The Metropolitan-Cammell Carriage & Wagon Co. Ltd., who are developing certain lines of mobile cranes and mechanical handling equipment, expect the Company to take up these items for manufacture in this country.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	66,68,700	Gross block	75,87,465
Reserves and surplus	10,13,891	—Depreciation	14,63,310
Other liabilities	1,65,09,249	Net block	61,24,155
		Current assets	1,77,35,152
		Investments	34,323
		Cash	2,35,300
	Rs. 2,41,28,930		Rs. 2,41,28,930

* Paid-up capital consists of 6,69,604 equity shares of Rs. 10 each. Calls in arrears amount to Rs. 250.

Nutan Mills Ltd.

(Managing Agents: Messrs. Jagabhai Bhogilal Nanavaty & Co., Ahmedabad.)

Thirty-third Annual General Meeting—Held on 1st May 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	1,96,94	1,63,89
Closing stock	17,22	36,07

Appropriations:		
To short provision of tax for previous year	1,24	97
Proposed dividends (taxable) Preference	23	23
" " " Ordinary	5,49	5,47
	(22%)	(22%)
Carry forward	2	1

Extracts from the Directors' report: During the year under review, the manufacturing cost maintained its high level partly because dearness allowance continued to rule on the lines of the previous year and also the increases in the cost of fuel, electricity, chemicals, dyes and spare parts. Sale of the Company's products are still under the Voluntary Price Control Scheme.

The rate of contribution to the provident fund for employees, has been raised from 6¼ per cent to 8 per cent with effect from 1st December 1963. The dearness allowance has been raised owing to its linking with a revised cost of living index. The Bonus Commission appointed by the Central Government has made several recommendations for determining bonus, one of which is for accepting the total wage paid to the employees as a base for determining bonus. This is a departure from the base of basic wages hitherto adopted. This will increase the quantum of bonus. All these factors will increase the manufacturing cost in the coming years.

During the year, a sum of Rs. 12,11,874 has been spent on extension of buildings and installation of machinery and equipment on mills' reorganisation and renovation programme. The main items covered by this expenditure are 1 *Multicylinder Sizing machine*, 10 *Carding Engines*, 4 *Globe Drawing Frames*, *Conversion materials* for 8 *Ring Frames* and equipment for *Humidification Plant* and extension of buildings for dyeing and spinning departments.

The installed capacity of the Mills is 25,056 *Spindles* and 576 *Looms* with complete dyeing and bleaching plants.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,96,700	Gross block	1,39,60,474
Reserves and surplus	75,43,115	—Depreciation	71,41,390
Other liabilities	33,31,231	Net block	68,19,084
		Current assets	61,68,312
		Investments	1,37,608
		Cash	7,46,012
	Rs. 1,38,71,046		Rs. 1,38,71,046

*Paid-up capital consists of 5,000—4½ per cent cumulative preference shares of Rs. 100 each and 21,067 ordinary shares of Rs. 100 each. Of the above all the preference shares and 10,000 ordinary shares are allotted as fully paid-up by way of Bonus shares by way of capitalisation of reserves.

NEWS IN BRIEF

THE Union Government has abolished the cess of 19 nP per quintal of coir imposed on the coir industry with effect from the 1st inst.

The Government of India is considering the suggestion made by the Chief Justice of India for abolishing the Income-tax Appellate Tribunal and transferring the appeals to High Courts.

Postal life insurance will not be merged with the Life Insurance Corporation, as the Union Government feels such merger will deny the Postal Life Insurance insurants certain facilities now being enjoyed by them.

A heavy structural plant at a cost of Rs. 12 crores is proposed to be set up near Wardah by the Government of Austria. The plant is likely to go into production by 1966. Preliminary work will start in about two months.

The registration of the Unique Motor and General Insurance Company Ltd., Bombay, has been cancelled for contravention of the provisions of Section 40C of the Insurance Act, 1938, relating to the expenses of management. The cancellation came into effect on 27th April 1964.

The Government of Madhya Pradesh has banned strikes in the State-owned Heavy Electricals project (Bhopal) for a period of six months from the 5th inst. The ban has been imposed under the Defence of India Rules with a view to "maintaining supplies and services essential to the life of the community."

Under a trade agreement signed recently between the Government of India and Korea, India will export to Korea *engineering goods* and machinery, ferro-manganese, chemicals and pharmaceuticals, etc., in exchange for non-ferrous metals like zinc, lead, tungsten ores and concentrates.

Prospecting done recently by the National Coal Development Corporation in three regions of Hazaribagh district revealed the existence of a total coal reserve of 400 million tons of coal. Further prospecting is going on. The Corporation will raise three million tons of coal per annum during the fourth Plan period.

The Oil and Natural Gas Commission has reduced its target of drilling of wells during the third Plan to 490 from 512, to which level it had earlier been cut from 611. The latest reduction is necessitated by the delay in securing the right type of drilling equipment, inadequate free foreign exchange resources and organisational deficiencies.

It is proposed to replace almost all the German technical personnel in the Rourkela Steel plant within the next 18 to 24 months, according to Mr. C. Subramaniam, Union Minister for Steel, Mines and Heavy Engineering. Even after the Indianisation, a small team of German experts may continue there.

In order to enable units of textile industry to submit their applications for import of permissible items of textile machinery from Italy, along with proforma invoices, etc., the last date for receipt of applications has been extended up to the end of this month. Applications received after this date will be considered as time-barred and will be rejected.

An individual earned a salary of Rs. 11,74,075 in the year 1961-62—almost Rs. one lakh per month—and paid income-tax and other taxes to the tune of 85 per cent of it, according to Mr. T. T. Krishnamachari, Union Finance Minister. The top ten salaries in that year (in rupees lakhs) were: 11.74, 4.69, 3.78, 3.54, 2.81, 2.67, 2.57, 2.48 and 2.46. Five of the ten salaried people were foreigners.

Out of the Rs. 119.05 crores drawn from the International Monetary Fund in 1961, the amount yet to be repaid by India is Rs. 107.14 crores. On the unpaid amount, India has to pay interest at the rate of 2.5 per cent for the period upto July 1964, 4 per cent from 1st August 1964 to 1st January 1965, 4.5 per cent from 1st February 1965 and 5 per cent thereafter till the final repayment is made.

The Union Government has asked the Tata Iron and Steel Company and the Indian Iron and Steel Company to prepare project reports for their expansion programmes as early as possible, so that negotiations for financing these can be initiated. These two companies, it will be recalled, have been allowed to expand their steel ingots capacity by one million tonnes each during the fourth Plan.

An official delegation is expected to visit Tokyo shortly to finalise the agreement with three major ship-building firms which are to help the Indian Government in setting up a shipyard at Cochin. The Japanese firms have agreed to construct a shipyard with a 30,000-d.w.t. vessels building dock, a 15,000-d.w.t. shipbuilding berth and a repair dock for ships of 15,000 d.w.t. The whole project is expected to be completed in four years; work will begin by the year-end.

The Government of India has decided to set up a nine-member Small Newspaper Advisory Committee under the chairmanship of Mr. R. R. Diwakar, M.P., to make an investigation into the difficulties and problems facing small newspapers and to advise the Government on the measures to be taken for assisting the small newspapers published in various languages. The Committee has been asked to submit its report within six months.

The cornerstone of the Rs. 20-crore synthetic drugs factory, being set up by Indian Drugs and Pharmaceuticals Ltd., was laid by Mr. O. V. Alagesan, Union Minister for Petroleum and Chemicals, at Hyderabad on the 2nd inst. The factory will produce annually about 850 tonnes of synthetic drugs and 4,560 tonnes of intermediates at an estimated sale value of about Rs. 8 crores. When the Rishikesh and Hyderabad plants go into full production and the expansion schemes at Pimpri are completed, India will be able fully to meet its demand for these basic drugs.

As many as 17,912 import licences valued at Rs. 21.25 crores were issued by the Government of India during the six months ended March 1964 under the various export promotion schemes. Established exporters were given licences worth Rs. 2.87 crores. The share of prospective exporters was Rs. 1.39 crore. Licences valued at Rs. 5.2 crores were also issued in connection with two schemes for cotton textile export incentives. The imports of chemicals and dyes valued at Rs. 2.6 crores and textile machinery at Rs. 3.57 crores were also sanctioned.

The metal foundry of the Heavy Engineering Corporation was commissioned eight months ahead of schedule on the 1st inst., at Ranchi by Mr. T. R. Gupta, Chairman of the Corporation. The foundry will initially produce about 100 tons of material per month and the output will ultimately be raised to 700 tons a day. Castings and forgings weighing from a few kilos to 100 tons will be produced to meet the demands of the heavy machine building plant and the heavy machine tool plant. The surplus production will be supplied to private sector undertakings.

The total foreign aid authorised for the third Plan upto 1st February 1964 amounted to Rs. 2,055.55 crores, of which only Rs. 896.58 crores had actually been utilised. Aid in the form of loans and grants in foreign currency has been obtained from 19 countries, the World Bank and its subsidiary, the International Development Association. The biggest contributor is the U.S. with Rs. 724.62 crores followed by Russia with Rs. 308.92 crores, and the World Bank and I.D.A. together with Rs. 289 crores. West Germany accounts for Rs. 236.17 crores, the U.K. for Rs. 151.24 crores and Japan for Rs. 97.54 crores.

The State-owned Hindustan Machine Tools Ltd. (Bangalore) will shortly commence production of single-spindle automatic lathes. The H.M.T. signed a seven-year technical collaboration agreement on Monday this week with the internationally known French firm, "Manurhin." Under the agreement, the H.M.T. will turn out automatic lathes for the first time in this country and will have sole rights and exclusive licence for manufacture and sale in India and Ceylon. It will manufacture seven models in three varieties. Presently a good number of such lathes are being imported by Ordinance factories and the H.M.T. will hereafter supply the defence factories indigenous lathes.

From Abroad

The British Government is expected to lift quota restrictions on a wide range of Russian manufactures by the end of this year.

The U.S. Steel Company has effected a reduction of 12 to 14 per cent in the prices of wire rods and course wire in a bid to counter foreign competition. At the same time, the Company has increased its discount to distributors for stainless steel and plate from 5 to 10 per cent.

Tea production in Pakistan during the year ended March 1964 aggregated 55.49 million lbs. as against 51.83 million lbs. in the 1962-63. The quantity of tea sold at international auctions during the same year was 53.34 million lbs. as compared with the 45.84 million lbs. sold in the previous year.

The aggregate net profits of 101 major Swedish companies the shares of which are quoted on the Stockholm Stock Exchange, rose by 11.7 per cent to Kr. 927.3 million for 1963. The total dividends were up by 6.7 per cent to Kr. 665.5 million. Of the 101 companies listed, 60 reported a higher net profit for the year, 26 a lower net profit and 15 a practically unchanged net profit.

A British firm of chartered accountants is negotiating with the Government of Afghanistan an agreement to train Afghans in Britain and give accounting advice to the Government. This advice will be made available in the commercial sector rather than at a national level. An official of the British firm will be visiting Afghanistan for talks with the Government there.

A new titanium dioxide plant with an annual capacity of 15,000 tons started production recently at Fredrikstad in East Norway. Owned by the Titan Company A/S, a subsidiary of the U.S. National Lead Company, the plant is highly automated, requiring only 30 workers. The bulk of its output will be exported to other Scandinavian countries.

Sweden's wholesale prices remained stable at 164 points in March (1949=100), according to the index of the Central Bureau of Statistics. Price increases of 1.2 point were offset by decreases of 1.1. In March last year the index stood at 157. The import price index stood unchanged at 133 points, as against 126 a year ago. Export prices were up by one point to 148 as compared with 142 points in March 1963.

A furher tax cut for the American is possible in a few years' time, if the $11.500 million reduction recently enacted succeeds in building

PERSONAL

MR. K. P. Mathrani, till recently Chairman of the Industrial Finance Corporation of India, has taken over charge as the Secretary to the Union Ministry of Rehabilitation.

Mr. D. R. Narang, a leading sugar millowner of North India, has been elected President of the Indian Sugar Mills Association for the year 1964-65. Mr. S. Jaipuria has been elected Vice-President.

Mr. S. V. Kogekar, formerly Principal of the Fergusson College, Poona, has assumed charge as a Member of the Forward Markets Commission, Bombay, *vice* Mr. Syed Noon.

Mr. Norman H. Strouse, President of J. Walter Thompson Company of the U.S., has been elected Chairman of the Board of the American Association of Advertising Agencies for the current year.

Mr. M. Zaheer, I.A.S., till recently Joint Secretary in the Industries Department and Director of Cultural Affairs and Scientific Research Department, Government of Uttar Pradesh, has been appointed a Member of the Tariff Commission.

Mr. V. Shankar, I.C.S., Union Food Secretary, left for Japan on the 1st inst. to study the possibilities of stepping up exports of raw sugar. He will also seek Japanese collaboration in the development of the fishing industry in this country.

Mr. N. D. Sahukar of Messrs. Godrej and Boyce Manufacturing Company Limited has been elected Chairman of the reconstituted Western Regional Committee of the Engineering Export Promotion Council. Bombay, for the year 1964-65. Mr. J. V. Doshi of Kamani Engineering Corporation has been elected Deputy Chairman.

production, creating jobs, raising profits and generating revenue to balance the budget, according to President Johnson. Meanwhile, Mr. Johnson has asked the Congress to approve a multimillion dollar programme to combat poverty and economic stagnation in the Appalatchian region of Eastern U.S.

Only two West German firms rank among the top ten European industrial "giants" today, according to a survey conducted by the Common Market commission. The top ten in order of size: Royal Dutch Shell (Dutch-British); Unilever (Dutch-British); National British Coal Board; British Petroleum; Italian State holding Company, including Finsider, Fin-meccanica, Fincanticri and Finelectrica; Imperial Chemical (British); Volkswagen (German); Philips (Dutch); Siemens (German) and Fiat (Italian).

The Government of Indonesia has introduced an export incentive and allocation of foreign exchange scheme with retroactive effect from 22nd April 1964. Under the scheme, an exporter will be allowed to buy foreign exchange upto a total of 20 per cent of the f.o.b. value of the Government's realised export earnings which may be *traded or used for importing goods*. Simultaneously, the dollar rate for the transaction of export earnings has been raised from 45 rupiahs to 250 rupiahs. Further, the Government has fixed allocations of foreign exchange to producers and producers exporters at 5 per cent of the f.o.b. export value of the produce.

All five private trading banks operating in New Zealand have won the right to operate savings bank account in competition with the Post Office Savings Bank and local community trustee savings. While the move of these banks had been bitterly opposed by the trustee banks which feared that their existence was in jeopardy, the Government felt that the savings bank would make an important contribution to the Government's objective of increasing growth. In order, however, to lessen the impact on the trustee banks, stringent measures are proposed to be imposed on trading banks. Since the authorising legislation will be passed only in the coming session of Parliament, it will be only after several months that the trading banks will actually be able to open savings banks.

The International Monetary Fund has approved a stand-by arrangement with the Government of Somali Republic, authorising to draw up to the equivalent of $4.7 million over the next twelve months. The arrangement will provide financial support for the introduction of a unified exchange and trade control system which will be applied to transactions throughout Somalia, which began on 30th April last. The arrangement provides a secondary line of foreign exchange reserves which may be drawn upon by the Government of the Somali Republic should the exchange and trade control reforms result in a temporary strain on the balance of the country's international transactions. The Fund will maintain close contact with the Somali authorities in the application of the new system.

The Norwegian Storting's *Ombudsmann* for the civilian administration, received 1,275 complaints during the first year. According to a 250-page report submitted to Parliament by the former supreme court Justice, 868 of the complaints were rejected, shelved, or withdrawn, and five returned with request for further information. As grievance officer for Parliament, the *Ombudsmann* examines and, if indicated, acts on allegations about unjust or arbitrary treatment. During 1963, he found that 402 cases merited further study. These were forwarded to the administrative organ or civil servant concerned. There were various reasons why complaints against Government civil servants officials had to be rejected. Some were outside the field of the *ombudsmann*. Others referred to obsolete conditions or were inadequately substantiated. A few complaints were anonymous or incomprehensible.

TREND OF MARKETS

MONEY SLIGHTLY TIGHT

(From Our Own Correspondent)

BOMBAY, *6th May*

The short-term money market, which tended to be somewhat comfortable last week, turned slightly tight during the week under review. Funds available were no doubt large, but they were inadequate to meet the demand for credit. Borrowers, of course, did not find it much difficult to obtain their requirements. Only they had to pay a little extra. The inter-bank call rate for both renewals and fresh money rose by ¼ per cent to 5¾ per cent. Calcutta reported stringency, the call rate jumping up from 5½ to 6 per cent with borrowers over.

The money market has noted the move of bankers to raise interest rate on deposits for terms of over six months. At a meeting held in Bombay on Thursday, 30th April, the majority of bankers is reported to have favoured an increase of ½ to ¾ per cent on deposits for terms of more than a year, with proportionate increases in rates on deposits for terms between six months and one year. Some banks, however, are said to be of the view that the increase in interest rates should be confined only to time deposits of one year and more. A special committee, under the chairmanship of Mr. Bhabha, was constituted to evolve the actual schedule of interest rates; the Committee has been asked to complete its work before the end of this month. Meanwhile, the Chairman of the Indian Banks Association was requested to initiate discussions with the dissenting banks and persuade them to accept the revised rates. The upward revision in interest rates on deposits, according to a section of bankers, should not be followed by a rise in the minimum lending rate of banks, namely, 6½ per cent. As for service charges, no agreement has yet been reached and the issue stands postponed for consideration at a later date.

The response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 5th inst., was poor. The total amount offered was just equal to that invited (and also accepted): Rs. two crores. The average rate of accepted tenders was Rs. 3.000 per cent per annum, same as last week. The Intermediate Treasury Bills also evoked poor response, the Bills actually sold amounting to no more than Rs. 80 lakhs.

There was a further fall of Rs. 3.61 crores to Rs. 112.82 crores in India's foreign exchange reserves during the week ended 1st May 1964; including this fall, the total decline since 20th March 1964 comes to Rs. 21.82 crores. The fall occurred, despite the rise of Rs. 1.39 crore to Rs. 9.36 crores in balances held abroad, for this rise was more than offset by the decrease of Rs. 5.00 crores to Rs. 103.46 crores in the foreign securities held in the Issue Department of the Reserve Bank. Loans and advances to scheduled banks went up by Rs. 20.51 crores to Rs. 65.53 crores, of which the share of those against usance bills was Rs. 22.58 crores. At the same time, the balances of scheduled banks with the Reserve Bank increased by Rs. 7.78 crores to Rs. 91.21 crores. Notes in circulation were lower by Rs. 2.84 crores at Rs. 2,536.27 crores.

The total credit made available by scheduled banks to their clients increased by Rs. 2.34 crores to Rs. 1,845.61 crores during the week ended 20th April. Since, however, their deposits also went up by Rs. 13.27 crores to Rs. 2,493.86 crores, borrowings from the Reserve Bank receded by Rs. 20.53 crores to Rs. 44.62 crores. As just noted, this decline was more than made good in the following week. Investments declined by Rs. 9.66 crores to Rs. 615.09 crores and total cost by Rs. 73.28 lakhs to Rs. 141.56 crores.

On Thursday, 30th April, the Reserve Bank of India resumed the outright purchase of two short-dated loans (3½ per cent 1965 at Rs. 99.75 and 3 per cent 1964 at Rs. 99.80) and the sale of a medium-dated loan (4 per cent 1970 at Rs. 99) and a long-dated loan (4½ per cent 1989 at par). The resumption of open market operations in these loans did not have any effect on the gilt-edged market which continued to present listless conditions. Business put through was limited, with values of most Central and State loans moving narrowly.

In the foreign exchange market, the banks' buying and selling rates for U.S. dollars were unchanged at Rs. 474.75 and Rs. 478 per $100, respectively. In New York, the pound sterling (spot) was quoted at 279.980-280.020 cents and the three months' forward at 279.440-279.480 cents, both rates being unchanged from last week's levels.

GOLD AND SILVER RECEDE

(From Our Own Correspondent)

BOMBAY, *6th May*

Both gold and silver suffered a setback in values during the week under review. The drop in gold followed selling pressure induced by reports of fresh inflow and bearish advices from upcountry centres. Slackness in seasonal demand also imparted weakness. Silver ruled distinctly easy, though for a while early in the week, it had tended to move up. The easiness was due to lack of follow-up support when there were scattered offerings.

The Government of Gujarat has reduced from 10 to 2 per cent the rate of sales tax (payable by Gujarat delears under the Central State Sales Tax Act 1956 in the course of inter-State trade or commerce to consumers in other States) on the sales of *jari* thread and embroidery materials of gold, silver and gilded metal (including *badla* and *kasaf*), and brails borders, laces and trimming. The bullion dealers have welcomed the reduction, but they are greatly worried over the reported move of the Central Government to supply gold to the Madras Government for producing *jari* in a co-operative factory.

Fourteen-carat gold climbed down in the course of the week from Rs. 67.25 to Rs. 65.75 per 10 grams. Primary gold was unofficially quoted at Rs. 112, as against Rs. 118 a week before. Sovereign declined by a rupee to Rs. 89.

Silver opened the week at Rs. 261, as against the previous close of Rs. 260.50, and, after rising slightly to Rs. 261.50, drifted lower thereafter, the closing rate today being Rs. 259.50. The daily average arrivals and offtake of silver were 20 bars and 10 bars, respectively.

In the London bullion market, there was a slight fall in the international price for gold, from $35.08½ to $35.07½ per fine ounce. Ready gold, too, declined by ¾d. to 250s. 6¼d. Bold ready and forward silver remained unaltered at 111¾d. This was also true of silver in New York which stayed put at 129.3 cents.

The following table shows the trend of prices during the week under review:

	6-5-1964 (closing)	High	Low	28-4-1964 (closing)
SILVER	Rs.	Rs.	Rs.	Rs.
Ready (996 fine) ..	259.50	261.50	259.50	260.50
GOLD				
Ready (14 carat)	65.75	67.00	65.00	67.25
Sovereign	89.00*	90.00*	89.00*	99.00*
London—				
Gold ..	250s. 6¼d.	250s. 7¼d.	250s. 6¼d.	250s. 7¼d.
Silver Ready ..	111¾d.	—	—	111¾d.
Silver Forward ..	111¾d.	—	—	111¾d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas), London and New York quotations are per ounce. * Unofficial rate.

FURTHER FALL IN COTTON

(From Our Own Correspondent)

BOMBAY, *6th May*

Cotton futures suffered a further setback during the week under review. Persistent "long" liquidation and the easiness in spot prices more than offset the bullish implications of the continued delay in issuing the purchase authorisation for U.S. P.L. 480 cotton and the high level of mill consumption of cotton confirmed by the figures for February 1964. Consequently, both the Jarilla May and August contracts recorded further losses. Neither the removal of the limit on purchases of Digvijay cotton by the Textile Commissioner, nor the rumour that the ceiling price would be raised by Rs. 75 per candy during the next season, helped to lift values. Tenders issued against the Jarilla May contract on the first notice day, the 2nd inst., aggregated 400 bales, consisting of 300 bales of 216F and 100 bales of Laxmi A. This compares with a mere 50 bales issued on the first notice day against the previous contract, Jarilla March 1964. Another 300 bales were issued on the second notice day, namely Monday the 4th inst., bringing the total till that date to 700 bales.

The maturing Jarilla May contract opened the week at Rs. 732.75 per three quintals and, after rising to Rs. 734.50 on the 2nd inst., declined to touch a low of Rs. 723 yesterday, before recovering to close at Rs. 726.50 today. The August contract commenced the week's trading at Rs. 722 and, after improving to Rs. 727.50 on the 2nd inst., eased to Rs. 716.50 yesterday but recovered to Rs. 720.50 at close today.

In the spot market at Sewri, ready prices receded, thanks to slack mill demand. Most of the mills have covered their immediate requirements. Needy mills have, however, shown stray interest in selected lots of good quality cotton.

The trade has welcomed the Textile Commissioner's announcement removing with immediate effect the restriction imposed on mills in January last, requiring them not to purchase Digvijay 'A' cotton more than 75 per cent of their consumption during the cotton season 1962-63. The notification added that if such cotton was sold at more than Rs. 1,270 per candy ex-godown, Bombay delivery or at a price exceeding the corresponding spot price in the upcountry centre, it shall be subjected to compulsory survey as provided in the Textile Commissioner's notification dated 28th March 1964.

Mills and importers are worried over the undue delay in issuing the purchase authorisation for U.S. cotton. There was moderate mill demand for foreign cotton, particularly American cotton, Sudan, Egyptian stockpile and Pima cotton. The export section was devoid of any activity because of absence of foreign interest. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 800; Gadag Laxmi 1,175; Buri 1,120; Co2 (Nagar) 1,685; L.147 1,130; American 1,510; Pima 1,950; Egyptian Stockpile 1,910-2,000.

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, *6th May*

Firmness of groundnuts was the feature of trading in the oilseeds markets during the week under review. The maturing (April) contract went off the board on the last day of April at the ceiling rate of 241, including a penalty of Rs. 5. On the last day, no tenders were issued apparently because the spot rates were out of parity with futures rates. Business in the current (July) contract was limited, as traders were not inclined to enter into fresh commitments, in view of the narrow gap between the ceiling fixed for the contract and the actual ruling price. The spot section was distinctly firm, thanks to tight supply position, meagre arrivals and short covering by some operators. After early firmness, castorseeds turned easy on bull liquidation and fears of fresh supplies from growing centres. A large quantity of castor oil was reported to have arrived in the city from Gujarat side. In sympathy with castorseeds, linseeds ruled easy. Cottonseeds were dull.

The groundnuts July contract advanced from Rs. 239.37 to Rs. 239.87 at which level it was just Re. 1.13 below the ceiling of Rs. 241. Nizam bold ready rose by 45 nP to Rs. 54.75. Khandesh quality spurted by Re. 1.12 to Rs. 55.87. Oil commercial gathered 50 nP to Rs. 21.50, while railway receipts put on 60 nP to Rs. 21.30. The groundnut oilcake expeller July contract, which had touched a new high of Rs. 261 on Wednesday, 29th April, following higher Rajkot advices and encouraging export enquiries, moved down thereafter and touched Rs. 457.50 today. The decline was due to heavy unloading by operators following the imposition of heavy margins referred to in this report last week.

Castorseeds June delivery began the week at Rs. 175.25, as against the previous close of Rs. 175, and receded to as low as Rs. 173.87 yesterday before recovering to Rs. 175 today. Spot Madras lost 13 nP to Rs. 34.37. Kanpur ready sagged by 25 nP to Rs. 33.12. Oil B.S.S. lost a like amount to Rs. 14.55. Oil commercial receded by 35 nP to Rs. 13.75.

Linseeds June strengthened by 19 nP to Rs. 42.69. Bold ready was neglected at Rs. 44.25. Oil ready was lower by 25 nP to Rs. 17.75.

Dull trading prevailed in cottonseeds. The June contract was nominally quoted at Rs. 104.50.

The following table shows the closing prices of oilseeds and oils on 6th May as compared with those of two previous weeks:

	6-5-1964	28-4-1964	22-4-1964
Groundnuts	Rs.	Rs.	Rs.
April 1964 contract	240.87	240.87	240.75
July 1964 contract	239.87	239.37	239.62
Nizam bold	54.75	54.00	53.75
Khandesh quality	55.87	54.75	54.50
Oil ex-mill	21.50	21.00	21.20
Oil,Rly. Receipts	21.30	20.70	20.95
Castorseed			
June 1964 contract	175.00	175.00	176.62
Ready Madras	34.37	34.50	34.50
Ready Kanpur	33.12	33.37	33.50
Oil B.S.S.	14.55	14.80	14.90
Oil commercial	13.75	14.10	14.20
Linseed			
June 1964 contract	42.69	42.50	42.62
Bold ready	44.25	44.25	43.25
Linseed oil	17.75	18.00	17.75
Cottonseed			
April 1964 contract	—	—	99.00
June 1964 contract	104.50	105.00	104.50

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BROKEN TEAS IN DEMAND

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *30th April*

A total of 408,000 kgs. was offered in tea sale No. 17 held here on 28th inst. Quality showed further seasonal decline, but it was satisfactory for this time of the year. The market opened to good demand which continued throughout the sale. The plainest descriptions evoked keen competition and were fully firm to dearer. Low medium and medium brokens received useful enquiry and were firm and occasionally dearer, with more emphasis on brokens than the equivalent fannings. Good mediums were also sold readily, but prices for these can be quoted only barely steady. Here again, brokens were better supported than fannings. Highgrowns were irregular and generally lower with quality. A few selected best invoices were sold well. Black leaf descriptions shared in the general trend of the market. Whole leaf grades were a little irregular, but still flowery pekoes continued in demand and realised useful prices. Unorthodox descriptions ruled steady with the exception of inferior types. Tippy teas elicited strong support at fully firm rates.

The quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low medium	4.40-4.90	4.30-4.55
Mediums	4.90-5.40	4.60-5.00
Good mediums	5.40-6.10	5.10-5.70
Nilgiri B.O.P.	5.60-8.70	5.30-8.00

The average price realised in dust sale No. 17 Rs. 5.20 per kilo, as against Rs. 5.37 a week ago and Rs. 4.85 in the corresponding sale last year.

In dust sale No. 17 held today, 178,000 kgs. were offered. There was strong demand which continued throughout the sale. All mediums met with useful support and were sold at firm rates. Highgrowns were well supported and continued along last week's trend. Unorthodox descriptions also shared in the general trend of the market. Clean black grainy descriptions were sold readily.

The average price realised in dusi sale No. 17 was Rs. 4.85 per kilo, as against Rs. 4.82 a week ago and Rs. 4.53 in the corresponding sale last year.

Colombo: The market opened to good general demand, but all brokens came to a considerably easier market. Liquoring fannings were firm, but medium and lowgrown ones shadded in price.

London: North Indian and other growths: In Monday's auction, there was firm to dearer market with the exception of plainest sorts which inclined easier. Best liquoring Assam C.T.Cs were distinctly dearer.

Ceylon and South Indians: In Tuesday's sale, the market was dearer following improved quality,

but the few C.T.C. descriptions on offer were irregular and sometimes lower.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire:

"*Sale No.* 18: 443,000 kgs. offered. Good demand. Highgrowns limited enquiry, easier. Good mediums lower. Low mediums and mediums generally firm. *Plainest sometimes easier. Unorthodox* firm."

SUGAR SUPPLY TIGHT

(From Our Own Correspondent)

HAPUR, *4th May*

Sugar ruled steady during the week, due to tight supply position and prices in the open market were quoted around Rs. 160 to Rs. 165 per quintal, as against the controlled price of Rs. 125 per quintal. Although the U.P. Government had urged the Centre to increase its monthly quota from 20,000 to 25,000 tons, the Centre has been obliged to reduce it further to 19,000 tons a month.

The supply position continued to be tight in the Muzaffarnagar market also and, in the Kanpur market, sugar in the open market touched a new high of Rs. 170 a quintal due to persistent shortage. Sugar supplies to rural areas here were being diverted to open market where it fetched a premium of Rs. 45 a bag.

Desi khandsari continued firm to touch a new high of the season on brisk demand from east U.P. and surrounding areas. Seasonal demand, too, was heavy due to scarcity of sugar. Stockists were keen buyers following reports that the State Government might allow export of the commodity to the deficit areas of Gujarat, Rajasthan and the Punjab. Prices firmed up by Rs. 3 to Rs. 5 a quintal during the week and week-end prices were:—inferior Rs. 117.50 to Rs. 130; medium Rs. 135 to Rs. 145; and superior Rs. 150 to Rs. 160 a quintal.

Ready *gur* was quietly steady during the week. Daily arrivals out of stocks retained by cultivators were small at an average of 250 maunds and, as the week's offtake aggregated 20 wagonloads, mostly to Gujarat and Rajasthan against import permits, local stocks declined to 13,000 quintals. *Shakker*, too, attracted keen demand and prices stayed steady. Standing cane crop is in its very early stage and is reported to have been adversely affected by *salai* pest, but it is as yet too early to predict crop prospects and most of it would depend on monsoons. Week-end prices (in rupees per 40 kilogram) were: *Pansera* superior 29; average 28.50; *balti* 28.75; *kotha* dry-wet 27.50; *shakker* 31 to 33.

Gur and *shakker* registered strident gains during the week in the Muzaffarnagar market on brisk demand from upcountry centres following issue of permits to co-operative societies and charitable institutes against February and March quotas which had lapsed. *Gur Chaku* evinced keen demand from Gujarat, Punjab, M.P., Rajasthan and West Bengal and prices improved upto Rs. 3 per 40 kilogram. *Pansera*, too, attracted outside buying support.

FOODGRAINS STEADIER

(From Our Own Correspondent)

HAPUR, *4th May*

Steadier trend was witnessed in the foodgrains market during the week under review, as arrivals of new grains were far below expectations. The Union Food Minister, however, has declared that there is now need to take a pessimistic view of the food situation. Rice production in 1963-64 is expected to be a record of 36 million tonnes—four million tonnes more than last year—and the wheat crop, too, is not expected to be substantially better.

Wheat at Hapur registered fractional gains towards the week-end due to brisk consumer support. Farm quality improved by Rs. 2.50 per quintal, while the average quality stayed steady. Average quality was now quoted between Rs. 51.50 and Rs. 54.50 and farm produce between Rs. 57.50 and Rs. 62 per quintal. Arrivals averaged 1,000 maunds.

Steadier conditions continued in the rice market and prices improved by Re. 1.34 to Rs. 2.67 per quintal according to quality on good seasonal demand in the face of declining stocks position. Later in the week-end, rice *basmati* superior was quoted at Rs. 96.45 to Rs. 99.13, *sela* at Rs. 93.77 to Rs. 96.45, *mainpuri* at Rs. 71, *ramajwayan* at Rs. 78.38, *raimunia* at Rs. 80.38 and *gadda* at Rs. 71 per quintal.

Gram was steady during the week on good demand against small arrivals at 400 maunds a day and local stocks estimated around 2,000 quintals. Punjab quality was quoted at Rs. 53.58 and local superior quoted at Rs. 54.50 a quintal. Barley and *bejhar*, however, ruled quiet at Rs. 40 to Rs. 41.25 and *bejhar* at Rs. 38.75 to Rs. 40 per quintal, respectively. Demand was reported to be slack. New *methi* arrivals were small were lifted at Rs. 43.75 per quintal. *Juwar* and *guwar* remained unchanged at Rs. 38.50 to Rs. 40.50 and Rs. 53.58 to Rs. 54.92 per quintal. Maize was stagnant at Rs. 40.50 to Rs. 42.50 per quintal. Other sections were listless.

Firm conditions prevailed in the pulses section. Peas improved upto 2.50 per quintal on brisk buying enquiry from the consuming areas of Madras, Bengal and Bombay. *Dara* variety was quoted at Rs. 49.75 to Rs. 50 and farm quality at Rs. 51.50 to Rs. 53.75 per quintal. About 20 wagons were despatched during the week. Arrivals of *arhar* were still poor and its prices ruled firm at Rs. 70 to Rs. 72.50. *Arhar dal* was traded at Rs. 80.38 to Rs. 85.74 per quintal. *Urd* and *moong* touched new high levels at Rs. 66.98 to Rs. 75.02 and Rs. 80.38 to Rs. 91.09 per quintal, respectively. Stocks of these commodities were reported to be poor. *Masoor* and other *dal* also ruled firm. Week-end prices were:—Peas *dal* Rs. 54; *urd dal* Rs. 83.06; *moong dal* Rs. 93.77; *masoor* Rs. 67.50 to Rs. 72.50; *masoor dal* Rs. 83.06; and gram *dal* Rs. 61.62 per quintal.

BRIGHT TEAS STRONG

(From Our Own Correspondent)

CALCUTTA, *5th May*

Good demand featured last week's internal sale, when dusts on offer aggregated 29,210 chests. C.T.Cs were supported to realise their invoice values, while the small and bright teas were a strong feature. However, the more fibrous teas eased slightly. Plain orthodox teas met with support at lower rates, but brighter Assams attracted good demand. The rise in prices of legg-cuts followed an improvement in quality. The quotations per 1 kg. inclusive of excise duty were:

Good Assam C.T.C. dust Rs. 6.30 to Rs. 6.80; medium Assam C.T.C. dust Rs. 5.00 to Rs. 5.30; legg-cut dust Rs. 4.60 to Rs. 5.10; medium Assam dust Rs. 4.50 to Rs. 5.10; and plain orthodox dust Rs. 4.00 to Rs. 4.30.

During the week, the heralding of the new season was underlined with some more arrivals of new tea, mostly from Darjeeling gardens. Although the first flush has been aided as a result of last year's autumnal rains, quality has so far been far from encouraging. The commencement of arrivals earlier than usual is taken to indicate a larger crop this year, although Darjeeling gardens have been handicapped by lack of rains in the last two months. All indications are that the North East Indian crop this year would be higher than last year's, and not less than the 1961 crop of 273.4 million kgs. First consignments from Assam are believed to be on their way, and it is likely that the first export auctions, provisionally fixed for 18th May, would have on offer a good proportion of representative teas. Forward bookings of tea for export were brisker this week than last, and tea is expected to occupy a fair amount of space in liners scheduled to leave in the last two weeks of this month.

Last year, although tea exports rose, the average price realised by both leaf and dusts was lower. Speaking at the annual meeting of the Calcutta Tea Merchants' Association held on 30th April, Mr. M. G. Patel, Chairman of the Association, declared that the present paradox of exporting more and realising less foreign exchange (in relation to the quantum of exports, of course) could only be remedied by improving the quality of output. He said that the bulk of the Indian tea produced and exported consisted of medium and common varieties and that increased exports would, therefore, lead to a glut in world markets. It is heartening for the trade to note that, as a result of indications of the continuance of favourable weather conditions and the Government's growing awareness of the importance of maintaining supplies of fertilisers to gardens on the same footing as to other agricultural crops, this year's crop is expected to show an improvement in regard to quality, too, in addition to the increase in quantity. Further, replanting and extension to planting done over five years ago are expected to show results this year, and the crop from the fresh soil is expected to be of top quality. At the same time, much progress has been made in the scientific use of fertilisers and watering.

All producing countries are aiming at increasing output further. More and more areas are being brought under tea every year. Although exports of Indian tea to the U.S.S.R. showed an impressive increase last year—Russian offtake of South Indian tea at 15.3 million lbs. was nearly 100 per cent higher than in 1962—it is believed that the U.S.S.R. has achieved considerable success in growing tea. In the Georgian region, climatic and soil conditions are very favourable for tea. Turkey has also begun to grow tea, and its success is very remarkable in areas contiguous to Georgia. Turkey has already celebrated its entry in Mincing Lane auctions by realising good profit in its first offerings held recently. Ceylon, Pakistan, Africa and China are among the other producing countries which are likely to show an increase in output this year. Needless to say that Pakistan would not be able to enter the export market, but its dependence on Indian supplies would diminish. Referring to the enhancing output trend in major producing countries and to the new producers exporting their produce to world markets, the President of the Calcutta Tea Merchants' Association said that these conditions demanded the early revival of the International Tea Agreement.

METALS RISE AGAIN

(From Our Own Correspondent)

CALCUTTA, *5th May*

Steady conditions prevailed in the Calcutta metal market during the week under review, and prices recorded further gains. On the London Metal Exchange, while copper and tin were either unchanged or looked down, both zinc and lead continued to search still higher levels. The persistent rise in world prices led to the inference that the rise in production of both zinc and lead had not been as much as the increase in consumption. World consumption of zinc in 1963 rose by 146,000 tonnes or 54 per cent to 2,850,000 tonnes, according to Mr. R. L. Stubbs, Director-General of the Zinc Development Association, London, who recently addressed the annual meeting of the American Zinc Institute. The increase is attributed to higher consumption in the U.S.A., Japan and West Germany. Production of zinc in Australia and Japan recorded a significant uptrend in recent years. However, the world's statistical situation is naturally a strong price-booster. During the week, spot zinc in London opened at £111 a ton and rose to £113½. The rise followed good demand both against internal consumption and against exports. From £107½ a ton, the three months' quotation rose to £109¼, thus widening the backwardation. With a poor stock position, the local price advanced from Rs. 292 to Rs. 302 per 100 kgs. A higher trend was also reported from the New York Commodity Exchange, the closing rate of 40.20 cents a lb. comparing with the opening of 38.25 cents.

The acute shortage in zinc eclipsed the scarcity in copper scrap and, since enough zinc was not available, consumers showed less interest in copper scrap. Utensil scrap at Rs. 690 per 100 kgs., however, maintained the recent gains. On the L.M.E., prices were marked down following fall in demand and downward tendency in U.S. markets. Spot copper wire-bars opened at £316½ a ton to ease to £313. At £309, the 3-months' rate lost £2. Spot cathodes and fire-refined metal opened at £295 and £290, respectively, and closed lower on balance at £292 and £289. The local quotation for tin moved up from Rs. 3.100 to Rs. 3.200 per 100 kgs. The stocks being fair, there was no difficulty for consumers to meet their requirements. Lead at Rs. 305 per 100 kgs. recorded a new high. On the L.M.E., spot lead closed at £86½ a ton, showing a gain of £1½. The cause for the fall in Russian offerings through London was stated to be increased shipments of lead from the U.S.S.R. to Japan.

HESSIAN MOVES DOWN

(From Our Own Correspondent)

CALCUTTA, *5th May*

Heavy goods recorded fractional gains during the week due to occasional support, hessian remained quiet with a pronounced downward tendency. Reports from the New York burlap market continued to be far from encouraging, and it was reported that consumers in the U.S. were content to buy on a hand-to-mouth basis only and that they were reluctant to enter into forward commitments on hopes of a further fall in prices. As a result, forward prices eased. May 10 oz. eased from 11.45 cents a yard to 11.40 cents and May 7½ oz. from 8.55 cents a yard to 8.50 cents. While spot 10 oz. was maintained at 11.45 cents a yard, the spot 7½ oz. gave way from 8.65 cents to 8.60 cents. Reports of these price movements made U.S. buyers at Calcutta inactive. Although the lower level of U.S. burlap stocks gave rise to the expectation that U.S. buyers would soon enter the market for replenishment, purchases continued to be limited to meeting day-to-day requirements only. At the same time, with the improvement in port conditions, increased offtake is expected this month. During the week under review, shippers were eager to complete their ready and near-term commitments. Now that it is several weeks since the U.S. offtake has been taking place on a hand-to-mouth basis, the trade is hopeful that the statistical position would not be affected. While it is most likely that current prices will be maintained, a rise in prices will be inevitable as and when bulk buying is resumed.

With excellent weather reports from most jute districts and satisfactory progress in sowing operations, the official optimism of a small increase in the forthcoming crop appears well placed. In other words, the mills will have to continue to operate up to their maximum capacity. Such a likelihood speaks against an immediate chance of revival of bulk buying in goods by overseas countries. A price rise is, therefore, most unlikely. An analysis of this type helps the foreign buyer to enter into commitments as slowly as he can. The trade is not, at the same time, worried, since, in the absence of bulk buying, there will be steady day-to-day offtake. The trade's optimism is aided by the experience of recent weeks and the continued satisfactory statistical position month after month. Current indications are that the acreage under jute this year will be the same as last year, while quality will show an improvement, thanks to the provision of better retting facilities and the realisation by cultivators in regard to the use of more fertilisers arising from the continued premium commanded by the better varieties. It is thus thought that there would be lesser need for imports from Pakistan of the superior varieties and that mills would be enabled to show greater attention to quality. Recent marketing surveys in several overseas countries have brought out the pointer that the scope for increased exports is linked closely to India's ability to improve quality. The overall exports of jute goods in 1963, increased despite keen competition from Pakistani mills, the fall in heavy goods having been offset by the increase in hessian, specialities and other goods. It is pointed out that every effort should be made to regain India's position relating to heavy goods. At present it is common knowledge, mills are sustaining losses in the manufacture of sacking. Considering that quality fibre is always commanding a premium over and above the minimum prices, the time has come, it is emphasised, to revise the prices of the inferior grades to enable the industry to increase exports.

Fibre prices were maintained as follows: Assam bottoms Rs. 31.50 a maund; northern bottoms Rs. 30.50; and daissee bottoms Rs. 33.50. With bright prospects for the new crop and the likelihood of an earlier harvest, holders were anxious to reduce their inventories. The grades acceptable to mills, however, were limited. At the same time, with the need of mills to complete their current quota of 200,000 bales, stockists demanded a higher price for the superior grades. Arrivals during the week declined to about 25,000 maunds a day. A week ago, these had averaged about 40,000 maunds a day. Now that the mills have purchased all the acceptable grades of the last crop, it is stated that they should not be burdened with any more compulsory purchase quota for the coming two months. Even the floating stocks of the inferior grades are not much. Thus conditions in the fibre market are not likely to be upset. The selling pressure which the holders of mesta and other inferior grades experience, despite the issuance of the purchase quota for this month coupled with the premium which the higher grades command, would, it is thought, contribute to an increase in the proportion of the output of superior grades in the forthcoming season. Pakistani jute districts are also experiencing afternoon showers, and it is expected that the jute acreage would be the same as last year. Fibre prices in the Narayanganj market were depressed.

In the goods market, moderate overseas support was in evidence. The U.S.S.R. was in the market for small parcels of hessian. The U.S.A., too, continued to buy in a small way. Deals were also reported with Australia, as well as with Argentine. In heavy goods, tenders for B. twills on behalf of the Government of India continued to enliven activity. Burma was in the market for heavy cees. The improvement in the port situation and the absence of the need for incoming ships to wait at the Sandheads in search of berths led to more interest by shippers to meet commitments for ready as well as near-term delivery goods. Bookings for River Plate distinations were a feature of this week, and loadings were estimated at 9,000 bales of gunny. On Tuesday last, ready B. twills eased from Rs. 113.50 to Rs. 113.30. Although some business in B. twills with Government took place, support from other quarters was limited. Argentina bought some hessian, but, since the quantity involved was insignificant, ready hessian 40" 10 oz. eased from Rs. 45.45 to Rs. 45.40. The feature on Wednesday was business in B. twills on Government account in respect of 2,200 bales for May delivery; this pushed up the price to Rs. 113.70. However, in the absence of adequate interest, hessian 40" 10 oz. eased to Rs. 45.35. On Thursday, these two constructions eased to Rs. 113.50 and Rs. 45.20, respectively, as, excepting for some due date transactions, there was no other activity. However, prices recovered to Rs. 113.70 and Rs. 45.25, respectively, on Friday, as business was considered to be in the offing. Over the week-end, ready goods were at one time sought for, and, as a result, B. twills hardened to Rs. 113.85 and hessian 40" 10 oz. to Rs. 45.30. Keen activity in futures was a feature of trading yesterday. This led to shortage in ready delivery goods. In addition, as a result of the improvement in the shipping position, ready goods were keenly sought by genuine buyers. Ready B. twills witnessed the biggest jump in recent months, and a high of Rs. 116.30 was touched yesterday. In sympathy, ready hessian 40" 10 oz. spurted to Rs. 46.00.

DELHI LETTER

(Concluded from page 788)

agreement in principle was reached in August 1962, even before the big Chinese attack. But nearly two years later, only the preliminary groundwork on the project has been laid. Meanwhile, the first of the Mark II HF-24 supersonic fighters to be made in the Hindustan Aircraft factory in Bangalore will join the Air Force in a few days.

The HF-24 project faced the biggest hurdle over a suitable engine when the British Bristols abandoned developing their Orpheus engine. The Russian RD-9 engine was found unsuitable, unless major design changes were made in the air-frame of the HF-24. Government spokesmen talk of an engine developed in the United Arab Republic by German experts as a possible power source for the HF-24. The latest is an offer by an American firm, the United Aircraft Corporation, to develop an engine suitable for the Bangalore-designed plane. The Defence Minister, Mr. Y. B. Chavan, during his coming visit to Washington later this month, will study the terms under which an American engine may be available for the Bangalore factory to power the supersonic fighters.

The Americans are also understood to have expressed distress over the fact that, though they have offered to equip a modern ordnance factory, the Indian Defence Ministry is delaying the project. It is said that the Indian Government has not even chosen the site for the ordnance factory yet!

The export promotion scheme for woollen textiles and woollen goods (excluding carpets, rugs and druggets) which was suspended on 31st March last has been revived from the 1st inst., with certain modifications. Export of worsted yarn and other types of woollen yarn including shoddy yarn except carpet/woollen yarn produced out of Indian wool, will be excluded; import entitlements in respect of carpet/woollen yarn made out of Indian wool will be 10 per cent of the f.o.b. value; in respect of all other items covered by the scheme, the total import entitlements will be calculated at the rate of 75 per cent of the f.o.b. value of the exported goods or of the value calculated in accordance with a schedule to be prescribed by the Textile Commissioner, whichever is lower; exports will be subjected to pre-shipment inspection and entitlements will be made available only to manufacturers-exporters.

Notices

ORISSA CEMENT LIMITED

RAJGANGPUR

NOTICE IS HEREBY GIVEN THAT THE Registers of Members and Share Transfers will remain closed from 21st May till 14th June, 1964, both days inclusive, except for recording the share transfers received before the closure of the Registers. The dividend for the year 1963, when declared, will be payable to those shareholders whose names would appear in the Register of Members as on 14th June, 1964.

By Order of the Board,
S. C. AGGARWAL,
Secretary.

Dated: 6th May, 1964.

DALMIA CEMENT (BHARAT) LIMITED

DALMIAPURAM

THE TWELFTH ANNUAL GENERAL MEETing of the Shareholders of the Company will be held at Dalmiapuram, the Registered Office of the Company, on 1st June, 1964, at 11.00 a.m. Notices of the meeting setting out the Agenda and Explanatory Statement on the special business to be transacted thereat have been sent by post.

By Order of the Board,
S. C. AGGARWAL,
Secretary.

Dated: 4th May, 1964.

THE AHMEDABAD ADVANCE MILLS LIMITED

NOTICE

THE SHARE TANSFER BOOKS OF THE Ahmedabad Advance Mills Ltd. will be closed from Thursday, the 28th May to Friday, the 26th June, 1964, both days inclusive.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
N. H. TATA,
Director.

Registered Office:
BOMBAY HOUSE,
24, BRUCE STREET, FORT,
BOMBAY, *4th May* 1964.

Lancashire textile union chiefs are seeking the backing of the Trades Union Congress to help press their case for wiping out death and illness in the mills. The Cardroom Workers' Association said in a report that Byssinosis—a millworkers' lung disease caused by dust—was a "scourge." They were recommending regular medical check-ups for workers, and checks on the amount of dust in mill cardrooms.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 7th May 1964:

	Closing quotations 29-4-1964	High	Low	Closing quotations 7-5-1964

COMMERCE AND INDUSTRY

(Concluded from page 817)

In regard to other traditional commodities, India seems to be facing greater competition from various sources. For example, in the first ten months of 1962, Indonesia supplied to U.S. 8,762,000 lbs. of black pepper, as compared to 19,385,000 lbs. by India. But, in the first ten months of 1963, there was a complete reversal of the position, the supplies from India and Indonesia being at 7,754,000 lbs. and 23,506,000 lbs. respectively.

In cashewnuts, India's position continues to be strong, its share amounting to 55.8 million lbs. in the first ten months of 1963 against the U.S.A.'s total imports of 61.6 million lbs. in this period. It is worthy of note that cashewnut imports into the U.S. in the first ten months of 1963 recorded an increase of 10.1 million lbs., as compared with the similar period of 1962.

In manganese ore, India's share continues to be low. In the first ten months of 1963, India supplied only 160,833 short tons of manganese ore out of the U.S.A.'s total imports of 2,024,144 short tons. Brazil was the major supplier, accounting for 860,891 short tons.

In mica, India suffered a setback in 1963, its supplies in the first ten months of the year amounting to 5,940,835 lbs. valued at $3,230,679, as compared with 8,518,254 lbs. worth $4,388,213 in the similar period of 1962. But the U.S.A.'s total import of mica in this period was also much lower at 7,826,909 lbs. against 10,294,211 lbs. in the similar period of 1962.

In shellac, recently, Thailand replaced India as the major supplier because of her bumper crop and low prices. But, in the last few months, the situation seems to be changing in favour of India.

So far as non-traditional items are concerned, India has made a small but encouraging progress. The value of engineering goods exported from India to the U.S. rose from Rs. 10,38,000 in 1960-61 to Rs. 20,46,000 in 1962-63; and it stood at about Rs. 10 lakhs in the first six months of 1963-64. The major products in this group are cast iron pipes and fittings and sewing machines. A recent official review says that "despite a certain amount of disappointment felt by U.S. importers primarily due to lack of response from Indian manufacturers and exporters, the Indian pipe and fittings have been uniformly acclaimed as of good quality." Also significant is the fact that American importers have lately shown much interest in obtaining from India a number of items like cotton sheeting, ready-made garments, zippers, punch presses and press brake equipment, dyestuff, plastic spectacle frames, sea-food, canned food, greeting cards and novelty items.

The task of stepping up our exports to the U.S. is by no means easy, because of the long distance, increasing competition from advanced countries, the high quality consciousness of the market, among other factors. Even so, with greater initiative by our businessmen and a more helpful attitude on the part of the U.S., the results can be much more satisfactory than they have been so far.

BUSINESS NEWS FROM EUROPE

(Concluded from page 805)

tive and, while the selling price to Belgian industry is not necessarily dependent on the Dutch industrial price, it cannot be fixed before it. If total sales of natural gas in Belgium can be raised to 5,500 million cubic metres by 1975, they will represent around 12 per cent of Belgium's expected energy needs. Two pipeline routes are under consideration and the advantage of one of them is that it could be used to carry supplies to France if that market proved receptive.

Plans to tap ***North Sea*** gas and oil reserves are expected to stimulate interest in the relatively new technology of installing pipelines and well-head valve installations underwater. These installations are being put on the sea bed, because, in part, of the potential hazard to marine navigation offered by traditional derrick construction and rough seas. The underwater equipment would be controlled from the surface or from the shore. Drilling operations in deep water off California and the Gulf of Mexico has made this method reliable. Reliability of operation and control were the two biggest problems that had to be overcome at the start. It was also difficult to develop a leakproof, four-way hydraulic valve with a built-in safety design that moves the valve gate to a pre-selected safe position if control pressure fails. These, and other problems such as marine growth, were eventually overcome.

MARKET GOSSIP

(Concluded from page 787)

products which could profitably be bought and sold by the developing countries among themselves. The suggestion is certainly quite an interesting one, but its actual implementation will bristle with innumerable difficulties which cannot be solved so easily as the Board of Trade seems to think. There is, however, no harm in exploring the possibilities of expansion in this direction.

Selling Insurance "Over The Counter"

The art of selling insurance has achieved so high a degree of sophistication in Britain that insurance is now literally sold "over the counter." The Great Universal Stores (G.U.S.), one of the better-known department stores in the U.K., has launched a pilot scheme for selling insurance over the shop counter and giving the customer the opportunity to pay premium in instalments. The Great Universal Stores had successfully pioneered last year the sale of insurance by mail-order.

The scheme to sell insurance over the shop counter has been arranged in conjunction with a well-known firm of insurance brokers which also handles the mail-order business. Special counters are being set up in selected stores controlled by the G.U.S. where details of all policies of a non-life nature would be available. Enquiries for life insurance policies would also be attended to, but they will be referred to the G.U.S. for follow-up. Official insurance forms have to be filled at the shop counters for forwarding to the brokers who also handle all the claims. The G.U.S. gets a commission for acting as agents.

Apart from being an extra-service to the customers, the assumption on which the scheme is based is that many would find it convenient to make regular premium payments while settling their hire-purchase and other credit accounts with the stores. The easy instalments for premium payment is obviously meant to be an added attraction.

Commercial Arbitration

The Committee on Commercial Arbitration (Chairman: Mr. B. T. Merchant) has suggested, in its report submitted to the Government of India on 30th April 1964, the formation of a central organisation, to be called "The Indian Council of Arbitration," for offering facilities for arbitration in foreign trade disputes. The Committee, it may be recalled here, was appointed last year to review the existing arrangements for arbitration in commercial disputes arising in the course of foreign trade and to recommend appropriate measures for their improvement so as to facilitate expansion of India's export trade. The constitution and functions of the proposed Council of Arbitration should, according to the Committee, be determined by all the existing arbitral organisations in India, in consultation with the Federation of Indian Chambers of Commerce and Industry, New Delhi. The Council should concentrate, in the initial period, the Committee has further suggested, on developmental and promotional aspects of arbitration in international trade with a view to making arbitration universal. The Council should also be vested with authority to establish arbitration facilities under its own auspices. The question as to when and in respect of what commodities the Council should arbitrate should be left to the discretion of the Council.

Another important recommendation of the Committee on Commercial Arbitration is that a clause for arbitration should be included in all foreign trade contracts between Indians and nationals of other countries. Such a clause, the Committee opines, will help smoothen business relations and offer scope for expanding India's export trade. The Committee, however, does not favour legislation to make inclusion of arbitration clause compulsory.

While emphasising the need to make known, as widely as possible, the benefits of and facilities for arbitration, the Committee has urged equally strongly the need to minimise the scope for disputes. For this purpose, it has suggested a model contract form containing provisions, usually found in most foreign trade contracts, as also a clause for the settlement of disputes, should they arise.

Disputes in foreign trade generally arise, as is well known, on grounds of non-delivery, delayed delivery, short delivery, non-payment of bills or commission, defective quality and non-compliance with specifications. The Committee obviously believes that prevention is better than cure and has, therefore, suggested that efforts should be made to avoid such disputes. For this purpose it has suggested a code of conduct for exporters, registration of exporters in respect of products for which some export promotion scheme is in existence and stricter implementation of pre-shipment inspection and quality control measures.

Some of the other important recommendations of the Committee are the following:

(1) Testing laboratories should be established in import trade centres for testing and certifying that the goods tested satisfy the specifications of the contract. The Government should seek to get such certificates accepted by foreign arbitration bodies.

(2) The Government should authorise its commercial representatives abroad to investigate small claims made by foreign parties in international trade disputes for amounts not exceeding Rs. 5,000 when an amicable settlement is not possible within a reasonable period. Commercial representatives might also be asked to suggest to foreign arbitration organisations in countries with which India has substantial foreign trade that their panels of arbitrators should include qualified and competent Indian nationals resident in those countries

(3) Since India now has adequate arbitration facilities, efforts should be made by the Government to transfer the venue of arbitration to India from foreign countries where they happen to be at present.

(4) A thorough study of arbitration laws of different countries should be undertaken by the proposed Indian Council of Arbitration in consultation with foreign arbitration organisations with a view to evolving model rules and procedures which would prove generally acceptable.

(5) Efforts should be made to persuade the trade organisations to provide in the contracts between the manufacturers and purchasers, who buy goods for export, that the manufacturers would abide by the award or decision that may be given in a dispute between the exporter and the foreign importer in regard to quality or other matters when the dispute has arisen on account of the fault of the manufacturers.

A suggestion of the Committee, which should be of great interest to exporters who are ever exposed to the risk of changes in export duty on goods contracted for, is that the Government should give adequate relief to exporters who had entered into firm contracts before the export duty was revised, so that a dispute between the foreign buyers and Indian exporters could be advised. It would also remove the hesitation of Indian exporters to enter into firm commitments for fear of unexpected changes in tariffs and embolden them to negotiate and conclude contracts more freely.

TREND OF SHARES

SLUMP AGAIN

(From Our Own Correspondent)

BOMBAY, *7th May*

THE firm trend that prevail in the share market last week abated during the week under review. In fact, after ruling quietly steady, with narrow and irregular movements, during the major part of the week, the market suddenly slumped today winding up the week with substantial losses in several of the cash and forward scrips. The sentiment of operators was adversely affected by fears of some fresh official measures to control stock exchanges. A hint to the possibility of such measures being adopted was reported to have been given by the Union Finance Minister in Parliament early this week. Many bulls were, therefore, anxious to reduce their commitments as much as possible. There was also further selling by parties who had recently bought on a large scale in anticipation of some fiscal relief which did not prove correct. In particular, Century and National Rayon were subjected to speculative liquidation by certain bulls. Apprehensions regarding costlier bank credit for industry and trade, too, imparted weakness. One more unhelpful factor was the rumour that the Directors of Tata Iron and Steel Company were contemplating a rights issue for the purpose of repaying Government loan. There was another rumour that T.E.L.Co. might not be able to maintain the dividend for 1963-64. To add to these bearish factors were the production figures (published this week) of both T.I.S.Co. and I.I.S.Co. for April, both showing a marked fall in their performance. Here are these figures.

	April 1964	March 1964	April 1963
	(In tonnes)		
TISCO:			
Saleable steel ..	115,000	128,400	122,200
Steel ingots ..	142,800	152,900	161,700
Pig iron	128,300	131,600	161,600
IISCO:			
Saleable steel ..	62,656	78,624	55,282
Steel ingots ..	82,319	89,766	80,807
Pig iron	111,269	113,069	109,650

In Dalal Street, Tata Ordinary encountered selling and moved down in the course of the week from Rs. 149.50 to Rs. 146.75 today before finishing at Rs. 147.25. The net loss was Rs. 2.25. Indian Iron fell by 40 nP to Rs. 24.40. Among Textiles, Century were hammered down from Rs. 612 to Rs. 597. Standard dropped Rs. 39 to Rs. 603. Shreeniwas and Svadeshi declined by Rs. 9 each to Rs. 242 and Rs. 236, respectively. National Rayon receded by Rs. 14.50 to Rs. 352; at one time today, they were lower still at Rs. 348. Bombay Dyeing, however, received some support and rose from Rs. 60.80 to Rs. 61.70 on Saturday, though they declined thereafter and touched Rs. 61 today. Engineering scrips drifted lower generally. T.E.L.Co. fell by Rs. 14.50 to Rs. 285.50, Alcock Ashdown by Rs. 8 to Rs. 291 and Cooper Engineering by Rs. 3.50 to Rs. 99.50. Sugars also drifted lower, Belapur losing Rs. 4.50 to Rs. 214, Maharashtra Rs. 2 to Rs. 127, and Walchandnagar 50 nP to Rs. 144.50. Cements fared no better. Digvijay eased by Rs. 3.50 to Rs. 181.50, Associated Cements by Re. 1 to Rs. 150.75 and Orissa by 36 nP to Rs. 13.40. Among Miscellaneous industrials, Indian Dyestuff were pushed down by Rs. 23.75 to Rs. 253.75. Voltas shed Rs. 7.50 to Rs. 250, Wimco Rs. 5 to Rs. 254.50, West Coast Rs. 4 to Rs. 157, Shivrajpur Rs. 3.50 to Rs. 13 and Tata Oil Rs. 3.30 to Rs. 57.20. Bombay Burmah declined by 80 nP to Rs. 58.20.

* * * *

Barring a few select counters which tended to move up on special enquiries, the Calcutta Stock Exchange put on a subdued appearance. Dunlop moved down from Rs. 37.06 to Rs. 35.60 following the decision of the Company's Directors to issue 500,000 right shares at Rs. 10 each at a premium not exceeding Rs. 10 per share. Birla Jute eased by Re. 1.65 to Rs. 30.10, Indian Aluminium by Re. 1.04 to Rs. 31.40, Texmaco by Re. 1.35 to Rs. 27 and Kesoram by Re. 1.30 to Rs. 25.20.

* * * *

In sympathy with Bombay and Calcutta, the Madras Stock Exchange also ruled distinctly easy, with a general fall in values. In the forward list, South India Viscose dropped Rs. 2 to Rs. 121.50. Madura shed 30 nP to Rs. 13.20 and Mettur Chemical 15 nP to Rs. 13.15. In the cash list, Buckingham declined by Re. 1.40 to Rs. 274 ex-div. Travancore Chemicals and Fertilisers receded by 27 nP to Rs. 18.37.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

ANOTHER EXERCISE IN PAPER SOCIALISM

NOWADAYS, the Congress Party is wasting too much of its time in defining its concept of socialism and drawing up long-winded policy statements for implementing its creed. Has it not got anything better to do than in indulging in the game of verbiage? If word-power could produce prosperity for all, the Congress Party has generated so much of it in the post-independence era that poverty in this country should be a thing of the past. Unfortunately, however, such miracles do not happen, despite what our mythological stories might say. Poverty is still as intense as before the commencement of the Five-year Plans. There are more mouths to be fed, more hands to be employed, more bodies to be clothed and more persons to be housed than at any time before. The more socialism (whatever it is) that one preaches and practises, the greater becomes the misery of the people. This is not surprising, as the socialism of the Congress Party has been of a doctrinaire type, yielding discontentment among the people rather than production. It has raised desires and expectations, without a corresponding increase in the means through which they can be met. There was, of course, some justification for engendering an ideological fervour in the initial years of independence in order to rouse the people from the somnambulism induced by the age-old fatalistic attitude. But it was, and is still being, overdone, with dangerous implications to our democratic way of life.

One might have thought from the new label to socialism—"democratic socialism"—given by the Congress Party at its Bhubaneshwar session that the powers-that-be had realised this danger. But this surmise does not seem to be correct. What the Congress Party is aiming at is State capitalism, State domination and State monopoly, so that, when all this is achieved in full measure, democracy will have vanished. It will be a type of socialism. Only, democracy as we all know it will be absent. Successive budgets of the Centre and the States have been framed with this objective. The last Central budget has clearly taken the country another long step forward in that direction. Henceforth, the private sector will have to depend increasingly on the Government for funds and other forms of energy that are necessary for sustaining it. Sooner or later, the private sector will virtually become an agent of the public sector. More fetters are in the making and still more curbs will follow, if the report of the Dhebar Committee for implementing the Bhubaneshwar brand of socialism is adopted at the A.I.C.C. session now being held at King's Circle, Bombay North. Many commentators have drawn a sense of satisfaction from the absence of any radical recommendations in the Committee's report. But that is a negative comfort, for the basic objective of the Bhubaneshwar resolution is sought to be achieved by proposing a further increase in the roles assigned to the State, co-operatives and the Reserve Bank of India. One would not have much to quarrel with this suggestion, if these agencies were at least efficient enough to carry out the responsibilities entrusted to them in time and without waste of resources. Experience so far clearly suggests that these prerequisites are only inadequately met; the result has been a needlessly low rate of economic growth, a high degree of inflation and great suffering by the people belonging to the low-income group. One, therefore, gets exasperated when one comes across the recommendations of the type contained in the Dhebar Committee report.

The Dhebar Committee has shared, not unexpectedly, the widely held view of the Congress Party that effective steps must be taken to prevent any further concentration of economic power in private hands. It has accordingly proposed that "the Government should intervene more extensively than at present in both financial and distributive activities," that the public sector's share in industries manufacturing capital goods and intermediate products should increase so substantially as to enable it to occupy a commanding position in the economy, that a total ban be imposed on the issue of new licences to existing large industrial concentrations, that the Government should encourage the growth of entrepreneurial skill by rendering financial and other assistance to enlightened managerial and technical personnel in the private sector, so that they may come forward and set up industries on their own, and that the Reserve Bank should be vested with penal powers to ensure that, in giving credit, banks adhere to national and social priorities. In making these proposals, the Committee does not seem to have considered the impact of their implementation on the pace of economic growth and creation of employment opportunities, as well as on the cost of development. There is no doubt that the rate of growth will be slower than otherwise and that the capital cost will be needlessly higher. The pursuit of this approach will delay the spread of real socialism, by which is meant the welfare of the people, for, ultimately, it is the masses that will have to foot the bill of such expensive development. Would it not be better, therefore, if the division of responsibility of industrialising the country is determined on the practical principle of ability to do the job and deliver the goods expeditiously and economically, without importing any doctrinaire principles of either the left or the right? In fact, many spokesmen of the Government, including the Prime Minister, have agreed in the not distant past that this should be the approach. Why then does the Congress Party keep on reopening the issue again and again?

The main assumption behind the Dhebar Committee's proposition that the public sector should be increasingly preferred to the private sector is that the people can expect to get more social justice under the former than under the latter. In theory, it may be right but not necessarily so in actual practice. Has India's experience during the last 13 years of active socialism been such as to sustain the thesis of the Dhebar Committee? We are afraid not. As against a few instances of successful public sector undertakings, there are many instances of unsuccessful ones. One has only to go through the reports of Public Accounts Committees in the Centre and the States, as well as the audit reports, to appreciate this point. Again, the amount of waste in the public sector is infinitely greater than in the private sector. It would be better to aim at a clean and efficient public sector handling limited responsibilities, so that it can not only set an example to the private sector but also exercise an effective control over the constituents of the latter sector, ruthlessly eliminating those that indulge in anti-social activities.

Let the growth of new entrepreneurs be encouraged by all means. None suggests that licences for establishing new industrial units should be given only to the big industrial houses. In any case, the hands of many of them are already full. This is true of the public sector also. But care must be exercised in selecting and promoting entrepreneurial skill. The manner in which licences for certain industrial projects included in the third Plan were distributed in keeping with this policy was by no means sound. Several of these projects failed to materialise and the licences had to be revoked, because the new entrepreneurs were not able to implement them for some reason or other. An expansion in the number of industrial entrepreneurs cannot be brought about overnight. It is not a fast growing species of trees. Nevertheless, in the post-independence period, there has been a significant growth. Many new industrial houses and individual industrialists have come into existence. The various industrial banks promoted by the Government, the nationalisation of life insurance and extension of protective tariffs and import control restrictions have all accelerated this process. A meed of praise is thus due to the Government for whatever progress that has taken place in this direction. If only the fiscal policy had been less harsh, the progress would have been more impressive than is the case now.

Unaccounted money is one of the many problems covered by the Dhebar Committee. Beyond stressing that the Government should take drastic steps to root out the existence of this black money, the Committee has not made any specific suggestions. Those who have this money may have reasons to feel that politicians are an ungrateful lot, for the majority of them have found it useful for fighting the elections. Much has been said on this problem, but little has been done, the claim made by the Finance Minister a few days ago notwithstanding. The evil itself is an offshoot of socialist planning. It can never be eradicated so long as there are shortages, too many controls, penal taxation, and prohibition of all sorts. It can, however, be minimised by tackling realistically the basic causes on which it thrives.

The lot of the poor man can be greatly improved—which is what a socialist Government ought to do first—if inflation can be checked and cost of living brought down. This will be possible only if agricultural production is substantially raised not through price increases but through larger yields per acre. The Dhebar Committee has naturally stressed this point, as many others have done many a time. The Committee has gone a step further in insisting that the Chief Minister and the Minister for Agriculture in every State must be specifically held responsible for progress on

the agricultural front, that they should be accountable to the Congress Parliamentary Board and that, if the Board is not satisfied, the necessary consequences for the failure should follow. It is, however, easier to lay down such a condition than enforce it. The Congress Party is the last that can impose such a discipline on Ministers. Has it ever sacked any Minister for inefficiency and incompetence? Nonetheless, it is good to see that some Congressmen at least are beginning to think that Chief Ministership in States should be related to performance in agriculture. Perhaps, some tangible results will follow, if the condition is strictly enforced by the High Command without fear or favour. At the same time, there is also the risk of some Chief Ministers asking for more doctrinaire economic and social reforms as an essential precondition for showing better results in the agricultural sector. The present Chief Minister of Maharashtra, for instance, has been making no secret of his conviction that nationalisation of banking is necessary for any significant advance in agriculture. His predecessor nationalised sugarcane plantations on the ground that it would confer great benefits on landless farmers. There are others who feel that all agro-industries must be nationalised.

Housing is another much neglected aspect of social progress in this country. In urban areas, shortage of houses is so acute that one, especially the new-comer, has to spend anything from a third to half of his income by way of rent, besides paying a heavy premium in cash. Slums and insanitary conditions are growing fast, accompanied by increases in crimes of all sorts. The position in rural areas is no better, where people are living in hovels. There is a great dearth of building materials and cost of construction is ever on the increase. Most of the unaccounted money is made in and goes into housing and allied spheres. The Dhebar Committee has prescribed severe penalties for those who do not build houses on the sites owned by them, but how are houses to be built, if the materials necessary are not available at reasonable prices? There can be nothing but phoney socialism in this country so long as the progress made in agriculture, housing and provision of protected supply of drinking water continues to be as poor as it has been in the last decade and a half. Even today there are many places in India where people have to spend several hours of labour to get a day's supply of drinking water.

BROAD CONTOURS OF FOURTH PLAN

THE third Plan, now in its fourth year, is in an advanced stage of execution, though the pace of progress towards the realisation of most of its targets is disappointing. Within eighteen months from now, the next Five-year Plan will have to be finalised after elaborate studies and discussions at different levels. Although the Perspective Planning Division has brought its studies to the point where the Planning Commission could begin discussions and take tentative decisions, there is still some way to go before the Commission and the National Development Council can come to grips with the issues pertaining to the fourth Plan's priorities, investment pattern and targets. As of today, there are unresolved controversies as to whether the next Plan should be more impressively investment-oriented or more significantly consumption-oriented than the third Plan, whether it should continue to have a "basic or heavy industry bias" for bringing about a structural change in the economy in the direction of self-sustained growth, whether a "national minimum standard of consumption" should be woven into the investment programmes, and so on. But, whatever final shape the fourth Plan may take, the broad contours of investment and growth envisaged are currently discernible, now that the Planning Commission is reported to have accepted the Perspective Planning Division's paper as a "tentative basis" for the formulation of the Plan framework by October or November next.

The magnitude of aggregate outlay (including current outlay) under the fourth Plan, adopted as a "working basis" at the meeting of the Planning Commission on the 10th instant, is Rs. 20,000 crores. This represents the average of a minimum limit of Rs. 18,000 crores and a maximum of Rs. 22,000 crores, and compares with the revised aggregate outlay (including current outlay) of about Rs. 12,000 crores under the third Plan. It will be recalled, incidentally, that the projections laid down in the second Plan for the future plans had envisaged an aggregate outlay of about Rs. 11,000 crores under the third Plan and Rs. 16,500 crores under the fourth. But these estimates were in terms of 1952-53 prices, and the subsequently proposed third Plan outlay of about Rs. 12,000 crores in terms of 1960-61 prices corresponded, more or less, to the earlier projection of about Rs. 11,000 crores for that Plan. Since prices have gone up further over the third Plan period, the "working basis" figure of Rs. 20,000 crores for the fourth Plan may be broadly taken to represent only 50 per cent more than the aggregate third Plan outlay in terms of, say, 1963-64 or 1964-65 prices. If the current level of prices or the likely level of prices in the next two years are thus taken into account, it will be seen that the aggregate outlay of Rs. 20,000 crores proposed for the fourth Plan represents in *real* terms (that is, in terms of 1952-53 prices) something less than the originally projected outlay of about Rs. 16,500 crores for that Plan. Even an outlay of Rs. 20,000 crores, it may be noted further, would raise the rate of capital formation from about 14 per cent of national income in 1965-66 to barely 20 per cent in 1970-71. It would thus appear that the magnitude of investment presently envisaged for the next Plan is quite reasonable from the point of view of the country's needs. It would be the barest minimum required to ensure economic growth (that is, increase in real national income) at an average annual rate of seven per cent, as compared with the scheduled five per cent of the third Plan.

But the proposed size of the Plan may look somewhat ambitious in the context of the estimated availability of foreign exchange resources and the ability of the country to muster the required technical and managerial manpower. Since, according to the Union Finance

Some Physical Targets of Fourth Plan
(As proposed by the Perspective Planning Commission)

Items	Unit	1965-66 (Final)	1970-71 (Proposed)
Agriculture :			
Foodgrains	Mill. tonnes	90	122
Oilseeds	" "	7.5	11.2
Cotton	Mill. bales	6.3	9.8
Sugarcane	Mill. tonnes	11.0	13.2
Tea	Thousand tonnes	408	431
Jute	Mill. bales	6.2	7.3
Industry and Mining :			
Finished steel	Mill. tonnes	5.8	11.5
Alloy and special steel	Thousand tonnes	61	500
Aluminium	" "	68	240
Copper	" "	36	70
Nitrogenous fertiliser	" "	500	1,750
Phosphatic fertiliser	" "	200	750
Caustic Soda	" "	300	600
Soda ash	" "	340	700
Plastics	" "	75	270
Petroleum products	Mill. tonnes	13	27
Cement	" "	12	23
All machinery and equipment	Rs. crores	1,233	2,891
Coal	Mill. tonnes	89	140
Iron ore	" "	27	60
Crude oil	" "	6	12
Electricity	Thousand mill. Kwhrs.	39.6	79.2

Minister, Mr. T. T. Krishnamachari, himself, the foreign exchange resources would not be appreciably more than what are available for the third Plan, the ultimate size of the fourth Plan may have to be fixed at a level substantially below Rs. 20,000 crores, even assuming that the required rupee resources can be fully mobilised without aggregating the inflationary pressures generated by the second and third Plans and that the required manpower can be found; both the assumptions, it is needless to add, are big. Considering that the foreign exchange components of plans pertaining to railways, irrigation, power, industry, minerals and transport will be relatively less in the fourth Plan than in the third because of increased indigenous manufacture of machinery and equipment, it is just possible that, at the assumed level of foreign exchange availability (Rs. 3,200 crores, including what is needed for servicing debts), a Plan of the size of Rs. 18,000 crores may be decided upon by the planners. (Incidentally, it is noteworthy that the perspective planners themselves have visualised that only seven per cent of all investments will need to be financed by foreign aid by 1970-71, as compared with 23 per cent under the third Plan). Of course, even this possibility is not quite distinct at the moment, for the assumptions regarding the size and scope of the Plan, according to the Planning Commission's decision, are to be tested for their technological, financial and administrative feasibility by the various working groups in the next few months. If, as the Commission believes, certain tasks can be accomplished by technological improvements and greater administrative efficiency and certain action programmes, to be initiated in the last two years of the third Plan in the fields of industry, power, transport and manpower, can be depended upon to realise the fruits of present investment in the early years of the fourth Plan, it may not be too difficult to implement a Plan of the size of Rs. 18,000 crores for ensuring overall economic growth at six per cent, if not more, per annum. Given political stability and a more conscientious effort to achieve such economies in construction costs as are known to be possible and to restrain non-development expenditure (other than on defence), the physical targets appropriate to a Plan of that size can conceivably be more handsome than what would otherwise be possible.

Above all, the Commission's general approval for the idea that agriculture should command a relatively higher priority than under the third Plan points to the possibility of creating larger real resources for sustaining the fourth Plan. The goal of agricultural self-sufficiency in its broad sense, for which this journal has pleaded in its issue of 2nd May 1964 (*vide* third leading article entitled "Another P.L. 480 Deal?"), if attained as it well can be) would spell not only more food supplies but also more surpluses for export. Tea, sugar, vegetable oils and oilcakes, preserved fruits and vegetables, tanned leather and raw hides come to one's mind in this connection. It should be possible to increase the exports of leather and hides greatly, if a suitable policy for the progressive elimination of old and useless cattle is boldly adopted and implemented. This would make up for the expected stagnancy in the exports of jute manufactures, cotton textiles and coir goods. Only, for all this the will to succeed must be there. It need hardly be added that agricultural growth at the presently canvassed rate of about six per cent per annum would be quite a feasible proposition, if, besides ensuring adequate supplies of manures and fertilisers, improved seeds and implements, pesticides, pumpsets, and so on, all the agencies catering to agriculture can systematically mobilise the idle sections of rural manpower in activities connected with irrigation, soil conservation and intensive cultivation.

The only policy issue of a crucial nature that has been decided at the meeting of the Planning Commission on the 10th instant pertains to agriculture and rural development. This meeting has merely listed all other issues vital to the Plan framework—issues such as (1) the target for rate of growth, (2) the target for standard of living, (3) the relative emphasis on capital goods and consumer goods, (4) the distribution of Plan outlays between the Centre and the States, (5) the relative proportions of investments in the public and private sectors and (6) the distribution of investment according to major heads of development. Of these issues, the fifth one seems to have been briefly touched upon but not discussed at the meeting. The Perspective Planning Division has laid down, in this connection, that the increase in public sector investment in industries should be big enough to make it possible for that sector to own directly more than half the aggregate capital stock of the country by the end of the fifth Plan. Of course, it has visualised, at the same time, that the magnitude of investment in the private sector generally (covering agriculture, industry, mining, power, transport and housing) would be larger in absolute terms than under the third Plan.

But the figure of outlay in the private sector, it is clear, would depend upon the relative proportions finally decided upon for investments in the two sectors. Judging by the present accent that is being placed on a massive growth of the public sector, it may be that the private sector's share in aggregate investment will be less than the third Plan's 38 per cent. If that sector comes to have at least a 33⅓ per cent share, it will be something of an achievement in the circumstances. The only consolation here will be that this one-third share will represent, in absolute terms, about Rs. 6,000 crores out of a possible aggregate investment of Rs. 18,000 crores. It is to be hoped that at least half of that private-sector investment of Rs. 6,000 crores would be in the fields of industry (including small industry), mining, power and transport. There will be a great deal for the private sector to do in these four fields, if its investment goes up from about Rs. 1,500 crores in the third Plan to Rs. 3,000 crores in the fourth. What the private sector should hope and plan for is thus a doubling of its effort over the next Plan period.

MARKET GOSSIP

Synthetics Vs. Natural Raw Materials

BUT for the steady decline in the prices of primary products the world over in recent years, the problem of setting right the growing imbalance in world trade and payments gap would not have been so tough as it actually is. And much of the time now being wasted at the United Nations World Trade and Development Conference could have been saved and devoted for the discussion of several other important problems. Primary products, it is common knowledge, provide the very economic wherewithal to the vast multitude of developing countries which are struggling hard to improve the woefully low living standards of the masses. Out of the developing countries' aggregate annual export earnings of about Rs. 14,600 crores ($31,000 million), the share of primary products alone accounts for two-fifths, Rs. 5,830 crores ($12,250 million), to be precise. In view of such heavy dependence on primary products exports, even a slight fall in their prices will have a very disquieting impact on the economies of developing countries. Both these countries and the developed countries are, therefore, very anxious to find out the ways and means of ensuring stability in primary commodity markets which is an essential prerequisite for the success of long-term economic planning in developing countries.

One of the most important factors responsible for the steady decline in primary products in recent years is the increasing competition from synthetic materials and other substitutes. The commodities most hard hit are rubber, apparel fibres, hard fibres, some tropical oils and oilseeds, hides and skins. Also affected are tin, mica, timber, copper, shellac, fertiliser and turpentine. The commodities affected greatly, according to the finding of the Working Party set up by the First Committee of the U.N. Trade Conference, represent about 40 per cent of the developing countries' total exports of primary products (excluding petroleum) or exchange earnings of Rs. 2,380 crores ($5,000 million) annually. The Working Party, incidentally, consisted of eight developing countries and five developed countries (U.S., Sweden, the Netherlands, U.S.S.R. and Poland). The synthetic products are offering keen competition to primary commodities in three ways. In the first place, falling synthetic prices, due to technological advances, have reduced the demand for primary commodities and depressed their prices. Secondly, in some cases, the trend towards synthetics is irreversible, since they have proved to be more efficient than their natural counterparts. Examples cited are nylon, as opposed to abaca fishing nets, and detergents, instead of soaps made out of vegetable oil. Finally, the synthetics are marketed and standardised better than natural products, though the latter are holding their own in certain fields (for example, cotton in clothing, leather soles and tyres) and, in other fields, natural and synthetic materials complement each other (for example, blending of fibres).

Merely because the competition from synthetics is due largely to technological advance, it would be foolish, as the Working Party rightly says, to attempt to hold back such advance. What is wanted is the adoption of measures designed to improve the competitive position of natural materials, on the one side, and to discourage manufacture of uneconomic substitutes, on the other. The Working Party has itself indicated the nature of these measures which are grouped under three heads, namely, action by developed countries, action by developing countries and joint action. The details of the measures recommended are as follows:

Developed countries: The developed countries should slowly eliminate trade barriers hitting primary products and semi-processed goods competing with synthetics, abolish subsidies on synthetics and prohibit manufacturers from passing off synthetics as natural products.

Developing countries: The developing countries should (*a*) reduce production costs (for example, replace low-yielding rubber trees by high-yielding new stock); (*b*) introduce uniform standards; (*c*) conduct research into new processing methods (such as the production of drip-dry cotton); (*d*) promote their products by publicity campaigns; and (*e*) find new ones for finished products containing raw materials.

Joint action: Both developed and developing countries should (1) co-ordinate investment plans within the framework of detailed projections of demand and production; (2) consult on steps to avoid manufacture of synthetics competing with the developing countries' exports; (3) study factors influencing substitution; and (4) work to eliminate price fluctuations by commodity agreements and other measures. Special techniques for agreements on threatened commodities should include coverage of both the natural product and its substitute, long-term purchase contracts, and minimum consumption quotas for natural products. Since certain synthetic products are so technically superior that they would inevitably replace their natural counterparts, receipts from compensatory financing or other terms of international financial assistance should be channelled to schemes of structural adjustment of production patterns.

The approach of the Working Party to the issue of natural products *vs.* synthetics is a sensible one and the programme of action drawn up by it is quite realistic. Some difficulties may, of course, arise in the stage of implementing this programme. One such difficulty will, perhaps, be the opposition from the synthetics manufacturers, especially in the U.S., who have been spending collosal amounts on research in their products. But these difficulties are not insoluble. While the developed countries should take suitable measures to check any tendency on the part of synthetics producers to offer cut-throat competition to natural products, the developing countries themselves must spare no effort to improve the competitive position of their natural products *vis-a-vis* the synthetics in respect of price, quality and use.

U.S. Attitude To Trade With Red Bloc

The decision of the U.S. Government to hold high-level political and economic talks with Rumania, an East European country belonging to the Soviet bloc, is regarded in Washington and European capitals as potentially one of the most significant developments in the relations between the U.S. and Eastern Europe since the last World War. At a time when the U.S. is tightening its economic sanctions against another Communist country, namely, Cuba, and is intensifying its efforts to curb Western trade with that country, the move for establishing trade relations with Rumania might strike one as inexplicable. But it is not so. For, it is in keeping with the U.S. policy of helping Russian satellite countries to assert their independence of their overlord. And Rumania has qualified for U.S. help by its refusal to accept economic dictation from Soviet Russia and the U.S. Government is, therefore, anxious to encourage Rumania's independence by extending to that country a friendly hand. Rumania is believed to be interested in purchasing equipment for its chemical industry and, if the talks between the Rumanian and U.S. delegation, scheduled to be held on 18th May, become successful, a sizable expansion of U.S. trade with Eastern Europe could result.

Apart from the aforesaid consideration, the move seems to reflect the new mood of economic conciliation towards communist countries evident in the U.S., especially among the business community. The U.S. Chamber of Commerce, it may be noted here, recently endorsed, by an overwhelming majority, a resolution urging the Government to expand trade with the Soviet Union itself. Its argument was that the present restrictions did not hamper Russia's economic growth, but only resulted in diverting business from American to European suppliers. Whether the U.S. Government would seek to enlarge trade with Soviet Russia also remains to be seen, but there is no denying the fact that there is still considerable political opposition in America to any kind of "softness" towards Russia. It may be recalled here that there was great opposition to the U.S.-Russian wheat deal from certain quarters. But as far as the East European countries are concerned, the State Department itself seems to be inclined to be more flexible and pragmatic in its approach as is evident from the proposed trade talks with Rumania. There is already a significant body of opinion in the U.S., Britain and France which would welcome any move that will shift the centre of the cold war struggle from politics to economics. For, according to those who share this view, the democratic countries could exploit this development to their advantage. Could it be that the U.S. Administration, too, has been sold, to some extent, on this line of thinking?

Achieving Self-sufficiency In Oil

Oil and natural gas together constitute the most important source of energy in the highly industrialised countries. In the U.S., for instance, which has plentiful resources of coal, oil and natural gas meet about 73 per cent of that country's total energy requirements. In fact, these occupy such a key position in this mechanised age that their consumption is taken as a definite measure of the degree of mechanisation and industrialisation achieved in a country. It is no wonder, therefore, that the developing countries have ambitions to become self-sufficient in this important motive-power of industrial growth. But the realisation of this ambition is circumscribed by a country's natural endowment. In other words, a country can hope to become self-sufficient in these non-smoky fuels only to the extent it has its own resources of oil and natural gas. The location and discovery of such deposits constitute the exciting adventure of oil exploration.

India's experience in the quest for oil, its achievements and frustrations todate and future prospects for oil exploration and discovery were discussed by Mr. W. B. Metre, Technical Director of Oil India Ltd. and Senior Technical Adviser to the Burmah Oil Company, in his inaugural address to the Seminar on Peninsular Geology held at Hyderabad this week. Mr. Metre, who is one of the foremost geologists and oil experts in this country, pointed out that indigenous production of crude oil, which was less than half-a-million tonnes per annum about 12 years ago, was expected to rise to over six million tonnes per year, when Barauni and Koyali refineries go on full stream. This, together with the exploration work so far done, was indicative, according to Mr. Metre, of India's "spectacular progress in oil exploration and development during the last few years." However, consumption of oil and petroleum products in India was rising so fast that, if the country were to attain self-sufficiency, it is necessary, Mr. Metre stressed, to discover several more oilfields as quickly as possible. But the prospects for complete self-sufficiency were not bright, according to him. Nevertheless, the exploratory effort must continue, despite the various difficulties and recent disappointments. The presently available findings from the Ganges Valley threw considerable doubt as to whether marine sediments were ever deposited in the region. If future exploratory work confirms this doubt, the chances of attaining self-sufficiency in crude oil, Mr. Metre opined, must be regarded as "very poor."

In such an event, it would be necessary, he said, to concentrate future efforts on achieving maximum total recovery of oil from the existing oil fields by restricting the rate of production and thereby lengthening the producing life of the fields. The temptation is to produce oil at a much faster rate to recover as much oil as possible, in the shortest time, without considering the resultant adverse effects on total ultimate production. If this country's resources were sufficiently large, Mr. Metre averred, such uncontrolled rates of production could be justified on economic grounds. But, with limited resources, it was most essential, he maintained, that India should concentrate on restricting production rates to achieve a maximum ultimate recovery. This might involve very drastic reductions in the potential production targets and increases in imports of crude. However, timely action, together with early introduction of secondary methods of oil recovery, might save the country from the disappointment of rapidly declining production resulting from the efforts to produce oil at as high a rate as possible. In this connection, Mr. Metre cited the example of East Texas oilfields in the U.S., the largest in that country and one of the most prolific fields of the world. This example, according to him, is very instructive, since a large proportion of oil in India is likely to be produced under conditions similar to those in East Texas. The relevant observations of Mr. Metre are quoted below:

"This field was fairly well developed by 1933 and attained its maximum rate of production of 1·2 million barrels per day in April 1933. Even the average rate of production of about 568,000 barrels per day for 1933 is the highest for any year in the history of the field. Thus, though the total annual production in 1933 represented only 4 per cent of the presently known reserves, the rate of production during April 1933 was equivalent to an annual production of 8.5 per cent of the reserves. This resulted in heavy production of salt water along with the oil and a very considerable decrease in the productibility of the field. Despite immediate remedial measures, the damage to the field could not be rectified until injection of water was initiated in 1938. Though this field is now producing only about 2.5 per cent of the remaining recoverable reserves every year, it is able to sustain a production of over 100,000 barrels per day, equivalent to 50 per cent of our present demand in India.

"It is interesting to point out that, since 1934, the rate of annual production has been less than 4 per cent of the presently known recoverable reserves and that, if the production rate had been any higher, even for a short period, water might have completely bypassed the oil and that, within a few years, possibly before 1940, the rest of the recoverable oil might have been completely lost. On the other hand, as a result of restricted production and pressure maintenance by water flooding, it now seems possible to recover about 86 per cent of the oil originally in the reservoir. This is a great achievement for a country where, as a result of keen competition between various operators, wells were drilled and produced for quick profits resulting in very low oil recoveries of between 10 and 20 per cent only. It is also worth recording here that, when East Texas produced large quantities of oil in the early thirties, they brought down the price of crude from about 60 cents per barrel to 10 cents per barrel!

"There is no doubt that, as a result of uncontrolled drilling and wasteful production, East Texas contributed to the great depression of the thirties. Despite this early setback East Texas has now become a model field for an exceptionally high oil recovery. Some of our fields in India have an active water drive and the experience of the East Texas field gives some indication of what the most efficient rate of production should be."

Having regard to the experience in various fields, it seems desirable, in Mr. Metre's opinion, that, in order to obtain maximum economic recovery from any oil pool, the annual production should not normally exceed 5 per cent of the recoverable primary reserves. Since some reserve calculations are vitiated by the inclusion of possible secondary reserves, the annual output, he maintained, could be restricted to about 2 per cent or less of the total oil content within the pool. This figure could be increased to about 2½ per cent if there were to be a very strong natural water drive.

Imports of crude oil and petroleum products cost this country Rs. 100 crores per annum at present. There are two ways of reducing the foreign exchange drain on this account, Mr. Metre pointed out. First, by increasing the indigenous production by discovering more oilfields and, secondly, by increasing refining capacity in the country, so that imports of refined products could be reduced to an absolute minimum. A ton of imported crude costs, in terms of foreign exchange, about Rs. 65, whereas an equivalent quantity of major refined products cost on an average Rs. 115 per ton. The so-called minor products, including lubricants, are much more costly. Even if allowance were made for the cost of refining, etc., the net saving in processing the crude within the country would be of the order of Rs. 35 per ton, in addition to the great advantage of providing more employment and encouragement to subsidiary industries. If full advantage of this saving were to be taken, it was imperative, Mr. Metre emphasised, that the requirements of refining capacity should be calculated not only for the various plan periods

DELHI LETTER

ADVANCE ACTION ON FOURTH PLAN

REAPPRAISAL OF VALUES AND PRIORITIES

From Our Special Correspondent

NEW DELHI, 12*th May*

LESS of hot air on ambitions and more concerted action on getting things done: such an approach to the fourth Five-year Plan is an aspect on which the Prime Minister, the Finance Minister and the Deputy Chairman of the Planning Commission are understood to be agreed. If the more rational among the planning counsels prevail, the effort in framing the fourth Plan will not be to present any dramatic financial framework which would be aimed at acting as a plank for the next election manifesto of the Congress Party. A fourth Plan of Rs. 18,000 crores? Rs. 22,000 crores? Or the mean of the two figures, Rs. 20,000 crores? Well, there is greater realisation today in Delhi than ever before that growth rate percentages and broadcasting of massive figures alone are no longer enough to create enthusiasm and restore public confidence.

The perspective planning unit and other divisions of the Planning Commission have made projections on the next decade of development in various sectors. The big problem before the planners and the Prime Minister is not the adjustments of the figures to suit various interests but to find ways to make changes in the attitudes of the politicians in power, the Congress Party in general and others with a vested interest in planning. When the National Development Council meets in July, the State Chief Ministers will be pressed by the Centre and the Planning Commission for political and administrative commitments to remove the careless attitudes to development programmes that have emerged in the past few years.

At the meeting of the Planning Commission last Sunday, the Prime Minister took an active part in the deliberations. At one stage, it had been suggested that a small group in the Planning Commission should prepare a *Yojana Bhavan* consensus on the fourth Plan perspectives. Ultimately, it was decided that the full meeting of the Commission would directly consider the papers prepared by the Planning Commission's various divisions. The planning debate, taking place particularly among the Prime Minister, the Deputy Chairman of the Planning Commission and the Finance Minister, is not confined to the financial aspects of the fourth Plan. There is as much or greater emphasis on the methods to rectify the numerous errors which have become obvious during the last thirteen years of planned development.

There is an influential body of opinion in the Planning Commission and in the Union Cabinet which now tends to think that far too much consideration has been shown to State interests in the choice and administration of projects. The fourth Plan will be a test for the public sector projects which can no longer be justified purely on doctrinaire grounds. Planning experts agree with the Finance Minister that the public sector projects must be made profitable and efficient. This means for one thing, stepping on the toes of various State Moghuls. The Centre will be seeking greater control on the massive industrial projects in the execution of which some chaos has emerged because of the overlapping nature of the functions of the Centre and the States. For instance, the expansion of Rourkela and the improvement of its working have to be undertaken with the primary object of making the steel mills play their crucial central part in economic development rather than to pander to State political interests. In the debate on development planning, more experts within the Government are advocating a greater authoritarian attitude by the Centre in relation to States. For example, in the immediate future the Centre is being pressed by the circumstances of production lags to lay emphasis on big fertiliser projects rather than a project in every State, an idea popular some time ago. The fertiliser projects will have to be massive in size in the interests of economy and will now have to be based in coastal towns or other sites close to centres of the petroleum industry.

The foodgrain target of 100 million tonnes for 1965-66 has been given up and the best expectations at present are between 90 and 92 million metric tonnes by the end of the third Plan. The fourth Plan ambitions will be to raise foodgrain production to 120 million tonnes.

In developing power projects also, the Central planners wish to lay emphasis on two aspects. The extension of the grid system will reduce the power of the State Electricity Board chiefs. Power projects will be planned to give substantial returns; a profit of 10 per cent per annum is the figure freely mentioned. The pattern of States getting away with unprofitable electricity generation ventures will be strongly discouraged.

There is also the realisation among Central planners that the procedures for financial allocations and expenditure on projects need radical revision. The present practices in estimating and auditing contribute to considerable delay. If some States have not been able to spend money allocated to them under specific heads, it is because sufficient advance planning had not been undertaken to implement projects for which the money was sought. At the same time, there have been instances in which State leaders have gone ahead with projects without Central clearance, the Orissa developments being the most outstanding example. Mr. B. J. Patnaik's drive, no doubt, led to a good start with some of his adventurous projects, but such ventures by other politically headstrong State leaders would create chaotic conditions.

Profitability as the major yardstick to measure the success of public sector undertakings also means price increases in several intermediate products like steel for industrial use. The strategy being advocated is to permit price increases in many sectors while trying to hold down the price line in essential primary products like foodgrains.

The most liberal expectation of foreign aid for the fourth Plan from all external sources—"Western and Soviet bloc—is between Rs. 3,000 and Rs. 3,200 crores, which may yield a net of Rs. 400 crores of foreign aid annually during the years 1966 to 1971. Since the arrivals of capital goods from abroad will thus be not more than the peak hitherto, a substantial portion of the industrial growth will have to be based on indigenous production, whatever the whims of persons like Dr. K. L. Rao, Irrigation Minister, who recently let pass a careless remark about his hesitation in accepting the products of the Bhopal Heavy Electricals. In addition to the Bhopal factory, the Hardwar and Ramachandrapuram heavy electrical factories will be commissioned in time to supply some of the needs during the latter part of the fourth Plan. Since these factories cannot plan their production on their own, but only against specific orders, the Irrigation and Power Ministry, for example, will soon have to link some of its long-term planning with the production possibilities in the heavy electrical factories and place orders well ahead. This type of specific co-ordination of needs and indigenous production will have to be extended all round, to get the best results out of the plants being commissioned to make capital goods. Such co-ordination can be taken for granted, for example, in the Steel and Engineering Ministry for the Ranchi production for the Bokaro steel project. Also, Utkal Machinery's production planning to meet some Rourkela expansion needs is another example of a machinery factory being established to service a specific product demand.

An influential section of policy makers tends to make the heart of the fourth Plan not a matter of financial figures, but efficient use of resources—greater production and productivity. Such an endeavour would need strong leadership at the Centre and the tragedy of the present situation seems to be that the whimpering end of the Nehru era coincides with the period when decisive Central action is called for. The most talked of successor to Nehru again gives the impression of believing in too many political adjustments and compromises to give comfort to the advocates of greater Central direction.

WHO SAID "Figures don't Speak"?

Canara Bank's Deposits soared from Rs. 50.88 Crores as at the end of 1962 to Rs. 72.37 Crores at the end of 1963 - an impressive increase of 42.3% as against the 10% increase registered by the entire banking system.

The figures that trace the rising curve in the graph of Canara Bank's Deposits speak volumes and volumes - and indicate the rising public confidence in Canara Bank.

Now, who said "figures don't speak" ?

NATIONAL EXPANSION

EIGHTEEN years ago, NATIONAL RUBBER MANUFACTURERS LIMITED commenced operations. Today, NRM represents the Largest single unit in India, manufacturing industrial and mechanical rubber products.

EXPANSION PROGRAMME

Encouraged by its phenomenal growth, 1963 sales nearly 979% higher than 1951, NRM plans to launch another large-scale expansion programme. This will substantially increase the manufacturing capacity of :

- Cycle Tyres and Tubes
- Industrial V-Belts

NRM will also start the manufacture of new products—

- PVC Conveyor Belting
- Reclaimed Rubber

In addition, NRM sponsored the first wholly Indian-owned automobile tyre company in 1961. Widespread consumer acceptance has proved the quality of its products.

NRM's dynamic policy will help to meet the growing demands for its quality products in the home and overseas markets. Increased exports will bring in more foreign exchange.

INDO-U.S. TEXTILE PACT

PRACTICALLY every member of the U.S. delegations to the United Nations Conference on Trade and Development and the Kennedy Round negotiations has urged that the developed countries should provide ready access to the products of developing countries. Indeed, the U.S., in an important policy document circulated to the United Nations Conference early this month, specifically observed: "Barriers to trade, including tariffs, quantitative restrictions, internal taxes and other restraints on consumption, should be reduced or eliminated on a non-discriminatory basis." Strangely enough, within eight days after this document was unfolded, the U.S. Administration announced at Washington (on Friday the 8th inst.) the enforcement of a new agreement with India, limiting the annual imports of five major categories of mill-made fabrics (carded sheeting, print cloth shirting, carded twills, sateens and a catch-all category that embraces fabrics not elsewhere specified), to 37 million square yards and of towels to 1.325 million pieces; the agreement covers a period of two and a half years, that is, up to the end of September 1966. The quota fixed for the first six months of the agreement (1st April to 30th September 1964) is 18.5 million square yards, that is, half of the annual quota of 37.5 million square yards. The annual quota will be raised by 2½ per cent for the following twelve months and by 5 per cent on a cumulative basis for the final twelve months. In other words, the actual quantity of mill cloth that India is permitted to export to the U.S. will be 38.5 million yards during the year October 1964-September 1965 and about 40.32 million yards in the subsequent year. Simultaneously with this announcement, the U.S. Administration expressed concern over the growth in imports of certain types of cotton bedspreads and stated that, if the high rate of imports continued to persist, it might require further consultations on this category.

The curbs on imports of Indian cotton textiles into the U.S. are, of course, not new, for they were already there. About nine months after the G.A.T.T. Long-term Agreement on Cotton Textiles was concluded (in February 1962), it will be recalled, the U.S. invoked Article 3 of the Agreement relating to "disruption" of the importing country's mill industry and wanted to put restrictions on the imports of four specific categories of Indian textiles. A textile delegation from India held discussions with the U.S. Government authorities at Washington in January 1963. The discussions led to an agreement under which an annual overall quota of 30 million square yards was fixed for exports of Indian mill-made cloth of four specific categories. The agreement was to last until the end of March 1964. An official delegation visited Washington again in February last to negotiate a new agreement. It was as a result of these negotiations that the present agreement was reached.

It may be true that the new agreement is more favourable to India than the previous one, because India can sell to the U.S. a larger quantity of mill-made cloth (37 million square yards annually, as against the 30 million square yards covered by the previous agreement) and the number of categories has been increased from four to five, with a sub-ceiling under each category. But such increases as have been agreed to for the next 2½-year period are no more than what is required under the Geneva Textiles Agreement. Accordingly, the U.S. has conferred no special favour on India. What, however, needs to be noted here is that, basically, there is no justification for imposing a ceiling on imports of Indian cotton textiles into the U.S. The insistence of the American Administrations on such a ceiling is certainly inconsistent with the preamble of the Geneva Agreement which says:

> "All those participating countries that are still maintaining restrictions inconsistent with the G.A.T.T. provisions on cotton textile imports from other participating countries MUST relax those restrictions progressively each year with a view to eliminating them as soon as possible. No participating country shall introduce NEW import restrictions or INTENSIFY existing import restrictions on cotton textiles, insofar as this would be inconsistent with its obligations under the G.A.T.T."

No one questions the right of the U.S. Government to invoke the disruption clause of the Agreement, but what one regrets is that, in so doing, the U.S. Government is violating the spirit of the understanding reached at Geneva. The G.A.T.T. Agreement itself specifically lays down that the measures for restraining imports should be resorted to only sparingly. When the U.S. Government first decided to invoke the "disruption" clause, cloth exports from India to the U.S. were running at an annual rate of about 25 million yards. Would this much import of cloth into the U.S. really disrupt the domestic market which consumes over 11,000 million yards of cotton piecegoods annually? The U.S. does import every year large quantities of cotton cloth—the total imports in 1963 amounted to as much as 600 million yards—in order to make up for the shortfall in supplies, and Indian exports account for a small share of the total imports. It is a pity that, by pegging cotton cloth imports at a low level, the U.S. Government has overlooked the vital point that cotton textiles constitute one of the important items on which India depends greatly for earning foreign exchange so urgently needed to push through the defence and development programmes.

This journal is opposed in principle to the imposition of any ceiling on exports of Indian cotton textiles to the U.S., for such a ceiling virtually amounts to a non-tariff barrier for the abolition of which India and other developing countries have been pleading all along. We are aware that the U.S. Administration has been prompted to insist on import ceiling because of the considerable pressure exercised by the domestic textile industry which has raised the bogy of severe competition from imported textiles. But the ceiling, together with the one-price system for U.S. cotton that will be introduced with effect from 1st August next, under the Cooley Act has blighted the chances of India earning a substantial amount of dollars through cotton textile exports. Under the one-price system of cotton, it will be recalled, the American textile manufacturers will be given a subsidy to purchase raw cotton at the same price as foreign manufacturers in the world markets. As a result of this subsidy, there will be a reduction in the cost of producing several varieties of cloth in the U.S. Such a reduction will doubtless reduce to some extent the competitive capacity of Indian textiles in the U.S. market *vis-a-vis* the domestically produced goods. Consequently, the total quantity of mill cloth that the U.S. actually imports from India may be well below the ceiling now fixed. Mention may be made here of the position in respect of cloth exports from India to Britain. As against the annual ceiling of 195 million yards fixed under the Indo-U.K. textile pact, the actual exports were no more than 156 million yards in 1963 and 134 million yards in 1962. The Indian cotton textile industry will, therefore, have to improve its competitive capacity and strive hard to reach the ceilings at least. There is no point in fighting for under wider opportunities for our exports, if even those that are given are not fully availed of.

TAXES AND SAVINGS

The excessively high incidence of a multiplicity of direct taxes came in for vehement criticism in Mr. K. K. Birla's presidential address at the thirtieth annual general meeting of the Indian Chamber of Commerce held at Calcutta on the 8th inst. No Henry Ford or Nuffield could arise in Indian society, for, as he put it so pithily, "if a man earns, he has to pay a heavy income-tax; if he spends, he has to pay expenditure tax; if he saves, he has to pay a heavy wealth tax; if he gives away, there is a gift tax; and, if he dies leaving any savings, his successor has to pay a heavy estate duty." Mr. Birla's contention, in brief, was that the incentive to earn and save was being eroded by the expropriatory tax structure that had been erected "not so much from the point of view of augmenting the revenues of the State as for ideological objectives." The consequent atmosphere of despondency prevailing in the indigenous capital market, he continued, was hardly conducive to the flow of foreign capital into the country. In other words, the climate for domestic capital and the climate for foreign capital cannot be different. Hence his plea that the Government's fiscal policy should cease to be harsh and unsympathetic towards the growth of indigenous capital. If the situation does not change for the better, there is no possibility, in his view, of any new big enterprise coming into existence as a result of public support. On the other hand, it is becoming increasingly evident, as he said, that in future companies will have to depend for their support more and more on financial institutions dominated by the Government.

Mr. Birla was at a loss to understand why, after having assigned an important role to the private sector in the economic development of the country, the Government had evolved a tax structure that was not conducive to the realisation of that objective of private industrial growth, albeit within the framework of a mixed economy. Pointing to the experience of some West European countries where even Governments wedded to the ideology of socialism had encouraged private industries to grow and expand, he wondered what type of socialism was being envisaged for India. In any case, in view of the "honoured place" reserved for the private sector, Mr. Birla was emphatic on the point that more savings should be left in the hands of individuals and companies alike, so that they could subserve a higher level of private investment. He, therefore, advanced the following suggestions for remedying the fiscal situation:

(1) The tax structure should be simplified and rationalised. This could be done only by abolishing some of the tax measures and suitably amending the provisions of the others.

(2) There should be some amount of stability in the overall taxation pattern, for the lack of such stability at present has caused no little concern to Indian and foreign investors alike.

(3) The high incidence of the erstwhile Super Profits Tax on company profits should not be perpetuated through other measures having the same result.

(4) As the high rates of gift tax on very low gift amounts would affect even the affluent middle class families, they should be reduced.

(5) At least the first inheritors of an estate should be spared from a heavy estate duty, for no one will exert himself to raise an estate if he knows that it is going to be hardly of any use to his offspring.

(6) If the burden of taxation is reduced, tax evasion and corruption are bound to decline and there will be no need for the kind of police powers now vested in the income-tax officers.

These are by no means extravagant demands. Now that the Union Finance Minister, Mr. T. T. Krishnamachari, has introduced all the Kaldorian tax devices, it would only be fair to demand that the maximum rate of income-tax should also be reduced to 45 per cent in keeping with Mr. Kaldor's recommendation. As the total incidence of income-tax and other direct taxes taken together exceeds 100 per cent in the highest income slabs, there is a strong case for reducing at least the high maximum rate (presently more than 80 per cent) of income-tax on higher incomes. Such reduction, if effected, would not only minimise tax evasion but also leave more savings in the hands of upper income groups for investment. After all, these savings, which are going to be ultimately taxed in some form or other under the integrated tax structure, could be prudently allowed to play their beneficent part in *current* investment and capital formation. If industrial growth is thereby accelerated, it will be good for the Exchequer itself in terms of larger revenue. Merely to prevent the rich from becoming richer does not seem to be quite a sensible objective in the present underdeveloped state of the economy. Mr. Birla, therefore, did the right thing in turning the spotlight on the present tax structure in relation to the general climate for investment.

PIG-IRON PLANTS

The output of saleable pig-iron, that is, foundry-grade pig-iron, increased from about 975,000 tonnes in 1962 to 1,184,000 tonnes in 1963. While the improvement was thus of the order of about 200,000 tonnes, it was still thoroughly inadequate to meet the large uncovered demand of 1.5 million tonnes per annum from the foundry industry. So much so, the foundries had to work very much below their capacity last year. This situation will not be relieved to any substantial extent in the last two years of the current Plan, for the Planning Commission itself, in its mid-term appraisal, has forecast a likely production achievement of only 1.2 million tonnes of saleable pig-iron in 1965-66, as compared with the target of 1.5 million tonnes. Imports, too, are not going to be of much consequence, for the quantity to be imported in the current year largely from Russia will be no more than 150,000 tonnes.

The Planning Commission seems to have taken note of the fact that practically the entire additional target of 500,000 tonnes earmarked for production in the private sector will remain unfulfilled by the end of the Plan. It may be noted here that, of the four or five licensed units of 100,000 tons each, only two—the low-shaft furnace plant of the Industrial Development Corporation of Orissa and A.C.M.E.—have gone into production so far. The low-shaft furnace plant in Orissa, incidentally, produced about 20,000 tonnes and A.C.M.E. just under 10,000 tonnes in 1963. Two licences have also been revoked, for small-size pig-iron plants have not proved sufficiently attractive to entrepreneurs. According to the 1963-64 Report of the Department of Iron and Steel of the Union Ministry of Steel, Mines and Heavy Engineering, production of pig-iron in a small furnace, using coking coal, is not quite economic and that none of the direct reduction processes involving the use of non-metallurgical coal has appealed to some of the licensees.

Accordingly, the Government decided recently to sanction schemes for the production of pig-iron in the private sector up to a capacity of 300,000 tonnes per annum in each unit. In pursuance of this decision, a letter of intent has been issued to P. D. Chowgule and Co. (Bombay) for establishing a pig-iron plant of 200,000 tonnes at Ratnagiri in Maharashtra State. A licence to V. S. Dempo and Co. for a pig-iron capacity of 300,000 tonnes in Goa has also been just issued. The capacity of 100,000 tonnes licensed to Birla Gwalior Private Ltd. is proposed to be increased to 300,000 tonnes in terms of a letter of intent. Besides permitting the Mysore Iron and Steel Company at Bhadravati to expand its pig-iron production by 120,000 tonnes, the Government has licensed a capacity of 120,000 tonnes for the manufacture of sponge iron. One hopes that the rebate of 10 per cent in corporate income-tax (including super-tax) permitted for the iron industry under the Union Budget for 1964-65 will go some way towards attracting capital to this priority industry, in which the Government is anxious to lincense more plants of 300,000 tonnes capacity for meeting the projected demand of four million tonnes of pig-iron in 1970-71.

The Government's present accent on a medium capacity of 300,000 tonnes for a pig-iron plant has flowed from its recognition of the uneconomic character of low-shaft furnaces with capacities of 100,000 tonnes or less. But it is rather surprising that it has lately revived its interest in low-shaft furnaces on the ground that they have the additional advantage of being able to use lower grade fuels. It is presumably because of this changed attitude that the Government has invited an expert team from Japan to advise on the arrangements required for setting up, in collaboration with the Japanese, eight pig-iron plants, each with a capacity of 100,000 tonnes and involving a capital cost of Rs. 3 crores. The team is presently in India and its leader is reported to have claimed that Japan has developed advanced methods of production of pig-iron in small-capacity plants and that the proposed plants would be of the latest design. According to him, some of the plants would be in the private sector and some in the public sector. These would be located in Andhra Pradesh, Madras, Punjab, West Bengal and Goa. It is a happy augury for the pig-iron programme that the Government is seeking to secure Japanese assistance in the establishment of small pig-iron plants which they had all but given up as uneconomic propositions. Perhaps advanced Japanese techniques of iron production in low-shaft furnaces may be more successful than the ones known or adopted in India so far.

ENGINEERING ASSOCIATION ON BONUS

It is not often that employers express so unanimous an opposition to any issue of common interest to them as they have done in respect of the recommendations of the Bonus Commission. Both individually and collectively through their associations, employers have questioned the validity of the basic assumptions on which the Commission's bonus formula is based and its conceptual soundness, highlighting its grave implications for ploughing back of profits and industrial growth in general. To the chorus of protest and criticism of the Commission's main recommendations has now been added a rigorously logical and closely-argued memorandum submitted to the Government by the Engineering Association of India, Calcutta. The Association assails the Commission's recommendation that a minimum bonus must be payable irrespective of whether there is profit or not as unsound and points out that it contradicts its (the Commission's) own concept of bonus as workers' share in the "prosperity of their concern," because it is against the well-established law and practice of "no profit, no bonus." This does not mean that the Association endorses the Commission's concept of bonus as workers' share in the profit of their concern. For, according to it, the Commission's definition of bonus is based on the out-moded principle of profit-sharing which does not seek to link bonus to productivity or efficiency.

Endorsing the views expressed by Mr. N. Dandekar, in his note of dissent appended to the report of the Commission, the Association points out that the Commission's rejection of the claim for specific allowance for rehabilitation would indeed have very harsh effects on industries, as a large part of the machinery and equipment in different industries is obsolete and replacement costs are rising. The allowance properly made for normal depreciation, the Association submits, is not at all relevant for denying a specific allowance for rehabilitation. The Association also does not agree with the Commission's argument that a substantial portion, namely, 40 per cent, of the available surplus, not distributable as bonus, *plus* the retention of the full tax benefit of 60 per cent of the available surplus distributable," as bonus would adequately cover the rehabilitation needs of the industry. If the funds available for the improvement of the techniques of production, and for rehabilitation, replacements, etc., are dissipated by way of higher bonus to workers, it maintains, the progress of industry and the nation would be slowed down. This is especially true of engineering industry which earns foreign exchange for the country and which has tremendous potentialities to earn much more in future.

The Association has taken strong objection to the Commission's recommendation regarding return on capital. The seven per cent return on paid-up capital allowed as a prior charge in the Commission's bonus formula is absolutely unrealistic, the Association points out, as it does not take into account the trend in the capital market. As far back as in 1950, the Labour Appellate Tribunal had defined a "fair return on capital" as "such that the investing public would be attracted to the industry by a steady and progressive return on capital which the industry may be able to offer." This return was fixed at six per cent free of tax in 1950 which was equivalent to 8.57 per cent taxable. It is evident, therefore, the Association submits, that, by fixing the return on paid-up capital at seven per cent taxable which is equivalent to 4.9 per cent tax-free, the Commission had, in fact, reduced the rate of return from its 1950 level. This, the Association emphasises, cannot be expected to act as an incentive for saving and investment, the more so because, since 1950, not only have the borrowing rates gone up, but entrepreneurs have had to resort to private borrowing at as high a rate as 12 per cent owing to credit squeeze. Even Government securities, it is pointed out, yield about 4.5 per cent tax-free, while fixed deposits in banks get 5.0 per cent. Banks lend at 7.5 to 8.0 per cent, or even more, and the Reserve Bank itself charges 6.5 per cent in respect of its lendings to scheduled banks beyond their respective quota limits. The Association is, therefore, of the considered opinion that the return of seven per cent (or 4.9 per cent, tax-free) on paid-up capital employed, allowed by the Commission, is far too inadequate in the light of the present market conditions. Similarly, the return of four per cent recommended by the Commission on reserves used as working capital is also inadequate. In fact, it is less than the return of four per cent allowed under the Full Bench Bonus Formula in 1950 because, while the latter is tax-free, the former is not. If this difference were to be taken into account, the return allowed under Full Bench Formula would work out to 5.7 per cent, as compared with 4.0 per cent recommended by the Commission. In the Association's opinion, a return of 10 per cent on paid-up capital and 8.0 per cent on reserves used as working capital is essential to achieve a faster rate of growth of industry in the country.

In order to demonstrate the impact of the Bonus Commission's formula on the finances of companies, the Association has applied the formula to the hypothetical case of a company which might be considered doing reasonably well. It has found from the calculations that, in spite of making a gross profit of Rs. 40 lakhs,

FINANCIAL STABILITY
IN A
5%
DEPOSIT ACCOUNT

Your money earns the maximum safe and sure rate of 5% when you place it in a Deposit Account with LOMBARD BANKING Limited. No U.K. Income Tax will be deducted; your money is completely unaffected by changing economic conditions, and withdrawals are easy to make—subject only to the terms you arrange.

To earn 5% per annum, the minimum initial deposit is £100, and the minimum period of deposit and notice of withdrawal is six months. Your deposit with Lombard Banking Limited is supported by paid-up capital and reserves in excess of £12,000,000.

Write now to the General Manager for further details, and your copy of "Deposit Account" Booklet No. A091.

subject to tax, depreciation and development rebate, the Company would not be left, after the payment of bonus worked out according to the Commission's formula, with any funds worth the name for ploughing back. If this is going to be the position in the case of a company earning profit at the rate over 40 per cent on capital and reserves, it can be safely assumed, the Association maintains, that in the large majority of cases, the situation would be worse.

It is obvious from the foregoing summary of the Association's submission that the Commission's formula is not entirely based on an objective assessment of the long-term needs of industry. Nor has it taken into account the broader economic objective of achieving a faster rate of development. In view of the unanimity of opinion among employers of the grave effects of the formula on the finances of companies, a closer examination of the question is called for before the Government takes a decision on the report. That the Government may not come to any hasty decision is a reasonable inference, for the Union Labour Minister has just referred to the "far-reaching effects, financial and other," of the Commission's recommendations.

"KENNEDY ROUND"

The outlook for the "Kennedy Round" of tariff negotiations, which began at Geneva on Monday last week after a year of preliminary talks, appears to be less uncertain than before, at any rate for the time being, thanks to the broad understanding reached on the guidelines for talks. On the very opening day of the Kennedy Round, there arose a crisis following wide disagreement among most of the delegates over the elements of a negotiating plan as drawn up by the G.A.T.T. Trade Negotiations Committee. France, along with the other members of the European Economic Community (West Germany, Italy, Belgium, the Netherlands and Luxemburg), firmly rejected the basic aim of cutting world tariff levels by a straight 50 per cent. Such a cut, it argued, would place the European industry at a disadvantage *vis-a-vis* its counterpart in the U.S., since, in actual effect, a fifty per cent cut in European tariffs would bring them to much lower levels than those in the U.S. For, in the opinion of France, the extreme disparities that already existed between the European and U.S. tariffs meant a departure from equality of sacrifice. France, therefore, insisted that the 50 per cent cut objective should be left open and that it should merely be a working hypothesis. France also insisted on a definite deadline of 10th September for countries to file lists of exemptions they want from tariff cuts. Further, it insisted that a solution of the agricultural question, along with the problems of disparities, exceptions and non-tariff barriers, should be a condition for eventual acceptance of the 50 per cent cut.

The U.S., Britain, and some other countries were in no mood to accept these points of view. And it looked as though the disagreement might hold up the real start of the Kennedy Round. Happily, however, a compromise basis for negotiations was approved by all the countries. The points actually agreed to cover the following:

The 50 per cent cut should be adopted as a working hypothesis only; even this is linked to solutions of the other outstanding problems.

There should be a bare minimum of exceptions, subject to "confrontation and justification."

The negotiations "shall provide for acceptable conditions of access to world markets for agricultural products in furtherance of a significant development and expansion of world trade in such products."

Non-tariff barriers are equally important and necessary procedures for tackling them should also be drawn up at an early date.

Australia, Canada, New Zealand and South Africa belong to a special category of countries which cannot be expected to make equal linear tariff cuts so as to provide "an adequate balance of advantages."

Greece and Portugal will later submit proposals for their participation in the Kennedy Round, and a way will be sought for Poland to do the same.

Every effort shall be made to reduce the barriers to exports of less developed countries; no reciprocity should be demanded of them.

The last point is of special significance to India which has been greatly handicapped in its export effort due to the prevalence of several kinds of barriers in the importing developed countries. It is, therefore, gratifying to find that the report adopted by the G.A.T.T. Trade Negotiations Committee has recognised the need for effecting tariff cuts deeper than 50 per cent or even the complete elimination of tariffs on products of special interest to developing countries and for removing all non-tariff barriers. As tariffs are reduced under the Kennedy Round, the margin of preference India and other Commonwealth countries enjoy will also be reduced to the benefit of other countries. India has, therefore, pleaded that, where such a reduction takes place, there should be negotiations in the appropriate sub-committee between the contracting parties that stand to gain and the losing ones. This is quite a reasonable plea and it would, it is to be hoped, find ready acceptance among the developed countries.

LABOUR IN PUBLIC SECTOR

Implicit in the statement of Mr. D. Sanjivayya, Union Minister for Labour and Employment, made this week at New Delhi, to the effect that the best way to ensure industrial peace in the public sector undertakings belonging to the Centre is for the Government of India itself to take over labour matters, is the admission that the State Governments, which are now charged with this responsibility, have failed to discharge it to the satisfaction of the Union Ministry of Labour. That the record of public sector undertakings, be they of the Centre or the States, is not enviable, is a well-known fact. And it is only natural that the Union Labour Ministry, as the labour expert of the Government of India, is anxious to see that industrial peace is maintained, at least in undertakings which belong to the Central Government. As of now, it is the duty of the State Governments to ensure the maintenance of industrial peace in undertakings situated in their respective territorial jurisdiction. The Union Ministry of Labour has only such control and influence as it can enforce through the State Labour Minister and Labour Department. In other words, the control is only indirect. Mr. Sanjivayya's proposal is to vest this control in the Centre, or rather in the Union Labour Ministry, to be precise. This solution, of course, would not present any constitutional difficulty, because trade unions and industrial and labour disputes are in the Concurrent List. Several State Governments are, however, opposed to the move. Nevertheless, Mr. Sanjivayya proposes to take up the issue with them again.

The present situation is that the Union Labour Ministry has to plead with the employing Ministries concerned to make them accept the principles and practices evolved by it in consultation with representatives of trade unions and employers. And, thereafter, it has to depend upon the State Governments to see that these are implemented. In effect its position is nothing more than that of an adviser even in respect of public undertakings belonging to the Centre. Its control over labour matters in such undertakings is circumscribed by the extent to which it can influence the State Governments concerned. There is, of course, nothing wrong in this arrangement, as long as it serves the purpose of keeping industrial peace. But there are frequent instances of breach of industrial peace in public sector undertakings of which the strike in the Heavy Electrical plant at Bhopal is the most recent. Evidently, the Union Labour Ministry feels that it can handle the matter more tactfully and efficiently than the State Governments. There is no reason to question this view. For the Centre has certainly a better understanding of the spirit and significance of the labour policy evolved by it. But this does not, *ipso facto*, mean that it can handle practical problems of labour in public sector undertakings better. But, as some of the States have not been particularly successful in the matter, Mr. Sanjivayya's solution is well worth a trial. If it proves successful, it can be extended to comparable undertakings in the private sector, too.

He is ready to take off on a business-cum-pleasure trip. He is care-free as he is taking with him the State Bank of India's Traveller's Cheques which are encashable anywhere, anytime.

When you travel next, for business or pleasure, please remember to carry with you the State Bank of India's Traveller's Cheques which can be cashed at :—

PREJUDICE AND POLITICS IN THE LIQUIDITY MIX

By Questor

WHEN the International Monetary Fund meets in Tokyo this autumn, it will have to consider two reports about the improvement of the monetary system established at Bretton Woods twenty years ago. One will have been prepared by officials of the Fund itself, the other by the Finance Ministers of the ten industrialised countries who make up the Paris Club. Changes in the international monetary system are a matter of political rather than purely technical decision, and it is the second report which the reformers will reach for first.

All the evidence suggests that they will be disappointed. The experts, meeting regularly in Paris, have at last been forced to come to grips with the various plans which have been put forward from time to time for improving the present system. The extremes have been almost dismissed already as impracticable. The idea of moving over to a system of floating exchange rates, for example, is dismissed as a counsel of despair—a state we have not yet reached. It would give everyone economic sovereignty, but it would tend, since exchange rates float up and down but wage rates move steadily upwards, to produce universal inflation.

It would also tend to produce sharp and arbitrary movements in exchange rates through capital movements which would distort the pattern of trade and which Governments would, therefore, be tempted to offset. Once Governments assumed the freedom both to intervene regularly in the markets and to move the exchange rate at discretion, the way would be free for the competitive and destructive anarchy which followed the collapse of the gold standard between the wars.

A rise in the price of gold has also been dismissed, though less unanimously. A number of European bankers dislike the present gold-exchange standard on theoretical grounds and would like to get back to the automatism of the gold standard; they admit that this is only possible through an increase in the price of gold —which would have to be steep (probably a doubling), if speculators were not immediately to begin counting on another increase within the immediate future.

The French Government, for political reasons, tends to support these extremists. But the U.S. administration, for a mixture of motives, is prepared to use both its reserve and its diplomatic strength to keep the gold price pegged at its present level. And this, since its payments balance is improving and it could vastly increase its available reserves by dropping its obsolete note-backing tradition, is effectively an end of the matter. Most bankers are prepared in any case, politics apart, to agree that a doubling of the gold price would be extremely inequitable and inflationary.

Having dismissed these two extremes, the experts have got down to discussing more moderate plans for reform—in particular, the idea of making currencies apart from the dollar and the pound available for use as reserves. More particularly still, they have been discussing the latest variation on this theme composed by Mr. Edward Bernstein, which would create a new reserve unit, equal to a gold dollar and guaranteed in terms of it, but composed of the currencies of all the main industrialised countries in fixed, negotiated proportions.

This is a good idea in theory, if only the negotiators were all as anxious as Mr. Bernstein to find a generally acceptable solution to a difficult problem. But there is political pressure as well as financial dogmatism at work. The French have been pushing the Bernstein plan in a form which would not merely enable them to convert their dollar balances into reserve units but would ban the future accumulation of dollar reserves. This is generally unacceptable, not merely because it would impose a dangerous strain on the U.S. reserve of gold but because it would probably lead to an even more dangerous drop in the total supply of international liquidity.

The fact is that the members of the Committee of Ten are still talking a mixture of prejudice and politics and that their report is unlikely to be constructive. If it goes so far as to recommend a further increase in Fund quotas, for lack of anything else to agree upon, this may well be made conditional (like the last increase) on a transfer of power from the Fund in Washington to the Committee in Paris.

But it may be that the Fund itself will manage, while the politicians are arguing at cross-purposes, to suggest a way in which useful progress might be made. M. Schweitzer received a certain amount of unfavourable publicity when he succeeded Per Jacobsson as Managing Director, partly because he was a French official who expected to return to work in France, partly because he went out of his way, in the inevitable newspaper interviews, not to take the liquidity problem urgently. He has made very few public statements since taking office.

But now, in a speech delivered to the New York Chamber of Commerce, while ruling out the possibility of drastic change in the immediate future, he has called openly for an increase in Fund quotas. He has also agreed that provision will have to be made in the future for increasing world liquidity and called attention to studies being undertaken into more far-reaching innovations "such as the acceptance by the Fund of deposits and the introduction of investments at the initiative of the Fund."

The description is deliberately vague, and it would be wrong to suppose that the Fund officials will come out in Tokyo in support of any particular plan for reform. But it is now clear that they are thinking not only about minor improvements in the system but about various possibilities of major change centred on the Fund. It is even possible that their report, however muted in its recommendations for immediate improvement, may have more to interest the reformers than the politics-bound report of the Committee of Ten.

U.K.'S PLEA AT WORLD TRADE CONFERENCE

Addressing the first committee of the U.N. Trade and Development Conference at Geneva on the 5th inst., the British delegate, Mr. John Burgh, said that fair and reasonable access for all efficient producers to the markets of developed countries was essential for the developing countries. He added that the developing countries. He added that the developing countries should also enjoy a fair and reasonable share in the growth of those markets. Referring to French proposals that world markets should be arranged mainly, if not entirely, for the convenience of uneconomic high-cost producers, Mr. Burgh said: "We think it is an undesirable idea. It is no comfort for developing countries to see a highly organised world market on which they cannot sell their products, or to be told that they should concentrate on selling to each other."

Mr. Burgh also mentioned the need for stable, equitable and remunerative prices for commodities, but warned against the dangers of trying to raise these artificially. This, he said, might produce a fall in the actual receipts of developing countries. He went on to list four fundamental points which should be borne in mind in relation to price levels: (1) Knowledge that high prices would be maintained for a long period would stimulate search for substitue products. (2) The "inescapable economic fact" that increased prices to consumers would reduce demand. (3) Reduced demand artificially imposed on existing market trends would confront producing countries with a choice of either cutting back on production or holding and storing large stocks. (4) Holding up prices by the use of export quotas would penalise efficient and dynamic producing countries which could otherwise increase their exports and export earnings, and would also make things difficult for new producers.

(Concluded from next column)

is to be provided and from whom has yet to be formulated.

Perhaps the greatest hope for the world from these be-dulled Conferences—which lack all sense of urgency, though the developing countries have succeeded in shocking the T.A.D. Conference into some semblance of life while avoiding the risk of losing all by demanding too much—is that the industrialised countries are sitting down together concerned with ways and means of expanding their trade; and that they are also sitting down with the developing countries and aware of the problems of the latter. Speed of action cannot be expected, but, given patience and persistence, action will no doubt be taken which will result in lower tariffs, a reduction in the non-tariff barriers to trade, a promotion in the trade in agricultural products and the injection of some liquidity into the world's credit structure in the mutual interest of debtor and creditor nations.

LONDON LETTER

CONFERENCE WITHOUT INSPIRATION

KENNEDY ROUND GETTING PROLONGED

(From Our Own Correspondent)

LONDON, *9th May*

THE Swiss, for all their solid virtues, have never been regarded as a particularly inspired people and the choice of Geneva as the meeting place for the G.A.T.T. Conference—alongside the already sitting U.N. Trade and Development Conference—invited the risk that the spirit of inspiration would not attend. And so it is turning out. "Britain stands ready to negotiate a cut in tariffs across the Board of 50 per cent with the minimum of exceptions. . . ." declared Mr. Edward Heath, British President of the Board of Trade, on Monday. This was the most dramatic line in an otherwise dull address, ill-fitting the concept of the late President Kennedy aimed to cut across the slow negotiation of tariff cuts by slashing 50 per cent reductions. But, alas, Mr. Heath was not unique in making a dull speech; the spirit of dullness sat leadenly on the delegates.

It was an understatement by the British Minister to declare that, "as we all appreciate, one of the principal parties is confronted with its own special problems." He was referring to the Common Market (dominated in this matter by France) bothered about making commitments to third parties, while still in the process of formulating its own common policy as a community. But this is not all—nor is it the most important question. The trouble about this Kennedy Round, as it is called, is that there is a basic difference of philosophy between, say, the U.S. and the U.K., on the one hand, and the European Community, on the other. For the British and Americans remain obsessed with the idea of free trade—hence the principle of a 50 per cent cut right across the board "with the minimum of exceptions." But the French, in particular, believe in system and organisation—that is the planning of concessions, accompanying these where appropriate with commodity agreements.

The French approach is, therefore, not really in the "Kennedy" spirit, but, since they are at Geneva to negotiate, they insist that the whole of the proposals must be known before anything at all can even be considered. In short, they want to see all the "exceptions" on the table, before the bargaining begins.

Meanwhile, all parties are to look at the problem of "disparities," that is, the irregularities in the tariff structure between countries. The European Community are, of course, all for disparities, while the U.K. and the U.S. are all against them, so the Conference will have to sit a long time and be prepared for many compromises and the whittling away of its basic principle before the delegates can go home—some say it may last two years!

If Mr. Heath's optimism that "the elements necessary for a solution (of the problem of disparities) have started to emerge" seems far-fetched, he is on surer ground in foreseeing useful discussion on promoting international trade in agricultural products and in negotiating about the non-tariff barriers to trade. These two subjects are likely to form the greater part of the Conference's work for the next few months and they are both of particular interest to the developing countries. As for these latter countries, they must on the whole lean towards the "disparity" principle and an important concession has already been agreed in the preliminary talks a year ago that, while tariff reductions between the developed countries must —under the M.F.N. (most-favoured-nation) clause—be extended to the developing countries, these will not be required to reciprocate.

A further great proposal for the developing countries has come from the British delegation at the Trade and Development Conference. This is the recognition that adverse terms of trade suffered by a developing country call for greater aid and not for retrenchment in the development plans. This greater aid, under the British scheme, should be supplied by the International Development Association which is empowered to make loans beyond the currency of the sort of help the I.M.F. might give.

The International Development Association (an offshoot of the World Bank) will need funds to make the proposed loans and how much

(Continued in previous column)

BANKING TRENDS IN BUSY SEASON

RECORD EXPANSION OF CREDIT

WELCOMING the liberalisation of credit policy and describing the improved resources position of the banks at the beginning of the 1963-64 busy season, we had hinted in our second editorial (*Commerce*, 2nd November 1963) at the possibility of increased pressure of demand for bank credit in that season, in view of the expectations of increased production in both the agricultural and industrial sectors. An intense pressure of demand for bank credit was in fact felt during the busy season, straining the resources of the banking system to the utmost; bank credit expansion by Rs. 384 crores between November 1963 and April 1964 broke all records and was beyond all expectations, even of the Reserve Bank of India. Moreover, although industrial production in many branches did accelerate considerably, the expansion in bank credit could not be attributed entirely to this factor: whereas industrial production has been running at a level some 10 per cent higher than in the previous year, there has been an unprecedented rise of 28 per cent in bank credit from Rs. 1,451 crores at the lowest trough of the 1963 slack season to Rs. 1,851 crores at the peak of the busy season that has just ended.

Among the several other factors responsible for this marked expansion of bank credit, the most important are the higher prices of food and agricultural products and other industrial raw materials and the consequent increase in the cost of holding inventories of raw materials and manufactures. Besides, in a market of rising prices, there is always a tendency among manufacturers and traders to keep larger stocks. The Index Number of Wholesale Prices for all commodities was higher by 8 per cent at 140 on 18th April 1964, as against 130 a year ago. Food prices have risen during the same period by 11 per cent from 128 to 142, industrial raw materials by 8 per cent from 137 to 148 and manufactures by 2 per cent from 130 to 133. The higher prices of foodgrains and pulses were due to the shortfall in the production of the main cereals—that of rice and wheat alone is estimated to have been about 8 per cent less than last year. It was in fact in recognition of the lower wheat crops this year than in the year 1962-63 (which itself experienced a sizable decline over 1961-62) and of the substantially higher level of wheat prices that the regulatory provisions relating to advances against wheat in respect of both ceiling limits and minimum margins were reinstituted by the Reserve Bank of India about three weeks ago. The busy season is traditionally the period when prices of foodgrains tend to decline on account of the new crops that move into the market: but this year the prices have displayed a persistent tendency to rise, even during the busy season, with the result that the increase in bank advances against foodgrains during the first three months of the busy season (at Rs. 42 crores) was higher than that during the entire busy season 1962-63 (at Rs. 38 crores).

The stocks of principal raw materials and manufactures with the industries were also substantially higher during the current season, with the exception of sugar. In the case of sugar, although the production was higher than in the previous year, the offtake was also higher. Further, due to a sharp fall in the opening stocks with the industry, the stocks to be financed have been consistently lower throughout the season. Nevertheless, enquiries made in banking circles reveal that no funds are returning to the banks from either the sugar industry or trade even after the end of the busy season—partly because of the higher prices of sugar.

The increase in advances against industrial raw materials during the first three months of the 1963-64 busy season only for which period details are available at the time of writing was substantially higher at about three-fourths of that during the whole six months period of the previous busy season: the increase in the advances against manufactures was in fact higher than in the whole of the previous busy seasons. Table I summarises the changes in the scheduled banks' advances against the principal securities.

TABLE I

Scheduled Banks' Advances Classified According to Security

(In crores of rupees)

	Increases in advances in busy season		
Nature of security	1961-62 (Nov.-April) 6 months	1962-63 (Nov.-April) 6 months	1963-64 (Nov.-Jan.) 3 months
Food articles	+ 58	+ 38	+ 42
Industrial raw materials	+ 66	+ 102	+ 78
Manufactures and minerals	+ 21	+ 36	+ 46
Other securities	+ 31	+ 20	+ 40

Particular reference may be made here to the rise in steel, paper, coal and cement prices. The expectations that the Government would allow an increase in the prices of these commodities were so widespread and were allowed to grow (with official encouragement) for such a long period that many of the traders and speculators had ample opportunity to build up stocks of these commodities. A large number of overdraft accounts of these trades with many banks were fully utilised and a number of additional limits were sanctioned, in sharp contrast with 50 per cent or even lower turnover in these accounts in previous years.

Two other special factors were also responsible for adding to the seasonal pressure of demand for bank credit; first, several industries in Maharashtra and Gujarat had to pay arrears of dearness allowance at enhanced rates as a result of the revision in the cost of living index numbers with retrospective effect. Secondly, a large number of business houses were forced to rely on bank credit, because fears of severe confiscatory measures by the Government to unearth unaccounted money, which was believed to be circulating in considerable amounts, led to the withdrawal of this money. Such a withdrawal had a twofold effect, that of raising the demand for bank credit directly and that of raising prices of consumers durable goods, residential flats, houses, etc., as a result of flight of these funds into them.

The most important source for financing this huge expansion in bank credit as the accompanying Table II will show was the liquidation of investments in Government securities. Such disinvestment totalled Rs. 158 crores, as against only Rs. 98 crores in the last season. During the 1963 slack season, banks had built up their investment portfolio upto the all-time peak of Rs. 780 crores in the hope of obtaining some return for their surplus funds and preparing for the higher liquidity requirements scheduled to come into force from mid-September 1964. Most of these investments were switched into advances during the busy season. During the slack season that is now in the offing the banks will have a double task before them. They will have to rebuild up their investments portfolio by a considerable amount, so that the ratio of investments to deposits may conform to the enhanced liquidity specification. It may be noted here that, from mid-September next, the liquid assets of banks, including the 3 per cent cash reserves held with the Reserve Bank, will have to be a minimum of 28 per cent but, allowing for a cushion of working funds, the banks will have to maintain it at 33 per cent at least, if not higher still. Further, in order to allow for a fresh cushion of investments which could be turned into advances during the 1964-65 busy season, the banks' efforts to build up their investments in Government securities during the ensuing slack season will have to be much harder than is realised. It is expected that the second tranche of Central Government's borrowing programme this season will include a shortish medium-term loan (say, maturing in about five years' time), tailor-made to suit banks' requirements and that State loans will be in brisk demand, on account of their higher yield.

The next important source of resources for meeting the demand for bank advances during the busy season is deposits. The aggregate deposits of scheduled banks, exclusive of P.L. 480 and P.L. 665 funds, rose by Rs. 136 crores between November 1963 and April 1964, as against only Rs. 97.8 crores in the previous busy season. During the same period, cash and balances with Reserve Bank were run down by Rs. 7 crores.

Over the entire busy season, the borrowings of scheduled banks from the Reserve Bank of India rose by Rs. 62 crores. The peak was, however, reached on 6th March 1964, when such borrowings totalled more than Rs. 106 crores. Such a big draft on the borrowing quota marked the signal for a reversal of the liberal credit policy of the Reserve Bank of India which was initiated on the eve of the busy season. A Reserve Bank circular, dated 30th October 1963, increased the availability of Reserve Bank credit by raising the quotas and reducing the cost in order to enable the banks to maintain a reasonably liberal supply of credit for productive purposes. Within less than five months, however, the Reserve Bank seems to have felt that liberalisation had gone far enough, that the necessary stimulus to the economy had been imparted and that caution was now required in regard to further credit extension by banks, especially in the context of rising prices and the difficult supply situation of agricultural commodities. What precisely happened between 30th October 1963 and 11th March 1964 to change the mood of the Reserve Bank and to reverse the gear of credit policy is not known but can be inferred. It is probable that the Reserve Bank did not really subscribe to the Finance Minister's enthusiasm in October for liberalising bank credit and was able to convince him of the necessity for tight money and high rates of interest only by March through the logic of events. It is also probable that the Reserve Bank is unable to prevail upon the Government to apply the same sort of discipline on bank credit to Governments as is imposed by the credit squeeze on the private sector, with the result that the *extent* of squeeze on the latter has to be proportionately larger.

Details of the October liberalisation of bank credit and March squeeze were given in *Commerce* dated 2nd November 1963 (page 734) and 14th March 1964 (page 399), respectively. Basically, the effect of the latest change on the availability of credit was to reduce the total normal borrowing quota from 150 per cent to 100 per cent of the total statutory reserves, half of which would be charged at the Bank rate and the balance at 6 per cent. Borrowings in excess of the quota would only be at the discretion of the Reserve Bank and would be charged at 6.5 per cent described as the penal rate. The effect of this change on the cost of central bank credit was to raise it by a small margin, particularly as a result of the reintroduction of the penal rate of interest on the discretionary tier of accommodation. The weighted average rate of scheduled banks' borrowings which was at 5.70 per cent at the peak of the 1962-63 busy season was hovering near 5 per cent in February 1964: it must have gone up by about ½ per cent during March-April 1964.

The bankers, of course, did not relish the reversal of credit policy in the midst of the busy season, for it was embarrassing for them to apply the squeeze on their customers at a time when they had already committed themselves. Many of them did not even relish the Reserve Bank's suggestion that they should re-examine the deposit interest rates as part of their efforts to mobilise deposits, with the result that carefully guarded deliberations are still going on behind tightly closed doors but no decision is in sight yet.

TABLE II

Seasonal Trends in the Business of Scheduled Banks

(In crores of rupees)

		Busy Season (November–April)			Slack Season (May–October)	
		1963-64	1962-63	1961-62	1963	1962
I.	Aggregate Deposits	+72.8	+39.1	+152.1	+156.7	+84.4
II.	Aggregate Deposits excluding P.L. 480 and P.L. 665 Funds	+136.4	+97.8	+162.6	+157.5	+90.1
III.	Borrowings from R.B.I.	+61.5	+22.0	+6.2	−29.0	−3.3
IV.	Cash position	−7.1	+3.5	−0.4	+26.6	−6.8
V.	Investments in Government securities	−157.9	−97.7	−25.0	+161.0	+111.9
VI.	Bank credit	+383.8	+203.9	+203.9	−121.9	−42.1
VII.	Highest/Lowest level touched by Bank credit	1,851.63	1,600.91	1,427.53	1,450.62	1,363.02
VIII.	Highest/Lowest credit ratio (excluding P.L. 480 and P.L. 665 Funds)	80%	82%	80%	65%	67%
IX.	Credit-Deposit Ratio at the end of the period (excluding P.L. 480 and P.L. 665 Funds)	80%	79%	78%	67%	72%

BANKING IN PAKISTAN

By Dr. Anwar Iqbal Qureshi

Economic Adviser to the Government of Pakistan

PAKISTAN has made considerable progress in various sectors of economy since its emergence as an independent State on 14th August 1947. An account of this progress has already been given in an earlier article published in *Commerce* dated 4th April 1964. In the present article it is intended to give a somewhat more detailed account of Pakistan's development in the field of banking. In a subsequent article the developments in the monetary field will be discussed separately.

The progress which Pakistan has made in developing the banking sector is specially remarkable as, in undivided India, there was only one Muslim scheduled bank, and it was generally believed that this was a field where the Muslims did not show much aptitude. Though one noticed a few Muslims as banking officers in the Imperial Bank of India and the Reserve Bank of India, and a few others in private banks, their number nevertheless remained insignificant. Even at the lower rung of the ladder, their existence was not felt.

In the circumstances, it becomes obvious that, in the areas which now constitute Pakistan, the banking field was monopolised by the British and the Indian (non-Muslim) banks.

In the unfortunate communal disturbances that soon followed in the wake of the partition of the country, the banking sector suffered very heavily. In the beginning of 1947, the total number of scheduled bank offices in the areas now comprising Pakistan were 631. At the end of that year, the number of branches dwindled to 481. The number continued to fall rapidly and, by June 1948, it had come down to 195. It may be further added that even of these depleted numbers many did not function properly due to shortage of trained staff and other operational difficulties.

It is obvious that this large-scale reduction in the number of banks and bank offices caused a serious blow to the economy of the country. The non-availability of trained personnel in the field of banking in Pakistan seriously handicapped the authorities to make amends. It is, therefore, a matter of very considerable satisfaction that, by the end of 1963, this gap was more than fulfilled. The number of scheduled banks, as at the end of 1963, stood at 36, with no less than 1,130 branches. The relevant details of the progress achieved in the field of commercial banking are given below :

End June	*Pakistani banks*	*Foreign banks*	*Total*
1948	23	172	195
1949	54	164	218
1950	81	121	202
1951	97	104	201
1952	113	99	212
1953	135	83	218
1954	160	86	246
1955	163	88	251
1956	177	84	261
1957	197	78	275
1958	232	75	307
1959	296	73	369
1960	358	72	430
1961	507	73	580
1962	639	74	713
1963	883	74	957
December 1963	..	..	1,130

It may be recalled here that, in one of the high level meetings of the Partition Council, it was decided that the Reserve Bank of India would continue to function as the central bank of the newly born Pakistan also until the end of September 1948, by which date Pakistan would take steps to set up its own central bank.

State Bank of Pakistan

In view of the virtual collapse of the commercial banking system in the country as mentioned above and in order to develop the banking structure as quickly as possible, it was necessary that Pakistan should start its own central bank earlier than it was agreed to at the time of Partition. This view found favour with the Government of India also. After mutual agreement, the State Bank of Pakistan was set up on 1st July 1948, that is two months earlier than stipulated in the agreement.

The State Bank of Pakistan is an autonomous organisation, the share capital of which is subscribed to the extent of 49 per cent by the public and 51 per cent by the Government. The paid-up share capital of the Bank is Rs. 3 crores and its reserve fund is Rs. 6.5 crores. The Bank is managed by an independent board of nine directors, of whom three are elected by the shareholders and six are nominated by the Government.

There is a restriction on the amount of dividend which the State Bank can give to its shareholders. The maximum is fixed at 6 per cent. The balance of the profits, after meeting necessary liabilities, reverts to the Government. In 1962-63, the Government received Rs. 5 crores from the State Bank as a part of the surplus profits. Its gross earnings were Rs. 10.68 crores and the net profit was Rs. 6.7 crores.

National Bank of Pakistan

The State Bank of Pakistan by its very nature, being the central bank of the country, is not expected or even allowed to perform activities which are the normal functions of commercial banking. In view of the collapse of the banking system in the earlier years of establishment of Pakistan and the tardy development of this sector, it was decided that the State should take active steps to fill in the gap and set up a banking institution. This resulted in the establishment of the National Bank of Pakistan, the details of which are given below:

The National Bank of Pakistan was established at the time of an economic crisis in November 1949, by a special Ordinance. It acts as the agent of the State Bank for transacting business in places where the State Bank has no branch office. The paid-up share capital of the Bank is Rs. 2.10 crores, of which 75 per cent has been subscribed by the public and 25 per cent by the Government. The Bank is managed by a Central Board of 12 Directors, headed by a President, and three regional boards located at Karachi, Lahore and Dacca.

The total deposits of the National Bank of Pakistan at the end of June 1963 exceeded Rs. 60 crores and it had 322 branch offices, both within and outside the country.

The original function of the Bank was to finance the jute and cotton trade but at present it is performing all types of banking business and is the biggest banking institution in the country.

With the establishment of the National Bank of Pakistan and opening of new commercial banks and resumption of activities by the older banks, especially the European banks, the short-term credit requirements were taken care of. The rapidly increasing tempo of commercial banking activity as reflected by increase in bank deposits and loans provided by the scheduled banks are given in a table below :

(*In crores of rupees*)

End of year	*Bank deposits*	*Bank credits*
1948	105.66	41.04
1949	109.19	44.45
1950	113.48	77.02
1951	147.19	91.91
1952	129.09	79.22
1953	148.93	78.14
1954	164.94	96.32
1955	184.23	116.17
1956	197.50	123.65
1957	218.04	126.86
1958	240.34	145.82
1959	283.63	161.98
1960	302.61	208.48
1961	338.51	272.47
1962	412.04	337.05
1963	510.97	416.10
End of March 1964	529.23	460.23

The areas that came to the share of Pakistan are largely frontier areas which were practically devoid of any large-scale industry. The British which ruled the country, for reasons best known to them, neglected the industrial development of these areas. The need for establishment of more industries was urgently felt. This required financing, as private capital was rather limited and shy. Moreover, what capital was available with the business community found favour in commercial trading where turnover is quick in the early days of comparatively less restrictions, turnover was large and net profits were on the high side, rather than in industrial ventures which required a long period of maturity.

Pakistan Industrial Finance Corporation

The Pakistan Industrial Finance Corporation was set up in early 1949 to meet the needs of the industrial sector, for medium- and long-term loans. During over 12 years of its operations ended June 1961, the accommodation provided by the Corporation to the industries amounted to over Rs. 27 crores. Although the Corporation's advances were distributed over a wide range of industries, the textile industry accounted for the bulk of the advances.

The Corporation, however, suffered from certain inherent weaknesses. It did not accept deposits, nor could it finance the establishment of new industries and grant loans and against prospective assets. Besides, it was unable to provide foreign exchange to any industrial project. The activities of the Corporation suffered a major setback during the late 'fifties, because of the restrictions imposed on the imports of capital goods and its inability to provide foreign exchange to its clients.

In spite of the various drawbacks, the Corporation continued to fulfil a very useful purpose and the total amount of its advances went on increasing. There was a very large rise in its activities during 1960-61, when it was entrusted with the responsibility of administering foreign credits on behalf of the Government.

An enquiry into the credit structure of the country by the Credit Enquiry Commission in 1959 revealed the inadequacy of the existing institutional arrangements for industrial finance, particularly in the field of long-term finance for the medium and small-scale industries.

Industrial Development Bank

Following the recommendations of this Commission, the Government of Pakistan promulgated an Ordinance on 29th July, 1961, establishing the Industrial Development Bank of Pakistan. In fact, the Bank is a reorganisation of the former P.I.F.C.O., but with enlarged functions. The Bank has a paid-up capital of Rs. three crores, divided into 300,000 fully paid-up shares of Rs. 100 each. Fifty-one per cent of the share capital has been subscribed by the Government and the rest by the public.

The Industrial Development Bank is primarily concerned with providing long-term credit to the medium and small-scale industries which its predecessors could not do. The present lending limit of the Bank is Rs. 10 lakhs in case of limited companies and Rs. 5 lakhs in the case of other concerns, except with the approval of the Government. This restriction does not apply to mining, jute, cotton, inland transport, and such other industries as are specified by the Government from time to time. The lending limit in the case of foreign exchange loans is at present Rs. 5 lakhs. The Bank is also engaged in administering several foreign credits on behalf of the Government. It is also negotiating directly with various international agencies for long-term credits.

The Industrial Development Bank finances the establishment of new industries as well as balancing and modernisation of existing units. The list of industries eligible for assistance has been extended to include road transport, film exhibitions, hotels, industrial trading estates and organisations engaged in testing and research. The development of the underdeveloped regions of the country will also be the responsibility of the Bank. For these areas, the Bank is prepared to give loans on more liberal terms. Also those sectors of the industry, including mining, which have faced difficulties owing to lack of credit, will receive particular attention.

P.I.C.I.C.

The Pakistan Industrial Credit and Investment Corporation (P.I.C.I.C.) was established in October 1957, to supplement the existing facilities for long- and medium-term credit to private industries. The actual operation of the Corporation started in November 1957. The Corporation has an authorised share capital of Rs. 15 crores of which Rs. four crores are paid-up. Forty per cent of the share capital is subscribed by private shareholders in the U.S.A., the U.K., Canada, Japan and West Germany and the I.F.C. and 60 per cent by the Pakistani private investors. The Corporation which is authorised to borrow upto three times its capital, reserves and Government advances, recently approached its borrowing limits, and the share capital was, therefore, raised by Rs. one crore to Rs. three crores in 1961.

The Corporation is authorised to provide long- and medium-term loans generally (7 to 12 years maturity) in foreign and local currency, in addition to direct equity participation and arranging local and external finance from private and institutional sources. It does not normally take direct part in the management of industries financed by it, but it may, in special circumstances, seek to appoint a director to represent its interest. From 1960 onwards, the Corporation started underwriting shares as a part of its programme to assist the development of the capital market. It has so far agreed with four

companies for underwriting shares of the nominal value of Rs. 151 lakhs.

P.I.C.I.C.'s financial resources are derived only partly from the paid-up capital. It has received two long-term loans, totalling Rs. 6 crores, from the Central Government, of which Rs. 5 crores have been drawn so far. These loans are subordinated to all its liabilities and the share capital and hence count as equity for all practical purposes. It has received several lines of credit in foreign currencies amounting to $115.40 million up to December 1963 from the World Bank (I.B.R.D.), U.S. Agency for International Development (A.I.D.) and some friendly countries as shown below :

	Million $
I.B.R.D.	49.20
U.S.A.	21.70
West Germany	25.00
Japan	12.00
France	8.00
U.K.	2.50
Total ..	118.40

Financing Agriculture

The main source of credit to agriculture before independence were the Hindu and Sikh moneylenders who operated all over the country and catered practically to all the credit requirements of the farmer though at a somewhat high cost. The vacuum left in the field by the mass migration of Hindu and Sikh moneylenders has, by and large, not yet been filled.

The other important sources were the co-operative credit societies which continued to provide credit, but limitations of space do not permit full coverage of these. But the role of *co-operative credits to agriculture is common* both to India and Pakistan. Here we may mention the emergence of two financial institutions to provide for long-term credit. An Agricultural Development Finance Corporation (A.D.F.C.) was established in 1957 and another bank called the Agricultural Bank of Pakistan (A.B.P.) was established in 1957. As a result of the recommendation of the Credit Enquiry Commission, the two institutions were merged on 18th February 1960 into one, called the Agricultural Development Bank.

Before this merger, both the A.D.F.C. and the A.B.P. were providing agricultural credit in areas allocated to them by the Government. The A.D.F.C. was functioning in half of the districts of both West and East Pakistan and the other half of the districts in the two provinces were under the jurisdiction of the A.B.P. Although both the organisations were providing the same kind of credit facilities, their policies and procedures differed in several important respects, since they were under different managements. Even the rates of interest charged by them were not uniform. As the functions of both the organisations were similar and both were *working with capital provided by the Govern*ment, it was felt desirable to merge them into one organisation, in order to have a uniform policy and procedure in the provision of credit facilities to agriculturists all over the country and also to economise overhead expenses.

In order to augment its resources, the Agricultural Development Bank is authorised to raise funds by borrowing and issuing and selling of bonds and debentures. During 1962-63, the Bank obtained a loan of Rs. 9.50 crores from the State Bank of Pakistan, inclusive of the loan of Rs. 5 crores brought forward from the previous year. The Bank also accepts deposits and maintains savings bank accounts. Total deposits of all kinds stood at Rs. 28.39 lakhs on 30th June 1963. There has been a steady increase in the loan operations and the progress made by the Bank in its loan operations is reflected in the figures given below :

(In lakhs of rupees)

Year	East Pakistan	West Pakistan	Total
1952-53	—	0,80	0,80
1953-54	1,91	6,96	8,87
1954-55	6.06	17,82	223,88
1955-56	12,90	27,70	40,60
1956-57	29,42	45,19	74,61
1957-58	66,60	81,46	1,48,06
1958-59	1,52,61	1,38,02	2,90,62
1959-60	3,43,39	3,85,74	7,29,13
1960-61	7,25,30	6,94,73	14,20,02
1961-62	11,30,74	11,63,85	22,94,59
1962-63	15,07,43	15,70,56	30,77,99
1963-64 (Upto December 1963)	16,82,31	17,36,71	34,19,02

A Board of Directors which controls and supervises the activities of the Bank is headed by the Chairman, all of whom are appointed by the Central Government. The composition of the Board is as follows :

(i) the Chairman; (ii) two officers serving under the Central Government, of whom one is a representative of the Ministry of Finance and the other of the Ministry of Agriculture; (iii) two officers of the Provincial Governments, one each from the Government of East and West Pakistan; (iv) two non-officials, one from East Pakistan and the other from West Pakistan.

The authorised share capital of the Agricultural Development Bank is Rs. 20 crores, out of which a sum of Rs. ten crores has been issued and made paid up. On 18th February, 1961, the paid-up share capital of the former Agricultural Development Finance Corporation was Rs. five crores, all subscribed by the Central Government and of the Agricultural Bank of Pakistan Rs. 3.25 crores of which a sum of Rs. 2.25 crores was subscribed by the Central Government and Rs. 50 lakhs each by the Governments, of West and East Pakistan. The merged organization, therefore started with a paid-up share capital of Rs. 8.25 crores. A sum of Rs. 1.75 crore was subscribed towards the share capital of the Bank during 1961-62. The paid-up share capital of the Bank has thus been *raised to Rs. 10 crores, subscribed by the Central* and Provincial Governments.

The construction of new houses was a relatively neglected affairs in the Indo-Pakistan sub-continent during the war years. The demand for housing facilities, on the other hand, continued to grow rapidly during this period on account of increasing population, war-time inflationary pressure and accelerated urbanisation. While rent control Acts adopted in various big cities provided relief to middle class urban dwellers, little incentive was left for new construction or even for proper maintenance.

On partition, the uprooting and immigration of millions of refugees intensified the housing problem. Not all the refugees could be settled on land and not all from rural areas were willing to go back to the traditional way of life. There were opportunities in the cities caused by the exodus of Hindu traders and middlemen which attracted fresh immigrants from the villages. Moreover, Muslims from all the big cities of India flocked to the new urban centres in Pakistan. The process of economic development and industrialisation inevitably leads to urbanisation. In Pakistan, the rate of progress was accelerated sharply in the decade following independence.

Government spent huge sums of money on the development of waste lands adjoining the cities and towns in West Pakistan and East Pakistan, where the influx of refugees was the largest, i.e., Karachi, Lahore, Lyallpur, Hyderabad, Multan, Sialkot, Sargodha, Rawalpindi, Dacca and Chittagong and, though every effort was made by the Government to tackle the problem of housing shortage by building refugee colonies and satellite towns out of budgetary resources, it was felt that the problem could not be solved unless adequate steps were taken to encourage private construction activity. Finance constituted a major obstacle to the expansion of private construction since the existing agencies and institutions were not providing finance for house construction.

House Building Finance Corporation

In order to relieve the shortage of housing accommodation and for providing financial assistance in the shape of long-term loans to persons intending to construct houses in urban areas of the country, Government set up a House Building Finance Corporation under an Act known as the House Building Finance Corporation Act, 1952 (Act No. XXIV of 1952). The Act came into force on 10th November 1952, and the Corporation started functioning with a small staff from that date.

The first Board of Directors was formed by the Central Government in February 1953. The Corporation started granting loans in May 1953. Subject to such direction on matters of policy as might be given by the Central Government, the general direction and administration of the Corporation and its affairs are vested in a duly constitued Board of Directors which exercises all powers and performs all acts which are required to be done by the Corporation Act. The Corporation is to act on commercial considerations subject to such directions as may be given by the Central Government from time to time.

COTTON GOODS IMPORTS SUBJECTED TO SPECIFIC LICENSING

COTTON BOARD'S NEW REHABILITATION PLAN

From Our Special Correspondent

MANCHESTER, 5th May

MANCHESTER LETTER

A CHANGE in procedure, but not in policy, was how the President of the Board of Trade described the revised methods for dealing with future imports of cotton goods from countries outside what must now apparently be described as the "traditional" supplying areas. Traders in Lancashire and in other parts of Britain who have been so openly exposed to thrusts from abroad will not argue about the wording of the announcement provided the Government fulfils its pledge by not only watching the situation closely but by taking action as soon as possible.

This was the general reaction last week after it was officially stated that, from the beginning of May, all imports of cotton, textiles would be subject to specific licensing. In this way, any sudden build-up of supplies from a new source could be "nipped in the bud" before it reached sizable proportions.

