There are signs, even if slight, that the downward trend may already be stopping. The total value of Commonwealth exports last year was 9 per cent more than in 1962 and they grew faster in the year than at any time over the past decade to reach £10,733 million. There was also a recovery in imports to reach a record level of £11,864 million. If the British trade with the Commonwealth were not declining so fast, it is probable that the Commonwealth share of world trade would also put on a spurt. The bad years of 1961 and 1962 are now thought to have been passed and last year saw an appreciable rise.

Britain's contribution to expanding inter-Commonwealth exports, a 2 per cent rise, was much less than the 6 per cent rise recorded by the rest of the Commonwealth, and did no more than recover a little of the ground lost earlier. In 1963, British exports accounted for 29 per cent of Commonwealth exports, as compared with 31 per cent in 1962 and 41 per cent in 1954.

Biggest increase in exports for the rest of the Commonwealth occurred with non-Commonwealth countries, where there was a 11 per cent rise to a record £7,312 million. Much of the 6.5 per cent expansion in imports came from other Commonwealth countries.

At the Crossroads

Europe's match industry is at the crossroads. Already one of the most tightly concentrated industries in the world, it faces the prospect of even more concentration if Common Market moves are carried out. The danger is that the present stagnation in sales will lead to a falling-off in output as competition from other lighting devices in homes and among smokers increases. Already margins in the match industry are tight and the only worthwhile sources of expansion lie in underdeveloped areas of the world such as Latin America. Cut-price competition from Soviet bloc countries has not made life any easier for the manufacturers.

Competition has struck on a number of fronts. Match sales are closely tied to cigarette sales and any falling off in the latter hurts them. In the past few years, reports linking smoking with lung cancer have knocked the smoking habit a number of times. Smoking resumed its former upward path fairly soon after each report. But match consumption has not been so fortunate, because there has been a steady substitution by petrol and gas lighters. Taxes on matches, fairly universally applied, have not helped. Nor has the emergence of gas stoves with built-in lighters helped the industry.

When the Common Market abolishes import duties on matches, as it is pledged to do, the trend to concentration is likely to become even more pronounced, because the few small independent firms that exist will be fighting a losing battle to stay in existence. The rest have long since diversified into allied products to try and reduce their dependence on matches.

The extent to which concentration already exists is phenomenal. In 16 European countries, there are four State monopolies (France, Italy, Germany and Greece), production is concentrated in the hands of one company in six more (among them Norway, Denmark, Sweden and Spain) and, in a further five (Belgium, Britain and Switzerland included), one group controls at least two-thirds of total production. Only in one country is there relatively free competition. The match industry in Europe is, in fact, probably as good an example of monopoly, duopoly and oligopoly as it is possible to find.

The degree of monopoly outside the four State monopolies is accentuated by the fact that one Swedish firm, Svenska Tandsticks, controls, directly or indirectly, 83 per cent of production in the remaining 12 countries. Even in the countries with State monopolies, it has valuable operating concessions. Svenska Tandsticks was formed after the fall of the match king, Ivar Kreuger. Now it is merely a holding company, exercising no operations itself. But its subsidiaries, and its ramifications, are worldwide.

Both in Norway and Denmark, a subsidiary of the Swedish match company is the sole producer. In Belgium, an affiliate occupies a predominant position. A subsidiary of the Swedish firm has a 35 per cent interest in the British Match Corporation, which, through its own subsidiaries, controls virtually the whole of Britain's output. So it goes on.

Italy, the leading producer in Europe, with an annual output of over 100,000 million matches, is one of the few countries on the Continent where consumption is still rising. Next most important producers are West Germany (98,000 million), Sweden (85,000 million) and Britain (80,000 million).

Britain is the Continent's biggest importer, some 37 per cent of 1962's consumption of 116,000 million matches coming from abroad. Most of the imports came from Sweden, Belgium and Norway. The Netherlands, with half its needs coming from abroad, was the second biggest importer.

In exports, Sweden was undoubtedly the most important country in 1962, with 60 per cent of its production going overseas. It was followed by Belgium, Norway, which sent almost all its exports to Britain, Finland, whose exports went largely to neighbouring Denmark, Italy (the United States was its most important market) and Portugal, which exported mainly to her overseas territories.

Consumption per head tends to drop as one goes further south. Belgium, with 2,900 matches per person a year, consumes nearly three times as many as Spain's 1,000.

Tackling Common Market Blackspots

What to do with declining industrial areas, which are failing to attract new industries to replace the old ones on which prosperity was originally based, has become a vital problem for the Common Market. For some time, Common Market officials have debated whether to pay special attention to these areas, such as some of the worked-out coal mining areas of Northern France and Belgium and the uneconomic shipyards of Italy, or whether to allow them to find their own level in a free economy.

A decision to take an active role in resuscitating old areas could, it is thought, have a considerable effect on the future of the Common Market's economic policy. Areas will now be able to demand action to offset the effects of a fundamental change in their economies.

The Common Market's experts first studied methods for obtaining clearer knowledge of the reasons for changes in regional economics and of forecasting these changes more accurately. In particular, they stressed the need for preventive measures.

It was felt that regions that depend too much on one industry, even if that industry is flourishing at the moment, should diversify while they have time on their side. Among these are tourist areas on the French and Italian rivieras, for instance, and those regions with too heavy a dependence on olives and horticulture in parts of Italy.

Where a decline has already set in, the Common Market believes that its policy must take advantage of all the favourable factors, particularly the availability of skilled manpower, in inducing other industries into the area. To do this it is felt that more positive action could be taken on vocational retraining, building infrastructures and a greater use of town planing. The Commission has also been studying two other aspects of Community policy—the objectives of regional policy and the efficacy of regional policy instruments. On the latter, it was felt that financial and fiscal instruments were only one aspect of regional action and that the development of infrastructures and the rationalisation of administration are vitally important.

Financial aid, though it cannot alone ensure the development of backward areas, must still, it was thought, play a vital role in development. This finance, if it is to be really effective, must come from both State and private sources; otherwise, the Commission felt there was a danger of one side leaning too heavily on the other. The Commission also felt that financial aids would be more effective, if they stimulated the setting up of several firms in certain centres. Although this would imply the use of subsidies, it was not felt that it would be basically against Common Market policy.

The role of the State in such development areas is seen as providing the necessary conditions for the development of private enterprise. Only it could adjudicate among localities, so that one locality was not allowed to outbid another to attract a firm if it was not in the general interest of the community that it should do so. In order to achieve a proper balance in regional economic policy, it was felt that action should be differentiated according to whether it concerned regions which already have one or more large industrial centres or those extensive outlying regions whose economies were still essentially agricultural.

The first would need a policy that was designed to maintain dynamism while avoiding over-concentration. The way in which the development centres of the Netherlands and the "central points" of West Germany had done this was taken to be the model. In large peripheral regions, development problems are more difficult to resolve. The first step would be to establish a complex of industries complementary to each other; then technical training should be adopted as a follow-through.

Rumania Strikes Out with Chemicals

Rumania is to step up her chemical exports to the West this year. And total exports are confidently expected to rise more rapidly than imports. This means that exports, for the first time, will be greater than imports. And, with a big push in exports, it is now almost certain that Rumania will have a bigger trade surplus in chemicals. Taking 1958 as the base year, the index of imports by value is thought likely to touch 220 by the end of this year while exports' index should reach about 485. By next year, the latter index should be well above 500.

Rumania intends to cash in on a shortage of calcium carbide in the West. Shipments are to be stepped up following a big increase in output: from last year's 77,000 tons output is expected to top 100,000 tons this year, half of which will be exported. Behind the expansion is a shift in production. Instead of concentrating on basic chemicals and feedstocks, it is planned to step up intermediates such as phenol, caprolactam (a nylon raw material) and phthalic anhydride. This policy will help Rumania to build up its own manufacturing facilities from local raw materials.

Although imports should now take second place, it is not intended that such rises as will occur will be haphazard ones. The aim of Government policy is to allow in mainly those chemicals which will supplement local production. It has already been necessary, for instance, to import certain plastics, colourants, drugs and reagents.

By a policy of planned manufacturing capacity, Rumania is steadily eliminating those sectors where she is weakest—she will probably become self-sufficient in suspension grade P.V.C., for instance, by the end of the year and in polystyrene next year.

Cyprus Clash Adds to Turkey's Troubles

The clash over Cyprus, whatever its outcome, is likely to add to the strain on Turkey's already uncertain economic position. Turkey already spends a high proportion of its national income on defence and any further outlays that become necessary with the deteriorating international situation will only add to an import gap that already seems unbridgeable.

The political crisis comes at a time when Turkey's foreign position is acute, following the failure of the Government to cope with a large import surplus and payments deficit. This year imports are estimated to be £230 million and total payments, including debt servicing and a deficit on invisibles, £300 million. To pay for this, direct exports are expected to amount to only £134 million. The gap is thought unlikely to be bridged even by foreign aid and private capital inflows. Almost £100 milion more is wanted in new foreign aid.

Not all of this has materialised and there has been a drive to boost exports and cut back imports. The latter has had some success. During the first four months of 1964 imports fell back to an annual rate of £213 million. But exports also fell in the same period and, since then, the trade gap is thought to have widened.

While the dispute with Greece goes on, Turkey may continue to be looked on with suspicion in international eyes (as may Greece) and it will become increasingly difficult for her to raise the foreign assistance so badly needed. So far, it is thought that just over half the £100 million needed in new aid has been found, about £53 million. But much of the aid is tied to projects and will not become available until the projects are either implemented or at least under way.

Big Inflow of Capital into Ireland

Despite a current balance of payments deficit of £30 million for the 12 months to the end of June Ireland's external reserves rose by £7 million. The net inflow of private capital during the period was, therefore, around £35 million, a useful contribution to the economy. Ireland is not placing too much reliance on this inflow, because it is recognised to be hot money, most of it from Britain where there are fears of the consequences of the autumn general election. After October, a lot of the money is bound to leave Ireland again once the election result is known; if the Conservatives win there could be a heavy outflow.

Irish gross national product is expected to rise by 4-5 per cent this year, though agriculture should go up in real terms by slightly more. The rise in G.N.P. may well be more, since, in the first three months of this year, industrial output was up 11 per cent on the same quarter of 1963.

The danger signal for the economy is that imports will increase far more rapidly than exports. In the first half of this year, exports were up by £19 million; over the year as a whole, imports are expected to rise by nearly £45 million, an increase of about 12 per cent. In spite of the fears of a withdrawal of private capital in the autumn, the Irish reserves are in a healthy position and could meet a run without too much difficulty. Over the past eight years, they have risen by £54 million to over £230 million. To back this, Ireland can call on the International Monetary Fund if necessary.

Increases are expected in livestock production, barley and horticulture. If the Second Economic Programme plans are met, as the first were, there will be a 60 per cent increase in real income per head in the agricultural community, as compared with 40 per cent for the population as a whole.

Topical Briefs

Britain's watch industry is trying hard to iron out seasonal fluctuations of sales by a high-pressure advertising campaign. In a normal year, the last four months account for over half the sales, and the pre-Christmas rush is the busiest time of all for the trade. As a consequence, the early months of the year are slack. To even out demand, the industry has mounted an advertising campaign in the papers and on television—a drive that appears to have had some success. In the first quarter of this year, some 13 per cent more watches were sold than in the same period of last year. Although reliable statistics are not yet available, it appears that this higher level of sales has been carried over to the second quarter. So the industry hopes that last year's record turnover of £4 million may be surpassed. Most of the increase has been recorded in the lower-price range, which is dominated by British manufacturers rather than Swiss and other foreign imports. In the under £5 range, some 2.5 million watches a year are sold.

West Germany's steel industry this year confidently expects to break the crude steel record set in 1960. In that year, 34.1 million tons were produced and the reason for the present confidence lies in the fact that rolling capacities are now working to 90 per cent. There is also a backlog of orders averaging at least three to four months for rolled products and delays for flats are rather longer than those for shapes. Order books in the first half of the year for rolled products averaged about 2 million tons a month, which would give an 18 per cent increase in total production for the year over 1960 if this rate is maintained. The one black spot, though, is prices. Although these have been improving, they are not yet back to the levels of 1960, when steel was in short supply.

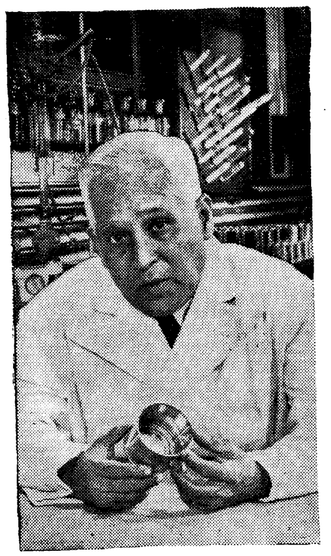
Britain has high hopes of expanding trade with the *Netherlands*. A report recently published stated that there was scope in particular for more exports of clothing, leather products, consumer durables and cars to Holland. Though its population is no larger than that of Greater London, exports to it from Britain last year amounted to over £150 million, a 32 per cent rise since 1960 and more than is sold to India or New Zealand. To push sales even further, British Week is to be held in Amsterdam next May. Britain now accounts for just over 7 per cent of Dutch imports, a figure that has fluctuated slightly in the past few years. Looking to the future, the report states that there should also be prospects for increasing trade in manufactured goods and in such items as prefabricated and the factory-made buildings. Re-equipment of the Dutch shipbuilding industry could offer scope for Britain as well, it was felt.

The rise in *European air traffic* continues, though the plan to merge the Common Market's airlines into Air Union has hit snags. During March, the last month for which figures are available, the 16 member-countries of the European Airlines Research Bureau flew 15 per cent more passenger-kilometres than in the previous March. The total was 723.8 million p.k. The load factor increased at the same time by two per cent to 54.4. And, for the year to the end of February, there was an increase of 11 per cent in passenger-kilometres flown while the load factor went up from 54.9 to 55.7. However, the Common Market's plan for Air Union ran into serious snags and there is still no date forecast for its implementation. Last spring, it was being confidently set at August. But there is still no agreement. Main stumbling block is thought to be the smaller countries' desire to be given bigger traffic quotas than either Germany or France agrees to.

Czechoslovakia plans to spend about £50 million soon on Western agricultural supplies. The Czechoslovak delegate at a special meeting in Bucharest, called to decide future policy of COMECON, the East European common market, said this would be the amount needed to buy seed and wheat in Canada and the United States, and cattle and pig-breeding stock in Britain. The delegate said that because of this, Czechoslovakia would be unable to meet some of her aid commitments to Cuba, India and several developing countries in Africa.

The West German Parliament is expected to adopt, later this year, a proposed private Bill that would set up a central fund for the promotion of *German farm products*. The Bill proposes a levy of a little under one per cent of the value of all farming land, with owners paying the levy for six successive years. Owners of land worth less than £300 would be exempt from the levy. The fund would be used solely for promoting the sale of German farm products and would not be used to support or intervene in the normal markets. The trade press is urging quick ratification.

Elderly *French* farmers are to receive extra incentives to retire, under a scheme announced by the Government. From this month, the veterans will have £154 a year added to their normal pensions if they agree to sell their holding to a younger farmer or to an official approved farm management organisation. Previously, they have received £115 a year in addition to pension. Farmers who give up small holdings below a certain acreage, or land officially judged to have been neglected or in poor heart, will receive a minimum pension bonus of £92 a year, instead of £70 a year. The new scheme is aimed at increasing agricultural efficiency in France by reducing the number of farm units, putting an end to uneconomic production and bringing large areas of unworked land back into the industry.



Acid-resistant lacquer for prawns? No!

To keep prawns eatable, cans must be coated with a sulphur-resistant lacquer. It's plum cans which need one that is acid-resistant Anyone can tell you that—anyone at the Metal Box Research Division.

Scientists attached to this Division help create the *right* package for every product... make certain that the *right* finishes are developed to preserve the contents and protect the package.

Yet it would be wrong to think that Metal Box scientists are concerned only with basic developments in packaging. They work all the time with customers to solve individual packaging problems.. help suppliers to develop improved materials.

And their discovery of many indigenous substitutes for imported raw materials helps save valuable foreign exchange. As does the work of the Metal Box Technical Development Division. Metal Box have designed and built in India can-closing and bottle-sealing machinery that used to be imported and cost the country a pretty penny

Metal Box spend about Rs 10 lakhs every year on Research and Technical Development. That's a lot of money—but it pays rich dividends to the Company as well as the nation. Take just one instance. Enterprising packers in Kerala have won growing export markets for canned prawns in recent years. Metal Box know-how and the world-wide acceptability of Metal Box containers have helped to make this export success possible.

Yes, research is at the root of all progress.

WILL G.A.T.T. SURVIVE?

MUCH DEPENDS ON THE WEST

THE ability or futility of the General Agreement on Tariffs and Trade (G.A.T.T.) to deliver the goods in the changed circumstances of world trade has been questioned by some. The issue took a clear shape during the early part of this year when the United Nations Trade and Development (U.N.T.A.D.) Conference discussed it as an important item on its agenda. The consensus on the principles and rules governing world trade are no longer the same today as they were in the early post-war years. A large number of underdeveloped countries have become politically independent since then. The economic development of these countries requires a larger flow of foreign exchange. It is through larger exports that this foreign exchange problem can be solved in a satisfactory way and on a lasting basis. It is mainly the solution of this issue that will determine the survival of G.A.T.T.

The basic principles embodied in the G.A.T.T. are:

(a) There should be no discrimination in trade and the existing preferential arrangements should be gradually reduced and ultimately abolished.

(b) Domestic industries should be protected through customs tariffs only, and not through other means like import quotas.

(c) The trading relations and the results of tariff negotiations should be embodied in a binding legal instrument, and its interpretation should provide a body of accepted rules to govern the trade.

(d) In order to protect the trading interests of the underdeveloped countries, they should be treated on a different footing and be eligible to exceptions to some of the G.A.T.T. rules.

The dynamic principle of the G.A.T.T. is negotiations. But the underdeveloped countries feel that, as they have no bargaining power, they have little force in their negotiations. Moreover, the G.A.T.T. has practically excluded from its coverage the agricultural commodities, which are considered under the provision of exceptions to the general rule. As agricultural commodities form a great part of the total trade of underdeveloped countries, they have to enter into a series of negotiations to decide the terms governing their exports. Thus, the problems of the underdeveloped countries—both for determining their agricultural exports and total exports—are considered as the secondary items outside the main scope of the G.A.T.T. Even the basic principles were not adhered to by many countries and protection was taken under the provision of exceptions to form customs unions like the European Economic Community (E.E.C.). Gradually, the former colonial areas of the member-countries became associated with the community, getting the benefits of preferential tariffs, and it now seems that the non-discrimination in trade—as envisaged in the G.A.T.T. principles—instead of going out, is becoming stronger day by day. These are the major problems facing world trade today. It is true that, as a result of direct negotiations with the E.C.M., India-Pakistan-Ceylon have obtained certain valuable concessions and sympathetic assurances. But a lot still remains to be done to abolish discrimination.

Mr. Michael L. Hoffman, Director of the Lambert International Corporation, New York, who was for many years the European Correspondent of the *New York Times*, has discussed the survival of G.A.T.T. in the light of these problems in a comprehensive article published in the July issue of the *Lloyds Bank Review*. According to him, there are three main points of view on the subject: the U.S.-British views, the views of the underdeveloped countries and the French views.

U.S.-British Views

The U.S. and Britain are anxious to solve the trade problems of the underdeveloped countries and negotiate on the major issues governing the exports of agricultural goods. They feel that this can be achieved within the framework of the G.A.T.T., under the provision of exceptions embodied in it. According to the U.S., there should be a good deal less resistance to the exceptions provided in the rules. Britain and the other members of E.F.T.A. largely adhere to this view. But this view does not solve the difficulties of underdeveloped countries in facing a long series of negotiations from a position of weakness.

Views of Underdeveloped Countries

The underdeveloped countries are of the view that G.A.T.T. has resulted in advancing the trade of the developed countries at a faster rate than has been the case in their exports. They want a rise in their foreign exchange earnings through exports, by way of reasonably higher prices for their foods and raw materials and preferential treatment for their manufactured goods, while having, as they do now, complete freedom to retain their own tariffs because of their serious foreign exchange position and in order to provide protection to their nascent industries. They want these preferences as a matter of right and not by way of negotiations.

French Views

The French and their friends assert that the price of a commodity which enters the foreign trade is generally not determined by the cost of production and transport and the influence of market operations, but by the subsidy granted by the exporting country and the public policy of the importing country. They feel that as the costs in industrial countries are manipulated to achieve the domestic objectives of income equalisation, in the international field also the prices should be settled by international agreements in order to achieve income equalisation between the developed and the underdeveloped countries. In case of temperate-zone foodstuffs, the system envisaged is that there should be variable levies on imports and the countries which are now subsidising their exports may contribute to Food for Peace foodstuffs equal in value to the increase in their export earnings. Those countries which are not subsidising their exports may make the contribution, in terms of foodstuffs if feasible or in cash, equivalent to the windfall gain by way of higher price paid by importers. Regarding the raw materials and foodstuffs exported by the underdeveloped countries, the French suggest that, as there are inherent difficulties in fixing the prices by international agreements, consumption taxes should be levied on these goods in developed importing countries which may be transferred to the exporting countries for economic development.

In the case of industrial products of the underdeveloped countries, the French advocate tariff preference, quota preference or a combination of both, to only such industries which are not well established in the developed countries and can be well established in underdeveloped countries, having the potentiality to compete in the world markets in a reasonable period of time. The preferences to such industries will thus be available for a limited period. Then there may be some industries which are well established both in the developed and the underdeveloped countries. Some of these industries in the underdeveloped countries (cotton textiles is one example) are presently able to export at prices lower than the cost of production in the developed countries. Under the French proposals, these industries will not be entitled to any trade preference and their exports will be subject to the protective tariffs and/or quota restrictions in the importing countries. The quantum of protection will have to be negotiated on a case-by-case basis. This plan of tariff preferences on industrial products is apparently based on the Brasseur Plan, named after its author Mr. M. Brasseur, the Minister for Foreign Trade and Technical Assistance of Belgium.

Criticism of French Proposals

The French proposal has been criticised on many grounds. Mr. Hoffman has examined these criticisms in some detail. First, in case of the exports of temperate zone foodstuffs, the proposal envisages large transfers of foodstuffs from the exporting countries to the Food for Peace Programme and thus nullifies any benefits of a higher export price. Secondly, in the case of both temperate-zone foodstuffs and the foodstuffs and raw materials from the underdeveloped countries, much will depend on the rate of levy. If the levy is too low, it may mean almost no change in the present position; if it is too high, it may affect the imports in the developed countries and though the price gained by the underdeveloped countries per unit of their exports may be high, the total exports may decline substantially, resulting in a net loss to the exporting countries. And it will be a huge task to assess the optimum amount of levy from the point of view of the exporting countries. Moreover, the burden will fall mainly on Britain, Germany and Japan which are the principal importers of agricultural goods from the underdeveloped countries, and will thus not be judiciously distributed in the developed countries. Though France looks favourably on the exclusion of trade in agricultural commodities from the scope of the G.A.T.T. the proposals, as enunciated above, are incompatible with the present form of G.A.T.T. system. The Brasseur Plan also involves many difficult decisions, based on international discussions. To list some of them: which country is able to establish what particular industry so that it does not remain dependent on preferences after a given period of time? What should be the period of gestation for that particular industry, and what should be the levy on the imports of goods manufactured by such industries into the developed countries after the period of grace? The enormity of the task will be evident from the fact that the number of underdeveloped countries is large, each of them claiming the ability to establish a particular industry. Equally large is the number of industries for which decisions will have to be taken in case of every country. It is practically impossible to establish a machinery to take these decisions, not to speak of its operation effectively. "The conclusion conjures up visions," to quote Mr. Hoffman, "of a permanent G.A.T.T. Conference adding cell after cell of little negotiating groups until it spread from the shores of Lake Geneva over the adjoining hills and valleys like some ghastly algæ freed of all normal biological controls."

The major criticism of the French plan on a matter of principle is that, whereas the underdeveloped countries will be allowed preferential treatment of only such industries which can compete in the world market in a given period of time, this argument will not apply to the industries in the developed countries and, in spite of their high costs of production, they will continue to enjoy protection.

Conclusion

From all this, as well as from what has been stated by some of the delegates of developing countries at the last World Trade Conference, it may appear that the survival of G.A.T.T. is threatened by the needs of developing countries and the demands made by them on the developed nations. But this is only half the truth. The other half is not so well known. The chief merit of Mr. Hoffman's article is that he has brought out this less known part, namely, the Western world itself is so divided on the ways and means of reconciling their own conflicting approach to world trade problems that their own quarrels are a source of danger to G.A.T.T. The following extract from Mr. Hoffman's article will bear this point out:

"Consideration of the present division of world opinion on fundamental trade issues leads to one very important reflection on the real connection between the oratory and the operationally meaningless resolutions emanating from the U.N.T.A.D. Conference and the grim negotiations going on round the corner in the Palais des Nations at Geneva in the Kennedy round. The connection is not primarily that implied in the most talked about issue; namely, whether new machinery should be created to replace, supersede, or simply needle the G.A.T.T. U.N. conference create new machinery for the same reason that hens lay eggs; because it is their nature so to do. It is as futile to protest that the machinery is not needed and may be positively harmful to the interest of the Governments that created it, as to ridicule the hen laying sterile eggs for market for believing that she is perpetuating her kind. The real connection lies in the proposition that the aspirations of the less-developed countries cannot be met or even seriously dealt with, unless the grave issues facing the G.A.T.T. negotiators are resolved. No real advance toward a more satisfactory trade relationship between the less-developed and the advanced countries can be expected, unless the trading relationships between the advanced countries themselves are such that continued growth in the volume of international trade can be expected.

"Here the French and the rest of the European Economic Community bear a heavy responsibility; for it is they who are initiating measures that threaten to introduce substantial alterations in established patterns of trade; and it is they who are insisting on a bargaining procedure that would, in effect, throw tariff negotiations back into the tussles. The immediate problem before the Contracting Parties is whether the minimum legitimate requirements of the community can be met without thereby destroying the integrity of the G.A.T.T. system or forcing the U.S., Britain and the other members of the Free Trade Association to take positions that would ultimately do so. If this crisis can be surmounted, the chances of modifying and adapting the system to give a better deal to the less-developed countries would become very much brighter."

It is thus obvious that the future of G.A.T.T. depends, first, on the successful manner in which the Western countries themselves resolve their differences and, secondly, on the extent to which they are prepared to accommodate the legitimate requirements of the developing countries.

NEW STANDARD ENGINEERING COMPANY LIMITED

SILVER JUBILEE YEAR ACHIEVES RECORD TURNOVER

STATEMENT OF CHAIRMAN, MR. R. G. SARAIYA

THE Twenty-fifth Annual General Meeting of the New Standard Engineering Company Limited was held at Bombay on 26th August 1964. Addressing the shareholders, Mr. R. G. Saraiya, Chairman of the Company, said that an all-time high turnover of Rs. 2.40 crores, representing an increase of 30 per cent over the previous year's level, was recorded by the Company in the year ended 31st March 1964, which was its silver jubilee year. He referred to the slowing down in the tempo of its development and attributed this trend to the general problem of finding funds for development. He disclosed that the Company had to refuse many collaboration agreements for further lines of manufacture, as the apathetic state of affairs in the capital market was not conducive to raising the necessary finance. He urged the authorities to revise the fiscal policy and undertake measures to restore the climate of confidence so that it might be worthwhile for individuals to save and invest.

The following is the text of Mr. Saraiya's speech:

Before I turn to review the operations during the past year, I must give expression to our deep sense of grief and loss over the passing away of Shri Jawaharlal Nehru. It is now about three months since death removed him from our midst, but our feeling of loss still persists. He was the one man who, above all others, played an outstanding role in holding the Indian people together in troubled and difficult times and securing for them the gains of progress, with stability at home together with respect and recognition abroad. He is now no more at the helm, and, if our ship of state is to steer clear of troubles and dangers ahead, we have above all to pull together. Our national solidarity could be the best homage that we could pay to his memory.

The audited statements of accounts for the year 1963-64, together with the Directors' report, have been in your hands for some time and, with your permission, I shall take them as read.

New Directors

I should like to extend here a special welcome to our two new Directors, Mr. S. P. Mehta and Mr. Prabhu V. Mehta. As you have seen from the agenda, they were both co-opted as Directors by the Board and seek election at your hands, in this meeting. Mr. S. P. Mehta is an eminent advocate of the Bombay High Court, who is particularly known all over the country as an authority on tax matters. With his deep study of industrial and technical problems, Mr. Prabhu Mehta has carved out for himself a position of leadership in the business community, despite his young years. He was President of the All-India Manufacturers' Organisation last year, and held his office with distinction. The Board of Directors have already profited from their advice and guidance, and I am sure their continued association with us will be of great help to the Company.

Pace of Progress

I am glad to report that, during the year under review, the Company continued to show good progress in its operations as well as development. Sales reached the record level of Rs. 2.40 crores, as against Rs. 1.83 crore in the previous year. Against an increase of only Rs. 21 lakhs in 1963, sales showed an appreciable increase of Rs. 57 lakhs during the past year. It is a matter of satisfaction that your Company has been able to register such a marked rate of increase of over 30 per cent, even at increasingly higher levels of operations, especially in the midst of expansion and development.

Increase in Costs

The year under review has witnessed a steady pressure of an all-round increase of costs. With the increase in prices of materials such as steel, pig iron, coke, electric motors, etc., there has also been an increase in wages, dearness allowance, bonus and other benefits to labour. To this has been added the statutory increase in customs duty, Central sales tax, employers' contributions for provident fund, E.S.I.C., etc. It has not been possible to offset fully this rise in costs by increased productivity or higher prices for our products, with the result that gross profits have not shown the same rate of increase as in the case of sales and output. However, your Company's profit performance can also be looked upon as satisfactory. As against Rs. 22.88 lakhs in the previous year, the gross profits in the year under report were Rs. 26.87 lakhs. The corresponding figures for net disposable profit after depreciation, development rebate and taxation are Rs. 7.73 lakhs and Rs. 10.05 lakhs, respectively. With this increase in profits, your Directors have thought it fit after careful consideration to recommend silver jubilee bonus dividend at the rate of one per cent on equity shares, while maintaining the previous year's equity and preference dividends each at the rate of nine per cent. With the increase in dividend distribution of Rs. 1.11 lakh, it has also been possible to transfer Rs. 2.75 lakhs to general reserve as against Rs. 75,000 only in the previous year.

The fixed assets of the Company increased during the year by Rs. 15.88 lakhs as against an increase of Rs. 46.08 lakhs, Rs. 25.99 lakhs and Rs. 29.44 lakhs in the previous three years. As you will see from this, there is some slowing down of the tempo of development particularly in the past year. While this is due, to some extent, to a deliberate policy of phased expansion and delay in issue of import licence for foundry machinery, it also reflects the general problem of finding funds for development. I propose to revert later in this speech to the consideration of this important problem, which not only affects your Company's development, but also threatens the growth of our national economy.

Silver Jubilee Celebrations

This is the silver jubilee year of your enterprise, which started as far back as 1939 as a proprietary concern founded by Mr. J. V. Patel, our Managing Director, and which has blossomed out after many phases of expansion, into a public limited company in its present form, over five years ago. A souvenir brochure entitled "25 years of Service to Industry" was issued to mark this historic occasion. It was released formally by Mr. S. G. Barve, Minister for Industries, Government of Maharashtra, at a small, informal function, held at our Goregaon Works on 25th January 1964. Copies of this brochure have been sent to you all as well as distributed amongst our many friends and associates, at home and abroad. We have received heartening messages of congratulations from some of our shareholders and well-wishers, to whom we are deeply grateful for their words of encouragement.

The Directors' report has reviewed in some detail the Company's operations during the past year, with special reference to progress of foreign collaboration and development at Goregaon, to which there is little that remains to be added. I should like to mention here, the publication of our house magazine entitled "We in NSE" which was first issued under the name of the "NSE Sandesh" on 1st October 1963. Four members have also been published in a bilingual edition in English and Marathi. It is proposed to enlarge the scope of this new publication and to make its issue more frequently so that the benefit of this forum of communication and self-expression can reach all the ranks of our employees.

Labour Problems

This brings me to the outlook for the Company in the current year. In line with the rising levels of production during the past year, and the previous years, we have set for ourselves higher targets for 1964-65. Unfortunately, the progress of the first quarter in the current year was marred by labour trouble which culminated in a strike paralysing operations in one department for over a month and in the entire works for ten days. Reference has already been made in the Directors' report to the strike, which was pending at the time the report was signed. The strike was precipitated by the management's charge-sheet against one of the workers for misbehaviour. I am glad to report that the strike has now been called off, and the dispute has been referred to an Industrial Court through the good offices of the conciliation machinery of the State Government. Now that the matter has been amicably settled with the workers and the union, I do not wish to prolong the controversy.

However, I cannot help making here some general observations concerning the present labour situation in the country. While times are undoubtedly difficult owing to, what may be called the growing pains of development, as indicated by rising prices, there is no need for acts of indiscipline, acts of intimidation and sometimes even violence and sabotage as part of the methods employed to redress real or imaginary grievances. These activities may, in course of time, not only retard our economic growth but also pose a challenge to our national stability and integrity. There may be legitimate differences between labour and management, and there may even be room for strikes. But every thinking section of the community must unequivocally condemn some of the methods which have been recently adopted in an increasing measure by a section of the workers in various institutions both in the public and the private sector.

Lack of Funds

Before I conclude, I should like to turn to the other serious problem faced by industry at present, in general, and by your Company, in particular. This is the problem of finding adequate funds for further development. As you no doubt are aware, your Company has been well established for the manufacture of engineering goods. It has gained considerable management and engineering experience and built up a corps of trained personnel, which is capable of handling much further development of your industry. It has resources in land, power and water supply which are also capable of further development. As a proof of the growing potential of your Company, we are receiving almost every month proposals for collaboration for entry into further lines of manufacture, and your Company has turned down several proposals owing to lack of funds.

Apathy Among Investors

This brings me to the problem of the complete apathy of the capital market towards new issues and stagnation, if I may use the term, in the stock market. In spite of some concessions made in the last Budget by the Finance Minister, the investment and taxation climate of the country is such that it is almost impossible to attract funds for new ventures. It is desirable that there is considerable rethinking on the taxation front by the Government of India. It is not merely doling out of one concession or the other to the corporate sector, but the creation of a climate favourable to generation and accumulation of savings in the community, which is most important. With heavy Governmental expenditure, on the one hand, and rising prices, on the other, the individual who has ultimately to bear the brunt of taxation is not able to find the wherewithal for investment in new industry. I realise that the Finance Minister has an extremely difficult role to play between the needs and the clamours of realising social objectives and the basic discipline required for economic growth. It is, however, possible to carry social objectives to a point which will defeat the main objective and spread poverty instead of prosperity, if economic growth is not achieved, if agricultural and industrial production is not increased, and if there is a general climate of stagnation and frustration. I do trust that the authorities will before long undertake measures to restore the climate of confidence, so that it may be worthwhile on the part of the individual to save and invest.

I am sure you would like to join me in thanking our Managing Director, staff and workers who have worked loyally and diligently for the satisfactory working of the Company during the year.

I have now pleasure in moving the adoption of the audited statements of accounts and Directors' report for the year ended 31st March 1964.

Note: *This does not purport to be a report of the proceedings of the Annual General Meeting.*

BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LTD.

ACUTE SHORTAGE OF RAW MATERIALS

CHAIRMAN, DR. B. N. GHOSE, URGES REVISION OF FISCAL POLICY

ADDRESSING the Sixty-fourth Annual General Meeting of the Bengal Chemical and Pharmaceutical Works Limited, held at Calcutta on the 14th August 1964, Dr. B. N. Ghose, the Chairman of the Company, said that, though the performance of the Company was encouraging during the year under review, it was below expectations because of an acute shortage of industrial alcohol as well as rectified and special denatured spirit. Dr. Ghose refuted the allegation that the pharmaceutical industry was making excessive profits. The critics, he said, forgot to take into consideration the factors determining the selling costs, namely, overheads, labour charges, distribution costs, sales promotion, quality control and research expenses. He deplored the enforcement of the Price Control Order when the authorities had no check on the prices of raw materials and other essential commodities and urged the Government to revise its fiscal policy and to withdraw levies like excise duties, sales tax and octroi. Alluding to the expansion programmes of the Company, he referred to the suspension of import entitlements against exports of surgical cotton wool, and stated that if the entitlements were granted, the Company could import essential oils, aromatic chemicals etc. and thus cover the shortfalls of raw materials.

The following is the full text of Dr. Ghose's speech:

GENTLEMEN:

It is a great pleasure for me to extend to you all, on behalf of the Board of Directors as well as on my own, a hearty welcome to this 64th annual general meeting of your Company.

Gentlemen, we are meeting here today under the shadow of a national gloom. The sudden death of our first Prime Minister, Pandit Jawaharlal Nehru, has created a void in the national and political life of India, which it will be very difficult to fill. A towering personality and a champion of world peace, Pandit Nehru was one of the greatest sons of the soil. So, before I take up the business on the agenda today, may I request you all to rise in reverence to the memory of our late beloved Prime Minister and stand in silence for two minutes to pay our respectful homage to the departed soul.

Gentlemen, the annual report and accounts for the year ended 31st March 1964, have been in your hands for sometime past, and with your permission I take them as read.

Encouraging Performance

The performances of your Company, despite various difficulties it had to encounter during the year under review, are encouraging although the net operating results are below our expectations. But for the acute shortage of industrial alcohol, rectified spirit and special denatured spirit during the latter half of 1963, which are essential raw materials in pharmaceutical industries, we could report better turnover this year with a corresponding increase in profits. To ensure smooth and uninterrupted working in the pharmaceutical industries, it is considered a matter of paramount importance to see that effective steps are taken by the authorities concerned to maintain adequate supplies of alcohol so vital for such industries. We must admit here that the excise authorities of West Bengal helped the industries of the State substantially by exercise of their good offices and eased up the acute situation by their sincere efforts in the right direction.

The trading results of your Company for the year ended 31st March 1964 are on the whole satisfactory, notwithstanding the fact that we continued to be confronted with troubles relating to procurement of raw materials, problems of transport, interrupted supplies of power and rising costs in a number of directions. I am sure, you will agree with me that, with the reduction of all these factors, as far as possible, which have direct impact on the trading activities of any industrial and manufacturing concern, your Directors will be in a position to report more satisfactory results in years to come.

Your directors recommend maintenance of the same dividend, that is, 10 per cent on all classes of ordinary shares as in the last year, and propose to carry forward a sum of Rs. 1,00,000 to general reserve No. II after providing for all prior charges. I would like to add here, that the completion of the various expansion schemes of the Company this year will necessitate the transfer of a substantial amount to development rebate reserve next year, which will have its reflection on the profits of the Company.

The overall business in the field of heavy chemicals in your Company shows a sign of steady progress, the sales during the year under review having increased substantially over the last year's figure. I am glad to report that the new alum plant is almost completed and it is now under trial run. We do hope the new alum plant will go into production very soon. You will be glad to learn that the Government of India have granted your Company industrial licence to carry on business for the manufacture of sodium aluminate, stannate, naphthenates, etc. The export potentialities of some of the products of the heavy chemicals section of your Company are now being studied and negotiations to export a large quantity of alumino ferric are going on.

The installation of an additional 50-ton/day sulphuric acid plant at Panihati is steadily progressing and we hope this plant will start production by the end of this financial year.

Regarding your Company's business in road tar, it may be recalled that I struck a note of pessimism in my review last year. The difficulties in procuring crude coal tar continued during the year as before. This setback in the tar distillation industry has substantially affected our business in the by-products of coal tar. Nevertheless efforts are being made for alternative arrangements to meet the situation.

Wrong View

Gentlemen, there is a sweeping allegation gaining currency that pharmaceutical industries are making excessive profits. I may be allowed to say that anyone with adequate knowledge of the cost economies of the manufacture of pharmaceuticals and drugs would hardly subscribe to this wrong view. In my humble opinion, the cost factors which are taken into consideration in determining the selling prices of drugs, namely, overhead, labour charges, distribution costs, sales promotion including advertisement, research expenses, quality control and other business costs which should be added to the cost of raw materials in arriving at a correct pricing policy, are presumably ignored completely when such reckless allegations are levelled against pharmaceutical industries.

Drug price control was introduced under the Defence of India Rules from November 1963 and its enforcement with retrospective effect from April 1963 has landed the pharmaceutical industries in practical difficulties in fixing the prices of drugs manufactured by them commensurate with the prevailing costs. It is pitifully interesting to note in this connection that while there is no check in prices of raw materials and other essential commodities the Price Control Order of drugs is being enforced. It has, of late, been a problem to us to adjust prices of our finished medicines on the basis of the costs of raw materials which are daily mounting by leaps and bounds. The pharmaceutical industries will be grateful if the Government revise their fiscal policy and withdraw various levies by way of excise duties, sales tax, octrois etc. on drugs, pharmaceutical and medicinal preparations. You will be surprised to note that Government undertakings also have enhanced the prices of raw materials which are essential components of our manufactured products. This upward trend in prices has resulted in the poor profitability in respect of certain items.

I reported to you last year that we have taken up in hand certain development programmes. Your Company is one of the pioneers in India in the field of manufacture of caffeine. I am glad to report that industrial licence for manufacture of 16 tonnes of caffeine annually has been obtained from the Central Government and our plants have been expanded accordingly to reach the production target. But unfortunately, the supply of tea waste, the principal raw material for manufacture of caffeine, is too inadequate to meet the increased demand.

You will be glad to note that the services of a well-known bacteriologist and immunologist are being utilised by the Company in its biology department for researches in various directions. As a step towards our declared policy of expansion the Company will soon market anti-snake-bite serum and tetanus toxoid. The utilities and the market potentialities of these two products are too obvious to need any emphasis. Your Company is also under negotiation with some foreign firms for introduction of new items.

We are trying to explore various markets in South-East Asia and Middle East and African countries. Our exports of surgical cotton wool have suffered a setback due to severe competition from other countries. We had previously been able to meet this competition to some extent from the import entitlements obtained under the special export promotion scheme against our exports of the item.

Import Entitlements

Unfortunately the import entitlements have been suspended by Government presumably because no imported materials are required for manufacture of the products. We are unable to accept this contention as substantial entitlements have been granted under the special export promotion scheme on exports of many other items which require no imported materials for production. For example, import licences are granted against exports of drugs and pharmaceuticals, irrespective of the contents of the products being imported or not. Our numerous representations that surgical cotton wool falls under this category have not met with any satisfactory response though considerable time has elapsed. We also feel that Government should recognise that the gain to the country is greater when wholly indigenous products are exported and exports of this category should be encouraged by extending full benefits under the scheme. The Government of India have not yet decided to include this export in the granting of import licences under the export promotion scheme. If the entitlement is granted against this export, we can import essential oils, aromatic chemicals, etc. to cover our shortfalls for such raw materials due to drastic cut in our usual import licences.

In an attempt to further promote its sales in Delhi and adjacent areas your Company cancelled its previous arrangements with the distributors and opened on 1st April last a depot of its own at Delhi for distribution of its products. Of course, this is an experimental measure in this direction and if it proves economical, we have in our mind to have similar measures in other parts of India as well.

The Company's business at its branch factories at Bombay and Kanpur is progressing satisfactorily. In this connection I may inform you that a strip of land of our Bombay factory has been acquired by Greater Bombay Municipal Corporation under Town Planning Scheme. Besides, loss of land the Company has to pay an additional amount of Rs. 4,000 and odd, by way of betterment fee, to the Bombay Municipal Corporation. Further, this acquisition of land has also necessitated partial re-planning of the said factory and reconstruction of its compound wall and passage-ways resulting in substantial amount of capital expenditure.

Working Results

I will now turn to analyse more salient points in the profit and loss account for the year under review. You must have noticed in the accounts forwarded to you that there has been a decrease by more than Rs. 4.5 lakhs under the head "consumption of raw materials." The increase in profit has been effected by revision of the terms to our customers resulting in savings to the Company and strict control of purchase. You will also notice that development rebate reserve which has been charged to profit and loss account has been much less this year. These are amongst others, the contributory factors [illegible]

INDIAN INSURANCE COMPANIES' ASSOCIATION

MR. P. A. ADVANI SURVEYS CURRENT PROBLEMS

AN appeal to the Government to revise the statutory limits on the general insurers' expenses of management, in the light of the increases in their cost of operation since 1950, when the limits were originally fixed, was made by the Chairman of the Indian Insurance Companies' Association, Mr. P. A. Advani, in the course of his speech at the Thirty-sixth Annual General Meeting of the Association held in Bombay on Tuesday, 25th August 1964.

Prefacing his address with a brief review of the Indian economic situation, Mr. Advani pointed out how there had been a steep rise in prices and living costs, superimposed on a built-in inflationary bias of forced development, excessive money supply and growth of population. He urged Government to trim the doctrinaire overtones of its economic policies and create a climate conducive to the growth of both the public and private sectors. "If either sector falters or lags behind, the economy will suffer," he averred.

"The most significant development for general insurers during the year was the Life Insurance Corporation's entry into the field of general insurance," Mr. Advani said. He recalled how the Association had told the Government that, if the decision was irrevocable, it was essential in the larger interests of the industry that the Corporation should conform to the discipline and regulations required of other insurers. He regretted that Government had refused this justifiable request and had allowed the Corporation to operate on a non-tariff basis. "Time alone will prove the effect of the Government's decision on the private sector," he said.

However, Mr. Advani felt gratified that the Corporation had commenced its general insurance business on a tariff basis and had also appreciated the need for harmony and goodwill in the industry. He added: "An immense insurance potential exists in this country and it is only through the collective efforts of both the sectors that such a task could be achieved successfully." At the same time, Mr. Advani reiterated his earlier appeal to the Government and the Corporation to accept the tariff rates which, he said, provided a reasonable margin of profit to any well-managed medium-sized insurer.

Mr. Advani felt that there was a marked willingness on the part of the insurers to comply with the Code of Conduct and to co-operate with the administrative machinery. He paid a tribute to the Executive Committee of the General Insurance Council which, he observed, had been doing very useful work. He added: "It will be realised that, in the final analysis, the success of the Executive Committee to place general insurance in India on a healthier and sounder footing is vitally dependent upon the support which the insurers extend to the various measures designed by it." He, therefore, appealed to the industry to give the Committee its unstinted support.

The Chairman deplored that the authorities had increasingly tended to divert general insurance business, however, remotely controlled by Government or semi-Government bodies, to the Indian Insurance Companies' Association Pool. He felt that this policy of creating a monopoly of such business militated against the very spirit of the concept of mixed economy accepted by the Government. He hoped that the authorities would soon review the position and enable insurers to provide covers to their constituents free from the fear of non-acceptance of their policies by any organisation purporting to act under official instructions.

Continuing, Mr. Advani referred to the unjustifiable stand by the income-tax authorities in disallowing expenditure in excess of the limits prescribed under the Insurance Act even when it was incurred for normal business purposes. He hoped that the authorities would set the position right. Another cause for concern was that, unlike other companies including banks, insurers were not allowed rebate of super-tax on inter-corporate dividends. He hoped that a just solution to this problem, too, would be found.

In conclusion, Mr. Advani deplored that water at adequate pressure was not available from the municipal mains and this was causing much concern to insurers, because it hampered fire-fighting operations. He renewed the Association's request to the municipal authorities to improve the water-supply position because the success of fire-fighting in Bombay, the chief centre of commerce and industry in the country, depended on prompt availability of water at sufficient pressure.

BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LTD.

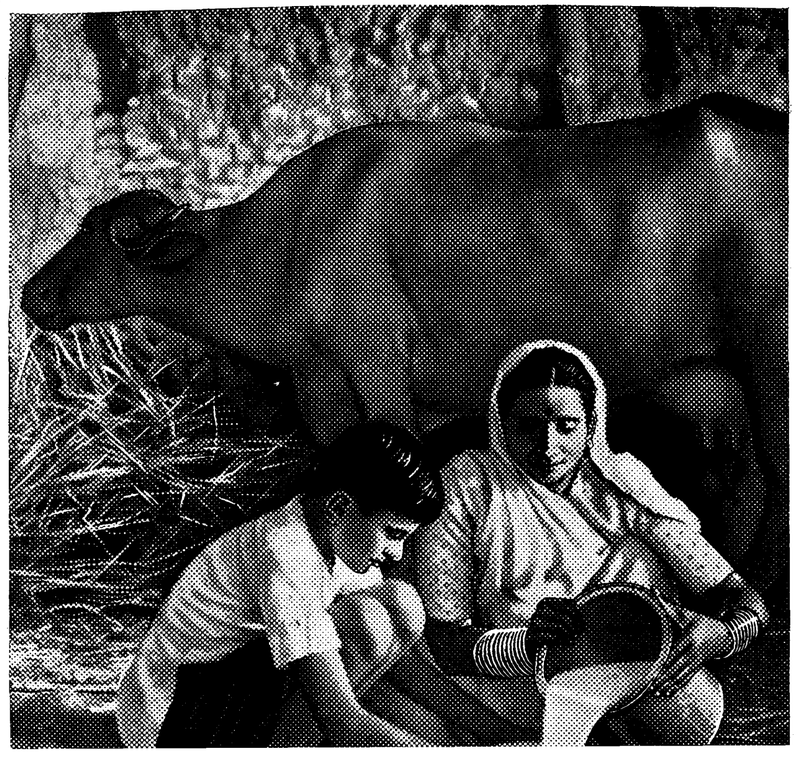
(*Concluded from previous page*)

in profits by over Rs. 5 lakhs against an increase in sales by about Rs. 7 lakhs.

Gentlemen, I am thankful to you for giving me a patient hearing. The progress that your Company has made in its trading activities during the year 1963-64 despite multifarious difficulties should not give all concerned a feeling of complacency. In these days of economic struggles and keen competition, the rule of "survival of the fittest" should always be borne in mind. The management of your Company has accordingly been wedded to such policies as would, in all probability, lead the Company to greater prosperity in the usual course of its business in future.

Finally, I conclude with an expression of gratitude to my colleagues for their co-operation, advice and mature guidance. My thanks are also due to the members of the staff at all levels without whose sincere efforts the satisfactory results would not have been possible. I also acknowledge with thanks the patronage of the members of the medical profession, our customers, stockists and distributors.

Note: *This does not purport to be a record of the proceedings of the Annual General Meeting.*



More for everybody

In thousands of villages today, Co-operatives are doing what no individual could do before. Behind them; a pillar of strength, the State Bank of India.

Every year, through over 1600 branches, the State Bank of India and its subsidiaries extend financial and other assistance not only to the co-operative banks but also directly to the co-operatives themselves, such as marketing and processing societies, sugar factories, industrial co-operatives, consumer wholesale stores, etc. It is a happy circle. We help them. They help the nation. That helps us. There is consequently more for everybody.

STATE BANK OF INDIA

The biggest bank serves the smallest man

I.M.F. ON WORLD ECONOMIC SITUATION

HIGHER RATE OF GROWTH—RISE IN EXPORT EARNINGS MORE WIDESPREAD

THE forthcoming annual meetings of the International Monetary Fund and the World Bank, scheduled to be held at Tokyo from the 7th to 11th of next month, need not devote much time to a detailed review of recent world economic developments. For such a review is already there. The voluminous documents presented at the Geneva United Nations Trade and Development Conference, as well as the vast quantity of literature on the deliberations of the Conference and the decisions taken thereat distributed by the Secretariat of the Conference, give a vivid picture of how the world economy has been moving lately and will move in future. The 1964 Annual Report of the I.M.F. itself provides quite a comprehensive account of the world economic developments, though the analysis does not cover the communist countries.

The I.M.F. Annual Report says that the period commencing from the beginning of 1962 has been marked by economic progress shared *more evenly than for a long time* (italics ours) among the different parts of the free world. The Report divides the free world broadly into two groups—one representing industrial countries and the other primary producing countries, rather the developing countries as they are commonly described. Output in the former group of countries has risen in the past one year more rapidly than in 1962. The continued prosperity in all these countries is a matter for satisfaction to the developing countries, for such prosperity has eased the balance of payments position of the latter countries to a great extent not only by means of larger economic aid but through better export earnings. The primary producing countries have benefited partly from the increase in the volume of imports into the industrial countries and partly from the general rise in the prices of primary products that occurred during 1963 and continued early this year.

Rapid Rise

Industrial production, according to the Report, expanded at a satisfactory rate in all the industrial countries during the year 1963. In North America, the economic upswing, that began more than three years ago, continued throughout 1963 and appeared to be accelerating early in 1964. In the U.K., recovery early in 1963, following several years of limited growth, was stimulated by expansionary policies, and the recovery gained momentum in the course of the year. In Continental Europe, industrial production rose more rapidly in 1963 than during the two preceding years, despite scarcity of labour. Japan reported a vigorous upswing, in contrast to the slowdown that had arisen in 1962 from the official measures to deal with the 1961 balance of payments crisis. Explaining the factors that induced a comparatively more rapid rate of rise in industrial output, the Report observes:

"In most countries, the main impetus to the expansion originated in the countries themselves. It came, in particular from the lift to consumption provided by wage increases and the stimulus to private investment resulting from continued expansion and favourable prospects for further growth; in some countries, budget deficits and other fiscal measures were also important. These influences were generally much more powerful in raising demand than was the impact of foreign transactions. However, the high degree of freedom for international payments that prevails in the industrial countries results in economic impulses being easily transmitted from country to country, and this undoubtedly helped to make the expansion of output general and to even out rates of progress. A rapid rise in imports in those countries which were less successful than others in controlling pressures on prices and wages served both to transmit excess demand to other countries and to bring about major changes in the payments positions of individual countries. In addition, short-term and long-term capital outflows from the United States, including the continuing U.S. direct investment in the other industrial countries, served to reinforce the domestic forces pushing for expansion in the recipient countries."

Notwithstanding the marked rise in domestic prices and wage costs in most countries, export prices remained remarkably stable in the industrial countries. Only in France, Japan and the U.K. did the overall index of export prices rise by as much as 3 per cent or more. The fall in export prices particularly in West Germany and the U.S., according to the Report, may imply involuntary cuts in profits to maintain or expand sales in foreign markets, especially in the countries where inflationary pressures have been strong. In any event, the countries in question may have good reason to be concerned about their export capabilities in the future in the face of rising wage and other costs, and also about maintaining investment in their export industries at adequate levels despite the diminishing possibilities of self-financing. In particular, costs are rising in some of the countries experiencing inflation, while they tend to remain constant or to decline in some of the important countries (notably the U.S. and the U.K.) which have had persistent balance of payments problems. This disparity, says the Fund's Annual Report, may lead to marked changes in the relative competitive positions of individual countries and in the structure of international trade.

For the primary producing countries, the most striking feature of development during the eighteen months ended June 1964 was the marked upturn in the prices of primary products. The average rise in prices (excluding petroleum) during 1963 was about 10 per cent, half of the rise being accounted for by sugar alone. As prices tended to turn upward during the year, particularly in the last quarter, the general level of primary product prices at the end of 1963 exceeded that a year before by nearly 15 per cent. The upward trend continued into 1964 and, early in the year, the overall price level had reached that prevailing in 1957, that is, prior to the most recent general downturn of primary product prices. The increase in export prices, accompanied by very little change in import prices, resulted in an improvement of approximately 3 per cent in the terms of trade of primary producing countries in 1963. This, incidentally, was the first gain since 1954. Consequently, the "importing power" of their exports, which for many years had tended to rise less than the export volume, advanced by about 8 per cent, as against a volume increase of roughly 5 per cent.

What of 1964?

Judging on the basis of developments during 1963 and early in 1964, the I.M.F. Report has made a tentative appraisal of the position in so far as the whole of 1964 is concerned. It is said that the prices received and earnings from exports of sugar, cocoa, and coffee will be in excess of their 1963 levels. As for raw materials, the Report says that much will depend on the development of business activity in industrial countries. There is no reason to believe, however, that further expansion will lead to sharp price increases, since output of most materials could be raised to meet demand, from capacity either already in existence or in the course of being set up. In any case, it is felt, the price increases that occurred during 1963 and early in 1964 should help to raise the 1964 export earnings of most primary producing countries above 1963.

The I.M.F. Report does admit that buoyant foreign receipts should provide a desired stimulus to demand and output. But it strikes a note of caution and urges that monetary expansion must be kept within sustainable limits. To quote the Report:

"If demand continues to expand after export receipts have ceased to rise, the maintenance of monetary and exchange stability may sooner or later make it necessary to contract credit or to reduce the rate of credit expansion markedly. If there is a subsequent decline in export receipts, the need for restraining action will be even greater. The volatility of export receipts contributes to the difficulties of monetary management in the less developed countries."

Largely as a result of rise in export earnings, together with some increase in foreign aid, the balance of payments position of the less industrialised primary producing countries as a group improved by $1,500 million, changing the deficit into a surplus. The I.M.F. Report describes this improvement as "the most helpful development in international transactions" during 1963. There was also some evidence of a tendency towards a reduction in imbalances among the industrial countries, even though new situations of external disequilibrium arose in the course of the year.

In the considered opinion of the I.M.F., the recent sharp increases in costs and prices in the present or former surplus countries in the developed world are not merely the effect of "imported inflation", that is, an automatic or deliberate response to the balance of payments situation; other factors have also been at work. Mention, for instance, is made of the rise in wages lagging behind that in productivity in some countries, a situation that has built up pressure towards a redistribution of income shares between wage earners and entrepreneurs. Mention is also made of the pressures on wages and prices created by the success of the Continental European industrial countries and Japan in reaching their goals of full employment and a high rate of growth. The I.M.F. Report has made the following interesting observations on incomes policies, role of capital movements and potential role of private capital:

Direction of World Trade

‡ Includes all other primary producing countries.
§ Including Cuba.

"Incomes policies have been given growing consideration as a possible means of mitigating tendencies toward cost inflation under full employment. Such policies seem likely to be used increasingly to supplement other instruments, although, even if they are generally adopted, there is no guarantee that they will be most effective in the countries chiefly prone to cost pressures. Nevertheless, an incomes policy can contribute to the adjustment process. In a deficit country, it can help to overcome a relatively unfavourable trend of costs and prices. A surplus country, confident in the effectiveness of its incomes policy in holding wage and price movements within appropriate limits, may be more willing to allow the expansionary tendencies of the surplus to have an impact on the economy.

"The role of capital movements in facilitating balance of payments adjustment has also attracted increasing attention, focussed on possibilities for improving the structure of capital markets in Europe. One point of emphasis has been a desire to correct the existing payments disequilibrium by limiting the outflow of capital from the United States and stimulating a net outflow of capital from Continental Europe. . . . It has to be borne in mind, however, that the flow of international capital is not always influenced by considerations of balance of payments equilibrium, which will vary over time and that the removal of imperfections in the mechanism of capital markets cannot be counted upon at all times to ease international payments problems.

"The potential role of private capital in assisting more effectively in the process of economic development also needs attention. The flow of

I.I.S.CO.'S STEADY MARCH FORWARD

SECOND PHASE OF EXPANSION UNDER WAY

BY scoring a pretty handsome gain of Rs. 2.50 to Rs. 28.05 during the last settlement on the Bombay Stock Exchange, the 10-rupee ordinary shares of the Indian Iron and Steel Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) have emerged as one among the very few shares coming close to their pre-Chinese aggression bull phase top levels which in their case is Rs. 28.70. This strident rise in 21 days of the settlement has no doubt been brought about by the fast accumulation of long positions (in the Calcutta market alone these are believed to total several lakhs of shares) on top of a heavy short position that had existed before. But what has caused this sudden burst of bullish activity is the realisation from the publication of the Company's impressive results for 1963-64, marked by an increase in the ordinary dividend from 16 per cent to 17 per cent after years of waiting, and the Chairman Mr. Biren Mookerjee's annual statement that the Company is slowly but steadily marching forward. What has impressed marketmen most is that this march has been deliberately gradual, with each stage of expansion, as the Chairman states, being followed by a period of consolidation before the undertaking of the next in order to avoid imposing too great an immediate financial burden on the Company or impairing the dividend position to the detriment of the shareholders' interests. With this progress, the book value of equity shares has gone up to Rs. 41.30 from Rs. 28.34 in 1961. If the 1961 top level of Rs. 28.70 was in anticipation of this increase in book value, the current high rate of Rs. 28.05 marks its consolidation and what is more still leaves the shares well below their intrinsic worth. No wonder Indian Iron have been in the limelight.

The following table shows at a glance the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sales and self consumption, less excise, surcharges and rebates ...	71,56.83	68,46.21	60,41.08	57,95.38

High ...	28.05	25.55	27.35	28.70	26.55
Low ...	23.60	19.20	22.80	23.00	21.84

Production of ingot steel during the year under review has again approximated to the rated capacity of the Plant, the actual figure increasing by 24,747 tonnes to 1,026,786 tonnes which is a fresh record for the Burnpur works. Because of various difficulties the output of pig iron was a little lower at 1,238,442 tonnes. Production of saleable steel, however, was higher by 14,684 tonnes at 809,804 tonnes. Despatches of saleable steel also improved from 797,960 tonnes to 808,393 tonnes and, with an increased average sales realisation, the gross profit, which had been sticky around Rs. 12.84 crores in the previous year, has increased considerably to Rs. 16.24 crores during the year under review. Incidentally, the average increase in the case of the Company on the decontrolled categories of steel which form nearly 60 per cent of the total output is of the order of Rs. 30 per tonne on the basis of the product mix and the proportion of "tested" to "untested" steel achieved during the year under review. In the case of the controlled categories, the effective increase has been Rs. 4 per tonne only because of a reduction in the net price of billets and the assumption by the Government of an incorrectly high percentage of "tested" galvanised sheets in working out the prices, despite the fact that on protest the price of "untested" billets was revised upward by Rs. 15 per tonne from 30th May 1964. The overall average increase in the price realised by the Company on its total sales of steel is placed at Rs. 20 per tonne.

The depreciation provision has been raised substantially from Rs. 340.18 lakhs to Rs. 440.25 lakhs primarily due to the fact that the "specified period," stipulated in Section 205(2)(b) of the Companies Act, 1956 as the divisor of 95 per cent of the original cost of each asset for computing the amount of depreciation, has been reduced consequent upon the announcement by the Finance Minister of the reintroduction of triple-shift depreciation allowance for income-tax purposes. Thanks to tax rebate to certain industries, including the iron and steel industry, and the substitution of S.P.T. by surtax under which no liability is expected to arise, the tax provision has increased by only Rs. 31 lakhs to Rs. 387 lakhs, although gross profit has gone up by nearly Rs. 3.50 crores.

In view of the necessity for conserving resources for repayment of the heavy indebtedness on loan account amounting to Rs. 17.10 crores and also for the very large expenditure of Rs. 23.19 crores to be incurred on the collieries development project and of Rs. 16.21 crores on the balancing of plant project, popularly known as "the Phase I Further Steel Expansion Scheme," a larger sum of Rs. 543.06 lakhs out of the year's profit has been set aside to general reserve, as against Rs. 364.25 lakhs in the previous year. On the other hand, the amount required to pay the ordinary dividend has increased only modestly from Rs. 199.05 lakhs to Rs. 211.50 lakhs.

When the project for balancing the plant is implemented, the steel-making capacity of the Burnpur works will improve by some 300,000 tonnes (of ingot) per annum. Preliminary steps for implementing the second phase envisaging an additional 700,000 tonne capacity of ingot steel per annum have already been taken up with the Government and the World Bank. This one-million-tonne (ingot) expansion programme has been phased into two parts for reasons stated before. The Chairman says that no firm estimate of the cost of the second phase can be made until a decision is taken as to what form the end-products will take, this being dependent upon the future requirement of the country. But, he adds, the cost will naturally be of very great magnitude. He has, therefore, emphasised the necessity for ploughing back profits not only for the year under review but also for the future. He has ruled out the possibility of issuing bonus shares to compensate the shareholders, because, under the current policy of the Government, only bonus issues solely out of any share premium account would be worthwhile. In order to assist shareholders to some extent, he proposes, however, recommending to the Board that for the current and future years an on-account distribution of profits should be made by way of declaration of an interim dividend during the course of the year, the balance of dividend only then being left for declaration in the normal course at the annual general meeting.