In the past, far too many examples have arisen of countries with no previous record of exporting to Britain gaining a strong foothold in the local market before restraining action could be taken. One of the main criticisms made by the trade against the former system of allocating quotas has been that they have been calculated on performance rather than potential.

Halt to Build-up

Under the new scheme, it will be possible for the British Board of Trade to keep a watchful eye, in consultation with the Cotton Board, on the progress of negotiations with newcomers to the scene. Importers will have to notify the authorities of any forward contracts arranged and these can be halted at any given time if a build-up is clearly developing.

Instances have been provided within recent months by the activities of merchants who have secured rapidly growing supplies from such territories as Macao and Korea. Once a precedent has been established, it becomes relatively easy for other sources to be tapped; the new regulations, provided they are strictly enforced, will act as a strong safeguard against any extension of this process which has had such iniquitous results for Lancashire.

To the Cotton Board, it must be gratifying that the Government is now recognising the validity of Lancashire's case which has been presented with such persistence over the years. Those traders who have occasionally made contact with Board of Trade officials need not be reminded of the very lukewarm attitude formerly adopted towards the industry's plea for protection against this form of undermining which has undone much of the achievements of the scrapping programme of a few years ago.

The new system may well have loopholes; the local industry will still be negotiating from weakness rather than strength in its discussions with the major suppliers when the next round of talks begins. Nevertheless, the recognition of the key bases on which restrictions of imports are established is another move in the right direction.

Long-term Plan for Stability

Not content with achieving one of its immediate aims in getting Board of Trade support for further measures to contain imports from "non-traditional" supplying areas, the Cotton Board has put before the Government a long-term plan for the rehabilitation of the trade during the next five years. First to hear publicly of these new proposals were delegates at last week's conference of the United Textile Factory Workers' Association. Mr. Frank Rostron, Chairman of the Board, gave the union officials gathered at Morecambe an outline of a new forward programme, aimed at giving the industry more stability.

The chief, and most controversial, feature of this scheme suggests that a levy should be placed on imports of cotton goods obtained from low-wage countries. This system could be introduced when the existing inter-industry agreements expire at the end of next year. The revenue obtained from such a levy, the Board contends, should be transferred back to the developing countries to assist in their expansion.

Prices and Profits

The idea behind this apparently "take-with-one-hand-and-give-with-the-other" paradox is that it would induce exporters in the Commonwealth to raise their prices. Foreign producers, it is suggested, would rather earn more profits themselves than see the proceeds of a levy given back to their respective Governments. An alternative proposal is that a global quota should be established on imports from countries which are not covered by bilateral agreements with Britain, or by a tariff on Commonwealth goods, coupled with a five or ten-year ceiling on exports.

Among the points raised in the document, which, according to Mr. Rostron, has been favourably received by officials of the Board of Trade, are the necessity for a genuine long-term policy for the industry and for the introduction of a formula under which all developed countries would accept not less than 10 per cent and not more than 20 per cent of their home textile market supplies from low-cost developing countries.

Other aspects of the current situation to which the attention of the Government is drawn include the need for an urgent review of the Ottawa Agreement permitting duty-free entry of Commonwealth textiles into this country and the capital-intensive nature of Lancashire's/ modernised mills. Given time, it is pointed out, wages are bound to rise in the developing countries, eventually narrowing the competition gap which now exists between low-cost producing areas and Britain.

Confident Outlook

The final clause in an eight-point message to the Government expresses the basic confidence of the Cotton Board in Lancashire's ability to weather the storm and come out fighting. "The industry," it says, "is undoubtedly capable of re-establishing itself, as shown by its recent increase in capital expenditure, increased output per employee and increased machine utilisation."

At the same time, there must be full recognition of the continual nature of re-equipment and the maintenance of modernised methods. All the progressive firms in the industry have taken this lesson to heart and are determined to carry out extensive programmes of redevelopment. On this more solid and enduring structure the future of the trade will be built.

Since 1963's significant May Day when Courtaulds and I.C.I. disclosed their intention of taking an active part in developing a modern structure for textiles, and particularly linking production and marketing, almost any action taken by these two giant companies has had repercussions on the industry. Strengthening their position by absorbing a number of well-established firms and providing the wherewithall for others to continue the process has been only one aspect of the changing world in British textiles.

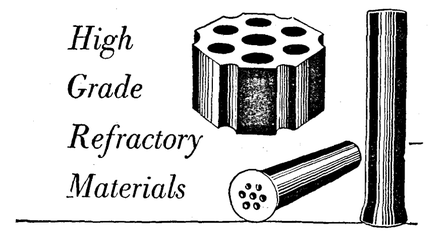
The decision to split their interests by divesting I.C.I.'s strong minority holding in Courtaulds is, needless to say, another highly important step in the chain of events. Courtaulds, no longer holding its half share in British Nylon Spinners, is to receive £10 million in five yearly payments to aid its own ventures into nylon production. I.C.I., with full control over British Nylon Spinners, will no longer have any stake in Courtaulds.

Such are the simple facts of the case; far more important from the angle of textile traders generally is the prospect of sharply intensified competition between two companies whose relations have never been entirely happy since I.C.I.'s abortive bid for their rivals two years ago. Indeed, very little time was wasted by Courtaulds in announcing their plans for substantial output of nylon 6. Expansion in the Spondon and Aintree factories to provide a 50-million-lb. production target by 1966 shows the shape of things to come. This aim compares with the object of British Nylon Spinners to raise output of nylon 66 to 225 million lbs. a year.

Textile "Federation"

In view of the events of last year, a statement from Mr. Joe Hyman, Chairman of Viyella International, setting out his plans and prospects, could scarcely go unnoticed. That it coincided with the Courtaulds-I.C.I. deal merely added to the importance of the general swirl of events. Describing his company as a "federation" of textile businesses, Mr. Hyman pointed out that the group now involved 90 individual manufacturing units, a multi-million pound turnover, and provided employment for towards 20,000 people. Every type of textile manufacture and process is now incorporated within the Viyella "Federation," he continued. In each section of activities, considerable streamlining and expansion could be anticipated over the next few years. The main outline of the group's future plans has been filled in, he added, but the Board's policy of including further first-class textile companies, which can be successfully and properly integrated, will continue.

The Viyella organisation has had the advantage of an exceedingly favourable Press since its general intentions were made known. Many outside observers are entirely "sold" on the idea of vertical integration, and welcome its translation from theory into practice. Viyella, of course, is not the only company so constructed, but the publicity concerning its activities has attracted widespread attention. Mr. Hyman himself is fully confident about its future, and describes his policy as "creating a new textile industry out of the best of the old."



Blast Furnace Bricks, Chequer Bricks, Tuyeres, Ladle Refractories, Glass Tank Blocks and Pot Mixtures; Burnite Air-setting Refractory Cements, Detric 'Detred' Tiles for industrial furnaces and Unifil Insulating Products for cold storage and industrial furnaces. RECORD PRODUCTION AND CONSUMPTION OF COTTON

HIGHER CARRYOVER INDICATED

WITH hardly four months to go for the current season ending 31st August 1964 to be over, it is now possible to have a clear picture of the crop position and consequently of the supply and demand position of cotton. Fortunately, the earlier expectation of good crop has materialised and present estimates place the season's output at 5.85 million bales of 400 lbs. or 180 kgs. each, as compared with 5.76 million bales harvested last season and the 1961-62 crop of only 4.7 million bales. In fact, this season's crop is the highest on record and falls short of the third Plan target for the year by only 334,000 bales. Not only is the crop better than last year's but arrivals have also been faster than in the previous season. Thus, by the end of March last, practically the whole of 1963-64 crop had been harvested and about 80 per cent had arrived at upcountry markets, as against 70 per cent by this time last year. Production estimates for the North and the Central belts show further increases, with record crops to their credit. For the West Coast and the South, however, the estimates have had to be lowered. The net result, according to a leading firm of cotton traders, namely, Messrs. Patels and Volkarts, is an increase in the overall crop estimate as at the end of March by 50,000 bales over the end-February figures. The firm's estimate of the current crop, as at the end of March, is as under, with the final estimates for the previous two seasons given alongside for purposes of comparison:

(In 1,000 bales of 400 lbs. or 180 kgs.)

Areas	1963-64	1962-63	1961-62
Northern area ..	1,472	1,032	1,042
Centra. belt	2,123	1,963	1,488
West Coast	1,394	1,871	1,388
Southern area ..	849	887	766
Elsewhere	12	12	16
Total ..	5,850	5,765	4,700

About eighty per cent of this season's crop, as already noted, had arrived at upcountry terminal markets by the end of March last. The region-wise breakdown of arrivals at the end of March, as compared with the corresponding figures for the two previous seasons, are:

(In 1,000 bales of 400 lbs. or 180 kgs.)

Areas	1963-64	1962-63	1961-62
Northern region ..	1,459	991	1,017
Central belt	2,058	1,698	1,411
West Coast area ..	783	1,198	755
Southern area ..	291	248	400
Elsewhere	8	5	5
Total ..	4,599	4,140	3,588

Now that a fairly precise idea of the size of the crop is available, it is now possible to attempt a trial balance-sheet of cotton for the current season on the basis of an esimate of the two other important elements in the supply and demand situation, namely, mill consumption and imports. The current season started with a carryover stock of 2.17 million bales, comprising 1.95 million bales of Indian and 212,000 bales of foreign cotton. Indigenous commercial production, according to the aforementioned estimate, would be 5.85 million bales. Assuming that imports of foreign cotton would be of the order of 875,000 bales, the supply and distribution of cotton during the season would roughly be as under:

(In '000 bales of 400 lbs./180 kgs. each)

	Indian	Foreign	Total
Carryover as on 1st Sept. 1963 ..	1,956	212	2,168
Commercial crop	5,850	..	5,850
Imports	..	875	875
Total supply	7,806	1,087	8,893
Mill consumption	5,400	750	6,150
Others	75	—	75
Exports	300	—	300
Carryover as on 31-8-'64	2,031	337	2,368
Total Distribution ..	7,806	1,087	8,893

One of the most striking features of the statistical picture of cotton presented above is the record mill consumption, which at 6.15 million bales, consisting of 5.4 million bales of Indian and 750,000 bales of foreign cotton, is perhaps, the highest on record. This high rate of consumption is reflected in the figures for the first six months of the current season. Thus, mill consumption of cotton during the six-month period, 1st September 1963 to February 1964, aggregated 3 million bales, comprising 2.72 million bales of Indian and 313,000 bales of foreign cotton, as against 2.27 million bales, comprising 2.2 million bales of Indian cotton and 545,000 bales of foreign cotton. The following table illustrates the position:

(In bales of '000 lbs.)

	Indian		Foreign		Total	
	1963-64	1962-63	1963-64	1962-63	1963-64	1962-63
1963						
September	447	384	54	79	501	463
October ..	441	351	53	93	494	444
November ..	450	369	55	110	505	479
December ..	472	371	54	104	526	475
1964						
January ..	473	388	51	90	524	478
February ..	436	386	46	69	482	455
Total for 6 months ..	2,719	2,249	313	545	3,032	2,794

It will be seen from the above table that consumption of foreign cotton during the current season is markedly less than that in the last season and consumption of Indian cotton is correspondingly higher. This is perhaps a reflection of the two good crops coming in succession which is not a common occurrence in the history of cotton growing in India. For this the country has to thank Dame Nature which has been kind to cotton in both the current and previous seasons.

COTTON TRADE JOURNAL

One of cotton's most important weapons in its fight against man-made fibres is a unique quality of fabrics made of cotton, namely, crispness and coolness. It is because of this quality that cotton is being increasingly blended with man-made fibres to produce apparel fabrics that are durable and crease-resistant. In spite of the inroads made by man-made fibres, cotton is still the king of apparel fibres, though "he now is a limited rather than an absolute monarch." The special quality of cotton assumes great significance now that competition between man-made and natural fabrics is getting sharper. The *Cotton Trade Journal* of Memphis, U.S.A., has, therefore, very appropriately devoted its 1963-64 International Edition to the qualities of cotton. (*The Cotton Trade Journal and Agricultural Reporter, International Edition 1963-64.* Pages: 224. Price: $3. Available in India from W. R. Stoessel and Co., 63, New Marine Lines, Bombay-1.) Called Cotton Quality Number, the publication, in the words of Mr. Seton Ross, President-Publisher, is dedicated to "the men who concentrate their talents on improving the quality of cotton—the seed breeder, who is constantly seeking an improved variety, the producer who applies sound production practices, the ginner who makes the most efficient use of his complex machinery to preserve the quality of cotton, the geneticist, the agronomist and the technologist who have endowed cotton with new qualities through the application of chemical finishes, thus opening up new end-uses for this natural fibre. Those are the trial-blazers for the cotton fibre of tomorrow."

The Number maintains the high production and editorial standards for which the *Cotton Trade Journal* is justly famous. The coverage is international in its sweep, encompassing almost all the major cotton producing and consuming centres in the free world. Of particular interest to Indian readers is the section on India wherein Dr. K. Sreenivasan, Director of the South India Textile Research Association, describes how research revitalises an ancient industry, namely, cotton textiles, and Mr. A. D. Pandit, President, Indian Central Cotton Committee, assesses the qualitative improvement of Indian cotton since the Partition. Particular mention may be made of an article on cotton consumption in India by Mr. Robert Evans, a former Executive Secretary of the International Cotton Advisory Committee, Washington, and at present Agricultural Officer of the American Consulate General, Bombay. The Number contains many other articles of immediate and perennial interest to cotton. It is, in fine, packed with profitable reading for all those interested in this king of fibres, as producer, trader, consumer or commentator.

MOVEMENT OF COTTON

The Western Railway has taken special steps to assist cotton trade in the movement of cotton during the current busy season, and has even undertaken to supply wagons immediately on demand, at the latest within 48 hours of registration of indents. A *Press note issued in this connection* says that it is also proposed to run block specials if adequate traffic is forthcoming from stations on the Bombay and Baroda divisions.

SOMEONE, SOMEWHERE HAS A SPECIAL ELECTRICAL PROBLEM

And AEI goes into action

The requirement: a microscope capable of magnification well over a million times. AEI's answer for the National Metallurgical Laboratory, Jamshedpur: the EM6. An electron microscope capable of direct magnification up to 120,000 times, the image it produces can be enlarged by photography well over a million times. The EM6 is being used to observe minute disorders in the arrangement of the atoms in a metal, an invaluable aid to metallurgists in their search for the Why and How of metal and alloy fatigue. Another highly sophisticated AEI instrument, the MS-3 Mass Spectrometer, is installed in the research laboratories of The Indian Association for The Cultivation of Science at Calcutta. It is used in the chemical and isotopic analysis of gases and volatile liquids; this institution is also equipped with AEI's RAYMAX-60 Diffraction Apparatus, used for quick accurate analyses of specimens. Precision AEI instruments like these are serving science the world over.

720 mile journey for oil

Three million tons of crude oil a year will soon be piped from the jungles of Assam to the refineries being built at Noonmati and Barauni. As a result, production of crude oil in Assam is expected to increase six times to three million tons per annum. The 720 mile pipeline makes 78 river crossings as it cuts through jungles, swamps and paddy fields. Radio signals giving temperatures, pressures and rates of flow along the pipeline will be received at a central headquarters. It will switch on by remote control the electrical motors operating valves and engine controls. Two independent communications systems will ensure absolute reliability. AEI is supplying part of it—a multi-channel carrier system and voice frequency telegraph equipment.

Ship to capture public imagination

'Canberra', the P. & O. Orient Lines' 45,000 ton passenger liner, is the newest and brightest addition to a proud fleet. Revolutionary in design, electricity has

helped in many ways to make the 'Canberra' a finer ship. Two of the world's largest marine propulsion motors, 42,500 shaft h.p. each, give her a swift, quiet 27½ knots. Electric drive allows the synchronising of propellers, so reducing vibration. AEI has supplied this equipment and also the auxiliary turbine generators for the ship's power supply system, more than 90 miles of cable, and the turbine-compressors used in the air-conditioning plant.

Imagine 7000 horses in Bombay's docks

Last year, nearly three thousand ships entered Bombay docks to load and unload over 117 lakh tons of cargo. Without the cranes that swing these vast amounts of merchandise between wharves and ships, by day and night, the docks would come to a standstill. The cranes must be completely dependable. And that largely depends on the quality of their electrical equipment. As dock traffic increases, so new cranes must be installed. Seventy-two have been commissioned; they are equipped with AEI motors and controlgear totalling 5868 h.p. AEI will soon provide yet another eighteen sets of motors (totalling 1,314 h.p.) and controlgear for new cranes in Bombay's Alexandra Docks.

40 years is a responsible age

In India, AEI's activities date back about forty years and include association on the steel works at Durgapur, the important heavy electrical project at Bhopal and the Bhakra dam project. AEI has been manufacturing electrical equipment in India for over twenty years and a wide range of products is now serving industry and the home.

We don't usually indulge in name-dropping, but . . .

In our case it's justified. AEI is no newcomer. Its origins go back *more than sixty years*. Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, Siemens Edison Swan, Henley's, Ferguson Pailin, Birlec and Hotpoint. Worldwide, AEI operates 60 factories and employs 100,000 people. It produces everything electrical from lilliputian transistors to the world's biggest turbine generators.

Principal Products

Steam and gas turbines and generators • Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • Power and telephone cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters • Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

BOOM DEVELOPING IN AIR TRAVEL

PROSPECTS FOR AIR-INDIA TOO BRIGHT

By Our Aviation Correspondent

PREDICTION is usually a profitless pursuit. On occasions, however, it brings its reward. Writing last September, of the marked improvement, then becoming apparent, in the fortunes of the American domestic airlines, this correspondent said: "The American air transport industry has always provided a reliable barometer for the traffic prospects of the world's airlines generally. ... We can expect to see over international routes everywhere—and particularly over trans-Atlantic routes—a very much brighter picture than has been the case for the past four years." (*Commerce*, 14th September 1963.)

That forecast, happily, has been more than fulfilled—it has been exceeded. As the 1964 tourist season opens, it is already abundantly clear that, on the Atlantic routes at least, the airlines are going to reap a bumper crop. Bookings, at this time of the year, have never been so heavy as they have been in recent weeks. A particularly welcome feature, moreover, is that traffic is flowing in both directions. Normally, during the months of April and May, the main flow is from west to east—from North America, that is to say, to Europe. This year, bookings are almost as heavy in the opposite direction.

There are a number of reasons for this unusual but profitable turn of events. Firstly—and, of course, of the greatest significance—are the really substantial fare reductions which the I.A.T.A. carriers have at last agreed. These came into force on 1st April. In addition—but not necessarily in this order of importance—there is the New York World Fair, the effects of an intensive "Visit the U.S.A." campaign, and the more favourable conditions for business on both sides of the Atlantic. So marked is the improvement in forward bookings that it is being suggested—perhaps a trifle optimistically—that mid-summer traffic will be double that of last year.

Of more immediate concern to India, however, are the effects which this unprecedented trans-Atlantic boom are likely to exert in other areas. European routes, of course, are bound to benefit. But, if in somewhat lesser degree, so are routes to South East Asia and the Far East. By the time that this is published, the Indian tourist season will be sufficiently advanced to assess the kind of bonus India will obtain. This, one firmly believes, will be of sizable proportions. Nor should we forget the Olympic Games of 1964. These are due to commence in Tokyo this autumn. Taking it by and large, the prospects for Air-India, one imagines, are extremely rosy.

A Drawback for India

One is reminded, however, in this context, that tourism cannot remain, indefinitely, a one-way street. As Air-India's inimitable Mr. Kooka pointed out in a recent address to the Travel Agents Association, the "P" form is probably the greatest single deterrent to travel that could be devised and one which serves very little useful purpose. Mr. Kooka had other sharp and pertinent criticisms to offer. Hotels, airports, automobiles, and prohibition, all received pungent attention. "There is no point," Mr. Kooka observed, "in our hoteliers asking what is wrong with our hotels. Since the book says that our sojourn on earth is but three score years and ten, frankly, we haven't time to answer." One joins Mr. Kooka in his belief that, if India is to boost her present meagre earnings from foreign tourists to the perfectly feasible target of Rs. 100 crores, much remains to be done and there is a long way to go.

But this is to digress—let us return to the general air transport picture. Even if the present boom sprang entirely from reduced trans-Atlantic fares, and such fortuitous circumstances as the World Fair, it would still be good. But there is much else besides. With an improved world climate in East-West relations—heaven forbid that some ugly crisis should nip this delicate blossom in the bud—there is every reason to hope that succeeding years may be even better. The airlines—pushed over the hump, possibly, by the United States Civil Aeronautics Board—gambled on lower fares. This has succeeded. Indeed, it has excelled their expectations.

As one suggested six months ago, the huge investment in subsonic jets has commenced to pay handsome dividends. "Whereas," one then wrote, "in the heyday of the piston liner, a break-even load factor of 55 per cent was the normal expectation, the big jets are breaking even at load factors considerably less than 50 per cent. And it is, of course, solely in the difference between the break-even and the actual load factor obtained that profit—or loss—is to be found." The profits for 1964 will, on present showing, be the highest the airlines have ever achieved. If fare reductions are a vital ingredient of this successful dish, need we doubt that the airlines will come back for a second helping?

There is another possible factor favourable to a prolonged era of prosperity. The latest information from the U.S.A. suggests that their supersonic aircraft (SST) project has suffered a setback. The indications are that none of the three designs submitted last January has been judged acceptable for immediate development—all, apparently, fail to meet the entire specification. This, of course, is occasion for considerable jubilation in the Anglo-French camp. The Concorde, it seems, is now virtually certain to gain a three-year lead over any possible rival. But that, for reasons which one will endeavour to show, need not concern us unduly.

A Delay That Needs No Regret

It will probably have been noted that, to date, far more airlines have signed up for the American SST than for the Concorde—despite the comparatively advanced stage which the latter has reached. In fact, as against 46 orders for the Concorde, some 83 delivery positions have been reserved—including three for Air-India—in the American queue. Now, whether or not many of these airlines will switch to the Concorde, seems immaterial. It must be sufficiently obvious that comparatively few are likely to secure deliveries before 1972-73. One suggests, in fact, that the first impact of the supersonic airliner on the air transport industry will now be comparatively gradual—and far less disturbing than would have been the case had both the Concorde and the American SST come almost simultaneously on to the market.

It is an ill wind that blows no one any good. This slowing up of the SST programme could be extremely beneficial both for the airlines and the aircraft industry. The airlines will now have a much longer period in which to wring the utmost benefit from subsonic jets. They will thus be financially better prepared to take the brunt of the SST programme when this is fully launched. Even in the American aircraft industry, one imagines, few tears will be shed on account of a temporary setback to the SST. Both Boeing and Douglas will now sell a great many more of their subsonic jets. The present traffic expansion alone is enough to open up the market. And what a magnificent start this will give to all the recently launched airliners—the VC-10, for example, the Trident, the Boeing 727, the BAC One Eleven, and the Douglas DC-9. Present circumstances could hardly be more propitious.

H.A.L.'S FIRST SUPERSONIC AIRCRAFT

Four HF-24s, India's first indigenously designed, developed and manufactured supersonic fighter aircraft, were formally handed over to the Indian Air Force by the Hindustan Aircraft Ltd. in Bangalore on the 10th inst. The ceremony also symbolised the completion of a big leap forward since the H.A.L., over a decade ago, designed the slow-speed piston-engined basic trainer—HT-2.

HF-24 is a frontline jet fighter incorporating modern aero-dynamic concepts and air defence weapon systems. Its adoption for squadron service by the Indian Air Force marks another important step in the country's effort to achieve self-sufficiency in the field of sophisticated air-defence equipment. The work on the HF-24, it will be recalled, was started at the H.A.L. in 1956 by a design team headed by Dr. Kurt Tank of West Germany.

SOME FREE BANKING SERVICES

FREE TRANSFERS OF FUNDS by means of Demand Drafts, Mail Transfers or Telegraphic Transfers upto Rs. 10,000/- per day per customer on any branch in India —**the payee need not be a customer;**

FREE COLLECTION FOR CUSTOMERS OF CHEQUES AND CLEAN DEMAND BILLS of any amount on any place in India where we have a branch;

FREE COLLECTION FOR CUSTOMERS OF CHEQUES AND CLEAN DEMAND BILLS of Rs. 5,000/- and over on places in India where we have no branch.

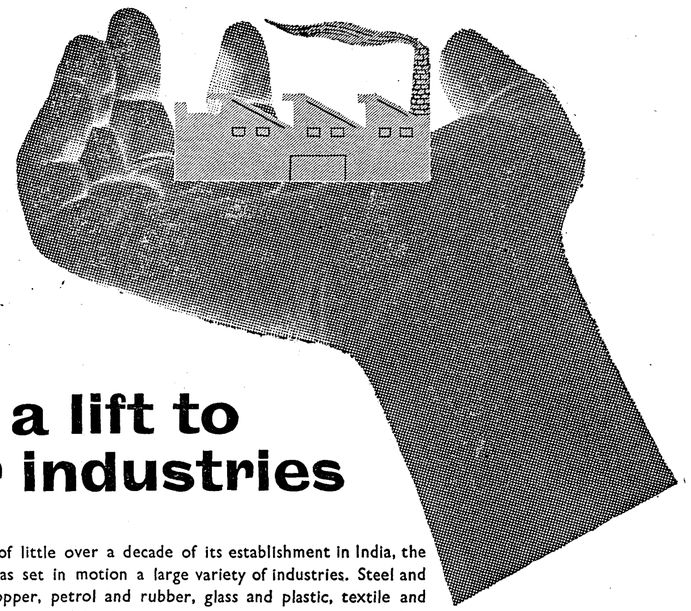
THE AUTOMOBILE INDUSTRY . . . .



gives a lift to other industries

Within the short span of little over a decade of its establishment in India, the Automobile Industry has set in motion a large variety of industries. Steel and aluminium, lead and copper, petrol and rubber, glass and plastic, textile and leather, electric components and intricate mechanical parts, to mention only a few, have all sprung to a new life to feed the basic automobile industry.

Today the indigenous content of a motor vehicle such as the Hindusthan Ambassador, for instance, comes to roughly 80%. Over one third of this indigenous content is made up of components produced by local ancillary industries. This represents some 3628 rupees or 24% of the "on the road" price of the car in Calcutta. Each car produced, therefore, directly helps a host of other industries.

Not that alone. In the case of cars manufactured by Hindustan Motors, the Government benefits to the extent of 5140 rupees from each car produced, in the form of direct and indirect taxes, thus helping to promote additional public works projects envisaged in the Five Year Plans.

In the U.S.A. where the annual production of motor vehicles has reached approximately 9 million cars and trucks, the automobile industry consumes 43% of the country's sheet steel production, 90% of petrol, 65% of natural rubber, 58.5% of upholstery leather, 48.6% of lead and 31.7% of zinc. As our automobile industry develops, its contribution to Indian industrial prosperity may well reach a corresponding scale.

CAR PRICE STRUCTURE :

Government taxes, direct and indirect :	33%
Raw materials, manufacturing and overhead expenses, salaries and wages, depreciation, profit etc. :	25%
Indigenous ancillary components :	24%
Imported components :	11%
Dealer's commission including distribution, service, advertising etc. :	7%

THE AUTOMOBILE INDUSTRY IS A KEY INDUSTRY

AD/HM/64

PROBLEMS FACING FOUNDRY INDUSTRY

REGIONAL STATIONS MAY GO SOME WAY TOWARDS SOLVING THEM

THE foundry industry is one of the basic engineering industries of the country. With about 2,000 units operating mostly on single-shift basis, the industry has an aggregate capacity of 2.5 million tons for producing non-ferrous iron, steel and malleable iron castings. But most of these foundries are too small to have suitable equipment or the technical know-how for the production of quality castings. So the National Metallurgical Laboratory, which has to its credit several years' research and development work on indigenous foundry sands and other moulding materials, has been called upon to establish four regional foundry stations at important foundry centres to make available testing facilities for small foundries which cannot otherwise afford to have independent testing facilities. One such regional station, set up by the Laboratory at Batala, Punjab, has started functioning since 10th April last.

The Batala station, it is said, has been equipped with adequate facilities for testing of foundry sand and bonding clays for routine control of sand mixtures, as well as to find out their suitability for use for foundry moulding purposes. The station has also been equipped to undertake the analysis of both ferrous and non-ferrous metals and also for carrying out chemical analysis of moulding sands. In the second phase, it is proposed to expand service facilities to enable the station to undertake metallography and mechanical testing of metals and alloys. The station will then be equipped with the necessary melting units for undertaking experimental work on problems relating to metal melting. It is expected that these facilities provided by the station will go a long way towards improving the quality of the castings produced by the foundry industry in the Punjab.

State of Punjab Foundries

Incidentally, there are more than 700 foundries in the Punjab itself, located mostly at Batala, Ludhiana, Ambala, Faridabad and Amritsar. Most of the foundries are equipped with poorly designed cupolas and several of them still practise crucible melting for castings. Most foundries are neither mechanised nor equipped with modern machines. The moulding practice, it is said, has yet to be improved, for most foundries employ floor moulding with very poorly designed and inaccurately built moulding boxes. Moulding machines are not used in these foundries. Again, practically all the foundries use natural moulding sand and have very little control over the physical properties of moulding sand mixtures. Molasses is the common binder used for core sand practice. The core making ovens are locally fabricated and are without any temperature control. The metal is mostly manually charged into cupola. Practically, no foundry is equipped with weighing machines. The temperature is still judged by an expert eye. No chemical laboratory and physical testing facilities are available in most foundries. In spite of these handicaps, the foundry industry in the Punjab is able to manufacture diverse types of castings and supply them to the home and overseas markets. With the establishment of the Regional Foundry Station at Batala, the Punjab industry may be expected to improve the quality of castings and sell them at competitive prices.

The foundry industry in the Punjab, as in other parts of the country, faces several problems and difficulties. These are:

1. Lack of adequate and regular supplies of essential raw materials like foundry pig iron Gr. I and II, graded scrap for steel melting and low phosphorus pig iron for the malleable iron industry.

2. Lack of adequate supply of processed raw materials like high quality silica sand, bonding materials, core oils and binders, etc.

3. Inadequate development of ancillary industries to supply items like chaplets, moulding boxes, pins and bushes to the foundry industry.

4. The high ash content of coke which, too, is not adequately available.

5. Lack of adequate pattern-making capacity, especially metal patterns and core boxes for mechanised foundries for mass-produced items.

6. Foundry equipment and machinery from indigenous sources not easily available.

7. High inventory of foundry raw materials and spare parts due to difficulties in getting regular supplies.

8. Lack of trained technical personnel at all levels.

9. Lack of adequate testing facilities.

10. The general deficiency in the application and control of process details.

Batala Station's Functions

The Regional Foundry Station cannot be expected to ensure adequate supply of such raw materials as pig iron and coke. But it can help solve several other problems. For instance, it can periodically test foundry sands, bonding clays used in foundries and raw materials used for melting like pig iron, limestone, coke, etc., as well as finished products. It can tender technical advice regarding selection and application of indigenous foundry sands and other moulding materials, including selection of metal charges, for the production of various types of castings. The station may also undertake *ad hoc* investigations on the problems faced by individual foundries and suggest suitable remedial measures therefor. Besides conducting a regional survey of moulding materials, the station will standardise melting and moulding techniques and procedures in underdeveloped foundries.

The regional station will also profit by the work so far done in the National Metallurgical Laboratory. Its formulation of standard foundry sand in collaboration with the Indian Standards Institution is noteworthy in this context. Besides exhaustively studying the properties of different foundry moulding sands and bonding clays, the Laboratory has carried out a number of investigations, on behalf of public and private-sector industries, on the melting and casting problems of metals and alloys. The Laboratory has developed a modifying agent for improving the fluidity, machinability and tensile strength of aluminium-silicon alloys which are used for automobile castings. The long-range fundamental work done by the Laboratory for making the best use of raw materials and for formulating national standards for silica sand, bentonite, graphite, natural moulding sand, silica flour, etc. for use in foundries is bound to stand the regional foundry stations and the industry in good stead.

HOUSING FOR G.O.I. EMPLOYEES IN BOMBAY

Plans are stated to have been finalised for a large-scale housing project for Central Government employees stationed in Bombay. A new self-contained residential township, the first stage of the project, will soon emerge near Wadala, on the eastern side of the Harbour Branch railway line in the city. Eighty-nine acres of land are being developed in this connection.

The Centre, incidentally, has about 175 offices in Bombay, attached to various Ministries other than Defence and Railways and the P. & T. Department. The total number of staff in these offices comes to several thousands. In view of the acute housing shortage in the city, many of these employees have to stay either in boarding houses or make their own arrangements. Hardship is felt particularly by those transferred to Bombay from other towns.

At present, the Centre has only about 1,010 residential tenements spread over the entire area of Greater Bombay. Some of these comprise residential colonies, such as the one at Wadala West and another at Ghatkopar. But these are hardly adequate, and over 14,000 employees are now on the waiting list for allotment of accommodation. The new colony at Wadala East will help substantially in reducing this number. It will have 1,728 residential flats. In addition, a few multi-storeyed buildings will be constructed to house some of the Central Government offices. The idea in constructing these offices in the colony itself is to meet the pressing need for more floor area for Central Government establishments and also to release the rented accommodation for which the Union Government is now paying a monthly sum of about Rs. 80,000 in Bombay City alone.

Apart from this, another nearby salt pan area of about 83 acres is planned to be developed into a self-contained colony with all amenities. This colony will have about 2,500 quarters. Also, it is proposed to develop two more sites measuring about 140 acres to accommodate 4,200 tenements approximately. With the completion of all these colonies, nearly half of the Union Government employees in Bombay, now awaiting residential allotment, will be provided with decent dwelling quarters.

ANGLO-FRENCH "CONCORD" AIRLINER

The British Aircraft Corporation and the Sud Aviation of France have just announced improvements in the supersonic airliner that is being jointly developed by them. The changes are intended to make the airliner bigger than originally planned, so that it can carry more passengers over longer distances. It is expected that these improvements may well encourage orders from airlines which have not so far joined the "Concord" supersonic queue or which have ordered American aircraft.

An important effect of the proposed changes will be to increase the cost of the aircraft's development programme beyond the presently-estimated level of £170 million. This, in turn, may well increase the purchase price of the aircraft, which is currently quoted at about $10 million. Orders for "Concord" now stand at only 43, while those for the proposed American supersonic airliner number 84. Nevertheless, it is said, "Concord" will have a substantial lead over any American supersonic airliner, especially since President Johnson has referred the U.S. programme back to his advisers for further detailed study.

HIGH SPEED SHUTTLELESS LOOM

A new high speed shuttleless loom for weaving both narrow elastic and rigid webs, capable of achieving speeds of 1,300 picks per minute on all bends, is claimed to be the fastest multi-head weaving machine in the world. It combines as its main feature the use of a needle weft insertor with a rotary batten, which enables such high weaving speeds to be achieved—a pick in this instance means the insertion of the weft by the thread arm into the shed and return to the original position—and an output of 20,800 picks per minute is possible in the production of elastic web on a machine with 16 weaving units. The manufacturers, a British company, state that even when producing complicated webbings with up to five warps, the speed is only reduced to about 850 p.p.m. per head.

The construction of the machine is largely based on cams which are synchronised to allow the thread arm to pass through a gap in the batten and cross-and-withdraw during a quarter revolution of the batten. This enables the batten shaft to rotate at one-quarter the speed of the needle and thread arm system so that four double picks are inserted with each revolution.

The batten is so designed that when the weft has been laid across the shed and held by a reciprocating latch needle on the opposite selvedge, the two ends can pass through a slot in the periphery of the batten which rotates. As the batten turns it presses the twin ends of weft into the fell of the webbing, while the shed is changing and the thread arm advancing to pass through the next gap in the batten.

A two to eight shaft machine, it is capable of weaving a variety of fabrics in widths upto a maximum of two inches, the patterning being via two eight-level comboxes. The picking can be adjusted from as many as 80 per inch down to only 18 per inch. The present design of the machine with 8, 12, or 16 weaving units is said to be ideal for a firm handling large quantities. The firm is planning modifications to meet the needs of the smaller manufacturer.

The manufacturers, the K.C. Engineering Company Ltd., Coalville, Leicestershire, England, claim that their weaving system is "ingenious but simple," with there being little possibility of anything serious going wrong. If a latch needle breaks—a rare occurrence—a new unit, already soldered into a holder on a jig in the workshop of the weaving shed, may be slipped in as a replacement for the damaged component, the entire operation taking less than three minutes.

The machine will accommodate all normal types of natural or man-made fibres, and six looms may be operated per weaver, or a greater number if warps are tied and twisted by extra personnel. Due to its very high output, the firm states, considerable savings in overheads and labour costs can be achieved. Although this machine costs almost double that of its predecessor, the difference, it is claimed, can be recovered in an incredibly short period of time which can be as low as eight weeks depending on the number of hours run per week.

NEW PRODUCTS AND PROCESSES

Surgical Instrument to Treat Blood Vessels

A SURGICAL instrument has been developed in the United States to treat brain aneurysms—abnormal bulging or ballooning of a weakened blood vessel in the brain. The instrument injects short hog bristles or horse hair into the diseased part of the vessel, thereby promoting healing. Known as a pilojector, the instrument got its name from *pilus*, the Latin word for hair. Brain aneurysms often cause excruciating pain, and death usually follows if the blood vessel ruptures. The idea for the instrument originated with Dr. John P. Gallagher, a Washington surgeon. On the basis of his suggestion, the instrument was designed and built by Harrison P. Hagemeyer, a machinist. The surgeon places the instrument's nozzle against an exposed aneurysm. An assistant releases compressed air which causes the hair to be injected into the aneurysm. Dr. Gallagher explained that hair has countless microscopic projections or scales that attract the blood's red cells and fibrin which produce clotting. The clotting, in turn, helps the body's natural healing powers to strengthen the weakened vessel section. The instrument causes the hair to penetrate the weakened blood vessel so fast that the vessel wall is not torn.

Uses for Artificial Odours

The ability of U.S. scientists to duplicate artificially thousands of natural aromas is giving rise to a wide variety of fascinating applications. For example, the Animal Trap Company of Lititz, Pennsylvania, manufactures a baitless mousetrap. It has a built-in synthetic odour of cheddar cheese that is so authentic that it lures countless mice to their doom. Several manufacturers of plastic luggage and handbags spray their products with chemicals that give the aroma of genuine leather. Retail stores have found that though buyers are told very plainly that the material is not leather, the aroma somehow helps boost the goods' sales appeal. In extreme uses, a wine advertisement was printed with ink that gave off the fragrance of grapes and a fruit store boosted sales by wafting synthetic scents of strawberries through its doors. Some manufacturers use synthetic odours to stimulate attractive natural aromas lost in modern processing while others use artificial odours to mask unpleasant and offensive smells. One aromatics supplier has developed a chemical which textile firms mix with substances used to treat drip-dry fabrics. The chemical neutralises pungent odours and replaces them with a "clean outdoor smell." One manufacturer, Fragrance Process Company of New York, has developed a machine the size of an average table radio which it calls the Scentomiser for use in homes, stores and offices. A tiny pump and fan in the machine combine to spread pleasant aromas. Missing from the thousands of artificial odours is that of freshly baked bread. Scientists admit that so far they have been unable to match it.

High-speed Nickel-plating

A new plating solution, designated 'Ni-Speed,' from which nickel can be deposited at speeds far greater than those normally achieved in conventional Watts or sulphamate solutions, has been developed in the research laboratory of The International Nickel Company (Mond) Limited. Deposits obtained at a current density of 400 A/ft.^{2} are soft and ductile with moderate or low tensile stresses. Operated at 200 A/ft.^{2} the solution yields deposits which are stress-free and, therefore, eminently suitable for production of electroforms such as gramophone record stampers, moulds and dies for the plastics industry and which will facilitate fuller and more rapid development of the electroforming technique as a manufacturing process. At conventional current densities, around 50 A/ft.^{2}, the solution yields lustrous, hard yet ductile deposits having high compressive stress. Such deposits are particularly useful for reclamation of worn engineering components. As will be clear, it is possible, in the same solution, to put a hard facing on to a softer deposit obtained at high speed, simply by reducing the current density. A composite deposit achieved in this way is useful for coating engineering components subsequently required to resist fatigue. No addition agents are used in the 'Ni-Speed' solution and control and maintenance of the solution composition is, therefore, very simple. The throwing power is superior to that of either the Watts or conventional sulphamate solutions.

Resins Speed Aircraft Work

Synthetic resins produced by a British firm, Leicester, Lovell and Company Ltd., North Baddesley, Southampton, England, are being used to make plastic "dummy" models which have simplified and speeded up the production of heat exchanger units in airliners. Basically, the plastic dummies serve two purposes: they are used as tooling aids in the manufacture of the heat exchanger units proper (made in aluminium) and as checking fixtures for various assembly line production operations. The use of plastics for these applications offers two main advantages:—(1) the speed at which a number of identical dummy units can be made; (2) the ease with which these light-weight plastic units can be handled in confined working areas. This enables simultaneous use of a number of units long before the heat exchanger units proper are completed. In this way work, such as the alignment of a multiplicity of inlet and outlet air-conditioning ductings, can proceed much earlier than hitherto.

Data Logger

A data logger selling at what is said to be a fraction of the cost of the lowest-priced complete system so far available has been developed by a British firm, The Solartron Electronic Group Ltd., Farnborough, Hampshire, England. A small unit, it has, for its 20 channels, all the facilities of a major complex system, and its modular construction enables extra functions to be added as required. The 20 channels can be scanned in as little as seven seconds and recorded in actual physical units (degrees Centigrade, pounds per square inch, and so forth) with high accuracy and automatic indication of any parameter measurement lying outside preset limits. The output can also be in punched-tape form for analysis by computer. The data logger is built around a new digital voltmeter that is said to have twice the accuracy and 10 times the sensitivity of any digital voltmeter of similar price.

Board-making Machine

A board-making machine—believed to be the largest of its type in the world—is now in operation at a new mill in Britain, Walmsley Group, Atlas work, Bury, Lancashire, England. When in full production, claims the firm, it will be the fastest multi-ply board machine in existence with an output of 12 tons per hour. It will produce more than 80,000 tons of packaging board a year—almost ten per cent of the current British output. Weighing 3,000 tons and 500 ft. in length, it produces reels of board at a width of nearly 14 ft. The reels themselves weigh 13 tons and are over 7 ft. in diameter. The machine makes the fullest use of automatic process control systems and is operated by a crew of only eight men.

Forging Billets

Automated, high-speed forging equipment installed at a Lancashire works enables one man to control the movements of a five-ton billet and 800-ton press and produce forgings to an accuracy within 1/16th of an inch. The billet is held in the jaws of a manipulator, developed by the Adamson-Alliance Company Ltd., Marlon House, Mark Lane, London, E.C.3, believed to be the most advanced machine of its kind in production in Europe, and probably in the world, which was designed for high acceleration, rapid response, and minimum delay in initiating manipulation. Controls for manipulator and press are side by side in separate desks, and closed-circuit television gives the operator an end view of what is happening to the billet. Movements of manipulator and press can be integrated, enabling parts of the forging process, by pre-selection of the billet's longitudinal movements and angles of rotation, to be carried out semi-automatically.

Aluminium from Waste

Recovery of about 7 per cent aluminium from the crustlike oxide scum that floats on the surface of molten baths of aluminium during refining has been claimed by A. W. Chamberlain, of Irving Road, Corner, Melbourne, Victoria, Australia. The scum is taken from the furnace and placed in a crucible mounted on a portable trolley where it is whirled around for a minute or so at high speed. As it is whirled it is broken up by a paddle and globules of semi-molten aluminium trapped in it are released and flung outwards, after which they are collected and returned to the furnace.

Changeable Metal

American patents have now been issued for a new series of metallic compounds which are magnetic at some temperatures and non-magnetic at others. The compounds of manganese, antimony and chromium were developed by researchers at the Du Pont Company, Wilmington 98, Delaware, and first announced three years ago, although patents on practical uses have only now been granted. Another characteristic of the compounds is that they transmit magnetic force from a permanent magnet even when in their non-magnetic state. The temperature at which they change from magnetic to non-magnetic can be varied by changes in their composition. Patents were issued for a motor using the material, a document copier using magnetic instead of electrostatic images, and various types of temperature and pressure indicators.

Thickness Gauge

A pocket instrument which can measure the thickness of paint, rubber, plastic, and other non-conducting coatings on non-ferrous metal bases, has been developed by Elcometer Instruments, a Manchester firm. The gauge indicates the coating thickness directly on a scale when a small, spring-loaded probe in the base is pressed on to the surface of the coated metal. The gauge, which makes use of transistors and miniaturized components, is powered by a battery with a working life of 60 hours. After switching on, the gauge is calibrated by setting the scale to zero when the probe is held on the uncoated metal base, and then adjusting a sensitivity switch with a piece of plastic of known thickness interposed between the probe and the base. Once set in this way it can be used for a large number of coated workpieces without recalibration.

Cheaper Stainless Steel

A less costly stainless steel for use in food, chemical and other industries, is reported by Soc. d'Electro-Chimie, d'Electro-Metallurgie et des Acieries Electriques d'Ugine, of 10 Rue du General Foy, Paris 8, France. The steel contains only about 10 per cent of chromium in place of the more usual 18 per cent, but the same stainless effect is achieved, it is claimed, by the addition of between 2 and 4 per cent silicon. It is stated that the steel has good mechanical and electrical properties and is weldable.

THE BANK OF RAJASTHAN LIMITED

Registered Office:—**Udaipur** *Central Office*:—**Jaipur**

The Directors' Report for the year ended 31st December 1963 to be submitted to the Shareholders at the Twenty-first Annual General Meeting to be held at the Registered Office of the Company at Clock Tower, Udaipur, on Wednesday the Thirteenth day of May 1964, at 2 p.m.

The Directors have pleasure in submitting to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963, together with the Auditors' Report.

Capital and Reserves :—During the year under report a sum of Rs. 3,50,700 being the amount of unpaid calls has been received raising the paid up capital to Rs. 13,22,275.

After transfer of Rs. 89,525 to Reserve under Section 17 of the Banking Companies Act, 1949, the Reserves of the Bank including Development Rebate Reserve total Rs. 10,69,530. The ratio of Paid up Capital and Reserves to Deposits as on 31st December, 1963 was 3.33 per cent. as against 2.96 per cent. in 1962.

Working Funds :—The working funds of the Bank have risen to a record figure of Rs. 8,19,02,160 which exceeds the last year's total by Rs. 1,12,28,358.

Deposits :—The deposits of the Bank have increased during the year by Rs. 91,15,401 to a record figure of Rs. 7,17,81,168 as against Rs. 6,26,65,767 a year ago. The total number of depositors has also increased from 42,153 to 47,780 during the year.

Liquidity :—The ratio of our liquid assets (Cash, Balances with Banks, Money at Call and Short Notice and Investments) is 47.90 per cent. of our total liabilities as compared with the All India Scheduled Banks Ratio of 37.3 per cent. (as on 27th December, 1963).

Investments :—The total investments of the Bank amount to Rs. 2,03,40,281. Of this 97.39 per cent. is invested in Government and other Trustee Securities.

Advances :—Our advances including bills purchased and discounted stand at Rs. 4,23,45,769 which are 59 per cent. of our deposits. Our advances to Small Scale Industries stand at Rs. 42.53 lakhs which are 10 per cent. of the total advances.

Branches :—During the year, four new branches were opened at Adarshnagar—Jaipur, Bharatpur, Industrial Estate—Kota and Manasa (Madhya Pradesh) raising the total numbers of branches to 45. It is proposed to open six more branches during the current year.

Safe Deposit Lockers have been provided at four more centres and now the number of offices of the Bank equipped with Safe Deposit Lockers has gone up to 16.

The Bank is collecting the water bills on behalf of the Water Works Department of the Government of Rajasthan at 16 places and electric bills on behalf of the Rajasthan State Electricity Board at 21 places, in Rajasthan.

Profit and its Appropriations :—The Gross Profit of the Bank has increased by Rs. 6,61,268 over the figure of the last year and stands at Rs. 48,68,536. The net profit for the year is Rs. 4,04,720.98 as against Rs. 2,34,259.08 a year ago. After adding a sum of Rs. 4,666.62 brought forward from the previous year, a sum of Rs. 4,09,387.60 nP. is available for appropriation.

After making the following appropriations :—

	Rs. nP.
To Reserve Fund under Section 17 of the Banking Companies Act, 1949 ..	89,525.00
To Provision for Income-tax and Super-tax	1,02,000.00
To Provision for Bonus	93,440.00
	2,84,965.00
The Directors recommend to declare a dividend @ 10 per cent. per annum on the Paid-up amount of shares *pro rata*, subject to tax, which will absorb a sum of ..	1,17,058.79
Balance (to be carried forward)	7,363.81
Rs. ..	4,09,387.60

Directors :—Your Directors have to record with deep sense of sorrow the untimely and sudden death of Rajadhiraj Shri Hari Singhji of Achrol, Chairman of the Board of Directors. In his capacity as Chairman of the Board he had taken live interest in the affairs of the Bank. His demise has been a great loss to the Institution.

The Board of Directors, under Article No. 103 of the Articles of Association, appointed Maharaj Kumar Shri Brijraj Singhji of Kota and Rao Narayan Singhji of Masuda, as additional Directors and Major Daulat Singhji as a Director to fill the vacancy caused by the death of Rajadhiraj Shri Hari Singhji of Achrol. They will hold office until the next following Annual General Meeting of the Bank, namely 13th May, 1964. Proposals of their election as Directors having been received, you are requested to elect them as Directors under Article 103 of the Articles of Association of the Bank.

In accordance with Article No. 119 of the Articles of Association of the Bank, Seth Shri Damodarlalji Mansinghka retires from the Board of Directors by rotation, but being eligible offers himself for re-election.

Appointment of the Auditors :—The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

The Directors are thankful to the shareholders, the Government of Rajasthan and the customers for their continued patronage. They also express their appreciation of the loyal services rendered by the members of staff.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the annexed Balance Sheet of the Bank of Rajasthan Limited as at 31st December, 1963 and also the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 14 branches audited by us and 31 branches audited by other Chartered Accountants. In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to Sub-section (1) and (2) of Section 211 and Sub-Section (5) of Section 211 and Section 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn in accordance with the sixth schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949. We report that :—

(*a*) we have obtained all the information and explanations which, to the best of our knowledge and belief were necessary for the purpose of audit and have found them to be satisfactory;

(*b*) the transactions of the Bank which have come to our notice, have been within the powers of the Bank;

(*c*) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books;

(*d*) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with books of account and the returns;

(*e*) the reports on the accounts of the branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report;

(*f*) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts together with notes thereon give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the state of affairs of the Bank as at 31st December, 1963 and Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

B. D. GARGIEYA, F.C.A.
Prop.
B. D. GARGIEYA & CO.,

CONTROL OF MONOPOLIES AND CARTELS

EXPERIENCE OF U.S. ANALYSED

By V. S. Swaminathan, M.A., M.Sc. (Lond.)

THE Monopolies Commission had its first meeting in New Delhi on 1st May 1964, with Mr. Justice K. C. Das presiding. It will discuss among other things the extent and effect of concentration of economic power in private hands and the prevalence of monopolistic and restrictive practices in important sectors of economic activity other than agriculture. In this context, the long experience of the United States in the control of monopoly should be of practical interest.

In 1890, the Sherman Anti-Trust Act was passed by the U.S. Congress. It makes unlawful "every contract, combination in the form of trust or otherwise, or conspiracy in restraint of trade or commerce," and "all monopolies to monopolise any part of trade or combinations or conspiracies to monopolise any part of trade or commerce." Although it prohibits every contract, combination or conspiracy in restraint of trade, the Act has long been construed to forbid only restraints or monopolies which may be "unreasonable."

This Act applies to all such restraints regardless of the good faith of the participants, or of the motives which led to the adoption of the restrictive plan. It is also applicable to integrated organisations if they attempt to monopolise the market. Under the Act, a monopoly may exist in connection with only one article or service. The basic decision in monopoly cases is the amount of control exercised in the market. The statute provides that those who violate its provisions shall be liable to criminal prosecution, and shall also be liable to civil actions to prevent or restrain violation of its provisions.

Basic Aim

These anti-trust laws represent a governmental effort to create a suitable environment for free competitive business. These laws are designed to counter the tendency, which became noticeable in the nineteenth century, of large companies producing petroleum, steel, sugar, tobacco, meat and other items to combine into trusts (cartels) for controlling commercial policy of a number of businesses operated independently. Many Americans began to apprehend that these trusts might eliminate small business and curtail effective competition.

The Sherman Anti-Trust Act was the beginning rather than the end of an era. For fifty years ago, in 1914, Congress strengthened the legal weapons against monopoly by enacting the Clayton Act which forbade corporations to acquire stock in competing concerns, and outlawed contracts whereby a manufacturer limited the right of a purchaser to deal with his competitors in business. It also prohibited price discrimination and interlocking directorates under conditions that lessen competition. The Clayton Act further stated that, because human labour was not a commodity, labour organisations were not to be considered conspiracies in restraint of trade and, therefore, were exempt from the operation of anti-trust laws.

The sign-posts to the application of the Sherman Anti-Trust Act are the courts' judicial interpretations in actual cases. What is unreasonable in the context of restraints and monopolies depends on the extent to which they close the market to competitors, and establish limits to the operation of market conditions. Broadly speaking, practices involved are grouped under four categories: fixing prices, limiting production or sales, limiting quality or service, and restricting sources of supply.

More sophisticated forms of price fixing were uncovered in investigations and litigation surrounding patent licensing arrangements. Under American law, the patent owner has power to fix the terms upon which another person may make, use or vend the patented creation. This was thought for a time to permit patent owners to erect a system of price fixing by cross-licensing or sub-licensing of patent rights to members of the industry. The Supreme Court struck down such arrangements as beyond the patent grant and hence subject to the Sherman Act.

No Mathematical Certainty

The extent of control necessary to constitute monopoly has not been, and probably cannot be, fixed with mathematical certainty by courts. Each case is judged on its merits, taking into account the percentage of market controlled, strength of remaining competitors, whether control comes through acquisition of facilities for business purpose or a purpose to monopolise, probable development of the industry, consumer demands and other special characteristics of the market.

In the late 1940s, the U.S. Government's policy was outlined in the report of the President's Council of Economic Advisers entitled "Business and Government" in these words: "In a stable and expanding economy, there is room both for well-conducted big business (with its unique facilities for scientific and developmental experimentation) and for small business with its display of individuality and self-reliance. Small business should be protected from any predatory practices by its larger neighbours, and all business should be protected against unfair competitive practices by units of any size."

In the summer of 1948, Henry B. Du Pont affirmed at Chattanooga:

"There is nothing incompatible or antagonistic between Big and Little Business. The mutuality of their interests is fundamental to the American competive system.... For myself, I believe we should devote ourselves to preserving in the United States our incentive economy which strives to the end that no man shall be poor."

It may be noted here that Du Pont had spent $27 million over 11 years of research behind the development of nylon and this fact was mentioned as proof of the necessity of large-scale enterprise.

Bigness is a Natural Result

Many things have been said about big business, some good, some bad. The bigness in business is a natural result of the nation's economic development. In order to handle any business on a nation-wide basis, one has to have a big organisation, a big company. The more successfully a business is operated the bigger it inevitably becomes. Moreover, mass production requires enormous investments in equipment to produce large quantities of goods at low cost. As Mr. Eugene Holman, President of Jersey Standard, wrote in the *American Magazine* in 1948: There are some things which a large corporation can do more efficiently. The large company can bring off undertakings that would bankrupt the small operator long before they begin to show a profit. For instance, Jersey Standard's affiliate in Venezuela had to invest some $30 million, and spend nearly ten years developing oil regions in Eastern Venezuela before the first oil was shipped commercially."

Giant corporations insist that their great size has enabled them to do for the American consumer things that are beyond the power of small business. The Great Atlantic and Pacific Tea Company introduced the chain store to the U.S. food business. Through efficient selling methods, mass buying, and, when it could not buy cheaply enough, by going into food production itself, A. & P. claims that it has helped make American living standards the envy of the world. The biggest of corporations has competitors and, in order to stay strong and healthy, it must give its rivals constant battle striving daily to improve its own products and its own methods. Large, medium and small undertakings are a necessary part of the American economy. All prosper together.

In peace-time, bigness plays an important part in assuring national prosperity. In an emergency, it is the nation's salvation. Who but a du Pont could have tackled and completed the job at Hanford—the top secret war-time atomic project? Who but a Monsanto could have replaced the Texas City styrene plant and its 34 key men in less than a year after an explosion had wreaked its havoc? Who but a Carbide and Carbon could have mobilised the co-ordinated experience and ability of 3,000 technically trained persons to erect and operate the butadiene plant for the synthetic rubber programme? Who but big business could meet another colossal war demand, if it ever comes, for rubber, aviation gasoline, light metals, steel, etc.? In several of these fields, the major oil, chemical, electrical and metal manufacturing companies proved America's life-savers during the Second World War. The larger American corporations feel that they are, *per se* through their size and "dominant position" in their industries, subject to almost legally impregnable suits by the Department of Justice for "divorce, divestiture and dissolution." In addition to du Pont, such cases have been brought against the A.T. & T. Company, the "Big Four" meat packers and the Great Atlantic and Pacific Tea Company.

Whereas the "pre-Roosevelt" Supreme Court developed the habit of striking down Acts of Congress as unconstitutional, the new Court, with its majority led by Justice William O. Douglas, has been writing into the law such matters as the law on basing-point pricing. Reversing an 1842 decision, it found that the State employees were subject to Federal income-taxes; reversing an 1869 decision, it found that life insurance is subject to Federal law; upsetting the general interpretation, it found that the 1936 wage-and-hour law applied to working time from mine-portal (or factory gate) to the job, and, in 1948, it found, in the Staley and Cement cases, that the basing of prices on geographical points was illegal. In short, the trend of a decade's decisions by the Supreme Court had been to favour the Federal Government over State Governments, Government bureaus over Congress, Governments (Federal or State) over private corporations, and unions over all the above categories.

The Supreme Court's interpretations of anti-trust laws in the late 1940s have shown three trends, that is: upsetting or raising of a cloud of legal questionableness over most major American industrial pricing practices; interpreting the law to protect small and weak competitive units against the "hard competition" of modern chain stores, and, in general, albeit to a lesser interest, in consumer than competitor, and putting the worst interpretation on motives and methods of big companies.

As examples of the first trend, quantity discounts were jeopardised in the Morton Salt case; the matching of competitors' prices and the basing of prices on geographical points in the Staley, Rigid Conduit and Cement cases, and dealer price units to get volume, integration and contracts in Standard Oil of California case; and price cuts to get volume, also integrated-firm book-keeping, as well as buyer initiated price cuts in the A. & P. case. The American Congress has contributed to the second trend in writing the Robinson Patman Act, 1936, making statutory the N.R.A. Grocers' Code, and Miller-Tydings Act (re-sale price maintenance). Turning to the third trend, in a series of decisions dealing with Aluminium, Tobacco, Motion Pictures and A. & P., the Federal courts appear to take the view that, in effect, power to violate the law is in itself a violation.

Bigness is not a Crime

Specifically, the courts have again and again affirmed that "bigness" is not in itself a crime. But they find it increasingly easy to agree when the Department of Justice assumes or implies from such bigness an illegal power to kill off competing companies. The Department of Justice officials deny that the great size of some modern corporations has meant unmixed benefits to people. In some cases, they contend, A. & P. has raised prices to consumers once it has forced competing retailers in a locality out of business. The Bell Telephone System is accused of having held back the use of advanced equipment for fear of hurting its own investment values, or the profits of allied companies. Du Pont, General Motors and U.S. Rubber have been charged with making deals that ultimately result in higher prices to consumers.

The Sherman Act is based on the philosophy that penalties should be applied, and big companies be broken into parts, only when they have demonstrated evil in the concrete form of specific acts in restraint of trade—price fixing, collusion instead of competition, and action to keep new competitors from the field. As David Cushman Coyle, counsel for Mr. Emanuel Celler, (Democrat, New York) of the House Judiciary Committee, put it: "The big cannot be free, or in the end they will destroy all freedom except their own.... The big can fairly be restrained by the law, just for being big, without being first convicted of criminal or moral turpitude."

Not a few Americans believe that the size of corporations should be limited by law, arguing that, otherwise, they would grow like a radio jack-pot and eventually one, two or three large corporations could so dominate each industry as to make successful competition impossible. They think that big corporations like the U.S. Steel, General Motors, G.E.C., Westinghouse, du Pont, etc., have too much economic power for the public good. In the steel industry, for example, the U.S. Steel Corporation owns 28.4 per cent of steel ingot capacity, Bethlehem Steel Corporation 15.6 per cent and Republic Steel Corporation 8.6 per cent. The twelve largest companies are in command of five-sixths of the industry's capacity. Again, six corporations in the automobile field are regarded as representing the nation's giant corporations. One of them, General Motors Corporation, is not only the largest automobile company in the world, but also America's largest manufacturing organisation. Likewise, the meat packing industry has its "big four" companies. The U.S. Census of Manufactures reported that 46 per cent of the nation's productive capacities were concentrated in only 133 giant manufacturing corporations in 1946, when the top four companies in each industry produced more than 75 per cent of its total output.

Beneficial Co-existence

What indeed is striking about the U.S. economic structure is the continued co-existence of big, medium and small business concerns. Thus, the 500 largest corporations employ more than nine million persons and account for over 50 per cent of all sales of manufactured goods and mining products. Yet, at the end of 1962, there were 4,810,000 independent business firms operating. This total represented a net growth of nearly 40,000 business firms since the end of 1961.

In the United States, the supposed home of everything big or large-scale, over 90 per cent of all businesses are small, and a normal one generally employs 100 persons or less in manufacturing, or 10 or less in other activities. This high frequency, together with the traditional American dispersion theme of Franklin and Jefferson, focusses attention on problems facing small business units. Government solicitude for small business dates largely from the depression of the 1930s.

The dividing line between firms of small and intermediate size has been drawn for manufacturing plant at 100 workers or less; for wholesale establishments at $200,000 annual net sales, and for retail enterprise at receipts of $50,000. In 1939, nearly 93 per cent of all American business establishments fell within the small business category. Such undertakings are naturally most numerous in service and retail trades which do not make heavy demands on capital. Textile mills, leather and leather products represent plant groups with over two-thirds of their workers in establishments employing more than 500 persons. On the other hand, women's clothing, printing, baking and jewellery industries mostly have small plants.

Problem of Efficiency

Coming to business efficiency, the available index nearest to measuring it in different sizes of plant is, perhaps, the cost of some standard physical output such as the production of standard barrels of cement and of flour and distribution of, say, 100 lbs. of milk. In these cases, the wide variety of cost within all classes of size is marked. The small sizes on the average show the higher costs. But they also display the widest variety, so that the actual low cost plant may be a small one.

The same greater variation round a lower average among the smaller firms is shown when comparing slump and boom years in the ratio of net profits to equity. In 1941, a boom year, the two smallest classes of business (with assets upto $150,000, and $150,000 to $1,000,000) averaged a ratio of *plus* 3 and 10 per cent, instead of *minus* 32 and 15 per cent as in (the slump year of) 1932; the larger classes of business (with assets upto $10 million) showed less cyclical change, but still averaged in the boom year profit ratios higher than the smaller units.

The wide variety in efficiency of small business units is illustrated by the following vital statistics:

In 1926-30, in three Minnesota towns, while only 16.5 per cent of the larger manufacturers died, the percentage for the two smallest sizes was 66.3 and 87.4, respectively. This wide variety in efficiency results, at one end of the scale, in relatively high mortality rates, but it also leads to high rates of survival, at the other end. In fine, mortality rate is higher among smaller business units, and those that survive and remain small suffer more sharply from fluctuating earnings than larger competitors. The calibre of management is, perhaps, the most decisive factor, influencing the success or failure of the small unit.

The smaller units suffer from such major handicaps as inability to command efficient management, lack of capital, tax problems and occasional unfair use of power by larger rivals. For some years past, the U.S. Department of Commerce has been offering an excellent programme of technical and managerial advisory service, primarily for their benefit. Constructive proposals have been made to provide equity capital, and effect tax revision. Fifteen years ago, the Metropolitan Life Insurance Company offered to assure 90 per cent of any otherwise acceptable small business loan made by a local bank, provided the bank retained 10 per cent. There are, too, regional capital banks, on the lines of the British Industrial and Commercial Finance Corporation, to invest in equity as well as debt.

The Council of Economic Advisers (C.E.A.) found that small units actually suffered more from general economic instability than from the predatory practices of big business. This reading of the situation leads away from the purely negative policy of anti-trust laws to more affirmative approaches to the problem. Re-examination of the meaning of free competition must, as the C.E.A. recommended, proceed hand in hand with the development of practical measures, lest the dream of wider prosperity be destroyed by the very efforts made to realise it.

To conclude, monopolies in the United States are proceeded against by legal action. The result has been to built up a body of principles by successive judicial interpretations. This system has its drawbacks. Cases, for example, have been known to drag on for several years. But, as the code becomes better defined, it should be possible to proceed more rapidly by way of the "consent decree," which sets out the steps to be taken to put an end to restrictive or monopolistic practices in particular cases. It cannot be claimed that the control of monopoly is fully effective in America. All the same, the U.S. system does establish clear and firm dictates of policy, which cannot be, and are not generally, evaded.

It is generally agreed that the Sherman Act has made a noteworthy contribution to the present strength and vitality of the American industry. While the ideal of free competition may never be completely attained, certain it is that this anti-trust measure has operated to maintain a vast area of workable competition. The Sherman Act and related trade regulation laws have, perhaps, had their greatest force in preventive effect. Most American business operates with a careful eye to prohibitions of this legislation, which, although invoked in relatively few cases, has been sufficient to prevent a crystallisation of the U.S. economy.

MONOPOLY INQUIRY COMMISSION

The Monopoly Inquiry Commission has invited views from the public on issues covered by its terms of reference by 15th July. An official Press note, released on the 11th inst., says that the Commission will enquire into the extent and effect of concentration of economic power in private hands and the prevalence of monopolies and restrictive practices in important sectors of the Indian economy other than agriculture. The Commission will make a study of the factors responsible for such concentration, monopolies and restrictive practices and then suggest such legislative and other measures that might be considered necessary, including, in particular, any new leigslation to protect essential public interests and the procedure and agency for the enforcement of such legislation. The Press release adds:

"Having regard to the comprehensive nature of the reference, the Commission would, in this inquiry, welcome the assistance of all persons and bodies who have made a study of these issues and others interested in them. It is accordingly requested that those who would like to place their views on these matters before the Commission may send memoranda dealing specifically with the issues covered by the terms of reference to the Secretary of the Commission by 15th July 1964. All communications of the Commission may be addressed, till a further Press note on this point is issued, to the Secretary, Monopolies Inquiry Commission, New Delhi."

Moisture seepage causes incalculable damage to your buildings. Impermo-treated walls will have no leakage, seepage or absorption of moisture through capillary action. Impermo is durable, economical ... just 2% of Impermo ensures 100% waterproofing. Can be stored in good condition indefinitely.

Available in 1 kg cartons for your convenience in mixing with a bag of 50 kg cement.

RUSSIAN COMPETITION IN OIL

FRESH EVALUATION OF PROSPECTS

THE gradual relaxation of tension between Russia and the West has been accompanied by an apparently unconnected slackening in the growth rate of Soviet oil exports to the free world. As we showed a month ago, the increase in these exports averaged two-and-a-half-million tons a year in 1962 and 1963, or half as much as in the preceding three years. In percentage terms, the growth rate was down to 9 per cent a year, which compares with a peak rate of 50 per cent in 1959.

For many observers, the improvement on the political plane, connected as it is with the widening of the rift between Moscow and Peking, has an appearance of permanence. It is natural, therefore, to ask whether the same can be said of the parallel slackening of the Russian oil export drive. That development may, as we have previously suggested, have been due to pressure of demand within the communist bloc, or to production difficulties resulting from shortages of materials or equipment. The precise chain of causation is not clear. There is, however, no reason to suppose that any permanent relief from Russian competition in the international oil trade is in prospect.

This is the main conclusion to be drawn from a report by the National Petroleum Council in the U.S.A., which brings up to date that body's 1962 study on the Impact of Oil Exports from the Soviet Bloc. Predictably, the views of the N.P.C. on the subject of Russian competition have not changed in the interim. The Council argues, indeed, that its second study confirms the principal findings and conclusions of the first. In particular, it rejects the view that Soviet oil exports are likely to be limited during the rest of this decade by an energy shortage within the bloc. It believes that the threat of Russian competition is no less now than it was two years ago.

The first formal conclusion of the new study is that the volume of Soviet oil available for export to the free world will go in increasing, though not quite as rapidly as it did a few years ago. It estimates that these exports, including shipments to Cuba, totalled 37 million tons last year—our own estimate was 35½ million—and that they will grow to 38½ million in 1965 and to between 70 and 85 million by 1970. The 1965 figure has been scaled down from the previous estimate of 51 million tons, while the projection to 1970 is new. Taking the period as a whole, the lower forecast for 1970 implies an annual average increase of just under 10 per cent, and the upper limit an average of 15 per cent.

Soviet Resources Adequate

Underlying these estimates is a view of the probable development of crude oil production within the communist bloc. Total bloc production, including natural gas liquids and synthetics, is estimated at 275 million tons for 1965 and about 400 million for 1970. Nine-tenths will come from the U.S.S.R., where production will be sufficient to meet the requirements of the satellite countries and still leave the envisaged quantities available for export to the West. The attainment of the production targets (including that for natural gas) will require an annual average increase of 10½ per cent in the Russians' drilling programme in 1964-70, against an annual increase of 7.6 per cent in 1957-62. This increase in the rate of drilling the N.P.C. regards as quite feasible.

The Council believes, moreover, that Russian oil resources are adequate to sustain the higher rates of production. Proved reserves of crude at the end of last year are put at 32 billion barrels (over 4½ billion tons), equivalent to 21 years' supply at the current rate of production. On the assumption, which the N.P.C. regards as reasonable, that the 1946-62 discovery rate (334 barrels per foot of exploratory drilling) can be maintained, the ratio of reserves to current production would be 17:1 by 1970 if the planned outputs were achieved.

The Russians' ability to produce and export will be enhanced, says the N.P.C. report, if they are able to import plant and equipment from the Western world. This is particularly true, it believes, of refinery equipment. To meet home and export demands for products, the U.S.S.R. will require a refinery capacity of 235 million tons/year in 1965 and 340 million in 1970, which compares with a capacity of 185 million tons/year at end-1962. On current practice, this would give a products yield of 184 million tons in 1965 and of 265 million five years later; of these totals, 17 million and 29 million tons, respectively, would be available for export. The refinery expansion programme appears to depend, however, on the ability to procure one or more large refineries of advanced design from manufacturers in the West.

Transport Facilities Augmented

The planned growth of Russian oil exports, to the communist bloc as well as to the free world, is of course dependent on a parallel expansion of inland transport facilities, particularly pipelines. (The proportion of the total to be moved by pipeline is planned to rise from 17 per cent in 1962 to 24 per cent in 1965, while the percentage going by rail is expected to fall from 56 to 43 per cent.) Construction of the new pipeline systems, notably the Comecon line to Poland, East Germany, Hungary and Czechoslovakia, has, however, been retarded by shortage of large-diameter pipe, which the Russians themselves could not produce in sufficient quantity, and by the decision to give priority to gas lines.

The shortage has been made good from Western sources. In 1959-62 the U.S.S.R. purchased, for delivery up to end-1964, some 710,000 tons of 40-inch pipe from West Germany, 180,000 tons from Italy, 135,000 tons from Sweden and 5,000 tons from Japan, despite the restrictions advocated by N.A.T.O. This total of 1,030,000 tons of 40-inch pipe—and the accounting may not be complete—is equal to two-fifths of the total Russian requirement of this category of pipe under the Seven-Year Plan. The N.P.C. concludes that the new lines under construction or definitely planned will suffice to deliver 1.1 million barrels of oil a day (55 million tons a year) to Baltic, Central European and Black Sea terminals by 1965. And it believes that internal transport facilities in general will be adequate to cope with the volume of exports envisaged.

It is not only internal transport facilities that are being expanded. The Russian tanker fleet—2.4 million dw. tons, two-fifths built in the free world—is being rapidly augmented. Vessels at present on order in Japan, Yugoslavia, Italy and Finland have an aggregate dw. tonnage of almost a million and the N.P.C. reckons that the Russian fleet will have grown to over 3.1 million tons by the end of next year; this is a much faster growth rate than was originally envisaged in the Seven-Year Plan. The Council is disturbed by the thought that this tonnage would be sufficient to handle about 85 per cent of the bloc's sea-borne exports: for it means that the Russians could create a severe transport crisis in the West if they were to withdraw this tonnage from service.

There is, however, no point in exaggerating this particular danger. As the N.P.C. points out, Russian attempts to expand their oil exports to Western Europe—which took seven-tenths of last year's total exports to the free world including Cuba—have an economic motivation. These exports help to pay for the plant, machinery and equipment, including the built-in technology, which the Russians are so anxious to acquire from the free world. While political motives cannot, of course, be excluded, the Russians would not lightly jeopardise their own export objectives by withdrawing their tankers from service.

Common Interest in Expansion

Pointing out ruefully that little is being done in the free world to check the import of Soviet oil or the export of free world manufactures to the communist bloc, the N.P.C. concludes that the trade is bound to expand along the lines indicated above. This expectation is the more likely to be fulfilled in view of the fact that continued expansion is desired on both sides of the Iron Curtain. The authorities in many consuming countries will jump at the opportunity of acquiring cheap oil from Soviet sources—and it is, of course, still being sold much more cheaply to the free world than it is to the satellite countries. The Italian state-owned E.N.I. is as ready to buy crude from the Russians as it is from Jersey Standard or Gulf Oil. Western shipbuilders or manufacturers, hungry for export orders, have an interest in pressing their Governments to permit the entry of Russian goods, including oil. And some Western politicians regard any expansion of East-West trade as a valuable means of reducing international tension and so of improving the prospects of peace. The westward flow of Soviet oil must, therefore, be expected to swell in volume, whatever may be said about the political and economic risks involved.—*By special arrangement with Petroleum Press Service.*

OIL INDUSTRY IN ITALY

The Italian oil industry is in an unenviable situation, having been caught between rapidly rising costs of operation and restrictive State controls on its pricing and other policies. Its operations have often been unprofitable in the past, but Sgr. Guicciardi, in his presidential address to last month's meeting of the *Unione Petrolifera*, revealed that most companies' results for 1963 were considerably worse than the year before, with the prospect of a further deterioration this year. The *Unione Petrolifera* is the joint organisation of the privately owned oil companies in Italy.

The inflationary pressure on the Italian economy is strong indeed. The oil industry's labour cost alone has risen by about 50 per cent in little over two years, but the trade unions are now asking for further wage concessions. Even now, labour costs are higher than anywhere else in the Common Market, and further increases might lead to intolerable conditions; there is also continued agitation by the owners of filling stations for an increased margin. The case is certainly strong, in the circumstances, for a revision of the present artificial structure of Government-controlled maximum prices for petroleum products, notably gasoline.

Sgr. Guicciardi also criticised the high and inequitable taxes on petroleum products, the costly programme of compulsory stock-piling, and the unfavourable legislation regarding oil prospecting. Taxes on petroleum products in 1963 yielded 760,000 million lire (£435 million), covering as much as 14 per cent of the entire State revenue, and, early this year, there was a further increase in the tax on gasoline, by 14 lire (2d.) per litre. Slight relief may be forthcoming, however, if—as expected—the Government will shortly arrange for tax exemption of products to be exported.

The latest increase in the gasoline tax forms part of the Government's anti-inflationary policy, which also includes a new purchase tax for the larger types of cars, as well as plans for restrictions on hire-purchase. While there is evidence that these measures are helping to curtail the pressure of demand, they are having an unfavourable effect on the oil industry. The Government's present policy to halt the issue of new licences for filling stations is also bound to affect the trend of consumption, which was previously moving sharply upwards. In 1963, total sales of petroleum products rose by 16 per cent to 32 million metric tons, and gasoline sales alone went up by 21 per cent to 4.6 million tons.

Oil last year accounted for as much as 56 per cent of Italy's energy supply and, whatever short-term fluctuations there may be in store, the *Unione Petrolifera* expects its share to go up to some 70 per cent by 1975. Investment in the Italian oil industry will, therefore, have to remain over the next five years or so at a high level; in 1963 alone, they totalled about 200,000 million lire (or around £115 million). The import of rising quantities of crude may be a drain of Italy's currency resources, but some 75-80 per cent of these outgoings are recovered, partly through foreign capital investments in Italy and partly through earnings from export, tanker operations, services, etc. The economy must benefit if the present restrictions on the growth of the oil industry are removed as soon as conditions are favourable.

AID FOR DEVELOPING COUNTRIES IN MINING AND GEOLOGY

New arrangements for providing British technical assistance to developing countries in the fields of geology and mining were announced in London on Thursday 7th May, 1964, with the publication of two White Papers. These recognise the importance of providing facilities for oversea students of mining and geology in British universities, schools of mining and technical colleges and in undertakings such as the National Coal Board. Teaching staff and equipment for institutions in the developing countries will continue to be provided.

The first White Paper is the report of a committee, headed by Sir Frederick Brundrett, which was appointed in 1962 to report on the type of technical assistance which Britain should be in a position to provide in the geological and mining fields. The other, a statement of the Government's policy on the recommendations of the committee, says that the Government intends in general to give effect to the recommendations.

The basic recommendation is that the functions of the Geological Survey of Great Britain should be expanded to cover oversea work, and that the Overseas Geological Surveys should be integrated with the atomic energy division of Britain's Geological Survey under the Department of Scientific and Industrial Research (D.S.I.R.).

The Governments statement says that it is believed that this proposed integrated organisation "will make the best use of the Government's resources in meeting the technical assistance requirements of developing countries in this field." The Department of Technical Co-operation (D.T.C.) will bear the cost of work undertaken by the new organisation for the benefit of oversea countries.

A committee of the Geological Survey Board, which at present advices D.S.I.R. on the functions and work of the Geological Survey of Great Britain, will be established to advise generally on the activities of the oversea components of the expanded organisation and, in particular, on the programme of oversea work, bearing in mind the requirements of the D.T.C's technical assistance programmes.

THE ATUL PRODUCTS LIMITED

CHAIRMAN, MR. KASTURBHAI LALBHAI, ON EXPANSION PROGRAMME

MANUFACTURE OF INTERMEDIATES VITAL

HOW the rising cost of raw materials was affecting the Atul Products Limited was highlighted by the Chairman, Mr. Kasturbhai Lalbhai, in his speech at the Sixteenth Annual General Meeting of the Company held at Ahmedabad on Tuesday, 5th May 1964. This handicap, Mr. Kasturbhai Lalbhai said, would continue to operate until the Company began to manufacture its own intermediates. He wanted grant of tariff or some other protection for bon acid which the Company had undertaken to produce. He also wanted a reduction in the price of electric power supplied for the production of caustic soda. As for the present programme of expansion, he assured the shareholders that all efforts were being made to implement the programme "with promptness and within the scheduled timings."

The following is the full text of Mr. Kasturbhai Lalbhai's speech:

GENTLEMEN,

The Directors' report and the annual accounts of the Company for the financial year ended on 31st December 1963 have been circulated to you previously. If you will, therefore, kindly agree, we will take them as read for the purpose of this meeting.

You may please observe that the Company has made a profit of Rs. 92,73,292, out of which the following provisions have been made:

Rs. 34,26,012 for depreciation.

Rs. 4,79,052 for remuneration of the Managing Agents.

Rs. 17,00,000 for taxation.

Rs. 6,90,000 for development rebate reserve.

Taking into account other additions such as refund and excess provision of tax and the balance of the previous year's account, a total sum of Rs. 33,93,745 was available for disposal. Since the Directors have recommended a dividend of 12 per cent per annum subject to tax, which would need Rs. 36,74,320, a sum of Rs. 3 lakhs has been withdrawn from the general reserve to meet the deficit.

Expenditure on Research

The profit for the year is Rs. 92,73,292 against the profit of the previous year of Rs. 1,23,38,097. On studying the profit and loss account, it would be noticed that the Company's borrowings have been steadily going up to meet the expenditure involved in the new projects and had, therefore, to pay about Rs. 10 lakhs more by way of interest than in the previous year. The Company also paid Rs. 3,12,389 by way of War Risk Insurance during the year. Another new item of expenditure is the contribution paid to the CIBA Research Centre. As you know, we have entered into an agreement with CIBA by which research in dyes will be carried out at the CIBA Research Centre, and the benefits of such research will accrue to the Company. So this amount represents the Company's expenditure on an item likely to be instrumental to its future growth. Over and above this, we have received about Rs. 5,20,907 less as dividends from other companies. I will request you to take a note of all these figures in judging the results of the year.

Raw Materials

Besides, the cost of the raw materials is also gradually going up. The Company has now to rely more and more, either on export promotion licences or on rupee payment licences to secure sufficient raw material to maintain production at a reasonable level. Export promotion licences have to be purchased at a large premium. Materials from the rupee payment countries are also costly. In either event, the cost of the raw material is higher by a percentage varying between 20 and 60 per cent, than if they were purchased in the normal way by import licences of free exchange. As I had mentioned last year, this factor would continue to operate and affect the Company adversely until the Company begins to manufacture its own intermediates.

As has been stated in the Directors' report, the year 1963 was poorer than the year 1962 for the sale of dyes. The market was bad and there was a general depression all throughout. The Company had to cut prices on two occasions to promote sales, but, the conditions being bad, there was no appreciable effect on the market of such reduction of prices. The sales have, however, been maintained by managing to sell more pharmaceuticals and vat dyes.

In the beginning of this year, there had been a slight improvement in the uptake of the dyes; but after the budget, there has again been a setback. Nevertheless, it appears that the market conditions may improve as time goes. It may be mentioned here that the Finance Minister has removed the surcharge of 10 per cent on the excise duty on dyes; but in the conditions of the dyes market as of today, a reduction in the excise duty itself might have been more helpful to the industry.

Bon Acid Plant

The bon acid plant has been commissioned last year, and now the Company will be able to produce all the bon acid required for the purpose of manufacturing naphthols. However, I may mention that we will have to face some complications till the Tariff Commission or a similar agency proposes to the Government to ban the import of bon acid, or place the price of the imported bon acid on par with the fair selling price of the indigenous product. This is an issue which is intimately connected with the general policy followed by our Government that all industries should, as far as possible, undertake the basic stages of manufacture. Since such new plants cannot be economical in view of their smaller size as compared with the normal size of the foreign plants, the Government is aware that they will have to extend tariff or some other protection to the industry during its different stages of development, as they are undertaken from time to time. We are, therefore, taking up with the Government the question of bon acid and the question of other intermediates that we propose to manufacture. I hope that some satisfactory solution of the problem would be arrived at.

Caustic Soda Plant

The Company has started the caustic soda plant. At present, power made available to the Company by the Gujarat Electricity Board is to the extent of half of its requirement. It has, however, been promised by the said Board that the full supply of electricity would be made available to the Company by June 1964. The cost of electric power in our State is higher than in the other States. On the other hand, in a plant like caustic soda, not only electric power is used in large quantities, but, for all practical purposes, it is used as a raw material. Therefore, if electrochemical plants situated in our State are to be able to compete with similar plants situated elsewhere, the price at which electric power is supplied to the local units will have to be given serious consideration. We have already made a representation to the Government of Gujarat in this matter and I am hopeful that the Government will consider our request with sympathy.

So far as the various projects of the Company are concerned, enough has been said in the Directors' report and I need not dilate on the same here. I may briefly mention that all efforts are being made to see that this present programme of expansion is carried out with promptness and within the scheduled timings.

Foreign Markets

I may mention that we have been trying to explore the possibility of development of foreign markets for sale of dyes. We exported dyes worth Rs. 4 lakhs last year, and hope to export a larger quantity this year. However, it should be noted that foreign markets are highly competitive, and we will not be able to realise the prices that we do in the domestic market. If, all the same, we persist in our effort to develop foreign markets, it is for two reasons. The country stands in need of foreign exchange and we should, therefore, do whatever effort we can to earn it. Also, if we are able to run our plants on a larger capacity, there will be an overall economy in the cost of production.

Thus you will see that, in spite of the unfavourable market conditions and other difficulties, the Company has been able to maintain its position and make good progress in the matter of the various projects that we have been having on hand. All this has been possible due to the loyalty, sincerity and hard work of the members of the staff and other employees. I take this opportunity to thank them for the willing co-operation that they have given us.

Notice

THE SASSOON SPINNING AND WEAVING COMPANY LIMITED

Registered Office:
Mafatlal House, Backbay Reclamation, BOMBAY-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE NINETY-FIRST ANNUAL GENERAL MEETING of the Members of the SASSOON SPINNING AND WEAVING COMPANY LIMITED will be held at the TATA AUDITORIUM, BOMBAY HOUSE, BRUCE STREET, BOMBAY-1, on Thursday the 11th June 1964, at 3.15 p.m. (S.T.), to transact the business specified in the Notice dated the 22nd April 1964 posted along with the Explanatory Statement, to individual Members at their address registered with the Company.

A Member entitled to attend and to vote at the Meeting is entitled to appoint a proxy to attend and to vote instead of himself, and a proxy need not be a Member.

The Register of Members and the Transfer Books of the Company will remain closed from Tuesday, the 12th May 1964 to Saturday, the 30th May 1964 (both days inclusive).

Dividend as recommended by the Directors, when declared at the Annual General Meeting, will be paid from Monday, the 15th June 1964 to Wednesday, the 30th September 1964, at all the branches in India of the United Commercial Bank Ltd., and thereafter at the Registered Office of the Company, during office hours, excepting Saturdays, to those Members whose names are on the Register of Members of the Company on 30th May 1964.

Members are requested to intimate the Company immediately any change in their registered address.

By Order of the Board of Directors,

M. G. INVESTMENT CORPORATION LTD.,
K. K. MAHADEVIA,
Director,
Managing Agents.

BOMBAY,
22nd April 1964.

Notices

GUEST, KEEN, WILLIAMS, LIMITED

NOTICE

THE THIRTY-FOURTH ANNUAL GENERAL Meeting of the Members of Guest, Keen, Williams, Limited will be held at the offices of Jardine Henderson Limited, 4, Clive Row, Calcutta, on Friday, the 12th day of June, 1964, at 11.30 a.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Accounts for the 52 weeks ended 28th December, 1963.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following resolutions, a Special Notice as defined by Section 190 of the Companies Act, 1956 having been received by the Company under Section 281 of the Act in respect of Resolution No. 5 hereunder:—

5. *As an Ordinary Resolution*
That Sir Raghavan Pillai, who vacates office having attained the age of 65 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956 shall not apply to him.

6. *As a Special Resolution*
That, subject to the approval of the Central Government, the Articles of Association of the Company be altered as follows:—
In Clause 104 by deleting the word "twelve" and substituting in place thereof the word "fourteen."

7. *As an Ordinary Resolution*
That, with effect from 29th December, 1963, and subject to Central Government approval, Mr. Krishna Chandra Maitra, who has been appointed a Managing Director, be and is hereby authorised to receive remuneration for his services as a Managing Director in accordance with the terms specified in the Agreement dated 24th April, 1964 made between the Company of the one part and Mr. K. C. Maitra of the other part, or on such other terms and conditions as the Central Government may think fit to determine.

8. *As an Ordinary Resolution*
That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Ardeshir Hormusji Sethna be and is hereby appointed a Director of the Company.

9. *As an Ordinary Resolution*
That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Nisith Ranjan Banerjee be and is hereby appointed, subject to the approval of Central Government under Section 269 of the said Act, a Director of the Company.

10. *As a Special Resolution*
That, in view of the foregoing resolution that Mr. Nisith Ranjan Banerjee be appointed a Director of the Company, consent be and is hereby accorded to Mr. Nisith Ranjan Banerjee holding and continuing to hold an office or place of profit under the Company and being remunerated, subject to Central Government approval, for his services in accordance with the terms specified in a written communication dated 24th April, 1964 conveyed to Mr. Nisith Ranjan Banerjee by the Company, or on such other terms and conditions as the Central Government may think fit to determine.

11. *As an Ordinary Resolution*
That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Robert Brabender Ritchie be and is hereby appointed, subject to the approval of Central Government under Section 269 of the said Act, a Director of the Company.

12. *As a Special Resolution*
That, in view of the foregoing resolution that Mr. Robert Brabender Ritchie be appointed a Director of the Company, consent be and is hereby accorded to Mr. Robert Brabender Ritchie holding and continuing to hold an office or place of profit under the Company and being remunerated, subject to Central Government approval, for his services in accordance with the terms specified in a written communication dated 24th April, 1964 conveyed to Mr. Robert Brabender Ritchie by the Company, or on such other terms and conditions as the Central Government may think fit to determine.

13. *As an Ordinary Resolution*
That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. John Marshal Leighton be and is hereby appointed, subject to the approval of Central Government under Section 269 of the said Act, a Director of the Company.

14. *As a Special Resolution*
That, in view of the foregoing resolution that Mr. John Marshal Leighton be appointed a Director of the Company, consent be and is hereby accorded to Mr. John Marshal Leighton holding and continuing to hold an office or place of profit under the Company and being remunerated, subject to Central Government approval, for his services in accordance with the terms specified in a written communication dated 24th April, 1964 conveyed to Mr. John Marshal Leighton by the Company, or on such other terms and conditions as the Central Government may think fit to determine.

The Register of Members of the Company will be closed from the 25th May, 1964 to 12th June, 1964, both days inclusive.

By Order of the Board,
R. B. RITCHIE,
Secretary.

Registered Office:
41, CHOWRINGHEE ROAD,
CALCUTTA 16.
25th April, 1964

Note 1.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and such proxy need not be a member of the Company. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

Note 2.—No application for warrants will be necessary and payment of any Dividend declared will be made on or after the 26th June, 1964 only to those Members whose names are registered in the books of the Company on the 12th June, 1964 or to their Mandatees. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Note 3.—The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 is being sent to all members of the Company.

JAY SHREE TEA AND INDUSTRIES LIMITED

NOTICE TO THE SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Eighteenth Annual General Meeting of the Shareholders of this Company will be held on Thursday, the 18th June, 1964, at 3.30 p.m. at 15, India Exchange Place, Calcutta-1, to transact the following business:—

1. To receive and consider the Directors' Report and to adopt the audited accounts for the year ended 31st December, 1963.
2. To declare dividends on Preference and Equity Shares.
3. To appoint a Director in place of Shri D. N. Bhattacherjee, who retires by rotation, but being eligible offers himself for re-election.
4. To appoint a Director in place of Shri M. L. Shah, who retires by rotation and to consider, and if thought fit, to pass the following resolution, a special notice of which as required by Section 281 of the Companies Act 1956 has been received and is also hereby given by the Company to the shareholders:

   "RESOLVED that Shri M. L. Shah, who has crossed the age limit of 65 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit prescribed in Section 280 of the Companies Act 1956 shall not apply to him."

5. To appoint Auditors for the current year and fix their remuneration.
6. To transact any other business which may be transacted at such meeting.

By Order of the Board,
B. C. BIYANI,
Secretary, Company Law.

Registered Office:
"INDIA EXCHANGE",
CALCUTTA-1.
The 29th April, 1964.

N.B.—1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

The Share Transfer Register will remain closed from 26th May, 1964 to 18th June, 1964, both days inclusive.

3. The dividend warrants for Preference and Equity Shares as sanctioned at the meeting, will be posted to the Registered Shareholders of the Company as on 18th June, 1964, in due course.

EXPLANATORY STATEMENT

Item No. 4:

Shri M. L. Shah, a Director of the Company, retires by rotation. Since he has crossed the age limit of 65 years, his re-appointment as a Director of the Company requires the resolution of Shareholders specifically declaring that the age limit prescribed in Section 280 of the Companies Act 1956 shall not apply to him. The Company has received special notice from a Member notifying his intention to move the resolution set out in the item. In view of his long association with the Company as a Member of the Board and his experience in business, it is in the best interest of the Company that he should continue to be a Director of the Company.

THE BRADY ENGINEERING COMPANY LIMITED

Registered Office:
Brady House, 12/14 Veer Nariman Road, Bombay-1

NOTICE UNDER SECTION 412(2)(a) OF THE COMPANIES ACT, 1956

To,

THE MEMBERS,
THE BRADY ENGINEERING COMPANY LIMITED.

GENERAL NOTICE IS HEREBY GIVEN that an application is being made to the Central Government for its approval under provisions of Section 310 and other applicable provisions, if any, of the Companies Act, 1956, of the proposed increase in the Directors' fees to Rs. 150 for attending each meeting of the Board or a Committee of the Board.

The proposed increase is in accordance with the Special Resolution amending the relevant Article of the Articles of Association of the Company passed by the shareholders at the Eighteenth Annual General Meeting of the Company held on 28th April, 1964.

By Order of the Board,
W. H. BRADY & COMPANY LIMITED,
J. M. MEHTA,
Managing Director,
Managing Agents.

BOMBAY, *7th May,* 1964.

MORE ABOUT WORLD TRADE CONFERENCE

DELIBERATIONS OF FIVE SPECIAL COMMITTEES SO FAR REVIEWED

SIMULTANEOUSLY in session now at Geneva are two important international conferences: the Trade and Development Conference—it began on 23rd March last—and the Kennedy Round Trade Conference—it began on the 4th of this month. The basic objective of both the Conferences is to ensure an orderly expansion of world trade, but there are three notable differences between the two. In the first place, the Trade and Development Conference is being held under the auspices of the United Nations Organisation, whereas the Kennedy Round is under the auspices of the G.A.T.T. Secondly, while countries in both free and communist worlds are participating in the former Conference, the Kennedy Round is confined only to the 62 G.A.T.T. member-countries which are all in the free world. The only country that is not participating in either of the conferences is Communist China which alone accounts for over one-fifth of the total world population. And, finally, the agenda before the U.N. Conference includes the various subjects pertaining to trade as well as aid, unlike the Kennedy Round which is rather restrictive in character, confined as it is merely to tariff negotiations.

The outcome of the Kennedy Round will be known only after several months—the negotiations are expected to last at least eighteen months—while that of the U.N. Trade Conference will be known in about five weeks' time, for the Conference is scheduled to close by the 15th of next month. The success of these two Conferences will be judged by the extent to which they will reduce the growing imbalance in world economy (caused by the greatly uneven growth in the sphere of expanding world trade between the developed and the developing nations) and secure a more orderly and healthy expansion of world trade, the benefits of which should be increasingly shared by the large number of developing countries. The developing countries—where two-thirds of the earth's population live with a standard of living deplorably below that enjoyed by a comparatively small population in the developed countries—have a direct and significant share in the outcome of the two Conferences. And, on their part, the developed countries are fully conscious of the urgent need to avert the yawning economic gap between them and the developing countries, for they well realise that such a gap will hurt themselves as much as—perhaps more than—the developing countries.

Wide Area of Agreement

A resume of the first phase of the U.N. Conference on Trade and Development was given in these columns three weeks ago (vide pages 721 and 722 of *Commerce* dated 25th April). This first phase ended on 8th April. Since then, the Conference has been conducting its deliberations exclusively in its five main Committees which are trying to find solutions for specific issues entrusted to them: (1) international commodity problems; (2) trade in manufactures and semi-manufactures; (3) an improvement in the visible trade of developing countries and financing for an expansion of international trade; (4) institutional arrangements, methods and machinery to implement measures relating to expansion of international trade; and (5) expansion of international trade and its significance for economic development and implications of regional economic groupings. The deliberations of the main Conference and the five Committees have been most constructive, indicating that a wide area of fruitful agreement would be forthcoming and that there is an insistent interest on the part of all to concentrate on essential issues. It is particularly gratifying to find that the various questions of complex character are being treated "seriously and objectively," with side issues avoided, and there is the justifiable hope that the five Committees would be able to assess the extent to which the wide and varied suggestions put forward by the experts of different countries would go towards filling the present world trade gap. After the five Committees complete their findings, the final phase of the conference will be held for taking formal decisions.

Main Ideas and Issues

The clarification of main ideas and issues achieved so far covers the following:

1. Recognition of the great gap between the living standards of people in the developing and those of industrialised countries.

2. The developing countries have admitted their responsibility regarding their own development. Speaker after speaker has given statistics showing that, while efforts have been made by developing countries to increase productivity and trade, the proceeds from their exports are decreasing in absolute terms.

3. A clear idea of the magnitude of the problem, namely, the size of the external payments deficit facing the developing countries, has emerged.

4. Various plans have been mooted to meet this deficit; the plans include increase in basic commodity prices, reduction or elimination of tariffs, increase in consumption, and enlargement of markets for pressed goods.

Commodity Problems

Each of the five Committees constituted by the Conference has held a number of meetings. At all the meetings of the first Committee, the spokesmen for the developing countries have repeatedly referred to the losses they are sustaining through the deterioration in their terms of trade and the consequent impossibility for them to achieve an annual rate of economic growth of five per cent as proposed in the U.N. General Assembly resolution on the Development Decade. The spokesmen have also drawn attention to the (*a*) adverse effects of protectionist and fiscal policies practised by the industrialised countries, especially in the matter of agricultural products, (*b*) competition of synthetic substitutes and (*c*) wide fluctuations in the prices of and demand for primary commodities. In varying degrees, the developing countries have advocated removal of import barriers in the industrialised countries, grant of preferential treatment to goods from developing countries, stabilisation of primary commodity prices at remunerative levels through modernised and comprehensive international commodity agreements, and compensatory financing to correct the ill effects of unfavourable terms of trade. The communist countries have indicated that they are prepared to step up further their purchases of primary commodities from the developing countries. The industrialised free enterprise countries have conceded the fact that the developing countries should have freer access to their markets.

Manufactures and Semi-manufactures

The second Committee first discussed the question (of trade in manufactures and semi-manufactures) as a whole and is currently examining specific aspects, beginning with what action should be taken to diversify and expand the industrial exports of developing nations so as to increase their share in world trade. The broad conclusions emerging from the views expressed by the representatives of the various developing nations of Asia, Africa and Latin America are as follows:

The developing countries' own experience in economic development had shown that a point was soon reached, after the initial stages, when further growth depended on ability to sell their manufactured or semi-manufactured goods in foreign markets. Their attempts to sell their industrial products in developed countries have met with a number of obstacles such as tariff barriers, quantitative restrictions, progressive rates of duties based on degree of processing of goods, monopolistic practices, lack of knowledge of market conditions abroad, and high cost of advertising and sales promotion in developed countries. Since the concept of the most-favoured-nation principle applies where nations are economically at the same level of development but not otherwise, preferential treatment must be accorded to the developing countries, in addition to the removal of tariff and other trade barriers.

On the part of some industrially advanced Western countries, the view was expressed that trade barriers should be eliminated. Many representatives wanted the trade to be carried on according to the most-favoured-nation principle. Some of them declared that, because the problems facing developing nations were so acute, they were prepared to consider some form of temporary preferential treatment. They, however, emphasised that any such system must be carefully examined and, to be effective, it must be accepted by all developed nations.

Foreign Aid

The discussions in the third Committee centred round such questions as importance of medium-term and long-term international financing, co-ordination of trade and aid policies, measures for improving the invisible trade of developing countries in fields like tourism, transport and insurance, and international compensatory financing. There was general agreement that more international capital should be made available on more favourable terms to countries seeking to speed up their growth by expanding their trade and importing the goods and equipment they needed. Twelve developing countries (including India but excluding Pakistan) and the U.S. have together sponsored a joint proposal containing new guidelines for financing economic growth through trade and aid. The guidelines are:

Developing countries should be free to use foreign aid funds to shop for the best bargains in goods and services, although balance of payments problems may require exceptions to this rule.

There should be available more long-term financing for economic growth to replace the burdensome medium and short-term loans.

External debt burdens should be eased, wherever necessary, by rescheduling or consolidating loans, with provisions for periods of grace, amortisation and reasonable rates of interest.

Aid should be co-ordinated with and should encourage regional and national development programmes, particularly regional industrial development and financing of regional trade.

Recognition should be given to the interdependence of industrial growth and farm output.

Technical assistance should be tailored to the stage of development of the recipient nation.

Industrialised countries should co-operate with developing countries in organising their own national or regional insurance and export credit systems.

That the U.S., a highly developed country which has given more by way of aid to developing countries than others, is a signatory to the joint proposal is quite significant. We do not know why Pakistan, a developing country which also depends considerably on foreign aid, has not signed the joint proposal.

However important may be the need for larger financial aid on more liberal terms, a greater inflow of foreign private investment into the developing countries is urgent. Some of the industrialised countries have urged the developing nations to create a favourable climate for investment by providing such guarantees as tax holidays and freedom for repatriation of profits. Some of the developing countries, however, have pointed out that such liberal policies often result in an outflow of capital which is an even further drain on their scarce foreign reserves. There has, however, been wide agreement on the need for reducing shipping and freight rates, as well as on the value of tourism for improving the invisible trade of developing countries. On compensatory financing, most speakers from developed and developing countries have called for concrete measures to compensate the developing countries for the deterioration in their terms of trade.

Institutional Arrangements

The question of future institutional arrangements in the field of trade is still under discussion at the meetings of the fourth Committee. The balance of opinion so far seems to be in favour of convening periodically U.N. conferences on trade and development similar to the present Conference, and of establishing a standing committee on trade and a permanent secretariat to service these conferences. The U.S. and five other nations (Canada, Japan, the Netherlands, Sweden and the U.K.) have co-sponsored a draft resolution recommending that the U.N. Conference on Trade and Development be convened every three years and that a Commission for International Trade be established to keep abreast of trade requirements between conferences and to perform a wide range of functions in the commodity field. The resolution also provides for a secretariat to service the Conference and the Commission. It will be a part of the department for economic and social affairs at the U.N. headquarters. The proposal, according to the U.S. delegate, Mr. Richard M. Gardner, represents a synthesis of views expressed by both industrial and developing nations. The six nations agree that the basic responsibility of the proposed conference should be to promote international trade, particularly in its relation to the economic development of developing countries. The Commission would have the authority, under certain conditions, to negotiate contractual arrangements in any area of trade which cannot be dealt with by existing institutions. The sponsors consider that the Commission would fill the present need to co-ordinate the efforts of the U.N. and other international organisations in the trade field—some 43 of them. Both the Commission and the Conference would be under the authority of the United Nations General Assembly and of the Economic and Social Council.

Trade and Development

The fifth Committee, after its general debate, is now discussing concrete proposals relating to general principles; trade needs of developing countries; the relationship of trade and international development; trade problems between countries at a similar level of development, at different stages of development and those having different systems; and the implications of regional groupings. This Committee is charged with such wide terms of reference that a part of its deliberations, as Dr. V. K. R. V. Rao, a member of the Indian delegation, emphasised in his speech at Geneva, are bound to cover the spheres of the other Committees. It is, therefore desirable, according to him, that this Committee should concentrate on the enunciation of the principles on which international trade can be built up, with its accent on the promotion of economic development of the less developed world, rather than on details of arrangements regarding individual commodities or sectors. In the considered opinion of Dr. Rao, there are four broad principles of development-oriented international trade. They are:

1. Prices of primary products cannot be allowed to fluctuate as they have been doing in the past and thus leading to substantial and quite often continuing decreases in the export earnings of developing countries.

2. All barriers, both tariff and non-tariff, in the developed countries to the inflow of goods (manufactured and semi-manufactured) from developing countries should be removed.

3. Conditions must be created that will make more certain the entry of the products of developing countries into the markets of developed countries.

4. The advantages accruing from a geographical division of labour must be maximised.

The principles outlined by Dr. Rao are sound and rational. If these principles are accepted without any mental reservation by all countries, the task of formulating practical programmes and policies that will enable the world at large to fulfil the U.N. target of economic growth during this Development Decade will not be that difficult. But the real question is the political feasibility of these principles, especially the fourth one regarding international division of labour. This is one issue on which the developing countries themselves will not be able to reach an agreement *inter se*. So steeped are they in the spirit of nationalism that every one of them is trying to attain self-sufficiency, in utter disregard of considerations of economic viability. Dr. Paul Prebisch, Secretary-General of the Geneva Conference, has most forcefully urged the formulation of "clear principles" for expansion of world trade and the setting up of quantitative goals for exports from the developing countries to both the free market countries and the centrally planned economies. A pertinent suggestion which Dr. Prebisch has put forward is that the Conference in view of the limited time before it, should concentrate only on those proposals that have a direct bearing on meeting the trade gap of the developing countries. Now that the idea of a permanent trade machinery to follow up the present Conference has been generally accepted, he is of the view that this machinery can discuss all residual and unresolved problems currently before the Conference.

INDIA'S EXPORTS IN 1963-64

The aggregate exports from India during the financial year 1963-64 amounted to Rs. 795 crores, as against Rs. 714 crores in the previous year. Sugar, jute manufactures and "new manufactures" accounted for an increase of about Rs. 9 crores in each case. Exports of vegetable oils (non-essential) were higher by Rs. 7 crores, followed by tobacco (+Rs. 4 crores) and leather, tanned and dressed (+Rs. 3.5 crores). Oilcakes, woollen manufactures and art silk manufactures registered an increase of Rs. 3 crores each. The largest increase, amounting to Rs. 47 crores, was in the exports to Asia and Oceania, of which the share of the E.C.A.F.E. region alone was Rs. 42 crores. Exports to America increased from Rs. 145.6 crores to Rs. 156.1 crores, showing a rise of Rs. 10.5 crores. Exports to West European countries were also higher by Rs. 10 crores, of which the European Economic Community countries accounted for over Rs. 8 crores. Exports to East European countries recorded an increase of Rs. 12 crores, the Soviet Union's share alone being Rs. 11 crores. Exports to African countries, however, declined from Rs. 45 crores in 1962-63 to Rs. 42 crores.

ALL-ROUND IMPROVEMENT IN RESULTS OF PHILIPS INDIA

DIVIDEND AND RESERVES ALIKE ENHANCED

THE results of Philips India Ltd. (Chairman and Managing Director: Mr. W. A. C. H. Bosschaart, Calcutta) for the year ended 31st December 1963 are very good, indeed, and reveal, as the Directors say, the continuing progress of the Company's development efforts directed not only towards expanding production but also towards increasing the indigenous content of the products manufactured. In fact, the Company's performance could well have been better still but for the shortage of raw materials, foreign exchange and power. Nevertheless, thanks to some improvement in the supply of locally made goods, the turnover has reached another record level of Rs. 10.63 crores and exceeds the previous year's figure by as much as Rs. 1.78 crores or 20 per cent. To quote, once again, the words of the Directors, "high level of production of radio sets, components and light articles, together with the efforts made to raise the efficiency of the selling and service organisations and more intensive sales promotional drive, have made the all-time record sales possible." Apart from pushing up the sales realisation, the aforesaid factors have brought about a welcome improvement in the profit-margin (ratio of gross profit to sale proceeds) of 1.7 point to 18.7 per cent and so the gross profit is perceptibly larger at Rs. 198.79 lakhs as against Rs. 150.17 lakhs for the year before.

The provision for depreciation has risen from Rs. 20.96 lakhs to Rs. 25.22 lakhs but it is the provision for taxation which, as during the preceding year, has mopped up the major portion of the pre-tax profit by rising rather sharply by Rs. 31.50 lakhs to Rs. 117.00 lakhs, including Rs. 15.00 lakhs for surtax. Thus, notwithstanding the changes made by the Government in the corporate tax structure with the professed object of augmenting the resources of this sector, the total incidence of tax so far as this Company is concerned continues to be as heavy as before. After making these essential provisions, there remains a net profit of Rs. 56.57 lakhs, which is Rs. 12.86 lakhs better than that (Rs. 43.71 lakhs) earned in the previous year. Out of this a sum of Rs. 5.50 lakhs (Rs. 6.15 lakhs) has been credited to the development rebate reserve and Rs. 19.04 lakhs (Rs. 9.00 lakhs) to other reserves including Rs. 11.04 lakhs (*Nil*) to general reserve. It will thus be noted that the amount of profit conserved is Rs. 8.39 lakhs larger than a year ago. It was in 1962 that the dividend was raised, albeit modestly, to 13 per cent subject to deduction of tax, after keeping it unchanged at 12 per cent, subject to deduction of tax, for a number of years. In the light of the large amount now available for disposal, but after considering the demands which seem likely to be made by the Company's future plans, the Directors have recommended a small rise of two points to 15 per cent (subject to deduction of tax) in the dividend to shareholders.

The rapid progress made by the Company during the past four years is brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	10,63.02	884.85	682.06	555.12
Other income	2.50	1.06	2.26	3.88
Stocks of finished goods ..	141.44	140.66	159.31	85.83
Materials consumed	494.29	425.49	386.91	289.95
Excise duty	58.80	34.20	41.39	—
Staff expenses	158.14	132.77	118.42	101.15
Other expenses	156.28	125.33	117.56	82.77
Gross profit	198.79	150.17	93.63	91.62
Provision for—				
Depreciation	25.22	20.96	19.44	19.04
Taxation	117.00	85.50	36.00	33.50
Net profit	56.57	43.71	38.19	38.98
To development rebate reserve ..	5.50	6.15	3.00	2.90
To other reserves	19.04	9.00	8.99	12.42
Dividend	33.00	28.60	26.40	26.40
	(15%)	(13%)	(12%)	(12%)
Carry forward	0.43	1.40	1.43	0.64
Market price of ordinary shares (in rupees)	1964	1963	1962	1961	1960
High	28.70	30.87	40.25	39.12	35.37
Low	21.00	25.25	21.87	26.12	23.50

The net earnings as percentage of net worth, it may be noted here, has improved from 11.17 in 1962 to 14.53 in the year under review.

The Company's various factories and the schemes to expand them made further progress during the year. Plans to step up the production in the Company's factories in Bombay and Calcutta were successfully implemented. The installation of a new capping mill at the unit in Bombay contributed to the speeding up of the manufacture of lamps and increased efficiency at the finishing stage. While the factory in Bombay turned out a large number of lamps, fluorescent lamp starters and burners for gaseous discharge lamps, the unit in Calcutta was able to fulfil its manufacturing programme for fluorescent lamp fittings and various accessories thereto.

Preparations reached an advanced stage during the year for realising the Company's expansion plan to produce tungsten and molybdenum wire and tungsten coils. It is hoped that, as a consequence of the steps taken to expedite the implementation of this plan, tungsten coils will be made available in the course of 1964. These are vital components for electric lamps and are at present entirely imported.

A plot of land was recently acquired at Kalwa in the new industrial belt of Bombay, where, ultimately, the Company's manufacturing plants for different types of lamps and their components as well as other industrial activities will be located. The Directors feel that this step will result in a more rapid expansion of manufacturing programmes pertaining to lamps and their components and various other products.

The year witnessed an appreciable increase in the production of radio components as compared with that in the previous year. Apart from the existing range of components, such as loudspeakers, "multi-function" switches, ceramic, polyester and variable condensers, trimmers of different types and potentiometers, the manufacture of miniature electrolytic condensers was started. The introduction of this type of condensers is said to mark an important step towards developing miniature components which are so vital for the growth of the transistor technique in India's radio industry. The production of radio sets at the factory in Loni was maintained at a satisfactory level.

Steps taken in the previous year to equip the factory in Calcutta with an outfit for tool room to fulfil its need for mechanical piece parts and mouldings greatly facilitated the production of radio sets and components. Output of this unit would have been higher but for the frequent breakdown in power supply which was a common experience of the industry located in the Eastern part of the country. A new unit was opened in Bombay to produce electronic measuring instruments and other industrial and scientific apparatus. It succeeded in turning out a number of electronic measuring instruments already during the year.

It will be recalled that, during the preceding year, the Company had received consent from the Central Government to issue new equity shares of Rs. 10 each for a total of Rs. 16.66 lakhs. Since no steps have so far been taken to issue these, the paid-up share capital of the Company continues to stand unchanged at Rs. 220 lakhs made up exclusively of ordinary shares of Rs. 10 each. Reserves, on the other hand, have risen to Rs. 114.28 lakhs from Rs. 90.70 lakhs a year ago, so that own funds now aggregate Rs. 334.28 lakhs. As against these, however, outside interest stands as high as Rs. 560.35 lakhs, comprising Rs. 221.44 lakhs secured and unsecured loans and Rs. 338.91 lakhs current liabilities and provisions. But these are adequately covered on the assets side by current assets, investments and loans and advances aggregating Rs. 636.71 lakhs. With the addition of new assets worth Rs. 65.78 lakhs during the year, the block account has grown to Rs. 355.54 lakhs and, on deducting therefrom Rs. 125.87 lakhs being the depreciation provided so far, there is a net block of Rs. 229.67 lakhs. This is besides the capital-work-in-progress shown at Rs. 28.25 lakhs.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 27.62 *cum-div.* On the *ex-div.* basis, the net annual return on fresh investment in these shares works out to 4.6 per cent. It may be noted here that the dividend is well covered, the net earnings per equity share being Rs. 2.21.

RAYMOND WOOLLEN

SALES RISE MARKEDLY

THE Raymond Woollen Mills Ltd. (Managing Agents: Messrs. J. K. (Bombay) Private Ltd., Bombay) has given by and large an excellent account of itself during the year ended 31st December 1963. Turnover has risen "remarkably" from Rs. 375.54 lakhs to Rs. 510.61 lakhs, registering a gain of 35.3 per cent over the previous year, as compared with the rise of 17.3 per cent recorded in 1962. The gross profit, as a consequence, has advanced from Rs. 60.86 lakhs to Rs. 75.21 lakhs, but, as expenses in aggregate have risen somewhat disproportionately from Rs. 311.85 lakhs to Rs. 438.42 lakhs, the rate of growth in gross profit is somewhat low, being only 25 per cent. With the improvement in gross profit, the provision for Managing Agents' commission has been increased from Rs. 4.02 lakhs to Rs. 4.65 lakhs. The provision for depreciation has also been increased from Rs. 6.41 lakhs to Rs. 9.70 lakhs, due mainly to the revision of specified period in respect of fixed assets entitled to multiple-shift allowance for third-shift working on the basis of the budget proposals for 1964-65. The provision for taxation, too, has claimed a higher amount of Rs. 34.50 lakhs, as against Rs. 30.30 lakhs for the year before. The resulting net profit is, therefore, not much, being Rs. 26.36 lakhs, or only Rs. 6.22 lakhs more than that earned in the previous year. Out of this, as much as Rs. 16.10 lakhs (Rs. 11.95 lakhs) have been credited to reserves and a further sum of Rs. 1.62 lakh has been set aside for payment of preference dividend in respect of the year. The ordinary dividend remains, once again, unchanged at 12 per cent for the fourth year in succession and claims Rs. 9 lakhs, leaving Rs. 14,825 to be carried forward, as against the Rs. 51,319 brought in. The Directors explain that the decision to maintain the dividend despite higher earnings has been dictated by the Company's requirements of large resources for financing its modernisation schemes.

Working results of the Company for the past four years are synoptically presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds (gross)	510.61	375.54	320.22	305.69

Dividend—				
Preference	1.62	1.62	1.62	1.62
Ordinary	9.00	9.00	9.00	9.00
	(12%)	(12%)	(12%)	(12%)
Carry forward	0.15	0.51	2.95	1.17
Market price of ordinary shares (in rupees)	1964	1963	1962	1961	1960
High	142	141	150	134	132
Low	134	127	123	103	93

The increased turnover during the year was due largely to the sales against defence orders which amounted to Rs. 238.48 lakhs, as against only Rs. 35.68 lakhs in the previous year. Export sales also showed a substantial increase of over 76 per cent from Rs. 15.19 lakhs to Rs. 26.77 lakhs. Satisfactory progress was also made in developing business in other lines of textiles such as nylon, hosiery articles like socks, jerseys, cardigans and ready-made garments. Sales for the civilian market, however, declined by about 40 per cent, but this decline was due to the severe cut in import allocations for raw materials used in the production of goods for civilian use.

The raw material availability was the highest during the year under review, in view of substantial allocations of imported raw materials for defence orders. As a result, machine activity in both the woollen and worsted sections of the mills was at a high level. At the same time, the availability of imported raw materials for civilian consumption was substantially lower due partly to a cut approximately 13 per cent in basic quota allotments and partly to the large utilisation of such allotments towards fulfilment of defence orders.

In their report for 1962, it will be recalled, the Directors had informed the shareholders that the woollen industry had approached the Government with a request to permit transfers to the industry of machinery entitlements earn-

(*Continued on page 868*)

RESULTS OF FINLAY GROUP MILLS

RISE IN PRODUCTION COSTS AFFECTS PROFIT MARGIN

THE three city mills under the management of Messrs. James Finlay and Co. Ltd., namely, Finlay, Swan and Gold Mohur, have suffered a mild setback during the year ended 31st December 1963 so far as their net profits are concerned. With the exception of the Finlay Mills, the other two have recorded a fair-sized increase in their sales realisation, but, barring Gold Mohur, the gross profits of the other two have declined, due, of course, to the further deterioration in the availability of long-staple cotton imported from Sudan and Egypt and the need to purchase the required quantity at a high price or to augment the supply by purchasing cotton quotas from other mills under the export incentive scheme at a high premium. It is interesting to note that the profit-margin (ratio of gross profit to sales) has declined in all the three cases, notwithstanding increased closing stocks. There has also been a sharp rise in "other" expenses of the mills, but the rise is more apparent than real, since the increase in each case is due to an upward revaluation of the opening stocks of finished and processed goods.

There is, therefore, an increase in the value of the opening stock amounting to Rs. 20.76 lakhs in the case of Finlay, Rs. 13.03 lakhs in that of Swan, and Rs. 24.81 lakhs of Gold Mohur. In line with the gross profit, the net profits of the mills have also declined, but the dividend in all the cases has been maintained at the previous year's level without affecting to any appreciable extent the plough-back.

Finlay Mills

Owing to the severe cut in its quota of imported long-staple cotton which led to a considerable underutilisation of capacity and necessitated the shutting down of a certain number of spindles in the earlier part of the year under report, there has been a fall in the production of yarn by the Finlay Mills Ltd. to some extent. This is reflected in a decline of Rs. 6.35 lakhs to Rs. 300.90 lakhs in the sales proceeds, while the gross profit is down correspondingly to Rs. 51.16 lakhs from Rs. 58.74 lakhs a year ago. Nevertheless, the provision for Managing Agents' commission has risen, though marginally, from Rs. 3.73 lakhs to Rs. 3.78 lakhs and, since the provision for depreciation is also higher by Rs. 3.24 lakhs at Rs. 13.26 lakhs, the profit prior to taxation has receded from Rs. 45.00 lakhs for the year before to Rs. 34.12 lakhs for that under review. The provision for taxation has also declined in consonance from Rs. 22.56 lakhs to Rs. 14.86 lakhs, but, even then, the net profit at Rs. 19.26 lakhs shows a decrease of Rs. 3.18 lakhs) as expense items relating to prior years After providing out of this Rs. 41,000 (Rs. 10.17 lakhs) as expense items relating to prior years and crediting Rs. 6.93 lakhs (Rs. 73,000) to reserves, the Directors propose to repeat the dividend of 23 per cent subject to deduction of tax.

Swan Mills

Notwithstanding the shortage experienced in the availability of imported cotton, the Swan Mills Ltd. has been able to maintain the upward trend in its turnover and report a higher sales realisation of Rs. 239.61 lakhs, as against Rs. 228.07 lakhs for the year before, besides carrying forward higher stocks of finished and process goods. But, unfortunately, the gross profit has declined from Rs. 50.79 lakhs to Rs. 47.19 lakhs. The profit-margin (ratio of gross profit to sales), therefore, shows a reduction of as much as 2.6 points to 19.7 per cent. Since, however, the provision for Managing Agents' commission and taxation are lower at Rs. 3.31 lakhs and Rs. 14.57 lakhs, as against Rs. 3.59 lakhs and Rs. 19.69 lakhs, respectively—the provisions for depreciation is, of course, slightly higher at Rs. 13.52 lakhs, as against Rs. 11.51 lakhs—the net profit is only fractionally lower at Rs. 15.79 lakhs, as against Rs. 16.00 lakhs for 1962. The dividend, therefore, has been maintained at 21.6 per cent, claiming Rs. 12.96 lakhs. Transfer to reserves, however, has been stepped up to Rs. 2.67 lakhs from Rs. 1.92 lakh a year ago.

Gold Mohur

It is the performance of the Gold Mohur Mills which is the best of the three. Thanks to the increase of about 22 per cent or Rs. 57.38 lakhs to Rs. 319.67 lakhs in turnover and the rise of Rs. 9.24 lakhs to Rs. 78.18 lakhs in closing stocks, the gross profit has increased (in contrast to that of the other two mills) from Rs. 33.63 lakhs to Rs. 38.28 lkahs. But, since this has been accompanied by a rise of Rs. 0.25 lakh to Rs. 2.86 lakhs in the provision for Managing Agents' commission, of Rs. 2.79 lakhs to Rs. 9.55 lakhs for depreciation and Rs. 2.56 lakhs to Rs. 11.16 lakhs for taxation, the net profit has actually declined by Rs. 1.05 lakh to Rs. 14.71 lakhs. About Rs. 1.09 lakh (as against Rs. 2.77 lakhs in 1962) of this has had to be utilised in writing off items relating to past years. The Directors have, therefore, reduced

Financial Position
(In lakhs of rupees)

	As at 31st December 1963		
	Finlay	Swan	Gold Mohur
LIABILITIES			
Share capital ..	50.00	60.00	50.00

Total ..	283.63	214.91	220.40

the transfer to reserves from Rs. 4.51 lakhs to Rs. 3.94 lakhs, but they have maintained the dividend at 19.5 per cent subject to deduction of tax.

Working results of the three companies for each of the past four years are set forth in the comparative table appearing at the foot of this page.

Financially, all the three Companies are in pretty good shape. There is, of course, no change in the paid-up share capital which in all the three cases comprises solely of equity shares of Rs. 100 each, but the reserves have been strengthened further. Owing to heavy capital expenditure during the year due to continued expansion, the gross block has no doubt expanded, but it has been well written down through the depreciation account, so that the resulting net block forms a reasonable percentage of the "own" funds. With the exception of Finlay Mills, current liabilities of the other two mills have declined somewhat, while current assets, loans and advances show a welcome increase in each case. Bank borrowings by each mill, however, shows a substantial increase over the previous year. Fortunately, both the loans and the current liabilities and provisions are well covered by the total of current assets and loans and advances. And so the situation need not be viewed with any alarm.

Commenting on the increase in borrowings, the Chairman, Mr. C. H. Campbell, explains, in his statement to shareholders, that it has been occasioned by the need to finance the present machinery rehabilitation programme. He also makes it clear that the Companies will have to continue borrowing fairly large amounts for some time to come in order to carry out the programme. He warns that, unless the Companies are prepared to keep the plant and machinery up-to-date, they may not be able to maintain the position they hold at present and the profit-margin will also drop. Whereas the Swan Mills and the Gold Mohur have managed to get additional accommodation from their banks on the security of stock-in-trade, stores, spare parts, etc., the Finlay Mills has obtained a mid-term loan of Rs. 50.00 lakhs secured by an equitable mortgage on the Company's land, building, plant and machinery, etc., which is repayable over a period of seven years. The total amount drawn against this as at the date of the balance-sheet is Rs. 30.00 lakhs.

All the three mills continued the rehabilitation and modernisation programme initiated a few years earlier. Ten new ring frames were received and installed by the Finlay Mills during the year and delivery of a further 36 ring frames is expected to commence in January 1965. Orders have been placed for 48 automatic looms, one fiction and finishing calender, and one complete roller printing plant. A new mercerising machine has been received and is at present under installation. The Swan Mills installed during the year 15 new ring frames and a further 10 frames are in the process of being installed. The Company has placed orders for 96 automatic looms, one sizing machine and one new dyeing plant. During the year, 48 automatic looms were installed by the Gold Mohur Mills which has also placed orders for a further 48 automatic looms as well as for one sizing machine.

It will be recalled that, by a Government order issued in October 1963, textile mills were permitted to expand their installed capacity to the extent of 7½ per cent of their spindleage and 10 per cent of their looms. After due consideration, the Directors of all the three mills have decided to take advantage of this opportunity and the expansion of the production capacity of the mills to the extent permitted is now under implementation.

As for the future, it is best to quote here what the Chairman, Mr. C. H. Campbell, himself has said:

"It is usually expected of me at this time to give some indication of the prospects of your Company for the current year and I do not find it an easy task in estimating the prospects for the current year. At the time of writing this report, market conditions for superfine cloth are satisfactory and there is a good demand for the products of the mills. On the other hand, there has been some falling off in the demand for yarn as a result of the increase in the excise duty in the last budget. Stocks of finished goods of both cloth and yarn are at present at a satisfactory level. As against this, our cotton supply position is far from satisfactory and does not look like improving in the near future. Also prices of Sudan and Egyptian cotton have increased considerably over the past year, as a result of world shortage of long-staple cotton. The most serious impost, however, is undoubtedly the heavy increase in the cost of production and, unless Government is prepared to grant a realistic increase in cloth prices, I am afraid that profit-margins for the current year are likely to fall."

The following table presents the present market quotations (*cum-div.*) for the Rs. 100 paid ordinary shares of the Companies—the net annual return fetched by these.

	Price Rs.	Yield %
Finlay	309.00	6.3
Swan	238.00	7.8
Gold Mohur	215.00	7.8

Total available balance	16,55	26,22
Transfer to provision for surtax and additional tax	1,40	3,00
Transfer to general reserve	1,00	6,50
Transfer to additional provision for taxes for 1961	Nil	4,50
Proposed dividend	13,99 (25%)	12,12 (25%)
Carry forward	16	10

N.B.—Adjustments relates to balance brought down from the previous year's account.

Extracts from the Directors' report: Throughout the year under review, the Company's products faced competition from the products of new glass manufacturing units and the Company had to reduce selling prices all round. Though the increase in sales works out only at 9.6 per cent in terms of the value of products sold, it must be remembered that this increase was achieved inspite of the reduction in prices. Taking into account the reduced profit margins the Directors consider the performance of the year satisfactory in the circumstances.

During the year a fire occurred in the premises of the factory, but it was controlled before much damage was caused. The loss, including estimated expenses on repairs to machinery damaged, is Rs. 1,39,984. The amount received from the insurance company was Rs. 80,000 and the net loss amounted to Rs. 59,984.

The Company has negotiated a loan for Rs. one crore from the Industrial Finance Corporation of India for the expansion of its factory at Baroda and establishment of a factory at Bangalore. The final terms and conditions of this loan are now being worked out. The Bangalore factory is expected to go into production in January 1965.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	64,19,600	Gross block	2,06,09,885

Proposed dividend on equity	4,03 (6%)	5,38 (8%)
Carry forward	31	13

Market value of ordinary shares (in rupees):	1964	1963	1962
High	—	10.55	13.62
Low	—	9.20	10.55

Extracts from the Directors' report: There was a total shut down of both the mills for a period of 12 days in June-July 1963 as a result of a 100 per cent power cut imposed by the Electricity department. No. 2 mills were also shut down for a period of 13 days as a result of strike. Further, both the Company's mills were affected, as were many other mills in Coimbatore area, by the dislocation, go-slow and strike due to the dispute regarding bonus, for a period of more than a week. The total effect of these closures on the Company's profit may be reckoned at Rs. 4.5 lakhs.

Plant and Machinery: During the year under review, a sum of Rs. 1,67,678 was spent on buildings towards balance of work on the extention of 'A' and 'B' blocks, construction of quarters for the manager, Mill No. 2, one new humidification tower and certain other sundry works. An amount of Rs. 9,72,686 was spent in Mill No. 1 towards renovation programme embarked upon in the earlier years. The programme has not yet been completed because of delayed deliveries by the suppliers and so far about two-thirds of the renovation has been completed. The performance of the renovated machinery has come quite upto our expectation and encouraged by these results, the directors have thought it advisable to renovate during the year 1964-65 about half of 1954 make Texmaco ring frames. The renovation programme, as originally envisaged, will be completed by the middle of this year.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	85,20,000	Gross block	2,19,65,263
Reserves and surplus	23,41,682	—Depreciation	1,11,50,774

Adjustments	4	4
Appropriations:		
Total available balance	77	26
Transfer to general reserve	68	Nil
,, ,, rehabilitation reserve	Nil	14
Proposed dividend (taxable) equity	8† (8%)	8 (8%)
Carry forward	1	4

N.B.—Adjustments represent the balance brought forward from the previous year.
† Dividends are paid out of the general reserve this year.

Extracts from the Directors' report: The directors of the Company have decided to transfer amounts standing to the credit of rehabilitation reserve of Rs. 50,000 and stocks and stores reserve of Rs. 75,000 aggregating to Rs. 1,25,000 to general reserve. The working results for the year under review have been satisfactory. There has been an increase in business largely due to orders secured from the Government. The directors, after full consideration, recommended payment out of the general reserve, of a dividend at the rate of 8 per cent subject to deduction of tax at the appropriate rate in respect of the year ended 30th November 1963.

Accounts in brief as at 30th November 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,00,000	Gross block	2,51,792
Reserves and surplus	4,87,892	—Depreciation	1,97,043

Proposed special dividend (taxable) Ordy.	5,00 (5%)	Nil (5%)
Total Ordinary dividend	[22.50%]	[27.50%]
Carry forward	1,79	1,19

N.B.—Adjustments represent the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: Since the arrangements for the acquisition by the revolutionary Government of Burma of the Oil Companies' investments and marketing assets in that country have been duly completed, and the Company has received the final instalments of the agreed price in December, 1963 and April 1964, the Directors now recommend a special distribution to the ordinary shareholders of Re. 0.50 per share (subject to tax) and amounting to Rs. 5,00,000 out of general reserve, similar to the recommendation made in the Directors' report for 1960.

During the year, highly competitive conditions prevailed in India and sales volumes were slightly less than those achieved in 1962. Lower profit margins were again experienced and these conditions continue. There was an improvement in sales volumes in East Pakistan, but here also profit margins were reduced. The Company did not trade in Burma during 1963 and operations were limited to winding up the affairs of the Rangoon branch.

The exploration well drilled in the U.K. failed to find oil or gas and it has now been decided to undertake a seismic survey over another part of our areas.

The negotiations for investment in other companies have not reached a stage where further proposals can be placed before you. The Directors are continuing to examine a number of projects which may afford suitable opportunities for investment.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,50,00,000	Gross block	1,29,47,889
Reserves and surplus	1,72,49,089	—Depreciation	65,87,416
Other liabilities	2,48,27,173		
		Net block	63,60,473
		Current assets	1,99,5a,382
		Investments	1,23,47,446
		Cash	1,84,32,961
	Rs. 5,70,76,262		Rs. 5,70,76,262

* Paid-up capital consists of 10,00,000 equity shares of Rs. 10 each fully paid and 50,000 7% taxable cumulative shares of Rs. 100 each paid.

Steel Containers Ltd.

(*Secretaries*: Messrs. Balmer Lawrie & Co., Ltd., Calcutta.)

Annual General Meeting—26th May 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	94,22	1,13,56
Closing stock of raw material	17,22	10,64
,, ,, finished products	15	51
Gross profit	14,08	21,22

,, ,, provision for taxation	8,21	14,88
To provision for taxation (previous years)	Nil	72
Net profit	5,43	5,84
Adjustments	Nil	78
Appropriations:		
Total available balance	5,43	6,62
Transfer to development rebate reserve	53	*
,, ,, general reserve	1,45	1,81
,, ,, replacement of plant for machinery reserve	1,00	2,00
Proposed dividend (taxable)	2,45 (17½%)	2,80 (20%)
Carry forward	Nil	Nil

* Represents only an amount of Rs. 575.
N.B.—Adjustments include the balance brought forward from the previous year.

Extracts from the Directors' report: *Operations*:—During the year under review the supply of steel sheet was insufficient to meet the demand and in consequence production was restricted. This is reflected in the reduction in turnover and profit earned as compared with last year. After making provision for the Company's liability to tax under the Companies (Profits) Surtax Bill, 1964 and for the proposed tax on dividends distributed, the amount available for distribution is insufficient to enable the Board to recommend the payment of a dividend at the same level as last year.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	14,80,070	Gross block	13,09,255
Reserves and surplus	15,36,386	—Depreciation	1,83,105
Other liabilities	11,39,142		
		Net block	11,26,150
		Current assets	27,17,951
		Investments	21,661
		Cash	2,09,836
	Rs. 40,75,598		Rs. 40,75,598

* Paid-up capital consists of 1,40,007 equity shares of Rs. 10 each fully paid-up.

Industrial Containers Ltd.

(*Secretaries*: Messrs. Balmer Lawrie & Co., Ltd., Calcutta.)

Annual General Meeting—26th May 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	1,10,07	74,85

THE LONDON GOLD MARKET

LARGEST AND MOST IMPORTANT IN THE WORLD

LONDON is the largest and most important gold market in the world. Its origins lie not too clearly defined in the history of the development of London as a financial centre. The firm of Mocatta and Goldsmid was founded in 1684, ten years before the granting of the Bank of England's Royal Charter. It was not until the nineteenth century, however, that London achieved its eminence, both for the refining and marketing of gold bullion and also for the exchange and disposal of gold coins of various countries. That eminence was in fact achieved before the discoveries of gold in Australia and South Africa, which made London's position ultimately even stronger.

Constitution

In the English way, the London gold market has no written or formal constitution. Like so many other institutions which are now a normal part of London's daily life, it has developed in response to changing needs and demands over the years and has adapted and modified its rules and procedures as it went along.

There are at present five members of the London gold market:

Johnson, Matthey & Co., Ltd.
Mocatta & Goldsmid Ltd.
Samuel Montagu & Co., Ltd.
N. M. Rothschild & Sons.
Sharps, Pixley & Co.

Two (Montagus and Rothschilds) are merchant banks, one (Mocattas) is wholly owned by a merchant bank, one (Sharps Pixley) is a pure broker, and the fifth (Johnson Matthey) is a metallurgical firm of international repute. Two of the members (Johnson Matthey and Rothschilds) melt, refine, assay, and process gold. Rothschilds act as chairman of the market and have done so since the market was constituted in its present form after the First World War, and the daily gold price fixing takes place on their premises.

Significance of Membership

All authorised banks under the Exchange Control Act, 1947, are also authorised to deal in gold. But in practice dealings are largely concentrated in the hands of members of the gold market, plus one or two others. The significance of membership of the market is that it confers the right to be present at the daily price fixing which is described below.

In an active market, gold changes hands in considerable quantities; and for this to be done efficiently there must be a recognized specification for bars which are regarded as "good delivery". The requirements of the London market list of good delivery bars are that the bar has been melted and stamped by one of the forty or fifty refiners or mints situated all over the world which have been approved by the market. It must also carry a similarly acceptable assay shown either by an impressed stamp or by an assay certificate which must accompany the bar. The bar must assay at least 995, that is to say, at least 995 parts in 1,000 must be pure gold, and it must contain between 350 and 430 troy ounces of fine gold (the fine gold content is the product of the gross weight multiplied by the assay).

Changes are made from time to time in the London market list of acceptable melters and assayers by way of either addition or deletion. The former occur only after stringent tests have been made on sample bars by two London refiners independently which have satisfied the members of the market that the bars produced by a melter can be relied upon to conform to London's standards. Deletions happen very seldom but have occurred, for example, as the outcome of war. History and the technical expertise to be found here have resulted in the London market's standards being the basis of acceptability for gold bars in most countries in the world. One exception is the United States, where the authorities will accept, without melting and assaying, only unmutilated United States Government-stamped bars when tendered in the exact form in which originally issued.

Bars of sizes smaller than the good delivery bars described above are also produced by British refiners to meet the requirements of customers on the Continent of Europe and in other places throughout the world. Dealings in all kinds of gold coins also take place.

The daily fixing of the gold price, which takes place at Rothschilds beginning at 10:30 each morning, is the only daily international gold price fixing of its kind in the world. There is no fixing on Saturday or on New Year's Day; but on all other working days a representative of each of the five members of the gold market attends in person at the "fixing room" at Rothschilds, a member of which firm takes the chair. Each of the five persons present is in communication, by direct telephone, throughout the course of the fixing with his own trading room, where, again, there may be direct communication by telephone or telex with operators in foreign centres who may be interested in dealing at the fixing if the price is right. The chairman will suggest a price, in terms of shillings and pence down to a farthing; this price will be chosen at the level where it is thought that buyers and sellers are likely to be prepared to do business. When the tentative price is proposed, all present declare the nature of their interest at that price, *i.e.*, as sellers or as buyers (or having no interest either way) with the sellers stating their amount but without, at this stage, the buyers declaring their actual requirements. If all present should declare themselves as buyers and no selling interest appears, business clearly cannot be done and the price is then moved up; conversely if all are sellers and there is no buying interest the price is moved down. At the new tentative price interests are again declared and this goes on until there are the possibilities of business, that is to say until there are both buyers and sellers in evidence. At this stage the extent of the buying interest is declared and a count is taken. If, for example, there are buyers of 400 bars and sellers of 250 bars those present must decide whether the 250 bars will be shared out amongst the buyers or whether the price shall be bid higher. Anyone has the right to bid a higher price or, if the selling interest is uppermost, to offer at a lower price. Finally a point is reached where buyers and sellers come together at a price, and that is the fixing price of the day.

It may be sensed from the foregoing that there is a subtle difference between the attitude towards the seller and that towards the buyer. This difference stems from a tradition that, while a large buyer may have to face a sharp increase in price if he wants to see his demands satisfied in full at the first time of asking, the market should always be slightly biased in favour of endeavouring to absorb all new production or other gold which may be offered at the fixing.

Operations

Operations on the London market are not confined to the amount of gold changing hands at the fixing price in the fixing room. It frequently happens that any one or all of the five members of the market have in hand both buying and selling orders to be executed at the fixing price; if so each member will offset buying orders against selling orders and will only go into the fixing room to transact the net balance of purchases or sales. There is no obligation for any member to declare or fulfil all his orders in hand at the fixing; he may, if he judges it to be more advantageous, execute part at the fixing and postpone the balance until later. A good deal of business is frequently done after the fixing has taken place at prices which may vary considerably during the course of a day. The amount turned over at the fixing can represent as much as 90 per cent of the day's business or as little as 10 per cent. Some international dealers prefer to operate at the fixing; others prefer to wait until the fixing has taken place and they can see what is the trend of the price for the day before doing their business. Operations whether at the fixing or afterwards are ordinarily for delivery of gold loco London and for payment two working days later. A commission of ¼ per mille (minimum ten shillings) is charged on all deals at the fixing. Transactions effected at times other than the fixing, transactions for value dates other than the normal two working days ahead, and those in currencies other than sterling are a matter of negotiation and may be dealt in at net prices without commission being charged separately. There is no organised or regular market in gold for forward delivery as there is in foreign exchange, though forward operations do take place, often for large amounts: those are, however, a matter of negotiation each time. While ordinary transactions are in gold for delivery loco London, deals can be arranged in the London market for delivery in other centres; (conversely a good deal of international business transacted in other centres or on the international telephone is in gold for delivery loco London).

The factors operating in the London market are broadly the following:

On the supply side

New production
Central bank sales
Other sales (including from time to time important amounts on Russian account)
Dis-hoarding

On the demand side

Central bank purchases
Purchases for industry and the arts
Hoarding purchases

The line of distinction between industrial and artistic consumption on the one hand and hoarding on the other is one which is not very clearly defined since increased demand for gold jewellery can, varying from one country to another, be either a disguised form of hoarding or a normal concomitant of inflation or just a result of a rising standard of living.

Hoarding is a term of art. In certain countries in the East, gold is the traditional manner of storing wealth, while in conservative-minded agricultural communities in various parts of the world it is a normal method of saving. Furthermore, in a number of countries throughout the world, a holding of gold has come to be regarded as a status symbol. In other countries, particularly on the Continent, gold may be held as an alternative to cash for balance-sheet purposes. So hoarding has come to mean all demand for gold which does not derive from central banks for reserve purposes or from industry and the arts in the stricter and literal sense of those terms.

The Bank of England's Part

The Bank of England are not physically represented at the fixing. But they are able, like any other operator, effectively to participate in the fixing by passing orders by telephone through their bullion broker and at the fixing they use exclusively the services of the chairman of the market, namely, Rothschilds. The Bank operate for a number of different parties; they are first the managers of the Exchange Equalisation Account, which may be a natural buyer or seller of gold: secondly, they are the agent for the largest single regular seller of gold in the world, namely, the South African Reserve Bank, which is responsible for the disposal of new production in South Africa: thirdly, they execute orders for their many other central bank customers: fourthly, the Bank aim, as in the case of the foreign exchange and gilt-edged markets, to exercise, so far as they are able, a moderating influence on the market, in order to avoid violent and unnecessary movements in the price and thus to assist the market in the carrying on of its business.

Other Markets

There are gold markets in other places. Leaving aside Paris, which is a domestic market, and Bombay which, since gold dealings were banned at the end of 1962, is no more than a black market, markets of varying importance exist in Switzerland, Belgium, Beirut, Aden, Cairo, Kuwait, Bahrain, Dubai, Bangkok, Saigon, Macao, Hong Kong, and in a number of other places as well, including more recently Johannesburg. During the period when the London gold market was closed (from September 1939) to March 1954) most of the international gold traffic was centred in Switzerland, Beirut, and Tangier—which has now lost its international status and no longer has an organised gold market—or in the East. The effect of reopening the London gold market in 1954 was to introduce a greater degree of stability into international dealings and to moderate fluctuations in the price of gold.

Note:—This article is an excerpt from an article appearing in the Bank of England's *Quarterly Bulletin* for March 1964.

BANKING

(*Concluded from page* 840)

The Corporation sanctioned a record number of loans during 1962-63 amounting to Rs. 4.87 crores, as against Rs. 2.85 crores sanctioned during 1961-62. Of these loans, Karachi claimed Rs. 212 lakhs (43 per cent), West Pakistan Rs. 159 lakhs (32 per cent), and East Pakistan Rs. 116 lakhs (24 per cent).

The overall figures of the distribution of loans sanctioned up to 30th June 1963 are: Karachi zone Rs. 1,011 lakhs; West Pakistan zone Rs. 455 lakhs; and East Pakistan zone Rs. 352 lakhs; total of Rs. 1,818 lakhs. So far, the Corporation being the only source of granting long-term loan facilities for house building, as helped in the construction of 9,610 houses by individuals and 704 houses and flats by cooperative societies since its inception a decade ago.

NEWS IN BRIEF

A BLUEPRINT for expanding the capacity of the Koyali Refinery in Gujarat *from two million tons to three* million tons has been prepared by Soviet experts.

The Life Insurance Corporation has agreed to advance Rs. one crore to the Punjab Government for its urban water supply and sewage schemes.

The Union Government has decided to locate the Defence Ministry's automatic rifle factory at a site near Tiruchirapalli in Madras State. The total cost of the factory is estimated at Rs. 7 crores.

Almost 90 per cent of the third Plan target of additional employment, namely, 14 million, will be reached by the end of 1965-66, according to the latest estimate of the Working Group on Employment.

The Aid India Club is scheduled to meet at Washington on the 26th inst. to continue discussions on the quantum of assistance for the fourth year of the third Plan. The Government of India has asked for over $1,000 million for the year.

It has been tentatively decided to locate the Madras Refinery on the coastline between Tiruvottiur and Ennore. This Rs. 20-crore refinery is expected to be the focal point for the development of a full-fledged petro-chemical complex with a maximum outlay of Rs. 100 to 150 crores.

The Soviet Union is buying from India fruit juice worth nearly Rs. 2 crores. Bulk contracts have already been signed for the supply of mango and guava juice which have been very popular in Russia since the Indian Industrial Exhibition held at Moscow last year.

A Venezulean Company is negotiating to buy from India 1,500 bicycles, according to the Indian Pavilion Director of the New York Fair. This is said to be the first supply order. Another Californian State Company is also *negotiating* to buy Indian bicycles.

The All-India final estimate of *mesta* during the year 1963-64 puts the current year's area and production at 952,000 acres and 1,805,000 bales (of 400 lbs. each) respectively, as against the partially revised estmates of 937,000 acres and 1,684,000 bales for *1962-63*.

'Terylene' cotton voile sarees will soon be made available by the Khatau Mills. The fabric, to be marketed under the brand name 'The Khatau Terylene Cotton Voile,' combines Terylene and the silkiest long staple cotton under a new scientific formula.

A three-member delegation of the Minerals and *Metals Trading* Company headed by Mr. Govind Narain, Chairman of the Corporation, left on Thursday this week for Europe to explore new avenues for exports of iron and manganese ores. The team will visit Rome, Paris, Rotterdam, Brussels, Bonn, Luxemburg and London.

The Rs. 16-crore Heavy Vehicles Factory now being established in technical collaboration with the British Vickers-Armstrong at Avadi near Madras, is expected to roll out its first tank off its assembly line by the end of 1965 as scheduled. Almost all components required for building a tank will be manufactured in the factory itself.

The Madras Government proposes to establish six more co-operative tea factories in the Nilgiris at an estimated cost of Rs. 66 lakhs, the major portion of which will be met by the Tea Board. Each factory will serve an approximately 1,000 acre tea plantation. Loans will be advanced to growers for the purchase of manure and pesticides.

A Corporation for establishing cement plants in the public sector *and for making extensive surveys for* limestone deposits is proposed to be set up shortly. A decision *to* this effect has already been taken by the Central Government. The Corporation is being formed in order to ensure that the target of 23-24 million tons of cement in the fourth Plan is achieved.

The foundation-stone of the Kathara Coal Washery of the National Coal Development Council was laid by Mr. K. B. Sahay, Chief Minister of Bihar, on the 10th inst. The washery, which will be the biggest coal washery in this country, is being set up with Soviet collaboration at a cost of Rs. 8.05 crores. It will have an input capacity of three million *metric tons of coal* per annum. It is expected to be commissioned by the end of third Plan.

A contract was signed in Washington on the 8th inst. between the General Electric Company and its Indian subsidiary, International General Electric, for the construction of the U.S.-aided Tarapur *atomic* power project. The project is expected to be completed by the end of 1968 and the experience gained in this will be utilised for the next project already sanctioned in Pratapsagar in Rajasthan.

The Hindustan Aircraft factory, the Aircraft Maintenance Depot (Kanpur) and the projected MIG complex, have been amalgamated under one Corporation called the Aeronautic India Ltd. Air Vice-Marshal Ranjan Dutt, Managing Director of HAL, has been appointed the Managing Director of this new Corporation. It will have its own board of directors. It will also have a more effective planning cell of its own to chalk out development plans for the future.

The *Union* Ministry of Community Developments and Co-operation has set up a consultative council with Mr. S. K. Dey, Minister for Community Development, and Co-operation, as Chairman, to review the progress of *Panchayat raj* in the country. The first meeting of the Council is likely to be held in the first week of June next. The *Panchayat raj*, first introduced in Andhra and Rajasthan in 1959, now covers 10 States, and it is proposed to extend it to other States in the near future.

The Economic Development Institute of the World Bank, in co-operation with the Indian Institute of Management (Calcutta), will hold a course in the evaluation of economic development projects for officials from eight Asian countries at Jaipur from 19th October to 11th December next. The course will cover selection and appraisal of investment projects, financial policy, financial analysis and performance of projects in various sectors of economy. Invitations have been sent to Afghanistan, Burma, Ceylon, India, Malaysia, Nepal, Pakistan and Thailand to send officials.

The cost of operating the Caravelle of the Indian Airlines Corporation works out to Rs. 54,388.31, while that of Boeing is only Rs. 10,616.98, according to Mr. Raj Bahadur, Union Minister for Transport. During March 1964, the Caravelle fleet carried 17,697 passengers and earned a revenue of Rs. 45.73 lakhs, whereas the Boeing fleet carried 6,876 passengers and earned Rs. 15.42 lakhs. The operation of the Caravelle fleet showed a profit of Rs. 13.16 lakhs in February 1964 and Rs. 15.30 lakhs in March last. The corresponding figures for the Boeing for the same months are Rs. 7.16 lakhs and Rs. 6.75 lakhs, respectively.

A contract for the supply of Soviet agricultural machinery for the first stage of the Jetsar Central mechanised farm in Rajasthan was signed at New Delhi on the 7th inst. between India and the Soviet Union. The total cost of machinery and equipment to be *imported from the* U.S.S.R. for the farm, which is the second biggest of its kind in Asia, would be Rs. 26 lakhs. Of this Rs. 17 lakhs would be for the first stage and Rs. 9 lakhs for the second. In the initial stage, the farm will produce about 25,000 maunds of cotton and oilseeds and 50,000 maunds of fodder every year. Besides, it would create an employment potential for about 300 regular employees and equal number of labourers during the third Plan period.

The Governments of India and Czechoslovakia have signed a second economic collaboration agreement providing for a Czech credit of Rs. 40 crores for financing the expansion of the boiler plant at Tiruchirapalli and the heavy electrical plant at Hyderabad, the setting up of *additional* foundry and forge facilities for the existing foundries, two new machine tool plants, one tractor and power tiller factory, one 220-mw power plant and import of components worth Rs. 14 crores required for joint ventures. The credit is repayable in rupees which will be utilised for export of Indian goods to Czechoslovakia and carries an interest of 2½ per cent. Repayment will be spread over 12 years in the case of projects and eight years in respect of components.

Impressive progress has been made in the construction of the Durgapur-Calcutta expressway during the past few months. According to a spokesman of the West Bengal Development Department the road is likely to be opened for regular traffic some time towards the second half of next year. Acquisition of land for the expressway which has been a problem so long is *now over with the* take-over of the last two pieces of land. The authorities are *confident* that the project will be completed by June next year. The *present distance of 120 miles from Durgapur* to Calcutta will be reduced to 92 miles with the opening of the expressway. The road will be linked with Calcutta along Barrackpore Trunk Road across the Vivekananda Bridge. The expressway will have *its diversion to the* Grand Trunk Road near Burdwan (between 55th and 56th miles). From Palsit it will run parallel to the Eastern Railway's Howrah-Burdwan Chord Line up to Bally (Vivekananda Bridge point).

The *Planning* Commission is understood to be cursrently working on the strategy necessary to boost exports to the maximum possible extent in the next seven years ending the fourth Plan. The strategy will not merely concern itself with *export incentives* but will go into the various aspects of production, domestic consumption, availability of surpluses, measures to be taken to improve the quality of export goods and reduction in the costs of domestic output. The Commission feels that it should be possible to achieve a target of Rs. 1,200 crores foreign exchange earnings through exports in 1970-71 as against the anticipated Rs. 850 crores at the end of the third Plan. The target is, however, stated to be tentative since the working group concerned with this subject is yet to submit its report. Sources close to the Commission feel that there is no justification for the reported view of the Union Ministry of International Trade that the proposed target is overambitious. The proposed strategy for stepping up exports will be worked out in consultation with the Ministry of International Trade.

MR. H. M. Patel, Chairman of the Gujarat Electricity Board, has joined the Scindia Steam Navigation Company as a Director.

Mr. T. S. Pattabhiraman. M.P., has been appointed Vice-Chairman of the Central Silk Board for a period of three years.

Mr. B. G. Rau, Joint Secretary in the Union Cabinet Secretariat, has taken over charge as the Additional Secretary in the Ministry of Industry.

Mr. P. L. Tandon, Chairman, Hindustan Lever Limited, who was a member of the Board of Governors of the Indian Institute of Management, Ahmedabad, has been nominated its Chairman by the Union Ministry of Education. Mr. Tandon succeeds Dr. Jivraj Mehta who resigned the chairmanship on his appointment as High Commissioner for India in the United Kingdom.

From Abroad

Volkswagen of West Germany expects to invest a record DM700 million in fixed assets this year, chiefly in its new factory at Emden, where it is hoped to assemble every day 400 vehicles for export by the end of this year.

Ethylene propylene synthetic rubber has been made available in commercial quantities in Britain by Shell Chemical and North British Rubber. The cost of this synthetic rubber is said to be low and its performance is better than that of the conventional rubbers.

Work will start soon on five big industrial projects in Malaya—two steel mills at Port Dickson, a hydro-electric power station at Ipoh, North Malaya and two flour mills. The steel mills are expected to be completed within two years.

The Pakistan International Airlines inaugurated a new service between Karachi and London *via* Moscow, on the 10th inst. The service is the first run by a foreign airliner to transit the Soviet Union and also the direct link *between Moscow and Frankfurt in West Germany*.

The Government of Japan has agreed to have a case involving alleged violations of trade union rights in Japan referred to the Fact-Finding and Conciliation Commission on Freedom of Association of the International Labour Organisation, *set up in 1950*

The U.S. balance of payments deficit during the first three months of the current calendar year was running at an annual rate of $1,000-$1,250 million, as *compared with the actual deficit of $3,300 million* a year before. The deficit for the whole of 1964 is, however, expected to be no more than $2,000 million.

The U.S. House of Representatives has passed a Bill which seeks to prevent the invasion of U.S. territorial waters by foreign trawler fleets. The Bill provides for the seizure of vessels found fishing in U.S. territorial waters *and maximum sentences for violators of a year's imprison*ment and $10,000 in fines. It is directed principally at offending fishing vessels from Russia, Cuba and Japan.

Canada has decided not to continue its uranium stockpiling after June next, by which time according to the Acting Trade Minister the Government would have stockpiled about $25 million worth of uranium under the one year stock piling policy started on 26th June 1963. The decision has been influenced by the feeling that any further stock piling would have a depressing effect on the eventual revival of uranium markets.

The Chrysler Corporation of the U.S. is taking over the Mack Trucks, one of the leading producers of heavy duty trucks in the U.S. through an issue of debentures amounting to about $150 million. The Chrysler is already producing trucks in its Dodge division, but the acquisition of Mack will greatly extend its stake in the profitable heavy duty trucks. It is, however, considered very likely that the U.S. Justice Department, which regards the motor industry as being "*far too concentrated*," will oppose the merger on anti-trust grounds.

The U.S. Steel Corporation has recently announced its major expansion programme which will more than double its capacity to produce hot steel strip in the Chicago-Gary area. The cost of the programme is not disclosed, but it is believed to be of the order of $100 million. It will construct an 84-inch hot strip mill and one of the nation's first large-scale continuous casting units. By utilising the latest development in steel-producing technology, the unit will be able to produce the largest weld-free coils of hot strip steel available anywhere in the world. The hot strip mill will be located at Gary Sheet and Tin Works and the continuous casting plant at Gary Steel Works. Both mills are expected to begin operations in 1966.

TREND OF MARKETS

MONEY STRINGENT

(From Our Own Correspondent)

BOMBAY, 13*th May*

It looks as though the busy season will last a few days more, contrary to earlier expectations that it might end by about the middle of this *month*. There is persistent pressure of demand for funds, whereas the supply of money actually available is inadequate to meet it. Borrowers, as a consequence, are finding it difficult to obtain their requirements even at high rates of interest. The inter-bank call *money rate* for both renewals and fresh money has once again moved up to the peak level of 6 per cent, as against 5¾ per cent a week ago and 5½ per cent two weeks before. Conditions at Calcutta, however, are somewhat better, the call rate receding from 6 to 5¾ per cent. Some stray business is said to have been put through even at 5¼ per cent.

The stringency of money is reflected in (*a*) the sharp rise of Rs. 43.47 crores in notes in circulation during the week ended 8th May, (*b*) an increase of Rs. 13.52 crores to Rs. 79.04 crores in loans and advances obtained by scheduled banks from the Reserve Bank, (*c*) a fall of Rs. 10.26 crores to Rs. 80.94 crores in their deposits with the Reserve Bank, and (*d*) the poor response to the 91-day Government of India Treasury Bills *tenders* for which opened on Tuesday the 12th inst. The total amount offered was just equal to that invited, namely, Rs. 2 crores, the whole of which was accepted. The average rate of accepted tenders was unchanged at Rs. 3.000 per cent per annum. These *self-same* Treasury Bill results suggest that the Bills are being taken up by special sources (believed to be the State Bank of India) under instructions from the Reserve Bank. The Intermediate Treasury Bills, too, elicited limited support, the Bills actually sold from the 6th to 9th inst. amounting to no more than Rs. 39.50 lakhs, as against Rs. 80 lakhs a week before.

India's foreign exchange reserves declined by a further Rs. 1.09 crore to Rs. 111.73 crores during the week ended 8th May. The whole of this de*cline* was in balances held abroad which aggregated Rs. 8.27 crores. The foreign securities held in the Issue Department of the Reserve Bank were unaltered at Rs. 103.46 crores.

There was a further rise of Rs. 6.03 crores to Rs. 1,851.64 crores in the total credit made available by the scheduled banks to their clients during the week ended 1st May. Since, at the same, their deposits declined by Rs. 3.72 crores to Rs. 2,490.14 crores, they were compelled to take recourse to larger borrowings from the Reserve Bank. The total of these borrowings spurted by Rs. 19.23 crores to Rs. 63.85 crores, of which the share of those against usance bills was Rs. 21.98 crores, an increase of Rs. 80.50 lakhs. Investments went up by Rs. 3.80 crores to Rs. 618.89 crores and total cash by Rs. 5.70 crores to Rs. 147.26 crores.

The Gilt-edged market continued to rule dull. Barring *some* short-dated Central loans and 4½ per cent 1974 State loans, others remained neglected. The turnover was small. 3 per cent 1986 conversion was quoted at Rs. 63.60, 1970-75 at *Rs.* 90.40, 3½ per cent 1969 at Rs. 99.60 and 4 per cent 1973 at Rs. 99.10. 6¼ per cent Gold Bonds 1977 stood at Rs. 118.25, at which level they give a re*dumption* yield of 4.75 per cent.

In the foreign exchange market, the banks' selling rate for U.S. dollars rose by 25 nP to Rs. 478.25 per $100, while their buying rate was unaltered at Rs. 474.75. In New York, the pound sterling eased a little *vis-a-vis* the dollar, the spot rate receding by 0.030 cent to 279.920-279.950 cents and the three months' forward by 0.070 cent to 279.370-279.400 cents.

COTTON FUTURES SLUMP

(From Our Own Correspondent)

BOMBAY, 13*th May*

Cotton futures, after having showed some signs of strength initially, turned easy during the rest of the week under review. The initial strength was due mainly to the message tenders (150 bales) issued against the Jarilla May contract on Thursday the 7th inst. This, however, proved to be a short-lived affair. The contract attracted heavy selling prompted by expectation of larger tenders on Monday the 11th inst. This expectation did not materialise. Although tenders issued on Monday were 100 bales more, at 250 bales, bringing the total to 1,100, they fell short of market expectations. In spite of the lower tenders the market ruled easy. This was attributed to the unwillingness of bulls to weigh over cotton and their consequent anxiety to liquidate their holdings. The report that purchase authorisation for 150,000 bales of U.S. cotton was already issued in Washington and that a corresponding announce*ment* by the *Textile Commissioner* was *imminent*, imparted weakness to the market. For the possibility of more U.S. cotton coming to India soon and the record domestic crop now expected indicated that the supply position of cotton would be comfortable in the *coming months*. Selling induced by these considerations resulted in a *further* break in futures prices.

The Jarilla May contract, which opened the week at Rs. 726 per three quintals after rising to Rs. 732 the next day, slumped to Rs. 716 yesterday, showing a net fall of Rs. 10 during the week. It is noteworthy that, at this rate, the contract stands at a discount of Re. 1, as compared with the August contract. The market was closed today on account of *Shivaji Jayanti*. The Jarilla August contract depicted an identical trend. After commencing the week at Rs. 723 per three quintals, the contract rose to Rs. 725.50 the next day, but eased to Rs. 717 yesterday. The net decline during the week is Rs. 6.

Activity in the spot market at Sewri was subdued. Mills bought only moderate quantities of selected varieties of good quality cotton such as 197/3, Digvijay, CO2, L.147, Kalyan and Laxmi. Turnover was limited and prices tended to rule easy. Only stray interest was evident in Bengal *Deshi*. Demand was mostly from Japan and Hongkong.

Mill demand for foreign cotton did not show *any improvement*. The usual interest in U.S., African and Egyptian cotton was maintained. Reports from Washington have it that the purchase authorisation covering 150,000 bales of U.S. P.L. 480 cotton has been issued at Washington and that a *corresponding announcement* will be made at this end shortly. It was also reported that India would get a quantity of 30,000 bales for *immediate shipment* against the *cotton-manganese-ore* barter deal. The delay in issuing the purchase authorisation is attributed *among other* things to shortage of desirable qualities of cotton in the U.S. itself. Meanwhile, the 1963-64 U.S. cotton crop is placed at 15.33 million bales of 500 lbs. each according to the final crop estimate of the Department of Agriculture. This compares with the preliminary final estimate of 15.55 million bales published in December and the 14.86 million bales harvested last season. Importers are also hopeful about the early announcement of a global quota which it is said would enable mills buy more East African cotton. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 735; Gadag Laxmi 1,125; CO2 1,340-1,345; Jaydhar 1,125; Khamgaon 1,025; Sudan XP2L 1,900.

GOLD ERRATIC, SILVER QUIET

(From Our Own Correspondent)

BOMBAY, 13*th May*

Gold moved rather erratically during the week under review, while silver was quiet. The yellow metal staged a smart rise in the first three days following good demand in the wake of reduced arrivals. Reports regarding the seizure of a sizable quantity of contraband gold by the Customs officials in Bombay and Madras imparted much strength. The firmness, however, abated on Monday and the easiness persisted yesterday also. Today the market was closed on account of *Shivaji Jayanthi*. Silver ruled quiet in the *absence of any special development*.

Fourteen-carat gold began the week at Rs. 67.25, as against the previous close of Rs. 67.75, and forged ahead to touch a high of Rs. 69.50 on Saturday the 9th inst. It, however, drifted downward thereafter and finished at Rs. 67.25 yesterday. The net loss over the week was 50 nP. Primary gold was unofficially quoted at Rs. 116, as against Rs. 112, and sovereign at Rs. 90, as against Rs. 89.