The Company's paid-up capital, unchanged at Rs. 15.14 crores including Rs. 2.70 crores in preference shares, is backed by reserves and surplus amounting to Rs. 41.05 crores. Barring the Government's special advance of Rs. 10.18 crores, the loan liability is shown at Rs. 17.73 crores, as against Rs. 21.11 crores a year before, all of which, as against Rs. 11.97 crores, is of long-term nature. Current liabilities and provisions total Rs. 19.25 crores and are adequately covered by current assets, book debts and investments aggregating Rs. 42.02 crores. The gross block is shown in the books at Rs. 86.12 crores (Rs. 90.74 crores a year before) and is written down to a net value of Rs. 57.81 crores, excluding livestock and vehicles shown separately at Rs. 26.28 lakhs and capital work-in-progress valued at Rs. 187.05 lakhs.

The net yield on the Rs. 10 fully paid ordinary shares of the Company at their current market value of Rs. 28.00 *cum-div.* works out to a little less than 5 per cent per annum.

W.I. PLYWOOD MAKES STEADY PROGRESS

PAYS MORE ONCE AGAIN

THE results of the Western India Plywoods Ltd. (Managing Director: Mr. A. K. Kaderkutty, Baliapatam, Kerala) for the year ended 31st March 1964 show steady progress. Sale proceeds of finished goods, which had improved by more than Rs. 30 lakhs in the previous year, have gone up by nearly Rs. 22 lakhs from Rs. 101.68 lakhs to Rs. 123.64 lakhs during the year under review. Gross profit at Rs. 35.50 lakhs is higher by Rs. 5.14 lakhs, thus maintaining the increase of Rs. 5-6 lakhs seen in the past few years. As a natural consequence of better working, the dividend on the 100-rupee ordinary shares has been raised once again by one point to 16 per cent per annum. This increase is the fourth in a row since the dividend became taxable in the year 1959-60 when it was left unchanged at 10 per cent.

Actually, the higher dividend has become possible because net profit at Rs. 12.21 lakhs is higher by as much as Rs. 3.08 lakhs, as against by barely Rs. 15,000 a year before. In the previous year, the net profit did not show much improvement due mainly to the marked rise in the tax provision from Rs. 6 lakhs to Rs. 12.52 lakhs, a part of it being on account of S.P.T. and also the inclusion of Rs. 1.60 lakh being the tax on such part of the profit of the hardboard unit as was expected to be exempted from tax under Section 84 of the Income-tax Act. The claim for such tax exemption has since been conceded by the Central Board of Revenue and the amount of Rs. 1.60 lakh, which has become excess, has gone to strengthen reserves and provisions. Because of the higher net profit again, the Directors, while recommending a further increase in the dividend, have been able to carry to reserves a higher amount of Rs. 6.64 lakhs which is over 50 per cent of the distributable surplus, as against Rs. 3.94 lakhs, or roughly 40 per cent, a year before.

The progress made by the Company in the past four years is tabulated below:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sale proceeds of finished goods ..	123.64	101.68	70.03	63.19
Closing stocks	15.79	15.83	17.67	12.75
Other income	0.26	0.13	0.22	0.06
Materials consumed	81.74	25.51	21.15	24.22
Salaries, wages and bonus ..	11.43	9.36	8.74	8.86
Other expenses	45.19	34.74	21.21	20.09
Gross profit	35.50	30.36	24.08	19.91
Provision for—				
Depreciation	11.29	8.71	9.10	10.05
Taxation	12.00	12.52	6.00	3.75
Net profit	12.21	9.13	8.98	6.11
Transfer to reserves	6.64	3.94	4.06	1.85
Dividends—				
Preference	0.48	0.48	0.48	0.40
Ordinary	5.03	4.72	4.40	3.77
	(16%)	(15%)	(14%)	(12%)
Carry forward	0.15	0.09	0.10	0.07

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High ..	..217.00	235.00	220.00	255.00	303.00
Low ..	..200.00	185.00	190.50	198.00	223.00

Arrangements in regard to the previous year's proposal of doubling the capacity in the hardboard plant are now nearing completion. Rupee finance for this additional capacity is to be obtained from the Company's existing resources and the necessary foreign exchange is expected to be made available to it shortly. The plywood plant is also being modernised at an approximate cost of Rs. 6 lakhs. The import permit for machinery and equipment is expected to be granted to the Company shortly.

The Company's paid-up capital, including Rs. 6.17 lakhs in 6 per cent tax-free cumulative preference shares of Rs. 100 each, stands unchanged at Rs. 37.64 lakhs and is backed by reserves and surplus amounting to Rs. 43.24 lakhs. Secured loans stand reduced from Rs. 25.13 lakhs to Rs. 20 lakhs, as the previous year's bank overdraft of Rs. 2.63 lakhs has been closed and the I.F.C.I. loan has been brought down from Rs. 22.50 lakhs to Rs. 20 lakhs. Unsecured loans of Rs. 2.81 lakhs, current liabilities of Rs. 13.78 lakhs and provisions of Rs. 30.76 lakhs bring total short-term indebtedness to Rs. 47.35 lakhs, as against which current assets, book debts and investments aggregate Rs. 91.35 lakhs. The gross block which has expanded during the year from Rs. 108.39 lakhs to Rs. 113.05 lakhs has been written down to Rs. 60.18 lakhs.

Currently quoted at Rs. 217.00 *cum-div.*, the Rs. 100 fully paid ordinary shares of the Company offer a net yield of 6.2 per cent per annum.

INDIA PAPER PULP SATISFIES

DIVIDEND SAME, BUT BONUS SHARES TO BE ISSUED

FOR some time now, the paper industry has been suffering from quite a few real grievances well enough aired. So the further, though modest, improvement in production, sales and profits reported by the India Paper Pulp Company Ltd. (Managing Agents: Messrs. Andrew Yule and Company Ltd., Calcutta) for the year ended 31st March 1964 comes as something of a very pleasant surprise. The gross realisation from sale of paper has advanced by 7.5 per cent from Rs. 283.14 lakhs to Rs. 304.32 lakhs. The gross profit has risen from Rs. 57.99 lakhs to Rs. 59.59 lakhs. Unfortunately, the ratio of gross profit to gross sale, that is, the profit-margin, has decreased by about a point to 19.6 per cent. This has of course been due to the fact that the reduction in indirect costs consequent upon increased production has been more than offset by increases in raw materials prices and wages with no compensating rise in the selling prices of paper. In fact, as the Directors observe, the small increase in gross profit has been due entirely to higher sales of the Company's by-product, Calex.

The improvement in gross profit has naturally resulted in higher provisions for the Managing Agents' commission and taxation, the former having gone up from Rs. 3.47 lakhs to Rs. 3.58 lakhs and the latter from Rs. 22.00 lakhs to Rs. 22.40 lakhs. Since the provision for depreciation at Rs. 13.50 lakhs is lower by Rs. 0.38 lakh than that a year ago, the net profit shows a gain of Rs. 1.45 lakh at Rs. 20.11 lakhs. The credit to reserves has been stepped up from Rs. 5.60 lakhs to Rs. 6.73 lakhs and the carry forward is higher at Rs. 43,578 compared with Rs. 28,615 brought in. The dividend remains unchanged at 15 per cent, subject to deduction of tax, claiming Rs. 13.23 lakhs as before, but a bonus issue is also proposed by capitalising Rs. 35.28 lakhs out of the share premium account and issuing 325,800 shares of Rs. 10 each. This means that shareholders will get bonus shares in the proportion of two shares for every five held.

The following comparative table clearly brings out the changes in the fortunes of the Company during the past four years.

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sale proceeds (gross)	304.32	283.14	233.08	229.27
Other income	6.04	4.63	4.27	2.65

	(15%)	(15%)	(12%)	(13%)
Carry forward	0.44	0.29	0.46	0.60
Market price of ordinary shares (in rupees) :	1964	1963	1962	1961
High	22.75	19.81	22.50	22.75
Low	18.25	16.12	16.44	18.69

Paper production increased by 995 tonnes to 16,636 tonnes, and there was a further increase in pulp production. The increase in paper production was due to modifications to the No. 3 paper-making machine which were completed during the year, while the higher pulp production is the result of the installation of the forced circulation plant during the previous year. Although there should be a further slight rise in both paper and pulp production during the current year, there will not be, however, any substantial increase until after the completion of the jute sticks pulp plant, which is scheduled to come into production in April 1965.

After the commissioning of jute sticks pulp plant, the total pulping capacity of the mill will be about 23,000 tonnes a year, and corresponding increases are being made in the paper-making capacity to 19,000 tonnes by speeding up No. 3 paper-making machine. An application has been submitted to the Government for raising the mills' capacity by a further 4,000 tonnes by renovating and modifying the mill's Nos. 1 and 2 paper-making machines. It is expected that the modifications to the Nos. 1 and 2 paper machines will enable the mill to manufacture speciality papers which are at present in short supply. The alterations to No. 3 paper-making machine should be completed by the middle of 1965, but the full benefit of expenditure on the Nos. 1 and 2 paper-making machines is not likely to be received until 1967.

The cost of the foregoing expansion schemes is estimated at Rs. 160 lakhs, about half of which will be met out of the Company's own resources assisted, if necessary, by temporary borrowings, leaving a balance of about Rs. 80 lakhs for which additional finance will be needed. With a view to raising this amount, it has already been decided to float a debenture loan of Rs. 40 lakhs and as for the balance it has been proposed to obtain further credit facilities from the Industrial Credit and Investment Corporation of India to cover the foreign currency which will be required for the purchase of part of the imported plant and machinery.

In spite of the difficulties encountered by it in the past four years, particularly in building up larger reserves, the Company has managed to maintain a very healthy financial position. The share capital, entirely in equity shares of Rs. 10 each, is Rs. 88.20 lakhs and is supported by reserves aggregating Rs. 97.58 lakhs. Borrowings are a meagre Rs. 1.94 lakh and together with current liabilities and provisions totalling Rs. 51.97 lakhs make for an outside interest of Rs. 53.93 lakhs. This is covered more than 2.5 times on the assets sides by the total of current assets, loans and advances and investments which is Rs. 126.51 lakhs. The net block is Rs. 113.19 lakhs including Rs. 3.84 lakhs as cost of capital work-in-progress and has been arrived at by reducing the gross block of Rs. 284.23 lakhs (including capital work-in-progress) by Rs. 171.05 lakhs being the accumulated amount of depreciation. Additions to the block account during the year were Rs. 9.62 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 22.75 *cum*-final div. On an *ex*-final div. price, the net annual return on fresh investment works out to 5.5 per cent.

KERALA SPINNERS LTD.

The Kerala Spinners Ltd. has received the consent of the Controller of Capital Issues for Rs. 40 lakhs of equity shares; the Company is expected to enter the market with its public issue before the end of the year. The Company is setting up a spinning mill with 25,000 spindles. The Kerala Government and the Kerala State Industrial Development Corporation are co-operating and actively participating in the venture. Twenty-five acres of land have been purchased, the plan for building finalised and order for indigenous machinery to the tune of Rs. 23 lakhs already placed with Texmaco. For the import of capital machinery from abroad, negotiations are already under way in Japan and orders will soon be placed.

The Board of Directors of the Company is headed by Mr. Devji Rattansey, Chairman of Union Bank of India Ltd., Bombay. The other Directors are Messrs. D. P. Kejriwal, Nandlal More, Abdul Salam and R. C. Warrior (Managing Director and Development Commissioner, respectively, of the Kerala State Industrial Development Corporation), Bhagawatiprasad Goenka, Nand Kishore Ruia, Hariram Singhal and Colonel B. N. Mehta.

(Concluded from next column)

INDIA CEMENTS EARNS MORE

DIVIDEND, HOWEVER, CUT AGAIN

THANKS primarily to the attainment of full capacity output of 465,166 tonnes of clinker and 494,601 tonnes of cement, India Cements Ltd. (Managing Agents: Essen Private Ltd., Madras) has been able to report highly encouraging results for the year ended 31st March 1964. The realisation from sales of cement has advanced by 17.9 per cent (from Rs. 395.06 lakhs) to Rs. 465.86 lakhs, while the gross profit is higher at Rs. 113.47 lakhs as against Rs. 86.36 lakhs for the year before. The profit-margin (ratio of gross profit to sale) has, therefore, improved by over five points to 26.9 per cent. This is, indeed, a creditable achievement considering the steady increase in the cost of production of cement on account of increase in the prices of coal, freight on movement of all goods and surcharge on electricity duty, all due to reasons beyond the control of the Company and due essentially to Governmental actions. In spite of this smart increase in gross profit, the provision for Managing Agents' remuneration, however, has risen by only Rs. 0.15 lakh to Rs. 4.15 lakhs and this is because the depreciation chargeable for calculation of the Managing Agents' remuneration has increased by more than 50 per cent from Rs. 35.52 lakhs to Rs. 57.24 lakhs. In the published account, on the other hand, the provision for depreciation is made at Rs. 41.14 lakhs only, as against Rs. 37.01 lakhs, so that the profit before taxation shows an increase of Rs. 22.97 lakhs to Rs. 72.33 lakhs.

Unlike in the previous year when a tax provision of Rs. 24 lakhs was made, no provision for taxation has been found necessary this year, in view of the heavy development rebate claimed on the new unit at Sankaridrug which commenced production during the year under report. Consequently, the net profit has more than trebled from Rs. 21.35 lakhs to Rs. 68.18 lakhs. Out of this, no less than Rs. 40.72 lakhs have been credited to the development rebate reserve against a mere Rs. 35,000. In addition, a sum of Rs. one lakh has been transferred to the investment reserve account and Rs. 75,000 to capital reserve. Preference dividend for the year claims a slightly higher amount of Rs. 2.78 lakhs against Rs. 2.88 lakhs. Since the balance available after all this prior appropriations has been insufficient to allow the maintenance of the ordinary dividend at nine per cent paid for 1962-63, the Directors have been obliged to reduce it by three points to six per cent per annum. The proposed dividend is only half of that paid for the years 1960-61 and 1961-62. Thus, for the second year in succession the dividend has been reduced substantially. It is true that the paid-up capital has gone up since 1960-61. Nevertheless, the cut has come as a disappointment to the shareholders.

The following table presents synoptically the working results of the Company for the past four years.

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961

			X.R.	

It will be recalled that, in their previous report, the Directors had informed the shareholders that the new plant at Sankaridrug group was nearing completion and that it was expected to commence production by the end of September 1963. Unfortunately, there was a slight delay in the commencement of production and the kiln was commissioned during the first week of November 1963. The erection of cement mill was completed by January 1964 and

(Continued in previous column)

commercial production of cement started from February this year. Since then, the working of this unit is said to have been satisfactory. Work on the expansion of the Sankari unit has already been taken on hand. Firm orders for plant and machinery have been placed. It is expected that the expanded unit would go into production in the latter half of 1965. When this expansion is completed, the rated capacity of the factories both at Sankarnagar and Sankaridrug would be of the order of nine lakh tonnes of cement per annum.

The balance sheet of the Company as at 31st March 1964 shows that there has been no change during the year under report in its paid-up share capital which continues to stand at Rs. 383.04 lakhs, of which Rs. 33.35 lakhs are in preference shares of Rs. 100 each and the balance in equity shares of Rs. five each. This is supported by reserves aggregating Rs. 102.41 lakhs so that the total of 'own' funds is Rs. 485.45 lakhs. As against these, borrowings themselves total Rs. 415.15 lakhs besides current liabilities and provisions of Rs. 186.78 lakhs giving total outside interest as Rs. 572.23 lakhs. On the assets side, the gross block, including additions during the year of Rs. 433.82 lakhs and unallocated capital expenditure of Rs. 5.57 lakhs is Rs. 949.13 lakhs and has been written down through depreciation to Rs. 697.53 lakhs. Investments are shown at cost at Rs. 15.83 lakhs, while current assets and loans and advances together amount to Rs. 374.02 lakhs.

The Rs. five paid ordinary shares of the Company are currently quoted at Rs. 5.52 *cum-div.* On an *ex-div.* basis, the net yield on fresh investment in this scrip works out to 4.7 per cent per annum.

† Includes provision for super profits tax Rs. 9,30,000.

Extracts from the Directors' report: **Production**:—While efficiencies in the Spinning and Weaving Sections of the Mill were satisfactory, frequent interruptions in power supply prevented optimum production levels being reached

Raw Jute—Purchases throughout the year were made, quantitatively, in accordance with regular quotas issued by the Jute Commissioner. This policy, designed to maintain the minimum price levels set by Government, was in a large measure successful in its objective. It must be stressed, nevertheless, that mandatory purchases of this nature to some extent usurp the function of Management and may well on occasion impair the efficiency with which this important activity of a mill's operations are conducted.

Purchases under the Jute Buffer Stock Association scheme continued and at the end of the jute season were equivalent to five weeks. While acknowledging the soundness of a policy which ensures supplies in times of shortages, it should not be lost sight of that the operation is a costly one, adding aproximately Rs. 2 per maund to the mill's consuming prices of raw matetrial.

Trading.—Trading conditions in all lines of production in which the Company's mill is interested continued to be favourable for most of the year, permitting the earning of reasonable profits. Specific demands for Gourepore products continued to increase.

Wide Looms.—In the Wide Loom Section of Mill there are now 124 looms installed manufacturing wide jute backing for the tufted carpet industry. While America continued to be the main consuming market, further progress has been made in developing shipments to other parts of the world.

Prospects.—It has been apparent for some time that the production of the two major producing countries, India and Pakistan has, temporarily, outstripped demand. The effect has been a general reduction in price levels. At the same time, with the sustained demand for jute to maintain production at existing levels, the prices for the raw fibre have shown a tendency to rise with the result that for the present the ability to earn profits has been very greatly diminished. The prospects for the Company's Mill, therefore, are not so encouraging as they were a year ago.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	74,50,000	Gross block ..	3,55,59,185

Extracts from the Directors' report: During the year under review, as per the Scheme of Compromise or Arrangement as sanctioned by the High Court of Gujarat under Section 391 of the Companies Act, 1956, the Company purchased the block assets of a Textile Mill in Ahmedabad formerly belonging to Messrs. Bharatkhand Textile Manufacturing Co. Ltd., at a price of Rs. 55 lakhs. The stores and stocks of cloth, yarn, cotton, etc. lying in the said mill were also purchased by the Company at an agreed price of Rs. 30,07,669. The possession of the said mill was taken over by the Company on 21st December 1963 and it was re-named as "Manjushri Textiles." This mill which remained closed from 10th April, 1963 has now been re-started and is employing about 3,000 workers. The workers of the said mill have been given continuity of service as per the Scheme of the Compromise or Arrangement. The Company now owns two Textile Mills in Ahmedabad.

Trading Conditions: During the year under review, the demand for cloth remained fairly good. The prices of cloth, however, continued to be under the Voluntary Price Control Scheme introduced by the industry in 1960. The manufacturing cost on the other hand remained at a high level due to rise in the prices of cotton, fuel, electricity, chemicals, dyes and spare parts and the increase in D.A. which was mainly on account of its linking with revised cost of living index. The rate of provident fund contribution was also raised from 6¼ per cent to 8 per cent with effect from 1st December, 1963. Inspite of these factors, the Company has been able to earn a higher profit during the year as compared to that of the previous year, thanks to the improved efficiency and better productivity consequent on the programme of expansion, modernisation and rehabilitation carried out during the last five years.

Additions to Plant and Machinery: In addition to the acquisition of the block assets of one more textile mill as stated above, the Company spent Rs. 11.96 lakhs on renovation and modernisation of its Textile Mill known as "New Swadeshi Mills." The main items of additions are: one Soaper Machine, one Barber Colman Spooler and Warper, one Singeing Machine, one Padding Mangle, one Kier and one Polymeriser.

New Projects: It was reported last year that the Compay's application for necessary import licence for *Cast Iron Spun Pipes Project* was pending with the Central Government. The Government of India have not favourably considered the above application for the issuance of necessary import licence.

As stated in the last report, the Company had received the letter of intent from the Government of India for establishing a Steel Casting Foundry with a capacity of 4,800 tons per annum. As the Government of India desired that a separate company be formed for this project, a new company was registered in Gujarat with the name of "Gujarat Engineering Industries Ltd." on 5th September 1963. The necessary Industrial Licence has also been issued by the Government in the name of this new company. However, the Company has made representation to the Government of India to agree to issue the licence in the name of this Company. If the Government agrees to the representation, it would enable early implementation of the scheme.

The Company's application for the Industrial Licence to set up an export oriented textile mill with 25,000 spindles and 500 looms has been recommended by the Government of Gujarat and is now under the consideration of the Government of India.

Accounts in brief as at 31st March 1964 are as under:—

* On this dividend no income-tax and super-tax will be payable by the shareholders under sections 85 and 110 of the Indian Income-tax Act.
† Upto 20th August 1964.

Extracts from the Directors' report: During the period under review, the sales of Company's products reached a new level of Rs. 1,09,07,645 excluding processing charges which amounted to Rs. 1,41,837. The Company also undertook important Defence orders and was able to achieve a larger production and sales during the last year in spite of the fact that, due to electricity failures and power restrictions in Calcutta, some of the plant and machinery could go into production only in the latter part of the year. In March, 1964, the Company has been sanctioned additional power and with the going into production of some of the plant and machinery received during the last year, the Company has been able to achieve comparatively higher sales during the last four months of the Company's current working and during the latter part of the year, sales are expected to increase further as Company's production of high carbon and other specialised wires would gradually increase during the year.

During the year under review, price of mild steel wire rods, one of the principal raw materials of the Company, was increased with effect from 1st July, 1963, but the increase in price of wires allowed fell short of the corresponding increase in price of raw materials. With effect from 1st March, 1964, distribution and price control has been lifted on wire rods, as well as finished products of the Company and this will enable the Company to have a more reasonable margin on its finished products.

The Company, went into production of high tensile wires for prestressed concrete in the latter part of the year, results of which would be more reflected in the current working.

For additional plant and machinery required, the Company received import licences valued at Rs. 35 lakhs under the 2nd Yen Credit only in February, 1964. Shipments of plant and machinery covered under the 2nd Yen Credit have already started from May, 1964 and it is expected that all the plant and machinery would be received by November/December this year and the expansion programme of the Company including manufacture of *tyre bead wire* would be completed during the current year. On completion of the project, the Company's sales and profitability will increase considerably.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.

High	11.55	13.05
Low	10.19	10.00

* This includes Rs. 45,000 for super profits tax.
† Upto 14th August 1964.

Extracts from the Directors' report: **Trading.**—Although profit margins were somewhat reduced, trading conditions generally remained favourable.

Development.—Orders have been placed covering the installation of 40 wide looms for the production of jute backing for the tufted carpet industry. The first of these looms went into production in the month of July of this year and it is hoped that this unit will make a significant contribution to the profitable working of the Company's mill.

Wage Award and Costs of Production.—The implementation of the Wage Award for the Jute Industry became effective from the 1st July 1963 and significantly increased manufacturing costs. With Dearness Allowance payments to the workers now linked to the Cost of Living Index, further additions to the wage bill are to be expected. At a time when it is imperative that costs are held to the minimum level in view of the competition from the emerging Pakistan industry, it is unfortunate that the cost of power has risen by some 18 per cent in the last year and that the rapid rise in the price of essential stores continues unabated. The Company's competitive position is weakened correspondingly.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	66,79,500	Gross block ..	1,68,98,900

* Paid-up capital consists of 6,67,950

Notices

THE PHOENIX MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-ninth Annual General Meeting of The Phoenix Mills Ltd., will be held on Tuesday the 22nd September, 1964, at 4-30 p.m., at Cama Oriental Institute, 5th floor, Apollo Street, Fort, Bombay 1, to transact the following business:

1. To receive and adopt the Directors' report and the Audited Balance Sheet as at and the audited Profit and Loss Account for the year ended 31st March, 1964.

2. To declare a dividend.

3. To elect a director in place of Mr. Radhakrishna Ramnarain Ruia who retires by rotation and is eligible for re-election, and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which special notice as required by Sections 190 and 261 of the Companies Act, 1956 has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions if any of Companies Act, 1956 Mr. Radhakrishna Ramnarain Ruia who retires by rotation from his office as Director of the Company and who is a director and member of Messrs. Radhakrishna Ramnarain Private Ltd., the Managing Agents of the Company, be and he is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

The reasons which make the above Special Resolution necessary are as under:—

Radhakrishna Ramnarain Pvt. Ltd., the Managing Agents of the Company, are authorised by the Articles of Association of the Company and the Managing Agency Agreement to appoint an ex-officio Director to the Board. As Mr. Radhakrishna Ramnarain Ruia is a Director and member of Radhakrishna Ramnarain Pvt. Ltd., and hence an associate of the Managing Agents, his appointment as a Director of the Company on retirement by rotation can only be made by a Special Resolution of the Company in accordance with the provisions of Section 261 of the Companies Act, 1956.

4. To elect a director in place of Shri Chandrakant M. Khatau who retires by rotation and offers himself for re-election.

5. To appoint Auditors for the current year and to fix their remuneration.

6. To consider and if thought fit, to pass either with or without modifications, the following Resolution as Special Resolution.

"RESOLVED that the contracts entered into between the Company and Messrs. Vinaya Trading Co. Private Ltd., an associate of Radhakrishna Ramnarain Private Ltd., the Managing Agents of the Company during the year 1963-64 pursuant to approval of the Company granted by the Special Resolution passed at the Annual General Meeting of the Company held on 8th October, 1963 and particulars whereof are entered in the Register of Contracts maintained under the provisions of Section 360 of the Companies Act, 1956 be and they are hereby ratified and confirmed."

7. To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:

"RESOLVED that subject to the approval of Central Government under the provisions of the Companies Act, 1956, the Company hereby re-appoints Messrs. Radhakrishna Ramnarain Private Ltd., as Managing Agents of the Company for a further term of 10 years from 15th August 1965 on the remuneration and upon the terms, provisions and conditions set out in the draft agreement (with such modifications if any as may be agreed to at this meeting) proposed to be entered into between the Company of the one part and Radhakrishna Ramnarain Private Ltd. of the other part and which draft Agreement is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof with power to the Directors of the Company, subject to the provisions of the Companies Act, 1956 to vary or alter such of the terms, provisions and conditions of the said draft Agreement before execution as shall not have the effect of increasing the remuneration of the Managing Agents, as may be agreed to between the Central Government and the Directors of the Company acting on its behalf."

To consider and if thought fit, to pass either with or without modifications, the following resolutions as Special Resolutions:

8. "RESOLVED that pursuant to the provisions of Section 360 and other applicable provisions (if any) of the Companies Act, 1956 the Company hereby approves of, confirms and consents with retrospective effect from 1st April, 1963 to the continuation of the arrangement between the Company and Messrs. Ramnarain Sons Private Limited, an associate of Radhakrishna Ramnarain Private Limited, the Managing Agents of the Company, for letting to the Company on monthly tenancy the following premises belonging to Messrs. Ramnarain Sons Private Limited,

1. One flat in "Shanti Kutir," Marine Drive, at the monthly rent of Rs. 229/50.

2. One shop in the building situate at Kalbadevi at a monthly rent of Rs. 849/76 and godown attached thereto at a monthly rent of Rs. 100.

with liberty to the Directors of the Company to agree to any additions, reductions and alterations in the area of the premises or terms of tenancy as may be deemed necessary or desirable and as may be agreed to between the Directors and Messrs. Ramnarain Sons Private Limited.

9. "RESOLVED that pursuant to the provisions of Section 360 and other applicable provisions (if any) of the Companies Act, 1956 the Company hereby grants its approval with retrospective effect from 1st April, 1963 to an arrangement between the Company and Messrs. Ramnarain Sons Private Limited, an associate of Messrs. Radhakrishna Ramnarain Private Limited, the Managing Agents of the Company, whereby Messrs. Ramnarain Sons Private Limited have agreed:

A. To allow the Company to use and occupy by way of leave and licence for a period of 5 years commencing from 1st April, 1963 the premises specified below of which Messrs. Ramnarain Sons Private Limited are tenants in consideration of a licence fee or compensation of Rs. 2,651 for use and occupation of the said premises and 25 per cent of the electricity bill in respect of the said premises per month.

(a) Portion of the office premises in State Bank Building Annexe.

(b) Two godowns at Sewri of the Bombay Port Trust.

(c) Portion of premises at Cotton Green Building, Sewri.

with liberty to the Directors of the Company to agree to any additions, reductions or alterations in the area of the premises so used or occupied on leave and licence basis or the terms of the licence as may be deemed necessary or desirable and as may be agreed to between the Directors and Messrs. Ramnarain Sons Private Limited.

B. To allow the Company to use the telephones belonging to Messrs. Ramnarain Sons Private Limited in their office premises in the State Bank Annexe and in the premises at Cotton Green Building, Sewri in consideration of the Company paying monthly to Messrs. Ramnarain Sons Private Limited a sum not exceeding 25 per cent of the respective telephone bills of Messrs. Ramnarain Sons Private Limited in the said premises towards the costs of the telephone calls and annual rental of the telephones.

By Order of the Board,

FOR RADHAKRISHNA RAMNARAIN PRIVATE LTD.,

RADHAKRISHNA RAMNARAIN,

Director,

Agents.

BOMBAY, 29*th July*, 1964.

2. The Share Transfer Books of the Company will be closed from 12th August, 1964 to 5th September, 1964, both days inclusive.

3. A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE ON POLL INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

4. The Register of Contracts referred to in special resolution No. 6 above is open for inspection of the shareholders at the Registered Office of the Company during office hours.

5. Dividend, if sanctioned, will be payable at the Bank of India Ltd., Bombay, on and from 25th September, 1964 to those shareholders whose names stand on the Register on 5th September, 1964.

6. Shareholders are requested to notify change in address, if any, to the Company.

INDIA STEAMSHIP COMPANY LIMITED

NOTICE OF THE ANNUAL GENERAL MEETING TO THE SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Members of the India Steamship Company Ltd., will be held at the Registered Office of the Company, "India Steamship House," 21, Old Court House Street, Calcutta, on Thursday, the 24th September, 1964, at 4 p.m., in order to transact the following business:—

1. To receive the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1964.

2. To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1964.

3. To appoint a Director in place of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), who has attained the age of 76 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

4. To consider, and if thought fit, to pass the following resolution as Special Resolution, in respect of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), a Special Notice for which as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which as required by Section 173 of the said Act is annexed hereto.

RESOLVED that pursuant to the provisions of Section 261 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards, (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company.

To appoint a Director in place of the Rt. Hon'ble Lord Sinha of Raipur, who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, the Rt. Hon'ble Lord Sinha of Raipur who has attained the age of 77 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

To elect Maharaja Sir Pratap Chandra Bhanj Deo Bahadur of Mayurbhanj, G.C.I.E., a Director of the Company, who retires by rotation and is eligible for re-appointment.

To appoint Auditors for Head Office and Branch Office, Bombay, and to fix their remuneration.

Special Business:

To consider, and if thought fit, to pass the following Resolution as Special Resolution with or without modifications, if any:—

RESOLVED that Clauses 14(b) and 71(c) of the Articles of Association of the Company be deleted and Clauses 19, 69 and 70 be amended so as to read as follows:

19. For every Certificate issued under Clauses 17 and 18 no fee shall be charged.

69. No fee shall be charged for transfer of shares at the time of registration.

70. The Company shall not charge any fee for registration of Probate, Letters of Administration, Succession Certificates etc.

The Share Transfer Register of the Company will be closed from Wednesday, the 9th September, 1964 to Thursday, the 24th September, 1964, both days inclusive.

By Order of the Board,

A. MUKERJI,

Secretary,

India Steamship Company Ltd.

CALCUTTA, 10*th August*, 1964.

The dividend, if sanctioned, will be payable on 25th September, 1964, to those shareholders whose names stand on the Register of the Company on Wednesday, the 9th September, 1964.

N.B.—Member entitled to attend and vote is entitled to appoint a Proxy and the Proxy so appointed need not be a member of the Company.

Note:—The Explanatory Statement as required under Section 173 of the Companies Act, 1956, is annexed to the Convening Notice issued to the members of the Company.

CALTEX OIL REFINING (INDIA) LIMITED

BRITISH PAINTS (INDIA) LIMITED

32, Chowringhee Road

CALCUTTA

NOTICE PURSUANT TO SECTION 412 OF the Companies Act, 1956, is hereby given that the Company proposes to apply to the Central Government for the approval in the increase in remuneration payable to Mr. S. R. Roy, Director Secretary and Mr. H. O. Sheane-Smith, Sales Director, with effect from 1st September, 1964.

By Order of the Board,

R. A. GODWIN,

Managing Director.

Dated the 28th day of August, 1964.

A high-power committee, headed by Mr. Ram Niwas Mirdha, Speaker of the Rajasthan Legislative Assembly, has been constituted to review the existing co-operative laws, rules and practices with a view to locating the loopholes which enabled "vested interests" to entrench themselves in co-operative institutions. The Committee has been asked to recommend measures for the elimination of vested interests, examine the factors inhibiting self-reliance and self-regulation in the co-operative movement, and suggest remedies. It will also lay down standards and criteria for judging the genuineness of co-operative societies of various types.

COMMERCE AND INDUSTRY

(*Concluded from page* 372)

private capital to the less developed countries has been discouraged in recent years by a number of phenomena that have accompanied the slow growth the exports of these countries; these include weak payments and reserve positions, intensive use of payments restrictions, and inflationary developments in many countries brought about by efforts to reach development goals not compatible with the available real and financial resources. The new rise and higher level of prices for primary products, if they prove to be more than temporary, should improve investment opportunities in the less developed countries and also encourage the inflow of foreign capital where the climate for foreign investment is favourable. The movements of private capital are quite sensitive to political developments and attitudes, and actions taken against foreign investments in one country may seriously affect prospects for a flow of capital not only to that country but also to other countries. But even where conditions are favourable, a substantial flow of private capital to some of the less developed countries will undoubtedly require a willingness, on the part of both investors and developing countries, to adopt new attitudes. It is, of course, equally important that the industrial countries should consider doing anything in their power, by fiscal or other means, to stimulate capital exports to the less developed countries."

Foreign Assistance

The I.M.F. is, however, quite confident that the larger part of the inflow of foreign finance into the less developed countries will continue to take the form of bilateral or multilateral aid, the net flow of which in 1963 accounted for about four-fifths of the total inflow of foreign financial resources. Taking note of the fact that much of the official loans and aid continues to be tied to purchases in the country providing them, the I.M.F. has emphasised that, in order to ensure effective utilisation of aid, this limitation should not be resorted to, unless, of course, there are compelling justifications for it.

The I.M.F. has also emphasised the need for improving international trading opportunities, particularly enlarged access to markets in the advanced countries for the products of the less developed countries. It has reiterated the importance of efforts to diversify these products. To quote it again:

"Nothing could contribute more to the balanced growth of the less developed countries than a steady rise in their export receipts. This would also help materially in achieving the guiding purposes of the Fund as set out in the Articles of Agreement—not only by promoting exchange stability and facilitating the expansion of international trade in all parts of the world but also by contributing to the promotion and maintenance of high levels of employment and real income and to the development of the productive resources of all members."

International Liquidity

It is, indeed, gratifying to hear from the I.M.F. that the pattern of world transactions that evolved during the year 1963 resulted in a substantial increase in international liquidity. Two welcome features were discernible during 1963. One was the rise of $3,400 million (as against $1,000 million in 1962) in the total official reserves of all countries; the rise was steeper than in any other post-war year. A major factor was the sharp increase in the balance of payments position of primary producing countries as a whole. Since these countries generally keep a high proportion of their world reserve in foreign exchange, their $1,600 million overall balance of payments surplus in 1963 brought about a nearly equivalent increase in their sterling and dollar holdings. The other factor was the greater increase in world monetary gold holdings than in any post-war year. Gold production and Soviet sales of gold rose, and there was also less hoarding which was itself a reflection of increased confidence in the international monetary system.

While all this is quite encouraging, there is no gainsaying the fact that the next few years will witness a persistent and substantial growth in the demand for international liquidity. The findings of both I.M.F.'s and Paris Club's studies have drawn attention to such growth and underlined the urgency of raising international liquidity. The forthcoming meeting of the I.M.F., it is hoped, will spell out more clearly the different elements (both quantitative and qualitative) of the future course of action to improve the international liquidity structure in the years to come.

The Planning Commission has appointed a technical team to draw up immediately a programme for raising fast-growing fuel wood species in the country. Such a programme is considered essential if the country is not to be exposed to a severe shortage of fuel wood in the next decade. It is estimated that about 40 per cent of the total energy consumed in the country is derived from burning wood.

NEWS IN BRIEF

LOANS aggregating $18 million from private sources in the U.S. have been secured for the Cochin refinery to meet the foreign exchange cost.

The Life Insurance Corporation of India has invested about Rs. 23 lakhs (fifteen lakh Malayan dollars) in the National Land Finance Co-operative Society of Malaya.

The total coal requirements of India by 1970-71 will be of the order of 136.46 million tonnes, according to the provisional estimate made by the Planning Commission's Working Group on Coal.

The State Trading Corporation has signed a new contract with the Raznoexport of the Soviet Union for an additional export of shoes worth Rs. 50 lakhs. The Soviet Union has already purchased Rs. 1.5 crore worth of shoes from India.

The National Shipping Board will meet at New Delhi on the 1st of next month to consider, among other subjects, proposals for fixing the fourth Plan tonnage target at four million gross tons, restarting a passenger service to the U.K. and improving port facilities.

The Government of India has constituted a Committee (Chairman: Mr. B. P. Patel, Chairman, State Trading Corporation of India) to study the market for tobacco and to promote exports. It will make recommendations on minimum export prices and suggest measures for the promotion of exports.

The ways and means of determining equitable allocation of raw materials and ensuring their proper utilisation by large and small industries will be considered by a seven-member committee. The Committee is headed by Dr. P. S. Lokanathan and consists of representatives of both large and small industries.

The Central Government has sought the Law Ministry's views on the question of introduction of legislation for compulsory amalgamation of small and uneconomic coal mines. The Collieries Voluntary Amalgamation Committee has so far received only 298 proposals, of which 50 have been approved for amalgamation.

The detailed project report on the Salem steel plant prepared by Messrs. Dastur and Company has been submitted to the Union Government. The report has confirmed the technical and economic feasibility of the project. It envisages the establishment of a plant with an initial capacity of 500,000 tonnes per annum which may be expanded to one million tonnes later and further to three million tonnes.

Production of cotton mill cloth during the month of June 1964 amounted to 379 million metres, as against the 361 million metres produced in the corresponding month last year. Cotton yarn aggregated 72.5 million kg., as compared with 69 million kg. The production of cotton cloth and yarn during the six-month period (January-June) of the current calendar year amounted to 2,262 million metres and 463 million kgs., respectively, as against 2,182 million metres and 429 million kg., respectively, in the corresponding period last year.

A Bill seeking to amend the existing law governing patents is to be taken up for consideration by Parliament at its ensuing session beginning on the 7th of next month. The Bill, which embodies the decision of the Cabinet Sub-committee on the question of drugs costs and the desirability of abolishing patents altogether, provides for the discontinuance of the products patent for foods and pharmaceuticals and the reduction, in future, of the period of patents from 16 to seven years. The Bill also fixes a ceiling of two per cent royalty (excluding the cost of know-how) on patents.

Work to provide more space for passenger facilities at Santa Cruz airport in Bombay is now in progress. The scheme for expansion in the existing building has been prepared by the Directorate-General of Civil Aviation in consultation with the airlines operating through the airport. Estimated to cost Rs. 12.55 lakhs, the scheme, when completed, will provide enough space to meet the requirements of passenger traffic through the airport for some time to come. As a long-term plan, it is proposed to build a separate block close to the existing building exclusively for international arrivals and transit passengers. The construction of this block is expected to be taken up during the fourth Plan period. The construction of new terminal buildings to provide improved passenger facilities has also been started at Dum Dum airport, Calcutta. The building will consist of three units, the international block, administrative block with control tower, and terminal for domestic airlines. Construction of the international block at an estimated cost of about Rs. 1 crore has been taken in hand. The estimate of Rs. 32.35 lakhs for the second block has been sanctioned.

A U.S. investment and industrial development mission will visit India early next spring. The mission will comprise five businessmen in fields of special importance to India's development and two Commerce Department officials who will serve as director and trade development officer. The group expects to be in India from 27th February to 27th March 1965. It will investigate during this period ways in which U.S. and Indian private firms can be most helpful and productive. It will arrive in New Delhi on 27th February 1965 and proceed to Bombay, Madras and Calcutta before returning to New Delhi, where it will complete its programme on 27th March 1965. Business information centres will be established in each of the four cities where the mission members will meet the Indian businessmen interested in the proposals offered by the U.S. firms or in presenting business offers of their own. Meetings will also be arranged with the Indian Government and State investment and industrial development organisations as well as with Indian trade groups and chambers of commerce. Plant visits will be arranged to discuss with company managements their plans for expansion, modernisation and diversification.

From Abroad

Krupps of West Germany are negotiating with the Government of Tunisia for a large share in the industrial complex to be built around the former French base at Bizerta.

The Mexican sugar industry has protested against the U.S. Government's decision to impose a tax on sugar at the rate of 3/10 cent on "basic quota" and 3/5 cent on "domestic" sugar.

The Arab League's Economic Council has decided that its members should adopt a "positive plan" to prevent the infiltration of Israeli goods into Arab States through the European Common Market.

Savings accounts of private individuals in West Germany are growing at a record rate this year. During the first half of 1964, the increase came to DM5,257 million as compared with the increase of DM4,523 million and DM4,006 million in the first half of 1963 and 1962 respectively.

The Indonesian Government has issued a new regulation under which importers are required to contribute an advance to a "stabilisation fund" in foreign currency and possess an "import approval certificate." The rate of contribution is fixed at one per cent of the total foreign currency maintained in the certificate.

A syndicate of ten Japanese steel mills has signed long-term contracts with Australian mines for importing 5.1 million tons of iron ore from the Western mines in Australia over a eight-year period starting from 1966. The price of the ore is $12.60 (c.i.f.) per ton. Gosho Trading of Osaka is the agent for the steel companies.

Courtaulds of Britain are making a £750,000 —offer for control of Courtaulds (Australia) which was formed in 1949 to produce rayon and acetate. It is to offer 20s. per ordinary unit of one Australian pound for one quarter of each member's holding. Acceptance of the offer will raise its British firm's interest in the Australian company to a little over 50 per cent.

The International Air Transport Association is organising a supersonic airliner symposium at its annual meeting to be held at Bogota from 14th to 18th September next. The representatives of the British Aircraft Corporation, Sud Aviation, Boeing, Lockheed Corporation, and engine builders, Bristol Siddeley and General Electric who are participating in the symposium, will explain the details of their proposals for supersonic airliners.

Eleven countries (Australia, Canada, Denmark, Spain, U.S.A., France, Netherlands, Italy, Japan, Britain and the Vatican) have signed two agreements envisaging the establishment of a world telecommunications network. One of the agreements relates to a general inter-governmental accord on the principles of organisation of the future system of world communications by satellites and the other pertaining to commercial financial and technical aspects of the system.

Some 11 million employed persons in West Germany are affected by new wage and salary agreements that have been concluded or are still to be negotiated this year. There is a much sharper tendency than last year in the direction of higher pay and shorter hours. Wage rises of, from 5 to 9.5 per cent have been agreed on so far in 1964. Wage and hour agreements affecting more than three million employees are due to expire during the remainder of the year.

Germans drink 50 per cent more coffee than they did five years ago, 20 per cent more cocoa and 10 per cent more tea. Average per capita consumption of coffee is now 3.4 kilos (just under 7½ English pounds) a year, of cocoa 1.9 kilo, and of tea 0.12 kilo. West German consumers' No. 1 beverage is beer, with a per capita consumption of 113.7 litres a year, followed closely by milk (108.5 litres). Demand for mineral water, fruit juices, lemonades and "soft-drinks" is up by 44 per cent in five years, to a per capita consumption of 30.2 litres.

The British Government has agreed, subject to Parliamentary approval, to provide Uganda with a loan of £6 million for its capital development over the next two years. During his visit last month, the Prime Minister of Uganda, Dr. Milton Obote, had discussions with the British Government concerning British financial assistance for the last two years of Uganda's current five-year development plan. The independent financial settlement between Britain and Uganda was designed to run only up to 30th June this year. Technical assistance to Uganda is being provided by the British Government at the rate of nearly £2 million a year. This is likely to continue.

The Commonwealth Development Corporation has agreed in principle to provide a long-term loan of nearly £1 million towards the estimated cost of £2 million for 14 additional tea factories in Kenya. It had previously undertaken to lend £900,000 for tea development in Kenya and to provide £160,000 for two of the three factories already established. The Corporation will thus be providing a total of more than £2.1 million for what is likely to become the largest and most successful smallholder tea scheme in the world. The additional loan, it is stated, is conditional upon the satisfactory development of the field planting programme.

PERSONAL

MR. P. B. Advani has been elected President of the Indian Council of Foreign Trade for the current year.

Mr. Thomas E. Naughten has assumed charge as Deputy Director of the U.S. Agency for International Development Mission in India.

Mr. S. K. Patil, Union Minister for Railways, returned on the 22nd inst. after a four-week tour of the U.S., the U.K. and the Continent.

Mr. V. Venugopal Naidu, Chairman and Managing Director of the Mysore Acetate and Chemicals Company Ltd., has left for the U.S. on a business visit.

Mr. Dharma Vira, Chief Commissioner of Delhi, has been appointed Cabinet Secretary vice Mr. S. S. Khera, who will be relinquishing the post in November next.

Mr. P. U. Patel of the Universal Fire and General Insurance Company Ltd. has been elected Chairman of the Indian Insurance Companies' Association, Bombay, for the year 1964.

Mr. George Woods, President of the World Bank, arrived in New Delhi on Monday this week. He held talks with Mr. T. T. Krishnamachari, Union Finance Minister, and other officials of the Government of India. He is leaving for Tokyo today (Saturday the 29th.)

Mr. A. L. Dias, until recently Chairman of the Bombay Port Trust, has taken over charge as Secretary to the Union Ministry of Food and Agriculture in place of Mr. V. Shankar who has now become the Secretary to the Ministry of Civil Aviation on the same day. Mr. E. H. Simoes, General Manager of the Port Trust, has assumed the duties as Chairman until a successor to Mr. Dias is appointed.

The International Finance Corporation and Credito Bursatil, S.A., a subsidiary of Banco Nacional de Mexico, S.A., with the participation of 10 U.S., Mexican and Swiss financial institutions, have formed a syndicate to underwrite an offering amounting to Mex $156 million (approximately U.S. $12.5 million) of capital shares of a Mexican steel company. The underwriting will assist the largest private steel company in the country to obtain finance to carry out a new expansion programme to increase steel production from 500,000 to 750,000 tons annually. The Export-Import Bank of Washington has announced the authorisation of a loan of U.S. $28 million for the expansion programme.

The International Development Association has extended a credit equivalent to $2.8 million to Kenya for the expansion of tea production by African smallholders. The credit is for a term of 50 years. Repayment of principal will begin from 1st June 1974, after a 10-year period of grace. Thereafter, 1 per cent of the principal will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest but a service charge of ¾ per cent on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs. The Government of Kenya will relend the proceeds of the credit to the Kenya Development Authority with repayment to be made in 16 years, including a 9 year grace period and interest at 5½ per cent.

Figures released by the Cotton Board reveal that despite a drop of 3,260 in the number of spinning and weaving operatives employed in Lancashire mills, yarns and cloth output has increased during the first six months of the year. Half-year returns show that yarn production reached 334.28 million lbs. as compared with 310.57 million lbs. in the same period last year. Cloth output totalled 868.94 million yards—a rise of 59.69 million yards. The total labour force in the industry now stands at 140,950, as against 144,210 a year ago. The increase in production reflects the increased activity in the trade and also the considerable advances in productivity achieved with the installation of modern machinery and general re-equipment.

The United Arab Republic Government has recently adopted unilateral measures which have a retroactive effect upon already confirmed cotton purchasing contracts and impose considerably more stringent credit requirements. Moreover, the volume of cotton already sold under contract for one specific extra-long staple variety has been curtailed by one-third. Describing these measures as arbitrary, the International Federation of Cotton and Allied Textile Industries points out that the measures are not only contrary to the usual international commercial practice, but represent a clear breach of contractual obligations. The cotton trade and industry in the traditional consumer countries have, therefore, expressed their strong opposition to the measures adopted by the U.A.R. The Director of the Federation, Mr. Mario Ludwig, is flying to Cairo shortly to lodge a formal protest with the Minister of the Economy of the U.A.R. on behalf of the major consumers of Egyptian cotton in Western Europe, America, Japan and India. Mr. Ludwig will also examine the current supply position in Egyptian cotton and enter into negotiations with the authorities regarding their future cotton export policy.

TREND OF MARKETS

GOOD RESPONSE TO STATE LOANS

(From Our Own Correspondent)

BOMBAY, *26th August*

The response to the State Government loans, which opened for subscription this week, was quite encouraging. Of the thirteen State loans, the Assam, Bihar, Gujarat, Uttar Pradesh and West Bengal loans were closed on the very first day, that is, Monday the 24th inst. Andhra Pradesh, Maharashtra, Madhya Pradesh and Orissa loans were closed yesterday (Tuesday) and Madras and Mysore loans today (Wednesday). Rajasthan and Kerala loans—the latter opened a day later, that is yesterday—are still on tap. The Andhra Pradesh, Bihar and U.P. loans were oversubscribed; the actual amounts of their loans are Rs. 11 crores, Rs. 4 crores and Rs. 10 crores, respectively. The loans fully subscribed are Assam (Rs. 3 crores), Gujarat (Rs. 7 crores), Madras (Rs. 14 crores), Madhya Pradesh (Rs. 5 crores), Maharashtra (Rs. 15 crores), Mysore (Rs. 7 crores), Orissa (Rs. 8 crores) and West Bengal (Rs. 7 crores). The amount of Rajasthan loan is Rs. 5 crores and that of Kerala loan Rs. 4 crores.

Despite large-scale subscriptions to State loans, the short-term money market ruled easy during the week under review. Funds available were plentiful and borrowers experienced no difficulty in obtaining their requirements. Only they had to pay higher interest charges. The inter-bank call rate for both renewals and fresh money stood at 2 per cent, whereas, last week, the former fetched ½ per cent and the latter ¾ per cent. Conditions at Calcutta were rather stringent, the call rate jumping up from ¾ per cent to as high as 3¾, with stray business put through at 3 to 3½ per cent.

During the week ended 21st August, there was no sale of Treasury Bills under the usual tender system, obviously because of the Reserve Bank's preoccupation with the State loans. However, sales of intermediate Treasury Bills, which were on sale from the 19th to 22nd inst., amounted to Rs. 12.90 crores, as against Rs. 8.56 crores a week before and Rs. 3.53 crores two weeks before.

There was a handsome rise of Rs. 4.20 crores to Rs. 98.46 crores in India's foreign exchange reserves during the week ended 21st August. The whole of this rise was in balances held abroad which increased from Rs. 8.80 crores to Rs. 13.00 crores. The foreign securities held in the Issue Department of the Reserve Bank were unchanged at Rs. 85.46 crores. Deposits of scheduled banks with the Reserve Bank improved by Rs. 8.70 crores to Rs. 122.16 crores. Loans and advances obtained by them declined by Rs. 5.25 lakhs to Rs. 1.84 crore. Notes in circulation receded by Rs. 29.15 crores to Rs. 2,423.82 crores.

The total credit made available by scheduled banks to their clients declined but by just Rs. 40 lakhs to Rs. 1,737.31 crores during the week ended 14th August. At the same time, there was a fresh accretion of Rs. 7.63 crores to their deposit portfolio. Borrowings from the Reserve Bank as a result fell by Rs. 1.67 crore to Rs. 2.37 crores. Investments declined by Rs. 9.32 crores to Rs 754.88 crores, while total cash improved by Rs. 10.35 crores to Rs. 170.63 crores.

The Gilt-edged market ruled quiet. Sellers were in evidence in some loans, while buyers were reserved. Business put through was small. 4 per cent 1969 dropped 30 P to Rs. 99.25. 3½ per cent 1967 and 4½ per cent 1972 eased by 5 P each to Rs. 99.75 and Rs. 100.10, respectively. Practically all the other Central and State loans were unchanged at last week's levels.

In the foreign exchange market, the banks' selling rate for U.S. dollars rose by 25 P to Rs. 480.75 per $100, while their buying rate was uneffected at Rs. 477.25. In New York, the pound sterling eased further vis-a-vis the dollar, the spot rate declining by 0.070 cent to 278.520-278.550 cents and the three months' forward by 0.120 cent to 278.100-278.130 cents.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, *26th August*

Both silver and gold were depressed during the week under review. After being erratic last week, silver was subjected to selling induced by larger arrivals and lack of sustained demand. In sympathy with silver and due to poor inquiries, gold tended to move down.

Silver commenced the week at Rs. 258, as against the previous close of Rs. 257.50, and moved up to touch Rs. 259 on some support from local stockists. But, as the follow-up inquiries were lacking and as arrivals were higher, silver uneffected at Rs. 477.25. In New York, the pound today. The daily average arrivals of silver were 27 bars, while offtake was around 9 bars.

Fourteen-carat gold was neglected at Rs. 72.50 throughout the week. Reports of seizure of contraband gold were responsible for the cautious attitude on the part of traders. Pure gold, in unofficial trading, was marked lower at Rs. 124, as against Rs. 128. Sovereign eased by 50 paise to Rs. 93.

The international price for gold in the London market was quoted lower at $35.06¼, as against $35.07¼ a week before. The sterling price, however, gained 1d. to 251s. 10d. Both ready and forward silver were unchanged at 112d. and 112½d., respectively, as also silver in New York at 129.3 cents.

The new jari export promotion scheme reintroduced by the Government from last month has created a "very serious problem" for the industry, as the import entitlement of 14 per cent gold had been removed from the scheme, according to the Surat Jari Merchants Association. In a representation made to the Gold Control Administrator, the Association says that, under the old scheme, provision is made to allow import entitlement of 14 per cent gold and 50 per cent silver against export of red jari. On the basis of the 50 per cent gold quota, the jari exporters are unable to meet the foreign demand with nearly Rs. 75 lakhs.

The U.P. Government has decided to advance loans to industrial co-operative societies of certified goldsmiths for extending and developing small-scale and cottage industries or for starting new enterprises within the State. The maximum loan will be Rs. 10,000, repayable in six monthly instalments.

The following table shows the trend of prices during the week under review:

	26-8-1964 (closing)	High	Low	19-8-64 (closing)
	Rs.	Rs.	Rs.	Rs.
SILVER				
Ready (996 fine)	256 50	259.00	256 50	257.50
GOLD				
Ready (14-carat)	72 50	72.50	72.25	72 25
Sovereign	93 00*	—	—	93 50*
London—				
Gold	251s.10d.	251s.10d.	251s.9d.	251s. 9d.
Silver Ready	112d	—	—	112d.
Silver Forward	112¼d.	—	—	112½d.
New York—				
Silver	129 3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

STAPLE FIBRE YARNS FIRM

(From Our Own Correspondent)

BOMBAY, *26th August*

Staple fibre yarns ruled firm during the week under review while art silk yarns lost further ground. In the cotton yarns section higher counts put on a cheerful appearance, while lower counts were steady. The firmness of staple fibre yarns was due mainly to higher demand from Surat consumers. As much as 50 bales were reported to have changed hands at current market rates. Art silk yarns drifted downward due to lack of fresh incentives, small buying interest from consumers and improved supply position. Even rumours of a possible reduction in excise duty failed to have any effect. For the manufacturers were eager to sell because of increasing stock.

The Union Ministry of Commerce has clarified that no imports of rayon yarn or man-made fibres are at present allowed against export of any handicraft goods, except hand-made tufted carpets. No imports of rayon yarn or man-made fibres are allowed even against export of zari goods in which some rayon and man-made fibres are used. The clarification is a sequel to persistent rumours that licences for the import of art silk yarns are being issued even now against exports of handicrafts.

Mr. C. C. Bhanwala, Vice-President of the Central Development Council of Surat's weaving industry, has complained that the art silk weaving industry is facing a very delicate situation, as rayon yarn spinners are not fulfilling their obligation under the export promotion scheme of art silk fabrics. The spinners, according to him, are not selling rayon to manufacturers-cum-exporters of art silk fabrics at concessional rates.

Among art silk yarns, National Rayon 150D declined by 14 P to Rs. 10.93, while 120D shed 2 P to Rs. 11.68. Bright Century 75D eased by 20 P to Rs. 18.70. South India 120D was neglected at Rs. 13.10.

In the staple fibre yarn (2 x 34 French count) section, City put on 7 P to Rs. 9.55, Sitalaxmi gained 6 P to Rs. 9.72. Premier was marked up by 7 P to Rs. 9.90. Vasantas and Pioneers were firm, the former at Rs. 9.22 and the latter at Rs. 9.35. Sriram, however, lost 11 P to Rs. 9.24.

Cotton yarns 34s Madura improved by Rs. 2 to Rs. 43 and Vasantas by 75 P to Rs. 39.75. 68s Minerva strengthened by Re. 1.50 to Rs. 87.50 and Finlay by a rupee to Rs. 97. All other counts were quoted unaltered at last week's level.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	26-8-1964	19-8-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11 68	11 70
Century 75D	18 70	18 90
S. I. Viscose 120D	13.20	13.20
Staple fibre yarn-34 x 2 *French Count* (per kg.)		
Pioneer	9.35	9.35
Premier	9.90	9.83
City	9.55	9.48
Cotton yarn - French Count (Rs. per 5 kg.)		
8s Podar	21.00	21.00
17s Modern	27 00	28.50
27s Sasoon	—	37.00
34s Madura	43 00	41 00
52s Pioneer	89 30	89 30
68s Finlay	106 70	105.60

NEW CROP CASTOR AND LINSEED CONTRACTS

(From Our Own Correspondent)

BOMBAY, *26th August*

For want of fresh developments, trading in the oilseeds market during the week was a dull affair. The only interesting development was the commencement of trading in the new crop castor and linseeds March contracts. Even here, the market seemed to lack lustre. Price movements were narrow and the tone was quiet to easy at the close.

The characteristic feature of the new crop contracts is that they are free from ceilings, although are subject to margins. The margin in castor is Rs. 20 per 250 kg., if the rate touches Rs. 196 during non-delivery periods, and Rs. 50 per 250 kg. during delivery periods. The margin in linseeds is Rs. 5 per 50 kg. during non-delivery periods and is Rs. 12.50 during delivery periods. Castor March opened at Rs. 180 and, after moving both ways, closed the week at Rs. 177.12. Linseeds began the week at Rs. 39.25 and was mentioned at Rs. 39.16 at the close. Current week's fluctuations, and fluctuations during any one week for that matter, do not mean much particularly in the case of contracts which have a very long life. But, by and large, the feeling in the market is that the trend is going to be bearish. Knowledgeable sources are already saying that the market has yet lower levels to seek and that a bearish trend in futures will naturally affect spot prices. The rate for spot linseed is currently Rs. 48.25 and, with the forward rate at Rs. 39.16, it is apparent that there is still a wide gap to be bridged. Sentiment in the market is induced at present by reports of good weather and the consequent prospects of a larger harvest.

It is, however, rather too early to talk of the state of the market in the distant future. Much will depend upon the Union Government's policy regarding exports of edible oils from the country which are banned at present as well as the policies of State Governments like Gujarat and Uttar Pradesh which have stopped oils and cakes from going out of their respective States. The Union Government's policy is anybody's guess, but market men think that, if exports of new crop oil from the country were also banned, groundnut oil might seek much lower levels—Rs. 1,500 would be the probable rate.

The ban enforced by Gujarat and Uttar Pradesh has resulted in the disruption of the price pattern of groundnut and mustard oils. It is said that groundnut oil in Saurashtra is quoted at Rs. 28.50 per tin of 16 kg., including the cost of tin which alone is said to be around Rs. 2, while, in Bombay, the price is Rs. 26.10 per 10 kg. The rate in Delhi is about Rs. 27.50 which is much higher than that either in Bombay or Saurashtra. The rate for mustard oil in Delhi and Uttar Pradesh is around Rs. 3,250 per tonne, but, in Bihar, the quotation is as high as Rs. 4,250. The official price for mustard oil in Bengal is Rs. 4,000, but no oil is said to be available at less than Rs. 4,500. Market men say that no rational assessment of prices will be possible unless the Government of India removes the ban on exports of edible oils and allows forward trading in groundnuts, groundnut oil and cakes. The need to check the rising trend of prices in the country is admitted on all hands, but it is also stressed that now is the opportunity to boost our exports of groundnut oil, in view of the higher advices from overseas markets. The trade is inclined to feel that, if the new crop oil were allowed to go out, we might easily dispose of a lakh of tons in international markets.

The extractions market has been dull. Demand from East European countries is virtually nil and it may be a long time before inquiries start coming. It is reported that about 75 per cent of the solvent extraction plants are remaining closed and that the ban by Uttar Pradesh of exports from the State of expeller cakes has put solvent extraction plants in an impossible position. It is also reported that about 16 plants in Bombay are dependent on U.P. expellers and that they are nervous, as stocks with them can hardly last a week. Currently, London advices are steady. The quotations are £37-17-6 for August-September, £37-5 for October, £35-15 for November, £35-5 for December, £35 for November-December-January-February and £34-15 for January-February-March. Near positions are fairly well held, but there is a bearish slant on distant positions. In Bombay, groundnut extractions are currently quoted at Rs. 418-419 and expellers at Rs. 492. Distant positions here, too, are easy with extractions October mentioned at Rs. 413 and November at as low as Rs. 380. Expellers September are quoted at Rs. 490, October at Rs. 458 and November at Rs. 421. Demand, as already mentioned, is at a low ebb, barring that from the United Kingdom which is interested in small quantities. Exports so far during the current year are said to aggregate about 7.5 lakh metric tons.

The Bombay Oilseeds Exchange is likely to take up with New Delhi the question of forward trading in groundnuts, oil and cakes. The Association has already submitted its memorandum, but its case seems to have been strengthened by good crop estimates around 38 lakh to 39 lakh tonnes. Further, prices of new crop seeds are tending to be bearish. October delivery is mentioned at Rs. 52, as against Rs. 65.50 for spot Khandesh Quality. The November and December positions are even lower at Rs. 48.25 and Rs. 46, respectively. The spot rate for oil is Rs. 25.70 per 10 kg., but the October and November positions are down at Rs. 21.50 and Rs. 18.75, respectively. The December position is just around Rs. 18.15. The argument is that hedge facilities might have a sobering influence on spot prices. Since the new crop begins arriving in October, an early start of forward deals will be very helpful, according to the trade.

Trading in castor September continued to be a standstill with the contract quoted nominally at the ceiling rate of Rs. 181.50. The new March contract closed the week at Rs. 177.12 on an easy note, as compared with the starting rate of Rs. 180. The last unofficial rate heard for the September contract was Rs. 183.25 and reports indicated that traders were willing to come to a settlement of the outstanding positions at about Rs. 183. The linseeds March contract closed at Rs. 39.16 and linseeds bold spot was mentioned at Rs. 48.25. Cottonseeds January contract finished at Rs. 96.75 and the tendency here is steadier for

the time being. The September contract was mentioned nominally at Rs. 90.50. Spot rates in the castor, groundnuts and linseeds sections were higher than last week.

The following table shows the closing prices of oilseeds and oils as on 26th August as compared with those of the two previous weeks:

	26-8-1964	19-8-1964	11-8-1964
Groundnuts	Rs.	Rs.	Rs.
Nizam bold	64 25	63.00	63.75
Khandesh quality	66 00	64 50	65.50
Oil ex-mill	26 75	25.00	25.70
Oil Rly. Receipt	26.40	25.00	25.15
Castorseed			
September 1964 contract.. ..	181.50	181.50	181.50
March 1965	177.12	—	—
Ready Madras	39 50	39 25	40 25
Ready Kanpur	38 37	38 25	39 25
Oil B.S.S.	18 15	18 00	18.20
Oil commercial	17.55	17.40	17.65
Linseed			
September 1964 contract.. ..	44 84	44.69	44.84
March 1965..	39.16	—	—
Bold ready	48 50	47.5	48.25
Linseed oil		20.00	20.35
Cottonseed			
September 1964 contract.. ..	90.00	90 50	98.00
January 1965 contract	96.25	94.75	100.00

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER EASY

(Messrs. Parekh and Company)

BOMBAY, 25*th August*

Malabar black pepper ruled easy during the fortnight under review, owing to the liquidation by weak bulls on the maturity of August delivery at Cochin and *Shrawan* delivery at Bombay. August went off the board at Rs. 353 and *Shrawan* at Rs. 358. Instead of taking delivery, bulls preferred to switch from August to October and from *Shrawan* to *Badrapad* by paying heavy premium. This affected the general sentiment of the market. Continuous weak advices from New York made the matter worse. Indonesia was reported free sellers in New York for Lampong for August-September shipment at prices much below the present check price in force in Indonesia.

Ungarbled was quoted at Rs. 332½ and garbled at Rs. 344. October delivery was nominally quoted at Rs. 362½, while December was depressed at Rs. 351 under the pressure of bear selling. *Bhadrapad* was quoted at Rs. 360 and *Asho* at Rs. 364. Business on the ring is very much restricted.

Spot in New York, after going down to $0.32½, is now reported steady, as Lampong is unquoted and pressure of selling is decreasing. Black pepper at Singapore is quoted at $107½, but the trend of the market there is uncertain owing to the Malaysian and Indonesian imbraglio. As grinders in New York are reasonably covered, they refuse to be excited even after the present deterioration in Malaysia situation. If the situation becomes worse, there is every likelihood that shipment of Lampong may be unduly delayed.

With selling pressure from Indonesia on wane and with chance of development in autumn demand from September onwards, bright pepper is likely to improve provided Lampong does not come to press which is very unlikely, as no shipment of old sales of Lampong is allowed after the end of August and that the new crop of Lampong may not come in the market before October.

Ready pepper in Bombay is quoted at Rs. 180 per 50 kilos.

STRONG DEMAND FOR FANNINGS

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 20*th August*

Offerings in tea sale No. 33 held here on Tuesday the 18th inst. amounted to 688,000 kgs. Medium quality was similar to that last seen, but the occasional invoice from the Nilgiris showed an improvement. The market met with strong demand for all liquoring teas especially fannings. Nilgiris broken elicited good support, but were a little easier, while their fannings were again in strong demand and frequently showed considerable increase. Good mediums were sold well at generally firm rates. Medium and low medium brokens were in fair demand, but the general level of prices declined slightly. Their fannings, however, particularly the cleaner ones, appreciated in value. Whole leaf grades were strong and dearer, particularly orange pekoes. Unorthodox descriptions with improved liquors were sold at dearer rates, but the others were generally easier.

The quotations (per kg.) were as follows:

	1964	1963
	Rs.	Rs.
Low mediums	4.00-4.20	4.00-4.30
Mediums	4.20 4.50	4 20-4 55
Good mediums	4.55-5.20	4.60-5.40
Nilgiri B.O.P.	5.00-7.30	4.90-9.10

The average price realised in sale No. 33 was Rs. 4.51 per kilo, as against Rs. 4.39 a week ago and Rs. 4.44 in the corresponding sale last year.

In dust sale No. 33 held today, 265,000 kgs. were catalogued. There was strong general demand. The few highgrowns on offer came to an irregular market. Good mediums were well supported and prices realised were fully firm to dearer. There was good enquiry for medium and low medium descriptions which were sold at fully firm rates. Primary C.T.C. grades held their value, but secondary and more fibrous types in this category showed considerable advances.

The average price realised in dust sale No. 33 was Rs. 4 39 per kilo, as against Rs. 4.41 a week ago and Rs. 3.98 in the corresponding sale last year.

Colombo: The market opened to strong general demand and again prices were generally dearer for all descriptions except for the plainest which were only firm.

London: In Monday's auction, there was strong demand with Assam teas again selling well. Dooars descriptions and the thinner liquoring sorts were irregular and occasionally somewhat easier.

Ceylon and South Indians: On Tuesday, there was only fair demand and prices for all descriptions were generally lower. Best liquoring South Indians were firm.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire us as follows:

"*Sale No.* 34: 535,000 kgs. offered. Good demand. Plainest and low mediums 5 to 10 paise easier. Mediums about steady. Good mediums dearer. Highgrows strong. Unorthodox firm."

JUTE GOODS RISE AGAIN

(From Our Own Correspondent)

CALCUTTA, 25*th August*

Although overseas buying of jute goods remained restricted during the week under review, prices continued to move up, as speculative interest led to excited conditions. It is significant that the rapid recession in fibre prices in the Pakistan markets arising from lack of genuine buying—this week the Narayanganj market price for a maund of jute fell to Rs. 40.45 from the highest level of this season, namely, Rs. 50.55—had no effect on Calcutta quotations which scored a further gain of about Rs. 2 a maund this week. The up-trend developed despite the increase in daily arrivals which aggregated about 100,000 maunds a day. Mills, however, showed little interest in fibre at the higher levels, but sellers were in no hurry to seek business, as they expected premium rates. A tendency among cultivators from releasing their produce was also a factor for the continued strength. However, with the need for cash for annual festivities, it is expected that cultivators would show more interest in marketing their produce within the next few weeks.

In the middle of the week, prices of goods receded under the impact of profit-taking. This was indeed welcome, as it was hoped that more business would be done with overseas buyers. The recession of prices was, however, short-lived, and prices, influenced by the up-swing in fibre, moved up and closed higher on balance. However, the fall in Pakistan fibre prices caused by overseas buyers' resistance, it was felt, should before long take the Calcutta fibre market to sobriety.

Due to floods, the quality of Pakistan fibre is reported to have deteriorated, but, in respect of quantity, the earlier estimate of five million bales is expected to be realised. In view of the sharp uptrend since the beginning of this month, the condition of the fibre has suffered a setback in Pakistan, as several instances of mixture with mesta and other inferior grades have been reported. India's dependence on Pakistan to meet a portion of the former's requirements of the superior grades is also a factor for the rise in Pakistan prices in recent weeks.

The news that Indian imports of about 800,000 bales were planned immediately had a bullish effect on the Narayanganj market. Although U.K. buyers were not enthusiastic to purchase the Pakistan fibre at the hardening rates, communist countries, including Yugoslavia, China and Czechoslovakia, showed interest in substantial quantities. In addition, in view of the expanded capacity, mills in Pakistan require more fibre in this year.

This week's fall in prices in Pakistan is attributed to clear indications of overseas buyers that it would not pay them to enter the market. Evidently, a stage has been reached when overseas mills are left with no alternative other than to stop operations or to go in for substitute fibres. This hint has been rightly picked up and balers in Pakistan have become nervous. However, the daily arrivals have not yet begun to increase; this week, they amounted to about 20,000 maunds. As in India so in Pakistan, cultivators who have had fortunes in the last two seasons have accumulated some holding power and are thus withholding their produce from marketing in anticipation of higher prices. An examination of prices for the manufactured products at once reveals that it is uneconomic for the Dundee mills to purchase Pakistan fibre at the existing rates. Prices this season having gone up higher by about 50 per cent as compared with the beginning of the season, Dundee buyers have withdrawn from the market. Although it is certain that the crop in Pakistan would fall shorter than last year's and although this expectation pushed up prices, this week's recession showed that awareness of shortage has spent its full force. Now that Pakistan prices have started receding, it is not expected that any large-scale buying will be done by balers for fear of losses unless prices go down to more reasonable levels.

Although prices in the New York burlap market rose this week, this was due not to more interest from consumers but to higher advices in Calcutta. Duty paid light 40" 7½ oz. hessian, after falling from 9.30 cents to 9.10 cents in response to Calcutta's mid-week recession, regained to 9.20 cents. The 10 oz. hessian at first eased from 12.15 cents a yard to 12 cents but soon returned to 12.15 cents. However, buyers in New York refrained from entering into large commitments, as they desired prices to dip to more reasonable levels. Moreover, with U.S. burlap stocks at the end of the last month having increased to 300 million yards from 285.8 million yards at the end of June, inventories are very satisfactory and, therefore, there is no need to make further purchases in a rising market and thus boost prices further. Paper and synthetic packaging materials are being put to considerable use in the United States and woven kraft paper bags are found more suitable to pack the more durable vegetables like potatoes. For these perforated paper bags take in air more systematically than gunny bags. Also, paper bags produce considerably less heat than gunny bags and are thus found to be more suitable to transport perishables such as potatoes and fruits. Not surprisingly, therefore, total imports into the U.S.A. of hessian in the six months to June 1964 were only 487.9 million yards, as against 593.4 million yards in the first half of last year. Although the total fall of 105.5 million yards worked out to 17.71 per cent imports from India fell by 20 per cent, that is, from 509.2 million yards to 406.9 million yards. On the other hand, imports from Pakistan showed a small increase from 52.7 million yards to 53.5 million yards. Imports from other countries at 27.5 million yards, as against 31.5 million yards, fell by 12.54 per cent. It was also discouraging to note that burlap consumption in the U.S. in July 1964 fell to 64 million yards from 69.5 million yards in the previous month and 68 million yards in July 1963. The total consumption in the seven months to last month having aggregated 500.3 million yards, as against 531.7 million yards in the same period of 1963, the average monthly consumption fell to 71.47 million yards from 75.95 million yards. The fall, despite higher industrial activity in the U.S.A., should, therefore, be attributed to more consumption of substitutes.

Fully steady conditions were in evidence in the fibre market this week, and both sellers and buyers were reserved. For sellers were not prepared to lessen their holdings in anticipation of premium rates, but, at the same time, mills were also not prepared to support the market at the higher levels. This week's recession in Pakistan prices had had no effect here, and Assam bottoms gained from Rs. 41 to Rs. 43, daissee bottoms from Rs. 43 to Rs. 45, and northern bottoms from Rs. 40 to Rs. 42.00.

In the goods market, quotations at one time began to lose on reports of the Pakistan recession, but, since fibre prices here continued to rule firm, losses were not only soon erased but closing quotations were higher on balance for the week. On Tuesday last, ready B. twills eased from Rs. 134.50 to Rs. 132.00 and hessian 40" 10 oz. from Rs. 48.85 to Rs. 48.25. At these levels, there was keen buying interest which led quotations to recover to Rs. 133.50 and Rs. 48.75, respectively, on Wednesday. The news that gunny despatches for export abroad in July at 80,700 tonnes recorded a small rise of 400 tonnes also contributed to sentiment. Despatches for local purposes increased from 24,500 tonnes to 27,200 tonnes. At the increase, support was affected, but activity in the hedge market was so intense and lively as to raise ready B. twills to Rs. 135 and hessian 40" 10 oz. to Rs. 49.00 on Thursday. On Friday, it was indicated that more measures to put down speculation to reasonable limits were under contemplation by the East India Jute and Hessian Exchange Ltd., and ready B. twills dropped to Rs. 134.75 and hessian 40" 10 oz. to Rs. 48.80. However, with ready B. twills at Rs. 137.00 and hessian 40" 10 oz. at Rs. 49.75, the week-end witnessed a marked increase in prices. The largest slice of the increase occurred yesterday when B. twills quoted Rs. 140.00 and hessian 40" 10 oz. Rs. 50.25.

KIPS IMPROVE

(From Our Own Correspondent)

MADRAS, 24*th August*

The market for hides and skins showed signs of revival and enquiries from overseas importers were more persistent and genuine, though the volume of export business was not large. As is usual, sellers were trying to obtain higher prices, in vain. Buying interest was mostly in cowhides light weights, fifths in mediums, and lower ends in light cowcalf. U.S. buyers were still not in the market for buffcalf usual weights and bufflights.

As regards tanned goat skins, demand was good for light and medium weights, and sellers were reserved, quoting high prices, as tanners were having enough orders in their books to cover their incoming stocks from the tanneries. U.S. buyers showed interest in heavier weight goat skins at less money and some orders were placed for shipment. In the sheep skins section, prices were steady for primes and semiprimes but weak for middle class. Raw market was firm for goat skins and weak for sheep skins.

The following were the prices per lb. quoted for all round lots:—

Tanned cowhides 8/8½ lbs. average Rs. 2.00 to Rs. 2.10; tanned buffhides 12/13 lbs. average Re 1.80 to Re. 1.86; and tanned buffcalf 1½/2 lbs. average Rs. 2.40 to Rs. 2.50.

FOODGRAINS HARDEN

(From Our Own Correspondent)

HAPUR, 24*th August*

Continued heavy rains during the week marred kharif crop prospects and this, coupled with poor arrivals and good consumers demand resulted in hardening of foodgrain prices. Pulses prices touched an all-time high level. The Union Government, however, thinks that worst is over due to marked increase in imports and their better distribution and that prices will ease.

Wheat prices advanced by Rs. 2 to Rs. 2.50 per quintal, according to quality, during the week on good consumers support, brisk east U.P. purchases, small arrivals and declining stocks position. Average quality was quoted between Rs. 77.50 and Rs. 80 and farm produce between Rs. 81 and Rs. 83.75 per quintal. The controlled price at fair price shops was quoted at Rs. 43 per quintal. Daily arrivals were small around 400 maunds and stocks were meagre. Steadier conditions continued in the rice market and prices rose by Rs. 2 to Rs. 4 per quintal due to poor stocks and good buying support from local and east U.P. traders. Standing paddy and *munji* crops were progressing under healthy conditions following heavy rains. Local stocks with trade were estimated around 2,000 quintals. Week-end prices were: Rice *basmati* superior Rs. 104.49 to Rs. 109.85, *sela* Rs. 101.81 to Rs. 104.49, *mainpuri* Rs. 100.47, *ramajwayan* Rs. 101.81, *raimunia* Rs. 101.81 and *gadda* Rs. 100.47 per quintal.

Gram prices also ruled firm and prices hardened by Re. 1 to Re. 1.50 per quintal during the week, due to tight supply position in face of good demand. Local produce was quoted at Rs. 73.12 and Punjab quality at Rs. 72.50 per quintal. Arrivals were negligible and stocks were meagre. Barley and *bejhar* prices also sought higher levels on poor arrivals and better buying enquiries from east U.P. districts. The prices ranged between Rs. 62.50 to Rs. 65 for barley and between Rs. 65 to Rs. 66 per quintal for *bejhar*. Small arrivals of new crop maize were lifted at Rs. 62.50 to Rs. 63.75 per quintal. *Juwar* and *guwar* prices ruled steady, as stocks were very small. Other coarse grain prices remained unchanged. Week-end prices were: *juwar* Rs. 62.50 to Rs. 65, *guwar* Rs. 65 to Rs. 66.98, *methi* Rs. 60 to Rs. 62.50 and oats Rs. 70 to Rs. 72.50 per quintal.

Firm conditions continued in pulses also and prices touched all-time high levels owing to tight supply position. Peas prices rose by Re. 1.50 to Rs. 2 per quintal, according to quality, on brisk Madras and east U.P. buying support. The average quality was quoted between Rs. 66.50 and Rs. 67.50 and farm quality between Rs. 70 and Rs. 71.50 per quintal. *Arhar* prices stayed steady while *arhar dal* improved from Rs. 105 to Rs. 116 per quintal. *Urd* prices ruled quiet while *moong* prices hardened to Rs. 3 per quintal and prices ranged between Rs. 61.62 to Rs. 71 per quintal for *urd* and between Rs. 87.07 to Rs. 111.19 per quintal for *moong*. *Masoor* and other *dal* prices also ruled firm. Week-end prices were: Peas *dal* Rs. 72.50, *urd dal* Rs. 96.45, *moong dal* Rs. 117.50, *masoor* Rs. 75 to Rs. 84.40, *masoor dal* Rs. 96.45 and gram *dal* Rs. 83.06 per quintal.

SUGAR SUPPLY TIGHT

(From Our Own Correspondent)

HAPUR, 24*th August*

Sugar continued to rule firm because of brisk festival demand and tight supply position. Despite the U.P. Government's repeated requests to increase the State's quota of sugar, the Centre reduced it from 25,000 to 20,000 tons earlier and now to 19,000 tons a month. Sugar, in unofficial trading, was quoted from Rs. 175 to Rs. 180 per quintal, as against the controlled rates of Rs. 127.39 to Rs. 136.99.

Khandsari was quiet. But stockists were very much perturbed over the accumulated stocks which the Government was not releasing for free sale nor was it making arrangements for its clearance to bulk consumers in the place of sugar. Trade has demanded the export of the commodity, as stocks have already suffered enough damage from heavy rains. New season was fast approaching and, as the peak consuming season was passing steadily, stockists want an early release of *khandsari* for open sale. Production of *dane minja* is being continued in some areas and prices of different qualities of *khandsari* ranged between Rs. 130 and Rs. 170 per quintal.

Ready *gur* recorded a steadier trend during the week, thanks to brisk buying support from the consuming areas of Gujarat, Rajasthan, Saurashtra and Bihar. Stocks of dry stuff were small and stockists were anxious sellers of the dry-wet stocks, the quality of which was being further adversely affected due to the heavy monsoon. With a good cane crop in sight and the prevailing high prices of the commodity due to increased demand in the face of dwindling stock position, the new *gur* production season would start early by next month-end. *Shakker* was very much in demand, due to tight sugar supply position, and prices improved fractionally. Week-end prices (in rupees per 40 kilogram) were:—*Gur* superior 37.50 to 38, *dara* 36.25, *kotha* selected 37.75, dry-wet 33.75, wet 31, *shakker* 41 to 42.50.

Ready *gur* was marked up in the Muzaffarnagar market owing to paucity of dry stocks. *Chaku* quality improved by Rs. 3 per 40 kilogram and *laddoo* and *pansera* quality also sought higher levels. Arrivals from rural areas were poor during the week, owing to heavy rains. Total *gur* arrivals during the season were 14.88 lakh maunds and local stocks amounted to 50,000 maunds. Week-end prices (in rupees per 40 kilogram) were:—*Chaku* dry 44 to 45, wet 33 to 35, *pansera* dry-wet 33 to 35, *laddoo* 38 to 42.50, *shakker* 39 to 42.50.

AUGUST CONTRACT EXPIRES

(From Our Own Correspondent)

BOMBAY, 26*th August*

The payment crisis that had developed towards the end of last week continued through the major part of the week under review. Trading in cotton futures, therefore, was confined to the last three days only. With August contract having matured on 25th inst. after a hectic career in its last days, the futures section presented a dull picture, with business in the distant contract March 1965 being of a limited nature. The basic undertone of the running contract was rather firm, though the upward trend was restrained, because of upcountry selling on account of fair weather reports. A leading bull operator is said to have accumulated a long position to the extent of about 35,000 bales.

The chief event of the week was, of course, the end of the career of the I.C.C. Jarilla August 1964, which went off the board of the East India Cotton Association Limited on 25th inst. The erstwhile contract was unique in certain respects. It attracted tenders aggregating 36,300 bales, the greatest for the last ten years. Opening at Rs. 737.25 on 13th April 1964, the Contract declined to Rs. 716 on 6th May, on account of arrival of large quantities of U.S. cotton under P.L. 480. Afterwards, the contract showed an uninterrupted upward trend and reached its highest at Rs. 749.25, during the non-delivery period on 25th July. During the delivery period, the Contract was involved in a strong bear-bull tussle, resulting in an acute payment crisis. It shot up to Rs. 784.75, the permissible upper limit for the week under review, before running out at Rs. 784, that is, Rs. 14 below the official ceiling of Rs. 798. In unofficial dealings on that day, however, it is understood to have changed hands at Rs. 792 to Rs. 794.

Tenders issued on the last day of the Contract were 11,150 bales bringing the total tenders issued against it to 36,300 bales.

Jarilla March 1965 Contract which had closed last week at its nominal rate of Rs. 732, opened higher at Rs. 732.50 and, after touching a new high of Rs. 734.75 during the course of trading today, closed at Rs. 734.25, showing a net gain of Rs. 2.25 over the week.

There was nothing outstanding in the Sewri spot market this week. Mills transacted business in Lakshmi new, Bijapur new, L.147, Pandharpur new, Khandesh and Kalyan ready cottons. The following are the rates in respect of certain important varieties.

Cotton gin L.147 Rs. 1,280; Dhragaon Rs. 940; Baramati new Rs. 1,160; Pandharpur new Rs. 1,141; Bijapur Lakshmi Rs. 1,033 K; Ganganagar 815 K Rs. 820; Kadi Kalyan Rs. 925 and Nagar Co2 Rs. 1,120.

There have been two major Government policy announcements during the week, one pertaining to exports in the season 1964-65 and the other to purchases of new crop cotton by the mills. The export policy allows free licensing of Bengal *deshi* cotton. It has done away with certain cumbersome procedures like performance guarantee and individual ceilings. Although the policy has been generally welcomed in market circles, as it is characterised by a welcome departure from the past, there is a feeling of disappointment that the Government has not given any relief in the export duty on cotton and sales tax on cotton destined for export. The demand from abroad for Bengal *deshi* has almost ceased and prices have gone down. After ruling firm at Rs. 737-738 till the end of the last week, this variety has gone down to Rs. 735 at the time of writing. Some in the market are, however, still hopeful of the Government ultimately cutting down in export duty; in fact, they are expecting an official announcement early next week.

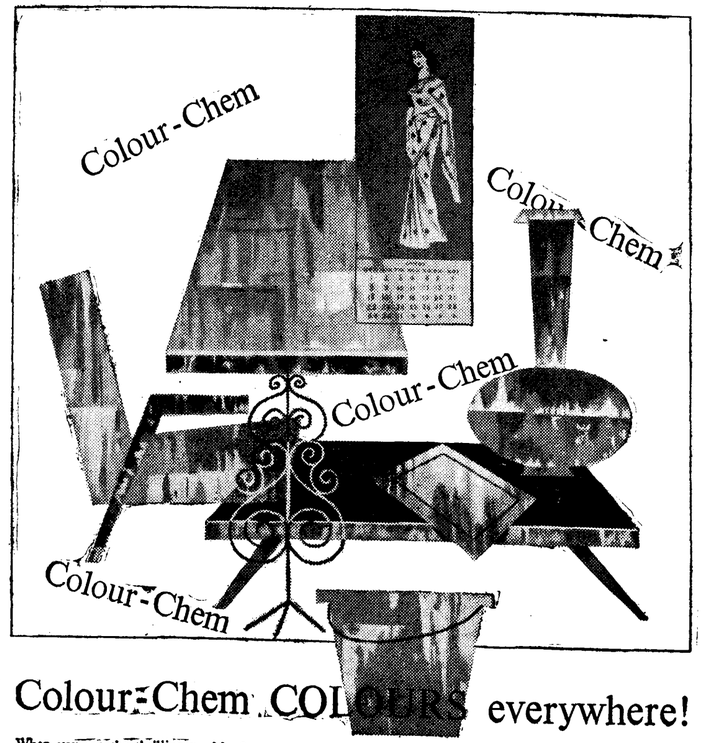
Another development is a notification by the Textile Commissioner permitting mills to make purchases of Indian cotton equivalent to their consumption during the current season which is about to end now. In other words, the mills have been granted a 100 per cent quota for buying indigenous cotton. A stipulation for compulsory purchase of Cambodia A and B cotton to the extent of 7½ per cent of consumption of Indian cotton has been added for those mills which have been using this variety during the three years ending 31st August 1964. Trade has welcomed the allocation of a liberal quota for indigenous cotton, but no immediate reaction is visible price-wise, as the mills have already filled their requirements for the next four or five months.

BANKING

(*Concluded from page* 350)

in the demands of workers for more wages. In fact, the bankers as a whole, with the single exception of the Bank of India, have turned a blind eye to the possibilities of growth and development of their business by employing a contented and well-paid staff. There is no doubt at all about the large and medium-sized banks' capacity to pay a decent wage to their employees. Nor can one question the view that a much more efficient banking system could be built up and much healthier and harmonious industrial relations be evolved if the big banks at least were to pay decent salaries to their staff, taking into account the needs of middle and lower- middle class.

Two final comments on the subject. The employees have now achieved some of their needs that were just and reasonable, even if the means and methods adopted by them were unjustified and unreasonable. The bankers have willingly paid what they think is within their paying capacity. But the Government has lost on all counts, through its indifference, indecisiveness and lack of clear price and income policies. Its failure to hold the price line has unleashed a spurt of wage increases which will ultimately increase the pressures on prices and may largely nullify the gains made by employees. Secondly, there are bankers and their advisers with a legalistic bent of mind, who may want to blow up the goodwill created by the negotiated settlement by pointing out that it has no legal basis. After all, legal basis or no, a negotiated settlement is a negotiated settlement. It is as much binding on the parties as a legal one. Further, experience has shown that neither the bankers nor the Government have any capacity to enforce even a legal agreement against the wishes of their employees. Bankers will, therefore, do well to consider this matter wisely and diligently work hard for the emergence of a new era of understanding and amity with their workers.



Colour-Chem COLOURS everywhere!

When you see the thrilling world of man-made colours around you—spectacular prints on your fabrics, colourful inks in your magazines, pleasing paints in the interior of your home, fascinating tapestry and the attractive furnishings of your drawing room, plastic balls in the hands of your children—remember that COLOUR-CHEM, India's leading makers of Pigment Colours, is very much a part of your daily life.

ABBREVIATIONS. N—Nominal. (J) Income-tax free.
A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. † Bombay State Transport.
†† Rate of Interest reduced from 6 to 3 per cent with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent with effect from 1st April 1963.
—Interest free for first 12 years. t—Interest free for first 7 years. * Loans held entirely by the Trustees.
M—At the option of the Government after three months' notice. 2—Ex Twelve instalments but inclusive of accrued interest.
T—Liability taken over by Madhya Pradesh. ● Total amount invested in Gold Bonds up to 18th February 1963. D—Domestic Loan not marketable.
E—On September 1956 or later at the option of the Government after three months' notice.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. C.R.—Cum. Right. XR.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : ' A ' shares and ' B ' shares—these are indicated by the same letters ' A ' and ' B ' under the columns ' Paid-up Ordinary Capital ' and ' Paid-up ' per share.

Accounts :— Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

TREND OF SHARES

BULLISH FERVOUR MAINTAINED

(From Our Own Correspondent)

BOMBAY, *27th August*

LAST week's buoyancy in shares was fully maintained during the current week and the market made further headway in its upward journey. In this process, many shares not only crossed their early July levels but registered new highs in the current bull phase. The volume of business was heavy and the tendency for the turnover to increase with the rise in prices was an unmistakable proof that, basically, the market remained strong.

Sentiment in the market continued to be induced by the series of moves which the Prime Minister is reported to have initiated in order to get a firmer grip over the present inflationary tendencies. The Prime Minister's earlier decision to prune expenditure and to put off projects which were not very essential at present had created a favourable impression. On top of this came the news on Thursday that Mr. Lal Bahadur Shastri had asked the Planning Commission to study the impact of taxation on the price trends and this was taken as an indication that the Government appreciated the need for a new approach to fiscal policy in the light of recent experience. Further, the loan from the Ex-Im. Bank and the proposed change in the World Bank's charter which would enable the International Development Association to expand its operations also strengthened the bullish sentiment.

Steel shares were, however, in the background during most of the week under review, except that Indian Iron shot up to Rs. 29 at the close on Thursday the 27th inst. But it must be pointed out that Indian Iron had touched a new high level of Rs. 28.25 in the kerb on Friday the 21st inst. Tata Steel closed unchanged over the previous week and the comparatively quiet tendency in them was attributed to precautionary liquidation on the part of one of the leading bull operators.

There were many others which shot up to establish new high levels. The most notable among them were Telco and Kohinoor, not to speak of Standard, Tata Chemicals and Hindustan Motors. Telco crossed the pre-Budget level of Rs. 317.50 to be quoted at Rs. 321.50, though the closing was subdued at Rs. 316. Sentiment in Telco was helped by the decision to issue right shares at a premium of just Rs. 30, as against the earlier proposal of Rs. 50. Moreover, the hope expressed by the Chairman at the annual meeting last week that it might be possible to issue bonus shares at a future date by capitalising the share premium account enthused the market. Later reaction was due to profit-taking which was not surprising in view of the steep rise. Kohinoor, rather in the rear these days, came to the fore and in hectic activity the shares were bid up to around Rs. 339.50 although the closing level was four points down on this at Rs. 335.50. Apart from favourable contang charges, support to Kohinoor came from knowledgeable sources. It may, however, be mentioned that Kohinoor is yet far behind its November 1963 level of Rs. 349 and its bull market top of Rs. 372 in 1961.

Also prominent in the textiles section were Century and Standard. Though Century reacted at the close to Rs. 642.50, the shares had been bid up during the week to Rs. 646 in the kerb on Tuesday and to Rs. 648 in the official session on Thursday, again a new high level. Bullish fervour in Century was helped by hopes of a higher interim dividend as well as a bonus issue. Standard shot up to Rs. 696 on brisk speculative and influential buying and it might be mentioned here that the scrip has pierced its July top of Rs. 675, belatedly though. Activity in Svadeshi was not so brisk as it used to be in the week before last but the shares were well held at Rs. 266.50. Tata Mill was another notable counter in the textile section and moved up to Rs. 58 at the close on sustained support. Dawn was quiet, as of the bare maintenance of dividend disappointed a market which was looking for a rise. National Rayon closed the week barely steady at Rs. 384.50, after touching a high of Rs. 390 earlier. The current easiness is due presumably to the difficult situation in which the yarn industry is finding itself at present. Also, the expected cut in the excise duty has not come as yet.

The Automobile section also attracted considerable attention. Hindustan Motors reached a new high at Rs. 19.44 (kerb Rs. 19.48), while Premier Auto were bid up to Rs. 109.25 which meant a gain of four points over last week. Telco has already been discussed at length.

Along with Century and National Rayon, other rayon shares were also quiet. Despite good working, Gwalior Rayon failed to attract fresh support and closed the week with a fractional rise of 50 P at Rs. 42.50 while Indian Rayon was distinctly subdued at Rs. 57 against Rs. 59.20 of last week. Baroda Rayon was quiet at Rs. 72, but South India Viscose was exceptionally firm and gained five points to close the week at Rs. 121.

In Engineerings, Voltas attracted considerable support to gain more than 12 points at Rs. 271.50. However, a much talked of scrip was Larsen and Toubro; it touched a high level of Rs. 23.20 on Tuesday. Mukand Iron and Premier Construction also moved to higher ground at Rs. 19.20 and Rs. 197, respectively.

West Coast Paper, among paper shares, came in for good support to record a 6-point gain on balance at Rs. 172. Sirpur was also better at Rs. 11.64. Tyre shares were almost neglected and went unquoted on Thursday although Premier Tyres among them came out with good working results for the accounting period to March. The Company seems to have turned the corner and although the net profit is a modest figure of a little more than Rs. 88,000 it should be noted that it has provided for depreciation up-to-date. Its shareholders however look forward to the day when they would be given dividends but looking to the latest balance-sheet that welcome day should not be very far off. Tata Chemicals which touched a new peak (Rs. 19.72 the highest on Thursday) during the week was said to have been supported in expectation of good financial results. Sugar shares returned to activity, with Belapur and Phaltan in the lead at Rs. 226 against Rs. 224 of last week and Rs. 110 against Rs. 106.50 respectively.

Special mention must be made of electricity shares, among which all Tata group recorded a handsome gain following a one per cent rise in the dividend. Andhra Valley have jumped up from Rs. 1,110 to Rs. 1,212.50, Tata Hydro from Rs. 119 to Rs. 126 and Tata Power from Rs. 1,192.50 to Rs. 1,267.50. All the three companies have reported an excellent increase in their profits, as well as in their appropriations to reserves.

Another interesting point of trading during the week was the emergence into the limelight of many shares which were hitherto in the background. This is an unmistakable sign of a market which is set for a rise. It was also satisfactory to note that the cash section, many members of which have been discussed above, was more active during the week than before. Others among these were Sandvik Asia at Rs. 171, Sankey wheels at Rs. 12.76 and Dhrangadhra Chemicals at Rs. 126.

* * * *

At the time of writing, Calcutta was steady, despite settlement considerations. Indian Iron and Hindustan Motors were the leading counters there while Guest, Keen, Williams and Textile Machinery improved on balance. J. K. Steel and Kumardhubi attracted scattered support. Jute shares were dull, although Anglo-India was in demand. Birla eased on long liquidation. Mill shares were devoid of interest. In coals, Burrakur and Bengal were steady.

* * * *

In Madras, selected forward scrips came in for enquiry with South India Viscose and Madura being the highlights. Firmness in Deccan Sugar was another notable feature. Plantings were active and business was well spread. Mettur Chemicals and Aluminium Industries were the other active shares.

PREMIER TYRES LTD.

The performance of the Premier Tyres Ltd. (Managing Agents: Indo-Orient Agencies Private Ltd., Bombay) during the fifteen months ended 31st March 1964, which represent the Company's first full period of commercial production, is quite encouraging. On the total sales amounting to Rs. 3.82 crores, the Company has earned a gross profit of Rs. 21.63 lakhs. After providing Rs. 50,000 for Managing Agents' commission and Rs. 20.25 lakhs for depreciation, the net profit comes to Rs. 88.488 which has been used to reduce the previous years' debit balance of Rs. 58.28 lakhs, so that the debit balance to be wiped out is Rs. 57.40 lakhs. The Company has not made any provision for development rebate reserve and the arrears of preference dividends aggregate Rs. 13.38 lakhs. The working results of the Company for the first four months of the current year are better than last year, according to Mr. Chandrakant S. Desai, a Director of the Company.

At present, the Company is working two shifts, the actual utilisation of capacity (three-shift basis) being 70 per cent. As against the installed capacity of 800 truck tyres and 200 passenger car tyres per day, the actual daily output of the factory is now of the order of 500 truck tyres and 100 passenger car tyres. In another three months, the factory is expected to reach full capacity production. The Company is proposing to diversify production by undertaking the manufacture of V-belts, conveyor belts and scooter tyres.

The Company's foreign collaborators, the U.S. Rubber Company, continue to take a keen interest in seeing to it that the quality of the products manufactured is second to none. The Company's products are said to have been well received by vehicle manufacturers as original equipment, the State Transport and other Government and semi-Government organisations.

The Company's paid-up capital (150,000 equity shares of Rs. 100 each and 50,000 6½ per cent tax-free cumulative redeemable preference shares of Rs. 100 each), together with the development rebate reserve of Rs. 24.85 lakhs, brings the Company's own funds to Rs. 223.79 lakhs. The gross block, which has increased during the fifteen-month period under review from Rs 252.18 lakhs to Rs. 264.51 lakhs, has been written down to Rs. 224.94 lakhs.

NEW PUBLICATIONS

Rail and Road Transport in India. By Dr. M. O. Mathew, Head of Commerce Department, University of Annamalai. Published by Scientific Book Agency, 103, Netaji Subhash Road, Calcutta-1. Pages: 226, Price: Rs. 18.

DESPITE the fact that economic planning in this country accords a very high place to railways and roadways which serve as lifelines of trade and commerce, very few studies have been undertaken on the size and organisation of transport units. Seen in this context, Dr. Mathew's book is thought-provoking and is a pioneering work in this field. It is a study regarding the application of the theory of opumum size in the transport industry. Optimum size has been defined in the economic text books as a norm towards which every industry tends to expand, but beyond which production becomes less profitable. Transport industry is peculiar in that it is a public utility service in which the evolution of size is influenced by governmental regulations. In this book it has been stressed by the author that the degree of economy and efficiency of the transport industry as a whole is determined by organisational considerations in the context of unit sizes. The author's analysis of concepts like operational ratio and traffic density constitutes an interesting study. There cannot be a better appraisal of Dr. Mathew's treatise than what has been said by Prof. M. H. Gopal, Member, Railway Rates Tribunal, in his foreword. He remarks: "As in all true research, he (Dr. Mathew) has chosen a small segment of the problem instead of trying to paint impressionistically on a large canvas. He must, therefore, be congratulated on his attempt and it may be hoped that his lead in analysis in depth will be followed by other scholars."

Census of India, Vol. X, Maharashtra: Part II-B(ii). General Economic Tables—Occupational Classification. Published by the Manager of Publications, Delhi-8. Pages: 511. Price: Rs. 7.35.

This part of the Census Report for Maharashtra gives the occupational data for workers in the State. The exhaustive material on the occupational classification of workers other than those engaged in cultivation is arranged in two tables. They are presented division-wise and district-wise, cross-tabulated by sex, broad industrial categories, age-groups and educational levels. The report reveals that 57 lakh workers are to be found in the non-farm sector. This means that about 14.4 per cent of the State's population of about 396 lakhs is economically active in this sector. Like any other census publication, this report provides a wealth of data for research workers, economists and sociologists.

Bombay Cotton Annual 1962-63. Compiled and published by D. G. Damle, Secretary, East India Cotton Association Limited, Bombay. Pages: 411. Price: Rs. 7.50.

The Bombay Cotton Annual, the forty-fourth edition of which has just been published by the East India Cotton Association, can undoubtedly claim to be a comprehensive account on trading in cotton and laws governing the same. The manual contains statistical information regarding cotton crops, imports, exports, stocks and consumption, prices and forward deals in the commodity. The present edition contains the latest developments regarding cotton and incorporates, *inter alia*, the texts of various Acts on cotton and amendments thereto, and also Union Government notifications. Mention may also be made of the Madras Cotton Control Order, 1962 and Superior Cotton Production and Certification Order, 1962. A valuable addition in the latest issue of the Cotton Annual is a chapter on glossary of cotton terms. The publication is by far the most authoritative compilation of various items of interest for all those connected with the cotton trade.

The Iron and Steel Industry in India. By M. R. Chaudhuri, Professor and Head of Department of Geography, Vidyasagar College for Women, Calcutta-6. Published by Indian Economic-Geographic Studies, Calcutta. Pages: 196. Price: Rs. 20.

The need for development of iron and steel industry in a developing country like India cannot be overemphasised. Professor Chaudhuri's book is a geo-economic study of the industry and examines critically and meticulously the raw material pattern, processes and equipment, problems and prospects of dispersal and development of steel centres and future lines of progress in this field. An interesting feature of the book is a historical-geographical approach. The book should prove useful to students of economics and engineering. The author holds that, though till a decade back the progress of the industry was very slow—in 1954 India produced only 1.7 million tons of steel as against total iron ore deposits in this country to the tune of 21,000 million tons, representing 70 per cent of total Asian deposits—at present it is in the midst of a most remarkable and spectacular expansion in its history. The author feels doubtful whether the target of 10 million tons will be achieved by 1965-66 and advocates long-term planning. Referring to the problems and prospects of the industry in chapter eleven, the writer observes: "Careful planning and development of the steel industry is the need of the time keeping in view the needs and resources of the country." An addition of appendices on ancillary industries and general statistics increase the usefulness of the book.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."

SHIPPING POISED FOR DYNAMIC GROWTH

INDIAN shipping, which acquired international recognition by crossing the coveted one-million-ton mark a couple of years ago, has an operating tonnage of 1.3 million now. With the orders already placed and the deliveries expected during the rest of the third Plan period, the aggregate tonnage will be about 1.5 million in 1965-66. This tonnage growth—from 857,000 G.R.T. in 1960-61 to 1,500,000 G.R.T. in the last year of the current Plan—is all the more remarkable, considering that the Plan's target was originally fixed at only 1.1 million tons and subsequently raised to 1.3 million tons without increasing the original rupee allotment of Rs. 51 crores. But that is not all, for, without exceeding this rupee allotment, further firm orders have already been placed, on deferred payment terms, for new constructions or acquisitions to the tune of 900,000 G.R.T. There are thus two revised higher targets now for the third Plan—one relating to an operating tonnage of 1.5 million and the other (2.4 million) covering the operating tonnage and the firm orders for new constructions. These targets eloquently indicate that the growth of Indian shipping will be beyond all expectations. And they also bring out, incidentally, that shipping is perhaps the only sector in which growth has greatly exceeded the target, while in all or most other sectors there has been to date no comparable progress towards the fulfilment of their respective targets.

The credit for this achievement may be claimed equally by the private sector and the public sector in shipping. That the two sectors together have made the national merchant fleet more balanced by adding to it modern bulk carriers, large-size super-tankers and fast-moving liner ships is even more significant in the context of the country's growing international trade. The fact that today about 18 per cent of India's foreign trade is handled by Indian vessels, as compared with barely nine per cent three years ago, will be noted with pride and joy in this connection. This happy outcome would not have been possible if the Government had blindly followed the dog-in-the-manger policy advocated by some champions of shipping in the private sector. Indeed, the growth would have been even more striking and gainful to the economy as a whole had the Government been more daring in associating foreign capital and collaboration in building up the mercantile marine.

It is success of the kind noted above that will pave the way for still greater success in the years to come by encouraging the Government and the shipping industry to set their sights high. The signs are not wanting that the Government, heartened by the performance of the shipping sector, is already thinking in terms of expanding the country's tonnage in a big way. The Prime Minister, Mr. Lal Bahadur Shastri, for instance, has just told a meeting of the National Shipping Board that it would be worthwhile to have the objective of carrying at least 50 per cent of India's overseas trade in Indian bottoms so as to save a lot of foreign exchange. This objective, according to his estimate, could be achieved with an aggregate tonnage of 4.5 million. He has, therefore, suggested that, while expansion of foreign trade is going on, the country should try to increase the present tonnage "in a big way." Although he is not quite sure what the fourth Plan shipping target would be, his own view is that it should be not less than 3.0 to 3.5 million tons. One line of thinking in the Planning Commission and the Union Transport Ministry, however, seems to favour a fourth Plan target of four million G.R.T., of which 2.2 million G.R.T. will represent additional tonnage on the assumption that 1.8 million tons will be in actual operation by the end of the third Plan, as compared with the revised target of 1.5 million tons. The fourth Plan target, it is believed, can be achieved with an outlay of no more than Rs. 225 crores (with a foreign exchange component of Rs. 95 crores), if new acquisitions are made on deferred payment basis as at present, or Rs. 590 crores (with a foreign exchange component of Rs. 280 crores), if no deferred payments are involved. Both the estimates include Rs. 83 crores (with a foreign exchange component of Rs. 49 crores) on account of ships to be built indigenously.

As the proposed additional tonnage will save or earn foreign exchange to the tune of an estimated Rs. 37 crores per annum, the entire foreign exchange cost of shipping expansion in the fourth Plan can be recouped in about eight years. The proposed target does not seem to be over-ambitious against the background of achievement in the third Plan period. If the third Plan will have doubled the country's tonnage, the fourth Plan, too, can achieve similar doubling. The target is also not over-ambitious in the light of requirements, for, even with an aggregate tonnage of four million, the twin objective of carrying 100 per cent (dry cargo) of the coastal trade and 50 per cent of the overseas trade in Indian bottoms cannot be fully achieved. Whatever target is ultimately laid down, there can at least be no doubt that Mr. Lal Bahadur Shastri, who had done so much, in his former capacity as Union Transport Minister, to ensure the rapid expansion of national shipping, will do his best to further a cause so very dear to his heart.

The private sector in shipping would, therefore, do well to strengthen the Prime Minister's hands by taking a realistic stand on foreign capital participation and official encouragement to enterprising companies, old or new. This is all the more necessary, because the Prime Minister himself expects the private shipping companies, whose contribution to the growth of shipping has won his unqualified appreciation, to expand their tonnage much further. As he looks forward not to competition but to "complete co-operation and co-ordination between the public sector and the private sector in the development of shipping," the shipping industry should welcome expansion in the secure belief that each and every company will fare well, provided its operations are efficient. It would not be in good grace if any section of the private sector continues to find fault with the authorities for having given greater encouragement to newer entrants. After all, such encouragement has been given to more enterprising companies in the private sector, and there is nothing to prevent others from being equally enterprising and thereby laying claim to similar encouragement. As Mr. Vasant Sheth, a leading young shipowner, has just said, the Government has shown boldness and dynamism in achieving sizable shipping expansion during the third Plan period and the National Shipping Board should take the cue and vitalise itself.

But Mr. Vasant Sheth has also wisely added that the Government should invariably refer all important shipping matters, problems and policies to the Board and seek its guidance in the interest of co-ordinated development and of co-operation between the Government, the shipping industry and the public. Much of the kind of misunderstanding that has arisen in recent months between the Government and a large section of the private sector in shipping will not arise in future, if two pieces of advice given by Mr. Vasant Sheth are accepted by the authorities. One of these is that if, for any reason, it is not possible for the Government to accept the Board's suggestions, the latter should be advised of the reasons

underlying the Government's action. And the other is that, if any new schemes for expansion (whether in the public or in the private sector) are received or thought of by the Government for prompt attention and implementation, the Government should at least keep the Board advised in regard to such schemes. If the Government can act upon this advice, it will be very good indeed, for, then, the representatives of private shipping companies on the Board will appreciate the Government's point of view better and feel encouraged to cooperate more wholeheartedly in the implementation of policies governing expansion in both the public and private sectors. Again, if the Prime Minister's call for "complete co-operation and co-ordination between the public sector and the private sector" means anything, taking the National Shipping Board into confidence on all shipping matters is necessary to ensure such co-operation and co-ordination.

Of course, for their part, the representatives of private shipping companies, especially of the older ones, on the Board should also reciprocate by taking an expansionist view of things, by discarding their obstructive approach to enterprising newcomers and by adopting a realistic line on foreign capital participation and the like. One is prompted to give this advice, because in the past some of them took an extremely doctrinaire stand on these issues and tried their best to prevent the entry of new entrepreneurs by resorting to pressure tactics such as powerful lobbying in Parliament. If, therefore, the Government fought shy of consulting the Board on delicate issues, the entire blame cannot be laid at its (the Government's) door. Mutual understanding between the Government and the Board is necessary and this will be possible only if all the members of the Board realise that they are members of only an advisory body. Given this understanding, there is every possibility of the latter's recommendations being accepted by the former. For instance, the Board's latest recommendation that the public and private sectors should be given equal opportunities in the expansion of national shipping, that both the sectors should be enabled to expand their activities on overseas trade routes and that the two sectors should co-operate with each other is a sensible one. This is the kind of recommendation that will appeal to the Prime Minister who has no particular ideological bias in favour of the public sector, who has always looked at things from the practical angle and who attaches the highest importance to the expansion of shipping as a "national sector." It may not also be too much to hope that the National Shipping Board's future recommendations on the fourth Plan shipping target, coastal shipping, policy in regard to the public sector *vis-a-vis* the private sector, mechanisation of ports, port development and problems of personnel would be on realistic lines free from doctrinairism.

PLANTERS' PROBLEMS

IT is, indeed, creditable that, despite heavy odds, the plantation industry in South India has endeavoured its best to achieve a notable expansion in output since Independence. The annual production of tea, for instance, has doubled, from 98 million lbs. in 1947 to 195 million lbs., with an increase of only 11 per cent in area. The production of coffee has also gone up from 14,900 metric tonnes to over 67,000 tonnes (the quantity so far supplied by growers to the coffee pool from the 1963-64 crop) and that of rubber from 16,713 tonnes to 37,200 tonnes (last year). These production achievements, as Mr. J. R. Henshaw, the retiring President of the United Planters Association of Southern India (U.P.A.S.I.), stated in his speech at the seventy-first annual general meeting of the Association held at Coonoor on Tuesday this week, are the result of (*a*) good organisation, (*b*) a forward-looking and competent management, and (*c*) a rational and scientific approach to the problems of the field and the plants. In short, the plantation industry in the South provides one more striking example of the achievements that are possible on the agricultural front, given the leadership, finance and application of scientific methods of cultivation.

The production performance of South Indian plantations, remarkable though it is, should not give rise to any sense of complacency, for the need for augmenting the output of plantation crops is by no means over. With the continuously rising trend of population and improving living standards, the demand for tea, coffee and other beverages is bound to go up markedly in the coming years. There is, then, the exigency of earning the much needed foreign exchange through exports. Tea, by the way, is India's second largest earner of foreign exchange; the actual exports (in terms of value) in the financial year 1963-64 amounted to over Rs. 123 crores, representing almost one-sixth of the aggregate exports. In the same year, coffee earned a foreign exchange of Rs. 8.30 crores. Rubber is a strategic commodity widely used not only in the transport industry but also in a large number of other industries which will continue to expand. Since there is a wide gap between production and demand, the country is currently spending quite a bit of foreign exchange every year on imports of rubber (natural and synthetic).

Appropriately enough, the task of securing further increases in production of plantation crops was the main theme of the speech of Mr. Henshaw. It was refreshing to find that he did not harp, as was done by some of his predecessors and fellow planters, on the old F.A.O. theme of the world being inundated with huge quantities of surplus tea by 1965, a theme to which the U.S. Department of Agriculture has just lent weighty support. The experts of this Department are of the view that, although exports and internal consumption thus far have gained sufficiently to absorb the mounting production, "the long-time threat of an oversupply still lingers." The big question now, according to them, is: "Can the large 1964 harvest and future bumper crops be easily marketed or will stocks begin to pile up, as has been the case with coffee?" Undeterred by such recurring pessimistic forecasts from abroad, Mr. Henshaw was bold enough to say: "We are with the Government in its objective of larger production and exports." But he hastened, very rightly, to urge the Government to take remedial action for eliminating many of the obstacles lying in the way of increased production. He mentioned three obstacles, in particular, namely, heavy incidence of taxation, irrational labour legislation and shortsighted land policy. "It is," to quote him, "a self-defeating policy to pursue a tax policy which discourages expansion of production, a labour policy which appreciably increases costs and a land policy which stagnates the industry." All these policies have been having a very disquieting effect on the finances of plantation companies and, their impact on the future growth of the industry would be quite marked, unless they are corrected in good time. Even now, most of the U.P.A.S.I. member-companies, one is told, are working on large overdrafts, the only measure of meeting the day-to-day expenses.

There is certainly no exaggeration in the statement of Mr. Henshaw that the cumulative burden of competing taxation from the Centre and the States is starving the plantation industry of the resources so desperately needed and in his warning that, until this problem is tackled, progress, despite all efforts, will be limited. That the plantation industry has not fared as well as it should have is borne out by the Reserve Bank's analysis of the financial position of 1,333 joint-stock companies as of 1962-63. Here are some of the relevant figures:

	Tea planta-tions	*Coffee planta-tions*	*Rubber planta-tions*
Net fixed assets formation (%).	6.3	1.9	3.2
Net capital formation (%) ..	9.1	0.8	4.9
Profits after tax as % of net worth	5.9	7.5	8.0
Dividends as % of net worth..	5.2	6.5	6.9
Tax provision as % of profits before tax	61.4	54.1	49.4
Profits retained as % of profits before tax	4.4	6.6	7.0

Considering that the plantation industry is predominantly an agricultural industry and that tea and coffee plants are in the nature of wasting assets, it is unfortunate that the rate of States' agricultural income-tax payable by the industry is much higher than the rates of Central income-tax. The whole of the incomes from rubber and coffee and 60 per cent of the income from tea are subject to this tax. And what is worse, none of the concessions of rebates, deductions and incentives extended by the Central Income-tax Act is allowed at least in two States. Mr. C. Subramaniam, Union Minister for Food and Agriculture, who inaugurated the U.P.A.S.I. meeting, himself admitted that there was some confusion in the different spheres (of taxation) represented by States as well as by the Centre. He, therefore, suggested the convening of a conference of State Finance Ministers to evolve a uniform pattern of taxation. Uniformity is very important, but equally important is the need for reducing the heavy incidence of agricultural income-tax. In any case, the maximum rate of tax should not exceed the amount suggested by Mr. Henshaw, namely, 40 paise in the rupee.

The stiff rate of agricultural income-tax is not the only fiscal disability affecting the plantation industry. For there are several other disabilities too. Mention, for instance, may be made of disallowance of depreciation on field assets. Although tea and coffee plants age and soils become exhausted, no depreciation is allowed on the planted assets and this factor, according to Mr. Henshaw, lowers the ability of the industry to find the necessary resources for replacement. When the Tariff Commission has clearly conceded grant of allowance for depreciation against capital consumption in the case of rubber trees which have a limited economic life, one fails to understand the reason why similar depreciation allowances should not be conceded to tea, coffee and cardamom plantations which also have a limited economic life. Then, there is the question of treating the expenditure on new plantations for tax purposes. The planters would like such expenditure on all new plantations as a revenue expenditure, instead of capital expenditure. But this is asking for too much. Mr. Henshaw himself seems to realise this point. Hence his alternative suggestion that a development rebate at 50 per cent of the cost incurred should be allowed on all new plantings, whether replacements or extensions. This proposition sounds reasonable and deserves to be accepted by the authorities at the Centre and in the States.

Mr. Henshaw's plea for the grant of a similar 50 per cent development rebate on labour welfare expenditure is also not unjustified. This expenditure forms a large portion of the fixed assets of planting companies. In some cases, it is said, the expenditure exceeds the cost of established plantations. Since the resources diverted to meet this expenditure are not an investment, as there is no financial return on it, it cannot be called for from the public. It has, therefore, to come out of current savings. Also unexceptionable is Mr. Henshaw's plea for a rebate of excise duty on tea actually exported or, alternatively, for the sake of administrative convenience, a flat reduction in the rate of excise duty. If every other commodity subject to excise duty is entitled to a refund of the duty when it is exported, there is no reason why tea should be denied this facility.

The point to be borne in mind while considering the suggestions of Mr. Henshaw for fiscal relief is this: What the plantation industry urgently needs is not so much the supply of funds in the form of short and long-term loans as a more reasonable tax structure which will enable the industry to thrive on self-financing and to attract adequate risk capital out of the genuine savings of the people. After all, inasmuch as the industry's indebtedness is already heavy, any additional loans will only mean increasing its servicing and repayment obligations, which in turn will add further to costs. If the industry's demand for suitable tax relief were accepted, the problem of finance, as Mr. Henshaw rightly pointed out, would become easily more tractable. Mr. Subramaniam certainly struck the right background note when he said: "The plantation industry has been a pioneer in the export field and has earned the much-needed foreign exchange. I am sure the Union Finance Ministry and the State Governments would keep this in mind and would not kill the goose that lays the golden egg." This is exactly the point which is conveniently ignored by the authorities in framing the fiscal policies.

To the extent the plantation industry is accorded tax concessions, there will, of course, be a loss of revenue to the State exchequer. But the loss will be more than made good by the stimulus to increased production that the tax concessions give. In fact, the States, as Mr. Henshaw very pertinently remarked, stand to gain progressively more from an expanding industry with a broader tax base than from high levies on a stagnant industry, while the Centre will gain in earnings of that valuable commodity, foreign exchange. This consideration apart, one should not ignore the vital role that the plantation industry plays in the country's economy. Besides being a stable earner of foreign exchange—the industry spends only a very small percentage of its export receipts to maintain its essential imports —it is a valuable source of revenue to the State and an employer of a vast number of persons. Is the industry, then, not entitled to ask for a more understanding and sympathetic response to its problems from those who preside over its destinies?

MARKET GOSSIP

Bonus For Workers

THERE is no doubt that the Government must have been highly embarrassed by the recommendations of the Bonus Commission, as witness the long time (a little over 7½ months) taken by it to make up its mind. If implemented in full as they are, they would cripple the growth of industry in both the sectors, besides adding strength to the vicious spiral of inflation. But at the same time, they have given a fresh impetus to the rising expectation of workers. In these circumstances, what else could it do except to follow the middle path and have the satisfaction of pleasing neither employers nor employees?

Really speaking, the workers have fared very well, for the Government has accepted almost all the major recommendations of the Commission. All along, the bonus has been related to basic wages only; hereafter, it will be related to both basic wages and dearness allowance. So the higher the cost of living, the greater will be the bonus. The workers will get 60 per cent of the available surplus subject to a maximum of 20 per cent of their annual income in any one year. If the companies are prosperous, as most of them are these days, they are assured of a high level of bonus every year, as the surplus of their share in profit in a year is to be carried forward and would be available for adjustment in lean years. They will get their bonus whether they work hard or not, because it is not related to productivity or efficiency. Even if a company does not make any profit, they will get a minimum bonus equivalent to 4 per cent of their basic wages and dearness allowance or Rs. 40 whichever is higher. The workers have, therefore, the best of both worlds. It would accordingly be not in their real interest to listen to the wrong advice of some of their leaders and go through the hardship of staging demonstrations, striking work and losing wages.

The only ground on which they can follow their leaders is jealousy. For all that the Government has done in modifying the Commission's recommendations is to increase the quantum of the shareholders' share in the surplus and to allow as a prior charge against the profit all direct taxes that are payable and tax concessions given to industries in order to enable them to build up reserves for development. In both these respects, the majority of the Commission was niggardly and shortsighted. It is in the interests of workers themselves that the industries in which they are engaged are able to grow and remain financially sound. Neither of this will be possible, if the investors' share in profit is unduly deflated and if adequate reserves are not built up. The workers need not have any misgivings that the purposes for which tax concessions are given—and there are not many in any case—would be misused by the managements, for the Government proposes to ensure by law that no such thing happens.

The majority of the Bonus Commission had recommended that the shareholders' prior share should be arrived at as follows:

> 7 per cent taxable on paid-up equity capital of all companies; the return on preference capital to be at the actual rate payable; and 4 per cent return on reserves and surpluses.

The Government has now modified the rates applicable only to equity capital and reserves and surpluses. It has fixed them at 8.5 per cent taxable on paid-up equity capital and 6 per cent taxable on reserves, for all companies, except banks. For banks, the corresponding rates are 7.5 per cent and 5 per cent. At the same time, the Government has refused to concede the employers' plea for allowing rehabilitation allowance as a prior charge against the divisible surplus. The distinction made by the Government between banks and other companies is probably based on the reasoning that the great bulk of banks' resources is provided by depositors, a reasoning which will be acceptable to all fair-minded persons.

It will thus be noted that the Government has not given away to employers and investors anything which is not in the ultimate interest of workers. There is also no reason why workers should be jealous of shareholders, a substantial proportion of whom are small investors. The changes it has made are only designed to ensure a steadily growing level of employment, which is what the working class needs. The labour leaders who are now shouting from housetops that the Government has capitulated to capitalists are indulging in gross exaggeration, if not falsehood.

So far as the impact of the Government's decision on the economy in general is concerned, there is good reason to believe that inflation has received a fresh boost. The worst sufferers will, therefore, be the vast majority of people who are not covered by the Bonus Commission's recommendations, namely, the farmers, the landless labourers, the unemployed, the retired people and the self-employed persons.

I.D. Bank Takes Over R.C.I.

The taking over of the Refinance Corporation for Industry Ltd. by the Industrial Development Bank of India with effect from the 1st of this month has not come as a surprise, though the timing of it was rather unexpected. The Industrial Development Bank Act 1964 contains a specific provision enabling the Bank to acquire the entire undertaking of the Refinance Corporation. But as the Bank began functioning only a little over two months ago, one did not expect that this provision would be given effect to so soon. Apparently, the Bank must have felt that there was no need for delaying the absorption of this refinancing agency. Announcing the taking over in the course of a Press note, the Bank says: "As the functions of the Development Bank covered those of the Refinance Corporation, there was no particular advantage in the Refinance Corporation continuing to function as a separate institution after the establishment of the Development Bank, and the merger has been effected as a corollary to its function of co-ordination of the activities of various financial institutions engaged in providing term-finance to industries." The Bank has paid as compensation to the Corporation a sum of Rs. 2.5 crores equivalent to its paid-up capital to be paid to its shareholders (the Reserve Bank, the State Bank, the L.I.C. and 16 commercial banks in the private sector).

The Refinance Corporation, it will be recalled, was set up in June 1958 for providing relending facilities against medium-term loans given by banks to medium-sized industrial units for the purpose of increased production. The Corporation had, during its existence of over six years, not only utilised the entire initial allocation of Rs. 26 crores out of the P.L. 480 funds but also drawn Rs. 7.50 crores from out of the Rs. 10 crores allotted to it subsequently. It must be said to the credit of the Corporation that it fulfilled its role effectively. Besides making available relending facilities, the Corporation had also actively associated itself with the various private sector collieries in order to finance to the private sector collieries in order to help them utilise the World Bank foreign exchange loan of $35 million for importing capital equipment, etc., required to step up output.

No one need have any doubts as to whether the efforts and achievements of the Refinance Corporation, which had achieved a high degree of maturity within a few years, would receive a setback as a result of the changeover. For the Industrial Development Bank has held out the assurance that it will continue the facilities extended by the Corporation. Actually, the Bank, it is gratifying to hear, has (1) doubled the limit of refinance to any industrial concern (from Rs. 50 lakhs to Rs. 100 lakhs), (2) decided to relate the limit not to sanctions but to outstanding balance in a refinanced loan account, and (3) removed the upper limit of Rs. 50 lakhs in respect of refinance for medium-term export credits to any one party.

Indian Oil Corporation

The formation of the Indian Oil Corporation Ltd., incorporating the existing two public sector units, the Indian Oil Company Ltd. and the Indian Refineries Ltd., represents an important landmark in the development of the country's oil industry in the public sector. Mr. P. A. Gopalkrishnan, I.C.S., who has been the Chairman of the former, will be the Chairman of the new Company which formally came into being on 1st September 1964. With an authorised share capital of Rs. 75 crores, the Corporation will rank among the first ten biggest companies in the country. It is expected to handle nearly 20 to 25 per cent (3 to 4 million tonnes) of the trade in petroleum products by 1966. As a result of the merger, the Indian Oil Corporation will enjoy considerable economy, especially in marketing, overhead and other expenses. It is also expected to yield some improvement in the efficiency of operations, thanks to unified control and direction. This is only a first step, according to Mr. Gopalkrishnan, in integrating all phases of petroleum industry in the public sector under one Company. Other activities, such as exploration, mining of crude and establishment of petrochemicals, as well as by-products industries may be made a part of the Corporation at a later date. The organisational pattern the Government has in mind for its activities in this sphere is the E.N.I. of Italy. Its idea in this respect has already been endorsed by the Estimates Committee of Parliament some years ago.

For the present, the unified Corporation will have two divisions—the marketing division and the refineries division. The former division will market the entire production of public sector refineries and also the products of the Cochin Refinery, now under construction. It will also continue to distribute all petroleum products that are in deficit and imported from abroad and the Mobil lubricants from the Indian Oil Blending Company. This company, as readers are aware, was established by the Indian Oil a couple of years ago in partnership with the Mobil Petroleum Company, Inc. of the U.S. on a 50:50 ownership basis. It has two blending plants, one in Bombay with a capacity of 60,000 tonnes and another in Calcutta with a capacity of 40,000 tonnes.

The refineries division of the Corporation will manage the refineries in Gauhati, Barauni and Koyali. It will also be in charge of the construction of the products pipelines, one connecting Barauni refinery with Haldia (W. Bengal), on the one hand, and Kanpur and Delhi, on the other, another Silguri with Gauhati and the third Ahmedabad with Koyali. The object in establishing these pipelines is to ensure quicker, economical and smooth movement of refined petroleum products from the refineries to the consuming centres and to reduce the load on the railways.

The Chairman of the Corporation, Mr. Gopalkrishnan, will also act as the Managing Director of the marketing division at its headquarters in Bombay. The refineries division will be headed by Mr. N. N. Kashyap, Joint Secretary to the Ministry of Petroleum and Chemicals, who will function from New Delhi.

The marketing division of the Indian Oil Corporation has a far more difficult task than the refineries division. It is a relatively easier job to establish refineries and operate them, especially because of the help that is being provided by foreign collaborators, than to organise the distribution of millions of tonnes of products all over the country. In less than four years from now, all the four public sector refineries are expected to be completed and in full production. This means that the marketing division will have to expand fast enough to distribute about 10 million tonnes (in terms of crude) of petroleum products—the quantity would be a little more if imports of deficit products were also included. In other words, it will have to market 40 to 42 per cent more than the volume now handled by the marketing organisations of Burmah-Shell, Esso and Caltex after years of experience and endeavour. It will have to plan in great detail and establish all over the country storage depots, distribution agents, pump sites with all the facilities required by vehicle users, and equipment to transport the products to pumps and storage points. A lot of market research and exploration will also have to be done. Will it be able to carry out this enormous task single-handed in less than four years? The authorities concerned will do well to reflect on this question and be realistic in fixing the goals for the marketing division. It is needless to add that any bottleneck in distribution will have unpleasant effects on both the refineries and the consumers of petroleum products.