Silver moved narrowly between Rs. 259.50 and Rs. 259 before closing at Rs. 259 yesterday. The daily average arrivals were unchanged at 20 bars. There was also no change in the average offtake which was about 10 bars per day.

In the London bullion market, the international price for gold was unchanged throughout at $35.07½ per fine ounce. The *sterling* price of gold, however, picked up ¾*d.* to 250*s.* 7½*d.* Both *ready and forward silver* stood at 111¾*d.*, same as last week. Silver in New York, too, was unchanged at 129.3 cents.

The following table shows the trend of prices during the week under review:

	12-5-1964 (closing)	High	Low	6-5-1964 (closing)
SILVER				
Ready†(999 fine) ..	Rs. 259.00	Rs. 259.50	Rs. 259.00	Rs. 259.50
GOLD				
Ready (14carat) ..	67.25	69.50	67.25	65.75
Sovereign ..	90.00*	—	—	89.00*
London—				
Gold	250*s.* 7¾*d.*	250*s.* 7¾*d.*	250*s.* 6*d.*	250*s.* 6¾*d.*
Silver Ready	111¾*d.*	—	—	111¾*d.*
Silver Forward	111¾*d.*	—	—	111¾*d.*
New York—¶				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

BOOM IN READY GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, 13*th May*

Last week's firm trend of groundnuts gathered further *momentum* during the week under review, the ready prices scaling new peaks. Never before in Bombay were the prices so high as they are at present. The sharp rise in groundnuts followed persistent bull support induced by (*a*) the rapidly deteriorating supply position as a result of poor arrivals, and (*b*) higher upcountry advices. Those crushers who had to fulfil large commitments in respect of groundnut meal were eager to buy groundnuts by offering higher prices. The rise in spot rates were so marked that the gap between them and forward prices widened further so much so that the forward trading was virtually at a standstill. Even the cheapest quality groundnut in the ready section was quoted at Rs. 275 per 250 kg., as against the official ceiling price of Rs. 241 fixed for the forward delivery. Trade circles, therefore felt that the forward *trading* now was meaningless unless the ceilings were readjusted suitably. It may be noted here that the trading in September contract is due to commence shortly. It is, however, not known whether the Forward Markets Commission will revise the ceiling upward or not. Castorseeds which were somewhat firm earlier turned easy later in the week on lower sarson advices and stale bull liquidation. Fears that heavy tenders might be issued against the maturing contract and lower spot advices also imparted easiness. Linseeds were generally firm, though towards the close futures ruled easy. The spot section ruled distinctly firm on higher *North Indian advices*. Cottonseeds, after a hesitant start, gained strength and closed on a fully steady tone.

The Groundnut July contract opened higher at Rs. 240.12, as against the last week's close of Rs. 239.37, and remained at that level throughout before closing at Rs. 239.75. Nizam bold ready, advanced from Rs. 54.75 to touch a new high of Rs. 56.25 on Friday; this level was maintained till the close. Khandesh quality spurted by Re. 1.25 to Rs. 57.12. Oil ex-mill put on 35 nP to Rs. 21.85 and Railway receipts 20 nP to Rs. 21.50. Groundnut *oilcake* expeller however, declined by Rs. 9 on tired bull liquidation and lack of fresh support from Rajkot.

Over the week, Castorseeds June slumped by Re. 1.75 to Rs. 173.25. Ready Madras and Kanpur shed 12 nP each to Rs. 34.25 and Rs. 33, respectively. Oil B.S.S. sagged by 15 nP to Rs. 14.40. Oil Commercial lost 25 nP to Rs. 13.50.

Linseeds June Contract opened 7 nP lower at Rs. 42.62, but moved up to Rs. 42.75 on Monday. The contract, however, closed 3 nP less at Rs. 42.66 today. Bold ready strengthened by 25 nP to Rs. 44.50. Oil ready gathered 30 nP to Rs. 18.05.

Cottonseeds June was slightly active and touched Rs. 106.50 on Saturday. Thereafter, it remained dull at Rs. 105.

The following table shows the closing prices of oilseeds and oils on 12th May as compared with those of two previous weeks:

	12-5-1964	6-5-1964	28-4-1964
	Rs.	Rs.	Rs.
Groundnuts			
April 1964 contract	—	—	240.87
July 1964 contract	239.75	239.87	239.37
Nizam bold	56.25	54.75	54.00
Khandesh quality	57.12	55.87	54.75
Oil ex-mill	21.85	21.50	21.90
Oil Rly. Receipts	21.50	21.30	20.70
Castorseed			
June 1964 contract	173.25	175.00	175.00
Ready Madras	34.25	34.37	34.50
Ready Kanpur	33.00	33.12	33.37
Oil B.S.S.	14.40	14.55	14.80
Oil commercial	13.50	13.75	14.10
Linseed			
June 1964 contract	42.66	42.69	42.50
Bold ready	44.50	44.25	44.25
Linseed oil	18.05	17.75	18.00
Cottonseed			
June 1964 contract	105.00	104.50	105.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER MOVES IRREGULARLY

(Messrs. Parekh and Co.)

BOMBAY, 12*th May*

Malabar black pepper moved irregularly with quiet tendency and uncertain undertone during the week under review. Continued lack of foreign demand often brought forth tired long selling which depressed both ready and forward values.

Ungarbled at Cochin was quoted at Rs. 320 and garbled at Rs. 330. May was quoted at Rs. 336 and July at Rs. 358. Bulls in the ring are reported to be sufficiently long in May delivery and *badla from* May to July is as high as Rs. 23.

New York dealers are reported to have bought small quantity of Malabar pepper at $0.37 to $0.36½. Small business at reduced price by India made New York dealers all the more suspicious regarding the holding capacity of the Indian dealers. They reduce their buying limit. The present apathy of New York buyers is a paradox to *bazar* analysts, who were all expecting sizable demand from New York, in view of the limited stocks in the hands of both dealers and grinders. New York dealers are reported to be trying to put one against the other in the hope of getting price reduction. Spot in New York, after touching the highest at $0.38½, came down to $0.37½. *In the Bombay ring, Vaisakh* delivery, after touching the lowest at Rs. 357, is quoted at Rs. 363 and *Jeth* at Rs. 375.

Singapore is quiet with foreign demand lacking. Black is nominally quoted at Str.120 and white at Str.142½.

Ready pepper in Bombay is nominally quoted at Rs. 178 for 50 kilos with demand discouraging.

BLACK LEAF TEAS FIRM

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 7*th May*

A total of 442,000 kgs. came under the hammer in tea sale No. 18 held here on the 5th inst. Once again quality showed further decline, particularly in teas from the higher elevations. There was good demand for all medium and plain descriptions, but support for high growns was limited. *Nilgiri brokens evoked restricted* enquiry at considerably lower rates and many were withdrawn without bid, but their fannings were sold quite well although at rates which were slightly easier following quality. Prices for good mediums brokens eased while their fannings were barely steady. Medium brokens tended a little lower, but were well supported at the drop, while low mediums must be quoted fully firm; fannings in these categories elicited better support and were occasionally dearer. Black leaf sorts were fully firm, but plainest descriptions were irregular and *sometimes easier*. Orange pekoes were sold well and whereas there was good enquiry for other whole leaf grades, liquoring sorts were lower with

quality. Tippy teas came to an easier market while unorthodox types were somewhat irregular.

The quotations (per kg.) were as follows:

	1964	1963
	Rs.	Rs.
Low medium	4.50-4.90	4.20-4.40
Mediums	4.90-5.30	4.45-4.80
Good mediums	5.40-5.90	4.85-5.50
Nilgiri B.O.P	5.50-7.30	4.90-7.80

The average price realised in sale No. 18 was Rs. 5.26 per kilo, as against Rs. 5.20 a week ago and Rs. 4.70 in the corresponding sale last year.

In dust sale No. 18 held today, 214,000 kgs. were offered. There was good demand. Highgrowns came to an irregular but generally easier market following quality. All medium descriptions were sold well at barely steady rates. Travancores tending irregular. Unorthodox grades were the strongest feature of the sale and were sold at last rates.

The average price realised in dust sale No. 18 was Rs. 4.79 per kilo, as against Rs. 4.85 a week ago and Rs. 4.35 in the corresponding sale last year.

Colombo: Just under 7¼ million lbs. were offered and the market opened on a quieter note with high and medium grown brokens 10-20 cents lower, while lowgrowns eased 3-8 cents. Liquoring fannings were strong, selling at firm to dearer rates, but those in the low medium and lowgrown categories tended easier.

London: *North Indian and other growths*: In Monday's auction there was strong demand with best Assams realising dearer prices, but the remainder were firm with the exception of poorest thin liquoring kinds which were easier.

Ceylon and South Indians: Out of the 29,430 packages on offer in Tuesday's sale 2,466 packages were from South India. There was good demand. Ceylons received good support and were firm and, where quality showed improvement, considerably dearer. South Indian teas, except the plainest, were generally dearer.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 19: 529,000 kgs. offered. Good demand. Low mediums and mediums fully firm. Good mediums slightly easier. Highgrowns irregular and lower."

FIBROUS TEAS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, 12*th May*

With more arrivals of tea, the new season's export sale, scheduled to commence next week, is expected to catalogue a good selection of new teas. With continued reports of good weather and expectations of a higher crop this year, buyers may not be expected to cover their requirements. All the same, the demand, accumulated since the last sales, would be sufficient to enable good teas to realise good prices. Quality teas would meet with demand even despite the possibility of an increase in the proportion of the quality output, however, the trade is not so optimistic with regard to plain and common teas. The auctions held recently at London have given good support to quality teas and, in the last week's sales there, the bright liquoring teas recorded a handsome advance.

A good general demand was in evidence in the internal sales held last week, when dusts on offer amounted to 25,122 chests. Medium C.T.C. teas were keenly sought after, though the rates were a little irregular. Good C.T.Cs were firm, while fibrous teas gave way. Plain orthodox teas were quiet, whereas bright liquoring Assam teas were steady. Legg-cut teas met with good demand. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.30 to Rs. 6.80; legg-cut dust—not quotable, medium Assam C.T.C. dust Rs. 5.00 to Rs. 5.30; medium Assam dust Rs. 4.50 to Rs. 5.10; and plain orthodox dust Rs. 4.00 to Rs. 4.30.

Weather reports for the month of April from most tea districts add strength to the belief that this year's crop would be higher than last year's. In both Central and Eastern Dooars, good rains have improved prospects, despite the prevelence of red spider blight in certain areas. South Cachar reported excessive rains but severe hailstorms in Chutiabheel hit plants; overall, immediate prospects are considered to be good, but plants in Hallakandi and Chutiabheel have been affected by red spider blight. With favourable weather in both north Cachar and lower Assam, the output last month was good, the immediate prospects being bright. Central Assam reported good outturn, but more rainfall was required in Jorhat to strengthen a good second flush. In Upper Assam, prospects were considered good, but Naharkatia continued to be affected by red spider and blister blight. Teral requires more rainfall while normal conditions prevail in Darjeeling. Severe hailstorms have caused damage to plants in Chaisa in Western Dooars.

Another good news to the trade is the Austrian decision to abolish the existing import duty of 23 per cent on tea as from the 1st of next month. Following this, prices of teas in Austria will decline; the price of loose tea will move down by 12 to 14 per cent, and that of tea packeted in Austria by 10 per cent. Imports of packeted tea will also get the benefit of lower import duly. Although Austria is a predominantly coffee-drinking country, and that country has simultaneously reduced the duty on coffee from 27 per cent to 10 per cent, trade is confident of increasing tea exports to that country. More exports to New Zealand and Australia are also expected, as these countries have freed tea from import licensing. New Zealand, however, proposes to re-impose customs duty on tea.

It is noted that tea exports from India to the U.S. in 1963 declined to 14½ million lbs. from 15½ million lbs. in 1962. Despite this fall, it is reported that the tea drinking habit is receiving a boost especially from the young. This has been possible because of "instant" tea; and the trade thinks that Ceylon, which is already marketing "instant" tea, has been able to capture more markets in the United States. This explains the fall in India's exports of tea to that country last year. The instant tea factory of Tata-Finlays in Kerala has naturally earmarked all its production for export. Meanwhile, it is disturbing to note that the youth in the foremost tea drinking country in the world, namely, the United Kingdom, is showing a marked preference for beverages much 'stronger' than tea. The trade feels that there is the need for stepping up the tea campaigns in the U.K. The fact that the U.S. is drinking more and more tea, it is felt, should be widely advertised among the British youth.

In the week under review, reports of good progress of the new crop were received from both Indian and Pakistani districts. With alternate rains and sunshine, the weather continues to be excellent, and it is estimated that sowings in both India and Pakistan up to now have been higher than last year. The crop would, therefore, begin to reach mills much earlier than usual; within the next four to five weeks, the monsoon is expected to break out. In view of the premium which the superior grades realise and also of the difficulty of stockists of inferior grades to find buyers, it is expected that the forthcoming crop would be better in quality than last year's. Although the Pakistan authorities have attempted to restrict jute acreage this year in an attempt to avoid a glut in the market, it is reported that excellent weather in most jute districts in Pakistan has been an incentive for cultivators to sow as much land as they did last year. Meanwhile, overseas demand for the remaining quantity of Pakistan's last crop is at a low ebb, and this has led to a further reduction in the E.P.C. rates in respect of the higher grades of white jute. Overseas buyers of Pakistani fibre think that conditions would be favourable for a further decline in prices. This expectation, coupled with the existing dull conditions in the Narayanganj market, has led to little or no interest for forward commitments in the new crop.

Hitherto, jute cultivation in Pakistan had remained the monopoly of its eastern wing. However, this monopoly would soon be broken, as plans are in hand to grow jute in West Pakistan. Experiments conducted already have proved that fibre can be economically cultivated in certain areas which have benefited from irrigation schemes in recent years. While jute cultivation on a commercial scale is to be taken on hand, it has been decided to set up a jute mill in West Pakistan, which with 500 looms is expected to cost Rs. 3.14 crores. To start with, the proposed mill will depend on fibre supplies from East Pakistan, but it is expected that adequate fibre supplies would be forthcoming from cultivation in areas adjacent to the sight of the proposed mill. The mill's entire production will be consumed within West Pakistan itself and, to that extent, West Pakistan's dependence for jute goods on the Eastern wing will diminish, thus increasing the export capacity of the country as a whole. The decision to set up the proposed mill has also been aided by the shipping difficulties being continuously experienced in Chittagong and Chalna ports, which cause delays and uncertainties to supplies. Also transport costs are very high. These factors led to very high prices for jute goods in West Pakistan, and place industry at a disadvantage.

That it is time to improve the profitability of mills in India by revising the minimum prices of fibre has been often emphasised by all concerned with the welfare of the industry. Against this background, it is significant that the latest issue of the *Jute Bulletin* of the Indian Central Jute Committee says that the profitability of jute mills in the first quarter of the current year was affected by the movement of jute and gunny prices in the opposite directions. The *Bulletin* has reached this conclusion from an analysis of the monthly average prices of both raw material and the finished products in the three months ended March this year. The average price of 40" 10 oz. hessian declined from Rs. 47.28 in January 1964 to Rs. 46.35 in February and to Rs. 45.73 in March 1964, while the average prices for the corresponding months of 1963 were higher at Rs. 50.97, Rs. 50.63, and Rs. 47.85, respectively. The average price of B. twills was Rs. 112.74 in January 1964 as against Rs. 113.93 in January 1963 and Rs. 111.56 in February 1964 as against Rs. 114.67 in February 1963. While thus the average prices for goods not only declined from month to month—these in the last year rose—the average prices for fibre rose; thus Assam bottoms rose to Rs. 30.96 per maund in March 1964 from Rs. 30.35 in February and from Rs. 30.15 in January 1964, as against Rs. 28.30 in March 1963, Rs. 28.89 in February 1963, and Rs. 27.82 in January 1963. The *Bulletin* adds that, at current prices, simultaneous business in raw jute and sacking at current prices cannot leave much of a profit, while, in the case of hessian, the margin can be between Rs. 75 and Rs. 100 per tonne depending on the efficiency of the management. It is remembered that the Jute Commissioner, Mr. G. C. L. Joneja, had recently stated almost similar conclusions.

The trade is happy to note that demand for hessian on Argentine account has shown signs of a welcome increase as a result of that country's need for more packaging materials following excellent farms' returns. In 1963, shipments of jute goods from Calcutta port to River Plate destinations aggregated 174.6 million yards. This year, the trade anticipates from indications so far that exports to these destinations would significantly increase to 350 million yards. Argentine's programme to build bulk handling facilities received a severe setback as a result of political factors, and construction of silos at important railheads and inland river ports has not proceeded well. Shipments of hessian from Calcutta to South American ports amounted to 96.4 million yards in the three months ended March 1964, thus representing an increase of over 100 per cent as compared with the corresponding period last year when shipments aggregated only 45.7 million yards. During the week under review, Argentina was a prominent buyer for both ready and near deliveries. The U.S.A. also accorded support, which was again of a hand-to-mouth nature. An inquiry for a sizable quantity of hessian on behalf of Turkey was a feature earlier. There was the report subsequently that Argentina had issued quota for May to September when purchases would total Rs. 10 crores worth of hessian. Sentiment was naturally boosted. Ready hessian 40" 10 oz. opened at Rs. 46.00 on Tuesday last in sympathy with the higher level in sacking goods, but profit-taking soon intervened to reduce the price to Rs. 45.40. Soon, Argentina indicated interest and the price rose to Rs. 45.70. In heavy goods, a tender for 3,200 bales of May-June B. twills for Government was a feature. Moderate overseas interest was also shown. Ready B. twills opened firm at Rs. 116.30 on Tuesday last, but profit-taking imparted a fall to Rs. 114.55. A recovery set in at this stage, as a result of the firmness in hessian, and the price gained to Rs. 114.90 on Friday last. Over the week-end, B. twills fell to Rs. 114.60 and hessian 40" 10 oz. to Rs. 45.55 as a result of the announcement of increased stocks of goods with mills. The trade however, thought that, since in April good shipments had taken place the increase of 4,900 tonnes to 130,100 tonnes in stocks should have been due to an increase in production. Therefore, production statistics are awaited with interest. Selling pressure yesterday led ready B. twills to decline to Rs. 113.60. In sympathy, hessian 40" 10 oz. eased to Rs. 45.25. However, business was done with Government for 6,150 bales of B. twills for May-June delivery.

ANOTHER RAW JUTE QUOTA

(From Our Own Correspondent)

CALCUTTA, 12*th May*

Raw jute met with steady support from mills during the week under review, as mills were busy covering the quota of 200,000 bales issued by the Jute Commissioner in respect of the four-week period ended the 9th inst. Mills were keen on completing this quota by purchasing as much of the selected grades as possible and prices, as a result, were fully steady. In view of the huge stocks with them, mills were less inclined to purchase mesta and other varieties. Following a review of conditions in the fibre market, the Jute Commissioner has issued a compulsory purchase quota of 190,000 bales for the seven-week period from 11th May to 27th June. Of this quantity, the member-mills of the Indian Jute Mills Association have been allotted 175,000 bales and non-I.J.M.A. mills the balance, that is, 15,000 bales. Since the new jute season will commence on 1st July, it follows that this quota is the last for this season. The new fibre is expected to begin reaching mills' stations by about the end of July. The Mills had thought earlier that, since they possessed heavy stocks of the inferior fibre and had blocked considerable sums of money on them, the Jute Commissioner would not issue any more quota. The Commissioner, however, must have felt that, without the issuance of one more quota, prices would decline. A decline in prices especially at sowing time should be avoided, lest it should affect the morale of the cultivators and lead to a shift of acreage from jute to paddy. All the same, it is also necessary to impress on the cultivators the need for efforts on their part to improve the quality of their produce. If only the proportion of the output of quality fibre is increased and the output of mesta and other inferior varieties is brought down to about the level of demand, there would no longer be any problem for the Government as well as the industry to face in regard to fibre prices.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 12*th May*

Firm conditions prevailed in the metal market during the week under review, while, on the London Metal Exchange, copper shed a small portion of the recent gain but zinc moved up to touch a new high. It was announced earlier that the Government of India had arranged for the import of non-ferrous metals from South Korea against export of engineering goods, machinery and ferro-manganese. It is also encouraging to note that the $33-million World Bank loan granted to the Indian Posts and Telegraphs Department would be utilised for the import of copper and zinc, in addition to equipment for the development of tele-communications. In an attempt to increase indigenous output of non-ferrous metals, the Geological Survey of India has been conducting surveys to locate ore deposits. It was recently reported that copper, lead and zinc deposits in the South Arcot district of the Madras State are medium-sized but commercially exploitable. Ore reserves are estimated at about 800,000 tonnes. Copper deposits have also been located in certain areas of Mysore and Andhra States, as well as in the Kashmir valley.

It is estimated that the free world output of copper has now been raised almost up to capacity and that, if output is not interrupted by troubles, this year's production would be sufficient to meet demand. No significant decline in demand is, therefore, expected, though it is optimistically stated that the recent rising trend has already reached its climax. It is significant that, during the period under review, spot copper wire-bars on the London Metal Exchange eased from £314 a ton to £304½. At £289, spot cathodes shed £3 with the 3-months' position closing £5 down on balance at £290. Spot fire-refined tin fell to £285, as against the opening level of £291. The outlook for copper mines this year has improved as indicated by the fact that the Phelps Dodge Corporation of the U.S. reported increased earnings amounting to $12.50 million for the first quarter of this year, as against the $9.93 million earned in the corresponding period of 1963. Although production of copper in the free world has been raised, and copper is not believed to be in short supply, the price rise is attributed to the inclination among consumers to build stocks to provide for an emergency in case there is any possible interruption to supply as a result of labour troubles. At Calcutta, utensil copper scrap was firm at Rs. 690 per 100 kgs. and, though supplies were very difficult to be located, the fact that zinc was in tight supply led to less attention for copper scrap. Chile has proposed to levy an export tax on copper as from 1st July 1965. Chile is also passing the necessary legislation so that production costs of copper mines should not include the import duty charged on copper by importing countries; this will affect mostly the U.S.

As stated, zinc provided the strong feature on the London Metal Exchange during the week. The spot metal opened at £114¾ a ton and gradually rose to £125. The rise followed good outside demand. Earlier, it was reported that the Mitsui Mining & Smelting Company of Japan raised its price of zinc by 500 yen to 113,000 yen per ton. Other smelters in Japan are expected to make identical announcements. At Calcutta, the price ruled firm and the shortage was acute. Lead continued to forge ahead. The decline in stocks, coupled with higher advices from overseas countries, helped to boost sentiment. At London, spot metal rose from £88¾ a ton to £89¾. Spot tin was maintained at £1,041 a ton.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 11*th May*

Sugar prices continued to rule steady at Rs. 160 to Rs. 165 per quintal in the open market. This was because supply position was still tight and seasonal demand, coupled with marriage season offtake, was on the increase. Supply position has further deteriorated due to reduction in the monthly quota of the State sugar. Prices in the Kanpur and Muzaffarnagar market also registered a steadier trend due to shortage of supplies.

Deshi khandsari prices recorded sharp gains during the week on brisk demand from east U.P. and reported smuggling of the commodity out of the State. Scarcity of crystal sugar helped to increase the demand of the commodity. As a result, the prices of crystal *khandsari* touched new high level of the season at Rs. 163.50 per quintal. The firmness of *khandsari* was attributed to a reported shortfall in sugar production and revival of hopes for the export of the commodity to deficit areas. Non-crystal *khandsari* prices moved up from Rs. 135 to Rs. 150, a quintal and *boora* prices were quoted at Rs. 150, a quintal. *Khandsari* prices also hardened to the extent of Rs. 2 per quintal in the Kanpur market during the week due to brisk summer and marriage season demand.

Ready *gur* prices here recorded further gains during the week on good buying enquiry from the consuming States of Gujarat, M.P., Rajasthan and Saurashtra against import permits. Week's offtake aggregated twenty wagons loads and as daily arrivals were small at an average of 250 maunds only; local stock declined sharply and is put around 9,000 quintals. Stocks were also deteriorating in quality due to summer season. *Shakker* is also much in demand and prices have improved by Rs. 2 per 40 kilogram. Cane crop prospects were still uncertain. Much will depend on the monsoon. Week-end prices (in rupees per 40 kilos) were: *Gur pansera* superior 30; average 29; *balti* 28 to 30; *shakker* 31 to 34; *kotha* dry-wet 29 to 29.75.

After an early rise *gur* prices were subdued during the week in the Muzaffarnagar market in the absence of more permits from consuming States. Week-end prices were: *Gur chaku* 31 to 33; *pansera* 29 to 30; *laddoo* 31 to 33.50. *Shakker* attracted good demand from Punjab and Rajasthan and prices improved to Rs. 32 to Rs. 35 per 40 kilogram.

KIPS WEAK

(From Our Own Correspondent)

MADRAS, 11*th May*

There was practically no change in the pattern of trading in the kip section. Demand was poor in all sections of the kip trade—cow hides, buff hides, cowcalf and buffcalf. Arrivals of stocks from the tanneries have been of the usual volume and clearance from the market was meagre. Prices ruled weak.

In the skins section, prices of tanned goat skins ruled firm, thanks to the hardening of prices in the raw skins market, though importers' demand was slack and prices quoted low. As regards sheep skins, only middle class sheep was in demand at firm levels, while others were quiet. There were more inquiries from the Continent than from other traditional ports.

Shipments during April 1964 were as under: 1,090 bales tanned cowhides, 173 cowcalf, 5 buffhides, 600 buffcalf, 342 goat, 280 sheep skins to U.K., 42 cowcalf, 3 buffcalf, 910 goat, 554 sheep skins, and 759 cases chrome and pickled goat to the Continent; 3 buffs, 91 buffcalf, 280 goat skins and 52 cases pickled goat skins to U.S.A., 18 goat, and 196 sheep skins to Japan. It will be seen from the above figures that the export of tanned skins to the Continent has been well maintained by the E.I. tanners.

RICE PRICES HARDEN

(From Our Own Correspondent)

HAPUR, 11*th May*

Barring rice, prices of which ruled steady on brisk seasonal demand, prices of other grains, including wheat, were subdued during the week under review, thanks to pressure of arrivals of new crops in the markets. Winnowing and threshing operations were in full swing and as arrivals were still far from normal, it looked as though cultivators were now withholding their produce in anticipation of better price in future.

After early sharp gains of upto Rs. 4 per quintal, wheat prices eased by Rs. 2 a quintal during the week. Ruling prices on Monday were: wheat average Rs. 50 to 53 and farm quality Rs. 56.50 to Rs. 61.50 a quintal. The corresponding prices last year were much lower at Rs. 45 a quintal and prices of imported wheat through fair-price shop was still lower at Rs. 42 a quintal. But the quality available from these shops is very inferior. Daily arrivals of wheat, which has slightly improved to 1,250 mds. average, were still far from normal. Stockists were, however, reluctant to enter the market on fears of Government intervention at any stage. Rice prices hardened upto Rs. 2.50 a quintal on brisk seasonal demand in the context of poor stock position.

Gram prices too, after several week's bullish activity, registered a subdued trend during the week on slack demand. Gram was, however, still being quoted higher than average wheat prices at Rs. 55 a quintal. Barley and *bejhar* prices stayed steady as arrivals of these coarse grains were still far from normal. *Juwar* and *guwar* prices tended to rise on revival of demand for seed purposes. New *methi*, too, was quoted higher and prices of other coarse grains were listless.

In pluses, peas prices hardened upto Rs. 3 a quintal thanks to good buying support from consuming areas. Week's offtake aggregated thirty wagon loads, mostly to Madras side, West Bengal, Bombay and Bihar. Daily arrivals averaged 1,500 mds. and local stock with trade was small at 1,400 quintals. New *arhar* reaching here in small quantity was being lifted at better prices and prices of other pluses were steadier, in sympathy with peas and *arhar* prices. Week-end prices (in rupees per quintal) were: *Peas dara* 48.45 to 52.75; *farm* 53.50 to 56.50; *arhar* 69 to 72; *arhar dal* 77.70 to 80.38; *moong* 77.70 to 91.09; *dal* 93.77; *urd* 66.98 to 73.68; *urd dal* 80.38; *masoor* 66.87 to 73.68; *masoor dal* 84.85; *gram dal* 62.96.

AGRICULTURAL PRODUCTION TEAMS

Eight joint Central Teams on Agricultural Production will be visiting the States in May-June this year. The object of their visit is to secure close collaboration between the Central and State Governments in the formulation and effective implementation of agricultural production programmes for 1964-65. Similar teams visited the States in April-June last year, but the scope of their study was confined to agricultural crops. The discussions this year will extend also to certain important aspects of the implementation of programmes relating to animal husbandry, dairying, fisheries and forestry. Each team will consist of senior officials and technical and administrative personnel drawn from the Planning Commission and the Ministries of Food and Agriculture, Community Development and Co-operation and Irrigation and Power. In many of the States, Central Ministers from the Ministries of Food and Agriculture, Community Development and Co-operation and Irrigation and Power and Members of the Planning Commission will join the Teams in their visits and discussions. Each Team will visit two States. In each State an "intensive area" district other than a "package district" will be selected and the actual working of the principal agricultural production programmes in that district at the village, block and district levels will be studied jointly by members of the team and State representatives. The method of planning and implementation now being followed will also be reviewed. This will be followed by a joint study, at the State level, of the agricultural programmes drawn up by the Department concerned.

The European Free Trade Area Countries (excluding Portugal and Finland), Ireland, the Netherlands, Belgium and West Germany, produced a total of 228,000 tons of butter in the first quarter of 1964, representing a fall of 3 per cent as compared with the corresponding quarter last year. This fall was particularly marked in the U.K., Switzerland, Sweden, the Netherlands and Belgium.

Notice

THE STANDARD MILLS COMPANY LIMITED

Registered Office:

Mafatlal House, Backbay Reclamation, BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Sixty-Ninth Annual General Meeting of the Standard Mills Company, Limited, will be held at the Tata Auditorium, Bombay House, Bruce Street, Fort, Bombay-1, on Friday, the 12th June 1964, at 4-00 p.m. (S.T.), to transact the business as specified in the Notice dated 22nd April 1964, posted to the Members of the Company individually at their registered addresses with the Company. TREND OF SHARES

INDECISIVE

(From Our Own Correspondent)

BOMBAY, *14th May*

THE share market looked up a little on the concluding day (Friday the 8th inst.) of the last settlement, in contrast to the panicky conditions that prevailed on the day previous, but opened the new account (Monday the 11th inst.) rather indecisively and this trend persisted practically till the close today. The improvement noted on Friday was engendered by some bear covering and fresh bull buying at low levels to which equity values had receded previously, while fresh offerings were absent. The recovery was, however, short-lived, as, on Monday, the market developed a sagging tendency, due to lack of follow-up support, paucity of genuine investment demand, and stringency in money. Neither the report of the Dhebar Committee on implementation of the Bhubaneshwar resolution on "Democracy and Socialism" nor the prospect of a larger share for private sector in industrial development under the fourth Plan had any significant effect. For operators were in no mood to enter into fresh commitments either way, as they preferred to await the deliberations of the A.I.C.C. session due to begin at Bombay on Friday the 15th inst. It was not surprising, therefore, that turnover was greatly reduced, the bulk of business put through being of a jobbing nature. Trading conditions remained unchanged on Tuesday, as well as today—the market was closed on Wednesday on account of *Shivaji Jayanthi*—with limited activity and narrow price movement. Over the week, equities showed a mixed pattern, with moderate gains and losses evenly spread.

The thin and featureless trading in both forward and cash sections has caused concern among market circles. These circles feel that a relaxation of margins is imperative to bolster up the sentiment of share market. It is believed that the Union Finance Minister, Mr. T. T. Krishnamachari, who is in Bombay to attend the A.I.C.C. session, has agreed to meet the Bombay Stock Exchange President, Mr. K. R. P. Shroff. The latter will doubtless reiterate the plea of the Exchange for relaxing the margin system, besides inviting the attention of T.T.K. to the adverse effects of the taxation proposals on the capital market. It would be rash, indeed, to predict the outcome of these talks. But it is obvious that they would not result in any tax relief in the foreseeable future. He may, however, agree to yield some ground on the margin issue, as the markets continue to remain in a depressed state.

* * * *

Steel shares in Dalal Street evoked scattered support. Tata Ordinary spurted from Rs. 147.25 to Rs. 148.50 on Friday and, after moving indecisively between the latter level and Rs. 147.75, wound up the week at Rs. 148.25, that is, a rupee higher. Indian Iron gained 20 nP to Rs. 24.60. Engineering scrips were generally depressed, thanks to the recent spurt in the prices of decontrolled issue of steel, rise in production costs and growing labour unrest. T. Maneklal (old) were hammered down by Rs. 35 to Rs. 525. New Standard declined by Rs. 2 to Rs. 128 and Asian Cable by Re. 1 to Rs. 74. Telco, after rising from Rs. 285.50 to Rs. 289.50, receded to the former level today, with no change thus over the week. Alcock Ashdown no doubt rose by Rs. 3 to Rs. 293, but this rise was due to the highly optimistic note struck by the Company's Chairman about the prospects for the current year. Textiles were somewhat well favoured. Following the withdrawal of the scheme of rayon yarn supply at concessional rates to weavers, Century and National Rayon advanced by Rs. 13.50 each to Rs. 610.50 and Rs. 365.50, respectively. Kohinoor hardened by Rs. 3.50 to Rs. 237.50. Svadeshi gained Re. 1.50 to Rs. 237.50. Bombay Dyeing, however, dropped Re. 1.40 to Rs. 57.60 *ex-div.* Sugars were dull, Belapur declining by Rs. 4 to Rs. 210. Among Cements, Digvijay strengthened by Rs. 7.50 to Rs. 189, due to higher dividend announcement for the year 1963 (13 per cent as against 10 per cent) and Associated Cements by 25 nP up to Rs. 151. In the Chemicals group, Indian Dyestuff gathered Rs. 2.50 to Rs. 256.25, while Amar Dye shed Rs. 2.50 to Rs. 130. Among Miscellaneous industrials, Tata Oil advanced by Rs. 2.80 to Rs. 60. Voltas picked up Rs. 2.50 to Rs. 252.50. West Coast increased by 50 nP to Rs. 157.50. Wimcos gained a like amount to Rs. 255. Bombay Burmah old lost 30 nP to Rs. 57.90.

* * * *

Lyons Range (Calcutta) put on a dull appearance during the major part of the week under review. Buyers were scarce and, with the exception of a few scrips which met with sustained support, prices were generally lower. Dunlop, in the forward list, encountered persistent selling and declined again from Rs. 36.31 to Rs. 34, as operators did not take kindly to the Company's proposal to issue right shares in the proportion of one for three at a premium of Rs. 10 per share. They thought that the premium was rather on the high side. Indian Aluminium fell by Rs. 2.06 to Rs. 30. Indian Cable eased by Re. 1.25 to Rs. 34.50. Birla Jute by 88 nP to Rs. 29.87, Guest, Keen, William by 31 nP to Rs. 24 and Texmaco by 15 nP to Rs. 27.45. Orissa Cement dropped 44 nP to Rs. 13, following the publication of disappointing preliminary statement of accounts for the year 1963. In the cash list, Alkali and Chemical softened by 93 nP to Rs. 27.44. Imperial Tobacco shed 16 nP to Rs. 9.56. Metal Box receded by 87 nP to Rs. 29.50.

* * * *

Restricted activity and a general fall in values characterised trading on the Madras Stock Exchange. In the forward list, Consolidated Coffee declined from Rs. 22.10 to Rs. 21.98 and Periakaramalai from Rs. 3.48 to Rs. 3.45. S.I. Viscose fell by Rs. 2 to Rs. 119.50 and Laxmi Mills by Rs. 2.50 to Rs. 131. Travancore Rayon softened by 25 nP to Rs. 22.50, reflecting the disappointment of the market over the cut in dividend from 15 per cent to 12½ per cent. Among cash counters, Binny was neglected at Rs. 271.60 *ex-div.*, as also W.I. Plywood at Rs. 200, Textool at Rs. 141 and Parry at Rs. 3.14 *ex-div.* Madras Aluminium shed 50 nP to close at Rs. 71.

BANK OF RAJASTHAN

The Bank of Rajasthan (General Manager: Mr. R. Y. Garg) made further progress at a brisk pace during the year ended 31st December 1963. The balance-sheet total rose by 15 per cent during the year from Rs. 767 lakhs to Rs. 904 lakhs, more than five times the rise in the previous year. This rate of growth approached the rate achieved in 1961. The increase in balance-sheet total largely flowed from the increase in deposits of the Bank—a 15 per cent increase took the deposits to a record level of Rs. 718 lakhs. The total number of depositors, too, increased from 42,100 to 47,800. The increase in deposits also approximated the rate achieved in 1961, although, during 1962, there was only a meagre rise of Rs. 3 lakhs.

A more intensive utilisation of resources by the Bank is reflected in a consistent and continuous increase of 63 per cent in advances over the last two years from Rs. 260 lakhs at the end of 1961 to Rs. 351 lakhs at the end of 1962 and to Rs. 423 lakhs at the end of 1963, taking the credit-deposits ratio from 42 per cent to 56 per cent and again to 59 per cent. Advances to small-scale industries were Rs. 42.53 lakhs, about 10 per cent of total advances. The ratio of cash was higher at 23 per cent as against 18 per cent at the end of the previous year, although it was still lower than the unduly high level of 32 per cent in 1961. The rise in the cash ratio was at the cost of investments, which were lower at 26.6 per cent. But the total of liquid assets is high enough to give a ratio of no less than 49.9 per cent. This suggests that there is still considerable scope for raising the level of advances.

Allocations to reserves have more than doubled from the previous year, and unpaid calls amounting to more than Rs. 3.50 lakhs were received during the year, with the result that the ratio of paid-up capital and reserves to deposits improved to 3.33 per cent. It was only 2.96 per cent in 1961.

The gross income of the Bank rose from Rs. 42.07 lakhs to Rs. 48.69 lakhs during the year, largely as a result of increase in interest and discount income. Higher income was, however, neutralised to a larger extent by higher interest and staff expenses. Interest paid on deposits rose by Rs. 1.20 lakh to Rs. 21.15 lakhs and staff expenses by Rs. 2.38 lakhs to Rs. 15.75 lakhs. Profit (before taxation) nevertheless rose substantially to Rs. 4.05 lakhs from Rs. 2.34 lakhs in the previous year when they had fallen to that level from Rs. 3.50 lakhs. In spite of a higher provision for taxation at Rs. 1.02 lakh (Rs. 0.90 lakh previous year) and higher transfers to reserve funds, it was still possible to pay bonus to staff at Rs. 0.93 lakh as against *nil* in the previous year and Rs. 0.49 lakh the year before. Dividend was maintained at 10 per cent per annum, absorbing Rs. 1.17 lakh, slightly higher than last year, on account of increased capital.

The table below summarises these trends in the Bank's working the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned ..	37.36	32.57	28.83	24.50
Commission and exchange ..	9.31	7.91	6.25	6.24
Other income	2.02	1.59	1.66	1.34
Interest paid	21.15	19.95	17.80	14.81
Staff expenses	15.75	13.37	9.77	8.31
Other expenses	6.26	5.32	4.75	4.82
Depreciation	1.48	1.09	0.92	0.79

MARKET GOSSIP

(Concluded from page 831)

particularly the third and fourth Plans, but for every year of the Plan, especially because the annual consumption of petroleum products in India would soon be increasing by about 2 million tons per annum and at the rate of 3 million tons in about five years. It is, therefore, necessary, according to Mr. Metre, to have a Master Plan, based on the country's requirements during the next twelve years, and to decide on the location of the various refineries and their target completion dates. The refining capacities should always be above the calculated requirements of refined products by about 10 to 20 per cent. This was the practice followed in most other countries.

An important consideration which had to be borne in mind in expanding refining capacity is the capital cost of the refineries. Refineries just completed or nearing completion in India seem to have cost more than refineries of equivalent capacity in other countries, according to Mr. Metre. Standardisation of the various parts of plant, machinery and spares and flexibility in the intake of crude are the two factors that contributed to the reduction in the cost of refineries. Consequently, it is now possible, according to Mr. Metre, to construct a simple coastal refinery in India at a cost of Rs. 45 per ton of refining capacity, of which Rs. 27 will be in foreign exchange, and it will take 2 to 2½ years to complete the work. Expansion of capacity of existing refineries will cost much less, the total investment for increasing the capacity of a coastal refinery by 2 million tons per annum may vary between Rs. 4 crores and Rs. 5.5 crores. From the economic point of view, therefore, expansion of capacity of existing refineries is far more advantageous than putting up new refineries. Even if regional, transport and strategic considerations dictated the dispersal of refining capacity through establishment of new refineries in two or three more centres, it would be prudent to allow the existing refineries also to grow, as the demand for petroleum products is running ahead of the available and planned capacity. The managements and owners of the existing refineries must be sure of this point; otherwise they would not have cared to risk their capital on further expansion. It must be noted here that they have not asked for any special protection in this regard. It would, indeed, be a short-sighted policy on the part of the Government, if, for ideological reasons, it refuses to turn this advantage to good account.

COMPANY MATTERS

(Concluded from page 858)

ed under the cotton textiles export promotion scheme and that the Government, recognising the urgency of the matter, had permitted such transfers. Under this scheme, the Company was able to secure during the year import entitlement to the extent of about Rs. 24.81 lakhs for a consideration of Rs. 12.36 lakhs and further entitlements to approximately Rs. 20.79 lakhs were secured during the first four months of the current year for a consideration of Rs. 12.64 lakhs. Thus, with the total import entitlements amounting to Rs. 45.60 lakhs and its own import licences for plant and machinery, the Company is in a position to embark almost immediately on a scheme of complete modernisation of its woollen mills.

For some time past, the Company has been feeling an urgent need for developing its existing wool combing capacity, particularly in view of the increasing utilisation of indigenous wools in the worsted section. With a view to achieving this, it has now entered into an agreement with Sir Jame Hill and Sons Ltd., a leading firm of top makers in Bradford, for the establishment of a modernised wool combing division. It also proposes to undertake the complete modernisation of its worsted spinning section, including preparatory processes and the installations of further automatic looms in the weaving section in replacement of its existing looms. The completion of this programme, it is stated, will place the Company in a strong, efficient and competitive position both at home and in export markets.

The Company has still not been able to undertake the running of the factory known as Baimath Bankey Behankal Woollen Mills under the agreement of lease entered into by the Company due to certain difficulties connected with the transfer of the plant and machinery to Bombay. In fact, the scheme of running this factory itself has been shelved for the time being. Moreover, it seems unlikely that any further defence orders of sufficiently large quantities may be forthcoming in the near future.

There is no change in the paid-up share capital of the Company of Rs. 100 lakhs, comprising Rs. 25 lakhs in preference shares and Rs. 75 lakhs in ordinary shares both of Rs. 100 each. But the reserves have risen by Rs. 5.11 lakhs to Rs. 55.92 lakhs. Borrowings have also increased quite substantially from Rs. 73.36 lakhs to Rs. 125.13 lakhs and so have current liabilities and provisions from Rs. 133.94 lakhs to Rs. 141.63 lakhs. On the assets side, together with the additions of Rs. 20.97 lakhs made during the year and Rs. 2.78 lakhs as the value of capital work-in-progress, the gross block is standing at Rs. 238.01 lakhs. On deducting from this Rs. 114.52 lakhs as the depreciation earned, a net block of Rs. 123.49 lakhs is obtained. Investments are carried in the books at a cost of Rs. 22.16 lakhs, and current assets, loans and advances are placed at Rs. 264.68 lakhs. Unadjusted capital expenditure is shown as Rs. 12.36 lakhs.

The current market quotation for the Rs. 100 paid ordinary shares of the Company is Rs. 140.00 *cum-div.* On an *ex-div.* price, the net yield works out to about 7.4 per cent per annum.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CVIII. No. 2770 BOMBAY, 23rd MAY 1964 PRICE Rs. 2

A.I.C.C. REITERATES ITS SOCIALISM

THE three-day Bombay Session of the All-India Congress Committee which concluded last week-end was a relatively tame and dull affair. Prime Minister Nehru spoke only a few words, in striking contrast to the thousands of words that used to flow from him on similar occasions. Ill-health, rather than lack of interest, was the reason for his brief observations. Even the few words that he uttered were confined mostly to Kashmir and world affairs. He said practically nothing on the Dhebar Committee report on democracy and socialism, beyond endorsing it generally. It was obvious that he was more concerned with the consequences flowing from the release of Sheikh Abdullah and the continuing military threat from both China and Pakistan. Usually, the long speeches of Mr. Nehru used to be matched by equally long ones from the President of the Congress Party. No such thing happened this time, for President Kamaraj, well known as a man of few words, stuck to his reputation, despite many tempting provocations. He can rest assured that his record in brevity will remain unbeaten, for it is inconceivable that any of his successors would be so modest as he has been in speech-making. The Menon-Malaviya-Patnaik partnership, representing the leftist camp in the Congress Party, was the loudest among the critics. All three of them confined themselves only to the Dhebar Committee report. They had a few supporters, the most notable among them being Mr. N. V. Gadgil, the oldest advocate of nationalisation of banking among Congressmen. The critics, who wanted more State capitalism, State controls and State *monopolies than those conceded by the Dhebar* Committee, however, failed to carry the house with them, once again, as they did in Bhubaneshwar. Mr. Dhebar, who spoke for nearly two hours, elucidating the report of his Committee and replying to the critics, carried the day. The result was that the Committee's report was adopted as it was and it is now up to the High Command (that is, the Working Committee) to take steps for getting the recommendations of the Committee implemented. As Mr. Kamaraj has been a man of action all along, it would be sheer complacency to assume that the Committee's report would be simply pigeonholed. But even the so-called moderate proposals of the Committee, as, for instance, stricter supervision over rice mills until they are nationalised, bristle with so many practical difficulties that it would not be surprising if even he were to fail in giving life to them.

In endorsing the Dhebar Committee report, the A.I.C.C. has approved of an economic policy which, if faithfully followed, will result in a lower rate of economic growth than the country is capable of attaining under practical dynamism. There will be a perpetual shortage of goods and services that people need and the only things to be in surplus will be manpower, misery and discontentment. This remark is not made in any light-hearted fashion. It is based on the experience of the past 15 years. Despite all the stress in the three Five-year Plans on heavy industry, small industries, rural industries, agriculture and land reforms, as well as on a heavy redistributive system of taxation, the shortage of food, clothing, housing, educational and medical facilities is acuter than before. Even potable water is in short supply in most parts of the country. The administrative and organisational abilities of the Congress Government to develop agriculture, animal husbandry and irrigation have been unequal to the task. That is one of the fundamental reasons for the poor economic progress of the country. While there are no signs that this weakness will be overcome in the foreseeable future, more responsibilities remain to be undertaken in the same sphere. To give a specific instance, establishment of service and marketing co-operatives in rural areas has been lagging far, far behind the target. And yet the Dhebar Committee has entrusted more tasks to Co-operation, including rural industries and manufacture of mass consumption goods like cloth. Are there enough number of selfless and efficient leaders and workers to promote and run such co-operatives? The Congress Party has miserably failed in generating the necessary leadership in rural areas. On the contrary, it has driven the intelligentsia to urban areas by pursuing expropriatory types of land reforms. The resulting gap is getting filled by irresponsible, opportunist elements. The record of industrial co-operatives, too, is dismal, though there may be a few exceptions. There are many States where the Co-operative Movement has not even made a beginning.

One of the important recommendations of the Dhebar Committee is that Chief Ministers and Ministers in charge of Agriculture in States must be held responsible for the attainment of agricultural production targets. As was only to be expected, this proposal was criticised by some, especially Mr. A. P. Jain, who was a singular failure as a Union Minister for Agriculture. Mr. Jain, of course, made a valid point when he said that, since the progress of agriculture would depend upon the work of the connected Ministries such as irrigation, power, planning and co-operation, the Agriculture Minister alone could not be blamed. But, since the Chief Minister, too, shall be responsible, it is his duty to ensure the necessary co-ordination of work. The idea is that the Chief Minister must take active interest in, and provide the highest priority for, agriculture. It should be his business to get the co-operation of the Centre also and, as a member of the National Development Council, he has the means of influencing the policies and programmes of the Union Government, as well as those of the Governments of the neighbouring States. Mr. Dhebar was perfectly right when he said that everybody's responsibility for agriculture would be nobody's responsibility. Indeed, if there is one recommendation of the Dhebar Committee which deserves to be implemented without any delay, it is this one, namely, the assigning of responsibility for agricultural production. The Congress High Command must, therefore, handle this suggestion expeditiously, indicating the punishment for failure. Here is a test for its earnestness of purpose.

Several members, belonging to both the centrist and leftist persuasions, criticised the continued dependence of the country on P.L. 480 food imports. They were right in doing so, for such imports have engendered a sense of complacency among the powers-that-be and, what is worse, encouraged them to indulge in unnecessary ideological land reforms which are inimical to scientific cultivation and securing higher yields per acre. There has been no serious objection in this country to reforms aimed at abolishing *Zamindaris, Inamdaris, Jagirdaris* and similar types of feudalistic land systems. There has also been no objection to legislation seeking to protect the rights of tenants, regulate the share of cultivators under crop-sharing arrangements and fix the conditions of lease where land is taken for cultivation on that basis. But what the Congress Party has been trying to do is to go beyond these legitimate objectives and force a redistribution of land-holdings by placing a ceiling on ownership of agricultural lands. The surplus land is taken over on payment of nominal compensation, an act that is nothing short of expropriation. Now it wants to go a step further and have the freedom for commandeering the land of even the smallest peasant in the name of public interest, a vague and all-pervasive concept. It is for this purpose that the Constitution is sought to be amended in a special session of Parliament next week, by reintroducing the seventeenth amendment Bill, which had suffered a providential defeat a few days ago, in the form of nineteenth amendment Bill. Immense harm has been done to agricultural production and productivity by the land ceiling legislation, which has placed talent and efficiency at a discount and caused a sense of insecurity among landowners. This is one of the indirect consequences of ready availability of American foodgrains under P.L. 480.

But neither the Congress Party nor any of the leftist parties will agree with this contention. Most of them are opposed to P.L. 480 foodgrains on the ground that it keeps India dependent on the charity of a foreign country even for a basic necessity like food. They are, of course, right, as this dependence hurts the self-respect of the nation. It is surprising that even persons like Mr. Dhebar and Mr. Nehru have become insensitive to this feeling and candidly admit that imports of food under P.L. 480 are necessary to build a buffer stock and stabilise prices. The question, however, is: how long are we going to depend upon the

charity of a foreign country for food? The Congress leaders are so diffident of attaining the targets for food that they are not even prepared to prescribe a time limit for dispensing with P.L. 480 imports. There was a time in the initial years of our independence when Mr. Nehru prescribed a time limit for stopping imports of foodgrains; there was, of course, no P.L. 480 then. The same Nehru now consoles himself by saying that even Russia imports foodgrains. Sure it does but pays for them in gold. It is, therefore, not in the position of a person going about with a beggar's bowl. It is time Parliament fixed a target date, preferably end of 1968, for stopping all imports of foodgrains under P.L. 480 or anything similar.

The observations made by some members on acceptance of foreign private capital and nationalisation of banking were, however, unhelpful and injurious to the economic progress of the country. Messrs. Malaviya, Menon, Patnaik and company expressed the view that the independence of this country would be in danger if foreign private capital were allowed to come in on a large scale. An expression of this nature at a time when the Government has been trying hard to encourage the inflow of foreign capital in larger amounts than hitherto by infusing confidence among foreign investors is mischievous and adds to the handicaps to speedier economic growth. All the three of them have been Ministers and know very well that foreign capital is not just waiting to invade this country on a massive scale, that it has actually to be coaxed to come in, and that the alternative to foreign private capital is to slow down the pace of economic growth, as the limit of Government-to-Government loans is rapidly drawing nearer. It is a gross exaggeration to say that import of foreign private capital would restrict India's freedom. On the contrary, as was clearly seen at the time of Chinese assault on India, the industries established with the help of foreign capital were a source of immense strength. Significantly enough, the stand of Malaviya, Menon and Patnaik and company on this subject is more or less identical to that of communists. Repeated reiteration of it is bound to give rise to doubts among foreign investors about the safety of employing their funds in this country and create an unfavourable climate even for the modest amounts that are likely to be available. Viewed thus, it is a pity that Mr. Dhebar met his critics half-way by calling upon the Government to be watchful, so that the import of foreign private capital might not in any way restrict India's liberty of action either in the political or economic field. Surely, there was no need for this warning.

The leftist company mentioned above strongly pressed its case for nationalisation of all the remaining banks in the private sector. It was not satisfied with the Dhebar Committee's proposals for further restrictions on the freedom of banks. In fact, it argued that it would be less painful for all concerned to usher in complete State ownership of banking. Mr. Krishna Menon disclosed his inner thoughts when he said that, since the Reserve Bank was being administered by civilians and its board of directors was dominated by the same businessmen who control the banks, no useful purpose would be served by giving the Bank more regulatory powers. He knows more than any one else that civilians are sticklers for rules and procedures and, therefore, a nuisance to those go-ahead politicians who are in a hurry to administer vote-catching social justice irrespective of its cost to the economy. But how does he propose to get rid of these inconvenient bureaucrats when banking is nationalised? Is it his intention to place the management of nationalised banking in the hands of politicians? Be that as it may, the reply given by Mr. Dhebar to those who demanded immediate nationalisation of banking is of no comfort to the private sector and democracy. He said that, if the Committee did not recommend nationalisation of banking, it was because the Bhubaneshwar resolution had made no mention of it, but added that it was open to members to re-agitate the question of nationalisation. This is an open invitation to the protagonists of nationalisation to continue their agitation undaunted until their objective is reached. It is obvious that only a person who believes that nationalisation of banking is desirable but not possible for the time being will be in a position to tender such an advice. So it seems that the Sword of Damocles has been left hanging over the heads of banks in the private sector. Or is it just a trick of the Congress Party to keep the bankers at its mercy for ever?

A BIGGER PUBLIC SECTOR IN CEMENT ?

THE cement industry has been described as a capital-intensive industry of basic or strategic importance to the entire economy. But its growth so far has not been adequate to meet the combined needs of defence and development (including housing). What is disquieting is that cement production has invariably fallen short of targets. The end-year production under the first Plan, it will be recalled, represented only 90 per cent of that Plan's target of 4.8 million tons. Actual production in the last year of the second Plan was no more than eight million tons, representing just two-thirds of the relevant original target under that Plan. So the industry was assigned a production target of only 13 million tons (*corresponding to a capacity target of 15 million tons*) under the third Plan. But the growth of production till the end of 1963-64 (that is, the third year of the Plan) has not been quite encouraging. As the 1963-64 output has come to only about 9.3 million tons, it is difficult to share the Planning Commission's optimism that production in the last year (that is, 1965-66) of the Plan would reach the level of 12 million tons. It would thus appear that all is not well with the industry.

In fact, a recent study by the Association of Indian Trade and Industry (Bombay) has spotlighted some of the factors responsible for the *comparatively slow growth of the industry*. First and foremost is the factor of pricing which has been subjected to statutory or informal regulation all along. As the largest consumer of cement in the country, the Government has been directly interested in keeping cement prices at rather low levels, with the result that the industry has not seen even one prosperous year. The second factor is the inadequate accumulation of reserves by the industry. The analysis has revealed, in this connection, that the cement industry's accumulated reserves (excluding capitalised reserves) and premium on shares were only about 42 per cent of its ordinary paid-up capital (including bonus shares), as against 132 per cent in iron and steel, 121 per cent in paper, 116 per cent in sugar and 114 per cent in cotton textiles. It has been further found that the Indian cement companies' reserves and capitalised reserves as percentage of paid-up capital (excluding bonus shares) in 1961 were only 28, as compared with *650 in the United Kingdom, 146 in the United States* and 106 in Japan. It is well known that reserves not only provide capital funds directly, but also help indirectly by making investment in equity capital more attractive and by improving the borrowing position of the company. There is thus no doubt that the weak reserve position of a capital-intensive industry like cement has retarded its growth. The industry's low level of profitability, as compared with the levels in other leading industries, has also operated as an inhibiting factor.

Where thus a basic industry like cement, which is predominantly in the private sector, has fared none too well in financial terms, the Government should have acted with some foresight and set things right in the interest of the economy as a whole. This it has not chosen to do so far. True, such factors as foreign exchange stringency, lack of indigenous manufacturing capacity for special steels and castings and inadequate exploitation as well as exploration of the country's reserves of limestone, which is the principal raw material for cement manufacture, have all been responsible to some extent for the slow growth of the industry. But these factors have been of much less consequence than the factor of disincentives resulting from the imposition of rigid Government controls on prices and distribution and even in the matter of licensing of new factories. How some of these disincentives or inadequate incentives have operated to depress the operating performance of even that giant, namely, the Associated Cement Companies Ltd., comprising 13 factories and accounting for as much as 3.8 million tons of cement output, should be clear from the following passage in the A.C.C.'s annual report for 1962-63:

> "Arising out of the Tariff Commission Report, the retention price of cement in India was increased from 1st November, 1961. Production costs continued to rise after that date largely as a result of governmental action in raising railway freight, pitsmouth price of coal, royalty, electricity duty, contribution to Government Provident Fund and Employees' State Insurance. Power supply rates were also increased and a very substantial burden was imposed by the Emergency Risks Insurance Scheme. The Company, as well as the Cement Manufacturers' Association, made several representations to Government to compensate the industry for the increase in cost resulting from governmental action. Government responded belatedly by allowing an increase in the retention price of Rs. 2.75 per tonne as from 1st June 1963. At the same time, selling agents' commission receivable from the State Trading Corporation was reduced from Re. 1.50 per tonne to Re. 1.25 per tonne. The net increase in the retention price so far as the A.C.C. is concerned is thus only Rs. 2.50 per tonne and does not fully cover the loss in returns due to increase in cost during the nineteen months from 1st November 1961 to 31st May 1963. Furthermore, *the Company was put to a very considerable* loss by the action of Government in arbitrarily changing the packing charge formula from October 1962, on the assumption that the industry as a whole was capable of packing 50 per cent of its despatches in second-hand bags. Despite vigorous protests, pointing out that industrywise it was physically impossible to purchase and use second-hand bags in such a large proportion, no redress was available till August 1963, when Government ultimately agreed to the packing charges based on the utilisation of 33⅓ per cent old bags. These factors combined to depress the operating performance to a very considerable extent. The profits earned would have been appreciably lower but for the increased profits earned on ancillary activities and other diversified products, which maintained a sustained growth during the year under review."

If that is the state of affairs even in the A.C.C. group, one can easily imagine how much more difficult must be the lot of the other 19 companies in the private sector. When the Government itself has brought about this depressing result, it is only fair to expect that it would facilitate further investment in the private sector, especially in the expansion programmes of existing companies. There are several ways of doing this—ways involving removal of all the inhibiting factors mentioned previously in this article. That would be a more sensible thing to do, for it would mean further augmentation of capacity almost entirely in the private sector which now accounts for about *97.5 per cent of the country's aggregate cement* manufacturing capacity of just under 10 million tons. If the reported decision of the Union Government to set up a State-owned cement corporation for bolstering up the development of the cement industry were meant to serve the purpose of facilitating investment in the private sector alone, it would be *prima facie* commendable. But the proposed move seems to be primarily intended to facilitate the growth of the public sector in cement industry. The public sector, incidentally, has at present only *two cement works, namely, the Uttar Pradesh* Government Cement Factory at Churk and the Mysore Iron and Steel Works at Bhadravati. It is not clear as to why the proposed corporation should establish more cement factories in the public sector. There are some valid reasons why the public sector need not and should not take on itself more responsibilities, especially in a field where the private sector is quite capable of performing better, given some incentives. For one thing, the public sector has a lot to do in the fields which it has already entered. It must try to complete the industrial projects on hand more expeditiously and to run the completed enterprises more efficiently before undertaking additional responsibilities. For another, a growing public sector in cement industry would complicate the problems pertaining to cement pricing and distribution as in the case of steel and fertiliser industries with their private and public sectors. Such complications can as well be prudently avoided in the case of cement industry. For yet another, the proposed additional capacity of 13 million tons (including the five million tons *scheduled to come up* before the end of the third Plan) would be quite within the competence of the private sector to establish over the next seven years, given suitable assistance and encouragement. It is here that the public corporation to be set up can help, more especially in the raw material field where *there is much to be done*. The corporation would, therefore, do well to confine its activities to the proposed survey, prospecting and provision of cement grade limestone, and, if possible, to the operation of a cement development fund on the lines of the shipping development fund.

MARKET GOSSIP

Investment Objectives Of L.I.C.

WE heartily concur with the views expressed by Mr. B. K. Kaul, Chairman of the Life Insurance Corporation of India, in a special note reported to have been sent by him to the Planning Commission, on the role, functions and objectives of the L.I.C.'s investments. Mr. Kaul could not have chosen a more appropriate occasion to make the bold and forthright remarks contained in the note. For, with discussions about the priorities, size, targets and sources of finance for the Fourth Plan progressing apace now, the L.I.C. is bound to figure prominently as a major supplier of finance for some at least of the Plan promote the interest of the policyholders will be social objectives of nationalisation of life insurance as a convenient excuse for using the funds of the Corporation for purposes other than to promote the interes of the policyholders will be irresistible to the planners hard put to find sources of finance for the Plan. The L.I.C. Chairman's restatement of the Corporation's role and responsibilities to its policyholders should enable its investment objectives to be appreciated in the proper perspective.

The main point emphasised by the L.I.C. Chairman in his note is that nothing should be done which would adversely affect the development of the Corporation into a profitable organisation, fulfilling "its primary responsibilities to policyholders and playing its legitimate role in national development through better earnings and profits." The Chairman does not deny that the Corporation must play an important role in finding resources for the Plan. But this, he rightly avers, must be done by increasing and improving the business of the Corporation and by generating enough surplus through profitable investment of its funds. The volume of business could be increased, the Chairman emphasises, only if the Corporation can show year after year more profitable working and declare higher bonuses on with-profit policies which account for the bulk of its business. In fact, the aim should be to do more business at less cost, so that higher profits and larger surplus would be available. In other words, the profit-making motive of the L.I.C. should be diligently encouraged instead of being looked upon as deplorable capitalist tendency, because only by making good profit can the L.I.C. serve the interests of its policyholders as well as of the country.

One of the principal ways open to the L.I.C. for making profit is investment of its funds. Since as much as 50 per cent of its invisible funds are to be placed in Government securities yielding less than 4 per cent per annum, there is utmost need for carefully selecting the avenues of investment for the other half of funds, so that the low yield on Government securities would be compensated by the high yield on others. It must be remembered, in this connection, that the yield on the sum total of the Corporation's investments should be sufficiently high (*a*) to cover the rate of interest assumed in the premium calculations, (b) to leave adequate surplus to declare attractive bonuses for policyholders and (c) to pay satisfactory dividends to the Government. The Corporation, in Mr. Kaul's opinion, faces certain difficulty in doing all this because of certain wrong notions entertained by some of the institutions which borrowed funds from the L.I.C. and the distorted perspective on its investment developed by some others. One of the wrong notions, according to the Chairman, is that the L.I.C. is a source of cheap credit for such financial institutions as the Industrial Finance Corporation, the State Financial Corporations, the State Electricity Boards, and the State Housing Boards. These institutions, the Chairman points out, expect the L.I.C. to provide them with funds at 4½ per cent when they themselves lend at as much as 7 to 7½ per cent. And, if the Corporation is not prepared to oblige them, it is charged with obstructing the fulfilment of the Plan objectives.

In this connection, the L.I.C. Chairman has criticised the present manner of raising funds through market loans by these institutions. Using the Reserve Bank's objection to the issue of market loans with high interest rate as an excuse, these institutions raise medium-term loans merely with a view to obtaining funds cheaply and then force these loans on the L.I.C. A number of such medium-term loans are available at substantial discounts even before the list is open. Thus, the medium-term loan market has become, to quote him, "scandalous" which would eventually affect the Government's own borrowing programme. The L.I.C. Chairman is of the view that this policy needs to be changed. In his opinion, the issue of medium-term market loans by these institutions can be justified only to the extent that there is a genuine need for them. For the balance of their requirements a different procedure of raising funds *should be adopted*. The L.I.C. *can*, in such an event, help these institutions, to some extent, by granting privately-negotiated loans on terms satisfactory to it and within the repaying capacity of the institutions concerned. Pointing out that L.I.C. has no choice but to resist the demand for cheap credit from financial institutions, the Chairman observes:

> "It is not our case that the monetary policy should be regulated to suit the convenience of the L.I.C. The L.I.C. has to adjust itself to the policy. But considering that the net yield currently obtainable or likely to be obtained in the future on Government securities is much less than 4 per cent and considering that more than 50 per cent of the L.I.C. funds are invested in Government securities, the L.I.C., if it wishes to average a 4 per cent yield, will have either to secure a very substantially higher yield on the balance of funds or to reduce the proportion of its investment in Government securities. It is in this context that the demands, as of right, from the various institutions mentioned above, on the funds of the L.I.C. at low rates of interest, have to be resisted, particularly when it is obvious that they should be able to afford paying higher rates of interest."

The L.I.C. Chairman rejects the argument that the Corporation has no business to go about purchasing the shares of companies in the private sector and thus lend support to the stock exchanges and that, if at all it were to buy shares of such companies, it should support only the capital issues of new companies in the interest of accelerating the pace of industrialisation. The L.I.C., Mr. Kaul argues, is not interested in supporting stock exchanges or the speculators therein; it is merely interested in obtaining a more satisfactory and progressive yield. Any other effects its actions may produce are purely incidental, asserts the Chairman. In its search for better yields, any large investment in new capital issues is out of the question, because the L.I.C. has of necessity to be choosy.

The L.I.C. Chairman makes a really sound point when he says that the Corporation should not be be saddled with social responsibilities that properly belong to the nation as a whole and which should, therefore, be appropriately shouldered by the Government. For the L.I.C.'s prime responsibility is towards its policyholders whose money it holds in trust.

The most agreeable and valid point of Mr. Kaul's exposition is that the interests of policyholders are the immediate and prime responsibility of the Corporation. Accept this premise and it will be seen that Mr. Kaul's propositions are only its logical conclusions. And they are strictly in keeping with the spirit of contractual relations and the principle of trusteeship implied in the business of life insurance.

Non-coking Coal Freed From Control

With the prior informal acquiescence of coal trade and industry, the Union Ministry for Steel, Mines and Heavy Engineering has just announced the removal, with effect from 1st July 1964, of control on the distribution of soft coke for domestic consumption and non-coking coals of grades II and III used mainly by low-priority industries like brick-kilns as well as by thermal power stations. As the market prices of these grades of coal are already less than the official ceiling prices by two to three rupees, no rise in prices is expected as a consequence of the removal of distribution control. On the contrary, the Government foresees a further fall in prices because of increased competition. The present trends in coal production, demand and transport availability seem to favour this step. When stocks have been accumulating at pitheads and the transport situation has also become easier, there is no point in continuing the restrictions on distribution.

The Government has, therefore, done well to do away with these restrictions and to clarify that consumers would be free to enter into agreements with producers of their choice in their respective authorised coalfields either directly or through middlemen for unlimited supplies of the specified grades of coal and soft coke. Consumers thus will not have to indent for supplies through the Coal Controller. For their part, the collieries will only have to submit to the divisional superintendents of railways concerned monthly statements of quantities figuring in their agreements with producers, so that haulage could be effected in accordance with the principles of transport rationalisation already in force. All the three parties concerned—producers, consumers and traders—may generally welcome the Government's move. If, as has been indicated, the present step is followed up later by decontrol of grade I coal as well, nearly half the entire output of coal in the country will have been freed from restrictions on distribution. And that will be a healthy development indeed.

Shipping At Geneva Trade Conference

How to improve the invisible trade of India and other developing countries? This is one of the most vital questions now being discussed by the third Committee of the United Nations World Trade and Development Conference. The question is a vital one because the developing countries pay every year to the overseas shipping companies colossal amounts of money for transport of goods (imported and exported). Quite a bit of these amounts could be saved and utilised for various other purposes connected with economic development, if only the world's leading maritime nations were to concede the just pleas for active support and encouragement in the sphere of shipping put forward in a resolution sponsored by 26 developing countries at the Geneva Conference a few days ago. In view of the importance of the subject, it is worth recording here some of these pleas:

First, there is an imperative need for international aid to improve port facilities and to help developing countries build up their own fleets where this is economically justified.

Secondly, liner conferences are useful, but the system must be improved by organising consultative machinery with an adequate complaints mechanism.

Thirdly, special "promotion rates" are necessary for helping the developing countries' exports and improving inter-regional trade.

Fourthly, for the protection of national merchant marines, measures will have to be devised only in conformity with proposals which do not inflict discrimination on developing countries; the developed nations should not hedge in their aid programmes by restrictions that would make non-discrimination effective in operation.

Finally, the Shipping Conferences should guarantee to shipping lines of developing countries entry as full and equal members; linked to this suggestion are an obligation on the part of the Conferences to file and register with a competent national authority their tariffs and regulations; representation in the Conferences for the major ports of developing countries; regulation and control of the present system of deferred rebates; reasonable advance notice to shippers of developing countries on any contemplated general increases in freight rates, as well as commodity-wise *increase; and an adequate procedure for registering* complaints and remedies.

The maritime nations have conceded only the first two pleas but rejected all others. They have turned down the suggestion for setting up inter-Governmental consultative machinery, as, in their opinion, the Governments should not interfere with a private enterprise activity. They have also opposed the demand of developing countries for equal membership in liner conferences.

Due to the divergence of opinion on several major issues between the maritime nations and the developing countries, the 66-nation Working Group on shipping constituted by the third Committee "has reached a deadlock." It is to be hoped that the deadlock will soon be resolved and that the Working Group will succeed in evolving a compromise formula. Considering that both the imports into and the exports from the developing countries will expand greatly in the coming years, a heavier freight bill is bound to aggravate their balance of payments position. The need for ensuring to these countries a larger share in the growing world maritime trade cannot, therefore, be stressed too strongly.

W. Germany To Cut Tariffs

The international liquidity position of West Germany has strengthened considerably in the past few years, thanks to the persistent export surpluses. Thus, between 1959 and 1963, the total gold holdings of the country have risen by more than $1,200 million to $3,843 million, foreign exchange reserves (including those held by deposit money banks) by $1,450 million to $4,005 million and I.M.F. tranche positions by $284 million to $1,340 million. Growing export surpluses have not, however, been an unmixed blessing, inasmuch as they have also brought about a lot of headaches to the West German authorities who are quite conscious of the attendant danger of imported inflation. It is with a view to preventing any disquieting impact of these developments on the country's economy that the West German Government has now decided to give effect to a tariff-cutting programme with effect from 1st July next. The programme, which has been evolved after several months' consideration, envisages the following two important steps:

1. Duties on industrial goods imported from the Common Market countries (France, Italy, Belgium, the Netherlands and Luxembourg) will be halved and, where the present level of duty is 4 per cent or less, it will be cut out altogether. The aggregate tariff reductions are expected to be of the order of DM 220 million (about Rs. 24.80 crores) out of the total revenue from tariffs of DM 3,640 million (as of 1963).

2. Tariffs on about 300 industrial goods imported from other countries, including India, will be lowered, the items covered being those on which West Germany now charges duty at a level higher than the future common external tariff of the E.E.C.; they include steel shapes, cotton yarns and certain concrete castings.

Besides effecting cuts in import tariffs as indicated above, the West German Government proposes to ask the E.E.C. Commission to reduce, in anticipation of the results of the Kennedy Round, the level of its future external tariff by a quarter. This proposal marks a major departure from the E.E.C.'s time-table, under which duties on goods from non-E.E.C. members are to be cut by 10 per cent from 1st January next, by another 10 per cent a year later and the balance of 20 per cent to be abolished towards the close of 1966. It is considered highly doubtful whether the E.E.C. Commission will accept the proposal, especially in the light of the French Government's firm stand to stick to the existing time-table.

West Germany's move to halve duties on industrial goods imported from the Common Market countries is bound to affect India's exports to West Germany, since these exports will be exposed to greater competition in the German market from other Common Market countries. It is true that Germany is also reducing duties on several industrial goods imported from other countries, but the benefit of such a reduction which the Indian exports will obtain will be relatively small. For the total tariff reductions (all sources) are expected to cost no more than DM 5 million (about Rs. 57 lakhs). Even this limited benefit will have to be shared by India along with other countries. So much so, the imbalance in Indo-German trade may become more marked in the coming years than at present. The annual adverse balance of trade India is currently having with West Germany is as much as Rs. 70 crores, with imports and exports running at an annual rate of Rs. 90 crores and Rs. 20 crores, respectively. Germany is, of course, giving India loans to finance a large

DELHI LETTER

SEVERAL MISSIONS TO EAST EUROPE

TALKS ON DEFENCE AND ENGINEERING PROJECTS

By Our Special Correspondent

NEW DELHI, 19*th May*

CLOSE on the heels of the announcement of Soviet decision to help in the construction of the Bokaro steel plant has come the confirmation of reports, current for a long time, that the Russians are willing also to supply a 1,000 kilowatt transmitter which the Government of India wants to use for broadcasting propaganda against the Chinese beamed into South Asia. As in the case of Bokaro, the high-power transmitter too was the subject of controversy involving Americans. In aiding Bokaro, it was the Americans who became shy of the project. In the case of the high-power transmitter, however, the happenings were almost like the cancellation of the consummation of a marriage after a formal engagement had been announced. The Indian Government withdrew after signing a preliminary agreement. Offers of transmitters on commercial terms have come from American and British firms and the Czechoslovaks and Yugoslavs too have made bids for sales of transmitters for All India Radio.

Almost as if to confirm the non-alignment stance, the Defence Minister is planning a trip to Moscow, after his U.S. visit to discuss further the slow-moving plans for starting the manufacture of MIG-21 fighter planes. By the time Mr. Chavan is able to visit the Soviet Union at the head of a mission, it will be nearly two years since the Russians had agreed in principle to assist manufacture of MIG planes in India. The original programme for an ordnance factory with Czechoslovak aid is also hanging fire. A new project likely to be discussed by the Air Force team in Moscow is the provision of help to install a missile defence system. The Americans have aided in establishing a mobile radar warning arrangement which as yet is too thinly spread for effective warning against any possible Chinese air offensive. As reportedly conceived, American radar equipment to be established around strategic regions will provide the warning for the defence to be supported by a series of Russian missile stations.

The search for defence assistance apart, the Ministers in charge of industrial projects have firmly scheduled trips to Eastern European countries. The first among the 'pilgrims' will be Mr. Humayun Kabir, Minister for Petroleum and Chemicals, who will be supported on the trip by top officials from his Ministry and from the Indian Oil Company. Mr. Kabir's programme for a tour lasting more than a month covers Moscow, Bucharest, Milan, Rome, Paris and London. The Indian Government is not looking to Russia as a source of supplies for crude, though there is a longstanding offer from Moscow. Supplies of products being distributed by the Indian Oil Company have been the subject of differences between Moscow and Delhi, after Soviet disappointments with the Indian Government which did not agree to rapidly increasing deliveries of products from Russia. A new agreement for limited supply of petroleum products from Russia is to be negotiated, now that the Soviet Union is understood to have withdrawn her demand for higher freight on transport of the products to Indian ports.

The Indian Oil Company is not in a position to enter into long-term commitments for the import of Soviet products for more than one reason. The Company has not yet proceeded fast enough with arrangements for distribution. To the limited production from the Gauhati refinery will be added the output of the Barauni refinery which is expected to go on stream before the end of next month. The Indian Government also wants to keep its hands free to negotiate for purchases of products from Kuwait or Iran which may be able to offer better terms than Russia. The Rumanian-aided Nunmati refinery has been limping ever since its inauguration in the beginning of 1962 and the blame for the difficulties is largely on the shoulders of the Rumanians. In Bucharest Mr. Kabir hopes to discuss plans to expand the Nunmati refinery to 1.25 million tons annual capacity from the present theoretical capacity of 750,000 tons a year. Most of the economic relations between India and Rumania concern equipment needed for projects under Mr. Kabir's Ministry. Rumanian experts have assisted India at Jwalamukhi and Cambay also. While in Moscow, Mr. Kabir will also discuss the plans for the expansion of Barauni and Koyali refinery capacity to three million tonnes each per annum. For Mr. Kabir and the officials accompanying him, the visits to Milan, Rome and Paris will partly be a tour of education in matters relating to the petro-chemical industrial complexes planned to be set up.

Mr. C. Subramaniam's talks with Russians in Moscow on Bokaro affairs will be after the technical teams from Russia have had talks with officials in Delhi within the next few weeks. Mr. Subramaniam will be visiting Poland to see the Poznan Fair and will also have discussions with the Czechoslovaks. While there have been numerous delays in the utilisation of Soviet bloc aid in general (Bhilai project a great exception), the difficulties have been pronounced in the case of Czechoslovakia. The foundry forge plant which the Czechs are building to supply the intermediate needs of the heavy engineering plant now being built by the Russians is much behind schedule and it is difficult to say how far the Czechs are to blame and how far the Indian administrators have been responsible for the problems in the foundry forge plant. In terms of money, the first big slice of Czech aid amounts to Rs. 23 crores but this amount was sought to be used to make a start with a variety of crucial projects. Apart from the foundry forge, the Czech-assisted projects are the heavy machine tools plant at Ranchi, the heavy power equipments plant at Hyderabad and the high pressure steam boilers plant at Tiruchirapalli. The foundry forge plant at Ranchi is to be bigger than even the parent Skoda Works at Pezen in Czechoslovakia and Western experts comment that the Czechs have overextended themselves in the nature of the projects they are trying to set up in India. But the British and West Germans also have tried to set up in India projects larger than they have been normally accustomed to undertake in their home bases.

The new credit of Rs. 40 crores, announced by Czechoslovakia on 12th May, will be used for the expansion of the boiler and heavy electrical plants, for a new foundry forge, two machine tool plants and a tractor and power tiller factory and one 220,000 kilowatt power installation. Of the sum of Rs. 23 crores announced as aid by the Czechs five years ago, about Rs. 12 crores have been covered by orders until the end of last year. Both Czech and Indian sources say that the first aid allotment will be fully used as a result of equipment deliveries by the end of this year.

Mr. Subramaniam's negotiations in Warsaw will include talks on a second mining machinery plant, sought to be established in Andhra. The first, with Soviet assistance, has come up at Durgapur. The major project with Polish assistance hitherto is in coalmining, to raise about 20 million tons of coal a year. Of nearly Rs. 30 crores aid offered by Poland, orders placed until the end of 1963 account for a little over Rs. 13 crores. In the case of Soviet assistance, of Rs. 383.81 crores offered, contracts concluded until the end of 1963 cover equipment valued at Rs. 256.64 crores.

BOMBAY-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Transfer Books of the Corporation will be closed from the 2nd June, 1964 to the 16th June, 1964, both days inclusive.

Dated at Bombay this 20th day of May, 1964.

By Order of the Board of Directors,
WALLACE AND COMPANY,
Secretaries and Treasurers.

TREND OF SHARES

DOWNWARD DRIFT

(From Our Own Correspondent)

BOMBAY, 21*st May*

EQUITIES in both forward and cash lists drifted downward during the week under review. Hopes of some relaxation in margin system entertained by operators last week receded at any rate for the time being. The President of the Bombay Stock Exchange was to have met the Union Finance Minister in Bombay during the latter's visit in connection with the A.I.C.C. session, but the Minister cancelled the visit, as he was indisposed. It is not known whether the Stock Exchange President will visit New Delhi or merely send a letter urging the Minister to reduce the vigour of margin rules. Market circles seem to feel that the relaxation of margins alone will not help share markets shake off the depression and present a cheerful picture. What is more urgently wanted, in their opinion, is tax relief and cheap money.

The downward drift in equities during the week was due to tired bull liquidation and scattered bear pressure, while both professional and investment support was poor. The sentiment of the market was adversely affected by the general tone of discussions at the A.I.C.C. session, with the leftist group strongly urging immediate nationalisation of banks, as well as greater controls on industry and trade. Even the blue chips failed to evoke fresh buying enquiries. The general setback in equity values would, perhaps, have been more marked but for (*a*) the reports of growing American interest in investment in India following the recent visit of leading U.S. businessmen, and (*b*) the expectation that the Central Government might not pursue the original proposal for converting the loans granted to Tata Steel and Indian Iron into equities. The Chairmen of the two Companies met Mr. C. Subramaniam, Union Minister for Steel, Mines and Heavy Engineering, at New Delhi this week. Commenting on the discussions at a Press conference, Mr. Subramaniam said: "We are in sight of a solution. It looks as though we will be able to arrive at a solution satisfactory to the Government and the two Companies."

* * * *

In Dalal Street, Tata Ordinary moved down from Rs. 148.25 on Thursday last week to Rs. 146.25 on Saturday the 16th inst. on selling induced by proximity of the announcement of transfer books' closure. After moving between this level and Rs. 147.50, the scrip closed at Rs. 147 today. The net loss over the week was Re. 1.25. Indian Iron receded from Rs. 24.60 to Rs. 24.28, after being lower still at Rs. 24.16 at one time today. Textiles, too, suffered losses, Century declining by Rs. 6.50 to Rs. 604, Finlays by Rs. 4 to Rs. 306, Phoenix by Re. 1 to Rs. 223 and Bombay Dyeing by 40 nP to Rs. 57.20. Standard and Shreenivas dropped three points each to Rs. 606 and Rs. 246, respectively. India United shed 20 nP to Rs. 21.60, despite the Chairman's reference to the expansion of capacity and improvement in technical efficiency in his statement accompanying the report for 1963. Simplex was dull at Rs. 122, better profit and higher dividend notwithstanding. Sugar shares encountered selling pressure. Belapur was the worst sufferer with a drop of Rs. 10 to Rs. 200. Among Cements, Digvijay shed a rupee to Rs. 188 and Associated Cement 25 nP to Rs. 150.75. Engineerings were depressed. Telco were hammered down by Rs. 12.50 to Rs. 273.25 on renewed fears that the Company might not be able to maintain the dividend. Premier Construction fell by Rs. 5 to Rs. 166, Precision Bearings by Rs. 4 to Rs. 89. Structural (old) by Re. 1.50 to Rs. 83.50 and Larsen and Toubro by 44 nP to Rs. 22.36. T. Maneklal receded from Rs. 525 to Rs. 520. Among Chemicals, Sardesai softened by Rs. 4 to Rs. 63, Colour-Chem by Rs. 2.50 to Rs. 316.25 and Alembic by 50 nP to Rs. 162. Polychem, however, picked up Rs. 2.50 to Rs. 121.25 on rumours regarding bonus issue. Amar-Dye improved by a like amount to Rs. 132.50, in spite of lower profit and reduced dividend for the year 1963. In the Miscellaneous group, Voltas and National Rayon lost Rs. 5 each to Rs. 247.50 and Rs. 360.50, respectively. West Coast fell by Rs. 3.50 to Rs. 154. Tata Oil was neglected at Rs. 60. Bombay Burmah, after rising from Rs. 57.90 to Rs. 58.20, declined to Rs. 58 towards the close.

* * * *

Dull but quiet conditions continued to prevail at Calcutta. Budge Budge fell by seven points to Rs. 120. Indian Oxygen lost 88 nP to Rs. 23.62. J. K. Cotton eased by 37 nP to Rs. 10.69, Guest, Keen, William by 31 nP to Rs. 23.69, and Dunlop Rubber by 25 nP to Rs. 33.75. Birla Jute was quiet at Rs. 29.87, as also Burrakur Coal at Rs. 15.69 and Texmaco at Rs. 27.45. Imperial Tobacco, however, elicited special support and hardened by 69 nP to Rs. 10.25. Metal Box also improved by 25 nP to Rs. 30.62 and Philips India by 38 nP to Rs. 28.

* * * *

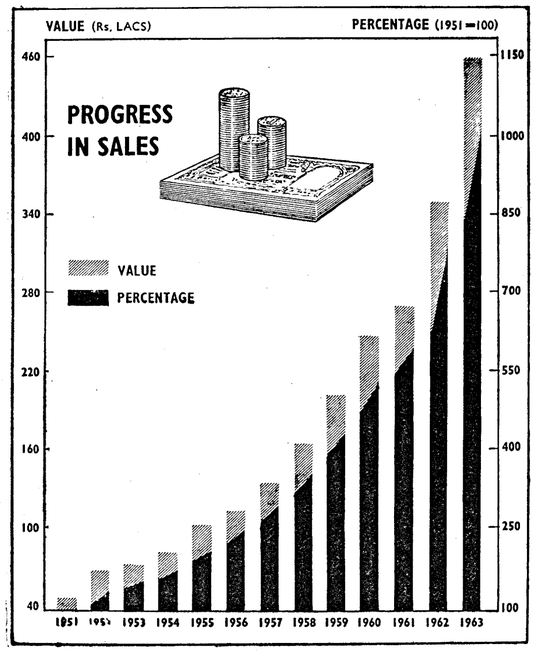
Barring a few select scrips which tended to move up, the Madras Stock Exchange ruled distinctly easy. Bangalore Woollen dropped Rs. 7 to Rs. 250 and Buckingham Rs. 2 to Rs. 270. S.I. Viscose declined by Re. 1.50 to Rs. 118, Travancore Rayon by 75 nP to Rs. 21.75, Ashok Leyland by 20 nP to Rs. 6.90. Highland Produce by 10 nP to Rs. 15.50 and India Cement by 13 nP to Rs. 5.52. W.I. Plywood was neglected at Rs. 200, but Textool gathered Rs. 2 to Rs 143 on special support.

NATIONAL PROGRESS...

On the eve of Independence, NATIONAL RUBBER MANUFACTURERS LIMITED was incorporated. Today, after only 18 years NRM represents the Largest single unit in India, manufacturing industrial and mechanical rubber products.

The wide range of NRM quality products includes:

- Cycle Tyres and Tubes
- Rickshaw Tyres
- Railway Rubber Fittings
- All types of Hoses
- Industrial V-Belts and Fan Belts
- Transmission and Conveyor Belting



SALES PROGRESS

1951—Rs. 46·68 lacs
1963—Rs. 457·09 lacs
Increase 979%

EXPANSION PROGRAMME

NRM will substantially increase the capacity for:

- Cycle Tyres and Tubes
- Industrial V-Belts

NRM's new projects will include:

- PVC Conveyor Belting
- Reclaimed Rubber

NEW ENTERPRISE

NRM has sponsored the first wholly Indian-owned automobile tyre company. Widespread consumer acceptance has proved the quality of its products.

NATIONAL RUBBER MANUFACTURERS LTD.

LESLIE HOUSE
19, Chowringhee Road, Calcutta-13

TEA INDUSTRY

WHEN tea production in India was running at an annual rate of about 700 million lbs., the Planning Commission fixed the third Plan production target (for 1965-66) at 900 million lbs. The quantity of tea actually gathered in the very first year (1961) of the Plan jumped up to 781 million lbs., a rise of 85 million lbs. as compared with the previous year's output. This was a good augury for the third Plan target. But, subsequently, tea production tended to decline: 761 million lbs. in 1962 and 758 million lbs. in 1963. On this basis, the additional output in the remaining two years (1964 and 1965) of the third Plan will have to be 142 million lbs. if the target of 900 million lbs. is to be achieved. The Planning Commission's Working Group on Tea considers such an increase highly improbable. It has accordingly revised the target for 1965-66 downward to 830 million lbs. and fixed the fourth Plan production target (tentative) at no more than 950 million lbs.

The question naturally arises as to why tea production is trailing much behind the original projections of planners. In just two sentences, Mr. B. C. Ghosh, the retiring Chairman of the Indian Tea Planters' Association, gave an impressive answer to this question when he spoke at the annual general meeting of the Association held at Jalpaiguri last week-end. He said:

"The estimates (of tea production of 900 million lbs. and exports of 550 million lbs. by 1965-66) were apparently based on the expectation that, with an accelerated rate of planting, replanting and replacement, as a result of incentives such as refundable non-interest bearing subsidy, and with the application of extra fertilisers and relief in taxation, the desired higher crop would be available. But the industry was (and continues to be) disillusioned, as most of the incentives or assistance have not materialised."

No one need question the veracity of the above statement, for these are facts which speak out clearly. As Mr. Ghosh himself revealed, the State Bank of India machinery is so slow that years of effort have not produced even one medium-term loan for a tea company and the West Bengal Financial Corporation is not at all interested in lending for the development expenditure. Further, the Agricultural Refinance Corporation, besides charging high rates of interest, is said to be imposing difficult conditions such as guarantee by the State Government; it is also refusing accommodation for financing the construction of labour quarters. As for the Tea Board's plantation loan, interest is charged at the rate of 6½ per cent per annum right from the beginning, on loans granted to new plantations, though such plantations take six or seven years to yield tea. Consequently, by the time the take-off stage is reached, the cost per acre goes up to Rs. 4,500, as against the actual cost of Rs. 3,000. In view of such heavy incidence, many estates have not availed themselves of the plantation loan.

The tea estates, of course, would not have bothered about obtaining loans from the Tea Board or other agencies, if their profit-margins had been sufficient to cover for development and expansion. But a large part of their earnings is eaten up year after year by high production costs, heavier wage bill and mounting burden of taxation (Central and State). What is worse, the cost incurred by estates on replantation or new plantation is treated for tax purposes as expenditure on capital account, whereas it ought to be considered as revenue expenditure, for a tea bush is, after all, a wasting asset, and State Governments do not allow any provision for depreciation on tea bushes before assessing the estates for agricultural income-tax. It is, therefore, heartening to learn from Mr. Manubhai Shah, Union Minister for International Trade, who addressed the meeting of the Association, that the Government of India is now "favourably considering" the question of treating the cost of replantation and new plantation as revenue expenditure. The Centre, we are told, is also requesting the State Governments to treat such cost as revenue expenditure under the State Agricultural Income-tax Acts, so that a uniform pattern could be followed in regard to both Central and State taxation. The relief thus provided will certainly meet the long-felt need of the tea industry and enable it to plough back a sizable part of its profit in a satisfactory manner. It is equally heartening to hear from Mr. Shah that the Government is "favourably considering" the recommendation of the Chanda Committee for collecting excise duty on tea at the auction stage, instead of at the garden stage. This change in the method of tax collection, too, will certainly give quite a bit of relief to the tea industry, inasmuch as it will release for more profitable use a large amount of money which continues to remain blocked because of payment of excise duty on tea much in advance of actual sale at auctions.

Welcome though these measures are, they do not constitute a real remedy for the standing problems of finance and, unless this problem is solved, it would be futile to expect the tea industry to set about achieving the production and export targets in all earnestness. Pinpointing this aspect, Mr. Ghosh suggested two alternatives: formation of a separate tea finance corporation to provide short-term and medium-term finance to the industry or creation, by the Tea Board, of a tea finance guarantee fund which would, after scrutinising the proposals, stand guarantee for short-term bank loans for crop financing, thereby leaving title deeds free for term-loans for development from other sources. Apropos this suggestion, Mr. Manubhai Shah did not commit himself in any way. He merely recalled that, as recommended by the Board of Trade, a committee "to look into the question of finance and development of tea industry" was being set up and expressed the hope that this Committee "would be able to formulate necessary measures to help the industry."

While the Tea Board and the Governments (Central and State) should give all possible support and encouragement for augmenting tea production, the industry itself must spare no effort to improve its efficiency and avoid wastage of resources. The tea companies must always try to maintain their plantations up-to-date and build adequate reserves. By so doing, they could reduce their dependence on bank loans, which carry a heavy interest burden, and official props.

WHAT'S IN A NAME?

"Workers' participation in management may be an abstract idea for some, it may be as well a scheme for others; for me it is an article of faith." In these words, Mr. D. Sanjivayya, Union Minister for Labour and Employment, reaffirmed his faith in workers' participation in management at Bombay on the 15th inst. The Minister, who was inaugurating a seminar on the subject organised by the Devidayal Cable Industries Ltd., said that, for democratisation of the management of an undertaking, workers' participation in management was a "must." But participation, he emphasised, had to be real and not formal, effective and not for name's sake. Mr. Sanjivayya, then went on to dispel what he called "unfounded misgivings" about the scheme. As readers are aware, there are some who think that joint management councils infringed management prerogatives. Likewise, some labour leaders fear that collective bargaining would suffer if joint management councils were successful. Dismissing these misgivings as unfounded, the Minister categorically stated that joint management councils neither encroached upon the legitimate functions of management nor usurped the position of collective bargaining. Joint management councils, he averred, were meant to remove day-to-day irritations in the sphere of industrial relations. Such councils, in which employers and workers were equally represented, envisaged joint consultation and discussion and exchange of ideas on subjects of mutual interest. Consultation on administration of welfare measures and sharing of information on specified items were the basic ingredients for the effective working of joint management councils. While these ingredients were important for the successful functioning of joint management councils, equally important was the right attitude towards workers' participation in management on the part of both workers and employers. Emphasising this point, Mr. Sanjivayya added:

"The fruits of participation can be made available only with the genuine willingness of employers and employees to co-operate fully and without any reservation in giving the scheme a fair trial over a prolonged period. While the management has to shed its customary notions about management prerogatives, etc., the union has to eschew belligerent and demonstrative acts which may hamper the spirit of co-operation. ... Both labour and management have to adjust themselves phychologically and otherwise to the concept of co-operation in matters, earmarked by agreements, for co-operative action."

Mr. Sanjivayya is not entirely wrong when he says that there are mental reservations on the part of both employers and workers about workers' participation in management. But this seems to be due to the fact that the phrase "workers' participation in management" conveys the wrong impression of equal status for both workers and employers in all aspects of management of an undertaking. In fact, what is envisaged under the scheme is only joint consultation on certain agreed matters which impinge directly on workers' welfare and not participation in the broader management functions of risk-taking, planning, marketing, negotiations, etc. The wrapping of the simple, straightforward joint consultation in the alluring but misleading phraseology "workers' participation in management" has confused both managements and workers, creating mental reservations in both. Repeated official clarifications have not dispelled the doubts created by the use of the wrong term. Well may the bard ask "What's in a name?" But, in the sensitive field of labour-management relations, there is much in a name.

PRIVATE FERTILISER PROJECTS

While reviewing the progress of fertiliser projects in the public and private sectors, this journal, in its issue of 21st March 1964 (*vide* page 450), expressed the opinion that the special fiscal concessions available for the fertiliser industry might be expected to create a more favourable climate for foreign capital in a field which had been virtually boycotted by it, provided satisfactory arrangements were also evolved in regard to pricing policy. The soundness of this opinion, it is gratifying to find, has just been vindicated by the finding of an official expert group that the present pricing and distribution policy for fertilisers is not likely to stimulate private investment in this field. This policy, according to the group, would have to be radically changed, if any substantial contribution from the private sector towards additional fertiliser capacity were envisaged during the fourth Plan, or else the Government itself would have to take the entire responsibility for establishing the additional capacity required. The group's recommendation is very sound and realistic in the context of the fertiliser output targets proposed by the Perspective Planning Division for the fourth Plan. These targets, incidentally, are 1,750,000 tonnes for nitrogenous fertiliser (in terms of N) and 750,000 tonnes for phosphatic fertiliser, as compared with 500,000 tonnes and 200,000 tonnes, respectively, for the third Plan. There is no doubt that the targets will be found too big for the public sector alone to handle in the absence of participation by the private sector also in a big way. It is pertinent to recall here that, with its nitrogenous fertiliser capacity of about 350,000 tons installed so far, it (the public sector) has by no means been conspicuously fast in its progress towards the third Plan target of about 780,000 tons.

It has been made abundantly clear by the group that the private sector's successful participation cannot be ensured, unless the obstacles to investment are removed. The major obstacle, of course, is that the pricing and distribution policy has been most unprofitable to the private sector. Under this policy, the entire production of nitrogenous fertilisers is taken over into the pool which arranges its distribution. The private-sector units are given retention prices corresponding to those given to public-sector units producing comparable products. The private sector has all along had certain mental reservations about the linking of prices payable to it with those payable to public-sector projects. Its stand has been that the prices should be remunerative enough to attract investment in a competitive capital market and that the distribution of prices should be left to private channels. The group's recommendation that a radical change should be brought about in the price and distribution policy constitutes, in effect, a concession to the private sector's stand.

The group's review of the progress of private-sector fertiliser projects shows that, of the five projects licensed in the expectation of foreign collaboration, those at Tuticorin, Mangalore and Hanumangarh are not likely to materialise, while the other two at Kothagudam and Visakhapatnam stand some chance of being fulfilled. As the group has recommended that the licences of the three infructuous projects should be revoked, other proposals, involving different locations, might have to be considered. It is in this connection that the group has urged that the pending applications from the private sector should be expeditiously examined. But it is not clear how much of the additional capacity of one million tons (that is, additional to the capacity of one million tons expected to be achieved by 1967-68 on the basis of projects under implementation or expected to materialise) would be licensed in the private sector. It is, however, conceivable that, at least, half of the required additional capacity will have to be in the private sector.

Whatever be the additional capacity to be licensed in the private sector the problem of foreign exchange, it is needless to add, would continue to be intractable, unless, of course, something could be done to bring down the foreign exchange component of a fertiliser project. As imported equipment would account for about 50 per cent of the investment (Rs. 24 to Rs. 30 crores) on a standard fertiliser plant of 90,000 tons capacity, the aggregate foreign exchange requirement for an additional capacity of, say, 500,000 tons in the private sector would be of the order of Rs. 67 to Rs. 83 crores. This is a pretty big sum. One way of bringing down this figure would be to create adequate engineering capacity in the country for fabrication of high pressure vessels, compressors and pumps. If the two public-sector projects, namely, the plate and vessel project and the compressor and pump project, which are still marking time, can be expedited, the foreign exchange component of fertiliser projects would go down appreciably. But, even if a beginning were made tomorrow, these projects would not be completed in time to help the fertiliser projects proposed for the next Plan. So the dependence on foreign capital and collaboration would continue to be heavy for both the sectors. While for the public sector rupee finance is not a problem, for the private sector it is a major hurdle to be overcome. With the shares of existing fertiliser companies quoted at a substantial premium, it will not be easy to attract the savings of investors for new capital issues. It is here that private entrepreneurs would need the active encouragement of Government in all possible ways. That favourable changes in the pricing and distribution policy for fertilisers would go a long way towards attracting both foreign and domestic capital need hardly be overemphasised.

HOUSING GROUP'S REPORT

India's housing problem is of stupendous magnitude, judged either by the number of additional houses needed in both urban and rural areas or by the estimated financial requirement therefor. A working group on housing co-operatives, set up by the Government of India, has estimated that at least 18 million additional houses would be required in the urban areas alone during the period 1961-76, and some 22 million additional houses in the rural areas. Then, there is also the need for effecting substantial improvements in the existing sub-standard rural houses. The financial magnitude is, indeed, staggering, for the amount of outlay required for meeting the urban housing shortage alone during the period 1966-76 has been estimated by the group at Rs. 15,500 crores. But the estimated availability of funds, according to the group, would be no more than Rs. 3,000 crores during that period. It may be broadly figured out that, in view of the ever-rising building costs and land prices, only about three million additional houses could be constructed during the ten-year period in the urban areas. If this is going to be the position in towns and cities where public opinion is vocal, the prospects for rural housing on any appreciable scale may be rated as next to nil.

It is difficult to believe that co-operative housing can progress fast enough to ensure a break-through on this front. The working group itself has found that the progress of housing co-operatives has not been quite encouraging. The total number of houses built by such co-operatives up to June 1961 has come to only about 263,000 involving an outlay of just under Rs. 180 crores, including the Government's financial assistance of about Rs. 23 crores. How, with this poor record of performance, housing co-operatives would be able "to make a more effective contribution towards solving the immense housing problem facing the country" is by no means clear. Nevertheless, the working group has recommended that necessary encouragement and incentives should be given to co-operative housing. In particular, it has suggested several ways of providing financial assistance, namely, (i) the advancing of funds by the L.I.C. to apex societies, (ii) the relaxation of restrictions by the Reserve Bank on the scheduled banks against investment of funds in immovable property so as to permit them to advance loans to co-operative housing societies, (iii) the liberalisation of the pattern of financing to enable housing co-operatives to draw loans up to 15 times their share capital and (iv) earmarking by the State Governments of 20 to 25 per cent of the funds under the housing schemes to the co-operative sector. The group has also suggested that, in order to harness additional resources, the Oriental Fire and General Insurance Company may be persuaded to undertake a mortgage guarantee insurance scheme to insure the loans advanced by institutions/individuals to housing co-operatives.

Even if the practicability of these measures is established after further consideration, it is doubtful whether the additional funds expected to accrue from them would be large enough to make an impact on the co-operative sector in housing, let alone housing in general. It may be noted here that there are immense procedural difficulties and red-tape to be overcome by the co-operatives in securing the permission of their respective State Governments for their plans and that some of the State Governments have not cared to avail themselves of the credit facilities offered by the L.I.C. Private house-building activity would, therefore, have to be encouraged and facilitated in all possible ways. It is needless to add, in this connection, that the special measures suggested by the group for enabling the housing co-operatives to secure land, cement and building materials should be made applicable, *mutadis mutandis*, to private builders too.

It is good to hear that the Government has just accepted most of the group's recommendations regarding co-operative housing and forwarded the relevant ones to the State Governments for implementation. But the Government has wisely decided not to accept the group's recommendation that it should be made compulsory for new industrial undertakings in the private sector to provide houses for workers. The Government's stand here is to the effect that such a measure would not be feasible at present and would prejudice the growth of industries. This is a correct stand, for provision of housing is primarily the responsibility of local bodies. It has become a very costly and low-yielding investment which industries that have to make a profit and declare regular dividends cannot afford to undertake. The State, however, can assist them by liberalising the conditions under which finance is made available for industrial housing.

PRODUCTIVITY IN COTTON MILLS

The cotton mill industry in India can double its production of yarn and cloth through modernisation and proper work assignment. This hard-to-believe claim is made in a survey report prepared by the South Indian Textile Research Institute which has conducted labour productivity surveys in several mills. The claim may sound optimistic to impress the realists, but it does indicate the vast scope that exists for achieving higher productivity in the industry. And higher productivity leads to a reduction in costs, besides improvement in quality. If the prices of cotton textiles are high today, as indeed, they are, it is because of the fact that productivity has not kept pace with the persistently rising cost of production, not to speak of the heavy load of taxation (both indirect and direct). Speedy modernisation of mills' equipment and rationalisation of

AMERICAN LETTER

EXPORTS TO RUSSIA AND EAST EUROPE

BUSINESSMEN URGE POLICY REVISION

By N. Pattabhi Raman

NEW YORK, 16*th May*

THE United States Chamber of Commerce adopted a significant resolution at its annual meeting on 29th April. Focussing on East-West trade, an issue it had for long carefully sidestepped in shaping its policies, it called on the U.S. Government to "undertake a prompt re-examination and re-evaluation of the present system of restrictions, with the objective of eliminating those which are not necessary for the security requirements of the United States and which result in discrimination harmful to its competitive position."

The system of restrictions referred to by the Chamber resolution applies to U.S. trade with the U.S.S.R. and the countries of Eastern Europe. It prohibits the export from the U.S. to these Communist countries of a long list of "strategic" materials and products, "strategic" not merely in the narrow military sense but in a larger "cold war" sense. It also provides for the imposition of import duties at more than twice the usual rates on goods imported into the U.S. from these countries, though imports from Yugoslavia and Poland have been exempt from such harsh treatment as part of Washington's attempt to woo those nations as far away as possible from the Kremlin.

Countries Excluded

The system is actually one of total embargo as far as trade with mainland China, North Korea and North Vietnam is concerned. The Governments of these countries are not recognised by the United States. Cuba also falls in the category of nations whose Government Washington refuses to acknowledge. As is well known, this island is the target of an economic blockade organised by the U.S. Accordingly, no exports have been permitted to that country for several months, excepting food and medicine which have been allowed on "humanitarian" grounds. Even this exception seems to be vanishing, because on 14th May President Johnson announced that shipments of medicine and food to Cuba would henceforth be subject to export control and licensing.

The Chamber of Commerce resolution recommended that many items, including oil refineries, which are currently on the embargo list, be permitted to be shipped to the Soviet Union and the East European countries. It did not ask for the reopening of trade with Red China or Cuba or with North Vietnam or North Korea.

The Chamber's move has come at a time when there is considerable doubt in this country about the wisdom and usefulness of using trade restrictions as part of an undeclared economic war against communism.

The theory behind the U.S. policy is that, to provide the communist nations with the products they badly need but could not make or make enough themselves, is to aid and abet their survival and growth; conversely, to keep them lean and hungry is to subject them to pressures which might keep them weak or ultimately even contribute to their collapse. America's N.A.T.O. allies have refused to subscribe to this theory, even though they have agreed to restrict the export to communist countries of items on a shorter embargo list—much shorter than the U.S. list. Their view has been that a fat and less discontended enemy is likely to be less adventurous and troublesome.

Allies Differ

Because of this difference in approach to East-West trade, the United Kingdom in particular, the West European countries, Canada and Japan have all been trading with the "devil" that the U.S. has been trying to exorcise through trade withdrawal. West Germany has exported heavy steel pipe to the U.S.S.R.; the U.K. has been building up a large volume of trade with the Soviet Union and is now shipping buses to Cuba; France is exporting planes to mainland China; and so on.

Thus, the Soviet Union and other communist countries have been able to buy many of the goods on the U.S. embargo list from the U.K., France and other suppliers; the only limitation has been the availability of credit or foreign exchange. Diplomatic intervention by the U.S. has failed to stop this exchange of goods. Foreign trade is a key to the health of the economies of the European countries, in a way it is not to that of the United States' economy, and this too has contributed to the failure of American diplomacy.

But it has been more than a failure of strategy, for U.S. restrictions on trading with the communist countries have also meant that the U.S. has gained little economically from the East-West trade that has actually been taking place. It is true that the world is still divided, by and large, into two trading zones, that the non-communist nations trade mainly between themselves, and that the communist nations too exchange goods chiefly between themselves. But exports to the communist countries from the countries of Western Europe and from Japan have doubled in the last six years to some $3,000 million a year, while those from the U.S. are estimated at only slightly about $100 million.

Like Salt in the Wound

This has been like salt in the wound. And this is what has finally converted many to the view that the U.S., too, should expand its trade with the communist countries. The relaxation of tensions between the U.S. and the U.S.S.R. has provided an atmosphere somewhat conducive to the advancing of such a view.

The resolution of the Chamber of Commerce is not a call in wilderness. The Export Expansion Council made a similar suggestion last year at the end of a conference convened by the late President Kennedy. Individual business leaders have also come out for "trading with the Red bloc."

President Johnson said recently that he welcomes all proposals for expanding trade with the Soviet Union and the East European countries, but he did not commit himself to a change in the present policy. Such a shift in policy might come ultimately, but right now Mr. Johnson is very careful about it. East-West trade is a very sensitive issue, particularly in this election year.

Some leading legislators like Senator William Fullbright have spoken publicly in favour of expanded trade with the Russians and their friends. In a recent speech, Mr. Fullbright stated that a "modest increase" in East-West trade might serve as a "modest instrument of East-West *detente*." But debate and voting in the Congress on this issue, and particularly on the proposal to sell U.S. wheat to Russia, revealed the existence of a sizable minority that is opposed to such expanded trade. There is, indeed, a strong feeling in this country that trading with any communist country at any time in any product is evil, because it is bound to strengthen communism. Moreover, there are moral and emotional overtones to this attitude.

Ambivalent Attitude

It is not surprising, therefore, that, in this atmosphere, the Government exhibits an attitude of ambivalence. The late President Kennedy laid the groundwork for an expansion in trade with the Soviet Union and the East European countries, but he had repeatedly to qualify his proposals on shipping wheat to the U.S.S.R. It is not simply a question of allowing the export of items that are now on the embargo list. It also involves the question of extension of credits. No one is really suggesting that special long-term credits should be extended, even though the U.K. is reported to be willing to do that for Russia. But, while the protagonists of expanded trade would allow normal commercial credits, some politicians would have the U.S. accept only cash.

The Chamber's resolution could conceivably help the Government in coming to a positive conclusion, because it brings into focus the attitude of a majority of the business community. But it will not be surprising if the Government postpones the decision until after the November presidential elections.

Moreover, even when the way is cleared for expanded trade with the Soviet Union and the East European countries, there is unlikely to be any spectacular jump in the volume of trade. The main limiting factor will be, as it has always been, the ability of communist countries to expand their exports to the West and thus earn the foreign exchange necessary to increase their imports.

Oil Refineries Too

There is one curious aspect to this whole business. It is that U.S. firms are now willing to export oil refineries to the Soviet Union. It is curious because the Soviet Union's successful penetration into oil markets in Asia, the Middle East and even Western Europe has been most unwelcome to U.S. oil companies. They have been—and are—waging a determined battle to prevent the Soviet Union from making further inroads into their traditional markets. In this battle, they have enlisted the support of their Government. And they have decried Italy, West Germany, Sweden and other countries for importing Russian oil. Yet, the U.S. Chamber of Commerce would recommend that U.S. companies should be allowed to export oil refineries to the Soviet Union!

There is an American saying, "If you can't lick 'em, join 'em!" To a considerable degree, the "re-examination and re-evaluation" of the present policy of restricting trade with the communist nations would seem to be based on this formula.

SURVEY

(*Concluded from previous page*)

manufacturing methods are, therefore, very essential for ensuring maximum production of quality textiles at economic costs, which is urgent in all conscience as much to compete effectively for a larger and larger share in the world market for textiles as to cater successfully to the expanding domestic requirements. Mr. P. V. Mackay, Chairman of the Southern India Millowners' Association, certainly struck a note of realism when he declared, while inaugurating the twenty-first all-India Textile Conference at Coimbatore on Friday the 15th inst., that the world had witnessed new ideas in textile technology and that India should not hesitate to benefit from the knowledge and experience gained in other countries. Appropriately enough, he urged the technological and research personnel in the Indian textile industry to maintain close touch with modern developments in textile processing.

At no time in the history of the textile industry was the need to focus attention on quality aspect so urgent as it is today. India no doubt occupies an important place in overseas markets; it is the second largest exporter of cotton textiles in the world, next only to Japan. But it requires sustained effort on the part of the industry and trade not only to maintain their position in the coming years but also to enlarge its share in the expanding world market for textiles. The country's exports, as Mr. Mackay rightly pointed out, depend very largely on the quality of the product and every care should be taken to export always textiles of the highest quality. "There is," to quote him, "a great deal to be done in modernisation and rationalisation. This is a subject regarding which the Centre and State Governments could give even more help than they had given in the past."

For maintaining the production of high quality textiles at an optimum level, an abundant supply of superior quality cotton is essential. There may be a great future, as envisaged by Mr. Mackay, for cloth woven from a blend of cotton and man-made fibres, but there is no getting away from the urgent need for taking all possible measures to boost cotton production. That India possesses all the conditions for growing more cotton is common knowledge. These conditions should be made use of properly, with greater emphasis on intensive cultivation than on further expansion of acreage. The scope that exists for augmenting the productivity of cotton lands, both quantitatively and qualitatively, is pretty vast. It can be exploited to the maximum extent possible, provided the Central and State Agricultural Departments and the Indian Central Cotton Committee adopt a more dynamic approach to the problems of cotton cultivation.

LONDON LETTER

BOOMING BRITISH ECONOMY

ELECTION PROSPECTS STILL FAVOUR LABOUR

From Our Own Correspondent

LONDON, 15*th May*

THERE is no doubt that the rapid upswing in demand and output which began in the third quarter of last year is continuing. Risks are being run by the Government (examplified by the mild budget) for the sake of immediate expansion and there are few established instruments which can be used to check demand between now and the next budget. But the latter, of course, could be in the autumn, if a Labour Government came to power and decided this was necessary.

However, the Government's argument that it is certainly *not* time for a change has failed to help them in the two recent rounds of elections. A week ago elections were held throughout the country for borough and district councils and the result was a sweeping victory for Labour. The Conservatives have been at pains to point out that these gains have done little more than restore Labour's position in the councils to what it was in 1961 (when the same seats were last contested), but, if the electoral tide had been running against Labour, this would not have happened.

The by-elections this week have been held in four constituencies—all previously held by the Government—and, though the Government have held three and lost only one, in all of them the majorities were drastically reduced and the average swing to Labour was over 6 per cent. Such a swing, if repeated all over the country, would give Labour a majority of 70 to 80 seats in the next Parliament. The country does not, therefore, seem to have heeded the Premier's call that a Labour Government would halt prosperity.

Output and Employment

Over the past nine months, total output has been rising at about 7 per cent a year, according to an analysis of the home economy just produced by the National Institute of Economic and Social Research. Quite such a high rate is unlikely to be maintained and the forecast is 5 per cent for rather more than a year ahead. This is one per cent higher than the "safe" long-term target, but the forecasters are perhaps being a little pedantic if they claim to be able to fix to within one per cent the true output potential of a country. The Government is taking the view that it is worthwhile running whatever risk there may be in letting output go on at this rate. There is a natural brake on what can be done and that is the level of employment. So far employment has risen only ½ per cent (unemployment has been falling much faster, percentage-wise) and it will probably have to rise a further 2 per cent if the rise in output is to be maintained. This would bring the unemployed percentage down to 1½ per cent which past experience suggests may be even beyond the practical limit. Here is the inflationary danger, if labour pressures, translated into wage pressures, end as overall cost pressures. And one of the main absorbers of extra labour is the construction group of industries. Over the past nine months, fixed investment has been rising very rapidly, averaging about 13 per cent per annum, especially on housing and office building. The latter is, indeed, about the only item that could easily be halted by a Government wishing to ease the pressure on resources. Theoretically, housing could also be damped down, but, since housing—or its lack—is the country's most serious social problem, all parties are determined for political reasons to press on with house construction whatever else may be slowed down. Oddly enough, this investment activity may well be halted by a shortage of bricks, already evident—and so prevent a labour crisis!

In the first quarter of this year, exports rose 2 per cent—chemicals, metals and miscellaneous manufactures in the lead. Exports to the sterling area, and especially Australia, accounted for most of the movement. As Your Correspondent noted last week, exports to the Common Market countries appear to have been held back for reasons of tariff discrimination—but it is difficult to judge over such a short period. On the whole, exports are doing rather better than seemed likely a couple of months ago.

The National Institute's forecast for 1964 is a rise of 7-8 per cent in value of exports over 1963. But, in spite of this (and because of the upsurge in imports), the Board of Trade has estimated a deficit in *visible* trade of £105 million for the first quarter. The indications are that this has been a specially bad quarter in which a rise in import prices and a worsening in the terms of trade has had undue influence. The rise in import prices appears to be slowing down, but, as against this, the surplus of invisibles will probably be less than last year, for overseas military expenditure will be swallowing up what trade is gaining. It may be then that, by the time this year is through, the U.K. will have suffered a payments deficit of some £200 million on current account (as compared with surpluses of £120 million and £100 million for the two preceding years) and, after allowance for overseas investment, the total deficit may be as high as £300 million. This is not a large figure in relation to gross national output, but it is too high in relation to the level of "overseas" resources.

There are few fiscal measures the Government could take should they decide the inflationary risks outweight the production advantages —that is until a fresh budget is produced. Direct dampers on demand might become necessary and the best of these would be a cutback in the amount of military spending, especially on overseas ventures. What remains are measures to stimulate exports—provided always there is a sufficient margin of productive capacity. But it is pointless to speculate further on what might be done—*for the moment* the risks are being taken and for the moment the economy is booming and the crises seem to have retreated again towards 1965.

WORLD BANK LOAN TO ALGERIA

A loan equivalent to $20.5 million has been granted by the World Bank for financing a natural gas liquefaction plant at Arzew on the Mediterranean coast of Algeria. The plant will be the first large-scale commercial installation of its kind. It will produce 2.4 million cubic metres of liquefied natural gas annually which will be supplied to the U.K. and France. Chemical Bank New York Trust Company is participating in the loan, without the World Bank's guarantee, for an amount of $300,000 representing part of the first maturity which falls due in May 1966. The loan is for a term of 12 years and bears interest of 5½ per cent per annum including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin in May 1966.

A British industrial group is reported to have offered to build and finance a giant 3,000-megawatt coal-fired power station and coal port on Italy's western seaboard. The offer has the active support of the British National Coal Board, although it seems unlikely that the Board will itself participate in financing the project. If the offer is finally accepted an expenditure of about £80 million would be involved. Repayments would start immediately after the station begins operation and would be spread over 15 years. The station together with the coal port may take about five years to build. About four million tons of coal would be required every year to feed the plant supplied under a 10-year contract granted to the N.C.B. An Anglo-Italian study group is being set up to go into the details of the project.

(*Concluded from next column*)

not only to finance development projects which are admitted to be economically sound but which are ineligible for World Bank backing because of the borrower's foreign exchange position. It should also provide them to maintain development programmes threatened by a long-term decline in earnings from exports of primary products which could not have been foreseen.

I can see no theoretical flaw in this proposal. The practical catch, however, is that untied aid of every sort is provided grudgingly and that the I.D.A., in particular, is already suffering from the reluctance of the U.S. Congress to supply the modest increase in its resources agreed upon last year. The main merit of the British proposal may be that it provides another excuse for adding to the pitifully small supply of genuine aid funds available for narrowing the gap between rich and poor.

AID BY COMPENSATION

By Questor

ALTHOUGH a number of raw material prices have hardened considerably during the past few months, there is little reason for supposing that this is more than a temporary reversal of the trend which has ruled for the past decade. While the price of manufactured goods entering into international trade has risen steadily, that of primary products has fallen ever since the Korean war. The terms of trade of the poorer countries have deteriorated markedly. During the nineteen-fifties, the International Monetary Fund estimated in its last annual report, while the volume of their exports rose by some 52 per cent, their importing power per person rose by only 15 per cent. Since the oil-producing countries fared considerably better than this, the rest must have fared considerably worse.

It can be argued that these countries will solve their development problems only by reducing their dependence on exports of primary products, that the fall in prices may now be levelling out, and that fluctuations are now less violent than they were a few years ago. It is hardly surprising, however, that, among the claims for better treatment which they are urging at the U.N. conference in Geneva the question of export prices is prominent.

Two suggestions for stabilisation have been made. One is that a greater international effort should be made to run commodity price support schemes. A fundamental objection to this suggestion—or at least to the form in which it is commonly made—is that it would place an unfair share of the common burden on countries which import large quantities of primary products, that it would help certain developed countries which are in no need of international assistance, and that it would probably lead to the emergence of unmanageable surpluses.

Compensatory Financing

The other suggestion is that special provision should be made to compensate for fluctuations in export income, caused by lower prices, which tend to disrupt national development programmes. The International Monetary Fund has already taken action on this front. Early last year, it decided to create a "compensatory financing facility" designed to help primary producers who run into balance of payments difficulties because of a temporary drop in export income. It is now prepared, in suitable circumstances, to make available special credits on top of the normal limit—not normally exceeding 25 per cent of quota—where export income is depressed by a cyclical downturn in the industrialised countries, or abnormal market conditions, or even natural calamity.

The trouble, of course, is that the Fund must be satisfied that the drop in export income is only temporary and that its loans will soon be repaid. It is not equipped to compensate for a drop in export income caused by a long-term downward trend in prices, such as many undeveloped countries have experienced. Nor, indeed, are the providers of longer-term credit like the World Bank. Compensating finance is an excellent idea, but, if it is to be of practical use in the majority of cases, it must consist of very long-term loans—long-term enough to be the equivalent of gifts.

Britain, it is good to see, has now recognised the logic of the situation. Its delegation to the U.N. conference has now submitted a draft recommendation aimed at providing compensating finance of a long-term kind under the auspices of the International Development Association, the World Bank subsidiary which specialises in 'soft' loans and is gradually (in theory, at least) taking over the work of its sterner parent.

The principles of the recommendation are as follows: The industrialised countries should finance the scheme and only undeveloped countries should be eligible to benefit from it. It would normally be applicable only after a country had drawn on the Fund for short-term compensatory credit and enough time had elapsed to assess the real nature of the drop in its export income. A drop in export income should be regarded as "a shortfall from reasonable expectation" and such a shortfall would constitute a *prima facie* case for assistance. This established, the I.D.A. should investigate the economic circumstances, assess how much assistance is needed to help avoid disruption of development programmes and then provide enough to cover "a substantial proportion" of the shortfall in income.

It is proposed, in short, that I.D.A. should, in future, provide long-term credits at low rates

(*Continued in previous column*)

TREND AND PROGRESS OF BANKING

RESERVE BANK'S ANNUAL SURVEY

THE Reserve Bank of India's customary annual Report on the *Trend and Progress of Banking in India* for the year 1963, has just been published. It contains a review of trends in credit and monetary policy and traces developments in banking structure, organisation and legislation. The outline and analysis of trends and policies have been made in the context of the Emergency. The inflationary impact of the intense pressure of aggregate demand, matched very inadequately by overall supplies due to some slackening in output and considerable diversion of resources for defence of the nation, was so marked that the accent of policy was on reducing credit availability, both in the aggregate and in respect of certain individual lines, and on raising its cost.

Describing the evolution of the policy of credit restraint, the Report recalls the restrictions imposed in July 1962 by the Reserve Bank of India on access to its accommodation facilities by banks, that is, well before the Emergency. The restrictions were lightened on 31st October 1962, by setting, for the first time, a ceiling to the total amount which a bank could borrow from the Reserve Bank. The ceiling was fixed at 100 per cent of the statutory reserves of a bank, but could be relaxed, if necessary, on a detailed assessment of a bank's operations and credit requirements. That the screw was tightened rather excessively is evident from the clarification which had to be issued within ten days of the October circular to the effect that the ceiling on Bank's lending would in practice not be rigid and inflexible and that special accommodation in excess of the quota would be permitted on an assessment of the position of each bank. The Report under review makes a special effort to emphasise that the clarification did not go beyond the original circular, but only sought to explain what had already been stated in the circular: it meant that the access to the special quota was possible but not automatic. The Reserve Bank also requested the banks to readjust their advances portfolios, to recall advances against gold, shares and unsecured advances and not to encourage speculative and hoarding activities.

Borrowing Quotas and Slab Lending Rates

It was against this background that the Bank Rate was raised by ½ per cent to 4½ per cent in the beginning of 1963. The ostensible purpose was "to bring it in line" with the prevailing higher pattern of interest rates in the money and capital markets, the tone and level of which had already been set by the system of differential lending rates adopted by the Reserve Bank. The interest pattern has been steadily upward since 1960, and has been varying according to the changes in the tier system of lending rates. The October 1962 circular created four tiers—25 per cent of quota at Bank Rate (4 per cent), another 25 per cent at 5 per cent; the balance at 6 per cent and the discretionary additions to the quota at 6.5 per cent. In January 1963, along with the higher Bank Rate, the system of borrowing quotas and lending rates was simplified by allowing 50 per cent of the quota at Bank Rate (4.5 per cent) and the balance at 6 per cent, the discretionary quota being charged at 6.5 per cent. Tight money and high rates held sway throughout the winter and summer of 1963, and lasted till the end of October 1963, when several modifications liberalising the credit policy of the Reserve Bank were announced. The Report gives, for the first time, a table, showing the peak level of scheduled bank borrowings from the Reserve Bank at various rates of interest in each of the busy seasons 1960-61, 1961-62 and 1962-63.

Preferential Treatment

But even before the liberalisation, the preferential treatment given to special sectors was not only continued but also extended. In March 1963, the Reserve Bank announced that the additional quota at Bank Rate given to scheduled banks in respect of their credit to small-scale industries and co-operatives would be over and above the normal ceiling (equivalent to 100 per cent of statutory reserves) and that there would not be any corresponding reduction in the quota at 6 per cent as till then. Under the Export Bills Credit Scheme, scheduled banks who charged exporters at no more than 1½ per cent above Bank Rate were allowed to borrow further additional amounts from the Reserve Bank at Bank Rate over and above the normal quota. Additional accommodation was also granted at Bank Rate to those banks which granted advances to coal industry in the private sector to enable it to utilise the World Bank loan of $35 million.

Selective credit controls were also in continued operation, since, as already pointed out, it was considered desirable to regulate availability of credit in individual lines, apart from their aggregate availability. Preferential treatment accorded to warehouse receipts covering certain foodgrains in respect of margins and ceilings was discontinued: selective controls were reimposed on sugar, in view of the lower output and firmness of prices. Ceilings on groundnut and oilseeds advances were allowed to lapse and only minimum margin requirements were enforced against them in view of the improvement in supplies and fall in prices.

Slack and Busy Seasons

The factual survey of the 1962-63 busy season given in the Report is revealing in many ways, but it is difficult to agree with the contention that the economy was able to absorb the immediate impact of increased defence outlays and the subsequent heavy step up in taxation without disturbance to the internal balance: the sustained and all-round rise in prices, falling or stationary production levels in many sectors and sluggishness of the economy as a whole are evidence to the contrary, if any evidence were needed. It may be that the speculative activity in the commodity markets remained subdued as a result of the policy measures instituted, but the Reserve Bank's Report contains no analysis of the impact of steps taken to meet the Emergency on production and fresh investments.

Inspite of the larger credit expansion against seasonal commodities, the total credit expansion in the 1962-63 busy season around Rs. 200 crores was more or less of the same magnitude as in the previous busy season. In view of the marked slow-down in deposit growth during the busy season, the banking system had to rely on, and did succeed in getting a larger volume of credit from the Reserve Bank despite the more rigorous scrutiny with regard to such credit: this it is claimed was a demonstration of the flexible use of this policy instrument to subserve the needs of essential production while discouraging non-priority uses. But the Report does not analyse the repercussions of the failure of official policies to distinguish *dear* credit policy from *liberal* credit policy, though the failure was later publicly acknowledged by the Governor of the Reserve Bank and was implied in the October 1963 liberalisation and modifications, the object of which was to enable banks to satisfy all credit demands for productive purposes and *to eliminate any inhibition on productive investment*.

The analysis of the 1963 slack season in the Report is very well done by bringing out all its significant and relevant features. The unusually large return flow of funds coincided with a substantial contra-seasonal expansion in money supply with the public, and shortfall in supplies of commodities. The pressure on prices in the lean months of the year was, therefore, aggravated. The credit trends in the slack season, which reflected the sluggishness of the economy, in juxtaposition with the contra-seasonal rise in prices, focussed attention on the need to induce a psychology geared to expansion and give a fillip to productive activity. This paved the way for the October 1963 liberalisation of credit, according to which the borrowing quota was raised to 150 per cent of banks' statutory reserves, half at Bank Rate (4½ per cent) and the other half, as well as the discretionary accommodation, at 6 per cent. Besides, additional quotas at Bank Rate allowed to banks in respect of their advances to special sectors were continued. It was expected that, with these liberalisations both in the cost and availability of credit and with the high degree of liquidity that the banks enjoyed on the eve of the 1963-64 busy season, they would be able to meet the anticipated increase in demand.

Sudden Reversal

The analysis of trends during the first two months (November-December 1963) of the 1963-64 busy season in the Report is extended to cover up to the sudden March 1964 reversal in the liberal credit policy. The season began with a very comfortable resources position for the banks and with a policy attuned to a larger volume of credit expansion. It is recognised by the Reserve Bank that the relaxation in credit policy on the eve of the 1963-64 busy season had enabled the banks to maintain a reasonably liberal credit supply for productive purposes and to impart the much needed stimulus to the economy. The reason given for the reimposition of credit controls, however, is that, with the progress of the busy season, credit expansion tended to become too rapid and that, early in March, it exceeded the Rs. 300-crore mark and the scheduled banks' borrowings from the Reserve Bank also touched the high level of Rs. 106 crores. In these circumstances and in the context of the supply situation of agricultural commodities, there was a clear need, says the Report, for caution in further credit extension by banks. All this explanation suggests one thing: it is that the Reserve Bank had not correctly assessed the prospective demand for bank credit in the 1963-64 busy season when it relaxed its restrictions on the eve of the season. Anyway, the 4½-month experiment ended by restoring the position as it prevailed before October 1963.

Deposits and Advances

The overall trends for the year 1963 indicate a secular growth in banking. While expansion of deposits was substantially higher than in 1962, the increase in paid-up capital and reserves was only slightly better. The growth in resources were used for expanding bank lending and investment in Government securities by a larger magnitude than in the previous year.

Scheduled banks' aggregate deposits (excluding P.L. funds) rose by Rs. 283 crores (14.7 per cent), as compared with a rise of Rs. 233 crores (13.7 per cent) in the previous year. The Report recounts the usual factors—deficit financing, branch expansion and institutional and other measures taken for strengthening the banking system—which contributed to this growth.

The increase in demand deposits was larger than in time deposits during 1963. In this connection, the Report refers to a "statistical" shift in the classification of a larger proportion of savings deposits as demand liabilities following the competitive liberalisation of the rules governing withdrawal of deposits in savings bank accounts. Thus, although the higher liquidity preference and competition from non-banking companies for term deposits by offering higher interest rates are important factors, the change in the manner of classification was responsible in no small measure for the apparent increase in the share of demand deposits in the total from 42.3 per cent to 45.1 per cent.

The credit expansion during the calendar year 1963 amounted to Rs. 159 crores, as compared with Rs. 145 crores in the previous year—the rate of growth being the same, namely 11.3 per cent. The seasonal swings, however, were much wider during 1963, reflecting mainly the varying tempo of economic activity during the year. The progressive rise in the share of industry in bank credit noticed in recent years continued—the proportion rising from 34 per cent in 1955 and 53 per cent in 1961 to 57 per cent in 1963. The distribution of bank credit among the various industries was in conformity with the diversification of industrial output.

Liquidity Position and Profits

In view of the revised liquidity ratio to be effective from September 1964, the progress made by the banks towards the new enhanced overall ratio of 28 per cent. assumes special significance. Although the ratio for all scheduled banks (excluding the State Bank) was 33.3 per cent both at the end of 1962 and 1963, the progress towards the new goal was on the whole inadequate, because, out of 79 scheduled banks at the end of 1963, there were 16 with a liquidity ratio of less than 28 per cent. The Report, therefore, emphasises the need to take corrective action through readjustment of their pattern of assets. This remark, of course, applies only to those banks which have been operating on an over-extended credit-deposit ratio.

The past year was quite a profitable one to banks. With the average level of bank credit about 9 per cent higher as compared with 1962 and with the proportion of advances earning above 6 per cent rising from 54 per cent to 85 per cent, there is no wonder that the balance of profits after taxation in the case of 29 larger Indian scheduled banks showed a rise of 8.5 per cent. The seasonal pattern of Indian banking re-emphasised itself during 1963 but, taking the year as a whole, the increase in banks' resources, as well as in their credit and investment portfolios, made for higher earnings and profits. Broadly speaking, it is correct to say as the Report does, that the Emergency and its aftermath did not have an unfavourable effect on the operations of banks during the past year.

Structure and Organisation

All this is essentially a review of the developments in banking during the year: but there is also a simultaneous, but longer-term process of

(Continued on next page)

PUNJAB NATIONAL'S DEPOSITS HIGHER

CAPITAL PROFIT COMES TO THE RESCUE

NOTWITHSTANDING the fact that, in line with the general banking trend in the country, the Punjab National Bank Ltd. (General Manager: Mr. Rajendra Lal Tuli, New Delhi) has scaled new heights during the past calendar year, its working, as seen in terms of profit earned, has definitely become costlier. This, however, need not prove surprising, since all, except the protagonists of nationalisation of banks, know that present-day banking is quite a costly affair, particularly because staff expenses are becoming heavier and heavier and the emphasis is not only on more business but also greater and better service to customers.

The following comparative table gives a clear idea of the Bank's working in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Interest and discount earned	907.18	836.63	732.49	697.12
Commission, exchange and brokerage	181.75	174.85	162.85	147.87
Other income	39.38	18.66	20.85	26.17
Interest paid	475.46	429.89	371.45	351.38
Staff expenses	403.01	375.65	327.49	305.75
Other expenses	..	95.33	83.91	81.21
Depreciation and repairs ..	17.22	17.84	14.71	14.78
Provision for taxation ..	*N.D.*	*N.D.*	*N.D.*	53.00
Profit before taxation ..	126.06	114.43	118.40	65.04*
To reserve fund	50.00	25.00	45.00	11.00

Advances	62.8	59.4	61.9	67.0
Investments	30.2	33.3	30.1	29.4
Cash	14.2	14.1	15.7	9.1

N.D.=Not disclosed. * After taxation.

To record the details of the Bank's working during the year under report. The gross income has shot up by nearly Rs. one crore from Rs. 10.30 crores to Rs. 11.28 crores. Its balance-sheet total has expanded further from Rs. 223.96 crores to Rs. 251.29 crores. Its deposits, only Rs. 10 crores less than the Rs. 200-crore mark, show an accretion of Rs. 22.48 crores to Rs. 190 crores. Its advances, which had been sticky around Rs. 93 crores in 1960 and 1961 and had increased by a little more than Rs. 6 crores in 1962, have staged a marked rise from Rs. 99.54 crores to Rs. 118.46 crores during 1963. Finally, its investments are greater by roughly Rs. 2 crores at Rs. 57.61 crores, which is in addition to an increase of more than Rs. 10 crores witnessed in the previous year. This growth in business has been attained largely through the more favourable deposits position, for borrowings from other banks, which had risen by Rs. 30.23 lakhs in the previous year, have actually receded by Rs. 7.63 lakhs to Rs. 55.31 lakhs as at the end of the year under review.

The declared profit has also improved sizably from Rs. 114.43 lakhs to Rs. 126.06 lakhs, in contrast to the slight drop of about Rs. 4 lakhs in the previous year. But what has caused this improvement is a substantial rise in income from non-banking sources amounting to Rs. 39.38 lakhs (as against only Rs. 18.66 lakhs a year before) following the realisation of a net profit of Rs. 22.73 lakhs (as against only Rs. 22,204) on the sale of investments, gold and silver, land, premises and other assets. It follows that but for this large non-banking income, the profit would have been actually lower—lower than even the reduced profit for the previous year. Moreover, against this increase of over Rs. 20 lakhs in the non-banking income, the improvement in disclosed profit is less than Rs. 12 lakhs. In other words, the costlier banking operations have even eaten into the benefits arising out of a higher income from other sources.

The improvement in profit has been utilised to double the transfer to the statutory reserve fund from Rs. 25 lakhs to Rs. 50 lakhs, while the dividend on the 10-rupee shares (including the 10 per cent interim paid earlier) has been maintained at 20 per cent per annum, subject to tax. In spite of this larger transfer to the reserve fund, the ratio of "own" funds (that is capital and reserves) to deposits is lower at 2.5 per cent, as against 2.6 per cent a year before, obviously because of the large growth in deposits.

The sharp rise in advances has pushed up the credit ratio to 62.8 per cent from 53.4 per cent to which level it had declined in the previous year, in spite of higher aggregate advances, from 61.9 per cent in 1961. On the other hand, the ratio of investments to deposits has slipped back by three points to 30.2 per cent and the cash-deposits ratio has remained practically unchanged at 14.2 per cent. The liquidity ratio, however, is substantially high at 44.4 per cent.

The growth in deposits has been all-round, it being, however, relatively more pronounced in savings deposits which have gone up from Rs. 47.44 crores to Rs. 56.32 crores, as compared with fixed deposits which show an increase from Rs. 78.48 crores to Rs. 86.75 crores and current accounts which have improved from Rs. 41.16 crores to Rs. 46.51 crores.

During the year, the Bank opened eight new offices bringing the total number of offices to 435. The business of the Rangoon office was taken over by the Government of Burma on 23rd February 1963, following the nationalisation of banks in that country.

The Scandinavian Airlines System (S.A.S) and Alitalia have concluded an agreement to pool air traffic between the two countries. Principal features of the agreement are the introduction of daily jet services between Copenhagen and both Milan and Rome and low-cost summertime night flights. By co-ordinating their aircraft utilisation between Scandinavia and Italy, S.A.S. and Alitalia will also be seeking to develop a more efficient and economical route structure within the framework of the pool. Both airlines are maintaining, however, their independent sales, service and administrative organisations within the two areas.

Trend and Progress of Banking

(*Concluded from previous page*)

improvements in banking organisation and reform of the legislative framework. One aspect of the effort to strengthen the banking system so as to promote its growth on sound lines has taken the form of infusing more confidence in the depositors through legislative amendments designed to minimise misuse of banks' funds. The other aspect is to enlarge the scope of banking operations over a wider geographical area and over a broader range of functions and thus make banking growth more responsive to the larger national interest. Chapter II of the Report under review deals with the progress made in reconstructing the banking system on these lines.

The most outstanding developments of the past year were the enactment of Banking Laws (Miscellaneous Provisions) Act and the State Bank of India (Amendment) Act. Besides alluding to these events, the Report also indicates the progress of Deposit Insurance, the Refinance Corporation for Industry and the Export Risks Insurance Corporation (now Export Credit and Guarantee Corporation). In addition, it discusses many other routine matters like the progress of mergers, licensing, inspections and liquidation of banks and promotional measures like expansion of clearing house facilities, banking education, and credit information bureau. Further, the Report shows how the banking policy was attuned to the requirements of the preferred sectors in the economy, namely small-scale industries and exports. But the most important of all is the outline of the branch expansion policy of the Reserve Bank and of the programmes of scheduled banks. This outline has been presented against a historical perspective. Since this is an exceedingly important matter, it is proposed to deal with it in a separate article.

The *Report on Trend and Progress* changed its size last year. It has changed its appearance also this year. But the reports for both the years have suffered a progressive deterioration in their quality and usefulness. The pruning of statistical tables last year meant that, for detailed data, students of banking and bankers would have to wait till the *Statistical Tables* were published. This publication usually makes its appearance only nine months after the end of the year to which it pertains. In this year's Report, the authors have cut down more than a dozen tables, which appeared in the text of the Report last year, to hardly one-third of their original quota. In the process, much valuable information on the performance of banking has disappeared from the Report.

ANDHRA BANK'S PROGRESS

EARNINGS HIGHER, BUT PROFIT LOWER

THE Andhra Bank Ltd. (General Manager: T. R. Bhagavat) continued to make good progress in 1963 both by increasing its resources and turnover. The total deposits of the Bank rose by 13 per cent from Rs. 1,817.53 lakhs to Rs. 2,057.15 lakhs, as against a 15 per cent rise in the previous year from Rs. 1,578.90 lakhs. The balance-sheet total also rose to a similar extent during the last two years. From Rs. 2,003.96 lakhs at the end of 1961, it rose by 13 per cent to Rs. 2,264.41 lakhs at the end of 1962 and by further 12 per cent to Rs. 2,542.78 lakhs at the end of 1963. The total advances of the Bank rose by 20 per cent to an all-time high at Rs. 1,231.59 lakhs, raising the credit-deposit ratio to 59.9 per cent, a level which was reached in 1960, but from which it had uninterruptedly fallen to 56.3 per cent in 1962. This rate of increase in advances was much higher than the 13 per cent growth rate achieved in 1962.

The gross earnings of the Bank also rose by 12 per cent from Rs. 129 lakhs in 1962 to Rs. 144 lakhs in 1963—at the same rate as the growth in balance-sheet total. The most substantial increase was in the income from interest and discounts which rose by about Rs. 8 lakhs to Rs. 119 lakhs, and in the income from commission, exchange and brokerage which rose by about Rs. 4 lakhs to Rs. 18 lakhs. The profit before tax, however, has only fractionally improved by a mere Rs. 8,000 to Rs. 8.70 lakhs. One cannot even have the satisfaction that the downward trend in profit has been reversed, for the profit after tax for the year has been less than that for 1962. In fact, it has been continuously going down—from Rs. 6.87 lakhs in 1961 and Rs. 5.62 lakhs in 1962 to Rs. 5.45 lakhs in 1963. The steady decline in net profit is the result of the rising burden of interest costs and staff expenses. Between the two years 1962 and 1963, interest paid has gone up from Rs. 50 lakhs to Rs. 69 lakhs, a rise of Rs. 14 lakhs (28 per cent) in 1962 and Rs. 5 lakhs (3 per cent) in 1963. Staff expenses have also gone up during the same period from Rs. 37 lakhs to Rs. 48 lakhs—a rise of 16 per cent in 1962 and 12 per cent in 1963.

The effect of the reduced net profit is felt on the allocations to reserves, though the dividend has been maintained at 8 per cent per annum, absorbing the same amount as last year, that is, Rs. 3.34 lakhs. The transfers to reserves have again been cut down to Rs. 2.10 lakhs from Rs. 2.38 lakhs.

The table below summarises the trends in the working of the Bank during the last four years:

(In lakhs of rupees)

	For the year ended December			
	1963	1962	1961	1960
Interest and discount earned	118.93	111.13	94.24	87.89
Commission, exchange and brokerage	17.99	13.97	12.70	12.10
Other income	6.61	3.84	3.52	1.82
Interest paid	69.13	63.74	50.31	48.50
Staff expenses	47.90	41.15	36.70	32.43
Other expenses	15.04	13.06	11.43	8.50
Depreciation	2.75	2.39	1.00	0.80
Profit (before tax) ..	8.70	8.62	11.02	11.57
Provision for taxation ..	3.25	3.00	4.15	4.90
Transfer to reserves and other funds	2.10	2.38	3.45	3.40
Dividends	3.34	3.34	3.34	3.33
	(8%)*	(8%)*	(8%)*	(8%)*
Carry forward	0.05	0.03	0.13	0.04

	As on 31st December			
	1963	1962	1961	1960
Capital	41.77	41.74	41.69	41.64
Reserves	30.68	28.48	26.38	23.08
Deposits	20,57.15	18,17.53	15,78.90	14,78.63

Advances	12,31.59	10,25.32	9,09.13	8,85.63
Investments	7,90.28	7,19.59	6,60.80	5,25.73
Cash	2,46.51	2,35.58	2,06.10	2,34.55
Balance-sheet total ..	25,42.78	22,64.41	20,03.96	18,56.61
Ratio to deposits of—	%	%	%	%
Advances	59.9	56.3	57.5	59.9
Investments†	38.4	39.5	41.8	35.5
Cash	12.0	12.9	13.0	15.8

* Subject to deduction of tax. † Unencumbered portion only.

It will be noted that investments in Government securities have been stepped up substantially to raise the ratio of investments to deposits from 33 per cent to 38 per cent, obviously in an effort to conform to the revised liquidity requirements due to be effective from mid-September of this year.

EXTRA-LONG STAPLE COTTON

PRICES EXPECTED TO DECLINE BY A QUARTER IN NEXT SIX YEARS

THE recent sharp decline in the price of extra-long staple cotton (that is, cotton having a staple length of 1⅜" and above) has caused considerable concern among both producers and consumers of this variety of cotton. The producing countries (which number about a dozen, of which the United Arab Republic, Sudan and Peru are particularly worried because extra-long staple cotton is a major export commodity for them), are dismayed at the progressive decline in the price of extra-long staple cotton, while the consuming countries, including India, which is a major consumer, accounting for the import of about a quarter of a million bales a year, are, for their part, wondering whether adequacy of supplies and stability of prices, would not be affected if this state of affairs were to continue. In view of this situation, the International Cotton Advisory Committee, Washington, that world Parliament of cotton, asked the World Bank to make a study of the demand and price prospects for extra-long staple cotton. The findings and conclusions of the study, which was undertaken by the Economic Department of the Bank under the direction of Mr. Frank Lowenstein, have just been published. The study, it may be noted here, is not an official document of the World Bank and hence should not be regarded as reflecting the views or policies of the Bank; nor does the Bank accept responsibility for its accuracy or completeness. Nevertheless, as one of the most competent and thorough investigation ever to have been made into the demand and supply prospects for extra-long staple cotton, the study under reference is of great interest to India, which consumes more extra-long staple cotton than any Western country, including the United States.

Principal Qualities

The principal physical properties of extra-long staple cotton that contributes to its utility as the highest quality cotton in the world for the manufacture of textiles are extra length of staple, exceptional strength of fibre and high lustre. The advantages to spinners in using this type of cotton are mainly (1) increased yarn strength, particularly in the finer yarns, (2) suitability for spinning finer yarn, (3) improved lustre and general appearance of both yarn and fabrics made of the yarn, and (4) lower processing costs even in the coarser yarns. The principal disadvantage to spinners is the price premium that extra-long staple cotton has traditionally commanded over shorter staple cotton.

The use of extra-long staples in the finest and strongest yarns, where it is virtually free from competition from other cottons is nevertheless tending to decrease. It is, in fact, being displaced by synthetic fibres and certain technological developments such as blending of synthetics and cotton. Growth in the use of cotton in easy-care or wash-and-wear fabrics has caused the demand for fine cotton yarns to diminish. Such fabrics are usually made of yarns coarser than 60's.

On the other hand, the use of extra-long staple cotton in coarser count yarns is tending to increase for the following reasons: (1) Extra-strength yarns spun from extra-long staple cotton are needed to maintain minimum fabric strength after treatment with easy-care finishes, (2) development of high speed machinery tends to make the use of longer cotton economical, and (3) there have been drastic declines in price premium for extra-long staples since the mid-1950's.

Share in World Fibre Consumption

In recent years (1957-60), extra-long staple cotton comprised 2.8 per cent of the world apparel fibre production, 3.6 per cent of apparel fibre consumption and 5.2 per cent of overall cotton consumption. The demand for extra-long staple cotton depends, to a considerable extent, on the total demand for apparel fibres. Hence, trends in the consumption of all these fabrics (cotton, wool and man-made fibres), especially in the total demand for cotton, have a direct bearing on the prospects for extra-long staple cotton.

The percentage rate of growth of world consumption of apparel fibres is declining, though the annual increment in the volume of consumption has remained remarkedly steady. From 1947 to 1961, the absolute quantity consumed has increased at an annual rate of about 522,000 tons. *Per capita* consumption, however, is levelling off. The world average in 1961 was about 43 per cent above consumption in 1947, as against a gain of nearly 87 per cent in population and 108 per cent in world index of manufacturing activity. The rate of growth in world cotton consumption is also declining, while production is increasing. Production of extra-long staple cotton has more than doubled in the two decades since the early forties. This is in line with total apparel fibres production.

Production

The production of extra-long staple cotton is confined to a relatively few countries. These are the U.A.R., Sudan, Peru and the U.S. *plus* some six others. The big four producers have, in fact, accounted for about 97 per cent of the world production of extra-long staple cotton in recent years. Since 1945, the acreage planted to extra-long staple cotton has increased in all the four major producing countries, though, of late, the area under cultivation has tended to stabilise in the U.A.R. and Peru.

The increased production of extra-long staple cotton, which averaged 2.35 million bales (of 478 lbs. each) during 1960-62, has been absorbed in the world market since the mid-1950's at steadily declining prices in relation to prices of other growths of cotton. Exports of extra-long staple cotton worked out to an average of 13 per cent of the world exports of all cotton during the period 1958-62, as compared with over 11 per cent in the late 1940's. The big decline in relative prices, which accompanied the small relative increase in exports of extra-long staple cotton, indicates a drop in world demand for these fine cottons relative to other growths. The statistical evidence of a decrease in world demand was confirmed by many independent observations. The nature of the uses for increased quantities of man-made fibres, especially synthetic fibres, was indicative of growing competition and displacement of extra-long staple from fine goods and fabrics of high strength requirements.

On the basis of observed trends in production and consumption and taking into account the factors likely to affect production and consumption of extra-long staple cotton, the authors of this special study have made projections of the probable demand for and supply of this type of cotton in 1970. The production of extra-long staple in 1970, according to them, was concentrated in four countries which are currently the principal producers. Their order of importance is not expected to change from that of recent years, with the U.A.R. being the largest producer, followed by Sudan, Peru and the U.S.A., in that order. Acreage planted to extra-long staple in 1970 is expected to be about 13 per cent larger than the 1960-62 average. Most of the increase is expected to take place in Sudan and Peru, because of development of additional irrigated land. The yield per acre is also expected to increase from the present world average of 450 lbs. per acre to 505 lbs. per acre in 1970. And world production of extra-long staple cotton is projected at about three million bales (of 478 lbs. each), as compared with an average of 2.4 million bales in 1960-62.

Demand for Extra-long Staple

The demand for extra-long staple for cotton would depend upon the demand for apparel fibres, in general, and cotton fibres, in particular. The factors that affect the demand for apparel fibres are complex and often changeable. They include population, levels of economic activity, tastes of consumers, various Governmental actions, general price levels and many other tangible and intangible elements. The demand for all cottons and extra-long staples is seriously affected by a highly specialised force, namely, inter-fibre competition.

Using certain assumptions (as for example, world population in 1970 would be 3,740 million) the authors of the study estimate that world apparel fibre consumption in 1970 will aggregate 21 million metric tons, of which about 60 per cent will be cotton. The distribution of the total among the different fibres is estimated as follows:

(In thousand metric tons)

Fibre	Annual average			1962 (Preliminary)	1970 (Projection)
	1947-51	1952-56	1957-61		
Cotton	6,766	8,447	9,932	10,235	12,900
Wool	1,109	1,182	1,385	1,442	1,500
Rayon	1,353	2,032	2,527	2,923	3,400
Synthetic fibres ..	56	214	589	1,075	3,200
All fibres	9,284	11,875	14,433	15,675	21,000

Consumption of 21 million metric tons of apparel fibres in 1970 implies a growth rate of 3½ per cent per year and a 34 per cent increase over the 1962 figure of 15.67 million metric tons. The rate of increase of apparel fibre consumption is higher than the 2½ per cent growth expected for population. Consequently, fibre consumption *per capita* would increase to about 5.6 kilograms, as compared with 5 kilograms in 1961. Of the 21 million metric tons, cotton's share is projected at 12.9 million tons (or 59.5 million bales of 478 lbs. each), an increase of 24 per cent, as compared with that in 1961. The projected output of three million bales of extra-long staple cotton represents about 5 per cent of the total consumption. If all the three million bales are to be consumed, according to the authors of the study, prices of extra-long staple cotton will have to decline by about 22 per cent from the 1962 price level. A 22 per cent decline in prices in the context of an increase in production of the order of 17 per cent would mean less cash income for producers of extra-long staple cotton in 1970, as compared with 1962. These calculations are, of course, subject to change, because production in 1970 may turn out to be less than that expected due to changes in production plans or prices variations may be different from those now anticipated. But regardless of whether income from extra-long staple cotton production is somewhat lower, or higher or about the same in 1970, as in 1962, the return per pound of extra-long staple cotton or per harvested acre is expected to decline sharply. In view of this, the authors of the study point out, producing countries might wish to reconsider their plans for future production of extra-long staple cotton.

"Promotion"

"Promotion" plays an important role in stimulating demand for any commodity. The authors of the study have, therefore, examined the scope for stimulating demand for extra-long staple cotton through better promotion and improved merchandising. Promotion, in the sense of introducing and stimulating the purchase and use of a new product, does not apply, says the study, to an established product like cotton. However, promotion may be effective when applied to new uses or adaptations or to newly-developed qualities for cotton. The introduction of wash-and-wear cotton fabrics and blends may have been helped by promotional techniques, but this stimulus is not likely to continue over a long period of time. Once a use or characteristic is established, the force of promotion soon fades. Nonetheless, according to the study, a number of features of extra-long staple cotton might be emphasised by producers of extra-long staple cotton in order to exploit fully the opportunities for promoting the marketing of the fibre. In this connection, the authors of the study are of the view that the following steps might be taken by producers of extra-long staple cotton:

(i) Adopt some easy term or word for their cotton that is distinctive and easy to say; for example, E.L.F. (extra-long fibres), X.L. (extra-long) or some other description which is preferable to the more or less awkward E.L.S.

(ii) Begin at once to develop a quality standardisation programme for their cotton including: (*a*) length, (*b*) colour, (*c*) foreign matter, (*d*) fibre strength, (*e*) fineness, (*f*) yarn strength, and (*g*) spinning potentiality.

(iii) Develop a system of quality measurements, including arrangements for checking, coordination, calibration, and arbitration, acceptable to producers and consumers.

(iv) Follow the practice used in the Sudan of stamping each bale with quality information. Field surveys showed that this practice enjoys much favour among mill buyers but is generally disliked by traders.

(v) Support programmes designed to make technical information concerning the advantages of E.L.S. readily available to spinners, other manufacturers, merchants and consumers.

(vi) Foster the same spirit of innovation, competition, publicising and pricing among producers of E.L.S. that prevails among reputable manufacturers of consumer goods.

THE AUTOMOBILE INDUSTRY . . . .

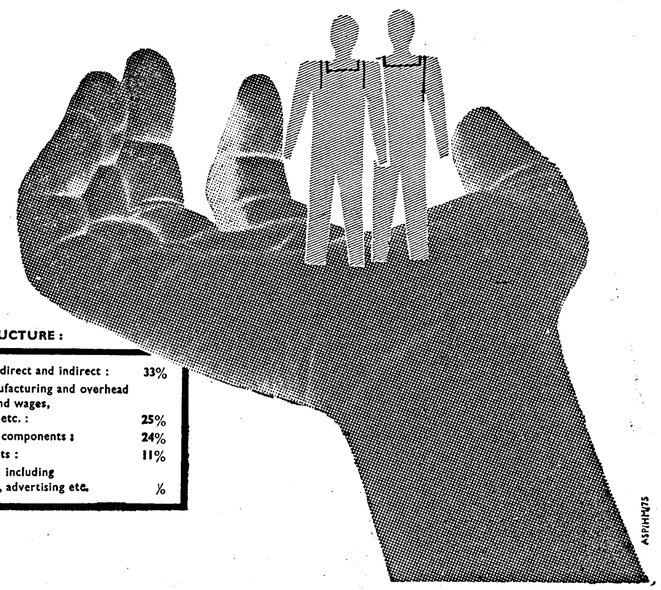
Each vehicle produced offers opportunities for employment of twelve to thirteen persons in the manufacturing, servicing and operational functions of the automobile and road transport industry. In the U.S.A. where the automobile industry is highly developed, one out of every seven wage earners is connected with automobile industry.

As the automobile industry develops in India, more ancillary industries spring up. As the road transport system takes root, a more intensive movement of men and material takes place. As the communication network expands, the country's planned programme of agriculture and community development, irrigation and power, small scale and large scale industries proceeds apace. All these help vastly increase the employment potential in the country.

The automobile industry thus not only opens up opportunities for greater employment, but the income of those employed becomes a source of revenue to the Government. Apart from this, a considerable portion of the price of a motor vehicle goes to the Government in the form of direct and indirect taxes. In the case of the Hindusthan Ambassador car, for instance, this amounts to 5140 rupees or one-third of the "on the road" price of the car in Calcutta. The revenue thus realised helps public works projects to develop and expand the employment potential.

Besides boosting its direct employment, the automobile industry creates increasing opportunities for employment in the ancillary as well as other basic industries.

a boost to employment in India



THE AUTOMOBILE INDUSTRY IS A KEY INDUSTRY

CAR PRICE STRUCTURE:

Government taxes, direct and indirect :	33%
Raw materials, manufacturing and overhead expenses, salaries and wages, depreciation, profit etc. :	25%
Indigenous ancillary components :	24%
Imported components :	11%
Dealer's commission including distribution, service, advertising etc.	7%

TRADITIONAL DIVISIONS IN TEXTILE INDUSTRY BREAKING DOWN

NEW "PACKAGE DEAL" FOR WORKERS

From Our Special Correspondent

MANCHESTER, 12*th May*

MANCHESTER LETTER

THE growth and development of the British man-made fibre industry had blurred the sharp edges of demarcation between the traditional sections of the textile industry, and there was now a need for a new organisation representing the whole of the textile trade, *said* the annual report of the Silk and Man-Made Fibre Users' Association. While there was still a positive need for efficient trade associations in each field, the report urged the establishment of a new "pan-textile" organisation.

"Cotton, wool, silk and linen are no longer watertight sections of the textile industry," added the report. "The incursion of man-made fibres into each of them is breaking down traditional divisions."

A new organisation with wider representation from all sections of the industry could provide the means for co-ordinated action and a more authoritative expression of the views of the whole industry. The report said that it was becoming increasingly apparent that the interests of the various textile sections were "very closely" linked. On major policy questions, there were few basic differences of viewpoint.

Garment Trades Too

The suggestion has been put forward by that controversial figure in the finishing trade, Mr. William Crossley, that the garment manufacturing section should also take part in the deliberations on any new structure which is developed to speak for textiles. His view, expressed at the annual meeting of the Overall Manufacturers' Association, was that the cotton industry's case for safeguards against imports would have registered more forcibly with the Government if it had had the backing of the several thousand firms in the garment-making trades, with their labour force of more than 300,000 workers.

This fits in with the ideas of the unions in the cotton trade. Earlier this month, the annual conference of the United Textile Factory Workers' Association discussed a resolution calling for closer co-operation between the textile and clothing trade unions. The Legislative Council of the Association was instructed to convene a meeting with a view to establishing a permanent confederation of textile and garment unions within the United Kingdom.

Plan for Progress

Within the next few weeks, another milestone in the amicable labour relationships existing between management and trade unions in the cotton and allied industries will have been reached. The new "package deal," providing the operatives with a programme of increased wage rates, longer holidays and shorter hours over a period of several years ahead, is now in its final stages of negotiation.

Those with memories of the trade's history will need no reminding that the last serious outbreak of industrial trouble in cotton was as long ago as 1932. Although hard bargaining has taken place in the years between, and no doubt tempers have on occasion been frayed, the peace has been kept, to the credit and benefit of all concerned.

The negotiators of the thirties, on both sides, would certainly be astounded at the subsequent turn of events, particularly the current prospect of steadily improving conditions scheduled over a period. Little more than 25 years ago, the Weavers' Amalgamation was engaged in a prolonged campaign to obtain a fall-back wage of 35s. 0d. per 48-hour week for its members!

An important contributory factor in the present series of talks, which cover all the spinning and weaving sections, is the strongly held belief by both employers and unions that the morale of the industry and its public image will benefit materially from a pact of this kind. Recruitment has again become a live issue, not just because of the present overwhelming demand for supplies, but mainly on account of the high average age of the existing labour force.

Details of the full scheme must await the settlement of a few points, but, according to spokesmen from both sets of negotiators after last week's meeting, the main principles are already agreed. The one issue originally submitted by the unions, but not finding favour with the millowners, is the question of payments for redundant workers. The employers have all along maintained that this was a policy matter for the Government.

Second Highest Imports

By no means for the first time, the volume of imports is the dominant factor in assessing the overseas trade situation during the first quarter of the current year. Although still below the peak level of arrivals reached in the early part of 1961, the rate of textile shipments into British ports to the end of March was significantly and disturbingly high.

Three years ago, the quantity of cotton cloth imported exceeded 225 million yards for the first quarter; the current figure is 192,574,000 yards, of which the share of grey cloth was 145,842,000 yards, a rise of more than 17 million yards. Chief suppliers of cotton grey cloth were again the leading Commonwealth countries, with India well to the fore, having provided 59,019,000 yards, an increase of 7½ million yards over the 1963 level. In contrast, Hong Kong sent smaller quantities, the total of 16,279,000 yards being nearly 5 million yards down on last year, while Pakistan provided 16,934,000 yards, a reduction of nearly 2 million yards. Fourth in the list of suppliers came China with 13,445,000 yards, an increase of 3 million yards. Meanwhile, imports from undesignated foreign countries more than doubled at 11,423,000 yards.

Arrivals of finished cotton cloth in the first three months this year rose by more than 5 million yards to 46,732,000 yards, the most significant change being the doubling of supplies from India at 7,400,000 yards. Belgium regained first position as provider of finished fabrics at 7,819,000 yards. The value of these goods exceeded £2,000,000, but purchases from Hong Kong were curtailed, being 6,802,000 yards, as against 9,497,000 yards.

More Man-made Fibres Cloth

Larger quantities of man-made fibres cloth also entered Britain in the first three months of this year. Purchases from abroad were nearly 22 million yards, as against 15 million yards in the same period of 1963. Imports of man-made fibre yarn and thread increased sharply at 6,025,000 lbs., as against 2,975,000 lbs., but arrivals of cotton yarn and thread were only marginally higher at 10,527,000 lbs. (9,817,000 lbs.)

After the rather better experience last year, when it appeared that exporters had recovered from the downward slide which had persisted for more than a decade, the first quarter of 1964 has been a disappointment. Shipments of cotton cloth have fallen back from 58,400,000 yards to 51,954,000 yards, and even the renewed progress made by distributors of man-made fibre cloth has not been able to close the gap. In this section, exports have risen from 19,067,000 yards to 22,463,000 yards, but the joint total is still below the 1963 level.

Despite a reduction of over two million yards, South Africa remains the biggest customer of cotton cloth exported from this country, the figure for the quarter being 6,321,000 yards. The Irish Republic has taken second place with 5,472,000 yards (5,004,000 yards in 1963), while shipments to Australia were 5,396,000 yards (7,090,000 yards) and to Nigeria 4,259,000 yards (4,984,000 yards).

FINANCIAL STABILITY

IN A

5%

DEPOSIT ACCOUNT

Your money earns the maximum safe and sure rate of 5% when you place it in a Deposit Account with LOMBARD BANKING Limited. No U.K. Income Tax will be deducted; your money is completely unaffected by changing economic conditions, and withdrawals are easy to make—subject only to the terms you arrange.

To earn 5% per annum, the minimum initial deposit is £100, and the minimum period of deposit and notice of withdrawal is six months. Your deposit with Lombard Banking Limited is supported by paid-up capital and reserves in excess of £12,000,000.

Write now to the General Manager for further details, and your copy of "Deposit Account" Booklet No. A091.