Singapore-U.K. Economic War Averted

What would otherwise have turned out to be an economic war between Singapore and the United Kingdom has been averted, thanks to the efforts of the U.K. High Commissioner in Malaysia, Lord Head, and the intervention by the Central Malaysian Government. Piqued by the restrictions placed by Britain on the flood of imports of cotton textiles said to have been made in Singapore, the Government of Singapore suddenly banned on Wednesday last week imports of 46 British-made goods (covering foodstuffs, household articles, domestic wares, tyres and textiles) and introduced the system of specific import licensing in respect of all other British goods. And, in order to make its decision effective, the Government's order provided for severe penalties for breach of regulations. This move, it was said, would affect several million pounds worth of goods exported from the U.K. to Singapore out of the total exports now running at an annual rate of about £38 million. The order was, however, withdrawn within five days after it was issued, that is, at midnight on 31st August, following the understanding reached on the issue of textile exports by Singapore mills.

The Singapore Government's action was clearly not justified. It is true that the U.K. Board of Trade had decided early in May last to license imports of cotton goods from Singapore and announced two months later suspension of licences for these goods till the completion of negotiations with all the countries concerned (including Singapore). But this decision was prompted by the need to check the marked increase in imports of cotton goods from Singapore of late. In terms of value, the actual imports of finished cotton goods alone in the first half of 1964 amounted to over £900,000, as against a bare £1,000 (all cotton textiles) in 1962. Such huge imports must have been partly due to the setting up of new textile mills by Hong Kong producers in Singapore with a view to evading the restrictions placed on its sales in the U.K. under an agreement reached with India, Pakistan and Hong Kong. It is also possible that a large part of the cotton goods imported into Singapore from Hong Kong were being re-exported to Britain. Instead of taking action against such trade, it is regrettable that the Singapore Government resorted to such an extreme course as that indicated at the outset. It is all the more regrettable because the British Government has consistently been saying that it is always willing to talk about the level of limitation which would be imposed on imports of cotton goods made in Singapore. By its extreme action, the Singapore Government had certainly set a bad precedent in Commonwealth trade relations. Anyway, it is a matter for satisfaction that the crisis in Singapore-U.K. economic relations has ended. One important lesson emerges from this episode and that is that no country should take any unilateral action in trade matters unless the other country simply refuses to negotiate.

Iron Ore Requirements Of Japan

A group of leading Japanese businessmen is currently in Australia to take part in the second annual meeting of the Japan-Australia Business Co-operation Committee, the objective of which is to strengthen the trade ties between the two countries. One of the important topics of discussion is the possibility of entering into long-term contracts between the two countries for the supply of iron ore and coking coal from Australia to Japan. This move, a perfectly legitimate one, should open the eyes of businessmen and officials entrusted with the task of export promotion. If Japan buys more Australian goods, it would naturally expect Australia to buy more of its goods. Thus, more trade between Japan and Australia will mean stiffer competition for Indian goods in both these countries. India exports large quantities of cotton textiles to Australia and of ores, especially iron ore, to Japan.

Japan imports the major portion of its total requirements of iron ore from foreign countries like Malaysia, India, Peru, Chile, Canada and the Philippines. As the production of iron and steel is rising in Japan at a fast rate, it is estimated that, by 1970, the imports of iron ore by that country will be more than doubled to over 50 million tonnes. In order to meet a substantial portion of these requirements, some long-term

DELHI LETTER

ARE TRANQUILISERS ENOUGH?

THE CONFLICT OVER PLAN CONCEPTS

From Our Special Correspondent

NEW DELHI, 1st *September*

THE long halt of Mr. George Woods, President of the World Bank, in the Indian capital on his way to Tokyo, was used by the Finance Minister, Mr. T. T. Krishnamachari, the Deputy Chairman of the Planning Commission, Mr. Asoka Mehta, and other officials for what is described as frank discussions between the lender and the big borrower. To some extent it appears it was a one-way conversation, with Mr. Woods doing most of the talking and the Indian side listening. Audit reports of the Indian economy being what they are, there was little perhaps to be gained from the Indian spokesmen pressing forward with any firm stand on any issue concerning planned expansion and requests for infusion of more foreign credits. Mr. Woods took up the public pose that there was no question of the creditor dictating the terms of formulation of the fourth Five-year Plan. In the past, Indian Ministers and administrators had cultivated the habit of studiously ignoring a flood of criticism unleashed by World Bank experts. Time and again, the Indian Government refused to release the details of World Bank comments for public scrutiny and discussion and on occasions, somebody or other indulged in the practice of leaking out selective criticism so that the Bank's views were publicised.

When Mr. Woods spoke to a distinguished group of economists and planners gathered together in an off the record session, he welcomed the "flexibility in approach" which was becoming evident in Indian planning. Nobody in the group which listened to Mr. Woods, it appears took pains to ask Mr. Woods what he meant by his discovery of flexibility which has permeated Indian thinking. Did Mr. Woods mean that the Indian Government and planners now appeared willing to *adopt* a variety of suggestions from the World Bank or other lenders? If that was Mr. Wood's reading, there is no need obviously for the World Bank experts to interfere publicly with the formulation of the fourth Plan; there is no need to rub the Bank's ideas in and raise a public uproar with political overtones. *Flexibility* and *realism* are two catchwords which have become popular in the past few weeks and they mean different things to different men in power. What Mr. Krishnamachari means by flexibility, particularly flexible fiscal arrangements, is certainly different from what civil servants may make of the expression. The thesis of going slow—said to be pressed by the Prime Minister as well as his "economic wizard" Mr. L. K. Jha—will be interpreted by various civil servants as the practice of a method which will give rise to fewer short-term problems. The effect ultimately may be to stockpile the problems which could be realeased later. To borrow from a medical analogy—if you sit still or walk slowly, the intake of calories can be reduced; instead of exhaustion from the strains of speeding and overwork, one may become anchored to a stable position, more or less inactive and the muscles may become weak!

A Big Danger

A big danger in the next few weeks could be that, as a result of pressures which have developed in favour of the concept of *consolidation*—yet another popular catchword with some these days—the spirit of adventure essential for any form of national development, whether in the public sector or in the private sector, may be forced to lie low. Mr. Shastri, in his letter to Mr. Bhupesh Gupta, prescribed his formula of balances in development, but at the same time the search for too much stability can lead to growth of numerous barriers for development. Several commentators hail the Shastrian approach as the common man's approach to problems of development. This approach could degenerate into dissipation of energies into non-developmental ventures, to please the common man who may ultimately find that all that he has got are tranquiliser pills. The tranquilisers may merely lead to delays and piling up of developmental pressures. A long time ago, Mr. C. D. Deshmukh, who cannot be accused of being a dogmatist, used to point out that stability and stagnation go together.

Fundamental urbanisation demands and trends have been built into the society during the war years and the years since planned development began. How far can Mr. Shastri and his wizard—and is it advisable on their part?—restrain the demand for industrialisation in which the public sector and the private sector and a growing number of technicians and administrators and educated job seekers are all vitally interested? Heavy cutbacks in industrial investment and greater concentration on diffused sectors can also lead to the spread of subsistence level employment for many while reducing the employment opportunities for the educated.

Despite rumours that Mr. Asoka Mehta is interested in getting back into active politics, Mr. Mehta is said to be keen on concentrating on the economic and administrative tasks in formulating the fourth Five-year Plan. His or Mr. Krishnamachari's understanding of flexibility and feasibility may be very different from that of the Chairman of the Planning Commission. Although Mr. Krishnamachari led the assault some months ago on perspective experts who favoured a huge plan, both he and Mr. Asoka Mehta will henceforward be probably engaged in a holding operation to fight off tendencies to cut back too heavily on planned industrial investment in the country. His many years as a leftist have not prevented Mr. Asoka Mehta thinking along Mr. Krishnamachari's lines in trying to promote private foreign investment. Their flexibility may be in terms of revising their own judgments in changing situations of resources, fiscal and technical feasibility, instead of holding on to dogmatic decisions. It is unlikely that either of them would in the long run accept a position in which Mr. George Woods or other foreign aiders—or civil servants—will be the arbiters of what is good for the country.

The problem, again, is not an elegantly simple one of just going ahead with plants for which foundation-stones have been laid already; there are too many consequential projects on which work has to be started. In the interests of a vague idea of consolidation there cannot be a holiday from venturing into several new projects which have become inescapable.

The Paper Weights

Even as the Planning Commission secretariat is sought to be reorganised to get rid of executive functions it has gathered in its growth—there is still groping about to determine the direction of reorganisation—the Finance and other executive Ministries have to acquire more decisive control on the execution of projects. Like his predecessors in the Food Ministry, Mr. Subramaniam feels hamstrung by the lack of control the Centre has on agricultural development and distribution which comprise the most diffused sectors in the country. There is, no doubt, resistance on the part of the Establishment in Yojana Bhavan to Mr. Asoka Mehta's or Mr. Shastri's ideas on reorganisation.

Some of the entrenched experts, no doubt, act as paper weights in trying to prevent some of their favourite formulation papers being blown away. One senior civil servant who later became a Planning Commission member may also regret the removal of some of the structures and methodology he has painfully built up.

The progressive increase in Central aid to State projects in successive plans has brought in its wake Delhi's pressing desire to have greater control over project execution and Mr. Krishnamachari has again talked of more projects during the fourth Plan being treated as national or Central projects.

These problems of administrative reorganisation will come up for consideration when the postponed meeting of the National Development Council takes place in four or six weeks. By that time, the Planning Commission may find it possible to outline its thoughts on what the fourth Plan could be. The final framework of the next Plan will have to emerge later as a result of the Development Council discussions.

The built-in momentum in industrialisation measures may carry forward into the fourth Plan some factors essential for development. A major aspect on which a final decision is to be made is on the question of prices and price controls. The seventeenth year of independence has emerged as the year of the most distressing price increases. The Economic Adviser's wholesale price index shows that, in the week ended 15th August 1964, the index was 155.6 as compared with 135.4 a year earlier. In the case of food articles the index rose from 137.4 to 165.1, the index for cereals rising from 115.2 to 144.4. The Shastri Administration—the Prime Minister as well as the Food Minister, with Congress President Kamaraj hovering in the wings—gives the impression that it is thinking in terms of a high price for the farmers. It is against a system of wholesale rationing or wholesale State purchases, a suggestion which has the support of the technocrat Mr. Krishnamachari as well as ex-Ministers Krishna Menon and Malaviya. The States will refuse to take action which will earn the disapproval of the producers on the farms, and the fixing of wholesale prices in urban areas is not enough for the consumer if the short-term Delhi experience is any indication. Reduction of margins for wholesalers has been immediately followed by the Delhi retailers increasing their effective profit-margins.

A high price level for the farmers' produce is known to be firmly advocated by Congress President Kamaraj. Not all economists are agreed on the optimistic view that more money per kilo of grain given to the farmer can automatically induce the farmer to produce more. Could it be that in some areas the higher price may merely mean that the farmer will produce even less for sale into the market? Are the increases in prices paid to the farmer and non-fiscal inducements to be accompanied by the imposition of any contractual obligations? Can a higher income for the farmer be tied to measures which will provide also for more capital formation instead of increased money supplies being diffused with no hope of the Government being able to mop them up? Is the higher standard of living for the farmer to come about through increased prices or through increased production? The Food Minister's theoretical justification for refusing to take the plunge of attempting to depress prices is that the villager should be permitted to make up the lag he has suffered in relation to urban levels of income and living standards. Writing in the *New Statesman* in December 1959, Professor Rene Dumont, who visited India as a member of a U.N. Commission to study community development, said: "As a result of the failure to exploit the resources of rural manpower to the full, to give production priority over luxury and to provide all classes with a direct motive to invest, Indian agricultural production is failing. . ." The community development effort, it is now being admitted officially, has not led to the injections of incentives for increased agricultural production. Are high prices to be the solution? Writing in another context, Mr. Dumont (who is also the author of a treatise, *L'Afrique Noire est Mal Partie*—"Black Africa Got a Wrong Start") said:

"Donations, subsidies in capital or foodstuffs should no longer be a gift so much as a contribution towards development. In return, a village receiving such aid would undertake a sort of contract to carry out all those fundamental improvements on its territory which would enable it to become adequately productive and to finance subsequent development itself. Let me give an example. A village in India has had a bad harvest. It received the few tons of grain it needs but in exchange it must improve its irrigation reservoirs. It is no longer a question of begging or charity, of subsidised idleness but a fraternal helping hand given to people whom we help to emerge from their wretchedness on condition that they likewise help themselves."

National Income Report

Bad news has a natural tendency to make bigger news headlines than good news and the ineptitude of the publicity organisation of the Government of India resulted in the encouraging report of the Central Statistical Organisation on income growth in 1963-64 not receiving as much public attention as it deserved. (*Commerce*, as a specialised paper, was an exception in that it gave prominent interpretive attention to the C.S.O's report last week. Even some other financial papers published only insignificant summaries.) The Government release on the spurt in national income—signs of a recovery after two bad years—was quietly circulated, with most of the correspondents in Delhi being ignorant that the estimates of national income were on the way. In a fully planned economy, the release of such information would have been accompanied by fanfare. The recovery in economic growth in 1963-64 from the low rates in 1961-62 and 1962-63 was something of which the Government and the public could be proud. The industrial and banking and other organised sectors have maintained a fair rate of growth. The Central Statistical Organisation's "quick estimates" are generally conservative; the revised etimates generally indicate a better performance than the first assessment does. This is perhaps as it should be, because, otherwise, the Government would be accused of bluffing. The estimates of 4.3 per cent growth in the third Plan's third year were not something of which the Government should have been ashamed. Given two bumper harvests in the last two years of the current Plan, the final growth total during the Plan period would not show a huge gap as compared to the target of 30 per cent growth.

Steel Controversy

The Steel Ministry is now understood to have told Dastur and Company that it will have to revise drastically the original draft contract spelling out the tentative amounts which the firm may hope to get for services in connection with the Bokaro project. This makes it clear that the Indian consultant firm will have a substantially reduced role and smaller fee than what it had hoped for in the Bokaro project. This also makes it clear that the Government has accepted without protesting unnecessarily the conditions under which the Russians will design and build the first one and a half million tonne stage of the steel plant. (See also page 348 of *Commerce* dated 29th August 1964.)

Notice

THE TATA MILLS LIMITED

NOTICE

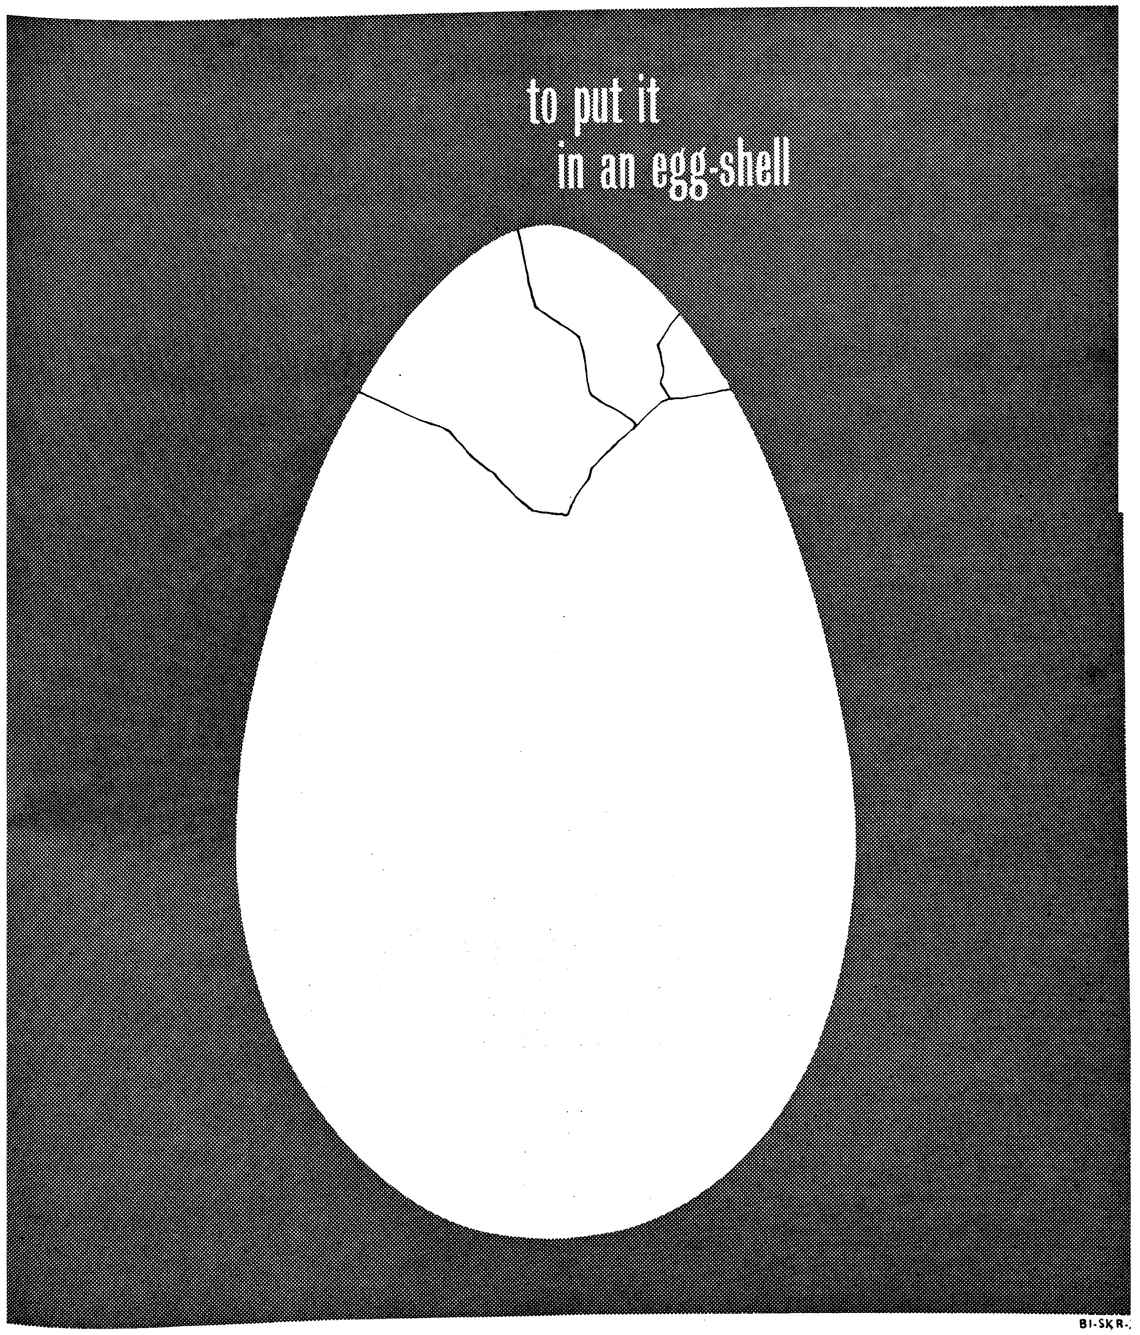
THE SHARE TRANSFER BOOKS OF THE Tata Mills Limited will be closed from Wednesday, the 23rd September to Wednesday, the 30th September, 1964, both days inclusive, in connection with the issue of further Ordinary Shares.

Circular letters conveying offers for the new issue will be posted to holders of Ordinary shares on the Register of the Company on 30th September 1964 in terms of the resolution passed at the Annual General Meeting of the Company held on 25th June 1964.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LIMITED,
Managing Agents,
N. H. TATA,
Director.

Registered Office:
BOMBAY HOUSE,
24, BRUCE STREET,
FORT, BOMBAY 1.
September 2, 1964.



POOR PACKING MEANS SO MUCH GONE WASTE

Are there any cracks in your packing of rayon & synthetic fabrics? Check on it before shipment. Packing can make or mar your business reputation. Adhere to the packing specifications laid down for exporting these fabrics.

Strong and seaworthy packing creates confidence in you and your fabrics . . . brings in repeat orders.

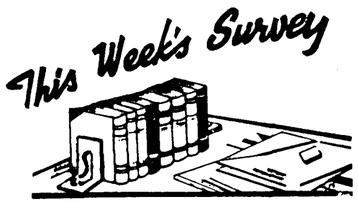
Your reputation abroad rests on:
- ★ Supplies as per samples
- ★ Attractive presentation
- ★ Strong and seaworthy packing
- ★ Shipments in time

Build your exports on a long-term basis

Issued by:

THE SILK & RAYON TEXTILES EXPORT PROMOTION COUNCIL

Resham Bhavan, Bombay-1



JOHNSON-HUMPHREY TICKET

BY nominating President Johnson and Senator Hubert Humphrey last week as its candidates for the Presidency and Vice-Presidency, respectively, the Democratic Party, like the Republican Party, has provided a choice to American voters in the forthcoming presidential election. The choice is between the conservatism of Senator Goldwater, Republican presidential nominee, and the liberalism of President Johnson. Put this way, it may seem to be a straight and simple choice between black and white, which, of course, it is not. For, conservatism, as a respectable school of political and economic philosophy, is wedded to social stability and to conservation of all that is good in the established order, and in this sense President Johnson himself is a conservative. But his is a kind of conservatism with a vital difference, for it is interwoven with dynamism and liberalism, as witness his emphasis on 'peace,' 'preparedness,' 'prosperity' and 'progress.' In other words, the dynamic or liberal conservatism of the President will be contending against the static or ultra-conservatism (albeit diluted somewhat in recent weeks) of Senator Goldwater. It will thus be a more sophisticated choice than between simple conservatism and simple liberalism. As President Johnson has put it, it is also "a choice of continuing on the courageous and compassionate course that has made this nation the strongest, freest, most prosperous and most peaceful nation in the history of mankind." How the American voter is going to exercise his choice will be watched with world-wide interest and anxiety.

The world's supreme interest is in peace, for it knows it cannot survive a nuclear holocaust. Hence its anxiety whether the unusually bitter and acrimonious presidential election campaign in the U.S. this year would result in a Goldwater victory and thereby add to the nuclear perils or, what is equally bad, put an end to the bipartisan approach of the Republican and Democratic parties to foreign policy and foreign aid and thereby cause all-round instability and uncertainty. No doubt, both the parties have pledged firmness to defend freedom and the strength to support that firmness. Whether a possible Goldwater Administration would put forth, in the words of President Johnson, "a constant, patient effort to move the world towards peace instead of war," is, however, in doubt. It may be that the responsibility of being in the White House will force Mr. Goldwater, if he wins, to modify his present rigid and extreme stand on America's relationships with the rest of the world. If that happens, it would mean that "the immediate, direct impact of a Goldwater victory might not be great, except emotionally." But *The Economist* (London), which has taken this line, adds, in the same breath, that "the long-term, indirect impact of such a reversal of the whole trend of American political development could be quite another—and a very disturbing—matter." As of now, it is only the Democratic Party's foreign policy plank that offers the reasonable hope that world peace could be maintained—and maintained in a manner that does not involve surrender to international communism. Some of the elements in this plank would bear quotation for their pregnant brevity and unmistakable sincerity:

"Peace should be the first concern of all Governments as it is the prayer of all men.

"At the start of the third decade of the nuclear age, the preservation of peace requires the strength to wage war and the wisdom to avoid it....

"Responsible leadership, unafraid but refusing to take needless risk, has turned the tide in freedom's favour. No nation, old or new, has joined the Communist bloc since Cuba during the preceding Republican Administration....

"As citizens of the United States, we are determined that it be the most powerful nation on earth.

"As citizens of the world, we insist that this power be exercised with the utmost responsibility....

"Through our policy of never negotiating from fear but never fearing to negotiate, we are slowly but surely approaching the point where effective international agreements providing for inspection and control can begin to lift the crushing burden of armaments off the backs of the people of the world."

The Democratic Party has thus presented itself as a "peace party." Its claim to be so considered seems to be a valid one against the background of its progressive and enlightened domestic and foreign aid policies which go well with its peace goals. Particularly relevant, in this context, are the domestic goals spelt out by President Johnson—namely, medical care for older citizens, fair and stable prices for the farmer, a decent home in a decent neighbourhood, an education for every child to the limit of his ability, a job for every man who wants to work, victory in the war against poverty and a continually expanding prosperity. As for foreign aid, the pledges made by the Democratic Party are: (i) Helping the developing nations in Asia, Africa and Latin America raise their standards of living and create conditions in which freedom and independence can flourish; (ii) increased priority for private enterprise and development loans in mutual assistance programmes; (iii) expansion of U.S. economic ties with other nations of the world and elimination of unjustifiable tariff and non-tariff barriers under the authority of the Trade Expansion Act of 1962; (iv) expansion of the Peace Corps; and (v) still greater use of U.S. food for peace. Now that Senator Hubert Humphrey, a forthright liberal and a staunch friend of developing countries, has been chosen as the vice-presidential nominee, there can be no doubt that, if the Democratic Party wins, the liberal policies of the Eisenhower, Kennedy and Johnson Administrations would be continued in the crucial sector of foreign aid and mutual assistance.

FOOD AND AGRICULTURE

Following the Union Food Minister's recent statement in Calcutta that the food situation has begun to improve, there is less alarmist talk in the country about scarcity. This is a salutary trend which minimises the chances of scarcity being aggravated. And that is not all, for there is also in evidence some realistic and constructive thinking on food and agriculture. The All-India Congress Committee, for instance, has just rejected the minority plea for total rationing and socialisation of the entire foodgrains trade, welcomed the Government's twin proposals to set up an agricultural prices commission and a foodgrains trading corporation and urged that utmost importance be attached to the strategy of agricultural development in the interest of industrial development itself. In particular, the A.I.C.C. has expressed the opinion that the proposed foodgrains trading corporation should be run on strictly commercial lines without being constricted by red-tape and Governmental procedures and that it should be so operated as to have a *stabilising* influence on the prices of foodgrains which should be fair to both producers and consumers.

It is a happy augury that the Shastri Government has not allowed itself to be stampeded by left-wing elements into the unwise position of socialising the entire foodgrains trade. But, of course, it would be folly on the part of the trade if it were to mistake the Government's prudence and moderation for weakness and lack of determination. For, the A.I.C.C. has warned that the "realistic maximum prices" fixed so far in six States—Madras, Kerala, Mysore, Andhra Pradesh, West Bengal and Rajasthan—and likely to be fixed soon in the other States should be scrupulously respected by the trade in the interest of its own survival. And the Food Minister, Mr. C. Subramaniam, has gone on record with the statement that, if the trade does not behave in a responsible manner, the foodgrains trading corporation would be built up step by step to take over the entire trade. It is, therefore, up to the trade to reorder its affairs and discipline itself, so that, along with the foodgrains trading corporation, it can stabilise prices and ensure uninterrupted supplies, thereby giving no provocation to the Government to do what it has so far wisely refrained from doing. Now that the Food Minister has clearly indicated that zonal restrictions on foodgrains movement and distribution would be abolished after the next harvest, it should be easier for the trade to divest itself of the distortions in its pattern and regulate its own operations more smoothly.

The food problem, as a problem of prices and distribution, can thus be tackled imaginatively with the co-operation of the trade, provided, of course, the Government resists the temptation of according, as indicated by the Food Minister, the status of "cash crops" to foodgrains in the long-range pricing policy that is to be evolved. It is necessary to emphasise this proviso, for any undue shift in pricing policy in favour of food crops may not only have the effect of inflating the living costs of the vast body of non-producing consumers but also mean relatively less cloth, sugar and vegetable oils for the entire population and less surpluses for export. After all, the fact is that the relative area under food crops has not decreased appreciably over the last 13 years although commercial crops have been throughout much more remunerative, thanks to the comparatively greater increase in their prices. Still some sort of price parity for competing crops may be necessary in certain areas where the same land could be put under different crops. In such cases it may be a good thing to establish price parities in advance for a period of three or four years, as urged by the F.I.C.C.I. Agricultural Conference on 29th August.

Incidentally, this Federation's conference has advanced several other constructive suggestions for dealing with the food problem as primarily a problem of production. Particularly noteworthy is its call for a moratorium on further land reforms and legislation, with particular reference to land ceiling, and for a uniform production-oriented agrarian policy in all the States so as to exempt all integrated and efficiently-managed holdings and the sugarcane farms of sugar factories from the purview of ceiling legislation. The plea made by the Conference for permission to set up private seed farms and for exemption for such farms from land ceiling is also a sensible one. The fact that has recognised this week the need for freezing all land reform measures at a particular level and for removing, as quickly as possible, the uncertainties in the ownership or management of land is yet another significant pointer to his realistic approach to the problems of food and agriculture.

COMMONWEALTH ECONOMIC CO-OPERATION

Three features usually mark out the Commonwealth Finance Ministers' Conferences from several other conferences. In the first place, the agenda for the Conference is not decided until it begins. Secondly, the Conference is held every year just a few days before the annual meetings of the International Monetary Fund and the World Bank commence. Finally, after a formal opening, the Conference goes into a closed session. This year's Conference, held at Kuala Lumpur on the 1st and 2nd inst., was in conformity with these features. Besides undertaking its usual review of world economic trends and of the matters likely to arise at the Fund-Bank meetings, the Conference devoted a good deal of attention to the problem of augmenting inter-Commonwealth trade, removal of difficulties faced by countries like India and Malaysia due to heavy defence burden, and an African plea for the channelling of more trade to the underdeveloped African countries. Although details regarding the deliberations of the Conference and the decisions taken thereat are not available at the time of writing (Wednesday the 2nd inst.), it is gathered that there was a wide measure of agreement on the following issues:

Once the economic inequality is removed, the Commonwealth will not only be strengthened further but also be able to face the challenge from other rich nations. (The Finance Ministers of developing countries pleaded for more liberal import policies by the developed countries to enable them export both primary produce and manufactured goods).

A specific suggestion put forward was to the effect that an importing country should first seek the goods from a Commonwealth country before opening its markets for other exporters.

The Commonwealth projects proposal was generally welcomed. This proposal, which was first mooted at the Commonwealth Prime Ministers' Conference at London in July last, envisages the launching of "Commonwealth Development Projects" in individual countries by pooling together men, money, materials and technical expertise.

The African countries need particular attention; they must be provided with all available help (technical as well as financial) to exploit their natural resources.

This brief account signifies the recognition, by the Finance Ministers of Commonwealth countries, of the vital importance of strengthening Commonwealth economic co-operation with possibilities of speedier economic growth of developing nations. The stress on the need for augmenting the intra-Commonwealth trade is understandable, considering that the growth of this trade has been rather poor, the actual increase in the value of intra-Commonwealth exports between 1958 and 1963 being no more than five per cent, as against the increase of 31 per cent in the Commonwealth's exports to the rest of the world; in 1963, over two-thirds of the Commonwealth's total exports went to non-Commonwealth countries. At the same time, it can be easily realised from these data themselves that the scope for expanding inter-Commonwealth trade is extremely limited, unless special props are provided to boost it artificially. It is a moot point whether any member of the Commonwealth will be prepared to do so and whether the other trading nations of the world will take it in good spirit. Commonwealth preference has lost much of its force now.

With the exception of Ghana, Nigeria, Uganda, Kenya, Tanganyika and Aden, all the other twelve Commonwealth countries give and receive preferences in varying degrees. Preferences cover about half of both Commonwealth exports to Britain and of British exports to the Commonwealth. But the preferences themselves, though still important, have declined in value since the war. The decline has been due to (*a*) a world-wide reduction in the general level of tariffs which has reduced the importance of both the preferences Britain earns and those Britain gives; (*b*) a cut in duties on non-Commonwealth imports effected by many countries, including Britain, either to secure them more cheaply or to obtain advantages for their own exports in other markets; and (*c*) membership of the G.A.T.T. which precludes new preferences.

It is appropriate to recall here the observations of the U.K. Board of Trade President on Commonwealth preferences made at the U.N. Conference on Trade and Development:

"We in Britain are prepared to extend tariff preferences to all developing countries. The preferences are at present designed for the benefit of Commonwealth countries. These countries might suffer from sharing them with others, unless they obtain compensating advantages in other markets. We should, therefore, act in concert with the major industrialised countries to ensure that this is brought about. Moreover, when present preferences are the subject of agreements with Commonwealth Governments, we could not act without the consent of these Governments."

Whatever be the future of preferences, there is doubtless plenty of room for greater economic and trade collaboration among Commonwealth countries in the coming years. It is with a view to achieving such collaboration that it was decided at the last Commonwealth Prime Ministers' Conference to set up a Commonwealth Secretariat to handle all aspects pertaining to Commonwealth trade and economic relations.

GENERAL INSURANCE BUSINESS

Within a week of the thirty-sixth annual general meeting of the Indian Insurance Companies' Association Bombay, addressed by its retiring Chairman, Mr. P. A. Advani, there was another meeting of insurers on 31st August 1964, namely, the twenty-seventh annual general meeting of the Indian Insurance Companies' Association, Calcutta, addressed by its retiring President, Mr. P. K. Ghose. Most of the problems discussed by Mr. Ghose were the same as those covered by Mr. Advani, namely, the entry of Life Insurance Corporation (L.I.C.) as a non-tariff insurer in the general insurance business, the working of the Code of Conduct among insurers, diversion of governmental and semi-governmental business to the Indian Insurance Companies' Association Pool and the need to revise the maximum limits of expenses fixed as far back as 1950.

Although the entry of L.I.C. as a non-tariff insurer in the general insurance business is an established fact now, it is still haunting the private insurance companies. Mr. Ghose was, however, somewhat optimistic about the solution of the problem. According to him, "it is too early to arrive at any conclusion. I for one would like to watch the character and the trend of Corporation's business in this new field. However, I am confident that, with mutual understanding and co-operation, both the L.I.C. and other general insurers can build up a strong base for the general insurance industry in the country." On the Code of Conduct, which enjoins upon the companies to follow certain agreed business practices and procedures and avoid price competition, Mr. Ghose said that it was a moot point whether the Code had been able to realise to an appreciable extent the objectives for which it was introduced. There are some insurers who have not complied with the Code and Mr. Ghose felt that, unless these companies also followed the Code, it would be better that the companies which were following the Code were also relieved of their obligations, so that they might be in a position to compete with the non-followers which include the L.I.C. also. The Code of Conduct was evolved as early as in 1951. And if it has still not been found attractive and advantageous enough for all insurers to take to it automatically, there is no point in hoping that it would be so in the near future, especially as the L.I.C. has now entered the field as a non-tariff insurer and some of the insurance companies observing the Code are now anxious to be freed of its fetters. On the tendency on the part of the Government authorities to direct general insurance business, falling within the influence of governmental or semi-governmental bodies, to the Indian Insurance Companies' Association Pool and the low limits of expenses fixed by the Government as far back as 1950, there can be no two opinions, and the views expressed by Mr. Ghose were identical with those of Mr. Advani.

The drain on foreign exchange on account of reinsurance transactions abroad, which amounted to Rs. 1.84 crore in 1960, increased to Rs. 3.27 crores in 1961, but declined to Rs. 2.06 crores in 1962. This amount can be reduced considerably if the Indian insurers exchange business more freely among themselves. The need for such a step is all the more, in view of the considerable expansion envisaged in the foreign trade of India during the fourth Plan period. Although the responsibility rests mainly on Indian insurers, it is also necessary that Indian businessmen patronise Indian insurance in an increasing measure. Mr. Ghose has suggested that the Government may come to the help of Indian insurers and induce businessmen to patronise them by allotting additional import licences equal to the difference between the c.i.f. or c. & f. price, as the case may be, and the f.o.b. price of imports. On the face of it, this seems to be a useful suggestion, but its practicability must be carefully examined before implementation.

Another point referred by Mr. Ghose related to the unfavourable claims ratio of Indian insurers as compared with that of foreign insurers operating in this country. He made two suggestions in this respect. One, as the situation may partly be due to the acceptance of substandard risks, unsatisfactory mode of packing and negligence in handling of cargo at the ports, the claims ratio may improve to some extent if insurers become more vigilant in these respects. Secondly, the development of many sections of business (such as fidelity guarantee, personal accident, cash in transit and burglary) beyond the conventional line will also help in improving the claims ratio as it will make the business more diversified. Surely, both the suggestions ought to be feasible.

In conclusion, there is enough business in the country for both the L.I.C. and the private companies, and, with the development of the economy continuing, still more insurance business will be created. The need of the time is to mobilise this prospective business to the mutual benefit of the insured and the insurers. Even the best efforts of the insurers will, however, not be fruitful unless the Government removes the unnecessary restrictive regulations and hindrances that stand in the way of vigorous development of insurance business.

Morocco has been granted a World Bank loan equivalent to $17.5 million for financing the Sidi Slimane agricultural development and irrigation programme. The programme is a pilot undertaking to introduce modern intensive agriculture into Morocco, and its successful execution will point the way to similar developments in other parts of the country. Its purpose is to improve the quality and quantity of agricultural products both for the home market and for export, to diversify production, mainy through the introduction of sugar beet to meet part of Morocco's sugar requirements, and to improve living standards through raising the level of farm incomes. Bank of America National Trust and Savings Association, San Francisco, is participating in the loan, without the World Bank's guarantee, to the extent of $100,000 representing part of the first maturity which falls due on 15th September 1972. The Bank loan is for a term of 25 years and bears interest at the rate of 5¼ per cent annually. Amortisation will begin on 15th September 1972. The eight-year grace period, which is longer than is usual for Bank loans, was agreed to not only because of Morocco's external payments position but also because the full programme requires large additional expenditures by the Government and substantial returns from the project cannot be expected until after 1971.

Cashed in a Minute!

And that is precisely what we mean. It takes no longer than a minute to cash your cheque at any PNB office with the Teller System.

The streamlined Teller System eliminates tokens, queues, all tedious and unnecessary waiting and delay

PNB was the first bank to have introduced the Teller System as far back as 1954. Today, PNB has 90 branches operating this system and plans to introduce this on-the-spot service in 60 more branches throughout the country.

GROWTH WITH STABILITY IN DANGER

THREAT FROM AUTO WORKERS AND STEEL PRODUCERS

By N. Pattabhi Raman

NEW YORK, 29*th August*

IN July, the unemployment rate in the U.S. declined to 4.9 per cent. Some 3.8 million workers in a civilian labour force of 76.2 million people were still without jobs. As Secretary of Labour Willard Wirtz ruefully admitted: "That is an awful lot of people to be left out of a record high prosperity."

Yet, the drop in the jobless rate was significant. It was the first time in four and one-half years that the rate had declined below 5 per cent. Impressive by itself, it was more so because the most hopeful view of the Government was that this break-through would occur only by the end of the year. Furthermore, in the view of Labour Department experts, it was no fluke, but part of a trend toward lower levels of unemployment that began last February. These experts believe that the unemployment rate could possibly rise again in the months ahead, but that any such rise would be quite a temporary deviation from the trend.

The decline in joblessness in July was a reflection of the continuing improvement in the economy. The Gross National Product again expanded in the second quarter by 1½ per cent, which was the fourth large quarterly rise in a row. Disposable personal income rose, reflecting the first full quarter effect of the tax cut. Corporate profits set a new record.

Fiscal Policy

There is little doubt—and it is conceded generally—that the huge reduction in individual and corporate taxes granted earlier this year has substantially contributed to the rising activity. The tax cut, it might be recalled, was advocated by the late President Kennedy on the recommendation of his economic advisers specifically to release the "fiscal drag" on economic activity. Convinced that the bold experiment is working out, the Government is now beginning to think in terms of additional tax cuts in the future. Secretary of the Treasury, Douglas Dillon, recently disclosed that the Government would recommend reduction of excise taxes next year. Such a paring down of excise levies, amounting to several billion dollars of revenue loss, might expand the budget deficit which otherwise could conceivably be as low as $2 billion, as compared with the deficits of $6 billion to $8 billion in recent years. But under the policy of planned deficits, initiated by Kennedy and now supported by President Johnson, the Government is apparently determined to keep to an expansionary fiscal policy until unemployment is reduced to the "tolerance" level of 4 per cent of the labour force. It is reasoned that it is better to have controlled deficits than to follow a fiscal policy which, while possibly resulting in a balanced budget or even a surplus in the short run, nonetheless retards economic activity and thus results in unplanned deficits later on.

A second tax cut will most likely not be needed until sometime next year. All factors point to continued improvement of the economy through the rest of this year. Adverse developments in two key areas of the economy—automobiles and steel—could, however, upset the apple-cart. These developments hinge very much on human decisions rather than on mechanistic factors.

Automobile Industry

The automobile industry is doing exceptionally well this year, so well indeed that it is quite within the realm of possibility that 8 million new cars might be sold, as compared with the sales of some 7 million last year. Manufacturers believe that the long-term prospects are "excellent" and that they could confidently look forward to "the time in the not-too-distant future when 8, 9 and even 10 million cars can be taken in stride." Also, a revolution could well be set in motion if the new turbine car now being tested becomes commercially feasible. A Chrysler executive observed recently: "Our turbine engine has one-fifth the moving parts of the conventional engine. It cools itself without a radiator. It runs on any kind of fuel that can flow through a pipe and burn with oxygen. It provides nearly complete combustion, producing no carbon monoxide or other contaminants. It is practically vibrationless. . ."

Amidst all the silver clouds, however, there is a strip of red, signalling potential danger. The current labour-management contracts expire at the end of the month and, as of this writing, no progress has been made in the negotiation of new contracts. The issues involve the impact of technological change on labour, not merely dollars and cents. The three major producers have made an initial offer which, in terms of dollars and cents, is within the guidelines for wage increases developed by the President's Council of Economic Advisers. According to these guidelines, wage advances should be in line with productivity increases, and the average non-inflationary increase would be in the neighbourhood of 3.2 per cent. But, while seemingly adhering to the Government's guidelines, the auto companies have ignored another part of the guidelines which calls for price reduction in those industries where the gain in productivity rises faster than the average. In fact, they have flatly ruled out any price reductions.

Wage Demands

This has only strengthened the determination of the trade union of the 550,000 auto workers to demand as large a share of the industry's prosperity as it could possibly do. Describing the companies' profits as "fantastic," Walter Reuther, the union's president and a powerful national figure, said: "Never before have so few with so much offered so little to so many." The union's demand for increased hourly wages and additional fringe benefits would represent a 4.9 per cent increase in labour costs. The industry has turned it down. With neither side yielding a strike is very much a probability.

A prolonged strike could easily upset the present economic upswing, even if it is directed at only one of the three major producers selected as the target. For this reason, and also because of political considerations, President Johnson is keen that a strike should be avoided but chances are that neither he nor his Administration will intervene in the dispute at this stage. The union—the United Automobile Workers—is also keen to avoid enbarrassing President Johnson prior to the elections in November and, moreover, to get on with its plans to campaign against Barry Goldwater. Yet, considerations of its own security might influence the union to strike in search of a bargain which would satisfy its members that they are getting a fair shake from the management.

A strike is not the only possible source of adverse consequences. For a labour-management settlement that simply divides up the fruits of increasing productivity between the companies and the workers could also have a damaging impact on the national economy. With their huge profits, the manufacturers could absorb a substantial rise in labour costs without price increases, but a contract providing for such an arrangement could well have a inflationary impact on other sectors of the economy and queer the remarkable mixture of economic growth and cost stability that has so far characterised the current cyclical movement.

Steel Industry

The steel industry is also a possible source of inflationary pressure. Both demand and production are holding up very well this year and there are some expectations that the annual output will reach a record 120 million tons, as compared with about 100 million tons last year. With the industry position so strong, the major producers are beginning to talk publicly of price increases. This is causing some anxiety in the Government and President Johnson has expressed the hope that the industry would not raise prices again, particularly since so-called "selective" price increases were made earlier this year. The Government is concerned because further increases in steel prices would, in its view, undermine cost stability and generate inflationary pressures. Since steel is a primary commodity, a rise in its prices tends to increase costs in other steel-using industries and eventually percolate through the entire economy.

LONDON LETTER

MANPOWER SHORTAGE AHEAD

NO NEED TO FEAR AUTOMATION

(*From Our Own Correspondent*)

LONDON, 29*th August*

ONCE again, the Malthusian theory of population received a rude shock by the publication of the first report of the Manpower Research Unit which reveals a likely trend in the British labour force for the next ten years. The report points out that the 1970s will witness "Labour resources stretched to the limit." Its basic assumption is, of course, that the economic activity in Great Britain will continue at a high level. If the growth of the economy proceeds at a rapid pace, as expected, the economy is sure to face a crisis owing to labour shortage. The Unit holds the view that, between 1963 and 1968, the labour pool will be "no more than adequate," and that, from 1968 until 1973, "the strain . . . may well be even severe."

The first reaction of the Government to this report is that both unions and employers will have to work towards cuts in industrial demarcation; industry will have to look more to automation and the hoarding of labour by manufacturers will have to end. Nevertheless, the whole thing will depend upon the moral encouragement given by the Government. Welcoming the report, Labour Minister, Mr. Joseph Godber comments that it confirmed his views that "while automation may accelerate changes in the occupational structure and thus require special attention to adaptation and mobility, it is not something to be feared but welcomed."

No doubt the report has given a serious rebuff to those who have been suggesting that organised labour must be ready to face widespread unemployment. But it is true that, in the field of agriculture and mining, the decline in the needs of workers will continue. But, on the other hand, construction industry will need a sizable increase in its labour force, even allowing for the better productivity because of increased mechanisation. The gap between the demand for and supply of skilled labour will widen, as a result of the greater demand for skilled labour and this may create a crisis. Of course, the extent of requirement of individual industries is a matter of detailed surveys.

Comparison with the Continent

The growth of population in Great Britain compares favourably with the western countries as well as with the U.S. While Britain's working population has been expanding faster than in France, it has been doing so slower than Germany's. It will, perhaps, be expanding more slowly than the Common Market as a whole during the 'sixties. Labour force in the U.S. is expanding twice as fast as Britain's and the rate of growth is accelerating. It is expected to be four times as fast as Britain over the next decade.

In suggesting remedies, the Unit looks to women and older men and urges steps to avoid periodical peak demands for labour. "The efficient and flexible use of the manpower will continue to be of the greatest importance," says the report. It also suggests that, in the face of a decline in women and girls available for employment, the employer should be required increasingly to encourage part-time work and thereby facilitate the employment of married women which may encourage them to come to the employment market rather than lead a bored life. The married women are, however, relatively immobile and their immobility means that the rest of the labour force must be willing to accept greater mobility.

The report also points out that the next ten years are likely to see a larger sector of the population depending on the rest. "The rising birth rate, longer full-time education, earlier marriage and increased expectation of life in retirement have been combining to increase the economically dependent groups of the population," the report adds.

The conclusion of the report solves one problem but raises many. According to the *Financial Times'* editorial, "The problem it solves is the fear that automation will create unemployment; though a few areas of the country, and a few men with outdated skills, may be adversely affected by labour-saving machines,

(*Continued on page 436*)

TAX CONCESSIONS EXPLOITED

By Questor

LONDON, 28*th August*

THE dangers of giving discriminating tax advantages to certain forms of saving have been amply demonstrated by recent British experience. The traditional method of contractual saving in this country is an insurance policy—both for wage-earners, who pay their weekly subscription to a collector from one of the two large companies who specialise in this type of business, and for salary-earners' who can accumulate funds under policies tied to objectives such as school fees and house purchase.

One reason why an insurance policy takes the place here often assumed by saving through a mutual fund in the U.S. is partly a matter of history: insurance remained safe in the inter-war years when some of the unit trusts turned out to be a poor investment. But it is also partly due to the fact that premiums on a life policy are entitled to a tax concession. Underwriters have not been slow to realise that this concession applies not only to straight life assurance but also to the kind of policy on which the holder gets the benefit of capital appreciation on the stocks in which his premiums are invested.

This gives investment in life assurance a special attraction to anyone liable to more than a moderate rate of tax. The taxpayer who wants to invest in a house or a lump of stock, for example, can take out a policy on his life to yield a minimum sum either at an agreed date or on previous death, and the company will make an immediate loan on the security of this policy. He can claim tax-relief both on the loan interest and the assurance premiums, and the dividends on the stocks in the life fund can be reinvested to his future advantage free of surtax.

This preferential treatment of a particular type of saving has been exploited deeply for some years past, and the results are now so widespread that no Government, whatever its political colour, could lightly undertake to change the system.

Other savings media, realising that the life assurance element can be used as a cover for something rather larger, are now, however, beginning to join in. In particular, the unit trusts—our equivalent to the U.S. mutual funds which, though still relatively small, have been growing rapidly in the past few years—have been taking advantage of the tax concession on life assurance in a big way.

This began when a small insurance company offered a life policy whose value at maturity would be pegged to the price of units in an associated trust. The idea was bound to catch on. Now, most of the larger trusts have made arrangements with insurance companies—to provide life cover for investors who join a regular savings scheme. The policy, premiums on which are entitled to the usual tax concession, provides that on maturity the saver gets the units in which his money has been invested; on previous death his legatees get the units so far acquired together with the outstanding balance of contributions due. One trust even guarantees, for a modest extra charge, that the investor will get back, whatever happens to stock markets, at least the value of his contributions over the years.

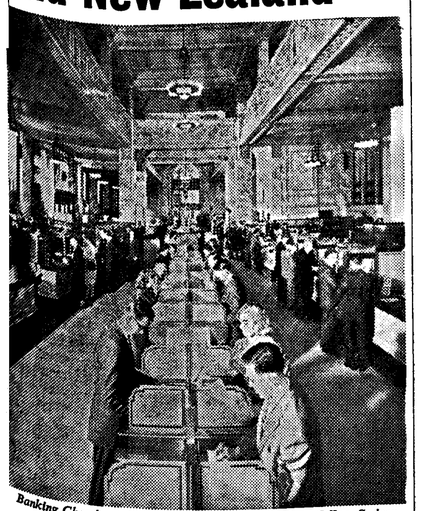
Many investors, however small, have an understandable wish to manage their own investments. For those who do not, the new type of unit trust-*cum*-insurance policy offers three considerable advantages over straight insurance. In the first place, unit trusts publish their portfolios. Many of them specialise in particular types of investment, and the buyer can choose. Insurance companies, however expert their managers, provide no more than a general breakdown of investments between stocks, government bonds, mortgages, and so on.

Secondly, the buyer gets a full share in the equity: the value of his holding at death or maturity is directly related to the market value of the trust fund. With an insurance policy, on the other hand, the investor gets a bonus from time to time when the fund earns more than it needs to meet its commitments—often a very good bonus, but it is declared at the discretion of the managers. If they are cautious, as they usually are, a part of the appreciation on his money may well be held back for the benefit of future policyholders.

Thirdly, the unit trusts attract their custom mainly through newspaper advertisements, whereas insurance companies attract their's mainly through professional agents like solicitors and bank managers. These agents are paid a fixed and relatively high commission which is deducted from the initial premiums. The investor, who is forced by circumstances to cash an ordinary insurance policy fairly soon after taking it out, will get very little back—his money has gone to pay the agent; on a unit trust policy, however, his loss will be relatively small.

It is an excellent thing that unit trusts are now managing to compete with the large insurance companies for the business of the regular saver. But this latest development shows the danger of subsidising any particular kind of saving. No doubt the tax concessions allowed on certain kinds were originally intended to serve valuable social purposes. But any tax concession is inevitably of most use to those who pay most tax and who least need subsidising, and sooner or later they will find a way of exploiting it beyond what was intended. It serves then only to distort the free operation of the market and to encourage the growth of some institutions at the expense of others. It would be better, unless taxes are levied on expenditure rather than income, to have no concessions at all.

The Biggest Commercial Bank in Australia and New Zealand



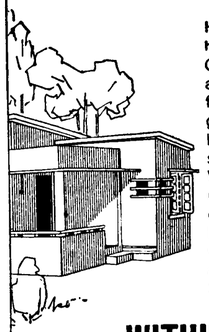
Banking Chamber, Bank of New South Wales, Head Office, Sydney

BANK OF NEW SOUTH WALES

AUSTRALIA'S FIRST BANK

Hundreds of branches right across both nations (and throughout Fiji and Papua/New Guinea)

NA4410



How wonderful, I thought, to have a home of one's own! One day, a friend told me about a good house located in a friendly neighbourhood. It was going at a reasonable price, but I could not buy it...no savings in the bank! Who knows? Tomorrow you may come face to face with an opportunity that will not wait. Don't let lack of cash stand in your way. Start saving now for a better tomorrow. Let the State Bank of Bikaner & Jaipur help you do it.

WITHIN REACH, BUT STILL ELUSIVE

RESERVE BANK GOVERNOR ON BANKING POLICIES

PATTERN OF DEPOSIT RATES STILL UNREALISTIC

THE Governor of the Reserve Bank of India, Mr. P. C. Bhattacharyya, followed the tradition recently set by the Governor of the Bank of England in doing some loud thinking on a few problems of mutual interest to banks and the central banking institution at the annual dinner of bankers held at Bombay on Monday this week. An occasion of this sort provides an excellent opportunity for exchange and expression of views, for, in view of the informal nature of the occasion, the Governor could talk without being bound by the weight and responsibility of his high office. His utterances are nevertheless important, for they explain the rationale and present trend and line of thinking behind some of the actions of the monetary authorities which have come in for comment and criticism.

The Governor analysed, in his speech on Monday this week, the stresses and strains of the current economic situation in the form of two paradoxes which admirably describe the present trends. The rising outlays on defence and the impact of investment expenditure in both the public and private sectors has resulted in a large increase in overall liquidity, which has led to a persistent pressure on the price level, but which has failed to impart any significant and sustained buoyancy to the capital and stock markets. On the contrary, there were indications at one or two points during the past two years, that the tempo of industrial and economic growth was slowing down, that bank credit levels were moving down rapidly (1963 slack season) as the resources were being augmented. All that has changed now—for the banks will find that credit levels will move up fast in the next busy season, but their resources will be inadequate to meet both the requirements of law and the legitimate needs of trade and industry. Seasonal swings in credit operations are becoming much wider, in spite of the increasing diversification of our economy and the growth of industries with a non-agricultural base: witness how the 1963 slack season, the slackest of the slack seasons on record, was followed by the busiest of the busy seasons in the winter of 1963-64—a season which upset the calculations of the Reserve Bank and forced it to pull the reins within 4½ months of loosening them. The high rate of credit expansion in the last busy season has not left much room for manœuvre and has placed the banks in a tight resources position.

A Few Problems

The growth in banking business in recent years has accompanied the opening of more and more branches; last year alone saw an increase of over 400 branches. This is "by no means a mean achievement," as Mr. Bhattacharyya himself admits, for it reflects a widening and deepening of the banking structure to subserve the growing needs of a developing economy and represents the process of institutionalising savings and credit. But this has also created a few problems—the problem of policy for the monetary authorities, the problem of resources for the commercial bankers, and the problem of properly delimiting the appropriate sphere of the money and the capital markets in order that they may be linked and co-ordinated adequately.

The Governor's explanation of the rationale behind the sudden reversal of the monetary policy in March 1964 sounds quite convincing. When the credit reins were loosened in October 1963 through a marginal liberalisation in the midst of an extremely comfortable resources position of the banks, the Reserve Bank did in fact anticipate a much larger increase in bank credit than in the previous busy season. But what it had not bargained for was the failure of food crops and the consequent serious price situation. When the earlier optimistic crop estimates failed to materialise on account of a severe cold wave amongst other factors and the prices of food and other agricultural commodities started advancing even when the crops were moving, the Reserve Bank found it necessary to apply the brake on unrestricted credit expansion.

The Governor answers the criticism of the sudden reversal of policy in the middle of the busy season by distinguishing between the long-term promotional aspects of monetary policy, on the one hand, and the objectives and methods of monetary policy in the short-term, on the other. In order to meet the needs of development and to service a growing economy, the Reserve Bank has been endeavouring to build an institutional credit structure. The credit levels, however, have always to be related to the productive *needs* and *capacity* of the economy. Timing and flexibility are important in adjusting the cost and availability of credit to the changing economic situation. Early diagnosis of changes and an alert and purposive response to them are the essence of monetary policy, if it is to be a live one. It is the failure of the Reserve Bank's critics to realise that the short-term needs may often conflict with the long-term ones and that such conflict in emphasis need not necessarily retard the realisation of the objective of growth with stability that causes a lot of misunderstanding over its credit policy. Emphasising this point, Mr. Bhattacharyya said:

"In few areas of policy, the timing is so crucial and flexibility so important. There is no doubt that credit policy in India has to be attuned to the needs of development and the attempt of the Reserve Bank has been, over a longer term, to build up the credit structure to service a growing economy. This promotional aspect is, however, not inconsistent with a concern at any point of time with current credit levels and a watchfulness to see that credit expansion in the short-run does not outstrip the productive needs of the economy or is diverted into speculative channels. It is in this context that the accent on restriction that has marked the credit policy, both general and selective, in the last few years, has to be seen. The accent has, of course, varied in intensity at various times. In October 1963, the situation called for ... some loosening of the reins. Equally it cannot be denied that the picture as it emerged in March 1964 indicated the need for some pulling back of the reins."

No Embarrassment to Bankers

It has often been urged by bankers that the mid-season change in policy put the banks in an embarrassing position, for they had already entered into credit commitments on the basis of the earlier liberalisation of policy. The Governor, however, made it clear that it was not the intention of the Reserve Bank to restrict legitimate credit needs. In fact, in nearly every case, the earlier quotas were restored, on the Reserve Bank being convinced of the genuineness of the credit need. The fact that, in spite of the more rigorous scrutiny, banks continued to obtain almost the same level and order of finance from the Reserve Bank shows how flexible was the operation of policy. In other words, it was not the availability that was curtailed in effect, but the period for which funds were borrowed from the Reserve Bank that was reduced, as the cost of credit became higher and this, in turn, induced a more economic use of resources. Since the new policy made credit dearer rather than tighter, it should have caused on embarrassment to bankers in the sense of being unable to meet their commitments. What the change in policy really did was to make the bankers think twice before making fresh commitments to extend credit, and, in a way, this was what the Reserve Bank precisely wanted.

In this context, the Governor made a valuable analysis of the role of monetary policy in industrial growth. In view of the importance of this subject, it is desirable to quote what he said rather than summarise his observations:

"Easy credit is not the providential power that can solve the difficulties of industrial growth. The limitations to a more rapid expansion in this sphere are real rather than monetary. Factors such as raw material difficulties, foreign exchange shortages and various physical bottlenecks such as transport and power cannot be cured by easy credit. On the other hand, excessive credit under these circumstances do only more harm than good. There is no doubt that the imbalance between overall supplies and demand is clearly the underlying factor in the recent deterioration of the price situation. I am aware that the increase in credit levels by banks is only one of the major factors in the overall monetary expansion, the other important influence being the impact of fiscal operations. ...

"Policy measures such as monetary tightness or fiscal restraint which are designed to correct the price situation, will, in the ultimate analysis, succeed only to the extent to which they help to mop up some of the excess liquidity in the economy."

It will be seen from the above quotation that the Governor is aware that credit levels is only *one* of the factors in the overall monetary expansion and that, unless fiscal operations of the Governments are restrained, they will in fact frustrate the attempts of monetary control, but, for reasons which must be obvious, the Governor did not make more than a passing reference to the role of fiscal restraint in an anti-inflationary policy.

Deposit Mobilisation

Another outstanding feature of the Governor's talk to bankers this week is his candid views on deposit mobilisation. He plainly told them that "the relative ease with which the banks have been able to obtain their deposit resources in recent years has obscured them to the reality of the problem of deposit mobilisation." There is no exaggeration in his contention that banks have succumbed to the temptation of relying upon Government deficits for the purpose of augmenting their deposits and not exerting themselves unduly to gather more deposits.

The Governor of the Reserve Bank was not negative in his criticism of bankers' complacency in regard to gathering more deposits, for he did indicate the lines on which they could function more effectively in this direction. Thus, he said:

"There is still scope for further structural improvements and a rethinking of some of the policies. The success of banks' efforts at mobilising deposits is linked, on the one hand, with the rate of economic growth and income expansion and its distribution and, on the other, with institutional factors such as the expansion of branches and the improvement of banking services. Measures to impart strength to the banking system such as deposit insurance and the various statutory provisions of regulation no doubt help to inspire greater confidence among the public in the viability and soundness of the system. The role of banking education, which would feed the system with a growing cadre of qualified bankmen, is no less important and it is heartening to see increasing attention being paid by banks to this aspect of their organisation. ... I would plead once again for a reappraisal by bankers of the role of interest rates as one of the factors in attracting more deposits into the system. I venture to say that some more rethinking than what has been done in this context on the present pattern of deposit rates is called for. It has been apparent for some time that the spread between the short end and the long end of deposit rates is narrow, somewhat unnaturally so. This suggests the need for greater orderliness in the rate structure without necessarily increasing the total interest cost to the banks. With the rates of interest prevalent on call money, I have no doubt that the banks are paying more than what is needed for retaining the money which would in any case remain with the banking system. On the other hand, with the present spread, there is not surprisingly the result that the genuine saver tends to turn away from the banks and seeks other repositories for the placement of his funds."

Stand Vindicated

The fact that, within a fortnight of the revision of deposit rates under the Inter-bank Agreement, the Governor of the Reserve Bank has found it necessary to urge a fresh reappraisal of the role of interest rates is clear evidence of the half-hearted and grudging manner in which the bankers have conceded the case for paying higher rates of interest on deposits. He has plainly stated that some more rethinking than what has been done during the last six months on the present *pattern* of deposit rates is called for. What is more important is that the Governor has been more specific now than before in pointing out the precise directions in which changes are required. First, the *unnaturally narrow spread* between the short-term and long-term deposit rates must be corrected and, secondly, greater *orderliness* must be brought about in the interest rates structure. All this need not necessarily mean an increase in the total interest cost to the banks. In a way, the Governor's plea is a comment upon the unwillingness of bankers to accept the rationalisation of rate structure proposed by the Bhabha Committee. But even the Bhabha Committee, one must hasten to add, did not go far enough. We had already pointed out (*vide* page 1055 of *Commerce* dated 20th June 1964) that expediency, rather than evolution of a long-term policy, was the characteristic feature of inter-bank agreement on deposit rates and that the changes proposed by bankers then after protracted negotiations behind closed doors represented some *clever*, though not necessarily, *clear* thinking. The Governor has now fully vindicated the stand taken by this journal.

It may be recalled that the bankers had rejected the Bhabha Committee's proposal for reducing three days' call money rate by ½ per cent to 2½ per cent and did not even agree to a stipulation for a minimum period of 15 days, but they are now faced with a categorical statement by the Governor that banks are unnecessarily paying more than what is needed for

(Continued on page 436)

Driving on wet, slippery roads is as dangerous as stepping on a banana peel. Avoid skidding by taking these simple precautions.

- **See that your tyres are in good condition and always at correct pressure.**
- **Drive more slowly and smoothly on wet and slippery surfaces.**
- **Don't brake, accelerate or turn sharply.**

Never brake sharply in a skid. Leave the clutch engaged for better control of your car through the engine.

If however your car does skid, here are a few points to help you control it.

REAR WHEEL SKID. Remove your foot from the accelerator and turn front wheels into the skid. e.g. If the rear of the car swings to the left, steer left. Then steer in the desired direction, and gently accelerate.

FRONT WHEEL SKID. Remove foot from accelerator. Straighten the front wheels.

FOUR WHEEL SKID. Release brakes at once to allow free rolling of wheels. Then apply brakes gently, gradually increasing pressure, to avoid wheels locking again.