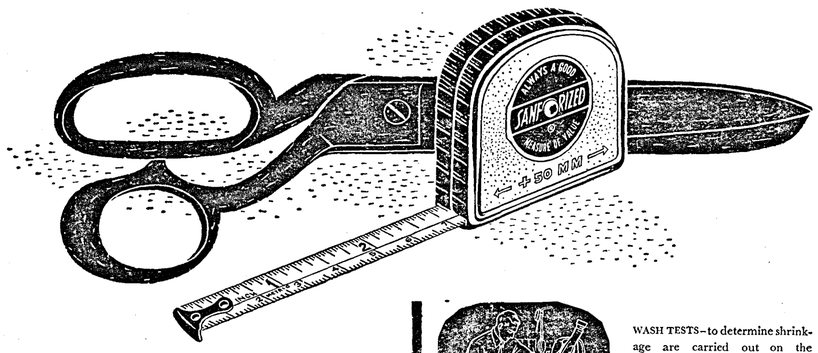
The trademark 'Sanforized'—a reliable yardstick for measuring clothes that will not shrink out of fit



'Sanforized'—known to millions of consumers everywhere—signifies a standard of shrinkage control that is identical the world over. To maintain this uniform standard on cloth labelled 'Sanforized'...to assure that fabrics bearing this label will not shrink out of fit in washing...'Sanforized' technical representatives are constantly on the job...visiting mills...checking fabric...helping the textile industry keep quality at a high level.

REGULAR, ALSO SURPRISE VISITS—are paid by 'Sanforized' representatives, every month throughout the year, to licensees, to examine each mill's records of wash tests and samples of fabrics to be labelled 'Sanforized'.

RANDOM SAMPLES — of fabric labelled 'Sanforized' are selected from the mills' warehouses for testing, to ensure that no out-of-tolerance material has been inadvertently marked with the trademark 'Sanforized'.

WASH TESTS—to determine shrinkage are carried out on the catalogued, measured samples of fabric, in each mill as well as in the U.S.A., in fully equipped technical laboratories.

TEST RECORDS—are made after the catalogued samples are re-examined and re-measured. Every mill keeps its own dossier of the results of the findings made by the technical experts.

REPORTS & SAMPLES SENT TO—the Standards Testing Laboratory of 'Sanforized' in the United States. This procedure ensures the world-wide uniformity of shrinkage control and recognition of cloth labelled 'Sanforized'.

Make sure YOU get the full measure of value of the cotton you buy—look for the label 'SANFORIZED' REGD TO MK *and your clothes will never shrink out of fit!*

mass. SAN. 3702

Issued by Cluett, Peabody & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark 'SANFORIZED', or permit its use by authorised registered users, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

BOOSTING EXPORTS OF RAYON TEXTILES

MOVE TO SET UP MONOPOLY BODY NOT JUSTIFIED

THERE is, to say the least, no justification for the move of the Silk and Rayon Textiles Export Promotion Council to float a new monopoly company for handling export trade in rayon textiles. The reasons adduced in support of the move are hardly convincing, as the following extract of a speech, which the Chairman of the Council, Mr. D. N. Shroff, delivered at Bombay last week, itself shows:

"The Council is a non-trading body and as such it has its limitations to give direction to the trade. The new organisation (Rayex (India) Limited), which will be a trading company, registered under the Companies' Act, will seek to regulate the existing export activity as well as develop trade with new markets, East European countries, etc. It will assist those manufacturers in marketing their fabrics who do not have facilities and as such have not been able to participate in the export trade. It may even create a pool for surrender of entitlement certificate and import licences and may make arrangements for import of yarn in bulk if the members so desire. In short, this organisation will be a members' body, intended to help them in marketing their fabrics abroad and build-up goodwill and reputation for the Indian industry and export trade."

This journal has for long opposed the setting up of monopoly bodies, be it in the private or public sector and for whatever commodities. It may be true that the Council, being a non-trading body, has its limitations to give direction to the trade, but it can certainly discharge most of the functions that are proposed to be assigned to the new organisation. There are several ways in which the Council can, and ought to, help promote exports of rayon textiles. If this help is really effective and useful, the private trade channels themselves can seek to expand their export business in the existing markets and to explore new markets. In either case, the private traders can bargain with the overseas buyers much better than a monopoly body which is especially ill-suited, considering that export business in rayon textiles consists of small dealings with numerous buyers-scattered over wide areas abroad. The sad experience of the State Trading Corporation in certain fields is there for all to see. And, what is worse, the creation of a special export organisation is bound to raise the export price of Indian rayon textiles due to heavy administrative charges for the organisation's services which would be a permanent load on the overseas buyer. After all, the competitive capacity of Indian rayon textiles in world markets will depend entirely on price, quality and delivery schedule, the aspects which can easily be handled by private parties through active support and assistance from the Export Promotion Council. Where, then, is the need for channelling exports of rayon textiles through a special corporation or for any trading body to act in an advisory capacity or as a middleman for other traders?

One More Point

There is one more important point. When the private sector goes on criticising any move on the part of the State to set up monopolistic organisations, is it justified in establishing such organisations itself? The only saving grace here is that the Government of India itself has approved of this arrangement. It will be interesting to know as to why the Government, which is opposed to monopolies, has agreed to this arrangement. Is it because the new company represents State Trading in another form? Or is it because of its anxiety to prevent the alleged leakage of foreign exchange? A more detailed explanation than that given by Mr. Shroff is necessary if one is to be convinced of the necessity for this new trading.

Be that as it may, the Export Promotion Council has adequate powers and the requisite organisational set-up to render assistance in various ways to exporters. The effects that the Council has already put in have met with not inconsiderable success. The total quantity of rayon, spun rayon and synthetic fabrics actually exported during the calendar year 1963 was at the all-time peak level of 90.5 million metres, as against the 83.8 million metres exported in 1962 and 67.3 million metres in 1961. The notable improvement in exports was achieved, it is particularly significant, on a higher price basis. The average export price realised per yard of cloth was Re. 1.14, whereas it was about Re. 1.08 in 1962 and no more than 94 nP in 1961. Taking the financial year (April to March), the aggregate exports of rayon, spun rayon and synthetic fabrics amounted to 88.48 million metres, as against 77.84 million metres in 1962-63. The actual foreign exchange earned was of the order of Rs. 10.58 crores, which was well above the amount earned (that is Rs. 8.47 crores) in the previous year and exceeded the target of Rs. 8.00 crores fixed for the year. Encouraged by the notable expansion in exports, the Council has fixed the target to be achieved in the current financial year (1964-65) at Rs. 12.00 crores. Since this figure represents a rise of just Rs. 1.42 crore over the actual performance in 1963-64 and considering that the Council has drawn up a special export plan, it would appear that the target will be more than fulfilled, the latest revision in the Export Promotion Scheme notwithstanding.

E.P.S. Modified

With effect from the 15th of this month, two notable changes have been effected in the Export Promotion Scheme. They are: (1) withdrawal of the allotment of indigenous yarn at concessional prices against surrender of 30 per cent of import entitlements, and (2) reduction in these entitlements from 100 to 70 per cent of the f.o.b. value of fabrics exported or the value calculated on the basis of the schedule of international prices, whichever is lower. The former change was a sequel to the representation made by the rayon spinners who were urging for long that they were finding it difficult to continue sales of yarn at concessional rates, in view of the downward trend of prices that had set in the domestic market since decontrol was announced and that, in the absence of fixed prices, there was no basis for working out the concessional rates.

The art silk weaving units and exporters, however, have criticised the reduction in export incentives. Such a reduction, according to the Export Promotion Council, would affect the competitive capacity of India's rayon textiles in world markets. The Council's Committee of Administration has expressed fears about the possible rigging up of prices, since there are only a few spinners who can come to an understanding among themselves in this regard. Such fears seem to be exaggerated, for the spinners know fully well that any tendency to rig up prices will evoke stiff consumer resistance. Mr. Shroff himself has stated: "I am sure that the spinners will prove these fears as false and contribute their due share in the national effort of export promotion." Reassuring, indeed, is his statement that he proposes to enlist the co-operation of the Association of Man-made Fibres Industry, Silk Merchants Association, and Yarn Merchants Association and such other bodies in making the export effort broad-based, so that each co-operates with the other in the task of export promotion.

New Export Plan

To revert to the new export plan of the Council. It consists of institutional arrangements, steps designed to build-up confidence and goodwill, market study and surveys, propaganda and publicity measures, and export development fund. Among institutional arrangements, it is proposed to constitute panels of exporters and an export organisation of the Council. The panels of exporters marketwise will be entrusted with the task of organising and regulating the export activity in a manner that unfair internal competition is eliminated, maximum export prices are realised and competitive capacity of exporters is improved by putting up a co-ordinated approach. The Council has already started with the Moracco Panel and other panels are under formation. Revealing this, Mr. D. N. Shroff gave the following particulars:

These panels will decide about the policy that may be adopted for a particular market, select qualities that are in demand and fix their export prices. When the trade gets stabilised on the basis of the panels, the prices fixed by the panels will be considered as international prices for determining even the import entitlement. The panels are also intended to help in creating a cadre of exporters whose methods of servicing the trade will not only inspire the confidence of the overseas buyer but also the manufacturers who would like to devote fully to manufacturing. The field for exports is very wide. It requires specialised skill, in both production and sales to take a larger share and it is only by so organising the export effort that such a share can be achieved. The trade with East European countries and those with which India has bilateral rupee account arrangement at present suffers from a handicap on account of its being comparatively less remunerative. This is so because the benefits are valid for import of yarn from this area alone which does not have adequate supplies available. The Council, in its panel scheme, proposes to form a panel for East European countries which will not only organise the trade directed to these countries but also look into the incentive aspect.

The formation of these panels with comprehensive functions itself obviates the need for creating a monopoly body (such as the one referred to above) for undertaking export business in rayon and synthetic fabrics. Regional committees have been set up to lay down export target for their region, to review export performance and recommend steps to overcome difficulties experienced by manufacturers-exporters. A panel of processors is proposed to be formed with a view to regulating the vital role that the processing houses have come to acquire in export trade in rayon and synthetic fabrics. In order to instil confidence in overseas buyers with regard to Indian goods, the Council has laid down specifications and quality standards of the main export items, as well as minimum specifications of export packing. Standard contract forms intended to regulate the sale and purchase of Indian goods and minimise the chances of dispute are under preparation. Meanwhile, the Council has appointed a complaints committee to investigate complaints brought to its notice and suggest fair basis of settlement.

Market Research

The Council is devoting special attention to market study and surveys. It is proposed to sponsor two delegations abroad (one to Canada, U.S. and Japan) and the other to (Kenya, Uganda, Tanganyika, Nyasaland, Rhodesia (North and South) and Mauritius) and five study teams (Australia and New Zealand; West Indies and other neighbouring markets; Morocco, Tunisia, Lybia and Algeria; East European countries; and Malaysia), besides sending its own officers and some representatives of the industry and trade for study tours abroad (Nigeria and Ghana; Cambodia, Vietnam, Laos; Ethiopia, Somaliland and Sudan; Ceylon; Cyprus; and Hong Kong). The Council also proposes to invite individual buyers in overseas markets to visit this country and utilise the services of professional agencies to carry out market surveys of Bolivia, British Guiana, Paraguay, Peru and Surinam.

As for propaganda, the measures proposed are (a) participation in about 18 exhibitions and international fairs; (b) show-room displays at four places, and (c) organisation of exhibitions at four other places. The publicity functions include, among others, a press campaign and publicity film.

In addition to all these, the Council is contemplating to create a special Export Development Fund for assisting exporters who may experience difficulties in efforts to develop difficult and new markets and for which the existing benefits do not provide adequate incentive. The Fund will also support institutions that may be set up to organise and regulate export activity. A code governing this Fund is under preparation.

Conclusion

Whatever be the steps taken by the Export Promotion Council, their ultimate success will depend on the production at economic costs of the types of rayon-synthetic fabrics that cater to the specific demands of overseas buyers. This prerequisite can be ensured only if the machinery and equipment used in mills are modernised. Special stress must need be laid on installation of automatic looms and modern finishing and processing machinery. Appreciating this point, the Union Ministry of International Trade had proposed some time ago that a portion of the entitlements earned against exports should be compulsorily utilised for import of machinery. A proposal of this type is any day much better than a scheme (suggested by the Council) under which machinery can be procured on deferred payment basis. Surely, the country cannot go on committing itself endlessly to deferred payment obligations for all and sundry items imported from abroad.

EXPORT EMBLEM FOR TEXTILES

The "truth ring" has been launched as the export emblem of the Norwegian textile industry. The emblem is legally protected, thus giving consumers conscious of original quality and design a guarantee that clothes and textiles carrying the emblem are genuinely Norwegian. During the past few months, several reports from abroad have stated that Norwegian textiles have been copied and foreign-made goods sold as "Norwegian." Imitations are often labelled or packed to give the impression of being manufactured in Norway. To put an end to this, the Norwegian textile industry decided to introduce an emblem when would protect consumers against plagiarism. Such a symbol had to be something thoroughly Norwegian. It could not be a Viking ship, as that is a symbol freely used by all the Scandinavian countries. Textile experts consequently studied the Viking sagas. There they found the "truth ring," the symbol of truth used on solemn occasions in the old days.

JWTSPW 721 R

Shalimar Superlac Synthetic Enamel and Plastic Emulsion Superlac Synthetic Enamel, available in 38 intermixable colours, may be applied on almost any surface—interior or exterior—at home or in industry. Superlac Plastic Emulsion brings you a fabulous range of colours—easy to apply, odourless, and thoroughly washable! Both Shalimar Synthetic Enamel and Plastic Emulsion dry fast, have high covering capacities and, like every Shalimar paint, offer the sum of four decisive elements—resources, research, know-how, quality-control—that guarantee superior quality and performance.

MONTHLY ECONOMIC REVIEW OF U.K.

MR. MAUDLING'S LENIENT BUDGET

STOCK MARKETS IN FINE FETTLE

By W. T. C. King
EDITOR, "THE BANKER," LONDON

TWO major influences have been dominant in the financial markets in Britain in recent weeks—first, the ending of uncertainty about the date of the general election, and then the introduction of the annual Budget.

The Prime Minister, Sir Alec Douglas-Home, announced in the second week of April that he saw no need to ask for a dissolution of Parliament before the autumn, which means that this administration will run for the five-year term permitted by the Constitution. One incidental result of this decision was to afford the Chancellor of the Exchequer rather more room for manœuvre in his Budget-making than would have been feasible if a general election had been following hard on its heels, since the first requisite in the Finance Bill would have been simplicity. However that may be, the Budget that Mr. Maudling presented a few days later was much less complicated than most Budgets of recent years, and some commentators dubbed it dull and unimaginative: the principal tax changes followed well-worn paths.

The Chancellor's analysis of the recent course of the economy and of its prospects in the coming year, and thus of the basic task of the Budget in its role of stabiliser, was closely in line with that already made and well publicised by unofficial observers in the preceding weeks. Mr. Maudling was in no doubt at all that, just as his first Budget last year had to be a reflationary one, giving a boost to the level of demand, so, this year, his second Budget had to pull in the opposite direction.

Growth Rates

In 1963, thanks to the stimulation given by the Budget and by the succession of monetary relaxations and other measures started in the previous year, the economy had expanded at a rate much surpassing the long-run average of preceding years. In the fourth quarter, the index of industrial production, seasonally adjusted, averaged 8 per cent more than in the corresponding period of 1962. The rate of growth in national output as a whole was naturally less than this, but it was still probably around 5 to 6 per cent. By contrast, over the period 1952 to 1962, Britain's total productive capacity was growing at an average annual rate of no more than 2½ to 3 per cent, though it is suggested that the rate may have slightly bettered 3 per cent by the end of the period.

The sudden acceleration in the growth in Britain's production in 1963 was attributable not to any corresponding spurt in the rate at which productive capacity was increasing, but to the fact that a once-for-all additional increment of output could be obtained by utilising more fully existing productive resources that had become underemployed because demand had not been keeping pace with the growth in the productive potential in the previous year or so.

This additional increment was called forth, because aggregate demand was in its turn expanding at a more-than-average rate; and, by the year-end, it had absorbed the greater part of the slack. The time had, therefore, come to slow down the rate of growth in demand. If undue strain on productive resources was to be avoided in the coming year, it was necessary that the rate of growth in demand should be slowed down to correspond much more closely to the long-run rate at which the productive potential was estimated to be itself expanding.

This was the main underlying theme both of the Budget speech and of the official economic analysis that preceded it—notably that given in "Economic Report 1963." The Chancellor did not, however, commit himself to any precise estimates of the extent to which demand might be expected to rise in the absence of new restraints, nor did he indicate how far the prospective increase in output might still be helped by the taking up of residual slack.

He contended himself with saying that the growth in demand would be somewhat lower than the 6 per cent a year of recent months, but "substantially greater" than 4 per cent (which is the long-range average annual target rate for output adopted as the basis of the planning through the National Economic Development Council). The range between the upper and lower of these estimates is wide, but—as the Chancellor himself emphasised—so is the margin for error in all these calculations of the balance between demand and resources.

Mr. Maudling's Optimism

Within these margins, the Chancellor took a somewhat more optimistic view than some of the unofficial observers. He thought it sufficient to restrain the growth in consumption by putting up taxes to the extent of roughly £100,000,000, as compared with the £200,000,000 or more that had been advocated in some quarters. But in claiming, quite justifiably, that the requisite amount was a matter for individual judgment rather than of any objective calculation, he was able to hint that some of those who this year were calling for larger tax restraints were the very people who last year had been calling for much bigger tax reliefs than he had then judged prudent—and the Budget that had then been called "timid and cautious" had been followed by a massive reflation and a large absorption of unemployed workers.

Mr. Maudling obtained his extra £100,000,000 not by any ambitious recasting of the tax system such as the widely advocated broadening of the purchase tax (which is the most general of the taxes on consumers), but by raising by roughly 10 per cent the existing duties on those familiar and already heavily taxed objects of consumption—tobacco and alcoholic drinks. The revenue now to be expected from these two sources is not far short of £1,500 million, or fully one-fifth of all the revenue that Britain raised by taxation.

At the same time, the Chancellor is seeking renewal of the power first given three years ago to raise or lower indirect taxes by up to 10 per cent by simple statutory order, subject to subsequent confirmation by Parliament. This so-called between-Budgets "regulator" is now made applicable to one or more of four sub-divisions of indirect taxation, whereas, previously, it applied virtually to all such taxation, considered as a single block.

No Further Dose This Year

In certain circumstances, this greater flexibility in the fiscal armoury could become of importance later in the year; but, in reply to criticisms that he might not have raised taxes sufficiently now, Mr. Maudling declared categorically that his Budget formula was not based on any assumption that a further dose would be administered later on. In reaching his decision, he clearly was giving great weight to the consideration that, if Britain is to achieve a faster long-run rate of growth, it is important that any action needed to prevent demand from rising too fast in the short run should not be so violent as to stop its rise altogether. Experience has shown that, if an abrupt "stop" is administered, it takes some time to re-establish the requisite confidence to permit expansion to be resumed after the danger is past.

Stock Markets' Reaction

Whilst there is widespread sympathy with this line of argument, it is clear from the behaviour of the stock markets that financial opinion in general feels that this Budget has probably erred on the side of leniency, if not markedly so. The relief among the financial community at the news that the election was not imminent had been reflected in a sharp advance in leading equity share prices just before the Budget, and this advance went significantly further immediately afterwards, carrying the *Financial Times* industrial share index to its highest point for three years. At the same time, the Budget was the signal for a rather sharp setback in Gilt-edged security prices.

Investment opinion plainly does not feel sure that the Government's economic policy will necessarily be flanked by due restraint on the incomes front, and without such restraint a new threat could develop to the structure of costs. Investors in Gilt-edged securities have also been focussing closely—perhaps even a little too closely—on the borrowing prospect that emerges from the Budget.

On the conventional Budget of "above-line" receipts and expenditures, there is a prospective surplus of £67,000,000 (with revenue estimated at £7,455 million), but, after providing for net "below-line" payments (mainly comprising Exchequer loans to nationalise industries and other bodies in the public sector), there is an Exchequer borrowing requirement estimated at £791,000,000. A year ago, the corresponding estimate was £687,000,000; but £165,000,000 of the increase this year is attributable to a change in the method of financing the capital needs of the local authorities, which will be increasing their borrowings from the Government-financed Public Works Loans Board and similarly reducing their demands on the capital market. The net borrowing requirement adjusted for this change (on the hypothesis that the funds formerly lent direct to local authorities will henceforth finance them indirectly, through the Exchequer) would be £626,000,000—still a large figure, as compared with £478,000,000 actually borrowed last year.

Effect on the Pound Sterling

If these considerations have raised some questionings in stock markets, they have happily not found any reflection in the foreign exchange markets, where sterling has been very firm; in terms of the U.S. dollar, it has risen above parity for the first time since last August. This improvement has occurred, moreover, in spite of confirmation of expectations of some deterioration in the balance of external payments. The estimates for the fourth quarter of 1963, seasonally adjusted, show that the surplus on current account ran down to only £6,000,000, though, for the year as a whole, there was still a slightly larger current surplus than in 1962, at £121,000,000. This fell slightly short of the increased net outflow on long-term capital account, so that there was a small overall deficit of £26,000,000, (whereas in 1962, very exceptionally, there had been a small overall surplus).

The prospect for 1964 is for a swing into deficit on current account, as at this stage in the cycle, partly because of stock-building, imports are rising faster than exports; there is also likely to be a bigger net outflow on long-term capital account. The Chancellor has emphasised, however, that, provided any rise in the overall deficit can be regarded as the natural (and temporary) consequence of the growth of the economy, and provided there was not simultaneously any excessive rise in costs, he would feel justified in financing the deficit by drawing upon reserves or utilising international credit facilities. Some running down in these resources would not, in short, be regarded as in itself necessitating a further dose of restraining action.

WORLD BANK LOAN FOR ETHIOPIA

The World Bank has announced the grant of a loan equivalent to $23.5 million for the development of electric power in Ethiopia. The loan will help finance nearly 70,000 kilowatts of new generating capacity with expanded transmission and distribution facilities. The new power projects will more than double present generating capacity and are expected to meet Ethiopian requirements until about 1971. Six commercial banks are participating in the loan, without the World Bank's guarantee, for a total equivalent to $975,000, representing the first three maturities which fall due between March 1969 and March 1970. The participants are Irving Trust Company, New York, the Chase Manhattan Bank, Bank of America National Trust and Savings Association, San Francisco Commerzbank A.G., Dusseldorf, Girard Trust Bank, Philadelphia; and the First Pennsylvania Banking and Trust Company, Philadelphia.

The total cost of the projects is estimated at $34.9 million. The Bank loan will cover the foreign exchange requirements. The Bank loan is for a term of 25 years and bears interest at the rate of 5½ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in March 1969. The loan is guaranteed by the Emperor of Ethiopia.

NEW PRODUCTS AND PROCESSES

Sending Light Round Bends

LIGHT can be transmitted in flexible curves by "light wires" produced by Bausch and Lomb, Inc., of 98,703, Bausch Street, Rochester, New York. They are a cheaper form of the bundle of glass fibres which can transmit an image from one end of a bending tube to the other. For image transmission, however, the fibres must be exactly parallel, which makes assembly expensive. The newer product merely transmits light, the fibres are not necessarily parallel, and the light wires are therefore cheaper. They can be connected by butt joining and can even be pulled through conduit like electric power cables. The Company suggests them for illuminating and signalling in difficult areas.

High-speed Welder

A machine which can weld tubes with internal diameters of 10 mm. to the end plates of heat exchangers, condensers and similar equipment at high speed is being marketed by E.S.A.B., Box 850, Goteborg 8, Sweden. The time for welding each tube is six seconds. The machine is an adaptation of the Company's A9 semi-automatic gas metal arc welder and has a welding gun with a special barrel to feed the welding wire and gas. The system has been devised to perform the normal function of feeding the welding wire and gas and to supply the welding current to strike and maintain the arc. The gun barrel is also caused to rotate around the periphery of the tube to be welded. The welder is claimed to be considerably cheaper to use than more conventional equipment and simple enough to be handled by semi-skilled operators.

New Hydraulic Press

A new hydraulic press for the cold extrusion of steel and other metals has been developed by a British firm, E. W. Bliss (England) Ltd., City Road, Derby, England, in co-operation with the British Production Engineering Research Association. One of its principal features is an entirely new double-action motion which enables a wide variety of forward or backward extrusions, or a combination of both, to be performed without elaborate tooling arrangements or stripping devices. The Association states that substantial savings in production would be achieved by firms machining various types of components if the exact volume of metal could be formed accurately to the shape of the finished component, thus eliminating completely the waste inherent in turning metal into swarf.

Protecting Metal Surfaces

A strippable coating to protect highly polished metal surfaces from abrasions and corrosion during handling or while in transit has been developed by a British firm, Scott Bader and Co. Ltd., Wollaston, Wellingborough, Northamptonshire, England. The material is a PVC plastisol supplied as a thixotropic liquid at spraying viscosity. It is sprayed on with a conventional air gun, and then fused in an oven where it foams to about twice its original thickness. The coating, the manufacturers state, does not affect the metal surface of objects in any way, and can be easily stripped by hand. The colour selected for the foam can be used for identification.

Egg Dry-cleaner

An automatic egg dry-cleaning machine, which won the Britain's Royal Agricultural Society's silver medal and the British Egg Marketing Board's £1,000 prize last year, is now in full production at Salopian Industries Ltd., Battlefield, Shrewsbury, England. Since the prototype was shown at the Royal Show, a number of production models have undergone exhaustive field tests and minor teething troubles have been overcome. Using a sand-blasting technique, it not only completely cleans the most badly soiled or stained egg, but helps to reduce evaporation of egg contents and improves keeping quality. Throughput is up to 1,500 eggs an hour.

Magnetic Vice

By introducing magnetism as the grippping power of a new toolmaker's vice, a British firm, James Neill & Co., (Sheffield) Ltd., Napier Street, Sheffield, 11, England, claim they have enabled a greater accuracy to be achieved in grinding workpieces. This is because the vice has no distortion problem caused by the screw movement of the conventional type vice. It is switched on or off by a detachable handle, which controls a magnetic circuit between the vice base and a fixed jaw by rotating a brass strip separating the two through 90 degrees. The workpiece completes the circuit when the vice is switched on. A loose magnetic jaw is provided to strengthen the circuit when the shape of the workpiece prevents a good contact with the vice base or fixed jaw. In the "off" position the magnetic circuit is closed within the vice itself.

Adhesive Plastic Insulating Tape

An adhesive plastic insulating tape which can be used for a great many purposes in industry, crafts and households has been brought on the market by an Austrian enterprise specialising in the manufacturing of chemical and technical articles, Messrs. Chema, Fabrik Chem. techn. Produkte, Ing. E. Schoeninger, Linz-Wegscheid, Oberoesterreich, Austria. The elastic plastic tape manufactured on a PVC basis is coated on one side with a durable non-altering glue. It adheres without moistening or heating. The water-repellent tape has a high electric resistance. It is hardly effected by chemical influences or temperature oscillations between —20° and +80° C. The tape is said to be very useful for all kinds of operations requiring the insulation of wires, for instance lacing, bunching or splicing of cables, repairing damaged flexes, marking of cables with phase leads, sealing of refrigerating conduits, as a lead band, for insulating anchors and coils, etc. The insulating tape is turned out in 10 colours and in reels of 15 mm. width and 10 mm. length. Other widths manufactured are 20, 25, 30 and 50 mm. The tape has a thickness of about 0.15 or 0.20 mm. (green-yellow protective lead).

Vinyl Acetate

A new and economical process of making vinyl acetate monomer, using ethylene as feedstock, will be in operation in Britain in 1966 when Imperial Chemical Industries open a new plant at Wilton, North East England. It will have a capacity of 30,000 tons a year. Low-cost ethylene will be available for the new plant from a £10 million naphtha-cracker plant, which will raise ethylene capacity at Wilton from 140,000 tons to over 300,000 tons a year. Vinyl acetate is used in a wide variety of industries, including the manufacture of emulsion paints, adhesives, textiles, paper and plastics.

30V Transistor Power Pack

A new 30V transistor power pack has just been added to a British firm's range of laboratory instruments, Rank Cintel, Worsley Bridge Road, London, S.E.26. It is designed to deliver 6 to 30 volts at a maximum current of 500 milliamps. The output voltage is selected by means of a two-position range switch and continuously variable fine control. Two miniature meters indicate output voltage and current respectively. Complete protection of the unit and external equipment is provided by an electronic overload circuit which includes facilities for automatic and manual reset. The overload cut-out can be set to operate at any value by means of an internal control. The unit is particularly suited to educational laboratory applications in that it is of robust construction while retaining small size and low weight.

Sound-Mixing Equipment

A range of sound mixing equipment which uses electronic faders has been introduced by a British company, Elcom (Northampton) Ltd., Northampton, England. They claim that the equipment is more flexible, simpler and less expensive than equipment which uses resistive fading systems. Quality is of a level previously unobtainable without extremely expensive circuitry, say the firm. Based on a simple wire-wound potentiometer followed by an electronic transformer, the system gives completely stepless fading, and signal characteristics superior to those produced by the complicated variable resistive networks previously used. In addition, the system eliminates the problems of mis-match.

Stoving Enamel

A new, dual-purpose, stoving enamel has been developed by a Glasgow paint manufacturer, Federated Paints Ltd., Dobbies Loan, Glasgow, C.4. The material, claim the firm, will make it unnecessary to re-stove slightly damaged finishes. Components can be touched-up and air-dried. The product is intended for use as a normal stoving enamel. But with the addition of a special accelerator, it can be used to touch up any article which has been damaged in the stoving process. After being touched up, the surface will air-dry to a finish comparable to a normal stoving finish without any colour difference.

Plastic-coated Power Cables

Plastic-coated power cables have proved very economical for indoor wiring as well as for overhead and underground lines. The light weight and the smooth surface of the plastic cover makes laying of the cables easy and less expensive. For nominal voltages of 6 and 10 kV the cables are provided with contact protection consisting either of a copper tape or of a zinc-plated flat-wire shielding. As the copper tape and the wire shielding remain below the outer plastic cover, they are effectively protected against corrosion. With 1 kV no sealing off of the cable is necessary as plastic material does not absorb humidity (eventually necessary joints are made by means of cast resin sleeves or the usual iron sleeves). The fact that no sealing off is required represents a further saving in production costs. For nominal voltages of 6 and 10 kV sealing off will, of course, be necessary. Plastic-coated cables are resistant against most chemicals. Owing to their reduced inflammability a fire will not spread from the point where it started. Moreover such plastic-coated cables can be bent to very small radii which is of the highest importance wherever lack of space makes wiring of switch panels and distribution boxes particularly difficult. A further advantage of plastic-coated cables is that impregnated paper insulation layers are no longer necessary which prevent leaks. A Vienna cable and metal goods manufacturing firm, Wiener Kabel & Metallwerke Aktiengesellschaft, Marco d'Aviano-Gasse 1, Wien 1, Austria, which has been studying the problem of plastic-coated cables for power lines for a long time, has been able to achieve very satisfactory results with this production line on the Austrian as well as foreign markets.

SHREE NIWAS COTTON MILLS LIMITED

INCREASE IN COST OF PRODUCTION DUE TO HIGHER COTTON PRICES AND WAGES

CHAIRMAN, MR. G. C. BANGUR, CALLS FOR REVISION OF CLOTH PRICES

HIGHER price and irregular supply of cotton, coupled with mounting labour costs, were responsible for rendering the prevailing price of cloth uneconomic, said Mr. G. C. Bangur, Chairman of the Shree Niwas Cotton Mills Ltd., in his address to the shareholders of the Company at their Twenty-ninth Annual General Meeting held at Bombay on Friday, 15th May 1964. Mr. Bangur said that, in view of the enormous increase in costs, the cotton textile industry was now unable to continue the price-stamping system introduced in 1961 on the basis fixed four years ago. He, therefore, called for a revision of cloth prices, adding that, in fixing the new prices, account should be taken of the need to give a fair return on capital invested and to leave adequate surplus for modernisation of plant and machinery. The following is the full text of Mr. Bangur's speech:

GENTLEMEN:

I have great pleasure in welcoming you all to the twenty-ninth annual general meeting of the Company. The audited accounts together with the Directors' report have been in your hands for some time past, but these accounts will undergo some change in view of the reintroduction of the depreciation allowance for the third shift, under the Finance Act of 1964. We welcome the announcement regarding this allowance.

As the Finance Act came into force after the passing of the accounts, the allowance could not be taken into reckoning. As a result of this allowance, the provision for depreciation will increase from Rs. 26,71,896 to Rs. 33,93,328 and, consequently, the Managing Agents' commission will stand reduced from Rs. 5,34,862 to Rs. 4,66,147 and provision for taxation from Rs. 23,50,000 to Rs. 20,30,000, but on account of larger depreciation allowance, the net profit available for appropriation will go down from Rs. 19,73,236 to Rs. 16,40,519. The necessary adjustments in this respect will be made in the current year.

The unsettled border situation, which still continues, has necessitated a shift in the country's resources from economic development to defence. This would require our economy to become self-sustaining for which purpose individual savings are of vital importance. But, unfortunately, there seems no scope for savings with the investing public under the present fiscal policy of the Government. Savings with the investing public are very necessary to give fillip for increased production targets. Foreign collaborators and investors want to see that there is more money coming for formation of industries through the investing public and hence savings at their hands are very necessary.

Fixation of Selling Prices

The industry has already informed the Government its inability to continue the present system of stamping of prices on a basis which was fixed in January 1961 in view of the fact that the manufacturing cost has increased enormously during the period. Strong representations have been made by the industry to decide the question of prices of textiles in such a manner which will do justice to the claims of the industry of not only giving a fair return to its shareholders but also leaving adequate surplus for the enormous task of modernisation and rehabilitation. I hope the matter would receive due consideration of the Government with a view to enable the industry to function smoothly.

Cotton

The industry's problem of planning out production on a reasonably long-term basis is complicated due to the irregular trend of indigenous raw cotton supply in quantity and quality from year to year. Necessary steps should be taken by the authorities to improve the above said requirement. Meanwhile, adequate imports of foreign cotton should be allowed to ensure uninterrupted production.

Labour Costs

The second important cause of increase in the cost of production is the rising cost of labour. Whilst the industry has done all it can within the limits of its resources to modernise and renovate its machinery, yet the increased *per capita* productivity has not produced the expected benefit due to the ever-increasing cost of labour. The report of the Bonus Commission is under consideration of the Government and the results are awaited.

Exports

The difficulties regarding cost of production, namely, rising raw material cost, lower productivity, etc. have to be viewed also in the context of our need for increased exports of cotton textiles. The industry has to face severe competition in the international markets from the developed countries like Japan as well as developing countries like South Korea, Formosa and China. Moreover, the textile markets of the more affluent, developed countries are being made more and more inaccessible to us because of various import restrictions. In this situation, it would be very difficult for the industry to realise its annual export target of 850 million yards. In the circumstances, every effort should be made to manufacture high quality goods at low, competitive costs. The most important factor in this regard is rehabilitation and modernisation of machinery and diversification of production. As it will take time for the indigenous machinery manufacturers to meet the domestic demand, the Government should allow more liberally the import of textile machinery desperately needed by the industry.

Turning to the affairs of your own Company, I have to inform you that the Company has spent over a sum of Rs. 2 crores in the last five years on its modernisation and renovation programme which, in fact, is more than what we conserved during these years. This factor has increased the competitive capacity of the Company which enables it to face untoward business conditions, apart from serving the needs of the consumers with better varieties of the products. The total licensed capacity of the mills is now for 1,03,900 spindles, out of which 92,000 spindles are working at present and the erection of the remaining spindles is expected to be completed by next year. We are also installing 144 automatic looms in replacement during the year 1965. The working results of the current year have been satisfactory so far, and it is expected that, given normal trading conditions, the performance for the year should be to your satisfaction.

Subsidiaries

Both of your subsidiaries are progressing along with the parent company and their results for the current year are reported to be better than during the preceding year.

Nearly 80 per cent of the production of Shree Madhusudan Mills Ltd. now consists of processed goods and it has been planned to increase the proportion to 100 per cent. The licensed capacity of this unit is for 93,600 spindles, out of which 79,000 spindles are working at present and the erection of the remaining spindles is expected to be completed during next year. This Company is issuing further equity capital of Rs. 10 lakhs to finance its renovation and modernisation programme.

The expansion programme of Shree Gopal Industries Ltd. is also making satisfactory progress. Out of the licensed capacity for 26,800 spindles, 17,000 spindles have been erected and the remaining complement will go into production early next year.

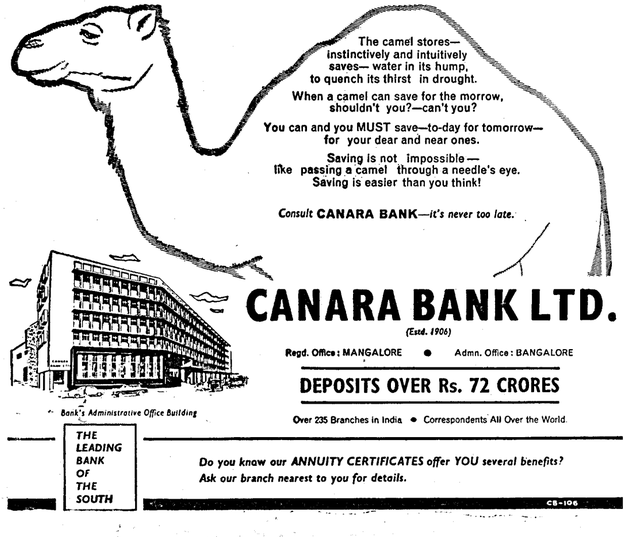
In view of the improved working of both the units, it would be possible for them to declare a dividend during the current year.

Before I conclude, I would like to express the appreciation for the services rendered by the workers and the staff who have contributed to the satisfactory working of the company during the year under review.

N.B.—*This does not purport to be a record of the proceedings of the Annual General Meeting.*

RUSSIAN AID TO MIDDLE EAST

Israel gets no economic aid from Russia. Who does? Russia does not publish regular statistics of its economic aid. According to Western estimates, as quoted by the London *Economist*, between 1959 and 1962, Russia granted to countries outside the communist bloc low-interest loans amounting to $4,817 million (£1,720 million) and $245 million worth of gifts. But only $1,495 million of that money was actually used during this period. Of the loans, 46 per cent were given to Asian countries, about a quarter to the Middle East and just over one-eights each to Africa and Latin America. The remainder went to Europe, chiefly Yugoslavia. Of the money actually spent, the share of Asia was 61 per cent and that of the Middle East was only 22 per cent. Africa and Europe each account for about 7 per cent and Latin America for a mere 3 per cent. Russian aid is highly concentrated. India, followed by Indonesia and Afghanistan, account between them for the bulk of credits to Asia. Egypt is the main Middle Eastern beneficiary; Iraq and Syria take almost all the rest. Aid to Africa was shared chiefly among Ghana, Guinea, Ethiopia and Mali, though Algeria is now likely to take a bigger share. Finally, Cuba took the bulk of the aid to Latin America. Since 1962, Russian aid to Cuba has been greatly increased, thus indirectly increasing the share of Latin America as a whole.



ANNOUNCEMENT

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT OF THE PROPOSED ISSUE OF THE CAPITAL. INTERESTED PERSONS MAY OBTAIN COPIES OF THE PROSPECTUS FROM THE COMPANY'S REGISTERED OFFICE, BANKERS, BROKERS AND UNDERWRITERS.

COMINCO BINANI ZINC LIMITED

(INCORPORATED IN INDIA AS A PUBLIC COMPANY ON 2ND AUGUST, 1962 UNDER THE COMPANIES ACT, 1956)

Registered Office: **Binani Buildings, 38, Strand Road, Calcutta-1.**

EXISTING AND PROPOSED ACTIVITIES

The Company will manufacture Zinc in India by the Electrolytic process. The Industrial Licence issued to the Company provides for initial manufacture of 12,000 metric tonnes of zinc per annum to be expanded to 20,000 metric tonnes per annum and proportionate quantities of by-products like cadmium and sulphuric acid. These activities will be carried on in collaboration with the Consolidated Mining and Smelting Company of Canada Limited, popularly known as 'Cominco', who own and operate the largest electrolytic Zinc Plant in the world. Besides contributing technical assistance, know-how and helping to train Indian personnel, Cominco has also subscribed for 8,40,000 Equity Shares in the Company. The work at site has commenced and it is hoped that the plant will commence production about the middle of 1966.

LOCATION OF FACTORY

Approximately 103 acres of land at Edayar near Alwaye has been allocated to the Company by Government of Kerala of which the Company has already entered into possession of approximately 96 acres. The site is on the bank of the navigable River Periyar.

SHARE CAPITAL

Authorised :—		
30,00,000 Equity Shares of Rs. 10 each		Rs. 3,00,00,000
Issued, Subscribed and Paid-up for Cash at par	*Subscribed*	*Paid-up*
7 Equity Shares of Rs. 10 each, fully paid, subscribed for by the signatories to the Memorandum of Association	Rs. 70	Rs. 70
8,40,000 Equity Shares of Rs. 10 each subscribed by the Consolidated Mining and Smelting Company of Canada Limited, of Quebec, Canada, upon which Rs. 2 per share has been paid	Rs. 84,00,000	Rs. 16,80,000
4,20,000 Equity Shares of Rs. 10 each subscribed by Metal Distributors Limited, upon which Rs. 2 per share has been paid	Rs. 42,00,000	Rs. 8,40,000
	Rs. 1,26,00,070	Rs. 25,20,070

PRESENT ISSUE

8,39,993 Equity Shares of Rs. 10 each in cash at par ... ... Rs. 83,99,930

Of this issue, 80,000 shares are reserved for the shareholders in Metal Distributors Ltd. who will be given a preferential allotment of three shares for every twenty shares or as nearly as circumstances permit, registered in their name in the books of that company on 11th May 1964. THE REMAINDER OF THE ISSUE, TOGETHER WITH ANY OF THESE 80,000 SHARES NOT TAKEN UP BY SHAREHOLDERS IN METAL DISTRIBUTORS LIMITED ARE NOW OFFERED TO THE PUBLIC AT PAR FOR SUBSCRIPTION IN CASH.

TERMS OF PAYMENT

On application ... ... Rs. 2 per share

On allotment ... ... Rs. 2 per share

The balance of Rs. 6 per share will be payable on one or more calls at such time and in such manner as the Directors determine. There will be an interval of atleast Six months between allotment and the first call.

APPLICATIONS FOR SHARES MUST BE FOR A MINIMUM OF 50 SHARES OR FOR A MULTIPLE THEREOF.

APPLICATIONS

Copies of the application form and prospectus can be obtained from the Registered Office of the Company or from the Bankers, Brokers and Underwriters listed herein.

DATES OF OPENING AND CLOSING OF SUBSCRIPTION LIST

The Subscription List will open at the commencement of banking hours on 27th May 1964 and will remain open until the close of banking hours on 6th June 1964 unless closed earlier at the discretion of the Directors if the issue is subscribed upto the full amount of the public offer; but not earlier than the close of banking hours on 29th May 1964.

DIRECTORS

Shri G. D. BINANI, 38 Strand Road, Calcutta 1.
Industrialist and Chairman of the Company. Also a Director of: The United Commercial Bank Ltd., Metal Distributors Ltd., The Binani Metal Works Ltd., Multimetals Ltd., Star Metal Refinery Private Ltd. and of other companies.

Mr. W. S. KIRKPATRICK, 2820, Hill Park Road, Montreal 25, P.Q., Canada.
President of the Consolidated Mining and Smelting Company of Canada Ltd., of Montreal, Quebec. Chairman of West Kootenay Power and Light Company Ltd., of British Columbia. Also a Director of: Amalgamated Metal Corporation Ltd. (England), Consolidated Paper Corporation Ltd. (Canada), and of other companies.

Mr. R. G. EDWARDS, Flat No. 11, Tivoli Court, 1A, Ballygunge Circular Road, Calcutta 19. (Alternate for Mr. W. S. Kirkpatrick.)
Stockbroker and Managing Director of Place, Siddons & Gough Private Ltd. Also a Director of: Braithwaite & Co. (India) Ltd., British Paints (India) Ltd., Indian Iron & Steel Co. Ltd., Indian Standard Wagon Co. Ltd., Titaghur Paper Mills Co. Ltd. and of other companies.

Mr. A. O. WOLFF, 90, Ballantyne Terrace, Dorval, Quebec, Canada.
Vice-President, Research and Development, of The Consolidated Mining and Smelting Company of Canada Ltd. President and Director of the Luster Corporation of Canada Ltd. of Wallaceburg, Ontario and National Hardware Specialities Ltd. of Dresden, Ontario, Director of Schultz Die Casting Co. of Canada Ltd., of Lindsay, Ontario.

Mr. T. G. HARDING, First National City Bank. 9, Brabourne Road, Calcutta 1. (Alternate for Mr. A. O. Wolff.)
Manager, First National City Bank, Calcutta.

Mr. H. T. FARGEY, 2145, Hanover Road, Town of Mount Royal, Montreal, Quebec, Canada.
Vice-President, Sales, The Consolidated Mining and Smelting Company of Canada Ltd.

Mr. D. D. MORRIS, 410, Ritche Avenue, Trail, British Columbia, Canada.
Vice-President and General Manager, The Consolidated Mining and Smelting Company of Canada Ltd. Vice-President and Director of: Pacific Coast Terminals Co. Ltd., Pacific Coast Bulk Terminals Ltd., West Kootenay Power and Light Company Ltd., Coast Copper Co. Ltd., Pine Point Mines Ltd.

Mr. D. K. BASU, M/s. King and Partridge, Regal House, McLean Street, Madras (Alternate for Mr. D. D. Morris).
Solicitor and Partner of: Orr, Dignam & Co., of Calcutta and Delhi. King and Partridge of Madras, Ootacamund and Bangalore, Director of: Fibreglass Pilkington Ltd., Arbor Acres Farm India Ltd., and of other companies.

6. **Shri CHARAT RAM,** 15, Sardar Patel Road, New Delhi.
Industrialist, Director of: Delhi Cloth and General Mills Co. Ltd., Jay Engineering Works Ltd. Industrial Finance Corpn. of India, Usha Refrigeration Industries Ltd. and of other companies.

7. **Mr. S. C. GLADSTONE,** 7, Ironside Road, Ballygunge, Calcutta.
Merchant, Director of: Gillanders Arbuthnot & Co. Ltd., (Managing Director) Clive Buildings (Calcutta) Ltd., Mackintosh Burn Ltd., Multimetals Ltd., and of other companies.

8. **Mr. GHANSHYAMDAS BINANI,** 38, Strand Road, Calcutta 1.
Industrialist and Merchant, Director of: The Binani Metal Works Ltd., (Managing Director) Metal Distributors (U.K.) Ltd., London. Metdist Inc. New York, Metal Distributors Ltd., Multimetals Ltd. and of other companies.

9. **Mr. R. K. BAGRI,** Barrington House, 59/67, Gresham Street, London E.C.2.
Merchant. Director of: Metal Distributors (U.K.) Ltd., London, Metdist Inc., New York, Multimetals Ltd., The Binani Metal Works Ltd., Metal Distributors Ltd.

SOLICITORS

ORR, DIGNAM & CO., 29, Netaji Subhas Road, Calcutta-1.

AUDITORS

S. R. BATLIBOI & CO., 1B, Old Post Office Street, Calcutta-1.

BUSINESS NEWS FROM EUROPE

HOW STRONG IS STERLING?

DEMAND FOR FROZEN FOODS RISING

From Our Special Correspondent

AFTER eight months below par, sterling broke through the dollar parity of 2.80 to the pound at the end of April. For a while, it hovered around parity, but whether this is a temporary phenomenon before it drops back or heralds the first step towards achieving a premium against the dollar is still too early to say. In spite of being under par for eight months, the exchange rate had actually been within one-eighth cent of parity since the Bank Rate was raised in London to five per cent in February. The period immediately preceding the rise in Bank Rate saw the worst time for sterling. At one point in February, it fell to 2.79 15/32 dollars.

But even though the change in Bank Rate managed to push the exchange rate up to 2.79⅞, there was a long period when it was stagnant at this level. Even so, in the face of a general election and the mounting impact of growth on import spending, sterling has managed to remain remarkably buoyant this year. Later in the year, when the election comes nearer and the time of the greatest pressure on sterling approaches, some of that buoyancy may disappear, though probably not as much as in previous years.

Two Questions

Two questions have been asked as a result of the rise in sterling's strength: what has caused the rise? and will the exchange rate be sustained at parity? There is no simple answer to why the rate rose as it did. But, in the general cause and effect, there are answers that are both technical and economic. Technically, sterling benefited by recovering from its "sickness" earlier in the year when election uncertainties on top of bad January trade figures induced many importers to cover their foreign exchange requirements for the rest of the year at the same time as foreign holders of sterling were reducing their balances and selling short. Now that the election has been postponed six months, a long time for a moneylender or borrower, there is a shortage of sterling for immediate use in most markets abroad. This shortage has coincided with a period in which British importers, who would otherwise have been seeking foreign exchange, have not done so, since they fulfilled their requirements three and four months ago.

Other reasons are less technical. The rise in Bank Rate attracted a certain amount of hot money into London (though there is no evidence that it came in great quantities). Such money as came strengthened the gold reserves at the same time as it became apparent that January's rapid growth of imports was a temporary phenomenon. Finally, the rise in sterling balances, particularly by Australia but also by other primary producers, has helped enormously—sterling balances in London have risen by about £150 million. Commodity prices have been lifted to their highest level for seven years as the southern hemisphere's autumn sales have reached their peak.

Movement Against Sterling

To a large extent, the question of whether parity will be maintained depends on the reaction to the possibility of a Labour Government. Since the element of hot-money inflow in February was small, political reaction is now supermost. It is extremely likely that there will be some movement against sterling, though whether this forces sterling below par depends on the level above it that can be achieved before the fall sets in. In favour of sterling is the fact that, during the immediate pre-election fever of 1959, the last comparable period when the defensive position of sterling was much weaker than it is now, the rate of exchange never had to withstand crisis attacks.

Certainly, structural changes in the position of sterling have reduced its vulnerability in recent years; the growth in tourist earnings, for instance, has helped to offset the drain in September from Britain's own tourist outflow. This is proved by the fact that sterling has had a remarkably smooth passage through September ever since 1957 and, even in 1959, it was above par during the third quarter of the year. The dependence of the rest of the world on London and sterling since convertibility in 1958 has strengthened this position by increasing the importance of the facilities offered by London.

More Frozen Foods

With both output and consumption per head rising in most European countries, there is a clear trend towards the increased purchase of frozen foods. Britain is the leader in this market and her rate of growth is being reflected in other countries. Last year 1¼ per cent of the national housekeeping budget was spent on frozen foods, and retail sales in these lines reached a record £62 million (173.6 million dollars). When sales to the catering trade are included, the figure rises to £75 million (210 million dollars), also a record. Output has now reached 197,000 metric tons, 28 per cent up on 1961 and more than twice as much as in any other European country. Exports, although minor, have doubled since 1959, from 575 tons to 1,050 tons; but imports, most of which supplement home production, reached £28 million (78.4 million dollars).

Higher standards of living are mainly responsible for this rise. There is a tendency in most countries, especially the north European, for more women to go out to work. With no one at home during the daytime to prepare and cook big meals, there is an increasing demand for foods than can be served with the minimum of preparation. The frozen-food manufacturers have also brought an ever-increasing range of goods into the shops. This has interacted with increasing affluence by providing foods that would not otherwise have been bought at income levels existing a decade ago. Strawberries, loganberries, gooseberries and other relatively exotic foods are now available.

The industry also offers an increasing number of foods "out of season." Frozen peas, which can be bought all the year, are an outstanding example and probably the most popular. But broad beans, ice cream runner beans and many other products are now on sale in any month. Finally, there has been a very large increase in the number of distribution points, from which the large number of retail outlets required could be stocked. This is probably as important a single factor as any other. Had frozen foods not found sufficient selling points for economic penetration of the potential market, their progress could have been seriously held up.

After Britain's 197,000 metric tons output, West Germany comes next among the European producers with 80,000 metric tons, nearly seven per cent more than 1961. These two countries dominate European output, accounting for just over half the output. The third biggest producer in Europe is Sweden, with 41,000 metric tons, and then come the Netherlands, 26,000 metric tons; France, 17,000 metric tons; and Denmark with 16,000 metric tons. At the bottom of a table of 12 major producers are Finland, with 7,000 metric tons in 1963 and Italy, 8,000 metric tons.

With the exception of France, output is highest where traditional attitudes towards cooking have been broken down most of all. There is still a "purist" approach to cooking in France, Italy and Belgium and new products are not readily accepted in these countries. This is most clearly seen from a comparison of the average consumption in pounds weight of frozen foods per person. Italy now has the lowest consumption, 0.3 lb., and France the second lowest with 0.8 lb., though French consumption has doubled in two years. Finland, which has the lowest overall output, consumes four times as much per persons, 3.3 lbs., as France, and is eighth in the table of *per capita* consumption.

Heaviest consumer countries are now Sweden, with 11.9 lbs., followed at some distance by Britain, 8.1 lbs., Denmark, 7.5 lbs., and Norway, 6.6 lbs. (compared respectively with 7.8, 6.7, 4.4 and 3.8 lbs. in 1961). Germany is surprisingly eclipsed and consumes less per person than Finland and Switzerland, with only 3.1 lbs.

All these figures pale into insignificance, however, by comparison with the United States. Output there last year was 4.25 million metric tons and average consumption per head was 50.6 lbs.

Rumania Wins Comecon Fight

Rumania's victory in its fight for economic independence from Comecon, the organisation through which Russia hoped to integrate the Eastern European economies into a common market, could have serious consequences for the future of that body. In any case, it is a severe setback to Russia politically, if not economically.

Russia wanted Rumania to concentrate on certain lines of production, giving up to other Comecon countries productive capacities in which it was less efficient. Rumania argued that it had to develop in its own way and could not shift some functions of "economic management from the competence of the State concerned to supra-State bodies or organs."

Although the battle has been won by a relatively poor communist community, the result will be greeted warmly by the more prosperous: Czechoslovakia, East Germany and Poland. These countries have always feared that they would have to foot the bill for the development of the poorer partners, Rumania and Bulgaria. Now they will no longer be saddled with this particular burden.

Only Russia would be immune from the consequences of economic integration through Comecon, because of the extent of her vast industrial market and network. She could even make out a case for developing all the necessary industries within her own borders and, if necessary, for restricting such development in the satellite States. While she is hardly likely to do this—she would certainly gather much opprobrium if she did—Russia would have economic logic on her side. Now each of the other satellites must ask herself whether the management of a single economy is possible if the direction of part of it is taken from above or outside. The answer to this question may not become immediately apparent, but when it does it could present a nasty shock to Russia.

India Seeks New Adviser Firm

A French firm may take over responsibility for providing technical assistance to the Indian Government for a £20 million (56 million dollar) organic and intermediate chemicals project at Panvel, near Bombay. Three West German firms have withdrawn because of the fall in world market prices of heavy organic chemicals and also because of the changing requirements of the Indian industry. The Indians are naturally disappointed at the action by the three firms, Farbenfabriken Bayer, Farbwerke Hoechst, and Badische Anilin-und Soda-Fabrik. But the decision to make the break was not taken until talks between both sides. And it was emphasised that the aid so far granted should be available to India for the realisation of a chemical project adapted to the new situation.

India now hopes that a French team will take the place of the Germans, though so far no firm approach has been made. A delegation of French businessmen visited New Delhi in March and are believed to have shown great interest in the project. If they do not take up the offer, India will almost certainly approach Britain or other industrialised nations. Not all contact between the Germans and India has been broken, however. The three firms are prepared to continue talks with the Indian Government to see how they can offer any further advice in the field of intermediate products and their related heavy organic chemicals. The Panvel project was expected to produce 47 basic organic intermediates from benzene/toluene and was to be managed by a State-owned company called Hindustan Organic Chemicals. Nearly £1 million (218 million dollars) has already been spent on the project.

Notice

INDIAN ALUMINIUM COMPANY LIMITED

31 CHOWRINGHEE ROAD, CALCUTTA-16

NOTICE IS HEREBY GIVEN THAT THE Ordinary Share Transfer Register of the Company will remain closed from June 10th to June 15th 1964, both days inclusive.

The Directors of the Company at a meeting held on April 27th, 1964 have decided to make the second (final) call, in respect of 801,276 ordinary shares of the Company issued on February 4th, 1963, amounting to Rs. 10 per share to be applied towards the payment of the balance premium (making these shares fully paid up in respect of both the par or nominal value and the premium). The Board of Directors at the abovesaid meeting have further decided that the amount of second call will be payable by those Members of the Company whose names appear in the Register of Members on June 15th, 1964.

T. D. SINHA,
Secretary.

20th May 1964.

Norway's Buoyant Exports

Norway's export trade reached a record level of £350 million (1,060 million dollars) last year and foreign income has now risen uninterruptedly for five years. Exports rose by 40 per cent by value in the same period. The only time exports declined in the last 10 years occurred in 1957, when they fell by some £20 million (56 million dollars). Otherwise, they have doubled in value in a decade. One of the important factors in this rise from Norway's point of view is the move away from the traditional—fishing, timber—industries towards new products. Furniture, glass and china, silver and pewterware, cutlery and kitchenware in stainless steel, adding machines, cash registers, portable radios and tape recorders, hoists and cranes are all playing an increasingly more important role in the export trade.

One small section of the chemical industry illustrates this trend. Norway has recently become an important exporter of the light metal magnesium and she has built up her own output to such an extent that this year she should be able to supply half of West Europe's supplies of the metal and 20 per cent of the Western world's consumption. From 4,000-ton output in 1955, production was boosted to 15,000 tons in 1960 and 25,000 tons last year. Capacity is being enlarged, so that output this year should be 30,000 tons.

Not that the traditional industries are failing to move with the times. Norway's merchant fleet is now the third largest in the world, behind Britain and the United States (and its working fleet is larger than the American). Last year, gross foreign earnings of the fleet were almost as high as the nation's total commodity export earnings. Although most of the 4.3 million tons of new shipping is being built outside Norway, home yards have increased their output considerably since the war. In 1939, output was 40,000 tons. Last year, deliveries reached a record 370,000 tons.

Finland's Economy on the Upturn

Finland ended 1963 on a high note after two years of depressed economic activity. The recession is now confirmed to have ended around the middle of the year, when growth rates began to revive. The average real growth in production in 1948-61 was 4.2 per cent a year. In the boom years of 1959-61, it rose as high as 7.9 per cent in one year. But, by 1962, the increase was no more than three per cent. Preliminary calculations now show that the growth last year was around four per cent, even though it had been assumed early in the year that the rate would be lower than the previous year's three per cent.

The rise at the end of the year was in part due to a big improvement in agricultural production—eight per cent over the year—and to a seven per cent growth in building and civil engineering. This latter was mainly the result of expanded public works projects to maintain employment. Industrial production rose by four per cent, though a serious weakness lay in housebuilding, which rose by a mere two per cent, the same as in the previous year. Activity was slack in factory and commercial building. Consumer demand was good throughout the year and exports picked up at the end. But domestic investment was weak and in private investment there was actually a contraction.

Six major **British** concerns have set up a consortium to prospect for natural gas and oil from under the North Sea. The move follows closely on the heels of the discovery that the Dutch field of natural gas, one of the largest untapped reserves in the world, may extend into the North Sea. The British group is to work closely with American concerns that have had wide experience of this sort of prospecting and all the latest American know-how will be available for the project. It is not thought that the survey will produce any recognisable results for some time. The North Sea provides some very bad weather conditions and drilling will probably have to go down to 20,000 feet. Should the prospecting be successful, British industry could receive a big boost as well as some big problems. Coal would be seriously affected and any extension of natural gas could affect oil, too. So far British industry has been insulated from the effect of the Continental field, because of the cost of transporting. But a field on her own doorstep would bring a cheap form of energy within range of pipelines.

West German workers have made the biggest wage gains in Europe over the past eight years. A German trade union paper claims that the whole group of German workers have made more gains in wages, shorter hours and social benefits during the past eight years than any other in Europe. Since 1955, working hours have been cut by nine per cent as compared with 5.7 per cent in Holland, 5.2 per cent in Britain, 4.7 per cent in Switzerland, and 0.5 per cent in the United States. Hours have actually increased in both France and Italy. Over the period, the purchasing power of salaries and wages of West German industrial workers rose by 66.4 per cent. This compares with 33.5 per cent in France, 29.6 per cent in Switzerland, 24.7 per cent in Italy, and 23.3 per cent in Britain. On top of this, German workers get an average of 20 paid days holiday a year—the most in the Common Market—and are entitled to full net wages for six weeks when ill.

The rise in **French** prices now appears to be coming to a standstill, though there may be problems ahead. In the first four months of this year, the French retail price index rose by a mere 0.3 per cent, which is being claimed as a success for last autumn's stabilisation plan. The Government has every intention of continuing the plan, but it remains to be seen whether it can keep to it. A large amount of wage pressure is building up in the economy and already wages in the private sector have risen by 1.8 per cent in the first quarter. This is about the same increase as was registered in the first quarter of last year. In some parts of the economy, such as chemicals and textiles, the increase has been even higher. The way in which the Government has been able to keep wages in check in the public sector has been mainly responsible for the slow increase in prices. A rise of four per cent had been allowed for, but, in fact, the rise has probably been less than a quarter of this. This growing gap between the private and public sectors has been building up a steady pressure in the latter.

Expansion in **Austria,** stimulated by a construction boom, is better this year than at any time since 1960. Signs of recovery are beginning to become apparent from all sectors of the economy. Industrial output rose by 10 per cent during the first two months of the year, according to a report by the Institute for Economic Research, and the capital goods producers have also managed to raise their production by eight per cent in spite of electrical machinery and motors remaining weak spots. Common Market tariff discrimination—Austria is a member of the European Free Trade Association—has had no appreciable effect on either the economy or trade. Exports in the first quarter rose by nine per cent and the Six still took half of them. But exports to E.F.T.A. jumped up by 32 per cent and, whereas the area accounted for 16 per cent of Austrian sales abroad in the first quarter of 1963, its share was 20 per cent this year.

European wheat output this year is expected to be well up on the 1963 level following increased winter sowings of the grain. With winter wheat acreage in western Europe around eight per cent higher at 39.7 million acres than in the previous year, production is likely to be two to three million tons higher than the 1963 level of 35.9 million tons. But European demand is expected to mean a relatively high level of wheat imports, between four and five million tons higher than last year. No difficulty is anticipated in meeting this demand, for most of the main exporting countries expect higher wheat output this season. Canadian farmers plan to boost their summer wheat acreage by 7.5 per cent and United States production is forecast at 26.3 million tons, an increase of 2.3 million tons on last year's level.

Italian Egg Scheme: Dutch Protest

The creation in Italy of a National Egg Board, closely modelled on the British scheme, is causing grave concern in the Netherlands, the world's biggest egg exporter. One of the purposes of Italy's new egg marketing scheme is to encourage consumption of eggs and ensure sufficient domestic production to meet it. Italy was until lately an important importer of eggs. Dutch producers had expected to enjoy a privileged position in both the Italian and West German markets, because of the Netherlands' membership of E.E.C. But the emergence of an Egg Board scheme in Italy has come on top of a rapid development of domestic output in both Italy and Germany to blunt Dutch hopes. Italy has lately virtually ceased to import any eggs at all.

The Dutch authorities are expected to protest to the Common Market Commission in Brussels, first, on the grounds that Italy should at least have sought clearance from the Commission before setting up the Board; and, secondly, because they allege the initial subsidy of the Board's operations by the Italian Government may violate Common Market rules. A further sore point about Italian egg expansion in some Common Market circles—particularly in France, it is believed—is that (as in West Germany) it has largely been based on the increasing use of imported American poultry feed. Imports of cheap feedgrains from the United States are considered to undermine the Common Market's aim of a unified cereals market, now being painfully thrashed out. Under the Italian scheme, payment to producers will be graduated according to quality. Initially, the Government will contribute 75 per cent of producer prices as registered by Chambers of Commerce in various centres, and will grant 90 per cent of the Board's administrative costs.

European Butter Prices Set Firm

West European butter production, though now going through the usual seasonal increase, seems to be a good deal lower than in both the last two years. As a result, prices, once the early summer production peak has been passed, are expected to remain firm for the rest of this year.

Regular dairy statistics reach Geneva from nearly all the major producers and exporters; namely, the E.F.T.A. countries (including Britain but excluding Portugal and Finland) and the Netherlands' Belgium and West Germany. Reports from these countries show that a total of 228,000 tons of butter was produced in the first quarter of the year—three per cent less than last year and six per cent less than in the first quarter of 1962. Most of the decline was accounted for by setbacks in Britain, the Netherlands and Belgium, and there are also reports—so far undetailed—of smaller outputs in Switzerland and Sweden. Italy's production rate is also almost certainly down.

The maintenance of a high level of production in France and the stability of Danish output—at about the same level up to April as in the first four months of last year—are thought unlikely to offset the overall decline in supplies. One effect of the overall shortage has been to keep prices relatively steady at a time of year when they normally fall. Last month, only the Danes and the Dutch reduced prices—those used for offers in the British market—but their quotations for export are still well above Australasian prices. The assumption in Geneva is that Australia may have a little less butter to offer later on, though New Zealand output is understood to be about four per cent up on a year ago. Even so, only an exceptional and unexpected increase in European domestic production—that is, if fine weather persists throughout the summer and early autumn—will now make a marked impact on 1964 prices.

Notice

BALMER LAWRIE AND COMPANY LIMITED

THE BOARD OF DIRECTORS OF THE Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a final dividend of 15½ per cent for the year ended 31st December, 1963.

BALMER LAWRIE & CO. LTD.,
D. MANSON,
Managing Director.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 11*th May*, 1964.

ANNOUNCEMENT OF PUBLIC ISSUE

(This is not a Prospectus but only an announcement of the proposed issue of Equity Capital. Interested persons may obtain copies of the Prospectus from the Company's Registered Office, Underwriters, Brokers and Bankers.)

HINDUSTAN POLYMERS LIMITED

(INCORPORATED UNDER THE COMPANIES ACT 1 OF 1956 ON 29TH NOVEMBER, 1962 AS A PUBLIC COMPANY LIMITED BY SHARES)

(*Registered Office:* **C/o Shree Ram Mills Limited, Fergusson Road, Lower Parel, Bombay-13.**)

EXISTING AND PROPOSED ACTIVITIES

The Company proposes to establish at Visakhapatnam in the State of Andhra Pradesh, a plant (i) for the manufacture of 1.5 million gallons per annum of Power Alcohol, (ii) with the technical collaboration of Universal Oil Products Company Inc., Des Plaines, Illinois, U.S.A. for the manufacture of 10,000 tons of Styrene Monomer per annum, and (iii) with the technical collaboration of B. X. Plastics Limited, Highams Park, London, E.4., England, for the manufacture of 7,500 tons per annum of Polystyrene and its Co-polymers including high impact by a continuous mass polymerisation process.

LOCATION OF INDUSTRY

The location of the proposed plant, well-served by National Highways, Railway Transport and other essential facilities will be on a site of about 250 acres at Visakhapatnam (Andhra Pradesh).

SHARE CAPITAL

		Rs.
AUTHORISED CAPITAL:		
3,00,000 Equity Shares of Rs. 100 each	... ...	3,00,00,000
2,00,000 Unclassified Shares of Rs. 100 each	... ...	2,00,00,000
Total	... Rs.	5,00,00,000
ISSUED CAPITAL:		
3,00,000 Equity Shares of Rs. 100 each	... ...	3,00,00,000
SUBSCRIBED CAPITAL:		
(i) 610 Equity Shares of Rs. 100 each subscribed by Subscribers to the Memorandum of Association, Directors, their relatives, friends and associates on which Rs. 50 per share have been paid up	...	61,000
(ii) 30,000 Equity Shares of Rs. 100 each subscribed by Shree Ram Mills Limited, Bombay, a promoter of the company on which Rs. 50 per share have been paid up	...	30,00,000
Total Subscribed Capital ...	Rs.	30,61,000
PAID-UP CAPITAL:		
(i) 610 Equity Shares of Rs. 100 each subscribed by and allotted to the Subscribers to the Memorandum of Association, Directors, their relatives, friends and associates which Rs. 50 per share have been paid up	...	30,500
(ii) 30,000 Equity Shares of Rs. 100 each subscribed by and allotted to Shree Ram Mills Limited, Bombay, a promoter of the company on which Rs. 50 per share have been paid up	... ...	15,00,000
Total Paid-up Capital ...	Rs.	15,30,500
OUT OF THE ISSUED CAPITAL:		Rs.
(i) 30,000 Equity Shares of Rs. 100 each have been subscribed by Shree Ram Mills, Limited, a promoter of the company, (on which they have paid up Rs. 25 per share) and the same will be allotted to them	...	30,00,000
(ii) 51,990 Equity Shares of Rs. 100 each have been subscribed by the Promoters, Subscribers to the Memorandum of Association, Directors, their relatives, friends and associates (on which they have paid up Rs. 25 per share) and the same will be allotted to them... AND 60,000 Equity Shares are RESERVED FOR SUBSCRIPTION as follows :—		51,99,000
(iii) 20,000 Equity Shares of Rs. 100 each are reserved for subscription in cash at par by The Industrial Credit and Investment Corporation of India, Limited, Bombay (hereinafter referred to as I.C.I.C.I.)	... ...	20,00,000
(iv) 20,000 Equity Shares of Rs. 100 each are reserved for subscription in cash at par by Commonwealth Development Finance Company Limited, London, England (hereinafter referred to as "C.D.F.C.") subject to the conditions of the Head of Terms (contract No. 3 below).		20,00,000
(v) 20,000 Equity Shares of Rs. 100 each are reserved for subscription in cash at par by Bakelite Xylonite Limited, London, England	... ...	20,00,000
Total ...	Rs.	1,41,99,000

It is a condition of the Consent of the Controller of Capital Issues that shares privately allotted to the Directors, Promoters, their friends, etc. shall be retained as a long-term investment and shall not be disposed of within a period of one year from the date of allotment.

NOW OFFERED AT PAR FOR CASH FOR PUBLIC SUBSCRIPTION:

1,27,400 Equity Shares of Rs. 100 each.

NOTE : The total Issued Capital of 3,00,000 Equity Shares of Rs. 100 each is made up as follows :—

	Rs.
Subscribed Capital	30,61,000
Reserved for Subscription	1,41,99,000
Offer for Public Subscription	1,27,40,000
Total ... Rs.	3,00,00,000

BOARD OF DIRECTORS:

1. **Shri KASTURBHAI LALBHAI,** (*Chairman*) Business & Industry, S/o Lalbhai Dalpatbhai, Shahibaug, Ahmedabad.
   Director of :
   1. The Atul Products Ltd. (*Chairman*).
   2. The National Rayon Corp. Ltd. (*Chairman*).
   3. The Hindustan Motors Ltd.

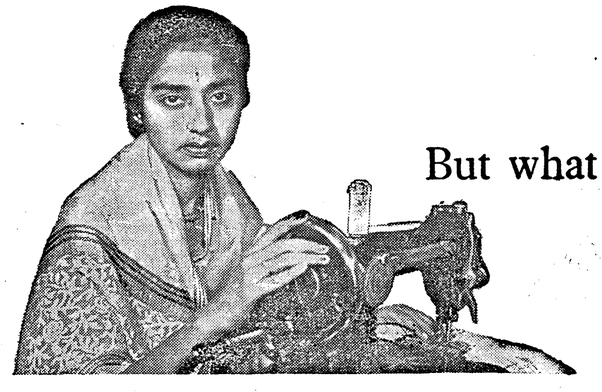
APPLICATION FORMS for application for shares along with copies of the Prospectus can be had from the Registered Office of the Company or from the Underwriters, Bankers and Brokers whose names and addresses are given above.

DATES OF THE OPENING AND CLOSING OF THE SUBSCRIPTION LIST :

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 26TH MAY 1964 AND WILL CLOSE AT THE CLOSE OF THE BANKING HOURS ON 4TH JUNE 1964 OR EARLIER AT THE DISCRETION OF THE DIRECTORS BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON 28TH MAY 1964.



But what can I do to help?

There is so much that every Indian woman can do, *now*, to strengthen and defend the Home Front. Take part in Defence through local women's organisations. There is plenty to be done. Contribute, and *encourage* contribution, to National Defence Fund and buy Defence Certificates. There are, too, the many personal efforts you can make—in discipline, behaviour and attitude:

• Wage war on waste; check thoughtless buying and resist inflated prices. • Do not buy gold. Give your gold for country's cause. • Be resolute in work, whatever it may be, because each task done just that little more efficiently helps the national drive, strengthens India's position. • Rouse yourself from apathy, and Take Action.

BE VIGILANT—*take part in national preparedness*

RIGHTS, DUTIES AND OBLIGATIONS OF COMPANY DIRECTORS—I

GOVERNMENT'S ASSUMPTIONS ON THE NEED FOR CURBS TOO SWEEPING

By N. K. Petigara

ALTHOUGH there is a popular impression that the rights, duties and obligations of company directors have changed of late, in reality no changes have been effected in regard to the *duties* and *obligations* of directors of companies: the *rights* of directors have, however, been cut down by some restriction on the rights of management.

The Vivian Bose Commission made recommendations with regard to:

(*a*) The possible misuse of the objects clause of the Memoranda of Association. It drew attention that it was possible for the board of directors of a company to enter into trading, manufacturing, or business transactions of any kind covered by its Memorandum of Association however far they might be from the main activity of the company and that that was not necessarily in the interest of the shareholders, though technically within the powers of the management by reason of the wide nature of the clauses normally adopted in the Memoranda of Association of companies.

(*b*) The practices in regard to payment of underwriting commission on the issue of shares or debentures.

(*c*) The practices in regard to the possible issue and allotment of shares in the names of fictitious or non-existing persons.

(*d*) The practices in regard to the holding of shares on blank transfers and that of nominee holdings.

(*e*) The practices in regard to the appointment of directors, termed "dummy directors" by the Commission, whereby is meant persons occupying subservient and minor positions either in the company concerned or companies within the same group. The Commission also considered in the same connection the cases of absentee directors and their liability.

(*f*) The practices in connection with loans to companies under the same management, in particular, and to other bodies corporate, in general.

(*g*) The practices in connection with the appointment and termination of sole selling agents. The direction in which the Commission's mind was working was in regard to restricting payments on account of compensation on termination of selling agencies similar to those in respect of managing agents and managing directors.

(*h*) The practices in connection with the power which could be exercised in certain events to acquire shares of objecting shareholders under a scheme or contract which was not approved by the majority.

(*i*) The practices in connection with liquidation proceedings. The Commission's mind was working in the direction of ensuring that the Court should be in full possession of all the facts and circumstances relating to liquidation, and recovery of taxes from companies in liquidation.

(*j*) The practices in connection with destruction of books of account and records of both functioning companies as well as those in liquidation or already wound up.

(*k*) The practices relating to the allotment of shares prior to the company obtaining sufficient funds.

The Commission also made recommendations regarding the administrative machinery of the Company Law Department being brought under the ægis of one Ministry.

Unwarranted Assumptions

None of the matters reported on by the Commission has been specifically legislated upon so far. Bill No. 23 of 1963 was introduced in the Rajya Sabha on 23rd August 1963 but no decision has been taken on it. The Government introduced another Bill, No. 46A of 1963, not referring to the above Bill or the Bose Commission's report but containing regulatory measures including a substantive and very controversial provision regarding conversion of certain loans into equity capital. The Legislature has also amended the Banking Companies Act, 1949, whereby changes of great consequence have been made affecting directors of banking companies. There was a discussion in Parliament and a Select Committee was appointed which made a report to the Lok Sabha on 9th December 1963. Except in one major respect, the Select Committee's amendments were accepted and the amending legislation which was passed has already come into effect in part.

My purpose in drawing attention to this legislation is that it is in consonance with the current trend of thought, particularly amongst the members of the several Legislatures in India that it is necessary to place curbs on the rights and powers of directors of companies and that there should be more control over companies. What is more important and at times disconcerting, especially to company managements, is that the power of regulation is not restricted to the shareholders of the company concerned, but is handed over to Government agencies on the basis of a concept not particularly new, but one which is very vigorously pressed, namely, that of "public interest" which is definitely something much wider than the interest of shareholders.

I have noted with care, and at times with concern, the progress made by this concept. As a director of a number of companies for a number of years and as a solicitor for over 35 years, I can claim to have examined the law on the subject a little more than as an amateur. I have come in contact with the boards of directors of various companies, have seen the managements thereof in action both in prosperity and adversity and have taken part in the conduct of proceedings under the Company Law in the Courts and before the Company Law Department. Further, it has been my good fortune to have been and to be working with directors who have been upright, conscientious, and anxious to carry out their obligations and duties in the interest of their shareholders and generally in public interest. So far as chairmen of the boards are concerned, I can only say that I have been working under some marvellous persons. I owe a great deal to them.

The Companies Act, 1956, does not define the expression "director." Section 2(13) merely describes a director, as including any person occupying the position of a director by whatever name called. Sub-section (30) of the same section defines the word "officer." It is also an inclusive definition and not a precise one. The word "officer" is said to include, amongst others, any director, including a director of the managing agents or of the secretaries and treasurers if a corporate body, or the director of a secretary if the secretary is a body corporate. The Act, therefore, equates in a measure a director with an officer. A director is clothed with three characters. He is an agent, a trustee, and an employee in the sense that, in his office are contained some of the characteristics of agents, trustees and employees.

Definition

Since the Companies Act itself does not define a "director," we must look to the textbooks, commentary cases, and also to what we see every day around us in regard to the characteristics of directors. We must also see what are the powers given to directors under the Act which regulates Company Administration in India or otherwise. Guidance is had from Section 291 of the Act, which provides that, subject to the provisions of the Act, the board of directors of a company shall be entitled to exercise all such powers and to do all such acts and things as the company is authorised to exercise and do. The subsequent Sections 292 onwards restrict or regulate the powers which could be exercised by a board. In some cases, the procedure whereby they could exercise such powers is defined: for example, the power to make calls; the power to issue debentures; or to borrow moneys otherwise than on debentures; the power to invest the funds of the company and the power to make loans. Such powers have to be exercised at board meetings, unless delegated in a particular manner to particular persons.

Then, there are restrictions on the exercise of powers such as that the board of a public company or a subsidiary thereof cannot sell, lease or otherwise dispose of the whole or substantially the whole of the undertaking of the company, or remit or give time for the repayment of any debt due by a director; or invest (otherwise than in trust securities) compensation received in respect of compulsory acquisition; or borrow moneys beyond the aggregate of the paid-up capital of the company and its free reserves; or contribute to charitable and other funds not directly relating to the business of the company, beyond the limits of Rs. 25,000 or 5 per cent of the average net profits during the three financial years immediately preceding the donation except with the consent of the company.

An Act of the English Parliament passed in 1844 described directors as "the persons having the direction, conduct, management or superintendence" of a company's affairs. This definition brings out the essence of what a director is and recognises two or rather three important matters. One is that a company is an artificial person made up of an aggregate of persons, who, in the total, make up the artificial person recognised by law and capable of doing almost all of the things a natural person can do. The second matter is that a company, being an artificial and not a natural person, can act effectively only through agents and that agency, being the board of a company is expected to function as a whole and an individual director has in law, apart from delegated powers, no individual powers to act on behalf of the company.

Main Function

Thus, directors are a special kind of agent, entrusted with the function of controlling the company's affairs and supplying the driving force behind it. How this control can be and is exercised must vary with different companies under different systems of administration and according to the composition of different boards. There must be variations from company to company, from country to country, and also from period to period. Control can be exercised for the good of the company and its shareholders or, as must be publicly admitted with regret, it can be and is in a number of cases exercised adversely to the interest of the company and its shareholders and for the personal benefit of those in control of the company. Control can be exercised in matters of detail or in matters of general policy. By and large, in a well-run and properly organised large public company, control is exercised in the matter of the framing of general policy, in particular, in matters of finance and trade, business or manufacturing policies, also in the choice of the company's main officers, also in ascertainment from those officers how they are carrying out their duties, and, finally, in regard to advising the members on the distribution of profits and matters of policy such as increase of the capital where shareholders' consent is necessary or desirable. If directors tend to do more, the result is, in the case of large companies particularly, disastrous.

It must follow, having regard to the fact that the determining factor in the case of a director is the factor of control, that those who are in effective control of the company's affairs would be deemed its directors whether they are described as directors and nominated or elected as such or they are not. It must also follow that the office of a director, endowed as it is with control, must carry with it responsibilities which could be enforced in accordance with the law. The existence of responsibilities postulates the existence of duties to be performed in accordance with the dictates of good conscience and in accordance with the public conscience. The higher the moral standards of a country or its people, the higher would be the standards of observance of duties and obligations by boards of directors.

Some Distinctions

Directors lay down the policy for observance by the management. It is quite clear that most matters of detail or of minor importance have to be and are left to the executive. Policy decisions would be those decisions of major importance which are intended to be laid down to determine and guide the activities of the company. But this is an easy definition. In practice, much would depend upon the chairman and the directors of a particular company as to what they consider to be matters of policy. Here, one has to differentiate between a director who is, what I may call, a *pure director*, that is a director not connected with the company in any other capacity, and a director having some interest in the company and connected with it as, for instance, a managing director. This distinction is drawn by the well-known commentator, Mr. Read.

There is also another distinction made by Mr. Read. He distinguishes between full-time directors, on the one hand, and other directors, on the other. He divides the full-time directors between *operational directors* and *functional directors*. Operational directors are those responsible for some particular part of the business of a company which is sometimes carried out by a subsidiary company or a division of the company itself. Functional directors are those responsible for an activity which extends to all the operating units such as finance, accounts, personnel management, etc. To sum up, the theory of the law (except as amended by statute) is that the board of directors are collectively entitled to exercise all or any of the powers of the company which are not expressly vested in the shareholders either by the law governing companies or by the Articles of Association of the company or for the exercise of which no special sanction or permission of the Government is required.

It follows, in strict theory, that the powers vested in the directors may, except as aforesaid, be exercised even without interference from the shareholders and that, in a number of cases (apart from Sections 397 and 398), the shareholders cannot overrule the board and thereby set aside the decision taken by the directors. In theory, the rights of shareholders are confined to their taking action open to them under the law and the Articles of Association such as removing directors and replacing them with others who are more willing to fall in with their views. In the alternative, the shareholders can express their dissent from a particular course of action by a vote of no confidence in the board or by not passing the report of the directors or the balance-sheet and profit and loss account at an annual general meeting of the company. In the last resort, the shareholders could go to the law courts for redress.

This was the law and, to a considerable measure, still is the law, though now there are specific provisions in our Companies Act of major importance for interference from or regulation by Government authorities and/or by the courts and now by a Tribunal under the amended law. Whatever the prescribed procedure for the time being be, there has always been a right to take steps at law for the enforcement of the obligations and duties of directors.

An Incorrect Rationale

The strong criticism that is at present focussed on directors and business, particularly big business, is based on the assumption that they always tend to act in their own interests which is necessarily incompatible with the interests of shareholders and of the public generally, and that, since the existing law does not provide remedies, it is necessary for the legislature to intervene.

It is also urged that the provisions of the law, especially those entitling directors to act on behalf of the company, and the right of the board to appoint additional directors and alternate directors, render the boards self-perpetuating and all-powerful bodies enabling them to act contrary to the interests of shareholders and the public. The general answer has been given in England by the Cohen Committee, which stated that it was satisfied by the evidence that was placed before it that a great majority of limited companies there, both public and private, were honestly and conscientiously managed. Having regard to my own experience on boards and the knowledge that I have gathered about the administration of the affairs of large-scale companies, I think that, in India too it will be found, if an inquiry is made, that the majority of public limited companies with large shareholdings (especially when there are no particularly large controlling interests) are reasonably honestly managed in the interest of their shareholders. The existence of undesirable elements in company managements and also the existence of certain practices of an undesirable nature are not ruled out. If it is possible, such elements should be weeded out. But the question is whether it is possible and fair to enact legislation on a basis applicable to all companies and if so to what extent such legislation should go.

I am definitely of the view that, in the circumstances our country is in today, the most suitable method of rapidly industrialising the country is by not restricting private enterprise. Lack of capital, the vastness of our population and the desirability of speed do make out a case for the public sector in certain spheres. But so long as private enterprise holds its present legitimate and proper place in the economy of the country, it would be unnecessary and, indeed, dangerous to introduce new and mostly untried schemes for dealing with what should be the comparatively few cases of abuse of power by directors resulting in deliberate mismanagement of the affairs of companies under their control for personal or dishonest ends. Out of the several thousands of companies working in India, it would not be fair to their directors to be placed under restrictions some of which are irksome and result in delays because some directors have been found to be erring. By and large, all over the world, it is the institution of corporate existence that has been found to be providing the only systematised and appropriate method of mobilising the finance and other resources of a country for the purposes of industry and trade and also to run such industry or trade on proper lines with a view to making profits and distributing them to shareholders in their interest as well as in those of the country itself.

It must, at the same time, be recognised that, in India, the base of shareholding is extremely limited and there is rightful insistence on shareholding in new ventures being as broadbased as possible. The larger the company, the more is the finance required and it must follow that the number of shareholders should be as large as possible, and that there should be means and methods whereby shareholders can know and enforce their rights.

MAHARASHTRA *VERSUS* WEST BENGAL

FACTORS BEHIND ECONOMIC GROWTH

By A Special Correspondent

LEADING industrialists of Calcutta have lately expressed concern at the slower rate of economic growth of West Bengal as compared with Maharashtra. This matter was referred to by Mr. K. K. Birla in his presidential address to the West Bengal Business Convention in March this year. Mr. Hari Shankar Singhania also dealt with this question in his presidential address to the annual general meeting of the Bharat Chamber of Commerce in Calcutta on 17th April 1964. He gave three reasons for the faster progress of Maharashtra in relation to West Bengal.

In the first place, Maharashtra has drawn up its State Plan in a comprehensive manner, demarcating the spheres of development for the public sector and the private sector. But, according to Mr. Singhania, "neither the second nor the third Plan of West Bengal envisages a total Plan for the State, composed of investments and developments in the public and private sector. This comprehensive attitude on the part of Maharashtra in drawing up its State Plan has geared up the motive force of development in that State."

The second factor is the relatively higher ratio of private investment in the second and the third Plans of Maharashtra. In the second Plan, investment in the private sector was Rs. 572 crores against a total investment of Rs. 764 crores or 75 per cent. In the Third Plan, private investment in Maharashtra is estimated at Rs. 820 crores in a total of Rs. 1,245 crores or 66 per cent. "These investments," said Mr. Singhania, "are to be viewed in the context of an all-India ratio of 60:40 in the public and private investments. It is obvious that Maharashtra reversed the whole all-India ratio proportion between public and private investments, and with good dividend to the State as a whole."

The third factor mentioned by the President of the Bharat Chamber of Commerce was the ability of Maharashtra to attract more private capital. During the second Plan period, Maharashtra was able to attract nearly 19 per cent of the total private investment in the country. In the third Plan, out of an all-India total of Rs. 4,100 crores of private investment (including that in agriculture), Maharashtra's share is expected to be about 20 per cent.

Commenting on these trends, Mr. Singhania said: "This amply indicates that the climate for private investment in Maharashtra has been more congenial than has been the case in our State. By citing the performance chart of Maharashtra, it is not my intention to draw any picture of economic equation, but I will certainly submit that Maharashtra's achievement should prompt us to make a thorough study of the factors that have choked our momentum for a comparable growth. No data are available regarding the private and public investment ratio in West Bengal. Any specific projection, therefore, is not possible, but I will urge the State Government to assess the situation in all seriousness."

Mr. K. K. Birla also dwelt on this aspect in his presidential address to the annual general meeting of the Indian Chamber of Commerce on 8th May 1964. He said that there were signs to show that West Bengal was losing its primacy as an industrial State and that its rate of growth was poorer as compared with that of Maharashtra. He gave the following facts to support this view:

> "The peak load requirement of power in West Bengal in 1961-62 was 627 MW when the corresponding requirement in Maharashtra was 569 MW. But, in 1964-65, the peak load requirement in West Bengal is estimated at 894 MW, whereas in Maharashtra it is estimated at 992 MW. The number of industrial licences issued to entrepreneurs in West Bengal during the period January, 1962 to January 1964 was 360. The corresponding figure for Maharashtra was 548. From the reports of the financial institutions also, it is clear that the demand for loans these days is greater from Maharashtra and other parts of the country than from West Bengal."

Although the rate of growth in West Bengal has been slower of late, that state of course still continues to occupy a place of prominence in the India's industrial economy. According to the Indian Chamber of Commerce, Calcutta, West Bengal's share in the total production of jute goods in India in 1963 was about 95 per cent, finished steel 30 per cent, enamelware 70 per cent, soap 31 per cent, whitewares (crockery) more than 50 per cent, razor blades 92 per cent, coal 29 per cent, tea 25 per cent, electric fans 87 per cent, radio receivers 31 per cent, paints and varnishes 49 per cent, sewing machines 80 per cent, rubber footwear 74 per cent, electric lamps 56 per cent, paper and paper boards 21.5 per cent and railway wagons 78 per cent.

The following table compares the position of West Bengal and Maharashtra in regard to general and electrical engineering industries as of 1961:

	West Bengal	Maharashtra	India
No. of factories	304	318	1,230
Productive capital (Rs. crores)	91	80	289
Persons employed ('000)	127	97	414
Gross output (Rs. crores) ..	136	103	409
Net value added by manufacture (Rs. crores)	47	32	134

In the field of chemicals, however, Maharashtra leads over West Bengal as will be seen from the following table, showing the position as of 1961:

—	West Bengal	Maharashtra	India
No. of factories	70	126	403
Productive capital (Rs. crores)	27	76	256
No. of persons employed ('000)	21	33	115
Gross value of output (Rs. crores) ..	39	102	251
Net value added by manufacture (Rs. crores)	11	35	77

It is encouraging to find that prominent industrialists in Calcutta have drawn the attention of the authorities to the need for accelerating the economic growth of West Bengal. Adequate electricity at cheaper rates, better facilities for transport and communications, improvement of the Calcutta port, and cordial employer-employee relationship—these are some of the major requisites for speeding up West Bengal's development. The State Government is no doubt fully conscious of its responsibility in this respect but it cannot, by its own efforts, do much without the active co-operation of the Centre. Unless the fiscal policy of the Government of India is suitably modified so as to remove the disincentives, it will be difficult to enthuse entrepreneurs to invest more in expanding the existing units or in setting up new ones.

TRENDS IN REAL AND MONEY WAGES

HIGHER WAGES NEUTRALISED BY RISE IN PRICES

WAGES occupy so central a place in industrial relations that no labour policy which does not take into account the level and trend, over a period of time, of real and money wages of workers can be described as realistic, nor can it ever hope to gain even the acquiescence of workers, let alone their support, which is so very essential for its successful implementation. The authors of the First Five-year Plan had laid down, as a broad guideline, that (1) all wage adjustments should conform to the principles of social policy, (2) disparities in income should be reduced to the utmost extent, and (3) that claims of labour should be dealt with liberally in proportion to the distance which the wages of different categories of workers have to cover before they attain the living wage standard. A continuous study of the trends in real and money wages is important in order (*a*) to judge periodically as to what extent these objectives are being realised, (*b*) to enable a critical evaluation of the wage policy, and (*c*) and to make such changes and modifications as are necessary to further the aforesaid objectives. In the context of the persistent demand for higher wages by workers on the ground that prices and cost of living are increasing day by day and the controversy whether wages have kept pace with productivity, studies of the trend of wages are especially important because they help to test the accuracy of the claims made in respect of wages, production and productivity.

Two Plan Periods

A study of the trends in money and real wages during the decade 1951-61, broadly covering the First and Second Plan periods, published in the latest (April 1964) issue of the *Reserve Bank of India Bulletin*, throws some revealing light on this vitally important subject. The author of the study is Dr. H. B. Shivamaggi of the Division of Planning and Special Studies of the Economic Department of the Reserve Bank of India. The study indicates the overall trends in money and real wages in India during 1951-61, the trend of wages in major industries and the State-wise trend of real and money wages during the period.

Tracing the broad trend of wages prior to the First Plan, the author of the study points out that, generally the levels of money wages do not tend to decline, except under severe economic depression. Even prior to the beginning of the First Plan, money wages had shown a more or less continuous rise. Thus, between 1939 and 1950, the index number of average annual money wage earnings per worker in factories and mines recorded a rise of 234 per cent and 292 per cent, respectively. But, as a result of the acute rise in the prices of consumer goods after 1939, on account of the war, the real wages of factory and mine workers had suffered an erosion. However, though the prices continued to rise even after 1948, the downward trend in real wages was arrested and they started rising as the increase in money wages more than compensated for the rise in the cost of living. It was only by 1953 that the real wages of factory workers reached the pre-war level. Thus, on the eve of the First Plan, the real wages were below the pre-war level and, naturally, the Plan's first objective was to restore the pre-war real wage level.

Price Situation

The price situation during the First Plan period was favourable from the point of view of labour. At the same time, money earnings also showed a significant rise, particularly in the case of mine workers, following the enactment of the Minimum Wages Act in 1948 and the increase in the bargaining power of labour as a result of the coming into power of the Congress Party, which was pro-labour, and the effective and extensive organisation of the trade union movement. Consequently, real wages registered a considerable increase. The average annual money wages per worker continued to rise during the Second Plan period also. But, since the consumer price index recorded a rise of 18 per cent between 1956 and 1960, the level of real earnings of factory workers showed a fall during the first four years of the Second Plan, as compared with 1956. It was only in 1961 that the 1956 level of real wages was restored as a result of a 6.2 per cent rise in the level of money wage earnings during 1961, as against a rise of only 1.7 per cent in the consumer price index. In the case of mine labour, however, the real earnings continued to show a rise as the increase in money wages, particularly of coal miners, was higher than the rise in prices of consumption articles.

The following table indicates the trend of consumer prices, employment, average annual money and real wages per worker in factories and mines during the period 1951-61:

(Base: 1951=100)

Year	Price	Employment		Money wage per worker		Real wage per worker	
	Consumer price index number	Factories	Mines	Factories	Mines	Factories	Mines
1952 ..	98	104	102	107	106	109	108
1953 ..	101	102	103	108	106	107	105
1954 ..	96	104	104	108	108	112	113
1955 ..	91	107	108	113	110	124	121
1956 ..	100	117	115	115	144	115	144
1957 ..	106	122	119	121	160	114	151
1958 ..	111	123	118	119	171	108	154
1959 ..	115	125	113	122	183	106	159
1960 ..	118	129 (P)	119	130 (P)	190	110 (P)	161
1961 ..	120	135 (P)	122	138 (P)	198	115 (P)	165

Source: Indian Labour Statistics, 1960 and 1963.
(*P*) Provisional.

An aspect of wage trend which deserves to be noted is that the real wages of factory workers have been fluctuating from year to year, because money wages are not linked to the consumer price index in the case of a large number of workers. In 1958-59, the latest year for which data are available, wages were linked to the consumer price index in the case of only 41 per cent of the total number of factory workers.

It is evident from the above table that, between 1951 and 1961, the average annual money-wage per factory worker increased by 38 per cent. The *per capita* national income (at current prices) increased during the period by 22 per cent. This broadly means that the lot of factory workers showed a relatively greater improvement, as compared with that of the average citizen. The actual improvement in the workers' lot may not be of the same order as that revealed by the increase in the earnings per worker, in view of the reported increase in the number of dependents per earner and the higher costs of living, especially in urban areas. But there is no doubt that factory workers have fared better by comparison than the average citizen. Reflecting this development, the share of factory wages in national income rose from 2.9 per cent in 1951 to 3.4 per cent at the end of the First Plan (1956) and 4.4 per cent at the end of the Second Plan. As to the share of factory labour (wages and other benefits) in the income originating in factory establishments, it appears that the share declined from 46 per cent in 1951 to 42 per cent in 1961.

Interesting Pattern

A study of industry-wise trends in money and real wages reveals some interesting patterns. Money wages per worker in the textile (cotton, silk, jute and woollen) industry, which accounts for one-third of the labour force in the organised industrial sector, increased by 39 per cent during the period 1951-61 and real wages rose by 16 per cent, that is, by about the same rate as in the case of the factory sector as a whole. During this period, production recorded a rise of 17 per cent only, while employment showed a nominal rise; actually, there was a small decline in employment during the Second Plan period, as compared with the First Plan, thanks, perhaps, to the steps taken towards rationalisation.

In the basic metal industries, in which iron and steel industry forms the major sector, real wages recorded a nominal rise of 5 per cent between 1951 and 1961. But real wages actually recorded a decline during the Second Plan period, though money wages continued to rise. Production and employment, on the other hand, increased by 137 per cent and 47 per cent, respectively. The difference between the increase in production and employment is an indication of the improvement in productivity brought about by the increasing capital intensity in this growing industry.

In the mining sector, between 1951 and 1961, money wages and real wages increased by 98 per cent and 65 per cent, respectively, as compared with the rise of only 38 per cent and 15 per cent in factories taken as a whole. In coal mining, the rise in money and real wages was spectacular—115 per cent and 79 per cent respectively. This steep rise in wages of coal miners indicated that their wages, which were lower earlier, were catching up with wage levels of other industrial labour.

In the transport-equipment industry (railway workshops, motor vehicles and ship-building, etc.) which accounts for one-tenth of the industrial labour in India, employment increased by 73 per cent between 1951-61, while real wages per worker rose by 28 per cent. Money wages per worker showed a rise of 54 per cent. There was an improvement in wages during the First Plan period and, despite a fall during 1957-60, the wage level at the end of the Second Plan was higher than that at the end of the First Plan.

In the chemical industry, which employs one per cent of the total factory labour in the country, money wage rose by 56 per cent during the period 1951-61, as compared with the rise of 38 per cent in the case of factory workers as a whole, and real wages recorded a rise of 30 per cent, as against a rise of 15 per cent for factory labour as a whole. At the same time, employment and production rose by 62 per cent and 183 per cent, respectively. In the printing industry, there was a moderate rise in the money index during the First Plan period, whereas, during the Second Plan period, it remained more or less unchanged, with the result that the real wage index declined from 111 in 1956 to 97 in 1960, though it rose to 103 in 1961. In the paper industry, employment increased by 50 per cent between 1951 and 1961, while money and real wages increased by 35 per cent and 13 per cent, respectively. During the said period production increased by 172 per cent.

To sum up, rise in money wages per worker was found to be considerable in the case of those industries in which wages were relatively low. For instance, in the coal mining industry, the money wage index rose by 115 per cent between 1951 and 1961, whereas the rise was less than 30 per cent in the rubber, printing, basic metal and electrical machinery manufacturing industries. The average annual money earnings per coal miner increased from about Rs. 575 in 1951 to Rs. 1,155 in 1961, the corresponding increase being Rs. 1,325 to Rs. 1,491 in the rubber industry, Rs. 1,052 to Rs. 1,319 in the printing industry, Rs. 1,368 to Rs. 1,506 in the basic metal industry and Rs. 1,238 to Rs. 1,493 in the electrical machinery manufacturing industry.

State-wise Trend

A State-wise analysis of trends in money and real wages indicated that Orissa lead other States in respect of money wage rise between 1951 and 1961. The money wage index for Orissa rose by 70 per cent, while the rise was 34 per cent for West Bengal, 32 per cent for Bihar and Bombay and 21 per cent for Uttar Pradesh. The average annual money earnings per factory worker in 1961 were the lowest in Rajasthan (Rs. 727) followed by the Punjab (Rs. 1,000) and Andhra Pradesh (Rs. 1,098). The earnings per worker were the highest in Maharashtra (Rs. 1,636), followed by Gujarat (Rs. 1,617), Delhi (Rs. 1,495) and Bihar (Rs. 1,484).

As regards the State-wise trend of real wages, it was noticed that there was a relatively large rise in real wages in the major States during the First Plan period mainly as a result of fall in prices of consumer goods. During the Second Plan period, there was a fall in the level of real wages in Bombay, Uttar Pradesh, West Bengal and Bihar.

The study reveals that though the average annual money wage per worker had shown a rising trend even before the beginning of the First Plan, the real wages of factory workers reached the pre-war level only in 1953 when the increase in money wages more than compensated for the rise in cost of living. The price situation during the First Plan period, as compared with the Second Plan period, was favourable to workers whose average annual money earnings had shown a rise of 15 per cent and 44 per cent in the case of factory workers and mine workers respectively. Following the twin advantages of favourable price situation and rising money wages, real wages also rose. During the Second Plan period though the money wage level of factory workers continued to rise, with the index of money wage reaching 138 in 1961, the real wage level recorded a fall, with the index declining below 115 (the level reached in 1956) during the four-year period 1957-60. It was only in 1961

(*Continued on next page*)

QUALITY CONTROL AND PRE-SHIPMENT INSPECTION

A RESUME OF MEASURES ADOPTED IN INDIA

THE development of India's export trade on a sustained and enduring basis presupposes that the goods meant for export compete effectively in world markets from the point of view of both price and quality. As between price and quality, it is the latter that is more important, for, even if the prices of some items are high, these items can still be sold abroad provided they are up to the quality desired by overseas buyers. One of the common complaints made often by overseas buyers is that the goods imported by them are not up to the quality specified and contracted for by them. This factor has led to frequent commercial disputes in India's export trade with foreign countries. It is, therefore, just as well as that the Committee on Commercial Arbitration (Chairman: Mr. B. T. Merchant), in its report submitted to the Government recently, has laid special emphasis on measures of quality control and pre-shipment inspection of goods sold abroad; a reference to the recommendations made by the Committee has already been made in *Commerce* (*vide* page 828 of issue dated 9th May 1964). The findings of the Committee on this important subject are reproduced below:

Quality of export products plays an important role in the promotion of export trade. Various measures have, therefore, been taken to assure the foreign buyers of the quality of the export products and thereby eliminate a major source of trade disputes. These measures can be broadly divided into three categories. The most important are those that are enforced on a compulsory basis for export products under which certification of quality is invariably done under Government supervision, leaving no scope for any deviation from the standard specifications. Second in importance comes the voluntary measures which are open to the buyers and the sellers to adopt as a part of their export transaction. Under the third category falls such measures or laws requiring production of only pure and standardised products and safeguarding against adulteration; these are applied irrespective of whether the commodities are intended for the home market or for export.

Commodities Covered Already

For quite sometime now, such measures of quality control and pre-shipment inspection are being applied to a number of commodities. We have at present the following agricultural commodities under compulsory quality control and pre-shipment inspection, so that their export is not allowed unless they are tested and certified for their quality:

Sunn hemp.
Unmanufactured tobacco.
Raw wool.
Bristles.
Goat hair.
Lemongrass oil.
Sandalwood oil.
Palmarosa oil.
Black pepper.
Chillies.
Cardamoms.
Myrobalan.
Vetiver oil.
Walnuts.
Cashew kernels.

Similarly, in the field of manufactured products the following commodities are under compulsory certification for quality prior to their exports:

Aluminium utensils.
Plywood panels for tea chests.
Salt.

Textile fabrics known as "bleeding Madras" and Etawah bedspreads.

Silk and synthetic fabrics (where these are exported under export promotion scheme).

The second category of quality control measures, namely, those that are adopted on a voluntary basis, cover a variety of products including the following:

Lac.
Mica.
Tanned hides.
Coir products.
Certain jute products.
Fisheries products.

The third type of quality control measures which effectively guard against adulteration and sub-standard production extend over drugs and medicines, tea, coffee, and processed foods including vegetable oils.

The measures described above for ensuring the quality of the products have been enforced under different legislative enactments. In respect of agricultural commodities, this certification of quality is done under the Agricultural Produce (Grading and Marking) Act, 1957, and the Rules made thereunder. Similarly, the Cashew Products Export (Grading and Marking) Rules, 1962, regulate the quality certification of cashew kernel for export. The Indian Standards Institution Marks Act, 1962, and the Rules and Regulations made thereunder, regulate the quality of some of the manufactured products prior to their export. The Drugs Act, 1940 and its Rules, and the Fruit Products Control Order, 1955, are other existing legislative measures that regulate the quality of drugs and medicines, etc.

The most notable step taken in recent years to ensure quality of export products has, however, been the enactment of the Export (Quality Control and Inspection) Act in 1963. This legislation now enables the Central Government to (i) notify the export commodities that should be subjected to compulsory quality control prior to export; (ii) lay down the standard specification or specifications to which a commodity must conform before export; and (iii) approve the organisation(s) that should shoulder the responsibility of quality certification. The Cotton Textile Committee Act, 1963, has been enacted to ensure the quality of textile goods and textile machinery.

Trade Disputes

Certification of quality of a product prior to its export under the existing laws has resulted in the number of trade disputes on grounds of quality being reduced. When, with the authority of the Export (Quality Control and Inspection) Act, 1963, more export commodities are brought under compulsory export quality certification, trade disputes in respect of such commodities are expected to be completely eliminated. These two comprehensive legislations provide that standards of quality have to be laid down and in the process of laying down these standards, the requirements of overseas markets are duly taken into consideration, so that the standards provide easily acceptable bases for agreement between the exporters and overseas importers in the matter of supply of goods and remove chances of disagreement or disputes.

Testing Houses

As an integral part of the scheme for ensuring effective quality certifications of products entering the export markets, independent testing of the products has been provided for. Various testing houses and laboratories for specialised testing of individual products are working and new ones are being established. It is planned that a number of such testing houses should function all over the country and provide ready facilities for quality testing of all export products. The role of these testing houses under the scheme of quality control will be that of independent technical institutions. Therefore, their certificates will be both impartial and accurate and should provide a third party guarantee about the quality of the product. It is of particular satisfaction to note that, even where standards and specifications have been laid down, the scheme of certification has not ruled out the procedure of issuing quality certificates according to the specifications desired by the overseas customers. By this the overseas customers and the seller will have a means of coming to an agreement about their wares that should give satisfaction to both.

Already Government efforts including the establishment of AGMARK, by providing impartial quality testing and certification, have reduced commercial disputes on grounds of quality. Similarly, a number of private agencies are doing the work of independent testing with such impartiality and thoroughness that a large number of overseas importers in their purchase contracts ask for quality certificates by such agencies. As more such agencies are set up under the Export (Quality Control and Inspection) Act, 1963, by providing larger scope of independent quality checking and certification, disputes on grounds of quality are expected to be reduced still further. Even where disputes still arise, the independent opinion of testing houses will provide a convenient basis for settlement of such disputes.

* * * *

The Committee on Commercial Arbitration has urged the extension of quality control and pre-shipment inspection to as many export products as possible. In its opinion, the proposed extension of testing facilities to all important business centres in India in respect of export products should be expedited. Provision should also be made whereby the testing laboratories, too, can issue certificates that the goods in question are or are not in accordance with the specifications of the contract and not merely in regard to some general standards. The ITEX certificates, it is emphasised, should be in accordance with the specifications laid down by the foreign buyers and the Government should try and provide a clause in all the trade agreements with the foreign countries that such a certificate should be accepted by the arbitral bodies. If that is not possible, the Committee suggests, a procedure should be evolved whereby there would be pre-shipment inspection of the goods in collaboration with the foreign buyers to avoid any dispute.

ZAGREB TRADE FAIR

The Government of India has decided to organise participation in the forthcoming Zagreb International Autumn Fair, scheduled to be held at Zagreb in Yugoslavia from 5th to 20th September next. Yugoslavia negotiates a large percentage of its annual purchases on the occasion of the Fair and the adjacent State trading countries also take advantage of the Fair to negotiate considerable "on-the-spot" business. Indian exporters and manufacturers can avail of the attractive trading opportunities offered by India's trade agreement with Yugoslavia and of the liberalised import regulations which have been in operation in that country for the last two years. The intention of the Government is to project an image of the country's developing economy by emphasising the display of light and heavy engineering goods and other non-traditional items of export from India, and thereby to create and develop a market for Indian engineering and other non-traditional goods, besides the traditional and general exportable merchandise, in Yugoslavia and the adjacent countries.

The intending participants are expected to forward a list of exhibits which they wish to display at the Fair to the Director of Exhibitions, Ministry of International Trade, for prior approval, by 16th June 1964, indicating against each item the quantity and value, the area likely to be required for display, and the approximate gross and net weight and volume of the packages containing the goods. The approved exhibits will, thereafter, have to be delivered to the Government's forwarding and shipping agents, Messrs. Mackinnon Mackenzie and Co. (P) Ltd., Ballard Estate, Bombay by 30th June.

It would be advisable to send adequate quantities of explanatory literature about the goods to be displayed and some trade samples for free distribution in the Fair to help ancillary publicity to the concerned industry. The literature sent is expected to be well-produced and of a quality acceptable in the international market. The quantity of free samples proposed to be enclosed with the exhibits has to be indicated in the list of goods sent for approval to the Director of Exhibitions.

The intending participants are also advised to state, while sending the goods, their wholesale c.i.f. prices in Yugoslavia, period required for supply, quantity that could be supplied during a specified period and other business terms, in order to facilitate the handling of trade enquiries on their behalf in the Fair.

The Government of India, after a careful examination of the factors hampering the development of mica exports and with a view to improving exports and increasing foreign exchange earnings, has decided to bring mica under compulsory pre-shipment inspection with effect from 1st July 1964. It has further decided that the Mica Export Promotion Council, Calcutta, will be the competent agency to carry out the pre-shipment inspection and issue the necessary certificate for quality.

The Railway Board has decided to allow a concession of half the tariff rates for milo received as a free gift from the U.S. when booked from stations in Bombay area to scarcity affected areas of Rajasthan. These consignments are required to be booked by the Regional Director (Food), Bombay, to an official of the Rajasthan Government and certified that they are intended for free distribution.

(*Concluded from previous page*)

that the 1956 level of real wages per factory workers was restored.

The fall in real wages, in spite of the continuous increase in money wages, indicates that, unless the price line is firmly held, increases in money wages would be neutralised by rise in prices. The failure of the Government to ensure price stability explains the fall in real wages during most part of the Second Plan period. An important point that should be borne in mind is that the foregoing study does not take into acccunt the non-monetary elements (the so-called fringe benefits) such as the cost of social security schemes designed to benefit workers. Since fringe benefits account for a progressively increasing share of the total wage bill, they should also be regarded as part of the workers' gains. It will, therefore, be appreciated that, actually, workers have benefited more than what the statistics of money and real wages quoted above indicate.

SETBACK FOR DALMIA CEMENT

TAX SAVING HELPS MAINTAIN DIVIDEND

AN all-round setback has been reported by Dalmia Cement (Bharat) Ltd. (Managing Agents: Messrs. Hari Brothers (Private) Ltd., Dalmiapuram, Madras State) for the year ended 31st December 1963. Cement production and despatches have been substantially lower at 461,000 tonnes and 462,000 tonnes, as compared with the all-time peak figures of 495,000 tonnes and 502,000 tonnes, respectively, reached in the previous year. Clinker production, too, has come down from the peak level of 458,000 tonnes in 1962 to 455,000 tonnes during the year under review. Proceeds of sale and self-consumption have dropped from Rs. 517.83 lakhs to Rs. 464.59 lakhs and gross profit has receded from Rs. 146.62 lakhs to Rs. 134.05 lakhs. This rather poor show, which looks all the more poor as it contrasts with the best performance so far in the previous year, has come about in spite of two favourable factors having come into operation during the year. One is the increase of Rs. 2.75 per tonne allowed by the Government in the ex-works retention prices of cement from 1st June 1963. The other is the receipt of Rs. 27.77 lakhs, being the bulk of the payment of coal freight subsidy due from the Government under the scheme introduced for subsidising the movement of coal by sea from 1st May 1961. The payment was received following the introduction of a simplified formula for computing the subsidy in February 1963. However, since the share of profit from the partnership firm—Dalmia Magnesite Corporation—has declined from Rs. 24.67 lakhs to Rs. 11.59 lakhs, the effect of this large receipt of subsidy has been neutralised to a considerable extent.

The fall in production and despatches alike has been due largely to the stoppage of one of the cement mills for repairs. The shortage of gypsum also adversely affected production. The increase in retention prices does not fully cover the incidence of various levies imposed before it was granted. Besides, production costs have gone up further, because of a higher pit-head price of coal and surcharge on electricity. The surcharge on railway freights proposed in the Railway Budget for 1964 will further raise the costs. Increases have also been recorded in the cost of production of potteries and iron ore. Yet another factor which has affected the Company's results is the unrealistic formula adopted by the Government for computing packing charges for cement, which has put it to a substantial loss.

The following table compares the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales and self-consumption ..	464.59	517.83	410.77	391.62

Depreciation	20.30	22.23	23.85	26.07
Taxation	50.50	70.50	24.00	19.50
Net profit	56.56	46.31	31.28	32.02
Withdrawals from reserves ..	1.91	—	—	2.26
To reserves	31.86	21.18	6.73	9.33
Dividends:				
Preference	5.10	4.80	4.80	4.80
Ordinary	20.82 (12%)	19.92 (12%)	19.92 (12%)	19.92 (12%)
Deferred	0.60 (12%)	0.60 (12%)	0.60 (12%)	0.60 (12%)
Carry forward	—	—	0.19	0.97

Market price of ordinary shares (in rupees)	1964	1963	1962	1961	1960
High	13.44	13.76	14.20	12.88	12.68
Low	11.36	12.00	11.76	10.90	11.00

Whereas the gross profit shows a setback of Rs. 11.57 lakhs, the net profit has improved a little by Rs. 10.25 lakhs to Rs. 56.56 lakhs due to a cut in the essential provisions, more particularly the tax provision which shows a saving of Rs. 20 lakhs at Rs. 50.50 lakhs on account of the replacement of S.P.T. (which had claimed Rs. 14.50 lakhs in the previous year) by the Sur-tax and concessions in super-tax allowed to industries engaged, *inter alia*, in the production of cement, refractories and iron ore. This tax saving has enabled the Directors to maintain the dividend on the 10-rupee ordinary shares at 12 per cent per annum, subject to tax, especially because, keeping in view the advantages flowing from a strong reserve position under the current taxation policy, they have ploughed back to reserves a larger net sum of Rs. 29.95 lakhs (after allowing Rs. 1.91 lakh withdrawn from development and rehabilitation reserve) as compared with Rs. 21.18 lakhs a year before. The preference, ordinary and deferred dividends, which absorb in all Rs. 26.61 lakhs, are to be paid from a dividend reserve of Rs. 26.78 lakhs created out of the year's profit. The preference and ordinary dividends show a small increase in the total distribution because both the paid-up preference and equity capital have gone up from Rs. 61.58 lakhs to Rs. 66.57 lakhs and from Rs. 166 lakhs to Rs. 173.50 lakhs, respectively, following the issue of shares to the outside shareholders of the Magnesite Corporation of India Ltd. after the Company acquired it as a wholly-owned subsidiary from 1st January 1963. It is now proposed to amalgamate it with the Company.

Sales of iron ore for export during the year under review declined from 150,000 tonnes to 114,000 tonnes due to a virtual suspension of supplies to the S.T.C. from March to August 1963, when the terms of the new contract with the S.T.C. were settled. Under the present contract with the Minerals and Metals Trading Corporation of India Ltd. (which has taken over the iron ore business from the S.T.C.), the Company will have supplied by the end of the current month a quantity of 80,000 tonnes of ore. It expects to receive a fresh contract from the Corporation for the supply of about 170,000 tonnes of high grade iron ore for export to Japan against the Corporation's contract for the exports of such ores in 1964-65. The Company hopes that negotiations between the Corporation and the Japanese buyers will end the uncertainty under which exports have suffered. In the meantime, it is continuing to finalise plans for expansion of its mining activities.

The kiln for manufacturing magnesite clinker, which had been suspended in October 1963 because of poor demand, has been restarted this year and ways and means of stepping up sales and also making exports are under consideration.

The Company has obtained the services of Yugoslav experts to study and improve the production facilities and quality of pottery goods, as growing competition has resulted in a fall in despatches and the section has been unable to make any profit during the year under review.

Dalmia Cement Ltd., a subsidiary of the Company, earned a lower net profit of Rs. 8.54 lakhs as compared with Rs. 13.47 lakhs in the previous year. On account of the persistent increase in production costs, the subsidiary was compelled to raise its ex-works selling price of cement from 1st July 1963 by Rs. 7 per ton for sale to the public. The question of increase in the price of supplies to Government is still pending with the authorities concerned. Progress in the implementation of the agreement regarding the sale of the assets in Pakistan has been slow on account of the time taken by the purchaser in arranging a satisfactory bank guarantee in terms of agreement. The value of the assets as at 30th September 1962 shall be the basis for the transfer. The Company is, however, entitled to interest at 6 per cent per annum on the sale price with retrospective effect from 1st October 1962.

The Company's paid-up capital of Rs. 245.07 lakhs, comprising Rs. 66.57 lakhs in preference shares, Rs. 173.50 lakhs in equity shares and Rs. 5 lakhs in deferred shares, is supplemented by Rs. 117.25 lakhs in reserves and surplus after excluding, Rs. 26.61 lakhs required for meeting the year's dividend liability. Bank loans and other borrowings are shown at Rs. 188.04 lakhs (Rs. 173.39 lakhs a year before) and, together with current liabilities and provisions (including the dividend liability), the total of short-term indebtedness is Rs. 393.53 lakhs. This indebtedness is quite amply covered by liquid assets aggregating Rs. 569.48 lakhs, of which Rs. 185.36 lakhs comprise current assets, Rs. 191.87 lakhs book debts and Rs. 191.75 lakhs investments, out of which those quoted are shown at Rs. 27.64 lakhs against their market value of Rs. 28.41 lakhs. The gross block of Rs. 334.46 lakhs (Rs. 314.38 lakhs a year before) has been written down to Rs. 182.76 lakhs. Capital work-in-progress is shown separately at Rs. 4.37 lakhs.

Currently quoted at Rs. 13.24 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company fetch a net yield of no less than 7.8 per cent per annum.

(*Concluded from next column*)

Rs. 155.86 lakhs and current liabilities and provisions to Rs. 91.54 lakhs, bringing the total indebtedness to Rs. 247.40 lakhs. On the assets side, current assets and book debts are shown at Rs. 240.57 lakhs and investments at Rs. 42.90 lakhs, of which Rs. 14.13 lakhs are in quoted scrips with a market value of Rs. 21.71 lakhs. The gross block, which has increased during the year from Rs. 308.90 lakhs to Rs. 354.44 lakhs, has been written down to Rs. 214.93 lakhs.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 163.75 *cum-div.* and offer a net yield of 6.2 per cent per annum.

ALEMBIC FARES WELL

SAME DIVIDEND CLAIMS MORE

THE progress made by the Alembic Chemical Works Company Ltd. (Managing Agents: Messrs. Rayuma Services, Baroda) during 1962 after the setback suffered in 1961 due to some operational defects continued further during past calendar year. Net sale proceeds (that is, excluding the excise duty paid) have improved from Rs. 327.94 lakhs to Rs. 383.90 lakhs, showing an increase of over Rs. 121 lakhs as compared with the 1961 level of Rs. 262.03 lakhs. Gross profit, up by Rs. 13.68 lakhs to Rs. 73.23 lakhs over the year, marks a substantial rise over the 1961 figures of Rs. 41.68 lakhs. A straight look at these figures gives the impression that the increase in both the turnover and profit during 1963 does not compare quite favourably with that in the previous year. But such an impression is exaggerated by the fact that the 1962 figures are compared with the rather poor results in 1961. A more relevant point than such an impression is that the Company has been able to make continuous progress.

In spite of the further rise of Rs. 13.68 lakhs in gross profit, the tax provision has increased by only Rs. 4.25 lakhs to Rs. 20.50 lakhs, as against by Rs. 8 lakhs to Rs. 16.25 lakhs a year before. This relatively small increase in the tax liability is due possibly to the fact that the Company has been able to claim a substantial development rebate allowance as witness the higher allocation of Rs. 7.92 lakhs to development rebate reserve as compared with only Rs. 4.66 lakhs a year before. Further, no surtax liability is expected in respect of the year's profit. But, after the concessions announced in the S.P.T. Bill, no liability for S.P.T. was expected in the previous year. With the provision for depreciation raised from Rs. 20.88 lakhs to Rs. 23.36 lakhs and that for Managing Agents' commission also from Rs. 2.80 lakhs to Rs. 3.48 lakhs, the net profit is Rs. 25.89 lakhs, showing an improvement of Rs. 6.27 lakhs or 32.1 per cent.

Out of this profit, no less than Rs. 11.92 lakhs (as against Rs. 12.66 lakhs in the previous year) have been ploughed back to reserves. The dividend on the 100-rupee ordinary shares has been maintained at 12 per cent per annum, to which level it was reduced in the previous year following the issue of right and bonus shares from 14 per cent paid for 1961. But since the 1963 dividend is for a full year on the new capital issued in the previous year, the total amount absorbed by it has gone up from Rs. 13.87 lakhs to Rs. 17.34 lakhs. The surplus carried forward is Rs. 16,265, as against Rs. 82,961 brought in.

The following comparative table mirrors the Company's progress from 1960:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960

The birth centenary of Dr. T. K. Gajjar, one of the founders of the Company, fell in the year under review. To commemorate his memory, the Directors have instituted a Chair in Microbiology, to be called "Prof. T. K. Gajjar Chair in Microbiology," at the M.S. University of Baroda. A donation of Rs. 60,000 in cash and of the right to subscribe for 600 ordinary shares of the Alembic Glass Industries Ltd., to which the Company was entitled, was made to the University for the purpose of instituting this chair.

The paid-up of the Company is unchanged at Rs. 159.50 lakhs comprising Rs. 15 lakhs in three classes of preference shares and Rs. 144.50 lakhs in equity shares. It is backed by reserves and surplus amounting to Rs. 91.51 lakhs. As against these "own" funds aggregating Rs. 251.01 lakhs, borrowings amount to

(*Continued in previous column*)

PODAR MILLS' PROFIT BETTER

EQUIPMENT MOST MODERN

THE Podar Mills Ltd. (Managing Agents: Messrs. Podar Sons Pvt. Ltd., Bombay) has, during the year ended December 1963, very nearly recovered the ground lost in 1962 in terms of profits. This appears a creditable performance, indeed, especially when the industry's profit-margin has continuously been under pressure. Prices of cotton textiles have remained almost stationary due to voluntary price control, while the cost of production has been going up for various reasons. With the improvement in demand, sales of cloth, yarn and waste by the Company, which had exhibited a steady upward trend in recent years, have risen by almost 10 per cent from Rs. 257.05 lakhs to Rs. 276.12 lakhs, while closing stocks have been well maintained around Rs. 48 lakhs. The cost of raw materials and stores consumed as also other expenses have no doubt increased, the former from Rs. 166.24 lakhs to Rs. 170.63 lakhs and the latter from Rs. 83.02 lakhs to Rs. 89.43 lakhs, but these are merely indicative of increased activity. The gross profit, therefore, stands improved by as much as Rs. 11.09 lakhs at Rs. 27.80 lakhs which is within striking distance of the peak level of Rs. 30.80 lakhs reached during 1961. The profit-margin (ratio of gross profit to sales) has thus improved from 8.5 per cent in 1962 to 10 per cent in the year under review.

Unfortunately, increases in essential provisions have neutralised the major portion of the improvement in gross profit. Thus, the provision for the Managing Agents' commission has risen from Rs. 1.02 lakh to Rs. 1.14 lakh, for depreciation from Rs. 6.40 lakhs to as much as Rs. 13.83 lakhs and for taxation from Rs. 1.00 lakh to Rs. 2.75 lakhs. Even so, the net profit at Rs. 10.08 lakhs is higher by Rs. 1.79 lakh than that for the year before. The Directors have stepped up the plough-back from Rs. 1.25 lakh to Rs. 5.10 lakhs. The ordinary dividend has again been maintained at 12 per cent comprising a dividend of 10 per cent and a special bonus of two per cent, both subject to deduction of tax. This claims, as during the previous year, Rs. 6.60 lakhs, leaving a much reduced carry forward of Rs. 3,646 as against Rs. 1.23 lakh brought in.

The steady progress made by the Company is revealed by the following comparative figures:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales of cloth, yarn and waste ..	276.12	257.05	223.36	173.60
Other income	12.45	11.49	9.90	5.96
Closing stocks	48.01	48.72	51.29	33.67
Raw materials and stores consumed	170.63	166.24	145.45	116.07
Other expenses	89.43	83.02	79.63	55.04
Gross profit	27.80	16.71	30.80	24.95

Depreciation	13.83	6.40	6.73	6.68
Taxation	2.75	1.00	13.50	6.50
Net profit	10.08	8.29	8.13	9.97
Provisions written back ..	1.00	—	—	—
To reserves	5.10	1.25	3.20	1.75
Dividend—				
Preference	0.58	0.58	0.58	0.58
Ordinary	6.60 (D. 10% +B.2%)	6.60 (D. 10% +B.2%)	5.40 (D. 10% +B.2%)	5.40 (D. 10% +B.2%)
Carry forward	0.03	1.23	1.36	2.41

Market price of ordinary shares (in rupees):	1964	1963	1962	1961	1960
High	13.36	14.00	160	160	183
Low	11.76	10.52	113	128	130

There is no change in the paid-up share capital of the Company which therefore continues to stand at Rs. 65.00 lakhs comprising Rs. 10 lakhs in preference shares of Rs. 100 each and Rs. 55 lakhs in ordinary shares of Rs. 10 each. This is supported by reserves and surplus, aggregating Rs. 54.83 lakhs as at 31st December 1963. Secured and unsecured loans, however, show an increase of Rs. 10.60 lakhs to Rs. 55.74 lakhs but current liabilities and provisions at Rs. 54.75 lakhs are lower by Rs. 4.63 lakhs than those a year ago. Current assets and loans and advances are practically unchanged at Rs. 100.46 lakhs and so are investments—mostly in shares of subsidiary companies—at Rs. 42.73 lakhs. The net block on the other hand has risen from Rs. 77.98 lakhs to Rs. 86.56 lakhs and is obtained by reducing the gross block of Rs. 148.89 lakhs by Rs. 62.33 lakhs representing the accumulated depreciation upto 31st December 1963. Additions to the block account during the year were Rs. 24.13 lakhs.

The programme of renovation, modernisation and expansion made further progress during the year under review and 5,400 spindles were added by the Company to its spinning capacity, thereby raising the total spindleage to 38,000. In the current year, the Company has so far spent Rs. 19 lakhs on modernisation and rehabilitation of the Bombay Unit bringing the total amount spent in this direction during the past eight years approximately to Rs. 1 crore. As a result of this, the Company now has 75 per cent of its spinning department with new machinery. The weaving department too has been modernised and the old 196 looms have been completely replaced by automatic looms. The mill is, therefore, now a highly rationalised unit with a very low complement of labour. In order to make itself a self-sufficient unit, the Company proposes to install a modern dyeing, bleaching, finishing, and printing plant at Bombay at a cost of about Rs. 50 lakhs. Besides, it proposes to purchase additional new machinery other than spindles and looms for the Bombay unit at a cost of approximately Rs. 40 lakhs. The Company's subsidiary, the Jaipur Spinning and Weaving Mills Ltd., has also undertaken a substantial expansion programme. Its spinning capacity is to be increased during the current year by an additional 11,200 spindles, thereby increasing its total spindleage to 26,880.

The construction work on the new spinning unit at Jaipur has commenced. Orders have been placed for indigenous machinery like ring frames and card doublers. The Industrial Credit and Investment Corporation has agreed to give a foreign exchange loan of about Rs. 14 lakhs for the import of other machinery such as blow rooms line, fly frames, draw frames, combing equipment, ring doubling frames, doubler winders, etc. This unit, which will have a capacity of 25,000 spindles and which is being built at an estimated cost of Rs. 140 lakhs, is likely to go into production in 1965.

All these various schemes are, of course, going to need considerable finance. Although a part thereof will be met from internal resources and a further part from bank borrowings, there is still likely to remain a gap which will have to be filled up. It is heartening to note that the Company proposes to fill this by raising more permanent capital. As a first step in this direction it is raising its authorised capital from the present Rs. 2 crores to Rs. 4 crores and issuing a further 40,000 first preference shares of Rs. 100 each and 5.50 lakh equity shares of Rs. 10 each. These will be offered by a prospectus to the public but the present equity and preference shareholders will enjoy a preferential right to apply for and be allotted shares applied by them.

The Rs. 10 ordinary shares of the Company are currently quoted at Rs. 12.00 *cum-div.* On the basis of *ex-div.* price, these fetch a net return of 8.7 per cent per annum.

UNILEVER RESULTS

The Boards of Unilever Limited and Unilever N.V. have announced the Companies' consolidated results for the first quarter of the current year. The turnover and sales to third parties in the first quarter of 1964 at £512 million and £401 million, respectively, showed a rise of 10.3 per cent and 9.3 per cent over those for 1963. Profit after taxation was £13.6 million, as against £11.7 million for the corresponding period last year. The consolidated net profit of £13.1 million represented an increase of 19.1 per cent as compared with 1963. After allowing £1 million for payment of preferential dividends of parent companies, the profit accruing to ordinary capital of parent companies stood at £12.1 million, as against £10 million last year, a rise of 21 per cent. The increase in sales in the first quarter of 1964 over those for 1963 is spread over all the main product groups. The edible fats profits were lower following increase in the cost of raw materials which were not immediately reflected in prices. But these lower profits were more than offset by better results in other groups.

SYNOPSES OF COMPANY REPORTS

Assam Match Co., Ltd.

(*Chairman*: Mr. Tulsidas Kilachand, Bombay.)

Annual General Meeting—23rd June 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	2,55,74	2,11,82
Closing stocks	4,57	4,97
Gross profit	28,17	26,80
To depreciation	2,00	1,87
,, development rebate reserve ..	11	6
,, provision for gratuity	79	60
,, ,, taxation	15,98	12,75
Net profit	9,29	11,53
Adjustments	13	1,50
Appropriations:		
Total available balance	9,42	13,03
To transfer to general reserve ..	3,23	Nil
,, additional taxes on 1961 profits	Nil	1,40
,, super profits tax reserve ..	Nil	5,50
Proposed dividend (taxable) ordy. ..	6,00	6,00
	(20 %)	(20%)
Carry forward	18	13

N.B.—Adjustments relate to the balance brought from the previous year.

Extracts from the Directors' report: The trading result of the year has been satisfactory. The factory worked to its full capacity and the sales were also good. Shortage of matches still continues in the country. The Company is negotiating with the Government for permission to expand the manufacturing capacity. The factory and other property of the Company have been adequately maintained.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,00,000	Gross block	50,67,241
Reserves and surplus ..	43,28,188	—Depreciation ..	27,77,600
Other liabilities ..	18,72,794	Net block	22,89,551
		Work-in-progress ..	1,04,148

,, Ordy. shares	3,24	1,26
	(15%)	(5.80%)
Carry forward	*	*

N.B.—Adjustments relate to balances brought forward from the previous year.

* Represents only an amount of Rs. 290 for the year 1963 and Rs. 63 for 1962.

Extracts from the Directors' report: The Company was converted into a public limited Company on 31st October 1963 with the object of offering to the public both equity and preference capital, which became necessary on account of the large expansion, which is envisaged in the manufacturing activities of the Company and for the establishment of new units; also on account of the advisability of increasing the participation of the public in its ownership.

In keeping with the forward policy, the Company has set up an up-to-date laboratory for the development of new products. As a result of extensive research, two new types of enamelled wires have been successfully brought out. These are self-solderable wires, which are extensively used in electronics and radio industries. The commercial production of this item, has been started and the product has been well received on the market. The other product is thermobonding type of enamelled wires which are used in the bicycle dynamos. Extensive preliminary tests have been carried out and the Company hopes to go into commercial production of this item shortly.

With a view to diversifying its activities, the Company has planned to set up a new steel and alloy steel wire plant. These wires are used in the manufacture of springs, core wires for ACSR conductors, pre-stressed concrete wires, etc. The order for necessary machinery has already been placed and construction of building is being taken in hand, and it is expected that this unit will go into commercial production towards the end of 1964. The Company is also expanding its existing lines of manufactures, namely, super enamelled wires and double paper covered strips and wires. Machinery for expanding the super enamelled wire unit has been received and installed and the unit will go into production by the end of April 1964. The machinery for the expansion of double paper covered strips and wires unit has been ordered out and is expected to arrive shortly and it is hoped that this will go into production towards the end of September 1964.

The implementation of the expansion scheme of the above two units during the 1964 will result in increase in the production by at least 20 per cent. Correspondingly the sales turnover and the profit during the current year may be expected to rise.

The Company's sole selling agents, the Cable Marketing Company, continue to make progress in the sale of its products by organising a net-work of distributors and dealers throughout India. The Company's products, both winding wires and cables and wires enjoy high reputation in the market throughout India. The Company has been able to find ready market for its products, because of the experience of the selling agents for the past several years in handling the Company's products and the continuous efforts made by them in pushing their sales.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	23,72,500	Gross block	51,92,615

N.B.—Adjustments relate to the balance brought forward from the previous year.

Extracts from the Directors' report: The foundry production increased by about 6 per cent over the previous year and a steady progress was maintained due to the drive for higher production. Costs, however, have not stood still and some of the notable increases were on account of power, fuel, scrap and labour. In order to keep pace with the growing demand in the country, an application was submitted in August 1963 to the Government for expanding the output of steel castings to 1,000 tonnes a month, and the proposals have been accepted by the Government. There has been a slight improvement in the output of the structural shop as the fabricated tonnage increased by about 4.5 per cent over the previous year. Production, however, suffered throughout 1963 due to the shortage of electrodes and the constant difficulty in obtaining matching steel sections. There has been an all-round improvement since then and now that the proposals for expanding the capacity to 950 tonnes per month have been accepted by the Government, it is hoped that the tonnage fabricated will show a steady rise in the current year.

The effects of price and distributional decontrol of a large number of steel sections have still to be assessed but there seems little doubt that the results of the fabrication division will be affected to some extent. The Company's products have met with increasing demand and the order books for steel castings as well as structural steelwork are fairly full. The current modernisation and expansion schemes are expected to be completed by 1966.

It is also proposed to make a Rs. 40 lakhs debenture issue later this year and in this connection negotiations are under progress with the Commonwealth Development Finance Co. Ltd., London, and the Life Insurance Corporation of India, Bombay.

Relations with labour continue to be satisfactory on the whole and the management was particularly pleased to be able to conclude lengthy negotiations over a revised wage structure which resulted in a generous settlement for all workers. In conformity with the progressive outlook of the Company, a fair price shop has also been established to see that essential food supplies are made available for workers living in our industrial estate.

Accounts in brief as at 30th November 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,64,800	Gross block	1,15,97,149
Reserves and surplus .	65,08,048	—Depreciation ..	56,44,607

No. of Employees (Number) ..	2,240	2,405	2,508	2,438

* This has been arrived at after deducting provision for super profits tax of Rs. 80,000 and adding Rs. 17,319 for provision for previous year made in 1963 Accounts.

Extracts from the Directors' report: Working and Sales: The sales during the year under review, have shown some improvement as compared with the previous year. The profits, however, have slightly declined, due to general rise in prices of all stores and the fact that the prices obtained for finished goods could not be increased on account of voluntary price control on cotton textiles. Under the circumstances, the Directors consider the working results satisfactory. Due to keen competition in foreign markets, there has been a fall in the Company's export sales; the quantum prescribed under the Export Promotion Scheme has, however, been exceeded.

Renovation and Modernisation: Implementation of the programme of renovation and modernisation of the mills, is being continued.

Expansion of Mills:— An Industrial Licence has been received by the Company for the installation of additional 12,500 spindles, and work in this connection is in hand. The land required for this purpose adjacent to the mills is being acquired, for which a special resolution for approval of the shareholders is included in the notice of the annual general meeting. A general permission has been given by Government to all cotton textiles mills in the country to install additional spindles to the extent of 7½ per cent of their existing total spindleage. Under this scheme the Company is entitled to install a further 2,205 spindles.

Adoni Spinning and Weaving Co., Ltd.

(*Managing Agents*: Kothari & Sons Ltd., Madras.)

Annual General Meeting—27th May 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962

	(9%)	
,, Pref. shares (6%C)	1,56	1,56
Carry forward	72	53

N.B.—Adjustments relate to the balance brought down from the previous year.

Extracts from the Directors' report: During the year under review, as in last year, all the 24,000 spindles worked three shifts throughout the year. The total number of days worked during 1963 was 352 as against 342 in 1962. Sales have registered a rise from Rs. 1.50 crores in 1962 to Rs. 1.54 crores in 1963. This rise in sales can be attributed to upward revision in ceiling prices of yarn of 20s and 40s counts effective from February 1963.

The Company is liable to pay surtax on its profits in terms of the Finance Bill of 1964. The surtax in respect of the profit made during the year under review would be approximately Rs. 1,06,000. The Company is not liable to pay dividend tax, as the Finance Bill provides exemption from the payment of dividend tax for a period of 5 years from the date of payment of the initial dividend.

There was no significant addition to the plant and machinery during the year under review except conversion of some of our ring frames from single motor drive to dual motor drive, on which a sum of Rs. 27,000 was spent. Towards the end of the year, 48 Nos. F. S. Yurin Evercleaners, which had been ordered earlier, were received and are being erected.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	44,99,600	Gross block	85,95,885
Reserves and surplus .	12,43,255	—Depreciation ..	37,67,653
Other liabilities ..	36,04,053	Net block	48,28,232
		Investments	3,34,775
		Current assets ..	36,20,044
		Cash	5,63,867
Rs. ..	93,46,918	Rs. ..	93,46,918

* Paid-up capital consists of 300,000 equity shares of Rs. 10 each fully paid and 200,000 6% tax free cumulative preference shares of Rs. 10 each paid.

MAFATLAL TEXTILE GROUP RESULTS

PERFORMANCE OF SASSOON SPINNING THE BEST

THE results of the four textile mills, belonging to the Mafatlal group, namely, the Standard Mills Company Ltd., the Sassoon Spinning and Weaving Company Ltd., the Mafatlal Fine Spinning and Manufacturing Company Ltd., and the New Shorrock Spinning and Manufacturing Company, Ltd., faithfully follow the general pattern set by other textile units inasmuch as each shows a fair improvement in the turnover but less than a proportionate rise in gross profit. The profit-margin (ratio of gross profit to sales) in each case shows a decline owing to the continuance of the voluntary price regulation scheme, on the one hand, and the steady rise in the prices of cotton, stores, colours, chemicals etc., the increase in the rate of statutory provident fund and the need to pay premium to purchase a part of export obligation under the export scheme of the Indian Cotton Mills Federation, Bombay, on the other. The net profit of each company has also been affected on account of additional provision of depreciation in respect of third-shift allowance and an additional tax burden under the provision of the Finance Act 1964. The main reason for the heavier tax burden is that the rate has been increased by 10 points to 60 per cent, as all the companies come within the mischief of the old Section 23A (now Section 104) of the Income-tax Act. If nevertheless the plough-back has been stepped up in each case, it is only by drawing an equally heavy amount from the reserves previously created. Standard Mills and Mafatlal Fine have maintained the dividend at the previous years level while New Shorrock has reduced it, but, as this is payable on an enlarged capital, the amount required for this purpose is actually higher. Sassoon Spinning, on the other hand, has doubled the dividend. As for the details of the results of individual mills, readers' attention is invited to the comparative table at the bottom of this page.

Standard Mills

Consequent upon the rise of a little over five per cent in the net turnover, that is exclusive of the excise duty paid, from Rs. 881.28 lakhs to Rs. 927.33 lakhs and in the closing stocks of finished and processed goods from Rs. 92.68 lakhs to Rs. 99.78 lakhs, the gross profit of the Standard Mills has advanced by Rs. 17.91 lakhs to Rs. 135.54 lakhs. The profit-margin (ratio of gross profit to sales) has, therefore, increased from 13.4 per cent to 14.6 per cent. But it still falls short by almost 6.2 points of the record level reached during 1960, the most profitable year enjoyed by the textile industry. The rise in gross profit is, of course, accompanied by large essential provisions. The Managing Agents' commission has gone up from Rs. 5.53 lakhs to Rs. 5.72 lakhs and so also the provision for depreciation by as much as Rs. 13.61 lakhs to Rs. 52.10 lakhs. Accordingly, the profit subject to taxation is only moderately higher at Rs. 77.72 lakhs as against Rs. 73.61 lakhs for the year before. The provision for taxation absorbs more at Rs. 43.16 lakhs as against Rs. 42.64 lakhs, so that resultant net profit at Rs. 34.56 lakhs is only Rs. 3.59 lakhs higher than that for 1962. After augmenting this with Rs. 28.60 lakhs withdrawn from the development rebate reserve, the Directors have transferred Rs. 31.72 lakhs to reserves, of which Rs. 10.02 lakhs go to the credit of the development rebate reserve and Rs. 21.70 lakhs to the general reserve. The maintenance of dividend at Rs. 20 per share, subject to deduction of tax, takes up Rs. 30.73 lakhs as before.

Sassoon Spinning

Of the four mills, it is the Sassoon Spinning and Weaving Company Ltd. which has put up the best performance during the year, thanks to the renovation and modernisation carried out in the past few years. The realisation from the sale of cloth, yarn, waste, etc., has expanded by Rs. 76.13 lakhs to Rs. 762.08 lakhs and because the closing stocks are also higher the gross profit has risen quite sharply from Rs. 67.87 lakhs to Rs. 94.06 lakhs, despite cost inflation. Since the provision for depreciation has advanced sharply from Rs. 27.36 lakhs to Rs. 37.92 lakhs, the rise in the provision for the Managing Agents' commission has only been small, from Rs. 3.38 lakhs to Rs. 4.26 lakhs. However, the provision for taxation is substantially higher by Rs. 9.45 lakhs at Rs. 27.17 lakhs so the net profit shows only a modest improvement of Rs. 5.30 lakhs to Rs. 24.71 lakhs. Practically the whole amount has been transferred to reserves, with the development rebate reserve getting Rs. 10.61 lakhs and the general reserve Rs. 14.10 lakhs. In order to facilitate the payment of a dividend of 20 per cent, as against only 10 per cent last year, the Directors have withdrawn a sum of Rs. 16.00 lakhs from the reserve.

Mafatlal Fine

The performance of the Mafatlal Fine Spinning and Manufacturing Company Ltd. is also quite encouraging, though less so than that of Sassoon Spinning. Sale proceeds net of excise duty paid are reported higher at Rs. 335.87 lakhs as compared with Rs. 309.00 lakhs in 1962. The gross profit is bigger at Rs. 76.72 lakhs, as against Rs. 67.29 lakhs for the year before. Closing stocks too are up, from Rs. 28.83 lakhs to Rs. 32.91 lakhs of which only less than a third or Rs. 11.54 lakhs are in finished goods. Unfortunately there has been an all-round increase in essential provisions—that for the Managing Agents' provision moving up from Rs. 5.15 lakhs to Rs. 5.59 lakhs, for depreciation from Rs. 17.58 lakhs to Rs. 21.75 lakhs and for taxation from Rs. 19.04 lakhs to Rs. 26.55 lakhs, as a result of which the net profit actually stands reduced by Rs. 2.69 lakhs at Rs. 22.83 lakhs. From this Rs. 3.18 lakhs have been credited to the statutory development rebate reserve and Rs. 17.75 lakhs to general reserve. A further sum of Rs. 1.86 lakhs has also been earmarked for the payment of preference dividend. Because of drop in profits there is again to be no change in the ordinary dividend which, therefore, remains pegged at 30 per cent again. To facilitate the payment of dividends for the year under review, a sum of Rs. 17.55 lakhs has been transferred back from the reserves. The carry forward is, however, more or less unchanged at Rs. 16,774, as against Rs. 18,095 brought in.

New Shorrock

In contrast to the results achieved by the above three companies, those of the New Shorrock Spinning and Manufacturing Company Ltd. are distinctly disappointing. The turnover has no doubt risen further from Rs. 595.85 lakhs to Rs. 623.61 lakhs and the closing stocks from Rs. 50.86 lakhs to Rs. 53.23 lakhs, but the gross profit has decreased, though only modestly, by Rs. 2.79 lakhs to Rs. 134.60 lakhs. In consonance with this decrease in gross profit, the provision for the Managing Agents' commission has declined from Rs. 7.28 lakhs to Rs. 6.92 lakhs, and that for taxation is likewise lower at Rs. 54.66 lakhs, as against Rs. 58.60 lakhs (inclusive of arrears of Rs. 5.62 lakhs in respect of 1961). The rise of Rs. 4.30 lakhs to Rs. 28.14 lakhs in the provision for depreciation, however, fully covers the saving in the other two provisions and this leaves a reduced net profit of Rs. 44.88 lakhs in contrast to Rs. 47.67 lakhs for the previous year. Although the profit has been supplemented by Rs. 19.88 lakhs withdrawn from reserves, credits to reserves have also been stepped up from Rs. 15.38 lakhs to Rs. 28.86 lakhs including Rs. 4.17 lakhs to the development rebate reserve. Since the balance is inadequate to maintain the dividend on the enlarged number of shares, the rate has been stepped down, from Rs. 45 per share of Rs. 125 each or 36 per cent to Rs. 40 per share or 32 per cent.

Modernisation

Considerable progress was made by each company during the year under report in implementing the renovation and modernisation of mills. Substantial sums were spent on the construction of buildings and the purchase and installation of plant and machinery. Orders for further additions to buildings, plant and equipment have also been placed. Since this is sure to require a substantial capital outlay, which the internal resources of the companies may not be able to cover in full, the Directors of most of the mills are seeking permission of the shareholders at the forthcoming annual general meetings of the companies to raise large amounts through borrowings.

The Directors of the Standard Mills are most singularly silent on the progress made by the new venture of the Company, namely, the National Organic Chemical Industries Ltd., even though the Chairman, Mr. Arvind Mafatlal, had assured the shareholders at the annual general meeting last year that he would be giving more details about the scheme on his return from America after finalising the collaboration agreement with two or three firms there. The Directors of Mafatlal Fine, on the other hand, have informed the shareholders that the Company has received licences for import of plant and machinery for the fluorin chemicals project and that orders would be placed as soon as specifications were finalised. They further state that delivery of foreign plant and machinery was expected to be completed by August 1965 and that this plant would be put into commission by the end of 1965 or early in 1966.

Financially, all the Companies are in a fine shape. The share capital is substantially supported by reserves. Although the borrowings are moderately high, all current liabilities and provisions are quite adequately covered by current assets, loans and advances. The gross block is well written down and the net block, inclusive of capital work-in-progress, forms generally a very reasonable proportion of own funds. The market value of quoted investments is considerably higher and the proportion of unquoted investments in this total portfolio is small.

The current market prices of the four scrips and the net return they fetch are as follows:

	Face Value Rs.	Price Rs.	Yield %
Standard Mills	100	606.00 cum-div.	2.7
Sassoon Spinning	10	36.25 ,,	4.6
Mafatlal Fine	100	500.00 ,,	5.0
New Shorrock	125	817.50 ,,	4.0

The relatively low yields reflect the confidence of investors in these scrips.

NEW PUBLICATIONS

Monetary Policy and Central Banking in Contemporary Japan. By Prof. Hugh T. Patrick. Published by The University of Bombay. Pages: 219. Price: Rs. 9.50.

THE Japanese economy, particularly in the post-war period, has indicated how amazingly high rates of increase in productivity and income growth could be possible in spite of the limitations imposed by the limited natural resources and the co-existence of capital-intensive model industry with labour-intensive small-scale industry. In any sustained growth, money and capital market have to play a significant role. The banking system has to be responsive.

Prof. Hugh T. Patrick, who was for sometime a visiting Professor at the Bombay University, had opportunity to study Japanese language materials, and as a result of the research carried out by him, he delivered a series of three public lectures in March 1962 at Bombay which have been suitably edited. The subject of monetary policy and central banking in contemporary Japan has been dealt with in nine chapters. The first four give the background, dealing with the various types of financial institutions and the institutional conditions that make monetary controls possible. The efficacy of the various central banking weapons of monetary policy—open market operation, reserve requirements, discount policy, selective control etc. are dealt with in the next five chapters. The chapter on the application of Bank of Japan techniques of monetary control contain an appraisal of the monetary policies and certain features of the impact of the policies upon the economy. The chapter on conclusions provide a good summing up.

The task before the Japanese economic policy makers was how to facilitate capital formation at a rate sufficiently high to obtain rapid economic growth, but not so high that the requisite imports would be greater than Japan's ability to pay for them through exports and foreign borrowings. In post-war Japan, corporate investments have been financed to a considerable extent by external funds, especially in lean periods. With relatively undeveloped capital markets and the lesser importance of financial intermediaries, corporate borrowers have had to rely upon the banking system as a major source of funds.

The commercial banking system in Japan is centralised with a small number of city banks; the other types of financial institutions are relatively unimportant. With a relatively restricted short-term money market and long-term securities market, the Bank of Japan has been able to influence a good deal the position of banks. With the financial system basically illiquid, the Bank of Japan had been effective but the warning is that, because of the lack of the liquidity cushion in the financial system, the Bank of Japan must take care not to force a liquidity crisis by too sharp an application of its measures of monetary restraints. Though the capital formation requirements have been met in this manner, was the monetary policy effective in solving the balance of payments problems that emerge because of the high growth rates and the structural need for imports to sustain the growth? The Government has depended less upon measures of fiscal policy or foreign exchange rate adjustment, so that monetary policy has been the major weapon of restraint used by the authorities. The author judges the efficacy of the monetary policy on two alternative criteria, namely, the degree to which it serves to prevent or mitigate a crisis in the economy or the extent to which it solves the crisis once it has risen. Since the fifties, Japan has had to face at least four balance of payments crises. It has been possible to control these by the general restriction of domestic investment demand, thereby reducing the demand for imports, while at the same time leading to a reduction in price levels, so that exports have become more competitive.

Though the economy is of the private free enterprise type, the Government takes a more direct role in stimulating economic growth. While the Government avoids direct controls over domestic price and output, it relies upon fiscal and monetary policy. At the same time, it is significant to note the Bank of Japan's subservient position relatively to the Ministry of Finance and hence the Government is likely to continue, and unless an exceptionally strong Government happens to be in office, it is unlikely that the Bank will have a major influence on the determination of Government economic policy or have an effective independent policy of its own.

A fact of the money rate structure of the Bank of Japan which might interest Indian readers is the system of higher rates on borrowing from the Bank within certain stipulated ceiling limits of borrowing at the basic rates, termed the Higher Interest Rate Application System. The conclusion is that the effectiveness of the discount rate system as a cost mechanism of adjustment has not been very strong. "Because of the utilisation of the commercial bank maximum lending rates system the major consideration for business is the availability of bank credit rather than its cost. At the same time, when money is tight the commercial banks not only raise rates where possible but restrict the amount going to less eligible, riskier borrowers in order to satisfy the needs of preferred customers. The fact that the city banks are in debt to the Bank of Japan and have to borrow at a loss arising from penalty rate does restrain the city banks' demand for funds. However, in the short-term, the city banks have been willing to take a loss in borrowing at the penalty rate from the Bank of Japan in order to meet the business demand for funds, to a certain extent at least."

Dealing with the rediscount rate, the author points out that commercial banks have in practice been willing to borrow additional funds from the Bank of Japan, even though incurring short-term losses, since they have attempted to maximise long-term profits by making and maintaining close lending relationship with preferred business customers. He continues that such behaviour has weakened considerably the efficacy of the discount rate as an interest-cost mechanism in restricting the demand for central banking credit. The following final observations of the author are also significant:

"The entire matter of central banking techniques for the implementation of monetary policy are not independent of the degree of the power the central bank has; the development of techniques usually implies the *de facto* provision of new powers to the central bank and thereby requires policy as well as institutional changes. It is difficult to judge whether these developments in Bank of Japan techniques will take place. To the extent that they do not, the Bank of Japan will be forced to continue to rely heavily on its system of credit rationing."

This case study by Prof. Patrick will be a standard work for students of monetary economics.

The Development of Firms. By Mr. A. S. Mackintosh. Cambridge University Press 1963. Pages: 298. Price: 37s. 6d. net.

Corporate taxation is important today in every country, but the interesting question is how the taxation of profits affects the growth of companies. It is, at the same time, an interesting conclusion that the tax system cannot alter a firm's size, willingness to use outside finance or profitability. The development of a firm through time may take many forms and involves changes of many kinds—changes of scale, products, marketing techniques, organisation, equipment, material and personnel. Mr. A. S. Mackintosh, in his publication "The Development of Firms," builds a theoretical model for the way in which firms develop and uses in his model data collected from sample surveys. Data in regard to 36 firms in Birmingham has been analysed to list the author's theory.

The book is divided into four parts. In the first part the theoretical framework is indicated rather elaborately. The main object in studying each of the 36 firms was to identify the conditions which set the active limit to its scale of development and to classify the firms accordingly—finance, market factors (labour, material, equipment, lack of ambition, lack of initiative and maximum rate.) Part II explains the method of inquiry and definitions, while Part III draws together the information about individual firms, compares the characteristics of various groups and presents conclusions in the final chapter about the effects of taxation. Equally important is the last part where a report on each of the firms in terms of the theoretical frame is given.

The value of the publication is not so much in the conclusions arrived at as in the models framed. The tax system cannot alter a firm's size, willingness to use outside finance or profitability. Also a scheme of investment allowance is potentially one of the most effective instruments to encourage the timing of investment expenditure or to encourage a higher rate of investment in the long run. Such is the broad conclusion arrived at by Mr. Mackintosh. Discussing the situation of an increase or decrease in taxation, he concludes that the effects are asymmetrical. The greater the addition to the initial tax burden the greater is the marginal effect on investment, while the greater the reduction the smaller is the marginal effect. It is also observed that, in general, a given change in taxation will cause a relatively small change in the dividend of any firm, if it faces a finance limit, and a relatively large one if it does not. As regards the question whether "tax saving" would be used for additions to financial assets and repayment of debt, the conclusion is that it is only after several years that the accumulated tax savings will represent a significant increase in the firm's financial assets. Further, there is evidence that taxes on profits are to some extent shifted forward, but the author qualifies this by stating that this does not mean that the prices of products of firms which succeed in shifting part of their tax burden are necessarily higher than the prices of similar products made by firms which do not attempt to shift the burden. The ratios of profits to price may be higher in the former firms but their costs in the normal sense may well be lower. He also discusses the effect of tax variations which discourage or encourage particular forms of expenditure. Considering the taxes on profits, which discriminate against payment of dividends, he concludes that for a majority of the firms the general weight of taxation and other factors which influenced dividends were much more important than the discrimination in the rates of tax; however, for two or three firms, profits tax provided an important reason for their decision to borrow instead of issuing preference or ordinary shares. The author approaches the question of investment allowances for two policy purposes, namely, to influence the timing of investment expenditure as a contra cyclical instrument or to encourage a higher rate of investment in the long run and concludes that within certain limitations the scheme of investment allowance is potentially one of the most effective instruments.

As a pioneer work in a field which is very important, the publication is unique. This will certainly give the background for studying further the factors in the development of firms.

Notices

MAFATLAL CHANDULAL AND COMPANY LIMITED

Registered Office:

New Shorrock Spinning and Manufacturing Company Ltd. Compound, Asarwa Road, Ahmedabad-16

NOTICE

To

THE SHAREHOLDERS,
MAFATLAL CHANDULAL & CO. LTD.

NOTICE IS HEREBY GIVEN THAT THE SEVENTEENTH ANNUAL GENERAL MEETING of the Shareholders of the Company will be held on Saturday, the 13th day of June, 1964 at 10.45 a.m. (S.T.), at the Registered Office of the Company in the mill compound of the New Shorrock Spinning and Manufacturing Company Ltd., Asarwa Road, Ahmedabad-16, to transact the business mentioned in items 1 to 6 as ordinary business and also to consider and if thought fit, to pass the Special Resolutions mentioned in the Notice accompanying the Annual Report and Accounts for the year ended 31st December, 1963 being posted to the Members individually at their Registered addresses.

The Explanatory Statement as required by Section 173(2) of the Companies Act, 1956, in respect of the Special Business is annexed to the Notice.

N.B.:—(a) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY OR PROXIES TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(b) A copy of the Articles of Association of the Company is open for inspection of the members of the Company at the Registered Office of the Company between 2.00 p.m. and 4.00 p.m. on any working day.

(c) The Register of Members and the Share Transfer Books of the Company remained closed from Tuesday, the 31st day of March, 1964 to Saturday, the 11th day of April, 1964.

(d) The Dividend, if any, as sanctioned at the General Meeting will be paid to those shareholders whose names stood on the Register of the Company on 11th April, 1964 at the Registered Office of the Company in the mill compound of the New Shorrock Spinning and Manufacturing Company Ltd., Asarwa Road, Ahmedabad-16, between 12.00 noon and 4.00 p.m. on working days and after 25th June, 1964.

(e) Dividend Warrants will be sent to the registered addresses of the shareholders.

By Order of the Board of Directors,

ARVIND N. MAFATLAL,
Chairman.

BOMBAY,
Dated: 22nd April, 1964.

STATE BANK OF INDIA

NOTICE IS HEREBY GIVEN THAT A Local Meeting of the Shareholders of the State Bank of India on the Branch Register of Shareholders kept at the Bombay Local Head Office of the Bank will be held at the Bombay Local Head Office, Apollo Street, Bombay, on Wednesday, the 24th day of June 1964, at 4.00 p.m. (Standard Time), for the purpose of electing a person to be a Director of the Central Board in pursuance of Section 19(1) (c) of the State Bank of India Act, 1955, in place of Shri Pratapsinh Mathuradas a Director of the Central Board who will retire in terms of Section 20 of the Act on the 30th June 1964, but is eligible for re-election.

B. VENKATAPPIAH,
Chairman.

BOMBAY, 25*th March* 1964.

NEWS IN BRIEF

IF everything goes well, the two-million-tonne Barauni refinery in Bihar will commence production by the end of June next.

India exported 51,179 tonnes of spices valued at Rs. 15.3 crores during the financial year 1963-64, as compared with 48,340 tonnes valued at Rs. 13.3 crores shipped in 1962-63.

The Institute of Chartered Accountants of India proposes to start shortly a post-graduate course in Taxation, in addition to the course in Management Accounting which is already being conducted.

Exports of engineering goods (including steel) from India during the first quarter of 1964 aggregated Rs. 306.34 lakhs, as against Rs. 237.88 lakhs in the corresponding period last year, recording an increase of 28.77 per cent.

The Planning Commission has set up a two-man Committee consisting of Dr. V. K. R. V. Rao, member of the Commission, and Dr. K. S. Krishnaswamy, of the Economic Division in the Commission, to draw up a training programme in planning techniques.

A part of the machinery and equipment for the Kathara Coal Washery now being set up in Soviet collaboration has already arrived and the balance is expected shortly. Of the total estimated cost of Rs. 8.5 crores, the foreign exchange component is put at Rs. 3.67 crores.

The Central Government would shortly appoint a committee in consultation with State Governments to fix the price of cane payable to growers, according to Dr. Ram Subhag Singh, Union Minister of Agriculture. Cane growers, in his opinion, should be paid according to the cost of production and sugar contents of cane.

The Union Government has appointed a high-power Committee to consider the unification of the Employees Provident Fund Scheme and the Employees State Insurance Scheme, according to Mr. D. Sanjivayya, Union Labour Minister. Meanwhile, the Government is considering the question of formulating a pension scheme for workers.

The Uttar Pradesh State Electricity Board has finalised a contract worth Rs. 26 crores with a Canadian firm for the construction of the Rs. 55-crore second stage of the Yamuna hydel scheme. The second stage is expected to generate 340,000 kw. of power by the end of the fourth Plan. The first stage of the scheme now being executed which is likely to be completed by the end of 1965, will generate 84,000 kw. of electricity.

Twenty-nine units licensed to establish fresh capacity in steel castings aggregating 123,502 tons, are still to commence production. Also on this list are 36 firms which have been licensed to establish fresh capacity for steel forgings amounting to 129,436 tons. In addition to these, the Union Government has issued letters of intent for annual capacity of 277,700 tons for steel castings and 29,200 tons for steel forgings.

A pilot demonstration centre for implementing an intensive rural and urban health family planning programme is proposed to be set up at Nagpur. The cost of working the centre is estimated at Rs. 1.25 crore, which will be met from out of the Ford Foundation Fund. The recurring and non-recurring expenditure over the first five years is expected to be of the order of Rs. 73.80 lakhs and Rs. 51.75 lakhs, respectively.

The three steel plants in the public sector—Bhilai, Rourkela and Durgapur—will undergo further expansion during the fourth Plan, according to Mr. M. S. Rao, Chairman, Hindustan Steel Ltd. The expansion programme is being prepared by a Steering Committee of experts and specialists appointed by the Union Government. The Committee will take into account all aspects of working of plants and the demand potential in respect of the different types of steel in the country.

The first branch of the Bank of America in India was declared open at Bombay on Tuesday this week. Working with world-wide facilities, this Bank, it is claimed, will provide a full range of banking services with special emphasis on helping local importers and exporters by giving advice, information and business contacts in the U.S. and other countries throughout the world. The Bank has proposals to open more branches in the coming years. There is already a proposal to open two more branches, one at Madras and the other at Calcutta.

A new Indian shipping line, known as Mauryan Shipping Company, Ltd., is being formed in Bombay. The Company will acquire a vessel on 100 per cent credit basis, repayable over a period of 8 to 10 years. This ship will be time-chartered to Central Gulf Steamship Company of Louisiana and repayment of credit will come out of charter hire. The shipping line is studying the possibility of building a vessel in Britain and is in favour of a closed sheller-decker of 13,000 to 14,000 d.w.t. with a speed of about 15 knots.

The blueprint of the State-owned Fisheries Corporation of India, which will take over the development of a modern marine fishing industry during the third Plan period, is expected to be ready by the end of June next. It is reported that many countries like Japan, U.S., Britain, Soviet Union, Norway and Denmark evince keen interest in collaborating with India in this project. It is, however, felt that Japanese technique and equipment will, at least for the initial period, suit Indian fishermen better.

The work concerning the Regulation of Stock Exchanges and the Administration of Securities Contracts (Regulations Act, 1956), have been transferred from the Department of Economic Affairs of the Union Ministry of Finance, to the Department of Revenue and Company Law of the same Ministry. All communications relating to the aforesaid works should henceforth be addressed to the Chairman, Company Law Board, Department of Revenue and Company Law, Ministry of Finance, New Delhi.