I.M.F. NEARLY NINETEEN YEARS OLD

A RESUME OF ITS ACTIVITIES

THE International Monetary Fund (I.M.F.), on the occasion of its twentieth annual meeting to be held at Tokyo from the 7th to 11th inst., can certainly look back on its career with justifiable pride and satisfaction. The Fund, since it came into being nearly nineteen years ago—on 27th December 1945, to be precise—may not have achieved fully its fundamental objective of establishing a multilateral system of world trade and payments, a system that is free from all exchange restrictions, import controls and other handicaps lying in the way of a balanced growth of international trade. But it has doubtless succeeded in preventing a recurrence of the game of "beggar my neighbour" played by several countries during the 'thirties. What is more, the Fund has set and promoted a standard of conduct in international monetary affairs and assisted its member-countries in times of external payments difficulties. As a lender for short-term, the Fund has been helping its members to keep their economies growing and becoming stronger in all possible ways —by giving advice and technical assistance, as well as by providing foreign currencies when required. The extent and nature of help provided by it has varied from country to country. As a lender, it has been of much greater use to the developed countries than to the underdeveloped, the latter receiving more advice than tangible financial assistance. The Fund is primarily a rich man's club.

Since the Fund commenced operations, it has sold the equivalent of more than $7,000 million to 49 different countries and conducted some hundreds of consultations. Almost a hundred par values have been established and many adjustments in official rates of exchange approved. Under the Articles of Agreement, it will be recalled, each member of the Fund is obliged to agree with the Fund on what the par value of its currency shall be, that is, the ratio of its currency unit to the U.S. dollar and

to a stated amount of gold. Once the par value is agreed, the member is obliged to maintain the actual buying and selling rates for exchange transactions in its currency within one per cent either side of the established par value. Thanks to the international scrutiny of proposals for changes in par values, the world is today better assured than ever before that, if a country devalues, it does so for good reason and to no greater extent than its circumstances warrant.

Convertibility

The Fund has been ably discharging the responsibility concerning members' restrictions on payments and transfers for current international transactions. It has consistently encouraged its members to examine the feasibility of ending recourse to these transitional arrangements and to accept the obligations of convertibility, that is, to move from Article 14 to Article 18; the latter Article requires the country concerned to refrain from imposing restrictive measures on current payments and transfers without the Fund's approval. Alluding to the progress made in the field of convertibility, the inaugural issue of *The Fund and Bank Review* observed:

"It is something quite new in international relationships to have in existence an institution continuously concered with ecouraging countries to ease restrictions on payments, and thereby to stimulate increased international trade. Without the steady moral influence thus brought to bear by the member-countries collectively upon each one individually, it is doubtful whether many countries would yet have felt ready to cut loose from the familiar framework of restrictions. It is also important that this same collective body was and is able to help its member-countries with substantial financial aid as they prepare to scrap their restrictions."

The most conspicuous of the Fund's operations has been the provision of foreign exchange to members needing to draw on its resources. The Fund makes available to its members the pool of gold and currencies built out of the subscriptions of its members. The extent to which the pool has been drawn upon have varied greatly from time to time. The amount drawn was very heavy ($467.7 million in the very first year of operation, that is, 1947). The withdrawals were negligible in the subsequent three years, due to the Marshall Plan for Europe. For the five years 1951-55, in fact, repurchases exceeded new drawings every year, with the result that, by December 1955, the net amount due to the Fund had been reduced to $234 million.

Standby Facility

Meanwhile, in 1952, the Fund had introduced the use of standby arrangements by which the member-countries that so wish are given assurance of support should they need it, rather than immediately drawing on the Fund. Over the years during which the Fund has been assisting its members financially, it has made available about $11,000 million in drawings or the unused standby arrangements. Fifty-four members have had recourse to the Fund's resources. And at one time or another, the currencies of 14 different members have been used to assist others. Something like $1,700 million of the Fund's resources used to support its members' individual reserves are still outstanding and another $1,970 million still committed under standby arrangements.

Between the beginning of operations by the Fund and 30th April 1964, 51 members purchased currencies and three had standby arrangements without drawing under them. Of these 54 members, 19 were in Central and South America, 13 in Europe, 7 in the Middle East, 7 in the Far East and Western Pacific, 5 in Africa, and 3 in North America. Total sales by the Fund were equivalent to $7,470 million. The drawings made by 44 members have been wholly or partly repaid, either through repurchases in gold or convertible currencies or as a result of purchases of their currencies by other members. On 30th April 1964, the total amount of members' purchases still outstanding was equivalent to U.S. $1,606.2 million.

Except for the drawing by Cuba, all purchases made prior to 3rd March 1960 have been fully reversed. However, 11 other members have been in a debtor position to the Fund continuously for more than five years, that is, they have not within that period reduced the Fund's holdings of their currency to 75 per cent of quota, or to the level corresponding to their currency subscription. This has been the result of new drawings, agreed with the Fund to meet re-emerging payments problems, being made concurrently with the repurchase of earlier drawings.

Repurchase Obligations

Since the inception of the Fund, 122 repurchase obligations aggregating the equivalent of $1,684 million (repurchases during 1963-64 amounted to $380.41 million, the smallest total since 1958) have been incurred by 49 member-countries. Of these, 24 are incurred by countries which have not used the Fund's resources but which had originally paid gold subscriptions equivalent to less than 25 per cent of their quotas. In addition to repurchase obligations, a member drawing from the Fund undertakes to repurchase its own currency equivalent to the amount drawn (except to the extent that other countries draw that member's currency) within a maximum period of three to five years. If a drawing is made under a standby arrangement, the maximum period is three years. In practice,

the largest part of repurchases is made under commitments of this kind.

The periodic exchanges of views between the Fund and its members have proved to be a valuable instrument of international monetary co-operation for two important reasons. In the first place, they serve to make members' policies more responsive to the aims of the international community. Secondly, they equip the Fund to be more fully appreciative of the peculiar problems and needs of its individual members and supply it with the information necessary for action to meet those needs and, with the experience, to formulate realistic general policies for the implementation of the Articles of Agreement.

Technical Assistance

During the year ended April 1964, the Fund substantially increased its capacity to provide technical assistance to member-countries. In response to requests from members, it has continued to make available staff officers to give technical advice on problems within its area of competence. The assignments have lasted from a few weeks to more than a year, and have covered such problems as improvement of statistics, banking legislation, exchange reforms and programmes of monetary stabilisation. In order to meet an emerging need, the Fund has lately established a Central Banking Service to provide advice on problems arising in connection with the establishment of new central banks, and through which experts can

be made available to assist newer central banking institutions in various specialised fields. During the year, the Fund also began to build up a group of experts qualified in the fields of taxation, budgeting and financial control to help countries which would like assistance in dealing with their fiscal problems.

Fund officers have also had valuable short discussions on many specific problems with country officials, both in the field and at headquarters. For its part, the Fund particularly welcomes these exchanges.

During 1963-64, the Fund continued its training programme for middle-rank and junior-rank staff of member-Governments as a form of technical assistance in the field of financial analysis and policy. The Fund has long recognised that its training programme plays an important part in the service to its members and that every effort should be made to strengthen it in the light of emerging requirements. Recently, a broad review of the programme has been undertaken, and several changes have been adopted. The programme will be gradually expanded over a period of years in keeping with the growth of the Fund as a whole. Organisationally, the training activities have been regrouped and have now been committed to a new Fund department, known as the I.M.F. Institute.

Resources

In keeping with its expanded activities, the resources of the Fund have risen markedly. The aggregate subscriptions of members—the subscriptions equal quotas—have more than doubled during the nineteen years the Fund has been functioning; the actual amount of Fund quotas as on 30th April 1964 was $15,615 million. The rise has been due partly to admission of new members and partly to increases in quotas. There are now as many as 102 members as against just 30 when the Fund began functioning. The initial quotas of members were first based "on a volume of trade (and so on prospective needs) related to war-time price levels." The total quotas available were found later to be less adequate to cope with a possible emergency. In 1958, the Executive Directors of the Fund recommended an increase of 50 per cent in the quota of each member, with additional increases for Canada, Japan, West Germany and a number of other countries. As a result of these changes and of new members, the total of quotas has risen from $9,200 million at the end of 1958 to more than $15,615 million today. Since 1958, there has been a further growth in the volume of international transactions. Further, the freedom for movement of capital has broadened owing to the abolition of almost all exchange controls among the developed countries and the opportunities for short-term capital movements have increased, following the frequent changes in the interest rate policies of these countries. It is, therefore, now felt that the existing enhanced (in 1958) quotas might not be sufficient to prevent dangers to the stability of exchange rates arising from volatile flows of capital. The anxiety to avert a possible heavy run on countries' reserves has reinforced the need for raising the supply of resources at the disposal of the Fund.

The Fund has been seized of this problem for quite a few years. At one time, it was thought a solution for it could be found by making special arrangements covering the main trading countries, since it was felt that only they needed such emergency assistance as would take care of the situations arising from movement of short-term capital. Accordingly, the Fund made arrangements, which became effective in October 1962, to borrow (if and when needed) some $6,000 million in the currencies of the ten main trading countries. So far, the Fund has not needed to draw on this reserve; and it is quite conceivable that the fact that these resources are now available will make it unnecessary for the Fund to borrow them.

Even so, this arrangement has not been found to be satisfying to all and the search for finding ways and means of improving international liquidity continues. The view is gaining ground that a further general increase in the Fund's quotas is necessary. This issue will figure prominently at the Fund-Bank meeting at Tokyo next week.

An addition to the Fund's financing service was made in February 1963 when the Fund established its special compensatory financing facility which provides for more liberal terms of assistance to countries faced with temporary commodity export problems that are largely beyond their control. The Fund also agreed to give sympathetic consideration to increases in quotas proposed by commodity exporting countries, so that they might have larger borrowing facilities.

Fiscal Policy

On many occasions in the past, the Fund has emphasised that, while monetary stability is a prerequisite for sustained economic development, it must be accompanied by resolute efforts to increase productivity and capital formation. Reiterating this plea in its latest Annual Report, the I.M.F. observes:

"An orderly development programme should ensure that total investment plans are within the financial resources available and that all possibilities for expanding these resources are fully explored. It has become increasingly evident that, in a number of countries, fiscal difficulties, which give rise to deficits in the public sector, are a substantial element in economic instability. To the extent that the Fund can, by expert analysis and advice, help such countries to deal with their fiscal problems, the principal task of the Fund in the monetary and exchange fields will be eased."

Since it is the fiscal policy that influences greatly the nature and pattern of a country's economic growth, the I.M.F. has done well, indeed, in deciding to set up a new Fiscal Affairs Department, the budget for the fiscal year 1964-65 makes provision for this Department. It is to be hoped that the member-countries will fully make use of the expert analysis and advice tendered by the Department.

MANCHESTER LETTER

RISE IN COTTON MILLS' PRODUCTIVITY

OUTPUT INCREASES MARKEDLY DESPITE SHARP REDUCTION IN LABOUR FORCE

From Our Special Correspondent

MANCHESTER, 25*th August*

WHEN the production figures for the first half of 1963 were being analysed, the British cotton industry took credit for the fact that, particularly in the spinning section, there had been relatively little fall in output, despite the sharp reduction in the labour force. In the ensuing twelve months, manpower has been further reduced, although by no means as sharply, while production from the mills has not only been maintained but has increased to a significant extent.

This welcome reversal of former trends deserves the widest publicity, as there are still many outside observers who persist in their contention that the trade is backward and lacking in enterprise. Incontrovertible facts and figures of this kind should be used to show what has been done and to illustrate that not only is the spirit willing but practical steps have been taken to modernise plant and improve efficiency.

The following comparative figures covering the past four years speak for themselves and should provide useful ammunition for those who recognise that the trade deserves more bouquets than it has usually received:

TABLE I

	1st half 1964	1st half 1963	1st half 1962	1st half 1961
Cloth (million yds.):				
Cotton	551.10	518.20	566.96	650.53
Man-made	280.90	254.96	262.29	273.35
Mixtures	37.04	36.09	39.05	41.08
Total ..	868.94	809.25	868.29	974.86
Yarn (million lbs.):				
Cotton	210.99	199.51	203.91	241.61
Man-made	53.81	44.12	43.42	50.25
Mixtures	16.67	19.12	19.16	20.01
Waste	52.81	47.82	51.56	51.52
Total	334.28	310.67	318.05	363.39

One of the encouraging aspects of the production totals is that purely cotton goods have regained ground, at least as compared with the past two years, while the man-made fibres have continued to make sustained porgress. Provided there is no sudden curtailment of buying, there seems every reason to anticipate further gains on the productive front, as more efficient machinery is steadily introduced into the mills.

The number of employees on the books of spinning and weaving firms at the end of June this year was 140,950, as against 144,210 twelve months previously and 158,100 in mid-1962. Within the different sections spinning workers are now shown at 51,860, as against 53,500 last year and 58,570 two years ago. In the same period, manpower in weaving has been reduced from 79,750 in 1962 to 71,410 last year and to 70,550 at the end of June 1964. In waste spinning, the labour force over the past twelve months was 270 lower at 6,230, while, in doubling, manpower was 490 down at 12,310.

Changing Cycle?

According to the trade cycle, which is so frequently governed by the availability of supplies in the market, the revival of business in cotton and allied textiles should have come by mid-1962. It was not until twelve months later, however, that the movement really got into its stride and, a year ago, the wheels were beginning to turn at a much faster rate.

TABLE II
(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1954 ..	2,775	335	3,110	812	2,298
1955 ..	2,479	365	2,844	688	2,156
1956 ..	2,314	380	2,694	595	2,099
1957 ..	2,287	490	2,777	567	2,210
1958 ..	2,030	434	2,464	468	1,996
1959 ..	1,927	575	2,502	411	2,091
1960 ..	1,911	786	2,697	383	2,314
1961 ..	1,842	801	2,643	336	2,307
1962 ..	1,813	642	2,255	200	1,965
1963 ..	1,574	700	2,274	303	1,971
First 6 months					
1955 ..	1,350	200	1,550	351	1,199
1956 ..	1,215	201	1,416	301	1,115
1957 ..	1,212	250	1,462	295	1,167
1958 ..	1,105	229	1,334	257	1,077
1959 ..	977	257	1,234	201	1,033
1960 ..	993	382	1,375	201	1,174
1961 ..	975	455	1,430	180	1,250
1962 ..	868	324	1,192	150	1,042
1963 ..	809	361	1,170	153	1,017
1964 ..	969	461	1,330	148	1,182

The statistical background to the fluctuations in activity is generally provided by the rough estimates which can be gained by the simple addition of production and imports and the substraction of exports in any given period. The resultant balance has, in the past, provided a reasonably accurate guide to subsequent events, but, in view of developments which have occurred so far this year, more comprehensive control over the situation may follow in the future.

Meanwhile, the position at the end of the first half of 1964 shows a definite swing towards more supplies being in prospect, as Table II illustrates.

Coupled with the sharp increase in arrivals of foreign goods to the highest level yet recorded in any half-year, there has been a revival in output from the local mills. The volume of cloth produced, in fact, is almost identical to that in 1962. Exports in the meantime have been virtually unchanged as compared with the first half of the last two years, so that the balance has increased substantially. This is in marked contrast to the position twelve months ago, when the cloth available was at the lowest level recorded.

Predictions based solely on statistical evidence are always liable to contradiction, but experience has shown that an upward movement in stocks, as indicated during the past six months, eventually has its repercussions on the general level of trading.

According to the Textile Distributors' Association, total sales during the half-year increased by 6 per cent as compared with the same period in 1963, the major improvement being in the disposal of women's knitted outerwear, blouses and skirts which rose by over 20 per cent. Sales of piecegoods and nets were 13½ per cent up, while household textiles showed little change on the 1963 level of purchasing. Total stocks at the end of June were 6.2 per cent higher than at the same period last year.

General reports from distributing centres have been encouraging leading to the belief that more goods would be needed to satisfy the requirements of customers. Weather conditions this year have certainly been more conducive to better clearances and purchasing power has broadened.

Manufacturing Comparisons

Weavers are to be given the opportunity of joining in the cost comparison schemes which have already been introduced in other sections of the industry. The Productivity Centre of the Cotton Board has been running a pilot plan for weaving firms for some time and its success has encouraged the launching of a comprehensive programme for the whole branch. As in the earlier schemes of this kind, complete secrecy is maintained, so that although reports are provided for those taking part, no firm can recognise its competitors in the table of results. The information provided, however, enables participating firms not only to compare their total costs but to identify the strong and weak points in their respective performance. Meetings are to be held in six centres during the first fortnight in September to explain the system to interested firms. The next results will be drawn up in January and the completed forms from those firms entering the project are required by the end of November.

The party's over! This was a party of minds. Rather than men. There was plenty of food—for thought! The leftovers were, in short, used-up pencils and pads. And blades and clips. The venue: The Research and Development Department of the West Coast Paper Mills Limited.

Today's party is over. But there will be one tomorrow. And the days after. At the same place. And, all the time. So that more—better—paper may be produced. For writing. For printing. For packaging. By the West Coast Paper Mills Limited, at Dandeli.

THE MAN WHOSE BUSINESS IS BUYING

In every modern industrial enterprise, there is a man who specialises in buying. He is a man of experience and is constantly posted with information on the performance of the products he buys by the engineers who use them. He demands an uncompromising standard of quality—whether in machinery, raw materials, accessories or other equipment.

Dunlop Industrial Rubber Products are sure to interest such a discriminating buyer.

COAL CONUNDRUM

EXTENSIVE MECHANISATION UNNECESSARY

By D. N. Chakraverty

THE shadow of an impending crisis over the coal industry is apparent. Demand for coal is suffering from a peculiar slump at the moment. In 1962, when production of lower grades did not exceed 10 per cent and that of the medium grades, particularly in West Bengal and Bihar, formed 59 per cent of the total production, all attention was focussed on how a speedy rise in production could be achieved. The position continued even till the beginning of the year 1963. It is, therefore, paradoxical that all attention is now focussed on how to increase the offtake of coal from the piling stock at the colliery pitheads mounting every day for want of adequate demand. The proverbial transport bottleneck, which characterised the railways' ineffectual efforts to come to the aid of the industry, which had persisted for several decades in the past, does not exist today. On the contrary, the position in regard to the railway transport availability has improved so much that wagons are said to be going abegging. The recent decontrol on the distribution of soft coke and non-coking coals of grade II and below, effective from 1st July 1964, was expected to add to the general improvement for the benefit of the economy of the industry, stagnant so far under the force of unfavourable circumstances. And yet coal is not moving as freely and rapidly as the growing pace of industrialisation in the country warrants. The targets of the Plan had been revised and the estimated requirements scaled down from time to time, as the current slump in coal demand is believed to portend a bleak future.

Mechanisation

At such a juncture, if we cry ourselves hoarse, demanding large-scale mechanisation of the coal industry, the situation to the common man will be incomprehensible. Mechanisation's chief aim is to increase production. When coal is suffering from the evils of overproduction, confusion may be worse confounded. Efforts seem to be directed to channelise popular demand for coal to superior grades even for purposes where inferior ones can suffice. The known reserves of the superior grades are admittedly very limited. Any recourse to large-scale mechanisation for the production of these grades would only bring about quicker exhaustion of such reserves. Such innovations will undermine our national economy. Any fear of shortage of supply of energy to hold up the pace of our industrialisation is chimerical, simply because shortage does not exist; what is evident is surplus over demand, leading to a glut in the market against the background of which elaborate boosting of production capacity by costly installations of modern machinery is almost an anathema.

Machinery of the type advocated for implementing the programme of large-scale mechanisation with a view to reaping the benefits of mass production are not manufactured in India at present. Imports of such machinery, therefore, involves heavy expenditure in foreign exchange, besides other important considerations like enormous capital layout. A cursory glance at the progress and state of affairs of the finances in the industry will convince one that the endeavour is more aimed at concentrating the resources in the hands of a few *entrepreneurs* leading ultimately to monopolistic trends in the coal market than anything so grandiose as they seemingly profess. The necessity of decentralisation of the productive capacity in the field of industrial enterprise in the economy of our country is obvious. We cannot afford, in the larger interests of our national economy, to ignore this and other factors in the context of these considerations.

It is an irrefutable fact that our country abounds in manpower and is faced with almost an insuperable problem of unemployment. Increased industrialisation, all-round economic development and national struggle for prosperity are incompatible with large-scale unemployment and underemployment with poverty of the extreme type raging all round. In fact, unemployment withholds economic development, acting as a hurdle at the altar of which all pious thoughts of modernisation of productive methods have to be sacrificed.

In a country's economy, agriculture and mining play a vital role. Our agricultural sector is knee-deep in economic mire. Landless labour, suffering from chronic unemployment, still constitute the biggest single problem for all our economists to solve. Seasonal unemployment of the cultivators and farm labour still cause headache to the policy-makers at the top. Coal industry is set in a semi-rural surrounding. While agriculture provides inadequate scope for full-time gainful employment, no other industry except coal provides means to the unemployed and underemployed farm labour to augment his income for a tolerable living. A study of agro-industrial migration and mobility of labour in this regard will reveal the enormity of the truth.

Geological Conditions

Another consideration which cannot be cast to the winds is the peculiar nature of coal industry, caused by geological conditions. Coal mining is such an operation where cutting of coal by pickaxes is still an operational necessity. Conditions are not rare where considerations of safety also warrant this so-called primitive method. All these vital considerations cannot be summarily dismissed merely because of a craze for overnight modernisation by a coterie of advocates.

Things have to be weighed in the balance of social justice and economic foresight. Production of any commodity can be speeded up by adoption of modern scientific methods in the present nuclear age, but how far such jet-age production will go to the benefit of the society as a whole has also to be seen. Our national Government has not lost sight of this vital aspect of our endeavours for attaining higher economic progress. This is evident from the planned encouragement which the Government affords to the growth of small-scale industries throughout the length and breadth of the country. The products of these small units could be turned out by mass-scale production at no time and yet in the tiny huts and hovels of the craftsmen they are produced at a slow speed on a small scale.

Nobody can gainsay the fact that prices of coal, which is the basic fuel and prime mover of all industrial wheels, should be competitive in a world of scientific advancement where substitutes are likely to appear in various shapes and forms. But, come what may, no substitute can replace King Coal from its rightful place in our national economy during the coming hundred years or more. Admittedly, economic prices are an imperative necessity, but, for achieving this, subsidiary and overhead costs have to be held in restraint.

Cost Aspect

The cost at which coal is won, as compared with any other modern fuel, particularly in relation to the heat value yielded by the former, is certainly not so prohibitive as is endeavoured to be made out by certain quarters by confusing the cost of raising with the cost of coal at the consumption point. The cost of raising will naturally be high in the case of selective mining in defiance of the occurrence of seams of different qualities in a sequence endowed by nature.

This brings us again to the question of super-abundance of inferior qualities of coal in the subterranean reserves in our country—a peculiar feature which cannot be ignored. In plain words, it will be imprudent to lay aside that which is available in plenty and run after that which is rare. The importance that is attached to the role of lower grades of coal in meeting the fuel requirements of the country is borne out by the fact that the then Minister of Steel, Mines, and Heavy Engineering, Mr. C. Subramaniam, in his speech at the Central Fuel Research Institute, as recently as in March 1964, said that the test of "human wisdom lies in utilising what we have" and further added that we would have to devise ways and means of encouraging the use of lower grades of coal. This candid statement of the Union Minister indicates the emergence of a new era of thinking in Government circles, basing the pattern of our consumption of coal on the qualities abounding in our known reserves. An immediate reorientation of our attitude towards the demand for quality coal for every little purpose where coal of common varieties, so plentifully available in the country can, very well do, is a sheer necessity.

Further, we must not lose sight of the great fact that demand for coal for providing

INDUSTRIAL FINANCE CORPORATION OF INDIA

4¾% BONDS 1976

PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL GUARANTEED BY THE GOVERNMENT OF INDIA

AMOUNT OF ISSUE: Rs. 6,00,00,000

Issue Price Rs. 99.25 Per Cent

REDEEMABLE AT PAR ON THE 15th SEPTEMBER 1976

The Bonds are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act and are also eligible for grant of advances to Scheduled Banks by the Reserve Bank of India. They are on the approved list of securities of the State Bank of India.

Subscriptions will be received in cash or by cheques at the branches of the Reserve Bank of India at Bombay, Calcutta, Madras, New Delhi, Nagpur and Bangalore from Tuesday, the 15th September, 1964 but the list will be closed without notice as soon as the total subscriptions amount to Rs. 6 crores and in any case not later than the close of business on Monday, the 21st September, 1964. The Corporation reserves the right to retain subscriptions received upto 10% in excess of the sum of Rs. 6 crores.

Copies of the prospectus and application forms can be had from the offices of the Reserve Bank of India as also from the Head Office of the Corporation at Reserve Bank Building, 6, Parliament Street, New Delhi and its Branches at Liberty Building, 8, Marine Lines, Bombay-1, 23, Rajendranath Mukherjee Road, Calcutta-1 and Keshav Bagh, 38, Whites Road, Royapettah, Madras-14.

Arrangements will be made for listing of these Bonds at the Bombay, Calcutta and Madras Stock Exchanges.

Brokerage will be paid at the rate of 6 Paise per Rs. 100 to recognised banks and brokers on allotments made in respect of applications for the Bonds bearing their stamp.

ADMINISTRATIVE JUSTICE

COURTS VS. TRIBUNALS

By J. B. Monteiro

IN April 1964, the Chief Justice of India publicly declared in the course of two different addresses that the Income-tax Appellate Tribunals should be abolished and their work should be transferred to the High Courts. He made this suggestion first while addressing a conference of members of the Income-tax Tribunals at Bombay, and reiterated the same while inaugurating a symposium on "Accountancy Profession" in New Delhi on 25th April last. He said that in the hierarchy that functioned for the collection of taxes there were three offices before any dispute reached the High Court and it had been their experience that the litigants often got a feeling of dissatisfaction that the question on which they had appealed was not tried by the High Court.

The Chief Justice went on to say: "I am not suggesting that the Income-tax officer and the Appellate or the Income-tax Tribunal do not do their duty properly. You have to realise that in such matters there is such a thing as faith and confidence and I think I would be justified in claiming that fortunately the High Court and the Supreme Court continue to enjoy the highest confidence of the public." Mr. Justice Gajendragadkar argued: "If the tax statutes are going to be more comprehensive, would it not be a better step to depart from the trodden path of leaving the Income-tax Appellate Tribunal to deal with facts and leave this question of law and fact together to be dealt by the High Courts in an appeal directly brought to them?" Thereby one court would be eliminated and the High Courts would have jurisdiction to deal with the complex question of facts.

This statement sparked off a controversy which has not yet stopped raging. While the lawyers have been indulgently concurring with the Chief Justice's views for obvious reasons, the accountancy profession has raised an alarm at the prospect of losing the right of representation in income-tax cases. Organised trade and industry also found it necessary to oppose the proposed move. Very good arguments have been advanced against the suggested change. For instance, it has been argued, with the help of factual data, that the tribunals deal with cases with much more swiftness than courts; the tribunals have to go by evidence which would not meet the tests of legal evidence; there were very few appeals from the tribunal's verdicts and most of them were upheld by the courts; the courts would be deprived of expert knowledge of the accountants, and so on.

However, the controversy still continues in the absence of any denial on the part of the Government about the proposed change. On the contrary, now and then Press reports indicate that the Government is working on the proposed change. It is unfortunate that such an uncertainty should be cultivated by the Government on a matter of such fundamental importance. For, the question is far more important than is generally recognised. It goes far beyond the narrow interests of right of representation and cost of litigation which have been the main factors behind the current debate.

British Experience

The larger question is whether in a modern welfare State the multitudes of disputes that arise between the citizen and administration shall be decided by ordinary courts or administrative tribunals. This question has been conclusively decided in England first by the Donoughmore Committee on Ministries' Powers, thirty-five years ago, and lately by the Franks Committee on Tribunals and Inquiries which said: "We agree with the Donoughmore Committee that tribunals have certain characteristics which often give them advantages over the courts. They are cheapness, accessibility, expedition and expert knowledge of their particular subject. It is no doubt because of these advantages that Parliament, once it has decided that certain decisions ought not to be normal executive and departmental processes, often entrusts them to tribunals rather than to the ordinary courts." Again, the Franks report says: "If all the decisions arising from new legislation were automatically vested in the ordinary courts, the judiciary would by now have been grossly overburdened." The Permanent Secretary to the Lord Chancellor said in his written evidence: "It is plain, I think, that if all disputes now determined by administrative tribunals had to be transferred to the ordinary courts such a transfer would necessarily involve the creation of a large number of additional judges. . . . I believe that it is essential for the administration of justice as a whole that, because the Bench should be of the highest possible quality, any proposal for dilution should be jealously guarded. These are some of the reasons why I believe, with others, that the system of administrative tribunals as it has grown up in this country has positively contributed to the preservation of our ordinary judicial system." We agree with the Permanent Secretary to the Lord Chancellor that any wholesale transfer to the courts of the work of tribunals would be undesirable.

T.T.K. Endorses Tribunal System

In the context of Indian conditions, it is interesting to note that Mr. T. T. Krishnamachari has strongly endorsed the tribunal system in the course of the Feroze Memorial Lecture delivered in New Delhi on 8th September 1962. He said: "The fact, however, remains that in this country the present system of adjudication by the executive in several matters affecting the citizen has the double disadvantage of making the law that gives the executive these powers weak, as the ultimate adjudication is to be by the executive and of superimposing on executive decisions a complex and long-drawn-out legal procedure which, while it creates an uncertain position for the individual affected, makes the administration difficult. A mere proliferation of courts with a dichotomy between facts and law will neither help the speedy collection of taxes nor the speedy administration of justice." He concluded that "the necessities of common law and equity emphasised by Dicey need not stand in the way of our establishing an organisation fair to the citizen and equally fair to the needs of society. The circumstances obtaining in this country needs the creation of tribunals the constitution of which and the disciplinary control over which does not lie in the hands of the executive but is vested in the highest organs of the judiciary. The procedure followed by these tribunals should not be elongated, as it happens in the case of orthodox judicial bodies administrating common law and equity, and some kind of summary procedure, which has to be arrived at with the assistance of lay and expert assessors where a final appeal under Articles 32 and 226 of the Constitution is considerably limited, seems to be called for. The desiderata that are necessary in this connection are that the president of the tribunal must come from out of the cadre of the existing judiciary, that the executive should have no voice in the appointment of the tribunal and that its decisions must have a finality about them."

Notwithstanding the advantages of the tribunal procedure in administrative adjudication, lawyers and judges brought up in the Diceyean tradition of the rule of law have accorded only a grudging acceptance to the *status quo*. Even the Indian Law Commission felt it necessary to talk at length, and in strong terms, about "executive justice" before it endorsed the tribunal system. One of the foremost exponents of the rule of law, Lord Denning, has been very outspoken on this point, when he said, in the course of the debate on the Franks report in the House of Lords, "Tribunals form as valuable and indispensable a part of our judicial system as justices of the peace."

Chief Justice on Tribunal Strategy

Ironical as it might sound, the present Chief Justice himself has outlined a comprehensive strategy for tribunals in the course of an address delivered at the Indian School of Public Administration. After summarising arguments for and against tribunals, he said: "The administrative tribunals cannot, therefore, be regarded as being inconsistent with the doctrine of the rule of law, provided, of course, the tribunals are properly constituted and adjudication by them conform to the healthy requirements of the administration of law." He concluded: "If the administrative tribunals are properly appointed and their procedure conforms to the essential requirements of administration of law, their working may lead to some advantage. The judges appointed may claim special knowledge of technical matters which are brought before them, elaborate procedure may be dispensed with, costs may be minimised, the length of trial may be controlled and speedy and effective justice may be assured."

The case for special tribunals rests on the ground that the ordinary courts are either incompetent to try the cases which come before administrative bodies or, if they did deal with them, could not try them properly. In the first place, the courts are too busy to deal with them. Secondly, the courts are generally not suited to deal with cases involving specialised knowledge with which lawyers, as a rule, have little or no acquaintance. Tribunals, moreover, having an informal procedure and not being burdened by ordinary rules of evidence, can act more quickly and cheaply than the courts which are too slow and costly and have a complicated procedure. While it is often useful to be represented by an advocate, it may not be so necessary, for the procedure of a tribunal will place an applicant more at ease than that of a court will.

These constitute very strong reasons for not entrusting the ordinary courts, with administrative matters and allowing the tribunals to handle them. The proper safeguards against the abuse of tribunal procedure, the question of confidence of the public in the tribunals, ensuring conformity of the rule of law, proper supervision of tribunals and the anachronistic system of departmental appeal call for separate treatment.

Towards an Independent Appeal System

It is generally accepted that tribunals are better equipped than ordinary courts to dispense with administrative justice. But this still leaves the question of strengthening the tribunal system. The question of public confidence is the foremost problems which we have to face in this respect. In this respect, the Law Commission recommended:

(a) The existing jurisdiction of the Supreme Court and the High Courts which enables them to examine to a limited extent the actions of administrative bodies, should be maintained unimpaired.

(b) Decisions should be demarcated into (i) judicial and quasi-judicial and (ii) administrative.

(c) In judicial and quasi-judicial decisions an appeal on facts should be to an independent tribunal presided over by a person qualified to be a judge of the High Court. He may be assisted by a person or persons with administrative or technical knowledge. The tribunal must function with openness, fairness and impartiality as laid down by the Franks Committee.

(d) In the case of judicial or quasi-judicial decisions, an appeal or a revision on question of law should lie to the High Court. Special machinery can, if necessary, be provided to assist the High Court judge.

(e) In the case of administrative decisions, provisions should be made that they should be accompanied by reasons. The reasons will make it possible to test the validity of these decisions by the machinery of appropriate writs.

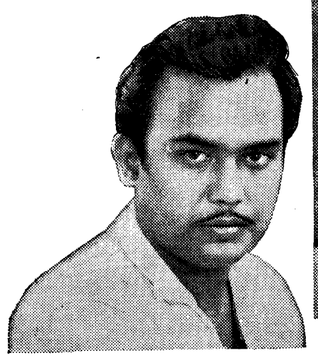
(f) The tribunals delivering administrative judgments should conform to the principles of natural justice and should act with openness, fairness and impartiality.

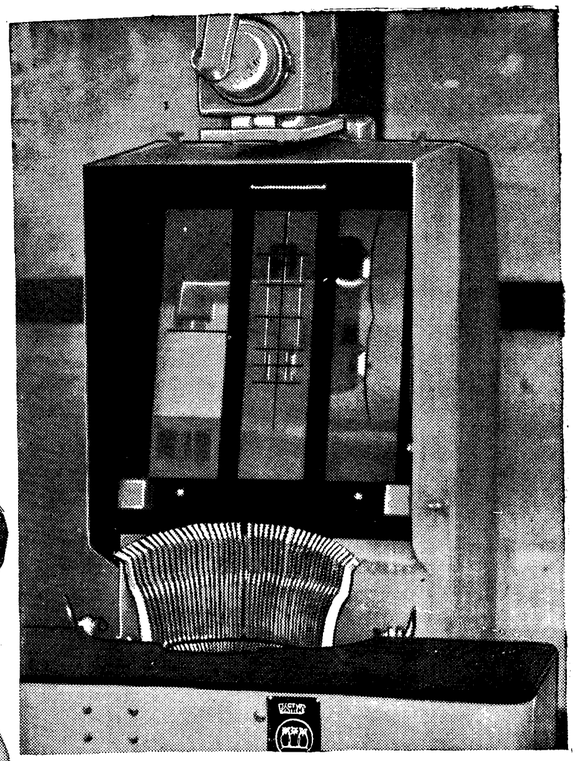
To ensure confidence the tribunals should be manned by competent and qualified persons who can claim special knowledge of the problems which are likely to be brought before them. Persons appointed on tribunals should have security of tenure, the appointments should never be made on an *ad hoc* basis, subject to extension or open to abrupt termination at the pleasure of the department. The trial of disputes before the tribunals should be open, fair and impartial. Normally lawyers should be allowed to appear before tribunals, and their conclusions should be recorded with reasons and the same should be publicly announced. Above all, it is necessary to keep in mind the Franks Committee proposition that tribunals are not appendages of the Government but are machinery provided by Parliament for adjudication.

One of the problems which has to be considered in dealing with administrative tribunals is whether there should be an Appellate Tribunal which would be competent to deal with issues of fact and law. In France, there is the Consil d'Etat to take care of this problem. In Britain, the Spense Committee and some administrative lawyers have been long advocating an Administrative Division of the High Court. The Franks Committee, however, recommended a Council on Tribunals which has been functioning for the last five years.

In dealing with this aspect of the matter in our country, Article 136 of the Constitution

"I check every type of the Typewriter on this machine





"It's the 3-Dimensional TYPE ALIGNING PROJECTOR —simultaneously projecting three images of a type on three adjacent screens. These images reflect three faces of the type (top, side and front) which must conform with pre-drawn markings on the screens. This enables me to check the projected type image for accuracy in type-soldering and bar-alignment. Faults, if any, are immediately corrected and types perfectly positioned to ensure smooth flow and light touch."

Modern precision equipment like the 3-D Type Aligning Projector and Braja Mohan Dan who works on it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

Over the years people in India have come to expect the standards set by REMINGTON—the highly responsive touch, light positive shift, smooth carriage action, and superior styling and finish—which make them so essential to distinctive correspondence.

may afford a solution. The powers conferred on the Supreme Court are so wide that in its discretion the Supreme Court can, in a proper case, correct even errors of fact found in the decisions of the administrative tribunals which are tribunals within the meaning of Article 136. Point of law arising out of the decisions of the tribunals can always be brought before the Supreme Court, and the decision of the Supreme Court in such points of law would naturally be binding on all the administrative tribunals.

The Franks Committee reasoned: "Perhaps the most striking feature of the tribunals is their variety, not only of functions but also of procedure and constitution. It is no doubt right that bodies established to adjudicate on particular classes of case should be specially designed to fulfil their particular functions and should, therefore, vary widely in character. But the wide variations in procedure and constitution which now exist are much more the result of *ad hoc* decisions, political circumstance and historical accident than of the application of general and consistent principles. We think that there should be a standing body, the advice of which would be sought whenever it was proposed to establish a new type of tribunal and which would also keep under review the constitution and procedure of existing tribunals."

The appointment of a special tribunal corresponding to the British Council on Tribunals is bound to solve many of our present problems and restore a semblance of order in the chaos that is our tribunal set-up today. This still leaves unsolved the problem of providing an independent appeal machinery in the place of the present hierarchical appeal system within the department. An appeal within the department has been dubbed as an appeal from Cæsar to Cæsar by an eminent jurist. Yet in many cases we have to be satisfied by such an arrangement. A typical example is provided by the appeal procedure in the Iron and Steel Controller's organisation in respect of allotment of iron and steel.

Complaints Against Discretionary Decisions

Here we deal with situations where there are complaints against discretionary decisions and where the citizen disagrees with the way in which an official has exercised his discretion but has no formal means of challenging it. The citizen's complaint in these cases is not that the official has abused his power but that the decision he has reached is not, in all the circumstances, appropriate. There may be no allegation of bias, negligence or incompetence but merely the charge that the decision is misguided. In essence this type of complaint is a complaint that there is no right of appeal to an independent body which can substitute its own discretionary decision for that of the official who made the original decision. The citizens do not feel confident about the impartiality of the departmental or hierarchical appeal system because the original decision is made on behalf of the department and hence the department is tending to be a judge in its own cause.

This is all the more real when the citizen smells a rat around, which is the common attitude today in respect of licensing of industries, issuing of import licences and letting contracts. Therefore, what is called for under the present circumstances is a comprehensive independent appeal system to which a citizen dissatisfied with any discretionary decision can confidently turn and expect justice in return.

The separation of persons is a more real basis for the avoidance of tyranny and a greater safeguard against maladministration than the separation of powers. That one person should have the right to review the actions of another is a more important principle than that legislative, judicial and executive powers should be in different hands. Our Constitution in practice is based on the better of these two theoretical alternatives. But by "persons" it is sometimes necessary to mean "institutions." If persons merely meant individuals, then a self-protective instinct of solidarity could make the separation less effective.

If, that is to say, we relied simply on a system of hierarchical internal checks whereby individuals within the same institution were put in positions of authority, one above another, there would be considerable danger that the mistakes of the juniors, although corrected by the seniors, might also be concealed from those outside the institution. Clearly the hierarchical system must be adopted in any Governmental or other institution of any size and clearly also covering up inevitably and constantly occurs. But the existence of investigation, criticism and public pronouncement does much to prevent petty and great tyranny and to reveal maladministration.

This, in essence, seems to be the spirit of a recommendation by the Santhanam Committee: "Discretionary powers are exercised by different categories of Government servants all of whom are not endowed with a high sense of dedication and integrity in equal measure. There is scope for harassment, malpractices and corruption in the exercise of discretionary powers. While we recognise that it would not be possible to eliminate completely discretion in the exercise of power, it should be possible to devise a system of administration which would reduce to the minimum, even if there is certain seeming loss of perfection, the need for exercise of personal discretion consistently with efficiency and speedy disposal of public business. Even so, there would be quite a considerable area where exercise of discretion could not be eliminated. It will, therefore, be necessary to devise adequate methods of control over exercise of discretion. In the more advanced countries various methods of such control have been devised. We recommend that this should be studied and a system of control should be devised, keeping in view the needs of the situation, the difficulties that arise on account of the vastness of our country and the basic principles which are enshrined in our Constitution and jurisprudence."

COAL

(*Concluded from page 408*)

energy for the growing tempo of our country's industrialisation, as envisaged under projections of our coming Five-year Plans, will be constantly increasing from year to year, over the next twenty years or more during which period nothing but coal alone will be expected to furnish the basic motive power, making it obligatory on all concerned to ensure increased production of this precious fuel at a pace consistent with the rising demands of a rapidly growing economy. Supplies in this extractive industry cannot be accelerated at will.

The present slump in demand is nothing but a passing phase, and may very well spell doom, if units capable of yielding increased raisings, even without the costly aid of mechanisation, are allowed to be closed under the force of unfavourable circumstances due to lack of foresight and prudence. Mining is such an operation that, if the present temporary slump is allowed to squeeze a single unit of production out of function, it will take years for it to recover and add, howsoever humble a mite it may be, to the total contribution of the industry towards the economic progress of the nation. Callousness, neglect and procrastination in this regard today may cause a calamity tomorrow.

Associate this number exclusively with your pinta-milka-day ! Why ? Because it represents the gauge thickness of aluminium foil strip from which milk bottle capping is made. Extensively used by all reputable Dairies, Alfoil capping protects both the bottle lip and the contents within from all contamination—ensures that you get your milk fresh and wholesome right to your table.

GROWTH OF NATURAL RUBBER INDUSTRY

THREE CRUCIAL ISSUES NEED URGENT ATTENTION

By V. I. Chacko

HENRY Wikham's mission to Brazil which led to the introduction of rubber to the South East Asian region was actually financed by the Government of India. But, as events were to prove, India's rubber industry which originated with the Brazilian rubber seeds 70 years ago, has expanded the least, as compared with that of other Eastern countries. In the 60 years after rubber began to be grown on a commercial scale, the rubber plantation industry, largely confined to the State of Kerala, has expanded to over 360,000 acres, thus to form the largest single plantation crop in South India. But a little known fact is that most of the expansion took place between 1951 and 1962. The area under rubber in 1951 was 171,191 acres. By 1962 it had increased to 361,142 acres. A remarkable feature of this increase has been that most of it was raised by small growers changing the industry from one of large-scale plantations to that of peasant ownership. Whereas there were only 14,007 owners in 1951, the number had increased to 66,962 by 1962. A distribution of ownership according to size of holdings as compared between 1951 and 1961 would give an indication of the transformation that has taken place:

Classification of Estates According to Size

Size of holdings	1951		1962	
	Units	Acres	Units	Acres
5 acres and below ..	10,757	19,639	57,524	110,098
Above 5 and upto 10 acres ..	1,471	9,794	5,428	40,041
Above 10 and upto 50 acres ..	1,321	25,128	3,410	69,698
Above 50 and upto 100 acres ..	201	13,513	305	22,113
Above 100 acres	257	103,117	295	118,292
Total ..	14,007	171,191	66,962	361,142

Those who are interested in the industry are concerned with three principal questions: (i) What does this distribution of ownership signify in terms of efficiency of operation and the economic viability of the majority of units? (ii) What is the true nature of the confrontation between India's plantation rubber industry and the newly developed synthetic rubber industry? (iii) What are the prospects of manufacturing expansion and the ability of the industry to meet the consequent demand for raw rubber?

A Significant Development

While the plantation rubber industry in India was mostly, according to the orthodox concept of plantations, a large-scale enterprise during the first 50 years of its development, within a matter of less than 15 years the small grower section has practically swamped the large growers who now form a hopeless minority. Most of the rubber plantations in the early days had its origin in corporate initiative. Today, most of the rubber planting is an individual venture on a small scale and taken up by many who maintained a number of other cultivations simultaneously. Their main dependence is not on rubber and their interest in and attention to rubber are proportionate to the prospects of return.

In 1962, the companies engaged in rubber planting was controlling only about 24 per cent of the total acreage under rubber. Because of its organisational features, rubber companies invariably led in the matter of innovations and modern practices and set the pattern for cultural and management practices throughout the industry. But, in the future development of the rubber industry, many of the practices which could be accomplished under a corporate set-up would be impracticable as far as small holdings of producers are concerned. The benefit of large-scale operations has been lost already and that of following higher standards would become diminished as individual producers follow their own convenience and pattern of organisation and operation. To some extent the increasing activities of the Rubber Board and its network of extension service centres might have some influence on the practices of small owners, but it would be difficult to sustain any common standard uniformly over a period of time. The effect of such diversity of practices would be to retard the growth quite considerably on economic lines. There is already sufficient evidence of this unfortunate trend.

The weakest link in the present situation is the small grower, who is not organised and, therefore, not on the lines of communication which would otherwise have linked the small and large growers together in one common effort. Many of the small growers are, in fact, cultivators of other crops and whose dependence on rubber is only as a side line. In the circumstances, the development of small-sized rubber estates would depend very greatly upon the expansion of the Rubber Board's extension staff and their ability to introduce changes in the methods of operations of small growers. But this does not mean that the rubber industry would not record outward sign of progress, that is, a net increase in output. It should be noticed that, while the total acreage has increased by 211 per cent, the total output of rubber has increased only by 80 per cent. A substantial area under rubber is yet to come under bearing and in the next few years much of that will come under tapping, with the result that there will be a sudden increase in the output of raw rubber. But it is a moot question whether, in terms of yield per acre and cost, India's natural rubber will compare favourably with that of the rest of the world.

Land Ceiling Law

There will remain two questions even when full account is taken of the possible area under rubber today. One is that the extent of extension now possible is limited, unless the lands in suitable areas which are distributed by the State under its land ceiling law, are utilised for additional planting by the small holders. The other is an extension by the State on its own account. The third possible line is in encouraging large-scale plantations under corporate ownership in the private sector. Even then, there will ultimately be a limit to the extent that new planting can take place. In other words, the largest expansion in output must now be expected from an improvement in the stand of rubber in the existing fields rather than from any substantial extension. The scope for that is very considerable, since the gap between the yield of an acre of new planted area under high yielding material and the old stand is as high as four to five times. The narrowing of the gap between the leaders and the laggards within the rubber industry would mean an increase in output from the existing area to well over 120,000 tons or four times as much rubber as was produced in 1962.

For the first time in the history of rubber, the world use of synthetic rubber has exceeded the total of natural rubber. This event took place two years ago, in 1962. Within the next ten years it is expected that the share of natural rubber in the world consumption of rubber would fall to about 40 per cent of the total of both types of rubbers. This does not mean that there will be a reduction in the absolute quantity of natural rubber produced or consumed. But what it means is that synthetic rubber would set the pace and the price level and would expand its market faster than natural.

Synthetic Rubber

The plantation rubber industry in India, while busy with quick expansion of its acreage during the 1950s and early 1960s, has found itself suddenly confronted with the emergence of synthetic rubber industry the rated capacity of which is 30,000 tons of S.B.R. per annum. In other words it was possible to set up one single synthetic plant with a capacity equal to what was achieved by the natural rubber industry in 60 years. The full impact of this confrontation has not seeped through the very large body of small producers, because of the remoteness of the manufacturing industry from the producers and the current shortage of raw rubber. The effect of a growing synthetic rubber industry would begin to be felt as soon as its total supply reached the level of demand made by the manufacturing industry. The extent to which synthetic rubber manufacturing will take place is dependent upon the increased demand for raw rubber which the natural rubber industry cannot fully meet and the rise of a petrochemical industry in India.

The growth of the synthetic rubber industry may not cause an immediate calamity on the natural rubber industry, but the message should be clear that it can survive only if it performs better and is able to hold its own in the future preference of manufacturers of rubber goods. The recent linkage of import of natural rubber to a compulsory offtake of synthetic rubber is only a crude exercise of administrative power to compel the manufacturer to take a particular kind of rubber. This will not work for all time. It is to be expected that, if synthetic rubber of satisfactory quality in terms of technological requirements of the manufacturers is produced within the country at cheaper rates and in adequate quantities, it will be very difficult to prevent manufacturers exercising their preference for such rubber to that of natural. It is a clear sign that the future of natural rubber will have to be organised for reasonable competition with the attractions of synthetic rubber. The test for leadership within the industry is whether they can foresee the realities of the '70s and '80s and prepare the community of producers to meet when the challenge comes.

Rubber is only one of the raw materials used in the manufacture of rubber goods. Although raw rubber is an important component, it should be recognised that the health and growth of the manufacturing industry will determine, in a large measure, the future prosperity of the raw rubber producing industry. As it is, the licensing of new rubber manufacturing capacity was undertaken on an expectation of economic growth which has not been matched by actuality so far. To take one major example: the tyre industry, which was licensed to produce 5.14 million tyres and tubes, has not yet reached that capacity and is not likely to by the end of the third Plan period. It has now been found that, even with an output of 2.6 million units, the supply is in excess of actual demand and there is a slump in the tyre market. If this trend continues, much of the prospect of a high offtake by the rubber manufacturing industry would not be realised. It is, therefore, clear that the plantation rubber industry in India cannot take the future for granted either in terms of an expanding demand which will give them the benefit of a continuous shortage of raw rubber or on the ground that the synthetic rubber industry which has just appeared on the scene will be incapable of bringing down its production costs.

Major Overhaul of Attitudes Needed

The plantation rubber industry can hold its own only if it undertakes a major overhaul of its attitudes and policies in keeping with the realities of the next 20 years as we can now foresee it. It will demand a greater and more efficient organisation of producers, progressively higher standard of cultural practices and management of rubber production in the case of thousands of small producers and an overall change in the stand of trees in the fields, so that costs can be brought down by means of a much higher output per acre. It is imperative to realise that better utilisation of the facilities offered by the Rubber Board can be possible only if the growers are properly organised. But the greatest obstacle in the way of development would be lack of resources. The agricultural income-tax on rubber income, the sales tax and other taxes bear upon the industry quite heavily.

In the development of rubber industry, the question of resources has become a matter of great urgency. Taking a representative group of rubber companies, it was found that some Rs. 36 lakhs were added to land and development between 1953 and 1958, whereas, between 1958 and 1962, the amount has fallen to Rs. 15 lakhs. During the years 1954 to 1958, nearly Rs. 11 lakhs were spent on buildings, largely for labour welfare and housing. During the next four years, the industry could spend only less than Rs. 2 lakhs. Addition of machinery and equipment had to be held back to less than Rs. 2 lakhs in ten years, for the purpose of increasing the provision of labour welfare amenities. The total net fixed assets of the companies covered increased from Rs. 1.38 crore in 1953 to Rs. 1.88 crore by 1958 and Rs. 2.11 crores by 1962. The largest increase was in the direction of welfare spending, although the largest item was land and development. In 1950, in spite of the fact that the price of rubber was only Rs. 91 per 100 lbs., the profit per acre was Rs. 130 and the retained profit Rs. 24. By 1962, the total profit had increased to Rs. 229 per acre, but the retained profit had fallen to Rs. 4.40 per acre. The total income between 1951 and 1962 increased from Rs. 464.50 to Rs. 968.02 per acre; but the net profit actually decreased from Rs. 152.89 in 1951 to Rs. 131.92 per acre in 1962.

If the increased prices are wholly neutralised by increased costs, and taxation increases out of step with the rise in profit, the end result cannot but be a diminution of the resources required for making rubber industry attractive to investors. In fact, taxation, labour welfare expenses and cost of production have all combined to make rubber less able to find the resources for future development. Although a subsidy is provided by the Rubber Board for replanting, it does not fully cover the cost of replanting or make good the loss of crop when the fields are felled for replanting. As a result, the grower stands to lose for a number of years if replanting is undertaken. It can only be resorted to by those who have adequate resources. to accept the loss from clearing fields for replanting. This is acting as a disincentive to replanting on a large scale, although there are many producers who now accept the loss in the hope of making good when the new plants come into bearing seven to eight years later. It is clear that, in the struggle with which the rubber industry is faced, the planters require the sympathetic understanding of the State Government in whose territory most of the rubber of today is found in India. Each individual owner should be in a position to improve his resource position and this cannot be done, unless there is a review of the tax burden and the amount that can be left with the producer, so that part of it may be diverted for future growth.

SYNTHETIC RUBBER *Vs.* NATURAL

For the sixth year in succession, the production of synthetic rubber exceeded consumption in 1963. On the other hand, the output of natural rubber lagged behind demand, the gap of 135,000 tons being largely met by rubber released from British and American stockpiles. Reporting this, the Food and Agriculture Organisation has said today that competition between natural and synthetic rubber is expected to become more intense in the coming years; producers of synthetic rubber would be competing among themselves too, in view of increasing supplies of new types of synthetic rubbers.

A note on recent developments in rubber appears in the July-August issue of the F.A.O.'s *Monthly Bulletin of Agricultural Economics and Statistics*, released this week. The article cites statistics compiled by the International Rubber Study Group (which is not an F.A.O. body) which show 1963 production of natural rubber as 2.1 million metric tons and consumption as 2.3 million tons. Production of synthetic rubber was 2.5 million tons (excluding the East European countries and Mainland China) and consumption amounted to 2.4 million tons.

The note states that the synthetic rubber industry is itself "currently in a state of flux" and developments now taking place "would transform the nature of the threat it poses to the natural rubber industry." The recently-evolved synthetic rubbers, known in the trade as polybutadiene and polyisoprene, have qualities "practically identical" to those of natural rubber. This means that natural rubber would face competition for such uses as heavy-duty tyres, where so far it has been the only product used. Secondly, the new types of synthetic rubbers may capture a large share of the market for styrene butadiene rubber, in use mainly for tyre threads for passenger cars. The note observes: "Clearly, a situation is developing where the interests of both natural and synthetic sectors of the (rubber) industry would be best served by a greater measure of co-operation than has existed in the past."

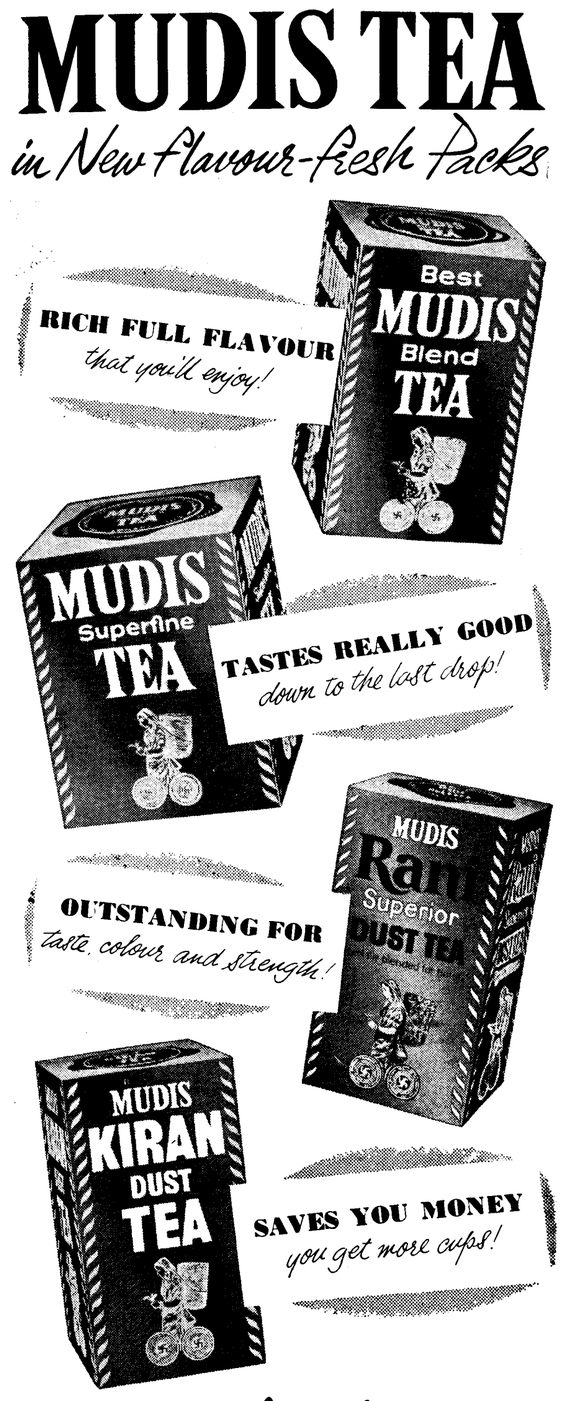
According to the forecast made by the International Rubber Study Group, natural rubber production in 1964 would reach a record figure of 2.2 million metric tons. In addition, 97,000 metric tons of natural rubber would be delivered from Government stockpiles. World consumption of natural rubber in 1964 is estimated at 2.3 million metric tons, as against at least 2.4 million metric tons of synthetic rubber. This, the note points out, implies that natural rubber produced in 1964 would again be disposed of.

COFFEE: PRODUCTION AND EXPORT QUOTA

In our article on outlook for coffee appearing on page 1098 of *Commerce* dated 27th June 1964, we had given some figures relating to coffee production in India and the export quota allotted to this country under the International Coffee Agreement. Apropos this article, the Chief Coffee Marketing Officer of the Coffee Board, in a communication addressed to us a few days ago, indicates what he regards to be the correct position in respect of production estimates and export quota. The estimates of coffee production in the past four seasons as made by the Board are as follows:

	(Tonnes)
1960-61	68,029
1961-62	46,050
1962-63	55,925
1963-64 (latest revised estimate) ...	68,500

The quota allotted to India initially for the international coffee year 1963-64 is not 21,304 tonnes but 21,384 tonnes. This was revised to 22,064.4 tonnes later and a further quantity of 366.7 tonnes was allotted on account of shortfalls of other countries. The total quota for the year was 22,431 tonnes.



INTERNATIONAL LABOUR CONVENTION

GENESIS AND IMPACT OF THE PLANTATIONS CONVENTION

By C. S. Krishnaswami
SECRETARY, ASSOCIATION OF PLANTERS OF THE STATE OF MADRAS

THE I.L.O. had framed Conventions relating to agriculture as early as 1921 and it is an interesting coincidence that the International Labour Conference held that year was attended by the then Secretary of the United Planters' Association of Southern India. It was, however, nearly thirty years later that the I.L.O. turned its attention to plantations as an agro-industry. It took a further seven years for a comprehensive convention to be adopted governing plantation labour.

It was at the Preparatory Asian Regional Conference of the International Organisation held in New Delhi in October-November 1947 a resolution was passed on labour in the tropical countries of Asia employed in plantation agriculture "producing such important commodities as rubber, cinchona, tea, coffee and sugarcane." Taking note of the 'unsatisfactory' conditions of such labour in certain countries, the resolution requested the Governing Body of the I.L.O. to urge the Governments concerned to enact "appropriate legislation for improving the conditions of plantation workers so as to bring them to a satisfactory level, particularly in respect of recruitment, wages, housing, hours of work, workmen's compensation, maternity benefit, freedom of association and social security measures." It also asked for a special study by the International Labour Office of the problems which were peculiar to plantation labour and for the establishment of an industrial committee to consider the special problems of plantation workers in Asian countries.

In implementation of the New Delhi resolution, the Governing Body of the I.L.O., at its 107th Session in December 1948, approved of the setting up of a committee on work in plantations to examine and to report "on the basic questions common to workers on plantations as a whole" and "on the methods for securing within the framework of the I.L.O. consideration of the special problems of plantation workers employed in the different branches." Although the New Delhi resolution was passed with reference to Asia, the scope of the Committee and the enquiry instituted by the International Labour Office as required by that resolution was enlarged to cover all such countries in the world as had important plantation interests or a significant amount of plantation production. On the pattern for I.L.O. Industrial Committees, the Plantation Committee was constituted on a tripartite basis with equal representation (two delegates from each group) of Governments, workers and employers.

Protection of Living Standards

The first report of the office on its enquiry covered all the major aspects of the life and work of plantation workers as detailed in the New Delhi resolution. This report, entitled "Basic problems of Plantation Labour," which contained information furnished by 16 countries spread over Asia, Africa and Latin America, formed the basis for discussion at the first session of the I.L.O. Committee on Work in Plantations, held at Bandung (Indonesia) from 4th to 16th December 1950. The session was attended by fourteen out of the seventeen member-countries. Eleven resolutions were adopted calling for Governmental action through legislation for the protection and welfare of plantation workers.

The second session of the Committee held in Havana in March 1953 discussed the definition of the term "plantation" on which agreement was not reached at Bandung and also considered the two important subjects of regulation of wages on plantations and health and social services. The session was of particular significance, as, at the instance of the Workers' Group, it addressed itself to the question of the relationship between instability of prices of plantation commodities in the world market and the level of employment. The resolution adopted at the session invited the Governing Body to consider the question of assuring fair remuneration and the protection of the living standards of plantation workers through measures which would "obviate so far as possible severe fluctuations in the world commodity market." The resolution also called for the consideration of the possibilities of approaching the United Nations and other international organisations concerned with a view to establishing principles and conditions on which the I.L.O. might participate in the negotiations of agreements regarding basic commodities with a view to safeguarding the interests of the workers in respect of employment and earnings in any discussion of market prices and the possibility of controlling their fluctuations.

The third session, held in October 1955 in Geneva, concerned itself with living and working conditions of plantation workers, the stabilisation of employment and earnings of workers. The fourth session which also met in Geneva in December 1961 devoted itself to the promotion and development of the co-operative movement for plantation workers and the extension of social security with particular reference to sickness, maternity, invalidity and old age, to plantation workers and their families.

A Convention of 92 Articles

The culmination of the efforts of the first three sessions of the Committee was the passing of the Plantations Convention 1958 (No. 110) at the 42nd session of the International Labour Conference held in 1958 by 92 votes to 60 with 12 abstentions. This Convention comprises 92 articles, arranged under 14 parts. The Plantation Recommendation 1958 was also adopted unanimously at the same conference by 164 votes to nil, with no abstentions. The recommendation not only covers the same aspects as are dealt with by the Convention but also contains guide lines regarding vocational training, equal remuneration and welfare facilities. It is not possible here to analyse the various articles of the Convention or the various provisions of the recommendations. Succinctly stated, the Convention and the Recommendation furnish a blueprint for member-countries for framing suitable legislation to protect the wages and other conditions of employment of plantation workers.

India and the Convention

It may appear surprising at first sight that India, which had comprehensively framed protective labour legislation for the benefit of plantation workers, has not found it possible to ratify the Convention. The reason is that, according to the Government of India, the definition of 'plantation' given in the Convention is too broad. The definition as contained in Article 1 reads as follows:

> "For the purpose of this Convention, the term 'Plantation' includes any agricultural undertaking regularly employing hired workers which is situated in the tropical or sub-tropical regions and which is mainly concerned with the cultivation or production for commercial purposes of: coffee, tea, sugarcane, rubber, bananas, cocoa, coconuts, groundnuts, cotton, tobacco, fibres (sisal, jute and hemp), citrus, palm oil, cinchona or pineapple: it does not include family or small-scale holding producing for local consumption, and not regularly employing hired workers. For the purpose of this Article the term 'Plantation' shall ordinarily include services carrying out the primary processing of the product or products of the plantation."

Right from the days of the Bandung Conference, the Government of India emphasised the need to define plantations more precisely, having regard to actual conditions in many countries having a plantation industry. It is pointed out that one drawback of the definition of 'plantation' in Article 1 is that it makes little distinction between the plantation and small holding. Only if the definition is suitably revised, limiting the coverage only to plantations proper or to those undertakings employing a certain minimum number of workers would the convention be realistic in relation to Asian countries. The Asian Advisory Committee of the I.L.O. which met in November 1961 urged that the definition contained in Article 1 should be amended by setting forth appropriate criteria with reference to the size of the undertaking measured by acreage and the number of workers employed and the use of mechanisation.