A bilateral agreement on covering the extension of investment guarantee agreement to include war risks is expected to be signed shortly between the Governments of India and the U.S. Under an invoked U.S. Government war risk guarantee, the U.S. Government will reimburse a U.S. investor for losses in dollars if the physical property comprising a guaranteed investment suffers major damage from war. The U.S. Government does not expect to claim reimbursement from the Government of India in respect of invoked war risk guarantee.

The State-owned Hindustan Photo Films factory at Ootacamund, now being set up at a cost of Rs. 8 crores, in collaboration with a French firm, Bauchet, is scheduled to go into production early next year. The factory will begin with the manufacture of positive films for the cinema industry, X-ray and roll films, besides photographic printing paper. Since entering into collaboration agreement, the French firm was sold to a U.S. company. It is, however, understood that the U.S. firm has agreed to honour the terms of agreement entered into with the Indian Government.

The Damodar Valley Corporation will be allowed to function as an agency to plan, generate and distribute power in the Valley and to control its four dams. A decision to this effect has already been taken by the Government of India. In future, the irrigation part of the D.V.C's work, including the control of the Durgapur Barrage, will be the West Bengal Government's concern. Actually the transfer of control of the irrigation system took place early this year. The State Government is expected to bring forward necessary legislation to validate the change-over of control. The Centre will then seek to amend the D.V.C. Act accordingly.

A new State-owned undertaking, called Bharat Earth Movers Limited, has been registered as a company with headquarters at Bangalore. It will be entrusted with the task of setting up a factory for the indigenous manufacture of various types of heavy earthmoving equipment in technical collaboration with Messrs. Le Tourneau-Westinghouse Company of the U.S.—a well-known firm in this field. The new factory with the township will be located in the Kolar Gold Field area on a 1,600-acre site being offered free by the Government of Mysore. Government sanction has been accorded for the project, estimated to cost about Rs. 10.50 crores.

An expert Committee headed by Mr. B. P. Patel, Chairman of the State Trading Corporation, has been appointed by the Union Ministry of International Trade to formulate a scheme for the bulk transportation, storage and handling of liquid cargo other than petroleum products, with a view to improving efficiency of operations, reducing cost and maximising foreign exchange earnings. The Committee has been asked to recommend a suitable agency which can be entrusted with the administration of such a scheme. Before formulating the scheme, the Committee will assess the annual exports from and imports into India of liquid cargoes during the next ten years, and will review the existing port, shipping and ancillary facilities for handling bulk shipments. It has been asked to submit its report within three months. Liquid cargo other than petroleum products comprises ethyl alcohol, benzene and glycerine exported from India and methanol, phenol and liquid chemicals imported into India.

* * * *

From Abroad

The Imperial Chemical Industries of Britain has finalised a 50-million sterling deal to erect a terylene plant in the Soviet Union.

The Supreme Advisory Council appointed by President Sukarno has suggested adoption of more concrete steps towards nationalisation of all British companies in Indonesia.

The U.S. Agency for International Development has authorised a $8.5 million loan to help increase electric power capacity to East Pakistan. The U.S. loan will meet the dollar cost for installation of a steam generator in a power plant near Dacca.

Austria has abolished import duty on tea with effect from the 15th inst. The rate of duty hitherto in force was about Rs. 3.20 per lb. with an additional 30 per cent if the tea is imported in individual packing of less than one kilo.

The special working group on shipping, set up at the World Trade Conference now in session at Geneva, has emphasised that the liner conference system for fixing international freight rates and passenger fares is necessary for securing stable rates and regular services.

The Soviet Union has agreed to supply Nepal goods on credit worth 5.8 million roubles. A Soviet Trade Delegation is currently in Nepal negotiating a Soviet-Nepalese trade agreement, under which the two countries expect to exchange capital goods and primary products.

The U.S. Ford Motor Company has reported that its sales rate of both cars and trucks in the first ten days during the current month (May) was the highest for any similar May period in the Company's history, actual sales aggregating 44,468 cars and 10,610 trucks.

The U.S. industrial production index, apparently responding to the impact of the tax cut, rose sharply to the record level of 129.2 in the month of April 1964. This was the steepest rise in the index since last June and reflected a marked increase in the output of cars, steel and other durable goods.

The world's first international white sugar market is due to open at Paris on the 28th inst., and, if it were to prove successful, a raw sugar market will also be opened in three or four months time on lines similar to those already operating at London and New York. The quotations for white sugar will be in francs per metric ton f.o.b. and contracts will be made in 50-ton units. Deliveries will be made at 17 European ports with quotations made upto 16 months ahead.

Belgium's first synthetic rubber plant, built at a cost of approximately £5 million with an annual production capacity of 27,000 tons of butyl rubber, was declared open on the 11th inst. The plant belongs to S. A. Polysar, the wholly owned subsidiary of the Canadian Crown Company, Polymer Corporation. The cost of the plant was met out of the long-term loans from Belgian banks. The bulk of the feed stock for the plant is supplied under a long-term contract from the Grangemouth works of British Hydrocarbon Chemicals.

The World Bank has announced the grant of two loans aggregating $32 million to Pakistan. One of the loans ($17 million) will be given to the trustees of the port of Karachi for the expansion and improvement of the port and the second ($15 million) will be extended for the distribution of natural gas from the Sui field to the northern region of West Pakistan. The port loan is for a term of 25 years with interest at 5¼ per cent a year, including one per cent commission allocated to the Bank's special reserve. The gas loan is for a term of 20 years, with the same interest rate as for the port loan.

The French Government has cancelled the Frs. 100-million of budgetary aid to Tunisia, following the Bourguiba Government's new decree nationalising foreign-owned land. The new Tunisian law is considered to be a unilateral violation of the agreement drawn up in March 1963 for a gradual repurchase of foreign-owned land, and jeopardises the whole principle of co-operation between the two countries. The French Government is also considering other measures of reprisal covering credit facilities, technical and cultural aid and imports of Tunisian products.

The Soviet Union has informed the World Trade Conference currently in session at Geneva that, within the next 20 years, it could increase its imports from developing countries by as much as 12 times the present level. Imports of cocoa beans, for instance, could be increased from 54,000 tons in 1963 to 120,000 tons by 1970 and 350,000 tons by 1980, of coffee from 29,100 tons to 60,000 tons by 1970 and 120,000 tons by 1980, of oilseeds and vegetable oils from 212,000 tons to 300,000 tons and 1,000,000 tons and citrus fruits from 60,200 tons to 180,000 tons and 750,000 tons.

PERSONAL

MR. Farik Ibrahim Abboud, President of Sudan, arrived in New Delhi on Wednesday this week on a five-day State visit.

Mr. Chester Bowles, U.S. Ambassador to India, left for Washington on Thursday this week for consultations with the U.S. Administration.

Mr. B. R. R. Rao, Controller of Training, Heavy Electricals Ltd., Bhopal, has been appointed Adviser on Intra-regional Training in the Colombo Plan Bureau.

Vice-Admiral R. D. Katari, a former Chief of the Naval Staff, has been appointed Ambassador of India to Burma. He is expected to assume charge of his new assignment shortly.

Mr. John P. Lewis, Member of the U.S. President's Council of Economic Advisers, is arriving in India in September next to serve as Director of the U.S. Agency for International Development (A.I.D.). Mr. Lewis will succeed Mr. C. Tyler Wood who has been serving in that post since November 1959.

Mr. Herbert W. Hall, international division technical specialist with Dorr-Oliver Incorporated at the Company's Stamford, Conn., World Headquarters, will head the Company's operations in Japan, Korea, Taiwan, Okinawa and Hong Kong, with effect from 1st June 1964. He replaces Mr. R. Russell Denison who returns to Stamford from Tokyo to assume the post of Assistant Manager for Far East and India.

TREND OF MARKETS

BULLION IRREGULAR

(From Our Own Correspondent)

BOMBAY, 20*th May*

An irregular trend was in evidence in the bullion market during the week under review. Thus, gold ruled distinctly firm, whereas silver drifted lower. The firmness of gold was due to continued demand in the wake of reduced supplies. The reported outflow of a sizable quantity of 14-carat gold from the local market to up-country centres also aided sentiment. Silver, however, was rather depressed, following renewed sales by some stockists and bearish advices from North Indian markets where large supplies of the white metal were said to have arrived from U.P. side.

Goldsmiths in the Punjab State will obtain larger loan facilities from the Government, if the recommendation made by the State Advisory Committee for rehabilitation of goldsmiths is accepted by the Government. The Committee has suggested the raising of the maximum limit of loan granted to a goldsmith from Rs. 2,000 to Rs. 5,000.

Over the week, 14-carat gold scored a gain of Re. 1.75; it was quoted today at Rs. 69, as against Rs. 67.25 on Tuesday last week. Primarily gold advanced by a rupee to Rs. 117. Sovereign picked up a like amount to Rs. 91.

Silver began the week firm at Rs. 260.50, as against the previous close of Rs. 259, but moved down thereafter and touched Rs. 257 today before finishing at Rs. 257.50. The daily average arrivals and offtake were unchanged, the former at 20 bars and the latter at 10 bars.

The international price for gold at London eased from $35.07⅞ to $35.07⅜ per fine ounce. The sterling price of gold, too, declined by ½d. to 250s. 6¾d. There was no change in the quotations for ready and forward silver both of which stood at 111½d. Silver in New York also stayed put at 129.3 cents.

The following table shows the trend of prices during the week under review:

	20-5-1964 (closing)	High	Low	12-5-1964 (closing)
SILVER	Rs.	Rs.	Rs.	Rs.
Ready (996 fine) ..	257.50	260.50	257.50	259.00
GOLD				
Ready (14 carat) ..	69.00	69.00	67.50	67.25
Sovereign	91.00*	—	—	90.00*
London—				
Gold	250s. 6½d.	250s. 7½d.	250s. 6½d.	250s. 7½d.
Silver Ready .	111½d.	—	—	111½d.
Silver Forward .	111½d.	—	—	111½d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

A NEW DEPOSIT INTEREST RATES SCHEDULE ?

(From Our Own Correspondent)

BOMBAY, 20*th May*

The busy season is still on with persistent high pressure of demand for credit, and there is as yet no sign whatever of its abatement. Actually, on Thursday, the 14th inst., the first day of this week's report, conditions in the short-term money market were stringent, as the available supply of funds was too insufficient to meet the demand. Borrowers, as a consequence, found it difficult to obtain their requirements, and several banks had to turn to the Reserve Bank for temporary accommodation, in order to satisfy the credit demands of their clients. It was no wonder that the inter-bank call rate rose by a further ¼ per cent to the high level of 6¼ per cent. The tight situation continued practically till the close on Saturday. Since Monday, however, there has been a slight improvement in position owing to some inflow of fresh money, the call rate declining a little to 6 per cent. The tone of the Calcutta market has been a little better, albeit with borrowers over at the rate of 5½ per cent.

Financial circles are most eagerly awaiting the outcome of the deliberations of the Bhabha Committee constituted recently by the Indian Banks Association to revise the existing schedule of deposit interest rates under the Inter-bank Agreement. The Committee is reported to be working on a revised schedule of interest rates for different types of deposits on the following lines:

Usance of deposits	*Proposed rate of interest* (Per cent)
Three days' notice money	2.50
One month	3.00
Two months	3.25
3-6 months	3.75
7-12 months	4.25
Two years	4.50
Three years	4.75
Four years	5.00
Five years	5.50
Over five years	6.00
Saving deposits	3.00

These are to be the standard rates for banks of Category I, that is, banks with deposits of over Rs. 50 crores and Exchange banks. For the banks falling under Category II (with deposits more than Rs. 25 crores but less than Rs. 50 crores) and Category III (with deposits more than Rs. 10 crores but less than Rs. 25 crores), the existing differential of ¼ per cent over the previous categories is proposed to be allowed.

The standard rates of interest for notice money and term deposits at present are as follows:

Notice Money: 3 per cent; 3 to 30 days (inclusive): 3 per cent; 31 to 60 days (inclusive): 3½ per cent; 61 to 90 days (inclusive): 3½ per cent; 91 days and over but less than 12 months: 3¾ per cent; 12 to 24 months: 4 per cent; 24 to 48 months: 4½ per cent; 48 to 60 months: 4¾ per cent; and 60 months and over: 5 per cent.

The Bhabha Committee has yet to decide about service charges, and issue on which there is said to be wide disagreement among bankers.

The 91-day Intermediate Treasury Bills evoked fairly good support, the Bills actually sold from the 13th to 16th inst. amounting to Rs. 354.25 lakhs, as against Rs. 39.50 lakhs a week before and Rs. 80 lakhs two weeks before. The response to the 91-day Government of India Treasury Bills, however, was not encouraging, although the total amount offered was slightly higher at Rs. 2.02 crores, whereas the amount invited (and also accepted) was Rs. 2 crores. The average rate of accepted tenders was unchanged at Rs. 3.000 per cent per annum.

There was a small addition of Rs. 4 lakhs to Rs. 111.77 crores in India's foreign exchange reserves during the week ended 15th May. Of this total, balances held abroad accounted for Rs. 8.31 crores (+Rs. 4 lakhs) and the foreign securities held in the Issue Department of the Reserve Bank for Rs. 103.46 crores (same as in the previous week). Loans and advances to scheduled banks declined by Rs. 10.47 crores to Rs. 68.57 crores, while their deposits rose by Rs. 4.49 crores to Rs. 85.44 crores. Notes in circulation receded by Rs. 6.45 crores to Rs. 25.70 crores.

The total credit made available by scheduled banks to their clients went up by Rs. 4.55 crores to Rs. 1,856.19 crores during the week ended 8th May. Since, at the same time, deposits decreased by Rs. 3.62 crores to Rs. 2,486.52 crores, borrowings from the Reserve Bank were larger by Rs. 15.17 crores at Rs. 79.12 crores. Investments rose by Rs. 2.60 crores to Rs. 621.49 crores, while total cash shrank by Rs. 6.11 crores to Rs. 141.15 crores.

The Gilt-edged market ruled firm. Offerings were scarce, while some buying support was in evidence. Among Central loans, 3½ per cent 1969 spurted by 40 nP to Rs. 97.75 and 1967 by 25 nP to Rs. 99.75. 3 per cent 1986, 3¼ per cent 1965 and 4 per cent 1969 hardened by 15 nP each to Rs. 63.75, Rs. 100.05 and Rs. 99.65, respectively. 6½ per cent 1977 Gold Bonds, however, shed 15 nP to Rs. 118.10. State loans were dull, with the exception of 4½ per cent 1974 Maharashtra which met with some selective buying and gathered 20 nP to Rs. 99.60.

In the foreign exchange market, there was no change in the banks' selling and buying rates for U.S. dollars: Rs. 475.25 and Rs. 474.75 for $100, respectively. In New York, the pound sterling firmed up a little *vis-a-vis* the dollar, the spot rate rising by 0.020 cent to 279.940-279.960 cents and the three months' forward by 0.040 cent to 279.410-279.430 cents.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 20*th May*

In contrast to the easiness witnessed for the past two weeks, the cotton futures market ruled steady during the week under review. The steadiness, in the context of no apparent change in the supply and demand position of cotton nor any bullish development, was attributed to two factors: first, the long and continued delay in issuing the purchase authorisation for the U.S. cotton and, second, rumours of a possible rise in the ceiling price of all varieties of cotton by Rs. 25 per quintal, effective from the next season. In fact, mills were greatly exercised over the undue delay in issuing the purchase authorisation for P.L. 480 cotton and, instead of waiting for American cotton, showed renewed interest in long-staple Indian cotton. Consequently, spot prices tended to look up. This trend favourably affected futures too. The fact that not a single bale was tendered against the May contract on the two notice days during the week, namely, 14th and 18th inst., also imparted strength to futures.

The Jarilla May contract opened the week at Rs. 722 (per three quintals), Rs. 6 higher than last week's closing rate and improved to Rs. 725 yesterday before finishing lower at Rs. 723.50 today, showing a new gain of Rs. 7.50 over the week. The Jarilla August contract, after having commenced the week fractionally higher than last week's closing rate, attracted support, rising to Rs. 727 yesterday before closing at Rs. 724.50 today. The net gain over the week is Rs. 7.50. The undertone of both the contracts at the time of writing is steady.

In the spot market at Sewri, following the prolonged delay in getting U.S. cotton, spinners turned their attention to good quality Indian cotton, good business was reported in such qualities as Digvijay, Co2, Laxmi, Jaydhar, and L.147. A prominent mill group was reported to have purchased as many as 5,000 bales of Digvipay in one day itself. Prices of all popular varieties consequently tended to move up.

Business in foreign cotton was on a very restricted scale although good mill interest was reported in American, East African and Sudan cotton. The purchase authorisation for P.L. 480 cotton has yet to be issued but in the meanwhile the Textile Commissioner announced that he had received advice regarding the availability of about $1.59 million for import of cotton under the manganese ore—cotton barter deal with the U.S. The allocation letters are being issued with instruction to mills to import this cotton immediately.

Export interest in Bengal *Deshi* was very limited. Stray business was, however, reported with Japan and certain continental countries as buyers on a moderate scale. The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Ganganagar 811; Kalyan 800; Hubli Laxmi 1,170; and Co2 1,350.

TRADING IN NEW SEEDS CONTRACTS

(From Our Own Correspondent)

BOMBAY, 20*th May*

Barring castorseeds which were easy, the oilseeds markets ruled distinctly firm during the week under review. Groundnuts continued to rule strong, due to scarcity of offerings, renewed buying by crushers and vanaspati manufacturers, and higher upcountry advices. Trading in the forward section was restricted, owing to the persistent wide gap between forward and spot prices. Linseeds moved up in sympathy with groundnuts and on higher North Indian advices for mustard seeds. Spot prices continued to command a premium over the forward. Cottonseeds were well maintained. Castorseeds no doubt presented a fully steady trend in the earlier sessions of the week following bear covering and scattered support from shippers, but turned easy later in the week, thanks to profit-taking at higher levels, lower spot advices and large tenders (7,000 to 8,000 candies) against the maturing (June) contract.

The Board of the Oilseeds Exchange has decided to permit hedge trading in castorseeds, linseeds and cottonseeds for September delivery from tomorrow (Thursday the 21st inst.). Trading will be subjected to the overall ceilings fixed by the Forward Markets Commission. The actual ceilings are Rs. 186 per 250 kgs. for castorseeds, Rs. 45 per 50 kgs. for linseeds and Rs. 113 per 250 kgs. for cottonseeds. The increase in the ceiling limit from Rs. 43 to Rs. 45 in respect of linseed is below the expectations of trade circles. There has been some hitch about the commencement of business in the groundnut September delivery. The Oilseeds Exchange is pleading for the upward revision of ceiling from the present level of Rs. 241, whereas the F.M.C. is opposing the plea. Trading in the new contract may not, therefore, begin at least for a few days more.

The Groundnut July contract began the week at Rs. 240, as against the previous close of Rs. 239.75, and touched Rs. 240.37 on Saturday. It closed at Rs. 240.25 today. Nizam bold ready put on 12 nP to Rs. 56.37. Khandesh quality was fully maintained at the last week's level of Rs. 57.12. Oil ex-mill strengthened by 25 nP to Rs. 22.10. Railway receipts gained a like amount to Rs. 21.75. Groundnut oilcake expeller July contract hardened by Rs. 3 to Rs. 451.50 on good buying support from Rajkot side and enquiries from shippers.

In the castorseeds section the June contract advanced to Rs. 173.75 on Saturday but lost ground in subsequent sessions and closed at Rs. 171.87 today. The net loss over the week was Re. 1.38. Ready Madras fell by 63 nP to Rs. 33.62. Kanpur shed 50 nP to Rs. 32.50. Oil B.S.S. declined by 10 nP to Rs. 14.30 and Oil commercial by 15 nP to Rs. 13.35.

The Linseeds June contract put on 9 nP to Rs. 42.75. Bold ready was firm at Rs. 44.50. Oil ready, however, lost 5 nP to Rs. 18.

Cottonseeds June moved between Rs. 105 and Rs. 105.50 and finished the week at the latter level.

The following table shows the closing prices of oilseeds and oils on 20th May as compared with those of two previous weeks:

	20-5-1964	12-5-1964	6-5-1964
Groundnuts	Rs.	Rs.	Rs.
July 1964 contract	240.25	239.75	239.87
Nizam bold	56.37	56.25	54.75
Khandesh quality	57.12	57.12	55.87
Oil ex-mill	22.10	21.85	21.50
Oil Rly. Receipts	21.75	21.50	21.30
Castorseed			
June 1964 contract	171.87	173.25	175.00
Ready Madras	33.62	34.25	34.37
Ready Kanpur	32.50	33.00	33.12
Oil B.S.S.	14.30	14.40	14.55
Oil commercial	13.35	13.50	13.75
Linseed			
June 1964 contract	42.75	42.66	42.69
Bold ready	44.50	44.50	44.25
Linseed oil	18.00	18.05	17.75
Cottonseed			
June 1964 contract	105.50	105.00	104.50

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

MEDIUM TEAS FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 14*th May*

A total of 529,000 kgs. was offered in leaf tea sales No. 19 held here on the 12th inst. Quality medium teas was often well maintained, but teas from Nilgiris showed a further decline. The market met with good demand. Brighter liquoring low mediums and mediums evoked useful enquiry and were sold at firm rates, while others were sometimes lower with quality. There was good demand for good mediums, although prices for these were a little easier. Highgrowns elicited restricted enquiry and there were many withdrawals. A few best liquoring Nilgiri teas were sold well, whereas others came to a lower market with quality. Clean black leaf descriptions also were a little easier. Whole leaf grades were irregularly lower, particularly flowery pekoes. Unorthodox teas met with fair support but, here again, these realised lower prices. A small selection of tippy teas on offer came to a lower market.

The quotations per kg. were:

	1964	1963
	Rs.	Rs.
Low medium	4.50-4.90	4.10-4.30
Mediums	4.90-5.30	4.35-4.70
Good mediums	5.40-5.90	4.75-5.40
Nilgiri B.O.P.	5.20-7.95	4.60-8.00

The average price realised in sale No. 19 was Rs. 5.08 per kilo, as against Rs. 5.26 a week ago and Rs. 4.51 in the corresponding sale last year.

In dust sale No. 19 held here today, 208,000 kgs. were offered. The market met with good but irregular demand. There was useful enquiry for coloury mediums which were firm. Low mediums and mediums encountered fair support, but prices for these inclined easier, with a few withdrawals. Highgrowns attracted fair support, but were sold at irregular rates. Residuals kinds came to a lower market, while unorthodox descriptions were barely steady. Clean black grainy descriptions were sold at around last rates.

The average price realised in dust sale No. 19 was Rs. 4.79 per kilo, as against Rs. 4.79 a week ago and Rs. 4.03 in the corresponding sale last year.

Colombo: There was good general demand. Western brokens were lower with quality. Coloury mediums were firm. Lowgrowns met with good enquiry and were sold at slightly dearer rates.

London: *North Indian and other growths*: In Monday's sale, there was good general demand. Better liquoring C.T.C. Assams were fully firm and were sometimes dearer. Dooars were slightly irregular, whereas remainder were steady.

Ceylon and South Indians: 25,239 packages were offered in Tuesday's sale, of which 3,792 packages were from South India. The market met with good general demand. Ceylons received good support and were fully firm to dearer with quality. Plainer sorts, however, were irregular. Teas from South India also were sold in the same pattern.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire:

"*Sale No.* 20: 733,000 kgs. offered. Less demand. Low mediums and mediums 20 to 30 nP lower. Good mediums and highgrowns substantially easier. Unorthodox irregularly lower."

PEPPER RECEDES

(Messrs. Parekh and Co.)

BOMBAY, 19*th May*

After liquidition of May delivery at Cochin which went off the board at Rs. 345, Malabar pepper showed steady improvement during the early part of the week.

Ungarbled pepper at Malabar coast, after advancing from Rs. 320 to Rs. 332, came down to Rs. 328. Garbled hardened to Rs. 342, going down to Rs. 338. July delivery on the Cochin ring exchange, after touching the high of Rs. 374, receded to Rs. 366.

In Bombay, *Vaisakh* delivery improved to Rs. 375, but came down to Rs. 366 and *Jeth* delivery at Rs. 377 from the highest at Rs. 385.

Spot in New York remains steady at $0.37. Singapore is also reported steady.

Ready pepper in the local market is quoted at Rs. 179 for 50 kilos.

The future of pepper will depend upon the size of the new crop of Lampong.

Business in Malabar with New York remained impossible at present, as Lampong was undercutting nearly by $0.2 to $0.3.

FOODGRAINS ARRIVALS POOR

(From Our Own Correspondent)

HAPUR, 18*th May*

Steady to firm trend was witnessed in the foodgrains market during the week, due to poor arrivals and good buying support from consumers here as well as from East U.P. Threshing and winnowing operations were nearly completed and it was gathered that producers were withholding their produce expecting better prices in offseason.

Wheat ruled firm during the week on brisk consumer demand and East U.P. purchases. Prices advanced by Re. 1.50 to Rs. 2.25 per quintal according to quality to be quoted now between Rs. 53.50 and Rs. 56.50 for average quality and between Rs. 58.25 and Rs. 63.25 per quintal for farm produce. Daily arrivals averaged 1,500 to 2,000 maunds a day and stocks reported were small.

Steadier conditions continued in the rice market and prices improved by Re. 1.34 to Rs. 2.67 per quintal on good seasonal demand in the face of declining stocks. Week-end prices were:—Rice *basmati* superior Rs. 96.45 to Rs. 99.13; *sela basmati* Rs. 93.77 to Rs. 96.45; *mainpuri* Rs. 73.68; *ramajwayan* Rs. 81.72; *raimunia* Rs. 83.06; and *gadda* Rs. 73.50 a quintal.

Gram ruled steady during the week. Arrivals were small and prices were quoted at Rs. 56.25 for local quality and at Rs. 55 for Punjab quality. Arrivals averaged 300 maunds daily and local stocks estimated around 2,000 quintals. Barley and *bejhar* ruled firm on poor arrivals in the face of good buying enquiry and prices now quoted at Rs. 41.50 to Rs. 42.50 for barley and at Rs. 41 to Rs. 41.75 per quintal for *bejhar*. *Juwar* and *guwar* also hardened on brisk demand for seed purposes and prices now ranged between Rs. 42.50 and Rs. 44.50 and between Rs. 57.60 and Rs. 58.94 per quintal, respectively. *Methi*, however, drifted lower, due to increased arrivals. Other coarse grains were listless. Week-end prices were:—*Methi* Rs. 5 to Rs. 57.50; maize Rs. 40.50 to Rs. 43.25; and oats Rs. 51.50 to Rs. 52.50 per quintal.

Mixed trend was witnessed in pulses section. While peas and *arhar* advanced on small arrivals, other *dal* prices were subdued on poor demand at higher price levels. Peas advanced by Re. 1 per quintal, as demand was reported brisk from the consuming areas of Madras, Bengal and Bombay. Daily arrivals average 500 to 700 maunds and prices were placed between Rs. 49.25 and Rs. 51.25 for *dara* quality and between Rs. 53.50 and Rs. 55.50 for farm quality. *Arhar* hardened by Rs. 2.50 a quintal to be quoted now to Rs. 70 to Rs. 75 a quintal. *Urd* and *moong* were subdued on slack demand at higher price levels and prices were now quoted at Rs. 66.98 to Rs. 72.34 for *urd* and at Rs. 77.70 to Rs. 91.09 for *moong*. *Masoor* and other *dal* also ruled quiet. Week-end prices were:—Peas *dal* Rs. 53.75; *arhar dal* Rs. 80.38 to Rs. 83.06; *moong dal* Rs. 93.77; *urd dal* Rs. 80.38; *masoor* Rs. 66.98 to Rs. 72.34; *masoor dal* Rs. 83.50; and gram *dal* Rs. 62.96 per quintal.

SUGAR SUPPLY LIMITED

(From Our Own Correspondent)

HAPUR, 18*th May*

Sugar continued to rule firm, thanks to brisk buying support for the marriage and summer season. Supply position was limited and prices in the open market stood around Rs. 165 to Rs. 170 a quintal, as against the controlled price of Rs. 125 a quintal. No early improvement in sugar supply position was in sight and trade circles expected that prices might touch new heights.

Marriage and summer demand being at its peak, *desi khandsari* continued to record buoyant conditions. Demand from east U.P. continued unabated and smuggling activities on Madhya Pradesh and Rajasthan borders was still reported. Stockists from the consuming States of Madhya Pradesh and Rajasthan were building stocks in anticipation of securing export permits from the U.P. Government. The actual rise in the prices of *khandsari* during the week ranged between Rs. 3 and Rs. 10 per quintal according to quality. Week-end prices (in rupees per quintal) were:—*Desi* inferior 120 to 135; medium 138 to 152; superior 162 to 171; non-crystal 141 to 157 and *boora* 152 to 162.

Khandsari in the Kanpur market also touched new height of Rs. 55 to Rs. 70 per maund due to brisk buying enquiry.

Revival of demand from consuming States against fresh import permits in the face of dwindling stock position accounted for the firm trend in *gur* and *shakker* during the week. Daily arrivals averaged about 250 maunds and, as the week's offtake was ten-wagon loads, local stock drifted lower to 8,000 quintals. *Shakker*, too, was in good demand due to acute shortage of crystal sugar. Week-end prices (in rupees per 40 kilogram) were:—*Gur pansera* superior 32; average 30; *kotha* dry 31.75; *shakker* 32 to 34.

KIPS OFFTAKE SMALL

(From Our Own Correspondent)

MADRAS, 18*th May*

Arrivals of kips from tanneries during the week were moderate and offtake for local trade and for shipment small. There were a few inquiries from U.K. for cowhides—light weights—all selections and medium fifths, but very little demand for other lines in hides and calf. Prices ruled weak and the tone was bearish.

Tanned skins market ruled firm. Exporters of pickled goat skins were actively in the market, paying attractive prices which were uneconomical for tanners to follow. Consequently, E.I. tanners were quoting increased prices to their overseas buyers, to the detriment of large export trading in tanned section. There were several inquiries for tanned goat 8/9 and 5½/6 lbs. averages for export, but buyers were counter-offering 3*d*. to 6*d*. per lb. less than sellers' quotations and trading, as a result, was small. As regards sheep, the market was unchanged and export business patchy.

In the London public sales held last week, the quantities on offer were the smallest in the history of the trade; yet the clearance was negligible. Goat skins lost 12*d*. per lb., were sold and sheep gained 12*d*. on current quotations.

TEA IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 19*th May*

The first export sale of new teas was held yesterday. With rapidly advancing arrivals since the last two to three weeks, there was a representative selection of grades on offer, although the quantity was limited. There was a fairly good general demand. That quality teas would meet with good demand had been foreseen even earlier and, in recent sales in Mincing Lane, demand was unsatisfied. In the last week in London, good quality teas included in North Indian offerings aggregating 27,933 packages were taken at hardening prices; the better liquoring C.T.C. Assams were a particular favourite of buyers. Good quality Dooars were also keenly sought at, with the medium and low quality teas recording a firm tendency. That the U.K. needs to build up stocks is evident by the low level of stocks which in the week ended 8th May were only 144.81 million lbs., as against 150 lbs. in the previous week. Judging from the present rate of tea arrivals in Calcutta, it can be said that, by the first week of next month, arrivals would be heavy. Already, tea is claiming a good portion of space in forward liners.

Pakistan has been making attempts to increase tea output. The Pakistan Tea Board has stated that the country's tea output in the year ended March 1964 rose to 55.49 million lbs. from 51.83 million lbs. in the previous year. In March 1964, at 930,000 lbs., production was higher as compared with 420,000 lbs. in March 1963. Until 1961, Pakistan used to export tea. At one time, the yearly quota of 5 million lbs. was increased to 10 million lbs. However, since 1962, Pakistani production has fallen, and this is not even sufficient to meet internal demand in full. Pakistan has taken active steps to increase acreage under tea, and it is expected that, before long, that country would be able to recover its overseas markets.

The difficulties faced by the tea gardens, the small gardens in particular, in regard to finding resources for normal financing of the crop were explained at length by Mr. B. C. Ghosh in his presidential address to the annual meeting of the Indian Tea Planters' Association held in Jalpaiguri on the 16th inst. He said that, as a result of the "unjust treatment" meted out by most of the tea crop financing institutions las year, wage payments to permanent labour were delayed and additional workers could not be recruited to harvest more crop. He estimated the output loss sustained thereby at 5 million lbs, and the foreign exchange loss to the country at Rs. 1 crore.

The I.T.P.A.'s meeting was also addressed by the Union Minister for International Trade, Mr. Manubhai Shah, who, it is encouraging to note, stated that in consonance with the plea of the tea industry for relief from increasing costs and taxation, the Government was considering a proposal to give concessions in order that the industry would have more funds for development. On the question of crop finance, Mr. Shah pointed out to the loan facilities available from the Tea Board. The smaller gardens have been unable to take recourse to these facilities in view of their uneconomic nature. The Minister also referred to the likelihood of Government treating expenditure on re-plantation and new plantation in tea estates as expenditure on revenue account instead of on capital account as at present. The State Governments are also expected to follow suit and they would treat the expenditure of the above type as revenue expenditure under their agricultural income-tax acts.

In the internal sale held last week, dusts on offer aggregating 25,711 chests met with good and general demand. Medium C.T.C's opened quiet, but soon demand picked up. Good C.T.C's were firm at last levels. Plain orthodox teas were also about firm. Good liquoring Assams were steady. Legg-cut teas were readily absorbed. The quotations per 1 kg. inclusive of excise duty were: Good Assam C.T.C. dust Rs. 6.30 to Rs. 6.80; medium Assam C.T.C. dust Rs. 5.00 to Rs. 5.30; legg-cut dust Rs. 4.70 to Rs. 5.10; medium Assam dust Rs. 4.50 to Rs. 5.10; and plain orthodox dust Rs. 4.00 to Rs. 4.30.

During the season's first export sale held yesterday, offerings amounted to 19,044 packages, most of which comprised Darjeelings. Prices were easier at below valuations, although a fairly good general demand was in evidence. Darjeelings were subjected to a large number of withdrawals, but the flavoury lots met with support at hardening rates. Orthodox teas eased, but B.P.S. teas received good attention. C.T.C's were irregular. Suitable teas being limited, no quotations were issued.

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, 19*th May*

The announcement of a sizable fall in output last month, coupled simultaneously with an increase in stocks with mills at the end of last month, came as a disappointment to the jute market, which, therefore, ruled dull during the week under review. Prices also eased, albeit only fractionally. Ordinarily, an increase in stocks would have caused a more marked recession, but this was not so in the present instance, for, since a few months, buying in the export market has been taking place on a hand-to-mouth basis. Mills in both India and Pakistan are working up to their maximum capacity and carrying huge stocks of goods, so that the overseas buyers are assured of sufficient supplies. Naturally enough, they are disinclined to enter into very large forward commitments. Moreover, they have noted that, with the continuance of good weather conditions and good progress in sowing in both India and Pakistan, prospects for the new crop have considerably improved. A higher crop in the two countries is expected and, with abundant fibre supplies, mills would be obliged to continue to operate at the existing enhanced rate of production. At the same time, it was disquieting to note that, although output of mills in India for April at 103,700 tonnes dropped by 9,000 tonnes as compared with the previous month, stocks at 130,100 tonnes rose by 4,900 tonnes. The decline in output was accounted for by lower working hours and it was noted that stocks represented to about five weeks' production.

Stocks at the end of March had amounted to 125,200 tonnes, and thus availability in the month of April aggregated 228,900 tonnes. It follows that demand in the month was of the order of only 98,800 tonnes or less than output in the month. Although this statistical position is discouraging, it was noted that the outlook is not entirely hopeless. For shipping difficulties in the Calcutta port have considerably eased and Argentina, a substantial consumer of hessian, has already started to cover its requirements in bulk. Argentina's purchases this year are likely to exceed last year's level, in view of that country's excellent reports from farms. As in the case of fibre, mills have been compelled to block substantial sums in goods also. This position is not likely to be retrieved in the near future, since foreign consumers generally are lifting goods to meet their immediate requirements only. In other words,

prospects for gunny prices to change in favour of mills are considered to be remote. The continued depression in gunny prices has affected profits of mills and, unless fibre prices are lowered in line with the increased crop having enabled the cultivator to reduce his costs, a happier position for mills is difficult to emerge. Government spokesmen have already indicated that no change in minimum prices for the new season is under contemplation. On behalf of mills, it is pointed out that several factors have contributed to raising their costs. These factors include higher wages bill as a result of the implementation of the Wage Board's recommendations, enforcement of the provisions of the Employees Insurance Act to several mills this year, blocking up of large sums in raw material as well as finished goods, and revision of electricity and coal charges. It should also be noted that Pakistan is further strengthening its competitive power. That country has already announced its decision to construct thirteen more jute mills, one in its Western wing and twelve in its Eastern wing.

With the issuance of the current compulsory purchase quota of 190,000 bales—for the period from 11th May to 27th June—the total of quotas released for this season comes to 7.08 million bales, of which 150,000 bales are for the Jute Buffer Stock Association, 530,000 bales for the non-I.J.M.A. mills, and 6.40 million bales for the I.J.M.A. mills. As soon as the mills complete lifting the latest quota, total purchases by them under the price support scheme would have amounted to 94.4 per cent of the last crop, estimated at 7.51 million bales of jute and mesta. Purchases by jute co-operatives so far amount to 32,140 bales. The balance of 387,860 bales is equivalent to offtake for exports as well as for other purposes. Although the recent rainfall is generally considered beneficial to jute and paddy, the West Bengal Government has apprehended harm to crops in certain areas as a result of accumulated rain water.

Fair support was accorded by mills to fibre during the week under review. Arrivals averaged about 20,000 maunds a day. Mills continued to show preference to selected grades only. Prices quoted as follows: Assam bottoms Rs. 31.50; Daisee bottoms Rs. 33.50; and northern bottoms Rs. 30.50. Although sellers were not disposed to respond to discounted offers, the occurrence of more rains in most jute growing districts and the possibility of an earlier crop are factors which stockists cannot lose sight of.

The announcement of an increase in stocks of goods with mills in the face of a marked fall in output affected sentiment in the goods market during the week. Although a large number of inquiries from overseas countries continued to be received, business done was small. However, the prospect of Argentina lifting 100 million yards of hessian between now and September was noted with satisfaction. The U.S.A. lifted small parcels now and then, and the continued depressed conditions in the New York burlap market give no immediate hope of revival of U.S. interest for bulk quantities. On Tuesday last, ready B. twills slipped to from Rs. 113.80 to Rs. 113.45 and, in sympathy, ready hessian 40" 10 oz. gave way from Rs. 45.25 to Rs. 45.10. At this stage, buying in ready B. twills was revived, and the price on Wednesday improved impressively to Rs. 114.30. Government was in the market for about 700 bales of B. twills against May-June delivery. Hessian 40" 10 oz. was also better, the price quoting at Rs. 45.20. Thursday's feature was short-covering in ready goods, but, in view of depressed conditions in May delivery futures, ready B. twills moved down to Rs. 114.10. However, ready hessian 40" 10 oz. was steadier at Rs. 45.25. At this stage, reports of a small fall in U.S. consumption of burlap in April and of a rise in U.S. stocks affected sentiment and, on Friday, ready hessian 40" 10 oz. sagged to Rs. 45.00. Despite a tender for Government involving 3,500 bales, ready B. twills eased to Rs. 113.65. Over the week-end, the quotations were slightly better at Rs. 45.10 and Rs. 113.90, respectively. Hessian 40" 10 oz. at Rs. 44.85 was depressed yesterday, but, at lower levels, there was good buying in heavy goods and B. twills recovered to Rs. 114.00.

METALS STEADIER

(From Our Own Correspondent)

CALCUTTA, *19th May*

The deeper phase of the acute shortage of metals was reflected in steadier conditions in the Calcutta metal market during the week under review. Advices from the London Metal Exchange showed progress in the recessionary phase in copper, which set in a week ago after several weeks of continued buoyancy. Other metals also registered a down trend. Copper on the New York Commodity Exchange also looked down.

Spot copper wire-bars in London closed lower on balance at £304 a ton, after being higher at £310 earlier in the week. At £287, the three-months' quotation eased by £7. Both spot and three-months' cathodes opened at £285 and closed lower at £277 and £279, respectively. The two positions for the fire-refined metal closed at £272, after opening higher at £282 and £283, respectively. Utensil copper scrap in Calcutta was steady and active and, at Rs. 290 per 100 kgs., rose by Rs. 10. Copper mines all over the world have raised output in an attempt to satisfy the increased level of demand. The Rhodesian Selection Trust group has announced that, in the quarter ended March 1964, its output at 72,978 tons rose by 6,189 tons; output in the nine months to March 1964—financial year ends in June—has come to 198,904 tons, showing a rise of 43,636 tons, as compared with the corresponding previous period. The group's sales in the nine months rose to 181,347 tons from 164,708 previously, sales in the quarter ended March last being 68,096 tons, as against 56,661 tons in the previous quarter and 56,590 tons in the first quarter of the financial year. According to the Chairman, Sir Ronald Prain, production of the Rhodesian Selection Trust is likely to aggregate 301,000 tons in the current financial year. Sales would total 284,000 tons, the balance going to replenish stocks depleted as a result of the strike in one of the Trust's mines. A 2-cent rise per lb. of copper was considered imminent in the United States in an attempt to narrow the gap between the L.M.E. price and the producer price. As from July 1965, the price is likely to rise further, as a result of the proposed Chilean levy of 2 cents a lb. on all exports of unrefined copper.

Tin in Calcutta shed a portion of its recent gain during the week under review, thanks to moderate fresh arrivals. Spot tin on the L.M.E. closed lower at £1,043 a ton, as against £1,047½ earlier. It was reported that there was no difficulty to meet increased Continental demand in full. According to an overseas estimate, the world deficit of tin this year would be greater than earlier estimates. Spot lead in London closed at £86 a ton, after opening at £88¾. Since world consumption of lead is also rising, world stocks at the end of January were only 177,900 tonnes, as against 231,000 tonnes in mid-1963. Lead in Calcutta was firm at Rs. 302 per 100 kgs. Spot zinc on the L.M.E. opened at £125 and, after rising to £127, reacted to £125.

Notices

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

Registered Office:
9, Wallace Street, Fort, Bombay-1

NOTICE IS HEREBY GIVEN THAT THE following Interim Dividends (subject to deduction of Income Tax) have been declared for the year ending 31st May 1964, namely:

Rs. 1.20 per share on 7,34,000 shares of Rs. 25.

Rs. 0.96 per share on 4,20,000 shares of Rs. 25 (Rs. 20 paid-up).

The above Interim Dividends are payable on and after 1st July, 1964, to those shareholders whose names stood on the Share Register of the Corporation on 2nd June, and to holders of Fractional Certificates after such certificates have been exchanged for Bonus Shares in accordance with the prescribed procedure.

Dated at Bombay this 20th day of May, 1964.

By Order of the Board of Directors,

WALLACE AND COMPANY,
Secretaries and Treasurers.

THE NEW SHORROCK SPINNING AND MANUFACTURING COMPANY LIMITED

Registered Office:
Asarwa Road, Ahmedabad-16

NOTICE

To

THE SHAREHOLDERS OF

THE NEW SHORROCK SPG. & MFG. CO. LTD.

NOTICE IS HEREBY GIVEN THAT THE FIFTY-SECOND ANNUAL GENERAL MEETING of the Shareholders of the Company will be held on Saturday, the 13th day of June, 1964, at 9.30 a.m., at the Registered Office of the Company in the mill compound at Asarwa Road, Ahmedabad-16, to transact the business mentioned in items 1 to 6 as ordinary business and also to consider and if thought fit, to pass the Special Resolutions mentioned in the Notice accompanying the Annual Report and Accounts for the year ended 31st December, 1963, being posted to the Members individually at their Registered addresses.

The Explanatory Statement as required by Section 173(2) of the Companies Act, 1956, in respect of the Special Business is annexed to the Notice.

N.B.:—*(a)* A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY OR PROXIES TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(b) An abstract of the proposed Managing Agency Agreement is posted to the Shareholders as required under Section 302 of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960.

(c) A copy of the draft Managing Agency Agreement, a copy of the existing Managing Agency Agreement and a copy of the Memorandum and Articles of Association of this Company and a copy of the draft Agreement to be entered into between the Company and M/s. Mafatlal Fine Spinning and Manufacturing Company Ltd. regarding use of Registered Trade Mark "MAFINISED," are open for inspection of the members of the Company at the Registered Office of the Company at Asarwa Road, Ahmedabad-16, between 12.00 noon and 2.00 p.m. on any working day.

(d) The Register of Members and the Transfer Books of the Company remained closed from Wednesday, the 25th March, 1964 to Saturday, the 11th April, 1964.

(e) The Dividends as recommended by the Directors when declared by the shareholders will be paid at the United Commercial Bank Ltd., Bhadra Branch, Ahmedabad-1, from 18th June, 1964 to 25th June, 1964, during business hours and thereafter at the Registered Office of the Company between 12.00 noon and 4.00 p.m. on all working days except on holidays, to those shareholders whose names stood on the Company's Register on 11th April, 1964. Shareholders are requested to intimate to the Company change in their Registered Addresses, if any.

By Order of the Board of Directors,

MAFATLAL CHANDULAL & COMPANY LTD.,

L. D. VASA,
Director,
Managing Agents.

BOMBAY,
Dated: 22*nd April,* 1964.

HOPE'S METAL WINDOWS (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Sixth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 11th June, 1964, at 3.30 p.m., to consider the Accounts of the Company for the year ended 31st December, 1963, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 5th June, 1964 to 11th June, 1964, both days inclusive.

By Order of the Board,

BALMER LAWRIE & Co. LTD.,

D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *1st May,* 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

THE CHAMPDANY JUTE COMPANY LIMITED

AT A BOARD MEETING HELD TODAY, THE Directors decided to recommend to the Shareholders in General Meeting the payment of a final dividend at the rate of 25 per cent or Rs. 2.50 per each share of Rs. 10 for the year ended 31st March 1964. The dividend will be subject to deduction of tax.

A notice calling the Annual General Meeting on 16th June, 1964, will be published shortly.

By Order of the Board,

JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, NETAJI SUBHAS ROAD,
CALCUTTA, 19*th May,* 1964.

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities : repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Including Defence Savings Banks Deposits upto 1954-55. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked ' E ' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings amount to Rs. 29.22 crores. Fifteen-year Cumulative Time Deposits commenced from June 1962—the outstandings at the end of Jan., 1964 amount to Rs. 51 lakhs. Twelve-year National Defence Savings Certificates commenced from 15th November 1962 and the outstandings at the end of Jan., 1964 amount to Rs. 137.34 crores. Ten-year Defence Deposit Certificates were issued from 10th November 1962 — the outstandings at the end of Feb., 1964 amount to Rs. 27.40 crores. Five-year Premium Prize Bonds were issued from 1st January 1963 and outstandings at the end of Dec., 1963 amount to Rs. 5.49 crores.

A new series of premium prize bonds, 1964 was issued since January 1st 1964. The outstandings at the end of Jan., 1964 was Rs. 17 lakhs.

Progressive net repayments at the end of period since 15th Aug., 1947.

†These were issued from 1st June 1957 to 14th November 1962 with a maturity of 12 years, and these series have now become defunct.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. C.R.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : ' A ' shares and ' B ' shares—these are indicated by the same letters ' A ' and ' B ' under the columns ' Paid-up Ordinary Capital ' and ' Paid-up ' per share.

Accounts :—Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

(*Concluded from page 871*)

part of its import commitments, but these loans also entail a heavy burden of repayment obligations. There is a limit up to which such obligations can be accumulated. Viewed thus, West Germany will, indeed, be helping India considerably in its task of economic development, if, besides granting larger loans on more liberal terms, it opens its gates wider to the commodities exported by India.

Hindustan Polymers

Hindustan Polymers Limited is entering the capital market next week to raise Rs. 1.27 crore by issuing to the public 127,400 equity shares of Rs. 100 each at par. The subscription list will open on 26th May and will close on 4th June or earlier at the discretion of the Directors but not, in any case, before 28th May. The amount payable is Rs. 25 per share on application and Rs. 25 per share on allotment. The balance of Rs. 50 per share is payable in two calls of Rs. 25 each, the first call to be made not earlier than two months after the date of allotment and the second not earlier than two months from the date of the first call. The entire issue of the public has been underwritten by a long list of 15 underwriters which includes, among others, the Life Insurance Corporation of India, the Industrial Finance Corporation of India, the Industrial Credit and Investment Corporation of India and the Bank of India.

Hindustan Polymers Ltd. is a new company registered on 29th November 1962. Details of its capital structure, composition of the Board of Directors, etc., are published on pages 892 and 893. As will be seen therefrom, the present public issue accounts for Rs. 1.27 crore out of the total issued capital of Rs. 3 crores. As many as 141,990 shares of Rs. 100 each have been firmly reserved for subscription by the promoters, the Directors and their friends and some of the underwriters. In addition, 30,810 equity shares of Rs. 100 each have already been taken up by the Directors and their friends, etc.

The Company proposes to manufacture power alcohol, styrene monomer, polystyrene and its copolymers, etc. Molasses and benzene will be the basis for the production of styrene monomer and polystyrene. The Company expects to obtain sufficient molasses at reasonable prices from sugar factories in Andhra Pradesh. It may be noted here that the factory is proposed to be set up at Visakhapatnam (Andhra Pradesh) on a plot of about 250 acres. Production of power alcohol will start by the first quarter of 1965 and the other items by the middle of 1965. Ethylene will be produced by dehydration of power alcohol which in turn will be produced by distillation of molasses. Benzene will be obtained from steel works and refineries in the country. Styrene can also be used to produce synthetic resins, synthetic rubber and foam styrene.

The third Plan has laid down a production target of 84,000 tons per annum for all types of plastics. Of this, the target for polystyrene, including styrene alloys, has been set at 15,000 tons per annum. The Government of India has so far licensed a total manufacturing capacity of 14,000 tons per annum for polystyrene and its copolymers. Of this, the share of Hindustan Polymers Ltd. is 7,500 tons per annum. The demand for polystyrene and its copolymers is steadily increasing and the Company should, therefore, have no difficulty in finding a market for its products. Polystyrene could be used in the manufacture of a large variety of products, such as refrigerators, radio cabinets, air conditioning units, telephone receivers and apparatus, gramophone records, automobile parts, tape recorders, batteries, toys and household articles. There is a good home market for moulding powders, films, and sheets and good export prospects, provided the prices are competitive.

The estimated capital outlay on the project is Rs. 6.35 crores which is to be met by the issued capital aggregating Rs. 3 crores, foreign exchange loans amounting to Rs. 2.16 crores and bank borrowings of the order of Rs. 1.19 crore. Of the foreign exchange loan of Rs. 2.16 crores, a sum of Rs. 66.67 lakhs in pounds sterling will be supplied by the Commonwealth Development Finance Company, London, Rs. 75 lakhs in U.S. dollars by the Industrial Credit and Investment Corporation of India, Rs. 54.33 lakhs in French francs by the Industrial Finance Corporation of India and Rs. 20 lakhs in pounds sterling by the Mercantile Bank Ltd., London. The Company has entered into arrangements with two foreign companies for technical assistance and collaboration. These are: Universal Oil Products Company Inc. of Illinois, U.S.A., said to be a world leader in petroleum refining and petro-chemical industries, and BX Plastics Ltd. of Manningtree, England, a wholly-owned subsidiary of Bakelite Xylonite Ltd. London, which has agreed to take up 2,000 equity shares of Hindustan Polymers.

The Company, as will be seen from pages 892-893, has a competent Board of Directors, with Mr. Kasturbhai Lalbhai, the famous Ahmedabad industrialist, as Chairman.

Cominco Binani Zinc

Zinc is one of the principal non-ferrous metals and is used extensively for galvanising and die-casting, as also in dry batteries and copper alloys. It is being entirely imported now, as the only unit licensed to produce some 18,000 tonnes of zinc per annum is still under construction in Rajasthan. Imports are currently running at the annual rate of about 90,000 tonnes, involving a foreign exchange drain to the tune of Rs. 10 crores. It has been estimated that the country's requirement of this non-ferrous metal will go up to 187,500 tonnes in 1965. Presumably the demand will go up further during the fourth Plan period. There will thus be a large and expanding market for this metal. It is to this market that Cominco Binanj Ltd., the announcement of the capital issue of which is published elsewhere in this journal, will begin to cater in a substantial way after mid-1966 when commercial production is scheduled to commence. With a capacity for producing 12,000 tonnes of zinc per annum initially and 20,000 tonnes ultimately, the Company's plant, which will be located near Alwaye in Kerala, will also be capable of producing about 45,000 tonnes of sulphuric acid per annum. The plant will use imported ores/concentrates for manufacturing zinc.

The aggregate capital requirements of the project are estimated at Rs. 4.95 crores, of which Rs. 2.1 crores will be met from the proceeds of capital previously issued and of the present issue and the balance as loans from the Industrial Finance Corporation of India, Kerala State Industrial Development Corporation, Export Credits Insurance Corporation of Canada and commercial banks. The Company, incorporated in 1962, has an authorised capital of Rs. 3 crores divided into 30 lakhs equity shares of Rs. 10 each. Of its issued and subscribed capital of Rs. 1,26,00,070, as much as Rs. 84,00,000 has been taken up by the collaborating Canadian firm of "Cominco" (The Consolidated Mining and Smelting Company of Canada Ltd., Montreal) and Rs. 42,00,000 by Metal Distributors Ltd. of Calcutta. The Canadian collaborators have paid up to Rs. 16,80,000 on their share of subscribed capital, and Metal Distributors Ltd. have paid up to Rs. 8,40,000.

The present issue is for Rs. 83,99,930 divided into 8,39,993 equity shares of Rs. 10 each. Of this issue, 80,000 shares are reserved for shareholders in Metal Distributors who will be given a preferential allotment of three shares for every 20 shares registered in the books of that Company on 11th May 1964. The remainder of the issue is now offered to the public at par for subscription in cash. The terms of payment are Rs. 2 per share on application and Rs. 2 per share on allotment. The balance of Rs. 6 per share will be payable in one or more calls at such time as the Directors determine. There will be an interval of at least six months between allotment and the first call. Applications for shares must be for a minimum of 50 shares or for a multiple thereof. The entire issue offered for public subscription has been underwritten. The subscription list will open on 27th May 1964 and will remain open till 6th June 1964, unless closed earlier at the discretion of the Directors.

The Company's Chairman is Mr. G. D. Binani of the Binani Metal Works Ltd. The House of Binanis is well known for its knowledge and experience of non-ferrous metals. Among the Directors, four belong to Canada. Mr. Charat Ram is also one of the Directors. Considering the excellent auspices under which the Company's affairs have been organised, there is every likelihood that it will commence production as per schedule. The Directors have studied the cost of manufacture and marketing in detail. It is their opinion that, in the absence of unforeseen circumstances, the Company will, in due course, earn sufficiently to justify the payment of a reasonable dividend and also build up reserves for future development. This reasonable expectation has every chance of being fulfilled in the context of the vast market for zinc.

Notice

KHANDELWAL FERRO ALLOYS LIMITED

Registered Office:

"Khandelwal Bhavan," 166, Dr. Dadabhai Naoroji Road, BOMBAY-1

NOTICE IS HEREBY GIVEN THAT THE 6th Annual General Meeting of Khandelwal Ferro Alloys Limited will be held at the Registered Office of the Company, "Khandelwal Bhavan," 166, Dr. Dadabhai Naoroji Road, Bombay-1, on Friday, the 12th June, 1964 at 3 p.m. (S.T.), to transact the business specified in the notice dated the 4th May, 1964 posted to the Members of the Company individually at their registered addresses with the Company. The explanatory statement as required under Section 173 of the Companies Act, 1956, has been attached to the said notice.

A Member entitled to attend and vote is entitled to appoint a proxy or proxies to attend and vote instead of himself and a proxy need not be a member.

The Share Transfer books and the Register of Members of the Company will be closed from 5th June, 1964 to 12th June, 1964 (both days inclusive).

By Order of the Board,

for and on behalf of KHANDELWAL FERRO ALLOYS LTD.,

KHANDELWAL INDUSTRIES PRIVATE LTD.,
Managing Agents.

RAMPRASAD KHANDELWAL
Director.

BOMBAY, *4th May*, 1964.

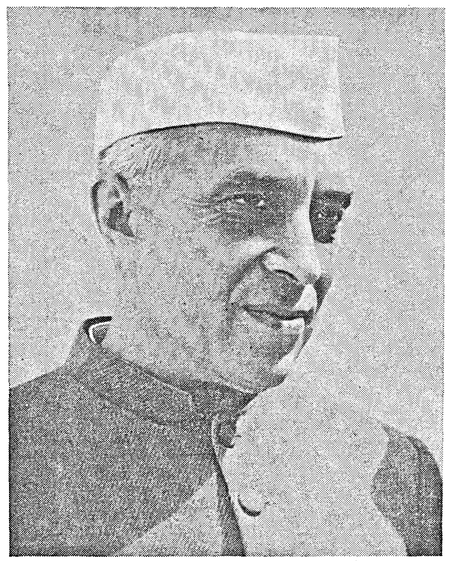
VOL. CVIII. No. 2771 BOMBAY, 30th MAY 1964 PRICE Rs. 2

JAWAHARLAL NEHRU

JAWAHARLAL NEHRU, the jewel of India, is no more. Death claimed him at 2 p.m. on Wednesday, 27th May, 1964. Although Mr. Nehru was well over 74 and had served the country with selfless devotion for well-nigh four decades, first as a fighter for freedom and then as a builder of free India, Death removed him from our midst rather prematurely and suddenly. Many problems remain to be solved, the most important of them being establishment of amity between India and Pakistan. Mr. Nehru had just initiated new moves to check the disturbing deterioration in Indo-Pakistan relations since the commencement of 1964. Providence could have been a little more considerate to this country by sparing him for some more time, so that he could have solved amicably the one tangle that has for long been a threat to peace on this sub-continent. If there was any person who could have taken a bold but painful decision and carried the public with him, it was Mr. Nehru, for his hold over the masses remained undiminished till his last breath.

In their love and affection for him, many in this country sincerely believed that it was cruel to keep him in harness even after his health had begun to fail and, therefore, favoured his retirement from active politics. But so great was his sense of duty to the country and so keen his desire to ensure peace and prosperity for the people that he could not even contemplate doing any such thing. For him India and its teeming millions counted more than his life. He would have been miserable and restless had he been compelled to retire from his work. He was one of those born to die in harness and in the service of mankind.



Although Mr. Nehru had not completely recovered from the effects of paralytic stroke he suffered early this year at Bhubaneshwar, none who saw him at the A.I.C.C. session here less than two weeks ago had thought that he would pass away so soon. He himself was confident that his life-time was not going to end so very soon. He said so in as many words at a Press Conference—the last one, as it subsequently turned out—which he held just six days before his death. Thus, the end was sudden, thereby adding to its poignancy and enhancing the severity of the blow.

There are critics in this country who, annoyed by some of his policies that appeared irrational, used to say that Mr. Nehru would die friendless. But he had the last laugh at them. The encomiums showered on him by world leaders and the world press and the respectful, affectionate regard shown to him by the world, in general, and India, in particular, while he was on his last journey have completely belied these critics. Even those sections of the British and American Press which were extremely critical of his policies changed their tone and paid handsome tributes to him. It would, indeed, be true to say that he has been even more honoured in death than in life, universally and nationally alike. That is a tribute to the sincerity with which he strove for world peace by following a policy of non-alignment in a world divided into two powerful hostile blocs, as well as to the sagacity that underlined his efforts to make India a modern, secular, democratic country. A patrician by birth, education and upbringing, Mr. Nehru had all the opportunities one could have had to be a dictator and an overlord. Perhaps no other leader in world history had enjoyed the unquestioned affection and love of millions and millions of people as Mr. Nehru did. But Mr. Nehru never allowed power to go to his head. He was a democrat in both thought and action. He went out of his way to preserve democratic values, subject to his sense of social justice, and democratic institutions. He would, on no account, compromise on the freedom of the Press, even though there were provocations by a section of the Press. There is, perhaps, no country in Asia, barring Japan and Malaysia, where the Press is as free as in India. And the credit for this goes to Mr. Nehru.

Many of Mr. Nehru's policies, national and international, political and economic, were controversial. One is too close to the events to say how history would judge them. But taking a broad view, one can say that the credit side is overwhelmingly greater than the debit side, with the result that the entire world, more particularly India, has greatly profited by them. His policy of non-alignment and dynamic neutrality has helped preserve world peace. And so has his success as the architect of modern, industrial India. It is no mean achievement to have kept this country of over 440 million people of diverse faiths together against many dangerous fissiparous tendencies that emanated in the post-independence period and to have ensured a high degree of political, as well as economic, stability. There are undoubtedly not a few disquieting fissures, some deep and some shallow. But one has to compare the India of Nehru with the countries, Asian and African, that became free from colonialism in the last decade and a half to realise how ably Mr. Nehru has kept it going (and growing), despite heavy odds. At this stage, we have to thank Providence for having spared Mr. Nehru as the Prime Minister for as long as 17 years since India attained independence. This has been a long enough period for him to steer the country clear of the cold war, to lay firmly the foundation of a secular democracy, to give a strong impetus to planned economic development, to demonstrate to the world the benefits of mixed economy for an underdeveloped country and to bring nuclear power—the motive power of the future—to India. As the maker of modern India, Mr. Nehru has fully discharged the duties entrusted to him by Gandhiji, the Father of the Nation. It is now up to us to uphold the liberal traditions of democracy, secularism and social justice which Mr. Nehru strove hard to establish in this country.

There are, of course, many problems, big and small. But, as Mr. Nehru was fond of saying, only the dead have no problems. In this changing world, with power politics still flourishing, a big country like India, is always bound to have problems. The challenge can be met so long as the leaders of this country remain steadfast in their loyalty to his ideals. Those who happen to be in power in the States and at the Centre alike must shed their differences, close their ranks and set an example of unity and integrity for the whole country. They have to remember that Mr. Nehru, to whom they used to run with their quarrels and self-made problems, is no longer available. They and their party can hope to be in power only by sheer merit of performance, because Mr. Nehru is not there to win votes for them. The time when they can naively indulge in slogans and shibboleths is gone. They have to be practical in their outlook and realistic in their actions.

An illustrious fighter for freedom, one of God's great creatures, a prince of peace, a darling of the masses, a born leader of men, an outstanding statesman, one of the tall trees in the forest of mankind, a democratic idealist and visionary, a world leader endowed with flexibility but firmness of purpose, a fascinating writer and speaker, a man of high moral standards, integrity of character, large-hearted understanding, catholicity of interest, hard, systematic work and a rare degree of refinement, a loyal friend, a human dynamo, one of the few men who had conquered both hate and fear—these are some of the tributes paid to Mr. Nehru by his admirers far and near. To be sure, they are sincere ones, borne out by Mr. Nehru's deeds during his long career of leadership. It is rightly said that leaders like Mr. Nehru are not born often. But there is a lot in their qualities that even laymen can try to emulate with considerable profit to themselves and to the society in which they live.

CURRENT ECONOMIC SITUATION

IN a moving radio broadcast on Wednesday night, Mr. G. L. Nanda, the new Prime Minister, paid glowing tributes to the departed leader, Mr. Nehru, and added significantly at the end: "The nation has to live. The problems before us have to be faced and solved." The significance cannot possibly be lost on all those in the ruling party who will continue to be in charge of the political and economic destinies of the country. While it is to be expected that the purely political problems—some old, some new—will command the attention of Congress leaders in the coming months and years, one hopes that some of the more pressing economic problems reflected in the stresses and strains, as also imbalances and distortions, of the Third Plan would be seriously attended to at the same time. The need for such attention, incidentally, is reinforced by the Planning Commission's half-yearly review, as well as by the latest F.I.C.C.I's. analysis, of the economic situation.

The Planning Commission has drawn pointed attention to the "signs of imbalance in the economy." These signs, which were visible even in the first half of last year, have continued to persist, thanks to the decline in the availability of foodgrains and some other agricultural commodities and to the "developing pressure from the demand side resulting from the stepping up of development and defence outlay." It is by now common knowledge that, contrary to the usual seasonal trend, the rise in prices, especially of foodgrains and industrial raw materials, gathered momentum in December last and that this had its impact on the consumer price index. The upward pressure on wholesale prices was so persistent that the relevant index showed a rise of about 10 per cent at the end of 1963-64, as compared with a rise of only 3 per cent during 1962-63 and a fall of 3 per cent in 1961-62.

The steep rise in prices in the third year of the Plan was primarily accounted for by agricultural commodities, especially by rice and wheat. Incidentally, in view of the high sensitivity of rice prices to shortages, the Government recently took the right decision to build up, as in the case of wheat, a buffer stock of two million tons of rice through internal procurement and imports. Increased procurement prices in the context of the estimated bigger rice crop in the 1963-64 agricultural season may, of course, go some way towards augmenting Government stocks, although it is doubtful whether rice prices, which have risen by six per cent in the last six weeks, can be decisively held in check by such means alone. The problem, in the ultimate analysis, is one of production. It is here that the Union Agriculture Ministry, which is reported to have chosen a new batch of 65 districts for intensive paddy cultivation, should take time by the forelock, provide the requisite quantities of fertilisers and pesticides and get the States to organise the extension services in time for the *rabi* crop, if not the *kharif* crop, during the coming agricultural year, that is, 1964-65. What is required is a sense of urgency for, otherwise, the vaunted "crash" programme for intensive rice cultivation will turn out to be a damp squib.

It is something to be thankful for that the prices of manufactured articles increased only marginally up to the end of 1963-64. In that year as a whole, industrial output rose by about 10 per cent, as compared with the growth rate of 8.5 per cent in 1962-63. This recovery, albeit modest, undoubtedly restrained the prices of manufactured goods which might have otherwise behaved like foodgrains, considering that the prices of agricultural raw materials, too, had gone up and that the incidence of increases in wages and excise and customs duties was not negligible. But there is no warrant for complacency, for the recovery in industrial production in the past fiscal year was only modest. If the situation is to improve further this year, the shortages officially admitted to be responsible for lagging output in several industries would need to be mitigated within the overall limits set by foreign exchange availability and by supplies of indigenous raw materials. For instance, cannot something be done to ensure the prompt arrival of imported components and raw materials eligible for non-project consortium aid and to make available adequate coke supplies to chemical and fertiliser industries and additional pig-iron and steel supplies to engineering industries? Of course, there is also the overall need for improving power supply to industries in all possible ways, so that the recovery, which has been under way since January last, may be accelerated. It should be a firm objective that the rate of industrial production in 1964-65 and 1965-66 should be well above the average annual rate of 11 per cent envisaged in the Plan.

The Federation of Indian Chambers of Commerce and Industry, too, has just pleaded vigorously for increasing the tempo of industrial production. This tempo, according to the Federation, can be quickened only by rectifying certain governmental policies which have distorted the "distribution of fields between private and public sectors and between small scale and big-scale units." Delays in the issuance of licences and in the utilisation of foreign exchange would also have to be simultanously eliminated. Perhaps the most pressing problem, requiring prompt attention, is how best to put new life into the depressed capital market. Almost all the recent capital issues have failed to evoke public response in adequate measure, with the result that underwriters have been obliged to take up the major part of such issues. This state of affairs has generally been attributed to the Government's fiscal policies which continue to be harsh, the recent selective tax concessions to industries notwithstanding.

There is no point in blaming the stock exchanges for their so-called "unhelpful" behaviour. After all, as the Federation has correctly pointed out, the stock market has become sensitive and sophisticated as the shareholdings are now widespread and the shareholders, who belong largely to middle-income groups, expect a reasonably "fair return on their investment and appreciation of capital." Again, as "the companies are no more than the sum total of individual savings and holdings," the need for reviving the capital market and keeping it in a state of buoyancy can hardly be over-emphasised. Investment being a matter of sentiment and confidence, it is of the utmost importance that it should be sustained by a sound and stable fiscal policy. This is necessary to attract not only domestic capital but also foreign investment.

RICE IN WEST BENGAL

WHILE the bold bid made by the West Bengal Government to check the rising trend of rice prices is, indeed, commendable, it is a moot question whether the situation really warrants such an elaborate control scheme for the distribution of rice in the free market as the one now being considered by the Government. It is true that rice stocks have practically disappeared from several markets in the Calcutta region, resulting in a sharp rise in prices. Rice is now said to be selling in the Calcutta wholesale market at as high as Rs. 37 a maund—the retail price is Rs. 3 higher—as against the rate of Rs. 29.33 at which it reaches the market. But the sudden spurt in prices could be easily checked by measures other than direct intervention of the State in the trade, as, for instance, severe warning to trade and stern action on dealers who deliberately indulge in creating artificial scarcity and rigging up of prices. For, basically, the rice supply situation in West Bengal is not that bad.

The current season's rice harvest is estimated at about five million tons which is more than the actual consumption requirements of 4.8 million tons. Even supposing the requirements are higher than production, the balance can certainly be met out of imports from the neighbouring surplus State of Orissa and, to some extent, from Behar. What is more, whenever an artificial scarcity of supplies develops in any area, the State Government can ask the Centre to release adequate quantities of rice from its stocks.

Where, then, is the need for direct State intervention in the rice trade? No one will object to reasonable regulation which is clear, specific and beneficial to producers, distributors, and consumers. But such regulation should only supplement the existing trade channels and not supplant them. The West Bengal Government should not underrate the important role played by these channels. Nor can it ignore the vital fact that the rice problem ought to be treated not at the State level but on an all-India basis.

By all means, let the Government of West Bengal take any punitive action it likes on unscrupulous traders in rice. But it would surely be treading on dangerous ground if it were to take over the entire wholesale trade in rice. The task involved may be too big for the Government to handle. Apart from the colossal amount of money estimated at no less than Rs. 200 crores required to nationalise wholesale trade, the Government will have to face formidable problems pertaining to warehousing, transport, etc.

Viewed thus, it is somewhat regrettable that the Price Inquiry Committee, appointed by the West Bengal Government, has recommended, after deliberating for over eighteen months, (*a*) full Government control on rice trade at all stages through nationalisation of rice mills and acquisition of the entire marketable surplus of rice and paddy, along with the cardoning off of surplus areas, (*b*) introduction of statutory rationing in big industrial areas, and (*c*) distribution of all wheat and wheat products through ration shops. State trading in rice (and other foodgrains) is, as two members of the Committee have rightly warned in their dissenting note, fraught with immense difficulties which are almost insurmountable, and the cost to the consumer is bound to be higher. Our experience in regard to measures like controls and rationing has been none too happy. The one direct offshoot of these measures is the evil of black marketing and adulteration which cannot be curbed so easily as one imagines. Moreover, such extreme measures can be resorted to only in times of emergency, for their adoption in normal times will thwart all efforts at augmenting production.

The problem of rice, as, indeed, of any other foodgrain, is one of production. There is as yet no clear evidence that everything possible is being done in West Bengal and the rest of India to ensure the attainment of Plan target, so much so the gap between the estimated total foodgrains output of about 78 million tons in 1963-64 and the third Plan target of 100 million tons fixed for 1965-66 is considerable. Dame Nature has, of course, not always been quite helpful to India, but the Central and State Agricultural Departments, too, have not played their part properly. If only these Departments shake off their lethargy and go full hog with arrangements for irrigation, agricultural implements, better seeds and manures, the productivity of lands devoted to foodgrains cultivation can be stepped up greatly. The average per-acre yield of rice, wheat, etc., in India are much lower than those obtained in several countries abroad. There is plenty of scope for raising the yields, but what is wanted is energetic action to exploit this scope to the maximum extent possible. If this shortcoming in administration is rectified, and if the Government of India builds a buffer stock of foodgrains to take care of unexpected shortages, distribution of foodgrains will take care of itself. Instead of concentrating attention on these measures, it is a pity that the Governments, both Central and State, continue to harp on such negative measures as controls and rationing. Unless the Governments follow a pragmatic and dynamic food policy on an all-India basis, there is no hope at all of the country achieving self-sufficiency in foodgrains on a continuing basis to meet the growing needs of a fast increasing population, with a rising, however slowly, standard of living.

DELHI LETTER

TOWARDS FREEDOM FROM FOREIGN AID

DYNAMIC APPROACH TO PLANS FOR MAKING MACHINES NEEDED

From Our Special Correspondent

NEW DELHI, 26*th May*

IN the mid-term appraisal of the third Plan, published in the latter part of last year, the Planning Commission emphasised the long-term perspective that it would not be prudent for either the public sector or the private sector to go on relying on foreign aid to the extent they had done so far. The Planning Commission said: "It was clearly stated at the time of the formulation of the third Five-year Plan that the economy should reach a reasonable degree of self-reliance by the fifth Plan. If this decision is going to be implemented, then we must ensure that the projects that we take in hand from now on are designed primarily to strengthen the balance of payments by increasing exports and replacing imports without at the same time involving an excessively large foreign exchange component. In this context, efficient and speedy implementation of whatever is taken in hand is as important as the observance of correct priorities in investment in the light of the basic objectives of a self-reliant economy."

Some of the problems of reappraising values and priorities for the fourth Plan period were dealt with in these columns earlier (see Delhi Letter, in *Commerce* dated 16th May last, *vide* page 832 and 'Broad Contours of fourth Plan' in *Commerce* dated 16th May *vide* page 830). The attempt here is to examine the level of efforts at import substitution in machinery manufacturing industries needed to pave a strong runway to handle the take-off into a self-reliant national economic structure in which there will be negligible inflow of direct foreign assistance. Or in other words, how big a push is needed to be given to indigenous machinery manufacture so as to achieve what may be termed economic sovereignty by 1976?

The strategy in the fourth Plan, as conceived by perspective planning experts and other planners in Delhi, is to institute changes to suit development programmes with a foreign exchange component only half in relative terms of what is available during the third Plan. The foreign exchange amount remaining about the same level as during the current Plan, the total investment in the fourth Plan is sought to be doubled from Rs. 11,000 crores to Rs. 22,000 crores. If the financial feasibility equations of the Finance Ministry lead to a slightly lower investment target of Rs. 20,000 crores, it does not change the Plan priorities very much in essentials.

During the current Plan period, foreign aid flow from friendly foreign countries and international institutions averages about Rs. 500 crores a year. The foreign loan and grants picture at the end of January last was as follows: loans for which agreements had been signed aggregated Rs. 3,424 crores *plus* Rs. 321.37 crores from the International Monetary Fund. The grants amounted to Rs. 684.99 crores, including Rs. 546.37 crores grants from the United States. Of the loans from countries, Rs. 2,135.83 crores have to be repaid in foreign currency and Rs. 455.76 crores through export of goods to the Soviet bloc nations and Rs. 832.41 crores in rupees. Actual withdrawals of loans until the end of January aggregated Rs. 2,304.18 crores. Loan repayments come to more than Rs. 405 crores and interest payments work out to over Rs. 243 crores. This leaves a balance on January 31 of Rs. 1,900 crores foreign debt, of which Rs. 1,200 crores have to be repaid in foreign currency.

A large part of the loan agreements being made in the remaining period of the third Plan will be available for utilisation in the early years of the fourth Plan. The projection of about Rs. 500 crores net annual average utilisation of foreign aid during the fourth Plan period would probably mean a high rate of use during the early years of the Plan, with the aid flow and utilisation tapering off during the later years of the next Plan. The most popular assessment among the planners is that Rs. 300 crores of oreign aid will be available for use in 1970-71.

When the third Plan was framed, it was assumed that there could be self-sufficiency in foodgrains by 1966 with a target fixed for producing 100 million tonnes of foodgrains. The first three seasons of the third Plan show that India has still a long way to go before being able to combat the deterrent natural factors afflicting agriculture. The lower target now assumed for 1966 is around 90 million tonnes, which would imply imports on a scale similar to foodgrain arrivals during the past few years. The assumptions of foreign exchange needs for the fourth Plan exclude funds for food imports which are expected to be met, by and large, by new contracts for American gift supplies. The foodgrain target of 120 million tonnes for 1970-71 is intended to meet the needs fully.

The figure of Rs. 300 crores foreign aid in 1970-71 is a net amount conceived as representing the excess of imports required for consumption and investment over the exports likely to be achieved at the end of the fourth Plan period. Although the perspective planners project an export target of Rs. 1,200 crores for the end of the fourth Plan, the International Trade Ministry as well as some Yojana Bhavan experts outside the Perspective Planning Division tend to favour as feasible a target of a little over Rs. 1,100 crores exports in 1970-71. The adjustments in domestic outputs, investments and consumption patterns are sought to be such as to limit total imports to around Rs. 1,400 crores in 1970-71. There is not much choice left in rearranging the pattern of imports from the structure of austerity that has already emerged. The three broad sections of imports are: intermediate goods which are additional to domestic production and which vary directly with output levels in different sectors; imports of electrical, non-electrical and transport equipment; and all other imports.

If the fourth Plan programmes are not to fall on the wayside, it will be essential to undertake large-scale import substitution in metals and electrical, non-electrical and transport equipment. The challenge in the fourth Plan is acceleration of measures to increase indigenous production of capital equipment.

In the past decade, there has been considerable progress in import substitution. During the first Plan, the total import bill was Rs. 3,620 crores for an investment of about Rs. 3,400 crores. Or in other words, the value of imports exceeded the total investment. In the second Plan, there were imports worth Rs. 5,360 crores, as against an investment of Rs. 6,750 crores. In the current third Plan, the investment may go up to Rs. 11,000 crores and the imports to about Rs. 6,000 crores, or a little more than half. These ratios are not a complete indication of the import substitution progress, but also reflect the degree of import austerity. For the fourth Plan period, an attempt is to be made to keep the total imports down to Rs. 7,000 crores, while the investments on planned development will go up to Rs. 22,000 crores or Rs. 20,000 crores. This will mean that imports will work out to a third of the total investment costs.

Another way to look at the successes hitherto in import substitution is to compare the imports of finished capital equipment and components with the investments in power, industry and transport, sectors in which the imported equipment has been the most needed. Approximate total investments in these sectors were Rs. 3,700 crores between 1956 and 1961. In the second Plan period, import of capital equipment and components amounted to Rs. 1,615 million, according to estimates made by planning experts. (See accompanying tables for trends in imports in comparison to Plan costs, and analysis of import substitution in selected sectors; sources are Yojana Bhavan, Reserve Bank of India, International Monetary Fund and E.C.A.F.E. Secretariat). During the current Plan, the total investment in the three sectors may be around Rs. 5,800 crores and values of imports of equipment and components about Rs. 2,000 crores. In terms of percentages, the imported values account for a little less than 44 per cent in the second Plan and a little over 34 per cent in the Third Plan. For the fourth Plan, perspective planners want the tempo of indigenous production to move towards production which would keep imports of capital equipment and components down to Rs. 2,700 crores, while investment in the three sectors go up to Rs. 13,000 crores. Or, the percentage of import value in investment in the three sectors should come down to 20 for the Plan period as a whole. In fact, this would mean less than 15 per cent imported component for these sectors in 1970-75.

A tentative estimate of the value of indigenous equipment production is Rs. 660-670

(Continued on next page)

TABLE I—*Trend of Imports and Total Plan*
(In crores of rupees)

	Total Imports	Import of equipment and components	Total outlay on plans
1951-56	3,620	625	3,400
1956-61	5,360	1,615	6,750
1961-66 (estimated)	5,750	2,000	11,000
1966-71 (projections)	7,000	2,700	22,000

N.B.—Projections and estimates exclude P.L. 480 imports.

TABLE II—*Capital Goods Imports and Investment in Power, Industry and Transport*
(In crores of rupees)

	Capital goods imports	Investments in power, industry and transport
1956-61	1,615	3,700
1961-66 (estimates)	2,000	5,800
1966-71 (projections)	2,700	13,000

TABLE III—*Indigenous Production of Capital Goods and Imports*
(In crores of rupees)

	1965-66 (Estimates)	1970-71 (Projections)
Finished equipment production ..	670-680	1,700
Components imports for production.	200-220	320
Imports of finished equipment ..	320	280
Total needs of equipment.. ..	990-1,000	1,900

TABLE IV—*Major Heads of Imports Used for Industry, Transport and Power*
(In crores of rupees)

	1961-62	1962-63

FEDERAL TAX SYSTEM IN THE U.S.

DISTRIBUTION OF BURDEN QUITE FAIR

By Mortimer M. Caplin

U.S. Commissioner of Internal Revenue

THE effectiveness of the United States in maintaining a sound economic system at home while meeting its international responsibilities depends on many factors. One of the most important of these is a sound and efficient system for providing the vast revenues required to carry out the national defence and other vital domestic and foreign programmes of the Federal Government.

From the beginning of organised civilisation, the "tax collector" has not, of course, been among society's most popular men. In many cases, this has been due to an unjust system of taxation. Even under an equitable system, the nature of taxation—the exaction of part of an individual's earnings—has not created an atmosphere conducive to affection, warmth or even cordiality. Yet, if a society is to provide the essential programmes of Government, tax revenues will be needed. If it is to grow and remain strong, further tax revenues will undoubtedly be required. In meeting these goals, a tax system can be fair, reasonable, efficient and economical. It can be impartial and even-handed. Respect, not popularity, is the most that can be hoped for. I think the Federal tax system has met these standards and has served our nation well.

Complexities

Although there is a natural grumbling about paying taxes, an underlying feeling exists in our society that out tax system has for the most part achieved a fair distribution of the tax burden. This by no means is to say that the system is perfect. It is far more complex than I and many others desire. In large measure, the complexities result from the complexity of our modern-day business world and of life itself. Secondly, these complexities are a natural result of the legislative process in the United States in which many diverse interests and divergent views play a part in shaping tax legislation as it moves from the drawing board through the Congress to final enactment.

Despite these defects, our Federal income-tax has been accepted by the public because of its reliance on a concept fundamental in our society—that is the distribution of the tax burden based on ability to pay. I am confident that any basic change to eliminate the graduated income-tax principle and to substitute a different type of tax based on another principle would not be accepted today by the American people.

We have a remarkable level of tax compliance in the United States. This is a tribute to the honesty and responsibility of our people, as well as to their industry and initiative. The Federal tax system is primarily one of self-assessment, coupled with withholding of taxes on wages and salaries. In the 1963 fiscal year, these self-reporting procedures were responsible for $103,000 million of a total of $106,000 million collected. Only a small percentage of our revenue is raised through direct enforcement procedures or involuntary methods of collection. This is to be contrasted with the situation in many other countries today where voluntary tax payment is the exception rather than the rule.

Both withholding of taxes and quarterly payments of estimated taxes are designed (1) to simplify tax administration, (2) to reduce costs, and (3) to ease the burden for the millions of taxpayers in the United States. Through the withholding system, the wage earner is able to pay his taxes on an even basis throughout the year and is not required to make a large lump-sum payment at the close of the year. Quarterly payments by the taxpayer of estimated tax for the current year serve the same function for those with income not subject to withholding.

I believe we have made great headway in recent years in improving the administration of the income-tax laws. We have expanded taxpayer assistance, emphasised taxpayer rights and conveniences, and broadened our information and publication programmes. At the same time, I recognise that we have a long way to go. We handle 100,000,000 tax returns a year and some errors and misunderstandings will inevitably occur.

I might emphasise the great importance of equal treatment under our tax system. Taxes are high and the burden is great for all of us. We expect our neighbour, if he has income that is taxable, to file an honest return and pay his proper share of the tax. This is part of our compact in a democracy. Such an attitude on the part of the taxpayer in turn places an obligation on the Government—that we accomplish our collection task as efficiently as possible, at the lowest possible cost. Our effectiveness in this respect is indicated by the fact that, in the 1963 fiscal year, total collection of $105,900 million was made at a cost of less than one-half cent for each dollar of revenue. Individual personal income taxes amounted to nearly $53,000 million in fiscal year 1963, while corporate income-taxes were $22,300 million. Together these two taxes accounted for $75,300 million of the total tax receipts. But the Federal Government also levies taxes on a very wide variety of goods and service.

Some of the larger sources of revenue are Federal taxes on alcoholic beverages and tobacco products, on estates and gifts, on gasoline, on motor vehicles and parts. There also are Federal excise taxes—in the nature of sales taxes—on many other products. Some of these are levied at the manufacturer's level, and some at the retail sales level. There is a use tax on highway motor vehicles to help finance a new nation-wide highway system. There are also Social Security taxes to finance old-age retirement for workers, unemployment compensation insurance, and other benefits.

Internal Revenue Service

The U.S. Internal Revenue Service, an agency of the Treasury Department, is purely an administrative agency. It is charged with receiving and accounting for the tax moneys. The U.S. Congress is responsible for the tax laws and tax rates; the Commissioner of Internal Revenue and the Internal Revenue Service only carry out the tax laws enacted by Congress.

Let us examine some of the characteristics of the Internal Revenue Service. It is non-political in its composition and in its operations. The Commissioner is the only appointed official. Its other 60,000 employees are selected and serve under the Civil Service merit system. They must meet strict personal and professional qualifications to be considered for employment. Once employed, highest standards of integrity are insisted upon, with an Inspection Service responsible for investigating any suspended dereliction.

The operations of the Internal Revenue Service are largely decentralised. Thus the tax relationship of the citizen is primarily with officials in his own State, and often in his own locality. A small national headquarters staff in Washington carries out overall management, supervisory and policy-making functions. The operating functions are carried out in eight regional offices, 58 district offices, and some 900 branch offices.

These functions and activities cover a wide range. Provision must be made for the tax forms and instructions, and for information and assistance to taxpayers. The millions of tax returns and related documents must be received and processed, mathematically verified and checked for accuracy. Moneys must be accounted for and deposited. Collections must be made in cases of delinquencies and deficiencies. Refunds must be made of overpayments.

Provision must be made for taxpayer appeals in cases of disagreement, and for litigation of disputes where necessary. Enforcement procedures must be maintained to detect the few who would cheat their Government. This programme is designed to assure that each citizen pays his fair share. There are certain regulatory responsibilities, such as those affecting the liquor and tobacco industries. Regulations implementing the basic tax laws must be prepared and issued, and rulings made for guidance of taxpayers in particular situations.

U.S. citizens living and working abroad who have taxable income must file returns. Subject to certain exclusions, they pay U.S. taxes on their earnings. There are about 1.5 million such persons. To provide service to them, and to improve their compliance with U.S. tax laws, the Internal Revenues Service has established an Office of International Operations. It has offices in Paris, London, Ottawa, Manila, Sao Paulo and Mexico City. These offices provide information, audit returns, collect taxes, gather information in cases under investigation in the United States, and negotiate with authorities of countries with which the United States has tax treaties. In addition, teams of agents are sent to nearly 100 cities in 50 or more countries each year during the tax return filing period to assist U.S. citizens in tax matters.

These, then, are some of the features of the Federal tax system and administration. But the overriding characteristic is that of taxpayers voluntarily paying the taxes they owe to support vital programmes in the national interest. The high degree of compliance produces the large tax revenues and low collection costs that attest to the basic soundness of this approach.

DELHI LETTER

(Concluded from previous page)

crores by 1965-66. In 1965-66, the value of imported finished equipment may be around Rs. 320 crores and value of imported components going into indigenous manufacture about Rs. 200 crores. To achieve the degree of import substitution necessary to keep balance of payments within control, the value of indigenous production of equipment will have to increase more than two and a half times during the fourth Plan, to around Rs. 1,700 crores in 1970-71. This projection also assumes that about Rs. 200 crores worth of finished equipment will be imported in 1970-71 and about Rs. 320 crores of components will be imported to go into indigenous machinery manufactures.

The supplementary question which follows the projections of such an increase in indigenous equipment production is on who will make these and who will help. In the private sector, the most significant single project is perhaps the A.C.C.-Babcock plant to make cement machinery. A variety of projects have come up in the private sector which includes growing facilities to make machinery for paper, sugar and jute and cotton textile factories. In machine-tool making the Government's Hindustan Machine Tools has made rapid advances, while a large number of small units exist in the private sector. Among the more significant machinery making projects with Western technical assistance is the heavy electrical plant in Bhopal. But the more spectacular deals in this field are between the Government and the Soviet bloc countries. The heavy electrical plant planned in Hardwar will be the biggest of its kind in South Asia and Soviet assistance for this project will be more than Rs. 23 crores under the terms of the agreement signed on May 23. The big heavy engineering unit in Ranchi and the mining machinery plant in Durgapur are again with Soviet aid. The

TABLE VI—*Source of Financing Imports*
(Total imports = 100)

	Exports of goods and services	Capital Inflow			Reduction in foreign assets
		Private	Official	Total	
1951-56 ..	89.6	3.0	3.9	6.9	5.3
1957-62 ..	66.4	5.9	21.7	27.5	7.6

Czech credits, of Rs. 23 crores announced in 1959 and Rs. 40 crores announced earlier this month, are almost wholly to be devoted to machinery-making projects covering machine tools, foundry forge, electrical equipment and heavy boilers, among others. The Poles are to build the second major coal-mining machinery factory. The inability so far to find a foreign collaborator for the plate and vessels works is a serious gap in plans for indigenous machinery manufacture.

The fact that steel, mines and heavy engineering have been brought under the charge of one Minister, Mr. C. Subramaniam, no doubt, adds somewhat to organisational efficiency, but as yet a complete technical assessment of the capacity existing in the public and private sectors for producing equipment for industrial projects does not exist. Metals, including non-ferrous, form another significant sector in which quick import substitution is needed. Steel has become largely a Government affair, except for the expansion of the Tata and Indian Iron plants proposed during the fourth Plan. Aluminium is destined to be more important in the coming years, with that metal planned to be used as a substitute for copper in which direct import substitution is not possible for want of adequate indigenous raw materials. In aluminium, as well as in some other industrial sectors, the ruling party's preoccupation with ideological reasons for non-licensing can backfire. Messrs. Krishna Menon, Dhebar and Patnaik notwithstanding, the economics of size will dictate licensing policies which cannot be to the liking of the Congress 'leftists.' To give a back seat to efficiency and economy during the fourth Plan would be a suicidal trend.

THE AUTOMOBILE INDUSTRY . . . .

helps raise national revenue

The automobile industry is currently contributing some 260 crores of rupees yearly to the national exchequer—towards the funds required for providing the nation with free education and medical aid, better housing and cheaper electric power, more irrigation works, greater agricultural production and a host of other public needs.

In the price structure of the Hindusthan Ambassador, for instance, the Government's share constitutes about 33% of the total "on the road" price of the car in Calcutta (or 5140 rupees per vehicle).

Besides the automobile manufacturers, the producers of tyres, batteries, oil and a great many other suppliers all contribute their share in the form of taxes, duties and other fees. The ancillary industries which supply a large portion of the requirements of components of motor vehicles constitute another rich source of revenue to the Government. Cars like the Hindusthan Ambassador today utilise more than 80% indigenous content, of which the ancillary industries supply articles worth some 3628 rupees per car. This represents 24% of the "on the road" price of this car in Calcutta.

A further contribution to the national exchequer is provided by the income tax paid by the increasing number of employees of the automobile and allied industries.

CAR PRICE STRUCTURE :

Government taxes, direct and indirect :	33%
Raw materials, manufacturing and overhead expenses, salaries and wages, depreciation, profit etc. :	25%
Indigenous ancillary components :	24%
Imported components :	11%
Dealer's commission including distribution, service, advertising etc. :	7%

THE AUTOMOBILE INDUSTRY IS A KEY INDUSTRY

SUGAR PRICES RAISED AGAIN

SUMMING up the prospects for the current (1963-64) sugar season, we stated, in our Annual Number 1963 (*vide* page 197), that, while the consumers might not find it difficult to obtain their requirements of sugar, they would have to pay appreciably higher prices, besides subjecting themselves to the rigour of additional controls. This assessment has been abundantly proved correct by actual events. In the beginning of the season itself—on 18th November 1963, to be precise—it will be recalled, the Government of India had announced increases in the ex-factory prices of sugar ranging from Rs. 2.75 to Rs. 12.15 per quintal in different areas. The sugar industry, however, considered the increase in prices inadequate to meet the additional incidence resulting from the enhanced cane prices and rising cost of production. Representations were accordingly made for a further rise in sugar prices. Apropos these representations, the Union Food and Agriculture Minister, Mr. Swaran Singh, indicated, in his speech at the annual meeting of the Indian Sugar Mills Association in April last, that the Government was considering a further revision of sugar prices in the light of actual duration of the season and recovery. This revision has since been announced; it has come into force with effect from the 22nd inst., that is, the date of notification.

The maximum increase (+Rs. 22 per quintal) in sugar price has been effected in respect of Rajasthan, the revised ex-factory price being Rs. 138 per quintal, as against Rs. 116 previously. The increase is also steep in the case of West U.P. (+Rs. 15.75), Punjab (+Rs. 14), Assam (+Rs. 10.50), East U.P. (+Rs. 9) and South Bihar (+Rs. 12), whereas it is marginal in respect of other States and there has actually been a cut in prices of sugar produced in the Lucknow Division of U.P., Gujarat (—Rs. 2 per quintal) and Orissa (—Rs. 3.50). The table below gives the revised ex-factory sugar prices as compared with the prices prevailing hitherto and those fixed in April 1963:

(In Rs. per quintal)

	Revised prices announced now	Prices fixed in Nov. 1963	Prices fixed in April 1963
Maharashtra	116.00	115.00	109.85
Gujarat	116.00	118.00	112.50
Punjab	132.50	118.50	109.35
Rajasthan	138.00	116.00	109.85
MadhyaPradesh	125.50	118.00	109.85
West Bengal	119.00	116.50	111.20
Assam	127.00	116.50	113.85
Orissa	113.00	116.50	110.50
Andhra Pradesh	113.00	118.00	116.00*
Mysore, Madras, Kerala and Pondicherry	116.00	115.00	111.20
North Bihar	120.00	118.00	108.50
South Bihar	134.00	122.00	109.85
East U.P.	120.25 to 116.00	111.25 to 116.00	108.50
West U.P.	113.25 to 131.00	115.25 to 116.50	108.50

* Average price only.

Announcing the revised sugar prices, the Government of India's Press note says:

"In some areas, as, for example, in the South, where the sugar season was nearly normal or better, the actual working results have been quite close to the estimates. But, in some areas in the North, on account of diversion of sugarcane to *gur* manufacture and on account of frost and drought conditions, particularly in some districts of Western Uttar Pradesh, the Punjab, Rajasthan, Madhya Pradesh, South Bihar and Assam, both duration and recovery were adversely affected. Some adjustments in cane prices have also been made in some areas. The combined effect of these factors has been to disturb a comparative uniformity in costs that used to prevail in certain areas and, consequently, it has become necessary to isolate high cost areas from others. It has, therefore, been considered necessary to sub-divide West U.P. into (*a*) Meerut, Muzaffarnagar and Bulandshahr districts, (*b*) Saharanpur and Dehra Dun districts, (*c*) Rohilkhand and Agra districts and (*d*) Lucknow district."

The revision in sugar prices has been effected some seven months after the season actually began in November. The crushing operations of practically all sugar factories have come to a close. And so the revision in prices will not have any effect on the total sugar output which, according to the latest indications, is estimated at no more than 2.53 million metric tons, representing a shortfall of 770,000 tons as compared with the target of 3.3 million tons first fixed for the season. The revision may, however, be expected to act as an incentive to sugar mills to produce more in the coming season, assuming that they will be allowed to continue. But the question is whether, even with the higher sugar prices announced now, the mills will, in fact, be in a position to compete effectively for the available cane supplies. The question is a very pertinent one, unless, of course, the cane crop is a bumper one. For, in view of the persistently high prices of *gur* and *khandsari*, coupled with the tax advantage and the absence of controls on the production of these substitutes for white sugar, large quantities of cane will continue to be diverted from sugar mills. The need for checking such diversion is urgent in all conscience. The Governments, Central and States, will have to face this problem squarely by summoning sufficient political courage, if they want the sugar mills to produce enough for both domestic consumption and export. This is the right solution to the problem of higher sugar output and not increases in cane and sugar prices time and again. The consumer of sugar has been making heavy sacrifices for a long time now. It is time he was provided with some relief.

EXPROPRIATION IN BURMA?

The Burmese Revolutionary Government's decision to demonetise, with effect from the 17th inst., 100-kyat and 50-kyat currency notes is malicious in intent and purpose and virtually expropriatory in nature. It is malicious because it is aimed at hitting primarily foreigners doing business in Burma, a good percentage of whom are Indians, and is almost expropriatory because, irrespective of the amount deposited, only a maximum of 200 kyats (about Rs. 200) will be returned, in legal tender, to the depositor, the balance being compulsorily deposited in the nearest State commercial bank as a fixed deposit in the name of the depositor concerned. It is not known when and on what conditions a depositor would be allowed to have the benefit of these funds, nor whether full value would be given to the money deposited.

None would question the right or competence of the Burmese Government to adopt whatever policy, monetary or other, it deems fit. But what is disturbing is the sinister move to deprive foreign nationals doing honest business in the country of their legitimate earnings after having taken over their business. The Burmese Government's explanation that the demonetisation was aimed at those "foreigners" who, having withdrawn their deposits from banks on nationalisation, were indulging in speculative trade, will convince nobody, because it does not square with the facts of the current economic situation in Burma. Thus, far from there being any speculative rise in price, the velocity of circulation of money has declined and the consequent reduction in money availability has put a curb on price rise. This might be due to the fact that business activity has almost come to a standstill. Even so, the actual position is contrary to what the Burmese Government wants the world outside to believe. That there might have been a tendency to hoard currency notes, especially high denomination notes is not denied. This is only natural, in view of the political and economic uncertainty in the country. But then the right way to deal with the situation is not to take measures calculated to work harshly and unjustly on "foreigners" who, it is undeniable, have made a substantial contribution to Burma's economic development. If the Burmese Government chooses not to have foreigners doing business in the country, it is of course entirely a matter for it to decide. But it is legally and morally bound to pay fair compensation to those whose assets it has taken over and permit prompt repatriation of compensation money. India too nationalised some foreign concerns. But, in spite of the fact that it was placed in no less uncomfortable position in respect of foreign exchange than Burma is at present, this country paid fair (if anything more than fair) compensation to foreign investors. Unfortunately, Burma, even where it has agreed to give compensation, has valued the assets to its advantage and, what is more, has been delaying unduly permission for remitting proceeds to the countries of origin.

What is far more deplorable is the Burmese Government's indignation at the Indian Embassy at Rangoon receiving, for safe custody, gold and jewellery from Indian nationals leaving Burma. In a bid to prevent this, the Revolutionary Government has now banned Indian nationals from leaving Burma "until the question has been settled on a Government level." Now that the Burmese Government intends to take up the matter on a Governmental level, it is to be hoped the Government of India would take a firm stand in the matter and insist on justice being done to Indians in Burma. The Indian Government's softness in dealing with matters like this seems to be taken for granted by its neighbours. And it is difficult to fix the blame for this on anybody except the powers-that-be at New Delhi. For the Government of India has, in the past, shown spinelessness and even indifference which are in sharp contrast to the firmness and solicitude (for the interests of its nationals in foreign lands), shown by such countries as the U.K. and the U.S. It may be recalled here that the U.S. Government recently even went to the extent of stopping its economic aid to Ceylon, because the latter country refused to give adequate compensation for the assets of American oil companies taken over by the Ceylon Government. It looks as though the Government of India has been sacrificing the assets and interests of Indian nationals in countries like Burma, Ceylon and some of the newly independent African countries as a price for their political goodwill and support for its foreign policy. This is bad in principle as it amounts to a form of appeasement. And, as history has shown, appeasement can never be the basis for a firm and sustained friendship.

Notice

THE STANDARD COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Friday, the 22nd May, 1964, the following dividend was recommended for declaration at the Annual General Meeting to be held on the 26th June, 1964, to be paid for the year ended 31st December, 1963, subject to deduction of tax.

On Ordinary Shares at the rate of 10 per cent per annum.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretary.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *22nd May*, 1964.

HARDWAR HEAVY ELECTRICALS

The revised final target for power generation under the third Plan is about 40 billion kw. hrs. to be attained in 1965-66. A doubling of this output by 1970-71 has been proposed by the Perspective Planning Division of the Planning Commission for the fourth Plan. Power development on this scale would call for a large quantity and variety of machinery for installation at the generating stations of the regional and State grids. As expenditure on machinery normally accounts for about 25 per cent of the outlay on hydro stations, over 50 per cent on thermal stations and about 30 per cent on transmission, the foreign exchange component of the fourth Plan's Rs. 2,500-crore power development programme would be unbearably heavy in the absence of a substantial increase in the indigenous manufacture of heavy electrical machinery and equipment. If the Bhopal Heavy Electricals in the public sector can reach the scheduled output level of about Rs. 55 crores in 1970-71, it would be something of an achievement. But there is no certainty that it will, for the teething troubles in that plant have been recently aggravated by labour unrest, with the result that its annual production has not touched even the modest level of Rs. 10 crores so far. It is in this context that the Government's present move to expedite the establishment of the proposed Hardwar heavy electrical plant in the public sector is to be welcomed.

The Hardwar unit, which forms part of the projects that are being aided by the Soviet Union under the 1,500-million rouble credit committed for the third Plan, will involve an estimated capital outlay of upto Rs. 40 crores in its first stage. It is intended to manufacture steam turbines and turbo alternators, hydro turbines and generators and large-size motors. Thanks to a contract, concluded on the 23rd inst. with the Soviet Union, equipment and material worth Rs. 23.5 crores, as well as technical assistance for the project, would be more speedily available from now onwards. As 400 out of the 760 metal cutting machines needed could be supplied by indigenous sources, it should now be possible to go ahead with the project more confidently.

But it is one thing to construct the project, quite another to get it going in accordance with production schedules. As the plant is being designed for an aggregate annual manufacturing capacity of 2.7 million kw. for steam and hydel units and 515,000 kw. for electrical machines, both together valued at about Rs. 40 crores, its requirements of raw materials like steel plates, castings and forgings would be heavy. The expectation here is that the Rourkela steel works would be able to supply the special steel plates and that the public sector foundry/forge under construction at Ranchi would provide the castings and forgings. The Rs. 2.5-crore forgings and castings unit that is being set up at the site is also expected to meet a part of the raw material requirements. Given these raw material supplies in progressively increasing quantities, the Hardwar unit may well reach its optimum production level by 1974, if not earlier. The Government's hope that it might even be possible to reach the optimum production level by 1971, however, does not seem to be quite justified in the context of the disappointing record of production performance in other heavy engineering enterprises, including the Bhopal Heavy Electricals.

SOCIAL SECURITY

The frontiers of social security in India will be considerably extended when the proposals now said to be under active consideration come into force. One of them that is being given practical shape concerns the provision of family pension and retirement benefit to those members of the Employees Provident Fund Scheme, contributing eight per cent of their wages. There are 2.8 million workers who contribute at this rate and the balance of 1.1 million workers, who are also members of the Scheme, are subscribing at the old rate of 6¼ per cent. Disclosing this at Hyderabad the other day, Mr. D. Sanjivayya, Union Minister for Labour and Employment, said that, to begin with, the family pension and retirement benefit scheme, which envisages a minimum life pension for a family of Rs. 25 per month and a maximum of Rs. 150 per month, will cover only the former, that is, those contributing 8 per cent of their wages. The entire cost of the scheme will be met out of the contributions of both the employers and the employees in excess of 6¼ per cent. In addition to the minimum pension indicated above, members would also be given certain monthly grants for education of boys and for girls until they are married.

This scheme is in addition to the death relief scheme introduced by the Government of India, with effect from 1st January 1964, under which a minimum of Rs. 500 would be given to the family of a worker, falling within the purview of the Factories Act and contributing to the Provident Fund Scheme, as also the contemplated pension scheme for aged destitutes and physically handicapped. The latter scheme provides for a pension of Rs. 20 per month to persons above 65 years of age, who, it is estimated, form about 10 per cent of the total population of the country. The cost of this scheme is to be shared by the Centre and the States on a 50 : 50 basis.

Details of the pension scheme of provident fund members are, it is said, still being finalised. It is, therefore, difficult to give a critical appraisal of the move. But from what has been officially stated, the principle underlying it is apparent. It is that, in return for surrendering a percentage of their contribution (as also a like percentage of the employers' contribution), a member of the Provident Fund will be given a life pension. In other words, an additional benefit, in the form of a pension, is to be given to members of the provident fund contributing at the rate of 8 per cent of their wages. This pension will be financed in part out of the difference between the old and new rates of provident fund contributions. The Government has promised to bear a part of the cost of the scheme.

Whether it is desirable or necessary to have a pension scheme for members of the Provident Fund Scheme is a question on which there can be honest differences of opinion. There may be some who would prefer the whole of their enhanced contribution being credited to their account, instead of surrendering a part of it for a pension. They would at least like to satisfy themselves that the pension they get in return is worth as much as an annuity they can buy with the same amount. In any case, the scheme should be only optional and not compulsory.

SPECIAL STEEL PROJECTS

India's continued imports of steel are confined to categories which are either not produced in the country or produced in inadequate quantities. These imports, which have ranged round a million tonnes per annum in recent years, involve an aggregate foreign exchange expenditure of about Rs. 80 crores. But this figure conceals the relatively large share on account of special steels, that is, tool and alloy steels, which are highly priced. For instance, the quantity of these special steels imported in 1963 was only about 60,000 tonnes, representing just 12 per cent of the total quantity of finished steel imported in that year. But in value terms, the much smaller volume of special steel imports accounted for as much as Rs. 12 crores, while the much larger volume of mild steel imports accounted for only about Rs. 43 crores. It may be calculated from these figures that, while the average cost of imported ordinary steel is just under Rs. 600 per tonne, that of tool and alloy steel is as much as Rs. 2,000 per tonne. It is because of this factor of high price that imports of special steels have had to be restricted all along to a relatively small volume, though the demand for them from the engineering industries has been very much above the level of imports. In fact, by the end of the second Plan, the uncovered gap in the availability of special steels was so big that the planners decided to assign a very high priority to the manufacture of such steels in the third Plan period.

But this so-called high priority has not led to any tangible result so far. The licence granted to T.I.S.Co. proved infructuous as the Government refused to approve of the terms and conditions on which it was able to secure foreign collaboration. In retrospect, it appears that the Government was most imprudent in not having given a free hand to Tatas in this respect. Its own projects (the Durgapur Alloy Steel Project), proposed in the third Plan, has still not come up, although the Plan is now through its fourth year. Work on this project may yet be expedited, for supplies of Japanese equipment under the Yen-credit have started coming in. As trial production in the ten-tonne electric arc furnace in the Steel Melting Shop No. II is expected to start by the end of this year, the project as a whole may well be completed by the end of the Plan. But it is bound to take some time longer to reach the scheduled optimum production level of 60,000 tonnes. Incidentally, the product mix of this Durgapur plant, when in full production, will be 2,250 tonnes of high speed steel 8,250 tonnes of carbon tool steel, 4,000 tonnes of alloy tool and die steel, 18,000 tonnes of alloy structural steel, 7,000 tonnes of case hardening steel, 2,500 tonnes of ball bearing steel and 18,000 tonnes of stainless steel. As for the special and alloy steel project of Mysore Iron and Steel Ltd., which will have Austrian collaboration and West German financial aid, orders for equipment are being placed this year. It looks as if this project, designed to produce 77,000 tonnes of special steels per annum, will take some two years for completion.

All in all, therefore, indigenous production of special steels will be on a fairly substantial scale only during the next Plan period. Till then the foreign exchange drain on their account will cotinue. Still something can conceivably be done to produce at least some varieties of special steel in some of the existing steel plants. This seems to be the opinion of an official group which is reported to have recommended that such private-sector units as have electric furnaces and other ancillary facilities should be encouraged to manufacture some items of special steel like spring steel and free-cutting steel. It would be necessary to provide adequate cogging facilities for this purpose. If these facilities can be ensured as a matter of urgency, it should be possible to manufacture some spring and free-cutting steels even in the T.I.S.Co. which is already producing electrical steel sheets. At the same time, every effort should be made to expedite work on the three public-sector alloy steel projects (including the one in the defence sector), so that they may come to fruition at least from the beginning of the next Plan. It would also be worthwhile to revive the project, worked out by the T.I.S.Co., by encouraging the Company to go ahead with it for completion well before the end of the fourth Plan.

JUTE MILL MACHINERY

While the jute industry in India justly feels proud of its eminent position as the ace earner of foreign exchange for the country—the industry accounts for one-fifth of the aggregate exports in terms of value—it is also greatly worried about the prospects for the future. So keen has the competition from Pakistan become lately that the industry apprehends a possible setback in its exports. But the apprehension has not engendered any sense of pessimism among jute millowners, the majority of whom continues to be quite confident that the industry could successfully weather the growing competition not only from its counterpart in Pakistan but also from substitute materials, if conditions were created to ensure an orderly development of the industry.

The important elements of such a development are (*a*) modernisation and expansion of existing units, (b) weeding out of hopelessly uneconomic old units, and (*c*) establishment of some new units if need be. The successful implementation of a programme of this nature presupposes adequate availability of the requisite machinery and equipment. Viewed thus, the statement of Mr. S. C. Kela, President of the newly formed jute Machinery Manufacturers Association, which was inaugurated at Calcutta on Thursday last week, that the industry would ere long be able not only to meet the complete requirement of jute mills but will also have surplus stock for export is, indeed, heartening.

Jute machinery making, it will be recalled, began in India only towards the close of the first Plan. The progress made since then has been quite substantial. The number of units manufacturing jute mill machinery has gone up from just one in 1955 to 10 in 1961. The actual production (in terms of value) of jute mill machinery in the year 1963-64 amounted to Rs. 3.75 crores, which is well above the third Plan target of Rs. 2.50 crores fixed for 1965-66; the value of production in 1956-57 was no more than Rs. 38 lakhs. The range of production, too, has widened. Among the various items now being manufactured, the most important ones are spinning frames, drawing frames, carding engines, broad looms and cop-winders, besides several kinds of spare parts, components and stores. Approximately 70 per cent of the jute industry's requirements of machinery and spares, according to Mr. Kela, is currently being met from indigenous sources and only 30 per cent is met through imports.

The demand for jute mill machinery is expected to rise markedly in the coming years. The total demand (in terms of value again) is estimated at Rs. 6.40 crores in 1966-67, Rs. 8.00 crores in 1967-68 and Rs. 10.50 crores in each of the subsequent three years (that is, 1968-69, 1969-70 and 1970-71), or a total demand of Rs. 45.90 crores. The estimated annual requirements of different items during the fourth Plan period are 302 carding machines, 357 drawing frames, 631 spinning frames, 40 roll-cone winders, 151 cop-winders, 24 prebeamers, 20 dressing machines, 86 carpet backing looms and 367 modern automatic looms. Since the machinery manufacturers cannot normally reach full capacity production, not to speak of export possibility, the total installed capacity of the jute mill machinery industry will have to be higher than that suggested by demand estimates.

The jute mill machinery industry, just as any other industry, is faced with several problems which can be solved by proper understanding between the industry and the Governments, Central and State. It is with a view to bringing about such an understanding that the Association has been established. All the manufacturers of jute mill machinery and stores will do well to join the Association, so that it could function efficiently and be of real help to the industry as a whole. Quality of machines and equipment is of vital importance, especially as the major part of jute goods has to be sold abroad against keen competition. The Association will, it is to be hoped, constantly impress upon its members the need for maintaining the highest quality standards in their production.

U. P. LETTER

ACCELERATING INDUSTRIAL DEVELOPMENT

AGRICULTURAL PRODUCTION NEEDS HIGH PRIORITY

From Our Special Correspondent

LUCKNOW, *26th May*

IN recent weeks, the industrial backwardness of U.P. came up for discussion at a number of seminars and annual meetings. It was pointed out at these discussions that U.P. is not only backward in the setting up of new industries but the existing industries in the State—sugar, cotton textiles, leather and leather goods, oil milling, among others—are not doing well due partly to the lack of essential raw materials, old and worn out technical equipment, high incidence of taxes and wrong Government policies. Mr. Padampat Singhania told the Kanpur Study Circle earlier this month that the sugar industry in the eastern districts of U.P. is on the point of being wiped out due to unremunerative sugar prices and the high costs of production. The cotton mill industry is suffering undue hardships as the Sampurnanand award has increased the wages bill of the industry, but has not increased the productivity of labour. The cotton textile industry of U.P., which produces mostly medium and coarse varieties of cloth, is also suffering because of the unremunerative prices of cloth. The old price levels which were voluntarily agreed upon some three years ago have become unremunerative, as cotton prices, wages and, in fact, all the costs of production have gone up.

Sales Tax

The jute industry in the State is suffering because the sales tax on jute goods manufactured in U.P. and sold in U.P. is 4 per cent while the sales tax on jute goods manufactured outside U.P. but sold in U.P. is only one per cent. The hosiery industry in U.P. is working under a serious handicap because of the high incidence of the sales tax and the excise duty. There are some difficulties of an all-India nature which are faced, for example, by the sugar industry and the cotton textile industry in U.P. and these would be solved only in due course of time. But it is not easy to understand why the U.P. Government cannot rationalise the sales tax, the excise duty and other taxes imposed by it in such a way as to reduce the hardship of U.P. industries.

Addressing the sixth annual session of the Eastern U.P. Chamber of Commerce and Industry, Mr. C. Subramaniam, Union Minister of Steel, Mines and Heavy Industries, observed that what is needed for the industrialisation of U.P. is not the setting up of one heavy industry here and one there, but the creation of a proper atmosphere for industrialisation. But, in order to create the necessary atmosphere, it is unavoidable to set up some new units not only in the private sector but also in the public sector. It is unfortunate that, in the matter of starting new industries in the public sector in the first three Plans, U.P. has been relatively neglected. It has been suggested that the Central Government should locate the proposed tractor manufacturing factory in U.P. There is also scope for setting up some cement factories, paper mills, fertiliser factories, electrical and engineering units in U.P. in the fourth Plan, in order to accelerate the rate of industrial growth.

Infra-structure

It has been suggested that one of the main things for creating the necessary atmosphere in U.P. for industrial development and for providing the required facilities to entrepreneurs is the creation of the necessary infra-structure in the State in the shape of transport facilities, supply of electric energy, creation and strengthening of institutional financial agencies, increasing facilities for the building up of technical skill and know-how. A weak infra-structure in U.P. has gone a long way towards slowing down industrial growth. It has been suggested that the total outlay in U.P.'s Fourth Plan, which is now under preparation, will have to be of the order of Rs. 700 crores and that, out of it, a larger proportion than in the Third Plan will have to be assigned for industrial development.

Another difficulty in U.P. is that all the regions are not uniformly developed. In recent months, greater attention has been paid to the eastern districts of U.P. but the Hill districts—especially the Uttarakhand Division—continue to be relatively neglected. Mr. G. P. Nautiyal, a member of the U.P. Small-scale and Cottage Industries Board, has suggested that the Central Government and the Planning Commission should appoint a Joint Study Team, as was appointed for the eastern districts of U.P., so that the difficulties faced by the people of Uttarakhand might receive proper attention.

A Source of Danger

The continued backwardness of the Uttarakhand Division, consisting of the Chamoli, Uttarkashi and Pithoragarh districts—is a source of danger to the country as these border districts are vital for the defence of India against the aggression from the north. The Estimates Committee of the U.P. Legislative Assembly, in its eighth report, has pointed out that some adjustments should be made in the different districts constituting the Uttarakhand Division in order to improve their administration. The infra-structure in the Uttarakhand Division is exceedingly weak and in some places non-existent. The estimates Committee has pointed out that the construction work undertaken by the P.W.D. has been without proper planning with the consequence that certain unimportant buildings have sprung up while some important buildings have been left out. Proper attention has not been paid to the construction and maintenance of strategic roads in this region. It does not speak well of the P.W.D. that it could make an outlay of only Rs. 2.20 crores in one year and Rs. 3.80 crores in another year as against the allotment of Rs. 5½ crores per annum for important buildings. The Committee has suggested that responsibility for getting the work completed and for making the allotted outlay according to target should be fixed on particular officers.

This region has a number of perennial waterfalls and rivulets which could be used for generation of electricity not by major projects but through a number of small hydel units. The region offers good prospects for horticulture, fruit, vegetable, and dry fruit farming, dairy and poultry farming and above all, sheep farming and woollen industry. It has been suggested that, instead of concentrating on importing Australian sheep, as has been the policy so far, proper efforts should be made to improve the locally available breeds of sheep. Another practical suggestion is that, in addition to giving financial assistance to people to start small-scale and cottage industries, a concerted effort should be made to improve the organisational set-up and to provide the necessary facilities to the producers in the supply of necessary materials and technical knowledge and in finding markets for the goods produced by them.

Some Valuable Suggestions

The Joint Central Team on agricultural production, which visited U.P. this month, has made valuable suggestions for increasing agricultural production in Uttar Pradesh. It is unfortunate that the target of foodgrains output for the first three years of the Third Plan could not be realised and the target of 15½ million tons for 1964-65 also would not be realised, unless the U.P. Government takes especial measures. The Team has suggested that the package programme for intensive paddy cultivation, which is so far in operation in the Varanasi and Basti districts, should be extended to the Banda and Saharanpur districts. The main cause of slow progress on the agricultural front is poor organisation and defective administrative set-up. The Team has therefore suggested that there should be at least 20 sale points in each package block where not only fertilisers but also the other requirements of the cultivator should be supplied. An important recommendation of the Team is that the number of village level workers should be increased from 10 to 15 in each block and the Assistant Development Officer (Agriculture) should have full control on these village level workers.

While the river valley projects and other big schemes have their own importance, the Team has suggested that, in order to produce quick results, efforts should be concentrated on minor irrigation programmes in certain selected areas of the State and every possible effort should be made to utilise the sullage water for agricultural purposes.

Tube-wells

In U.P., the utilisation of irrigation potential during the Third Plan has been only about 300 acres per tube-well as against the minimum of 400 acres considered economical. This has partly been due to the high tube-well tariffs and partly because the use of water has not been made compulsory. The revised tube-well tariff in the State tries to remove both these defects. As against the present tube-well irrigation rate of 16,000 gallons of water per rupee for all seasons, the new schedule introduces a rate of 16,000 gallons per rupee from 1st April to 30th June, 36,000 gallons per rupee from 1st July to 30th September and 30,000 gallons per rupee from 1st October to 31st March. This new schedule is calculated to encourage the cultivators to use tube-well water for irrigation purposes. Moreover, a fixed charge of Rs. 5 per acre will be levied on each cultivator in the command area of the tube-well which is about 500 acres per tube-well in the western districts and about 600 acres in the eastern districts. In the past, there was no fixed charge and it is hoped that the fixed charge of Rs. 5 per acre on land in the command area of each tube-well will provide the necessary incentive to the cultivator for a fuller utilisation of tube-well water. Besides, the State tube-wells in U.P. have so far been running at an annual loss of Rs. 4½ crores. The new tube-well tariff will not only increase the utilisation to 350 or 360 acres per tube-well but would also reduce the losses incurred by the State on account of the tube-wells.

Notice

CALCUTTA STEEL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifth Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at 4, Old Court House Street, Calcutta-1, on Monday, the 15th June 1964, at 4-00 p.m., to transact the following business:—

Ordinary Business:

1. To receive, consider and adopt the Directors' Report and the Audited Balance Sheet as on 31st March, 1964 and Profit and Loss Account for the year ended 31st March, 1964.
2. To declare a dividend.
3. To appoint a Director in place of Shri B. P. Khaitan who retires by rotation but being eligible offers himself for re-appointment.
4. To appoint a Director in place of Shri G. S. Nevatia who retires by rotation but being eligible offers himself for re-appointment.
5. To appoint Auditors and fix their remuneration.

Special Business:

6. To consider and, if thought fit, to pass with or without modification the following resolution to be proposed as a Special Resolution.

"RESOLVED that payment to the Directors of Commission at 1 per cent of the net profits of the Company as provided for in Article 94(2) of the Articles of Association of the Company be and is hereby approved and authorised for a further period of five years with effect from 1st day of April, 1964.

By Order of the Board,
R. N. BHOTIKA,
Secretary.

4, OLD COURT HOUSE STREET,
CALCUTTA-1, *the 28th day of April*, 1964.

Notes: (1) The Register of Members and Share Transfer Books of the Company will remain closed from 6th June to 15th June, 1964, both days inclusive.

(2) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

(3) The Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 in respect of the Special Business is being sent to all the members of the Company.

(4) The Dividend when approved will be paid only to those Members whose names appear in the books of the Company as on 15th June, 1964 or to their Mandatees.

LONDON LETTER

TRENDS IN FOREIGN TRADE

IMPORTS RISING FASTER THAN EXPORTS

From Our Own Correspondent

LONDON, *23rd May*

THE publication of the trade figures for April has thrown all the analysts into a flap—both here and abroad. Sterling slumped at first, then recovered, but the general consensus is that nemesis is round the corner and will appear as soon as the exchange dealers start buying foreign exchange as a hedge against a post-election bear market against sterling. Three months' forward buying is likely to start in the first week in July. But how true is this appraisal of the underlying strength or weakness of the British economy? In reality, there is no need for all the flap which is going on and which arises from all kinds of short-term analyses of the trade figures—the true factors are plain for all who really bother to look and the conclusions to be drawn neither obscure nor particularly depressing.

The first flap is based on the actual April figures: exports at £342 million were £18 million down on the preceding quarter; and imports c.i.f. at £480 million were £20 million up on the first quarter average. Thus (allowing for a small rise in re-exports) the trade gap in April was apparently £37 million *worse*, in one month alone, than the average for the first quarter—a quarter which in itself was bad on account of the January figures. The pessimists, however, conceded that a comparison should be made on the seasonally adjusted figures. What did these show? That exports and re-exports in April were £350 million and imports c.i.f. £457 million—a crude gap of £107 million, as compared with a crude gap in the first quarter of £85 million per month, a deterioration of £22 million on the month, quite enough to justify the second flap. Then along comes the Board of Trade to correct the *c.i.f.* import figures to *f.o.b.* and thus put them on the same basis as the export figures. This brings the true gap for April to £55 million, as compared with an average for the first quarter of £35 million—a worsening of £20 million on the month, further justification for the second flap.

True Trade Gap

Finally comes the third flap when it is realised that the very bad January figures, which threw up a true trade gap (visible trade only, of course) of £77 million were not isolated in the light of an April gap of £55 million and that the true gap for the first four months of this year now totalled £160 million, or an annual rate of £480 million. If net invisibles are allowed for at £200 million, this still means an overall deficit on current account of about £300 million or £200 million more than assumed at the beginning of the year. This figure would probably be swollen by capital exports to give a payments deficit of not less than £400 million. Obviously, nemesis was round the corner and, if Mr. Maudling is kept out of trouble till October, Heaven help his unfortunate successor!

But the Government (and Mr. Maudling) have refused to flap. Things are getting better they point out—not worse. The following figures comparing the past three months with the preceding months show the argument:

(In million £s)

Monthly averages	*Total exports*	*Imports c.i.f.*	*Imports f.o.b.*	*True gap*
November 1963-January 1964 ..	356	440	391	35
February-April	372	453	401	29

Thus, in the last three months, exports have risen by 5 per cent, while imports have only risen by 3 per cent and the trade gap has actually been narrowed. This comparison is, indeed, valid, though it remains a disagreeable fact that the average monthly gap for the past six months is £32 million, or an annual rate of £384 million. But this is £100 million better than the analysis based on the first four months of this year, which included two bad and two so-called "good" months. There is also this to be said for the Government's argument, namely, that the month of November, when the above comparison begins, is actually firmly demarcated from the earlier months of 1963. It marks the point at which the upswing in British production went ahead of home industry's capacity to supply the materials necessary and when, as a result, imports began to shoot up. This is illustrated by the following comparison:

(In million £s)

Monthly average	*Total exports*	*Imports f.o.b.*	*True gap*
1963: 10 months			
January-October	350	351	0.6
1963-64: 6 months			
November-April	364	396	32

The first quarter of 1963 actually showed a visible trade surplus; the following seven months showed a small deficit, but, till October, the visible trade was almost in equilibrium. Since then, imports have leaped up by £45 million per month, while exports have risen by £14 million per month, hence the worsening in the visible trade balance of £31 million per month—£370 million or so per annum.

Metabolism of Home Economy

What has been happening is quite clear. British exports are rising, but imports have enormously outstripped them as a result of internal business activity. Yet this result is easily explainable in terms of the metabolism of the home economy and one can begin to weigh the likelihood of this position continuing. Stock-building will slow down and the expansion in home capacity should divert orders from overseas. Thus, the final outturn on the year ought not to show as large a gap as the above figures indicate. But, also, since the swollen imports are real things and not just calculations, the deficit built up to date will clearly have to be met.

The Government's problem is this: Are they to do nothing and thus suggest that sterling will become progressively weaker, especially when it is no longer supported by surpluses from the rest of the sterling area? Or are they to say, in effect, that the "import bulge" is an inevitable result of domestic expansion and turn to the I.M.F. for support to the tune of, say, £300/£400 million, enough to meet the maximum *payments* deficit (including capital exports) on the year? The knowledge that the situation was clearly understood and would be met by international action would give full assurance to all interested in the position of sterling.

(*Concluded from next column*)

on behalf of Copenhagen, mainly on the emotional ground that they did not want the Swiss franc to become an international currency but also on the rational ground that Swiss investors would never subscribe to a domestic issue if they could get better terms, guaranteed in their own currency, on foreign bonds. The U.S. has not yet publicly objected to the offer of bonds denominated in dollars, but it is very possible that these divert funds, domestic or foreign, which might otherwise have been invested in the U.S.

Finally, then, we have the bonds denominated in European Units of Account—an artificial yardstick defined in terms of 17 currencies, whose value can change only if two-thirds of them alter their gold parity in the same direction. The bondholder gets an exchange guarantee, not in terms of gold, but in terms of the most stable currency in the group. The issuer undertakes a risk which is smaller than that involved either in a straight foreign loan or an exchange-option loan.

Theoretically, the European Unit is excellent. It has caught on slowly only because it seems complicated. But the more fundamental fact is that no scheme, however excellent, is going to create a unified European capital market unless individual Governments are prepared to remove impediments deeply rooted in differences of national habit and tradition. And this is most unlikely except in the context of a move towards political federation.

It is significant, perhaps, that M. Segré ends his article by suggesting that the Unit of Account should be used to promote European integration, should be based on a smaller number of currencies, and should help the Community on its way towards monetary union. His, in fact, is the voice of the European Commission.

EUROPEAN CAPITAL MARKET

By Questor

IT is two years now since Mr. Dillon, speaking at a meeting in Rome of the American Bankers' Association, argued that institutional factors were impeding Europe from making full use of its savings and that an excessive burden was therefore being placed on the New York capital market. A good deal of experimenting has gone on in Europe since then to create an alternative to New York, particularly since the U.S. proposal of an interest equalisation tax and the temporary closing of the U.S. market. A fair amount of capital has, in fact, been raised, but it would be an absurd exaggeration to suggest that a unified European market yet exists.

The problems involved in developing it are clearly set out by M. Claudio Segré, of the Economic Department of the European Commission, in the current issue of the review of the *Banca Nazionale del Lavoro*. So far as size is concerned, he points out, particularly in relation to the volume of saving, the new issue markets of the Six put together are not all that much smaller than the U.S. market. But their recent growth has been unequal and they are by no means integrated; each tends to be dominated, in fact, by a tradition of governmental intervention. This intervention may take the form of giving priority to official bond issues, or of official restrictions on the investment policies of institutions (like life assurance companies) which prevent them from growing and providing a regular outlet for private new issues; or it may be simply a matter of taxation, which usually tends to favour public against private borrowers.

Other Factors

This isolation of national capital markets from one another is reinforced by a host of other factors—exchange risks, legal requirements, tax laws, and so forth—which cannot be dealt with quickly, even inside the European Community. The fact that the skills needed to operate an international market can be developed only slowly has led to the idea of concentrating it in a single centre which already possesses these skills and could conduct an entrepôt trade in capital.

This is an idea which Britain, in particular, has been pushing hard. The British, like the Swiss (though without the advantage of an equally hard currency), possess expertise without capital; a good many international loans have been floated in London, issued by foreigners and subscribed for by foreigners, since New York shut its doors. But M. Segré holds and I do not altogether disagree with him, that the entrepôt idea will work only if domestic investors are capable of absorbing a large proportion of the foreign issues floated. And this condition is not met in any European capital market—nor any longer, indeed, in New York.

We come down, then, to the various attempts at internationalisation of the market which have been made in Europe during the past few years. First, of course, there is the fact that the attitudes of Governments to placings of foreign issues are gradually becoming more liberal. But the process is very slow, just because any country that steps ahead of the rest is immediately flooded.

Second, we have the formula, promoted by Herr Abs of the Deutsche Bank, by which a consortium of banks floats various tranches of the same issue in national markets, making up for differences in interest rates by varying the price of issue. The difficulty here is mainly the complexity of the operation and its inevitably high cost: it is a method best suited to very large issues, where the need to tap a wide circle of investors justifies the cost.

Third, we have had issues with an exchange option, which give investors the right to demand payment of interest and capital in a named currency other than that in which the securities are denominated. The catch about these, obviously enough, is that devaluation of the domestic currency could make the exchange option extremely expensive to the issuer.

Another alternative is the issues, in which Britain has played a leading part, denominated in dollars and (in one case) in Swiss francs. The main disadvantage about these is that the country whose currency is used to denominate the bonds may object. The Swiss, for example, objected strongly to the issue in francs floated

(*Continued in previous column*)

WINDOW DRESSING BY BANKS

U.S. FEDERAL RESERVE SYSTEM STARTS CAMPAIGN TO DISCOURAGE IT

IN an effort to end window dressing by banks in the United States, the Legal and Monetary Affairs Sub-Committee of the House Government Operations Committee made two recommendations last November. The first is a very simple and innocent recommendation which tells the bank supervisory agencies and banks that window dressing of bank accounts should not be permitted or resorted to. The Federal Supervisory Agencies should make a co-ordinated, concerted and continued use of their powers of moral suasion to have the "banking community refrain and desist from" window dressing of bank reports and statements.

The other recommendation is more pointed and is likely to be more effective. It requires every bank to certify in each of its report and statement of accounts that no window dressing is contained in it. If any bank is subsequently found to have given a false certificate, its name and the nature and extent of violation should be extensively published, and the matter should be referred to the Attorney-General "for possible prosecution under the false statement statutes."

While the practice of window dressing is known to every banker the world over, its precise definition is nowhere available. The above Sub-Committee defined it as the practice of entering into temporary non-business purpose transactions solely for balance-sheet enhancement: the purpose is, according to the U.S. Comptroller of Currency, to present a bank's financial position in a more favourable light than it really is. The Sub-Committee regarded window dressing as dangerous, because it was a deceptive and uneconomical practice which might undermine public confidence in banking industry and bring adverse consequences to the national economy.

Strangely enough, though window dressing is universally regarded as undesirable, untruthful, unfair, wasteful and misleading, it is no crime, since it violates no law. Whatever be the purpose or a lack of it in resorting to window dressing, the transactions are actually made and accordingly entered into the books of the bank.

The Chairman of the U.S. Federal Reserve Board, however, is in agreement with the report of the Sub-Committee and has taken the initiative to end the practice. The Federal Deposit Insurance Corporation agrees in principle and is co-operating with the Federal Reserve Board, though it is not doing anything directly. The Board has requested the presidents of the twelve Federal Reserve Banks to take suitable steps to eliminate window dressing in their respective regions. The Reserve Banks have found that the best way of doing it is to meet, face to face, the banks which resort to this practice and persuade them not to do so. They do not think that the task is difficult, for many banks dress their statements *only* because others also do that. The plan and the programme is to approach every bank and to persuade it to abandon window dressing. The Reserve Banks also regarded their task as an educative one, and do not wish to use pressure.

In addition to the Reserve Banks and the Federal Deposit Insurance Corporation, the Federal and State Examiners and all other bank supervisory agencies except one are participating in this programme. The exception is the lively U.S. Comptroller of Currency, Mr. I. J. Saxon. He, too, is convinced of the need to eliminate window dressing, but he differs from others on what to do about it. His suggestion is that surprise audit of banks should be conducted and different surprise call dates should be fixed for preparing bank report and accounts in addition to the two half-yearly fixed dates. The Comptroller has flatly refused to co-operate with the Federal Reserve, because he thinks that, as the "moral suasion campaign" could not reach all the banks simultaneously, some inequity is bound to result. Since it is conceded that banks resort to window dressing because other banks also do it, a simultaneous approach, he contends, is very unnecessary in any programme designed to eliminate it.

The Federal Reserve Board, however, does not agree with the Comptroller, because they feel that surprise call dates and audits are no answer to the problem of window dressing. The various Federal Reserve Banks are, therefore, going ahead with their programme of face to face meetings with officers and executives of banks. The Comptroller, meanwhile, waits for the Congress to debate and approve of his suggestions.

Window dressing is, of course, quite different from what the law allow banks in the U.K. and India to make *undisclosed* provisions for bad and doubtful debts and for taxation, provisions which are described by the vague but expressive name "the usual and necessary provisions." In the U.K., the Jenkins Committee's report on Company Law discussed the pros and cons of the vexed question of full disclosures in bank accounts. Bankers were quick to react by pointing out the dangers involved in disclosing sudden and unforeseen variations in bank profits on account of circumstances over which they have no control; supporters of the Jenkins Committee, on the other hand, referred to the great size and strength of the British banks and contended that the investing or depositing public are not so unreasonable or illogical as to be carried away by passing trends. No final decision has yet been taken, but, in any case, the British Bankers' assurance to the Jenkins Committee was revealing enough. They had told the Committee that, while their undisclosed provision may affect the *extent* of the movement of profits, it would not reverse the *direction* of profits.

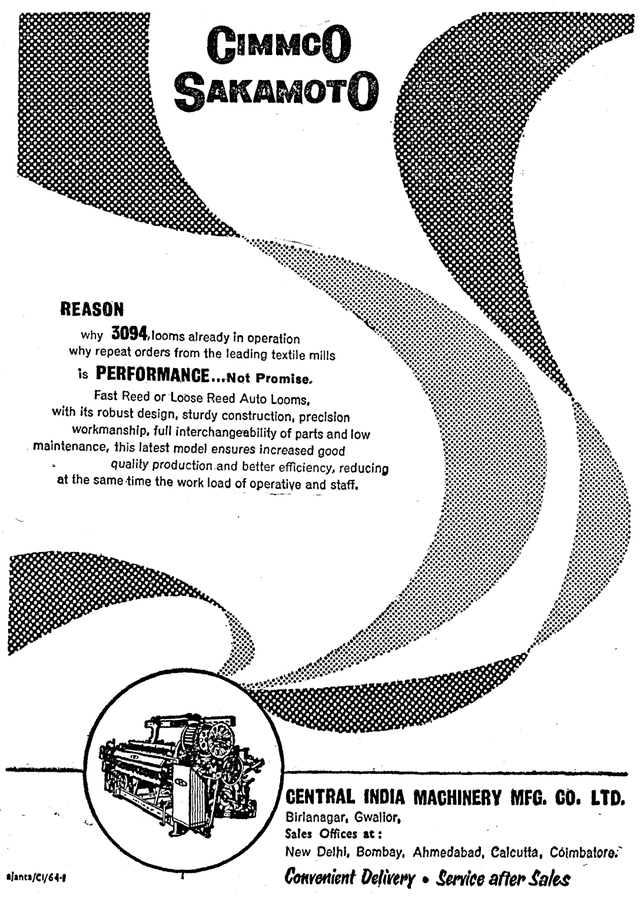
In India, we have no such assurance, with the result that it is difficult to assess even the exact direction of real profits. In addition it is not unusual for many banks to resort to "mutual transactions" in sale and purchase of Government securities in order to book a loss that goes a long way towards reducing the profits and hence the tax to the Exchequer and the bonus payable to workers. The Banking Companies Act recognises the practice of making "usual and necessary" provisions and protects the banks from disclosing their secret reserves: but the sort of window dressing that is being done so often for balance-sheet purposes in this country can neither be upheld by law nor by the principles of sound banking. Accordingly, a drive similar to that of the Federal Reserve Banks' efforts to eliminate unhealthy window dressing needs to be undertaken by the Reserve Bank of India also.

I.M.F.'S RESOURCES

At $15.6 billion, the resources of the International Monetary Fund are still edging upward prior to a general review of members' quotas scheduled for 1965. The increase since 1st January 1963 has been equivalent to $475 million, due in part to subscriptions of new members and in part to requests by individual countries to increase their financial participation. Higher quotas have been established during the past sixteen months for the Dominican Republic, Ecuador, El Salvador, Ethiopia, Honduras, Israel, Jordan, Libya, Luxembourg, Malaysia, Peru, Senegal, the Syrian Arab Republic, Tunisia, the United Arab Republic and Viet Nam. Several other increases have been approved by the Fund but will not become effective until they are formally accepted by the members concerned.

Quotas in the Fund determine the amounts of members' subscriptions, which are generally payable 25 per cent in gold and the rest in national currency, and also the assistance members may expect to draw from the Fund in dealing with foreign exchange difficulties. The Articles of Agreement require a broad survey to be made of the quotas every five years, a procedure last carried out in 1960.

If commitments under the borrowing arrangement are included, resources available to the Fund have tripled since it was established in 1945, when quotas were equivalent to $7 billion. Members numbered 29 countries then, and are 102 today. In recent years, the Fund has been further strengthened by the achievement of convertibility for many currencies that formerly played little part in its operations. But this more widespread convertibility also created new problems, in that it made possible sudden and substantial shifts of short-term investment funds from one country to another.



UNION CARBIDE INDIA LIMITED

ANOTHER SUCCESSFUL YEAR—DEVELOPMENT OF MANAGERIAL TALENT

MANAGING DIRECTOR, MR. J.W.L. RUSSELL, EXPLAINS COMPANY'S APPROACH

ADDRESSING the Twenty-ninth Annual General Meeting of the shareholders of Union Carbide India Ltd., held at Calcutta on 15th May 1964, Mr. J. W. L. Russell, Managing Director, said:

You will have noted from the annual report for 1963 that your Company has again enjoyed a successful year. This continuingly improved performance can be attributed to a number of factors such as an improvement in operating efficiencies, the improved utilisation of capital equipment and cost reduction programmes. In a developing economy, such as that which prevails in India today, there is no reason why this improved performance should not continue over the years to come.

There is another and a vital factor in this improved performance which I would like to single out for special attention. In the final analysis no business, industry or group of people can achieve its objectives unless a clear appreciation exists as well as a recognition of the worth of the individual members of the enterprise. The degree of success achieved depends largely upon the degree to which the individual is encouraged and stimulated to participate in the work of the group.

It follows that those who manage, those who encourage individuals to participate, are of the greatest importance to the success of your Company. Your Company is indeed fortunate in having a very talented and competent group of managerial and supervisory staff. Over the past few years your Company has grown at a very rapid rate. This has been made possible by the efforts of this group who have successfully coped with the many problems which have arisen. On the balance-sheet you see recorded the profits made by your Company from the manufacture and sale of its various products. What does not appear on the balance-sheet is the devotion, skill and abilities of the managerial staff who have developed the products and the methods of marketing.

Recruitment of Managerial Staff

Competent and experienced managers are not plentiful in India today and this condition while posing many knotty problems, is in itself a sign of the vigorous and healthy growth of Indian business and industry. It is because of this growth that there is now considerable competition within both the public and private sectors for the limited supply of managers of good calibre and potential. Despite such competitive conditions, your Company has not experienced to any degree, the loss of senior and more capable employees, which it is considered is due to the congenial atmosphere which has been created over the years amongst the employees resulting from your Company's philosophy towards work and management.

In essence, this philosophy states that, in order to develop and retain the body of managerial skills required for present and future operations, it is necessary to select the best possible human material, to utilise the knowledge, skills and aptitudes of each individual to best advantage, to foster the development of these and to assist in the acquisition of new skills and abilities. It goes without saying that a fair and adequate remuneration policy forms an integral part of this concept. Generally rising costs and the enhanced impact of taxation on this group of employees have given an increased importance to this last factor. This is receiving very careful attention by the management of your Company.

The settled policy of your Company calls for promotion from within its own ranks whenever possible. This calls for a timed training schedule so that, as plans for expansion progress, promotion may be given to fully qualified executives in order to fill new positions as they arise.

As a corollary, this policy also requires recruitment at the lowest level of management. Exceptions must, of course, be made from time to time in order to meet special circumstances as, for example, when venturing into new fields of activity, fields which require special skills and techniques not represented amongst existing staff. In such cases there is no hesitation in bringing in new skills, techniques and disciplines from outside your Company. One important advantage which is enjoyed in this connection is the ability to "borrow" from your Company's overseas associates, highly skilled technical and professional experts to help in the initial stages of these projects, who also act as instructors for their Indian colleagues.

Recruitment for the managerial group at whatever level involves a very careful selection process. Each applicant is interviewed by a group of senior managers who look not only for the evidence of the applicant's suitability and qualifications for the particular position but also for those basic traits of character which will enable him to rise within the managerial levels. An essential feature of this procedure is that it is a two-way communication process. It is just as important that the applicant should learn, through these interviews, as much about your Company, its practices and policies as is learned from him concerning his abilities and potential. Naturally, this is a time-consuming process and senior managerial time is a scarce commodity but the time and effort thus invested has paid rich rewards in the calibre of the employees.

Management Training

Managerial training in your Company has a twofold object: firstly, to enable the individual to discharge his assigned duties to the best advantage to himself and to your Company, and secondly to enable him to increase his skills and abilities to the greatest extent possible so that, as expansion takes place and new and more responsible positions are created, trained, qualified employees are advanced to fill these. Since each manager has as one of his most important responsibilities, the development of each of his subordinates, there are no gaps in the programme.

In practical operation this is, in the case of your Company, a process of communication and is, in its essentials, simplicity itself. The executive is first told what is expected of him. Then, at regular intervals his actual performance is compared with that expected and from this comparison a draft programme is drawn up so designed as to facilitate his progress. Finally, this is discussed with the individual thereby enlisting his co-operation in the preparation of his own annual development programme. The process might be likened to the art of the navigator of a ship at sea who, by determining the ship's exact position and comparing this with that predicted, takes such action in changing course or speed as may be required to correct any deviation from the planned progress in order to bring the ship to her destination at the appointed time.

In essence this is a simple matter. In practice it is not quite so simple. Before a man can be told what is expected of him, the aims of the entire organisation must first be clearly established. From this, the objectives of each division, department and section can be formulated. Only when this has been done can the manner by which the individual is expected to contribute to the accomplishment of the task of the unit be stated. This is termed the position description system. Each managerial position is covered by a position description which sets forth the duties inherent in the position. Each of these descriptions is in turn supplemented by a statement of position objectives, setting forth the results which the position-holder is expected to achieve and, as appropriate, the time by which they should be achieved. In preparing these, a conscientious effort is made to avoid specifying or indicating how the desired result should be achieved. Within the general administrative framework of your Company a wide area of freedom is allowed for experimentation and innovation and is considered to be a basic requirement for healthy managerial development.

At regular intervals each manager's actual performance is measured against his position objectives. This appraisal is performed by the manager's immediate superior, assisted by two other managers senior to the one under appraisal. Based on this comparison an assessment of present performance and potential is made along with forecast of his progress over the next five years. The group also at this time prepares a tentative training programme for the person appraised, designed to foster demonstrated strengths and to help overcome deficiencies. The future, as well as the present, managerial needs of your Company are, of course, considered in drawing up each programme.

Finally, and this is of utmost importance, the main points of the appraisal, the good and the bad, are discussed privately by the manager appraised and his immediate superior in the organisation. The object of this post-appraisal conference is to give each manager an opportunity to see himself as others see him and to work out with him his own detailed development programme.

The development programme, as finally worked out, reflects the requirements of the individual and your Company. It can cover a period of months or years. It may, for example, call for intensive training in a particular branch or subject of a profession or for re-assignment in order to broaden experience, for the acquisition of detailed knowledge of a particular process or product or for a grasp of the broad principles of management itself. While I will not burden you this afternoon with statistics, your Company has vigorously supported the management training movement in India since its inception. It has assisted in the formation of several professional associations in the field and your Company's executives have served as guest speakers, lecturers and as members of directing staffs. Encouragement is given to managers to contribute material to the growing number of professional publications devoted to management. In addition, of course, your Company has regularly sponsored its managers to membership in the courses offered. A close association with similar bodies in the U.K. and the U.S.A. exists and, as appropriate, executives have been sent for training to these. Your Company's overseas associates have been most co-operative in making their plans and research laboratories available for this purpose.

Indianisation

In applying this programme your Company realises the vital importance of placing first priority on those of its managers who are Indian nationals. This programme is succeeding. In every phase of operations, in manufacturing, in marketing and in administration, Indian managers are replacing internationally-assigned executives. In these positions they are doing well. The single and temporary exception to this is in the chemicals expansion project. In this case experts have been "borrowed" from your Company's overseas associates who will not only assist in the initial stages of the project but who will also impart their special skills and techniques to their Indian counterparts. I do not anticipate any reversal of the present trend of "Indianising" our management.

In all of this there is nothing mysterious or esoteric. What has been attempted is to apply good sense and simple justice in order to benefit both your Company and the individual.

I do not wish to imply that the system which I have described is a perfect one. Management development, even in the most advanced industrial countries, is still more of an art than an exact science. Changes have been made in our system. I have no doubt that other changes will be made in future which will reflect changes in the structure, operations and needs of your Company. What I do state is that the programme I have described enables your Company to base its managerial planning on reasoned, objective opinion. It serves as a constant reminder to executives at all levels that one of their chief responsibilities is the development of their subordinates. Although a staff service is provided to assist in the administration of the programme, responsibility is clearly defined as that of each senior to his subordinates. The plan has been well publicised and since there are no tricks, no hidden mysteries, it has met with ready acceptance at all levels and has

RESEARCH IN WOOL INDUSTRY

NOVEL AND IMPROVED FABRICS DEVELOPED

By Dr. A. B. D. Cassie

Director of Research, Wool Industries Research Association, Leeds

WOOL is an exceedingly versatile fibre, and many of its unique properties have been used from time immemorial to produce typical wool fabrics. Its felting property was one of the first to attract attention, and was put to good use in the fulling of cloth. However, with the advent of knitting and particularly of the knitting machine, the felting property was found to be a defect, in that knitted wool goods felted and shrank in size when laundered. This led to the first attempt to modify the wool fibre; it was already known in the last century that treatment of wool by chlorine in an aqueous solution reduced the tendency of felt. The use of chlorine was, however, a chancy business, because the reaction of wool with chlorine and water is very difficult to control. The wool that first comes into contact with a solution containing chlorine is liable to be over-treated, whilst the centre of a mass of wool may be treated only by a very dilute solution, and so has little shrink-resist property. The results of the early wet chlorination processes were, therefore, very variable, and were accordingly regarded as unreliable.

When organised research for the wool industry was established, chlorination of wool was one of the first subjects for study. This research revealed the very rapid reaction between wet wool and chlorine, and established it as the prime cause of the unreliability of the wet chlorination process; it also provided methods of measuring the degree of attack of wool by chlorine and other reagents. As wool was so susceptible to attack when in the wet state, workers in the early days of the Research Association conceived the idea of using chlorine gas, rather than chlorine in an aqueous solution. The chlorine gas system was found to be susceptible to very close control, the control being exercised mainly by the regain of the wool that came into contact with chlorine. A commercial unit was developed for the process, and very satisfactory shrink-resistant materials were obtained.

Easy-care Requirements

This process, however, required the setting up of special plant and, furthermore, left the wool with a somewhat harsh handle. These two drawbacks have restricted the use of dry chlorination for civilian goods, although it was extensively and very successfully used for military clothing during the Second World War. Since then, many methods of controlling the reaction in liquid baths have been put forward, and reagents other than chlorine have been used to produce shrink-resistant wool materials, but they all suffer to a considerable extent from the difficulty of obtaining uniform treatment throughout a mass of material. Nonetheless, with care and adequate control, many of these processes are used successively today, and shrink-resistant knitted garments are widely available to the public. Indeed, shrink-resistance can be regarded as the first modification or improvement of wool to meet "easy-care" requirements.

Another unique property of wool is its ability to take on a set. This again has been known for a very long time, and has been used by the industry in such processes as potting, crabbing and steaming to obtain finishes that are unique to wool. This property, too, has been the subject of much careful study, so that the conditions required to give wool different degrees of set are now well known. The basic principle behind setting fabrics by crabbing is the fact that a wool fibre that is stretched and held stretched in boiling water, and then dried, will retain its stretched length in almost any subsequent process. The careful study of setting and methods devised to measure the degree of set led to much research into the effects of chemical reagents on the setting of wool; it was revealed that reducing agents could help materially in improving the permanence of a set given to wool fibres. The first application of chemical treatments, however, came not in the wool industry but in hairdressing, where results obtained from a study of wool were used in the permanent waving of hair.

This body of knowledge of the setting power of wool, and of its attainment by chemical methods, has recently taken on a new importance for the wool industry. The advent of synthetic fibres, and the "easy-care" claims for fabric made from them, have led the wool industry to consider whether or not the "easy-care" properties could be added to the already unique features of wool. It does appear that the chemical methods of setting wool can, in fact, provide many such features in wool garments. One of these is the setting of pleats in skirts and creases in trousers, so that they will be retained after wear and even after dry cleaning or mild washing. Many reducing agents will provide such properties in wool without much modification of the fibre, but, unfortunately, some dyestuffs that have long been used with wool change in colour when exposed to certain reducing agents. There are, however, reducing agents that have little effect on dyestuffs, and these are now being put to good use in the production of "easy-care" wool materials. Monoethanolamine bisulphite is one that seems to have the best compromise properties; it is used today to provide both permanent creases and flat set fabrics.

I.W.S.'s Pilot Plants

A considerable impetus to the use of the research results has been given by the International Wool Secretariat, whose pilot plants throughout the world are stimulating interest in the new wool processes. One such plant is at Bradford Technical College where wool manufacturers and users of wool products can learn at first hand the opportunities that are open to them when research results are applied in practice. At this stage, the background work, done by the Research Association, becomes invaluable. Methods that have been developed for measuring a host of variables in these processes become essential for success. The effects of very many reagents on the wool fibres are also known for past researches, and provide an indispensable guide in controlling processes that produce "easy-care" properties. "Easy-care" attained at the expense of some innate valuable property of the fibre will soon bring disrepute to the "improved" material, and it is in avoiding such pitfalls that past research results are proving so valuable. Thus, strength, abrasion resistance, recovery from deformation, dyestuff fastness and handle are some of the features of wool cloth that must be maintained in any novel fabric offered to the clothing industry.

"Stretch Fabrics"

"Easy-care" looks after the appearance of our clothes; now we have fabric modifications aimed at improving their comfort—the so-called "stretch fabrics." Knitted fabrics are, of course, the stretch fabrics *par excellence*, and no doubt the increasing popularity of knitted materials provided an impetus to developing woven stretch fabrics.

There are a number of ways of producing stretch fabrics, all relying on the power of the constituent fibre to acquire a set. In the case of wool, this can been obtained by use of chemical reagents or by the use of boiling water or steam. In the case of synthetic fibres, it is obtained by high temperature treatment. The simplest form of stretch fabric is obtained by setting excessive crimp into either the warp or weft yarns, the process being much simpler for weft-way stretch than for warp-way stretch. Thus, if an all-wool fabric is woven with the ends more widely spaced than normal, the application of high tension, warp-way will shrink the cloth in width by straightening the warp threads whilst increasing the crimp in the weft yarns. The problem is how to set this high degree of crimp in the weft yarn. The simplest way of doing this is to use cloth that has been impregnated with one of the chemical setting agents and feeding it on to a blowing machine under tension; the stretch is then set in the blowing process. This cloth now has much crimp in the weft direction and can, therefore, be stretched in this direction; if the setting treatment has been adequate, the stretch is recovered when the stretching force is removed. If used in a jacket, for instance, such a material can give stretch across the shoulders, and so comfortably accommodate body movements.

The stretch that can be obtained by setting crimp in fabrics is, however, somewhat limited, and many of the stretch fabrics available today use yarns that are themselves elastic. Some of these yarns do, in fact, contain a fine rubber or other polymer elastic filament, but the more general method of producing them is to use twist properties to provide yarns with stretch properties. If a yarn is crepe twisted in one direction, and the twist set in the yarn followed by untwisting to normal twist, the yarn will have considerable stretch properties. This procedure has been used for some time to provide bulked continuous filament yarns, the setting medium in this case being heat. It was the stretch properties of these that led to the development of stretch yarn fabrics. Similar effects can be obtained with all-wool yarns by the same method, but the setting in this case has to be done with boiling water, steam, or one of the modern setting agents. Weaving these yarns into satisfactory fabrics requires considerable care and skill. In particular, the tensions of the yarns in weaving must be uniform and as low as possible, as if the stretch properties of the yarns are to be retained in the fabrics. In maintaining this close control, research results are again proving invaluable, and methods that have been developed for measuring and controlling tensions are an essential tool in providing acceptable fabrics.

"Easy-care" and stretch woven fabrics provide a revolution in the materials available to the public, and their development within the last few years has provided great technical interest in the industry. They are the logical outcome of a great deal of past research, the results of which are now finding increasing application in the production of novel and improved fabrics.

WOOL IN SOVIET UNION

The report on the results of the 1963 State Plan, issued by the U.S.S.R. Council of Ministers' Central Statistical Board, gives details of the sheep and wool textile industries in the Soviet Union. According to *Wool Intelligence*, which quotes part of the report, the total number of sheep in the Soviet Union appears to have declined during 1963, although, for 1963, the figures for goats are included with those for sheep. At the end of that year, there were 139.2 million sheep and goats, of which 133.6 million were ewes. Collective farms, State farms and other State enterprises accounted for 108.4 million. A year earlier, the total sheep number was 139.7 million and the number of goats was 6.6 million, so that, overall, there was a reduction of some five per cent during the year. Owing to fodder shortage, the State and collective farms slaughtered a larger number of livestock than usual. State purchases of raw wool amounted to 836 million lbs. in 1963, as against 825 million lbs. in 1962. Production of wool fabrics in 1963 amounted to 563 million square yards, slightly more than in 1962. The production of fabrics of other fibres showed greater proportionate increases, those of cotton, linen and silk (including presumably synthetic fibres) rising to 6,062 million sq. yards, 609 million sq. yards and 958 million sq. yards, respectively. The number of knitted outer garments and of knitted underwear rose, the former by six per cent to 133 million and the latter by seven per cent to 554 million.

SUBSIDY RATE FOR U.S. COTTON

The U.S. Department of Agriculture has reset the cotton equalisation payment-in-kind rate for the 1964-65 season at 6½ cents per pound, the same as for the interim programme, and has also announced appointment of a 12-man *ad hoc* committee to advise on who should receive the payment under the new programme after 1st August 1964. In the first of two announcements on the equalisation P.I.K. for 1964-65 the U.S. Department of Agriculture recently made two points in addition to setting the initial payment rate: (1) Eligible cotton in inventory which has passed the point at which the payment will be made under the programme for the 1964-65 marketing year will qualify for payment. (2) The P.I.K. certificates received under the current programme may be used to obtain cotton from C.C.C.'s inventory at domestic market prices, as determined by the C.C.C. If the equalisation payments during the 1964-65 marketing year are made at a point in the movement of cotton through trade channels before the bales are opened for consumption, any eligible, raw upland cotton in inventory at 12:01 a.m. Saturday, 1st August that has passed the point for the initial payment will be eligible for the 6½ cent payment on gross weight of the cotton.

MANCHESTER LETTER

COTTON BOARD ON TEXTILE TRENDS

ORDER BOOKS LARGE—STOCKS FALL SLIGHTLY

From Our Special Correspondent

MANCHESTER, 19*th May*

LATEST output figures issued by the Cotton Board in Manchester show that Lancashire mills are turning out more cloth and yarn than they were a year ago, in spite of a four per cent drop in the number of workers employed. During the five weeks ended 4th April, weekly average yarn production reached 12,020,000 lbs., and cloth output aggregated 30,800,000 yds. "Despite the fact that trade was rather quieter in March, order books continued to lengthen on the whole and there were further slight reductions in stocks of finished products held by mills," said the Cotton Board report. "Production was affected by the Easter holidays."

Yarn output per working day was about 1 per cent less than in February, but about 4 per cent greater than in March 1963. Production of cloth per working day was one per cent less than in February but about 2 per cent greater than in the same month a year ago. The number of employees on mill order books at 142,340 fell by 240 in the month, although there was a "considerable" rise in the number of juveniles employed following the Easter school leaving period.

Recruitment in Mills

More young people are needed in Lancashire cotton mills to correct the present "top heavy" age structure and to meet the needs of shift working, said Mr. G. H. K. Rae, Chairman of the Cotton and Rayon Merchants Association. In his annual report, he said that the British cotton trade seemed to be in a better position now, and that prospects for stability were more encouraging than for some time. "It is to be hoped that the recent expansion in Lancashire production will be at least held and that there will be no relaxing of effort towards making the industry more efficient and competitive," he added.

Although Mr. Rae described recent Government moves to control cotton imports as "a step in the right direction," he said that the whole system still had many complications. He hoped that something more imaginative would be devised particularly regarding imports from low-cost and developing countries.

Velvets Close Down

There are fears that a traditional Lancashire textile trade will be faced with extinction after news that the London-based E.V. Industrials group is to close down its English Velvets works at Salford. In addition to throwing 350 operatives out of work, the decision means that at least three weaving mills specialising in velvet cloth manufacture and dozens of merchant firms will have no outlet for their products.

The Salford mill has been the main processor of velvet fabrics in this country for many years and, although the trade has dwindled in line with others in the textile industry, it still offered employment not only for its own operatives, but also for those engaged in the manufacturing of velvets.

Traders were shocked by the suddenness of the move and there is talk of joint protests to the Cotton Board and the Board of Trade.

Brighter Outlook for Mutual Mills

A much brighter outlook, very satisfactory demand for yarns and the installation of plant which should increase production by about 20 per cent are the salient points made by Mr. Geoffrey Livsey, Chairman of Mutual Mills Ltd., spinners of specialist synthetic yarns, of Heywood, Lancashire, in his annual statement with the accounts for the year ended 29th February 1964.

Despite the intensive competition encountered in the spinning trade during the past year, Mutual Mills one of the foremost spinners of man-made fibres earned a reasonable profit, declares Mr. Livsey. Group profit was reduced from £105,939 to £73,608. The taxation charge was also reduced—from £32,895 to £8,454—and a final dividend of 7½ per cent is recommended, making 10 per cent for the year against 11 per cent. Depreciation was fixed at £37,776, as against £43,107 and a further £41,474 has been written off assets, being the amount received under the Cotton Industry Re-equipment Scheme held in reserve.

"Production in the knitting company is expanding at a progressive rate," says Mr. Livsey, "and sales extend well into the second half of the financial year at profitable margins." The engineering company has again had a profitable year and further new plant has been installed to cope with the extended order book.

A Valuable Asset

"Our minority interest in Mutual (Filaments Division) Ltd., a company held jointly by The Klinger Manufacturing Co. Ltd. and ourselves, is proving a valuable asset," he continues. "An appreciable increase in dividend from this source is anticipated during the current year. A further investment has been made in an associated company with a view to safeguarding the offtake of a portion of our production."

In the past year, £77,840 had been spent in pursuance of the company's policy of modernising plant and machinery. Further commitments for the current year amount to £51,000. The standard of quality, design and efficiency of British textile machinery, says Mr. Livsey, is now vastly superior to that which obtained previously and is at least comparable to any available from other sources in the world. Demand for the products of the group remains good and a successful year's trading can be anticipated, with a consequent improved result.

I.F.C.A.T.I.

The International Federation of Cotton and Allied Textile Industries, the leading trade association of the world's textile industries, has recently moved its headquarters from Manchester to Zurich. On the occasion of the inauguration of its new offices at 29 Am Schanzengraben, the President of the Federation, I.F.C.A.T.I., Mr. Alfredo Sedó (Spain), held a Press conference. He explained the scope, structure and activities of the federation, whose national member-associations represent 20 countries and more than two-thirds of the productive capacity of the whole world. The aim of the organisation, which was founded in 1904, is to promote international co-operation within the textile industries and to represent the industry's interests in international affairs.

President Alfredo Sedó announced that this year's general assembly of the federation will be held at Zurich from 5th to 10th October 1964, at the invitation of the Swiss Spinners', Doublers' and Weavers' Association. More than 200 delegates from all parts of the world are expected to attend. The general assembly will mainly deal with the structural evolution and the problem of the productive capacities in the world's textile industries. In addition, special sub-committees will consider questions concerning raw cotton production and marketing and the supply and use of man-made fibres. At the opening session, Ambassador Dr. E. Stopper of the Federal Ministry of Economic Affairs will be the guest speaker. In 1965, the general assembly of the federation will be held in the U.S. at the invitation of the American Textile Manufacturers' Institute.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of the records in London and proper returns adequate for the purposes of our audit have been received from the branches in India, none of which has been visited by us. We have examined the foregoing balance sheet and profit and loss account which are in agreement with the said records and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act 1956 (India) as amended by the Indian Companies (Amendment) Act 1960 and the Banking Companies Act 1949 (India) as amended up to 30th December 1963 and on such basis the said balance sheet gives a true and fair view of the state of the affairs of these branches as at 31st December 1963 and the profit and loss account gives a true and fair view of the profit for the year ended on that date.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion, proper books of account have been kept by the Company as required by Law so far as appears from our examination of those books.

We have examined the above Balance Sheet of Mercantile Bank (Agency) Private Limited as at 31st December, 1963, and the Profit and Loss Account for the year ended on that date which are in agreement with the books of account. In our opinion and to the best of our information and according to the explanations given to us, the said account together with the Note gives the information required by the Companies Act, 1956, in the manner so required, and the Balance Sheet gives a true and fair view of the state of the Company's affairs as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the results for the year ended on that date.

LOVELOCK & LEWES,
Chartered Accountants.

CALCUTTA,
Dated the 4th January, 1964.

REPORT OF THE BOARD OF DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1963

GENERAL

As shown by the Balance Sheet as at 31st December, 1963 the Company's Authorised Capital of Rs. 10 lakhs has been fully issued, out of which Rs. 5,00,500 has been paid up and is held on Deposit account with Mercantile Bank Ltd., Calcutta. As in previous years, the year under review shows no profit or loss, as the transactions of the Company, are incorporated with those of the Parent Company, Mercantile Bank Ltd.

The whole Share Capital of the Company is owned by Mercantile Bank Ltd. and its English subsidiary, Mercantile Bank (Nominees) Ltd.

DIRECTORATE

Shri Sunil Kumar Singh Roy was appointed a Director of the Company with effect from 4th June, 1963.

Mr. W. H. Jackson retires from the Board with effect from 8th January, 1964, as he is leaving India permanently. We wish to place on record our deep appreciation of the valuable services rendered by him to the Company in his capacity as Director.

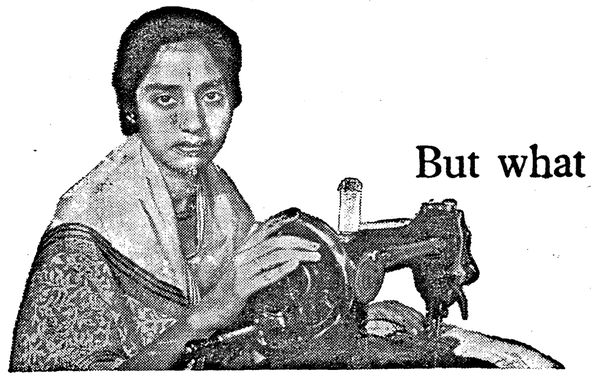
Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), aged 76 years retires this year from the Board by rotation. In this connection notice under Section 190 of the Companies Act has been received from the Mercantile Bank Ltd., Share-holders, that it is their intention to propose a Special Resolution for the re-appointment of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. at the next Annual General Meeting of the Company and that the age limit prescribed by Section 220 of the Companies Act shall not apply to Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon),

AUDITORS

Messrs. Lovelock & Lewes retire but being eligible, offer themselves for re-appointment as Auditors for the ensuing year.

CALCUTTA,
Dated 4th January, 1964.

W. H. JACKSON,
A. RAMASWAMI MUDALIAR,
SUNIL KUMAR SINGH ROY, } *Directors.*



But what can I do to help?

There is so much that every Indian woman can do, *now*, to strengthen and defend the Home Front. Take part in Defence through local women's organisations. There is plenty to be done. Contribute, and *encourage* contribution, to National Defence Fund and buy Defence Certificates. There are, too, the many personal efforts you can make—in discipline, behaviour and attitude:

• Wage war on waste; check thoughtless buying and resist inflated prices. • Do not buy gold. Give your gold for country's cause. • Be resolute in work, whatever it may be, because each task done just that little more efficiently helps the national drive, strengthens India's position. • Rouse yourself from apathy, and Take Action.

BE VIGILANT—*take part in national preparedness*

RIGHTS, DUTIES AND OBLIGATIONS OF COMPANY DIRECTORS—II

NOWADAYS COURTS DO NOT ALLOW THEMSELVES TO BE DECEIVED BY MERE FORMS OF LAW

By N. K. Petigara

IN the article published last week, I briefly dealt with the rights of directors of companies, rights which have always been and still are very substantial. Let me now analyse the liabilities and duties of directors. It is said, and quite justly, that a director incurs liabilities in the nature of those incurred by trustees even though he is not a trustee. A director, therefore, can never justify the making of a secret profit out of his office, such as receiving a commission from a transaction in which the company is interested.

Personal profits can be of various kinds arising from either deliberate fraud, dishonesty or corruption or from the mere fact that a director holds a certain position. The law, both Indian and English, provides that a director is obliged to account to the company for any benefit he obtains from his position, additional to the remuneration prescribed for him. This theory has been taken to its logical conclusion in England. In 1942, the House of Lords, overruling both the High Court and the Court of Appeal, held [in the case of *Regal (Hastings) Ltd.* vs. *Guliver and others* (1942) 1 A.E.R. 378] that even in respect of a transaction the *bona fides* of which were not in doubt the directors were liable to reimburse the company certain benefits they had indirectly acquired. This company had owned a cinema theatre and had formed a subsidiary to acquire two other theatres. It subscribed only £2,000 of the capital which was all it had available for the purpose. The remaining capital was put up by the directors and certain friends of theirs. Subsequently, the subsidiary was amalgamated with the company and a profit of £2 16s. 1d. per share was made by the holders thereof. The Company sued to recover these profits made by the directors and both the High Court and the Court of Appeal held that the directors were not liable to make any refund. These courts stated that the Company had already subscribed as much as it could and the only way the transaction of having a subsidiary could be carried out was by the directors and others putting up the balance of capital. The House of Lords accepted these facts, but said that, as the directors had subscribed by virtue of their office and with the special knowledge acquired in such office, they must account to the company for the profits that had accrued to them. Lord Russel stated:

"The Rule of Equity which insists on those who by use of a fiduciary position make a profit being liable to account for that profit, in no way depends on fraud or absence of *bona fides* or upon such consideration as whether the profit would or should otherwise have gone to the plaintiff or whether the profiteer was under a duty to obtain the source of the profit for the plaintiff, or whether he took a risk or acted as he did for the benefit of the plaintiff, or whether the plaintiff has in fact been damaged or benefited by his action. The liability arises from the mere fact of a profit having, in the stated circumstances, been made. The profiteer, however honest and well intended, cannot escape the risk of being called upon to account."

This is the ultimate in relation to the risks a director has to take when he makes a profit from a transaction in which his company is concerned. The House of Lords rejected the argument that, in taking up the shares themselves, the directors were merely acting as members of the public. The House of Lords stated that the directors could have protected themselves by asking the Company in a general meeting to allow them to take up the shares.

No Personal Motives

This is undoubtedly the law, though it is not so stated in our Companies Act which has made elaborate provisions for directors, their remuneration and for their making good to the company any benefits that they may derive from the company in addition to their remuneration and for disclosure of interest by interested directors. All such provisions, which in reality are not as comprehensive as they are intended to be, merely confirm the law that, for all that a director may obtain beyond his remuneration, he is accountable to the company and unless specifically sanctioned has to refund it to the company. These provisions of the law should be accepted by directors without reserve or exception. A director should not put himself in a position where his personal interests may come into conflict with his obligations to the company. The company has a "right to the voice of every director and the advice of every director; accordingly, the directors must remain in a position whereby the advice they give is not vitiated or affected by any personal motives."

There is, therefore, a misunderstanding or misconception in regard to the persistently growing demand for greater stringency in our laws relating to directors. In fact, the law is more stringent than the Act and no amount of particularisation by way of amendment of the Act can achieve the object in view. The whole theory of the law is (a) that a director is liable for negligence or default and (b) that directors are jointly and severally liable to make good a loss suffered by the company owing to any breach of duty on their part. In a suit by a company against a director for negligence, the only answer can be either that there is no breach of duty or negligence or that there is mere error of judgment. Otherwise, an enforceable liability attaches to the directors. Of course, there are limits to this liability. Nobody can be proceeded against for not having more skill and knowledge. There can also be no responsibility for mere mistaken decisions. In cases such as those of banks or insurance companies, bad debts or claims are bound to arise but that does not mean that the directors who sanction the loans or agree to the issue of a policy or the acceptance of a risk are automatically liable for the losses.

A Case History

Directors acting *bona fide* and accepting *bona fide* the statements of the officers of the company are acting properly, entitled as they are to rely upon the advice and experience of the officers, unless there is any reason to doubt the same. If there is any such reason, then the directors have to be upon guard and they must go to the bottom of the matter to the best of their ability. But, even while exercising the care and caution ordinary prudent businessmen acting in their own affairs take, the director's liability is substantial and the extent to which the American Courts, the English Courts and now our own Courts have gone can be gauged from the decision of the Allahabad Court in the *Life Insurance Corporation of India* vs. *Haridas Mundhra and others*. Subject to any revision from the Supreme Court, the Appellate Division Bench of the Allahabad High Court has gone to an extent to which, to my knowledge, no other court in India has so far gone.

An application was made by the Life Insurance Corporation of India under Sections 397 and 398 for relief on the grounds that the affairs of a company with which Mr. Mundhra and others were connected were being conducted in a manner oppressive to the members and prejudicial to the interest of the company. Coupled with that prayer, the L.I.C. also applied for relief against individual directors of the company for loss caused by their misconduct and breach of duty. Some of the claims were in respect of losses suffered by the subsidiaries of the British India Corporation. The Allahabad Appellate Court held that in law misfeasance or breach of trust in relation to the subsidiary company was misfeasance or breach of trust in relation to the holding company. Therefore, (a) the affairs of the subsidiary company were relevant under Section 398 of the Act and also under Section 543 which entitles the Court to assess damages against delinquent directors in the case of winding up as read with Schedule XI of the Act; (b) the directors of the *holding* company could be responsible for wilful misconduct, misfeasance, or breach of trust in relation to the affairs of a subsidiary company.

According to this decision, even a single member of a company has the right under Sections 397 and 398 (provided, of course, that the single member holds not less than one-tenth of the issued share capital of the company or otherwise 10 per cent of the total number of the members or 100 members if that is the lesser number) to make the application to seek reliefs for the benefit of the company, and this right includes the right to enforce jointly and severally the liability of directors for misfeasance.

Theory of Business Reality

The Court recognised that the holding company was an entity distinct from the subsidiary company but the court acted upon the theory of what is termed business reality. It is a theory which the American courts have to a large extent developed over the years. It is also recognised by English Courts and now our Courts have been using the same language and accepting the same principles. The court held that there was obviously a breach between dogma and reality in the realm of the corporate relations of a holding company and its subsidiary and that Sections 397 and 398 had repaired the breach to an extent. The court, having held that the affairs of the subsidiary company were being conducted at the behest of the holding company, and that the affairs of the holding company were being controlled by certain directors of the holding company who were treating the subsidiary as a mere department, came to the conclusion that, since, by and large, the two bodies were fused together and the one was controlled by the other, the adversity of the one inevitably created a crisis in the other and that, therefore, the holding company's board of directors was liable for the losses of the subsidiaries incurred through misfeasance or breach of duty.

The Court enquired into the history of the rise and growth of holding companies and concluded (though there are writers as well as entrepreneurs of eminence who would not agree with the conclusion) that the main cause for the rise of the holding company was the desire of a small group of finance and business entrepreneurs to acquire control over concentrated capital and industrial resources by the device of what could be relatively insignificant investments.

The Court then construed Section 398 and said that the true import of the provision had to be comprehended by an examination of its purpose and context and that the full purpose itself could not be understood without a complete awareness of the dangers inherent in the system of holding companies, which were that the structure may become dangerously poisonous and that complicated and involved financial transactions may take place between the members of the two companies and that directors may, by reason of inter-corporate finance, be attracted to improper or dishonest manipulation of accounts at the expense of a prosperous member of the group or to the prejudice of the minority shareholders of a company.

The Court came to the conclusion that the Companies Act, 1956 treated the holding company and its subsidiary as a unified group, rather than as separate personified institutions, for purposes of ownership of capital and control of the subsidiary by the directors and managing agents, as also for their inter-corporate finance and accountancy. The Court emphasised the validity of the theory of business realities and said that, in the construction of a statute regulating the affairs of the companies, the Court would be justified in looking into business realities and it should not confine itself to the purely legalistic view.

American and British Decisions

In arriving at such a decision, the Allahabad Court felt itself fortified by American and English decisions. The American Courts have always said that they would not permit themselves to be deceived by mere forms of law but that they could deal with the substance of the transactions involved as if the corporate agency did not exist and as the justice of the case may require. The doctrine of corporate entity would have to be disregarded where fraud or injustice is concerned. The English Courts have also adopted similar principles. The corporate veil can be raised where not to do so would defeat public convenience, justify wrong, protect fraud or defend crime. Courts are prone, more prone than ever before, to cast aside the corporate mask and give recognition to the economic facts such as that in an entity, composed of a group of companies, actual business enterprise is carried on by the component individuals active in the groups.

I have digressed into a discussion of the theory of the corporate veil and how easily the courts allow it to be raised. This is to point out that there is no radical change in the law about the liabilities and responsibilities of directors introduced either by the Companies Act, 1956, or the amendments thereto between 1956 and 1963. The radical change in the Companies Act, 1956, brought about by the introduction of Sections 397 and 398, was in regard to the procedure evolved which, according to the Allahabad High Court, can be utilised simultaneously for enabling applications to be made for relief in cases of oppression or in case of mismanagement (a right which the Courts previously had by the more elaborate method of a suit by shareholders for themselves and on behalf of the other shareholders or on behalf of the company) and coupling this right with the right of obtaining relief.

Serious Implications

When the judgment was delivered, I drew the attention of the Company Law Department to the implications of this judgment and said that, in my opinion, very important questions arose which required determination by the Supreme Court and that, if the construction of the Supreme Court was the same as that of the Allahabad High Court, then the legislature would have to consider those implications. I expressed my doubt whether it was wise or proper as a matter of procedure to allow a petition under Sections 397 and 398 or either of them to be used for the purpose of making a claim for damages against the directors or persons in control of a company. If Sections 397 and 398, read with Sections 539 to 544 and Section 406 and Schedule XI, entitle the Court to examine the conduct of any person who has taken part in the promotion or formation of the company or any past or present director amongst other people and also compel him to repay or restore the money or property or any part thereof which the Court might find he has taken away or benefited by as a result of any misapplication, retainer, misfeasance or breach of trust, then a great deal of burden is thrown on the Court in determining claims which are different in nature and substance. Now that the powers and functions conferred on the Court under Sections 397 and 398 may be delegated to the Tribunal, even the safety inherent in a hearing before the High Court and later on before Supreme Court might be jeopardised.

The persons most directly affected by action under these sections are directors. Normally, they would be the persons against and in respect of whom action would be taken. If directions are given by the Court and now the Tribunal, regarding the management, it is the directors' powers which would be affected. If any payments are ordered, the directors would have to make the payments. The orders that could be passed would include orders to provide for the regulation of the conduct of the company's affairs in the future (which may be a short time or a long time), the purchase of the shares or interests of any members of the company by other members thereof or by the company itself (which otherwise would be impossible under the law), the termination, setting aside or modification of any agreement between the company and, amongst other persons, the managing directors and directors, upon such terms and conditions as may in the opinion of the Court or the Tribunal be just and equitable in all the circumstances of the case, and the termination, setting aside or modification of any agreement between the company and any other person, the setting aside of any transfer, delivery of goods, payment, execution or other acts made or done by the company within three months before the date of the application on the same principles as applied to fraudulent preference in cases of insolvency of an individual and what is more the Court can make an order providing for any other matter for which in the opinion of the Court or the Tribunal it is just and equitable that provision should be made.

These powers are very wide and the legislature has intended that they be wide. Having regard to the well-known attributes of our higher judiciary, it may be expected that such powers would be used sparingly after the most complete consideration and only when the occasion necessitates them, but the extent of these powers and the extent to which the exercise of these powers can affect the rights, duties and obligations of directors must not be underestimated. An obvious danger or risk in such applications is that they are liable to be made, in most cases, by shareholders who are not necessarily fully aware of all facts. In fact, the risk may arise in various ways. I can envisage a number of different kinds of cases where the provisions of Sections 397 and 398 may conceivably fail and indeed be a good weapon in the hands of any evil-minded persons who desire to hide their own defaults. They may, for example, use the procedure of these sections for stifling a suit or other proceeding taken or proposed to be taken against them in due course of law. It must be remembered that a decision in such an application may amount to *res judicata* and, if the company is subsequently taken into liquidation and the liquidator considers further investigation necessary into the same matters, he may be prevented. If a particular claim is adjudicated upon in these proceedings, would it be open for review in any other proceedings, or in liquidation when more facts are available? It must be remembered that, with the recent amendment, even the jurisdiction of the ordinary Courts have been removed which was not the case previously.

I have again digressed in dealing with the provisions of Sections 397 and 398 but I have done so purposely, because I feel that these amendments affect directors considerably and that they require reconsideration even viewing them from the point of view taken while legislating therefor.

Duty of Care

Let me summarise the duties of directors and persons in the position of directors, such as controlling shareholders. There is, first and foremost, the duty of care; secondly, there is the duty of loyalty; thirdly, there are the duties of directors in the case of "transactions in shares of the corporation or its assets" or "in transaction with or concerning the company wherein they themselves are interested." Fourthly, there is the duty of directors towards creditors of the company; and, lastly, there is a duty (which at present is advocated strongly) towards the public. These duties are owed to the company as such rather than to the shareholders or creditors individually. But, in most cases, these duties are enforced on behalf of the corporation in suits or proceedings instituted by individual shareholders.

The standard of care that should be shown and taken is the same in theory in the case of any company, namely, that of the prudent businessman acting in his own interest. But in actual practice, the standard varies from business to business and from transaction to transaction. Theoretically, the duty of care, according to the decisions, is to exercise the same degree of care and prudence that men, prompted by self-interest, generally exercise in their own affairs. American decisions perhaps modify this theory and the degree of care there is upgraded a bit, because it has been held by American Courts that one who voluntarily accepts the position of a director and invites confidence in that relation undertakes, with those whom he represents or for whom he acts, that he possesses at least ordinary knowledge and skill and that he will bring them to bear in the discharge of his duties. There is noticeable difference between the two dicta. A man in the exercise of his own affairs may not be as careful in his duties or rigid as he undertakes to act with ordinary knowledge and skill appropriate to the business which he has to conduct or supervise for and on behalf of others.

Under the head "Care," the primary and all-embracing duty is to supervise the acts of the executive. Direct supervision being impossible, especially in large corporations, this duty of supervision is, American text-books say, conditioned by the circumstances of the case with the right to rely upon the judgment, advice and experience of the executive. In assessing the degree of care, the Courts have always appreciated that, when directors have to come to a decision, judgment has to be exercised, risks have to be undertaken and that either errors of judgment or events and circumstances happening afterwards could upset predictions and projects. A mere error of judgment, therefore, cannot be upheld against a director. There must be a case of improvidence, of recklessness or unreasonable action, of not taking that measure of reasonable prudence, care and skill which the law requires—it is cases of this nature that render the position of a director vulnerable.

(To be continued)

Dena Bank was founded on 26th May 1938. The story of its growth is the story of perseverance and determined efforts to pioneer, develop and bring modern commercial banking to as many people as possible.

Since its inception, Dena Bank has striven to live up to the four cardinal ideals of its revered founder, the late Shri Pranlal Devkaran Nanjee - *SOUNDNESS, INTEGRITY, EFFICIENCY* and *SERVICE*. Today, with its 137 Offices spread all over India, its sphere of activity has enlarged and with it have grown the faith and confidence of those it serves.

Now completing its 26th year, Dena Bank looks ahead to many years of fruitful service to commerce, trade, industry, and the people at large—a fulfilment of its mission that was started in 1938.

WORLD AGRICULTURAL GROWTH

ESTIMATED OUTPUT IN 1964 WILL BE SHORT OF POPULATION INCREASE

By Orville L. Freeman
U.S. SECRETARY OF AGRICULTURE

A RISE in world agricultural production for 1964 is expected on the basis of information collected by the Department of Agriculture. However, this increase will not meet the growth in world population.

Associated with this situation are a record movement of farm products in world trade and a slight increase in world prices for 1963-64, as compared with 1962-63. The exception to the continued uptrend in agricultural production is Eastern Europe, especially the U.S.S.R.

During the latter part of 1962 and in 1963, higher world prices of farm products brought them more closely in line with prices of non-farm products than they have been in recent years. A substantial rise in world prices of certain food products occurred in the first three quarters of 1963. These were significant for corn (maize), sugar and some livestock products, especially butter. A smaller rise occurred in prices for many other food products, and of non-food farm product exports as a whole. Wool and sisal prices mounted sharply. Some other prices, such as those for tobacco and cotton, increased slightly while the price of natural rubber declined.

Contributing most of the expected *per capita* decline in the world supply of agricultural products from 1962-63 to 1963-64 are reductions in the output of wheat and milk. Sugar and rice production, however, has increased. Production of edible oilseeds, other fats and oils, and feedgrains has remained at high levels. Meat and egg output has continued upward. Tobacco production has increased significantly. Cotton production has climbed to a record high, but other fibre crops generally have declined slightly.

World exports of farm products were up somewhat in 1962, while U.S. exports maintained their previous level of a little more than $5,000 million. Some rise is expected in exports from both the United States and the rest of the world for calendar year 1963, and further new highs are expected in U.S. and Canadian farm exports during the year ending 30th June 1964. Fiscal 1963 (1st July 1962, to 30th June 1963) U.S. farm exports were valued at $5,084 million, as compared with $5,142 million during fiscal 1962.

Population growth combined with short crops in Eastern Europe and in several populous countries in Asia will necessitate increased food imports by those areas. The mounting industrial productivity in the United States, Western Europe, Japan, Canada and Australia will stimulate further world agricultural trade. Somewhat higher prices for tropical agricultural exports will slightly raise the purchasing power of many less-developed countries.

"Per Capita" Output

Despite a slight gain in total agricultural output during 1963-64, there is a decline of about two per cent in *per capita* output because of the rapid rate of population growth. Drought conditions in parts of Latin America and hurricanes in the Caribbean have limited the size of increases in production. Both total and *per capita* output are up sharply in Canada.

Canada's record wheat crop and Argentina's expected increase in grain output will contribute to greater export supplies for the Western Hemisphere. Similarly, the United States with a record corn (maize) crop and substantial stocks of wheat and other crops can help considerably to meet the apparent food deficit in other parts of the world.

Total West European farm output was at a very high level in 1963, as it was in 1962. Despite winter damage in grain, especially wheat, most countries showed little or no declines in total farm production. Wheat imports will be substantial in 1963-64, but feedgrain imports may be reduced by the increased production of barley and corn (maize). Total consumption of feedgrains in 1964 will continue to grow as livestock production moves steadily upward.

The extent to which the price support system of the European Economic Community (E.E.C.), as implemented by tariffs, variable levies and other measures under the Common Agricultural Policy (C.A.P.), will deter imports of farm products from member and non-associate countries is still uncertain at this time. The C.A.P. so far has had adverse effect on some imports, mainly poultry and wheat flour, but since the policy has not yet been fully implemented or extended to all products, its overall effect has been limited.

In Eastern Europe

Agricultural output in Eastern Europe in 1963-64 will be markedly less than during the preceding year. The decline is estimated at four per cent in the U.S.S.R. and an average of two per cent in other countries. Adverse weather sharply reduced crop output, especially of spring wheat in the New Lands areas of the U.S.S.R.

This poor agricultural outturn has a number of significant implications. For the fifth year agricultural production in the U.S.S.R. has failed to advance beyond the 1958 level, although substantial increases were planned. The large imports of wheat by the Soviet Union suggest extremely low food grain reserves throughout the Soviet bloc. The poor showing further points up the precarious nature of agricultural production in Eastern Europe. Most satellite countries depend on the Soviet Union for considerable quantities of grain, especially wheat. In turn, the U.S.S.R. now depends heavily on its New Lands area for wheat. Thus, a serious crop failure in the New Lands, as occurred in 1963, has a disproportionate impact on the Soviet Union and the Bloc.

In Asia and Africa

In Western Asia agricultural production in 1963 increased four per cent over a year earlier, largely because of a significant gain in Turkey. Imports will again be required to meet the area's net deficits in wheat and fats and oils. Agricultural exports from 1963 production will hold steady, despite sharply reduced exports of raisins from Turkey.

Agricultural production in Africa is likely to increase about two per cent in 1963-64, if anticipated yields materialise. Trade patterns, similar to those of recent years, will feature increases by the Republic of South Africa in imports of wheat and exports of corn (maize). Emergency assistance continues to be needed in parts of Africa, especially in the Congo (Leopoldville).

Agricultural production reports in both the Far East and Oceania show a rise in total output for 1963-64, but *per capita* output will decline an estimated one per cent in Asia. The largest production increases in the Far East occurred in Taiwan, the Philippines, Federation of Malaysia and Pakistan. Unfavourable yields from early summer crops resulted in reduced farm output in Japan and Korea. In Mainland China and India no major changes are reported. Wheat imports by Mainland China in 1963 exceeded those of 1961 or 1962. (Its agricultural output appears unable to keep pace with population growth.)

Imports of wheat and some other commodities will again be needed by India and Pakistan. Deficit rice-consuming areas, particularly Malaysia, Ceylon and Indonesia, will again require substantial rice imports in 1964. The expected near-record Australian wheat crop of about eight million metric tons has been committed largely to regular Australian customers (such as the United Kingdom, other Commonwealth countries and Japan) and to big advance sales to Communist nations.

Need for Imports

Projections of factors affecting production, consumption and trade for major commodities show the need for food imports by foreign countries going over the next several years. Demand will grow faster than food production in many areas outside the United States and will be spurred by steadily rising incomes in an increasing number of countries and rapidly increasing populations in Asia, Africa and Latin America. On the basis of these economic projections, it is expected that agricultural exports from the United States will also incline upward over the next several years.

The rise in anticipated U.S. exports will be led by foodgrains, soybeans and soybean oil. U.S. farm exports by 1968 are expected to be up one-fourth from 1959-61, when the annual value averaged $4,800 million.

Further stimulation of agricultural production in the E.E.C. countries during the next several years is expected. Also in the years ahead the C.A.P. may have larger consequences for E.E.C. trade than heretofore. Trade within the E.E.C. will be encouraged in commodities that the member-countries produce. Trade between the E.E.C. and Greece, Turkey, Associated Overseas Territories and countries with bilateral arrangements will also be stimulated.

OBJECTS

The Company was incorporated on 7th October 1961 and has set up a workshop in Hyderabad where orders are being executed for fabrication of structurals and chemical plant equipment.

The Company now proposes to establish a plant for the manufacture of Cast Iron Spun Pipes and has entered into a collaboration agreement for technical know-how with the well known firms, M/s. **Rheinstahl Industrie Planning, G. m. b. H.**, M/s. **Rheinstahl Huttenwerke A. G.**, in West Germany, for this purpose. The plant will produce 24,000 tons of pipes per year on double shift. These pipes are mainly required for water supply schemes and for drainage and sewage schemes. The Factory is located at Maula Ali (Hyderabad). The Company is assured of supply of raw materials, power and water. The foreign exchange cost of the plant and machinery is being met out of a loan of Rs. 37 lakhs in foreign exchange sanctioned to the Company by the Industrial Credit and Investment Corporation of India and the balance cost of the project will be met out of this public issue.

The subscription list will open at 10.00 a.m. on 4th June 1964 and will close at 5.00 p.m. on 15th June 1964 or earlier at the discretion of the Directors but not earlier than the close of business on 8th June 1964.

Copies of prospectus and application forms can be obtained from Bankers, Underwriters and Brokers to the issue and from the Registered Office of the Company.

THE PUNJAB NATIONAL BANK LIMITED

REGISTERED OFFICE: **PARLIAMENT STREET, NEW DELHI**

DIRECTORS' 117th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1963

The Board of Directors of the Bank has pleasure in submitting the audited Balance Sheet as at 31st December, 1963 and the Profit and Loss Account for the year ended that date. The Auditors' Report is also annexed.

The transactions for the year, after providing for taxes, contributing Rs. 17,49,785 to the Employees' Gratuity Fund Trust and Rs. 1,67,233 to Superannuation Scheme, and including Rs. 15,20,907 brought forward from the previous year, have resulted in a profit of Rs. 1,40,77,073.

The Directors have made the following appropriations:—

	Rs.
Ad-interim dividend paid for the year at Re. 1 per share	20,00,000
Transferred to Reserves	50,00,000
Transferred to Special Reserve	20,00,000
Provision for Bonus to Staff	47,50,000
Provision for Charity and Donations	1,00,000
	1,38,50,000
Leaving a balance to be carried forward to next year	2,27,073
	1,40,77,073

The Directors recommend payment of final dividend at Re. 1 per share, making 20 per cent for the year subject to deduction of tax, which will absorb Rs. 20,00,000 out of the Special Reserve.

The working of the Bank continues to be satisfactory.

The Bank rate was increased from 4 per cent to 4½ per cent with effect from the 3rd January, 1963.

With the nationalization of banks in Burma, the business of our Rangoon office was taken over by the Government of Burma on 23rd February, 1963.

During the year 8 new offices were opened increasing the total number of offices to 435.

Under the provisions of Section 256 of the Companies Act, 1956 and of Article 65 of the Bank's Articles of Association, Shri Ramnath Goenka, Pandit J. N. Bhan, Shri T. S. Srinivasan and Shri S. K. Handoo will retire at the forthcoming Annual General Meeting. They are eligible for re-appointment.

Shareholders are requested to appoint Auditors for the current year and fix their remuneration.

By Order of the Board of Directors,
R. N. GOENKA,
Chairman.

31st March, 1964.

BALANCE SHEET AS AT 31st DECEMBER, 1963

AUDITORS' REPORT TO THE SHAREHOLDERS, THE PUNJAB NATIONAL BANK LIMITED, NEW DELHI

We have audited the annexed Balance Sheet of The Punjab National Bank Limited as at 31st December, 1963 and also the annexed Profit and Loss Account for the year ended on that date with the books and accounts kept at the Head Office at New Delhi, in which are incorporated the audited returns from 244 branches (of which 13 branches have been audited by us and 231 by other Auditors) and the unaudited returns from 190 branches not visited by us. Under Rule 4 of the Companies (Branch Audit Exemption) Rules, 1961, the Central Government, by an order dated 30th September, 1963, has exempted the said 190 branches (names of the branches are given in Annexure 'A') from the provisions of Sub-sections (1) and (3) of Section 228 of the Companies Act, 1956, in respect of the year ended 31st December, 1963.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions of Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with forms 'A' and 'B' of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us;

(d) the reports on the accounts of Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing this report;

(e) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(f) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

NEW DELHI, 30*th March* 1964.

BRAITHWAITE AND COMPANY (INDIA) LIMITED

NEXT PHASE OF EXPANSION SCHEME UNDER CONSIDERATION

STATEMENT OF THE CHAIRMAN, MR. J. V. JARDINE PATERSON

A SUCCINCT review of the progress made by Braithwaite and Company (India) Ltd. during the year ended 31st December 1963 was made by Mr. J. V. Jardine Paterson, Chairman of the Company, in his statement to shareholders circulated along with the Directors' Report and statement of accounts. One of the most notable features of the working of the Company was that the turnover at the Angus Works of the Company during the year was double that in 1962 and, for the first time in four years, there was a small net profit. Mr. Paterson disclosed that the next phase of the Company's expansion programme was under consideration.

The following is the text of Mr. Paterson's statement:

Production and Development

Clive Works

But for the slowing down of production at three periods during the year as mentioned in the Directors' report, the target for the year of 30,000 tonnes would have been achieved. As it was, production reached 28,569 tonnes which is the highest so far achieved and 4 per cent more than the previous year. It was unfortunate that production was again interrupted in January this year as a result of riots in the city and the associated curfews but it is confidently expected that, with the improved raw materials position, the Works will exceed their previous best during the current year.

Angus Works

Very satisfactory progress has been made and, as stated in the Directors' report, the turnover for the year was nearly double that of 1962. In the fourth year of our operations in these Works, we have, in fact, shown a small net profit which, in view of the development charges to be incurred, must be considered a notable success. The order book is well filled and a number of outstanding quotations for electric overhead travelling cranes are known to be competitive and are likely, therefore, to become orders. After many delays the loan agreements have been completed, import licences received and orders placed for the machinery which will enable the present phase of expansion to be completed. It is hoped that these machines will be received within the next twelve months. We have not yet received the electric power supply required for this expansion but we are advised that this will be available early next year and there should, therefore, be no delay in bringing these machines into operation.

Consideration is being given by the Directors to the next phase of the expansion scheme and details will be worked out so that this can follow on closely the completion of the first phase.

Work has continued on the housing scheme and three blocks comprising 18 flats for junior officers have been completed and occupied. Flats for senior officers are also well advanced.

Profit, Taxation and Dividend

The profit for the year, after providing Rs. 14,19,333 for depreciation and transferring Rs. 7,03,186 to development rebate reserve, amounted to Rs. 1,24,47,705 which shows an increase of approximately Rs. 18 lakhs over the previous year. This result is most encouraging but once again very large sums are required for payment of taxes as, in addition to income and super taxes amounting to Rs. 62,20,706, Rs. 17 lakhs has been provided for payment of sur-tax, making a total of Rs. 79,20,706 or more than 63 per cent of the profit. It is interesting to note that this provision for payment of sur-tax is very nearly the same as that for super-tax in the previous year but is, of course, calculated on the increased profit referred to above.

The annual dividend on the preference shares has been paid in two instalments, absorbing Rs. 3,60,000 as against a single quarter's dividend of only Rs. 90,000 required in the accounts for 1962. The Directors are now recommending an increased dividend on the ordinary shares at the rate of 20 per cent, thereby leaving available for transfer to reserves slightly more than Rs. 21¼ lakhs.

There was further improvement in the export to Malaya of pressed steel tanks in collaboration with the Technical Consultants, Braithwaite & Co. Engineers Limited. Results elsewhere were, however, disappointing and a second sales tour was undertaken towards the end of the year. Whereas there are possibilities of improving sales in Hong Kong, it is clear that conditions in Burma particularly, and to a less extent in Thailand, are not encouraging, though every effort will be made to develop business.

Labour

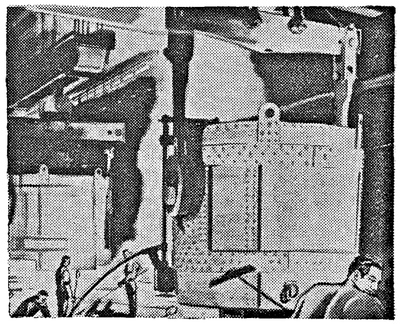
The severe drop in production in April/May, due to inadequate supply of welding electrodes, with the consequent fall in earnings from production bonus, resulted in labour agitation which took some time to settle. This, combined with the recent general demand throughout the industry for the setting up of a Wage Board, has unfortunately affected relations with our labour, but with the present healthy position of the Company's order book and the vast improvement in availability of raw materials, it is expected that workers will now be able to earn high rates of pay through production bonus, and the normal satisfactory co-operation between labour and management will be restored. The quantum of annual bonus to be paid was amicably settled under a bipartite agreement.

Management and Personnel

We are again grateful to our Managing Director, Mr. J. E. Bingham, for his successful conduct of the Company's affairs during the past year. His term of office as Managing Director of the Company expires on 30th June, 1964 but it has been agreed that application should be made to the Government of India for his re-appointment for a further period of one year. The Board also proposes to appoint Mr. J. E. Sawtell as a Managing Director and the necessary application in regard to his appointment and remuneration has been made to the Government of India. Mr. Sawtell has served the Company in various capacities and, since April 1963, has been General Manager of Clive Works. He will take over from Mr. J. E. Bingham at the expiry of the latter's agreement in 1965. On receipt of Government approval to the applications in connection with these appointments, the necessary general meeting of shareholders will be convened.

Mr. Y. S. Tayal, Secretary of the Company, and Mr. A. D. Morley, General Manager of Angus Works, left the services of the Company during the year. Mr. B. L. Mathur has been appointed Secretary of the Company, Mr. A. P. Sarkar, the Financial Controller, and Mr. M. Dhar, Chief Engineer. Mr. K. R. Sundaram was transferred from Clive to assume responsibilities of the Works Manager, Angus. All these senior executives have worked extremely hard during the past year and we are indebted to them and all other members of the staff for all that has been achieved.

DEVELOPMENTS IN THE EAST



With the improving living standards in the East comes the prospect of trade expansion and of increasing opportunities for profitable marketing. The world-wide facilities of three great banking organizations, merged into a single comprehensive service, are at your disposal with up-to-date information and expert advice on all aspects of finance and trade in these areas.

MONOPOLY—BIG DRAWBACK OF I.A.C.

SOME EFFECTIVE OPPOSITION WILL DO IT A LOT OF GOOD

By Our Aviation Correspondent

READERS of the correspondence columns of the daily Press can hardly have failed to notice, of recent months, the increasing number of letters which complain of alleged sins of commission and omission on the part of the Indian Airlines Corporation. Complaints range from criticism of the catering and cabin service to more serious allegations of irregularity, delays, faulty organisation, and lack of discipline. Much of this criticism, no doubt, is exaggerated, some is ill-informed, and some is ill-founded. Throughout the correspondence, however, one question is constantly repeated—what is wrong with I.A.C.? There is, one suggests, an equally short—if controversial—answer. If there is anything fundamentally wrong with the Corporation, it is monopoly.

Most of us still recall the period, immediately after the last world war, when India's internal air services were privately operated. In those days, complaints were even more numerous and, moreover, were often valid enough. That can hardly be denied. In almost every particular, of course—passenger handling, operational techniques, maintenance, and administration—the standards of the nine companies involved varied enormously. The best performed a difficult task well, the worst were very bad indeed. The only feature they all had in common, perhaps, was a lack of profit.

The fact is that there was far too much competition—and very wasteful competition at that. By and large, it was a rather dismal episode which reflected little credit on either the Government, the Air Transport Licensing Board, or, with very few exceptions, the operators themselves. It is not one's intention to rake over the dead embers of the past. One alludes to the subject only because some of the ill-effects linger on. The shareholders of a majority of the companies concerned lost their entire investment. That, perhaps, was the most regrettable feature of all.

Gordian Knot Cut

It is little wonder that, after some seven years of this unsatisfactory state of affairs, the Government decided to cut the Gordian knot and to start afresh. Few would argue that the course chosen—nationalisation—was misconceived. No one can deny that the outcome has been satisfactory. From a difficult start, and in rather unfavourable circumstances, the Corporation has achieved a large measure of success. The financial results have progressively improved and, where the Corporation has shortcomings—the slow pace of modernisation generally and, in particular, the perennial shortage of accommodation on the trunk routes—these are as much due to a shortage of foreign exchange as to any lack of foresight on the part of the Corporation.

It is a pity, nevertheless, that the Government went from one extreme to another—from, in fact, conditions of almost unbridled competition to a regime of absolute monopoly. It is here, if anywhere, that the Corporation's weakness lies. One is conscious that many will disagree but, so far as the public is concerned, a complete restriction of choice is almost always undesirable. Monopoly, in the case of IAC, has led to progressively dearer travel, and to an almost static route system. It underlies many of those small, but irritating, failings of which the public complains. Only a monopoly can afford to ignore the tastes and susceptibilities of its customers.

Competition, one argues, is a natural feature and it is certainly an integral part of modern life. On the whole, it does us all a lot of good. Like everything else, however, it can be taken in excessive doses—when, of course, it defeats its own object. But somewhere between absolute monopoly and wasteful competition, a *via media* can always be found—or can it? What, for instance, would be an effective remedy for the present situation?

Britain, which for a long time maintained the same brand of monopoly for its two air corporations as does India, has now lowered the barriers. A large number of licences to operate scheduled services have been granted to private companies. These, it is to be noted, permit of direct competition with the corporations and are not restricted to domestic routes. The benefits are threefold: the public is better served, a limited number of independent companies have become powerful and efficient organisations—owning, in some instances, fleets of aircraft as modern as those of B.E.A. and B.O.A.C.—and the country's reserves of air power have been materially augmented.

Australia has gone a step further. There, with the Government holding the scales, private enterprise has been confronted with State competition. A nationalised airline competes on level terms with a private airline of comparable size. There is even parity in the matter of equipment—to such lengths does the Government go to ensure that neither airline gains any material advantage over the other. One does not, for one moment, suggest that either the British or the Australian pattern should be introduced in India. That, no doubt, would meet with bitter resistance. One does suggest, nevertheless, that some measure of competition, however small in the first instance, should not only be permitted but actively encouraged.

Give a Reasonable Chance to Private Sector

The Government of India, one assumes, had something of the sort in view when they amended the Air Corporations Act of 1953. Unfortunately, that legislation did not go nearly far enough. One suggested, at the time, that it would be ineffective and so, demonstrably, it has proved to be. The fact is that, if there is to be an element of competition, the dice must not be loaded too heavily in favour of the State Corporation. Private enterprise must be given a reasonable chance of success. Otherwise, who would promote, and who would finance, such a venture?

And it is here, perhaps, that we have most cause to regret the disastrous climax to seven years of private operation. "Once bitten, twice shy" probably describes the mood of both the entrepreneur and the investing public. Yet, since that time, all over the world, air transport has been successfully operated by all manner and sizes of private companies. Given the necessary knowledge, experience, and resources —operation cannot be sustained on a shoe-string —air transport, like any other business, can be made to show profits.

Because one advocates the participation of private enterprise in the operation of domestic air services, that does not imply any quarrel with the manner in which the Corporation serves the country. One merely suggests that, from most points of view—national, public and, indeed, that of the Corporation itself—the spur of real competition would prove to be beneficial. As in politics, an opposition, irksome, no doubt, at times, is a necessary ingredient of democracy. And talking of politics, the Air Corporations Act, as it now stands, is, of course, an insuperable obstacle. In that respect, if in no other, a discussion of this sort is of purely academic interest.

NEW AIR CARGO LINER

The largest commercial order for airplanes designed exclusively for cargo, aggregating $64 million, was placed recently with Lockheed by the President of The Flying Tiger Line. The order covers eight Super StarLifters, a 168-foot-long commercial growth version of the giant C-141 jet cargo transport now being built by Lockheed in Georgia for the U.S. Air Force. It brings to $161,000,000 the total spent by Flying Tigers in the past 10 years on all-cargo aircraft. This is almost twice as much as any other carrier had committed for such equipment.

The Flying Tigers' President said that the proposed fan-jet freighter had been designed in the systems concept and that its economics promised a new era in transportation. "Its operating efficiencies and performance," according to him, "will permit the air cargo industry to compete effectively with long haul motor trucks and thus carry a wide variety of freight now travelling by other means." He explained that straight-in, truck-bed height loading of truck-sized freight would permit direct and easy exchange of unitised freight loads between the air and all types of surface freight carriers. He compared the significance of the systemised air cargo approach to the standardisation of railroad gauges which led to interchangeability of rolling stock late in the past century. For the first time, pointed out the President of the Flying Tiger, it will be possible to have a "common gauge" of unitised freight loads not only beween the various modes of commercial transport but also between the military services and civil cargo carriers without payload or handling cost penalties to either.

A growth version of the first fan-jet airplanes developed from the outset for cargo use, the big new transports will be capable of accommodating two 40-foot-long truck vans with 24 feet left over in their huge cargo holds. The Super StarLifter design will call for transportation of 55-ton payloads at a cost lower than ever before possible. The airplane's maximum cruise speed will be more than 550 m.p.h. The aircraft is to be powered by four Pratt & Whitney turbofan engines delivering 21,000 pounds of thrust each. Deliveries of the proposed new Flying Tiger airplanes are scheduled to begin in the latter half of 1967. The airplane is called the Super StarLifter, or L-300B, in order to indicate the increased payload and greater volume of the proposed airlifter. Its cargo hold measures 104 feet long, 25 per cent longer than the C-141.

The Super StarLifter's powerful engines, combined with its big wing area, which is twice as much as the floor space of an average home, permit the Super StarLifter to operate with a full load out of medium-sized airports in contrast to the 10,000-foot runways required by most jets. Since the airplane is a high-wing ship, the loading deck is at truck-bed height, 50 inches off the ground, contrasted to the conventional freighter with a deck 12 feet above the ground. This permits quick, direct loading. Cars or trucks can be driven directly into the aircraft, and costly forklift or elevator platform loading is eliminated.

The high-wing construction of the airplane provides the most useful cargo hold ever built into an airplane. Control systems, which must be routed through the wing area, are thus built through the roof of the cargo hold. By contrast, low-wing airplanes such as today's jets, necessitate routing the control system through the lower part of the aircraft, thus using up much of the belly, or lower cargo hold space. This requires placing of the cargo floor high above the bottom of the aircraft with consequent loss of cargo area. The Super StarLifter's high wing permits its entire cargo hold to be free of wing restrictions. This also greatly reduces fuselage curvature restrictions and permits the nearest approach to the ideal square box cargo area of the railroad boxcar or truck, permitting the greatest possible use of the freight loading area.

NEW PRIVATE JET HAILED A WINNER

On the occasion of the 1964 German Aeronautics Exhibition in Hanover, the West German baby-jet HFB 320 Hansa was presented to the public for the first time. The machine arrived just after its successful maiden flight. Already, it is considered the favourite amongst comparable French, English and U.S. productions. To an astonished crowd of spectators consisting mainly of experts, well-known American test pilot Loren Williams Davis demonstrated a stalling flight at 10 m. altitude with partially throttled engines, a feat, so far thought impossible of achievement for a jet plane. The HFB 320 is the one plane of its class to be able to take off from and land on grass runways. At a landing speed of 140 km. p.h., it requires 1,160 metres of runway; for the takeoff, only 975 m. are needed. The plane, developed by the Hamburger Flugzeugbau GmbH for busy industrialists' private and business trips, is propelled by two rear-positioned jet engines, has a 2,660 km. (without wind influence) range and a travelling speed of 815 km. p.h. Particularly noteworthy are the V-shaped wings, their tips pointing in the direction of flight rather than towards the rear. The 16.61 m. long plane seats up to 12 persons. During the initial testing flights, the HFB 320 Hansa already passed a number of tensile tests including a simulated engine failure, so that regular production can be assumed to begin and the brisk demand to be met soon. The HFB 320, of which 12 have already been sold, is priced at DM.2.4 million ($600,000.)

SKYCRANE CARRIES 8 TONS

A giant pylon and a flat-bed trailer with four Volkswagens were the big things which, together with a few smaller ones, were borne aloft by the new WF-S 64 helicopter-crane in front of the amazed visitors to the 1964 German Aeronautics Exhibition in Hanover. After a short 100 km. p.h. trip, the flying crane deposited the pylon with millimetre-accuracy on a concrete foundation where it was subsequently cemented. The "Skycrane" was developed jointly by the Westdeutsche Vereinigte Flugtechnische Werke in Breman and the U.S. Sikorsky Works. The six-blade rotor, driven by two turbines of 4,680 h.p. each, is of 22 m. diameter. It lifts up to eight tons in weight. Of neat pure aerodynamic form, the machine reaches a travelling speed of 268 km. p.h. In between the rear rotor and the pilot's compartment, a passenger cabin can be strapped on, designed to comfortably carry 50 persons.

WEST GERMAN V.T.O. PLANE

One of the greatest attractions at the 1964 German Aeronautics Exhibition was the West German VJ 101 Vertical Takeoff plane, built jointly by three aircraft construction firms and just back from its first cross-country flight. The jet plane, repeatedly rumoured discontinued in the last few months, has turned out to be the one current project of the West German aircraft industry to arouse the keenest world-wide interest. In addition to its dead-start feature, the V.T.O. plane can, of course, take-off in usual horizontal fashion. Recent air displays showed that the Vertical Takeoff plane is performing perfectly. So far, the Federal Defence Ministry, which has spent more than DM.200 million on developing the aircraft, has not given the green light for the machine to go into production. The reason being that, meanwhile, work has begun on the VJ 101 D, an improved version with a speed twice as fast as sound and with a future, correspondingly even greater.

NEW PRODUCTS AND PROCESSES

Transistors for Car Ignition

A NEW system for car ignition, using transistors, has been developed by engineer *L. Duus Hensen* of the Danish radio concern *Bang & Olufsen, Alhambravej 5, Copenhagen V.* Instead of the mechanical system so well known, ignition comes from an electric impulse produced electro-magnetically. Engineer Duus Hensen installed the system in his own car, and has since then driven 15,000 trouble free kilometres in all types of weather. His car has operated without ignition trouble or adjustment in winter and summer. An immediate start is given in almost all conditions without using the choke, even in temperatures several degrees under freezing. Other advantages include greater efficiency under acceleration between gears, and a noticeable improvement at high speeds. There is a slight saving of petrol due to the surer ignition. Bang & Olufsen are thinking of marketing the ignition system, possibly in co-operation with manufacturers abroad.

Mobile Car Garage

Cover garages made in the West Jutland town of Esbjerg (Denmark) will cover automobiles all over the world in coming years, and give them an increased life span. Made by *Aage Hozbro Madsen*, of *Esbjerg*, who turns out about 5,000 yearly the poplin and porous woven garages allow moisture *in a car to evapore* quickly. The soft material used for the car covers prevents paintwork getting scratched. About 17,000 of these covers have been shipped off to Norway, a large model for use on Government luxury cars, a smaller model for sale to the average car owner. The Madsen garage covers can be supplied with the car's licence number fitted front and rear, together with markers of reflecting material. A cover that can fit an area of 18 sq. metres weighs only three kilogramms. To cover heavy demand, the firm is in the process of erecting a new factory which is expected to boost production to over 20,000 yearly.

Centrifuge for Eggs

A Dutch firm which specialises chiefly in the manufacture of centrifuges, has produced a centrifuge capable of separating the shell from the whites and yolks of 360 eggs at a time. A special feature of this centrifuge, which is provided with a generous feed and discharge opening, is its great stability—essential on account of unbalance caused by the rapidly rotating eggs. Since the drum can be removed, the centrifuge can be cleaned rapidly and thoroughly. The special repulsion motor is provided with a thermal safety device and a built-in electromagnetic brake. For small-scale users a machine of this type can also be supplied with a maximum capacity of 75 eggs at a time.

Combination Potato-scraper and Spin-drier

A Netherlands firm, namely, N.V. ESBE, Minstraat 26, Asperen (Holland), which manufactures mainly centrifuges, is marketing a potato-scraping machine which, after the insertion of a special drum, can also be used as a normal spin-drier. The extra stainless steel interior lining of the scraping machine is provided with inverted flutes. The scraper disc is coated with a layer of burnt-in carborundum. The combination can be supplied in two versions with capacities of 3 and 5 kgs. (6½ and 11 lbs.) of potatoes, respectively. Scraping time is about 15 seconds. The electric motor is fitted with a thermal safety device and provided with a built-in electromagnetic brake. It is actuated by means of a time switch that is set at either scraping or spin-drying. Since it is easily removed, the drum of the centrifuge can be emptied quickly, after which the machine can also be used to dry chips before frying. Advantages of pre-drying chipped potatoes are reduced frying time, lower oil consumption, less frying odour and whiter chips. The Motor's revs adjust automatically to the loading, which is much higher when scraping potatoes than when spin-drying. For use exclusively as a drier, that is, without a scraper disc, the machine can also be supplied with chip-drying capacities of 6 or 10 kgs. (13¼ or 22 lbs.).

Automatic Recording of Wagon Movements

A system for automatically reading and recording the identification numbers of railway wagons moving at speeds up to 100 m.p.h. and for transmitting this information to a distant control room, has been developed by a British firm, Salford Electrical Instruments Ltd., Silk Street, Manchester 3, England. In tests on a busy main line in Britain, during which the equipment operated unattended for several months, wagon movements were recorded 50 miles away with an accuracy of more than 99 per cent and no incorrect information was recorded. The equipment operates satisfactorily in rain, snow and fog and at temperatures from minus 20° C to plus 40° C. A nation-wide system, in which information from many recording points would be correlated by an electronic computer, is being considered by British Railways. Several oversea railways are also showing interest in the system. The equipment consists of a photo-electric scanning device mounted besides the track, the nearby cubicle containing storage and transmission equipment, and plates on the side of each wagon with a pattern of bars representing the number of the wagon in code form. As a train approaches the scanning device, a special track circuit lifts a shutter and exposes a beam of modulated light. This light is scattered by the code-plates on the wagons, and some of it is picked up by photo-electric cells and converted to electrical impulses representing the wagon number. These are passed to the line-side cubicle, where they are stored, until the whole train has passed. They are then transmitted to the central control room together with details of time, location of the unit and direction of motion of the train.

DUNLOP RUBBER COMPANY

RECORD YEAR IN SALES AND PROFITABILITY

SIR EDWARD BEHARRELL'S SPEECH

SIR G. Edward Beharrell, Chairman, presiding over the Annual General Meeting of shareholders held at London on 25th May, said, *inter alia*:

The results include many record figures, but I propose only to make special reference to three particularly encouraging items—the increase in our sales, the margin of profit in relation to turnover, and the return on our employed capital.

Group sales of £283 million mean that our sales went up by about 5 per cent. On a volume basis, this is even higher, because some prices have been reduced. This higher volume, together with some real improvements in efficiency, were the prime reasons for our profit performance, despite the price reductions which in the year amounted to some £1½ million.

The margin of profit in relation to turnover, which fell in 1962, is, at 5.5 per cent, almost back to the 1961 ratio. This, too, is a reflection of volume and efficiency; but, although it is a 10 per cent improvement, it is still a modest profit of only 13d. in every £'s worth of sales.

Improvement is shown in our return on capital employed which has increased from 10.6 per cent to 12.1 per cent, but we still do not consider that the return we are earning is as high as it should be.

Taxation was a less heavy burden than in 1962, partly due to increased investment allowances in the United Kingdom and partly to lower taxes in India. Nevertheless, the proportion of profit absorbed by tax is still high at almost 54 per cent, or 7d. out of the 13d. profit margin.

Capital Expenditure

Our capital spending during the year, though lower than in 1962 when we were equipping the new factories in Malaya and Nigeria, was still at a high level. The introduction of more advanced and productive plant and equipment is continuing both in the United Kingdom and overseas. Our capital expenditure, therefore, will continue to be heavy and we expect to spend some £60 million on expansion and modernisation over the next three years.

Technological developments are occurring rapidly and the expenditure in recent years is now making a significant contribution to profits as well as to the improvement of our product range and its public acceptance.

Productivity

I can say with some confidence that the Group is better equipped today to use its skills and enthusiasm competitively than at any time in its history. This is largely due to the continuing drive for greater productivity and efficiency in every part of our business. It is new ways of organising and inspiring research, development, production and marketing that are doing most to create greater productivity.

Research and Development: An appreciable part of our programme is aimed at cost reduction and increased productivity in the existing manufacturing areas. Particular attention has been paid to simplified approaches to production and to improved processes that reduce scrap and labour cost. It is still in the field of raw materials, however, that some of the biggest savings can be made due to technical innovation in their preparation and use. Research and development have shown that such savings are possible without reduction in quality and in certain instances quality has actually been improved at the same time.

Value: Attention is nowadays specially focussed on price. The customer can and should gain in another way. The worth of our products has improved. The whole tyre industry has much to be proud of in this respect, and I am particularly pleased that your Company has led in many developments. This is a kind of productivity that is not always clearly seen or wholly appreciated, but it provides in full measure a quality that is well expressed in one word: value. We give, in tyres like the C41, remarkable value for money, and that is equally true of our wide range of other products.

I hope that the emphasis which has been recently given to productivity throughout the country has helped the continuing nature of the problem to be more clearly understood. I wonder, too, if it has done anything to make the word less frightening. Productivity means change, and change for many people is disturbing. This is a fact of life: and although in our industry, as in others, there can be no absolute guarantee of continuing employment, it is our aim to ensure the greatest measure of stability and in this we have had a good measure of success.

The Present Year

I should now like to turn to the trading results for the first four months of this year. Weather conditions in the early part of 1963 make a direct comparison between this year and last year somewhat misleading. Discounting this influence we have made a good start and our results are consequently better than for the corresponding period of 1963. Provided that business activity is maintained at home and abroad I look forward to reporting increased volume and profitability in 1964.

The report and accounts were adopted, and a final dividend of 1/3d. per 10/- stock unit (making a total of 1/10d. against 1/7d. for the previous year) was approved as was also a one for three scrip issue.

COMPANY NOTICE

INDIAN COPPER CORPORATION LIMITED

(Incorporated in England)

DIVIDEND NO. 38

NOTICE IS HEREBY GIVEN THAT AT the Fortieth Annual General Meeting to be held in Committee Room No. 2 (2nd Floor) of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta-1, on Wednesday, the 12th August, 1964 at 11-30 a.m. the Directors will recommend payment of a Dividend (No. 38) for the year ended 31st December, 1963 of 12 per cent (2.88 pence i.e. 16 Naye Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital of £2,056,950. Subject to confirmation of members, the dividend will be paid on the 7th September, 1964 to all members registered in the books of the Company at the close of business on the 15th June, 1964.

The Registers of Members will be closed from the 16th June, 1964 to the 11th July, 1964, both days inclusive.

The profit for the year ended 31st December, 1963 was £1,384,875 (against £1,351,771 for previous year), out of which have been provided £170,000 for depreciation (£170,000 last year), £ Nil for gratuities (£3,375 last year), £21,694 for decretal amount under Kyanite Suit compromise (£50,788 last year), £821,855 for Taxation (against £742,378), £26,597 for Development Rebate Reserve (against £15,136) and £98,000 for General Reserve (against £195,000), leaving a net profit of £246,729 (against £175,094). With £570 brought in from 1962, the balance available is £247,299 (against £247,404) and after providing £246,834 for the abovementioned proposed Dividend of 12 per cent subject to deduction of Tax (Dividend No. 37 of 18 per cent subject to deduction of Tax last year—£246,834) the balance carried forward is £465 (against £570 brought in from previous year).

By Order of the Board,
E. A. JOHNSTON,
Secretary.

GILLANDER HOUSE,
NETAJI SUBHAS ROAD,
CALCUTTA-1,
Dated the 21st May, 1964.

CONCENTRATION IN CORPORATE SECTOR

MAHALANOBIS COMMITTEE'S FINDINGS

IN the absence of the full text of Part I of the Mahalanobis Committee's Report on Distribution of Income and Levels of Living, editorial comment in *Commerce*, dated 9th May 1964, had to be based on some published summary findings and conclusions. Now that a copy of the report is available, it would be useful to present some of the statistical and other data contained therein, so that the reader may have a better insight into the question of so-called "concentration of economic power" in the private corporate sector. "Concentration," incidentally, can be treated as a technical concept involving "concentration ratios" which give the share of the largest few (say, three) firms in the total gross output, net output or employment in a particular industry. This is how "concentration" is understood in the United Kingdom. But the Mahalanobis Committee would prefer to define or understand it "in the wider sense of a small number of individuals or groups having in their control significant volumes of economic power in terms of capital or income or employment or media of communication which, though not constituting a large percentage share of the national aggregate in each case, nevertheless sets them so much higher than any other individual or group in the relevant context that it gives them a disproportionately large influence and enables them to exercise economic power not measurable statistically by the mere ratios of concentration." This involved and long-winded definition of "concentration" seems to have been intended as a sort of "interpretation" of the vague and confused ideas held by the Planning Commission and the ruling Congress Party on the question, for the Committee itself says that "apparently what the Planning Commission and the public in general have in mind is the latter rather the former, though an analysis of concentration ratios is also relevant from the point of view of a study of the wider aspects of concentration of economic power." How very unjustifiably wide and patently loose is the Committee's definition, which seems to have been designed to fit in with some preconceived ideas, may be inferred from the following paragraphs in the report:

"This concentration might exist in the form of either ownership or management, or even in more indirect forms of operational control. Though majority ownership generally implies operational control, a minority ownership can and very often is sufficient to achieve such control. Similarly, the operation of the managing agency system, as well as other forms of management, e.g. secretaries, treasurers, etc. wthin the corporate sector, might lead to considerable centralised control. So would interlocking of directors between different branches of activity or even between units within the same industry or activity when such interlocking does not follow from centralised ownership or management.

"Economic power may be concentrated in a few hands within one particular sector, such as 'industry,' or within one particular group of production, e.g. 'engineering,' 'steel' or 'chemicals,' or may be exercised over a number of economic activities simultaneously. Thus, for example, Tatas, one of the most prominent business groups in the country, have their main interest in steel, engineering and power, but also have interests in many other industries like cement, cotton, chemicals, vegetable oils, as well as in activities like insurance, investment and trade. Similarly, Birlas, another most important industrial group, are engaged in not only all varieties of industrial production other than steel and power but also control one of the largest banks in India and have considerable interest in investment and trade. The study of concentration cannot, therefore, be confined to individual sectors of production or economic activity, though this aspect of the study is also of importance."

Dealing first with "the more generalised form of concentration of economic power" in terms of ownership of share capital in the corporate sector, the Committee itself admits that "no complete data" are available regarding ownership distribution of such capital. But such data as are available have been analysed and interpreted as follows:

"Income-tax statistics do not cover the entire shareholding population, as quite a number of shareholders have incomes below the income-tax limit. A study made by the C.B.R. for 1954-55 took into account not only assessees who received dividends but also refundees and it showed that of the estimated number of 101,033 shareholders—itself an infinitesimal part of the total population—1.4 per cent accounted for 31.5 per cent of the dividend income, while 50.3 per cent could claim only 10.8 per cent of that income. A more detailed study carried out by the Reserve Bank of India in March 1960 covered 70 companies with paid-up capital of Rs. 212 crores with a market value of Rs. 417 crores; and it showed that 0.5 per cent of the total number of shareholders (without making allowance for duplication in the sense of some holders having shares in different companies, but including company shareholders) had holdings of Rs. 50,000 and above, accounting for 56.5 per cent of the total value of the shares covered by the enquiry. If allowance is made for multiple shareholding by individuals and also for the fact that some of the holdings are by companies, there can be no doubt there is a high degree of concentration in the wealth represented by shares of joint-stock companies. This is also shown by the income-tax statistics on dividend income by ranges according to which 1.5 per cent of dividend receivers accounted for 34.6 per cent of total dividend income assessed to tax in 1959-60.

"The data given above do not indicate any trends in concentration. What they do reveal, however, is the existence at the end of ten years of planning of a considerable degree of inequality in the distribution of economic assets and consequent concentration of economic power in the hands of a numerically small section of the population."

If, as the Committee itself admits, the above incomplete data do not indicate any trends in concentration, it is difficult to understand why it has referred, in a general way, to the "high degree of concentration in the wealth represented by shares of joint-stock companies." Is it simply because the Committee has described companies, rather arbitrarily, as constituting "economically the most significant form of property"? It is well known that industrial production in the private sector accounts for only 16 per cent of the net national product and that only about a half of this production is organised in corporate form. Still the private corporate sector claims special attention in the Committee's study of concentration of economic power only because it "is the most dynamic element of our developing economy."

Statistical Study

For its study of concentration in the private corporate sector, the Committee has started with the data in Table I. In its interpretation of these figures, the Committee observes that, while the number of companies is large, a small number of companies accounts for a large portion of their paid-up capital. Thus, in 1960-61, the total number of companies having a paid-up capital of less than Rs. 5 lakhs each constituted 86 per cent of the total number of companies at work during that year, but their share of the total paid-up capital was only 14.6 per cent. As against this, the companies having a paid-up capital of Rs. 50 lakhs and above constituted only 1.6 per cent of the total number of companies but claimed 53 per cent of the total paid-up capital. Of course, the Committee recognises that "the increasing size of companies is by itself not necessarily an index of growing concentration in *ownership* of companies" and that "there is some evidence of an increasing dispersal of ownership as such." Still it is of the view that "the phenomenon is conducive to greater concentration of *control* and economic power." After pointing out that the working of the planned economy has contributed to this growth of big companies in Indian industry, the report sums up as follows:

"It must be pointed out, however, that the growth of big business as such, though indicating the presence of economic concentration, does not necessarily mean the deliberate adoption of an anti-social policy. There is such a thing as the economy of scale which works in favour of big business, on purely economic grounds; and economic considerations are certainly relevant especially in the context of our scarce resources and the imperative need for our making the most economic utilisation of these resources. In many industries, the size of the domestic market is small in relation to the size of the plant at which maximum average costs begin to obtain: and any attempt to reduce the degree of concentration by breaking down economic-size units into a large number of uneconomic-size plants would only lead to economic waste. At the same time, there is no doubt that localised concentration of industry, even if unavoidable on economic grounds, must necessarily result in the accrual and possible exercise of monopolistic power. What is needed in such a case is not the break-up of large units as the adoption of a policy of regulation, continuous scrutiny and, possibly, nationalisation which will help to prevent the emergence of anti-social consequences from the otherwise economically justifiable localised concentration in the form of big units in one industry or another."

If "localised concentration" has emerged in industry to some extent or other, there may be a case for the adoption of a policy of regulation with a view to preventing possible restrictive practices or curbing possible monopolistic power. But how can that "localised concentration," if any, justify recourse to nationalisation? After all, nationalisation can only lead to concentration of economic power in the hands of the State, that is, in the hands of a few bureaucrats.

The report, incidentally, has provided some data regarding localised industrial concentration. The source of the data is a note on industrial concentration, prepared by the National Council of Applied Economic Research. The relevant statistical statement is given below:

TABLE II—*Producer Concentration in Selected Industries*

Industry	Year	Percentage share of topmost unit/group in total production/capacity	Percentage share of topfew units/groups in total production/capacity	No. of units/groups under column (4)
(1)	(2)	(3)	(4)	(5)
Finished steel	1958	63.70	93.36	2 groups
Pig iron	1958	54.63	90.08	2 ,,
Electric lamps	1960	40.00	88.70	14 units
Sewing machines	1960	88.00	88.00	1 unit
Soda ash	1958	52.25	84.68	2 groups
Electric fans	1961	51.00	82.00	4 units
Paper and paper board	1958	23.50	77.90	5 groups (with 8 units)
Bicycles	1959	20.20	72.72	4 units
Cement	1960	45.00	71.90	3 groups
Soap	1957	30.75	69.11	4 ,, (with 8 units)
Superphosphate	1958	14.76	53.04	5 groups
Hydrogenated oil	1958	14.01	47.09	6 units
Paints and varnishes	1957	11.40	45.90	6 ,,
Ceramics	1957	17.29	39.72	4 groups (with 6 units)
Jute textiles	1958	12.29	37.61	4 groups
Matches	1960	60.00	60.00	1 group (with 5 units)
Caustic soda	1958	14.76	28.51	2 groups
Coal	1958	11.09	24.70	3 ,,
Sulphuric acid	1958	16.89	23.72	2 ,,
Cotton textiles (percentage of looms installed)	1958	4.10	11.49	3 ,,
Sugar	1958-59	2.36	4.56	2 units

Commenting on the above figures, the Committee observes:

"It will be seen from the above statement that in the case of 12 out of the 21 industries listed above, the top units claimed a share of more than 50 per cent of production. In four of these cases, one unit claimed more than 50 per cent of production. It is true that in the case of steel and pig iron, there is now substantial production in the public sector, which reduces to a significant extent the share of the top units, as also of the top unit in production. Also, the monopoly or semi-monopoly position enjoyed by a few concerns earlier has been considerably reduced as a result of a steady expansion of the industrial sector during the last decade or so. Thus, for example the A.C.C. in 1951 controlled 64 per cent of the total output of cement; by 1960, its share had declined to 39 per cent and is expected to decline further to 25 per cent by 1965-66. In match industry, W.I.M.C.O. was more or less the sole producer of matches in 1951; as a result of differential excise and encouragement of A, B C and D class of units, the share of W.I.M.C.O. in total output of match industry has been reduced to 60 per cent by 1960. The share of Titaghur Paper in the total output of paper declined from 25 per cent in 1951 to 15 per cent in 1960. The Metal Box Company in 1951 enjoyed almost a monopoly in the matter of containers; in 1960 its share has been reduced to 20 per cent. Hind Cycles accounted for 90 per cent of the output of bicycles in 1951; its share in 1960 declined to about 15 per cent. Soap and *vanaspati*, electric cable manufacturing, aluminium industries, soda ash and other chemicals and several other areas of industry furnish instances of a declining trend in localised industrial concentration with new entrants in various fields of industry. An appreciable measure of such concentration in the private industrial sector, however, still remains. Even in the case of pig iron and finished steel, the fact of concentration remains as far as the private sector is concerned.

"How far the position revealed by this study has justification in terms of economies of scale and what policy measures are required to safeguard the public interest are questions which need detailed study in the case of each industry; what agency should undertake this task, whether departmental or otherwise, is a matter for consideration by Government."

TABLE I—*Number and Paid-up Capital of Non-Government Companies*

(1 lakh = 100,000) (1 crore = 10 million)

Concentration of Control

The Committee next proceeds to deal with the question of concentration of control, as distinct from ownership, for, according to it, it is control that is significant from the point of view of economic power. But here, as the Committee admits, "it is extremely difficult to obtain light on the concentration of control in the corporate sector without a full and detailed inquiry into the operations of individual companies, such as only a full-time agency, with powers to call for books and examine accounts, could undertake." However, in the absence of such an inquiry, the Committee has given some findings on concentration of economic power through concentration of control in the private corporate sector with the help of rather incomplete data contained in a study by Dr. R. K. Hazari and in some working papers prepared by the Central Statistical Organisation and the Reserve Bank.

Dr. Hazari's study, incidentally, deals with the subject of concentration of control in the structure of the private corporate sector. Twenty leading groups have been selected for his study on the basis of various criteria to yield a cross-section of the corporate sector. These twenty groups had an interest of one kind or another in 983 companies with a share capital of Rs. 236 crores in 1951 and 1,073 companies with a share capital of Rs. 352 crores in 1958. These companies accounted for 29.2 per cent and 32.4 per cent of the share capital of non-Government companies in 1951 and 1958, respectively. While the share capital of the companies controlled by the 20 groups in 1958 stood at Rs. 352 crores, their net physical assets accounted for Rs. 502 crores, net capital stock for Rs. 814 crores and gross capital stock for Rs. 1,102 crores. Their share of net physical assets was 37.0 per cent, of net capital stock 34.7 per cent and of gross capital stock 34.3 per cent. Among these 20 groups, the top four, it has been found, showed a still higher degree of concentration, the companies controlled by these complexes accounting for a share capital of Rs. 147 crores in 1951 and Rs. 225 crores in 1958 or 18.2 per cent and 20.8 per cent respectively, of the share capital of the entire private corporate sector. These figures, according to Dr. Hazari's study, reveal an impressive picture of concentration of economic power in the private corporate sector. But the Mahalanobis report has made the following qualifying observations on Dr. Hazari's findings:

"We have not been able to assess whether and how far the undoubtedly larger *area* of concentration in industry was balanced to any extent by a dilution of the *intensity* of control associated with a decline in the ratio of share capital of the controlled sector owned by the Controlling Interest. Indeed, the procedures and processes of decision-making in the groups and their significance for concentration of economic power would seem to be worth some further exploration for a fuller assessment of the problem. The groups in Indian industry differ in their structure and internal organisation, ranging from the rather loose to the closely knit organisation of the patriarchal type and with varying degrees of customary or formal devolution of powers. Some regard to these factors seems necessary when making use of Dr. Hazari's ratios of concentration."

The Mahalanobis Committee adds that control need not be exercised only through the controlling interests' relative share in the assets of the companies either through ownership or inter-corporate investment. It can also be exercised through managing agents, common directors and similar other forms which enable the controlling group or authority to participate actively in the day-to-day business of such undertakings. According to a paper prepared by the Reserve Bank of India, the managing agents, controlling units with net worth exceeding Rs. 20 crores, controlled 23.0 per cent of net worth of 1,001 companies in 1959, as compared with 15.0 per cent in 1955. The Mahalanobis report continues that, while the reform of Company Law has reduced the role of the managing agents in corporate affairs, within the reduced number of managing agents the tendency is clearly visible of a strengthening

PROTECTION FOR SODA ASH

IS ITS CONTINUATION NECESSARY?

VERY rarely does an industry itself plead for the discontinuance of tariff protection. But such a plea has been put forward on behalf of the soda ash industry by the Alkali Manufacturers' Association of India. In a memorandum submitted to the Tariff Commission, which is currently examining the question whether or not protection for the industry should be extended further after 31st December next when it is due to expire, the Association has asked for deprotection with effect from the beginning of 1965. The request is based on three main grounds: one, the industry is enjoying substantial protection through the operation of import control; two, there is little or no likelihood of relaxation of these restrictions in the foreseeable future; and three, indigenous production has been increasing at a rapid rate, with the prospects of self-sufficiency in the near future. The plea for deprotection has, however, been hedged in by two conditions. In the first place, imports should continue to be strictly regulated to fill in the gap between demand and indigenous production. Secondly, the imported soda ash should be sold at prices comparable with those of the domestic product. Incidentally, the prices of soda ash have been decontrolled with effect from *16th December 1963.*

Since the soda ash industry has itself pleaded for withdrawal of protection, one may say that the Tariff Commission need not bother at all about examining the question. But the Commission has to take into account the viewpoints of not merely the manufacturers of soda ash—they number four—but also of the innumerable consumers of this heavy chemical. Soda ash is widely used in the manufacture of glass, bangles, silicate, textiles, paper, chemical caustic soda, bichromate, sodium bicarbonate, aluminium and other miscellaneous items, as well as by *dhobis* and laundries. The glass and bichromates industries use heavy soda ash, while all others use light soda ash. The quantity of soda ash consumed by these industries is now running at an annual rate of about 305,000 tonnes, which is much higher than the actual output of about 257,000 tonnes. The gap is bound to

Progress of Soda Ash Industry At A Glance

be wider still in the coming years, what with the continuously rising demand for soda ash. An idea of the magnitude of demand can be had from the high minimum (tentative) production target of 700,000 tonnes fixed for the last year (1970-71) of the fourth Plan by the Perspective Planning Division of the Planning Commission, a target that represents an increase of over 55 per cent of the anticipated level of production (450,000 tonnes) in 1965-66. The Chairman of the Tariff Commission, Mr. K. R. P. Aiyangar (who, incidentally, will soon be joining the Monopolies Commission), must *have had at the back of his mind* these considerations when, during the public inquiry held at Bombay on Thursday last week, he bluntly asked the soda ash industry the following two questions:

1. You have asked for deprotection. As a responsible industry, do you have the courage to face the consequences of deprotection?

2. Are you in a position to say confidently that, even in the face of stiff competition in the event of deprotection, you will be able to expand steadily, to increase production, to reduce output costs and to meet domestic demand adequately at reasonable lower prices?

One does not think that the soda ash manufacturers are in a position to give categorical affirmative answers to the aforesaid posers. How could they? As already mentioned, they have proceeded on the assumption that imports would be restricted for balance of payments considerations and that, in case this assumption were to be belied, imports should be limited strictly to the extent of shortfall between the supply and demand. There is, as already seen, a wide gap between production and demand and, since the industry is not expected to be in a position to meet the demand even during the next three years, sizable quantities of soda ash will have to be imported in order to relieve the acute shortage. The manufacturers' representatives who were present at the inquiry themselves admitted this fact. Besides inadequate production, output costs are getting rigid, with the result that the selling prices, too, are very high. The remedy lies (a) in augmenting production capacity through establishment of new plants and expansion of existing plants, and (b) in reducing the cost of production through increase in the size of the existing plants to optimum capacity, efficient functioning of plants, setting up of industrial units to utilise distillation wastes, reduction in fuel consumption by using dry lime, lower tax burden, and reduction in costs of transport, packing, etc. Drawing attention to these aspects, Dr. R. Balakrishna, a Member of the Commission, is reported to have expressed surprise at the industry's advocacy of deprotection and added:

"The Commission is not interested in extending protection one day longer. Even in a controlled economy like ours, there is no room for a completely insulated market. The purpose of tariff protection is to regulate the supply of a commodity in relation to output and offtake and to find out its impact on domestic prices and consumers. Domestic output and imports should be equivalent to domestic consumption. If this is not the case and if demand remains unsatisfied, leading to high internal prices, then demand for deprotection should be considered as inconsistent."

The Tariff Commission's view as highlighted by both Mr. Aiyangar and Dr. Balakrishna are neither logical nor convincing. The industry says it does not need protection. The consumers' interest seems to be safe. This is evident from the fact that the Government itself has already removed the price control and that imports are being regulated through the State-owned monopoly, namely, the S.T.C. The industry's assumption that imports will continue to be restricted is more realistic than Mr. Aiyangar's posers to the industry mentioned above. If circumstances change against the industry at a later date, protection can be reintroduced. In any case, even if protection is removed, it will be only in name, for the Government will, as it has done in many cases, simply convert the protective duty into a revenue one, for its hunger for more revenue is insatiable. So, why bother about extending the tariff protection to an industry which does not want it?

Price Disparity Wide

There is, of course, a wide disparity between the prices of Indian and foreign soda ash. The factory sale prices of Indian soda ash (about Rs. 410 to Rs. 435 per metric tonne) are much higher than the imported prices (about Rs. 312 per tonne if imported from Commonwealth and Rs. 345 if imported from *other sources); the latter bear, besides in*surance and freight charges, a fairly high import duty also. Soda ash is at present assessed to a protective duty of Rs. 8.37 per quintal preferential (Rs. 11.32 standard) plus a countervailing excise duty of Rs. 2 per quintal plus an additional duty (surcharge) of 10 per cent of the import duty. But, when the Government decontrolled this commodity towards the close of last year, the assumption was that, with the passage of time, the abolition of price control would lead to an increase in production, which, in turn, would bring about price stability.

Be that as it may, the present enquiry by the Tariff Commission provides an opportunity to one for knowing the up-to-date position of the industry and its problems. Mr. Aiyangar, in his statement, provided a neat survey of the industry. The soda ash industry, it will be recalled, was first accorded tariff protection in 1949. Thanks to protection, the industry has expanded quite considerably. Thus, between 1950-51 and 1963-64, the number of units manufacturing soda ash has risen from two to four, the aggregate annual rated capacity from 54,000 tonnes to 296,800 tonnes and actual production from 44,650 tonnes to about 257,000 tonnes. Nearly 3,300 workers are employed in the four units engaged in the production of soda ash, namely, the Tata Chemicals (Mitapuram), the Dhrangadhra Chemical Works (Dhrangadhra) and Saurashtra Chemicals (Porbandar), all in Gujarat State, and Sahu Chemicals and Fertilisers in U.P. Two of the existing units, according to the Tariff Commission's Chairman, have plans to expand their capacities over the next three years. The implementation of these plans will raise the aggregate capacity of the four units to 352,000 tonnes in 1965, 402,000 tonnes in 1966 and 422,000 tonnes in 1967. In addition, the issue of a licence to a new unit for the establishment of a soda ash plant in Madras with Japanese collaboration is stated to be under the consideration of the Government of India; the daily capacity of this plant is expected to be of the order of 200 tonnes. Meanwhile, the licence to put up a plant in Bombay granted to Messrs. K. B. H. M. D. H. Bhiwandiwalla and Company has been revoked, as the Company was unable to implement the project.

Quality

Besides the expansion of capacity and production, the quality of soda ash (both light and heavy), it is gratifying to hear from Mr. Aiyangar, is satisfactory and, by and large, it conforms to Indian Standards specifications. The producers *claim to have* adopted quality control measures at various stages of production. They also claim to have taken remedial measures whenever complaints were received

Demand for Soda Ash*

Of which: Heavy soda ash (for glass and bichromates industries)	82	90	99	115
Light soda ash (for the rest)	222	248	274	304

* As assessed by the Alkali Manufacturers Association of India.

by them. Yet, there are, we are told, a few complaints from consumers expressing dissatisfaction with the quality of soda ash and *two of the complaints* are from the glass industry. The defects pointed out relate mainly to low specific gravity of dense soda ash and presence of high-moisture and sodium chloride content and other impurities such as stone and iron.

There is also said to be general satisfaction about the selling arrangements for the indigenous and imported soda ash, though they are a few complaints regarding non-availability of indigenous soda ash and a complaint that some manufacturers have raised their selling prices after the Government announced decontrol of prices in December last. But one company at least, it is said, has reduced its selling price consequent on the abolition of excise duty on carbon-dioxide used in the process of soda ash manufacture.

It may be noted, in this connection, that the Government of India has extended the import policy for soda ash followed in the fiscal year 1963-64 to the current licensing period (April 1964-March 1965) also. Under this policy, imports of light soda ash as well as of natural/synthetic heavy soda ash of a purity not less than 98 per cent Na_2CO_3 are canalised through the State Trading Corporation of India. Licences are also granted to mills, registered cloth processors and exporters of fabrics to import, among other items, soda ash against exports of cotton fabrics. The Director General of Technical Development, in consultation with the Development Council for Alkali and Allied Industries, advises the S.T.C. about the *actual quantities* of soda ash to be imported and reviews the position every six months. Imports of soda ash were 49,235 tonnes valued at Rs. 95.04 lakhs in 1961, 45,326 tonnes valued at Rs. 83.47 lakhs in 1962 and 14,585 tonnes valued at Rs. 25.56 lakhs in 1963. It will be observed that there was a steep fall in imports during 1963. The bulk of imports during 1961 and 1962 were of the dense variety, being 37,918 tonnes and 43,072 tonnes, respectively.

The Tariff Commission has received representations from the industry on certain issues connected with the supply of raw materials. These are: (a) the practice of Railways to demand costly protective measures for railway wagons for bulk movement of salt, otherwise charging higher freight rates; (b) withdrawal of station-to-station freight rates on limestones; and (c) inferior quality of coke and its inadequate supply, etc. Mr. Aiyangar has stated that the Commission will discuss these issues at the appropriate stage of inquiry and try to explore the possibilities of providing reasonable relief to the industry.

CODE OF CONDUCT IN GENERAL INSURANCE

DOES IT MERIT CONTINUATION?

THE move reported to be afoot to relax the Code of Conduct for general insurers is, perhaps, the first ripple of a wave of consequential changes that are likely to come about in general insurance, following the L.I.C.'s entry into the general insurance market. *The object of the proposal is said* to be to counter the challenge posed by the L.I.C.'s decision to transact general insurance business also in competition with the companies in the private sector. The latter, private companies, it may be noted here, are bound by a Code of Conduct evolved in 1951 and voluntarily adopted by the companies in their own interest and the interest of the industry as a whole. The Code enjoins upon the companies to adopt fair business methods, to avoid price competition and to follow certain agreed business practices and procedures so that competition would be healthy and not unfair and wasteful. The Code has been accepted by the majority of companies, though there are a few which have not done so. But the companies not subscribing to the Code account for only less than 10 per cent of the total premium of all the companies taken together. It is true that, with the debut of the L.I.C. into the general insurance field as a non-tariff insurer not bound by the Code of Conduct, the size and importance of that section of companies outside the Code of Conduct has increased enormously. But the L.I.C. has, declared that, though it will operate as a non-tariff insurer, it will not resort to any kind of rate-war nor engage itself in unfair competition. It has stated that, to begin with, the L.I.C. would adopt the same tariff schedule as are used by the tariff companies and that the rates would not be revised until after sufficient experience has been accumulated, so that a realistic rate of premium could be evolved.

This means that, though there is no immediate prospect of a rate-war, there is nothing to prevent the L.I.C. from reducing premium, if, after some time, it is satisfied that its own underwriting experience warrants a reduction in premium. Since the L.I.C. has not accepted the Code of Conduct and it is under no obligation to do so in future, it is not bound by any of the terms or provisions of the Code. The only limitations on its operation would be such provisions of the Indian Insurance Act, 1938, as amended, and the rules framed thereunder, as are applicable to general insurance business as a whole. These are as much applicable to the L.I.C. as to other insurers.

Open Position

In view of the open position of the L.I.C., there is a section of opinion among general insurers which feels that the companies in the private sector should be freed of its fetters, irrespective of whether or not they are self-imposed, so that they can compete among themselves and with the L.I.C. on the basis of complete equality. There is no point, suggest those who share this view, in companies running a race with the L.I.C. when they are saddled with handicaps and obligations, even if these are voluntarily assumed. The race should be one in which all participants are treated equally or no race at all is their stand. This view, however, is not shared by all insurers, especially the smaller companies which fear that, once the restraining effect of the Code of Conduct is removed, the resulting indiscriminate competition would be harmful to them. The assumption behind this line of thinking is that the Code of Conduct and its enforcement machinery have improved the tone of the market, reduced unfair practices and illegal rebating and has exercised a generally healthy influence on the industry. It is claimed that the Code has worked fairly well and brought some tangible benefit to the industry, especially after its administrative machinery has been streamlined and made more effective. Mr. E. Kolet, Chairman of the Executive Committee of the General Insurance Council, which is responsible for enforcing the Code, testified to this claim last week in Bombay. He said that, thanks to the Code, the general insurance market had registered a distinct improvement in the last three years with a marked reduction in procuration and servicing costs. This improvement, according to him, is reflected by the gradual fall in the management expenses of insurance companies, though costs in general had gone up in the country. Insurers, he pointed out, had refrained from making "doubtful appointments," following the stricter enforcement of the Code of Conduct and the appointment of inspectors by the Committee. The evil of illegal rebating had also been checked to a great extent, though not completely eliminated.

That the Code has brought about some improvement in general insurance is not denied even by its critics. What is more important to the point is whether the Code has helped to stimulate the growth of the industry at a pace and in directions necessary for enabling general insurance to play a more dynamic role in the industrialisation of the country. Comparisons are always odious, but looking to the vigour and dynamism of banking, notwithstanding the inter-bank agreements on deposits and advances alike, one cannot help comparing general insurance with banking. The comparison, one must admit, does not reflect well on the former which looks anemic. One, therefore, wonders whether the Code of Conduct has not outlived its utility. In fact, it looks as though general insurance badly needs a doze of healthy competition to shake itself into vigorous growth. And, so long as the Code of Conduct remains, free, open and healthy competition is out of the question. It is true that, under such competition, only the best companies, and not necessarily the biggest companies, can survive because it will then be the case of survival of the fittest. And, if, as a result, some of the inefficient companies, which now survive simply because they can count on what is called "tied-business," goes out of existence or amalgamate to form more efficient and economically viable units it is a development to be devoutly wished for.

(Concluded from next column)

business, which emanates, to a large extent, from leading companies in the United Kingdom and Continent. In this, we have naturally to follow the fortunes of the treaty companies. There have been exceptionally heavy fire losses in those countries during the last two years, with the result that these treaty accounts have resulted in losses during the year under report.

"We have been able to maintain the net premium income in the marine department, which in the present-day conditions, can be considered satisfactory. There was a small reduction in the claim ratio during last year. Competition for cargo business remains keen, making expansion in this field extremely difficult; so also is the case with regard to the retention of existing accounts at anything like economic rates.

"In the accident department, there was a *small rise in the net premium income, in spite* of the fact that we lost our entire portfolio in Ceylon. The motor business continued to be unprofitable. One main reason for the increase in the claim ratio is the expensive third party claims, which fall upon insurance companies, and these are costing the companies far more than was the case till two or three years ago. Whilst no one would wish to deny the right of innocent victims of road accidents to receive fair compensation for their injuries, it would, nevertheless, be most undesirable for damages to be awarded, as though the insurers had unlimited funds. The insurance offices are doing a public service, by providing cover under the Motor Vehicles' Act for compulsory third party liability and this they endeavour to do at the lowest possible cost. Excessive damages can only lead to further increase in premium rates to the motoring public, from whom alone are derived the funds from which these claims have to be met. It is hoped that the revised rates of premium introduced by the Insurance Association of India during the second half of last year will have some effect on the underwriting of the motor insurance business in future.

"As you would have noticed from the accounts, the working of the Company during the last year has resulted in a profit of Rs. 61,383, after making a provision of Rs. 15,000 for staff gratuity account. The fact that we are able to show fairly satisfactory overall results is attributable to our being able to control the expenses and due to the increase in the earnings from our investments."

ALL-INDIA GENERAL INSURANCE

PROGRESS WELL MAINTAINED

THE statement of accounts of the All-India General Insurance Company Ltd. (Secretary: Mr. P. S. Parameswaran, Bombay) for the year ended 31st December 1963, discloses satisfactory results. Despite a slight decline in premium income and higher expenses, the Company was able to maintain the net profit at about the same level as in 1962, which, it may be noted, was a favourable year. But the results would have been worse had not the management rigorously controlled the expenses, which, nevertheless, exceeded last year's level of Rs. 8.77 lakhs and amounted to Rs. 9.64 lakhs. The effect of higher expenses on the overall profit position was lessened, to some extent, by the higher earnings from investment.

A noteworthy feature of departmental working during the year is the substantial reduction in underwriting losses in the marine and miscellaneous departments. Thus, the underwriting loss in the marine department during the year was only Rs. 58,866, as against Rs. 1.23 lakh in 1962. Similarly, it was lower at Rs. 69,822 in the miscellaneous department, as against Rs. 1.18 lakh in the previous year. If this trend is maintained both the marine and miscellaneous accounts may turn amber during the current year and may well show a profit in the near future.

Less encouraging, however, is the trend in the fire department which recorded a decline in underwriting profit from Rs. 2.63 lakhs in 1962 to Rs. 1.36 lakh during the year under review. The higher claims, especially in respect of treaty reinsurances which originate mostly from companies in the U.K. and the Continent whose experience had been adverse, are largely responsible for the lower profit in the fire department, the only account to show a surplus.

The net profit for the year aggregated Rs. 61,383, as against Rs. 66,965 in the previous year. The dividend has been maintained at last year's level of 40 nP per share of Rs. 8 paid-up which works out to 5 per cent per annum.

The following table sums up the results of the Company for the year under review, with figures for two previous years given alongside for purposes of comparison:

(In lakhs of rupees)

	Year ended 31st December		
	1963	1962	1961
Fire:			
Net Premium	11.74	12.41	11.74
Claims	6.56	4.47	4.15
Commission and Expenses ..	4.24	5.07	5.32

Carry forward	0.66	0.74	0.67

The main features of the Company's working during the year were highlighted by Mr. Ramnath A. Podar, Chairman, in his speech at the Twentieth Annual General Meeting of the shareholders of the Company held at Bombay on Friday, 22nd May 1964. Some of the more relevant observations made by Mr. Podar in his speech are reproduced below:

"The total gross Indian and foreign premium income written by the Company amounted to Rs. 28,94,128, as against Rs. 30,68,061 in 1962. The fall in the premium is mainly due to the fact that, during the year under report, we stopped writing business in Ceylon, consequent upon nationalisation of general insurance in that country. The total expenses of management incurred last year was Rs. 8,77,068, as against Rs. 9,63,862 in the previous year. It had been a difficult task to keep the expenses under control, especially at a time when there is a tendency for a continuous all-round increase in costs.

"Turning now to the working of the individual departments, the net premium income in the fire department shows a small decrease when compared to the previous year. The claim experience in this department in regard to both Indian and foreign business was less favourable during the year under report. Major portion of this unfavourable claim experience was in respect of treaty reinsurance

(Continued in previous column)

B.I.C.'S PERFORMANCE ENCOURAGING

HANDSOME INCREASE IN DIVIDEND

A FURTHER substantial improvement both in sales realisation and profit has been reported by the British India Corporation Ltd. (Chairman: Mr. Satish Chandra, Kanpur) in respect of the year ended 30th December 1963, notwithstanding the continued upward thrust of costs. Sale proceeds at Rs. 12.88 crores are 38.8 per cent higher than the previous year's level of Rs. 9.28 crores. The gross profit is up by as much as Rs. 86.04 lakhs to what appears a record level of Rs. 231.41 lakhs. The profit-margin (ratio of gross profit to sales) has, therefore, undergone an improvement from 15.7 per cent to 18.4 per cent. Although the essential provisions are correspondingly larger—that for depreciation at Rs. 9.37 lakhs as against Rs. 8.62 lakhs and for taxation at Rs. 133.00 lakhs as compared with only Rs. 77.54 lakhs for the year before—the net profit still stands improved by almost Rs. 30.00 lakhs at Rs. 89.04 lakhs. This betterment has not only enabled the Directors to increase the plough-back from Rs. 20.88 lakhs to Rs. 38.49 lakhs but also to step up the ordinary dividend by six points to 15 per cent, subject to deduction of tax. As will be seen from the following comparative table, this is the third successive increase since the Corporation commenced paying a dividend in 1959:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds (gross)	12,88.20	928.07	781.91	785.89
Other income	22.82	22.34	20.77	10.94
Closing stocks	342.63	284.82	234.64	206.45
Materials, stores, spares etc. consumed	637.42	457.41	381.80	352.27
Excise duty	122.75	69.21	51.51	49.40
Finished products purchased	14.56	11.64	11.50	13.47

Low	8.80	6.76	8.76	6.76	5.44

* For the years 1959 and 1960.

Working results of the Corporation's woollen branches—the New Egerton Woollen Mills at Dhariwal and the Cawnpore Woollen Mills—were quite satisfactory. The scheme of rehabilitation and modernisation initiated during the preceding year continued to engage the attention of the Directors during the year and valuable import licences and consignment of machinery thereunder were received by the Corporation in 1963 and thereafter. The working of the leather branches, namely, Cooper Allen and the North West Tannery also showed welcome improvement during 1963 as compared with the preceding year. The question of extending the scope of activities of these branches is said to be under the Directors' consideration.

The Company has four subsidiaries, namely, Elgin Mills Company Ltd., the Cawnpore Textiles Ltd., the Calico Processors Ltd., and Brushware Ltd. During the year ended 30th September 1963, Elgin Mills recorded a higher turnover of Rs. 722.55 lakhs as against Rs. 630.67 lakhs during the preceding year but its net profit declined from Rs. 32.42 lakhs to Rs. 18.89 lakhs. The dividend, nevertheless, was maintained at Re. 1.75 per ordinary share of Rs. 10.00 each. The decrease in profit was attributed by the Directors to the considerable increase in the prices of cotton, higher labour cost and general rise in prices of all stores as also to the fact that the prices obtainable for finished goods could not be increased due to voluntary price control on cotton textiles. Notwithstanding this, the programme of renovation and modernisation of the mills continued and the work connected with the installation of 12,000 additional spindles progressed satisfactorily. The Directors of Calico Processors reported that the contemplated voluntary liquidation of the Company was kept pending till such time as the actual loss in respect of the loan to Shree Madhav Mills Ltd.—also in liquidation—could be determined. The final winding up of this latter company has not yet been completed. The sale proceeds of Cawnpore Textiles Ltd. during 1963 improved somewhat from Rs. 163.55 lakhs to Rs. 186.89 lakhs but its net profit decreased from Rs. 5.99 lakhs to Rs. 4.65 lakhs. The Company, however, paid the same dividend as during the previous year, that is, 10 per cent per annum. The implementation of the programme of renovation and modernisation of the mills continued and a licence was received for the installation of additional 12,500 spindles. Working results of Brushwares Ltd. for the year ended 30th November 1963 were highly satisfactory. The turnover rose sharply from Rs. 6.15 lakhs to Rs. 11.01 lakhs and the profit after taxation from Rs. 21,717 to Rs. 73,332. The dividend, nevertheless, was maintained at eight per cent subject to deduction of tax.

The B.I. Corporation's paid-up share capital continues to stand unchanged at Rs. 406.72 lakhs, of which Rs. 81.00 lakhs are in 8 per cent cumulative preference shares of Rs. 100.00 each and the balance, that is, Rs. 325.72 lakhs in ordinary shares of Rs. 5.00 each. The reserves, on the other hand, have advanced from Rs. 222.19 lakhs to Rs. 260.39 lakhs. Secured loans too have risen from Rs. 226.18 lakhs to Rs. 304.42 lakhs and current liabilities and provisions from Rs. 207.27 lakhs to Rs. 291.06 lakhs but both these put together are very adequately covered by current assets, loans and advances aggregating Rs. 1023.36 lakhs. Investments continue to stand at Rs. 145.96 lakhs but the net block is higher at Rs. 70.89 lakhs, consequent upon the increase of Rs. 13.25 lakhs to Rs. 330.38 lakhs in the gross block. The value of the capital work-in-progress is also substantially higher at Rs. 21.82 lakhs, as against Rs. 4.82 lakhs a year ago.

The Rs. 5.00 paid ordinary shares of the Corporation are currently quoted at Rs. 9.62 *cum-div.* On the *ex-div.* price, the net annual return on fresh investment in this scrip works out to a little over 6.6 per cent per annum.

VIBGYOR LIMITED

Vibgyor Limited, which was converted recently into a public limited company with an authorised capital of Rs. 50 lakhs, is issuing to the public 14,890 equity shares of Rs. 100 each, in addition to the 15,110 shares already subscribed or proposed to be subscribed by the Directors and their friends. The subscription list will open on Monday, 8th June next. The public issue has been underwritten to the extent of Rs. 12.75 lakhs by three parties.

The Company has been specialising in all kinds of civil engineering and construction works, as painting specialists, interior decorators, etc. There has been a considerable expansion of its activities in recent years and it is, therefore, considered advisable to provide an adequate capital base for the Company with public participation. Besides, subject to permission from the appropriate authorities, the Company also proposes to set up, in due course, a well equipped unit for fabricating its requirements of steel structures and manufacturing ancillary equipment.

The Company has on hand jobs of the value of Rs. 190 lakhs covering power stations, development of ports, irrigation and housing projects. Another contract worth Rs. 118 lakhs is expected to be finalised shortly.

The Company has paid a dividend of 8 per cent on ordinary shares of Rs. 100 for the year ended March 1963, as against the dividend of 7 per cent distributed for 1961-62 and 3.5 per cent for 1960-61. The Chairman of the Board of Directors is Maharaja Fatesinghrao P. Gaekwad of Baroda.

(*Concluded from next column*)

Ex-Im Bank for the expansion scheme. A separate company, Renusagar Power Company Ltd., which will be a wholly subsidiary of the Company, is being formed to run this power plant. It will have an authorised capital of Rs. 5 crores. It will issue initially 350,000 equity shares of Rs. 100 each, which the Company proposes to subscribe for wholly.

The Company's paid-up capital of Rs. 849.25 lakhs comprises Rs. 249.70 lakhs in 9 per cent redeemable cumulative preference shares of Rs. 100 each and the rest in 10-rupee equity shares. Borrowings aggregate Rs. 915.49 lakhs, of which Rs. 627.32 lakhs (Rs. 614.28 lakhs a year before) represent Ex-Im Bank loans and Rs. 288.17 lakhs (Rs. 337.15 lakhs) short-term borrowings. These short-term loans and current liabilities and provisions bring the immediate liability to outsiders to Rs. 396.34 lakhs. As against this, current assets and book debts are shown at Rs. 416.48 lakhs and investments at Rs. 15.20 lakhs. The gross block has expanded during the year from Rs. 14.59 crores to Rs. 14.83 crores. It has been written down to a net block of Rs. 11.33 lakhs and together with work-in-progress shown at Rs. 12.13 crores. In addition to the accumulated debit balance of Rs. 190.68 lakhs, the Company has to write off miscellaneous expenditure of Rs. 39.14 lakhs.

At the end of the year under review, the Company had 15,481 equity shareholders and 1,917 preference shareholders. Of the total equity shareholders, 11,468 persons held 11 to 100 shares each, with 6,155 out of them holding 51 to 100 shares each, whereas only 12 owned one to ten shares and 197 held 1,001 and more shares. A number of large financial and banking institutions are members of the Company.

HINDUSTAN ALUMINIUM REACHES CAPACITY

EXPANSION UNDER WAY

DURING the first year—the year ended 31st December 1963—of full operation of its plant which was started in May 1962, the five-year old Hindustan Aluminium Corporation Ltd. [Managing Agents: Messrs. Birla Gwalior (Private) Ltd., Calcutta] has made very satisfactory progress. It has produced 22,138 tonnes of primary metal, thus exceeding the plant's rated capacity of 20,000 tonnes. Naturally, it has negotiated during the year arrangements for trebling the capacity under a licence already obtained. Despite some initial teething troubles in the working of the alumina plant, the production of alumina has reached 39,040 tonnes, against the rated capacity of 42,000 tonnes. The Directors believe that this could be better. Sales of the Company's products have amounted to 19,799 tonnes, with difficulties in sales of ingots having been got over by obtaining permission from the Government to export metal and import the same in fabricated form. Consequently, stocks during the year are said to have not risen.

The financial results show a more than threefold rise in sales from Rs. 202.43 lakhs to Rs. 707.55 lakhs, with stocks of finished goods at the close of the year amounting to Rs. 89.32 lakhs, as against Rs. 66.01 lakhs a year before. The year has closed with a gross profit of Rs. 200.38 lakhs (as against a loss of Rs. 42.72 lakhs in the previous year), after allowing Rs. 230.73 lakhs (Rs. 184.20 lakhs) for raw materials consumed, Rs. 20.23 lakhs (Rs. 11.69 lakhs) for stores and spares consumed, Rs. 83.28 lakhs (Rs. 41.04 lakhs) for power and fuel, Rs. 45.24 lakhs (Rs. 26.95 lakhs) for staff expenses, Rs. 65.59 lakhs (Rs. 49.26 lakhs) for interest and guarantee commission on loans and Rs. 90.51 lakhs (Rs. 65.04 lakhs) for other expenses. Out of this profit, Rs. 195.22 lakhs (Rs. 156.40 lakhs) have been provided for depreciation, Rs. 1.27 lakh (Rs. 2,848) for previous years' taxation and Rs. 50,000 for Managing Agents' minimum commission, leaving a surplus of Rs. 3.39 lakhs. This surplus has gone to reduce the net loss brought in from the previous year to Rs. 190.68 lakhs, which has been carried to the balance-sheet.

Evidently, the year's results suggest that the Company has got off pretty well, especially when the odds in a highly capital-intensive industry like aluminium are quite heavy. Against its plans for fabrication, one Properzi continuous casting and rolling mill for the manufacture of redraw rods was received in November 1963 and has since been put into operation. Even though some of the ancillary equipment ordered from the U.S. is yet to arrive, the quality and production of E.C. rods are satisfactory. Other major equipments for fabrication have not yet arrived, because the loan from the Ex-Im Bank could be cleared only towards the end of October 1963. Although the civil construction work is well under way, the Company has to wait for the arrival of the major fabrication equipment, namely, the rolling mills and the extrusion press with their ancillary equipments. The deliveries are being expedited and it is expected that most of the equipments will be installed and put into operation before the end of 1964.

The earlier proposal to expand the primary aluminium capacity by 30,000 tonnes was amended to 40,000 tonnes on the advice of technical consultants. The Government has granted the necessary licence. The Company approached the Ex-Im Bank for financing the foreign exchange requirements of the first phase of the expansion programme and has succeeded in obtaining a favourable initial reaction. Agreement has been reached with Kaiser Engineers for providing engineering and construction facilities for the expansion programme and it has been approved by the Government. The sanction for the issue of further equity capital has been obtained, but no action is considered necessary in this regard for the time being.

For setting up a thermal plant to meet the additional power requirements for the expansion programme, provisional orders have been placed for two generating units of 67.9 MW. each with International General Electric Company of New York against long-term suppliers' credit. The terms of the order have been approved by the Government, but the finalisation of the contract is pending clearance from the

(*Continued in previous column*)

G.K.W. MAKES FURTHER HEADWAY

DIVIDEND LOWER, BUT ON HIGHER CAPITAL

"DURING 1963, there was difficulty in obtaining adequate supplies of quality billets and deliveries from main producers were irregular. Production recorded an increase over the 1962 level, but this has resulted in a reduction in the stocks of raw materials at the end of the period under review." These are the few words in which the Directors of Guest, Keen, Williams, Ltd. (Managing Director: Mr. W. Morrice, Calcutta) describe the Company's physical performance in 1963. Indeed, they say less, but suggest much more. No management will run a company at a higher level of production in the face of difficulty about raw material supply, unless when such a proposition is found worth the risk of depleting the stocks of raw material on hand. For G.K.W., it has proved something more than merely worthwhile. For, with the higher production indicating increasing market at favourable prices, the Company has made further headway during the year.

Sales have recorded yet another three-crore jump from Rs. 13.06 crores to Rs. 16.37 crores, representing an increase of 25.4 per cent. Gross profit, up from Rs. 155.69 lakhs to Rs. 184.83 lakhs in the previous year, has shot up by 49.2 per cent to Rs. 276.32 lakhs. Profit before tax amounting to Rs. 215.40 lakhs (Rs. 130.38 lakhs a year before), as shown in the published accounts, stands, as a ratio to turnover, 3.2 per cent higher at 13.2 per cent. Actual provision for depreciation amounts to Rs. 51.14 lakhs (Rs. 51.19 lakhs in the previous year), but this pre-tax profit is arrived at after deducting from gross profit the transfer to additional depreciation reserve of Rs. 7.75 lakhs (Rs. 6.08 lakhs).

Normal taxation, as per the Finance Act 1964 and including tax on dividends declared during the year but not Sur tax as the profit is not expected to attract any liability, has increased from Rs. 55.60 lakhs to Rs. 110.25 lakhs. A further liability of Rs. 26.34 lakhs has arisen following the one-for-two bonus share issue during the year. Thus, the total tax provision works out to Rs. 136.59 lakhs. Because of this heavy tax liability, the net profit shows an increase of only Rs. 10.55 lakhs to Rs. 88.59 lakhs. Out of this again, Rs. 6.77 lakhs (Rs. 11.78 lakhs in the previous year) have been set apart for tax reserves. A sum of Rs. 7.75 lakhs (Rs. 6.08 lakhs) has been carried to additional depreciation reserve and another Rs. 6.93 lakhs (Rs. 5.55 lakhs) has been credited to development rebate reserve. The transfer to debenture sinking fund is practically the same at Rs. 5.05 lakhs and the general reserve has got Rs. 3.64 lakhs which is the surplus after providing for the dividend. The dividend on the 10-rupee ordinary shares has been reduced by two points to 12 per cent per annum, the entire cut having come in the final dividend of 6 per cent, as against 8 per cent a year before, which is, however, payable on the increased paid-up capital of Rs. 632.19 lakhs following the bonus issue during the year.

The following comparative table gives a clear idea of the Company's working in the past four years:

(In lakhs of rupees)

	For the 52 weeks ended			
	28-12-63	29-12-62	30-12-61	31-12-60

Low	23.50	25.94	34.87	36.00	36.75

* Before issue of bonus shares in the ratio of one for two.

It will be seen from the table above that, besides favourable market conditions, a limited increase in costs is an equally important factor for the marked rise in gross profit. The cost of materials and stores consumed has gone up from Rs. 753.04 lakhs to Rs. 869.63 lakhs due largely to the higher level of production attained during the year. The increase of about Rs. 24 lakhs to Rs. 249.63 lakhs in staff expenses has apparently followed the increase in the number of employees from 8,127 to 8,501 during the year. The rather much pronounced rise in other expenses from Rs. 209.95 lakhs to Rs. 274.39 lakhs has been shared largely by three items: power and fuel Rs. 63.38 lakhs (Rs. 51.86 lakhs in the previous year), repairs and maintenance of plant and machinery Rs. 68.47 lakhs (Rs. 54.57 lakhs) and technical aid fee and royalty Rs. 30.21 lakhs (Rs. 17.19 lakhs). The failure of net profit to share fully the improvement in gross profit is explained, as noted before, by the bonus share issue which has also caused a reduction in the rate of dividend, though not in the aggregate amount distributed to shareholders.

The wholly-owned subsidiary, Sankey Electrical Stampings Ltd., has experienced an increase in turnover from Rs. 588.12 lakhs to Rs. 616.31 lakhs, but not in gross profit which has declined from Rs. 88.41 lakhs to Rs. 75.69 lakhs. The dividend has been halved to Rs. 5 per share and it has brought to the holding company Rs. 6.09 lakhs, as against Rs. 12.17 lakhs in the previous year. The improvement in sales has been largely derived from products covered by the diversification programme consisting of press-work for textile machinery, automobile and other industries. G.K.W. advanced a further loan of Rs. 50 lakhs to finance the development programme. Effective from the close of business on 28th December 1963, the subsidiary has been amalgamated with G.K.W.

A consequential change for G.K.W. from this amalgamation is the proposed election of Messrs. A. H. Sethna, N. R. Banerjee, R. B. Ritchie and J. M. Leighton to its Board which is required to be strengthened, in view of its increasing activities following the implementation of its expansion and development programmes.

G.K.W.'s "own" funds at the end of the period under review amount to Rs. 11.44 crores, of which Rs. 6.32 crores represent the share capital and the balance reserves. As against this, the gross block stands at Rs. 10.12 crores (Rs. 9.78 crores a year before) and is written down by more than a third of the cost to Rs. 6.28 crores. Including capital work-in-progress, the net block is shown at Rs. 6.69 crores. During the year, the debenture sinking fund was utilised to purchase from the market and cancel Rs. 10.25 lakhs of the Company's 6.5 per cent Rs. 150 lakhs 1966-71 debenture-stock which now stands reduced to Rs. 139.75 lakhs. Secured bank loans have receded from Rs. 245.01 lakhs to Rs. 202.60 lakhs, but current liabilities and provisions make a bigger total of Rs. 388.77 lakhs as compared with Rs. 295.87 lakhs a year before, bringing the aggregate indebtedness to outsiders to Rs. 591.37 lakhs, as against Rs. 540.88 lakhs at the end of the previous year. This liability is, however, amply covered by current assets, loans and advances aggregating Rs. 955.56 lakhs and investments shown at cost at Rs. 250.92 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 23.69 *cum-div.* (final) and offer a net yield of 4.1 per cent per annum.

(*Concluded from next column*)

cularly from Pakistan, Hong Kong and Japan, which have the advantage of cheap cotton and modern machinery.

The Company's paid-up capital, unchanged at Rs. 73.21 lakhs in 100-rupee equity shares, is backed by reserves and surplus amounting to Rs. 85.42 lakhs (excluding Rs. 10.26 lakhs under dividend reserve required for meeting the year's dividend liability). The Company has a debenture liability of Rs. 40.03 lakhs and has raised unsecured loans of Rs. 1.50 lakh. These unsecured loans and current liabilities and provisions (including the year's dividend liability) account for a total short-term indebtedness of Rs. 78.12 lakhs, as against which current assets, book debts and investments aggregate Rs. 177.80 lakhs. The gross block of Rs. 243.52 lakhs (Rs. 237.33 lakhs a year before) has been written down to a net value of Rs. 93.86 lakhs and, together with work-in-progress, the net block stands at Rs. 99.09 lakhs.

Currently quoted at Rs. 180 *cum-div.*, the Rs. 100 fully paid ordinary shares offer a net yield of 6.6 per cent per annum.

GOKAK BENEFITS FROM HIGHER YARN PRICES

CUT IN RETURN PARTLY RESTORED

THE partial upward revision of cotton yarn prices for only counts up to 40s (those for counts above 40s were actually reduced) in February 1963 has benefited the Gokak Mills Ltd. (Managing Agents: Messrs. Forbes Forbes Campbell and Company Ltd., Bombay), as the bulk of its production is in counts under 40s. Consequently, the Company's gross profit has gone up from Rs. 58.31 lakhs to Rs. 63.59 lakhs during the past calendar year, in contrast to the sharp setback of Rs. 17.10 lakhs suffered in the previous year. The recovery, no doubt, looks small, considering that sale proceeds of yarn and waste, which had experienced only a slight improvement of about Rs. 8 lakhs in the previous year as compared with as much as Rs. 37 lakhs in the year before, have increased again substantially by nearly half a crore, from Rs. 430.91 lakhs to Rs. 481.55 lakhs. But this is due to the considerable increases in costs, particularly in the prices of raw materials following the upward revision of the ceiling prices of cotton by approximately Rs. 125 per candy. Increases took place in wages and stores also and, from 1st December 1963, the Company's contribution to the provident fund for labour and staff was raised to 8 per cent of salary—wages *plus* dearness allowance. As a result of these increases, the cost of raw materials and stores consumed has gone up from Rs. 287.47 lakhs to Rs. 330.80 lakhs and staff expenses have added Rs. 2.26 lakhs to Rs. 72.56 lakhs on top of more than Rs. 3 lakhs in the previous year.

In spite of higher costs, the return to normal growth in sales has been reflected to some extent in profit as well. And it is this restoration, though partial, of the normal sales-profit relations that seems to have prompted the Directors to return to the 14 per cent rate of dividend on the 100-rupee ordinary shares, after it was reduced to 12 per cent in the previous year. But, since the return to shareholders in 1961 also included a 4 per cent bonus, which had been dropped altogether in 1962, this restores only one-third of the 6 per cent cut imposed in the total return in 1962.

The net profit for the year shows an increase of only Rs. 1.53 lakh to Rs. 21.26 lakhs, because the tax provision has gone up by no less than Rs. 4.25 lakhs to Rs. 24.25 lakhs. No provision has been made for Sur Tax for the year, estimated at Rs. 2.90 lakhs, and for the tax on the year's dividend, estimated at Rs. 65,900. But these liabilities are to be covered out of the contingency reserve to which Rs. 3.56 lakhs are transferred out of the year's profit. No provision has been made for triple shift depreciation (estimated amount Rs. 3.87 lakhs) for the year as recently proposed to be allowed under the Finance Act, 1964. In addition to Rs. 3.56 lakhs credited to the contingency reserve, Rs. 5.82 lakhs have been carried to the general reserve and Rs. 15,000 to the staff gratuity reserve, bringing the total profit so appropriated to Rs. 10.42 lakhs, as against Rs. 9.22 lakhs a year before. The dividend liability is to be met from a dividend reserve of Rs. 10.26 lakhs created out of the year's profit.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale of yarn and waste	481.55	430.91	422.36	385.17

Notices

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-first Annual General Meeting of Industrial Investment Trust Limited will be held at the Registered Office of the Company at 61, Apollo Street, Fort, Bombay, on Friday, the 26th day of June, 1964, at 4 p.m. (S.T.), to transact the following business:—

ORDINARY BUSINESS

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st December, 1963.
2. To declare a dividend.
3. To appoint a Director in place of Mr. Arvind N. Mafatlal who retires by rotation and being eligible for re-appointment offers himself for re-election.
4. To appoint a Director in place of Mr. Nawal S. Phatarphekar who retires by rotation and being eligible for re-appointment offers himself for re-election.
5. To appoint a Director in place of Mr. C. H. Campbell who retires by rotation and being eligible for re-appointment offers himself for re-election.
6. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

SPECIAL BUSINESS

7. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

"RESOLVED that the Articles of Association of the Company be amended as under:—

(i) The present Articles 19, 20 and 21 be deleted and the following Articles be substituted therefor respectively:—

19. *"Share Certificates.*—(*a*) Every Member or allottee of shares shall be entitled, without payment, to receive one certificate specifying the name of the person in whose favour it is issued, the shares to which it relates and the amount paid up thereon. Such certificate shall be issued only in pursuance of a resolution passed by the Board and on surrender to the Company of its letter of allotment or its fractional coupons of requisite value, save in cases of issues against letters of acceptance or of renunciation, or in cases of issue of bonus shares.

Every such certificate shall be issued under the Seal of the Company, which shall be affixed in the presence of two Directors or persons acting on behalf of the Directors under a duly registered Power of Attorney and the Secretary or some other person appointed by the Board for the purpose, and the two Directors or their attorneys and the Secretary or other person shall sign the share certificate; provided that if the composition of the Board permits of it, at least one of the aforesaid two Directors shall be a person other than the Managing Director, if any, or a wholetime Director, if any. For any further certificate the Board shall be entitled, but shall not be bound, to prescribe a charge not exceeding Rupee one. Particulars of every share certificate issued shall be entered in the Register of Members against the name of the person to whom it has been issued, indicating the date of issue.

(*b*) A Director may sign a share certificate by affixing his signature thereon by means of any machine, equipment or other mechanical means, such as engraving in metal or lithography, but not by means of a rubber stamp, provided that the Directors shall be responsible for the safe custody of such machine, equipment or other material used for the purpose."

20. *"Delivery of Share Certificates.*—Any two or more joint allottees of a share shall, for the purpose of this Article, be treated as a single Member, and the certificate of any share, which may be the subject of joint ownership, may be delivered to any one of such joint owners on behalf of all of them. The Company shall comply with the provisions of Section 113 of the Act."

21. *"Issue of New Share Certificates.*—(*a*) No certificates of any share or shares shall be issued either in exchange for those which are sub-divided or consolidated or in replacement of those which are defaced, torn or old, decrepit, worn out, or where the cages on the reverse for recording transfers have been fully utilised unless the certificate in lieu of which it is issued is surrendered to the Company. The Company shall be entitled to charge such fee, not exceeding Rupee one per certificate, for any certificate issued on splitting or consolidation of share certificates or for any replacement of share certificates that are defaced or torn as the Board thinks fit, provided that no fee shall be charged for issuing new certificates in replacement of those which are old, decrepit or worn out or where the cages on the reverse for recording transfers have been fully utilised, or for issuing new certificates in denominations of the market unit of trading on sub-division or consolidation of the old certificates.

(*b*) When a new share certificate has been issued in pursuance of clause (*a*) of this Article, it shall state on the face of it and against the stub or counterfoil to the effect that it is 'Issued in lieu of share certificate No. sub-divided/replaced/on consolidation of shares.'

(*c*) If a share certificate is lost or destroyed, a new certificate in lieu thereof shall be issued only with the prior consent of the Board and on payment of such fee, not exceeding Rupee one as the Board may from time to time fix, and on such terms, if any, as to evidence and indemnity as to payment of out-of-pocket expenses incurred by the Company in investigating evidence as the Board thinks fit.

(*d*) When a new share certificate has been issued in pursuance of clause (*c*) of this Article, it shall state on the face of it and against the stub or counterfoil to the effect that it is 'duplicate issued in lieu of share certificate No. .' The word 'duplicate' shall be stamped or punched in bold letters across the face of the share certificate.

(*e*) Where a new share certificate has been issued in pursuance of clause (*a*) or clause (*c*) of this Article, the particulars of every such share certificate shall be entered in a Register of Renewed and Duplicate Certificate indicating against the name of the persons to whom the certificate is issued, the number and date of issue of share certificate in lieu of which the new certificate is issued, and the necessary changes indicated in the Register of Members by suitable cross reference in the 'Remarks' column.

(*f*) All blank forms to be used for issue of share certificates shall be printed and the printing shall be done only on the authority of a resolution of the Board. The blank forms shall be consecutively machine-numbered and the forms and the blocks, engravings, facsimiles and hues relating to the printing of such forms shall be kept in the custody of the Secretary or such other person as the Board may appoint for the purpose, and the Secretary or the other person aforesaid shall be responsible for rendering an account of these forms to the Board.

(*g*) The Managing Director of the Company for the time being or, if the Company has no Managing Director, every Director of the Company shall be responsible for the maintenance, preservation and safe custody of all books and documents relating to the issue of share certificates except the blank forms of share certificate referred to in clause (*f*).

(*h*) All books referred to in clause (*g*) shall be preserved in good order permanently."

(ii) The present Article 52 be deleted and the following Article be substituted therefor:—

"No fee payable on transfer or transmission.—No fee shall be payable to the Company in respect of the transfer or transmission of any shares in the Company.

(iii) All the provisions of the present Article 195 after the first sentence thereof, beginning with the word "Provided" and ending with the word "control" be deleted.

(iv) The present Article 196 be deleted.

***Notice* is also hereby given that the Transfer Books of the Company will remain closed from Saturday the 30th day of May, 1964 to Saturday the 20th day of June, 1964, both days inclusive.**

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

By Order of the Board,
KISHORE M. PREMCHAND,
Director.

Registered Office:
61, APOLLO STREET,
FORT, BOMBAY, *dated 15th day of May,* 1964.

Notes:—1. The dividend when declared will be made payable at the State Bank of India, Bombay, on and after the 29th day of June, 1964. The dividend warrants will be posted to those shareholders whose names stand on the register on the 20th day of June, 1964.

2. Change of address, if any, should be notified to the Company immediately.

A copy of this notice and the Explanatory Statement required to be annexed thereto are being circulated to the Members.

CONCENTRATION IN CORPORATE SECTOR

(*Concluded from page* 943)

of the bigger managing agents and, consequently, of concentration of economic power through the exercise of managing agency functions.

Besides managing agencies, says the Mahalanobis report, common directors or inter-locking directorates constitute another method for bringing about concentration of economic power. Some light on the presence of this phenomenon in India is thrown by a special study of directorships in 331 companies with paid-up capital exceeding Rs. 50 lakhs each that has been made by the Company Law Administration. In terms of paid-up capital, these companies account for 60 per cent of the total paid-up capital of all companies at work in the country in 1956-57. The total number of directorships in the 331 companies selected for the study comes to 2,419 held by 1,502 persons acting as directors. However, these 1,502 persons have been found to be holding 7,366 other directorships, besides the 2,419 directorships in 331 companies studied. The average number of directorships held by a person thus came to 6.5. Of the 1,502 persons, 26.6 per cent held single directorships, 53.2 per cent held two to ten directorships, 14.4 per cent eleven to twenty directorships and 5.8 per cent more than 20 directorships. In other words, 73.4 per cent of the persons acting as directors held multiple directorships and the total number of the directorships held by the directors holding single directorships accounted for about four per cent of the total of 9,785 directorships held by the 1,502 persons.

The Central Statistical Organisation has also undertaken a similar study of common directorships among 282 large-sized public non-Government industrial undertakings but for a later year, namely, 1959-60. The total number of directors of all these concerns put together was nearly 1,800, indicating an average of six directors per unit. But several of these directors were found to be associated with more than one company. After making adjustments for repetition of names, the number was found to have come down to 1,158. Distribution of these persons, according to the number of directorships held, showed that three directors held 11 or more directorships, 11 directors held eight to ten directorship each and 37 directors five to seven directorships each. Of the rest, 215 held two to four directorships each and 892 directors held single directorships. Thus, compared to 1956-57, the prevalence of multiple directorships showed a decline from the point of view of heavy concentration of directorships amongst a few directors, but inter-locking still continues to be an important feature.

The inter-locking between directorships of banks and non-Government industrial undertakings has also been studied. For the purpose, an analysis has been undertaken in the Central Statistical Organisation of the existing inter-locking between directors and managing directors of fourteen selected leading banks and the 296 large-sized non-Government public companies with a paid-up capital of Rs. 50 lakhs or more in 1959-60. The total number of directors of the 14 banks was found to be 148. Out of these, 73 were not associated with any major industrial undertaking; 24 were directors of one industrial house each; 37 were directors of two to four undertakings each and the rest, that is, 14 were directors of more than six industrial houses each.

Banks and Newspapers

The banking sector itself, the Mahalanobis report continues, presents a picture of high degree of concentration. The aggregate share of the 15 top banks having deposits of Rs. 25 crores and over in total deposits of 363 Indian joint-stock banks during the year 1959 was 78 per cent. If the Government-owned State Bank is excluded—and looking to the composition of its Board of Directors there is really no adequate reason for doing so—the percentage comes to 60.

Dealing next with the subject of inter-linking between newspapers and "big business" in India, the Mahalanobis report concludes on the basis of available data regarding newspaper chains, groups and multiple units, that there is concentration in the newspaper industry but that it has not been possible for it to examine its inter-connection with industry and with the bigger complexes that "control so much of economic power in Indian industry."

The Committee's concluding observations are given below:

"The data we have given do indicate the presence of concentration of economic power within the economy in terms of income, property and, especially, of control over the non-Governmental corporate sector. There can also be no doubt that, in part at least, the working of our planned economy has encouraged this process of concentration by facilitating and aiding the growth of big business in India. How far this is an inevitable part of the process of economic development, how far it can be justified in terms of economy of scale and full utilisation of scarce managerial and entrepreneurial resources, how far it is consistent or is in conflict with the declared objectives of our Constitution and our planned economy, and how far the growth which has taken place is unhealthy and anti-social in its consequences—all these are questions that we can only pose for further and detailed inquiry. It is true that except for the Complexes, statistics do not show any definite and significant trend in concentration ratios during the first ten years of planning. It is also relevant to note that during this period, Government has sought to limit unhealthy growth through a series of countervailing measures, such as company law reform, licensing of industrial units, control over capital issues, increasing scrutiny by the Reserve Bank, and other allied measures. They have also sought to create countervailing power by public investment, deliberate expansion of the public sector in industry, encouragement of newcomers in the private sector in industry, special facilities and aid for small industry, and promotion of co-operative organisation in industry and marketing."

But, despite all these countervailing measures, concentration of economic power in the private sector, in the opinion of the Committee, is more than what could be justified as necessary on functional grounds. At the same time, the Committee has given the finding that more comprehensive and detailed information regarding the many aspects and ramifications of economic power and controls in the private sector is called for. Such information could be collected only by a full-time agency. The recent appointment of the Monopolies Commission, it would appear, has been in pursuance of the Mahalanobis Committee's suggestion.

SYNOPSES OF COMPANY REPORTS

Borosil Glass Works Ltd.

(*Chairman*: Mr. Robert D. Murphy, Bombay.)

1st Annual General Meeting: 12th June 1964.

Working Results:

The financial statements reflect the results of working of the Andheri plant and the capital expenditure on the new project at Marol. After transferring to unallocated capital expenditure of Rs. 4,25,741, providing for depreciation of Rs. 2,31,769 and for development rebate Rs. 6,790, the net profit for the period was Rs. 8,67,101 from which is deducted the provision for taxation of Rs. 4,90,000, thus leaving a balance of Rs. 3,77,101, from which has been transferred to adjustment on amalgamation of Rs. 1,53,419 and to general reserve of Rs. 2,20,000 leaving a balance to be carried forward of Rs. 3,682 to next year's account.

The Company commenced its business from 13th February, 1963. The business of Industrial and Engineering Apparatus Co. Pvt. Ltd. was merged with that of the Company by the order of the Bombay High Court dated the 30th July, 1963. The manufacturing plant at Andheri taken over from Industrial and Engineering Apparatus Co. Pvt. Ltd. and now belonging to the Company, worked satisfactorily during the year 1963. The turnover for the year was Rs. 39,46,204 as against Rs. 34,30,985 for the year 1962.

Project in Progress: The construction work on the new project at Marol progressed satisfactorily. Civil work is almost complete. In early part of 1964, major portion of machinery and equipment to be supplied by Corning Glass Works, U.S.A., under the technical collaboration Agreement, arrived at site. The installation of machinery and equipment is expected to be completed shortly. The new plant is expected to go into production in the last quarter of 1964.

The Company has an overdraft facility to the extent of Rs. 7,00,000 from United Western Bank Ltd., against charge of fixed and movable assets, at Andheri plant. Negotiations were started with Agency for International Development for a eight-year term loan of Rs. 71 lakhs. It is understood that this loan has been sanctioned by the appropriate authorities. Till the funds from A.I.D. Cooley Loan are available, cash credit arrangement to the extent of Rs. 25 lakhs has been made with the First National City Bank, Bombay. During the current year, equity shares of the face value of Rs. 40 lakhs have been allotted to Corning Glass Works, U.S., against the supply of machinery and equipment. This is in terms of the technical collaboration agreement.

Accounts in brief as at 31st December 1963 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	89,78,125	Gross block	32,07,431
Reserves and surplus	3,84,542	—Depreciation	2,31,769
Other liabilities	15,55,804		
		Net block	29,75,662
		Work-in-progress	13,30,447
		Technical know-how	15,00,000
		Unallocated capital expenditure	4,25,741
		Other assets	1,06,36,870
		Cash	14,49,751
	Rs. 1,09,18,471		Rs. 1,09,18,471

* Paid-up capital consists of 9,06,100 equity shares of Rs. 10 each paid. Of the shares, 2,93,600 shares of Rs. 10 each are allotted as fully paid up to pursuant to a contract without payments being received in cash.

Delta Jute Mills Co., Ltd.

(*Secretaries & Treasurers*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—Held on 29th May 1964.

Working Results:

	For the year ended 30th November (In thousand rupees)	
	1963	1962
Sale of gunnies	3,71,13	3,23,74
Closing stocks	27,04	32,37

Proposed final dividends (taxable) on Ordinary shares	5,60 (16⅔)	4,48 (12⅝)
Carry forward	23	29

N.B.—Adjustments relate to the previous year's balance brought down.

Extracts from the Directors' report: The working results reflect the favourable trading conditions which were once again experienced during the year under review. World offtake of manufactured goods continued at a satisfactory level, which enabled maximum production to be maintained throughout the period. Abundant supplies of raw jute were available and it was possible to transact simultaneous business at profitable levels, despite the increase in costs and the implementation of the wage board award for the jute industry effective from July, 1963. The outlook for the current year, however, is not so favourable. Although there is again ample raw jute available, prices of manufactured goods, especially sacking, have fallen as production has caught up with current demand. The full impact of the wage board award, together with enhanced charges for power, fuel, boating, stores and essential spare gear, will contribute to a further inevitable increase in costs.

The Indian Jute Mills Association decided, after consultation with the Government of India, to abolish the working time agreement with effect from 1st February, 1964. This decision is not expected to result in any immediate change in the existing level of production at which the mill is presently operating.

Accounts in brief as at 30th November 1963 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	70,06,300	Gross block	1,88,80,591
Reserves and surplus	74,36,442	—Depreciation	76,70,106

Total available balance	38,66	27,15
To general reserve	38,10	23,16
,, tax paid in respect of previous years	30	Nil
,, debits in respect of previous years	26	3,98
,, proposed dividends (taxable) Ordy.	25,24* (10%)	15,14* (6%)
Carry forward	Nil	1,38

N.B.—Adjustments include the balance brought forward from the previous year.

* Dividends paid out of the general reserve.

Extracts from the Directors' report: Production: Production of ring frames, cards and automatic looms was higher during the year despite difficulties experienced in obtaining adequate quantities of pig iron and other raw materials. The supplies of pig iron and tin plate, apart from being inadequate, were irregular and caused frequent disturbance to normal production activities. Production of NMM-RUTI automatic looms for the first phase-wise programme reached the anticipated target for the year. The second phase of the production programme will commence shortly. Reports about the performance of the looms supplied to the various mills have been quite satisfactory.

Expansion: Keeping in view the increasing demand for the Company's products and the present position of orders for such products, the directors have given serious consideration to a programme for the substantial expansion of the Company's present capacity of ring frames, carding engines and spares. A team of technicians from Messrs. Textile Machinery Makers Ltd., Oldham, England, was asked to go into this question and to report on the requirements of further capital expenditure needed for this expansion programme. After careful consideration of the cost of the scheme for expansion drawn up by these technicians, the directors have decided to go in for a scheme which, when completed, is expected to increase substantially the capacity of the Company's plant. The scheme also includes plans for modernisation of the existing plant and re-arrangement of the present plant layout so as to obtain the best work flow. The expansion programme which is expected to cost about Rs. 2 crores will be financed partly from internal resources that would be generated over a period and partly by bank borrowings.

Accounts in brief as at 31st December 1963 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	2,52,40,000	Gross block	3,52,53,962
Reserves and surplus	62,32,205	—Depreciation	1,78,33,782
Other liabilities	5,45,03,791		
		Net block	1,74,19,280
		Work-in-progress	62,859
		Current assets	5,66,87,362
		Cash	1,18,06,495
	Rs. 8,59,75,996		Rs. 8,59,75,996

* Paid-up capital consists of 252,400 equity shares of Rs. 100 paid. Of this, 26,000 equity shares of Rs. 100 each as fully paid, pursuant to contract without payment in cash.

Travancore Ogale Glass Mfg. Co., Ltd.

(*Managing Agents*: Ogale Brothers (Private) Ltd., Udyogamandal.)

Annual General Meeting: 24th June 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sale of glassware	20,36	20,68
Closing stock	1,55	48
Gross profit	2,37	3,13
Transfer to Managing Agents' remuneration	14	22
,, ,, depreciation	92	1,02
,, ,, development rebate	6	3
,, ,, provision for taxation	59	1,24
Net profit	66	62
Adjustments	*	3
Appropriations:		
Total available balance	66	65
To proposed dividends (taxable) Ordy.	65 (6½%)	65 (6½%)
Carry forward	1	†

N.B.—Adjustments represent the balance brought forward from the previous year.

* Represents only a sum of Rs. 543 only.

† Relates to a sum of Rs. 498 only.

Extracts from the Directors' report: Production for the year reached Rs. 21.43 lakhs which is the highest on record. High costs of materials and larger wage bill besides levies like surcharge on sales tax, emergency risks insurance, increase in the rate of contribution to the provident fund reduced the profit to Rs. 1.25 lakh. In addition to the income-tax under the normal procedure, provision had to be made this year for payment of tax at 7½ per cent on the dividends. In the industry of this type and size these heavy imposts of Government taxation, in one form or other, year after year, are leaving no margin to increase the dividend rate or funds to be ploughed back into the industry.

Accounts in brief as at 31st December 1963 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	9,99,310	Gross block	19,24,738

High	29.50	34.75	40.00
Low	28.75	27.00	34.75

† Upto 17th May.

Extracts from the Directors' report: The trade conditions were more or less the same as in the previous year. The results for the first half of the year were not very encouraging and it was only during the second half that profits took a turn for the better. The working results of the weaving section were not encouraging inasmuch as the ceiling prices for cloth remained stationary in spite of the increased cost of yarn and the selling prices in respect of exports of cloth were also not attractive. The profits earned during the year were whittled down by the substantial increase in wages, power, insurance, transport charges and commission on yarn sales. A sum of Rs. 1,01,899 has been provided more than in last year towards depreciation on the plant and machinery of the Company to cover the working in respect of the third shift, in accordance with the provisions of the Finance Act, 1964. There was also a power cut during the year under review and as such the mills could work only for 294 days as against 305 days in the previous year. In the circumstances, the profits earned are considered satisfactory.

Accounts in brief as at 31st December 1963 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital*	63,13,120	Gross block	1,26,22,027
Reserves and surplus	44,31,496	—Depreciation	89,14,242

		Other assets	68,39,841
		Cash	91,393
	Rs. 1,46,05,244		Rs. 1,46,05,244

* Paid-up capital consists of 134,496 equity shares of Rs .25 each, and 117,634 equity shares of Rs. 25. Each allotted as fully paid bonus shares by capitalisation of reserves.

TREND OF MARKETS

CALL RATE RECEDES

(From Our Own Correspondent)

BOMBAY, *27th May*

There has been a distinct improvement in the tone of the short-term money market. With reduced pressure of demand for credit and return flow of funds to banks, borrowers are finding no difficulty whatsoever in obtaining their requirements. And, what is more, the cost of inter-bank money is now much lower than a week ago. The inter-bank call rate (for both renewals and fresh money) for day-to-day money has come down from 6¼ to 5 per cent with lenders over. Conditions, at Calcutta, too, are very comfortable, the call rate now standing at 4½ per cent., as against 5¼ per cent a week ago. Some business is reported to have been put through even at 3¾ per cent.

The distinctly easy trend of money is reflected in (a) the sharp fall of Rs. 27.69 crores to Rs. 2,543.76 crores in notes in circulation during the week ended 22nd May and (b) an appreciable contraction of Rs. 25.29 crores to Rs. 43.28 crores in borrowings of scheduled banks from the Reserve Bank. There is practically no change in the deposits of scheduled banks with the Reserve Bank: Rs. 85.33 crores. India's foreign exchange reserve show a rise of Rs. 4.82 crores to Rs. 116.59 crores, the whole of the rise being accounted for by balances held abroad which amounts to Rs. 13.13 crores. The foreign securities held in the Issue Department of the Reserve Bank are unaltered at Rs. 103.46 crores.

The improvement in the money market is not, however, reflected in the response to the Government of India Treasury Bills which continues to be poor; tenders for Bills were opened on Thursday this week. The total amount offered is a bare Rs. 2 crores, which is just equivalent to that invited (and also accepted). The average rate of accepted tenders remains unchanged at Rs. 3.000 per cent per annum. The Intermediate Treasury Bills, too, elicited very limited support, the amount of bills sold from the 20th to 22nd being no more than Rs. 20 lakhs, as against Rs. 354.25 a week before.

There was a fall of Rs. 8.45 crores to Rs. 1,47.74 crores in the total credit made available by scheduled banks to their clients during the week ended 15th May 1964. Since, at the same time, the deposits went up by Rs. 5.58 crores to Rs. 2,492.10 crores, borrowings from the Reserve Bank receded by Rs. 10.36 crores to Rs. 68.66 crores, of which the share of those against usance bills was Rs. 15.23 crores, a decline of Rs. 7.58 crores. Investents fell by Rs. 3.78 crores to Rs. 617.71 crores, while total cash improved by Rs. 5.00 crores to Rs. 146.15 crores.

The Gilt-edged market ruled firm. Demand for short-dated loans was quite good, but sellers were reserved. The Union Finance Ministry has announced that the outstanding balance of the 3 per cent 1964 is payable at par on the 15th June 1964. From this date, no interest will be accrued thereon. In order to facilitate payment, the holders have been asked to tender their securities at the Public Debt Office, Treasury, or branch of the State Bank of India or its subsidiaries at which they are enfaced-registered for payment of interest on or after 1st June 1964.

In the foreign exchange market, the banks' selling and buying rates for U.S. dollars continued unchanged at Rs. 479.25 and Rs. 474.75, respectively, for $100. In New York, the pound sterling eased a little easy *vis-a-vis* the dollar, the spot rate losing 0.020 cent to 279.940-279.960 cents and the three months forward 0.030 cent to 279.380-279.400 cents.

* * * *

The Reserve Bank of India, it will be recalled, had issued two press notes, on 9th May and 5th October 1963, respectively, summarising the policy approved by the Government for release of exchange and for approval of passage applications for general guidance of the public. The Government has recently reviewed the policy and it has been decided to introduce the following changes with immediate effect.

In order to meet the increased cost of living in most foreign countries, the daily allowances granted by the Bank for certain types of foreign travel have been raised.

A limited amount of exchange for incidental expenses will be released where passage applications are approved against invitations with full offer of hospitality received from foreign Governments, trade union organisations, International Chambers of Commerce or other international organisations, well-known educational, cultural and health foundations.

Passages of directors of foreign companies to attend board meetings abroad and of directors/executives of Indian branches of foreign companies or of Indian companies which are wholly-owned subsidiaries of foreign companies, if invited with full hospitality by the foreign company concerned, will also be approved.

Persons proceeding abroad for taking up definitely secured employment will normally be granted passage clearance for three months only in the first instance, the period of stay being subsequently extended by the Indian Embassy/Mission abroad after verification of the person being in continued employment.

Passage clearance will *not* be granted in respect of private hospitality except for meeting parents, sons and daughters; in special cases eminent Indian scientists, educationists and professional persons will be allowed to proceed abroad on invitations by individuals at the discretion of the Bank; special facilities of a limited character will also be given to staff of Airlines who under their terms of service are entitled to free passages.

Students who secure scholarships from Universities or recognised international institutions for full maintenance and fees, irrespective of the courses of study, will also be granted passage clearance.

Exchange facilities will not be granted to Indian nationals (including persons domiciled in India) wishing to emigrate except in special circumstances and to a limited extent.

GOLD FIRM, SILVER EASY

(From Our Own Correspondent)

BOMBAY, *27th May*

Gold continued to rule buoyant, while silver suffered a further setback. The yellow metal met with renewed buying support induced by fears of a possible acute shortage of supply developing in the coming weeks and the seizure of a further large quantity of contraband gold. Silver was depressed, thanks to selling pressure by some parties.

The Union Government will provide loans to the State Governments for distribution to goldsmiths during 1964-65 at the rate of four per cent interest, to be paid in eight equal instalments. This was stated by the Central Gold Control Administrator at a meeting of the Gold Control Officers held at New Delhi this week. The main objective of appointing separate Gold Control Officers in States is to rehabilitate displaced goldsmiths by giving them financial assistance or starting small industries with due employment potential. Some important suggestions were made at the Delhi meeting. They are: Goldsmiths should surrender their certificates and take to other professions individually and also collectively, forming themselves into small co-operative societies. The applications of goldsmiths who have applied to the competent authorities for the issue of licences, it is stated, would be disposed of by the end of September. Relief should be provided in extreme cases of distress, that is, bare indebtedness. Normally, those goldsmiths who received assistance in the shape of either loans or other help or concessions granted by the State Governments should surrender the licence within three months. But there may be some cases where it may not be possible to surrender within the prescribed period. Such cases could be examined by the Gold Control Officers and further time of a month or two should be allowed.

Fourteen-carat gold began the week at Rs. 69.25, as against the previous close of Rs. 69, and moved up to touch a high of Rs. 70.25 today. Primary gold advanced by a rupee to Rs. 118. Sovereign spurted by a like amount to Rs. 92.

Silver receded from Rs. 257.50 to Rs. 255.50 on the 22nd inst. but recovered subsequently and finished at Rs. 256.50. There was no change in the daily average arrivals and offtake: 20 bars and 10 bars, respectively.

The international price for gold at London eased again from $35.07⅞ to $35.07¼ per fine ounce. The sterling price of gold also declined by ¼d. to 250s. 6¼d. Ready silver shed ¼d. to 111¼d., while the forward continued unchanged at 111¾d. There was no change in the quotation for Silver at New York which stood at 129.3 cents.

The following table shows the trend of prices during the week under review:

	27-5-1964 (closing)	High	Low	20-5-1964 (closing)
SILVER				
Ready (999 fine) ..	Rs. 256.50	Rs. 256.50	Rs. 255.50	Rs. 257.50
GOLD				
Ready (14 carat) ..	70.25	70.25	69.25	69.00
Sovereign	92.00*	92.00*	91.00*	91.00*
London—				
Gold	250s. 6¼d.	250s. 7d.	250s. 6¼d.	250s. 6¾d.
Silver Ready ..	111¼d.	111¾d.	111¼d.	111¼d.
Silver Forward ..	111¾d.	—	—	111¾d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

JARILLA MAY EXPIRES

(From Our Own Correspondent)

BOMBAY, *27th May*

The second hedge contract of the current (1963-64) season, namely Jarilla May 1964, went off the Board on the 25th inst. at Rs. 735 per three quintals. The contract, which was being quoted (nominally only) at around Rs. 725 per three quintals, a few days ago firmed up to finish at Rs. 735. Tenders issued on the last day aggregated 250 bales of Laxmi, bringing the total to a mere 1,650 bales, comprising 800 bales of Laxmi A, 750 bales of 216F and 100 bales of Combodia C, as against the total of 7,100 bales issued against the previous contract, namely, Jarilla March 1964.

The contract, it may be recalled, opened at Rs. 725 on 24th December 1963 and after having firmed up to touch a peak level of Rs. 770.25 on 13th February 1964, declined to Rs. 716 on the 12th inst. but recovered to close at Rs. 735. A noteworthy feature of Jarilla May contract's career is that, as compared with its predecessor, it fluctuated in a narrower range.

With the expiry of the May contract, traders' attention turned to the only contract in force, namely, Jarilla August 1964 which is also the last hedge contract of the current season. Inspite of the bullish impact of the meagre tenders issued against the May contract and the switchover of purchases to the August contract, the trend of prices of the latter was steady. This was because of the improved prospects for obtaining more U.S. cotton. The purchase authorisation covering the P.L. 480 allocation was reported to have been issued in Washington on the 19th inst. It covers 190,000 bales (of 400 lbs. each) of U.S. upland cotton. The contracting period is 26th May to 30th June and the shipping period from 26th May to 31st July 1964. The Jarilla August contract ruled steady around Rs. 725 till yesterday. Today, however, the market reacted sharply to the sad news of the sudden death of the Prime Minister and the contract declined to Rs. 722, in sympathy with the trend in other markets. The market was closed early today.

In the spot market at Sewri, trading was limited although prices were fairly well-maintained. Moderate mill interest was noted in such popular varieties as Co2, L.147, Digvijay, Kalyan, and 197/3. While export demand for Bengal *Deshi* has yet to revive, the import section was active with good mill demand, especially for American cotton. Traders expect that the allocation of American cotton would consist of 1-1/16" and above cotton and cotton less than 1/16" staple but not less than 1" staple.

Importers of U.S. cotton noted with interest that the New York cotton exchange has disallowed trading in 1965 October and beyond deliveries until the new cotton law is clarified. This means a temporary suspension of business in cotton futures beginning with the October 1965 delivery. A spokesman of the exchange said that because of confusion in the cotton trade caused by the recent announcement of the cotton advisory committee of its proposal with respect to the payment-in-kind, the board of governors of the exchange have decided to disallow trading in all months not having any open positions until the Department of Agriculture announces official regulations under the new cotton law.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri:

Co2 1,245; L.147 1,190; Buri 1,075.
American 1,415; Elpaso 1,560.

TEA EASIER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *21st May*

A total of 725,000 kgs. was offered in tea sale No. 20 held here on Tuesday the 19th inst. Quality showed a further slight seasonal decline, but some useful mediums were available. The demand, which was less than that seen in previous weeks, slackened towards the close. Nilgiris were neglected, but others were sold well at lower levels. Nilgiri brokens depreciated in value and there were many withdrawals, but their fannings general were sold better than the equivalent brokens. Good mediums were considerably easier and, while medium and low medium brokens eased to a lesser extent, the cleaner fannings were sold well, but the more fibrous ones were discounted. Plainest description came to a barely steady market. Black leaf, while leaf and tippy teas were all easier. Unorthodox teas were irregular, but usually lower.

Quotations (per kg.) were:

	1964	1963
	Rs.	Rs.
Low medium	4.40-4.70	4.00-4.30
Mediums	4.70-5.10	4.30-4.55
Good mediums	5.20-5.60	4.60-5.20
Nilgiri B.O.P.	5.00-7.00	4.60-7.20

The average price realised in sale No. 20 was Rs. 4.85 per kilo, as against Rs. 5.08 a week ago and Rs. 4.34 in the corresponding sale last year.

Just over 200,000 kgs. were offered in dust sale No. 20 held today. There was less demand than in previous weeks and at lower rates. High-grown came to a good but irregular market and were often easier. There was fair enquiry for good mediums at reduced prices, but mediums and low mediums were sold at much lower rates. Residuals followed the easier trend of the market, as did unorthodox descriptions.

The average price realised in dust sale No. 20 was Rs. 4.72 per kilo, as against Rs. 4.79 a week ago and Rs. 4.03 in the corresponding sale last year.

Colombo: Just over 7½ million lbs. were offered and the market opened on an irregular note at slightly lower rates for all descriptions.

London: There were no sales this week, owing to the Whitsun holidays.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No.* 21: 690,000 kgs. offered. Limited demand. All descriptions appreciably lower, except unorthodox little easier."

SPURT IN GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, *27th May*

The main event of the week in so far as the oilseeds market is concerned was the commencement of trading in September contracts for castor, linseed and cottonseed on Thursday the 21st inst. There was no indication as to when business in the September contract for groundnut would begin. Traders were not willing to conduct operating within the limit of the present ceiling price fixed by the Forward Markets Commission. They insisted that the ceiling for this last contract of the season should be done away with. If this was not possible, they suggested the ceiling should at least be raised substantially. The Commission, however, was willing to raise the ceiling only by Rs. 10, but traders were not satisfied. The whole issue was expected to be decided on 3rd June next when the trade representatives, including the Saurashtra interests, will meet the Commission officials.

During the week, spot groundnuts scored handsome gains thanks to tight supply position, smaller arrivals and reports that some traders were deliberately holding stocks in anticipation of still higher prices. Oils also moved up. Castorseeds, after a hesitant start, picked up strength following poor arrivals from growing centres and bull support from North India. Linseeds firmed up in sympathy with castorseeds and on higher North Indian advices. Cottonseeds, however, were neglected in the absence of any fresh buying support.

The groundnut July contract put on 25 nP to Rs. 240.50. The closing was just 50 nP less than the official ceiling of Rs. 241. Nizam bold ready began the week at Rs. 57.25, as against the previous close of Rs. 56.37, and moved up to touch a high of Rs. 57.62 yesterday. The net gain over the week was Re. 1.25. Khandesh quality jumped up by Re. 1.13 to Rs. 58.25. Oil ex-mill gained 25 nP to Rs. 22.35. Railway receipts put on 30 nP to Rs. 22.05. Groundnut oil cake expeller contract, however, sagged by Re. 1.75 on poor Rajkot support.

The new September contract for castor commenced with a premium of Rs. 3.13 over the maturing (June) contract on Thursday and closed at Rs. 175.75 yesterday. June contract went up by Rs. 2.50 to Rs. 174.37. Ready Madras strengthened by 50 nP to Rs. 34.12. Kanpur bold improved by a like amount to Rs. 33. Oil B.S.S. hardened by 10 nP to Rs. 14.40. Oil commercial gathered 16 nP to Rs. 13.35

In the linseeds section, September contract began the week at Rs. 43.83. The ceiling fixed for this contract is Rs. 45, but declined in the course of the week to Rs. 43.55. June contract, which was firm till Tuesday eased yesterday and closed lower at Rs. 42.57, as against Rs. 42.75 last week. Bold ready hardened by 12 nP to Rs. 44.62. Oil ready gained 5 nP to Rs. 18.05.

The following table shows the closing prices of oilseeds and oils on 27th May as compared with those of two previous weeks:

	27-5-1964	20-5-1964	12-5-1964
Groundnuts	Rs.	Rs.	Rs.
July 1964 contract	240.50	240.25	239.75
Nizam bold ready	57.62	56.37	56.25
Khandesh quality	58.25	57.12	57.12
Oil ex-mill	22.35	22.10	21.85
Oil|Rly. Receipts	22.05	21.75	21.50
Castorseed			
June 1964 contract	174.37	171.87	173.25
September 1964 contract	175.75	—	—
Ready Madras	34.12	33.62	34.25
Ready Kanpur	33.00	32.50	33.00
Oil B.S.S.	14.40	14.30	14.40
Oil commercial	13.51	13.35	13.50
Linseed			
June 1964 contract	42.57	42.75	42.66
September 1964 contract	43.55	—	—
Bold ready	44.62	44.50	44.50
Linseed oil	18.05	18.00	18.05
Cottonseed			
June 1964 contract	105.50	105.50	105.00
September 1964 contract	—	—	—

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

* * * *

GROUNDNUT PRODUCTION

Groundnut production in India during 1963-64 is estimated at 8,290,600 tonnes (nuts in shell), the highest on record. It represents an increase of 9.7 per cent over the production in 1962-63. The rise has taken place despite the decline in the area under groundnut which in the year under review is put at 16,814,000 acres, as compared with the partially revised estimate of 16,962,000 acres for 1962-63. For the yield per acre during 1963-64 is markedly higher at 694 lbs., as against 627 lbs. in 1962-63, an increase of 10.7 per cent.

The increase in total production of groundnut is accounted for by all the producing States (except Rajasthan), thanks partly to favourable weather conditions during the period of growth of the crop and partly to the increase in area in some States. The decline in Rajasthan is due to deficient and erratic rainfall. The fall in area during 1963-64 has occurred mainly in Gujarat, Andhra Pradesh and Madhya Pradesh, the reason being late and insufficient rainfall at the time of sowing the crop. The decrease in Madhya Pradesh is also attributed to rotation of crops. This decrease has, however, been offset by increases in area reported mainly by Madras, Punjab, Uttar Pradesh and Maharashtra where climatic conditions were favourable at sowing time. Expansion of the area under the Integrated Oilseeds Development Scheme in Madras is another reason for increase in the area under groundnut in this State.

C.T.C. TEAS READILY ABSORBED

(From Our Own Correspondent)

CALCUTTA, *26th May*

Although the new season's export sales did not begin so well as expected earlier, the tea trade believes that nothing has happened to change its estimate of the optimistic outlook with regard to the marketing of new crop. Arrivals of new tea have begun earlier than usual and, within the next two or three weeks, arrivals would be heavy. Forward booking of space in liners took place on a liberal scale this week also, and such a feature only underlines the trade's optimism. Moreover, there has been no carryover from last year's tea as a result of not only the shortfall in output but brisker demand, so much so what demand has accumulated should be met from new teas. That the expectation that this year's crop would be higher would materialise is indicated by the continued good weather and crop so far. Up to the end of April 1964, the crop in North East India amounted to 8.3 million kgs. a rise of 2.5 million kgs. or 43.1 per cent as compared with the corresponding period of 1963.

It is noted, however, that the South Indian tea production is tending to fall. As a result of poor rains, the crop in the first three months of this year has been only 14 million kgs., as against the 16 million kgs. and 16.8 million kgs. produced in the corresponding periods of 1963 and 1962, respectively. A discouraging feature is that the drought is threatening to cause basal damage to bushes. Rubber trees in both Madras and Kerala have also been affected due to want of more rains and, accordingly, rubber output fell perceptibly in March 1964 as compared with March 1963, although, as a result of heavier tappings in January and February, the quarter's figure has been higher.

The average price realised for dust tea in Cochin auctions in the first quarter of this year was higher by 20 nP at Rs. 4.55 a kg., while the average price for leaf realised was only Rs. 5.13 per kg., as compared with Rs. 5.15 in the first quarter of 1963.

The South Indian output in 1963 was lately estimated as having amounted to 87.7 million kgs., 60 per cent of which or 108 million lbs. were exported. While shipments to Australia and Canada fell, U.K.'s offtake increased by 1 million lbs. to 46.4 million lbs. Shipments to the U.S. amounted to 5.6 million lbs., a fall of 1.4 million lbs. At 15.3 million lbs., Russian offtake showed a marked increase of 6.9 million lbs.

Dusts on offer during internal sales held last week aggregated 25,794 chests which met with good general demand. Plain orthodox teas were firm, while medium Assams eased. Legg-cut teas were fully firm. All C.T.C. teas were readily absorbed. The quotations per 1 kg. inclusive of excise duty were; good Assam C.T.C. dust Rs. 6.30 to Rs. 6.80; medium Assam C.T.C. dust Rs. 5.00 to Rs. 5.30; legg-cut dust Rs. 4.70 to Rs. 5.10; medium Assam dust Rs. 4.50 to Rs. 5.00; and plain orthodox dust Rs. 4.00 to Rs. 4.30.

Export offerings during yesterday's export sale amounted to 11,173 packages, a major proportion of which was Darjeeling leaf. Teas from other districts were also included. Darjeelings met with fair demand, but there was a large number of withdrawals. Good demand was in evidence for the few bright flavouury teas. The fannings grades met with a strong market. Teas from other districts recorded an irregular trend, but the few bright liquoring teas with good appearance were supported very well. The B.O.Ps as well leaf grades were particularly favoured by buyers. No quotations were issued, in view of the limited quantities of suitable teas.

Notice

TRITON INSURANCE COMPANY LIMITED

NOTICE TO MEMBERS

THE BOARD OF DIRECTORS OF THE Triton Insurance Company Limited hereby give notice that the ANNUAL GENERAL MEETING OF MEMBERS will be held at the Company's Registered Office, 4, Clive Row, Calcutta, on Thursday the 25th day of June, 1964, at 4 O'clock in the afternoon to receive and consider the Audited Accounts for the year ended 31st December, 1963, the Balance Sheet as at that date, the Report of the Board of Directors and the Auditors thereon, to declare a Dividend, to appoint Directors and in this connection to consider, as special business, and if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

"That Sir Biren Mookerjee, who has attained the age of 65 years and who retires from the Board by rotation, be and is hereby re-appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation and it is hereby specifically declared that the age limit of 65 years specified in Section 280 of the Companies Act, 1956, shall not apply to him."

and to appoint Auditors and to fix their remuneration. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy in his stead and such proxy need not be a Member of the Company.

The Share Transfer Books of the Company will be closed from 12th June to 25th June, 1964, both days inclusive, and the dividend, if declared, will be paid on and after 9th July, 1964, to those Members whose names are on the Register of Members on 25th June, 1964.

By Order of the Board,

J. V. JARDINE PATTERSON,
Director.

4, CLIVE ROW,
CALCUTTA, *22nd May*, 1964.

An Explanatory Statement as required under Section 173 of the Companies Act, 1956 is being forwarded to the Members.

EXPORT DEMAND FOR JUTE GOODS LIMITED

(From Our Own Correspondent)

CALCUTTA, *26th May*

Dull conditions characterised activity in the jute goods market during the week under review. The interest shown by overseas buyers was at a low ebb, and several factors, including the news of a marked fall in exports of gunnies during April and a decline in U.S. consumption of burlap, affected sentiment. Raw jute was also quiet and, with more thundershowers and further progress in sowing, stockists of low grade fibre entertained anxiety over the prevailing trend of mill demand for selected grades only.

Advices from the New York burlap market showed that consumers there were in no mood to build up stocks. Even a small decline in forward rates failed to move buyers. Further, the increase in burlap stocks at the end of April (to 277 million yards from 272.6 million yards at the end of the previous month) was another factor that enabled buyers to sit on the fence. It should, however, be noted that stocks at the end of April 1963 were higher at 300 million yards, consisting of 156 million yards spot and 144 million yards afloat. Of the stocks at the end of the last month, spot consisted of 155 million yards and afloat 122 million yards as compared with 150.4 million yards, and 122.2 million yards, respectively, at the end of March 1964. Consumption of burlap in the U.S. during April fell slightly to 74 million yards from 74.4 million yards in the previous month. The fact that the average monthly consumption in the first four months of this year had been only 75.80 million yards, as against 79.67 million yards and 77.5 million yards in the respective periods of 1963 and 1962, has been a disappointment. The figures relating to despatches of goods by mills in India during April released during the week also caused disappointment. Total despatches of 98,800 tonnes fell by 8,800 tonnes as compared with the previous month, with hessian at 40,600 tonnes, sacking at 40,900 tonnes and carpet backing cloth at 5,700 tonnes, showing a fall of 6,300 tonnes, 700 tonnes and 2,000 tonnes, respectively, while miscellaneous goods at 11,500 tons showed a small rise. Despatches for export abroad fell from 79,900 tonnes to 71,200 tonnes; the largest decline was accounted for by hessian at 35,600 tonnes, as against 41,800 tonnes, sacking at 21,600 tonnes went down by only 800 tonnes, carpet backing dropped by 1,900 tonnes but miscellaneous goods rose by 200 tonnes. On the other hand, despatches for local purposes at 27,600 tonnes fell only by 100 tonnes, but it was satisfying to note that, with sacking at 19,300 tonnes, as against 19,200 tonnes, consumption of heavy goods within the country was maintaining the rising trend. Both hessian and miscellaneous goods, however, dropped by 100 tonnes each.

In the ten months of the current jute season up to the end of April 1964, sacking exports at 207,200 tons declined by 19,300 tons or about 8 per cent as compared with the corresponding previous period. This decline, it is hardly necessary to emphasise, has been the result of increased competition by Pakistani mills. Countrywise figures are available only for the nine months ended March 1964, and it is seen that lower exports to the U.K. and Western Europe largely accounted for the overall decline, these destinations having taken only 14,000 tons, as against 22,100 tons. On the other hand, offtake by the U.S.S.R. and East European countries showed an impressive 100 per cent increase at 17,600 tons, as against 8,800 tons. A small increase was also recorded in the export of heavy goods to the Americas, which aggregated 47,000 tons, as against 40,600 tons previously. Offtake by countries included in the category of "other destinations" rose by 4,200 tons to 12,700 tons. While total exports of heavy goods fell, it is significant that total hessian exports in the ten months ended April 1964 increased by 30,100 tons, or a little less than 7 per cent, to 474,800 tons. Here again, country-wise figures have been brought up to the end of March only, when an impressive feature has been the increase in hessian exports to the U.S.S.R. and other East European countries, that is, by 23,000 tons or 73 per cent as compared with the corresponding previous period to 54,500 tons. The African countries lifted 20,300 tons, as against 19,300 tons. Shipments to the U.S.A. amounted to 189,900 tons, showing an increase of 3,100 tons, while exports to West European countries (including Great Britain) fell by 11,000 tons or 19.29 per cent to 56,500 tons.

The trade considers that the fall in shipments of hessian and heavy goods to Western Europe as stated above is serious and that measures should be taken to regain the markets lost already. In this context, it is a good sign that India, along with Pakistan and Japan, is taking part in the

congress now being held at Paris by the European Jute Industry Association. Fruitful results are also expected from the efforts of the Indian jute delegation now visiting the U.A.R. It is generally well known that the industry's efforts to increase exports would have been followed by a greater measure of success had only the industry's suggestion for measures to reduce costs of production as well as to improve the quality of fibre output been acted upon. All the same, it is heartening to note that an expert committee of the Union Government, after a recent survey, has recommended steps for early modernisation of mills, so that the industry may benefit from latest technological progress and it is strengthened to face the growing competition from Pakistan, Europe and the U.K. The committee has recommended that mills should be allocated adequate foreign exchange, estimated at Rs. 50 lakhs, in connection with their plan to manufacture mixed jute goods and yarn, chemical—and dye-treated fabrics, non-wovens, and coated fabrics. According to the committee's estimate, a sum of Rs. 4 crores would be necessary for stream-lining the standard looms and Rs. 5 crores for improving accessories. While in the Fourth Plan period, indigenous production of jute mill machinery would not only become self-sufficient but is expected to leave a surplus for export, the committee has emphasised the need for revision of the allocation of the permitted rated potential having regard to the rapidly changing designs of machines and equipment.

Fibre ruled quiet during the week. Mills were interested to procure what little of the selected grades was on offer. Holders of the inferior fibre signified their readiness to discount rates, but mills were unmoved, as they were little interested to add to their stocks of the inferior fibre. As such, they are attempting to cover the current purchase quota by as much as of the surplus grades as possible. May-June fibre quoted as follows: Assam bottoms Rs. 31.50; daisee bottoms Rs. 33.50; and northern bottoms Rs. 30.50.

In the goods market, after the news of the big increase in April-end stocks of goods with mills, overseas buyers displayed only nominal interest. However, there were good purchase of ready goods for loading in the liner scheduled to leave within the next few days to River Plate destinations. Both the U.S. and the U.K. accorded scattered support in ready hessian, and Cambodia sent in an inquiry for heavy goods. Government tenders were also a feature, but these failed to have an impact on the market, in view of the small quantities involved. An order for sand-bags was awaited for Burma. Iraq is wanting to buy heavy Cees. Ready B. twills and hessian 40" 10 oz. opened quiet at Rs. 114 and Rs. 44 on Tuesday last, but improved to Rs. 114.35 and Rs. 44.65, respectively, on the following day, as a result of interest in ready futures. At this stage, business in hessian took place with both the U.K. and the U.K. 40" 10 oz. construction hardened to Rs. 44.75 on Thursday, while B. twills gave way to Rs. 114.30. On Friday, the rates sagged to Rs. 44.35 and Rs. 113.70, respectively. Business with Government on so small a scale as 900 bales of B. twills that took place on Friday affected sentiment. The market was closed on Saturday. B. twills firmed up to Rs. 114 yesterday following news of renewed Government interest, but, subsequently, it was known that actual business done was only in respect of 600 bales of B. twills. Hessian 40" 10 oz. was quiet at Rs. 44.25.