India has not found it possible to ratify Convention No. 110 only for technical reasons and not because labour standards in the plantation industry in the country lag behind the international standards laid down by I.L.O. On the contrary, the terms and conditions of employment of plantation workers which had evolved over the years through the voluntary action of the employers and had more recently crystallised into statutory obligations served as useful precedents for the I.L.O. Convention and Recommendation. In fact, since the application of the Payment of Wages Act to the plantation workers in 1947, labour in the industry is well protected by a gamut of enactments, the most important of which, of course, is the Plantations Labour Act, 1951. Not only is the payment of wages protected by law but minimum wages are guaranteed by the Minimum Wages Act of 1948. What is more, with the appointment of Wage Boards, the industry has moved on to the fixation of fair wages. In the composition and working of the boards, the principle of joint participation of the representatives of the employers and employees as contained in paragraphs 19 and 20 of the Recommendation on wages as well as the principle of free negotiations as contemplated in Article 24 of the Convention is fulfilled.

Parts II and III of the Convention on Recruitment and Contract of Employment have become irrelevant so far as the plantation industry in South India is concerned, because of the abolition of the *kangany* system and the disappearance of the system of annual settlements of labour. Annual holidays with pay (Part V), weekly rest (Part VI), maternity protection (Part VII) and workmen's compensation (Part VIII) are guaranteed by the provisions of the Plantations Labour Act, 1951, and the Workmen's Compensation Act, 1923.

Collective Bargaining

The Right to organise and Collective Bargaining dealt with under Part IX of the Convention are enjoyed by plantation labour either under statutory provisions or voluntary arrangements. The right of workmen to form trade unions is ensured under the India Trade Unions Act and any unfair labour practice or victimisation by the employer which is calculated to curb that right has been unequivocally condemned by adjudicators acting under the Industrial Disputes Act and by the High Courts and the Supreme Court. The Code of Discipline voluntarily ratified by trade unions and employers' associations in the plantation industry lays special emphasis on collective bargaining and urges the recognition of unions by employers for this purpose. Steps have been taken for the recognition of unions of estate workers in South India. As required by Part IX, there is adequate machinery under the Industrial Disputes Act for the settlement of industrial disputes. Voluntary arbitration is also gaining ground. The Freedom of Association, urged by Part X of the Convention, is guaranteed in India both for employers and workers.

Part XI lays down standards of labour inspection. Plantations in India are closely inspected not only by inspectors of plantations functioning under the Plantations Labour Act but also under the Payment of Wages Act, the Minimum Wages Act, the Employees Provident Funds Act, etc. Where there is a factory on a plantation, there is also inspection under the Factories Act, 1948.

Housing (Part XII) and Medical Care (Part XIII) are statutory obligations under the Plantations Labour Act. Housing standards have been prescribed by the different State Governments in consultation with the Statutory Plantation Labour Housing Advisory Boards. Plantations have an obligation to complete the housing programme by constructing houses for 8 per cent of the resident population every year. Considerable progress has been made in the implementation of the housing programme. As regards medical care, the Act makes it compulsory for estates to maintain hospitals either individually or on a group basis and provide treatment to the worker and his family according to approved standards.

When the Bandung session of the Committee on Work in Plantations was held, many in the industry were sceptical about its value and dismissed its resolutions of no more than academic interest. Only a few realised the potentiality of the Committee for influencing labour legislation affecting plantation labour throughout the world. They were proved right within five years of the Bandung session. Not only was Convention 110 adopted, but international action was set afoot for the stabilisation of commodity prices. The International Coffee Agreement concluded in 1962 is an instance in point. The snowballing of an idea, initiated in the preparatory Asian Regional Conference in 1947, into an I.L.O. Convention of world-wide dimensions in just a decade should serve as an eye-opener to such of those in the plantations industry as are prone to think in isolation which, however splendid, is bound to be ended by the onrushing tide of international thought and action in this diminutive world of the rocket age.

OVER A CENTURY
OF SERVICE TO THE
Plantation INDUSTRY

That cup of Tea, or Coffee, you drink every day has been made possible only as a result of the pioneering efforts and accumulated experience of Companies like ourselves.

Our experience in, the management of Tea, Coffee and Rubber Plantations, Finance, Fertilisers, Estate Supplies and even Printing has been, and is, invaluable to the Companies we look after.

We will continue to serve the Plantation Industry to the advantage of both the consumers of many nations and the economy of India.

We are Managing Agents for the following Companies:-

The Kil Kotagiri Tea and Coffee Estates Co., Ltd.
The Peria Karamalai Tea & Produce Co., Ltd.
The Ouchterlony Valley Estates (1938) Ltd.
The Kalasa Tea & Produce Co., Ltd.
The Cochin Malabar Estates Ltd.
Chembra Peak Estates Ltd.

We are also Secretaries/Treasurers of the following Companies:-

The Thirumbadi Rubber Co., Ltd.
The Savamalai Estates Ltd.
Wartyhully Estates Ltd.
Cowcoody Estates Ltd.
Lingapur Estates Ltd.
Ossoor Estates Ltd.

PEIRCE LESLIE & COMPANY LIMITED
(ESTABLISHED 1862)
Incorporated in England with Limited Liability
COCHIN, CALICUT, COIMBATORE & MANGALORE

PL-127

INDIAN TEA BEYOND THE SEAS

PUBLICITY AND PROPAGANDA MUST BE INTENSIFIED

By M. R. M. Punja

TEA is a humble product of common use and is taken for granted. An Indian proverb runs: "Diminutive as the idol, its glory is great." Likewise, the glory of tea is great and there is in fact a two-volume encyclopædia on the beverage by Ukers. Thinking of tea, one always recalls the Boston Tea party which sparked off the American War of Independence. Perhaps the anglophobia which prompted the colonists to dump the East India Company's tea chests into the sea prejudiced American minds against tea and in favour of coffee. Our efforts are at present concentrated on winning the young Yankee as a votary of the elixir of youth from the two leaves and a bud.

In this article, I propose surveying the contemporary scene—Indian tea in the international market and tea in India's economy.

Of the world acreage of tea of 981,872 hectares in 1962, India's share with 334,093 hectares constitutes 34 per cent. Ceylon's acreage comes next with 24.4 per cent. The other countries come as follows:

	Per cent
Indonesia	8.0
U.S.S.R.	7.2
East Africa	6.7
Japan	5.0
Formosa	3.8
Others	10.9

World production of tea in 1962 was 774 million kilograms, of which India accounted for 44.4 per cent, that is, 344 million kilograms. Ceylon comes next with 212 million kilograms or 27.4 per cent and then Japan with 10 per cent, Indonesia with 6.1 per cent, the African countries of Kenya, Uganda, Tanganyika and Nyasaland with 5.2 per cent between them, and other countries with 6.9 per cent.

World Consumption

The picture of world consumption shows that the British, with their incurable love of a "cuppa," import 235.84 million kgs. (48.8 per cent) followed by U.S.A. with 58.7 million kgs. (12.1 per cent), Australia with 27.53 million kgs. (5.7 per cent) and Egypt with 26.65 million kgs. (5.5 per cent). So far as *per capita* consumption is concerned, again the U.K. leads with 4.4 kgs., followed by Ireland with 3.7 kgs. and New Zealand with 3.1 kgs.

The spectre that always haunts the tea trade is the fear of overproduction and slump in the world market. In that delightful play, "The Tea House of the August Moon," the comical Okinawan interpreter logically concludes, from the absence of locks on all house doors in Okinawa, that honesty is bad business, so far as the locksmiths were concerned. In tea, honest productive effort had more than once proved bad business and restrictions on acreage and exports had to be resorted to. The International Tea Agreement, first entered into in 1933, sought to regulate exports and acreage. The Agreement which was revived in 1938 and in 1948 was finally terminated in 1955. During the Second World War, the Agreement was in abeyance, the U.K. Government undertaking the bulk purchase of tea from India. Bulk purchase ceased in 1951. Since 1951, there have been proposals to revive the International Tea Agreement. The idea has not met with the approval of the producing countries and there is now no restriction on production or exports. Alongside the International Tea Agreement, there was a joint machinery for tea propaganda, namely, the International Tea Market Expansion Board. India terminated its membership of the I.T.M.E.B. in 1952.

No Need for Gloom

The prospects for Indian tea are bound up with the prospects for tea in the world market. In 1960, the F.A.O. predicted a million pound surplus of production over consumption by 1965 and the prediction has been reiterated since. The prediction has been a bone of contention, the trade urging caution and Government exhorting the industry to do its best and not to be discouraged by statistics. The Governmental view rests on the reasoning that the statistical forecast is based on the existing pattern of consumption in the traditional markets and does not reckon with the possibilities in the new markets of Europe, the Middle East, Africa, the Far East, Australia, etc. I personally think that it is better to err on the side of optimism rather than worsen one's position by spreading the gloomy word around. Gloom is not good for business!

India's tea exports looked up in 1963, when we earned the record figure of Rs. 132 crores as foreign exchange as against Rs. 125 crores in 1962. Government are naturally elated and are thinking in terms of increasing the targets for production and export during the fourth Plan period regardless of the fact that we are still trailing appreciably behind the third Plan target of 900 million lbs. and 610 million lbs. (or 408 million kgs. and 277 million kgs.), respectively. Actual performance so far has been only 345 million kgs. and 221 million kgs. in 1963 and 344 million kgs. and 209 million kgs. in 1962.

Prospects

My view is that, target or no target, there is scope for promoting exports of tea and there will be scope, until and unless tea falls out of grace as a beverage. There may not be much scope for expanding consumption in the traditional markets like the U.K., where *per capita* consumption has tended to stagnate around six cups a day or 9.4 lbs. a year for a long time. There is, however, great need to conserve such markets against marauding competitive drinks. Coffee consumption is increasing in the U.K. So is that of soft drinks, beer and so on. The doors of Europe have been thrown open for tea with the abolition of import duty on tea by E.C.M. countries and of export duty by India. Russia has become a regular buyer at our auctions, as her demand cannot be met by her limited tea industry in Georgia. The nascent nations of Africa remain to be tapped. Australia and New Zealand are rich customers to be cajoled. The U.S.A. is to be persuaded to favour tea to a greater extent.

The key to success is, of course, effective publicity and propaganda. The approach and emphasis should differ from country to country. In the traditional markets, the younger generation should be urged to conserve the tradition and not be seduced by new-fangled drinks. One of the questions exercising the minds of the trade is whether tea is considered too cheap or plebian a drink to be favoured by the young sophisticates. Some fear that, in the "trading stamp" war now on in Britain, the image of tea is suffering badly, as standard brands of tea are offered as gifts or sold at slashed prices. The psychology of the consumer, his conceit, his vanity, etc., have all to be reckoned with and pandered to if the market for tea is to be preserved. The Tea Board has opened tea centres in Edinburgh and other places in Britain and are doing a good job in persuading the young that tea is still the beverage to drink.

In the U.S.A. and Canada also, the publicity guns are trained on the young. In Australia and New Zealand, the housewives have to be captivated.

While the technique for publicity is a matter for experts in the field, the question of policy is one that concerns Government and the industry in the growing countries. Should publicity be a co-operative effort of producing countries on behalf of tea as a beverage or should it be uni-national by a producing country to further the marketing of its own tea? Publicity abroad, particularly in a country like the U.S., is an extremely expensive business and chauvinism has necessarily to be tempered by hard-headed economics.

It is indeed a rat-race in the tea markets abroad, principally between Ceylon and India. India's share in the total exports is 39.7 per cent, while Ceylon's is 37.1 per cent. In the U.K., India supplies 48.4 per cent of the total offtake and Ceylon 31.4 per cent. The share of the latter has increased in recent years. In the U.S.A., the percentages are: India 22.39 and Ceylon 39.4. Here, again, Ceylon has increased its share. When India steamed out of the International Tea Market Expansion Board, Ceylon was the residuary legatee of the Board's machinery and reaped the full benefits of it. It is only recently that the Tea Board's own efforts in the U.K. have made a mark. In the U.S.A. and Canada, however, in view of the million-dollar scale of the publicity business, the Tea Board's delegation recommended the continuation of combined attack against the 'admass' through the Tea Councils of the U.S.A. and Canada. Of course, the interests of Indian tea are furthered at every opportunity through available channels. In the New York World Trade Fair, the Tea Board has a stand to propagandise Indian tea. A visit by Tenzing Norkay, the Everest hero, to the Fair was arranged to impress the image of Indian tea on the millions of visitors from all over the world. In Australia and New Zealand, however, uninational effect is undertaken in addition to joint promotional campaign. In Europe, a combined effort is made in West Germany through the German Tea Council, whereas, in the Scandinavian countries, India is making her own efforts.

The goal of all publicity is to create an indelible tea habit and to get tea accepted as a status symbol in the affluent capitalist economies and as a low-priced egalitarian beverage in the socialist countries and in the low-income underdeveloped nations. Indian tea is well placed, as we have accepted democratic socialism as the sheet-anchor of State policy. Our tea is double-barrelled, the democratic brand being accepted in the capitalistic countries and the socialistic brew finding a ready clientele in Eastern Europe, Russia and other socialist nations.

TEA FINANCE COMMITTEE

"In view of our resource problems, it is gratifying to learn that the Central Government has set up a Committee to go into the question of short- and long-term finance for the tea industry. Later on, similar committees may be set up to consider the financial problems of the coffee and rubber industries. We hope that this Committee on which the U.P.A.S.I., is represented will go very fully into all aspects of the burden of taxation that is having a crippling effect on the industry today. Unless this Committee deals with the problems of the ever-increasing taxation, it cannot really find a satisfactory solution to our difficulties. Most of our members are working on large overdrafts, that being the only means of meeting the day-to-day expenses. Any additional loans offered would only mean increasing our obligations to add to our cost under interest, besides having to pay back the principal. What we need is a more reasonable tax structure. If that is conceded, the problem of short- and long-term finance will become easily more tractable."—*Mr J. R. Henshaw, Retiring President of U.P.A.S.I.*

COAL AND STEEL INDUSTRIES IN W. EUROPE

UNUTILISED POTENTIALS SUBSTANTIAL

THE European Coal and Steel Community's 1964 survey of investment—past and prospective—in the coal-mining and iron and steel industries covers all but a few very small enterprises in the countries concerned (West Germany, Belgium, Luxembourg, France, Italy and the Netherlands). These enterprises account for less than 0.5 per cent of the Community's total coal production and less than 0.4 per cent of its total crude steel production. The survey is thus most representative of the relevant industries—coal mining, iron-ore mining and iron and steel production in the Community. Some of the trends revealed by the survey are highlighted in this article. The most striking trend is that, although capital expenditure by all Community enterprises in the ten-year period 1954-63 has aggregated 12.6 billion dollar E.M.A. (European Monetary Agreement) units of account, investment in the coal mining industry and in iron ore mines has declined from 48 per cent and three per cent, respectively, of the total investment ($933 million) in 1954 to 18 per cent and two per cent, respectively, of the total ($1,827 million) in 1963, while that in the iron and steel industry has increased from 49 per cent to 80 per cent. This general trend of declining investment in coal and iron ore mines and increasing investment in iron and steel plants may also be noted in the following index:

TABLE I—*Index of Investment*

Sector	Projects completed				Projects planned for 1964
	1954-60 (annual average)	1961	1962	1963	
Coal mining ..	100	91	90	77	79
Iron-ore mines ..	100	132	122	83	73
Iron and steel industry	100	184	202	240	203
All Community industries ..	100	146	155	170	150

The declining rate of investment in coal mining has caused a fall in the extraction potential of hard coal from 258 million tonnes in 1955 to 243 million tonnes in 1963. The actual extraction in the latter year was only 223 million tonnes, as compared with 237 million tonnes in 1952. It is also indicated in the present survey that the industry's aggregate potential in 1967 will be only two million tonnes less than in 1963, despite the numerous pit closures effected since 1959 because of the change in the conditions of competition among the different energy products. If, thus, the coal mining industry's production potential will be contracting only gradually in the coming years, the reason therefor is to be found in the fact that investment so far has been designed to raise productivity in the collieries still in operation. As for iron-ore mining in which, too, investment has declined of late, it is noteworthy that the output of crude ore had increased progressively from 65 million tonnes in 1952 to 96 million tonnes in 1961. Since 1961, however, ore production has begun to decline, the actual figures being 92 million tonnes for 1962 and 80 million tonnes for 1963. This trend has been caused by the closure of some uneconomic mines and the scrapping of several expansion schemes in the face of stiffening competition from overseas ores. But the ore extraction potential, as distinct from actual extraction, continues, and will continue, at a high level. The relevant estimates of potential are 98 million tonnes for 1963 as well as for 1964, 100 million tonnes for 1965, 101 million tonnes for 1966 and 102 million tonnes for 1967.

Iron and Steel Plants

In the Community's iron and steel industry, the expansion made possible by the large-scale investment that has been effected continues at a fair pace. The aggregate investment in this sector has increased from $453 million in 1954 to $1,458 million in 1963 and is expected to be $1,239 million (on projects already in progress or approved) in 1964. An interesting finding of the survey, in this connection, is that the proportion of capital expenditure on the rolling mills and on general services has been steadily increasing, while the proportion of such expenditure on pig-iron and crude-steel production plant has been declining steadily. The proportion of expenditure on pig-iron production plant, incidentally, has fallen from 32 per cent of the total investment in the iron and steel industry in 1958-59 to 17 per cent in 1963; it will be only 14 per cent in 1964. Likewise, the proportion of expenditure on crude-steel production plant has declined from 18 per cent of the total investment in 1956-57 to 12 per cent in 1963; it will be only 13 per cent in 1964. The trends here are that (i) the industry has been investing less and less in basic Bessemer steel-making plant since 1958 and will before long be investing next to nothing, (ii) since 1961, it has also been showing less interest than before in open-hearth plant, (iii) expenditure on electric-furnace plant continues fairly high at about $20 million a year and (iv) the increase in expenditure on oxygen steelworks continues, accounting for about 70 per cent ($120 million) of total investment in the crude-steel sector in 1963.

The production potential for pig-iron in 1963 was 66 million tonnes and it is expected to reach the level of 77 million tonnes in 1967. But actual production of pig-iron in 1963 was only 53 million tonnes, as compared with 35 million tonnes in 1952. The production potential for crude steel in 1963 was 88 million tonnes and it is expected to rise to 103 million tonnes in 1967. But actual production of crude steel in 1963 was only 73 million tonnes, as compared with 42 million tonnes in 1952. Incidentally, Community ratios of actual production to production potential in the case of pig-iron and crude steel, as in the case of hard coal, coke and iron ore, are indicated in the following table:

TABLE II—*Ratios of Production to Potential*

Product	1955	1963
Hard coal	94.9	91.7
Coke	93.2	84.2
Iron ore	95.4	81.9
Pig iron	96.3	81.0
Crude steel	95.8	83.4

It will be seen from the above figures that there are relatively large unutilised potentials in the coal, ore mining and iron and steel industries in the Community. According to the authors of the survey, the sum of the potentials declared by the individual mines and works is bound to be slightly above the maximum production actually achievable in the Community. Unforeseeable incidents or circumstances in the course of any one year, it is said, may make it impossible for some of these enterprises to attain their maximum. Thus, even during the best years, actual production has never exceeded 96 per cent of the sum of the individual production potentials declared. For practical purposes, according to the High Authority, 96 per cent may be considered the highest rate of actual production achievable in the Community overall.

Steel Rolling Sector

It is in the sector of steel rolling that investment in recent years has greatly increased from 33 per cent of total investment in iron and steel industry in 1958-59 to 49 per cent of the total ($1,458 million) in 1963. It is expected to reach 50 per cent in 1964. While modernisation is going ahead actively on the traditional roughing mills, a number of enterprises, principally in Germany, are experimenting with the new continuous casting processes. It is expected that, by 1967, the proportion of finished products rolled in continuous or semi-continuous mills in the Community as a whole will be nearly 60 per cent, as against a mere 49 per cent in 1960 and 56 per cent in 1963. This growing interest in continuous casting in the rolling sector is as remarkable as the increasing accent on oxygen steel making in the crude-steel sector. Thanks to the heavy investments in recent years, the Community iron and steel industry is thus passing through a rapid phase of modernisation.

SPACE TRAVEL BY ORDINARY PASSENGERS?

Space travel by ordinary passengers may well become possible after a decade from now if the Lockheed concept for a rocket plane takes practical shape. This concept has just been outlined by Lockheed-California Company engineers in a study for the U.S. National Aeronautics and Space Administration. It will involve the development of a reusable rocket plane to transport ten passengers on regular schedules between earth and an orbiting space station. The winged rocket will be a two-stage carrier for transporting 'ordinary' passengers to and from earth orbit. The vehicle system development programme, if initiated in 1967, as estimated by the engineers, would become operational by 1975.

In addition to 10 passengers, the rocket plane would have a two-man crew and could haul three tons of cargo. The carrier would take off horizontally from earth via a ground rocket-sled. The first (lower) stage rocket will separate from the passenger (upper) stage and return to its ground base on turbo-jet power, after boosting the vehicle to the high rarefied atmosphere of the earth. The passenger stage would continue its journey to the space station orbiting about 300 m iles from the earth at a speed of 18,000 miles per hour. On its return trip, the vehicle would make an aircraft-type glide landing at its earth base.

The carrier system, it is said, will be designed to approach present airline levels of safety and reliability. It will be used primarily to exchange space station crews, transport scientific teams and ship supplies to the stations. The carrier which will be 168 feet long and 14 feet tall and have a wing span of 95 feet, is estimated to have a life span of upto 500 missions. It will require a major overhaul every 50 flights and a minor overhaul every 10 flights.

The round trip 'fare' to the space station is estimated to cost, under very favourable circumstance, as little as $12,000 (Rs. 57,000) by 1980 and $11,700 after the system has been operating for several years. This cost is in terms of 1964 dollar values.

SUPPLY OF TOOLS FOR BHOPAL ELECTRICALS

The requirements of the State-owned Heavy Electricals Ltd., Bhopal, for standard and special cutting tools (small) have become so large in view of the planned expansion of the factory that their supply poses a challenge to indigenous manufacturers. These requirements are estimated to be of the order of Rs. one lakh to Rs. 1½ lakh per month and are likely to go up further. This was revealed by Mr. R. Subbiah, General Manager, at the concluding session of a conference of leading manufacturers of standard and special cutting tools, held at Bhopal on the 27th and 28th August.

The conference, incidentally, was convened by Heavy Electricals to explore the possibilities of indigenous manufacture of such of the tools as were being imported and to urge on the manufacturers the necessity of continuous supply of tools already being manufactured indigenously. Mr. Subbiah suggested that the manufacturers who were present at the Conference should nominate two or three persons from among them to constitute a committee in the absence of an association for them. He also offered to convene a committee of officials from the management side Both these committees could then discuss problems concerning the distribution of the factory's orders among the manufacturers and the expansion of manufacturing programmes covering special tools.

BRITAIN'S HIGH-TEMPERATURE REACTOR

The high-temperature, gas-cooled reactor, first of its type in the world, built under the O.E.C.D. 'Dragon' project at Winfrith Heath, Dorset, England, started up on 23rd August. The helium-cooled, graphite-moderated reactor has been built as the first step in a programme aimed at producing more economic nuclear power from reactors of this type. For the rest of the year there will be a period of testing and commissioning, with the reactor running at very low power levels. It is expected that the reactor will begin operation at its full power of 20 megawatts (thermal) early in 1965. The reactor contains plant and equipment of new design supplied by contractors in most of the countries concerned. Ceramic fuel elements without metal cladding have been developed during the research and development programme and are now made at Winfrith Heath.

The 'Dragon' project, set up in 1959, is sponsored by the European Nuclear Energy Agency of the Organisation for Economic Co-operation and Development, in which Britain, Belgium, France, Germany, Italy, Luxembourg, the Netherlands, Austria, Denmark, Norway, Sweden and Switzerland are taking part. The agreement under which the reactor was built and is to be operated lasts until 1967, and the total cost will amount to £25 million.

NUCLEAR POWER IN SOVIET UNION

The Soviet Union, like the United States, has an atoms-for-peace programme. The nuclear power stations in that country are expected to achieve an aggregate capacity of about 900,000 kilowatts by the end of this year, according to Mr. A. Petrosyants, Chairman of the State Committee for Atomic Energy of the Soviet Union, who will be representing the U.S.S.R. Government at the third International Conference on the Peaceful Uses of Atomic Energy at Geneva. In the next five or six years big nuclear power stations are to be built, with an aggregate capacity of several million kilowatts.

At present the nuclear power stations in Siberia account for two-thirds of the aforesaid total capacity of 900,000 kilowatts. An atomic power station, with a boiling reactor for 50,000-70,000 kilowatts, will be put into operation near Ulyanovsk shortly. Soviet scientists are now busy studying reactors on fast neutrons. And the Government has also decided to build the world's first big reactor on fast neutrons with a capacity of 300,000-350,000 kilowatts.

The joint American-Israel team of technologists, which was appointed by the Israeli Government two months ago, to survey the possibilities of sea-water desalination on a large scale in Israel, has just arrived at an agreement on some major points in respect of the project. The agreed points are: (i) The project to aim at producing 150 to 200 M.W. of electricity and 100 to 200 m. cubic metres of water per annum; (ii) the power needed to be derived from a nuclear reactor; (iii) the process of simple evaporation to be used; and (iv) commercial operation to start by 1971. It has also been agreed that the unit to be installed should be hundred times bigger than the biggest single unit in operation at present in the U.S.

NEW PRODUCTS AND PROCESSES

Drill Adaptation Cuts Circles

EXTENDED compass arms and a side-cutting drill point makes it possible to use the home electric drill to cut up to 11½ inches diameter circles in wood, plastics or soft metals. A centre hole is first bored and the point of the adjustable compass arm inserted. The other end of the arm carries a bushing in which the sidecutting drill spins. The required diameter is set, the drill makes its own hole and then is swung around the centre point to cut the circle. Silken Compass Cutter Company, Box 242, Oceanside, New York, sells the compass and drill bits.

Compensating Barometer

A mercury barometer which compensates for local variations of temperature and gravity by a mechanical system has been developed by C. F. Casella and Co. London, at the request of the Ministry of Aviation. Whatever the actual temperature and gravity, it gives direct readings of pressure corrected to the stanard conditions of 0 degrees C. and 9.80665 metres per second gravity agreed internationally since 1955.

It also gives readings of altitude above sea level corresponding to these pressures, and can thus be used to calibrate aircraft altimeters. This job can be done quickly anywhere in the world. Without mechanical compensation, each pressure reading would require individual correction, by calculation or from tables, if conditions differed from standard. The correction is applied by three scales representing latitude from 0 to 90 degrees, altitude from 0 to 10,000 feet and temperature from 0 to 50 degrees C. In normal use, only the temperature scale need be adjusted before readings. The other two corrections, together determining gravity, are set when the barometer is first installed and do not need changing until it is moved to another station.

Insulating with Thin Foil

A method of forming thin, high quality heat-insulating layers on components for use in aircraft, submarines and electronics equipment has been patented by Commissariat a l'Energie Atomique, 29 Rue de la Federation, Paris 7e. The parts are wrapped with several alternate layers of "thick" and "thin" aluminium, magnesium or zirconium foil, and then processed at a temperature of 450 degrees Centigrade, and subjected to a 25 kilogrammes per square centimetre pressure in an atmosphere of carbon dioxide. The effect of this is said to oxidise the thin foil and to leave the thick unaffected so that the article is covered in alternate layers of heat insulating metal oxide and mechanically strong metal.

Magnetic Tape Typewriters

Repeating typewriters which produce the same letter or specifications over and over again by use of punched tape may be supplanted by a new model which uses magnetic tape instead. International Business Machines Corp. of 590, Madison Avenue, New York 22, says the magnetic impulses can be erased easily and replaced when a change must be made in the tape. Punched tape must be cut and patched to make a change. The magnetic tape, which receives a recording at regular typing speeds from a special typewriter, can repeat the text at 180 words per minute.

Measuring Tools to Last Long

Gauges, micrometers and other measuring tools which receive hard wear may have their lives prolonged by a Swedish process in which a layer of diamond particles is used to give exceptional wear resistance. The particles are made to adhere to each other and to the surface of the tool by means of a binding metal precipitated electrolytically with the particles. Manufacturing costs are lowered, claims the producer, Karl-Henry Mattsson, of Nora-Strand 11, Dandryd, Sweden, as a cheaper, softer metal is used for the basic tool. The diamond layer is only about 1-10 mm. thick and almost all of it can be recovered when the tool is scrapped.

Tank Corrosion Stopped

Protection for oil fuel tanks against internal corrosion by water, extending their useful life by many times and preventing dangerous leaks, is provided by a liquid corrosion inhibitor called "Protank." This material, according to Sir John Gallway and Partners of U.K., is added to the fuel oil tanks whenever they are refilled, at the rate of one pint per 300 gallons capacity per year. It has no effect on the burning qualities of the oil. Internal corrosion in unprotected storage tanks, particularly domestic oil tanks above ground which are subjected to extremes of temperature, comes generally from condensation collecting at the bottom of the tank and is a form of galvanic corrosion. The action of the chemical has been shown in tests to be particularly valuable after desludging.

Molten Metal Sampler

A pump has been designed to take samples of molten metal in the form of rods which can immediately be submitted to spectrographic analysis. The molten metal is introduced into a silica tube by vacuum created by a piston inside the pump. This tube, calibrated to very close tolerances, is then dropped into a water bath. A metal rod between 10 and 20 cm. in length is obtained which can be used at once after drying and cutting into sections. When sampling pig-iron for instance, no graphite precipitation can be detected, which is very valuable when the carbon content is to be determined spectrographically. The pump requires no special training to operate, and is manufactured by Ste. Jobin et Yvon, 26 rue Berthollet, Arcueil, Seine, France.

Examining the Human Body

A medical instrument which makes possible examinations and treatment within body cavities, hitherto accessible only by surgery, is now undergoing development and testing by the National Council for Research and Development, Jerusalem, and clinical testing at the Hadassah-University Hospital in London. The instrument, developed by the National Council for Research and Development, consists principally of a round "gun" which holds a flexible tube, a water pump for extending the tube, and a heater for adjusting the temperature of the water to body temperature. It uses a method similar to that of turning a stocking inside out, by steadily pushing it through from the inside until the tip comes out. The system of internal folding—which leaves the outside stationary—prevents friction and injury during penetration and recovery. Moreover, the flexible tube, which folds up within itself, is able to adjust itself without difficulty to narrow and twisting passages such as the intestines. Not only will it make possible examination of areas previously accessible only by surgery, but markings on the length of the tube may permit location of haemorrhages. It could also be used to transport a small camera or medication, or for the removal of foreign bodies and specimens.

Electronic Control of Housing Construction

An electronic system for controlling the construction programme in the Soviet capital will be introduced next year. A special electronic computer for this purpose has already been designed and the communication lines, pick-up and despatch equipment are on the drawing boards. The centralised system will unite and co-ordinate the operation of 120 construction units and 60 to 80 supply depots, about one thousand construction sites and over ten thousand trucks. According to estimates of economists, the centralised control of construction and building material industry will reduce construction costs substantially. It is estimated that the benefit from introducing electronic control would be tantamount to building scores of apartment houses at no cost at all.

Welding Machine

An automatic percussive-welding machine for electric lamp lead-in electrodes, said to be capable of producing high quality welds at high production rates, has been developed by Swift Wass Ltd., of England., in collaboration with British Production Engineering Research Institute. The development is claimed to be an appreciable advance on the currently widely used method of automatic gas (oxy-hydrogen) welding, which, the firm points out, has the disadvantages of relatively low output, high operating costs and low weld quality due to hydrogen brittleness. The composite lead-in electrodes normally fitted to incandescent, fluorescent and other discharge lamps are made from three lengths of dissimilar wires joined in series by two welds. The new machine joins the three wires by percussive welding, a form of butt welding using the electric discharge from capacitors.

Rigid Thermoplastic Sheeting

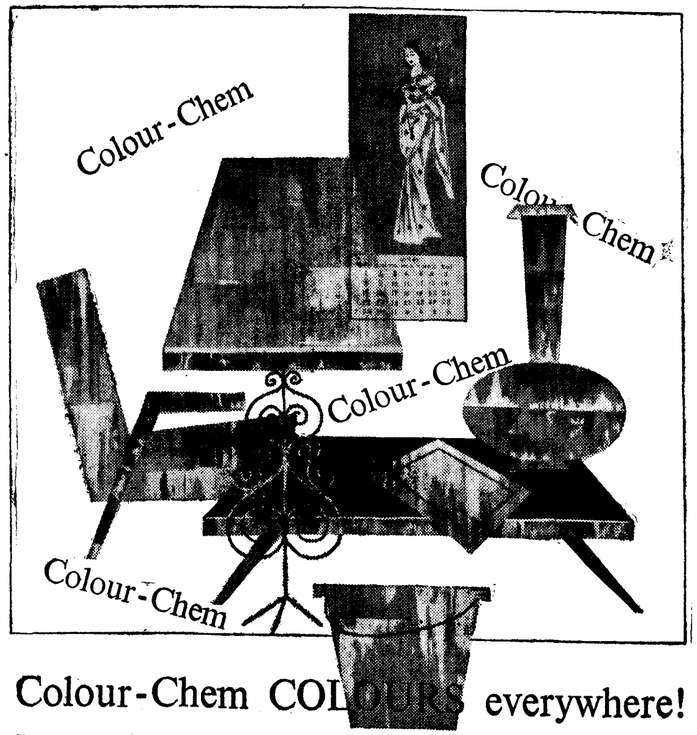
A method of making rigid, reinforced thermoplastic sheeting has been developed in Britain by Turner Bros. Asbestos Co. Ltd. The sheeting is manufactured from a mixture of asbestos and P.V.C. and can be had as a laminate or a single-ply sheet for moulding.

Among the advantages of the new material are stiffness, resistance to heat and chemicals impact strength, dimensional stability—its coefficient of expansion is about the same as steel's—and the fact that it can be drilled, cut or notched without shattering, even at sub-zero temperatures, and will not support combustion.

The firm says that the sheeting makes possible cheaper and lighter structures than have so far been obtainable from thermoplastics. Work is in progress on many combinations of reinforcing fibres and resin systems that are yielding high impact strengths and stiffness.

Wind Power for Cycle Traction

A new invention for utilising the force of the on-coming wind itself as the motive power for driving non-machine operated wheeled vehicles has been patented by R. K. Nijhawan, 37 Model Town, Amritsar. The invention will make it comparatively easier to ply a cycle, rickshaw, cycle rickshaw or wind-powered sailing craft on water against the wind. The device, which is akin to a windmill, lets the wind play on a number of cup-shaped wind vanes fixed around a central vertical shaft, mounted on the vehicles or vessels Under the action of the wind, whatever its direction, the vanes go round and round in a horizontal plane, producing a rotation of the central vertical shaft. The rotation, thus produced, is utilised for providing the motive power for traction on land in the case of land vehicles, or propulsion in the case of vessels on water. The device is so fixed around the axles of the wheels of the land vehicles as to rotate the wheels and move the vehicles in the forward direction only.



Colour-Chem COLOURS everywhere!

When you see the thrilling world of man-made colours around you—spectacular prints on your fabrics, colourful inks in your magazines, pleasing paints in the interior of your home, fascinating tapestry and the attractive furnishings of your drawing room, plastic balls in the hands of your children—remember that COLOUR-CHEM, India's leading makers of Pigment Colours, is very much a part of your daily life.

INDIAN DYESTUFF INDUSTRY

FURTHER EXTENSION OF PROTECTION URGED

THE consensus of opinion at the public enquiry on the dyestuff industry, held last week by the Tariff Commission, was in favour of continuation of protection to the industry beyond December 1964. In his speech, the Chairman of the Commission, Mr. M. P. Pai, said that the industry had made spectacular progress during the period that followed the grant of protection in 1954, its production having increased by more than ten times. The present scheme of protection to the industry covers acid azo dyes, direct azo dyes, fast colour salts, rapid fast dyes, rapidogens, solubilised vat dyes and sulphur black. During the last decade, the industry has diversified its production, and manufacture of other groups of dyes, namely, basic dyes, vat dyes, azoic dyes including naphthols fast colour bases whitening agents, organic pigments, pigment emulsion, oil solubles, food colours, reactive and other dyes, has been undertaken. Table A shows the present capacity and production of dyes in the organised and small-scale sectors of the industry. From eight units producing dyes in 1954, the number of units has gone upto 21 in the organised sector and 120 in the small-scale sector.

Capacity and Production

It will be further seen from the Table A that total capacity in the organised and small-scale sectors, both in respect of protected and non-protected dyes, stands at 21,306 tonnes, as compared with 2,022 tonnes in 1954 and 13,625 tonnes in 1962. The capacity in the organised sector has increased to about five times at 9,584 tonnes in 1964 from 2,022 in 1954. The small-scale sector's progress has been remarkable, considering that from a negligible capacity a decade back it has gone upto 3,979 tonnes in 1962 and to 11,722 tonnes in 1964. This large increase of capacity in the small-scale sector is not wholly due to the start of new units, but to the unreliable statistics in respect of small-scale units. It was only after a survey, conducted by the Directorate of Small Industries, that the exact capacity in this sector could be known. The utilisation of capacity, however, has been only to the extent of 60 per cent in the organised sector and 26 per cent in the small-scale sector. Production in the organised sector has improved from 674 tonnes in 1953 to 5,634 tonnes in 1963. The total production was 8,689 tonnes in 1963, as compared with 7,605 tonnes in 1962. In the small sector, the production, which was negligible in 1953, reached 3,055 tonnes in 1963. The *Commission has felt* concerned over the heavy under-utilisation of capacity in the small-scale sector, especially in view of a big spurt in capacity from 3,979 to 11,722 tonnes during the last two years, as noted earlier.

Table A: Present Capacity and Production of Dyestuffs
(In metric tonnes)

Items	Present capacity	Production 1963	Production 1962
Protected Category :			
Azo dyes (direct and acid)	9,665	2,149	2,384
Of which : Organised	1,653	1,097	1,464
Small-scale	8,012	1,049	920
Stabilised azoics (including rapidogens, rapid fast colours and fast colour salts)	2,907	626	590
Of which : Organised	662	152	195
Small-scale	1,945	472	395
Solubilised vat dyes	934	164	122
Of which : Organised	202	113	81
Small-scale	732	51	41
Sulphur black	2,290	1,584	1,258
Of which : Organised	2,290	1,584	1,258
Small-scale	—	—	—
Total	12,496	4,520	4,354
Non-protected Category :			
Basic dyes (including basic azo)	912	302	74
Of which : Organised	387	220	64
Small-scale	525	82	10
Azoic dyes (Naphthols and fast colour bases)	3,136	1,255	1,500
Of which : Organised	2,136	974	1,310
Small-scale	1,000	281	190
Vat dyes	890	486	559
Of which : Organised	740	481	556
Small-scale	250	15	3
Optical whitening agents	1,193	443	263
Of which : Organised	332	274	175
Small-scale	820	169	88
Organic pigments	1,406	893	275
Of which : Organised	906	564	275
Small-scale	500	29	—
Miscellaneous*	1,215	1,026	580
Of which : Organised	277	174	89
Small-scale	938	906	491
Total	8,810	4,169	3,251
Grand Total	21,306	8,689	7,605

Note : The figures of capacity in the organised sector are from Directorate General of Technical Development and figures of capacity and production of small scale are from Development Commissioner, Small Scale Industries.

* Oil solubles, food colours, sulphur dyes other than sulphur black etc.

The rise in production of dyes, it will be seen from Table A has been more pronounced in the *non-protected category* than in the protected group of dyestuffs during the last two years. The production in the protected category has remained almost constant at 4,520 tonnes in 1963, as against 4,354 tonnes in 1962, whereas in the non-protected group of dyestuffs it has gone up from 3,251 tonnes in 1962 to 4,169 tonnes in 1963, a rise of about 29 per cent over the course of one year. In the protected group of dyes, azo dyes and sulphur black account for the major share in output, whereas in the non-protected group, production of naphthols, vat dyes and other miscellaneous dyes has been significant.

Future Expansion

Adverting to the future expansion of the industry, the Chairman of the Commission informed that expansion licences had been granted to existing units for a total capacity of 6,022 tonnes. A further capacity of 602 tonnes was also licensed to four new units in the organised sector of the industry. With a further capacity for 1,266 tonnes licensed to the small-scale sector, the total capacity at the end of the third Plan would be around 29,000 tonnes. But total capacity at this level is considered far in excess of the projected demand for dyestuffs in the country. In 1954, it will be recalled in this connection, the total demand stood at 5,177 tonnes. When the Commission reviewed the position of the industry in 1962, the demand was estimated at 14,000 tonnes for that year and a 10 per cent per annum increase was expected during the next three years. But the actual trend of consumption has belied expectations, in that the apparent consumption of dyes, based on domestic production and imports worked out to only 11,668 tonnes for 1961, 11,276 tonnes for 1962 and 10,629 tonnes for 1963. In the course of discussions at the public inquiry it was revealed that the declining trend in consumption of dyes was because of a shift in demand in favour of better dyes, which were lighter in weight. The manufacturers said that the estimates of demand in respect of better and lighter dyes in tonnes were erroneous and did not reveal a true picture of actual consumption. Incidentally, the future estimated course of consumption of dyestuffs in the country may be seen from Table B. As figures in respect of certain dyes are not available, it is not possible to compare the apparent and estimated total consumption for dyestuffs.

Intermediates

Raw material difficulties, especially the shortages of intermediates, were highlighted during the proceedings of the inquiry. Primary organic chemicals like benzene, toluene, xylene, naphthalene, carbazole, pyridine, etc., constitute important and basic raw materials for the industry. These are distillation products of coal tar which is obtained in the process of carbonisation of coal. In addition to these, a number of inorganic chemicals like caustic soda, caustic potash, soda ash, sulphuric acid, nitric acid, hydrochloric acid, and chloro-sulphonic acid are also required. Some of the finished dyes like vat dyes, naphthols and bases, besides being used in the textile industry are also utilised as raw materials for processed dyes, namely solubilised vat dyes and stabilised azoic colours. Though most of the primary organic and inorganic chemicals except pyridine, carbazole, pyrene, sodium nitrate and caustic potash are available indigenously, very few intermediates are manufactured in the country. Accordingly, a major part of the industry's total requirements of intermediates is imported.

The Commission has laid emphasis on the production of intermediates which play a vital part in the growth of the dyestuff industry. The industry is, at present, faced with the dual problem of high costs of raw materials and non-availability of the required quantity of intermediates. Of about 200 intermediates required in the manufacture of dyes, 14 are major ones which require a production capacity of over 100 tonnes each a year. In their report in 1954, the Commission had recommended a concessional rate of duty of 10 per cent *ad valorem* standard and nil preferential on 17 intermediates which were of vital importance for the development of the dyestuff industry. The list was later enlarged and finally the number of intermediates enjoying concessions on duty increased to 32. The other intermediates are assessed to a duty of 40 per cent *ad valorem* standard and 30 per cent *ad valorem* preferential. Of late, the production of a few intermediates has been stated by the home industry. Though the quality of the indigenous product is satisfactory, it will take some time for the industry to achieve self-sufficiency in the production of intermediates. Incidentally, the Commission has also undertaken to examine the question of grant of protection to two more intermediates, namely, beta amino-authraquinone and benzanthrone. The former is enjoying a concessional rate of duty of 10 per cent *ad valorem* standard and nil preferential while the latter is subject to the standard rate of duty.

Bureaucratic Indifference

The most revealing aspect of the whole discussion over the need for and production of intermediates pertains to the failure of the State undertaking, Hindustan Organic Chemicals Limited, which had planned to start the manufacture of 47 intermediates for the dyestuff industry. The manufacturers have rightly criticised H.O.C.'s failure to put through its project, mainly due to bureaucratic indifference. This is, indeed, deplorable for despite the pressing need for intermediates, over which the country has been spending a lot of foreign exchange, a Government agency has chosen to go slow on its project. As of today, there is only an assurance by the representative of the Directorate-General of Technical Development, who spoke on behalf of H.O.C. that the final programme about the intermediates project would be drawn up forthwith! Considering that, at the time of the inquiry, 'nothing was clear about the project' to the spokesman of H.O.C., it defies one's understanding how a project, which could not proceed a step further from the paper-plan stage during the last one year, would be finalised by the bureaucracy so swiftly.

Table B: Apparent and Estimated Consumption of Dyestuffs
(In metric tonnes)

Item	Apparent consumption in 1963	Estimated consumption in 1964	1965	1966
Protected category :				
Azo dyes (acid and direct)	2,376	2,400	2,500	2,600
Stabilised azoics	627	N.A.	N.A.	N.A.
Stabilised vats	178	N.A.	N.A.	N.A.
Sulphur black	1,602	1,325	1,350	1,375
Total	4,783	3,725	3,850	3,975
Non-protected category :				
Basic dyes	540	425	450	485
Azoics :				
(i) Naphthols	908	1,075	1,100	1,140
(ii) Bases	528	770	800	850
Vat dyes	1,155	1,200	1,250	1,350
Optical whitening agents	443	370	400	450
Organic pigment	N.A.	625	650	700
Pigment emulsions	606	N.A.	N.A.	N.A.
Miscellaneous dyes	1,666	140	150	170
Total	5,846	5,605	4,800	5,145
Grand Total	10,629	8,330	8,650	9,120

Note : Both the Development Council for Organic Chemicals and the Indian Chemical Manufacturers Association put the estimated consumption for 1965-66 at 3,000 metric tonnes.
N.A.—Not available.

Imports

At present the total imports of finished dyes are valued at Rs. 7.5 crores and of intermediates at about Rs. 2.00 crores. According to present import control policy, the imports of coal tar dyes in combination with textile chemicals are linked with various export promotion schemes and there is no provision for any quota for established importers. Under the special export promotion schemes for silk fabrics and woollen textiles, licences are also granted for importing dyes and chemicals on the basis of the f.o.b. value of goods exported and the import entitlements vary in each case. The imports of dyes stood at 3,671 tonnes valued at Rs. 9.50 crores in 1962, 1,940 tonnes valued at Rs. 6.61 crores in 1963 and at 392 tonnes valued at about Rs. 1 crore in the first quarter of the current year. The bulk of imports in the protected category consisted of azo dyes, while the non-protected group, a major portion was accounted for by vat dyes and certain miscellaneous dyes. A member's suggestion that the annual imports of finished dyes should be reduced in favour of buyer imports of intermediates, the relative need for which was greater, has been welcomed by the Commission. As the export trade of the country is being affected by the inadequate supply of sulphur black and some vat dyes, as well as by the high prices being charged by the indigenous producers for certain types, the Commission has rightly expressed concern over this situation.

Emphasising the importance of the dyestuff industry, the Chairman of the Tariff Commission observed in the concluding portion of his speech:

"With the increasing domestic demand for dyes and the slow progress in the sphere of manufacture of intermediates, the dyestuff industry has still a long way to go to achieve self-sufficiency. Since the dyestuff industry occupies a very im-

(Continued on page 436)

GWALIOR RAYON PAYS A LITTLE MORE

PULP PROJECT QUITE A SUCCESS

ALTHOUGH clothed with a dull-looking *Batik*-printed cover, the annual report of the Gwalior Rayon Silk Manufacturing (Weaving) Company Ltd. [Managing Agents: Messrs. Birla Gwalior (Private) Ltd., Nagda] for the year ended 31st March 1964 flatters the holder's pride of owning a share in the Company, because the contents of the report are attractive and pleasing. The gross profit shows a recovery of Rs. 22.79 lakhs to Rs. 432.78 lakhs from the previous year's setback of Rs. 27.87 lakhs and gross sales show a sharp rise from Rs. 13.08 crores to Rs. 15.85 crores. With the depreciation provision having been almost doubled once again—this time from Rs. 83.89 lakhs to Rs. 163.36 lakhs—the net profit has dropped further from Rs. 309.38 lakhs to Rs. 256.52 lakhs.

Notwithstanding this decline, the dividend on the 10-rupee ordinary shares has been raised slightly from 25 per cent to 27.5 per cent per annum. This increase has become possible because the amount transferred to development rebate reserve has been much reduced from Rs. 112.36 lakhs to Rs. 7.98 lakhs, though the total carried to other reserves is quite high at Rs. 166.90 lakhs as compared with Rs. 124.50 lakhs a year before. The ordinary dividend absorbing Rs. 68.75 lakhs (as against Rs. 62.50 lakhs a year before) and the preference dividend taking up Rs. 12.92 lakhs are to be paid out of the general reserve to which an amount equal to the total dividend liability of Rs. 81.67 lakhs has been credited out of the year's profit.

Since the Government's appeal against the Madhya Pradesh High Court's decision accepting the Company's claim for tax exemption for a period of 12 years was decided by the Supreme Court on 28th April 1964, that is, after the close of the year, no provision for taxation has been made in the year's accounts. As readers are aware, the Supreme Court has decided the case against the Company. The tax liability for the past years up to 31st March 1964 is estimated at Rs. 6.71 crores approximately (against Rs. 5.93 crores up to 31st March 1963) and will be appropriated out of general reserve in the current year.

The following table mirrors the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st March 1964	1963	1962	1961
Sales (gross)	15,84.61	13,08.08	12,06.82	10,59.56
Other income	51.54	18.61	27.38	20.31
Closing stocks	329.14	127.85	72.15	56.05

Taxation		1.30	15.15	
Managing Agents' commission	12.90	15.42	18.15	19.42
Net profit	256.52	309.38	360.96	318.62
Provision for electricity duty etc.		4.47	1.50	
Development rebate reserve	7.98	112.36	9.55	7.33
Other reserves	166.90	124.50	310.00	220.00
Dividends—				
6 per cent preferance	12.92	12.92	12.92	12.92
Ordinary	68.75	62.50	62.50	55.25
	(27.5%)	(25%)	(25%)	(22.5%)
Carry forward		0.04	7.41	42.93
Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	47.00	50.00	63.00	55.50	49.00
Low	36.00	39.50	40.50	38.00	24.24

Production of staple fibre increased from 28.78 million kgs. to 29.67 million kgs. and but for an accident due to a fire in August 1963 (the Company's claim in respect of this was settled for Rs. 36 lakhs and the amount has been credited to the year's profit and loss account), it would have been higher still. The Government's decision the year before to allow the Indian Cotton Mills Federation to import 8.44 million kgs. of staple fibre continued to have its adverse effect on the staple fibre market during the year under review. Since the imported stock has still not been cleared by the spinners, the Company has approached the Government with a proposal to export its staple fibre. Another drag on the home market is the excise duty and, though it has been reduced from Rs. 1.33 to Rs. 1.15 per kg. from March this year, it is still very high.

During the year, the Company was successful in producing rayon grade pulp from bamboos at its plant in Kerala, which is the first of its kind in the world and is now entirely being operated by Indian technicians. But shortage of fresh water due to scanty rains in the region and excessive flowering of the bamboo forests restricted rayon grade pulp output to 7,500 tons, though flowered dried bamboos could be used to produce 24,400 tons of paper pulp. The total production of 31,900 tons has resulted in a saving of Rs. 3 crores in foreign exchange, which is about 85 per cent of the project's foreign exchange component. In the current year, rayon grade pulp output is expected to be considerably more and this, together with paper pulp production [illegible] sum of foreign exchange. An import licence for equipment to balance the plant in order to increase its capacity and obtain economy in raw materials and chemicals consumed has been applied for and the foreign exchange involved is expected to be recovered within one year.

The weaving division at Gwalior worked satisfactorily. The fabrics made have become very popular both at home and abroad and the suitings particularly have earned a very wide reputation. Exports, especially to the U.S. and the U.K., continue to be satisfactory. A hundred and fifteen looms have been acquired for expansion of this division.

The import licence applied for three years ago for the project for manufacturing machinery for rayon and ancillary plants is still awaiting the Government's sanction. However, it has been possible with the available equipments and other workshop facilities at Birlagam, Nagda, to manufacture some of the equipment for rayon and other ancillary plants and spare parts for the Company's staple fibre unit as well as to complete successfully one of the orders for the manufacture and supply of one CS2 electric furnace for a well-known rayon manufacturer during the year under review.

It will be recalled that, in the previous year, the Company had taken preliminary steps for manufacturing high tenacity viscose fibre following a patent developed by the Birla College of Science, Commerce and Pharmacy at Pilani for improving properties of viscose rayon yarn or filament and staple fibre. For having sponsored the research work for its evolution, the Company had been granted exclusive rights of the patent in the country. This proposal has now taken concrete shape, in that the application for an industrial licence for establishing a high wet modulus (polynosic) staple fibre plant with 50 tons capacity per day and a PVC staple fibre plant with a capacity of 10 tons per day has been made by the Company. Polynosic fibre has got properties very much like long-staple cotton and its production will, therefore, help further in saving foreign exchange.

The Company's paid-up capital is unchanged at Rs. 400.76 lakhs. Out of this Rs. 250 lakhs are in equity shares of Rs. 10 each and the balance in two series of preference shares. The equity capital is held by a large number of investors. The percentage of those holding 51 to 100 shares has come down from 43 to 39 and that of those holding one to 10 shares has remained unchanged at 8, but the decline in the percentage holdings in the 51-100 group is compensated by the increase in those in the 11-50 group from 15 to 21, while, on the other hand, the ratio of holdings to total shares in the larger groups of 101-1,000 and above 1,000 has dropped from 29 per cent and 5 per cent to 28 per cent and 4 per cent, respectively. The general reserve stands at Rs. 9.93 crores. But since Rs. 6.71 crores will be taken from this for meeting the past years' tax liability and Rs. 81.67 lakhs will be required for meeting the year's dividend liability, the amount in general reserve actually available for shareholders is only Rs. 240 40 lakhs. There are, however, other reserves and, with these, the total backing for the capital amounts to Rs. 527.10 lakhs. The Government loan under subsidised industrial housing scheme has increased during the year from Rs. 6.25 lakhs to Rs. 9.34 lakhs. Current liabilities and provisions (including the year's dividend liability) amount to Rs. 287.95 lakhs, as against which current assets, book debts and investments aggregate Rs. 10.39 crores. The gross block, which expanded during the year from Rs. 14.76 crores to Rs. 15.94 crores, has been written down adequately to Rs. 8.57 crores.

The net yield on the Company's Rs. 10 fully paid ordinary shares at their current market value of Rs. 42.00 *cum-div.* works out to 5.9 per cent per annum.

CHEMBRA PEAK FARES WELL

Impressive are the achievements of the Chembra Peak Estates Limited (Managing Agents: Messrs. Peirce Leslie and Company Ltd., Calicut, Kerala) in the year ended 31st March 1964. There has been a significant improvement in tea production, sales realisation, gross profit, net profit and the dividend declared. Thus, the tea output recorded an increase of 25,000 kgs. over the last year's output at 836,000 kgs. Production of coffee, too, was better, though only slightly. The average price realised per kg. of tea showed an improvement from Rs. 4.07 last year to Rs. 4.55 this year, but it was a shade lower in regard to coffee. From Rs. 7.86 lakhs last year, the gross profit has gone up to Rs. 12.86 lakhs, an increase of about 65 per cent. Similarly, net profit has increased from Rs. 2.90 lakhs a year ago to Rs. 5.61 lakhs, an approximate rise of about 100 per cent. Greater provision has been made for depreciation, as well as for taxation. The shareholders have been rewarded by an increase in dividend from 20 per cent to 25 per cent. This is the first time since 1950 that they have been favoured with a rise in the rate of dividend. At the same time, the Directors have utilised the major portion of the expansion in profit to strengthen the Company's reserves. Thus, they have followed a judicious policy of appropriation.

The following comparative table shows at a glance the working of the Company during the last four years:

(In lakhs of rupees)

	For the year ended 31st March 1964	1963	1962	1961
Sale proceeds of tea	35.05	30.26	31.75	36 38

Low	4.50	3.50	3.22	3.56	4.15

* Subject to deduction of tax.

Note :—The dividend for 1960-61 was on the enhanced capital of Rs. 14 lakhs following capitalisation of reserves to the tune of Rs. 4,66,700 and issue of bonus shares in the ratio of one for two.

Following the transfer of a good part of the profit for the year under review, the reserves and surplus of the Company have gone up to Rs. 20.97 lakhs, a level which is one and a half times the paid-up capital of Rs. 14 lakhs. The sound financial position of the Company is further borne out by the fact that the value of current assets, namely, Rs. 15.60 lakhs, is more than (nearly Rs. 4 lakhs) that of current liabilities standing at Rs. 10.92 lakhs. The gross block of the Company, shown at Rs. 41.85 lakhs, has been written down to Rs. 28.68 lakhs.

The current market value of Rs. 2 paid-up shares of the Company stands at Rs. 4.78 *cum-div.* On the *ex-div.* basis, the net yield works out to 9.1 per cent per annum.

INDUSTRY IN INDIA—1964

Printed on art paper—profusely illustrated with colour plates—374 pages

40 feature articles on a wide variety of subjects contributed by eminent writers like Dr. B. R. Nijhawan, Director, National Metallurgical Laboratory; Shri V. V. Giri, Governor of Kerala; Shri Raj Bahadur, Minister for Transport; Lala Bharat Ram; Shri V. P. Podder, Chairman, Development Council for Pulp and Paper; Dr. U. P. Basu; Dr. B. N. Ghosh; Shri B. P. Godrej; Shri R. S. Bhatt, Chairman, Unit Trust of India; Shri S. N. Chib; Shri C. S. Nair; Shri Balwant Rai Mehta, Chief Minister, Gujarat; Shri Raj K. Nigam and Prof. R. Natarajan. Of interest to industrialists, commercial organisations, economists, financiers, students and laymen.

Price **Rs. 12/-** (*Postage and Packing* **Rs. 2/50** *extra*).

METTUR INDUSTRIES

FURTHER SETBACK IN PROFIT AND DIVIDEND

SINCE the relatively favourable year of 1960-61, there has been a continuous downward drift in the fortunes of Mettur Industries Ltd. (Managing Agents: Messrs. W. A. Beardsell and Co., Private Ltd., Madras) for one reason or another, and the shareholders have had to be content with a progressively lower dividend one year after another. The drift had continued during the year ended 31st March 1964 also and the shareholders are getting a dividend of 15 per cent only, as against 20 per cent previously and 30 per cent for 1960-61, all subject to deduction of tax. In view of the difficult conditions still prevailing in the cotton textile industry and the recurring power shortage in the southern region in the summer months, it would be but natural if shareholders were apprehensive of the prospects for the current year, too. They may, nevertheless, derive some satisfaction from the fact that the Company's management is vigorously implementing a programme of plant rehabilitation the benefits of which can be felt in the coming years. The Company has also received permission for installing a limited number of spindles and looms. In the current year itself, an additional two spinning frames and forty-eight looms will go into operation. The demand for the Company's cloth is expanding faster than production.

During the year under report, the gross realisation from the sale of cloth, yarn and waste increased by about 10 per cent to Rs. 185.12 lakhs, but, as the profit-margin (ratio of gross profit to gross scale) was again badly mauled—it dropped by two points to 17.5 per cent—the gross profit declined from Rs. 33.07 lakhs to Rs. 32.43 lakhs. The principal factors which were responsible for this modest setback have been described by the Directors in their report as follows:

" .... increased costs in practically all directions have affected the final position. We have had to pay during the year an additional amount of Rs. 1,27,894 as bonus for the previous year and provide Rs. 1,69,006 as construction under the scheme of obligatory exports. This scheme was abandoned as from the end of December 1963.

"In repair and maintenance to plant and machinery, there is an increase of Rs. 1,47,738. This is accounted for by the rehabilitation of the machinery, particularly in the weaving shed where the looms are progressively being reconditioned as part of a general scheme covering the whole plant.

"Salaries, wages and bonus show an increase of Rs. 2,66,671. This is due to increased dearness allowance and additional staff. There is also an increase in power and fuel of just over Rs. 1,00,000. There was a reduction of approximately Rs. 13,000 in fuel, but electricity charges show an increase of about Rs. 1,20,000, due to the surcharge of 20 per cent introduced from November 1963 which is in addition to the 30 per cent which was imposed in July 1962."

In spite of the decrease in gross profit, the provision for Managing Agents' remuneration has been raised from Rs. 2.50 lakhs to Rs. 2.54 lakhs. But as the transfers to depreciation and taxation accounts are lower—the former by Rs. 0.15 lakh to Rs. 1.83 lakh and the latter by Rs. 0.31 lakh at Rs. 13.20 lakhs—the net profit is fractionally lower at Rs. 14.86 lakhs, as compared with Rs. 15.08 lakhs the year before. From this, Rs. 5.96 lakhs, as against Rs. 5.18 lakhs last year, have been credited to reserves, while the ordinary dividend at the reduced rate of 15 per cent, as against 20 per cent last year, claims Rs. 9 lakhs. There is no carry forward, as against the Rs. 10,434 brought in.

The steady deterioration in the Company's profits over the past four years is clearly shown in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sale proceeds	185.12	169.90	177.19	175.79
Other income	2.44	3.44	1.71	1.77
Closing stocks	1.70	4.94	1.71	1.40
Materials and stores consumed	82.51	70.77	76.32	78.00
Salaries, wages and benefits	46.32	43.29	43.81	41.18
Other expenses	23.06	20.44	16.33	19.07
Gross profit	32.43	33.07	42.75	47.18
Managing Agents' remuneration	2.54	2.50	3.49	3.59
Provision for—				
Depreciation	1.83	1.98	2.01	2.04
Taxation	13.20	13.51	18.44	13.73
Net profit	14.86	15.08	18.81	27.82
Withdrawal from reserves	..	1.75	..	..
To reserves and provisions	5.96	5.18	6.30	9.85
Dividend	9.00 (15%)	12.00 (20%)	13.50 (22.5%)	18.00 (30%)
Carry forward	..	0.10	0.45	1.53
Market price of ordinary shares (in rupees):	1964	1963	1962	1961
High	290	342	400	440
Low	278	264	342	367

The Company's own funds as at 31st March 1964 are Rs. 89.40 lakhs, of which Rs. 60 lakhs are in ordinary shares of Rs. 100 each. As against these, the outside finance, comprising current liabilities and provisions, aggregates Rs. 65.58 lakhs. These are more than fully covered on the assets side by the total of current assets, loans and advances of Rs. 127.52 lakhs. Investments, exclusively in Government securities, are carrried in the books at a cost of Rs. 10.59 lakhs, while the net block is Rs. 16.88 lakhs. The gross block as at the date of balance-sheet stands at Rs. 74.64 lakhs, including Rs. 2 lakhs being the cost of assets acquired during the year.

The Rs. 100 fully paid ordinary shares of the Company are currently quoted at Rs. 277.50 *cum-div.* and yield a net annual return of 4.5 per cent on fresh investments.

LYNX MACHINERY DECLARES DIVIDEND

A maiden dividend of 25 paise per share of Rs. 10 each has been declared by the Lynx Machinery Limited. The Company has shown good working results for the year ended 31st March 1964. The turnover stands at Rs. 73.72 lakhs, which is much more than the Rs. 37.95 lakhs during the previous period of 16 months ended 31st March 1963. The gross profit amounts to Rs. 8.17 lakhs. After providing for depreciation, development reserve and taxation to the extent of Rs. 0.87 lakh, Rs. 1.50 lakh and Rs. 0.72 lakh, respectively, the net profit works out to Rs. 5.07 lakhs. The Company has written off the entire loss brought in from previous periods amounting to Rs. 3.20 lakhs. The balance left is Rs. 1.87 lakh, of which a sum of Rs. 0.37 lakh has been carried forward after making provision for the proposed dividend aggregating Rs. 1.50 lakh.

The Company has decided to spread out the incidence of depreciation evenly under the straight line method as stipulated under Section 205(2)(b) of the Indian Companies Act 1956. The depreciation previously provided in excess on this basis amounting to Rs. 2.72 lakhs has been transferred to general reserves.