KIPS WEAK

(From Our Own Correspondent)

MADRAS, *25th May*

The kips market ruled weak. Shipment trading was at a low ebb. Importers' enquiries were selective and small in cow hides and cow calf but negligible in buff hides and buff calf section. Demand from buyers in the U.S.A. was *nil* and it was believed that their domestic hides are more economical for them.

In the tanned skins section, goat skins continued to rule firm, due to strength in the raw section. E.I. tanners seemed to be in a well sold forward position, and were going slow in booking fresh orders at last established prices. There were sustained inquiries for top marks in goat skins from the Continent, but not for secondary tannages. As regards sheep skins, export trading was small, and the market was a shade quiet.

The next German tanned skins Public sales will take place on the 25th inst. when 60,000 goat skins and 32,000 sheep will be offered for sale.

The following were the ruling prices per lb. for all-round lots in the local market:—

Tanned cow hides 8/8½ lbs. average Rs. 2.20 to Rs. 2.25; tanned buff hides 12/14 lbs. average Rs. 2.00 to Rs. 2.05 and tanned buff calf 1½/2 lbs. average Rs. 3.50 to Rs. 3.55.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *26th May*

With demand showing no sign of abatement in the context of increased industrial demand, conditions in the Calcutta metal market were firm during the week under review. Copper on both the London Metal Exchange and the New York Commodity Exchange maintained the slippery ground, but other metals advanced.

Copper scrap in Calcutta was difficult to obtain, and the utensil scrap at Rs. 690 per quintal recorded a further rise. A further recession in copper values on the London Metal Exchange took place when selling was precipitated following lower futures advices from the United States. How far the present recession would succeed in taking back the price to where it was prior to the recent buoyancy is difficult to say, especially because other metals on the L.M.E. are gradually advancing. Spot copper wire-bars closed lower on balance at £293¾ a ton after being higher at £301. However, the three-months' quotation opened at £291½, at one time eased to £288¾, and closed at £290¾. Spot fire-refined closed without gain or loss at £274, but was lower for a while at £272. On the other hand, spot cathodes rose to £281 from Rs. 280 but eased to £277. The improved prospects for the copper mines the world over was further reflected in increased earnings by the Kennecott Copper Corporation and the Anaconda Company, both of which have mines in Chile. In the first quarter of this year, Kennecotts increased earnings to $17¾ million from $15 million in the corresponding quarter of last year. Anacondas' earnings aggregated $12½ million, as against $11 million.

On the L.M.E., spot tin shot up to as high a rate as £1,088 a ton, after opening at £1,059, and closed at 1,077. The 3-months rate closed higher on balance at £1,073, after opening at £1,060 and moving up to £1,082½. In Calcutta, the rate was unchanged at Rs. 3,000 per 100 kgs. and the good stock position explained stability at this level. Zinc in Calcutta at Rs. 315 per 100 kgs. maintained the recent additions: on the L.M.E. the spot rate shot up to £133 a ton from £120. At £89¾ a ton, spot lead in London gained £1. The local quotation of Rs. 305 per 100 kgs. was maintained, although a further rise in the price was prevented by the buyers' resistance to follow the rising trend.

FOODGRAIN PRICES HARDEN

(From Our Own Correspondent)

HAPUR, *25th May*

Steady to firm trend continued in foodgrain prices during the past week. Arrivals of new *rabi* gains in markets here and elsewhere did not improve and brisk consumers' demand led to a hardening of prices. Threshing and winnowing operations were nearly complete and producers were reported to be withholding their stocks. *Kharif* sowings would shortly commence and until *kharif* crop prospects become clearer arrivals of *rabi* grains in markets will be restricted.

Brisk consumers' and stockists' support accounted for further hardening trend in wheat, whose prices advanced by Rs. 2.50 to Rs. 4 per quintal, according to quality during the week. Daily arrivals averaged 1,500 to 2,000 maunds. Prices were now quoted between Rs. 53.50 and Rs. 57.50 per quintal for average quality and between Rs. 58.50 and Rs. 63.50 per quintlal for farm produce. Despite controlled wheat prices being Rs. 43 per quintal, sales of wheat and flour through fair price shops is reported to be poor as quality offered was inferior. Firm conditions also continued to prevail in rice market and prices of inferior *gadda* quality improved upto Rs. 2.50 a quintal. Supply position was poor in the wake of good seasonal demand and stocks too were meagre. Week-end prices were: Rice *basmati* superior: Rs. 96.45 to Rs. 99.13; *sela* Rs. 93.77 to Rs. 96.45; *mainpuri* Rs. 73.69 to 75.02; *ramajwayan* Rs. 81.72; *raimunia* Rs. 83.06 and *gadda* Rs. 74.50 per quintal.

After early fall gram also improved at the week-end in sympathy with the rise in wheat and rice prices, coupled with higher Punjab advices. Local produce was now quoted at Rs. 56.50 and Punjab quality at Rs. 55.50 per quintal. Arrivals were around 400 to 500 maunds a day and stocks at the week-end were estimated around 2,000 quintals. Barley and *bejhar* prices hardened on good demand in the face of small arrivals and prices were now quoted between Rs. 41.50 and Rs. 42.50 for barley and between Rs. 41.25 and Rs. 42.50 per quintal for *bejhar*. *Juwar* and *guwar* sought higher levels on brisk demand for sowings. *Juwar* was quoted at Rs. 43 to Rs. 45 and *guwar* between Rs. 60 and Rs. 61.62 per quintal. *Methi*, however, ruled subdued on lack of support but oats improved at the week-end due to small arrivals. Maize ruled quiet as seasonal demand had subsided.

Quiet to steady trend was witnessed in pulses market during the week as buying enquiry was slack at higher price levels. Peas prices were subdued; arrivals were 500 to 700 maunds a day and prices ranged between Rs. 48.75 and Rs. 50.75 for *dara* quality and between Rs. 53 and Rs. 55 per quintal for superior farm produce. Peas *dal* prices also eased to Rs. 53.12 a quintal. *Arhar* prices ruled quiet although arrivals were still poor and now millers were the main buyers. The prices were quoted between Rs. 68.50 and Rs. 72.50 per quintal. *Urd* and *moong* prices also tended to ease on slack demand. *Urd* was now quoted at Rs. 66.98 to Rs. 72.34 and *moong* between Rs. 77.70 and Rs. 91.09 per quintal. *Masoor* prices also drifted lower in limited trading. It was quoted at Rs. 66.25 to Rs. 72.34 per quintal. Other *dal* prices were, however, unchanged. Week-end prices here were: *Arhar dal* Rs. 80.38 to Rs. 83.06; *urd dal* Rs. 80.38; *moong dal* Rs. 93.77; *masoor dal* Rs. 82.50 and gram *dal* Rs. 62.96 per quintal.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, *25th May*

Sugar prices continued to be steady due to restricted supply. The Government of India has revised ex-factory prices of sugar and, in most part of the country, prices have been revised upwards. Reduction in the sugar quota in the wake of increased summer and marriage season demand accounted for this hardening trend in sugar prices. Bihar ranked second in sugar production in the country, next only to U.P. Overall sugar production in the current season, around 2.6 million tons, is much lower than the targetted figure of 3.3 million tons. Open market prices ranged from Rs. 165 to Rs. 170 a bag, while the controlled prices were Rs. 121.50 a bag.

Desi khandsari prices touched a new high of the season on continued buying support from east U.P. and other areas. Rajasthan also reported brisk demand, following the issue of export permits for 1,000 tons of *khandsari* by the U.P. Government against import permits issued earlier by the Rajasthan Government to the Halwai Association of Rajasthan. Stockists were reluctant in anticipation of further rise in prices as soon as export were allowed. Week-end prices were: *desi* inferior Rs. 125 to Rs. 140; medium Rs. 145 to Rs. 162; superior Rs. 163 to Rs. 172.50; non-crystal Rs. 150 to Rs. 165; *boora* Rs 155 to Rs 165; and *khandsari* sulphur Rs. 175 to Rs. 177.50 per quintal.

After ruling firm in the earlier part of the week due to good buying support from Gujarat and Rajasthan against import permits, *gur* prices turned quiet in the week-end as export permits had exhausted. Week's offtake aggregated eight wagon loads and, with daily arrivals averaging about 250 maunds, local *gur* stocks declined to 7,000 quintals. The quality of stocks left was fast deteriorating due to the summer season. *Shakker* prices were steadier on good demand against poor stocks, coupled with non-availability of crystal sugar. Week-end prices were: *Gur pansera* superior Rs. 31.50, average Rs. 30.50 *dara* Rs. 30; *balti* Rs. 29.50 to Rs. 30; *kotha* selected Rs. 31; dry wet Rs. 28.50 and *shakker* Rs. 33 to Rs. 35 per 40 kilograms.

In Muzaffarnagar market, *gur* and *shakker* prices registered sharp gains during the early part of the week on brisk demand from upcountry centres. But in the second half of the week the values drifted lower because of non-issue of export permits by the Regional Food Controller. Week-end prices were: *Gur chaku* Rs. 33 to Rs. 35.12; *pansera* Rs. 29.50 to Rs. 31, *khurpapar* Rs. 34 to Rs. 34.50 and *shakker* Rs. 34.50 Rs. 37.50 per 40 kilograms.

Notice

THE STANDARD COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, at 12 noon on Friday, the 26th June, 1964, for the following purposes:

1. To consider and adopt the Profit and Loss Account of the Company for the year ended 31st December, 1963 and the Balance Sheet as at that date and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

4. To consider and, if thought fit, to pass with or without modification, the following resolution of which a notice has been received by the Company from one of its members in terms of Section 257 of the Companies Act 1956, and which will be proposed as an ordinary resolution:

"RESOLVED that Mr. P. C. Ganguli be and is hereby appointed a Director of the Company whose period of office shall be liable to termination by retirement of directors by rotation."

The Share Transfer Register of the Company will be closed from 15th June, 1964 to 26th June, 1964, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretary.

Registered Office:
CHARTERED BANK BUIDLINGS,
CHARTERED BANK BUILDINGS,

Notes:

(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividend, if declared will be paid on or after 10th July, 1964 to those shareholders so entitled whose names appear in the Company's Books on the 26th June, 1964 or to their mandatees. No application for Dividend Warrants will be necessary.

(*c*) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of Special Business set out above is being sent to the Shareholders.

TREND OF SHARES

SHARP SETBACK

(From Our Own Correspondent)

BOMBAY, *28th May*

PRIME Minister Nehru's sudden death on Wednesday afternoon came as a severe shock to the Stock Exchanges as to the rest of the country. As soon as the news was received, all activities had stopped. The markets have remained closed since then and will open only on Monday. The magnitude of the impact of this sad development is by no means complete. It will be known only when the markets open again.

Behind the sudden fall in values on the day of Mr. Nehru's death is the feeling of uncertainty about the type of Government that will come into force. Will it be a Government dominated by the leftist elements or the rightist elements? Will there be fresh curbs on private savings and investments? Will the attack on the private sector be intensified or lessened? Another set of questions that is bothering investors is: What will Pakistan and China do now? Will they feel emboldened to disturb the political stability of this country in order to gain their ends? These are some of the questions that are causing doubts about the safety of investments in equities.

The immediate behaviour of the market is obscure. There is, for reasons just stated, an undercurrent of uneasiness. In keeping the market closed until Monday, the authorities of Bombay and Calcutta Stock Exchanges have done a good thing. They have prevented a bear raid. It is to be hoped that they will keep a strong vigil against speculators who may try to take undue advantage of the understandable hesitancy on the part of investors to enter the market even at the prevailing low levels.

Now for a review of the markets. This week's survey covers only four working sessions, as the market remained closed on Saturday the 22nd inst. (*Muharrum*) and today as a mark of respect to the Prime Minister who passed away on Wednesday the 27th inst. During this brief period, the market depicted a contrary trend: While the first two sessions witnessed somewhat steady conditions, the latter two sessions experienced a sharp setback in values. Early in the week, equities staged a mild rally, which followed scattered short covering and some replacement buying. The rise in prices would have been more marked but for tired bull liquidation at every rise in prices, thanks to fears of higher contango charges. The upward trend persisted on Monday, the 25th inst., that is the opening of the new account, though, towards the close, there was a slight fall in values for want of follow-up support. Equities ruled distinctly easy on Tuesday and the easiness gathered considerable momentum on Wednesday on news that Mr. Nehru was critically ill. Just when the market was about to close the day's trading, the news of Mr. Nehru's death was received. So stunning was this news that there was an avalanche of selling orders on the Stock Exchange with prices tumbling down. Even at lower levels, buyers were scarce.

Operators generally seem to have taken a rather gloomy view of the future of India without Mr. Nehru, although they admit that they cannot say anything definite as to the shape of things to come. While expressing profound sorrow for the death of Mr. Nehru, they are fervently hoping for the emergence of a strong and wise leadership at the Centre. Incidentally, they have taken note of the outcome of the All-India Club Meeting held at Washington on Tuesday the 26th inst. The Club has pledged for the fourth year (1964-65) of the third Plan a total aid of $1,028 million which is less by just $72 million than what India had asked for. They have also taken note of the Bill signed into law by President Johnson, making an additional $312 million contribution to the International Development Association. Since the I.D.A. thus becomes assured of a $750-million replenishment of its loan capital from the U.S. and 16 other advanced countries over the three years ending June 1966, the chances of India getting more I.D.A. loans, which are interest-free and which are repayable over a long period, are considered to be quite bright. Welcome though these developments are, they have been overwhelmed by the tragedy of Mr. Nehru's demise at the most critical period in the life of the nation.

The majority of cash and forward scrips in Dalal Street suffered heavy losses over the week. Tata Ordinary slumped by Rs. 4.50 to Rs. 142.50; they had gone down to as low as Rs. 141 at one time on Wednesday. Indian Iron dropped 56 nP to Rs. 23.72. Textiles were depressed, Century declined by Rs. 21 to Rs. 583, Morarjee by Rs. 20 to Rs. 266, National Rayon by Rs. 18.50 to Rs. 342, Standard by Rs. 16 to Rs. 590, Kohinoor by Rs. 7.80 to Rs. 312 *ex-div.* and Bombay Dyeing by Rs. 2 to Rs. 55.20. Svadeshi, however picked up Rs. 5 to Rs. 245 following increase in dividend from Rs. 17 to Rs. 19 for the year ended December 1963. Cements drifted lower. Shree Digvijay fell by Rs. 5 to Rs. 183, Associated Cements by Rs. 2.75 to Rs. 148 and Orissa by 36 nP to Rs. 12.60. Among Sugars, Belapur eased by Rs. 2 to Rs. 198 and Phaltan by 30 nP to Rs. 96.50. In the dyes and chemicals group, Polychem receded by Rs. 6.25 to Rs. 115, Indian Dyestuff by Rs. 3.75 to Rs. 246.25 and Tata Chemicals by 56 nP to Rs. 16.80. Activity in Engineerings was limited. T. Manekla! moved down by Rs. 25 to Rs. 495. Telco slipped by Rs. 6.25 to Rs. 266, after being lower still at Rs. 259. New Standard dropped Rs. 3 to Rs. 125. Alcock Ashdown shed Rs. 2 to Rs. 288 and Larsen and Toubro 52 nP to Rs. 21.84. Miscellaneous industrials lacked support. Voltas retreated from Rs. 247.50 to Rs. 236. Bombay Burmah lost a rupee to Rs. 57. Wimco shed Re 1.50 to Rs. 252.50, Tata Oil Rs. 2.50 to Rs. 57.50 and West Coast Paper Rs. 2 to Rs. 152.

* * * *

Liquidation by tired bulls led to a drop in values at Lyons Range (Calcutta). In the forward list, Birla Jute declined by Re. 1.25 to Rs. 28.62. Dunlop Rubber eased by a further Re. 1 to Rs. 32.75. Guest, Keen, William receded from Rs. 23.69 to Rs. 22.62, Texmaco from Rs. 27.45 to Rs. 26.55 and J.K. Cotton from Rs. 10.69 to Rs. 10.25. Among cash scrips, Imperial Tobacco decreased by 56 nP to Rs. 9.69 and Philips India by 25 nP to Rs. 27.75. Metal Box was dull at Rs. 30.62. Jessop and Co. softened by Re. 1.12 to Rs. 20.44, British Paints 50 nP to Rs. 20 and Balmer Lawrie Rs. 2 to Rs. 254.

* * * *

A quiet trend was in evidence on the Madras Stock Exchange throughout the week. Business put through was small, with values moving narrowly. Madura in the forward list fell by 20 nP to Rs. 32.80, Ashok Leyland by 11 nP to Rs. 6.79 and India Cement by 7 nP to Rs. 5.45. S.I. Viscose were neglected at Rs. 118. Among cash scrips, Bangalore Woollen declined by Rs. 2 to Rs. 248 and Coimbatore Cotton by Rs. 3 to Rs. 152.

ANDHRA FOUNDRY AND MACHINE CO., LTD.

The Andhra Foundry and Machine Company Ltd., Secunderabad, a company registered in Andhra Pradesh in 1961, is to enter the capital market next week to raise, by public subscription, a sum of Rs. 45 lakhs. For this purpose, the Company is offering, at par, to the public 300,000 equity shares of Rs. 10 each and 15,000 9.3 per cent cumulative redeemable preference shares of Rs. 100 each. The subscription list will open on 4th June 1964 and will close on 15th June, 1964, or earlier at the discretion of the Directors but not earlier than 8th June 1964. The mode of payment is Rs. 2.50 per share on application, Rs. 2.50 on allotment and the balance of Rs. 5 in two calls of equal amounts in respect of the equity shares and Rs. 25 per share on application, Rs. 25 on allotment and the balance of Rs. 50 in two calls of equal amounts in respect of the preference shares. The entire issue is underwritten by as many as eight underwriters.

Some details of the capital structure, compositions of the Board of Directors are published on page 935 of this issue. As will be seen therefrom, the promoters, Directors and their friends have already taken up 100,000 equity shares of the value of Rs. 10 lakhs. This together with the present public issue of the value of Rs. 45 lakhs (Rs. 30 lakhs equity capital and Rs. 15 lakhs preference capital) and Rs. 10 lakhs already subscribed and paid-up make up an issued capital of Rs. 65 lakhs, Rs. 50 lakhs in ordinary shares and Rs. 15 lakhs in preference shares.

The proceeds of the present issue will go to finance the Company's proposed spun pipe plant with a capacity of 24,000 tons of cash iron spun pipes per year on a double shift basis. The total cost of the project is estimated at Rs. 1.02 crore, which is proposed to be met out of the share capital of Rs. 65 lakhs and the balance of Rs. 37 lakhs out of a foreign exchange loan from the I.C.I.C.I. The Company has entered into a technical collaboration agreement with Messrs. Rheinstahl Industrie-Planung Gmbh, Essen, W. Germany.

The factory will be located on a 100-acre site at Moula Ali, near Hyderabad. Cast iron pipes are required for water supply, drainage and sewage schemes. The total demand for such pipes during the third Plan is estimated at 800,000 tons per annum. As against this, the present installed capacity is only about 300,000 tons and consequently the products of the Company are assured of a ready market. The raw materials required are pig iron, coke, limestone and sand. The last the items are freely available locally, while pig-iron will be obtained on a quota basis from the Government. Production is expected to commence in the latter part of 1965. The Directors hope that the Company would be in a position to commence payment of dividend on the preference shares in 1966 and on equity shares in 1967.

UNION CARBIDE INDIA LIMITED

(*Concluded from page 927*)

been no small factor in the development of that Company loyalty to which I referred earlier and which is regarded as the chief factor of success.

The question might be raised—and it is a fair question—what does all this training and development cost your Company? This has cost nothing when the entire picture is considered, i.e., the amount of money spent in training managers *versus* the return in the form of increased efficiency of operations and the cost reductions effected which can be attributed to the training programmes. In fact the programme has, after defraying all costs, produced an appreciable part of the profits shown on the balance-sheet. This, of course, merely bears out the truth of the statement to which the management of your Company wholly subscribes, that executive talent is the most valuable asset, an asset which will continue to be fostered and safeguarded.

It is a far cry from the golden age of the Greek philosophers to the problems of industry in today's world; but the management of your Company believes that the axiom laid down almost twenty-five centuries ago, that "Man is the measure of all things" remains, and will remain, a sound guide to your Company's policy.

Note: *This does not purport to be a record of the proceedings of the above Annual General Meeting.*

WEEK'S STOCK EXCHANGE TREND

LIBERALISM TRIUMPHS

THE national grief, caused by the sudden demise of India's revered leader Jawaharlal Nehru last week, has been mitigated to a considerable extent by the smooth and swift manner in which the Congress Party chose the successor to Mr. Nehru as the Prime Minister early this week. The pessimists in India and abroad who had feared an unhealthy conflict in this respect have been completely belied. India's stature as a mature democratic country among the comity of nations and the stature of the Congress Party as a highly responsible organisation have been enhanced. One's grateful thanks for this are due to the leaders of the Congress Party into whose hands the destiny of this country fell on Mr. Nehru's demise. Realising their responsibility and appreciating the value of unity, they refrained from indulging in a contest for the supreme leadership and allowed the issue to be determined through informal consultations rather than through an election. This commendable behaviour of theirs has helped strengthen the confidence of the people of this country, as well as of friendly foreign countries, that political stability will continue. A large measure of credit for ushering in this happy augury goes to Mr. Kamaraj, President of the Congress Party, who tactfully ascertained the consensus of his party leaders at all levels, and to Mr. Nanda, Mr. Morarji Desai, Mr. S. K. Patil and Mr. Jagjivan Ram who refrained from forcing a contest and facilitating the election of the leader unanimously. It lay in the power of every one of these leaders to divide the Party on this vital issue, but their long training in and respect for party discipline, as well as their love for the country, had the better of them. They have demonstrated, once again, that, even in the absence of a great leader like Mahatma Gandhi, or Jawaharlal Nehru, they can stand united, suppressing their individual ambitions and predilections. It is to be devoutly hoped that this spirit of unity will stand the test of strains and stresses which the future may bring.

In unanimously electing Mr. Lal Bahadur Shastri as its leader and Prime Minister, the Congress Parliamentary Party has displayed a high degree of wisdom. That the Congress Party consists of leaders of many hues and persuasions is an open secret. All of them are, of course, socialists. Indeed, all in this country, except those who do not believe in the freedom of individuals and the freedom of the Press, are socialists, in that they all subscribe to the principles of a Welfare State and none is opposed to the fight against poverty and unemployment. But even among Congress leaders there are some who have been labelled as rightists, some as centrists and some as leftists. Mr. Shastri has been identified, as was Mr. Nehru, as a centrist. Whether this is correct or incorrect, the fact remains that Mr. Shastri has gained a reputation of being a moderate leader of amiable disposition, with no "enemies" in either group. Although he is unlike Mr. Nehru in many respects, his qualities of leadership are by no means less admirable. He may not have the towering personality of the late Prime Minister, but he has humility, sagacity and ability to inspire trust and to win the co-operation of his colleagues. He has proved his mettle in handling several fissiparous tendencies in both the country and his party. His integrity has never been questioned. He has been a conscientious servant of the people in whatever capacity he has worked for their welfare. He has rich experience as an administrator. The results produced by him as Minister in charge of a number of economic affairs might not have been spectacular, but they were ample, and, what is more, achieved without causing any rancour in any quarter. He is a stickler for the principles and traditions of democracy. He gives one the impression of being soft and indecisive, but appearances are often deceptive. Many of his actions and utterances suggest that he is a pragmatist and not a dogmatist. He seems to be singularly free from fads; at any rate, he has not aired them in public, though he has been leading a genuinely austere life. In fine, he does not bring with him to the high office to which he has been elected, any personal liability, though he has been in active politics all his life and held many positions of great responsibility in the Nehru era.

While the question "after Nehru who" has been fully answered much to the disappointment of those who had been expecting their pessimistic prognostications to materialise, the question "after Nehru what" still remains open in a way. We advisedly say "in a way," for more than one reason. It is true that Mr. Shastri has already solemnly stated that he would follow in the footsteps of Mr. Nehru, that he does not have to lay down general policies, as they have already been defined and enunciated, and that all that remains is their faithful, expeditious, efficient implementation. In other words, the *status quo* would continue. So far so good. But Nehruism has meant all things to all men. Mr. Nehru's policies in the external sphere, such as non-alignment and peaceful co-existence, have, of course, come to be appreciated of late; indeed, with the cold war gradually receding, neither the N.A.T.O. group of powers nor Soviet Russia wants India to change this policy, lest such a change should aggravate tension in international politics. It is, however, in the domestic sphere, especially in the economic sphere, that Mr. Nehru's concept of socialism has been vague; in more recent years, this vagueness has invariably been taken advantage of by the leftists rather than by the rightists. The leftists in the Congress and the Communist Party want every one to believe that both Mr. Morarji Desai and Mr. T. T. Krishnamachari have been pulling in the direction of rightists, but that is a myth. Both of them, in their capacity as Finance Ministers, have contributed more to the leftist pull of Nehruism (which in our view is synonymous to democratic socialism) than the leftists themselves.

Now how strong will the leftist pull be under Mr. Shastri's leadership? How far will it go? Will he as Prime Minister be able to display the same degree of pragmatism in economic affairs as he did when he was Minister of Railways and Transport and Minister of Commerce and Industry? He then had the backing of Mr. Nehru, who took care of the business of piping ideology to the people. Besides, the socialist ideological fervour was less strong than it is today; it may become stronger still as the next general election approaches. So it is hard to say whether, in discharging the new responsibility the Congress Party has entrusted to him, Mr. Shastri will remain unchanged. Man changes in keeping with circumstances, more so a politician. Much, however, will depend upon the Council of Ministers he chooses and the extent of assistance and co-operation which India gets from the Western world for implementing its plans for defence and development. Much will also depend upon the attitude of Pakistan and the extent of military support it gets from the West.

It used to be said that, during Mr. Nehru's time, the Government at the Centre was a one-man show, that the principle of joint Cabinet responsibility existed only in name and that, on many an occasion, Mr. Nehru used to take a decision first and then get the consent of his Cabinet colleagues. Mr. Nehru could do that because of the immense power of love he wielded over the masses and the high status he held

among world powers. Since none in the country enjoys that stature now, joint cabinet responsibility has every chance of becoming a reality. Mr. Shastri has a great opportunity to give new life to that democratic tradition and establish it firmly. Mr. Kamaraj hit the nail on the head when he said (in his brief talk to the Congress Parliamentary Party assembled to elect its new leader on Tuesday this week): "It is impossible to fill the role of the great leader whom we have lost. In spite of that, we have to shoulder the responsibility and discharge our duty. Nobody can discharge this responsibility individually. It is by collective responsibility, collective leadership and collective approach that you (Congressmen) will be able to undertake this task." Mr. Shastri, however, can carry out this task only if his Cabinet colleagues also take an active, intelligent interest in every major problem, in addition to their individual responsibility for the portfolios that are specifically allotted to them. Another prerequisite for the success of Mr. Shastri's Cabinet is the elimination of groupism and unrealistic ideologies in the Congress Party. It is here much is expected of Mr. Kamaraj and his Working Committee. If the Party is united and realistic enough to permit economic development on lines conducive to optimum rate of growth and consistent with the pattern of mixed economy without which democracy cannot exist for long, it can hope to show under Mr. Shastri's regime even better results than under Mr. Nehru's.

THE SEVENTEENTH AMENDMENT

SO the expected has happened. The Lok Sabha has passed this week the Constitution Seventeenth Amendment Bill (first moved as the nineteenth amendment and subsequently changed as seventeenth perhaps because of the need for accuracy in regard to the number of times the Constitution has actually been amended) in the teeth of opposition from a number of independents and the Swatantra Party with its well-reasoned stand against land reforms of a virtually expropriatory character. In adopting this amendment, the majority Party, with the help of Communists, has curtailed further the fundamental right to hold property which it itself had given to the citizens of this country about a decade and a half ago. The people that are vitally affected by the present amendment represent the large section of rural population engaged in agriculture. Their freedom of occupation may be in jeopardy if the right now conferred on State Governments is exercised to foster co-operative farming and/or State farming.

Be that as it may, it may be premature to say that, because the Seventeenth Amendment has been duly passed in accordance with the provisions laid down in the Constitution itself, the curtain has been rung down on the controversy. If anything, public agitation in the States against several Land Reform Acts which, under the Seventeenth Amendment, have been validated or protected in terms of Article 31-B of the Constitution, may well continue in some form or other. This is quite conceivable for the Seventeenth Amendment, which has redefined "estate" in Article 31-A of the Constitution so as to cover " any land held under *ryotwari* settlement" and "any land held or let for purposes of agriculture or for purposes ancillary thereto, including waste land, forest land, land for pasture or sites of buildings and other structures occupied by cultivators of land, agricultural labourers and village artisans," has not settled the question of compensation in a perfect and just manner.

The relevant point to be noted in this connection is that the Seventeenth Amendment has added to clause (1) of Article 31-A of the Constitution another proviso that is clearly discriminatory in so far as compensation is concerned. What is more, there is no remedy against this injustice, except to keep on agitating for the restoration of the curtailed fundamental rights. The proviso in question is to the effect that, "where any law makes any provision for the acquisition by the State of any estate and where any land comprised therein is held by a person under his personal cultivation, it shall not be lawful for the State to acquire any portion of such land as is within the ceiling limit applicable to him under any law for the time being in force or any building or structure standing thereon or appurtenant thereto, unless the law relating to the acquisition of such land, building or structure provides for payment of compensation at a rate which shall not be less than the market value thereof." Two crucial questions arise from this proviso. First, if any land within the ceiling limit is under tenant-cultivation and if any portion of that land is acquired by the State, would it not be equitable to pay compensation for such acquisition at market value? Secondly, if personally-cultivated land alone within the ceiling limit is made eligible for compensation on the basis of market value presumably on the ground that the landholders concerned are smallholders, does it not constitute discrimination *in favour* of one set of landholders and *against* another set of landholders from whom lands above the ceiling limit are acquired? After all, all of them are owners of identical landed property. Further, what crime have investors in agricultural land committed to deserve such expropriatory punishment from which investors in urban property and in shares and stocks are free?

Equity demands that the acceptance of the principle of market-value compensation for personally-cultivated land within the ceiling limit should be extended to all lands acquired under land reform legislation. After all, thanks to widespread documentary dispersal of bigger landholdings over the last seven or eight years, the surplus lands above the ceiling limits fixed in different States may aggregate, at the most, two million acres only in the entire country. Payment of market-value compensation for this relatively small quantity of land would present no insuperable difficulty. What is more, uniform application of this principle of market-value compensation to all lands acquired under the Land Reform Acts would severely discourage any future attempt by a State Government to reduce the ceiling limits to ridiculously low levels.

NEHRU'S ECONOMIC ECLECTICISM

MR. Jawaharlal Nehru was no original economic thinker in his own right. In fact, he never claimed to be one. But he had that singular capacity for synthesising what, according to him, were the best elements in every leading school of economic thought. Even his synthesis was by no means rigid, and this was quite evident in his recent analysis, in the light of planning experience, of certain basic strands of thought pertaining to capitalism, communism and socialism. There can be no doubt that, when the economic history of the Nehru era comes to be written, it will be acknowledged that the late Prime Minister's economic eclecticism, involving a delicate synthesis of different schools of thought—*bourgeois*, Marxist, liberal, socialist, Gandhian and pragmatist—had contributed in no small measure to political stability under his democratic stewardship. And political stability, in its turn, sustained the economic foundation cast in that eclectic mould. In the result, although no section of the population was wholly pleased, no section was wholly displeased either.

Time alone will show whether that foundation laid by Mr. Nehru, as Prime Minister of India for 17 years and Chairman of the Planning Commission for 14 years, for a mixed economy of public, private and co-operative sectors was a strong and stable one. It is too early to say whether the balancing of these three sectors—conflicting in some ways and complementary in some others—has proceeded well and far enough to keep the economy in a state of relative equilibrium. Much will depend on how and whether the divergent pressures building up, especially in the public and private sectors, will be eased in the post-Nehru era. Experience to-date does by no means point to any definite trend in regard to edifice construction on the Nehru foundation. Nor is there any clearly discernible trend of human progress in accordance with Mr. Nehru's idealistic dictum that "the law of life should not be competition or acquisitiveness but co-operation" and that "in such a society the emphasis should be on duties, not on rights." This may be because the ordinary individual is unable "to rise above his petty self." In a free society, progress springs from the desire of individuals to possess the best of everything in life. That is a universal human trait which no idealist has so far been able to subdue completely.

Even the "Welfare State" ideal, to which Mr. Nehru was wedded and which everyone now accepts, seems to be difficult of achievement, considering that the kind of socialism introduced in a backward and underdeveloped country like India is, to use his own words, "a backward and poverty-stricken socialism" and that State capitalism, with its bureaucratic features, may not be consistent with the "socialist way of life" in a democratic society. Mr. Nehru was, of course, aware of the fact that capitalism, in a few countries at least, had achieved the Welfare State "to a very large extent" and that democracy allied to capitalism had undoubtedly toned down many of its evils. But this experience of some advanced countries, according to Mr. Nehru, was not applicable to a poorly developed country like India. His preference for a planned approach on socialistic lines for achieving "steady economic progress" in India was rooted in the consideration that "the forces of a capitalist society, if left unchecked, tended to make the rich richer and the poor poorer." It was his belief that socialism, by deliberately interfering with the normal capitalist processes, would "add to the productive forces and lessen inequalities." But he did not seem to recognise that, in the actual implementation of this policy, many genuine, honest entrepreneurs were handicapped in playing their role effectively in the economic regeneration of the country and that, if private enterprise, according to his own view, could be conveniently encouraged in many fields, there was no need for the State to enter the field of industry on a wide front.

In fact, it was his nebulous stand on this question that encouraged some Ministries to give a slant to the Industrial Policy Resolution of 1956 in a manner calculated to discourage the growth of private enterprise in a wide range of industries like petroleum exploration and refining, petro-chemicals, fertilisers, ferrous and non-ferrous metallurgy and mineral development. It would have been something, if the Government had made any impressive headway in these fields. But that was not to be, for its actual achievements fell very much short of what it set out to do, with the result that its "dog-in-the-manger" policy unnecessarily stunted the growth of the economy. The worst sufferers of this outcome are not the capitalists but the poor unemployed and underemployed for whose benefit a socialist State is meant to be. Had the Industrial Policy Resolution been implemented in a more flexible and imaginative manner, industrial growth would have been more rapid by now, resulting in greater employment opportunities for all. The deliberate distortion of industrial policy with a view to enlarging the scope for public sector in industry (as distinct from the *infrastructure*) to limits beyond its capacity was, unfortunately, not set right by Mr. Nehru. His failure to do so has led to a situation in which the Soviet Union is making a determined bid to encourage, by aid and propaganda, further expansion of the public sector in Indian industry and thereby spread its influence and philosophy over India. Thus, the country is exposed to the grave risk of peaceful and gradual penetration of communism.

If this state of affairs is to be remedied, the only sensible course would be to limit public enterprise to heavy industry, atomic energy, *infrastructure* and the industries already established by it and to leave the rest of the field open to private enterprise. It follows naturally that the economic policies, especially fiscal policy, should be appropriately modified to enable the private sector to play a more dynamic role. As the public sector, which also covers social services and defence establishments, is already something of a leviathan, it would be prudent to develop further the countervailing power of private enterprise in industry. For the rest, the processes of democracy can be depended upon to lessen economic inequalities and ensure individual freedom within the limits set by the Constitution—the kind of freedom to which Mr. Nehru had attached the greatest importance in his conception of democratic socialism. It is no consolation to think that the countervailing power is already there in the sector of agriculture where peasant proprietorship has so far survived Mr. Nehru's determined campaign for co-operativisation with its collectivist bias. (Incidentally, the latest amendment to the Constitution, however, raises doubts whether even peasant proprietorship will survive for ever.) If democratic socialism is not to slide into totalitarianism at any stage, it is in the crucial sector of industry that the countervailing power of private enterprise as a whole would need to be reinforced, without, at the same time, encouraging further localised or unhealthy concentration. This is a worthy task for the new Prime Minister, Mr. Lal Bahadur Shastri, who is known for his moderate approach to socialism.

MARKET GOSSIP

Fall In Equities Overdone

THE shock suffered by Stock Exchanges, on account of the death of Mr. Jawaharlal Nehru, was understandable, as he was the backbone of political stability and driving force behind economic progress in the country. There was a severe fall in the prices of equities within a few minutes of his demise. Everyone was worried about the consequences. Confidence was at a low ebb. In such a situation, the desire to play for safety and to cut one's losses is always strong. There would have been much heavier losses had the markets been kept open, as fear has the habit of feeding upon itself and growing fast. However, by the time the market opened on Monday, there were clear indications that Mr. Lal Bahadur Shastri, known for his moderate views and gentle approach, would succeed Mr. Nehru without causing any split in the Congress Party. This infused confidence in the markets to some extent and almost the entire losses which the markets had suffered on the day of Mr. Nehru's death were recovered. A distinctly steadier tone came to prevail and investors heaved a sigh of relief. The view that the worst was over was widespread. But on Wednesday the markets were somewhat perturbed by the remark of Mr. Lal Bahadur Shastri, the Prime Minister-elect, that he would endeavour to expedite the implementation of socialist policies. Further, the operators preferred to await the formation of the new Cabinet and the possible redistribution of portfolios. Since Mr. Shastri would disclose his Cabinet to the public only on Tuesday next, the feeling of uncertainty would persist till then. Meanwhile, on Thursday this week, leading equities, especially Century, National Rayon and Telco, lost a good part of the gains registered earlier in the week. The provocation was the disclosure by the Chairman of Century, Mr. R. D. Birla, that the Directors were not in favour of issuing bonus shares and that the prospects for increasing the dividend for the current year were dim. This remark reminded the market that the position of most of the textile mills could be no better.

Politically, the developments following Mr. Nehru's death have been quite encouraging. There has been a tremendous resurgence of goodwill for India in almost all parts of the world. Mr. Nehru's policies and the work done by him for India and the world alike have earned better appreciation than when he was alive. Both the U.S. and Russia have reiterated their readiness to continue, as well as extend, their help to India. President Ayub Khan of Pakistan has expressed friendly sentiments for India and his willingness to negotiate with the new Government for resolving the differences between the two countries. China is, of course, maintaining a rigid attitude of aloofness and, though it is impossible to say what it will do, it seems unlikely that it will resume its adventure against this country.

Internally, the Congress Party has conducted itself in an exemplary fashion in selecting a successor to Mr. Nehru. There is reason to believe that Mr. Shastri will be practical in his policies and make a strong endeavour to push up the rate of economic growth. The risk of nationalisation of banks has receded. The new Government will be keen to assist industries and, short of fiscal concessions, render all possible help to help them. Having regard to all this, there is some force in the view that the worst is over so far as the stock exchanges are concerned. A large number of first class equities are going abegging at bargain prices. The fall in their value seems to have been overdone. The only fly in the ointment is that, due to the rising cost of living, heavy taxation and introduction of Annuity Deposit Scheme, the quantum of savings available for investment in equities has greatly diminished. Further, the saying "once bit twice shy" still holds good very much. It will not be surprising if there are many investors with a strong desire to reduce their stake in equities when they look up a bit. It would, therefore, be unrealistic to expect a sharp and sustained appreciation in equity values in the near future.

Non-banking Companies' Deposits

The Reserve Bank of India has just issued orders requiring non-banking companies and financial institutions to furnish information relating to their holdings of deposits from the public and their business. Hitherto, it will be recalled, the Bank could not seek such information, as it did not have the necessary powers. In the absence of such powers and with many non-banking companies accepting long-term deposits from the public on a fairly large scale by offering rates of interest much higher than those given by banks, the Bank was finding it difficult to ensure a more effective supervision, control and regulation of the monetary and credit system. This lacuna was filled by the Banking Laws (Miscellaneous) Provisions Act 1963 which *inter alia* amended the Reserve Bank of India Act.

Although six months have elapsed since the Act came into force, it is only now that the Reserve Bank has actually exercised the powers vested in it by the Act. Three separate orders have been issued, one for companies as defined in Section 3 of the Indian Companies Act 1956, another for non-banking firms which carry on as their principal business hire-purchase transactions or the financing of such transactions, and the third for every financial institution that carries on as its business or part of its business financing (by way of loans or advances or otherwise) of trade, industry, commerce and agriculture or the financing of shares, stocks, bonds, debentures or securities issued by Government or a local authority. The annual returns submitted by these institutions, it is stipulated, should indicate the position in respect of deposits as of 31st March and 30th September. The first category of companies has been asked to furnish details indicating not merely the amount of deposits received, but also the names of persons from whom deposits have been received, the periods for which they are received and the rates of interest payable thereon.

Simultaneously with the issue of the aforesaid orders, the Reserve Bank has warned the parties concerned against the penalty involved in the non-compliance of the directions. The penal provisions in the Act, it may be noted here, provide that offences under the Act are punishable with imprisonment upto three years or with fine or with both, in addition to the power of the Reserve Bank to prohibit acceptance of deposits by non-banking institutions.

What concrete measures the Reserve Bank proposes to adopt to regulate the business of acceptance of deposits from the public by non-banking companies and to ensure more effective supervision of the monetary and credit system are yet not known. One has to wait till the Bank scrutinises carefully the information furnished by the different companies which have been asked to submit the first set of their returns (for the past three years) before the end of next month. Such careful scrutiny will necessarily take quite sometime. Whatever measures the Reserve Bank takes will have a twin-purpose: to enforce the dicipline of the money market on the non-banking and financial institutions and to unearth the unaccounted money that may have been deposited with them under fictitious or benami names. To the extent the twin-purpose is served, there will be some check on the diversion of deposits away from the banking system. Welcome though this development is, there is no denying the fact that, unless the banks offer a more handsome return to depositors than is the case at present, they will not be able to mobilise resources on a scale commensurate with the growing needs of their industrial and business clients. The bankers have to face this fact squarely; there is no escape from it.

World Sugar

There has been a sharp drop in world sugar prices of late. The latest available rate for raw sugar at London is £52 per ton, as against £69 prevailing a month ago. The drop in prices is attributed partly to the withdrawal of Italy, a large buyer, from the market and partly to the belief that Taiwan, Brazil and Dominican Republic have sugar available for sale. Whatever the factors responsible for the recent weakness of sugar, the picture of the world sugar situation is rather confusing, thanks to the conflicting assessment of outlook as made by two world-famous sugar firms of London, namely, Messrs. E. D. and F. Man and Messrs. Czarnikow Company. Here are the views expressed by these firms:

E. D. and F. Man: "It now seems probable that, unless something new and large happens, there is going to be sufficient sugar for requirements for the rest of this year. With the weather in Europe looking favourable and the prospects of large crops in the Southern Hemisphere, it seems likely that prices will not go much above today's levels (£52 per ton as of 2nd June). In fact, we feel that further reductions are probable. . . ."

Czarnikow Company: "The downward movement in sugar price is puzzling and there is little in the statistical position to account for the current lack of confidence. In fact, there have been no new developments during recent weeks to bring about a radical change in the supply-demand position and, with values at their present levels, suppliers are likely to exert less selling pressure than they have done of late. . . . It seems likely, no matter how market sentiment interprets facts as they become available, that a tight supply position will continue. . . ."

The recent trends in world sugar are, of course, not of much significance to India right now, because the country is said to have already completed the sale of sugar contracted for in respect of current year and the sugar supply situation is so tight that no further exports are possible in the next few months. But India is committed to export a total of over 300,000 tons of sugar during 1965. The country can certainly fulfil this export commitment and perhaps sell abroad even a much large quantity, if the Governments, Central and State, take from the very commencement of the ensuing season (on 1st November) steps to ensure adequate cane supplies to sugar mills.

Futures Trading In Commodities

There is no need to throw up one's hands in despair, as some seem to have done, at the ban imposed by the Government of India this week on futures trading in as many as fourteen commodities. For such a bold step was long overdue and it should be welcomed in the spirit of better late than never. This endorsement of the ban, however, should not be taken as proof that this journal subscribes to the official view that the recent rise in prices of the commodities, futures trading in which is now banned, has been due to excessive speculation. Speculation might have been responsible, to some extent, for the spurt in prices, but it cannot wholly explain the phenomenon of prices consistently rising over a long period which has been the feature of trading in these commodities. That can be explained only in terms of a persistent shortage which gets more and more acute every year as the demand rises and production falls short of targets.

It is not denied that speculators do magnify the shortages and rig up prices, but it is hard to believe that speculation can per se convert permanently a bear market into a bullish one. That takes more than speculative manœuvres by unscrupulous traders. It is the failure to appreciate this elementary fact that leads the powers-that-be to lay the blame for the rise in prices at the door of speculation and traders who indulge in it. Of course, if the object is to find a convenient scapegoat, one can always get one in traders on whom could be heaped all the blame for the rise in prices. But, if the aim is, as it ought to be, to diagnose the real reason for the rise and to take remedial action, no useful purpose will be served by trying to fix the blame on traders.

It is, of course, not suggested that traders are absolutely innocent of speculation or that the price rise is entirely due to the interplay of supply and demand. This could be possible only under conditions of perfect competition which, as is common knowledge, is only an economists' abstraction. And, in view of all the official controls and regulations governing the forward markets, it is idle to pretend that commodity prices in his country are being determined by free market forces. Speculation is, undeniably, responsible in accentuating and exaggerating shortages and in inflating prices out of proportion to the scarcity. But who is ultimately responsible for this? The Government or the traders? Let us face facts; the latter, namely, traders, are, by the very nature of their profession, prone to speculation. And traders in this country, like the rest of the community, are less responsive to laws and regulations than their confreres in some of the Western countries. One need not be ashamed to admit that, for this reason, commodity markets in this country have proved to be more speculative than the commodity exchanges in Britain or the U.S.A. where, with less controls and regulations, they function more smoothly and to the common good of the consumer, producer and the trader.

But the speculative tendency inherent among Indian traders is not what is really wrong with the futures markets in commodities in this country. What is actually wrong is that futures markets are allowed to continue even when conditions are not only not conductive to their proper functioning but are in fact against it. For with acute shrotage of almost all the commodities in which forward trading is conducted, one of the basic conditions for the successful functioning of a futures market in commodities, namely, uncertainty about the probable trend of prices, is absent in this country. What is the point in having a futures market when the price can move only in one predictable direction? Chronic surplus, like chronic shortage, is also a condition which makes futures trading meaningless. But it is precisely this that is being done in this country.

If ever there was a case for keeping alive futures trading in commodities, it was the feeble one, namely, that the mechanism of forward trading should be kept alive so that, when the situation improves, warranting full use of hedging facilities, it would be easy to do so. But, in order to make the hedge contracts harmless, in circumstances which simply did not warrant the continuation of futures trading, they had, through restrictions and regulations, to be shorn of all practical utility as a medium of hedging. For, look at the long list of the so-called regulatory measures imposed on futures trading. There are maximum and minimum prices fixed for most of the commodities, limit on weekly rise in the price of the hedge contract and limit on the weekly fall in price, limit on open position and on top of these special margins in respect of quite a few commodities. The futures market, it appears, is required to record that price which the Government wants for a particular commodity. That, in spite of all these regulations, prices tend to shoot up only confirms the futility of these regulatory measures as also the futility of futures trading in the context of acute and continuing shortage of commodities. The present decisions to ban forward trading in certain commodities is an indirect affirmation of this.

There is no prospect of the situation improving substantially in the near future. For the improvement, if it is to last, has to come from a sustained increase in production which is as yet an unfulfilled objective of planning in this country. The Government should, therefore, seriously consider whether futures trading in commodities should at all be allowed until production and marketable surplus improve sufficiently to warrant such trading. It is high time that the Government evolved a long-term policy in respect of forward trading as a whole, instead of continuing the exercise in expediency in which it has indulged so long. In this connection, it must also take into account its own economic philosophy and the growing influence of State trading, buffer stock arrangements, co-operative marketing, etc.

A New World Trade Body?

It is, indeed, surprising that India and 72 other developing countries, along with the Soviet bloc, should have pushed to a vote at the Geneva World Trade Conference a resolution calling for the creation of a new International Trade Organisation to supersede all existing bodies, despite stiff opposition from several developed countries; the resolution was adopted since it commanded the requisite majority. No one will question the right of these countries to present any resolution they want. Nor will anyone dispute the fact that the recommendation contained in the aforesaid resolution has met with the approval of every developing country. But it is not good statesmanship to force, by sheer weight of numerical majority, the developed countries to accept their point of view, especially as the developed countries themselves have expressed their willingness to do everything possible to ensure for the

DELHI LETTER

HOW THEY CHOSE THE LEADER

A VALUABLE PRECEDENT ESTABLISHED

From Our Special Correspondent

NEW DELHI, *2nd June*

THE fact that the majority party in the world's numerically largest democracy could decide so quickly as it did on the choice of the successor to its greatest democrat without any breakdown in the party or the administration is itself a tribute to the success of the democratic experiment of Jawaharlal Nehru.

In the process of the election of 59-year-old Lal Bahadur Shastri as the new leader of the Congress Parliamentary Party, some welcome procedures have gained emphasis, particularly in relation to the fountain-head of power in a federal set-up. Within a few hours of Mr. Nehru's passing, Mr. Morarji Desai is known to have thrown his hat into the ring. To some he appeared to have acted in indecent haste; to some others in the party the succession question was one of practical issues and not purely to be restrained by sentiment and sorrow. Some of the men in the Shastri camp, no doubt, tried to smear Mr. Morarji Desai for his uninhibited desire to press forward with his leadership claims. Conclaves among various groups took place on Thursday night after the funeral. By Friday morning, some members of Parliament, said to be supporters of Mr. Morarji Desai, circulated the idea that the question of succession was a matter for the Congress Parliamentary Party to decide. This approach was naturally resented by many Congress leaders who firmly held the view that, in the federal set-up in the Indian Union, the choice of the leader to be Prime Minister was not something to be left to manœuvrings within the Congress Parliamentary Party. The Congress Working Committee was originally said to have been scheduled to meet on Friday but met only later in the week-end.

Immediately after the death of Mr. Nehru, Mr. Gulzarilal Nanda was sworn in as Prime Minister to hold interim charge and his choice by the President was based purely on the fact that he was the seniormost left in the Cabinet when Mr. Nehru died. By Friday afternoon, reports were that the supporters of Mr. Morarji Desai as well as the backers of Mr. Lal Bahadur Shastri were both firming up their ranks with Mr. Desai not being averse to the idea of having an open contest. At this stage, the situation was confused by odd suggestions to divert the trends away from a head-on clash between Mr. Shastri and Mr. Morarji Desai. One suggestion was that Mrs. Indira Gandhi could be an acceptable choice if Mr. Shastri and Mr. Morarji Desai would not make way for one or the other. But Mrs. Gandhi stood firmly by her decision not to be pushed into the fray and into the shoes of her father. Another suggestion was to let Mr. Nanda continue the interim *status quo*. This was undesirable, as it would have led to wranglings among the major rivals and horse trading all over the country which in turn would have afflicted the Congress Party deeply. A group also suggested Mr. Jagjivan Ram as a possibility. And from some men in Maharashtra came the advocacy of Mr. Chavan whom his admirers thought to be "the strong man."

But all these diversionary tactics turned out to be of little consequence. On Sunday morning the initiative went into the hands of Congress President Kamaraj who was assigned the task of finding out the consensus among Congressmen on the choice of the leader. Both Mr. Shastri and Mr. Morarji Desai agreed to abide by the consensus to be discovered by Mr. Kamaraj. It was made clear at this stage that the Congress President would find out the opinion of not only members of the Congress Parliamentary Party but also of State Chief Ministers and other party luminaries. This proved to be the implementation of the principle that, in a federal set-up, the choice of the Nation's No. 1 cannot be left merely to the Parliamentary Party caucus.

A Major Legacy

Mr. Lal Bahadur Shastri and the leaders he will bring around him in the Central Cabinet will certainly not make any attempt to divert the course of Jawaharlal's political or economic policies which has run deep into national life. Having heavily invested in the concept of mixed economy in India, the Western friendly nations as well as the Soviet bloc countries can be expected to continue and most likely intensify their support for peaceful economic development of the country. In conversations with Indian Ministers, both the U.S. Secretary of State, Mr. Dean Rusk, and the Soviet first Vice-Premier, Mr. Kosigyn, gave the assurance of support. This assurance was also reflected in the sentiments expressed by the American and Soviet leaders in their speeches in the public meeting held at Delhi last Friday to mourn Mr. Nehru.

One of the more important official engagements of Mr. Nehru in the period immediately preceding his death was his participation in the meeting of the Planning Commission in the second week of May. This meeting of the Commission approved as the working basis the papers prepared by the Perspective Planning Commission which tried to define the broad contours of development needed in the fourth and fifth Plan periods. The investment perspectives for the fourth Plan, around Rs. 22,000 crores, are now certain to be considered as an important legacy left by Mr. Nehru.

During the discussion of fourth Plan perspectives, a body of opinion had emerged in Delhi that the State Congress chieftains needed to be disciplined and the Centre should take over more responsibility for the efficient implementation of projects in the Government sector. This aspect is likely to suffer as a result of Mr. Nehru's exit. It is difficult to imagine Mr. Lal Bahadur Shastri roughriding over State or regional pressures.

MARKET GOSSIP

(Concluded from previous page)

developing countries a larger share in the expanding world trade. Moreover, the developed countries (of the free world) together exercise a powerful influence on the course and volume of international trade, so much so any move on the part of others to force these countries to accept something against their will is bound to have disquieting consequences. And, in the absence of any active support and encouragement from these countries, the attempts to establish and run a new International Trade Organisation (I.T.O.) will simply fail. Numerically, they may be small, but they are major partners, if one takes into account their share in world trade. One would just recall here that the first U.N. Conference on Trade and Employment held at Havana in 1947-48 prepared, after wasting much time and energy, a Charter for an I.T.O., but the I.T.O. did not come into existence at all, as it did not win the support of the U.S. and certain other developed countries in the free world. The U.S. delegation to the Geneva Conference has clearly reiterated that the U.S. will not commit itself to the idea of an I.T.O. now or later, as such an organisation will, in its opinion, encroach on fields now controlled by private enterprise, particularly shipping and insurance.

That the delegates representing India should have lent support to the plea for a separate I.T.O. is unexpected. Their action seems to be quite contrary to the policy statement made at the Geneva Conference by Mr. Manubhai Shah, Union Minister for International Trade. Mr. Shah had advocated that the G.A.T.T. should be enlarged and reconstructed as an effective instrument of world trade. This journal also feels that, with suitable amendments to its Charter, the G.A.T.T. itself can serve as a purposeful instrument of international trade co-operation. It has a ready, efficient administrative set-up and possesses rich experience gathered over a number of years, both of which can certainly be made use of for furthering world trade. Mr. Manubhai Shah had also suggested that a United Nations Trade Conference could meet periodically, say, once in three years, to discuss all outstanding trade problems and to suggest remedies. Such a Conference could usefully supplement the G.A.T.T. There does not, therefore, seem to be any justification for supplanting this G.A.T.T. by an entirely new I.T.O. In these circumstances, the Indian delegation should have worked for obtaining a compromise carrying the support of the West. If it had failed in such an effort, as it seems to have, it should have remained neutral, instead of voting for unrealism.

AID-INDIA CONSORTIUM'S PLEDGES

THE outcome of the Aid-India Consortium's meeting held at Washington on Tuesday last week might not have been as encouraging as one would wish, but it has not been disappointing either. In fact, India has reason to feel gratified at the outcome for two reasons. In the first place, the total of aid pledges amounting to Rs. 489 crores ($1,028 million), made by the nine member-nations, together with the World Bank and the I.D.A., for the fourth year (1964-65) of the third Plan, is only slightly less than the Rs. 524 crores ($1,100 million) asked for by India. Secondly, the Consortium members have conceded the plea of India for extending a substantial part of the aid in the form of non-project assistance. Thus, approximately half of the total aid pledged is expected to be in this form, the actual amount involved being Rs. 244 crores ($514 million). The share of non-project assistance in the aggregate pledges amounting to Rs. 501 crores ($1,052 million) made in respect of the previous year (1963-64), it will be recalled, was much less, being two-fifths of the total, Rs. 200 crores ($420 million), to be precise. The grant of sizable untied credit will, besides reducing the pressure on the country's balance of payments, help the Government of India in allocating a larger amount of foreign exchange for maintenance imports (raw materials, accessories and intermediate projects) which are so urgently needed for enabling several industries to utilise their capacities more intensively.

India, as already stated, had asked for a minimum aid commitments of $1,100 million, whereas the pledges actually made amount to $1,028 million, or a shortfall of $72 million. Could the Consortium members not have filled this gap? With the solitary exception of Canada which has stepped up its pledge for 1964-65 (as compared with 1963-64) by a handsome $10.5 million, all others have either maintained their commitments at the 1963-64 levels or reduced them, and Belgium has not made any contribution, apparently because the allocation of $10 million made by it last year continues to remain unutilised. The table below sets out the aid pledges of the Consortium members in respect of 1964-65 as compared with those for the previous year and the two years preceding it.

(In million $)

	1961-62	1962-63	1963-64	1964-65	4-Year Total
Austria	—	5	7	1	13
Belgium	—	10	10	—	20
Canada	28	33	30¼	41	132¼
France	15	45	20	20	100
Germany	225	120	99¼	95	538¼
Italy	—	53	45	36	134
Japan	50	55	65	60	230
Netherlands ..	—	11	11	11	33
United Kingdom ..	182	84	84	84	434
United States ..	545	435	435	435	1,850
World Bank and I.D.A. ..	250	200	245	245	940
Total ..	1,295	1,070	1,052	1,028	4,445

It is somewhat surprising that West Germany, of all the countries, has cut down its aid commitments again, for the third year in succession. Considering that the international liquidity position of West Germany is highly comfortable and that India continues to have a heavy payments deficit with it, West Germany could certainly have raised its aid to India for the current year. Indeed, it could have easily filled the shortfall of $72 million, which is by no means a large amount, for a country which enjoys persistent export surpluses and plentiful foreign exchange reserves. Austria, Italy and Japan, too, could have at least maintained their aid commitments at the levels of 1963-64, instead of cutting them down. Further, one wonders whether it would not have been possible for Britain and the U.S., as well as the World Bank and the I.D.A., to augment their contributions.

Including the Rs. 489 crores committed for 1964-65, the total Aid-India Consortium pledges for the first four years of the third Plan come to Rs. 2,116 crores, to which is to be added the non-Consortium aid of Rs. 739 crores, or a total of Rs. 2,855 crores. This figure represents as much as 90 per cent of the third Plan's original estimated foreign exchange gap of Rs. 3,200 crores (inclusive of the repayment liabilities aggregating Rs. 600 crores). But the Planning Commission, in its mid-term appraisal, stated that the foreign exchange requirements would be "considerably larger." Consequently, the uncovered deficit that remains to be covered in the last year of the Plan will be much heavier than Rs. 345 crores, the difference between the original estimate of Rs. 3,200 crores and the aid authorisations of Rs. 2,855 crores made so far.

While it may be possible that the aid-giving countries would meet the entire uncovered gap, whatever that be, there is no doubt that these countries will subject future aid to a closer scrutiny of the Indian economy. For concern is expressed over the fact that, despite the receipt of foreign aid on a large scale, the annual growth rate in India since the beginning of the third Plan has not been more than 2.5 to 3 per cent, as against the 6 per cent target envisaged in the Plan. It is, therefore, emphasised that the World Bank—it is under the auspices of the Bank that the Aid-India Consortium meetings are held—should not merely make broad service in preparation for the annual Consortium meetings but take a closer look at the functioning of Indian economy. Commenting on this point, *The Economist* of London has the following to say:

> "The World Bank is understood to attach great importance to identifying the economy's really crucial needs, because foreign exchange requirements are running ahead of what aid and trade may be expected to yield. More detailed probing of the economy by an outside agency like the World Bank will obviously hurt some political susceptibilities in India, especially on the left. Yet the Government, whatever shape it takes after Mr. Nehru's death, seems less likely to hold out against the Consortium because of the keen realisation that quality of performance will become increasingly the most important denominator of aid as the tides of cold war recede."

It would be for India's own good if its economy were subjected to closer scrutiny from the aid-giving end than in the past, especially from an agency like the World Bank. For such a scrutiny, assuming that it will not unnecessarily delay the authorisations or actual release of aid, will help the planners greatly in ensuring structural consistency of planning in terms of material and other resources.

FOR HIGHER CEMENT PRODUCTION

The cement industry may have, at the most, an aggregate installed capacity of about 14.2 million tonnes in the last year of the current Plan. This will be short of the target by a million tonnes. As for production, it is not likely to exceed 11.6 million tonnes in 1965-66, as compared with the target of 13.2 million tonnes and the actual output of 9.3 million tonnes in 1963-64. As the demand for cement in the last year of the Plan has just been estimated unofficially at about 13.6 million tonnes, the gap between demand and supply in that year would be of the order of two million tonnes. It may yet be possible to accelerate the pace of production, so that the estimated gap can be narrowed. In this context, the report that the Government is considering a proposal to relax the control on ex-works cement prices payable to the producers is heartening. If the report is true and the much-needed relief is vouchsafed to the industry, it is bound to go some way towards accelerating the pace of production, as well as of capacity expansion. Mr. V. H. Dalmia, Chairman of Dalmia Cement (Bharat) Ltd., has, therefore, done well to emphasise this aspect in his speech at the twelfth annual general meeting of the Company held at Dalmiapuram (Madras State) on 1st June 1964.

Some steps can be simultaneously taken in several other directions so as to facilitate greater production of cement in the current year, as also in the next. For instance, the incentive formula for higher production of cement from year to year can be continued with advantage, considering that, thanks to this formula, the industry was able to achieve a high level of capacity utilisation at 92.5 per cent in 1963. Only, it would need to be revised more favourably on the lines suggested by Mr. Dalmia. The revision, according to him, should involve the linking of the incentive with the average of the last three years' production and not, as in the last year, with the highest production achieved by a factory during any one of the preceding three years. Another direction in which prompt action is called for is the utilisation of waste products resulting from iron and steel production. While the manufacture of blast furnace slag cement has registered some expansion in recent years, practically no progress has taken place in the production of blended cements by admixture of fly ash and other such wastes. Mr. Dalmia's plea, in this connection, is that the Government should take energetic steps in regard to the latter so as to mitigate the present cement scarcity.

The Government's recent proposal to set up a cement corporation for the purpose of increasing cement manufacturing capacity in the public sector has not been criticised by Mr. Dalmia. On the other hand, he seems to welcome it for the reason that one of its principal tasks would be to undertake the prospecting and provision of cement grade limestone for the benefit of the entire industry. The industry's expectation seems to be that its acute raw material problem might be more easily solved, if the proposed corporation were to explore thoroughly and exploit adequately the country's reserves of limestone. The "if" here is a big one, for it is quite likely that the corporation may be concerned more with the establishment of new cement factories (based on the slags of the public-sector steel plants) than with discovering and developing fresh deposits of limestone. If the cement units in the private sector are to avoid disappointment in the future in regard to their requirements of raw materials, they will do well to rely on their own efforts. Why not organise, on a co-operative basis, a team of geologists of their own for exploring the country for limestone mines?

MATERIAL TESTING MACHINES

With industrialisation becoming more diversified and sophisticated, the need is all the greater for a wide range of machines and instruments for testing different materials. Such machines are particularly necessary for testing metals, textiles, paper, cellulose, rubber, plastics and construction materials. In the field of metallurgy, for instance, the testing machines gauge tension, compression, bending, hardness, strength and stress. The machines for testing rubber and plastics determine tensile strength, abrasive wear, heat constancy, hardness, elasticity, fatigue, plasticity, and so on. As for textiles, the relevant machines are thickness gauges, strength testers and fibre strength testers. The machines for testing paper and cellulose materials determine tensile strength, elongation, latent energy, dehydration, absorptivity, etc., while the ones for testing building materials measure impact hardness, compression and bending. All these testing machines are required not only for industry but also for research and technical education.

A noteworthy development in this context was last week's display of East German material testing machines at the Jehangir Art Gallery in Bombay. The Blue Star Engineering Company (Bombay) Private Ltd., which put up the display is, incidentally, the sole distributor in India of such machines produced by two East German factories. This firm has sold in the last eight years more than 1,000 testing machines to a wide variety of customers like polytechnics, engineering colleges and research institutions, as also several industrial undertakings which were conscious of quality control in production. It already has sales and service centres at Bombay, Calcutta, Delhi and Madras and proposes to extend the facilities to Kanpur and Jamshedpur. Blue Star's enterprise and expertise in this field may thus be increasingly useful to industry.

FORTY-HOUR WEEK IN BRITAIN

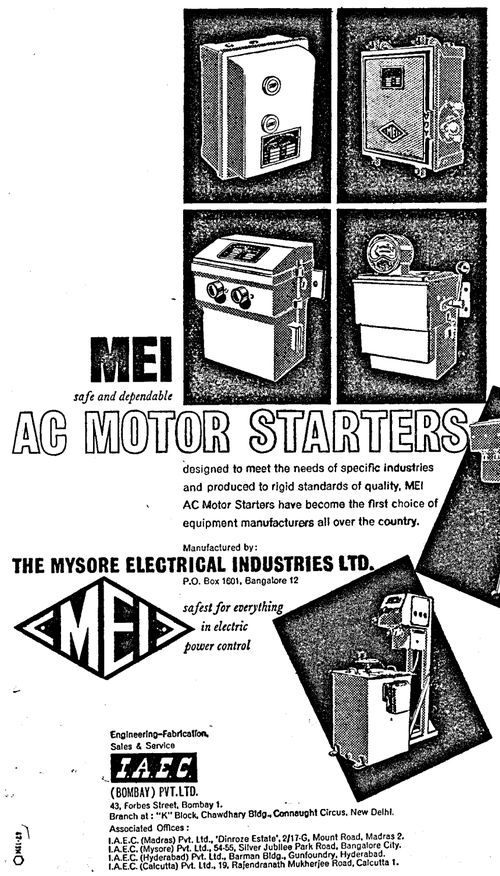
The forty-hour working week has been a cherished objective of the trade union movement in Britain for many years. (In the U.S., incidentally, the objective of A.F.L.-C.I.O. is a 35-hour week, as against the normal 40-hour week in most of the industries.) The demand for a reduction in working hours to 40 a week has, however, been consistently opposed by both employers and Governments on the ground that such a reduction, through its effect on production, is no less inflationary than wage increases without a rise in productivity. But it now looks as though, before long, the forty-hour working week would become the order of the day in the U.K. For instance, British shipyard workers are to get their working hours cut to 40 a week in July 1965. It is quite likely that engineering workers will soon follow suit. In fact, the Engineering Employers' Federation is reported to have been authorised by its member-firms to offer its 3-million manual workers a three-year agreement giving improved working conditions, among which the most important concession would be grant of a 40-hour working week.

The offer is expected to be formally made to the Federation's opposite number, namely, the Confederation of Shipbuilding and Engineering Unions, on the 10th inst. A condition of the offer, it is said, would be that the Union agree to a three-year standstill on all wage claims and demands for fringe benefits. The embargo on wage claims would apply not only at the national level but at plant and local levels as well. It remains to be seen whether the Union will accept this condition. For, all along, the Union leaders have been insisting that they are not interested in such a bargain but only in securing a 40-hour week. Already, as noted above, the shipbuilding workers have secured a 40-hour week to be effective in two stages, with the working hours being reduced to 41 at the end of this year and 40 hours by July next year. The agreement to this effect entered into by the employers and workers in the shipbuilding industry last December would appear to contain no such condition. Citing it as a precedent, the engineering workers are now demanding that they too should get a 40-hour week without any wage-freeze stipulation.

If the engineering workers were to win, it would be one more precedent for granting an age-old demand of industrial workers. This is bound to have repercussions on collective bargaining in the rest of British industries during the current and next year. The Government is unlikely to be indifferent to this development, because of its inflationary implication. It is, perhaps, in anticipation of the objection from the Government and in order to forestall criticism that reduction in working hours would accentuate inflation that the Engineering Employers Federation made the 40-hour week conditional on a wage-freeze. But the fact remains that the demand for a 40-hour week has become so insistent that employers are finding it difficult to resist it. Britain is by no means an exception in this regard in Europe. In W. Germany, too, a 40-hour week is fast becoming one of the main union demands. Already employers and workers in metal and steel have agreed in principle to a 40-hour week to come into force from next year. About three million workers in the metal-working industries have in fact gone on a 41¼-hour working week with effect from January last. The excess 1¼ hour is to be dropped before July 1965.

Although trade unions in Europe continue to fight for a 40-hour week, reduction in working hours is not an unmixed blessing for workers. For it is invariably inflationary in its effects and workers, as consumers, are affected as much as others. But this fact is unlikely to deter unions which seem to regard the 40-hour week as the new "promised land" for their members. The world has, indeed, travelled a long way since 1919 when the industrial commission, headed by Mr. Samuel Gompers, President of the American Federation of Labour, recommended that the achievement of a forty-eight-hour week should be one of the main objectives of the I.L.O. Improvements in technology, such as automation, and full employment are enabling industrial workers to reach their goal of reduced working hours and more leisure. The trade unions in the U.S. have been urging a 35-hour week, in order to reduce unemployment which in that country is large in terms of number and which is attributed by them to excessive automation.

The Enquiry Committee on Small Newspapers, at its meeting held in New Delhi on the 1st inst., discussed the scope of its work and fixed the following criteria for small newspapers and periodicals for inquiry purposes: Dailies: Newspapers with circulations of upto 15,000 published from towns with a population exceeding 300,000 and those with circulations upto 10,000 published from centres with a population of less than 300,000; Periodicals: Weeklies, fortnightlies and monthlies with circulations upto 5,000.



AMERICAN LETTER

UNITED STATES AND NEHRU

LIKELY IMPACT ON FLOW OF PRIVATE CAPITAL

By N. Pattabhi Raman

NEW YORK, *30th May*

"AFTER Nehru, Who?" This question, which has been on the minds of many Americans for a long time, became urgent on the lips of most people this writer met following the passing away of Prime Minister Nehru. The newspapers speculated about his successor, and so did individuals. This reflected not merely curiosity as to who would assume the tremendous burden that Panditji bore so long so cheerfully, but also real concern as to what policies Nehru's successor would follow and whether he would be able to hold the nation together and guide it along successfully in the difficult days ahead. Hence the insistent questioning.

Those who believed that Jawaharlal Nehru was a huge banyan tree protecting the nascent free nation, expressed the view that, now he was gone, India had arrived at the hour of truth. Some newspapers talked of an imminent power struggle; of the lurking, sinister figure of Krishna Menon; of the possibility of committee rule. But careful observers in Washington and elsewhere appeared to be satisfied that the institutions of democracy which Panditji had so lovingly fostered would assure a smooth transfer of power into responsible hands.

John Kenneth Galbraith, the Harvard don and former U.S. Ambassador in New Delhi, observed: "I think that the transition will be rather smooth." He voiced his belief that Mr. Lal Bahadur Shastri would be elected to lead the country. "He is a very wise and intelligent man and able political leader," he noted. "Shastri, in both his external and internal views, is close to those of the Prime Minister."

* * * *

The Prime Minister's death has come at a time when U.S. companies are seriously weighing India's dramatic new bid to attract a larger flow of American business investments. The strong endorsements of foreign private investments made in recent months by Finance Minister T. T. Krishnamachari and the Government measures to reduce tax deterrents and strengthen the capital market have favourably impressed many of them. They are also encouraged by the steps taken to trim delays in the Government's cumbersome approval procedures, particularly since many of them have long felt that the hæmorrhage of cost accompanying such delays is not fully appreciated in India. Moreover, their interest in India has been excited by the visit of the U.S. businessmen's delegation to New Delhi in mid-April and the fruitful talks the business leaders had with top officials of the Indian Government. But the demise of Panditji has cast a shadow over this promising situation.

Businessmen too believe that the transfer of leadership will be smooth and that it will not be accompanied or followed by drastic changes in policy. But it is in their nature to be prudent in a period of transition. It should not be surprising, therefore, if those who are contemplating business investments in India hesitate for a while at least in making commitments.

What is reassuring in this context is their continued, serious interest in studying investment opportunities in India. Thus, nearly 175 business executives attended a conference in New York City on 28th May at which the U.S. businessmen's delegation which visited India reported on its talks with Indian Government officials. The Business Council for International Understanding (B.C.I.U.), which sponsored the delegation's visit at the invitation of the Indian Investment Centre, decided to hold the debriefing conference as scheduled but cancelled all social activities associated with the conference in deference to the memory of Prime Minister Nehru. The delegation recalled Panditji's close personal interest in the New Delhi conference and voiced its belief that his wish would have been to see continued discussions and mutual efforts proceed without delay. The delegation, and the executives and Government officials who had come to listen to its report, adopted a unanimous resolution of condolence on the "tragic death" of the Prime Minister.

A highlight of the debriefing conference was a message sent by President Lyndon B. Johnson to Mr. Fred C. Foy, Chairman of the B.C.I.U. The U.S. President congratulated the delegation on its initiative and said: "The Administration has demonstrated its support of this effort from its inception and will itself take initiatives in the same direction. We will also continue to support those businessmen who follow up on the New Delhi meeting by seeking investment opportunities in India and other developing countries."

In an earlier article, I had discussed the Johnson Administration's keen interest in enlarging the role of U.S. private industry in the economic development of India and other new nations. President Johnson's message to the B.C.I.U. delegation reflects this interest. The Administration is greatly impressed by the success of the New Delhi talks between the U.S. business delegation and the Indian Government officials and is therefore reported to be contemplating a continuing programme of businessmen's missions to India and other less-developed countries. It is also considering ways of utilising P.L. 480 local currency funds to strengthen the capital markets of the less developed countries.

Meanwhile, President Johnson has constituted an Advisory Committee on Private Enterprise in Foreign Aid under the chairmanship of Mr. Arthur K. Watson, President of the I.B.M. World Trade Corporation. The Committee, formed in response to an amendment to the Foreign Assistance Act of 1963, will advise the U.S. Agency for International Development on the most effective means of encouraging greater private participation in the economic development of nations receiving U.S. assistance. It will, in particular, review the various programmes now in effect for encouraging private investment in the less-developed countries. It will study new proposals for investment guarantees and additional means of protecting investments, new patterns of business-Government co-operation and of joint ventures involving American and local investors. The Committee's services will extend also to labour, foundations, education, co-operatives and agricultural activities.

The Watson Committee consists of representatives of business, farmers, organised labour, banking, foundations, technical societies and the teaching profession. It is expected to complete its work in about a year.

* * * *

Of all the tributes paid by Americans to India's departed leader, the most sensitive I have seen was an editorial of the *New York Times* captioned "The Heart of a Nation."

"Jawaharlal Nehru and India bore great love for each other: and it was India's love for this man, this man who could be so demanding, so tender, so impatient, so involved, so aloof, so merry, so brooding, that gave him the greatest of all powers—the power to rule through the heart of a nation," the *Times* editorial observed. "Lesser leaders," it added, "have used the love of their people wantonly, to master their people. But Nehru refused to turn power into despotism. Dictatorship was within his grasp and at times India seemed to be thrusting it upon him. He refused. The insistence upon an India free in independence was his gift, born out of love, for his country."

The *Times* referred to the misunderstanding of Nehru in different parts of the world and said: "A large part of the failure to understand Nehru lies in the world's insistence upon seeing him reflected in foreign mirrors—the mirrors of Algeria, or S.E.A.T.O., or Hungary or whatever—instead of interpreting him squarely and directly for the two things he was. Jawaharlal Nehru was an Indian and he was a revolutionary."

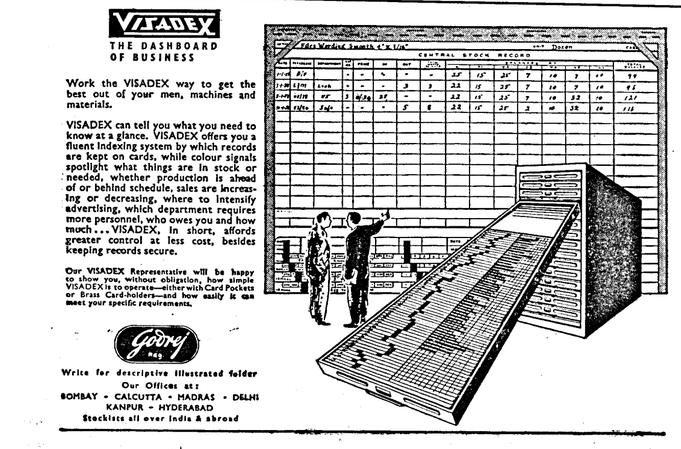
"He was an Indian..." the *Times* wrote. "What he did, he did for India...." A disciple of Gandhi, he was a revolutionary," the distinguished paper added. "He was in revolution against foreign rule, and everybody remembers it. But what is so often forgotten is that he was in revolution for things as well as against them—for a reassessment by every man and nation of the kind of world in which men starve and go cold and are aching with disease. Within his own society he was a revolutionary, constantly haranguing his own people about their superstitions and encrustments. He was a revolutionary in international councils, and a successful one, in that he was the first to prove that a nation without military might could and would be heard by the military mighty."

"He loved India and he died beloved by her," the *Times* editorial concluded. Who could deny this?

"THE ROLE OF G.A.T.T. IN RELATION TO TRADE AND DEVELOPMENT"

This brochure sets out, in Part I, the nature and objectives of the General Agreement on Tariffs and Trade and the functions of the Contracting Parties. In Part II, it examines the provisions of the G.A.T.T. and their implementation and deals, in particular, with (*a*) tariff reductions and general trade negotiations, (*b*) quantitative restrictions, (*c*) provisions relating to State trading, (*d*) provisions relating to subsidies, (*e*) temperate zone agriculture, (*f*) commodity policy, (*g*) the most-favoured-nation principle and regional groupings, (*h*) consultation, (*i*) position of less-developed countries in relation to the work of G.A.T.T. Part III deals with specific action by the Contracting Parties on trade and economic development problems of less-developed countries, under the following headings: removal of trade barriers, tropical products, preferences, trade in cotton textiles, trade information and trade promotion, development of export potential, financial assistance. The conclusions and resolutions adopted at the meeting of Ministers in May 1963, and the Declaration on the Trade of Less-developed Countries adopted in December 1961 are reproduced in annexes. There is also an annotated reference list of selected G.A.T.T. publications. The publication is available free of charge from the G.A.T.T. Secretariat, Villa Le Bocage, Palais des Nations, Geneva.

A Committee with the Chief Ports Officer to the Government (convenors) and ten other members has been constituted by the Government of Maharashtra to study the traffic potential and evolve a long-term plan for the development of minor ports in the State. The Committee has been asked to submit its report by the end of this year.



VISADEX
THE DASHBOARD OF BUSINESS

Work the VISADEX way to get the best out of your men, machines and materials.

VISADEX can tell you what you need to know at a glance. VISADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much... VISADEX, in short, affords greater control at less cost, besides keeping records secure.

Our VISADEX Representative will be happy to show you, without obligation, how simple VISADEX is to operate—either with Card Pockets or Brass Card-holders—and how easily it can meet your specific requirements.

LONDON LETTER

BRITAIN AND NEHRU

HANDSOME TRIBUTES ALL ROUND

(From Our Own Correspondent)

LONDON, *30th May*

THE national Press and all organs of opinion have made clear this week the basically high regard in which Mr. Jawaharlal Nehru was held in this country and have put into their place those differences and misunderstandings which have irritated the relations between Britain and India from time to time. The tributes are warm and spontaneous and generous from all parties and all interests of influence and British opinion joins with Indian not only in its sympathy in India's loss (which is seen as much as a world loss) but in its sincere anxiety that the succession of power will be smoothly, surely and peacefully achieved.

How does Britain then remember this first great statesman of the resurgent countries to become a world figure? Time enough has passed since the Chinese invasion to have mellowed the criticisms which were made over Goa and which have continued over Kashmir. Mr. Nehru then is criticised only for his rigidity (in British eyes) in being so sure he was right. Even today where most British opinion tends to see Kashmir as fundamentally an Indian problem in which Britain cannot be involved, there is only regret that this British "neutrality" should be interpreted as a leaning away from Mr. Nehru's own solution. But these matters are only to be mentioned in passing and in no way as affecting the "bigness," on the international scale, of the Indian Premier. In little more than a month Mr. Nehru was expected here for the Commonwealth consultations and already his presence is missed in anticipation. A Commonwealth conference without Nehru will seem to lack its key figure.

Indeed, outside directly Indian matters, Mr. Nehru's role in Commonwealth affairs is seen as his greatest contribution. The Commonwealth has during the last few years (though the process dates from soon after the war) been held together with increasing difficulty. The *Economist*—much more a pro-European and pro-international journal than a protagonist for the Commonwealth—has paid this tribute to Mr. Nehru: "to have done more than any other man to make possible, *if not sure*, the transformation and survival of the Commonwealth." This is high praise and not lessened by a deep appreciation of India's contribution to United Nation's affairs. For opinion in this country has understood how the Indian Premier saw in the association of the countries of the Commonwealth, with their differences of race, religion and economic development, one of the most important factors in building up the brotherhood of man. He was a greater Commonwealth man than most British leaders, not—as shallow critics sometimes said—for what India could get out of it, but for what the world could gain from it. The *Times* saw his influence, "in whatever sense the Commonwealth was regarded: as a multi-racial but equal group; as an assoication devoted to mediation in the world; as a body in which certain political standards survived..." as a measure of his greatness. So the strengthening of the ties of the new Commonwealth in July might be the greatest monument that India's sister nations could offer Mr. Nehru.

Appreciating the departed leader as the architect of India's drive to modernisation, the general comment here is that India's influence has extended much beyond her national boundaries. His vision led the way not only for India but for all the emergent countries. Probably in the popular mind that is how he will mostly be remembered—the man who wanted a "modern, scientific country...most easily made angry by silly people who minded most about superstitions." His secularism is understood, a secularism which was concerned to break down communalism and which stood for a merging of Muslims with Hindus as Roman Catholics and Protestants are merged in this country. The *Economist* comments again: "It was one of the shining paradoxes that surrounded this great man that the deeply conservative and religious masses of rural India accorded such reverence to an avowed agnostic, determined to break through ancient obstructions to modernisation."

Like all outstanding leaders, Mr. Nehru was alone. For this he has his critics here who comment that a national leader should bequeth a "smoothly working structure of leadership to a clearly designated successor." The Prophet Elijah did it, but even the Lord Christ failed to do it! It is of the nature of some struggles that they must be fought alone. This is not fully appreciated here—and indeed it may not be elsewhere. So one English friend of the Indian Premier thinks he should have split Congress into right and left and forged out of the left an organised socialist party with a fully established pattern of leadership. Yet even the British Labour Party only within the last year narrowly averted civil war! No, this is the price a country must pay, when, in a revolutionary development, it has the fortune to find a leader able to cope with, even at the sacrifice in the end of his own life, the vast problems that confront it. Loneliness is the price and somewhat also the measure of greatness, but the hearts of the British people do go out to India that worthy successors who will pursue the great ideals of Mr. Nehru will be found.

BRITAIN'S OVERSEAS AID AT HIGHEST-EVER LEVEL

The British Government's annual expenditure on aid to developing countries, which doubled between 1957 and 1961, probably reached its highest level ever last year, said Mr. Robert Carr, Secretary for Technical Co-operation, at the annual dinner of the United Nations Association in London on 26th May. In these years, Britain's annual aid expenditure rose from £80,000,000 to £160,000,000. After a drop in 1962, it rose substantially last year and looked like being the highest ever. It was the Government's intention, he said, to provide an expanding programme of financial and technical assistance.

Last year, there were nearly 65,000 oversea students in Britain—one-tenth of all the students in full-time education and three times as many as in 1950. Of the oversea students, 50,000 came from the developing countries. Also, "in spite of the shortage in this country," Mr. Carr disclosed, some 1,600 British teachers—350 of them at university level—left Britain last year to serve in the developing countries, alongside the much larger number already there.

Last year, some 19,000 British men and women were serving in the developing countries under the auspices of the British Government—in such fields as education, public administration, medical services and agriculture. Including volunteers, the numbers recruited annually under British Government auspices rose by over 50 per cent between 1961 and 1963.

(Concluded from next column)

years, which would enable most long-term projects to earn enough to liquidate their costs.

Third, the Government should make long-term exchange losses allowable as a charge against tax, so encouraging companies to borrow abroad in foreign currencies in the cheapest market. Such a measure would simultaneously, of course, strengthen the balance of foreign payments.

I have only one serious objection to raise against Mr. Merrett's line of reasoning and the conclusions he derives from it, an objection which may be slightly more valid in British conditions than in some other countries. There is no trouble about distributing a larger proportion of earnings: the greater part of the increase will undoubtedly be saved and re-invested through the capital market. But a major switch from equity to debt financing implies a corresponding shift in the preferences of investors, and I doubt whether this can easily be induced without a sharp rise in long-term interest rates.

It may have been rising prices which first caused stocks to gain in popularity at the expense of bonds, and the rise in prices may be much slower in the future. But, until there is a serious and prolonged recession, I think, the movement is irreversible. The gap between the yield on debentures and the effective yield on stocks may still be unrealistically wide—which is one argument, while Governments hold down interest rates, for remaining a bull of the stock market.

But a major switch to debt financing would have the effect of narrowing this gap—of raising the yield on debentures as well as lowering that on stocks—and largely cancelling out the stimulus to increased industrial investment at which Mr. Merrett is aiming.

SELF-FINANCING IN INDUSTRY—HOW FAR?

By Questor

IT seems unlikely that a Labour Government, if it comes to power in Britain in the autumn, will be as hostile to business as some businessmen fear. The party's overriding commitment, after all, is to produce faster and smoother long-term economic growth than the Conservatives, and it is probable that one of its chief aims in its first period of office would be to ensure that it obtained a second term. But on one issue, however predictably, it has already blotted its copybook. It has declared its intention of taxing profits distributed as dividends more heavily than profits retained in the business.

This is not a new policy. It is only recently, in fact, that the Conservatives abolished tax discrimination of this kind. There are two arguments put forward to support it—first, that a high rate of ploughback encourages heavy capital investment, second (and more relevant at the moment), that anything which discourages the rapid growth of dividends and capital values will make it easier to persuade trade unions to moderate their wage claims.

A Labour Government, less accustomed than the Conservatives to the ways of business, is less affected by the arguments on the other side, which have led some countries (Germany, for example) to impose a discriminatory tax on profits which are not distributed. The gist of these is that self-financing tends to make the existing industrial structure rigid and can lead to undesirable concentrations of economic power.

In fact, the extent to which industry depends on retained profits to finance its capital expenditure varies very widely from one country to another. During the nineteen-fifties as a whole, it ranged from 37-38 per cent in the U.S., Britain and France to nearly 50 per cent in Germany and over 60 per cent in Japan: a high degree of dependence on external finance is obviously not incompatible with rapid growth.

But a significant distinction can also be drawn between types of external finance—fixed interest (including bank loans as well as debentures) and equity. An economist employed by an international oil company, Mr. A. J. Merrett, has argued in several articles published over the past few months that British industry leans too heavily on equity capital and should move towards the European pattern.

His reasoning is that the yield on equity investment over a period of years, taking account both of dividends and capital appreciation, is very high—some 8-10 per cent on average after tax. This is several times the yield on debt capital. It follows that the firm which finances itself primarily out of equity capital can invest only in projects which are much more profitable than those open to firms which borrow primarily at fixed interest.

The same is true of the firm which relies heavily on ploughed-back profits to finance its expansion: these are funds withheld from the stockholder and are expected to earn the same rate of return as would capital raised by a new issue of equity.

At the same time, self-financing is inflexible, since retained profits are fairly constant while the need for investment capital tends to fluctuate. At one moment the firm is over-flush of funds, which is not only an inefficient use of long-term capital but probably encourages it to reduce its dependence on external loans still further. At another moment its investment needs exceed its funds, and it may well be tempted to trim back or phase out its capital programme rather than borrow heavily in the market.

From this line of reasoning, which seems to be as relevant to the U.S. as to British conditions, Mr. Merrett derives three practical conclusions. First, he suggests, legal changes should be made to rehabilitate the preference share, which is more flexible than the debenture: it can be either redeemable or irredeemable, and interest payments on it can be postponed if no profits are being earned.

Second, the commercial banks—which are tending more and more to supply long-term finance in the form of loan limits with a firm undertaking to renew attached to them—should be encouraged to take in medium-term deposits and supply term loans of a period, say, 5-10

(Continued in previous column)

EXPANSION OF BRANCH BANKING

PROGRESS OF POLICY AND PROGRAMMES

IT is the responsibility of the Reserve Bank of India, under Section 23 of the Banking Companies Act, to regulate the opening of new branches of banks. Every banking company is required to obtain a licence from the Reserve Bank of India for opening a new office. Before granting a licence, the Reserve Bank will satisfy itself regarding at least five matters: the financial condition and history of the applicant bank, the general character of its management, the adequacy of its capital structure, the earning prospects of its assets structure and the extent to which public interest will be served by the opening of the proposed branch. Within this broad framework of basic requirements, the main objects of the Bank's policy have been twofold: first, to regulate the opening of new offices of banks in such a manner as to assist the sound development of banking system, and secondly to regulate it in such a way as to enable the banking system to meet the growing requirements of the country.

The report on the *Trend and Progress of Banking in India* for 1963, traces the origin of the Reserve Bank's policy and reviews the performance in the light of the aforesaid requirements and aims.

Although the proposals for a comprehensive banking legislation for fostering the growth of banking on sound lines were under consideration ever since the Reserve Bank first reported on the need for it in 1939, they could not, for various reasons, materialise till 1949. Meanwhile, expansion of branch banking showed several undesirable characteristics. Under the impetus of war, there was indiscriminate growth of bank branches: on the one hand, there was undue concentration of branches in the larger cities and, on the other, a mushroom expansion of branches by several small banks resulting in high capital expenditure beyond the resources of banks. The provisions of draft Banking Companies Bill 1946 were, therefore, separately enacted into a small Act—Banking Companies (Restriction of Branches) Act, 1946: to this date, the statutory powers of the Reserve Bank to license the opening of branches by commercial banks are based upon this original legislation and are substantially the same.

In the initial years, the Reserve Bank was cautious in licensing new branches: for, in addition to the unhealthy nature of war time expansion, the post-war and post-partition strains dictated the need for caution. In fact, as pointed out in the Reserve Bank report, there was an almost continuous decline in the total number of bank offices from 4,886 in 1946 to 4,021 in 1953, owing to the closure of uneconomic branches the numerous bank failures and the movement towards amalgamation and consolidation of the banks, mainly in the South and in Bengal.

Turning Point

The year 1954 was, however, a turning point for Indian banking in many ways: so too, in the sphere of branch expansion. Not only was the declining trend reversed by 1954, but there was actually a steady increase in the number of bank offices since then. By the time the Second Five-year Plan got into momentum, there was an urgent need for mobilisation of resources in every possible way, for financing economic growth. It was then realised that, in order to bring within the banking fold, the new incomes which were being generated in the developing regions of the country, it was necessary to extend the network of bank branches into the rural and semi-urban areas. Having gained considerable experience in the administration of the Banking Companies Act, the Reserve Bank was also prepared to liberalise its policy of issuing licences for opening branches. In the post-war and post-partition years, it may be noted, the Reserve Bank of India was weighed down by its responsibilities in relation to more than 700 banking companies, but by mid-fifties, the problems of rehabilitation or reconstruction were more or less under control and the Reserve Bank was prepared to take the initiative in regard to promotional measures. Thus, a fresh impetus was provided to branch expansion towards the close of 1956. The extent of liberalisation is apparent from the fact that, while a total of 791 licences for opening new branches were issued during the six years between 1951 and 1956, almost as many licences were issued during the next two years.

Since 1954, when the trend was reversed, the commercial banks have so far opened a total number of 2,373 new offices, or an average of 237 offices per annum. If the reckoning is made since 1957, when the pace of branch expansion quickened under the impetus of the Five-year Plans, the total number of new offices opened comes to 1,969, or an average of 281 per annum.

Costly Affair

Opening a new branch office is a costly affair. With increasing shortages of residential as well as office accommodation in both urban and semi-urban areas, banks have to pay exorbitantly for acquiring premises. Even so, suitable premises are not always readily available. In many cases, banks have had to construct their own premises, or to carry out substantial alterations. Under the increasingly fierce competition for deposits, the decor and the appearance of bank branches is also changing, involving further costs: all the neat and trim counters, elegant panels, soft lighting and cushioned sofas in waiting lounges are, however, not merely for the sake of appearances. Customers and staff have come to regard them as minimum conveniences of banking.

Apart from premises, the industrial awards have regulated the wages of bank 'workmen' since 1951, involving substantial increase in expenses, particularly as the wages have been linked to the ever-rising cost of living index. The increasing number of branches have necessitated heavy recruitment of personnel. Moreover, fresh recruits have to be trained into the ways of banking and experienced hands have also to be trained and retrained periodically through refresher courses in order to enable them to maintain their efficiency and keep pace with the latest developments in the methods and techniques of banking.

With increasing number and size of bank branches and complexity of business, all this cannot be done haphazardly. In order to plan the branch expansion programmes methodically and carry them out systematically, many banks have had to organise development departments and, in order to maintain harmonious relations with the staff and customers, they have also had to have personnel and public relations departments and officers. Above all, under the pressure of competition, many branches are opened a few years before they can be expected to pay their way: even in developed areas, it will ordinarily take four to five years, for a branch to start earning.

Having regard to all these considerations, the development of branch banking in the country during the past decade or so should be considered as satisfactory. At the end of 1963, the total number of offices of the scheduled and non-scheduled banks was 5,032 and 510, respectively, or a grand total of 5,542, as against 2,646 and 1,473 respectively (total 4,119) at the end of 1951. This net increase of 1,423 in the branches of commercial banks in our country consists of a rise of 678 offices of the State Bank of India, 1,708 offices of scheduled banks other than the State Bank of India, partly offset by a decline of 963 offices of non-scheduled banks. The progressive decline in the number of non-scheduled bank offices has been the result of a conscious policy of the Reserve Bank of India of closing down uneconomic branches, winding up unsound banks, and merging or amalgamating small banks with larger or well-managed institutions in order to make them viable and efficient. Even the Reserve Bank of India recognised, in a circular letter addressed to the banks in the middle of 1962, that the progress of branch expansion during the decade covered by the first two Five-year Plans was broadly satisfactory.

In spite of this expansion, the Reserve Bank has held the opinion, albeit since 1960, that one of the main objectives of branch expansion, namely, the expansion of banking facilities to rural and semi-urban areas, has not yet been fully achieved. As a measure of the tasks awaiting the banking system, the Reserve Bank at first pointed out that, out of 3,018 towns in India, 1,400 towns were still without any banking facilities at the end of 1960, and that there was an urgent need, in the public interest, for the provision of banking facilities in the vast rural and semi-urban areas not served by any commercial bank. When the results of 1961 census were available, the figures pertaining to unbanked towns were revised and it was pointed out by the Reserve Bank that, at the end of March 1962, there were as many as 1,017 towns without any office of a scheduled, non-scheduled, or co-operative bank out of a total number of 2,690 towns (on the basis of the revised classification of towns).

More up-to-date data are now available, though these are not mentioned in the report of the Reserve Bank under review. The Finance Minister, for instance, informed Parliament some time ago that the number of unbanked towns had come down further to 990. Secondly, the report on the *Trend and Progress* itself points out that, since August 1962, permission has been granted or licences have been issued for opening 563 new branches, of which 226 are to be in unbanked centres, and that the number of offices actually opened at places which were not served by any banking office earlier were 45 in 1962 and 124 in 1963. Indications are that the total number of unbanked towns as at the end of March 1964 may not be very much above 800.

To return to the main argument. There can be no doubt that opening of new branches in such areas as also in the suburban areas of cities would not only assist mobilisation of deposits, but also provide better service to the community: but one cannot say that each one of the 1,017 towns is fit enough to have a branch of bank, for the potentialities of these towns have not been investigated. In July, 1962, the Reserve Bank supplied a list of 1,400 towns to the banks and promised to follow it up with a revised list of towns on the basis of 1961 census. This promise, it would appear, has not yet been fulfilled. But even if such a list is supplied, there is no point in opening a branch in each one of the towns, unless it offers scope for deposit mobilisation or credit services. More than 17,000 postal savings sub-banks are already serving some of the smaller towns: what is the point in duplicating costly facilities at centres where the existing postal savings banks can mobilise deposits much more actively and at a considerably lower cost.

Commendable Achievement

All this, however, need not be regarded as an argument against pushing the frontiers of branch banking into the rural and semi-urban areas: banks themselves go to such areas, if it is worthwhile. In addition to the 1,673 towns out of the total of 2,690, there were more than 700 smaller centres which could not qualify for township under the census definition, but which possessed banking facilities. What one wishes to emphasise here is the point that, in planning and implementing bank branch expansion programmes, attention must also be paid to the inherent limitations and to the costs involved. Even the State Bank of India, in spite of drawing a subsidy of about Rs. 1 crore over a period of seven years for financing losses of new branches, and in spite of the automatic inflow of Government and semi-Government deposits, has considered the task to be beyond its own means and capacity for the present. There is, therefore, no exaggeration in saying that commercial banks have been doing an equally commendable work in pioneering new branches with their own resources and efforts.

It appears that an appreciation of these factors has convinced the Reserve Bank of India to allow banks to formulate co-ordinated programmes of branch expansion embracing areas devoid of banking facilities and suburban areas of urban centres as well as towns of commercial and industrial importance which offer scope for further additional offices, in spite of the existing banking facilities that they enjoy: a judicious combination of the two types of centres and towns has to be allowed, if the overall financial position and earning capacity of a bank is not to be adversely affected. It is gratifying to learn that the Reserve Bank is operating its newly evolved branch expansion policy along these lines. How far it will yield results, only the future can tell.

HARVEYS STEP UP THEIR INDUSTRIAL FABRIC PRODUCTION!

Now they can serve more industries than ever!

Harveys' Madura Mills—India's largest producers of industrial fabrics—have to date been supplying leading manufacturers throughout the country with a wide variety of light, medium and heavy industrial fabrics. The installation of additional new high speed looms and up-to-date precision machinery-among the world's most modern-*now enables Harveys to accept many more orders of varied character.*

Why you should come to Harveys:

Harveys never compromise on quality. Harvey industrial fabrics are equal to the world's best. The most modern machinery...highly experienced and skilled technical personnel...and relentless testing at every stage of manufacture—ensure that all Harvey fabrics are of unbeatable quality.

Harveys can manufacture to a variety of specifications. Whether it's Rayon Warp Sheet for tyres, or Canvas for the Shoe, Tent and allied industries—Harveys can produce it! Every yard of Harvey industrial fabrics conforms rigidly to specifications—a fact that has won Harveys the confidence of manufacturers in India and abroad.

PAKISTAN'S COTTON INDUSTRY

BOTH QUANTITATIVE AND QUALITATIVE PROGRESS IMPRESSIVE

PAKISTAN is recognised as an ancient land of cultivated cotton. This king of fibres has been spun into yarn in that part of the Indo-Pak sub-continent, now known as West Pakistan, since times immemorial. Archæological excavations in (Mahenjodaro) the Indus basin, where civilisation flourished between 3300 B.C. and 2700 B.C., have revealed that the small pieces of fabrics discovered there were made of indigenous cotton. And, in East Pakistan, the stories of Dacca weavers producing very fine muslin are well known. The history of modern cotton in the areas now forming Pakistan began with the inception of the twentieth century when successful attempts were made to acclimatise American Upland seeds in the canal-irrigated areas of West Pakistan, and the cultivation of American type cotton was taken up on a commercial scale. The improvement that has been brought about in the quality has been commendable, thanks to the research, irrigation and improved agronomical practices. Pakistan cotton is famous for being long-staple and finds ready response in world markets. The American varieties have taken to the soil and climate of West Pakistan and now nearly 87 per cent of the area and 90 per cent of production of cotton in that country consist of these varieties. They are now being grown in well defined zones, extending north to south along the Indus basin of West Pakistan.

Pakistan had a small cotton textile industry at the time of partition in 1947. It was not adequate to meet the domestic requirements of cotton yarn and piecegoods. Imports of cotton manufactures were, therefore, large and the major portion of raw cotton output was exported. It is only natural that, as an independent country, Pakistan should have decided to process its fine cotton rather than export it. And it has succeeded remarkably in this direction. The progress of Pakistan's cotton textile industry has been remarkable. Whereas in 1947 there were 17 mills, there are now as many as 200. The mills in Pakistan are producing a wide variety of clothing and not only that the country is self-sufficient in the home requirements of clothing, but sizable quantities are also available for exports.

The growth of cotton textiles industry in Pakistan has to be seen in the larger perspective of industrialisation of that country. At the time of establishment of Pakistan in 1947, there was very little manufacturing industry. Immediately after partition, Pakistan lacked the manufacturing capacity, industrial credit facilities, technical and technological institutes and research laboratories. The Government of Pakistan, in order to achieve a reasonable measure of economic security, framed a new industrial policy replacing the pre-partition industrial policy. According to the new policy, the Central Government acquired rights to own and operate the manufacture of arms and ammunition, generation of hydro-electricity and manufacture of railway wagons, telephones, telegraphs and wireless apparatus. The rest of the industrial sector was left free to private enterprise.

In July 1951, the Government of Pakistan drew up a six-year Plan (1951-57) in which the industrial sector had a fair share. On this plan was later superimposed a Two-year Priority Programme which had as its aim the achievement of self-sufficiency in respect of certain basic needs of life as, for instance, clothing. The progress was still below the required mark. The indigenous capital was proving very shy mainly for two reasons. First, there was no tradition of industrialisation and there was uncertainty about the yield on investments. Secondly, the commercial sector was yielding quicker dividends than the industrial sector. The Government, therefore, decided to stimulate industrial progress by taking an active part. The Pakistan Industrial Development Corporation was established as a semi-public organisation, its main objective being to enlist participation of private capital in conjunction with public funds. Besides, the Central Government also granted tax concessions and provided long-term credit facilities through the establishment of Pakistan Industrial Finance Corporation and Pakistan Industrial Credit and Investment Corporation. After this, the story of the industrial sector is one of steadily upward progress. The progress of some individual industries, including cotton, has been spectacular. The production of mill-made cotton cloth in Pakistan increased from 88 million yards in 1948 to 629 million yards in 1960, an increase of 615 per cent.

In the Development Programme for 1951-57, a sum of Rs. 21 crores was earmarked for the development of cotton textile industry. It was envisaged that, at the end of this period, the production of cloth would be about 1,350 million yards (including the production on handlooms). It may be noted, in parenthesis, that no data are available on the progress of handlooms and the information that follows pertains only to the mill industry. During the period (1951-57), 600,000 additional spindles were to be installed. By 1955, the installed capacity had exceeded the target. There existed, as of that year, 1,683,000 spindles and 26,000 looms. The production of the mills was more than 300 million yards of cloth and 384,000 bales of yarn. As the production of cloth and yarn increased at home, the imports of cloth and yarn declined from 226,000 bales and 200,000 bales in 1951 to 20,000 bales and 8,711 bales, respectively in 1955. This had its effect on *per capita* availability of mill-made cloth in the country, which increased from 5.2 sq. yards in 1948 to 13.4 sq-yards in 1955. It will be noticed from these statistics that, by the time the first Five-year Plan (1955-60) was launched, the cotton textile industry in Pakistan had made considerable improvement and development.

The first Five-year Plan envisaged an additional investment of Rs. 41.20 crores in cotton industry and the installed capacity was expected to increase to 2.2 million spindles and 38,695 looms. The actual position at the end of the first Plan period was that the number of spindles was 1,928,000 and the number of looms about 30,000. The number of textile mills had increased to 193; of these 95 were in West Pakistan, with 63 in Karachi alone. As much as 34 per cent of the total industrial labour was employed by the cotton textile industry. The value of the total output of the cotton industry rose to Rs. 100.80 crores, constituting 22 per cent of the value of the total national output. The cotton industry's share in the national income of Pakistan was 28 per cent.

The second Five-year Plan (1960-65) proposed to increase cotton textile manufacturing capacity from 1.93 million spindles and 30,000 looms in 1960 to 2.5 million spindles and 40,000 looms by 1965. The increase in capacity target was relatively modest, as compared with the progress made in the previous decade, but that was understandable in view of the fact that the scope for further growth was limited and the available resources had to be utilised for bringing about a diversification of industries. The progress that is being made by the Pakistan textile industry in attaining the second Plan target seems to be satisfactory. By the end of 1962, it had 2.15 million spindles and 32,000 looms.

In addition to the mill sector, Pakistan, too, has, as does India, a sizable decentralised sector. No data pertaining to powerlooms are available, but the number of handlooms is placed at more than half a million. The estimated total production of the decentralised sector is 600 million yards of cloth. This compares with 725.2 million yards of cloth produced by the mills in 1962 and 778.3 million yards in 1963. The quantity of yarn spun by the mills in these years is placed at 432.2 million lbs. and 565.8 million lbs., respectively.

The following figures show at a glance the growth of cotton mill industry in Pakistan in terms of its capacity:

Year	Spindles	Looms	% of automatic looms to the total
1953	1,365,000	10,000	14
1955	1,683,000	26,000	N.A.
1961	1,998,000	30,000	60
1962	2,145,000	32,000	61

N.A.=Not Available.

It will be noted that more than two-fifths of the loomage is automatic. Being essentially a post-war growth, the Pakistan cotton mill industry is highly modern and, as such, its competitive capacity in world markets is pretty high. As between East and West Pakistan, progress made by cotton textile industry in East Pakistan has been comparatively slow, but this situation is being rapidly remedied as orders for the installation of more spindles and looms have been placed and it is expected that, by the end of this year, 24 new textile mills with more than 300,000 and 5,000 looms will come into operation in East Pakistan.

A brief reference may be made here to the position of cotton also in Pakistan. According to the final estimates of cotton crop for the year 1963-64 released by the Department of Marketing Intelligence and Agricultural Statistics, Government of Pakistan, the country has exceeded the target of production of 2.3 million bales of cotton for the second Five-year Plan period, one year ahead of schedule. The cotton crop for the current season is estimated at 1,983,000 bales of 478 lbs. each which shows a significant increase of about 15 per cent over the corresponding estimate for the previous year. The table below shows the latest statistics regarding production, consumption by domestic mills, imports and exports of cotton:

	(In thousand international bales of 478 lbs. each).			
	1959-60	1960-61	1961-62	1962-63
Supply				
Opening stocks	275	200	240	360
Production	1,360	1,405	1,510	1,635
Imports ..	5	5	42	9
Total ..	1,640	1,610	1,792	2,004
Distribution				
Consumption	1,100	1,125	1,130	1,150
Exports	334	245	301	685
Closing stocks ..	200	240	360	165

An important point that emerges from the above table is that, between 1959-60 and 1962-63, exports of cotton have more than doubled, despite the continuous growth in domestic consumption. This has been possible because of the gratifying expansion in cotton production. It is worth noting that production this season represents an increase of 623,000 bales of 478 lbs. each, or about 50 per cent over that five years ago, a commendable performance indeed, when compared with the sluggish growth in the production of cotton in India.

In qualitative terms, Pakistan's staple varieties of cotton are grouped as medium-staple cotton which constitutes about 85 per cent of the world production of cotton. These cottons face the biggest competition in the world markets. In accordance with some technological tests carried out by the U.S. Department of Agriculture, the Pakistan staple cotton has been recognised as having the highest rating in fibre strength, maturity and uniformity as compared to the corresponding foreign growths. This factor in the main explains the popularity of Pakistan cotton in the world markets. The domestic cotton textile industry is now consuming about 70 per cent of the domestic production of cotton. As the indigenous textile industry is gradually advancing towards high spinning, the need for longer staple varieties is increasing. The quality of Pakistan cotton and the rate at which development is taking place in the cotton textile industry of Pakistan warrant the hope that, with the added accent on modern cultivation techniques and plant protection measures, the production targets in Pakistan would be achieved according to the schedule and that Pakistan will continue to produce enough cotton to retain its share of export trade of cotton in the world markets.

I.C.M.F. JOURNAL

The Indian Cotton Mills' Federation has just begun publishing a monthly journal, the first issue of which pertains to May 1964. "The *Journal*," says the Chairman of the Federation, Mr. Ramnath Podar, "removes a long-felt need." He hopes that "it will be one more link in bringing the Federation closer and making it more serviceable to its member-associations and to the mills." The *Journal* proposes to carry special articles and studies, to reflect the activities of the Federation and member-associations, to include statistical and other information together with tables and graphs and to provide a survey of world developments in cotton, textiles and the general economy.

The first issue of the *Journal* covers a wide variety of subjects, ranging from national production of cotton and the difficulties faced by the producers to an international survey on cotton production.

The *Journal* has made an impressive start. The contents of the first issue warrant the hope that it will prove useful to cotton textile industry, in particular, and the trading community, in general.

MANCHESTER LETTER

RE-EQUIPMENT—THE FINAL PHASE

TEXTILE MACHINERY EXPORTS AT PEAK LEVELS

From Our Special Correspondent

MANCHESTER, *26th May*

EXPORTS of British textile machinery in the first quarter of the current year already show signs of breaking new records. Compared with 1963, shipments were practically 10,000 cwt. higher at 431,484 cwt., the value of these goods increasing by over £1,500,000 at £19,224,000.

Compared with some years ago when India and Pakistan dominated the overseas market for textile plant, shipments are now much more widely spread among individual countries. Pakistan has regained the lead as chief importer, having absorbed 54,162 cwt. in the first three months of 1964, as against 38,517 cwt. Shipments to the Soviet Union amounted to 31,061 cwt., as against 33,339 cwt., but trade with India has fallen back from 46,919 cwt. last year to 31,052 cwt.

Other leading buyers of British textile plant in the first quarter this year were (with 1963 comparisons): Egypt 29,773 cwt. (10,840 cwt.), Australia 21,263 cwt. (23,903 cwt.), Spain 20,560 cwt. (13,984 cwt.), South Africa 19,623 cwt. (26,791 cwt.) and France 16,132 cwt. (11,581 cwt.).

Better Basic Position

Fewer violent fluctuations in trading and prospects of more stability in textiles are forecast in a rather more optimistic survey of conditions than the Cotton and Rayon Merchants' Association usually provides in its annual report. Commenting on the situation at the end of 1963, the Association says that the industry seems to be in a better position basically and the outlook is more encouraging than it has been for some time.

Home trade consumption of woven cotton and man-made fibre cloth is now estimated at around 2,400 million yards annually. This compares with some 2,300 million yards only five years ago. "Since exports account for another 300 million yards," says the report, "and the volume of imports is now largely contained, a glut of woven textiles seems less likely in the foreseeable future."

Meanwhile, the merchanting section of the trade has continued to contract, no less than the producing branches. The Association points out that, since 1955, about 650 converting firms have ceased to be liable for the levy paid to the Cotton Board. The paradox of the complete absence of short-time working in the industry without any substantial improvement in margins, is largely explained by the direct effect of imports on the cotton side, according to the report. After dealing in detail with the action taken by the Government to control arrivals from many sources, the Association gives qualified approval to the new system requiring specific individual licences.

Reorganisation Scheme

In six weeks' time, the final date for completion of the cotton reorganisation scheme will have been reached. So much has happened since the autumn of 1959 when the venture was first launched that the trade itself has already taken on a new shape.

In the first quarter of 1960, the sledgehammer blows which heralded the physical scrapping of plant were indicative of a widespread readjustment of machine capacity under which many mule spindles and a large number of non-automatic weaving machinery was dismantled. Subsequent financial deals have led to further concentration and renewed disposal of obsolete plant.

Re-equipment has been proceeding steadily in the meantime but the completion date after which no Government grant will be provided against the purchase of modernised machinery is 8th July 1964. Unless the plant is actually installed by the date, no subsidy will be paid.

Considerable Orders

Actual orders for machines had to be confirmed by July last year in order to qualify for the grant and, according to a statement made by Sir Kenneth Preston, Chairman of Stone-Platt Industries, one of the largest textile Machinery groups in Britain, a considerable volume of orders was received by the final date. Those mills taking advantage of the scheme should achieve productivity figures on their new machinery comparable with the best in the world, he added. Although the provisions of the Act allowed millowners to buy machinery from any source at home or abroad, more than 90 per cent of the contracts for spinning plant were placed with the Stone-Platt group.

The movement towards the fully automatic mill gathers pace and there are already signs that this objective is not very far ahead. A full-scale pilot plant, Sir Kenneth revealed, has now been installed in a Lancashire mill; the economies of its operation are being assessed in comparison with the latest conventional equipment. Also being developed is fully automated dyeing machinery, while a co-operative project by several of the subsidiaries of the Stone-Platt group is manufacturing for Egypt the largest individual combing plant in the world.

"A Busy Year"

Coincidentally, two of the big textile groups which have been involved in a year of takeover deals have issued their reports within a week or two of each other. Mr. Joe Hyman's comments with the Viyella accounts have already been widely quoted; now comes the turn of Sir Cyril Harrison, whose tripartite arrangement with I.C.I. and Courtaulds to absorb Tootal can be said to have started the ball rolling just over a year ago.

Sir Cyril's statement contains more details of the individual subsidiaries of the group and their progress than commentaries on policy, but, in general terms, he describes the developments in 1963 as "a busy and eventful year." The acquisition of Tootal supported by the man-made fibre products, has brought the assets employed by the company from £19 million to £39 million in the past decade.

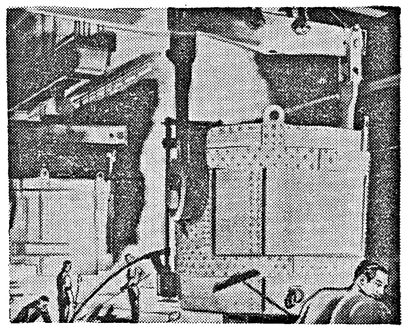
"We have not sought expansion for its own sake," he adds. "Our approach to investment has been guided throughout by the intention to augment the value of stockholders' investment and to make secure the employment and well-being of our employees in all grades."

Further Developments

The E.S.C. group, the Chairman says, has made good progress in the development of new threads, including a major development in thread dyeing using the latest electronic devices. A new spinning plant is being built in North Carolina, and a further thread business has been acquired in Australia. The knitting division of the Company has been expanded and reorganised, and a major concentration of cloth converting has taken place to adjust distribution to changing trading conditions in marketing.

On the financial side, £6 million have so far been borrowed from I.C.I. and Courtaulds out of the £10 million originally provided. After allowing for the sale of properties and consolidation of operations following the Tootal deal, between £3 and 4 million will be left for investment in existing plans and extending the business. Sir Cyril makes it clear that further expansion is to follow. Acquisitions, he says, will be in line with the past policy of the Board of operating "within the field of our present business and our management competence."

DEVELOPMENTS IN THE EAST



With the improving living standards in the East comes the prospect of trade expansion and of increasing opportunities for profitable marketing. The world-wide facilities of three great banking organizations, merged into a single comprehensive service, are at your disposal with up-to-date information and expert advice on all aspects of finance and trade in these areas.

BUSINESS NEWS FROM EUROPE

PROBLEM OF KEEPING PRICES DOWN

SOLICITUDE FOR CONSUMERS IN RUSSIA INCREASING

From Our Special Correspondent

WITH rising prices threatening most of the European Economies, one issue is uppermost in the thoughts of Finance Ministers and central bankers: disinflation. Only Norway, Austria and West Germany are relatively safe from inflation at the moment and only Norway is the safest from its effects. Germany is threatened by the rise in prices in the Common Market—and, in particular, importing inflation from France and Italy—and Austria is anxiously watching wage demands begin to build up pressure.

Outside Europe, the same pressures on national economies are at work. Latin America is plagued by inflation, especially Brazil; the Australian authorities have been energetically mopping up excess liquidity; and the New Zealand Government has been preaching restraint recently. Only the United States and Canada and South Africa are in the happy position of being able to let their economies have their head.

While the inflation that has undermined the booms in Italy and France is undoubtedly the reason for some of the inflation spreading in Europe, most of the price rises are basically home-brewed. Only Germany seriously maintains that its economy is threatened by imports from its Common Market partners. The Dutch would have good grounds for thinking that part at least of their inflation was imported, since France took 29 per cent more exports last year and Italy 38 per cent. But rather more cause in Holland has been the wage agreement last autumn which has set up a spiral effect. And that wage spiral, in turn, was caused by over-employment in the economy. Like most European economies, the Dutch can trace their troubles back to the early 1960s, when a re-expansion programme set in motion forces which are now causing strict disinflationary measures to be taken.

Cut in Spending

The Dutch have had to cut Government and Local authority spending this year by five per cent, suspending initial allowances and the accelerated depreciation facilities for private industry. They have also had to tighten the granting of personal loans, put a brake on hire purchase by increasing (by five per cent) the down payment, make an attack on resale price maintenance and put a ceiling on certain companies' goods. The Dutch Bank Rate went up early this year, as it did in France, Sweden, Belgium and Britain.

The Swiss have never (like the Italians) been keen users of the Bank Rate but they have, instead, used a series of measures to counteract pressure on the economy. Last year, the real growth in gross national product was down to 4.5 per cent (after having been 8 per cent in 1962 and 10 per cent the previous year). By comparison the nominal rate of growth was eight per cent to £4,000 million (11,200 million dollars). The difference between the nominal and real rates is attributed to price increases. Consequently, the Swiss have limited credit, neutralised the inflow of foreign capital, restricted domestic building (where a lot of the pent-up pressure has been) imposed a one-year ban on non-essential building and imposed more limitations on the inflow of foreign workers.

A Curious Move

This last step is a curious move, since it has been felt that only by *attracting* more workers could output be kept at a steadily rising level. Certainly, this is the view of the Belgians, who have encouraged more workers to come in at the same time as there has been a cut back in public spending, restrictions put on consumption and building credits and the higher rate of interest. Falls in the first two months of the year in the cost of living indicate that the Belgians might be getting their inflation under control. At the start of the year, a wage inflation spiral was feared, since prices had risen by five per cent last year, four times as much as in 1962. At the same time, labour costs rose 10 per cent.

The apparent stabilisation in the Belgian cost of living might be a mirage, holding out hope of a false salvation. But at least it gives the Belgians some grounds for optimism, while most of the rest of Europe is merely hoping that its measures will work.

Boom in Plant Leasing

Plant leasing is booming in Britain and making steady growth. And though the industry is not nearly so developed in Europe there are encouraging signs that it is growing almost everywhere.

Plant leasing is the system whereby a firm leases, or hires, plant and equipment from a supplier, usually a finance house or institution, for a set number of years at a fixed rental per month. At the end of the leasing period, the hiring charge normally drops drastically: sometimes, the monthly charge becomes the annual charge.

The system originated in the United States around 1952 and grew quite dramatically. From around £3.7 million (10 million dollars) for the American plant leasing industry in 1952, it grew to £143 million (400 million dollars) in 1960 and is expected to reach £375 million (1,000 million dollars) by the end of next year. It first crossed the Atlantic in 1961 when American finance houses brought their know-how to Britain and helped to set up a small number of leasing firms. British expansion has been slow since then and, until recently, the market has been dominated by three major companies. Now a number of others have joined in, though as yet their contribution to total leasing is negligible.

The three major firms are thought to account for about £13 million of leasing (36.4 million dollars). But, since no authoritative figures exist, these must inevitably be estimates. Last year was a bad year for the leasing firms. Three special difficulties hindered development: since 1962, an unusually high (30 per cent) rate of investment allowance has made borrowing for new plant and equipment much easier; lower Bank Rate (four per cent throughout 1963) also helped; finally, credit restrictions were relaxed in November 1962, along with the return of the special deposits, amounting to £300 million, to the clearing banks. Nevertheless, since last October, there has been a big leap forward in leasing and it is probable that the current rate of new business is now around £10 million (28 million dollars) a year.

It has been more difficult getting plant leasing moving on the Continent, because there is, generally, a greater concentration of businesses in fewer hands and, therefore, fewer difficulties over financing investment in plant.

However, almost all countries have made a start. There are now seven or eight firms in France, two or three in Belgium, two at least in West Germany and three in Holland, in spite of the fact that finance is easier for the Dutch, because the pension funds lend money industrially. In Sweden, three of the biggest banks have built up two leasing companies but total business is very small and only factory time clocks have made any sort of breakthrough.

An important leasing concern for machine tools was set up in France last March with Swiss and American capital, as well as French. It is thought that the scope for the extension of leasing, which only started there last August, is good in France because of the concentration of small businesses. Such firms are being squeezed in France by financial restriction and plant leasing is a way of getting equipment without committing capital reserves.

There are no precise figures for leasing in Germany but German industrial authorities expect that it will reach one per cent of total investment in six years' time, the same figure as America has already reached. This may well be an optimistic estimate; British experience is that it is difficult to attract an industrialist to the concept of hiring rather than owning, even if it is cheaper.

In order to stimulate knowledge in the subject a number of European banks have set up Interlease, with headquarters in Luxembourg, to disseminate information. The banks behind Interlease have already made incursions into France, Belgium, Holland, West Germany, Italy and Spain. Next they hope that they can get the Scandinavian countries interested. Interlease does no leasing itself.

Supermarket Moves in Russia

Mr. Khrushchev's personal initiative following trips abroad is thought to be behind moves in Russia to pay more attention to the consumer. Thus, a supermarket "revolution" is on its way in the U.S.S.R., with the development of self-service stores, pre-packaged foods and official policy statements on the need to placate the shopper. Russia claims to have 16,000 self-service shops, more than any other country with the exception of the United States and West Germany. But, in reality, most of these shops are too small to serve as food supermarkets and can only cater for single lines of goods. More serious in the matter of low retail standards, there is a lack of packaging, and even in Leningrad, a relatively well-organised town from the shoppers' point of view, only 30 per cent of the goods sold are pre-packed. And, for the whole of Russia, only one per cent of its sugar supplies are pre-packed.

Allied with this problem is the difficulty the Russians have in providing efficient storage, so that food, especially vegetables, in the shops is frequently old and often rotten. The interest shown by the Soviet authorities in vegetable processing machinery when a British mission visited them last year is, therefore, an important pointer to trends. That the authorities should be interested in buying such machinery—and from the West at that—at a time when all the available hard-currency reserves are going to buy wheat shows that the consumer food industry is now having higher priority.

This conclusion is backed by the report that an important committee, which includes two Deputy Premiers, is to consider ways of producing chicken and pork in industrial conditions. It might be some time before frozen chicken is as popular, and cheap, an item of everyday diet as it is in Britain and America and before meat is as plentiful as in the West. But that day is coming and things are going to get a lot better for the ordinary Russian consumer.

Travel Happy Germans

With the holiday season once more in full swing, the West German lead as the major European holidaymakers is assured, according to travel agents. From northern Scandinavia to southern Greece, the Germans are confidently expected to top their last year's world-leading spending on holidays. In 1963, West Germans spent £418 million (1,170 million dollars) on foreign holidays. Second biggest foreign holiday spenders, the British, spent £214 million (599 million dollars). By comparison, the United States, the third biggest foreign travel spender, only spent £100 million, though opportunities for travelling across foreign boundaries are less plentiful for Americans and there is no doubt that, overall, they are the greatest holiday spenders of all.

Long holidays (on average three weeks), a high standard of living and little unemployment have all contributed to the West German desire to travel. The result was that, last year, every West German spent almost £8 (22.4 dol-

lends a hand to food grain production

In order to achieve self-sufficiency in foodgrains and to attain the present target of 100 million tons or a per capita consumption of 17.5 oz. a day, we need expand our irrigation system, conserve soil, produce improved agricultural implements, introduce modern techniques of farming, manufacture more fertilisers, build warehouses and storage godowns, provide facilities for marketing and distribution operations.

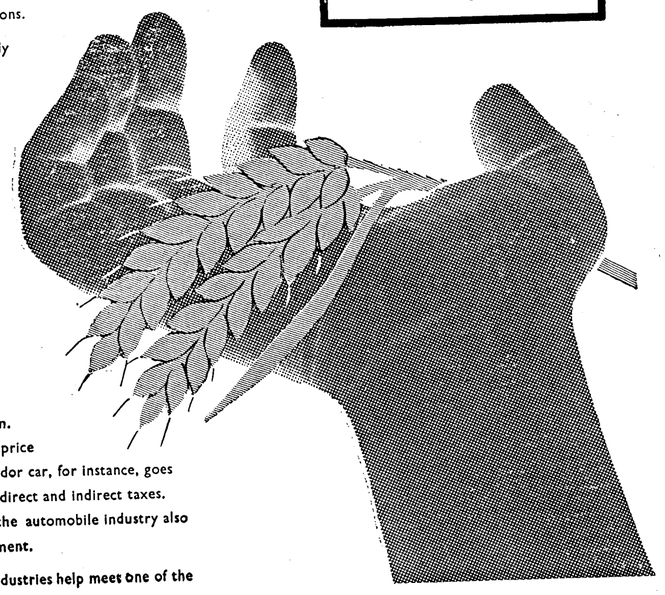
Every one of these operations is largely dependent on the efficient, speedy, economic form of transport provided by the motor vehicle. In the construction of dams and canals or the building of factories and warehouses, road transport helps the quick movement of men and material.

Each vehicle produced by the industry also contributes in a large measure towards the funds required by the Government to meet the cost of the development programme of agricultural production. Fully one third of the "on the road" price in Calcutta of a Hindusthan Ambassador car, for instance, goes to the Government in the form of direct and indirect taxes. Every ancillary industry that feeds the automobile industry also contributes its share to the Government.

Thus the automobile and ancillary industries help meet one of the country's prime needs—food production.

CAR PRICE STRUCTURE :

Government taxes, direct and indirect :	33%
Raw materials, manufacturing and overhead expenses, salaries and wages, depreciation, profit etc. :	25%
Indigenous ancillary components :	24%
Imported components :	11%
Dealer's commission including distribution, service, advertising etc. :	7%



THE AUTOMOBILE INDUSTRY IS A KEY INDUSTRY

lars) on foreign travel as compared with £5.5 (15.4 dollars) for every American. In all, 5.8 million Germans went abroad on holiday, as compared with two million Americans. Such is the standard of living and approach to holidays that some Germans even managed two foreign holidays last year. Thus 14 million West Germans made 15 million holiday trips between October 1961 and September 1962.

Holiday-making is far more accepted among wage and salary earners than among the self-employed. The proportion of the latter who took foreign holidays in 1962 was only 23 per cent, whereas half the white-collar workers took a trip. While Germans go abroad more frequently, West Germany is apparently no Mecca for the foreign holidaymaker. Earnings from foreigners had been practically unchanged for years at £181.8 million (509 million dollars), though the revenue did rise to £221.8 million (621 million dollars) last year. Between 1959 and 1963 the cost of foreign travel in Germany's balance of payments nearly doubled, from £217.3 million (608.4 million dollars) to £414.5 million (1,160.6 million dollars).

Opportunities in Tanganyika

European firms are expected to play an important role in the new five-year plan for Tanganyika, which comes into force on 1st July. Inducements will be offered to foreign investors and some 450 technicians and civil servants will be needed. The plan envisages a gross capital formation of £246 million (689 million dollars), of which the Government will find £102 million (286 million dollars). Some £80 million of the Government's contribution is budgeted to come from overseas under multilateral and bilateral foreign-aid schemes. A large part will obviously come from Britain, but other European nations could make an important contribution to the growth rate.

In order to get the economy moving and ease the balance of payments out of deficit (there is an import surplus on visible trade) an annual industrial growth rate of 14.8 per cent is envisaged. By 1980, this should have doubled the annual income per head from 1961's £19 6s. (54 dollars) to £45 (126 dollars). This implies an annual growth rate of individual incomes of 4.6 per cent over the five years of the plan, as compared with 2.7 per cent over the last eight years.

A Ministry of Development Planning has been set up with a Frenchman as Director. It also has an international team of economists and six Tanganyikan planning officers. To co-ordinate the work of the Planning Ministry, planning units have also been set up in several Government Departments and the regions have been given important roles to play. The mixed economy will, in fact, leave a substantial role to non-governmental bodies. In the gross capital formation, for instance, £10 million (28 million dollars) of the £246 million total has been allocated to local authorities, £18 million (50 million dollars) to the East African Common Services Organisation and £116 million (325 million dollars) to the private sector, including the co-operative societies.

Portugal's Stagnation

Portugal's economy continues to flounder along. A chronic shortage of money, the country's biggest headache, is prohibiting the necessary investment in industry which alone can raise the rate of production, boost exports and produce import-substitute goods. On top of this shortage, the military budget for Angola, in Africa, where a long war of attrition continues although it no longer attracts the headlines, is causing a severe drain on the economy. This running sore was budgeted to cost £64 million (179 million dollars) this year, but it is now thought likely to exceed that figure by a fair margin.

Although prices have remained relatively stable for the past two or three years (precise figures are difficult to obtain from Portugal), there has been little or no rise in the standard of living. As a result, emigration is widely resorted to, much of it illegal.

Two major imbalances plague the economy. Ninety per cent of the country's industry is to be found around Lisbon and Oporto, an uneconomic concentration. And 40 per cent of the population—that employed in agriculture—produces only 25 per cent of the national income.

Tourism is the one bright point in the economy. Tourism rose by some 32 per cent last year to 530,500 visitors, bringing in £12.5 million (35 million dollars) and, although the planned target of one million visitors for this year is clearly an over-exaggeration, there will undoubtedly be an increase. Tourism is now the most important item in the national accounts, more important, even, than cork production.

Equally, *Emigration* is one of the black spots. Between 1901 and 1960, some two million Portuguese emigrated legally, from a country that has fewer than nine million people. In the last ten years, Portugal has lost 400,000—legally. As many again have gone illegally. There are 300,000 Portuguese workers in France alone, as many as in the city of Oporto.

E.E.C. Deadlock on Cereals

A meeting of the Agriculture Ministers of the six E.E.C. nations to discuss a common cereals price has ended in deadlock. The meeting was the first, at ministerial level, to discuss revised plans for harmonising the Community's cereal prices—a vital factor in formulating joint agricultural policies. The West German delegation at the meeting last week would not accept the suggestion that only the basic political principles of a common cereals prices should be decided. Dr. Schwarz, West German Agriculture Minister, said that, if the German Parliament was to accept the plan in its broad aspects, there must be further clarification of the side issues at this stage.

The other five ministers refused to undertake this without German acceptance of the basic principles involved. The proposals for cereal price harmonisation—called the Mansholt Plan after its originator, the Dutch Minister of Agriculture—has been referred to experts for further study. Sources close to the talks here said it was difficult to see what progress the experts could make in the absence of a political decision to go ahead.

E.E.C. Move Bars Egg Imports

Imports of third country eggs into the Common Market are virtually barred by a new increase this week in import levies imposed on such supplies. The levies have been raised by almost 4s. per long hundred, bringing total levies on third country eggs to about 20s. per long hundred. At this level, non-Common Market suppliers need to reduce their prices to 6s. per long hundred or even less to stand any chance of making a sale. Some third country suppliers have been offering eggs at very low prices, but it is regarded here as impossible for any supplier to cut prices to the 6s. level.

The new levies were imposed following energetic protests from Belgium, supported by the Dutch, against cut-price methods recently followed by third country suppliers, especially Poland. The new move is not, however, expected to change substantially the demand-supply position inside the Common Market. Only a very small proportion of total supplies now come from outside the Common Market: current supplies within the Common Market are more than adequate to meet total demand. It is thought probable here that third country suppliers will increasingly turn to the British market, thereby tending to keep down the current level of prices for eggs.

Friesians Popular in Ireland

The growing influence of the Friesian breed of cattle in the Irish Republic is shown in figures published here on artificial insemination. Last year, a total of 699,381 inseminations were carried out in the Irish Republic. The total estimated number of cows in the Republic is 1.3 million.

The demand for the daily bulls, showing an increase up to 1960, turned downwards in 1961 and the latest figures show a further decrease. The figure show, however, that inseminations from Friesian bulls have been increasing steadily in recent years.

Topical Briefs

Swedish glassware exports reached new peak levels last year. Household glassware exports, which include decorative glass, amounted to over £2 million (5.6 million dollars), 42 per cent of total output of the industry. Most of the goods were sent to the United States, which has been the major market since the war. However, America has been taking relatively less of the Swedish output in recent years. At the end of the fifties, the United States took over 40 per cent of all Sweden's glass exports; last year the figure had dropped to 24 per cent. After America, Britain is the most important market and her share is likely to expand since Swedish goods in general are enjoying a vogue there. West Germany and Denmark follow in order of importance. A growing market for Swedish glass has been discovered in Australia, partly influenced no doubt by the large number of European immigrants over the last 10 to 15 years.

British production of paper and board in the first quarter of the year is well up on the same period of last year. Output rose by 12 per cent to 120,000 tons per week and weekly average production has been running at the highest level for over three years. In the paper section, where competition from foreign producers is most severe, output went up by 84,000 tons, a 12 per cent rise. Production of boards, also up 12 per cent, increased 34,000 tons. Since last July, British consumption of paper and board has moved steadily up and the first quarter's figures show an increase of 218,000 tons over the same period of 1963. A part of this rise has been met by a marked increase in imports which, during the first quarter, rose by 100,000 tons, valued at nearly £7 million Sweden, Norway and Finland continue to feature prominently as British suppliers and they supply almost half of British needs. Output of paper is expected to improve but margins still cause anxiety; the position is more satisfactory with boards.

Output of typewriters and calculating machines in *Italy* is rising steadily. Italian technical advances in typewriters and accounting machines have been reflected by recent statistics. Production of standard typewriters is estimated to have passed the 255,000 mark last year, a three per cent increase over 1962's 248,000 and the 241,000 in 1961. The rise in production of portable models is even more marked. Output was 480,000 compared with 423,000 in 1962 and 410,000 the previous year. Calculating and office machines (other than electronic computers or larger and more elaborate types of accounting machines) have also done well. Output of the latter in 1963 amounted to 756,000 machines compared with 704,000 in 1962 and 620,000 in 1961. The 1961 figure for United States output was 500,000 and 274,000 for West Germany. The overall value of Italian output of typewriters and accounting machines last year was £69 million (193 million dollars), and it is expected to reach £100 million by 1966. Exports play an important role in the industry, having reached £42 million (117.6 million dollars) last year, a four per cent rise over the previous year. World exports of calculating machines reached £44.3 million (124.1 million dollars) in 1961, and the Italian industry took nearly half the market—£20 million (56.2 million dollars), compared with West Germany's £6 million (16.4 million dollars) and the United States' £4.9 million (13.7 million dollars).

Polish textile machinery exports are becoming increasingly important. Until recently Polish exports of heavy industrial products were dominated by two industries—shipbuilding and machine tools. They have now been joined by the textile machinery industry. Last year, production in this industry was up by eight per cent on 1963 and exports amounted to £4 million (11.2 million dollars), more than double the 1962 figure. Exports this year are expected to top £5 million (14 million dollars). Main western markets are India, Israel and the United Arab Republic.

TIN PLATE FOR INDIA

The first electrolytic tinning line in continental Asia is to be erected at the Rourkela Steelworks. Demag of Duisburg was awarded the supply contract for the first expansion stage last year. It is now to supply the machines for the second expansion stage together with the main order. On commissioning, the plant will have an annual capacity of 150,000 tons of tin plate, which makes it one of the largest in the world. India will then be able to produce and process more tin plate.

This plant, which is designed for a maximum strip width of 1,040 mm., strip gauges of 0.15 to 0.31 mm., and coil weights of maximum 15 tons, belongs to the "processing line" sector. These plants are built by Demag under licence from the American firm of Blaw Knox Comp., Aetna-Standard Div., Pittsburgh, leaders in this field. The electrolytic tinning line comprises a coil preparation line, where the coils leaving the finishing mill are trimmed and checked for faults. The plant further includes an electrolytic tinning line which works on the Ferrostan Process. The U.S. Steel Corporation is responsible for the Ferrostan Process, and has concluded a direct licence agreement with Rourkela for this. A tin-coat thickness gauge, manufactured by Demag together with Interatom under licence, is used to accurately measure the thickness of the tin coat and for the precise control of the tinning process.

The plant also incorporates a tin plate squaring line, arranged immediately behind the tinning line, the strip entering the squaring and classifying line directly after being tinned, instead of first being coiled again in the tinning line. The squaring and classifying line is equipped with thickness gauges and pinhole detectors for classifying the sheets into four grades, e.g.: sound sheets, sheets with poor surfaces, sheets of incorrect gauges, and holed sheets.

THE WORLD-WIDE PROBLEM OF HOUSING

I.L.O. STUDY HIGHLIGHTS ADVANTAGES OF THE CO-OPERATIVE METHOD

THE problem of housing continues to be of pressing and profound concern in most countries of the world. It is a complex problem everywhere—all the more complex because of the increasing concentration of workers and low-income families in the industrial urban centres. From the point of view of these population groups, the real problem is that, alone and unaided, they cannot acquire decent homes of their own, as several surveys carried out by the International Labour Organisation have shown. Something has, therefore, to be done to mitigate the gravity of the problem. There are, to be sure, several methods of improving the housing situation in every country. But the I.L.O. is primarily interested in the co-operative housing method—a field of activity in which it has always had some competence. Hence its special study entitled "Housing Co-operatives," recently published at Geneva (Price: Rs. 7.88 nP). The author of this study is Mr. Samuel Ruiz Lujan, a member of the Co-operation and Small-scale Industries Division of the I.L.O.

The author has referred, at the outset, to the debate whether co-operative housing should be classified as a consumers' movement or a producers' movement. According to him, however, this type of co-operation aimed at satisfying the need for housing in a wide sense has always had a twofold character. For, it embraces both production and consumption, depending on whether people join together with a view to becoming occupants, in which case they look upon the accommodation not as a production article but as a consumer commodity, or whether teams of workers in the building industry band together on a co-operative basis and operate undertakings to produce dwellings for others. In Sweden, for instance, both types of societies operate. But in Canada, there also exists a third form of co-operative housing, in which both objectives, namely, production and consumption, are combined. Whatever form it takes, there is no doubt that co-operative housing forms today a well-defined sector on its own in several countries.

Special Features

The special features of the different types of housing co-operatives have been outlined in the I.L.O. study. Firstly, co-operatives, in which production is the dominant feature and which are organised by the building workers with the immediate aim of creating employment for their members, generally cover all the phases involved in the construction of a particular house or group of houses. Sometimes they build for other co-operatives of future occupiers or for other non-profit organisations concerned with housing; sometimes for the employees of consumers' co-operatives or of other private undertakings; sometimes for municipal housing programmes; and sometimes for individual families. Secondly, among the co-operatives organised with the primary objective of building houses to be lived in by the members themselves, some confer individual ownership upon their members. But some others retain the ownership of the buildings and allot the individual dwellings to their members, giving them privileged occupancy rights which they may pass on to other heirs. Of the co-operatives which confer individual ownership on their members, some do so as soon as the building is completed, if each member is directly liable for the financial obligations incurred. But it is more usual for the ownership deeds not to be made over until the mortgage has been paid off. Co-operatives, which retain the ownership of the property, usually construct groups of buildings or even large residential estates. Such societies, which have noteworthy achievements to their credit in the Scandinavian countries and in New York City, are of a permanent nature. In these co-operatives, too, the member pays for his accommodation in accordance with the agreed financial arrangements, but his stake is that of a co-owner (as distinct from an individual owner), being allotted a dwelling which he lives in and runs as if it were his own. He is free to sell his stake in the property, but only in accordance with the stipulations laid down in the rules of each society, so as to preclude profiteering contrary to the principles of co-operation.

There are also tenants' co-operatives in some countries, particularly France. In these societies, the members are neither individual owners nor have a privileged transferable right of occupancy. They are, of course, tenants, paying a reasonable rent. But, as members, they have a voice in the administration of the buildings they occupy. In some countries, there are only management co-operatives which manage the buildings and organise complementary services after the society, which constructed those buildings, is wound up. In some countries like Britain, there are building credit co-operatives which extend credit for building. The funds of such co-operatives are derived from shares taken out by members and from deposits made by the members or by other persons or bodies. Each member of a society must subscribe and pay for shares or deposit a sum equivalent to at least 7 or 8 per cent of the cost of the house he wishes to buy or construct. The society offers mortgage loans, generally for 80 per cent of the value of the building, to be paid off in instalments over a specified number of years. In Scandinavia which, according to the author of the I.L.O. study, is the most important group of countries as far as co-operative housing is concerned, the three aspects of saving, building and the subsequent administration of the projects are combined in a single organisation with very satisfactory results, instead of being handled by individual specialised societies.

Manifold Advantages

The I.L.O. study has dealt at length with the characteristics and achievements of different types of housing co-operatives in both developed and developing countries. It has also generalised the advantages offered by the co-operative method of solving the housing problem. The advantages are threefold, namely, financial, technical and social. The *financial* advantages are that the co-operatives: (1) encourage people to save and channel such money into the financing of housebuilding, (2) reduced and stabilise prices by eliminating a series of speculators at all stages from sale and development of land to actual building, (3) facilitate credit on favourable terms, (4) can practise mass-production methods, (5) purchase building materials at wholesale prices, (6) can be directly engaged in production, establishing their own factories, and (7) can produce and use best quality materials, since they are non-profit bodies. As for the *technical* advantages, the I.L.O. study has highlighted five of them. These are that the co-operatives (*a*) organise their own technical services, (*b*) engage highly qualified technical staff, (*c*) carry out their own surveys in respect of all the problems relating to building, (*d*) set quality standards, and (*e*) introduce new techniques into the construction and running of homes. The *social* advantages are that the co-operatives (i) offer many low-income families the only means within their reach of acquiring a decent home, (ii) encourage people to turn their spirit of initiative and mutual aid towards solving their own housing problem rather than depend entirely on outside help, (iii) relieve the State and municipal authorities of a large part of their administrative and economic responsibilities in the field of housing, (iv) establish additional financial, cultural and recreational amenities as part of their housing programmes, (v) help to create new communities where neighbours engaged in the same co-operative activities are likely to maintain closer ties, and (vi) constitute a satisfactory method for public authorities in their social housing programmes for the modernisation of large cities.

With these manifold advantages, housing co-operatives can play a significant role in solving a country's housing problem. But one important condition is that a favourable climate in which co-operatives can flourish should be created. The I.L.O. study has, therefore, emphasised that a well-thought-out national housing policy is needed. Such a policy should give co-operatives favourable conditions in which to operate and should also provide the necessary financing institutions to extend credit on terms that will enable low-income families to participate in the housing programmes. Referring to the developing countries, in particular, the I.L.O. study has advanced an important suggestion for adaptation of the co-operative formula in the field of housing. As experience shows that a society, which retains ownership of the property (while treating its members as privileged users), can do most to create a co-operative spirit, the I.L.O. study has expressed its preference for such a type of housing co-operative. Thanks to the permanent relationship that this type of society ensures, many community facilities like kindergartens, recreation rooms, playing fields, libraries and shops can be more easily provided. A housing co-operative of this type has some special advantages which are listed in the following paragraph.

The Best Choice

(1) It makes better use of the building land available. This is an important advantage in the case of projects near big towns, since the housing problem is tending to be aggravated by such factors as the rise in population, higher living standards, a higher marriage rate, greater economic independence for young people, higher expectation of life and an influx of people from the rural areas in search of better jobs in the towns. This argues in favour of larger projects, especially since, in a few years' time, it will undoubtedly be difficult to find land for building in many towns in a number of countries. (2) It creates a joint interest in the upkeep of the building or group of buildings in the project, while individual members who have the same security of tenure as if they personally owned their dwellings tend to take more interest in the care and decoration of their homes. (3) It eliminates any possibility of speculative selling. Not only are members unable to speculate at all during the stages preceding completion of the project, but they are not allowed to sublet except subject to certain conditions which are laid down in the rules specifically to prevent any transactions for profit. (4) It makes it easier to move to a new home on the same project if family circumstances change, for example, as more children are born. (5) It offers scope, especially on big housing schemes for several hundred families, for employing co-operative techniques to maintain quality and cut costs, as compared with the open building market. (6) It acts as a practical school of democracy, creating close links between families, who learn to live together in a community by taking an active part in the management of their project and making use of the same communal services.

Although it is common for co-operatives which retain the ownership of property to continue to manage it as well, sometimes it may be worthwhile to form a new society consisting of the privileged occupants after the completion of the building project. This new co-operative can take over the management of the project and the obligations in the form of mortgage loans. The co-operative management of housing schemes by the residents themselves, according to the I.L.O. study, has usually led to high standards of maintenance, not only of the buildings themselves, but also of the streets, avenues, gardens and communal services which are part of the purpose of co-operative housing schemes. The I.L.O. study has, therefore, suggested that local urban authorities, faced with the need to find the money for large housing schemes for families in the lower income groups, might consider the advisability of forming management co-operatives to enlist the residents' interest in matters affecting their own housing.

Wycon Services, a British company, is to build one of the world's largest plants for the manufacture of MCPA hormone weedkiller at Ufa, in the Soviet Union. Output is to be 4,200 tons a year.

A new process for the conversion of hydrochloric acid into useful chlorine has been developed at the Shell research laboratories in Amsterdam.

NEW PRODUCTS AND PROCESSES

New Nylon Knitted Fabric

A NOVEL knitting construction for nylon fabric, specially suitable for all kinds of outer garments because it has limited "stretch" properties and high recovery, has been evolved by British Nylon Spinners. Known as Triolock, this new type of weft-knitted fabric is double-faced, and it can be produced on interlock, Jacquard and rib machines after simple modifications which cost "very little," according to B.N.S. The method is being covered by patents in Britain and abroad, but any British manufacturer will be able to make the fabric and no royalties will be payable. Use of the method and the trade mark will presumably require quality and performance approved by B.N.S. though (as with other arrangements between the company and users of Bri-Nylon) no specific standards are laid down. Ability to stretch is an advantage in some hosiery and knitwear, such as nylon stockings, socks, cardigans, and so on, but a high degree of stretch is not desirable in fabrics for men's jackets, women's coats and skirts, and upholstery. Triolock's main advantage will be its restricted stretch properties, but it has the full but light handle known as "lofty" in the trade, has good heat insulation, and is more stable than most weft-knitted fabrics. Although outerwear seems the obvious outlet for the new fabric, trials for uses in upholstery suggest "interesting possibilities" in this trade, says B.N.S.

Basically, the construction is an interlock nylon fabric joined by an extra yarn, through an additional and specially made feeder, to a plain knitted fabric. Technical details for knitting, finishing and making up the fabric are now available in the information series published by the B.N.S. textile development department at Pontyphool.

New Transfer Pump

A new transfer pump, light and portable, which can pump direct from the end bung of a 44 gallon drum or any open-top vessel, is being manufactured by a British firm, Binks-Bullows Ltd., Pelsall Road, Brownhills, Staffordshire, England. It is specially suitable for handling lubricants, cutting oils, solvents and any non-corrosive liquid or semi-liquid. Its stalling characteristics make it particularly suitable for dispensing liquids when drawoff for blending or similar purposes is required. The outlet from the pump is provided with a removable steel spout which can easily be replaced by a screwed nipple for attaching a delivery hose. Pump speed is easily controlled by a lever tap fitted to the air inlet of the air motor.

Automatic Screen Printing

Sheets of self-adhesive labels can be screen printed in colour at speeds up to 1,800 sheets per hour on a new automatic machine developed in Britain by Soag Machinery Co. Ltd., Juxon Street, London, S.E. 1. The machine can also print nameplates, badges, scales, dials, transfers, printed circuits, tiles and other objects made of board, foil, glass, ceramics, plastics and metal in thicknesses from 0.001 in. to 0.250 in. Once the screen is positioned in its frame a hinged clamping head is lowered and the machine operates automatically. The sheet is transferred by suction slide to the printing position and held by suction during the printing stroke; it is then released and passed via another slide and running belts to a woven-wire conveyor which carries the work beneath a drying unit. An automatic feeding unit that increases the output to 3,500 sheets an hour is being developed.

Document Copying Machine

A photographic document copying machine which combines versatility and economy with speed and simplicity of operation, is now being produced by a British firm, Ilford Ltd., Essex, England. The machine, which has been designed as an integral part of a process that includes the use of specially developed papers and chemicals, produces high quality copies. The machine combines a flat-bed printer and a built-in processing unit of the two-bath, activator-stabiliser type. It will copy any original in black-and-white or colour, single or double-sided, reproducing printed, typed or hand-written matter, pages of magazines, line drawings, screen or continuous tone images. A powerful light source, controlled by a transistorised electronic timer, reduces exposure times considerably.

Image Amplifier

A new 12 in. image amplifier for industrial use is being produced by a British firm, Marconi Instruments Ltd., St. Albans, Hertfordshire, England. The first production model has been installed by the English Electric Company at Rugby, in the Midlands, where it is materially assisting the production of steam turbine blades of consistently high quality. The image amplifier is a high-definition, closed-circuit television system designed for direct viewing of a fluorescent image produced by the passage of X-rays through the specimen under examination. The image is focussed by a mirror-and-lens system on to the photocathode of a 4½ in image orthicon tube, and is finally displayed on one or more 17 in. television monitor screens which, by means of electronic magnification, can have an 800-line definition in the central eight inches of the screen. Outlets are also available for recording on video tape, 16 mm cine film, 100 mm negative film or 4 in. by 5 in. Polaroid positive film.

Position-sensing Instruments

Three new fully automatic instruments for detecting and measuring angular displacements, developed by a London firm, Hilger & Watts Ltd., 98 St. Pancras Way, Camden Road, London, N.W.1. are entirely free from the risk of human error in reading and recording. Once set up, they function continuously without an operator. There is no manual control to be adjusted, and therefore no danger that the instruments will be moved during the taking of a measurement. The instruments, known as autocollimators, give measurements in seconds of arc on an associated meter, and also provide an analogue voltage for connection to a digital voltmeter, chart recorder or data-logging equipment.

Sealed Cooling for Diesel Engines

A British firm, Perkins Group (F. Perkins Ltd.), Peterborough, Northamptonshire, England, is to offer a sealed cooling system for its range of "simplified" industrial diesel engines. This means that operators of all types of industrial plant and equipment will gain the advantages of water cooling and the anti-freeze characteristics of air cooling. The sealed cooling unit, to be offered with the firm's range of low cost, volume-produced diesels, employs a conventional radiator, but the "overflow" tank is connected to a separate closed expansion tank. Expanded coolant fluid and vapours from the radiator feed into the tank where they are cooled. Once cooled, they are fed back into the radiator by the pressure differential.

Conductive Fabrics for Heating

Textile coated with a new flexible, electrically-conducting polymer, developed by a Scottish firm, Ioco Ltd., Netherton Works, Anniesland, Glasgow W.3., Scotland, are expected to open up new possibilities in the field of electrical heating, particularly in such applications as low-voltage electric blankets and heated clothing. A complementary development is a strong, extremely flexible and easily attached electrode system to carry and distribute current to the conductive polymer. They have a remarkably high resistance to the effects of flexing. A test of more than 100,000 flex cycles caused no damage. The new conductive fabrics have important advantages over conventional flexible heating products. The conductive coating develops a uniform temperature throughout its surface area, in contrast to hot resistance wire, with which the actual heated area per square foot may be as little as four square inches. In an electric blanket, for example, a safe even temperature below 40° C. is produced over the whole surface of the conductive polymer; with an equal wattage, spirally-wound resistance wire will give temperatures of more than 70° C. in the immediate area of the wire. High voltages, with suitable insulation, can be used in other products.

Long Joint-free Plastic Pipe

What is believed to be the longest joint-free plastic pipe in the world was recently floated across a bay of Lake Mälar to the city of Sigtuna not far from Stockholm, Sweden. The one-piece tube 4,360 m long, had been manufactured at a mobile pipe-making plant on the shore. Sigtuna, a boarding-school town and favourite tourist resort some 50 km north of Stockholm, has for several years had trouble with its drinking water system. Even though the city will eventually be linked up with a new mains system for the entire Stockholm region, measures had to be taken to safeguard water supply for the time being. A reserve of ground water nearly five kilometres from the city limits was found suitable for the purpose as it could be reached by a submerged pipe. Svenska Metallverken, Sweden's leading producers of non-ferrous metal semi-manufactures who have a plastics factory at nearby Vasby, were called in to make the pipe. They decided the best procedure was to manufacture it in a mobile plant on the shore and float the entire length to its destination. The pipe, nicknamed "Ormen Lange" (Long Snake) after a famous viking ship, has an outer diameter of 140 mm., is 12.8 mm. thick and weighs 22 tons. Lead wiring has been added to make it sinkable. The mobile factory was designed by the Company to eliminate long transport. It is capable of producing joint-free Uveten pipe of 125 mm. diameter and upwards from granulated polyethylene which is pressed into shape by means of special tools. A crew of seven men service the mobile factory on a 24-hour basis. The operation does not allow for interruptions. It took Svenska Metallverken twelve 24-hour periods to arrive at the desired length. As the mobile plant pressed out the pipe, it was snaked out on the lake in 35 m. wide eights. When it was ready to be delivered, the whole package was 600 m. long and a tug boat pulled it at a speed of 1-2 knots across the lake to Sigtuna.

Short-arc Tube Welding

A new short-arc technique for high-speed welding of small diameter tubes to end plates of heat exchangers, condensers, etc., has been developed by ESAB, Gothenburg. The system is considerably cheaper than conventional methods and is so simple that it can be handled by semi-skilled personnel after little training, the Swedish company claims. The equipment includes the ESAB A 9 semi-automatic gas metal arc welding machine, the welding gun of which has a specially devised barrel to feed the welding wire and gas. The barrel is fitted into a gearbox which is driven by a compressed air turbine motor. The system has two controls, one to perform the normal function of feeding the wire and gas as well as to supply the welding current, and one to cause the gun barrel to rotate around the periphery of the tube to be welded. It is claimed that the method makes it possible to weld 10 mm. internal diameter tubes to end plates at the rate of one tube in six seconds. At present the unit can take tubes up to 40 mm. internal diameter.

Over 100 Years of Banking in India

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Limited, Grindlays Bank Limited and the Eastern Branches of Lloyds Bank Limited)

Registered in London under the Companies Act of 1862 on the 23rd March, 1866. The Liability of Members is Limited.

Bankers to the Government in Aden, Kenya, Uganda and Zanzibar.

DALMIA CEMENT (BHARAT) LIMITED

GAP BETWEEN SUPPLY OF AND DEMAND FOR CEMENT WIDENS

CHAIRMAN, MR. V. H. DALMIA, URGES STEPS TO REMOVE SHORTAGE

ADDRESSING the shareholders of Dalmia Cement (Bharat) Limited, at their Twelfth Annual General Meeting, held at Dalmiapuram (Madras State) on Monday, 1st June 1964, Mr. V. H. Dalmia, Chairman of the Company, stated that, considering the faster rate of increase in demand for cement, it was conceivable that, at the end of the third Plan, the gap between supply and demand would be about two million tonnes per annum. The installed capacity by 1965-66 would be about 14.2 million tonnes, with production aggregating 11.6 million tonnes, as compared with the original third Plan targets of 15.24 million tonnes and 13.2 million tonnes, respectively. The demand in 1965-66, was originally estimated at 13.2 million tonnes but later trends, he said, indicated a faster growth in demand. The following is a summary of Mr. Dalmia's speech:

GENTLEMEN,

I extend to you a very cordial welcome on the occasion of the twelfth annual general meeting of your Company.

We are meeting today under the shadow cast over the length and breadth of our land by the sad and sudden passing away of our great leader, Pandit Jawaharlal Nehru, who, as the first Prime Minister of India, has guided and shaped the destinies of our country since Independence. Not only was he the architect of modern India, but he was an acclaimed and accepted leader in the international sphere and particularly in the resurgence that has emerged in Asia and Africa. Above all else, he was a man of peace, who had dedicated his life to the ideal of the brotherhood of man and to the principle that all differences between men and nations be resolved by peaceful means. His loss will be mourned not only in the country of his birth but throughout the world where men of peace and goodwill meet. His passing away leaves a vacuum in our country which may, perhaps, never quite be filled. There could be no better tribute to his memory than our resolution to move together steadfastly forward in furtherance of his dream of a peaceful, prosperous and united India.

The annual accounts and the Directors' report for 1963 have already been circulated and I am sure you must have noted that the excellent results obtained in the previous year have been maintained. Though the gross profit is slightly lower at Rs. 134.05 lakhs compared to Rs. 146.62 lakhs in the previous year, on account of reduced provision for taxation, the net profit available for appropriation is higher at Rs. 57.65 lakhs compared to Rs. 45.53 lakhs in the last year. Rs. 26.50 lakhs have been appropriated to the general reserve and a dividend of 12 per cent subject to tax has been recommended on the ordinary shares. Some shareholders have represented that the distribution of the net profit by way of dividend should have been increased and that it was unnecessary to make any large allocation to general reserve. It would have been easy for your Directors to give in to the temptation of increasing the dividend but, on a long-term view, they came to the conclusion that it was desirable to maintain a steady dividend and to build up the reserve position of the Company by adequate appropriations whenever the profits made that possible. More reserves would reduce Surtax liability in future years, whereas higher dividend would have meant more dividend tax and thus further drain on the Company's coffers.

Cement Shortage

Cement continues to be in very short supply throughout the country due to the slower rate of growth of the industry and partly to the more rapidly increasing demand. In 1963, the installed capacity reached 10.12 million tonnes against 9.72 million tonnes in the previous year, an increase of only 4 per cent. Despite all efforts, it is likely that at the end of 1965-66, the installed capacity will be about 14.2 million tonnes with a production of 11.6 million tonnes as against the original third Plan target of 15.24 million tonnes and 13.2 million tonnes, respectively. The demand for 1965-66 at a growth rate of 10-12 per cent per annum was estimated at 13.2 million tonnes. Later trends have, however, indicated a faster rate of increase in demand. It is conceivable, therefore, that at the end of the third Plan, the gap between demand and supply may be about two million tonnes per annum. The industry has read with much interest Press reports about Government having under consideration a proposal to remove or relax the control on ex-works cement prices allowed to the producers. Details of this proposal are not yet known but it is hoped that Government will see fit to accord this much-needed relief to the industry which would then be better placed to find resources for its future expansions. The industry will watch with interest the progress of the Cement Corporation of India which the Government of India have decided to establish for increasing cement manufacturing capacity in the public sector. The industry hopes it will be allowed to benefit from the limestone prospecting efforts of the Corporation, which, as reported, will be one of its principal tasks. Manufacture of blast furnace slag cement has registered some expansion, but, so far, manufacture of blended cements by admixture of fly ash and other pozzolanas has not made much headway. I hope the Government will take more energetic steps in regard to the latter to mitigate the present scarcity.

Better Coal Supply

Mainly due to better supply of coal and better rail transport facilities, the capacity utilisation of the cement industry in 1963 at 92.5 per cent was the highest during the past decade. The incentive given by Government to the industry last year to increase production contributed to this to some extent. If the incentive is continued, it would be desirable that the incentive formula for higher production of cement from year to year should be linked with the average of the last three years' production and not, as was done last year, to the highest production achieved by a factory during any one year of the preceding three years.

The formula adopted by the Government of India for computing the quarterly packing charges resulted in 1963 in a loss of Rs. 3.27 lakhs to your Company. Despite belated revision of the ratio of second-hand to new bags from 1:1 to 1:2, the loss still persists as the prices of new and second-hand bags in Government's formula for fixing packing charges are not in line with the actual procurement prices. Whereas the formula assumes that the price of second-hand bags is 65 per cent of that of the new bags, the actual ratio may be 85 per cent. It is hoped that the Government, while computing packing charges in future, would take a more realistic view and give due regard to the factual position as represented by the industry.

Coal Subsidy Inadequate

Since last year, the position of the raising and distribution of coal has improved further, and, by and large, the cement industry is happily placed in regard to the procurement of its coal requirements. The Government have, therefore, decided that further conversion from coal firing to oil firing in cement factories situated at long distances from the Bengal-Bihar coalfields was not necessary, and your Company's proposal to resort to oil firing has been dropped. Movement of Bengal-Bihar coal by the rail-*cum*-sea route to certain industrial consumers in Western India has been discontinued. The bottleneck of transport from the Bengal-Bihar collierics via Waltair to the South, however, persists and your Company and certain other consumers of Bengal-Bihar coal are still compelled to obtain their supplies by the rail-*cum*-sea route. Though the coal subsidy is intended to equate, approximately, the cost of seaborne coal with coal carried by the all-rail route, the subsidy actually paid leaves a substantial shortfall which has not been remedied so far despite your Company and others representing about this shortfall to the Government of India ever since the announcement of the subsidy formula in August 1961. In your Company's case, for the coal received via Cuddalore Port, the shortfall ranged from Rs. 7.45 to Rs. 12.17 per tonne. The present shortfall is Rs. 9.54 per tonne which works out to about Rs. 6 lakhs per annum.

Among the important items contributing to the shortfall in the coal subsidy are inadequate allowance for railway freight and handling charges. In the case of your Company, the element of railway freight from collieries to Calcutta Docks allowed in the formula left a shortfall of Re. 0.70 per tonne in 1961, which has now risen to Rs. 3.50 per tonne. Similarly, the shortfall of Re. 0.84 in 1961 in the element for freight from the port of unloading to the consuming centre rose to Rs. 2.41 in April 1964. As against the provision of only Re. 0.20 per tonne for shipping and handling charges at Calcutta Port, actual expenses vary from Rs. 2 to Rs. 5 per tonne. While representations have been made to Government for full compensation for the railway freight and other charges in the subsidy formula, it is regrettable that no increase has so far been granted even to cover the increases in the railway freight structure effected by Government itself. Presently, your Company loses about 5 per cent in unloading and handling at Cuddalore Port which aggregates to about 3,000 tonnes per annum and is equivalent to about Rs. 2.40 lakhs. As this loss is due to the compulsion under which your Company has to take supplies by the rail-*cum*-sea route, Government has been requested to compensate adequately for it. There is no provision in the ex-works retention price allowed to the cement producers for the substantial shortfall in the coal subsidy as the cost of production was computed by the Tariff Commission on the assumption that under the subsidy scheme, coal moved by the sea-*cum*-rail route would be made available to the consumers more or less at the same rate as if it had moved by the all-rail route. I hope the Government will make good this serious inadequacy in the subsidy, retrospectively, which discriminates unfavourably against those consumers, such as your Company, who are compelled to take Bengal-Bihar coal by the sea-*cum*-rail route.