C.D.F.C. LOAN TO ASHOK LEYLAND

Large expansion schemes are planned at the Ashok Leyland factory at Ennore, near Madras. Helping to bring the schemes to fruition is a Commonwealth Development Finance Company (C.D.F.C.) loan of £450,000 to Ashok Leyland towards the cost of installing plant and machinery for the production of camshafts, timing gears and differentials. Ashok Leyland proposes to produce 5,000 seven-ton commercial vehicles and 1,500 industrial engines a year—a 35 per cent increase over current production. Ninety per cent of the Company's products will be indigenous.

Notice

GANNON DUNKERLEY AND COMPANY LIMITED

Registered Office:
Chartered Bank Building, FORT, BOMBAY

NOTICE

THE 41ST ANNUAL GENERAL MEETING OF the Company will be held at its Registered Office, Chartered Bank Building, Fort, Bombay, on Monday, the 28th September, 1964, at 4.00 p.m., to transact the following business:

1. To receive and adopt the Directors' Report for the year ended 31st March 1964 together with the audited statement of accounts for the period.
2. To declare a dividend.
3. To elect a Director in place of Mr. Niranjan Narottam who retires by rotation but being eligible, offers himself for re-election.
4. To elect a Director in place of Mr. J. Steffens who retires by rotation but being eligible, offers himself for re-election.
5. To appoint Auditors for the financial year ending 31st March 1965.

By Order of the Board,
R. MORARKA,
Governing Director.

Dated: 22nd August, 1964.

N.B.—(i) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The Transfer Books of the Company will be closed from the 21st September 1964 to 5th October 1964 both days inclusive.

PHŒNIX FARES BETTER

APPROPRIATION CONSERVATIVE

SOME operational improvements and increase in spindleage as well as in the number of looms worked have helped the Phœnix Mills Ltd. [Managing Agents: Messrs. Radhakrishna Ramnarain (Private) Ltd., Bombay] to produce better results for the year ended 31st March 1964. Sales, which had shrunk in the previous year from Rs. 349.62 lakhs to Rs. 348.27 lakhs, have increased to a new high mark of Rs. 411.45 lakhs and gross profit which had been lower by Rs. 12.62 lakhs in the previous year, has risen smartly by Rs. 21.37 lakhs to Rs. 53.24 lakhs, which is the best level on record. In 1962-63, cloth sales had expanded but the sales of yarn, surgical dressing and waste had declined substantially. That year's profit would have shown a still bigger setback had income from other sources not recorded a big rise from Rs. 27.13 lakhs to Rs. 40.91 lakhs. In contrast, such income during the year under review has dropped by Rs. 6.79 lakhs to Rs. 34.12 lakhs. The bulk of this other income represents dyeing and bleaching charges.

The Directors state that, though costs of the various items like cotton, dyes, etc. and labour have gone up considerably, the year's results have improved and that is due mainly to reduction in some labour costs by the successful introduction of four-loom system, increase in dye-house capacity and additional spindles. The number of looms worked, they add, had also increased by about 130 for both shifts. Moreover, the Company received large Government orders for *khaki* cloth. In the light of these operational improvements and because of further expansion of the spindleage in the near future, the Directors have naturally followed a conservative policy in regard to appropriating the year's profit. Thus, out of the larger net profit of Rs. 17.45 lakhs, as against Rs. 11.82 lakhs for 1962-63, they have carried to reserves Rs. 8.09 lakhs, as against only Rs. 5.72 lakhs last year. The dividend on the 100-rupee shares remains pegged at 20 per cent per annum.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sales	411.45	348.27	349.62	314.90
Other income	34.12	40.91	27.13	18.33
Closing stocks	136.89	127.22	118.18	107.63
Raw materials and stores	228.82	199.49	194.04	176.86
Other expenses	173.18	166.86	148.77	119.75
Gross profit	53.24	31.87	44.49	36.22
Managing Agents' remuneration	3.25	1.87	3.10	2.75
Provision for—				
Depreciation	13.54	11.68	8.05	6.78
Taxation	19.00	6.50	16.00	12.00
Net profit	17.45	11.82	17.34	15.09
To reserves	8.09	5.72	7.90	4.31
Dividend	9.60 (20%)	9.60 (20%)	9.60 (20%)	9.60 (20%)
Carry forward	0.11	0.35	3.85	4.01
Equity shares' market value (in rupees):	1964	1963	1962	1961
High	262.00	254.00	302.00	219.00
Low	218.00	193.00	225.00	126.00

Additional machinery aggregating Rs. 13.18 lakhs was installed during the year. Orders have been placed for 29,000 spindles for expansion. New weaving shed to shift 300 automatic looms to the basement in order to make room for the new spindles on the second floor of the factory building is practically ready. There will be an extension to the dye-house. It is in view of this heavy expansion that the Directors have decided to maintain the same dividend as in the previous year.

The paid-up capital (all in equity shares) which is unchanged at Rs. 48 lakhs is backed by Rs. 84.21 lakhs in reserves and surplus. Secured loans of Rs. 149.40 lakhs, unsecured loans of Rs. 43,455 and current liabilities and provisions (including the year's dividend liability) of Rs. 149.13 lakhs together bring the Company's indebtedness to outsiders to Rs. 298.96 lakhs. As against this, current assets, book debts and investments aggregate Rs. 346.64 lakhs. The gross block which has expanded during the year from Rs. 233.63 lakhs to Rs. 245.25 lakhs has been written down by two-thirds its value to Rs. 84.53 lakhs.

Currently quoted at Rs. 254.00 *cum-div.*, the Rs. 100 fully paid ordinary shares offer a net yield of nearly 7 per cent per annum.

THE SIMPLEX MILLS COMPANY LIMITED

CHAIRMAN, MR. S. R. DAMANI, REGARDS SUR-TAX AS TAX ON EFFICIENCY

DISTRIBUTION OF IMPORTED COTTON NEEDS REVISION

THE Fifty-second Annual General Meeting of the Simplex Mills Company Limited was held at Bombay on Thursday 27th August 1964. In his address to shareholders, the Chairman of the Company, Mr. S. R. Damani, stated that the gross profit and turnover of the Company had recorded an all-time high in the post-war period. Referring to the cotton problem, he said that efforts must be made to increase the supply of indigenous cotton and remove the defects in the distribution of imported cotton. Mr. Damani regretted the non-inclusion of textile industry in the list subjected to concessional rates of income-tax and super-tax in the Finance Act 1964, and regarded the new surtax as a tax on efficiency and a disincentive to investors.

The following is the text of Mr. Damani's speech:

GENTLEMEN,

While I have great pleasure in welcoming you all to this fifty-second annual general meeting of the Company, I would be failing in my duty if I omit to mention what is uppermost in my mind.

Our beloved Prime Minister Jawaharlal Nehru, expired on the 27th May 1964. It would be befitting the occasion to pay our tribute to the late "Panditji" as he was affectionately called. His services rendered to the nation could not be forgotten and would be written in golden letters. This illustrious statesman whose versatility, intellectual power, unfailing charm, and great understanding were supreme and in whom the East and West had met, was really a remarkable man of our times. With him has ended a glorious chapter, nay an era which would be remembered by posterity and acclaimed by the historians as the "Nehru Era." He attained the stature of an international figure and, through his humanitarian approach to the problems, served the entire world. He was a great believer in planning and, whatever has been achieved, is directly as a result of his interest in the development of the country.

I had the good fortune to come in contact with him. I can confidently say that hardly could there be any personality more towering, dominating and humane than him. The best homage would be to work unitedly for the development and national integrity of the country.

May I request you to stand silently in honour of his memory before I proceed with the normal business for which we have gathered here.

The smooth succession that followed the death of the Prime Minister Nehru was epoch-making and it pronounced to the whole world that our politicians are seasoned and mature. It earned all praise to our leadership and particularly for the present Prime Minister, Shri Lal Bahadur Shastri. In Shashtriji the country has found an able successor whose qualities of head and heart were even valued by Panditji. We are confident that he would guide the destiny of the country so that it fulfils all the aspirations and attains all-round progress and prosperity.

The Directors' report and audited accounts for the period ended 31st March 1964 have been in your hands for quite some time and I shall, with your permission, take them as read.

You will no doubt be pleased to observe that the sales and gross profit are the highest since the post-war period. Sales have risen by 14.2 per cent to Rs. 3.44 crores. whereas the profit has improved from Rs. 41.53 lakhs to Rs. 55.81 lakhs. Cotton consumption in relation to sales went up by 3.5 per cent mainly due to higher cost of cotton. The expenditure on electricity increased by 34 per cent to Rs. 7.87 lakhs. Cost of repairs to plant and machinery as well as building increased by Rs. 2.51 lakhs and during the current year is likely to increase still further. Bonus payment for the years 1957 and 1959 to 1962 amounted to Rs. 10.90 lakhs. The results, therefore, for the year should be considered very satisfactory.

Production

I am, indeed, very pleased to inform you that our new qualities have attained good reputation. Encouraged by this your Company has entered a new field by manufacturing superfine *dhotis* and *saris* produced from the best Egyptian cotton. During the year your Mill was granted a quota to print upto two million yards of cloth per annum. Orders for a suitable printing plant would be placed shortly but the plant would work partially as the sanctioned quota is quite inadequate.

Modernisation

The management continued to devote its attention to modernisation. A sum of Rs. 7.61 lakhs was spent on new machinery. During the current year, machinery of the value of about Rs. 17 lakhs which include 2,496 ring spindles and 2,400 doubling spindles are expected to be received. The registered capacity of ring spindles would thereby be increased to 52,552. The installation of these machinery would enable the mills to manufacture superfine poplins, full voils and terylene blended fabrics.

Cotton

Cotton still remains a problem. The rise in indigeneous production has not been adequate whereas the Government has allowed all mills to install additional spindles. Unless vigorous efforts are made to substantially increase cotton production from the present level of 62 lakh bales to 70 lakh bales as envisaged in the third Five-year Plan, the Government will be required to continue the import of foreign cotton to keep the spindles working. I have repeatedly stressed that the distribution of long-staple imported cotton is most defective and is only beneficial to a few erstwhile actual user mills and I deeply regret to state that proper steps have not yet been taken by the Government to completely plug this continued drain of precious foreign exchange. I fail to understand why the entire import of such cotton is not forthwith linked with exports. This would compel mills manufacturing fine and superfine varieties from foreign cotton to export and thereby earn the quota to import long-staple cotton.

Cloth Production

The production in the mill sector has steadily declined to 4,837 million yards in 1963 as against the planners' estimated annual production of 5,800 million yards by the end of the third Plan. I do not foresee any cloth shortage in the near future; nevertheless, in order to meet the country's requirement and also to continue the drive for increasing our exports, it is essential that cloth production in the mill sector be substantially increased. The Government has allowed mills to increase the installed capacity of spindles and looms by 10 per cent and 7½ per cent respectively. This can only be considered a long-term measure, as it would warrant the availability of necessary finance and also foreign exchange since the indigenous machinery manufacturers being heavily booked are quoting delivery period of upto three years.

Personally, I feel that the proposals for an increase in the shift working hours or staggering of rest intervals should be accepted as either of these would result in immediate increased output.

Exports

The modifications in the export incentive scheme resulted in an increase in the total exports from 512 million yards in 1962 to 534 million yards in 1963. Due to keen competition the value realised was only Rs. 1 crore higher at Rs. 41 crores. Exports would improve substantially if the anomaly of compulsory surrender of a part of the foreign cotton entitlement at a nominal premium to the Indian Cotton Mills' Federation under the export promotion scheme is removed.

The Company's exports are steadily increasing. The performance during the current year is likely to be much better.

Budget

I am sorry that the textile industry being the premier industry that meets the basic requirement of cloth has been bypassed. It should have legitimately been included in the list that is subjected to concessional rates of income-tax and super-tax under the Finance Act 1964. While a special allowance by way of third-shift depreciation at 50 per cent of the normal rates is welcome, an uncertainty about the continuance of development rebate after three years would affect the development of industries. Although the super profits tax has been replaced by a liberal surtax on the companies' profits, nevertheless. I feel that it is a tax on efficiency and would hinder the growth and expansion of the industries, and act as a disincentive even to the investors. I hope the Finance Minister would give due consideration when framing his proposals for the next financial year.

Rising Cost and Price Stamping

The continuous rise in cost and the long overdue and highly justified demand of the industry for a suitable increase in the price of cloth resulted in the Government's decision to control the price of 43 per cent of the production of cloth for civil consumption and the balance of the production is being decontrolled. The details of the scheme of price control have yet to be announced and as such it would be difficult to comment upon at this stage. Whatever formula for price fixation is devised should necessarily aim at leaving a reasonable margin to the manufacturers which shall act as an incentive to increase production.

The cordial relations between the workers and the management resulted in the implementation of the rationalisation schemes. Consequently the average earning of a worker steadily increased from Rs. 1,628 in 1959 to Rs 2,085 in 1963.

Prospects

Future prospects are more dependent on the price stamping policy of the Government. I am, however, happy to inform you that the progress achieved during the last year was further strengthened, and the results for the first four months of the current year are better. The benefits from the installation of additional spindles and new machinery would be further reflected in the performance next year.

The mills' retail cloth shop was inaugurated on the 7th December 1963 by Mr. A. D. Shroff. I am glad that response from the shareholders and public alike was heartening. Two additional sale centres at convenient places have been opened to make available the Company's products to its shareholders.

The members of the staff of the mills and selling agents deserve all praise and appreciation for their hard. sincere and efficient work and I thank them all.

Notices

THE BRADBURY MILLS, LIMITED

State Bank Building, Bank Street, Bombay-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-first Annual General Meeting of the Shareholders of the Bradbury Mills Ltd., will be held on Wednesday the 30th September, 1964 at The Ardeshir Namdar Hall, Cama Oriental Institute, 5th Floor, 136, Apollo Street, Opposite Lion Gate, Fort, Bombay 1, at 4-30 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Balance Sheet as at, and the Profit and Loss Account for the year ended, 31st March, 1964.
2. (a) To declare a Dividend on Preference Shares for the year ended 31st March, 1964.

   (b) To declare a Dividend on Ordinary Shares.
3. To elect a director in place of Shri Rustomjee Jeejeebhoy who retires by rotation and who offers himself for re-election.
4. To appoint a director in place of Mr. Lalitkumar M. Khatau who was appointed as an additional Director of the Company on 12th October, 1963 and who ceases to be a Director on the date of this Annual General Meeting under the provisions of Section 260 of the Companies Act 1956 but who is eligible for appointment and in respect of whom the Company has received a notice in writing from some of its members proposing his candidature for the office of Director.
5. To elect a director in place of Shri Radhakrishna R. Ruia who retires by rotation and is eligible for re-election and to consider, and if thought fit, to pass the following Resolution as a Special Resolution, of which Special Notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company.

   "RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions of the Companies Act 1956, if any, Shri Radhakrishna Ramnarain Ruia, who retires by rotation from his office as Director of the Company and who is an associate of Messrs. M. Ramnarain Private Ltd., the Managing Agents of the Company, be and he is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

   The reasons which make the above Special Resolution necessary are as under:—

   Messrs. M. Ramnarain Private Ltd., the Managing Agents of the Company, are authorised by Articles of Association of the Company and the Managing Agents Agreement to appoint an ex-officio Director to the Board. As Mr. Radhakrishna R. Ruia is a brother of Mr. Madanmohan R. Ruia, a Director and member of Messrs. M. Ramnarain Private Ltd., and is, therefore, an associate of the Managing Agents, his appointment as a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation can only be made by a Special Resolution of the Company in accordance with the provisions of Section 261 of the Companies Act, 1956.
6. To appoint Auditors for the current year and fix their remuneration.
7. To consider, and if thought fit, to pass either with or without modifications, the following resolution as Special Resolution:

   "RESOLVED that in supersession of Resolution No. 9 passed at the Annual General Meeting of the Company held on 10th October, 1963, the Company hereby accords its consent under the provisions of Section 293 (1) (d) of the Companies Act 1956 to the Board of Directors of the Company borrowing from time to time, all such sums of money as they may deem requisite or proper for the purpose of the business of the Company, notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserve that is to say, reserves not set apart for any specific purpose, provided that the total amount up to which moneys may be borrowed by the Board of Directors shall not exceed the sum of Rs. 2,00,00,000 at any one time."
8. To consider, and if thought fit, to pass either with or without modifications, the following resolution as Special Resolution:

   "RESOLVED that the contracts entered into between the Company and Shamun Private Ltd., an Associate of M. Ramnarain Private Ltd., the Managing Agents of the Company, during the year 1963-64 pursuant to the approval of the Company granted by the Special Resolution passed at the Annual General Meeting of the Company held on 10th October, 1963 and particulars whereof are entered in the Register of Contracts maintained under the provisions of Section 360 of the Companies Act, 1956 be and they are hereby ratified and confirmed."
9. To consider, and if thought fit, to pass either with or without modifications, the following resolution as Special Resolution:

   "RESOLVED that pursuant to the provisions of Section 360 and other applicable provisions (if any) of the Companies Act, 1956 the Company hereby grants its approval with retrospective effect from 1st April, 1963 to an arrangement between the Company and Messrs. Ramnarain Sons Private Ltd., an associate of Messrs. M. Ramnarain Private Ltd., Managing Agents of the Company, whereby Messrs. Ramnarain Sons Private Ltd., have agreed.

   (a) To allow the Company to use and occupy by way of leave and licence for a period of 5 years with restrospective effect from 1st April, 1963 the premises specified below of which Messrs. Ramnarain Sons Private Ltd, are tenants in consideration of a licence fee or compensation of Rs. 1,228/- per month for use and occupation of the said premises and 25 per cent of the electricity bill in respect of the said premises per month.

      (i) Portion of the office premises in State Bank Building Annexe:

      (ii) One Godown at Sewri belonging to N. M. Wadia Charities, Bombay.

   (b) To allow the Company to use the telephone belonging to Messrs. Ramnarain Sons Private Ltd., in their office premises in the State Bank Annexe in consideration of the Company paying monthly to Messrs. Ramnarain Sons Private Ltd., towards cost of telephone calls etc. a sum not exceeding 25 per cent of the telephone bills of Messrs. Ramnarain Sons Private Ltd., for the telephone in the said premises."
10. To consider, and if thought fit, to pass either with or without modifications, the following resolution as Special Resolution:

    "RESOLVED that pursuant to the provisions of Section 360 and other applicable provisions (if any) of the Companies Act 1956 the Company hereby grants its approval with retrospective effect from 1st April, 1963 to an arrangement between the Company and Messrs. M. Ramnarain Private Ltd., the Managing Agents of the Company, whereby Messrs. M. Ramnarain Private Ltd., have agreed to allow the Company to use and occupy by way of leave and licence for a period of 5 years with retrospective effect from 1st April, 1963 a portion of the premises at Great Western Building of which Messrs. M. Ramnarain Private Ltd., are licensees in consideration of the Company paying to Messrs. M. Ramnarain Private Ltd., a compensation of Rs. 750 per month for use and occupation of a portion of the said premises and 50 per cent of the electricity bill in respect of the said premises and to allow the Company to use the telephone belonging to Messrs. M. Ramnarain Private Ltd., in the said premises in Great Western Building in consideration of the Company paying to Messrs. M. Ramnarain Private Ltd., towards costs of telephone calls etc. a sum not exceeding 50 per cent of the telephone bills of Messrs. M. Ramnarain Private Ltd., for the telephone in the said premises."

The relative explanatory statement concerning the above special business, as required by Section 173 of the Companies Act, 1956, is forwarded to the members of the Company.

The Share Transfer Books of the Company will be closed from Thursday the 3rd September, 1964 to Wednesday the 30th September, 1964, both days inclusive.

By Order of the Board,

For M. RAMNARAIN PRIVATE LIMITED,

MADANMOHAN R. RUIA,

ORIENT PAPER MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the ORIENT PAPER MILLS LIMITED will be held at the registered office of the Company at Brajrajnagar in the district of Sambalpur (Orissa) on Wednesday, the 30th September, 1964 at 3.30 p.m. for the following purposes:—

(a) To receive and consider the report of the directors and to adopt the audited accounts of the Company for the year ended 31st March, 1964.

(b) To declare dividends on Preference and Ordinary Shares.

(c) To elect directors in place of Shri J. P. Poddar and Shri R. K. Somany who retire by rotation.

Shri R. K. Somany is an associate of the Managing Agents and has been on the Board of Directors since almost the inception of the Company. It is considered desirable to avail of his valuable advice by retaining him as a director of the Company. The Company has received the requisite special notice from a Shareholder and accordingly the special notice is hereby given to the Shareholders for passing the following special resolution under Section 261 of the Companies Act, 1956 for reappointment of Shri R. K. Somany, as a director of the Company.

"RESOLVED that Shri R. K. Somany, an associate of the Managing Agents, be and is hereby re-elected as a director of the Company."

(d) To appoint Auditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass with or without modification the following resolutions:

AS SPECIAL RESOLUTIONS:

(e) (i) "RESOLVED that the regulations contained in the Draft Articles of Association submitted to the Meeting and for the purpose of identification initialled by the Chairman be and are hereby adopted as the Articles of Association of the Company and shall come into force with immediate effect in substitution for and to the exclusion of the existing Articles of Association thereof."

(e) (ii) "WHEREAS the East Indian Produce Company Ltd., an associate of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, maintain an office in London in the United Kingdom and WHEREAS the said Company carry on business *inter alia* of acting as agents in the United Kingdom, the Continent and other countries for purchase and sale of goods including stores, plant and machinery etc. and also have dealings and business connections with parties all over the United Kingdom, the Continent and other countries and their operations are on a very large scale and WHEREAS their expenses of maintaining their office, amount approximately to £1,25,000 per annum and WHEREAS expenses which can be attributed to the work to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to their total turnover in each year, and WHEREAS the said East Indian Produce Company Ltd., have been acting as buying agents for and on behalf of the Company in the United Kingdom, the Continent and other countries. NOW it is hereby Resolved that the East Indian Produce Company Ltd., continue to act as buying agents of the Company for purchase of stores, plant and machinery in the United Kingdom, the Continent and other countries for a period of three years with effect from 1st July, 1965 and that they be paid a commission @ 2½ per cent of the invoice price thereof.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will be done in accordance with such permission."

(e) (iii) "WHEREAS Messrs. American East India Corporation, an associate of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, maintain an office in New York in the United States of America and WHEREAS the said Company carry on business *inter alia* of acting as agents in the United States of America and other countries for purchase and sale of goods including stores, plant and machinery etc. and also have dealings and business connections with parties all over the United States of America and other countries and their operations are on a very large scale and WHEREAS their expenses of maintaining their office amount approximately to $2,00,000 per annum and WHEREAS expenses which can be attributed to the work to be done for and on behalf of the Company, would depend on the value of purchases effected through the said Company in relation to their total turnover in each year, and WHEREAS the said Messrs. American East India Corporation have been acting as buying agents for and on behalf of the Company in the United States of America. NOW it is hereby Resolved that Messrs. American East India Corporation continue to act as buying agents of the Company for purchase of stores, plant and machinery in the United States of America and other countries for a period of three years with effect from 1st July, 1965 and that they be paid a commission @ 2½ per cent of the invoice price thereof.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will be done in accordance with such permission."

By Order of the Board,

Per Pro. BIRLA BROTHERS PRIVATE LIMITED,

G. D. MAKHARIA,
Managing Agents.

15, INDIA EXCHANGE PLACE,
CALCUTTA, *the 24th August* 1964.

N.B.—(i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The Registers of Members and Share Transfer Books of the Company will remain closed from the 1st September to 15th September, 1964, both days inclusive as already notified.

(iii) The dividends when declared, will be payable to registered shareholders as on the 15th September, 1964 or to their mandatees on or after the 19th October, 1964.

THE DAWN MILLS COMPANY LIMITED

State Bank Building, Bank Street
BOMBAY 1

NOTICE

OTICE IS HEREBY GIVEN THAT THE Fifty-first Annual General Meeting of Dawn Mills Company Ltd., will be held on esday the 29th September 1964, at 4-30 p.m. I.), at the Ardeshir Namdar Hall, Cama ental Institute, Apollo Street, Bombay 1, to nsact the following business :

To receive and adopt the Directors' Report and the Audited Balance Sheet as at 31st March, 1964, and the Audited Profit and Loss Account for the year ended 31st March, 1964.

To declare a dividend.

To elect a Director in place of Mr. Radhakrishna Ramnarain Ruia who retires by rotation and is eligible for re-election, and to consider and if thought fit, to pass the following resolution as a Special resolution in respect of which special notice as required by Sections 190 and 261 of the Companies Act, 1956 has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions, if any, of the Companies Act, 1956, Mr. Radhakrishna Ramnarain Ruia who retires by rotation as Director of the Company and who is an associate of Ruia Industries Pvt. Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

The reasons which make the above Special Resolution necessary are as under :—

Ruia Industries Pvt. Ltd., the Managing Agents of the Company, are authorised by the Articles of Association of the Company and Managing Agency Agreement to appoint an ex-officio Director to the Board. As Mr. Radhakrishna Ramnarain Ruia is a Director and member of Ruia Industries Pvt. Ltd., and hence an associate of the Managing Agents, his appointment as Director of the Company whose period of office is liable to determination by retirement of Directors by rotation can only be made by a Special Resolution of the Company in accordance with the provisions of Section 261 of the Companies Act, 1956.

To elect a Director in place of Mr. Madanmohan R. Ruia who retires by rotation and is eligible for re-election and to consider and if thought fit, to pass the following resolution as a Special Resolution in respect of which a special notice as required by Sections 190 and 261 of the Companies Act, 1956 has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions, if any, of the Companies Act, 1956, Mr. Madanmohan R. Ruia who retires by rotation as Director of the Company and who is an associate of Ruia Industries Pvt. Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

The reasons which make the above Special Resolution necessary are as under :—

Ruia Industries Pvt. Ltd., the Managing Agents of the Company, are authorised by the Articles of Association of the Company and Managing Agency Agreement to appoint an ex-officio Director to the Board. As Mr. Madanmohan R. Ruia is an associate of the Managing Agents, his appointment as Director of the Company whose period of office is liable to determination by retirement of Directors by rotation can only be made by a Special Resolution of the Company in accordance with the provisions of Section 261 of the Companies Act, 1956.

To elect Mr. Nirmalkumar Ramniwas Ruia as a Director and to consider and if thought fit, to pass the following resolution as a Special Resolution in respect of which notice under Section 257 and special notice as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company.

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions if any of the Companies Act, 1956, Mr. Nirmalkumar Ramniwas Ruia, who is an associate of Ruia Industries Pvt. Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

The reasons which make the above Special Resolution necessary are as under :

Ruia Industries Pvt. Ltd., the Managing Agents of the Company, are authorised by the Articles of Association of the Company and the Managing Agency Agreement to appoint an ex-officio Director to the Board. As Mr. Nirmalkumar Ramniwas Ruia is a Director and Member of the Ruia Industries Pvt. Ltd. and hence an associate of the Managing Agents, his appointment as a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation can only be made by a Special Resolution of the Company in accordance with the provisions of Section 261 of the Companies Act, 1956.

6. To appoint Auditors for the current year and to fix their remuneration.

7. To consider and if thought fit, to pass (either with or without modification) the following Resolution as a Special Resolution :

"RESOLVED that the contracts entered into between the Company and Messrs. Vinaya Trading Company Private Limited, an associate of Ruia Industries Pvt. Ltd., the Managing Agents of the Company during the year ended 31st September, 1964, pursuant to the approval of the Company granted by the Special Resolution passed at the Annual General Meeting of the Company held on 26th September 1963 and particulars whereof are entered in the Register of Contracts maintained under the provisions of Section 360 of the Companies Act, 1956 be and they are hereby ratified and confirmed."

8. To consider and if thought fit, to pass either with or without modifications the following resolutions as Special Resolutions :—

"RESOLVED that pursuant to the provisions of Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves of, confirms and consents with retrospective effect from 1st April 1963 to the continuation of the arrangement between the Company and Messrs. Ramnarain Sons Private Ltd., an associate of Ruia Industries Private Ltd., the Managing Agents of the Company, for letting to the Company on monthly tenancy the following premises belonging to Messrs. Ramnarain Sons, Private Limited.

One Shop in the building situate at Kalbadevi at a monthly rent of Rs. 424.80

with liberty to the Directors of the Company to agree to any additions, reductions and alterations in the area of the premises or terms of tenancy as may be deemed necessary or desirable and as may be agreed to between the Directors and Messrs. Ramnarain Sons, Private Ltd."

9. "RESOLVED that pursuant to the provisions of Section 360 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby grants its approval with retrospective effect from 1st April, 1963, to an arrangement between the Company and Messrs. Ramnarain Sons, Private Limited an associate of Messrs. Ruia Industries Private Limited, the Managing Agents of the Company, whereby Messrs. Ramnarain Sons, Private Limited have agreed :

(a) to allow the Company to use and occupy by way of leave and licence for a period of 5 years commencing from 1st April, 1963 the premises specified below of which Messrs. Ramnarain Sons, Private Ltd. are tenants in consideration of a licence fee or compensation of Rs. 2,671 for use and occupation of the said premises and 33 per cent of the electricity bill in respect of the said premises per month.

(i) Portion of the office premises in State Bank Building Annexe.

(ii) Two godowns at Sewri of the Bombay Port Trust.

(iii) Portion of premises at Cotton Green Building, Sewri,

with the liberty to the Directors of the Company to agree to any conditions, reductions or alterations in the area of the premises so used or occupied on leave and licence basis or the terms of the licence as may be deemed necessary or desirable and as may be agreed to between the Directors and Messrs. Ramnarain Sons, Private Limited.

(b) to allow the Company to use the telephones belonging to Messrs. Ramnarain Sons, Private Limited in their office premises in the State Bank Annexe and in the premises at Cotton Green Building, Sewri etc. in consideration of the Company paying monthly to Messrs. Ramnarain Sons, Private Limited towards costs of telephones calls a sum not exceeding 33 per cent of the telephone bills of Messrs. Ramnarain Sons, Private Limited for the telephones in the said premises and 25 per cent of the annual rental for the PBA telephone board."

10. To consider and if thought fit to pass the following resolution as an Ordinary Resolution :

"RESOLVED that subject to the approval of Central Government under the provisions of the Companies Act, 1956 the Company hereby reappoints Ruia Industries Pvt. Ltd., as Managing Agents of the Company for a further term of ten years from 16th August, 1965, on the remuneration and upon the terms, provisions and conditions set out in the draft agreement (with such modifications if any as may be agreed to at this meeting) proposed to be entered into between the Company of the one part and Ruia Industries Pvt. Ltd. of the other part (and which draft Agreement is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof) with power to the Directors of the Company, subject to the provisions of the Companies Act, 1956 to vary or alter such of the terms, provisions and conditions of the said draft Agreement before execution as shall not have the effect of increasing the remuneration of the Managing Agents, as may be agreed to between the Central Goverament and the Directors of the Company acting on its behalf."

The relative explanatory statement concerning the above special business under items 3, 4, 5, 7, 8 and 9 as required by Section 173 of the Companies Act, 1956 is annexed hereto.*

The Share Transfer Books of the Company will be closed from Monday, the 7th September, 1964 to Saturday, the 3rd October, 1964, both days inclusive.

By Order of the Board,
For RUIA INDUSTRIES PRIVATE LIMITED,
NIRMALKUMAR RAMNIWAS RUIA,
Director,
Agents.

CHAIRMAN, MR. M. R. RUIA, URGES TINPLATE MANUFACTURE ALONG NEW LINES

THAT the Indian tinplate production at present is outmoded was highlighted by Mr. M. R. Ruia, Chairman of the Poysha Industrial Company Limited, in his speech at the Seventh Annual General Meeting of the Company, held at Bombay on Monday, 24th August 1964. He emphasised that, unless some long-range steps were taken to undertake manufacture of thin tinplate and tinplate foil, India would be outclassed in this industry in the not too distant future. Mr. Ruia referred to the hand-to-mouth existence of the can industry because of inadequate and irregular supplies of raw materials. The Company had shown excellent working results during the year 1963-64, the profits having doubled from Rs. 2.11 lakhs a year ago to Rs. 4.26 lakhs in 1963-64.

Following is the text of Mr. Ruia's speech:

I am glad to report that the year 1963-64 has been a satisfactory year in most respects. Even in the existing factory at Bombay, with all its limitations, we have been able to show a distinct improvement in production, by increased efficiency and a certain amount of rationalisation. Our production of containers increased by no less than 18 per cent over last year's, and a substantial proportion of it was open top sanitary cans used mostly in the food preservation industry, the balance being general line cans for various industries like oils, paints, *vanaspati*, confectionery, etc. This performance must be regarded as quite satisfactory in relation to our resources. The very fact that, even after providing, among other things, Rs. 8.58 lakhs for taxation as against Rs. 2.95 lakhs in 1962-63, the profits for 1963-64 amounted to Rs. 4.26 lakhs as against Rs. 2.11 lakhs in the preceding year, is a measure of our striking improvement. The staff reorganisation already initiated has begun to produce results, and I am sure the performance during the current year will be even more satisfactory. I may mention that this will probably be the last year in which we shall function throughout the year in the present factory in Bombay, as we expect to move into the new modern factory near Thana before the end of 1965.

Expansion Programme

We have not been idle regarding our expansion programme. We have now acquired a total area of 33 acres of valuable land for our factory near Thana from the Maharashtra Industrial Development Corporation. Tenders are being invited for the construction of the new factory buildings on the basis of plans and lay-outs prepared by our architects. We hope to begin construction soon after the monsoon, and shall complete it as speedily as possible.

The land for the Cochin factory, comprising about ten acres, has also been bought at Mamala near Ernakulam, and we are now studying the plans for the factory buildings and installation of the plant. The site is a good one, about a mile, as the crow flies, from the new Oil Refinery complex.

The actual site for the new factory at Ghaziabad has also been selected, after personal inspection of the Uttar Pradesh Industrial Estate, and we are now negotiating the detailed terms of the purchase.

I may also mention that the requirements of our Associate, Kaira Can Company, which has been created solely to meet the needs of the Kaira District Co-operative Milk Producers' Union at Anand, have been receiving full attention. As there were difficulties in the procurement of land for this Company through the State Government, our Associate carried on private negotiations and has succeeded in selecting a suitable site (about 10 acres) near Anand. The plans for the factory buildings are also under preparation.

Automatic Printing Plant

As regards the plant, a modern automatic printing plant has already been imported for our Bombay factory and is now awaiting installation at the new factory at Thana. I am also glad to report that we have at last succeeded in getting permission from the Government of India for a second automatic bodymaker line for our Bombay factory, the absence of which has been a bottleneck in production there. The new equipment will enable quick changeovers from one can diameter to another, without appreciable loss of time, and we shall also be in a position to manufacture containers of larger diameters. The Government have also agreed to the importation of all the plant and machinery we had selected for the factories at Cochin and Ghaziabad, and we expect the import licences to be issued shortly.

The Kaira Can Company has already placed orders with American suppliers for the machinery required, and we expect the equipment to reach India some time before the end of this year.

The present year and the next will, therefore, be a very active year for our Company, involving the construction of four new factories for ourselves and our Associate, and the installation of up-to-date plant in each of them. When they start production, we shall get rid of our present strategic disadvantage in having only one important manufacturing centre at Bombay, and having to bear the handicap of long transport and high packing costs to various markets in distant parts of India. We shall, like the major producer of cans in this country, be in the happy position of catering for regional markets from the regional plants.

I mentioned in my last review the new developments regarding receipt of orders for various types of cylinders, etc., from the defence departments. We have made much progress in this respect, and were able to secure substantial orders, a considerable part of which has already been executed.

Our share in the present export drive has continued to expand, and I am glad to report that during 1963-64 about Rs. 20 lakhs worth of goods were exported in our containers. The beginning of the present year has already shown further remarkable progress in this direction, and new export markets have been created.

Raw Materials

I must mention one point in connection with the availability of our present raw material, namely, tinplate. While, on the whole, we had a slightly better, though still not an adequate supply of tinplate for our manufacturing requirements, the disturbing feature has been that arrivals have not been following any regular pattern. We get very large quantities of tinplate in some months, followed by a lean period, including some months with no arrivals at all. This absence of a proper phasing militates against any sensible planning of our whole manufacture throughout the year, and causes our customers considerable inconvenience. I do not know what the Government can do in the present circumstances to help us out of this condition of a relatively hand-to-mouth existence; but any long-range programme by them involving the proper staggering of indigenous production, as well as of imports, would be a real boon to us.

You will be interested to see from the relevant balance sheet and profit and loss account annexed to this report that our wholly-owned subsidiary, Colrige, has also had a successful year. The sales in 1963-64 exceeded Rs. 6 lakhs, and the previous loss has been converted into a sizable profit.

A word regarding our future activities. You will observe from the Directors' report that the capital is going to be increased from Rs. 25 lakhs to Rs. 110 lakhs. We have carried on detailed negotiations with important financing agencies like the Industrial Credit and Investment Corporation of India, Kerala State Industrial Development Corporation, Industrial Finance Corporation, Life Insurance Corporation, the U.P. State Industrial Corporation, and certain banks, for foreign exchange or rupee loans, or underwriting facilities. I am confident that these negotiations will soon fructify and that we shall shortly be fully armed at every point to embark on our scheme of modernisation and expansion, at the end of which we and our Associate will have four modern plants, combining the latest Continental and American techniques, and located at strategic centres, to enable us to cater for the greater part of India, besides contributing our tangible share to Indian exports.

All this has been possible as the result of combined team-work at all levels. Our staff have fully co-operated, and our relations with labour continued to be harmonious. I am happy to convey my thanks to them on your behalf.

Competition

Finally, I feel I should take the opportunity to refer to a topic which will be of paramount importance to the can manufacturing industry in this country within a decade or two. As you are well aware, tinplate has been facing increasing competition from other materials like aluminium, paper, plastics, etc., and has had to adapt itself to meet this competition. The enormous impact of aluminium as a package material on the American beer can manufacture industry first made American tinplate producers seriously think of a modified tinplate to meet this formidable challenge; and "tinplate," otherwise known as "double cold reduced tinplate," was expressly created to meet the challenge. A survey of current tinplate manufacture in the United States reveals that this particular variety of tinplate is now developing very rapidly and that almost all producers, including the "Big Three," have now started large-scale manufacture of this type. Another recent development is tinplate "foil" which has a paper-thin gauge of two-thousandths of an inch.

We, in this country, cannot afford to stand still while all these modifications are going on in the largest tinplate producing country in the world, whose practices and methods are bound to have a controlling effect on tinplate manufacture elsewhere. Many other countries outside America (for instance, the U.K. and Japan) have also taken up the manufacture of thin tinplate and are likely to take up the manufacture of tinplate foil also. All of India's tinplate production at present is hot-dipped, which is already outmoded (less than 3 per cent of the total manufacture of tinplate in the U.S.A. is of this variety today), and I note that a beginning is to be made in Rourkela in the manufacture of electrolytic tinplate. This is good so far as it goes. Unless, however, the Government take a long-range view, and modify the Rourkela programme in the fourth Plan and take steps now for the manufacture of at least a certain percentage of thin tinplate and tinplate foil, I am afraid we will be hopelessly outclassed in the not too distant future. The same consideration applies to the proposed new plant at Bokaro. I would earnestly request the Government to give this matter serious thought and arrange for a progressive increase in the manufacture of these two new varieties which have a great bearing on reducing the cost of tin cans and will enable our industry to face competition from containers made of other materials, not only in India but as regards exports also. An ancillary suggestion I would also make is that during the period in which this manufacture is being started in this country, imports should be allowed of tangible quantities of these two new varieties of tinplate to enable us to try them out on our plants and get ready in time to cope with full-scale production when the need arises. This need, I repeat, will be on us within possibly a decade.

Note: *This does not purport to be the record of the proceedings of the meeting.*

TWIN-SPINDLE GRINDING MACHINE

A twin-spindle grinding machine, specially designed for grinding components simultaneously on two faces, which are parallel to each other but at different levels, is being produced by Abwood Machine Tools Ltd., in England. Incorporating two vertical wheel-spindles, each of which can accommodate a grinding wheel up to 5 in. in diameter, the machine makes it unnecessary, as with conventional surface grinders, to repeatedly re-set the wheel height in order to treat first one face of a component and then another. The spindles are adjustable vertically and independently of each other. When grinding two faces at different levels, the difference in level can be maintained as the wheels are dressed as required by two diamond tools at the correct height one above the other. However, if the wheels are to be used at the same height, they are both dressed by one diamond tool which is on a rotary mounting so that it can be moved across both wheels. The mounting is rotated by hydraulic motor. In addition to their vertical adjustment, the grinding spindles can be set individually so that their centres are variable from 5 in. to 7 in. apart. A hand traverse is also provided to aid setting. The machine is arranged for both wet and dry grinding.

NEWS IN BRIEF

THE Life Insurance Corporation has agreed to make available to the State Governments Rs. 12 crores every year for their various housing schemes.

The Union Government has decided to participate in the Ceylon Industrial exhibition at Colombo to be held there early next year.

The Export-Import Advisory Committee is meeting at New Delhi on the 12th and 13th of this month under the presidentship of Mr. Manubhai Shah, Union Minister for Commerce.

A five-member delegation (leader: Mr. K. K. Modi) sponsored by the Plastics and Linoleums Export Promotion Council left on the 3rd inst. to attend the International Fair at Zagreb in Yugoslavia. During its four-week tour abroad, the delegation will explore new markets for plastic products.

An eleven-member Indian industrialists' goodwill delegation, headed by Mr. A. M. M. Murugappa Chettiar, is expected to leave Bombay on the 21st inst. on a one-month tour of African countries. The delegation will visit Nigeria, Ghana, Sudan, Ethiopia, Uganda, Tanganyika, Malawi, Northern Rhodesia and Kenya.

The Committee for Presidential awards for public sector industrial undertakings has decided to award a certificate of honour to the Fertiliser Corporation of India (Nangal Unit) for satisfactory performance during the year 1962-63. It will be recalled that the Sindri unit of the Fertiliser Corporation received a similar award last year.

Cotton textile mills' production in July 1964 is provisionally placed at 82 million kgs. of yarn and 415 million metres of cloth, as against 77 million kgs. of yarn and 385 million metres of cloth produced in the same month last year. The composite mills held during the month an estimated cloth stock of 93,000 metric bales as unsold and 155,000 metric bales as sold but unlifted.

The Monopolies Inquiry Commission proposes to meet the representatives of various chambers of commerce and some members of Parliament in order to collect information on the functioning of the industrial sector. Copies of questionnaire drawn up by the Commission to elicit views on various matters covered by its terms of reference have been sent to economists, industrialists and representative bodies of trade and industry.

The annual requirements of coal mining machinery and equipment in the remaining period of the current Plan and during the fourth Plan period will be assessed by a six-member expert committee formed recently by the Union Ministry of Steel and Mines. The Committee will also, *inter alia*, draw up a programme envisaging manufacture of coal-mining equipment at the mining machinery plant on the basis of demand.

Bombay is the fifth largest city in the world, with a population of 4,422,165, according to the United Nations *Demographic Year Book 1963*. Tokyo continues to be the largest city with a population of 8,613,000, closely followed by New York (7,781,984), Shanghai (6,900,000) and Moscow (6,317,000). These figures, however, refer only to population with the administrative boundaries of each city.

Twelve tonnes of Indian-made electrodes were exported to Thailand for the first time in June this year. Thailand's total demand for electrodes is considerable. This first order for export received from Thailand was the result of visits to that region by senior officials of Indian Oxygen Ltd. The staff of Indian Oxygen's electrode factory took special care in inspecting the material for export and a new method of packaging—that of putting electrodes in cardboard cartons packed inside wooden cases—was evolved in the process.

The Mitsubishi of Japan, which is to extend capital and technical collaboration for the second shipyard at Cochin, has decided not to press its demand for the Indian Government guaranteeing dividend on the investment it proposes to make in the project. The question of equity participation and payment of royalty is stated to have been settled. The Japanese firm's share in the equity will work out to Rs. 1.5 crore. The total investment in the project is estimated at Rs. 9 crores with a foreign exchange component of Rs. 2.5 to Rs. 3 crores.

The Government of Iceland has offered technical and economic assistance to India in developing fish and sea foods industry, according to Dr. Gylfith Gislason, Iceland's Minister of Education and Commerce. The Government of India is to prepare a suitable project report which will be sent to the Iceland Government for examination and decision as to the size of the economic and technical assistance that can be made available. Incidentally, India will send one or two representatives to Iceland for contacting importers of traditional export items of tea, textiles and other consumer goods.

Production of iron ore in India (including Goa) during the month of May 1964, was 1.60 million tonnes. This brings the total output during the period January-May to 8.61 million tonnes which is 5 per cent lower than the corresponding period last year. Orissa was the leading producing State during the month under review with a production of 440,000 tonnes, followed by the Union Territory of Goa (451,000 tonnes), Bihar (280,000 tonnes), Madhya Pradesh (222,000 tonnes) and Mysore (97,000 tonnes). The States of Andhra Pradesh, Maharashtra and Rajasthan jointly contributed the remaining 41,000 tonnes of the all-India output.

Hindustan Salts Ltd. is considering a proposal to set up at Kharagodha a plant for recovering by-products like magnesium chloride and sulphate from bitterns. Presently this work is being done under a special agreement by the Pioneer Magnesia Works; the agreement is to be terminated shortly. Another scheme for the manufacture of salt tablets for saline injections as well as for oral use is to be finalised soon. Meanwhile, the detailed project report submitted by a West German firm for the installation of an integrated washery-*cum*-sodium sulphate recovery plant at Sambhar costing about Rs. 120 lakhs is still in cold storage since credit facilities are not available.

Three Indian factory inspectors, at present studying in Britain under the Colombo Plan, attended a special industrial safety training course held at Wadham College, Oxford, from 30th August to the 4th inst. The course, which is sponsored and run by the Royal Society for the Prevention of Accidents, was also attended by factory inspectors from other countries of the Commonwealth. A similar series of courses has been running in Britain since 1941, at which over 3,000 students, including 350 from 51 oversea countries, have received safety instruction. The course at Oxford was, however, the first one designed specially for oversea officials.

The U.S. Export-Import Bank has authorised a loan of Rs 3 crores ($6,825,000) to the Central Pulp Mills Ltd. of Poona to purchase the U.S. goods and services needed for establishing a bamboo pulp mill at Fort Songad. The initial capacity of the mill will be 24,800 tons per annum to be increased to 33,000 tons in the seventh year of operations. The mill is expected to go into production within two years. The prime contractor for the project is Sandy Hill Corporation, Hudson Falls, New York, which will manufacture some of the required equipment and also act as the purchasing agent for other components. The Poona firm has selected the Sandwell International, Portland, Oregon, as its consultant engineers.

The decision of the Central Government that only aluminium (in place of copper) should be used in the manufacture of cable and wires of sizes upto 1/.044" copper was endorsed by the Standing Committee of the Central Ministry of Industry and Supply for substitution of copper in the electric wire and cable industry at its meeting held at Kundara recently. The Committee opined that, in view of the acute scarcity in foreign exchange and of the increasing requirement of lead required for meeting Plan targets, aluminium sheathing should be employed for power cables in the place of lead sheathing. A period of three years was suggested to accomplish this switch-over. In the programme of switchover to aluminium, the Committee also considered aluminiumising of high tensile steel core wire in the place of zinc galvanising.

• • • •

From Abroad

The Governments of Liberia, Guinea, Sierra Leone and the Ivory Coast have agreed to set up a high-level joint commission to study the possibilities of creating a free-trade zone covering the four countries.

The Bulgarian Government has decided to build near Varna a new motor factory with a capacity to produce 53,000 diesel motors per annum A part of the machinery and equipment for the factory will be supplied by the Soviet Union.

Industrial production in West Germany during the first seven months of 1964 was higher by 9 per cent, as compared with the corresponding period last year. The growth rate was 14 per cent in respect of the basic industries, 15 per cent in the building industry and 8 per cent in the capital and consumer industries.

Malaysian Airways, an associate of the British Overseas Airways Corporation, is to buy five Comet 4 jet airliners from the B.O.A.C. at a total cost of about £1 million. The airliners to be delivered next year, will come from the B.O.A.C.'s fleet of 19 Comets which are to be gradually phased out of service to make way for VC-10s and super VC-10s.

Israel's first plant to produce basic lubricants and waxes is now nearing completion and is scheduled to go into production early next year. The installed capacity of the plant is 25,000 tonnes per annum, but actual production during the first year of operations will be 15,000 tonnes. The current market requirements are estimated at 13,000 tonnes.

A new £15-million oil refinery with an initial processing capacity of three million tons a year is to be built in Britain. Work on the refinery, to be built for the Continental Oil (U.K.) Ltd. at Immingham in Lincolnshire, is expected to start next year. The plant is scheduled to operate during the latter half of 1966. Crude oil supplies will be drawn mainly from Continental's Libyan fields.

The International Finance Corporation is joining with leading financial institutions in Spain, France, Germany, Italy, the U.K. and the U.S. in subscribing to a new issue of capital shares of Banco del Desarrollo Economico Espanol, S. A. This company was established in 1963 to supply share and loan capital to private Spanish industry and to assist in broadening the market in Spain for corporate issues.

PERSONAL

MR. R. N. Chettur has been appointed as the Managing Director of the State Bank of India in place of Mr. B. Mukerji.

Mr. M. N. Kaul, who retired recently as Secretary of the Lok Sabha, has assumed charge as Public Trustee under the Companies Act.

Mr. R. Storey Dickson of Kanan Devan Hills Produce Company Ltd., Munnar, has been elected President of the United Planters' Association of South India, Coonoor, for the current year.

Mr. Humayun Kabir, Union Minister for Petroleum and Chemicals, returned to New Delhi on Monday this week after visiting London, Paris, Rome and Bucharest to explore the possibilities of collaboration in setting up petrochemical complexes in India.

Mr. Michael L. Lejeune, Assistant Director of the Department of Operations—Far East of the World Bank and I.D.A., has been appointed Director of Administration of the World Bank, the International Finance Corporation and the International Development Association. He succeeds the late Mr. William F. Howell. He will take up his new post on the 1st of next month.

The Life Insurance Corporation of India has been reconstituted with effect from 1st September 1964. Its members are: Mr. B. K. Kaul (Chairman), Mr. Rai Amarnath Agarwal, Mr. P. D. Chaliha, Mr. C. C. Chokshi, Mr. Y. A. Fazalbhoy, Prof. D. T. Lakdawala, Mr. Bhaskar Mitter, Mr. S. Govindarajulu, Mr. V. K. Narasimhan, Mr. Kedar Pande, Mr. G. V. Puranik, Mr. M. V. Rangachari (Deputy Governor, Reserve Bank of India), Mrs. Raksha Saran, Mr. V. R. Thayamanaswamy and Mr. Sucha Singh Anand.

The U.S. General Electric Company and the Olivetti Typewriter Company of Italy are said to have entered into an agreement under which the Italian firm will transfer its electronic branch to a new company. The General Electric Company will have majority holding in the new company. The exact division of the new company's capital between the two companies is still under negotiation, but it is believed to be something like 60-40 or even 70-30 per cent.

The International Monetary Fund has approved a stand-by arrangement that authorises the Government of Bolivia to draw the equivalent of $12 million in currencies held by the Fund during a twelve-month period beginning 1st September 1964. The arrangement will give support to a financial programme designed to ensure the country's balance of payments equilibrium and bring further progress towards domestic price stability. Bolivia has maintained almost continuous stand-by facilities with the Fund since 1956. Its quota in the Fund is $22.5 million and outstanding drawings are equivalent to $7.8 million.

The Government of Pakistan has decided to organise in March-April 1966 an international exhibition which will mark the completion of the second Five-year Plan and the commencement of the third Plan. The main theme of the exhibition will be "Achievements and prospects." The exhibition provides the forum to the various sectors of national life to make visual presentation to the nation of the progress so far made in the fields of industry, agriculture, education, health, etc. National industry would particularly be able to set forth the success achieved in increasing the production of goods, improvement of quality and design and in enlargement of the scope of manufacturers. It will provide an opportunity to countries interested in the development of Pakistan to demonstrate the contribution they have made and to assess the opportunities for future participation.

Proposals for a credit agreement for enlarging the Mysore Iron and Steel Ltd. into a special steel and alloys plant are now in the final stages of examination. And when an agreement is signed, in the near future, between the Government of India and the Development Bank of the West German Government, the Mysore plant will have an advance credit of DM 60 million (approximately Rs. 7.2 crores) for the import of equipment from Germany. The enlargement project is estimated to cost Rs. 10.75 crores, of which the foreign exchange component will be about Rs. 7 crores. When the project is completed, the production capacity of the plant will be 77,000 tonnes per annum of high speed steel, high alloy steel, free cutting and spring steels and constructional steels. At present, the plant is producing 80,000 tonnes of pig iron from one blast furnace of a capacity of 80 tonnes and from two electric pig iron furnaces each with a capacity of 100 tonnes.

The International Development Association has extended a credit equivalent to $5.25 million to Pakistan for the further improvement of inland water transport of East Pakistan. The credit is for a term of 50 years. Repayment of principal will begin from 15th July 1974 after a 10-year period of grace. Thereafter, 1 per cent of the principal will be repayable annually for 10 years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest but a service charge of ¾ per cent per annum on the amount withdrawn and outstanding will be made to meet I.D.A.'s administrative costs. The Government of Pakistan will relend the proceeds of the credit to the Province of East Pakistan on I.D.A. terms. The Province will make the proceeds of the credit available to the East Pakistan Inland Water Transport Authority at 3½ per cent interest to be repaid over 25 years, including five years of grace.

TREND OF MARKETS

RESULTS OF STATE LOANS

(From Our Own Correspondent)

BOMBAY, *2nd September*

With the closure of the subscription lists of Rajasthan and Kerala loans on Thursday, 27th August, the borrowing programme of 13 State Governments has been completed. The actual aggregate subscriptions amounted to Rs. 109.14 crores, as against the total of Rs. 100 crores invited. All the loans were either fully subscribed or oversubscribed within the time prescribed. The details of the amounts invited and the amounts actually subscribed are given below:

(In crores of Rs.)

	Amount invited	*Amount subscribed*
Maharashtra	15.00	15.01 (1.07)
Madras	14.00	14.00
Andhra Pradesh	11.00	13.81
Uttar Pradesh	10.00	11.55 (1.02)
Orissa	8.00	9.12
Gujarat	7.00	8.93
Mysore	7.00	7.00
West Bengal	7.00	7.00 (0.48)
Madhya Pradesh	5.00	5.20 (0.21)
Rajasthan	5.00	5.23
Bihar	4.00	4.78
Kerala	4.00	4.39
Assam	3.00	3.12
Total ...	100.00	109.14

Note: The figures in brackets relate to conversion to old loans. The actual amounts of these loans were: Maharashtra Rs. 5.98 crores; Madras Rs. 5.25 crores; Uttar Pradesh Rs. 5.89 crores; West Bengal Rs. 2.00 crores; Madhya Pradesh Rs. 2.03 crores.

It will be seen from the above figures that the response to the State loans was quite good. But it so happened that, immediately after the subscription lists were closed, the majority of loans were quoted well below their issue prices, the discount ranging from one rupee to Re 1.75. The only exceptions were Maharashtra, Gujarat and West Bengal loans which were quoted at the issue price, namely, Rs. 100 in the case of the first two loans and Rs. 99.75 in respect of the third.

The short-term money market continued to rule easy until yesterday when it turned somewhat tight. The earlier easiness was due to easy availability of funds. The call rate for both renewals and fresh money was unchanged at 2 per cent. But yesterday, owing to a sudden spurt in demand for funds, the call rate rose to 2½ per cent, with stray transactions put through at 3 per cent. Today, too, the market was tight; even renewals fetched 3½ per cent. Fresh money, too, was quoted at 3½ per cent with borrowers over. Calcutta reported stringent conditions, the call rate there jumping up again from 3-3½ per cent to 4½-5 per cent.

Despite the firmness of the short-term money market yesterday, the 91-day Government of India Treasury Bills evoked encouraging response. The total amount offered at Rs. 4 crores was double that invited (Rs. 2 crores). The average rate of accepted tenders was unaltered at Rs. 2.400 per cent per annum. The response to Intermediate Treasury Bills, however, was very limited; the amount of Bills actually sold from 24th to 29th August was Rs. 2 crores, as against Rs. 12.90 crores a week before and Rs. 8.56 crores two weeks before.

India's foreign exchange reserves declined by Rs. 2.85 crores to Rs. 95.61 crores during the week ended 28th August 1964. The decline was entirely in balances held abroad which stood at Rs. 10.15 crores, as against Rs. 13.00 crores. The foreign securities held in the Issue Department of the Reserve Bank were unchanged at Rs. 85.46 crores. Deposits of scheduled banks with the Reserve Bank fell by Rs. 30.25 crores to Rs. 91.91 crores apparently because of the subscriptions to the State loans. Loans and advances to scheduled banks were a shade higher at Rs. 2.06 crores. Notes in circulation receded by a further Rs. 33.69 crores to Rs. 2,390.12 crores.

There was a sharp fall of Rs. 17.43 crores to Rs. 1,719.88 crores in the total credit made available by scheduled banks to their clients during the week ended 21st August 1964. Since, at the same time, deposits went up by Rs. 23.58 crores to Rs. 2,689.12 crores, borrowings declined by Rs. 59 lakhs to Rs. 1.78 crore. Investments improved by Rs. 20.23 crores to Rs. 775.11 crores and so also total cash by Rs. 4.74 crores to Rs. 175.38 crores.

Many new State loans, as already stated, were on offer at a discount of a rupee to Re. 1.75 under their issue price, as those who had applied for these loans to oblige the State Governments concerned turned as sellers. Among Central loans, 3 per cent non-terminal fell by a rupee to Rs. 62.50. 4 per cent 1969 dropped 20 P to Rs. 99.35. 3½ per cent 1967 National Plan Bonds eased by 15 P to Rs. 99 and 3 per cent 1966-68 by 5 P to Rs. 98.35.

In the foreign exchange market, the banks' buying and selling rates for U.S. dollars were unchanged at Rs. 477.25 and Rs. 480.75 per $100, respectively. In New York, the pound sterling eased again *vis-a-vis* the dollar, the spot rate declining by 0.130 cent to 278.400-278.420 cents and the three months' forward by 0.120 cent to 277.990-278.010 cents.

BULLION DULL

(From Our Own Correspondent)

BOMBAY, *2nd September*

The bullion market presented a dull appearance during the week under review. Operators were hesitant to enter into fresh commitments either way, in view of the recent official raids to unearth unaccounted money. Demand for both gold and silver was at a low ebb. Over the week, the yellow metal was a shade easy, while the white metal was slightly better.

Silver began the week at Rs. 256.50, same as last week, and moved down due to selling pressure to Rs. 255.50 on Tuesday. But firm advices from other centres helped the metal to recover and close a shade better at Rs. 257 today. The daily average arrivals and offtake of silver were much lower at 22 and 5 bars, respectively.

Fourteen-carat gold opened higher by 25 paise at Rs. 72.75 on some support. Subsequently, however, it fell to Rs. 72 on lack of steady demand and better arrivals. Primary gold, in unofficial trading, was marked down by Rs. 3 to Rs 121 on reports of the Government's determined bid to curb smuggling. Sovereign was dull at Rs. 93.

The international price for gold in the London market was quoted higher at $35.07¾, as against $35.06¾ last week. The sterling price gained further 1¾d. to 251s. 11¾d. Both ready and forward silver remained unchanged at 112d. and 112¼d., respectively, as also silver in New York at 129.3 cents.

The Union Government has permitted the dealers licensed under the Gold Control Rules to maintain their accounts under the old forms till the end of this year. The new forms of accounts must, however, be introduced from 1st January 1965. This decision is a sequel to representations by dealers for an extension of the time limit.

The Punjab Government has ordered an inquiry into the issuance of certificates of goldsmiths affected by the Gold Control Order. It is learnt that a number of other persons unconnected with the trade have managed to secure certificates, loans and other facilities provided for the goldsmiths.

In Kerala, the Government has formed nine pilot societies with a total membership of 500, one in each district, as part of the scheme of rehabilitation of persons affected by the Gold Control Order. These societies will manufacture silver and 14-carat ornaments and other utility articles. Out of an estimated 28,000 displaced goldsmiths in Kerala, 13,500 have applied for licences to continue as professional godsmiths. Nearly 6,300 of them have received the same till last May.

In Gujarat, loans aggregating over Rs. 85 lakhs had been sanctioned to goldsmiths affected in the State by the Gold Control Order upto January this year.

The following table shows the trend of prices during the week under review:

	2-9-64 (closing)	High	Low	26-8-1964 (closing)
SILVER	Rs.	Rs.	Rs.	Rs.
Ready (996 fine) ..	257.00	257.00	255.50	256.50
GOLD				
Ready (14-carat) ..	72 00	72.75	72.00	72.50
Sovereign ..	93 00*	—	—	93.00*
London—				
Gold ..	251s. 11¾d.	252s.01d.	252s.10½d.	251s.10d.
Silver Ready ..	112d.	—	—	112d.
Silver Forward ..	112¼d.	—	—	112¼d.
New York—				
Silver ..	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

EXPORT DUTY ON BENGAL DESHI ABOLISHED

(From Our Own Correspondent)

BOMBAY, *2nd September*

The much-awaited official announcement abolishing the export duty on the Bengal *Deshi* materialised on 31st August 1964. The announcement was warmly welcomed in the market. This was evident from the instantaneous rise in the price of Bengal *Deshi* for December delivery contract, from Rs. 735 to Rs. 745 per candy, a gain of 10 points over the price ruling before the announcement. The complete removal of export duty on cotton has been regarded as the most appropriate finish to the liberal 1964-65 export policy announced on 22nd August 1964. The export duty of Rs. 25 per bale has been in force since 16th November 1958 but the removal of duty to the extent of 50 per cent on this variety by Pakistan in June last, has been the main factor responsible for its abolition. With its removal now, the Indian short staple cotton should be able to compete effectively in world markets, especially in view of the fact that quality-wise Bengal *Deshi* is superior to the comparable staples grown in Pakistan.

It is however quite possible that sooner or later Pakistan, too, may abolish the remaining export duty of Rs. 10 per bale.

Japan, the chief importer of Bengal *deshi* is understood to be reluctant to opening letters of credit and instead wishes to buy on credit for thirty and sixty days. In a meeting of East India Cotton Association today, it was however, decided that sales of Bengal *deshi* should be effected only against letters of credit. There is a feeling amongst exporters that, in the absence of L/Cs, financial help from banks will not be forthcoming resulting in hardships to shippers of limited means. Some interest, however, has been witnessed in Bengal *deshi* and export business to the extent of 2,000 bales is reported to have been transacted. After going down to Rs. 738, Bengal *deshi* quickly recovered today to Rs. 746 per candy.

In the futures section, distinctly firm conditions prevailed in the earlier part of the week on account of rains in the Punjab and the reported damage to crops and also of unfavourable weather reports from Berar districts. In the latter half of the week, however, the futures developed a sagging tendency owing to selling pressure from up-country operators, besides profit-taking at higher levels. This was the first time after the expiry of the Jarilla August contract that the March contract has shown a downward trend. Its subdued state was also attributed in a certain measure to the after effects of the August contract which, it will be recalled, has left a burden of about Rs. 10-12 lakhs on brokers and has, therefore, crippled their capacity for taking new risks. On the last day of the week, there was a slight recovery mainly on account of a large purchase by a leading bull who, it is estimated, has already accumulated a long position to the tune of 60,000 bales in the distant contract.

The Jarilla March 1965 contract, which closed at Rs. 734.25 last week, opened at Rs. 736 this week and after touching a high of Rs. 736.50 on 28th August 1964, dipped to Rs. 728.25 on the penultimate day of the week before closing a shade higher at Rs. 731. Thus, there has been a net loss of Rs. 3.25 over the week.

In the spot market at Sewri, there were no notable developments. Co2 and L.147 varieties remained in constant demand. Daily turnover was, however, restricted. The following are the latest available rates for certain popular varieties:

Hubli Laxmi Rs. 1,110, Rs. 1,120; Bengal fine Rs. 739, 740, 744 and 745; Kotal L.147 Rs. 1,310 f.o.r. Ahmedabad; Challisgaon Co2 Rs. 1,550; Baramati Laxmi New Rs. 1,565 and Gadag Laxmi Rs. 1,120.