Competition for Iron Ore

There are indications of recovery from world-wide recession in the steel industry, referred to by me last year. Certain experts estimate the steel production to rise to 1,200 million tons in 1991 against 400 million tons in 1961, for which the 1961 iron ore production of 500 million tons will have to be trebled during the same period of 30 years. On this basis, it is being planned to raise India's annual iron ore exports to 30 million tons by 1970 from 16 million tons targetted for the end of the Third Plan. There is, however, severe competition for iron ore in the international markets, as a result of which, in 1963, the Minerals and Metals Trading Corporation of India Ltd. had to concede reduction of 7*s.* in the price of the basic grade iron ores to be supplied to Japan. This competition is likely to continue for some time and it is heartening to note that Minerals and Metals Trading Corporation of India Ltd. is actively seized with the need of reducing the end-costs of Indian ores to their foreign buyers. Among the measures planned are more mechanisation of mines, rationalisation of transport and development of Indian ports. I am happy to say that the Government of India has recently approved a scheme costing about Rs. 1.5 crore for developing Cuddalore Port through which your Company's ore is being exported. I request the authorities to plan and execute this development speedily and in such a manner as would enable progressively higher loading rates being achieved without having to wait for the completion of the work.

Your Company realises the need of reducing mining and transport costs for its iron ore and is now finalising plans for laying a ropeway from the mines to the rail-head and for introducing a substantial degree of mechanisation in the mining. We hope in this manner to further in some small degree the Minerals and Metals Trading Corporation of India Ltd's efforts to reduce their procurement cost of high grade iron ore. We also hope that we will have their sustained support, which is so necessary, in the formulation and implementation of these plans.

Recession in Magnesite Industry

Since last year, there has been a further recession in the dead-burnt magnesite industry, which is reflected in the results of Messrs. Dalmia Magnesite Corporation, in which your Company is a partner. This is due to steel production having fallen short of the third Five-year Plan target while the dead-burnt magnesite industry increased its capacity in anticipation of the steel target being achieved. This difficult position is likely to continue until 1767-68 when the third Five-year Plan target of 10 million tons of steel production may be achieved. Even if the target under consideration of 18 million tons of steel production for 1970-71 is reached, the increase in consumption of dead-burnt magnesite by the steel industry may be comparatively negligible as improvements in the quality of indigenous refractories and steel-making techniques are reducing considerably consumption of refractories per tonne of steel production and as in new steel-making processes, such as the L.D. process which will mainly be adopted for further expansions of India's steel industry, use of conventional refractories, including basic, will be replaced to a great extent by tarred dolomite. Moreover, as the dead-burnt magnesite industry can increase its capacity within about one-third of the time required by the steel industry, I would earnestly urge the Government to defer for the time being any proposals for expansion in dead-burnt magnesite industry, including the reported setting up of a dead-burnt magnesite plant in the public sector based on the Almora deposits of raw magnesite, until future consumption trends of dead-burnt magnesite justify such expansion.

Efforts to export dead-burnt magnesite from India have not met with much success due to severe competition, both in terms of price and quality, from foreign manufacturers and particularly the producers of sea-water magnesite, and to very unfavourable freight rates applied to cargoes from Indian ports. We hope Government will be able to reduce the discriminatory freight rates and extend special export incentives to the industry to increase foreign exchange earnings and to enable the industry to utilise its idle capacity. Dalmia Magnesite Corporation, nevertheless, continue to make strenuous efforts to export.

Conversion of Deferred Shares

The scheme for conversion of the deferred shares of the Company into ordinary shares has been sanctioned by the Madras High Court and will take effect from the date to be fixed by your Board for this purpose. The implementation of the scheme had been kept in abeyance on account of the apprehension that capital gains tax might be attracted in the hands of the shareholders since the Central Board of Revenue had taken the view that the conversion amounted to a transfer and thus attracted the incidence of the said tax. I understand that there has been some rethinking on the part of the Government of India on this question and that it has now been decided that no tax should be levied at the time of conversion of shares of one class into another. As a result, capital gains tax would be levied only when the converted shares are disposed of. As soon as this position is confirmed by the Government, the scheme would be implemented and I expect that this would be done in the course of this year.

I am happy to report that the relations between the management and the employees of the Company continue to be cordial. I would like also to congratulate Shri M. Palaniandi, President of the Dalmia Cement National Workers' Union, Dalmiapuram, on his selection by the National Productivity Council for training in Industrial Relations in the United States of America. In the end, I wish to express our appreciation of the sincere and devoted services rendered to the Company by all the executives, staff and workers.

JAI HIND

A LOOK AT IRAN'S OIL ECONOMY

LITTLE HOPE OF "RUPEE SALES" TO INDIA

By K. Krishna Moorthy

MUSSADIQ, the Prime Minister of Iran during the early fifties, brought his country to the brink of ruin, if one were to believe Western newspaper reports of those days. For his crime of trying to overthrow the monarchy, Mussadiq is disliked by the Shah of Iran in whose imperial presence, according to Teheran gossip even the name of Mussadiq is unmentionable. But officials connected with the oil industry in Iran and in Arab Middle East today fondly talk of the good that the Mussadiq regime left behind in achieving for the oil producing countries of the region a higher share than before from the fabulous earnings of the oil exploiting companies.

The boom in the oil industry in the Middle East is only a decade and a half old and it is in the period after the war that the centre of gravity in the oil industry moved to the Persian Gulf. Before the war, Iran and Iraq were the only sizable oil producers in the region and the total Middle Eastern production was around five per cent of the world crude oil output. In 1962, the Middle Eastern oil wells produced 311 million metric tons of crude oil—or nearly 26 per cent of the total world oil output, including the production in the Soviet bloc countries. The estimate of the 1962 world oil output is 1,210 million metric tons. Middle Eastern oil now accounts for more than forty per cent of the oil entering international oil trade. About 60 per cent of the world's proven oil reserves are said to be under the desert sands and sea-beds in the Middle East.

Iran, whose maximum annual output before 1950 was 25 million tons, used to be the biggest Middle Eastern oil producer until oil began gushing out all around the Persian Gulf. Today the order of oil precedence is: Kuwait two million barrels a day, Saudi Arabia 1.65 million barrels a day, Iran 1.55 million barrels a day, and Iraq 1.3 million barrels a day. The world leader is the United States with a production of seven million barrels a day, followed by the Soviet Union with four million barrels a day and Venezuela with three million barrels a day. (See Table I.)

Iranian nationalists fought the oil companies and the industry in Iran nearly perished, but, for most of the others, it has been an easier bargain. The British had created a notorious record in Iran; the American companies pay ample cash before carrying the oil away. In the battle with the oil companies, Iran learnt two bitter lessons. First, while fighting a Western vested interest, it would be a mistake

TABLE I—Oil Production in Middle East
(In million metric tonnes)

	1960	1961	1962
Kuwait	81.9	82.5	93.0
Saudi Arabia	62.1	69.3	75.0
Iran	52.0	58.7	65.0
Iraq	47.5	49.0	49.0
Qatar	8.2	8.4	8.8
Egypt	3.3	3.8	4.3
Bahrain	2.3	2.3	2.3
Total (including others) ..	265.0	284.0	311.0

to assume that Russia would automatically come to help a country out. The Russians refused to come to Iran's aid when Mussadiq made a private request to Stalin, because Moscow thought that, if Iran was left to stew in the juice of its own concoction, the distress brought about by the possible ruin of the oil industry would automatically result in a communist regime. Stalin miscalculated, because he did not take into account the possibility of a slightly enlightened Western oil policy which came about as a result of American pressure. The second lesson which the Iranians learnt was that, even if one could produce all the oil that could be drilled out of the ground, sales abroad would depend entirely on the purchases of the major oil groups round the world.

In the South of Iran, the British oil interests had virtually run a kingdom of their own and the Iranian Government in Teheran was paid as little as possible in oil royalties. (One often hears from British diplomats of private payments made to Iranian royalty over and above what was officially credited with the Government, but these are irrelevant—because bribes are not shown in balance-sheets.)

Between 1893 and 1950, the British took away 381 million tons of oil from Iran and paid the Government the equivalent of Rs. 161 crores—an average Rs. 4 per ton of crude. Between 1954—when oil started flowing again after the interruption in the wake of the nationalisation order of 1951—and 1961, in seven years, 251 million tons of oil were exported from Iran and the Government in Teheran got returns amounting to Rs. 742 crores—or, in other words, an average of around Rs. 30 per ton. In 1962, Iran exported 60 million tons and received about Rs. 159 crores. The income in 1963, Rs. 173 crores, against export of 66 million tons, was more than what the British paid the Iranians in the 57 years 1893 to 1950 for 381 million tons of oil! (These calculations and tables alongside based on information from the National Iranian Oil Company in Teheran and Abadan.)

The agreement with the consortium companies operating in Iran covers a concession area of 100,000 square kilometres in the Southern part of the country. There are two consortium companies, the Iranian Oil Refining Company, and the Iranian Oil Exploration and Producing Company. The agreement of 29th October, 1954, brought the following companies into the consortium: The Gulf Oil Corporation, the Socony Vacuum Oil Co. (now Socony Mobil), Standard Oil of New Jersey, Standard Oil of California, Texaco Inc., each with eight per cent (making the American interest 40 per cent), the British Petroleum Co., Ltd. (inheritors of the infamous Anglo-Iranian) 40 per cent, De Bataafsche Petroleum Maatchappijha 14 per cent, and Compagnie Francaise des Petroles six per cent. On 29th April, 1955 one-eighth of the percentage share of the American members of the consortium was redistributed among a further nine American oil companies, namely; the American Independent Oil Co., Atlantic Refining, Hancock Oil, Pacific Western Oil Corporation (now Getty Oil), Richfield Oil Corporation, San

Jacinto Oil Corporation, Signal Oil and Gas, Standard Oil of Ohio and Tidewater Oil.

The two operating companies were registered in the Netherlands and they received the necessary exploration and refining rights from the Iranian Government and the National Iranian Oil Company. Thus, while the oil industry in Iran is nationalised, at the same time, as agents, the operating companies undertake the exploration and refining on behalf of Iran. The National Iranian Oil Company, which was formed in 1951 by Mussadiq, provides facilities other than refining in the oil city of Abadan and also distributes the oil products throughout the country. The original capital of the National Iranian Oil Company is about Rs. 90 crores and the N.I.O.C., which distributes about four million tons of oil products in the country, has also found oilfields near Teheran outside the concession area of the consortium. It is building a refinery near Teheran, but the oil find has not come up to early expectations. The consortium companies have spent about Rs. 26 crores for improving the Abadan refinery and the N.I.O.C. has spent about Rs. 23 crores for improving other facilities in Abadan. The consortium firms also invested about Rs. 45 crores recently in a new oil terminal on an island to which oil is piped across the sea for loading into giant oil tankers.

Like in Iran, there are Government-owned companies now operating in other West Asian countries, but these firms have a role less important than the N.I.O.C. in Iran. There are the Kuwait National Petroleum Company and the Kuwait Oil Tanker Company, the General Petroleum and Mineral Organisation in Saudi Arabia and the Iraqi National Oil Company. Neither the National Iranian Oil Company nor the mushrooming companies belonging to various governments has any decisive influence on international oil trade. To help in collective bargaining the West Asian oil producers formed their 'trade union,' the Organisation of Petroleum Exporting Countries, of which Venezuela and Indonesia also have become members.

In collecting the royalties and other payments from the consortium, Iran, for example, has a reserve clause under which it can take part of the payments in kind, that is, in oil. Normally, the N.I.O.C. has permitted the oil companies to pay cash in exchange. This arrangement has so far suited both parties. The international oil firms certainly do not relish 'independent' oil supplies being hawked about. Neither has the Iranian Government the ability as yet to transport the oil and sell it abroad. Is there any reason why Iran should exercise its right to take part payment in oil and sell the oil, for example, to India? India is interested, according to recent Delhi statements, in finding what the Petroleum Ministry calls 'its own source' of crude supplies. And one of the sources thought of is Iran with whom there has been a series of conversations. There is all kind of loose talk of barter trading, supply of Indian machinery and capital goods in exchange for crude oil supplies and all that. This fails to take account of the fact that if Indian capital goods are to be sold in West or South Asia, the sales have to be in competition with other countries' products—competition both in quality and in price. After the first flush of

TABLE III—Iranian Oil Exports

Period	*Quantity (In million tons)*	*Iranian Govt. earnings from oil (In Rs. crores)*
1893-1950	381	161
1954-61	251	742
1962	60	159
1963	66	173

prosperity from the oil revenues, Iran went on a spending spree in the latter half of the fifties but has recently cut back on imports and is making efforts to conserve foreign exchange as well as increase hard currency earnings. Iran is highly unlikely to be persuaded to agree to transactions for sale of crude oil against rupee payments committing her to buy Indian industrial goods whose reputation has still to be established. This is the impression this correspondent gained from recent conversations with officials in Iran.

Apart from the oil produced by the consortium companies, from which Iran can take a share and dispose of according to its will, the National Iranian Oil Company has, in collaboration with other firms, begun exploiting offshore oil. The S.I.R.I.P., in collaboration with Italy's E.N.I. was launched in 1957, and I.P.A.C., in collaboration with the Pan American Oil Company, was started in 1958. The S.I.R.I.P. began exports of crude in 1963 and the I.P.A.C. expects to export crude this year. The S.I.R.I.P. production is around 30,000 barrels a day and the I.P.A.C. output is about 100,000 barrels a day.

The Japanese, who have had foreign exchange problems, in recent years succeeded in exploration contracts and in finding what they call 'yen oil.' In these oil supplies, since there has been negligible investment in other hard currency, the purchases by Japanese refiners are all on the yen account. The Japanese have exploited such sources in Saudi Arabia and Indonesia. Delhi's ambitions are to find similar sources in which the expenditure will be only in rupees. This is a dream, because, unlike Japan, India does not have the technical capacity to go it alone. The Indian Government thinks in terms of joint ventures in which foreign oil firms also will be partners with the Iranian Government. Officials of the National Iranian Oil Company told this correspondent that the firm had no intention of calling for bids for new offshore concessions for another two years. The Middle Eastern oil producing countries are also unlikely to compete with one another on prices.

Recent exploratory talks with the Kuwait Government are on a slightly different footing. This is because the Kuwait Government has plenty of surplus hard currency earnings to invest. Kuwait already has started a Fund for Arab Economic Development which gives loans to Arab countries. The Fund's initial capital of Rs. 65 crores has been increased to more than Rs. 130 crores. The Jordan, Tunisia and the Sudan have already taken loans from the Kuwait Fund.

In the negotiations with Kuwait, two possibilities are envisaged. One is investment by

ALEMBIC CHEMICAL WORKS CO., LTD.

SPEECH OF CHAIRMAN, MR. R. B. AMIN

EXPANSION AND DEVELOPMENT PLANS UNDER WAY

AN idea of the expansion and development plans of the Alembic Chemical Works Company Ltd., was given by Mr. R. B. Amin, the Chairman, when he addressed the Fifty-seventh Annual General Meeting of the Company held at Baroda on Thursday, 28th May 1964. Mr. Amin disclosed that the Company was approaching the Government for permission to step up the capacity of the Penicillin plant. He also referred to the proposals for the manufacture of two other antibiotics, namely, Erythromycin and Kanamycin, as well as Hydroxocobalamin. Incidentally, he alluded to the establishment of the Virus Research Centre of the Company and stated that, within a short time, the Centre was able to develop, on a laboratory scale, oral polio vaccine. It was the Company's desire, he added, to manufacture and market this vaccine on a large scale. He further revealed that it was intended to manufacture other bacterial vaccines in the near future.

The following is the full text of Mr. R. B. Amin's speech:

LADIES AND GENTLEMEN,

We are meeting today in the shadow of a national tragedy of the first magnitude. India's noblest son, and one of the world's greatest men of all time, Jawaharlal Nehru, is no more. The light is out and there is darkness everywhere. His selfless humanism, his tireless work for the uplift of the underprivileged and the downtrodden, his boundless efforts to free mankind everywhere from the shackles of political and economic enslavement will stand as a timeless monument to his greatness and genius. Even in his lifetime, every one idolised him, nay worshipped him, not by reason of his office of Prime Minister, but by his great goodness of heart as a man. May his memory ever remain green. As a mark of respect to the departed leader, I would request you to stand up and observe silence for one minute.

Coming now to the business of the moment, I have great pleasure in welcoming you to the fifty-seventh annual general meeting of the Company. The accounts for the year ended 31st December 1963 and the Directors' report have been circulated to you and, with your permission, I shall take them as read.

As anticipated, the year under review records continued progress. The sales increased by Rs. 56.00 lakhs and have crossed the four-crore mark. The profits before taxation for the year were Rs. 46.03 lakhs, as against Rs. 36.62 lakhs for the previous year. All expansion planned for the year was completed, including the expansion of the ethyl alcohol plant and the penicillin plant.

Penicillin

In penicillin, we now have reached our licensed capacity of 20 M.M.V. In addition to meeting our own requirement for vialling, we were able to supply other filling units of the country also with bulk penicillin manufactured by us. With the use of better strains, which we have already introduced and the resulting increased yield, we think that it would be possible for us to double our production of penicillin without further capital expenditure. We are accordingly approaching the Government for their sanction for an increased capacity.

Other Antibiotics

The Company also intends to manufacture other antibiotics, namely, erythromycin and kanamycin. The main use of erythromycin is in the treatment of staphylococcal infection resistant to penicillin and other antibiotics. In such infections, which are now common, especially in hospital practice, the drug may be lifesaving. It is also very useful in the management of pneumococcal and streptococcal infection in people who are allergic to penicillin. Kanamycin has proved effective in the treatment of tuberculosis where other drugs like streptomycin, etc., fail to effect a cure. It is also very useful in the treatment of infections of the urinary tract and the intestine.

The Company is also thinking to undertake the basic manufacture of hydroxocobalamin. In a country like India, where malnutrition and liver diseases are common, a considerable quantity of vitamin B_{12} is required for the treatment of these disorders. Hydroxocobalamin, an analogue of vitamin B_{12}, has an action similar to that of vitamin B_{12}. However, it maintains a longer and higher blood level of the vitamin, thus requiring less frequent administration of the drug. We feel, therefore, that there is a good field for the introduction of this product in India.

Virus Research Centre

Last year, I referred to the establishment of a Virus Research Centre by your Company. I am glad to say that, within a short time, this centre was able to develop on a laboratory scale oral polio vaccine. It was our desire to manufacture and market it on a large-scale. I am sorry, however, that the Government of India is not favourably inclined to allow the manufacture of the type of strain developed. We are, however, pursuing this matter.

It is also intended to manufacture other bacterial vaccines in the near future.

We had some difficulties in putting on the market consumer goods like tooth-paste to which I had made a reference last year. In spite of our best efforts, it has not been possible to get Government sanction for the import of the necessary equipment and we have been asked to get our filling, etc., done from one or two units in the country which have capacity to spare. There is difficulty also in getting the polythene containers for some of these products, as polythene is in short supply. We think, however, that it would be possible to introduce some of these products at least during the year. I might mention here that these products would be sold under the name "Hompro" and would include items used in every home.

Artificially Created Obstacles

We in our country today are the victims of a bureaucratic structure where controls, regulations and red-tape are hindering our progress and not allowing us to go forward. Most of our energy is spent in overcoming these artificially created obstacles, in chasing files and pushing papers from the table of one Government officer to another. In our rigidly planned and regulated economy, we are still suffering from continued shortages of foodgrains, sugar and many other products. We must pause and think whether we are on the right track. What would happen if we relax controls, licensing and regulation and bring about a greater freedom into the whole economic structure where productive capacity could rise or fall or change over to newer lines according to the requirements and demands of people who constitute the market, free from all artificial hindrances. There would then be competition in the profitable lines which would lead to fast economic growth, lower prices and better quality products. Our politicians are talking about monopolies. Are we not really supporting monopolies by these regulations and controls? In our planned economy, under one excuse or the other, inefficient and uneconomic units are able to operate and still make a profit.

Inflationary Pressures

Particularly this year, there is all-round inflationary pressure on our economy. Enforced expansion of the Goverment sector in industry and commerce and proportionately more expenditure under non-developmental heads, both of revenue and capital nature, seem to be the root cause of this inflationary pressure. In 1961-62, the total investment in the Central Government's undertakings was Rs. 1,090.75 crores and the loss was Rs. 10.60 crores. In 1962-63, the investment was Rs. 1,294.11 crores and the loss increased to Rs. 12.38 crores. Non-developmental expenditure increased from 41 per cent in 1961 to 48 per cent in 1963 and developmental expenditure decreased from 58 per cent in 1961 to 51 per cent in 1963:

(In crores of rupees)

	1961-62	1962-63	1963-64
Non-developmental expenditure	1,071.5 (41.05%)	1,459.7 (44.1%)	1,866.8 (48.2%)
Developmental expenditure	1,534.4 (58.95%)	1,852.6 (55.9%)	2,013.0 (51.8%)

How can we have more goods at cheaper prices if we are following such policies? I would suggest that it is time we reversed these policies. Let us put to best use the resources available to us, both internal and external. Let us mobilise the creative talent of our people by creating conditions where they can operate freely. Let us have more freedom throughout the economic structure, by reducing regulations and controls, and let the resources flow to whoever is able to put them to greater productive use and profitable operations. The new trend in thinking both by our Finance Minister and the Planning Commission that investment must earn a return of 10 per cent is a healthy one. Let us all work purposefully to change the prevailing economic climate in our country.

The current year, in spite of the prevailing conditions within the country, will be another year of progress for the Company.

I take this opportunity of thanking my colleagues on the Board as well as the Managing Agents, staff and the workers of the Company for their co-operation. I now commend the annual accounts and the Directors' report for your consideration.

Note: *This does not purport to be a record of proceedings of the Annual General Meeting.*

Notice

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the eightieth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on THURSDAY, 25TH JUNE, 1964 at 3.45 p.m. to consider the Accounts of the Company for the year ended 31st December, 1963, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 11TH JUNE, 1964 to 25TH JUNE, 1964, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
D. MANSON,
Managing Director,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *25th May*, 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

A LOOK AT IRAN'S OIL ECONOMY

(*Concluded from previous page*)

the Kuwait Government in a variety of industries and the other is to persuade Kuwait to invest in a refinery which will use crude from Kuwait.

Prospects for Indo-Iranian collaboration exist in the matter of utilising the immense resources of natural gas which are now wasted in Iran. For the oil refining companies, it is not worthwhile making the huge investments necessary for using natural gas. In 1963, about 376,000 million cubic feet of natural gas were flared in Iran. Crystal gazers among economists—some of them associated with international organisations—have projected fantastic possibilities about the progress that can be achieved by the use of Iranian gas production which will be doubled by 1970. But feasibility is another matter, entirely different from the economists' dreams.

The Economic Commission for Asia and Africa has decided on further surveys to explore the use of Iranian natural gas and has asked member nations to co-operate with Iran in this field. India certainly is a natural market for Iranian natural gas or intermediates made from gas. One feasible way is for Iran to make ammonia which can be used by fertiliser factories in India. In more sophisticated economies, gas has been put to use after long overseas voyages, like gas from Algeria in use in Europe. There is speculation in Iran about natural gas being transported for use in Goa in a steel mill. Mexico, incidentally, uses gas in steel mills.

In exploiting natural gas and making chemical intermediates, some Iranian officials think that aid can be expected from the World Bank.

KRISHNARAM BALDEO BANK PRIVATE LIMITED

(A SCHEDULED BANK)

Registered Office : **JAYAJEE CHOWK, LASHKAR, GWALIOR**

SIXTH ANNUAL REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the Shareholders the BALANCE SHEET AND PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1963, together with the AUDITORS' REPORT.

During the year the working of the Bank has been satisfactory and after making the necessary and usual provisions the Bank has made a profit of Rs. 2,06,843.33. To this has been added the balance of Rs. 10,397.95 brought forward from previous year, making a total sum of 2,17,241.28

The following appropriations have been made :—

	Rs. nP
Amount provided for Taxes	82,000.00
Amount provided for Gratuity	10,000.00
Amount transferred to Reserve Fund	25,000.00

The Directors now propose :—

To pay dividend for the year ended 31st December, 1963 at the rate of Rs. 1.50 per share subject to deduction of tax at the prescribed rates which will absorb	75,000.00
To carry forward to the next year's account	25,241.28
Total .. Rs.	2,17,241.28

Under Article 149 of the Articles of Association of the Company, Directors Seth Lalchand B. Sethi and Col. Brijraj Narain retire by rotation but are eligible and offer themselves for re-election.

During the year Mr. P. C. Malhotra, President Income-tax Appellate Tribunal (Retd.), accepted seat on the Board. Under Article 134 of the Company's Articles of Association, he will hold office upto the date of the Sixth Annual General Meeting. He stands for re-election in the manner provided by the Articles of Association.

The Directors have to report that during the year Mr. M. S. Banker, Manager, *on the expiry of the term* of his contract, left the service of the Bank and Mr. S. R. Tipnis whose services have been loaned to the Bank on deputation basis by the Central Bank of India Ltd., took over from Mr. Banker as the Manager with effect from the 9th of May, 1963. Arrangements have also been made for the Bank's working in collaboration with the Central Bank of India Ltd., and a suitable agreement between the two Banks for the purpose is to be executed in due course.

The Directors convey their thanks to all the constituents of the Bank for their support to the Institution and place on record their appreciation of the services rendered by the Manager and staff of the Bank.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By order of the Board,
V. R. SCINDIA,
Chairman.

GWALIOR, *24th February*, 1964.

AUDITORS' REPORT TO THE MEMBERS

We have audited the attached Balance Sheet of the Krishnaram Baldeo Bank Private Limited, as at 31st December, 1963, and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the audited returns from all the branches.

We report that :—

(a) we have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the books of account ;

(e) in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet together with the notes thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

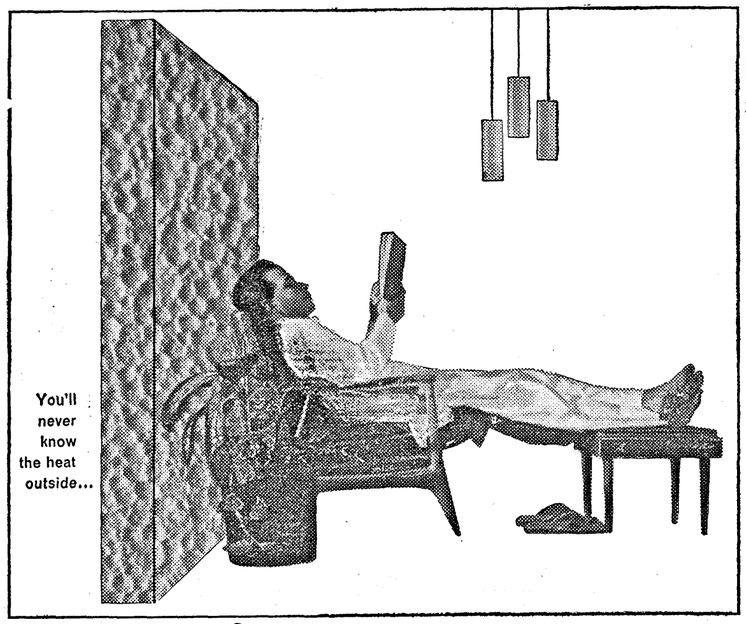
GWALIOR, *24th February* 1964.



Thermocole®
keeps your room so cool!

THERMOCOLE is foamed polystyrene: The lightest rigid insulation material. Its closed cells provide an effective barrier against heat, noise and moisture.

THERMOCOLE is versatile. It is ideal for insulating roofs, walls and floors in all kinds of buildings. One inch of THERMOCOLE insulates better than four feet of concrete!

THERMOCOLE false ceilings are very attractive. It is excellent for fabricating light-weight insulating partitions and doors.

THERMOCOLE is feather-light, yet strong, durable and easy to work with. It cuts structure and labour costs. Efficiency with economy—that's the insulation THERMOCOLE provides.

RIGHTS, DUTIES AND OBLIGATIONS OF COMPANY DIRECTORS—III

EFFICACY AND INTEGRITY OF COURTS MUST BE PRESERVED

By N. K. Petigara

IT has been said quite often that directors are trustees. So far as it means that directors in the performance of their duties stand in a fiduciary relation to the company, that statement is essentially correct and it would be wise and prudent for directors to act as if they were trustees. Directors are, therefore, bound by all those rules of conscience, fairness and morality of purpose which the law imposes as guides for those who are under fiduciary obligations and responsibilities. Baker and Cury, in their treatise on the corporation, state that directors are held in official action to the extreme measure of candour, unselfishness and goodwill and that these principles are rigid, essential and salutary that a director who owes loyalty and allegiance to the company must owe that loyalty completely undivided and his allegiance must be influenced in action by no consideration other than the welfare of the company of which he is a director. If, in any cases, any adverse interest arises, it has to be subjected by the director himself and by the other directors to an uncompromising scrutiny and it is only where such uncompromising scrutiny can stand that the transaction in question ought to be put through. It follows, therefore, that a director may not profit at the expense of the company concerned or in conflict with its rights and a director, therefore, must not act for personal gain or personal object. No opportunities which in fairness belong to the company could be utilised by a director for his personal gain.

Does this mean that a director must know the business which he is supervising, as if he was an executive officer having special knowledge thereon? I think not. What is expected of a director is that he should know of and give direction in regard to the general affairs of the institution and its business policy and have a general knowledge of the manner in which the business of the company is conducted, the character of the investments and the employment of the resources of the company.

Protection to Shareholders

In law, it is quite clear that no custom or practice can make a directorship a mere position of honour void of responsibilities. There is no substitute for proper and ample care and attention. A board of directors exists not for the personal ends of the directors, even if they own a majority of the shares, nor merely for giving confidence or for attracting custom; the board must be able to afford protection to the shareholders and, as the theory now holds, to some extent to the public. The directors are, however, not insurers. They are liable for breach of duty or negligence in the performance of their duties, but not for errors of judgment or mistakes so long as they act with reasonable skill and prudence and on the materials which they have before them or ought to have before them. The law recognises that the most conservative and careful director would not be infallible and that he can err in his judgment even to the extent of being in error or making mistakes, and that he ought to be excused, provided that he has used that degree of care, ordinarily exercised by prudent men. If he exercises that degree of care, he is not liable, even though his opinion may have turned out to have been mistaken and his judgment faulty.

Another proviso, which shareholders and in a number of cases members of the Legislature as well as those in authority possibly forget, is that, to assess that degree of care which a director must show, one has to look at the facts as they exist at the time of their occurence. Subsequent events may make one wiser, but those events cannot properly be taken into consideration in assessing the liability of a director. While considering this degree of care, there may be a difference between director and director. I conceive that the position of the chairman or of the managing director is even more onerous, if such chairman or managing director takes the duty of guiding his co-directors. In such cases, while, on the one hand, the others are entitled to depend on him, he is bound to be somewhat more careful, again on the basis that in a similar position, an ordinary prudent person would show greater care.

It has been said, perhaps too generally, that directors are concerned only with what happens in their presence at board meetings. This is not a correct appreciation of the legal position. A director is bound, as he is entitled, to inform himself of what is going on with the company of which he is a director. By absenting himself, he cannot absolve himself from liability altogether. It is possible that, in respect of one solitary transaction, he may not be aware and he may not be liable. But having accepted a post of confidence, having been charged with the active duty to keep himself informed of the company's progress, he must keep himself generally informed about the same.

Collective Responsibility

This brings me to the last question whether the responsibility is collective or individual. It is collective. Though a director of a company is liable for his own misconduct and not for the wrongful conduct of others, if he does not observe the duty of care, he may find himself liable for the active defaults of others, even though he may be absent from a particular meeting which decides upon a particular transaction.

As regards loyalty of a director, there are numerous ramifications. The duty of disclosure of personal interest falls under this head. It is essential to ascertain and inquire towards whom is this duty, on whose part is this duty and in what circumstances is this duty to be exercised. In most of the cases, where loyalty and personal interest can come into conflict, as would be in the cases of contracts of interested directors, or interlocking directors, the law has made provisions rendering void or voidable contracts or transactions between a company and an interested director. Intricate questions arise whether interest of the directors are fully disclosed and, even where that is so, whether the terms of the transactions are fair, and lastly whether the particular director has taken part in the discussion and decision. It is open to a company, after careful consideration of all known facts, to accept or even ratify and confirm a particular action or transaction. Much would depend in deciding such questions whether the facts were fully disclosed, and whether the transaction is fraudulent or unfair or lacking in faith.

Banking Laws Act 1963

In the light of the above, the effect of two important pieces of legislation, namely, the Banking Laws (Miscellaneous Provisions) Act, 1963 and the Companies (Amendment) Act, 1963, are to be considered. So far as these affect the rights, duties and obligations of directors, it appears to me that they affirm in regard to their duties and obligations the existing law but restrict, particularly in the case of banks, their rights, especially of management of the affairs of the companies under their care. In matters of procedure, however, and in the matter of restricting the jurisdiction of courts of law to entertain certain matters, there has been considerable amendment to the law. Perhaps my being a lawyer results in my deprecating all legislative measures depriving the courts of jurisdiction. I have made no secret of my views that it is incorrect and dangerous to deprive courts of law of jurisdiction and transfer jurisdiction to what at best can be administrative tribunals. Vital questions affecting the citizens are involved and a completely judicial approach, which is at the same time subject to appeal, revision or review by the Supreme Court, should be most useful.

Directors of banks have come in for a number of restrictions. The Reserve Bank of India has been given considerable powers over banks and financial institutions. The Reserve Bank has been given authority to give directions relating to the conduct of business by banks which can in cases amount to overriding the wishes and powers of the directors of those banks. Further restrictions have been introduced in regard to unsecured loans or advances by banks to either their directors or to firms or private companies in which directors are interested and in the case of public companies in which the chairman of the board of directors of a banking company is interested as chairman or managing director of that public company or as managing agent or director or partner of the managing agent of such public company.

The right at law of directors to remit debts is restricted in the case of debts due to a bank by any of its directors or any firm or company in which any of its directors may be interested in a variety of ways, and the law provides that, if the directors make any such remission without the permission of the Reserve Bank, it will be void. Important additional powers are granted to the Reserve Bank enabling it to give directions to a bank as to the purpose for which advances may or may not be made; margins to be maintained; the maximum amount of advance or other financial accommodation which may be made to any one company, firm, association of persons or individuals; the maximum amount of guarantees that may be given on behalf of any one customer and also the rate of interest and other terms and conditions on which advance or other financial accommodation may be made or guarantees may be given. All these, naturally, restrict the rights of directors.

A power of a sweeping nature, to remove from office any director, chief executive officer or any other officer or employee of the banking company, is also vested in the Reserve Bank and, what is more, any such order made by the Reserve Bank would effectively prevent such director or officer from being directly or indirectly concerned with or taking part in the management of any banking company for a maximum period of five years. A still greater power given to the Reserve Bank is to appoint any person it considers proper in place of the director or any other officer or employee who has been removed. The Reserve Bank has also the power to appoint for any banking company not more than five persons to hold office as additional directors. It is important to note that the nominees of the Reserve Bank are statutorily exempted from incurring any obligation or liability by reason of any acts of theirs done or omitted to be done in good faith.

These changes have been effected, according to the Statement of Objects and Reasons, for ensuring more effective supervision and management of the monetary and credit system of the country by the Reserve Bank and to enable the Reserve Bank to give the banks directions in respect of matters in which the Reserve Bank, as the central banking institution of the country, may be interested from the point of view of the control of credit policy. The Reserve Bank's powers in relation to commercial banks are enhanced so as to provide for stricter supervision by it in the operations and workings of such banks. Quite clearly, the amendments have been made following the new concept of public interest being the overriding factor in regard to company management.

Companies Amendment Act

In regard to companies, the legislature has, pursuing the same concept of public interest and following its expressed intention to ensure as far as possible the efficient and proper administration of companies, by the Companies (Amendment) Act 1963, provided for a Tribunal to exercise a number of the functions which Courts at present exercise and replaces the Company Law Department by a Board of Company Law Administration.

So far as all this concerns directors—their rights, duties and obligations—there are no important changes in the law except that the Central Government has now the right to remove from office directors or officers of the Company in certain cases. There are other very important provisions compelling conversion of loans by the Government to companies into equity capital.

The Board of Company Law Administration will exercise and discharge such powers and functions as are conferred on the Central Government by or under the Companies Act or any other law and as may be delegated to it by the Government. The board will consist of a chairman and four members. It will act according to the prescribed procedure and it will be subject to the control of the Central Government.

A Tribunal will also be constituted and appointed consisting of as many members as the Central Government thinks fit to exercise and discharge the powers and functions conferred on such Tribunal by the Companies Act 1956 and such of the powers and functions conferred at present on the Court under Section 155 (rectification of register of members), Section 203 (granting of leave to a fraudulent person against an order restraining him from managing companies), Section 240 (compelling production of documents and evidence before an Inspector appointed by the Government and taking action in case of default), and Sections 397 to 407 (regarding prevention of oppression and mismanagement), which the Central Government may from time to time specify.

While the Tribunal will have as its chairman a Judge of a High Court or a person qualified to be a Judge of the High Court, I feel that the deprivation of the jurisdiction of the High Courts is not a desirable feature of this legislation.

The other provisions of the Amending Act affecting directors directly are those authorising the Central Government to remove managerial personnel (which would include directors) from office on the recommendation of the Tribunal. Section 388B, which is newly introduced, directly affects directors who, under normal Company practice as understood up to now, could only be removed by the shareholders or in certain stated cases by the Court.

Concept of Public Interest

There are several grounds set out for which a director or an officer of the Company may be removed by the Central Government, and one of them is the carrying on of the business of a company in a manner prejudicial to the public interest. This is in accordance with the new concept of public interest which is gaining ground.

Ever since the system of corporate existence has taken root and developed, the duties and obligations of directors have been understood by the Court and enforced. Their rights have crystallised in the process of development of the system and, for a considerable time, the all-powerful position of directors in the matter of control continued supreme on account mainly of the shareholders being unorganised and scattered and public opinion being not so critical, as it has become later on, in some cases deservedly and in others not so. But the Courts have always taken care to protect the rights of shareholders and creditors and also the public interest by enforcing the duties and obligations of directors in their mixed-up capacities of agents, trustees and officers and, therefore, the makers and supervisors of the policy governing the administration of the Company concerned. The legislature in England and in our country have legislated in favour of the shareholders by placing a few restrictions on the rights of the directors in the governance of their companies and further by prescribing for the formalities to be observed in certain matters and by particularising the procedure whereby shareholders, creditors and others connected with companies (including in India the Central Government authorities), could strictly enforce the duties and obligations of directors.

As regards the pruning of the rights and powers of the directors, the pruning has not been considerable or restrictive. As regards the procedures now prescribed, there can be no particular objection, because procedural legislation does not affect the law. But procedures can be cumbersome and irksome and, in my view, the present legislative changes fails to achieve the objects contemplated. The dangers of such legislation are that the wide ambit of the unwritten law could be and is abridged and the policy of depriving the jurisdiction of the regular Courts of the country could and is likely to result in administrative judgments which are not always satisfactory. Believing as I do in the efficacy and integrity of our Courts and of the system adopted in the Courts whereby any possible mistake, or error of judgment is capable of being corrected, I think it is a mistake to substitute for them what are at their best administrative Tribunals. As against the virtues of despatch and economy which such Tribunals are expected to possess (and which I doubt), the possibilities of mistakes and errors being committed and there being abuses resulting in possible denial of justice and laying down of incorrect principles are greater in the system of administrative Tribunals than in the time-honoured system of judicial redress.

(Concluded)

Note: This is the third and concluding instalment of the article by Mr. Petigara who is a well-known solicitor and an authority on Company Law.

Notice

BALMER LAWRIE AND COMPANY LIMITED

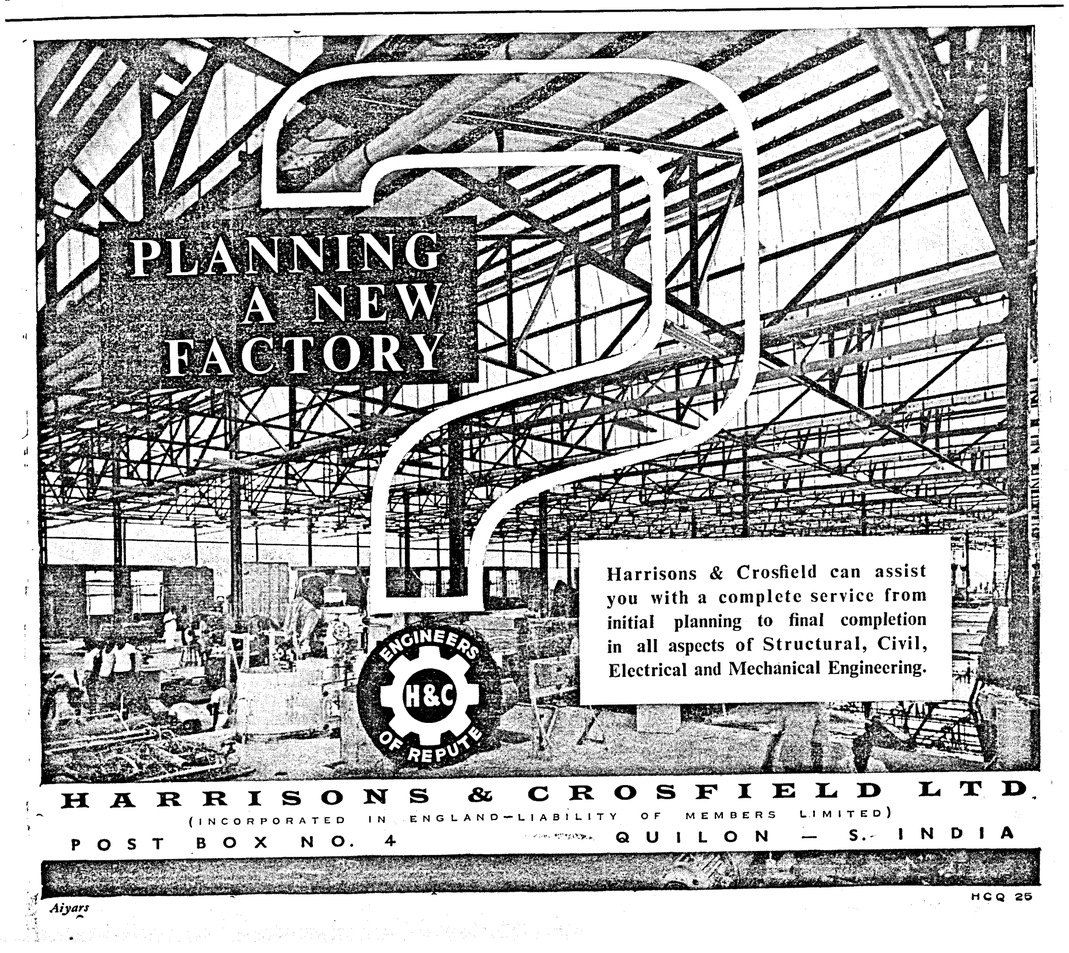
NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Monday, 29th June, 1964 at 3.30 p.m., to consider the Accounts of the Company for the year ended 31st December, 1963, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 9th June, 1964 to 29th June, 1964, both days inclusive.

By Order of the Board,
D. MANSON,
Managing Director.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 13*th May*, 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.



U.N. CONFERENCE ON TRADE

AGREEMENT REACHED ON SOME IMPORTANT ISSUES

BY next week-end, the United Nations Conference on Trade and Development will have concluded its deliberations and reached certain definite conclusions, unless, of course, the Conference decides to extend its session beyond the scheduled deadline—that is the 15th inst.—which seems highly improbable at the time of writing. The Conference, it will be recalled, began at Geneva on 23rd March last. The first phase of the Conference, which was marked by policy statements made on behalf of the different participating countries numbering 122, ended on 8th April (a resume of this phase was given on pages 721 and 722 of *Commerce* dated 25th April). Since then, the Conference has been conducting its deliberations in its five main Committees which are trying to find solutions for specific issues entrusted to them.

The five Committees devoted the first few days to the general discussion of the problems as a whole—a review of the discussions was made on pages 856 and 857 of *Commerce* dated 16th May—and they are currently examining the specific aspects pertaining to the main issues involved. All the five Committees have passed from the stage of expression of individual positions and the defining of problems to the stage of merging ideas and bringing together, as far as possible, lines of agreement on which solutions to various economic problems could be formulated. Among the indications of this progress are the completion of tasks entrusted to important sub-committees and working groups. Important also for the work of the Conference, though not officially listed in its programme, is the intensified activity outside the Committee meetings. In informal discussions, groups of countries have been seeking to widen the areas of agreement and to indicate possible measures to help improve world trade.

Financing Trade Expansion

While four of the five Committees are still discussing (as of Saturday, 30th May) various proposals before them, the Third Committee, dealing with the problem of financing expansion of world trade and improvement of the invisible trade of developing countries, has completed its task and is busy formulating a 50-page draft. It is, indeed, gratifying to hear from the Chairman of the Third Committee, Mr. Janez Stanovnik, that the Committee's work has progressed smoothly and in a friendly manner. Extremely constructive efforts, we are told, have been made on all sides by both developing and developed countries. One main reason for the success of the Committee is the high quality of experts sent by the developing countries. Mr. Stanovnik has particularly commended the vital contribution made by the Indian delegate, Dr. N. A. Sharma of the Reserve Bank of India. Another reason is the non-political nature of the subjects discussed, unlike the First and Second Committees which are dealing with primary commodities, manufactures and semi-manufactures of developing countries and the Fourth and Fifth Committees which are discussing the shapes and future set-up of the Conference.

It would be wrong to evaluate the work of the Third Committee in terms of immediate benefits, but there is no doubt that the recommendations made by the Committee, as Mr. Stanovnik has said, would influence the thinking and machinery of the Governments of developed countries, "whereafter real benefits would begin to flow." The recommendations fall into four categories: (*a*) shipping, (*b*) growth and aid, (*c*) terms and conditions of aid, and (*d*) compensatory financing. On shipping, the Committee has unanimously urged "appropriate procedures, including any committee that might be deemed necessary to be established under the United Nations system or as a part of the institutional system that might be set up under this Conference to promote understanding and co-operation in the field of shipping...." Incidentally, it may be noted that this is the first time that an international machinery on shipping has been accepted by the main shipping countries in the world.

The Third Committee has also approved of five draft resolutions. One of them pertains to the expansion of the activities the U.N. Special Fund so as to include increased financing of demonstration projects and to undertake investment proper as additional resources become available. The Fund would be authorised to accept additional contributions for this purpose, but would ensure that its new responsibilities would not prejudice its pre-investment work. Another resolution recommends that a U.N. Capital Development Fund should start its operations at an early date to finance, on favourable terms in all developing countries, especially those at an earlier stage of development, national and regional development plans, programmes and projects, particularly in the field of industrialisation. The resources of the Fund, it is suggested, should be derived from voluntary contributions. The three other resolutions cover the following:

The Secretary-General of the Conference should, in the light of the studies under way and after consultation with the appropriate world institutions, take steps to convene a group of experts to consider the international monetary issues relating to the problems of trade and development, with special reference to the objectives and decisions of the Conference and devoting particular attention to the needs of developing countries in their trade with one another and the rest of the world.

The developed countries and international organisations must follow the principles laid down by the Committee in order to promote more effective use of the possibilities of economic and technical co-operation. The principles refer mainly to the construction of industrial undertakings in developing coutries.

The World Bank should be asked to study the actual and potential use of suppliers' credits and credit insurance for financing exports from developed to developing countries; their effect on competition between exports of developing and developed countries, as well as between developed countries; and as a means of financing trade among developing countries.

No Definite Conclusions

Although the First Committee has completed its discussions on the various aspects of world commodity problems, no definite conclusions seem to have emerged yet. The discussions centred round (*a*) programme of measures and actions for the removal of obstacles (tariff, non-tariff and others) and of discriminatory practices and for expansion of market opportunities for primary commodity exports, as well as for increases in their consumption and imports in developed countries; (*b*) review of long-term trends and prospects for primary commodity producers (including terms of trade); (*c*) measures for stabilising primary commodity markets at equitable and remunerative prices (including commodity arrangements); and (*d*) international compensatory financing and measures for stabilising primary export earnings at adequate levels. There is, it is said, a wide divergence of opinion on commodity policies between the European Common Market countries (led by France), on the one side, and Britain and the U.S., on the other. The E.E.C. is opposed to the proposals, put forward by Britain and the U.S., for a reduction in tariff barriers on primary products with no strings attached. Any such reduction, it is argued by France, should be tied to a market organisation approach with fixed commodity prices. Most countries outside the E.E.C. are firmly opposed to any kind of price fixing.

A draft proposal put forward jointly by 62 developing countries calls for the establishment of a permanent commission on commodity arrangements and prices. The scope of commodity agreements, it is suggested, should be sufficiently wide so as to include not only clauses on prices and quantities but also co-ordination of national production, harmonisation of policies on specific commodities and overall development plans, and the relations between trade and disposal of stockpiles and surpluses. It is emphasised that the basic objective of the agreement is "to stimulate a dynamic and steady growth in the export earnings of developing countries, so as to provide them with expanding resources for their economic and social development."

Transitional Arrangements

Broad agreement has, however, been reached on the action to be taken by the developed market-economy countries to remove obstacles to trade. Proposing "transitional arrangements," a revised draft submitted by 64 sponsors says:

"Preferential arrangements between developed countries and developing countries, which involve discrimination against other developing countries and which are essential for the maintenance and growth of export earnings and for the economic advancement of the less-developed countries at present benefiting therefrom, should be abolished *pari passu* with the effective application of international measures providing at least equivalent advantages for the said countries. These international measures should be introduced gradually in such a way that they become operative before the end of the United Nations Development Decade."

The Second Committee (trade in manufactures and semi-manufactures) has adopted a draft resolution envisaging the establishment of a specialised agency for industrial development to assist the developing countries in planning and setting up viable export industries. The Geneva Conference, it has been agreed, should recommend that the U.N. General Assembly, at its nineteenth session to be held later this year, must take suitable action in this direction.

U.K.'s Proposals

At the Committee meetings, Britain has been most forcefully urging removal of trade barriers to exports of developing countries and grating of preferences. A draft proposal put forward by it calls for the removal of, or for reductions in, tariffs and quotas by Western developed countries on manufactured and semi-manufactured goods exported by developing countries, and for "equivalent action appropriate to their trading system" by the Communist countries. It has also suggested that non-Communist countries which are still maintaining quotas should report their reasons by the middle of next year, and that Communist countries should make annual progress reports to an appropriate international organisation. The British proposals are:

Developed countries should not impose or intensify quantitative restrictions inconsistent with international agreements on imports of manufactures and semi-manufactures from developing countries except in "exceptional and compelling circumstances" (when the countries most affected should be consulted).

Developed countries should remove those restrictions now existing as soon as possible; should not increase import duties on such goods; and should negotiate a substantial tariff reduction on them as soon as possible without demanding reciprocal tariff concessions; also, they should negotiate for the reduction and elimination of such duties "even though higher rates of duty might continue to be charged on like goods imported from developed countries. This last clause means that manufactured goods from developing countries could enjoy a preference over similar goods from developed countries.

Developed Communist countries should progressively increase their imports of manufactures and semi-manufactures from developing countries, and reduce the prices paid for such imports by their consumers; should make provision in their economic policy for maximum imports from developing countries; should not demand reciprocity in trade agreements with developing countries; and should allow these countries to spend the proceeds of their exports to them "freely in as large a number of countries as possible."

Compromise Proposal

The 75-nation group of developing countries has approved of the Western compromise proposal on preferences for manufactured goods exported by developing countries. The proposal, set forth by France on behalf of most delegations of Western industrialised nations, is that the Conference should accept the principle of such preferences, without making any definite recommendations. Under the compromise plan, the Conference would draw up a resolution endorsing such preferences to be granted by industrialised countries but would leave the task of working out the detailed arrangements to the proposed World Trade Commission expected to follow up the work of the present Conference. The U.S. delegation, however, has stoutly opposed the plan. As a result of such opposition, an atmosphere of subdued crisis, according to a U.N. official, reigns at the Conference as it enters its eleventh week. The plenary session, which was expected to begin on Monday the 1st inst., has been postponed for another week and there is said to be intense behind-the-scenes activity to stave off a possible break-down.

Institutional Arrangements

One of the most controversial issues before the Geneva Conference pertains to the institutional arrangements for implementing measures designed to ensure expansion of world trade. Seventy-five developing countries, backed by Soviet Russia and other Communist developed countries, presented at a meeting of the Fourth Committee a draft resolution calling for a new International Trade Organisation that would supersede all existing bodies. Pending studies that will be necessary for the creation of such an Organisation, the resolution suggested, the present Conference should be continued as an organ of the U.N. General Assembly. The resolution has not, however, found favour with the industrially advanced countries in the free world. These countries have put forward a counter-scheme the salient features of which are:

New organisational arrangements should be established as an integral part of the U.N. economic machine. There should be a periodic conference, meeting every three years, or more frequently in exceptional circumstances; a standing committee of the conference to be known as the Commission for International Trade; and a permanent full-time Secretariat within the U.N. for servicing the conference, the Commission, and any subsidiary bodies. The basic responsibilities of the periodic conference would be the promotion of international trade, particularly in relation to the economic development of the developing countries; the formulation of principles and policies to this end; and the continuing review of organisational arrangements in the light of the experience of their work and activities.

The proposed Commission for International Trade would have a number of functions. It would keep under review and take appropriate action for the implementation of recommendations, declarations, resolutions and other decisions of the conference, and ensure the continuity of its work. It would study, analyse and consider developments and trends in the field of trade, particularly the effect of such developments on the economic positions of developing countries. And it would formulate such policy recommendations in this respect as it might consider desirable. The Commission would keep under continuing review the effectiveness and further evolution of organisational arrangements and recommend such improvements as may appear feasible. It would also study the problems relating to international commodity trade. It would establish such sub-committees as it considered necessary, in particular one on commodities.

All the expenses of the conference and its subsidiary bodies would be borne by the U.N., with the addition of a special account for receipt of contributions from conference participants who are not members of the U.N.

Divergence of Opinion

Broadly speaking, there is general agreement on all these points between the Western and the less-developed countries. Differences, however, remain on such questions as the size and powers of the standing body and its voting procedures and the precise way in which the new structure would be linked with the existing U.N. bodies. The developing countries suggest, for instance, that the standing body should be an executive organ with 52 members (the Western countries having 14 seats), the decisions being taken on a simple majority vote. In their opinion, special account needs to be taken of the interests of major trading nations which would be primarily responsible for implementing any decisions or recommendations. In order to meet this difficulty, the Western nations suggest a membership of 40, including the twelve principal trading countries taking part in the conference, the recommendations being considered adopted when approved by a majority of members present and voting, including a majority of the twelve principal trading countries. Dr. Raul Prebisch, Secretary-General of the Conference, is reported to have been working hard behind the scences to arrange a compromise, and there is reason to hope that his efforts would be successful.

Regional Economic Co-operation

Increased economic co-operation among the developing nations on a regional basis is the keynote of a draft resolution adopted by the Fifth Committee. The resolution (based on an Algerian proposal)

calls for a "strengthening of regional and inter-regional economic co-operation and contacts, a more rational division of work, creation of complementary industries on the regional and sub-regional level, and promotion and gradual liberation of trade among developing countries," and

urges "reorientation of traditional trade currents through Government action and elimination of monetary obstacles to trade."

The idea of increased economic co-operation on a regional basis, though it is commendable, is somewhat difficult of being put into effect. It has been urged on more than one occasion at the E.C.A.F.E. meetings, but has failed to fructify, though every country has endorsed the idea in principle. The wide political and ideological differences among the countries in the region constitute the principal stumbling block. So far as Asia is concerned, the trade policies and the political ambitions of Communist China, which is not participating in the Geneva Conference, are not quite conducive to the strengthening of regional economic co-operation. Nevertheless, the like-minded nations in the principal underdeveloped regions may take the initiative and explore the possibilities of translating the idea into practice.

INCENTIVES IN MODERN INDUSTRY

INDIVIDUAL SCHEMES BASED ON WORK STUDY ARE THE BEST

DESPITE the finding of some social research workers to the contrary, the fact remains that money is still a major factor motivating workers. Money no doubt is not everything; but it plays an important, even a decisive, role in influencing workers' attitudes and reactions to work. Hence monetary incentives is an important tool in the hands of management to get the best out of workers. An important point that needs to be borne in mind in using this tool is that the worker is, above all, an individual whose reaction to his work and environment is basically the same as that of, say, his board chairman. No organisation, in spite of the impersonal character of modern corporate management, can, therefore, afford to ignore the human reactions of its employees to its policies and objectives and not to make suitable adjustments. It was Frederick Taylor, the father of scientific management and modern incentive systems, who saw the need to integrate the purposes of modern business organisation with the needs of the employees. "It is safe to say," he had observed, "that no system or scheme of management should be considered which does not, in the long run, give satisfaction to both employee and employer, which does not make it appear that their best interests are mutual and which brings about such thorough and hardy co-operation that they can pull together instead of apart." These words of Taylor are as meaningful today as they were when he uttered them. But the question is whether the incentive schemes he devised to achieve the objectives spelled out by him are appropriate today. A hard look at the adequacy of the incentive schemes devised by Mr. Taylor in present-day conditions has been taken by Mr. R. A. Manthei, a well-known British consultant on industrial management and Technical Director of Associated Industrial Consultants, Ltd. Writing on "Money, Motivations and Management" in the April issue of the *Voice of Welsh Industry*, Mr. Manthei critically examines the adequacy and appropriateness of the traditional incentive schemes in the present industrial context, suggests some novel schemes of his own and indicates the pattern of incentive schemes for the future.

Payment by Results

Payment by results is one of the simplest forms of incentive schemes and one of the earliest methods of payment by results is piecework applied in engineering, though it could as well be applied to service industries, laundries, invoice work in a sales office, drawing office work, engineering maintenance and various kinds of inspection work, warehousing, retail shops and sales. The advantage of piecework scheme is the simplicity with which prices can be fixed. Its chief disadvantage is that endless arguments and disagreement are likely to arise between the rate fixed and the operation. In order to overcome objections to piecework, it is necessary to establish more accurately the times of operations and this means using the watch as the basis of measurement—the technique of work study. The more refined forms of work study include Predetermined Motion Time (P.M.T.), sometimes known as Methods-Time Measurement (M.T.M.) as well as the use of synthetic times from tables for creating the composite times for any particular set of operations.

Incidentally, the work measurement component of work study does not, contrary to popular belief, necessarily give a split-second accuracy of the time of an operation as carried out by a normal operator. What it does achieve is to introduce a physical means of measurement which gives an answer much closer to the truth than unaided human assessment.

The unit of measurement is the standard hour—that is, work completed by a conscientious operator working diligently and allowing for suitable rest. The same principle of directly proportionate payment by results for piece-workers can be applied to incentive schemes based on work study and in fact this is commonly done with the usual guaranteed minimum of the normal hourly rate for the worker concerned. The fact that bonus is directly proportionate to the performance above the standard performance constitutes a powerful incentive. The principal advantage of this method, from the workers' point of view, lies in its straight forward concept and, from the Company's point of view, in the simplicity of bonus calculations. The disadvantage is that, unless standard times are accurate within reasonably low limits, bonus earnings can get out of hand and any slackness in the revision of standard times, as and when method improvements are effected, can result in looseness and, therefore, unduly high bonus earnings. Also, if the operator is off-colour one day his bonus can drop appreciably. Where the nature of the work prevents accuracy in setting times, it is possible and desirable to device geared schemes.

Four Groups

The aforesaid schemes cover the more straight-forward types of incentive schemes based on standard times established mostly by work study and which are largely, but not entirely, applicable to manual operations. But there are many other types of incentive schemes which have been introduced in all kinds of undertaking. Mr. Manthei singles out four groups of incentive schemes for special mention. The first is machine controlled and process work. This can be further classified into two groups, one relating to the familiar line-production in the electrical and automobile industries and, the second, to all the other types of mechanised industries, together with process work as in the chemical engineering industries. In the first group, work study is still employed to determine the amount of work load that can be handled by each operator along a production line where the speed of output is constant but the wages become fixed at some higher level. This is sometimes known as a measured, day-work scheme. In some instances, a small addition is made on a merit-rating basis. In these cases, it is up to supervision to ensure that each operator along the line is carrying out his duties as planned. In the second group, in which the measure of output is, in many cases, not directly related to the work done by operators such as in other machine and process fields, the bonus payment may be based on the amount of waste reduction such as the "broke" in paper making, the quantity of phosphate produced from the digestion of bones and so on. They may also be based on machine utilisation such as the number of bottles coming off a filling line per hour. In all these cases, particular care has to be exercised in establishing what is the attainable standard, a standard which may never have been actually achieved.

The second group consists of merit-rating schemes, which are concerned with assessing the abilities and efforts of individuals in their jobs and not, as in work study, with the work content of the jobs themselves. Some consideration must, of course, be given to the amount of work performed and to other factors such as co-operation, adaptability, initiative, length of service, time keeping, performance, quality of work and so on.

Merit-rating encourages selected qualities. Supervisors are also encouraged to become more responsible for the quality of the operators under their control. The disadvantages are that the incentive for increased output is not high. The supervisors may become slack in assessing the merit-rating factors resulting in high bonuses all round.

Advantages

Graded hourly rate schemes form the third group. These schemes, unlike merit-rating, involve the assessment of the jobs themselves. A job evaluation on a points basis needs to be undertaken as a first step in the formulation of the scheme. Points are given for such factors as experience and training, the skill required, responsibility for physical effort, hazards and so on. The subsequent conversion of the points into wages then gives a wage structure dependent on the job done and not on the qualities of operators. The advantages claimed for this system are: (1) full control of earnings and wage cost, (2) less resistance to the introduction of new methods and equipment, (3) less resistance to the free and full use of work study, (4) encouragement of supervision to manage and (5) improvement of labour relations. The disadvantage is that the incentive to output is not high.

Graded hourly rates with incentives, an

improved form of the previous one, constitutes the fourth group. In these schemes a small part of the total wages (not more than 15 per cent) is allocated as bonus, dependent on co-operation, adaptability, initiative quality of work and other factors.

Schemes for the Whole Organisation

Apart from the schemes described above there are several schemes wherein payments are made to all members of the organisation based on some overall calculation of results. The more important of these are three in number. They are: (1) Scanlon plan, (2) *Profit-sharing* and (3) *Co-partnership*. The main features of these schemes as described by Mr. Manthei are as under:

Scanlon Plan: This type of plan is based on the reduction of the ratio of wages to turnover from the standard ratio, resulting in a total bonus, which is distributed to the Company and all the staff. Indices other than turnover, such as profit, added value, etc., may be used. For example, if the normal ratio of wages to sales turnover were 40 per cent and if, for a particular month, the turnover were £1,000, then the normal wage bill for that month would have been £400. If, however, the wage bill were actually £300, then £100—the difference between £400 and £300—would be available for distribution. 75 per cent of this would be distributed to the workers in proportion to their gross monthly earnings and 25 per cent would be put into reserve as a buffer to absorb fluctuations due to seasonal trade conditions. Anything remaining in this fund at the end of the year would be distributed between the Company and the workers in the ratio of 25 per cent to 75 per cent.

Adjustments to the standard ratio of wages to turnover are made due to change in prices, wage rates and technical changes involving substantial changes in equipment resulting in reduction in the labour force.

Production committees are formed comprising management and workers to discuss ways and means of reducing costs.

Some of the benefits claimed from the Scanlon plan are that more suggestions come from operatives themselves, that older workers are more eager to teach their skills to less experienced men, that production costs are reduced, that there are fewer complaints, an improvement in deliveries and a better team spirit all-round.

These benefits are claimed by a number of companies in America who operate the plan with enthusiasm. There have, however, been some failures too:

Profit-sharing: This type of scheme is usually in the form of a share of profit in proportion to wages and/or length of service. A certain proportion of profits above a certain figure is set aside for this purpose.

Unfortunately, individuals may work extremely hard and yet, for some reason unconnected with their efforts, profits, and therefore earnings too, may fall. It may be argued that workers should not be expected to suffer business hazards and fluctuating incomes. These are risks for owners only.

A further injustice is inherent in the profit-sharing scheme because no distinction is made between individuals of different capacities who happen to be at the same wage or salary level.

Profit-sharing appears attractive as a means of sharing the fruits of labour among those who contributed the labour. It is not so attractive when it is a question of sharing the risks. Evidence seems to be lacking as to the real degree of effectiveness of profit-sharing as a positive incentive to the majority of employees in a business.

Co-partnership: A more rigid form of profit-sharing is the system of giving workers shares in business. The philosophy behind it is that there is a maximum incentive when the element of ownership is present.

Co-partnership suffers from the same drawback as profit-sharing—but at least with profit-sharing the worker can do what he wishes with his money. Co-partnership not only ties his labour to the Company, it ties his investments to the Company too. A high proportion of his eggs are in one basket, and the question of risk mentioned in connection with profit-sharing is intensified with co-partnership. It is true that the shares can usually be sold, but doubtless many workers feel under these circumstances that they may incur the disapproval of management by selling. It may, however, be argued that if the Company is powerful enough there is little risk involved.

The Paradox

The paradox of schemes applying to all individuals in an organisation is that, if the organisation is small, the incentive is great but the risks are high. If, on the other hand, the organisation is large, the incentive is small but the risks are low.

Which of the schemes described above should be adopted? Mr. Manthei sets out to answer this question, which, he says, is not easy, because so many factors are involved. In his opinion, however, individual schemes based on work-studied standard times produce the best immediate results in increased productivity and reduced cost. But there can be, he says, a risk of these benefits not lasting. For there is a tendency for method study improvement, produced by increased familiarity with the work, coupled with slackness on the part of the work study department in maintaining its activities during these changes, to create a "looseness" in time. This allows performance to rise, coupled with increases in bonuses, for no greater effort or productivity. As long as management-labour relations are of the highest order and proper work study discipline is observed this drift, however, can be avoided.

It must be borne in mind, points out Mr. Manthei, that there is no universal panacea that can be applied to fit all cases in all industries and businesses. Methods of paying wages in which benefits in increased productivity and reduced cost can be achieved, together with good labour-management relations, could be worked out to suit the particular conditions and particular needs of each situation.

Trend in U.S. and U.K.

It is by no means clearly evident that the trend in industry in the U.S. is towards high day rates and that incentives are on the way out. This, however, does apply to some of the giant American firms where machine-controlled line production plays a major part. Although there is a definite tendency to discard incentive schemes in these concerns, statistics show that there is still a large proportion of workers on direct incentives in both America and Britain. Thus, about 30 per cent of the workers' in the U.S. are on some form of direct incentives, the corresponding percentage for Britain being 40 per cent. Even if there is no significant statistical shift away from the use of wage incentives, it is true that far more managements today question whether incentive plans of one kind or other or not at all should be employed. Changed attitudes are more important than statistics. It is no doubt true that individual incentive schemes based on work study give good results quickly; merit-rating schemes will not give such good results as individual schemes but they create a better attitude among the workers. Similarly, graded hourly-rate schemes will not give such good results in output but they do encourage better management which in turn produces better labour relations.

Best Solution

In view of this situation, the best overall solution, which has the advantage of both worlds, according to Mr. Manthei, is to introduce individual incentive schemes based on work study, where, of course, previous conditions of wage payment on labour attitude permit. Then after 6 or 12 months, but before the work-study enthusiasm wears out, the scheme can be converted into a graded, hourly rate scheme with incentives. However, whatever scheme is adopted, the need for imaginative management is all-important. When considering means for improving productivity, one must look at organisational structure, communications, management attitude towards labour, etc., as improvements in these spheres will encourage workers to want to contribute to the well-being of the Company as a whole. These are problems of motivation in which management must take the lead by making positive move towards better systems of wage payment. For what is needed is "not only a union of management and labour on paper but a union of hearts and minds."

Notices

NEW INDIA INVESTMENT CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE twenty-seventh Ordinary General Meeting of the shareholders of New India Investment Corporation Ltd., will be held at the Registered Office of the Company at 9, Brabourne Road, Calcutta, at 4.15 p.m. on Monday the 29th June, 1964, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Profit and Loss Accounts and Balance Sheet for the year ended 31st December 1963.
2. To declare dividends as recommended by the Directors.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and to fix their remuneration.

The share transfer register of the Company will be closed from 23rd to 29th June, both days inclusive.

By Order of the Board,

(Sd.) RAMDUTT RAMKISSENDASS,
Secretaries and Treasurers.

CALCUTTA, *29th May* 1964.

Note: (*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(*b*) The dividends if declared will be paid on or after 10th July, 1964 to those shareholders whose names appear on Company's books on 29th June 1964 or to their mandatees. No application for dividend warrants will be necessary.

BRIDGE AND ROOF COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the eightieth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on THURSDAY, 25TH JUNE, 1964 at 3-30 p.m., to consider the Accounts of the Company for the year ended 31st December, 1963, to transact other ordinary business and the undernoted special business:

SPECIAL BUSINESS

NOTICE is also hereby given of the following resolution which will be proposed as an Ordinary Resolution, of which Special Notice dated 22nd May, 1964 as required by Section 257(1) of the Companies Act 1956, has been received:—

"That Mr. H. K. FitzGerald be and is hereby appointed a Director of the Company."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 19TH JUNE, 1964 to 25TH JUNE, 1964, both days inclusive.

By Order of the Board,
BALMER LAWRIE & Co. LTD.,
D. MANSON,
Managing Director,
Secretaries.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *25th May*, 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

ORISSA CEMENT LIMITED
RAJGANGPUR

THE FOURTEENTH ANNUAL GENERAL Meeting of the shareholders of the Company will be held at Rajgangpur, the Registered Office of the Company, on 29th June 1964, at 2.00 p.m. Notices of the meeting setting out the Agenda and Explanatory Statement on the special business to be transacted thereat have been sent by post.

By Order of the Board,
S. C. AGGARWAL,
Secretary

Dated: *12th May* 1964.

TATA MILLS' PROFIT DROPS FURTHER

ANOTHER TWO-POINT CUT IN DIVIDEND

A FURTHER decline in gross profit from Rs. 39.15 lakhs to Rs. 32.53 lakhs, in spite of a substantial improvement of Rs. 34.52 lakhs to Rs. 534.92 lakhs in net sale proceeds (excluding the excise burden of Rs. 73.66 lakhs) as compared with only the limited rise of Rs. 17.03 lakhs to Rs. 483.37 lakhs (excluding the excise burden of Rs. 63.12 lakhs) a year before, features the financial results of the Tata Mills Ltd. [Managing Agents: Messrs. Tata Industries (Private) Ltd., Bombay] for the year ended 31st December 1963. The setback in profit, which amounts to Rs. 6.62 lakhs, is much smaller as compared with the sharp drop of Rs. 35.12 lakhs in the previous year. But this is no consolation to shareholders, because the return on their Rs. 25 fully paid ordinary shares has been pruned once again by two points to 18 per cent per annum, subject to tax. This cut has been imposed in spite of the fact that the net profit at Rs. 17.24 lakhs does not compare particularly unfavourably with Rs. 17.81 lakhs realised in the previous year. In fact, it has remained more or less the same, because the Company has totally escaped the tax liability for the year (which in the previous year was Rs. 7 lakhs) except Rs. 1 lakh provided for the tax on dividend under the Finance Act 1964.

A clue to why the dividend has been cut is provided in larger allocations to depreciation and development rebate reserve, amounting to Rs. 13.79 lakhs and Rs. 4.50 lakhs, as compared with Rs. 12.70 lakhs and Rs. 4 lakhs, respectively, a year before. These provisions have helped the Company to escape the tax liability but left a surplus profit which is not sufficient to cover the dividend at the previous year's rate. Maintaining the dividend would have meant a dip into reserves which the Directors have naturally avoided doing, especially when a higher rate of dividend would have meant a higher dividend tax. Including other appropriations, the total amount carried to reserves is more at Rs. 5.40 lakhs as compared with Rs. 4.98 lakhs in the previous year. The dividend absorbs Rs. 11.80 lakhs and is to be paid out of dividend reserve to which Rs. 12.40 lakhs have been transferred from the year's profit.

The following comparative table mirrors the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sale proceeds	534.92	500.40	483.37	405.62
Other income	2.40	4.31	1.78	1.43
Stocks of finished goods and in process	98.79	121.87	109.85	80.60
Materials and stores consumed	238.83	252.67	232.43	194.63
Other expenses	222.89	224.91	207.70	190.71
Gross profit	32.53	39.15	74.27	44.83
Managing Agents' commission	0.50	1.64	4.18	2.39
Provision for—				
Depreciation	13.79	12.70	11.37	10.09
Taxation	1.00	7.00	16.00	..
Net profit	17.24	17.81	42.72	32.35
Withdrawal from reserves and provisions	..	..	..	10.35
To reserves	5.40	4.98	28.25	29.59
Dividend	11.80 (18%)	13.12 (20%)	14.43 (22%)	13.12 (20%)
Carry forward	0.06	0.02	0.30	0.26
Equity shares' market value (in rupees): 1964	1963	1962	1961	1960
High	59.00	62.00	75.50	53.00
Low	51.20	49.50	51.00	38.00

Regretting that the year's results have been disappointing, the Directors state that the setback in profit has been due mainly to the continuation of the voluntary price control, unremunerative export prices and higher costs of cotton, stores and other items of production. Apart from these factors, they add, the Company embarked, in order to secure a better realisation, on a programme of substantial changes in the pattern of production which disrupted production schedule. It continued to concentrate more on the production of bleached, printed and finished cloth for improving its earning capacity. During the year, various non-woven products, which would meet the needs of the sugar, dairy, garment, laundry and other industries, were further experimented with. In some cases satisfactory results were obtained after considerable development work. This being an entirely new field, the Directors feel that sustained development work and sales effort have to be continued.

During the year, new plant and machinery worth Rs. 29 lakhs were installed. The important additions were super cleaners, combers, a curing unit, a needling unit for the non-woven plant, high speed drawing frames, inter frames and dyeing jiggers. These will enable the mills to produce better quality cloth at more profitable rates. Towards the end of the year, the value of works under construction and machinery received at the mills awaiting installation was Rs. 27 lakhs. Additional machinery worth Rs. 9 lakhs has been ordered this year. The installed capacity of the mills is 70,840 spindles and 1,765 looms. Besides the 13,640 spindles already sanctioned, the Company was allowed, during the year, to install 20,000 spindles for balancing production. Further permission was received to acquire and install 6,336 additional spindles, being 7.5 per cent of the total sanctioned spindleage. A hundred and forty-four of the 192 automatic looms sanctioned for replacement purposes are under installation.

The addition to fixed assets over the past five years amounting to Rs. 137 lakhs approximately, largely on account of renovation and rehabilitation, has been financed mainly from retained profits and borrowings. The gross block at the end of the year has increased to Rs. 378.23 lakhs from Rs. 353.93 lakhs a year before. It has been written down to Rs. 221.67 lakhs. As against this, the paid-up capital stands at only Rs. 65.58 lakhs, whereas it is backed by nearly double that amount, which is precisely Rs. 104.79 lakhs (excluding Rs. 11.80 lakhs from dividend reserve, required for paying the year's dividend), in reserves and surplus. In order to restore the imbalance between the share capital and the block account, the Directors have decided to issue 87,438 further ordinary shares at par to the existing shareholders in the proportion of one new share for every three shares held. Further, they propose to issue Rs. 60 lakhs worth of debentures and to pledge Rs. 40 lakhs worth with a bank against an additional demand cash credit of Rs. 35 lakhs. The debentures will rank *pari passu* with the existing (1966-71) 5 per cent debentures of Rs. 39.51 lakhs. Borrowings from banks and other sources are shown at Rs. 215.06 lakhs and current liabilities and provisions (including the year's dividend liability) at Rs. 84.95 lakhs. The total short-term indebtedness thus amounts to Rs. 300.01 lakhs, as against which current assets, book debts and investments aggregate Rs. 260.89 lakhs, falling short of the former by some Rs. 40 lakhs.

Currently quoted at Rs. 53.20 *cum-div.*, the Rs. 25 fully paid ordinary shares of the Company offer a net yield of 7.2 per cent per annum.

AHMEDABAD ADVANCE PAYS LESS

Like Tata Mills, the Ahmedabad Advance Mills Ltd., one of the other two cotton textile mills managed by Messrs. Tata Industries (Private) Ltd., has suffered a further setback in its profit for 1963, from Rs. 23.97 lakhs to Rs. 16.94 lakhs, in spite of an improvement of more than Rs. 12 lakhs in net sales from Rs. 307.61 lakhs to Rs. 319.87 lakhs, excluding the excise duty paid amounting to Rs. 58.66 lakhs, as against Rs. 54.91 lakhs a year before. The reasons for the decline in profit are the same as those for Tata Mills (reviewed above), namely, the continuation of the voluntary price control scheme, unremunerative export prices and higher production costs. Net profit at Rs. 6.28 lakhs is less than half of that (Rs. 14.38 lakhs) for the previous year. Excepting Rs. 35,000 provided for tax on dividend, no provision has been made for taxation in view of the carry forward of unabsorbed depreciation of past years. The dividend on the 100-rupee ordinary shares has been reduced again by one point from 12 per cent to 11 per cent per annum. Together with the preference dividend, the total amount distributed to the shareholders is Rs. 5.39 lakhs, as against which only Rs. 2.70 lakhs have been set apart for dividend reserve from which the entire dividend liability is to be met. Thus more than half of the equity dividend is to be paid from the previous years' accumulated profits. The actual depletion of reserves is to the extent of Rs. 3.01 lakhs, as against which Rs. 3.55 lakhs (Rs. 1 lakh a year before) have been carried to development rebate reserve and Rs. 10,000 have been set apart again for gratuity reserve. The carry forward is Rs. 7,385, as against Rs. 14,370 brought in.

The following comparative table gives a clear idea of the Company's progress in the past four years:

(In lakhs of rupees)

	Year ended 31st December			Half year to 31st Dec. 1960

XR

During the year, new plant and machinery worth Rs. 23 lakhs were installed. The important additions were a sanforiser, auto weft winder, felt calender, hot flue, super cotton cleaner, auto jiggers and automatic looms. Towards the end of the year, the value of works under construction and machinery received but awaiting installation was Rs. 18 lakhs. The 96 automatic looms about which reference was made in the last year's report were received during the year under review and 52 looms were erected and put into operation by the end of the year. Six warp ring frames were converted to SKF drafting system. These additions form a part of an increase of Rs. 76 lakhs in gross block over the past five years. During the year under review itself, the gross block has expanded from Rs. 234.26 lakhs to Rs. 265.60 lakhs; it stands written down at Rs. 145 lakhs.

Since this expansion of gross block over the past five years, largely on account of renovation and rehabilitation, has been financed mainly from internal resources and borrowings and since it is going to be a continuous process (already the extension of the loom shed and the purchase of a set of combers and 144 automatic looms have been sanctioned by the Directors), the Directors have decided to increase the authorised capital of the Company from Rs. 60 lakhs, divided into 50,000 ordinary shares of Rs. 100 each and 10,000 preference shares of Rs. 100 each, to Rs. 110 lakhs by the creation of 50,000 additional new ordinary shares of Rs. 100 each. It is proposed to issue out of these new shares 10,000 shares as bonus shares to the existing shareholders in the proportion of one for five. This will be done by capitalising Rs. 10 lakhs standing under share premium account, which will reduce the total of reserves and surplus (excluding Rs. 5.71 lakhs from dividend reserve required for the year's dividend liability) to Rs. 72.99 lakhs. After making the bonus issue, it is proposed to make a one-for-four rights issue at par. In addition to increasing the share capital, the Directors propose to issue Rs. 70 lakhs worth of debentures and pledge Rs. 40 lakhs worth with a bank against an additional demand cash credit of Rs. 35 lakhs. These debentures will rank *pari passu* with the existing (1966-71) 5.5 per cent debentures of Rs. 30 lakhs. Besides these, there are borrowings of Rs. 120.96 lakhs and current liabilities and provisions (including the year's dividend liability) of Rs. 53.42 lakhs, bringing the total short-term indebtedness to Rs. 168.67 lakhs, as against which current assets, book debts and investments aggregate Rs. 184.65 lakhs.

The net yield on the Rs. 100 fully paid ordinary shares of the Company at their current market value of Rs. 140 *cum-div.* is 6 per cent per annum.

BHARAT COMMERCE AND INDUSTRIES

In spite of certain handicaps, such as the rather depressed prices of staple fibre yarns, a further increase in production costs because of a rise in wages, prices of stores and other raw materials, and the increase in the excise duty on staple fibre by 33⅓ per cent under the 1963 Finance Act, Bharat Commerce and Industries Ltd. (Managing Director: Mr. Hardatta Rai Sugla, Calcutta) has made further progress during the past calendar year. Its gross sales have gone up by approximately Rs. 98 lakhs from Rs. 331.87 lakhs to Rs. 429.75 lakhs, mis-

cellaneous receipts show an increase of over Rs. 5 lakhs from Rs. 10.05 lakhs to Rs. 15.61 lakhs and the gross profit has improved by nearly Rs. 4 lakhs from Rs. 39.67 lakhs to Rs. 43.26 lakhs. On the expense side, the cost of raw materials and stores consumed has risen from Rs. 229.32 lakhs to Rs. 295.30 lakhs, staff expenses have jumped up from Rs. 38.68 lakhs to Rs. 50.13 lakhs and other expenses have increased by Rs. 13.55 lakhs to Rs. 48.55 lakhs.

Out of the gross profit, the Directors have set apart Rs. 16.06 lakhs for depreciation, as against Rs. 11.62 lakhs a year before, and Rs. 9.61 lakhs for development rebate reserve, as against Rs. 5.88 lakhs. In view of the allowances of depreciation and development rebate under the provisions of Income-tax Act, 1961, the Directors feel that there will be no tax liability for the year under review and that the amount standing to the credit of provision for taxation (which is shown in the balance-sheet at Rs. 14.75 lakhs, including Rs. 6.25 lakhs provided for 1962) is quite adequate to meet the Company's tax liability up to the end of the year. However, a sum of Rs. 1.50 lakh (Rs. 2 lakhs a year before) has been provided for contingencies. The profit, after these allocations, which according to the published accounts is deemed net profit, amounts to Rs. 16.08 lakhs, as against Rs. 13.92 lakhs for the previous year. Out of this, Rs. 6 lakhs (Rs. 5 lakhs in 1962) have been carried to the general reserve and the balance is utilised for paying the preference dividend absorbing Rs. 2.70 lakhs and the equity dividend absorbing Rs. 7.50 lakhs at the rate of Re. 1.50 per share, which is the same as in the previous year.

According to the published results, the ratio of turnover of Rs. 430 lakhs to earnings of Rs. 43 lakhs is 10 per cent, that of capital assets (shown at a written down value of Rs. 244.46 lakhs) to earnings is 18 per cent, that of share capital (amounting to Rs. 80 lakhs, including Rs. 30 lakhs in 9 per cent cumulative redeemable 100-rupee preference shares) to earnings 53 per cent, and that of capital and reserves (which aggregate Rs. 145.62 lakhs) to earnings is 29 per cent. The total number of equity shareholders at the end of the year was 17,344, who held between them 500,000 shares of Rs. 10 each. The net profit of Rs. 16 lakhs, as split between these equity shares, works out to Rs. 3.20 per share.

During the year, the gross block increased by a net amount of Rs. 85.61 lakhs to Rs. 279.80 lakhs, as against which the net block is shown at Rs. 224.62 lakhs. Borrowings at Rs. 133.16 lakhs and current liabilities and provisions amounting to Rs. 52.60 lakhs bring the total of dues by the Company to Rs. 185.76 lakhs, which exceeds the total of current assets, book debts and investments by a fairly big margin of Rs. 98.84 lakhs.

The plant at Nagda had 30,360 ring spindles and 16,544 doubling spindles at the end of the year. Within a year's time, 3,500 waste spindles are expected to be installed there. The Thana plant worked 25,920 spindles on staple fibre against its licensed capacity of 28,000 spindles of staple fibre and 25,000 spindles of cotton, all of which will, however, be installed in stages within three years. The *Terelyne* blended viscose yarn manufactured by this unit has been well received in the market. The plant at Nanjangud had 15,392 spindles and 202 looms installed out of the 27,392 spindles and 302 looms licensed. It is proposed to reach the rated capacity in due course in the light of the Government's decision favouring production at full capacity. A part of the machinery in this plant is renovated, but completion of the renovation programme will take four to five years. The plant at Rajpura is nearing completion and will reach full capacity in due course.

Among the new schemes, the one for manufacturing H.T. and L.T. porcelain insulators has been approved, but since the import licences are against rupee payments, the plant has not been ordered. A proposal to install a cotton spinning plant in M.P. is being considered. The Company may increase its capital for financing the expansion programme.

The net yield on the 10-rupee ordinary shares of the Company at their current market value of Rs. 20 *cum-div.* is 6.3 per cent per annum.

NEW INDIA INDUSTRIES

The results of the New India Industries Ltd. [Managing Agents: Messrs. Distributors (Baroda) Private Ltd., Baroda] for the year ended 31st December 1963 are, indeed, heartening. Thanks to the satisfactory working of the camera factory and the commencement, in March 1963, of production by the photographic paper factory, the turnover has expanded by over 30 per cent from Rs. 114.79 lakhs to Rs. 149.57 lakhs; at the same time, the closing stock of finished goods stands appreciably higher at Rs. 11.97 lakhs, as against a mere Rs. 0.78 lakh at the commencement of the year. Consequently, the gross profit has advanced from Rs. 23.56 lakhs to Rs. 39.00 lakhs. The profit-margin (ratio of gross profit to sales) has thus widened by no less than 5.5 points to 26 per cent.

The major portion of the enlarged gross profit, however, has been mopped up by the essential provisions. The Managing Agents' commission takes up Rs. 2.23 lakhs as against Rs. 1.82 lakh, and depreciation Rs. 14.98 lakhs or Rs. 10.65 lakhs more than in 1962. Taxation, however, is lower at Rs. 6.85 lakhs, as against Rs. 9.25 lakhs. Nevertheless, the net profit is better at Rs. 14.94 lakhs, as compared with Rs. 8.16 lakhs the year before. Out of this, the Directors have transferred Rs. 15.07 lakhs (Rs. 7.93 lakhs) to reserves including Rs. 9.26 lakhs (Rs. 1.29 lakh) to the development reserve. They have also proposed a dividend of Rs. 8.57 per preference share of Rs. 100 each and an ordinary dividend of Rs. 15 per share, both subject to deduction of tax, and the former claiming Rs. 1.29 lakh and the latter Rs. 6.60 lakhs. It will be recalled that no ordinary dividends were either declared or paid during the preceding two years with a view to conserving resources, but bonus shares were issued, instead.

The progress made by the Company during the past four years is well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1963	1962	1961	1960
Sales	149.57	114.79	113.01	113.72
Other income	0.73	0.98	0.51	0.70
Closing stocks of finished goods	11.97	0.78	1.81	2.24
Raw materials and stores consumed	70.68	56.76	62.10	53.14
Other expenses	51.86	34.40	34.20	40.62

Net profit	14.94	8.16	5.27	8.07
Withdrawal from reserves and provisions	7.92	0.77	0.27	..
To reserves	15.07	7.93	5.49	1.36
Dividend—				
Preference	1.29	1.29	0.80	..
Ordinary	6.60 (15%)	..	..	6.90 (25%)
Carry forward	0.05	0.14	0.43	1.18
Market price of ordinary shares (in rupees):	**1964**	**1963**	**1962**	**1961**	**1960**
High	377	398	460	424	588
Low	369	300	381XR	380	379

Consequent upon the issue of bonus shares made in 1962 in the proportion of one ordinary share for every 10 ordinary shares held, the ordinary share capital of the Company has risen from Rs. 39.99 lakhs to Rs. 43.98 lakhs which, together with the preference share capital of Rs. 15 lakhs, makes for a total share capital of Rs. 58.98 lakhs. This is supported by reserves aggregating Rs. 63.56 lakhs excluding the amount earmarked for the payment of preference and ordinary dividend in respect of the year under review. Owned funds, therefore, have risen from Rs. 115.45 lakhs to Rs. 122.54 lakhs. Nonetheless, outside finance stands enlarged by Rs. 28.67 lakhs at Rs. 101.60 lakhs comprising Rs. 86.86 lakhs as secured and unsecured loans and Rs. 14.75 lakhs as current liabilities and provisions. On the assets side, following the additions worth Rs. 103.03 lakhs made during the year, the block account has increased to Rs. 200.68 lakhs and yields, on deduction therefrom of the accumulated amount of Rs. 70.32 lakhs by way of depreciation, a net block of Rs. 130.37 lakhs. Investments, mostly in unquoted shares, are carried in the books at a cost of Rs. 1.75 lakh, while current assets, loans and advances amount to Rs. 99.91 lakhs in all.

The present market price of the Rs. 100 fully paid ordinary shares of the Company is Rs. 370 *cum-div.*, at which rate the net yield works out to about 3.4 per cent per annum.

CALCUTTA STEEL COMPANY

Shareholders of the Calcutta Steel Company Ltd. (Director: Mr. G. S. Nevatia, Calcutta) must have been heartened by the decision of their Directors to restore fully the 2.5 per cent cut in dividend imposed in the past year. Thus, the dividend for the year ended 31st March, 1964 on the 10-rupee ordinary shares has been raised to the earlier level of 15 per cent per annum, subject to tax, because, in spite of a decline in gross sales from Rs. 378.84 lakhs to Rs. 351.78 lakhs, in contrast to an improvement of Rs. 48 lakhs in the previous year, the gross profit has gone up considerably from Rs. 45.05 lakhs to Rs. 59.41 lakhs. The excise burden has amounted to only Rs. 77,938, as against Rs. 15.29 lakhs in the previous year. But even after excluding this amount of excise, the net sale proceeds show a slight setback from Rs. 363.55 lakhs to Rs. 351 lakhs.

It may appear that the higher gross profit for the year under review has been on account of the lower burden of excise. But according to the Directors, it is not so. They state that, whereas the excise burden has declined because the Government abolished the duty on bars and rods which had been imposed on 24th April 1962, the Company has attracted a similar duty levied instead on steel billets which are its raw material. It will be seen, the Directors add, that this change in procedure in regard to the excise duty has had no effect on the working results of the Company.

The improvement in profit is attributed by the Directors mainly to a better production of wire rods. The actual quantity produced is not disclosed. But the Directors state that but for the continued shortage of raw material and power, the production would have been higher still. Further, in spite of the levy of an excise duty on billets, the cost of raw materials and stores consumed during the year has come down from Rs. 283.56 lakhs to Rs. 267.43 lakhs, which is, however, explained by the fact that the stock of raw materials at close has been much lower at Rs. 9.92 lakhs as compared with Rs. 27.10 lakhs a year before. Other expenses have increased marginally from Rs. 28.49 lakhs to Rs. 29.26 lakhs.

With a negligible credit of Rs. 5,328 taken for development rebate as against Rs. 35,768 in the previous year, the increase in gross profit has meant an increase of Rs. 8 lakhs to Rs. 32 lakhs in the tax provision. Because of this increase in the tax liability, the net profit shows an improvement of only about Rs. 6 lakhs to Rs. 20.97 lakhs, which, however, contrasts with the setback of about Rs. 3 lakhs suffered in the previous year. One-fourth of this profit, as against a little more than one-third in the previous year (the precise amount being Rs. 5.05 lakhs, as against Rs. 5.36 lakhs) has been ploughed back to reserves. The dividend, as noted at the outset, has been stepped up from 12½ per cent to 15 per cent. The carry forward is Rs. 1.58 lakh, as against Rs. 65,077 brought in.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sales of finished goods	351.78	378.84	320.04	418.13
Other income	0.76	0.48	0.85	0.20
Closing stock of finished goods	9.71	5.58	12.31	10.49
Materials and stores consumed	267.43	283.56	269.16	236.96
Excise duty	0.78	15.29	..	..
Other expenses	29.26	28.49	28.20	26.97
Gross profit	59.41	45.05	40.25	53.43
Provision for—				
Depreciation	6.44	6.22	5.17	5.68
Taxation	32.00	24.00	17.00	20.80
Net profit	20.97	14.83	17.98	26.95
To reserves	5.05	5.36	0.93	11.35
Dividend	15.00 (15%)	12.50 (12.5%)	15.00 (15%)	15.00 (15%)
Carry forward	1.58	0.65	3.68	1.63
Equity shares' market value (In rupees):	**1964**	**1963**	**1962**	**1961**
High	15.12	14.87	18.06	26.12
Low	13.00	12.75	14.69	14.94

The partial decontrol of steel from 1st March 1964 covers all the products of the Company. The Directors state it is too early to assess the full impact of decontrol on the working of the Company, but they look forward to reasonably favourable results. The Company has been granted a letter of intent for the manufacture of billets by continuous process and it has appointed a reputable firm of consulting engineers for preparing the necessary project report and technical advice.

The Company's paid-up capital, unchanged at Rs. 100 lakhs, is rather poorly supported by reserves and surplus amounting to Rs. 24.28 lakhs. Against current liabilities and provisions shown at Rs. 92.50 lakhs, current assets, book debts and investments total Rs. 153.56 lakhs. The gross block of Rs. 87.42 lakhs (Rs. 75.57 lakhs a year before) has been written down to Rs. 63.23 lakhs.

Currently quoted at Rs. 14.31 *cum-div.* the Rs. 10 fully paid ordinary shares of the Company offer a very attractive net yield of 9.1 per cent per annum.

Notices

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SEVENTY-EIGHTH ANNUAL GENERAL MEETING of THE SVADESHI MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay 1, on Friday, the 26th June 1964, at 4-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December 1963, and the audited Balance Sheet as at 31st December 1963.
2. To declare dividends on Preference and Ordinary shares.
3. *To appoint a Director in place of* Sir Fazal Rahimtoola, Kt., C.I.E., who retires by rotation and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice, as required under Section 281 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED, pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, that Sir Fazal Rahimtoola, Kt., C.I.E., who has attained the age of 68 years and who retires by rotation, be and is hereby re-appointed a director of the Company and it is hereby specifically declared that the age limit for directors prescribed under Section 280 of the said Act shall not apply to him."
4. To appoint a director in place of H. H. Maharaja Fatesinghrao Gaekwad who retires by rotation but does not offer himself for re-appointment and to fill which vacancy a notice has been received by the Company from certain members under Section 257(1) of the Companies Act, 1956, proposing Mr. Surottam Hutheesing as a director.
5. To appoint Auditors and to fix their remuneration.
6. To consider, and if thought fit, to pass the following Resolution as a Special Resolution:

   "RESOLVED that as required by the provisions of Section 360 of the Companies Act, 1956, if at all applicable, and other applicable provisions, if any, of the said Act, the Company approves of Mr. A. S. B. Tata, an associate of the Managing Agents of the Company, being a relative of a director of the Managing Agents and its holding Company, Tata Sons Private Ltd., continuing in the employment of the Company and having contracts of employment with the Company and its sister Companies, the Tata Mills Ltd., the Ahmedabad Advance Mills Ltd., and the Central India Spinning, Weaving and Manufacturing Company Ltd., in the Textiles Department at the Head Offices of the said Companies on an aggregate basic salary of Rs. 1,335 per month and applicable dearness allowance in the basic salary Grade VI applicable to the said Textiles Department viz., Rs. 775-50-975-60-1,455 and that such salary and dearness allowance be, as hitherto, divided equally between the Company and the said the Tata Mills Ltd., the Ahmedabad Advance Mills Ltd. and the Central India Spinning, Weaving and Manufacturing Company Ltd., so that the share of this Company is Rs. 334 (basic salary) per month and applicable dearness allowance with authority to the Board to grant such allowances and the benefits, amenities and facilities applicable to other employees occupying similar posts including staff superannuation fund, provident fund and retiring gratuity benefits and with further authority to the Board of Directors to sanction at their discretion double or higher increments within the grade or to withhold such increments as they may deem fit and proper.

   RESOLVED FURTHER that the Company hereby confirms and approves the payment of remuneration made to Mr. A. S. B. Tata from 28th December 1960 upto date under the scale mentioned above."
7. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

   "RESOLVED that the Articles of Association of the Company be altered in the manner following:—

   For Article 69, substitute the following Article:—

   '69. The Directors may from time to time fix a fee not exceeding 25 naye paise per share in respect of the transfer or transmission to the same party of any number of shares of any class or denomination subject to such maximum on any one transfer or transmission as may from time to time be fixed by the Directors. Such maximum may be a single fee payable on any one transfer or on transmission of any number of shares of one class or denomination or may be on a graduated scale varying with the number of shares of any one class comprised in one transfer or transmission or may be fixed in any other manner as the Directors may in their discretion determine. The Directors may waive the payment of any transfer or transmission fee either generally or in any particular case or cases.'"
8. To consider and, if thought fit, to pass with or without modification, the following Resolution as a Special Resolution:—

   "RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby authorises, approves of, confirms and consents to the contract between the Company and the Indian Hotels Company Limited (an associate of the Managing Agents, Tata Industries Private Limited) in terms of the Draft submitted to this meeting and for the purpose of identification signed by the Chairman thereof, providing for the supply of accommodation at the hotels of the Indian Hotels Company Limited for the Company's guests and employees and for the supply of meals and refreshments to the Company at its official and social functions at the Indian Hotels Company's standard tariffs and for garaging the Company's vehicles at the Wellington Mews owned by the Indian Hotels Company Limited, subject to such discounts, rebates or concessions, if any, as may be granted by the Indian Hotels Company Limited and accepted by the directors of the Company, with liberty to the directors of the Company to agree to modify the terms of the said contract as aforesaid (whether before or after execution) as they may think fit in the interest of the Company."
9. To consider and, if thought fit, to pass with or without modification, the following resolution as a Special Resolution:—

   "RESOLVED that pursuant to Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby authorises, approves of, confirms and consents to the contract between the Company and the Indian Hotels Company Limited (an associate of the Managing Agents, Tata Industries Private Limited) in terms of the Draft submitted to this meeting and for the purpose of identification signed by the Chairman thereof, for sale or supply by the Company to the Indian Hotels Company Limited of tapestry, bath towels, hand towels, bed sheets, table cloths, curtain cloths, cloths for making staff uniforms and other varieties of cloth manufactured or dealt in by the Company at prices which are not less favourable to the Company than the prevailing market prices for such products and which are otherwise reasonable, provided that for any property so supplied or sold, the Indian Hotels Company Limited shall make payment to the Company within one month from the date of supply or sale of the products.

   RESOLVED FURTHER that all contracts of sale or supply of any products as aforesaid hitherto entered into between the Company and the Indian Hotels Company Limited be and are hereby confirmed and ratified and shall be deemed to be valid against the Company."
10. To consider and, if thought fit, to pass the following Resolution as a Special Resolution:—

    "RESOLVED that subject to approval of the Central Government under the provisions of the Companies Act, 1956, the Company hereby re-appoints Tata Industries Private Limited as the Managing Agents of the Company as from the 16th day of August, 1965, for the period, at the remuneration and upon the terms, provisions and conditions set out in the draft Agreement (with such modifications, if any, as may be agreed to at this meeting) proposed to be entered into between the Company of the first part, Tata Industries Private Limited of the second part and Tata Sons Private Limited (as guarantors for the observance and performance of the terms and conditions of the said Agreement by Tata Industries *Private Limited as Managing Agents) of* the third part and which draft Agreement is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof with power to the directors of the Company, subject to the provisions of the said Act, to vary or alter such of the terms, provisions and conditions of the said draft Agreement before execution as shall not have the effect of increasing the remuneration of the Managing Agents and as may be agreed to between the Central Government and the directors of the Company acting on its behalf."

Notes:—

(*a*) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under items Nos. 3, 4, 6, 7, 8, 9 and 10 set out above, are being posted to all the Members.

(*b*) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(*c*) The Transfer Books of the Company will be closed from Thursday, the 28th May 1964, to Friday, the 26th June 1964, both days inclusive.

(*d*) If dividends on shares, as recommended by the directors, are passed at the Meeting, payment will be made on and after Saturday, the 27th June 1964, to those members whose names were on the Register of the Company on the 26th June 1964.

By Order of the Board of Directors,
TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
N. H. TATA,
Director.

SYNTHETICS AND CHEMICALS LIMITED

NOTICE

THE FOURTH ANNUAL GENERAL MEETING of SYNTHETICS AND CHEMICALS LIMITED will be held at Walchand Hirachand Hall, Indian Merchants' Chamber Building, 76 Vir Nariman Road, Bombay-1, on Monday, 29th June, 1964, at 4-30 p.m., to transact the following business:

1. To receive and adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December, 1963 and the Balance Sheet as at 31st December, 1963.
2. To appoint Directors in place of Mr. B. K. Daphtary and Mr. R. R. Ruia who retire by rotation and being eligible offer themselves for re-appointment.
3. To appoint a Director in the place of Mr. B. H. Larabee who was appointed by the Board of Directors, a Director of the Company, in the casual vacancy caused by the resignation of Mr. W. D. Waugh before his term of office would have expired in the normal course. Mr. B. H. Larabee holds office under Section 262 of the Companies Act, 1956, as a Director upto 29th June, 1964, i.e., the date of the Fourth Annual General Meeting of the Company, but offers himself for re-appointment.

The Company has received notice under Section 257 of the Companies Act, 1956, from some members of their intention to move the following resolution:

"RESOLVED that Mr. B. H. Larabee be and is hereby appointed a Director of the Company whose period of office shall be liable to determination by retirement of Directors by rotation."

4. To appoint Auditors for the current year and to fix their remuneration.

Notes—(a) A Member entitled to attend and vote at the Meeting is entitled to appoint one or more proxies to attend and to vote instead of himself. A proxy need not be a member.

(b) The Register of Members and the Share Transfer Books of the Company will remain closed from Monday, 8th June, 1964 to Monday, 29th June, 1964 (both days inclusive).

(c) The relative explanatory statement pursuant to Section 173 of the Companies Act, 1956, in respect of special business under Item No. 3 is annexed to the Notice posted to individual shareholders.

By Order of the Board of Directors,

K. B. DABKE,

Secretary.

Registered Office:

45-47 APOLLO STREET,

FORT,

BOMBAY-1-BR.

Dated 15th May, 1964.

29th May, 1964.

SYNOPSES OF COMPANY REPORTS

The Dharamsi Morarji Chemical Co., Ltd.

(*Managing Agents*: Messrs. Dharamsi Morarji and Co., Bombay.)

Annual General Meeting—9th June 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	2,29,45	2,33,55
Finished goods	20,56	20,92
Gross profit	40,32	31,29
Transfer to Mg. Agents' remuneration	2,10	1,54
,, ,, depreciation	17,80	15,37
,, ,, development rebate reserve	81	1,62
,, ,, provision for taxation	6,75	4,00
Net profit	12,86	8,76
Adjustments	6,88	6,76
Appropriations:		
Total available balance	19,74	15,52
To general reserve No. 2	6,51*	5,17*
,, general reserve No. 1	6,50	5,00
Proposed dividend (taxable) ordy.	6,62†	5,09† (16%)
Carry forward	10	26

N.B.—Adjustments include the balance brought forward and excess provisions of previous years no longer required.
* Profits of new industrial units exempt from tax.
† Dividend is paid out of general reserve No. 2.

Extracts from the Directors' report: *Operations*: Sales of finished products for the year total Rs. 2,84,82,505, an increase of approximately 22 per cent over the last year's figure of Rs. 2,31,12,795. The contribution of the Kumhari factory was of the order of Rs. 83,65,181 an increase of 92 per cent over the last year's figure. Sale of superphosphate fertiliser from the two factories during 1963 totalled 1,01,459 tonnes which is a record in the history of the Company. The export performance was also very encouraging. During 1963 the Company exported 5,661 tonnes alumina sulphate, a little over two times the figure of export achieved in 1962.

Expansion: (*a*) *Borax and boric acid venture.* The directors are happy to announce the successful formation of Borax Morarji Ltd., the Company formed in collaboration with Borax (Holdings) Ltd., of London, to implement the scheme of manufacture of borax and boric acid. In accordance with the approval granted by the shareholders of the Company and the Government of India, a sum of Rs. 7,50,000 has been invested in Borax Morarji Ltd., by the Company in the form of subscription to 15,000 equity shares of Rs. 50 each of the said Company. The offer of shares made to the public by Borax Morarji Ltd. was well received and the issue was substantially oversubscribed. The construction of the factory of Borax Morarji Ltd. on a plot of land adjacent to the Company's factory at Ambernath, is in full swing. It is expected that barring unforeseen difficulties, Borax Morarji Ltd. will go into production well before the end of 1964.

(*b*) 300 *Tons per day Contact Sulphuric Acid* Plant: This project is in an advanced stage of completion. It is expected that before the forty-fourth annual general meeting takes place, the plant will have gone into successful production.

(*c*) *Alumina Sulphate* (i) 100 *Tons per day project at Ambernath.* Installation of equipment for a production of 70 tons per day has been completed, but due to paucity of sulphuric acid and steam, production had to be restricted to 50 tons a day. Necessary quantities of sulphuric acid and steam will be available when the 300 ton sulphuric acid plant goes into production. Civil construction work for the additional equipment required to achieve 100 tons per day production is in progress.

(ii) 50 *tons per day project at Kumhari.* Installation of equipment needed for 50 tons per day production has been completed, but as in the case of the Ambernath project, production had to be curtailed for want of sulphuric acid, substantial quantities of which had to be reserved for superphosphate production.

(*d*) *Industrial Explosives.* The directors regret that no progress has been possible during the year under review in implementing this project.

(*e*) *Chlorosulphonic Acid.* The Company has been sanctioned a licence to expand the capacity of chlorosulphonic acid plant from 1,010 tonnes per annum to 6,600 tonnes per annum, to meet the increasing demands. The project is under active implementation.

Finance: Against the rupee-loan of Rs. 30 lakhs granted by the Industrial Credit and Investment Corporation of India Ltd., Bombay, and foreign currency loan of Rs. 19,20,000 granted by the Sulphur Export Corporation, New York, for financing the 300 tons per day sulphuric acid plant project, actual withdrawals during the year were Rs. 25,00,000 against the Industrial Credit and Investment Corporation loan and Rs. 17,95,889 against the Sulphur Export Corporation loan. The mortgage formalities in favour of the Industrial Credit and Investment Corporation of India Ltd., Bombay as outlined in the directors' report of 1962, with slight modifications, have been completed. Arrangements have also been made with the Devkaran Nanjee Banking Co. Ltd., Bombay, for an additional overdraft facility of Rs. 20 lakhs for financing the working capital requirements of the 300 tons Sulphuric Acid Plant. The rights issue of 27,588 equity shares of Rs. 50 each sanctioned by the shareholders at the extraordinary general meeting held on 13th April 1964 is under active implementation and letters of offer will be shortly posted to the shareholders.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	41,38,250	Gross block	1,64,19,639
Reserves and surplus	58,26,850	—depreciation	87,13,284
Other liabilities	1,62,31,061	Net block	77,06,355
		Work-in-progress	42,07,019
		Investments	7,69,400
		Other assets	1,22,47,202
		Cash	1,06,185
	Rs. 2,51,96,161		Rs. 2,51,96,161

* Paid up capital consists of 82,765 equity shares of Rs. 50 each paid.

The Rayalaseema Mills Ltd.

(*Managing Agents*: Messrs. Rayalaseema Agencies, Adoni.)

Annual General Meeting—12th June 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sale of yarn	1,10,51	1,09,27
Sale of waste	99	88
Closing stocks	1,09	45
Gross profit	12,75	12,85
Transfer to Mg. Agents' remuneration	73	40
,, ,, depreciation	3,02	2,62
,, ,, provision for taxation	5,99	5,34
Net profit	3,01	4,49
Adjustments	56	91
Appropriations:		
Total available balance	3,57	5,40
To donations	51	26
,, development rebate reserve	5	*
,, provision tax for previous years	Nil	66
Proposed dividend (taxable) ordy.	2,98 (10%)	4,47 (15%)
Carry forward	3	1

N.B.—Adjustments represent the balance brought forward from the previous year. * Represents only a sum of Rs. 425.

Extracts from the Directors' report: *Production*:—The Company's production was maintained at a satisfactory level throughout the year. The sales during the year have reached the highest record level of Rs. 1,11,59,371.

Production costs have been minimised wherever possible and whatever increases have occurred have chiefly been beyond management's control. The additional taxes and other burdens imposed by the emergency legislation have, as anticipated last year, increased operating costs.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	29,78,400	Gross block	60,03,477
Reserves and surplus	6,31,107	—depreciation	39,05,799

		Investments	1,68,593
		Other assets	46,43,928
		Cash	82,384
	Rs. 69,92,583		Rs. 69,92,583

* Paid-up capital consists of 29,784 equity shares of Rs. 100 each fully paid.

Jaipur Metals and Electricals Ltd.

(*Managing Agents*: Messrs. Poonamchand & Brothers Ltd., Jaipur.)

Annual General Meeting—25th June 1964.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1963	1962
Sales	2,26,43	2,30,50
Closing stock of finished goods	15,21	19,98
,, ,, raw materials	1,11,71	71,90
Gross profit	30,25	23,79
Transfer to Mg. Agents' remuneration	1,73	1,48
,, ,, depreciation	10,89	7,38
,, ,, provision for taxation	5,65	6,85

To development rebate reserve	4,92	2,50
,, dividend for 1962 on 51 ordy. shares	*	Nil
,, general reserve	3,61	1,22
Proposed dividends (taxable) on preference shares	48	40
Proposed dividends (taxable) on equity shares	3,00 (6%)	3,00 (6%)
Carry forward	3	6

N.B.—Adjustments represent the balance brought forward.
* Only Rs. 306.

Extracts from the Directors' report: *Operations*: During the year the working of the factory both in the meter and metal divisions has been quite satisfactory. The total turnover during the year amounted to Rs. 2,69,42,338 as against Rs. 2,32,75,942 during the previous year. This represents an increase of about Rs. 36.66 lakhs over the last year's performance in spite of difficult situation in obtaining copper, other basic raw materials and components. During the year, the Company commenced the production of A.C.S.R. and all aluminium conductors and secured orders for Rs. 65 lakhs. In view of the Government policy to switch over to aluminium from copper, the prospects for this line of manufacture are bright.

Expansion and Development: The Company has commenced manufacture of components for the cyclometer unit and is presently manufacturing 75 per cent of the parts required for the cyclometer. It is expected that the Company will be able to manufacture the balance 25 per cent parts during the course of the current year. All the machineries for manufacture of magnets have arrived and have also been installed. It is expected that the expert engineers from our collaborators from Japan will arrive in Jaipur very soon to commission the machinery and to start production. Import licence for machinery for the manufacture of enamelled copper wire and cotton, silk and paper covered wires and strips have been received and orders for the same are being formulated. The industrial licence of A.C.S.R. and all aluminium conductors have been increased for a capacity of 3,000 tons per annum and the Company has also applied for an import licence to import additional machinery from U.S.A.

Accounts in brief as at 31st December 1963 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	60,00,000	Gross block	1,59,91,490
Reserves and surplus	30,84,640	—depreciation	45,59,251
Other liabilities	2,43,84,585	Net block	1,05,32,239
		Investments	4,76,750
		Other assets	2,22,23,088
		Cash	2,37,148
	Rs. 3,34,69,225		Rs. 3,34,69,225

* Paid-up capital consists of 50,000 equity shares of Rs. 100 each paid 20,000 deferred shares of Rs. 10 each paid and 8,000 6% tax-free cumulative preference shares of Rs. 100 each fully paid.

Thamarapally Rubber Co., Ltd.

		Investments	15,000
		Other assets	1,59,838
		Cash	1,54,039
	Rs. 17,74,435		Rs. 17,74,435

* Paid-up capital consists of 15,000 6½% cumulative preference shares of Rs. 5 each paid (originally Rs. 10 each reduced to Rs. 5 each and cash refunded) and 6,25,000 equity shares of Rs. 10 each fully paid.

THE BANK OF MAHARASHTRA LTD.,

YOUR BANK WITH THE PERSONAL TOUCH, AT YOUR SERVICE, WITH 90 BRANCHES

NEWS IN BRIEF

THE Government of India has rejected the plea of the Indian National Textile Workers Federation for setting up a corporation to take over mismanaged and uneconomic textile units.

The Central Government has approved the purchase of a fourth Caravelle jet aircraft by Indian Airlines Corporation on a credit basis. The terms of purchase are under negotiation.

The Governent of India has offered a credit of Rs. 5 crores to Sudan to purchase Indian engineering goods, industrial machinery, chemicals, pharmaceuticals and other products mutually agreed upon. India has also extended technical co-operation in starting new industries.

The co-operative credit institutions in India are currently providing only Rs. 250 crores of credits per year to the peasantry, as against the total estimated requirements of Rs. 1,300-1,400 crores. It is hoped, that it would be possible for these institutions to raise this figure to Rs. 400 crores in the fourth Plan period.

The cotton mills in India produced during the month of April 1964 80 million kilograms of yarn and 392 million metres of cloth. At the end of April 1964, the composite mills of the industry held an estimated cloth stock of 89,000 metric bales as unsold and 140,000 metric bales as sold but not lifted.

India is losing about Rs. 100 crores annually due to floods. This is the finding of a Central Government study. The Government is making sustained efforts to minimise the quantum of damage caused by the floods. The third Plan allotment for flood control schemes all over the country is Rs. 61.32 crores.

In order to enable units of textile industry to submit their applications for import of permissible items of textile machinery from Italy along with proforma invoices, etc., the last date for receipt of applications has been extended up to the 15th inst. Applications received after this date will be considered as time-barred and will be rejected.

A contract worth over Rs. 30 lakhs for the supply of eight drilling rigs for structural drilling and spare parts for oil and transport equipment by Russia to India was signed between the Governments of the two countries at New Delhi on the 2nd inst. These rigs are in addition to the 33 heavy drilling rigs already received by the Oil and Natural Gas Commission and another six such rigs which Russia has agreed to supply towards the end of 1965.

The Railway Research, Design and Standard Organisation has drawn up an ambitious expansion scheme estimated to cost Rs. 1.61 crores. The scheme envisages the setting up of a diesel engine testing laboratory with equipment costing Rs. one crore, construction of a new block to house some of the design sections and laboratories for track bridges and mechanical and telecommunication engineering research.

A proposal to set up a Desert Development Board to ensure a more rapid development of the desert areas of the country is under the consideration of the Government of India. It is also proposed to have State Desert Development Boards in the States where arid zones exist. The Central and State Boards would work in a co-ordinated manner to ensure that the desert areas are reclaimed and developed as early as possible. More than a thousand species of plants and grass suitable for growing in desert areas have already been developed as a result of research. In this connection, the Jodhpur arid zone research station has done good work.

An agreement covering the grant of a $10-million credit by Japan to enable India to import textile machinery is expected to be signed shortly. The agreement follows the recent visit of an Indian delegation to Japan, headed by Mr. B. P. Patel, Chairman of the State Trading Corporation. The credit is being made available by the Japan Textile Machinery Manufacturers Association. During its visit, the delegation also finalised a contract for the export of 600,000 tonnes of industrial salt at a price of 22s. per tonne over a two year period commencing from July this year. The previous contract for the export of a total of 500,000 tonnes of industrial salt to Japan is expiring next month.

The Government of India has announced that, with effect from 1st of this month, the prefix, naya or naye in the designation, naya paisa or naye paise which appears on the reverse of the decimal coins has been deleted. The coin in the denominations of 50, 25, 10, 5, 2 and 1 to be minted as from this date will be termed paisa or paise coins as the case may be. The paisa/paise coins will be issued from 1st July 1964 by the offices of the Reserve Bank of India at Bombay and Calcutta in the first instance. They will be supplemented gradually, after sufficient stocks have been produced, by issue from other offices of the R.B.I., the State Bank of India and its agency banks, Government Treasuries and sub-treasuries. The design, shape, weight, metal composition, etc., of the paisa/paise coins will be the same as those of the existing naya paisa coins. The paise/paisa coins and the existing naye paise coins will both be legal tender and have the same value. The only difference will be that on the reverse of the coins the words "naya paisa" or "naye paise" will be replaced by the face value of the coins in words in Hindi. The issue of the paise coins does not involve the withdrawal of the coins with the words "naya/naye." The naya paise coins as well as the nickel and quaternary alloy half rupee and quarter rupee coins will continue to be issued and re-issued and be in circulation and be legal tender along with the new coins.

As the production of cheaper synthetic citral is continuing to reduce the prices of lemongrass oil, the Government of India has decided that, as a measure of price support, even though this will involve some losses, the State Trading Corporation should continue to purchase lemongrass oil in the new coming season from the first week of June and onwards at prices of Rs. 11 per kg. for lemongrass oil containing not less than 78 per cent of citral and Rs. 12 per kg. of lemongrass oil containing not less than 82 per cent of citral. The prices have been fixed in consultation with the Kerala Government and it is hoped that the growers and producers of lemongrass oil will fully co-operate with the Government in producing better variety and also by restricting their production in the coming season to less than 80 per cent of their last year's production. It has been further decided that, with a view to earning the maximum of foreign exchange in these difficult circumstances, the export of lemongrass oil will be canalised through the S.T.C. The shippers are requested to send their quotes, if any, at best prices to the State Trading Corporation. As the exports of lemongrass oil will be canalised, the floor prices for exports announced last year are being withdrawn with immediate effect. As in the previous year, the Corporation has made extensive arrangements and will open depots at various places, viz., Cochin, Alwaye, Calicut, Tellicherry, Muvattupusha, Kuruppumpady, Manantvady, Meenangadi, Taliparamba, Adimala, Kothamangalam and Piravam, where the producers can bring their oil up to certain limits fixed for each of the depots during a month. The Corporation will purchase in the coming five or six months during the lemongrass season quantities of lemongrass oil not exceeding 750 tons.

From Abroad

The average cost of materials is expected to be about 3s. 9d. per pound. They will be demonstrated to industry for the first time at the Reinforced Plastics Exhibition due to open at Earls Court in London on the 16th inst.

The U.S. Administration has decided to cut off direct economic aid to Nationalist China and close the office of the Agency for International Development (A.I.D.) mission in Formosa. The total aid received by Taiwan from the U.S. during the period between 1951 to 1964 amounts to $1,366 million.

The contract for the construction of the Karachi National Oil Refinery has been awarded by the Pakistan authorities to an Italian concern, the Firmsmann Progetti, a subsidiary of Italy's State-owned Ente Nazionale Idrocarburi (E.N.I.). The refinery is scheduled to be completed by March 1966.

The Development of three new materials by the British Resin Products will make it possible to use plastics re-inforced with glass fibre in completely automatic production processes. They have all been designed for forming into components by mechanical moulding methods and will help greatly the motor and other mass-producing industries.

Indonesia's inflationary situation is "very dangerous" and may take three to five years to overcome according to the Third Deputy Prime Minister who is regarded as Sukarno's Chief spokesman on economic matters. Indonesia is building up its foreign exchange resources by seeking foreign credits and increasing agricultural production.

The Government of Algeria proposes to buy a petro-chemical plant from British companies. For this purpose, the Algerian technical experts will visit Britain in about three weeks and a British team will go to Algeria. The Government is also proposing to buy a pulp mill plant from Britain and hopes to increase exports to the U.K. of natural gas, iron-ore and wine.

The Syrian Government has endorsed the contract for the purchase of 43 oil tanks in the Soviet Union which was signed by the General Organisation for Syrian Oil with the Machinoexport association in January. The total capacity of the oil tanks is no more than 200,000 cubic metres and the cost of the deal is 1,300,000 U.S. dollars.

Cash dividend payments by corporations issuing public reports in the U.S. amounted to $1,131.1 million in April 1964 as compared with $1,038.5 million during the same month last year, according to the U.S. Commerce Department. Cash dividend payments made during the first four months of the year 1964 amounted to $5,290.3 million, as against $4,821.6 million in the corresponding period last year.

Production of T.V. receivers in Israel will be started shortly by Amcon of Tel Aviv, following the conclusion of an agreement between this Israel firm and the Normevde Company. Each finished T.V. receiver now being imported carries a duty and a purchase tax of £I.1,000 (approximately £120). Israel has no T.V. station at present, but arrangements have been made to begin educational television in the near future.

PERSONAL

MR. Lal Bahadur Shastri was unanimously elected leader of the Congress Parliamentary Party. He has been asked by President Dr. Radhakrishnan to form a Cabinet to replace the caretaker Government headed by Mr. Gulzarilal Nanda. Mr. Shastri is expected to be sworn-in as the Prime Minister of India on the 9th inst.

Mr. M. S. Sivaraman, Adviser in the Planning Commission, is to take over as First Member of the Board of Revenue, Madras, next week.

Mr. D. Subramaniam, a former Secretary of the Central Board of Direct Taxes, has taken over as Commissioner, Income-tax, Gujarat-II.

Mr. D. S. Nakra, Additional Financial adviser to the Defence Ministry, has been appointed Financial Adviser and Chief Accounts Officer of the Hindustan Steel Ltd. at Ranchi.

Mr. Y. Krishna Puri, at present India's High Commissioner in Malaysia, has been appointed Ambassador to Morocco. He will be concurrently accredited as Ambassador to Tunisia.

Mr. B. R. Patel, I.C.S., Vice-Chairman and General Manager, Air-India, has been concurrently appointed Chairman of the Export Credit and Guarantee Corporation in place of Mr. Ramnath A. Podar.

The Ghanian Government is planning to organise next year an International Trade Fair, the second to be held in West Africa, the first one having been originated by the Nigerian Government in 1962. 41 countries had participated in that Fair. The countries expected to participate in the Ghanian Fair will include Austria, Czechoslovakia, France, Germany, Hungary, India, Israel, Italy, Spain, Poland, New Zealand, Yugoslavia, U.K. and the U.S.

A subsidiary of the Italian company E.N.I. has won a tender to build a £5-million oil refinery in Dar-es-Salaam. Work on designing, building and starting the refinery is expected to begin immediately after the signing of the contract this month. The refinery, which will have an initial annual output target of 600,000 metric tons of refined product, is expected to go on stream in about 20 months. The Tanganyika Government will contribute half of the share capital of £3.0 million.

The activities of the European Investments Bank continue to expand, according to its annual report issued last week-end. The number of loans granted increased from 14 in 1952 to 31 last year and from $93 million to $104 million. The bank's activity is principally concentrated in Italy, France and West Germany, the percentage of shares of these countries in Bank's lending being 66, 16 and 9, respectively. The Bank is now preparing itself for activity in Turkey and the associated African States.

The International Monetary Fund has approved of a stand-by arrangement with the Government of the U.A.R. authorising the drawings up to the equivalent of $40 million over the next 12 months. This stand-by arrangement will provide financial support for the renewed efforts which are being made by the authorities of the U.A.R. to stabilise the economy. The U.A.R.'s quota in the Fund was recently raised to $120 million and its outstanding drawings on the Fund currently total $124.20 million.

The first trade agreement between the Soviet Union and the Congo Republic was signed on 26th May 1964, in Brazzaville. Under this agreement, the Soviet Union will sell to the Congo Republic machine tools, power and electro-technical equipment, tractors and farm machinery, cars and trucks, planes and helicopters, rolled metal stock, cement and other commodities necessary for the economic development of this young African State. The Republic of Congo will export to the Soviet Union ores and non-ferrous metal concentrates, timber, cocoa beans, tropical fruits and other items of its traditional exports.

The Ceylon Government has sanctioned the creation of an overdraft of Rs. 1.35 crore (£1 million) for the three oil companies, Esso, Shell and Caltex, in order to enable them to pay Rs. 35 lakhs as termination benefits to former employees and to finance their commercial activities. Although the entire distribution of petroleum products was taken over by the Government in January last, the oil companies continue to supply bunkering and aviation fuels and market oil-based products like insecticides. No decision has yet been taken by the Government on the issue of compensation. The oil companies have claimed a total of £7.5 million as compensation.

The Kennedy Round of tariff Negotiations, which started at Geneva on 4th May last, has been postponed in accordance with a decision taken at a secret session of the G.A.T.T. Trade Negotiations Committee. The date on which the countries will submit lists of offers and exceptions has been put back from 10th September to 16th November. Many countries consider that in view of the August recess, the 10th September deadline is too early considering the slow progress in solving this issue. It is, however, unlikely that any real bargaining will begin before January 1965, that is until the countries complete their study of each other's lists.

TREND OF MARKETS

MONEY EASY

(From Our Own Correspondent)

BOMBAY, 3rd *June*

The short-term money market depicted a distinctly easy trend during the week under review. Funds available were plentiful, while demand for credit was on a reduced scale. Borrowers, as a consequence, could easily obtain their requirements at lower rates of interest. The inter-bank call rate (for both renewals and fresh money), which had declined from 6¼ to 5 per cent last week, fell further, by ½ per cent, to 4½ per cent. Calcutta, however, reported a slight stringency in money, the call rate jumping up from 4½ per cent to 6 per cent, though some business was put through at 4½ to 5 per cent towards the close.

Despite comfortable money conditions, the 91-day Government of India Treasury Bills, tenders for which were opened on Tuesday the 2nd inst., elicited limited support. The total amount offered was just equivalent to that invited (and also accepted), namely, Rs. 2 crores. Even this limited support was extended only by special quarters. The average rate of accepted tenders continued unchanged at Rs. 3.000 per cent per annum. The response to Intermediate Treasury Bills was no better. The total amount of Bills actually sold from 27th to 30th May was no more than Rs. 5 lakhs, as against Rs. 20 lakhs a week before and Rs. 354.25 lakhs two weeks before.

There was a small fall of Rs. 97 lakhs to Rs. 115.62 crores in India's foreign exchange reserves during the week ended 29th May. The whole of this fall was in balances held abroad which aggregated Rs. 12.16 crores. The foreign securities held in the Issue Department of the Reserve Bank were unchanged at Rs. 103.46 crores. Notes in circulation declined by a further Rs. 16.24 crores to Rs. 2,526.52 crores. Loans and advances to scheduled banks fell again, by Rs. 10.83 crores, to Rs. 32.45 crores, of which the share of those against usance bills was Rs. 5.88 crores, a drop of Rs. 1.51 crore. Deposits of scheduled banks, however, went up by Rs. 3.14 crores to Rs. 88.47 crores.

The total credit made available by scheduled banks to their clients receded by a further Rs. 9.87 crores to Rs. 1,837.87 crores during the week ended 22nd May. Deposits showed a minor fall of Rs. 66 lakhs to Rs. 2,491.44 crores. Borrowings from the Reserve Bank were less by Rs. 20.21 crores at Rs. 48.44 crores, including Rs. 7.74 crores (a drop of Rs. 7.49 crores) borrowed against usance bills. Investments improved by Rs. 2.87 crores to Rs. 620.58 crores, while total cash declined by about Rs. 76 lakhs to Rs. 145.39 crores.

Listless conditions prevailed in the Gilt-edged market. Business put through was very much limited, with values of almost all loans (Central and State) remaining at levels prevailing a week before.

In the foreign exchange market, the banks' buying rate for U.S. dollars receded by 50 nP to Rs. 475.25 per $100, while their selling rate improved by 25 nP to Rs. 478.50. In New York, the pound sterling weakened *vis-a-vis* the dollar, the spot rate moving down by 0.230 cents to 279.680-279.710 cents and the three months' forward by 0.180 cent to 279.190-279.220 cents.

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, 3rd *June*

The cotton futures market had a short week of only three trading days during the week. The market, which closed early on Wednesday the 27th May, on news of the death of Prime Minister Nehru, remained closed on the following three days also as a mark of respect to the memory of the departed leader. When trading was resumed on Monday the 1st inst., the only running contract, namely, Jarilla August 1964, showed signs of strength. This was attributed to the general revival of confidence and the fresh support and short-covering which followed as a sequel. The contract which had finished abruptly at Rs. 719 (per three quintals) on the 27th May firmed upto Rs. 730 on the 1st inst. A reaction, however, set in yesterday, thanks to selling induced by the ban imposed by the Government on forward trading in as many as fourteen commodities. This made operators somewhat nervous. It was feared that, should futures prices rise unduly, cotton might also attract such punitive measures. Selling induced by this fear was responsible for the easiness of the Jarilla August contract which receded to Rs. 727.25 at close today.

In the spot market at Sewri, activity was limited. Spinners showed interest in selected lots of such varieties as Co2, L.147, 197/3, Digvijay and Laxmi. Prices tended to rule fairly steady. Demand for U.S. cotton revived and fairly good business was reported. Sudan cotton varieties too were in moderate demand.

The Textile Commissioner has issued a notification giving the procedural details concerning the import of American cotton under P.L. 480. The purchase authorisation number is 39-122 and the contracting and shipment period are from 26th May to 30th June and from 26th May to 31st July 1964, respectively. The authorisation covers a quantity of 150,000 bales (500 lbs.), one-third of which will be for cotton stapling 1" and above but below 1.1/16". The balance will be for cotton stapling 1.1/16" and above. It is reported that the spinners will be permitted to buy only 50 per cent of the quantity allotted to them earlier. The exchange rate will be ruling market rate.

The latest available quotations—in rupees per candy of 784 lbs.—from the spot market at Sewri are the following:

L.147 1,170; Digvijay 1,197; Khamgaon 1,068; Wagad 950; Elpaso 1,500-1,620; Sudan XP3L 1,805.

• • • •

Exports of mill-made cotton piecegoods from India continue to realise a progressively higher value. Figures for April show that the value per yard was 88 nP for that month. In January, the price realisation was 80 nP per yard, as against 72 nP per yard in January 1963; in February the corresponding figures were 84 nP and 74 nP; in March they were 85 nP and 74 nP and in April 88 nP and 75 nP.

In April, exports from Bombay Port alone amounted to over 45 million yards which was in excess of the volume of exports in April last year. The total quantity of mill-made cotton piecegoods exported in the first four months of this year (including the April figure for Bombay Port alone) was 194.88 million yards, as against 198.27 million yards in the first four months of 1963. The total value realised, however, was better at Rs. 16.40 crores during the first four months of this year, against Rs. 14.60 crores in the first four months of last year.

GOLD RISES AGAIN

(From Our Own Correspondent)

BOMBAY, 3rd *June*

There was a further spurt in gold prices during the week under review, while silver was listless. The spurt followed hectic buying by bulls on renewed fears of an acute shortage of supplies developing in the coming week. Primary gold forged ahead from Rs. 118 to Rs. 120. Fourteen-carat gold hardened by a rupee to Rs. 71.25. after being higher still at Rs. 71.50 on Monday and Tuesday. Sovereign was firm at Rs. 92.

In silver, fresh buying support was conspicuous by its absence. Even so, there was no fall in prices, because offerings were scarce. Silver was unaltered at Rs. 256.50 practically throughout the week. The daily average arrivals were larger at 35 bars, as against 20 bars in the previous week. The average offtake was also higher at 20 bars, as against 10 bars.

The international price for gold at London eased slightly from $35.07½ to $35.07 per fine ounce. The sterling price, however, advanced by 3½d. to 250s. 10d. Ready and forward silver were unaltered, the former at 111⅛d. and the better at 111⅜d. Silver in New York, too, was unaltered at 129.3 cents.

The following table shows the trend of prices during the week under review:

	3-6-1964 (closing)	High	Low	27-5-1964 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine) ..	256.50	256.50	255.50	256.50
GOLD				
Ready (14 carat) ..	71.75	71.50	69.25	69.00
Sovereign ..	92.00*	—	—	92.00*
London—				
Gold ..	250s.10d.	250s.10d.	250s. 6½d.	250s. 6½d.
Silver Ready ..	111⅛d.	—	—	111⅜d.
Silver Forward ..	111⅜d.	—	—	111⅝d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

FORWARD TRADING IN SEEDS AND OILS BANNED

(From Our Own Correspondent)

BOMBAY, 3rd *June*

Traders in seeds, oil and oilcakes were almost stunned on Monday this week when the Government of India announced the imposition, with immediate effect, of a ban on forward trading in fourteen commodities. These include groundnut (seeds, oil and oilcakes), mustardseed and mustard oilcake, cottonseed oilcake, sesamum oilcake, rapeseed oilcake and taramira oilcake, taramira seed, rapeseed, etc. Justifying the ban, the Government says:

"The recent rise in the prices of certain essential commodities has been causing much concern. In the case of groundnut, groundnut oil, mustardseed and mustarseed oilcake, certain steps had been taken by the Forward Markets Commission to prevent speculative excesses. The steps included fixation of the maximum limit on price fluctuation and imposition of margins. However, these steps have not produced the desired results and the speculative activity has been going on in various forms. Even though forward trading in cereals has been banned throughout the country, it is still going on in the guise of free commodities, like mustard oilcake, taramira oilcake, *methi*, corianderseed, cottonseed oilcake, sesamum oilcake, aniseed, *arhar chuni*, *mung chuni*, etc. Further, the steps taken by the Forward Markets Commission to curb speculative activity in these commodities by directing the registered associations to fix maximum prices have not also produced the desired result. Considering the various aspects of the problem, the Government has, therefore, decided, in consultation with the Forward Markets Commission, to ban forward trading in 14 commodities."

The aforesaid move of the Government has evoked a strong protest from traders who categorically refute the allegation that undue speculation has brought about a marked rise in the prices of items in which forward trading has now been banned. In a statement issued to the press, the Board of the Bombay Oilseeds and Oil Exchange Ltd. observes:

"... The Board is of the considered opinion that the recent rise in prices of groundnuts, groundnut oil and groundnut oilcake is not due to any 'speculative excesses,' but it is due to paucity of goods, greater demand for home consumption as a result of increase in population and requirements, and larger exports resulting in continued rise in ready prices which have been and are remaining at much higher level than the forward prices. In the considered opinion of the Board, the price rise is not due to forward trading or to any alleged excesses. The trade is very much perturbed at Government action of squaring up transactions during the currency of the contracts, especially when all forward contracts are opened after obtaining the permission of the Government and on conditions fixed by them. It is important to note that the price rise in essential commodities in which there is no futures trading like wheat and rice during the past few months has been to the extent of 30 to 80 per cent. The Board of the Exchange is of the opinion that the real solution for bringing down the prices lies very much in increased agricultural production."

The ban on forward trading in groundnut and groundnut oil has not, however, had any effect on the market at any rate for the present. For prices have not only suffered a setback but have actually tended to move up. Nizam bold has spurted by Re. 1.38 to Rs. 59 and Khandesh quality by Rs. 2 to Rs. 60.25. Oil ex-mill has risen by 75 nP to Rs. 23.10 and railway receipts by 65 nP to Rs. 22.70.

In the castorseed section, the September contract advanced from Rs. 175.75 to Rs. 176.37 before finishing at Rs. 176. June contract rose by Re. 1.50 to Rs. 176.00. Ready Madras picked up 38 nP to Rs. 34.50 and Kanpur 25 nP to Rs. 33.25. Oil B.S.S. gathered 15 nP to Rs. 14.55, commercial gaining 4 nP to Rs. 13.55.

The linseed September contract improved by 20 nP to Rs. 43.75 and June contract by 34 nP to Rs. 42.91. Bold ready was done at Rs. 44.62. Linseed oil was firm at Rs. 18.05.

The following table shows the closing prices of oilseeds and oils on 3rd June as compared with those of two previous weeks:

	3-6-1964	27-5-1964	20-5-1964
Groundnuts	Rs.	Rs.	Rs.
July 1964 contract	—	—	240.25
Nizam bold	59.00	57.62	56.37
Khandesh quality	60.25	58.25	57.12
Oil ex-mill	23.10	22.35	22.10
Oil Rly. Receipts	22.70	22.05	21.75
Castorseed			
June 1964 contract	174.62	174.87	171.87
September 1964 contract	176.00	175.75	—
Ready Madras	34.50	34.12	33.62
Ready Kanpur	33.25	33.00	32.50
Oil B.S.S.	14.55	14.40	14.20
Oil commercial	13.55	13.51	13.35
Linseed			
June 1964 contract	42.91	42.57	42.75
September 1964 contract	43.75	43.55	—
Bold ready	44.62	44.62	44.50
Linseed oil	18.05	18.05	18.00
Cottonseed			
June 1964 contract	105.50	105.50	105.50

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER DRIFTS LOWER

(Messrs. Parekh and Co.)

BOMBAY, 2nd *June*

After a temporary spurt engendered by the news from New York that about 500 tons of Lampong pepper were detained. Malabar black pepper during the week drifted lower with undertone undecisive in sympathy with New York and Singapore, where market turned weak for want of following.

New York, after touching the highest at $0.39, came down to $0.34½, with buyers awaiting new development.

Ungarbled at Cochin after touching the highest at Rs. 344 per quintal, came down to Rs. 328. Garbled slipped down from Rs. 353 to Rs. 338. July delivery, after surging to Rs. 382, receded to Rs. 364. Calicut went upto Rs. 340 and receded to Rs. 325.

Singapore was down from Str.M.$120 to Str.M.$110 for black pepper. *Vaisakh* delivery went out of the board at Rs. 373. *Jeth* delivery, after touching the highest at Rs. 390, declined to Rs. 375. *Shravad* delivery opened at Rs. 398 and fell to Rs. 390.

Ready in Bombay market is quoted at Rs. 180 per 50 kilos.

TEA IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 2nd *June*

Fair support was accorded during the export sales held yesterday. Offerings included early Darjeeling teas, C.T.Cs and whole leaf grades. There was also good demand during the internal sales held last week, but, despite this feature, rates realised were lower. Tea shipments during the week from the Calcutta port showed a marked increase; the U.K. and Continental destinations claimed a good portion of the total quantity shipped. That the British buyers are in need of replenishment is evident from the low level of U.K. tea stocks, which, in the week ended 22nd May, were only 138.68 million lbs., as against 140

million lbs. in the previous week. The trade here noted that, in the last week's auctions held in Mincing Lane, North Indian offerings met with strong demand, with better liquoring C.T.C. Assams and all Dooars teas receiving the keen attention of bidders.

It was also noted that a very strong feature in Mincing Lane last week was the bright liquoring coloury teas from Africa. East African tea producers have this year received much encouragement from the continued strong support their offerings are meeting with in London. It is reported that private capital from the U.K. is offering active assistance in tea acreage expansion in East Africa. While in London recently, the Chairman of the Tea Board, Mr. A. S. Bam, contended that Indian tea would have to put up with stiff competition not only from traditional tea producing countries like Ceylon but also from new entrants into the world markets like the Latin American and East African countries. Mr. Bam, however, expected that India would be able to gain a better foot-hold in West European markets. He also said that Indian tea would benefit from the great potentialities in the U.S. as well as in the developing countries of Asia.

It has been noticed that, in recent years, U.S. imports of tea have gradually increased. From 93.7 million lbs. in 1953, they went up gradually to 117.6 million lbs. in 1963, an increase of 23.9 million lbs. or 25.5 per cent. At the same time, U.S. consumption increased from 69.7 million lbs. to 94.5 million lbs. in the same period, that is an increase of 24.8 million lbs. or 35.5 per cent. With the going into production of India's first instant tea manufacturing plant shortly in Kerala, it is expected that Indian exports of tea to the U.S. would increase. Instant tea is in good demand in the U.S., and Ceylon has already established a good export market for its instant tea.

An important announcement made by Mr. Bam at London was that the third Plan target of 900 million lbs. had been revised to the more realistic figure of 830 million lbs. It is doubtful even if this lower figure can be realised. For it is common knowledge that tea gardens are groaning under the heavy weight of taxation and increased costs. As a result, they have been unable to finance development programmes from current earnings. Loans have been found to be rather uneconomic, as its charges exceed the current level of return on capital. For the same reason, private capital has also been found less enthusiastic in financing expansion of tea gardens than other industrial ventures such as engineering and consumer goods industries. Mr. Bam also said that the export target has also been revised to 530 million lbs. Since India's tea exports in 1963 aggregated 493 million lbs., it may appear that the export target is realisable.

It should also be noted that world tea output is expected to be higher this year. Up to the end of April, the North East Indian production amounted to 18.25 million lbs. from 12.74 million lbs. in the corresponding period of 1963, that is, an increase of 5.51 million lbs. or over 40 per cent. Many gardens in this part of the country have switched over to C.T.C. manufacture; therefore, a glut in C.T.C. teas is possible. Although quality teas would readily find an export market, the marketing of dusts teas is seen as a problem.

Dusts on offer during last week's internal sales aggregated 13,907 chests. This was the last sale of the season that ended on 31st May. A good and general demand was in evidence. Plain orthodox teas met with buyers at discounted rates. Assam teas were about steady. Legg-cut teas were sold readily at lower rates. C.T.Cs dropped 15nP to 20 nP. No quotations were issued in view of the limited quantities of representative teas on offer.

During the export sale held yesterday, offerings amounted to 14,480 chests which met with fair demand. Offerings included Darjeelings, C.T.Cs and whole leaf grades. Darjeelings were generally easy, but the few flavoury teas met with demand at hardening rates. Prices of bright liquoring C.T.C. and orthodox teas were firm, but others eased. Whole leaf grades were fully steady. No quotations were issued, in view of the limited quantity of suitable teas.

JUTE GOODS DULL

(From Our Own Correspondent)

CALCUTTA, *2nd June*

The unpleasant news of Mr. Nehru's death took the trade, as indeed everybody else, by shock and uncontrollable grief and, within moments, all activity in the jute markets came to a standstill on the 27th afternoon. The market remained closed on 28th and 29th not only as a mark of respect to the memory of the late Prime Minister but also to allow traders to regain equilibrium of mind after the terrible news. The markets re-opened on 30th May, but activity was confined to due date operations. Unlike certain other markets, including the stock exchanges, where quotations fell, the jute markets did not move downwards on the news of Mr. Nehru's death. The reason is that already prices of goods had touched rock-bottom levels, as a result of buyers' resistance against any rise. The inferior grades of fibre were quoted at or below the minimum prices, but the superior grades commanded a premium.

In the past one week, the weather has been hot and dry and, although progress of plants in areas where sowing had already taken place has not been affected, rain is urgently required to allow plants a stable growth. For a while, the fear that the high prices of paddy would affect the jute acreage had been entertained, but the early occurrence of rains this year has enabled cultivators to sow jute in several low-lying areas, in view of prospects for a double crop. It was reported only recently that research had shown that the yield of paddy grown in land immediately after a jute crop tends to be higher than otherwise.

The trade anticipates fruitful results to follow from the current visit of the Indian jute delegation to West European countries and the United States. The delegation, which is led by Mr. G. C. L. Joneja, the Jute Commissioner, and includes representatives of the Indian Jute Mills Association and the Calcutta Jute Fabrics Shippers' Association, has just attended the annual Congress of the Association of European Jute Industry held at Paris a few days ago. Traders hope that the delegation has had opportunities to know about the particular problems faced by the European countries in regard to packaging. The delegation will proceed from Paris to the U.S. and then to Canada and, on its return journey, it will touch the Italian, British and Belgian capitals.

Dull conditions continued to prevail in jute goods during the week under review. Both the U.K. and the U.S. showed interest in ready and near goods. Shipping to River plate destinations showed a marked increase. Some difficulty was felt by ships as a result of the absence of an adequate number of lighters. It is apprehended that stock of goods with mills as at the end of the last month would again show a rise, although this should not be surprising, as at this time of the year, business in jute goods takes place only on a small scale. In addition to this factor, U.S. buyers are reluctant to come to the market for replenishment of their stocks, in view of the expectation of a further fall in prices. On Tuesday last, ready hessian 40" 10 oz. gained a fractional addition at Rs. 44.30, as a result of scattered business with overseas buyers. Ready B. twills, however, were unchanged at Rs. 114.00. On Wednesday, these levels were maintained. After remaining closed since then, the market re-opened on Saturday, when due date transactions led to steady conditions. Hessian 40" 10 oz. was better at Rs. 44.50, but B. twills were quiet at Rs. 113.80. Trading was featureless yesterday and, excepting for business with Government involving a quantity of only 600 B. twills for June delivery, there was nothing else of note. With ready B. twills at Rs. 112.40 and hessian 40" 10 oz. quotations eased sharply and nervous holders were anxious to liquidate their stocks.

The fibre market was quiet. Mills were determined to cover the existing quota with as much selected grades as possible. Sellers demanded higher prices, but mills did not respond. On the other hand, stockists of mesta were anxious to find buyers, while the mills avoided them, since there was still ample time left to cover the current quota. Quotations for ready white and daissee bottoms were as follows: Assam bottoms Rs. 31.50; northern bottoms Rs. 30.50; and daissee bottoms Rs. 33.50. Good progress in regard to the implementation of the intensive jute cultivation scheme has been reported. Two districts in Bihar (Saharsa and Purnea) have been chosen for this purpose. The jute crop will be linked with paddy, as paddy cultivation immediately after a jute crop has been found conducive to give a higher yield for paddy. Efforts are being made at the same time to propagate the new hybrid jute evolved by the Indian Council of Agricultural Research. The new variety has a longer fibre and a silken lustre. Plans are also proposed for intensive cultivation in selected districts of Assam, Tripura and West Bengal.

METALS MAINTAINED

(From Our Own Correspondent)

CALCUTTA, *2nd June*

Prices in the Calcutta metal market were maintained at previous levels during the week under review. On the London Metal Exchange, copper continued to recede, and a feature in the week was a recession in zinc also from the peak level of £130 a ton. Spot copper-wire bars opened in London at £285 a ton and closed lower on balance at £277. At one time, the rate was even lower at £275½. The three-months' position closed at £275, after opening at £283½. Closing at £271, spot cathodes eased by £4, with spot fire-refined metal at £262 showing a loss of £2.

The recession in the world price of copper has followed the realisation that producers have now raised their activity and that production is now almost equal to demand. It is significant that Mr. Robert G. Page, President of Messrs. Phelps Dodge Corporation, stated recently that most of the major producers had indicated by word and action that they did not want to see a sharp run-up in the price of copper such as had occurred on occasion in the past. He foresaw that world demand would grow further and hoped that supply also would increase. European consumption of copper is advancing, and the business boom in the United States has led to the anxiety among primary fabricators and consumers to build up inventories to a satisfactory level, Mr. Page declared. Up to 1963, copper mines had operated below their capacity, and even then held considerable stocks so as to serve as a measure against any price rise. However, they had under-estimated demand. In India also, with the gathering momentum of machine-building activities and the programme to fabricate essential plants and equipment within the country, demand for copper, as indeed all other metals, has gone up, but imports have to be restricted to the availability of foreign exchange. A plea has been made to the Government of India for increased foreign exchange allocation to the import of non-ferrous metals. Since import licences are issued on the basis of value, the quantum of imports would fall as a result of the rise in world prices of metals. In Calcutta, utensil copper scrap was unchanged at Rs. 690 per 100 kgs. in the week under review.

As in the case of copper, world consumption of zinc, lead and tin has also gone up. The continued rise in the price of tin on the London Metal Exchange—spot tin in this week rose from £1,066 a ton to £1,073 and the three-months from £1,065 to £1,069—is indicative of the feeling that the deficit as between production and consumption would not be fully met by the weekly releases from the U.S. strategic stock-piles. Free world consumption of lead in 1963 is estimated at 2.5 million tons, as against the annual average of only 1.9 million tons in 1952-56. Similarly, zinc consumption increased to 2.9 million tons last year from an annual average of 2.0 million tons in 1952-56. In London, spot zinc opened at the new high of £133 a ton, but eased to close at £124; at one time, the quotation was even lower at £120. On the other hand, spot lead hardened from £88¾ a ton to £89 as a result of the broadening of demand. In Calcutta, virgin lead and electrolytic zinc were unchanged at Rs. 303 and Rs. 312 per 100 kgs., respectively.

KIPS WEAK

(From Our Own Correspondent)

MADRAS, *1st June*

Arrivals of stocks from tanneries to Madras were moderate and clearance by shippers and by merchants for inland trade was small. Prices ruled weak. Importers buying was selective and small, with emphasis on top marks light weight cowhides and on market quality medium fifths and light inferior fifths. Demand for other lines was poor. The efforts of shippers to enthuse importers with offers at lower levels did not mature in orders.

As for tanned goat skins, E.I. tanners were holding firm to their price ideas, but overseas buyers were resisting these prices and were keeping out of the market, with a view to buying at lower levels later. Middle class sheep skins remained steady, but better tannages were a shade easy, due to lack of inquiries. Prices in the raw skins centres remained firm and were out of tanned parity.

In the last tanned skins public sales in Germany, attendance of buyers was small and only 30 per cent of goat skins and 20 per cent of sheep skins met with clearance, at unchanged to 3 pence less than current quotations. The next German public auctions will take place on the 6th July; and the London public sales will also be on the same date.

SUGAR FIRM

(From Our Own Correspondent)

HAPUR, *1st June*

Sugar continued to rule firm, as the supply position was far from satisfactory and the seasonal demand was on the increase. The commodity was very much in request due to marriage season and prices in the open market were around Rs. 175 per quintal, as against the recently increased controlled price of Rs. 131 per quintal. Sugar production has virtually closed and total production is reported to be around 2.6 million tons.

Desi khandsari, after touching new heights of the season in the earlier part of the week, recorded a modest fall towards the week-end due to uncertain market conditions. Despite poor demand, stockists were still reluctant to sell, as rumours still persisted that export permits of the commodity for Punjab and Rajasthan might be issued soon. The sad death of Pandit Nehru also gave a severe jolt to both buyers and sellers. Stocks of the commodity in Muzaffarnagar, which is the main assembling centre, were put around 202,000 maunds, the corresponding figure last year being much lower at 60,000 maunds. Production had nearly finished except at some centres where it was being done on *galawat* account. Week-end prices (in rupees per quintal) were:—*Desi* inferior 125 to 140; medium 142 to 160; superior 162.50 to 170; boora 160 to 165.

Ready *gur* ruled steady during the week, although offtake to consuming States was small because import permits for the month of May had been exhausted. Fresh permits were expected early next month. As *gur* stocks with the trade (about 7,000 quintals) were much below the requirements till next season's produce arrivals in the market by end of September, a further rise in *gur* prices was predicted. Cane crop prospects were still uncertain and most of it would depend on the monsoon, although there has been an increase in cane acreage. Week-end prices (in rupees per 40 kilogram) were:— *gur pansera* superior 31.25; average 30.50; *kotha* selected 31; dry-wet 28.50 to 29.50; *shakker* 33 to 35.

Ready *gur* recorded gains during the week in the Muzaffarnagar market on revival of demand from the consuming States. *Gur chaku* closed with net gains of Re. 1 to Re. 1.25 per 40 kilogram, and *shakker* also improved by 50 paisa per 40 kilogram. Stocks at week-end were 190,000 maunds, as against 75,000 maunds a year before. The latest prices (in rupees per 40 kilogram) were:—*Chaku* 34 to 36.25; *pansera* 30.50 to 31.50; *laddoo* 34 to 34.50: *rusket* 16 to 20; *shakker* 36 to 37.

FOODGRAINS STEADIER

(From Our Own Correspondent)

HAPUR, *1st June*

Steadier trend continued to prevail in the foodgrains market during the week under review. Poor arrivals in the face of brisk consumer demand was the main influencing factor. Grain trade here under advice of State Government has fixed the floor and ceiling prices for wheat. Wheat would not be purchased at more than Rs. 22 to Rs. 25 per 40 kilograms. Despite this decision, wheat was quoted higher in the open market.

Arrivals of wheat were about 1,500 to 2,000 maunds a day and its demand from both local and outside dealers was quite brisk. Prices, therefore, rose further, by Rs. 2.50 to Rs. 4 per quintal according to quality. Average quality wheat was now quoted between Rs. 55 and Rs. 58.50 and farm produce between Rs. 62.50 and Rs. 66.50 per quintal. Stocks at the week-end were estimated at 3,000 quintals.

Rice ruled quiet and prices of inferior variety eased slightly on poor demand at higher levels. Week-end prices were:—Rice *basmati* superior Rs. 96.35 to Rs. 99.13, *sela basmati* Rs. 93.77 to Rs. 96.45; *mainpuri* Rs. 73.01; *ramajwayan* Rs. 80.38; *raimunia* Rs. 83.06 and *gadda* Rs. 73.01 per quintal.

After an early advance, gram eased towards the week-end on poor buying support. Arrivals averaged 400 maunds daily, with local quality quoted at Rs. 56.26 per quintal and Punjab quality at Rs. 55.59. Local stocks were estimated around 3,000 quintals. Barley and *bejhar* also sought higher levels at Rs. 42 to Rs. 43 and Rs. 41.75 to Rs. 42.50 per quintal, respectively. Arrivals of both were very poor. *Juwar* and *guwar* were steady. Stocks with trade were reported to be meagre and prices now ranged between Rs. 43 and Rs. 45 for *juwar* and between Rs. 58.94 and Rs. 61.62 for *guwar*. *Methi*, however, was subdued on increased arrivals, while oats hardened on good demand. Prices at the week-end were:—*methi* Rs. 52.50 to Rs. 55; oats Rs. 57.60 to Rs. 58.94; and maize Rs. 41 to Rs. 43 per quintal.

Steadier trend was witnessed in pulses also. Peas improved by Re. 1 per quintal to Rs. 48.75 to Rs. 50.75 for dara quality and to Rs. 52.75-Rs. 55 for farm variety. Arrivals were around 400 to 500 maunds a day and stocks at the week-end were estimated at 3,000 quintals. Arrivals of *arhar* were small and prices ruled quiet in poor trading and prices ranged between Rs. 67.50 and Rs. 72 per quintal. *Urd* and *moong* were stationary at previous level at Rs. 66.98-Rs. 72.34 for *urd* and at Rs. 77.70-Rs. 91.09 for *moong*. *Masoor* and other *dals* remained unchanged. Week-end prices were:—Peas *dal* Rs. 53.12; *arhar dal* Rs. 80.38 to Rs. 91.90; *moong dal* Rs. 93.77; *urd dal* Rs. 80.38; *masoor* Rs. 66.25 to Rs. 72.34; *masoor dal* Rs. 82.50; and *gram dal* Rs. 62.96.

TEA RECEDES

(Messrs. Forbes, Ewart and Figgis Private Ltd.)

COCHIN, *29th May*

Offerings in Sale No. 21 held on Tuesday, 26th May, amounted to 690,000 kg. There was a further decline in quality for most of the offerings. The market opened to very much less demand at considerably lower rates and, consequently, there was a high percentage of withdrawals. The few selected best Nilgiris were sold well at lower rates, but the lesser kinds met with limited support and many were withdrawn; fannings in this category elicited better enquiry than their equivalent brokens. Good medium sorts eased in price, mainly following quality. Medium brokens declined quite sharply, but low medium sorts registered even greater drops in price and there was only fair enquiry at the lower levels; fannings in these categories sold better than their brokens. Black leaf and plainest descriptions followed the considerably easier trend of the market, whilst whole leaf grades met with very irregular support and also at much lower levels. Tippy teas were nearly all withdrawn without bid. Unorthodox teas met with quite fair support at only slightly lower levels.

The quotations (per kg.) were:—

	1964 Rs.	1963 Rs.
Low mediums	4.30-4.60	4.00-4.20
Mediums	4.60-4.80	4.25-4.45
Good Mediums	4.90-5.35	4.50-5.10
Nilgiri B.O.P.	4.60-7.10	4.50-7.20

The average price realised in sale No. 21 was Rs. 4.61 per kilo, as against Rs. 4.85 a week ago and Rs. 4.23 in the corresponding sale last year.

Approximately 299,000 kg. were offered in dust sale No. 21 held here today. There was fair demand but at much lower levels. Highgrown prices were much lower than those last seen. All medium descriptions came to a considerably easier market. Unorthodox and residual types were readily absorbed at lower rates.

The average price realised in dust sale No. 21 was Rs. 4.26 a kilo, as against Rs. 4.72 a week ago and Rs. 3.95 in the corresponding sale last year.

Colombo: Just over 7½ million lbs. were offered this week. The market opened to good demand with highgrowns brokens 5-15 cents lower. Coloury mediums were fully firm, but plainer sorts and Uvas tended 5-10 cents easier. Liquoring fannings were a strong feature of the sale, whilst lowgrown descriptions remained steady on last levels.

London: North Indian and other growths: In Monday's auction, there was good demand with C.T.C. Assams firm to dearer, but Dooars remained steady.

Ceylon and South Indians: In Tuesday's sale, there was good demand for the Ceylon and South Indian offerings at firm rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire us as follows:

"Leaf sale No. 22 held on Tuesday the 2nd inst.: 751,000 kgs. offered. Better demand at ten to twenty paise lower. Highgrowns again weak. Unorthodox about steady."

Notices

BRITISH PAINTS (INDIA) LIMITED

Registered Office:

32, Chowringhee Road, CALCUTTA

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fortieth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company on Friday, 26th June, 1964, at 11-30 a.m., to transact the following business:—

A. **As Ordinary Business**

1. To receive the Report of the Directors and to adopt the Audited Accounts for the year ended 31st December, 1963.
2. To declare a Dividend.
3. To elect Directors in place of Mr. J. T. Adamson and Mr. B. Gill.
4. To appoint Auditors and to fix their remuneration.

B. **As Special Business**

To consider and if thought fit, pass the following Resolutions with or without modification:—

(i) *As a Special Resolution No. 1*:

"That in view of the proposal contained in the succeeding Ordinary Resolution that Mr. Clifford James Harben be appointed a Director of the Company, consent be and is hereby accorded to Mr. Clifford James Harben holding and continuing to hold an office or place of profit under the Company as Works Director or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration as approved by the Central Government and set out in the Resolution of the Board of Directors passed on the 13th November, 1963, a copy of which has been signed by the Chairman and laid on the table for the purpose of identification."

(ii) *As an Ordinary Resolution*:

"That approval of the Central Government having been obtained to the appointment of Mr. Clifford James Harben as a Director and due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company, pursuant to Section 257 of the Companies Act, 1956, Mr. Clifford James Harben be and is hereby appointed as Director of the Company with effect from 1st January, 1964."

(iii) *As a Special Resolution No. 2*:

"That Mr. F. C. H. Rustomjee be and is hereby appointed as an Alternate Director for Mr. J. T. Adamson and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

(iv) *As a Special Resolution No. 3*:

"Resolved that the Articles of Association of the Company be altered in the following manner:—

By inserting the words 'without payment,' between the words 'entitled' and 'to' appearing in the first line in the Article 13."

(v) *As a Special Resolution No. 4*:

"Resolved that the Articles of Association of the Company be amended by altering Article 14, so as to read as follows:—

If any Certificate be defaced, torn or old decrepit, worn out or when the space on the reverse for recording transfer have been fully utilised, then upon production of such Certificate to the Directors, they may order the same to be cancelled and may issue a new Certificate in lieu thereof, and if the Certificate be lost or destroyed, then, upon proof thereof to the satisfaction of the Directors and to such reasonable terms, if any, as to evidence and idemnity and the payment of out-of-pocket expenses incurred by the Company in investigating evidence, as the Directors think fit, a new Certificate in lieu thereof may be issued to the party entitled to such lost or destroyed certificate."

(vi) *As a Special Resolution No. 5*:

"Resolved that Article 15 be substituted by the following Article:—

For every Certificate issued in the last preceeding Article, the Company shall charge no fee."

(vii) *As a Special Resolution No. 6*:

"Resolved that Article 41 be amended so as to read as follows:—

For the registration of each transfer and for each registration of transmission under the transmission clause, the Company shall charge no fee."

By Order of the Board,

S. R. ROY,
Director Secretary.

Dated at 32, CHOWRINGHEE ROAD, CALCUTTA-16, *the 25th day of May* 1964.

N.B.—1. The Share Transfer Books of the Company will be closed from the 12th June, 1964 to the 26th June, 1964, both days inclusive.

2. A Member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself, and the Proxy need not be a Member.

3. Subject to the confirmation of the Members in the Annual General Meeting, the related Dividend Warrants in respect of the Shares registered in the Books of the Company on the date of this Meeting will be ready for despatch on the 2nd day of July 1964, to the Holders thereof.

The explanatory statement as required by Section 173(2) of the Companies Act, 1956, in regard to the special business cited above has been forwarded to Members together with a copy of this notice.

THE BENGAL PAPER MILL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held at the Registered Office of the Company at 14, Netaji Subhas Road, Calcutta, on Monday the 29th June, 1964, at 4-30 p.m., for the following purposes:—

(1) To receive and consider the report of the Directors and adopt audited accounts of the Company for the year ended 31st December, 1963.

(2) To declare dividends on Preference and Ordinary Shares.

(3) To elect Directors in place of those who retire by rotation.

(4) To appoint Auditors and fix their remuneration.

NOTICE is hereby given that Share Transfer Books of the Company shall remain closed from 20th June to 29th June, 1964 both days inclusive.

By Order of the Board,

THE BENGAL PAPER MILL CO. LTD.,

H. P. DHANUKA,
Director.

Registered Office:
14, NETAJI SUBHAS ROAD,
CALCUTTA.
1st June, 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a Proxy to attend and vote in his stead. Such Proxy need not be a member of the Company.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. F.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. C.R.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : ' A ' shares and ' B ' shares—these are indicated by the same letters ' A ' and ' B ' under the columns ' Paid-up Ordinary Capital ' and ' Paid-up ' per share.

Accounts :—Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.