ART SILK YARNS EASIER

(From Our Own Correspondent)

BOMBAY, *2nd September*

The yarn market was devoid of any new development during the week under review. Art silk yarns continued to rule easy, for arrivals were quite heavy, while demand from consuming centres was poor. Weavers were buying their minimum requirements due to low offtake of finished fabrics. Consequently, weak holders were eager to reduce their commitments, with the result that prices drifted downward. Staple fibre yarns were fully steady, thanks to moderate demand from Surat weavers. Cotton yarns ruled quiet.

Futures trading in art silk yarn, which was to commence from the middle of this month, has been postponed to next month, as the current month is considered inauspicious. Actual trading is expected to commence on the *Dasara* day, that is, 15th October next. Meanwhile, trade circles are hoping that the Government would allow forward trading in staple fibre yarns also.

Among art silk yarns, National Rayon 120D eased by 11 P to Rs. 11.57. Bright Century declined by 12 P to Rs. 18.57. National Rayon 150D and South India Viscose 120D were neglected at last week's level of Rs. 10.93 and Rs. 13.46, respectively.

In the staple fibre yarn (2 x 34 French Count) section, City strengthened by 6 P to Rs. 9.61. Pioneer and Vasantas were firm, the former at Rs. 9.35 and the latter at Rs. 9.72. Sriram, however, shed 2 P to Rs. 9.22.

Cotton yarns 34s Madura lost a rupee to Rs. 42. All other counts were dull at last week's level. 50s Minerva provided an exception and went up on special demand by Rs. 7.50 to Rs. 61.50.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	2-9-1964	26-8-1964
Art silk yarn (per kg.)—	Rs.	Rs.
National Rayon 120D	11 57	11 68
Century 75D	18 57	18 70
S. I. Viscose 120D	13.20	13.20
Staple fibre yarn-34 x 2 *French Count* (per kg.)		
Pioneer	9.35	9.35
Premier	10 03	9.90
City	9.61	9.55
Cotton yarn - French Count (Rs. per 5 kg.)		
8s Podar	21.00	21.00
17s Modern	22 00	27.00
27s Madura	35 00	35.00
34s Madura	42 00	43.00
52s Pioneer	66 75	69.30
68s Finlay	106.70	106.70

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *2nd September*

During the week, the castor and linseeds September contracts went off the board, but trading in these had almost been at a standstill for quite some time. The trend had been firm and apparently the commodities were worth prices higher than the ceilings fixed for them. Therefore, though castor September was nominally mentioned at Rs. 181.50, transactions in private continued to be reported at as high as Rs. 184.75. The official rate last heard was Rs. 183 and the contract was unquoted on Wednesday. Linseeds, too, were quoted just below the ceiling of Rs. 45.

It is said that traders have come to an understanding by which the outstanding positions of castor September would be squared up at an agreed rate of Rs. 182. The outstanding position in this contract is believed to be more than 150,000 candies. The understanding seems to have been inspired by the fact that one of the leading bears is finding it difficult to meet his obligations and that the situation is more or less similar to the recent one in cotton. There is, however, a feeling that, while, in this particular case, a settlement is both necessary and desirable, there is no point in extending the facility to all the bears some of whom traded with their eyes wide open and thought that they could book sizable profits by bearing the market. It is argued that it would be unfair to ask bulls to liquidate their holdings at Rs. 183 when there is a ceiling of Rs. 186.50 and against the background of a spot price of Rs. 196.50.

The new crop March contract ruled quietly steady at the close, but, by and large, the trend in castor is distinctly bearish. Operators are reluctant to build up long positions, for, although spot castor prices do not warrant any selling at current levels, sentiment in the market has been currently disturbed by reports that some parcels of castor oil have been held up at the docks in Bombay. It appears that, due to a sectional strike, the holds are not cleaned and as such no oil can be pumped into them. This is said to have put a heavy burden on exporters who have been left with no choice other than to cover. Otherwise, they will have to keep the goods in storage at very heavy cost to themselves.

Further, the trend in castor is inextricably linked to the prices of groundnut oil and groundnuts. Estimates place the new crop at 3.8 million tonnes, as against the 3.2 million tonnes of last year. If the Government permits exports of new crop groundnut oil, the price, which at present is Rs. 1,800 per metric tonne for December against the current spot price of Rs. 2,775, is likely to shoot up by at least Rs. 500, according to knowledgeable circles. If exports continue to be banned, the price may decline to Rs. 1,500. Traders argue that, if new crop groundnut oil were sold at Rs. 1,500 a ton, castor oil should fetch Rs. 1,400, as against the spot price of Rs. 1,750. In that case, the corresponding rate for castor futures would be Rs. 160 per candy, as against Rs. 176 in futures now and Rs. 196.25 for the spot material. The outlook, therefore, depends to a considerable extent on the export policy for groundnut oil. Overseas quotations for castor oil indicate a firm tone with London quoting £123 for commercial oil spot and £127 for B.S.S.

During the last few days extractions have been firm and, following the closure of some of the solvent extraction plants for want of raw materials, the price has gone up to Rs. 421-422 per metric tonne. Distant positions are also tight with October quoted at Rs. 418. New crop November and December have improved by Rs. 10 to Rs. 385, respectively, on covering by shippers. It is reported that, against a link deal with the State Trading Corporation, a leading U.K. and Continental buyer has bought between 60,000 to 70,000 tonnes of groundnut extractions for November-March shipments paying 10s. to 15s. over and above the prices prevailing in the United Kingdom. It is said that, for November shipments, business has been put through at £36-5, at £35-15 for November-December, £35-10 for December, and £35-5 for January-February-March. Demand appears to be unsatisfied as yet, particularly against the link deal.

Linseeds September contract was mentioned at Rs. 44.87, but the new crop March contract was bid at a comfortable discount, the latest rate being Rs. 38.84. Spot linseed continues to be firm at Rs. 48. Cottonseeds September remained mostly untraded, but the January contract, though basically weak at Rs. 97, was slightly steady at the time of writing. The market is awaiting permission for trading in new crop groundnuts. It is likely that no ceilings would be imposed, but there will be stiff margins. This is the reading of the market at present.

The following table shows the closing prices of oilseeds and oils as on 2nd September as compared with those of the two previous weeks:

	2-9-1964	26-8-1964	19-8-1964
Groundnuts	Rs.	Rs.	Rs.
Nizam bold	65 25	64.25	63.00
Rhandesh quality	66 50	64.00	64.50
Oil ex-mill	27.75	26.75	25.00
Oil Rly. Receipt	27.50	26.40	25.00
Castorseed			
September 1964 contract.. ..	183.90	181.50	181.50
March 1965	175.75	177.12	—
Ready Madras	39 25	39.50	39.25
Ready Kanpur	38 25	38.37	38.25
Oil B.S.S.	17 80	18.15	18.00
Oil commercial	17.30	17.55	17.40
Linseed			
September 1964 contract.. ..	44.87	44.84	44.69
March 1965..	38.84	39.16	—
Bold ready	48 00	48 50	47.50
Linseed oil	20.05		20.00
Cottonseed			
September 1964 contract.. ..	90.00	90.00	90.50
January 1965 contract	97.25	96.25	94.75

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

GOOD MEDIUM TEAS DEARER

[*Messrs. Forbes, Ewart & Figgis (Private) Ltd.*]

COCHIN, *25th August*

A total of 535,000 kgs. was offered in tea sale No. 34 held here on Tuesday the 25th inst. Quality was generally about maintained with several Nilgiri invoices still showing a useful standard. The market met with good demand, particularly cleaner fannings. Nilgiri brokens were well supported at around last rates and fannings were again well sought after with prices firm on last. Good mediums encountered competition and were dearer. Mediums and low mediums, although meeting fair demand, were somewhat easier, particularly brokens, which often showed a decline in price by about 20 paise per kg. Clean fannings were again strong feature. Whole leaf grades were sold well and were generally firm. Unorthodox teas were well supported and prices were generally fully firm. There was fair demand for the small selection of tippy teas on offer, but prices were a little irregular.

The quotations (per kg.) were:

	1964 Rs.	1963 Rs.
Low mediums	4.00-4.20	3.95-4.30
Mediums	4.20-4.60	4.20-4.55
Good mediums	4.80-5.30	4.60-5.40
Nilgiri B.O.P.	5.00-6.50	4.90-8.30

The average price realised in sale No. 34 was Rs. 4.45 per kilo, as against Rs. 4.51 a week ago and Rs. 4.52 in the corresponding sale last year.

Colombo: The market elicited strong demand with prices for western types 5 to 15 cents dearer. Uvas were generally dearer except where quality had declined. Mediums were fully firm to dearer, but lowgrowns were somewhat irregular. Liquoring fannings were a strong feature at higher prices.

London: *North Indian and other growths*: In Monday's auction, there was good demand with limited Assams offerings strongly competed for. Dooars were generally irregular and easier, but best Africans were fully firm. All other descriptions were generally easier.

Ceylon and South Indians: In Tuesday's sale, there was strong demand for the Ceylon teas on offer with better descriptions advancing by 1d. to 2d. Other plainer mediums and lower South India types met with selective demand at generally easier rates.

QUALITY TEAS IN LESS DEMAND

(From Our Own Correspondent)

CALCUTTA, *1st September*

With an improvement in arrivals, offerings of less quality teas in auctions met with poor demand. However, quality teas were absorbed readily, and in the past week tea shipments showed an improvement. Demand for space in forward liners to the United Kingdom was good.

Last week's export sale, when leaf on offer aggregated 63,377 packages, was no exception to the above general trend. A strong feature was orthodox Assam B.O.P. teas possessing bright liquors, while the balance of this category eased in an irregular trend. Similarly, the best Assam C.T.C. teas were readily absorbed, but the less quality C.T.C. teas eased by 40 P. Selected Darjeelings were also in good demand at unchanged rates, but the rest of this category eased. Limited demand met whole leaf grades, the more stylish kinds easing visibly. Medium Dooars B.O.P. teas were shown poor attention. Low medium and plain teas were easier in an irregular trend, but the few black leaf fannings were dearer. Legg-cut teas were lower by 20 P. The quotations per kg., inclusive of excise duty were: best Assam C.T.C. B.P. Rs. 5.70 to Rs. 6.20; best Assam C.T.C. B.P. Rs. 6.60 to Rs. 7.50; medium Assam C.T.C. fannings Rs. 5.60 to Rs. 6.10; clean black pekoe Rs. 5.00 to Rs. 5.40; plain fannings Rs. 4.10 to Rs. 4.30; and plain B.P. Rs. 4.10 to Rs. 4.40.

In the internal sale held last week, dusts offerings aggregating 34,606 chests met with a strong general demand, which, however, declined as the sale came to a close. Orthodox teas were readily absorbed. After recording some gains, legg-cut teas eased. Similarly, clean C.T.C. teas after ruling higher, fell later. Fibrous secondary teas showed a marked decline. The quotations per kg., inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.20 to Rs. 6.50; medium Assam C.T.C. dust Rs. 5.40 to Rs. 5.70; legg-cut dust Rs. 4.90 to Rs. 5.30; medium Assam dust Rs. 4.90 to Rs. 5.70; and plain orthodox dust Rs. 4.20 to Rs. 4.40.

The increased world demand for tea has given an impetus to producing countries to expand tea production. The Pakistani tea crop for this year has been estimated at 60 million lbs. and internal consumption at 52 million lbs., thus leaving a balance of 8 million lbs. for carry-over as well as export. The Pakistani acreage is expected to increase by 90,000 in 1965; the country's third Plan has targetted an increase in area by 31.66 per cent to 118.500 acres, according to Brig. Hamid Shah, the Vice-chairman of the Pakistani Tea Board. Kenya has planned for a 25 per cent increase in area to 14,400 acres. It proposes to utilise the loan of $2.8 million granted by the International Development Association, for this purpose.

RAW JUTE RECEDES

(From Our Own Correspondent)

CALCUTTA, *1st September*

The feature of trading in the jute markets during the week under review was the marked fall in the price of raw jute—over the week-end, Assam bottoms had fallen to Rs. 39 a maund from Rs. 47 early in the week—as a result of the stern measures taken by the Jute Commissioner to put down "fatka" and stabilise prices under the advice of the Union Government. Prices were expected to fall further soon, but, considering that prices of most essential commodities have risen, it was felt that, if prices fell to the I.J.M.A. minimum level of Rs. 30 a maund basis Assam bottoms, this would hit the cultivators hard. Accordingly, a proposal to raise the I.J.M.A. floor level by Rs. 5 a maund, that is, to Rs. 35 basis Assam bottoms, was said to have already receiving the attention of authorities. An announcement soon was expected. The Government of India had felt that the recent uptrend in fibre prices was entirely unwarranted, as the existing fibre stocks with mills aggregating 2.8 million bales, coupled with an estimated crop of 7.2 million bales, would more than meet India's domestic needs. In fact, Mr. G. C. L. Joneja, the Jute Commissioner, attributed the rise since July 27th to speculation unleashed by some Pakistan jute traders who had slipped into Calcutta and circulated the rumour of a shortfall in Pakistani raw jute production. The price in Pakistan touched a high of Rs. 56 a maund, but began falling since the last two weeks, the latest quotation being Rs. 40. The rise in Pakistan fibre markets has been also entirely unwarranted, as the expected crop of 5.5 million bales, together with the carryover of 1.1 million bales from last season, is more than sufficient to meet internal requirements as well as export needs. The Pakistan mills are expected to consume not more than 2.2 million bales, and last year's exports from Pakistan amounted to only 3.8 million bales. In view of this actual position, the fall in Pakistan price has been as abrupt and as marked as the rise.

The rapid fall in fibre prices in Calcutta this week followed the order which fixed a deposit for every raw jute transaction that took place in the *fatka* since 27th July; this was followed by the East India Jute and Hessian Exchange collecting as much as Rs. 20 lakhs in deposits. With this measure, the speculative fervour came to a stop, as resources were mopped up in deposits. Initially deposits continued to be paid, but, with the rapid drying away of funds, the buying spree came to a stop and prices dipped.

Now that prices have been stabilised—and, fortunately, prices in Pakistan also have fallen to the same levels as in India—the authorities need not worry about the problem of smuggling. It is alleged that some mills had purchased jute goods with a view to re-selling the same in the hope that prices would continue to move up. Although prices of goods, too, have moved down, many mills have already hailed the suggestion that mills should confine themselves to manufacturing only and should on no account purchase goods. Such hoarding would only upset markets and do harm to the jute industry, since, if prices rise without justification, the tendency among foreign consumers to switchover to bulk handling methods and substitutes would receive an impetus. The East India Jute and Hessian Exchange is likely to ban purchase of goods by mills.

The need to stabilise prices in the jute markets has led to a suggestion for State trading in raw jute. But, this suggestion is considered difficult of acceptance by the Government, for not only the capital involved would touch the colossal figure of Rs. 120 crores, serious administrative problems are also likely to arise. The machinery needed for the purpose will have to be vast, and problems from displacement of existing channels are not easy of solution. As such, the Union Government is exploring ways as to how the raw jute market can be stabilised in present circumstances. The elimination of intermediaries, price control order, and issue of maximum purchase quotas are suggested as possible measures to impart stability to raw jute prices, if the measures already taken fail to produce the desired results. The Jute Commissioner has been exploring the possibilities of the marketing co-operative societies taking over the purchases normally controlled by middlemen. The Commissioner desires to make existing co-operatives more effective by giving them assistance. According to him, stabilisation of the jute market is vital to India and the Government will spare no effort to achieve the purpose. Raw jute arrivals are gradually rising and the quality of this year's fibre has shown a definite improvement. There is every hope that India's crop estimate of 7.2 million bales will be realised, and a buffer stock will again be created later in the year when arrivals reach a climax. The loss to crop as a result of floods during the months of May and June in Bihar, lower Assam and North Bengal is likely to be made good by increased crop in the Daissee districts. This year's retting has also shown an improvement, especially in Tossa districts, as water in tanks and canals is adequate and freer from dirt and mud.

Earlier in the week, in a statement, the Indian Jute Mills Association assured overseas buyers of goods that, although individual mills might have to adjust output, there should be no apprehension of any interruption in supplies. However, with the fall in prices and the effective curb on speculation coupled with the rising trend in arrivals, it was hoped that the mills would continue the enhanced rate of production. Moreover, the stock of goods with mills at the end of July was higher at 135,000 tons, as against 104.000 tons at the end of July last year. This factor should also enable allaying of any apprehension of possible interruption to supplies.

The importance which the Government of India attaches to measures aimed at stabilisation of fibre prices and to consult the industry and trade in regard to these problems, as well as export promotion of goods, is evident from the setting up of two high-powered bodies in this regard, the Jute Textiles Consultative Board and the Jute Export Promotion Advisory Committee. The inaugural meetings of the two bodies will be held here on the 9th inst.

As the week under review progressed and prices in the hedge market tumbled down, sobriety and stability gradually returned to the fibre market, and the ready crop offers were made at much lower rates. Thus, Assam bottoms receded from Rs. 45 to Rs. 40.00, Daisee bottoms from Rs. 47 to Rs. 42, and northern bottoms from Rs. 44 to Rs. 39.00.

With the fall in fibre prices and the reluctance of overseas consumers to support the gains, prices of goods also gave way. Only limited gunny business took place for export and the fact that jute goods in stock with mills at present are much higher than at this time of last year encouraged overseas consumers to restrict their purchases. There was the report that Peking had placed a huge order for gunnies on Pakistan; if this were to prove correct, some of the overseas orders, which would have normally gone to the Pakistani mills, would be diverted here. At the same time there was the news that workers in certain mills in Pakistan continued restive and that about 50,000 workers who had gone on strike as from 15th July and resumed work on 4th August as a result of an *ad hoc* agreement with the jute mills were reportedly demanding a higher basic pay than the industry had offered. As in Calcutta, the New York burlap market also recorded somewhat easier conditions. On Tuesday last,

ready B. twills eased from Rs. 140 to Rs. 138 and hessian 40" 10 oz. from Rs. 50.25 to Rs. 48.90. A feature on Wednesday was the interest shown by Argentina in hessian and some business with Government in B. twills. The trend, despite the easier conditions in fibre, was bullish, as ready goods were in good demand. As a result, ready B. twills gained to Rs. 141.50 and hessian 40" 10 oz. to Rs. 49.85. Conditions on Thursday became erratic with B. twills easing to Rs. 140.25 and hessian 40" 10 oz. to Rs. 49.75. Profit-taking in futures took down ready B. twills to Rs. 137.25 on Friday. In sympathy, hessian 40" 10 oz. declined to Rs. 49.40. Over the week-end, with the quotations at Rs. 136.25 and Rs. 49.00, respectively, prices eased further. At lower rates, there was interest shown by genuine buyers and, yesterday, the Government placed order for 4,000 bales of B. twills for mid-September delivery. B. twills at Rs. 137.00 and hessian 40" 10 oz. at Rs. 49.15 recorded small gains.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 31*st August*

The kip market ruled steady and export demand centred round fifths selection in cow hides 5/5½ lbs. and 8/8½ lbs. average and light weight cowcalf. Buyers were not willing to pay higher prices; and trading was, therefore, subdued. Arrivals of stocks from the tanneries were of moderate volume and clearance was slow but prices were held steady.

Trading in the skins section was small, as buyers were not willing to pay current levels. Only tanned goat 8/9 lbs. average held steady, as sellers were few due to their well oversold position. Demand for other weights were not marked. Though importers in U.S.A. were keen on heavier averages, their price ideas were low and a small volume of orders were booked for financial reasons. As the prices in the raw centres for goat skins were advancing steadily due to the brisk buying of the exporters who are reported to have sold substantial quantities of raw goat skins for export to Russia, E. I. Tanners have not been able to meet importers ideas about tanned goat skin to the continental markets. As regards sheep skins, prices remained quiet and business was meagre.

FOODGRAINS BULLISH

(From Our Own Correspondent)

HAPUR, 31*st August*

A distinctly bullish trend continued to be in evidence in the foodgrains market and prices touched all-time high levels. Poor arrivals in face of good consumers demand and grim prospects of kharif maize and *juwar* crops because of excessive heavy rains in last few months were the main influencing factors. Paddy crop, however, was progressing under healthy conditions and a bumper crop is in sight.

Wheat prices ruled firm and hardened by Re. 1.50 to Rs. 3.50 per quintal, according to quality, on poor arrivals in face of brisk local as well as east U.P. demand, coupled with reduced sales of imported wheat at the fair price shops. Average quality was quoted between Rs. 80 and Rs. 82.75 and farm produce between Rs. 84.50 and Rs. 86 per quintal. Daily arrivals were estimated around 300 maunds. Firm trend continued in rice market also, where prices improved by Re. 1.34 to Rs. 2.50 per quintal on good east U.P. support in face of tight supply position. Week-end prices were:—Rice *basmati* superior Rs. 104.49 to Rs. 109.85, *sela* Rs. 101.81 to Rs. 104.49, *ramajwayan* Rs. 101.81, *raimunia* Rs. 101.81, *mainpuri* Rs. 100.87 per quintal.

Gram prices were also steadier on good demand against paucity of supplies. Local produce was quoted at Rs 77.50 and the Punjab quality at Rs. 76 per quintal. Both arrivals and stocks were very small. Barley and *bejhar* prices also sought higher levels as stocks of both the grains with trade were reported meagre. Barley was quoted between Rs. 65 and Rs. 67 and *bejhar* between Rs. 65 and Rs. 67.50 per quintal. Small arrivals of new maize were lifted at better prices by consumers and prices ranged between Rs. 65 to Rs. 67.50 per quintal.

"KHANDSARI" DECLINES

(From Our Own Correspondent)

HAPUR, 31*st August*

Sugar remained steady at Rs. 175 to Rs. 180 per bag in private trading, thanks to good festival demand in the face of tight supply position. In retail market, it was quoted at Rs. 1.81 to Rs. 2 per kilogram. In Muzaffarnagar, crystal sugar was in hectic demand for the Hindu festivals in face of restricted supplies as the District's quota has been further reduced by the State Government. Prices, however, drifted lower upto Rs. 2 to Rs. 3 a bag in sympathy with the sharp decline in *khandsari*.

Khandsari came down by Rs. 5 to Rs. 10 per bag in the open market during the week, as outside demand was lacking and traders were anxious sellers. Bulk of the stocks in godowns have been damaged due to excessive rains in July and August. Production of *minja* quality on *galawat* account was being carried out in some areas these days, but inferior quality was quoted lower around Rs. 100 per quintal. *Khandsari* was quoted at Rs. 125 to Rs. 160 per bag, as against the U.P. Government's controlled prices of Rs. 109 to Rs. 131 per bag.

Ready *gur* hardened during the week on good support from the consuming states, mainly Gujarat and Rajasthan. Of the stocks left with the trade, about 3,000 quintals of dry goods were small, and stockists were anxious sellers of the wet quality which was being further damaged due to rains. Cane crop prospects were better, thanks to heavy rains in July and August, and increased cane acreage. In the current year which is soon coming to an end, the sugarcane production in U.P. had increased by 12 per cent in spite of frost. Ready *gur* stocks in the mofussil centres were estimated about 15,000 quintals, which would be exhausted by the time the new produce reached the market in a month's time. Week-end prices (in rupees per 40 kilogram) were:—*pansera* superior 38 to 39, average 37, *kotha* dry 38.50, dry-wet 33 to 34, wet 31, *shakker* 41 to 42.50.

LEAD RISES, ZINC FALLS

(From Our Own Correspondent)

CALCUTTA, 1*st September*

The continued buoyancy in world metal markets—the week under review was, no exception to this general trend—has been so very steady in recent weeks that it has become very difficult to state as to when a much-needed break will herald. The week under review on the London Metal Exchange saw tin and copper at new heights, attributed to visible signs of the acute tightening of existing shortage in the context of the widening demand for principal base metals.

The L.M.E. quotation for spot tin opened at £1,270 a ton and went up to close at £1,300. Demand from the Continent has reportedly increased, and the rise in quotation was preceded by higher advices from Penang. According to reports, the General Services Administration of the U.S.A., which is regularly releasing tin from its surplus stock-piles, is considering to base the release prices on Penang rather than on market trends in London and New York. This has been hailed as a realistic move, as such a change of base would encourage Malaysian producers to raise output. The world consumption of tin having steadily gone up, it is now estimated that the gap between demand and supply, despite increased output—according to the International Tin Council, world mine output of tin-in-concentrates increased to 12,000 tons in April 1964 from 11,900 tons in the previous month —has widened. Until recently, it had been believed that world demand of tin exceeded output by 20,000 tons a year, but the fact that despite U.S. releases, which exceeded this quantity, the shortage persists and the price continues to move forward is significant, and supports the assumption of a further widening of the gap. The quotation in Calcutta was firm at Rs. 3,300 per 100 kgs. and the acute nature of the shortage is demonstrated inasmuch as imports in July 1964 were only 304 tonnes as against 416 tonnes in the same month of last year.

The week under review has been significant for the shift in the base price policy hitherto pursued by the chief world producers of copper. Despite the rapid rise in the L.M.E. quotation since the beginning of this year, the chief producers had stuck to their fixed price of £234 a ton which was raised to £244 a ton in last January, and which has now been further raised to £260 a ton. Fear of substitution to aluminium by copper users had hitherto prevented producers from raising their price, but the alarming nature of the rise in the free market price as depicted on the L.M.E. quotations has evidently led them to revise their policy. The big producers who have raised their price as above include the Copper Mining Co. of the Anglo-American Group, the Rhodesian Selection Trust Group, the Societe General De Minerais of France, the International Nickel Co. of Canada Ltd., and the Noranda Sales Corporation Ltd. of Toronto. As regards India, the shift to aluminium started about two years back, even when the L.M.E. price was in par with the price of producers.

Against the background of fears of interruption to production of copper in Chile and the United States, and the steady increase in consumption in the highly industrialised countries of the world, especially the U.S.A., the U.K., France and Japan, it is not seen how the free market price can be checked without more visible signs of world substitution to aluminium. It is unfortunate that delays have occurred to the setting-up of a 12,000-ton copper smelter at Khetri in Rajasthan in the public sector. The project was included in the second Plan and, in view of the continued uncertainty as to the process to be adopted, the date by which the project will be completed is yet uncertain. Similarly, the proposal to set-up a 20,000-ton zinc smelter in the private sector near the Zawar mines—at present zinc concentrates being obtained from these mines are being exported to Japan for smelting—is being delayed.

On the London Metal Exchange, spot copper wire-bars rose from £374 a ton to £385. Similarly, spot cathodes and fire-refined copper closed higher on balance at £363 and £310, respectively, as against the opening rates of £348 and £295. In Calcutta, utensil copper scrap firmed up to Rs. 685 per 100 kgs. from Rs. 680, lead was unchanged at Rs. 307, but zinc, in line with the world market trend, eased from Rs. 370 per 100 kgs. to Rs. 365. On the L.M.E., spot lead was higher at £108-5/8 a ton, but spot zinc eased to £118 a ton, after hardening to £120 from £111.

MARKET GOSSIP

(Concluded from page 395)

agreements have been concluded between India and Japan. There are, however, certain factors which discourage Japanese steel industry from depending on India for the supply of a large portion of its requirements. The cost of production and the resultant export price is considerably higher in the case of Indian iron ore as compared with that of many other exporting countries. Moreover, production of iron ore in India is not expected to rise according to schedule and sufficient supplies of iron ore may not be available in time for exports. Again, ports in India are not as efficient as its competitors. Japan cannot, therefore, be blamed if it looks to other sources of supply, Australia, though at present only an unimportant exporter of iron ore to Japan, is one of them. At any rate, the Japanese steel industry feels that Australia can gradually be developed into an important and dependable supplier of iron ore at a reasonable price. If long-term agreements are made with Australia for the supply of a substantial quantity of iron ore to Japan, they will surely affect the future export capacity of Indian iron ore. There is, therefore, an urgent need for India for keeping its cost of production down, increasing the raisings at a fast pace and expanding the capacity of its transport system and ports for handling ore exports expeditiously and economically.

Cardamom Exports Increase

That the exports of cardamom are regaining their lost position should be viewed with great satisfaction. Cardamom is an important foreign exchange earner and, despite competition from Ceylon and Guatemala, which have recently stepped into world markets, encouraged by the high prices of Indian cardamom, this country holds a virtual monopoly of the commodity. Cardamom, with its aromatic flavour, finds extensive use as a masticatory stimulant. It is used for chewing with betel leaves in India and Pakistan. In other countries, it is used in liquors and foodstuffs, as well as in the preparation of perfumes and medicines. In Europe, cardamom seeds are powdered and widely used for flavouring cakes, pastries and other delicacies. Grown in Kerala, Mysore and Madras States, this commodity is exported to the United States, Sweden, East and West Germany, Saudi Arabia, Kuwait, U.S.S.R., Pakistan and the United Kingdom. Kerala State accounts for over 50 per cent of the total planted area and supplies a major portion of production.

Exports of cardamom, which stood in terms of value at Rs. 367 lakhs in 1960-61, fell to Rs. 358 lakhs in 1961-62 and further to Rs. 267 lakhs in 1962-63. In the year 1963-64, exports have again risen both in terms of quantity and value. In terms of value, the total exports of cardamom showed an increase of about 19.5 per cent at Rs. 319 lakhs over the previous year. In terms of quantity, however, the increase was moderate from 2,259 metric tonnes in 1962-63 to 2,306 metric tonnes, an increase of about 2.8 per cent. The rising trend has been maintained during the current calendar year. According to statistics released by the Directorate of Cardamom, Bangalore, the first six months of the year have witnessed a record in exports of 1,321 metric tonnes, valued at Rs. 184 lakhs, as compared with the corresponding period of any preceding calendar year. This achievement is, of course, welcome but, in the face of competition in the international market, it is imperative that price and productivity aspects should be given more attention. Of course, certain policies have started bearing fruit already. The procurement operations of the Directorate of Cardamom Development and Marketing, Bangalore, under the price support scheme, have resulted in an increased tempo of exports, stability in markets and better returns to the cultivator. The Government of India's decision to continue the present minimum and maximum export prices for several grades of cardamom throughout the 1964-65 season, beginning 1st September, should also be welcome, as it will ensure a satisfactory pace of growth in exports and production.

Notice

THE JAIPUR UDYOG LIMITED

Registered Office:

SAWAIMADHOPUR (W. RLY.)

NOTICE

THE ANNUAL GENERAL MEETING OF THE Shareholders of The Jaipur Udyog Limited will be held at the Registered Office of the Company at Sawaimadhopur on Wednesday, the 30th September, 1964, at 12 Noon, to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statements of Accounts for the financial year ended 31st March, 1964.
2. To declare dividends.
3. To elect a Director in place of Shri Chiranjilal Jhunjhunwala, who retires by rotation and is eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. S. D. Joshi & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

Share Transfer Books and Members' Registers of the Company will remain closed from Thursday, the 24th September, 1964 to Wednesday, the 30th September, 1964 both days inclusive.

By Order of the Board,
FOR THE JAIPUR UDYOG LIMITED,
FOR SAHU JAIN LIMITED,
A. K. JAIN
Director,
Managing Agents.

CALCUTTA,
31*st August*, 1964.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

TREND OF SHARES

STEADIER MARKETS

(From Our Own Correspondent)

BOMBAY, 3rd *September*

THE week under review was shorter by a day, the settlement having been fixed for Wednesday as Thursday was a holiday. The end-account trading suggested a firm undertone with sales by marginal bulls being more than well-absorbed. Trading as a whole was characterised by early hesitancy and eagerness to book profits and a tendency to rally towards the latter part due to short-covering and replacement buying. On balance, the list showed variations either way but there was nothing to doubt the basic strength of the market.

In keeping with the market's habit of picking up such factors which suit its current mood, sentiment was swayed alternately by the modifications made by the Government to the recommendations of the Bonus Commission and subsequently by the criticism of them by labour leaders and threats of a possible unrest. Executive action towards unearthing unaccounted money also affected sentiment. Later, confidence was sustained by the favourable response from Pakistan to India's proposals for the avoidance of clashes along the Kashmir cease-fire line. The encouraging tenor of recent corporate reports and sustained institutional support also helped the market to maintain its strength.

Steels presented a mixed pattern and while Indian Iron closed a shade lower at Rs. 27.90, sentiment in Tata Steel was sustained by the hope that the Chairman might be having some more encouraging points to say at Thursday's annual meeting. Therefore the shares though done down to Rs. 159.50 on Saturday improved on short-covering and scattered fresh support to Rs. 162.25 at the close and to Rs. 163 in the kerb on Wednesday. Indian Iron had been beaten to Rs. 27.45 during the week on persistent selling by upcountry operators but rallied substantially to close the week at Rs. 27.90.

The textiles section was rather erratic with small to moderate changes either way. Century and Standard which were leading the current upward move fell behind, both recording moderate losses over the week. Standard was down from Rs. 685 to Rs. 675 while Century closed the week at Rs. 638 against Rs. 642.50 of last week, although it staged a sharp improvement to Rs. 646 in the kerb on Wednesday. But this was due apparently to the *budla* which should be added to the quotation. Apart from the reluctance on the part of bulls to pay higher contango charges, sentiment in Century seemed to be induced to a certain extent by the yet difficult situation which rayon is facing at present. Hesitancy in Standard was due more to the fact that those who had entered the market earlier preferred to cash the available profit. Kohinoor shed its glamour of the last few days but managed to close the week with a minor loss of Re. 1.50 to Rs. 334. Svadeshi was a shade better at Rs. 267, but Bombay Dyeing was distinctly firm at Rs. 61.60 against Rs 60.40 of last week. It appears that the market is waiting for details regarding the textile policy and the so-called multiplier scheme before deciding which way to turn.

Shipping shares came in for sustained inquiry, following the Prime Minister's suggestion for a 3.5-million tonne target during the fourth Plan period. Consequently, Scindia Steam was bid up to Rs. 16.36 and the closing price on Wednesday at Rs. 16.32 was comfortably higher than the last week's closing of Rs. 16.12. Great Eastern Shipping also attracted inquiry, being mentioned at Rs. 14.52 at the close. Among Engineerings, Telco failed to pierce its recent high of Rs. 321.50 but here too it was a case of profit-taking by early entrants. Despite this, the shares closed three points better on balance at Rs. 319, while, in the kerb on Wednesday night, the quotation was Rs. 282 on an ex-dividend ex-right basis. It is likely that the scrip will begin to attract renewed support. Premier Construction failed to maintain its last week's gains and fell back from Rs. 197 to Rs. 192.50, while Voltas closed slightly better at Rs. 273.50, against Rs. 271.50 of last week.

Banks and insurances were dull but electricity shares continued to be active with Tata Power hovering just under its peak level of Rs. 1,270, the latest rate being Rs. 1,263.75 against Rs. 1,267.50 of last week. However, other members of the section like Bombay Suburban and Ahmedabad Electricity gained fractionally to Rs. 114 and Rs. 103.75 respectively. Tyre shares were a little active presumably following the optimistic inference drawn from the balance-sheet of Premier Tyres which improved by Rs. 2.50 to Rs. 82.50 over the week. Ceat Tyres were similarly better at Rs. 92 against Rs. 88.50. In the chemicals section, Tata was fractionally better at Rs. 19.64 and Indian Dyestuff, after touching the Rs. 300 level, reacted to close at Rs. 295.

However, the conspicuous aspect of trading during the week was the demand for cash shares several of whom shot up into the limelight. Synthetics and Chemicals which had long been out of grace, suddenly turned a favourite and, on persistent demand, the quotation spurted from Rs. 71.50 at the beginning of the week to Rs. 93 at the close. It was said that the Company had been able to clear off its accumulated stocks and there was also a rumour of a possible alteration in the managerial set up which might prove helpful to the Company. Lynx Machinery went up to Rs. 7.35 following favourable corporate news while Bajaj Auto was favoured for the same reason. Hindustan Aluminium came in for sustained buying upto Rs. 13.76 following Calcutta advices. Associated Bearings moved up to Rs. 113 on reported inquiries from the Unit Trust which in fact was said to be buying some selected cash scrips. The Life Insurance Corporation was also said to be in the market for several cash scrips but offers are said to be limited at present.

It is good for cash shares to come to the fore, because demand for them is a sure sign that the market is set for a rise. *Budla* rates should be considered moderate for a three-week settlement and the market is placing very great confidence, and rightly too, in the stewardship of Mr. Lal Bahadur Shastri, who, if the situation demands, can take the bull by the horns. His efforts to cut avoidable expenditure, lay down priorities as well as his call for an objective view of the issues that face the country have greatly impressed the market. These will make for a long-term strength of the market and it is apparently these factors that it is taking note of at present. However, it must be remembered that no healthy rise is perpendicular and reactions, as they ought to occur, are good and should be welcomed.

* * * *

Calcutta, at the time of writing, was steadier. Here too corporate news helped sentiment. Jute shares attracted selective support with Ganges, Megna, New Central, Lawrence and Northbrook in the limelight. Birla was steady after moving both ways. J. K. Rayon lost ground in the textiles section, but Bowreah, Cawnpore and Jayashree were better. Among coals, Burrakur and Rewa were quiet but Bengal, Central India and Equitable were better. Inquiries for tea shares were few and far between.

* * * *

Buying in Madras was selective with plantations in fairly good demand. Sugar shares were able to maintain their levels but the trend in textiles was mixed. Bank shares were quiet and, among miscellaneous counters, Mettur was quiet, while stray business was noted in Seshasayee Paper, Enfield, Madras Aluminium and Indian Steel Rolling.

BANKING

(Concluded from page 402)

retaining the money which would in *any case* remain with the banking system.

Bankers are, again, much worried by the competition they face from other deposit gathering institutions, but are hardly prepared to do anything about increasing the present spread between short and long rates to more realistic and attractive levels. There is hardly a difference of one per cent in deposit rates for three months and three years; again, there is hardly a difference of 1½ per cent in the rates for three days and three years. The recent revision in deposit rates has meant a *status quo* in deposit rates below six months, a meagre rise of ½ per cent in the deposits rates between six months and three years, an increase of ½ per cent in the rates beyond three years and of one per cent in the rates beyond seven years, with the result that banks pay 6 per cent per annum only on deposits placed with them for a period beyond seven years. Mr. Bhattacharyya has very well summed up the entire picture in a single sentence, namely, "it is not surprising that the genuine saver tends to turn away from the banks."

Realising full well the inadequacies of the existing structure of rates, some of the banks have, surprisingly enough, turned to misleading advertisements in newspapers which declare in bold letters that "you can earn 6 per cent," and add in extremely small types, "depending upon the term of deposits," but conceal the fact the term has to be beyond seven years. Do the banks really feel that any depositor will leave his money for seven years to earn 6 per cent taxable in the present state of the money and capital markets, particularly when the Unit Trust offers 6 per cent tax-free realisable on demand (at least in theory)? In any case, bankers will do well to scrutinise the wording and display of their advertisements carefully, lest they should be accused of indulging in misleading tactics and invite controls even on their freedom to advertise their business.

The attainment and maintenance of enhanced liquidity requirements by banks is yet another reason which ought to induce the banks to make greater efforts and do some rethinking on rates of interest on deposits. The Governor pointed out that the progress made by some banks in moving up to the higher ratios had not been satisfactory and reiterated that the Reserve Bank attached the highest importance to them. Moreover, as already pointed out, it is not enough merely to meet the requirements of law; it is also necessary to meet the legitimate needs of trade and industry. The real test for the banks would come in the ensuing busy season and the bankers cannot then say that they were not warned in time.

In his speech at the bankers' dinner, the Governor hoisted another red signal which is bound to have far-reaching repercussions. The banks have been displaying commendable initiative in moving away from the traditionally commerce-oriented character of their operations and in financing the expanding needs of industry to an increased extent. They have also enlarged the scope of their term-lending and underwriting functions. The Governor now feels that the banks would do well to hasten slowly in this direction. It is true that, a few years ago, that is, before the advent of Mr. Bhattacharyya, the Reserve Bank did encourage banks to go in for medium-term industrial finance and provided them with a backing in the Refinance Corporation for Industry. Actually the Reserve Bank has been responsible for the banks shedding their fear of even touching term advances. Several of them have established new departments and trained their officers to handle this complicated business. The question, therefore, arises as to why Mr. Bhattacharyya put up this red signal. Answering this natural question, the Governor said:

"There is, however, a point beyond which the banking system cannot go in this matter of provision of long-term finance. It is in appreciation of this position that the two institutions, namely, the Industrial Development Bank and the Unit Trust of India, have been launched. These institutions would not only supplement the role of the banks in the field of long-term finance but will also, I hope, ease their burden to a considerable extent. I have no doubt that banks would extend to these institutions the same responsive co-operation that has characterised their relations with other specialised financial institutions already in the field. To be effective partners in planned progress, banks, no less than any other sector of the economy, would need to search constantly for new ideas and new methods. They have to be more venturesome without sacrificing prudence. In all these matters, they can count on the willing support and encouragement of the Reserve Bank."

Another reason for the Governor giving the aforesaid advice is the fact that banks are nowadays finding it increasingly difficult to meet the rapidly expanding needs of working capital for industry and trade. Further, it was found in the last busy season that the abnormal rise in clean advances to industry was the result of banks meeting the temporary needs of industrial projects which had hoped to raise funds from the market but which could not do so as a result of market condition. It is significant, in this connection, that the Governor has suggested that such industries as are still unable to raise capital should consider the replacement of their bank borrowings by the issue of public debentures and has promised that, in deserving cases, the Unit Trust of India might provide good support.

LONDON LETTER

(Concluded from page 400)

the great majority have nothing to fear, and everything to gain, by letting machine to take over the more routine industrial tasks."

While the introduction of automation may not create serious unemployment problem, there is no doubt that those who are displaced as a result deserve generous treatment from the Government in the shape of "unemployment pay, mobility allowances, redundancy compensation and retraining schemes." For industry the clear guidance is that they must be flexible in their use of labour force. There is a danger of the labour force becoming rigid both as a result of the fall in the rate of growth of population and reduction in the flow of Commonwealth immigrants. This rigidity can be overcome by technological development and economy in the use of manpower. These measures can bear fruit only if the employed labour force becomes adaptable. The successful implementation of these remedial measures can be carried out by the willing co-operation of the trade union. So every effort has to be made to remove suspicion from the minds of trade union leaders.

COMMERCE AND INDUSTRY

(Concluded from page 422)

portant place in the whole organic chemical industry, its proper growth will not only contribute to strengthening the national economy but will also help in the technical progress in the entire field of organic chemical industries. It is, therefore, necessary that for further development, the dyestuff industry should concentrate on enhancement of its productive efficiency and quality control, production of intermediates, technical research for new dyes and co-ordinated growth of the industry. The industry should also see that its products reach consumers readily and at reasonable prices."

As a postscript it may be added that, if the proposed petro-chemical projects in both the public and private sectors come to fruition at an early date, the dyestuff industry would have no difficulty in securing adequate supplies of organic chemicals and intermediates for its manufacturing purposes. Only, for this, the projected petro-chemical complexes should come in for priority development. And that will be good not only for the dyestuff industry but for several other industries as well.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."

William Blake.

MORE CRITICAL THAN EXPECTED

THE annual reports of the Central Board of Directors of the Reserve Bank of India have invariably been more critical in their appreciation of economic trends and developments in the country than any of its other annual publications. We advisedly say "invariably," because, in some years, the reports used to be dull and drab in their commentary. The report for the year ended 30th June 1964 just released is not, it is gratifying to find, one of those exceptions. On the contrary, the comments in this year's report are lively against an objective presentation of facts in a concise and cogent manner. Some might still say that the Board's remarks are not sufficiently critical, but, considering that the independent and autonomous character of the Bank is more a fiction than a fact, they are more candid than any practical-minded person can expect. Besides, the comments have been so worded that the meaning implied in them will be pretty clear to those who have been keeping abreast of developments in the country. Indeed, one clearly sees in the report under review the impress of fresh blood infused into the Board. It may not be well known that the Board now includes several new members who are non-officials, prominent among them being Mr. P. L. Tandon, Mr. N. A. Palkhivala, Mr. Arvind N. Mafatlal, Prof. M. Mujeeb and Mr. K. Srinivasan. It is a good sign that the Board consists of fewer businessmen and more professionals, for the latter can be more independent of the Government and more objective in their views than the former.

The price situation still dominates the topics of the day. The commencement of the monsoon session of Parliament has given the topic a new lease of life. Members of Parliament have been speaking on it from their respective political platforms, with the result that there is a babel of voices. The common man cannot, therefore, be blamed if he feels confused. In this context, the summing up of the causes for the current stresses and strains in the economy in the Reserve Bank's annual report makes sane reading. The first point made in the report is that expenditure in the country on development, defence and refugees has been running high, resulting in a rapid expansion in liquidity in the economy. Money supply, which represents the monetary demand in the economy, expanded by Rs. 477 crores (or by 13.3 per cent) during the fiscal year 1963-64, as against Rs. 310 crores (or 10.2 per cent) during the previous year. The resulting "inflationary pressures have been accentuated by the virtual stagnation in agricultural output." The report has also taken care to add that "the gap between aggregate demand and aggregate supply persists, despite the unprecedented taxation measures contained in the previous year's budget and the corrective measures that were taken since then." This is an admission, albeit indirect, of the fact that the objectives of the present fiscal policy, as has been claimed by its authors, as well as protagonists, namely, to restrain consumption and to stimulate production, have not been realised, at any rate not fully. In fact, in one place the report clearly lists the increases in indirect taxation as one of the factors responsible for the rise in costs and prices. The second point made in the report is that the rise in the prices of food articles (13.3 per cent) and raw materials (11.4 per cent) in the year ended 30th June 1964 was most significant, in contrast to only a modest increase (2.5 per cent) in the prices of manufactured goods. The third point made therein is that the rise in prices has been due "largely to the setback in agricultural production," particularly foodgrains and all commercial crops except cotton, coffee, rubber and tobacco. The report has also not forgotten to add that, in the past three years, there has been a virtual stagnation in foodgrains production around the level of 81 million tonnes, even though rice production in 1963-64 has been larger than in the previous years. Nor has it minimised the fact that some of the measures taken by the Government to bring the situation under control have themselves aggravated the upward trend in prices. Thus, it says:

"The problem of shortage in foodgrains appears to have been aggravated by the restrictions on inter-State movement and the present system of compulsory levy together with the increase in the holding capacity of the big farmers and speculative activity by the trade. The delays in unloading foodgrains at the docks also contributed to the rise in prices. The shortfall in agricultural production relatively to the requirements of the economy in conjunction with the abovementioned factors has created a psychology of scarcity, raising prices beyond the level justified by the basic supply and demand position."

It must be added here that the pronouncements made and measures taken by the Government have been primarily responsible for engendering the psychology of scarcity, thereby aggravating the tendency to hoard by consumers all over the country who outnumber the producers and traders. A significant omission in the Reserve Bank's discussion on the price situation, it may be noted in passing, pertains to the impact of increase in population. Not even a word about the growing baby boom has been mentioned in the report under reference, as if it has not added to the inflationary pressures.

It will be seen from the foregoing account that the basic causes for the rise in prices are other than the cupidity of industrialists and traders compendiously known as businessmen. In this country dominated by the have-nots, the businessmen, however, are a convenient scapegoat for all politicians. They would be blamed and denounced equally strongly, if there were to be a sharp fall in prices. (This tendency, incidentally, is an unfortunate feature of the Indian political scene.) There need, however, be no fear of any sharp fall in prices. Although the Reserve Bank has made no specific attempt to analyse the short-term prospects of price trends, a discerning reader of its annual report will come across enough material to come to the conclusion that the chances of any significant relief to consumers are slender, if not *nil*, and that they should thank their stars if the situation does not deteriorate any further. The modest rise in prices in manufactures noted above has largely been due to repression of inflation through controls on prices of a large number of manufactured goods essential to the economy. Such suppressed inflation has a habit of bursting out sooner or later. The authorities will either have to allow an increase in the prices of these goods or face a slow pace of growth in their production which in turn will aggravate the cycle of scarcity. A stage has now been reached that either course will assert itself in the coming months.

Industrial production in 1963-64 expanded at a faster rate (9.1 per cent) than in the preceding two years (7.9 per cent in 1962-63 and 6.4 per cent in 1961-62), though it was still well below the third Plan's annual target of 11 per cent. It is a moot point whether even this rate of growth would be maintained in the current year, because the foreign exchange position continues to be quite uncomfortable and shortage of certain essential raw materials persists. "Bids for further increases in wages (on top of increases that have already taken place to the extent they are linked to costs of living) by organised labour, if successful, are likely," in the words of the Directors of the Reserve Bank, "to aggravate the problem of industrial costs. A co-ordinated wages and incomes policy geared to productivity remains a vital desideratum." It was only last week that we saw the Government taking a decision on the report

of the Bonus Commission which is not in keeping with this desideratum. The prospects in regard to prices of food and other agricultural commodities are uncertain, as the fate of harvests relating to 1964-65 crop year is still in the hands of Providence. Even if they happen to be a little bigger than in 1963-64, the increases may not be sufficiently large to offset the impact of too many intermediaries—the State Corporation, the co-operative marketing societies and the normal trade channels—wanting to have a share in them. On top of all this lies the intention of the Minister for Food and Agriculture, Mr. C. Subramaniam. He is more keen on stabilising agricultural prices at the current high levels than in bringing them down. It is rather distressing to find that, of late, the politician in him is getting the upper hand over the administrator with a high regard for economic facts.

So far as money supply is concerned, the outlook is by no means encouraging. It is true the Reserve Bank has been on the alert in regulating credit to the private sector, but it has no restraint on its master, the public sector. While appeals for economy in expenditure have been made by both the Finance Minister and the Prime Minister, very little has been done so far in implementing them. The rephasing of the Plan outlays, as suggested by the Prime Minister, is still in the stage of discussion. At this rate, nothing much will have been done in reducing the level of total expenditure before the current fiscal year is out. Consequently, the growth in money supply may once again outstrip the additions to the supply of goods. The Directors of the Reserve Bank have, of course, been less than forthright in discussing the prospects in regard to money supply, but they have cautiously observed that credit controls have their limitations, especially in the environment of overall monetary expansion, which make it possible for operators to resort to non-banking sources of finance. They have, therefore, underlined "the necessity of maintaining harmony between monetary policy and fiscal policy." This is a rather vague statement and so is their elucidation: "It is necessary . . . to ensure that both fiscal and monetary policies act in such a way as not to add to the pressure of aggregate monetary demand and thereby aggravate the imbalance between overall demand and supply." A little plain speaking by the Directors of the Reserve Bank on this issue, instead of indulging in a riddle, would have been desirable and helpful. They could have, for instance, explained how the fiscal policy has not been in harmony with the monetary policy and how it has been aggravating the imbalance between the demand and supply. Are they suggesting that taxation policy has been such as (*a*) to add to the growth of non-banking sources of finance and (*b*) to reduce the availability of internal finance for business corporations in the private sector, thereby forcing them to depend more and more on bank credit and other external sources? If the Reserve Bank's Directors can be blunt enough to point out that the rates of interest on deposits are not adequate enough for attracting more deposits, they could have been equally frank in their observations on fiscal policy too.

Another subject that figures prominently in public discussions these days is the fourth Plan, for which a lot of groundwork has already been done by the Planning Commission. The Directors of the Reserve Bank have made no reference to this next Plan in their report under review. But they have indicated certain general guidelines which can, and ought to be, followed in preparing the fourth Plan also. To summarise them briefly: Stabilisation of prices must be a major objective of policy, in order that defence and development may be secured while strengthening the balance of payments. A sizable expansion in the output of consumer goods, and particularly of agricultural products, is necessary. Frequent changes in the general structure of taxation should be avoided, as they have an unsettling effect on the climate of investment activity. There is need for the most effective mobilisation of genuine savings, a task in which the banking industry has a major part to play. There is also a need for not only monetary, fiscal and physical controls but also a co-ordinated price and incomes policy. A strict scrutiny of Government expenditure from time to time is imperative, with a view to weeding out less essential items. Even if this results in a temporary slowing down of developmental activities in some areas, it may prove beneficial in the long run. The sum and substance of these guide-lines is the well-known thesis that economic development, if it is to be successful and with minimum hardship to the vulnerable sections of the community, should take place in an environment of stability. Some impatient souls in the seats of power have been heard to remark recently that regard for this thesis would only lead to stagnation. This reaction merely goes to show that there are still many in high places who have not yet learnt the lessons of this country's experience in the second and third Plans. It is such people who constitute a danger to the future of this country.

PERSPECTIVES ON NUCLEAR POWER

AS the world's population and industries are growing all the time, so are its energy needs. But the known world reserves of fossil fuels—coal, oil, oil shales, peat and natural gas—amounting to 3,500 billion tons of coal equivalent would, it is said, last only for the next 800 years at the present world consumption rate. They would, however, last hardly for a hundred years, if the entire world were to consume as much energy per head as North America does now. If an accelerated rate of consumption somewhere between the present world rate and the North American rate is assumed for the future, it may be that the fossil fuel reserves will suffice only for the next 500 years—a period not too long in the continuing history of mankind. The question is: what will happen thereafter? Obviously, there will be an energy famine throughout the world, unless, of course, more fossil fuel reserves happen to be located and newer sources of energy come to be exploited in the meanwhile. It is, in this context, that the potentialities of nuclear power as a fairly big source of energy may be rated high. In fact, as the energy content of atomic fuels—uranium and thorium—is 10 to 20 times greater than that of fossil fuels and a ton of natural uranium can be utilised in a reactor until it has yielded 10,000 megawatt-days of energy, it has been estimated that the known world reserves of 1.5 million tons of uranium would represent the equivalent in energy potential of more than 400 billion tons of coal. The nuclear energy potential could be as high as 4,000 billion tons of coal equivalent—more than the world reserves of fossil fuels—if "breeder" reactors were used. Incidentally, in a "breeder" reactor, described as the ultimate in reactors, the energy yield would be as much as 200,000 megawatt-days per ton of uranium fuel which is surrounded by thorium. That much energy yield is rendered possible by the fact that some of the neutrons emerging from the uranium chain reaction convert the surrounding thorium into fissionable material which may itself be then processed into fuel as a substitute for uranium.

In view of these enormous energy potentials of nuclear fuels, it was thought at one time that the expansion of atomic energy programmes in several countries in the 'fifties and the 'sixties would lead to a fall in the cost of atomic power. But this has not taken place so far. According to a U.N. survey on the eve of the Third International Conference on the Peaceful Uses of Atomic Energy, held at Geneva from 31st August to 9th September 1964, three major difficulties have been encountered. First, since there is no immediate shortage of fossil fuels in most nations now operating nuclear power plants, nuclear competition with conventional energy sources has been none too easy. It should be noted here that conventional plants themselves have been improved technologically in recent years and there has been a notable move towards bigger units having lower production costs—as, for instance, in the United States where power plants consuming oil or coal are being built and planned on a routine basis to produce 600,000 to 1,000,000 kilowatts of electricity. Secondly, the cost of conventional fuels, including coal, has gone down due to larger production and economies achieved in transporting them. In the U.K., for instance, due to intensive mechanisation of collieries, closing down of uneconomic mines and other measures of rationalisation, the cost of producing coal today is less than what it used to be eight years ago, notwithstanding the increases in the wages and amenities of workers. Thirdly, high rates of interest are a handicap to nuclear plants which require large capital outlays. And, fourthly, the technological problems involoved in nuclear plants have proved more difficult than were once assumed. Atomic energy programmes have, therefore, been spread over considerably longer periods of time than were scheduled earlier, and the cost of atomic power, too, has not fallen as rapidly as was originally hoped.

But the experience of highly developed countries in this field has demonstrated at least one thing. This is the influence of unit size on the economics of nuclear power. In these countries, reactors of considerably greater power than those of 100,000 to 300,000 kilowatts already in operation are considered to be the most economical. Reactors of 500,000 kilowatts or more are now envisaged in this connection. The continuing expansion of demand for electricity and the development of special applications, such as water purification, seem to be clearing the way for these large units. In fact, such large units are under construction in Britain which has just commissioned a 325,000-kilowatt nuclear power station at Hunterston in Scotland and which, it is claimed, has the biggest nuclear power programme in the world. As that country has produced so far 15 billion units of electricity from nuclear fission—more than twice as much as the rest of the world put together—its experience is particularly relevant in the context of cost considerations. This suggests, according to a member of U.K. Central Electricity Generating Board, that the better performance of the fuel would reduce fuel costs of "Magnox" stations by 25 per cent and could reduce the cost of a unit of electricity by 10 per cent. In his view, the "Magnox" stations, which are still being improved, could eventually reduce generating costs by as much as 25 to 30 per cent.

Likewise, the United States, which has built so far 14 atomic power stations with an aggregate capacity of one million kilowatts and is already producing economically atomic power, albeit in high-cost regions in the north-east and on the west coast, is going in for large-sized units in the interest of cost reduction. It has now six larger units in the private sector, either under construction or consideration for an aggregate capacity of 2.5 million kilowatts. These units are confidently expected to be competitive over their lifetime with conventional electric plants *anywhere* and not merely in regions far away from coalfields. But, at the same time, it has been recognised in the United States that, in spite of the cost reductions possible in present reactor types, the goal of cheap and unlimited atomic electricity is yet far away, for the attainment of this goal would have to await the development of "breeder" reactors of the kind now in the experimental stage in that country and elsewhere. As the first full-fledged breeder station is expected to be in operation in the U.S. itself only after 16 years from now, there is a long way to go before the world can enter the era of cheap and plentiful electricity with the aid of breeder reactors. But it will not, of course, be a "long way," considered from the much longer 500-year or 1,000-year perspective of the world's future energy pattern. Even from the shorter perspective of the next 35 years, the world share of nuclear power will be of no mean order, for, according to India's Dr. H. J. Bhabha, it will be over 1,250 million tons of coal equivalent by A.D. 2000 in the then total world energy consumption of 30,000 million tons of coal equivalent.

The U.S.S.R., too, according to the leader of the Soviet delegation to the Atomic Energy Conference at Geneva, is thinking in terms of building giant atomic power stations in the next five or six years. Already the first 210,000-kilowatt stage of the Novo-Voronezh Atomic Power Plant is on the way to completion, and its second stage will take the capacity to 500,000 kilowatts. His expectation is that, in the next decade, towards the eighties, the aggregate capacity of Soviet atomic power plants will be "a few tens of millions of kilowatts," as compared with 900,000 kilowatts by the end of this year. Like the United States, the Soviet Union, too, attaches great importance to the development of "breeder" reactors which will enable a better utilisation of uranium. Noteworthy, in this connection, is the view of Soviet nuclear scientists that a thousand tons of uranium will be more than sufficient to operate atomic power stations with a combined capacity of 100 million kilowatts during a year. Equally noteworthy is the Soviet research under way in the field of fast-neutron reactors, as also the recent decision to construct the world's first large "BN-350" fast-neutron reactor with a power capacity of 300,0000 to 350,000 kilowatts.

All these developments in some of the advanced countries, it may be contended by some, may not have much relevance to conditions in the under-developed countries on two grounds. One is that these countries are hardly in a position to find the large capital resources required for big-sized nuclear power plants. It is recalled here that the earlier concept of compact and economical nuclear plants in the range of 30,000 to 50,000 kilowatts, suitable for use in less-developed countries, has had to be shelved because a reduction in size is not matched by a reduction in cost. The other ground is that the energy needs of these countries, engaged in industrialisation, are growing so rapidly that they cannot wait for the generation of cheap and plentiful atomic electricity with the aid of "breeder" reactors after, say, 20 years. As the energy needs of the immediate future will be most pressing in these developing countries, they will necessarily have to go in for large-scale power development on conventional lines, that is, through hydel stations and coal or oil-fired thermal stations.

These arguments, however, do not wholly apply to India which, though under-developed, is sufficiently industrialised to be called a semi-industrialised country. Being more advanced than most other under-developed countries—advanced to the point of operating a large atomic energy establishment of its own—this country is certainly in a position to put through a nuclear power programme. This is how Dr. H. J. Bhabha, Chairman of India's Atomic Energy Commission, and Mr. M. Dayal of the Department of Atomic Energy, have projected, in a paper submitted to the latest Atomic Energy Conference at Geneva, the growth of total power capacity for the country, along with the possible share of nuclear power in that aggregate capacity:

India's Long-term Power Needs

(In million kw.)

Year	*Nuclear power*	*Total all-India installed capacity*
1966	Nil	12†
1971	1.18*	24
1976	3.00	38
1981	8 to 10	60
1986	18 to 20	About 90

* 380,000 kw. at Tarapur (Maharashtra), 400,000 kw. at Rana Pratap Sagar (Rajasthan) and 400,000 kw. at Kalpakkam (Madras).

† About 5 million kw. in hydel stations and 7 million kw. in thermal stations.

It will be seen from the above estimates that India is already planning larger-sized nuclear power stations in keeping with the latest trends in the advanced countries. It will also be seen that the nuclear power programme, which will be increasing from Plan to Plan, will not in any way reduce the need for a rapid expansion in conventional power capacity at the same time. If anything, for the country as a whole, the major share of power capacity will still have to come from conventional sources and this will require a big effort in the hydro and thermal fields. The emphatic view of the authors is that, in India, in three widely separated and important regions, which are more than 350 miles from the coalfields, nuclear power is expected to be competitive with thermal power produced by (i) coal transported by rail, (ii) pit-head generation with high voltage transmission, or (iii) oil, even with an assumed interest-rate of 10 per cent. The different cost estimates so meticulously worked out by them in separate tables cannot, however, find space here. But the principal cost findings are brought together below:

Cost of Power in Paise Per kw.h.

Station	*Assumed rate of interest*	
	5 per cent	*10 per cent*
Coal-burning station in Bombay, Gujarat Madras and Delhi-Punjab-Rajasthan regions	3.6 to 4.1	4.4 to 4.8
Transmission of power from pithead thermal station over 350 miles	3.2 to 3.5	4.2 to 4.7
Oil-burning station (excluding duty and taxes) ..	3.2 to 4.0	3.9 to 4.7
Tarapur nuclear power station	3.0	4.4
Candu-type station (Rajasthan)	2.6	4.1

These cost estimates for different localities, it should not be forgotten, pertain only to regions which are far away from the coalfields. That nuclear power will be quite competitive with conventional power in such high-cost regions can be believed in the light of experience in the U.S. where nuclear power is already being produced on an economic and competitive basis in the north-east and west coast regions with their high-cost conventional power generation. Apart from all this economics, the basic factors underlying India's relatively modest atomic power programme are the need for building up experience, creating a technical cadre and producing plutonium to meet future nuclear power needs. When this experience is built up over the next decade, India will be in a better position to take advantage of the expected advances in nuclear power technology in the West. Otherwise, it will be difficult for this country to develop nuclear power in a fairly big way after 1976. In this, as in nuclear research, in general, Dr. Bhabha's far-sighted perspective is most commendable. One hopes that the men in power today will have the vision that Mr. Nehru had in backing Dr. Bhabha's enterprise in the nuclear field.

MARKET GOSSIP

Jute Industry's Biggest Worry

WHATEVER be the future trend and pattern of India's export trade and whatever be the developments elsewhere in the world, there is no doubt that jute goods will continue to be the biggest earner of foreign exchange for the country at least in the next few years. Out of the aggregate export earnings of Rs. 5,100 crores envisaged (tentatively) in the fourth Five-year Plan, jute goods alone are expected to contribute as much as Rs. 900-925 crores, about 18 per cent of the total. But one should not rush to conclude that all is, and will be, well with the Indian jute industry. Indeed, the industry is greatly worried about the severe impact of competition from Pakistan in world markets. It was, therefore, somewhat surprising that Mr. Manubhai Shah, Union Minister for Commerce, while addressing the inaugural meetings of the Jute Textiles Consultative Board and the Jute Goods Export Promotion Council held at Calcutta on Wednesday this week, should have characterised the worries expressed by the industry as springing from its nature of being overcautious. Overcautiousness may not be a commendable virtue, but it is certainly not unwarranted in the case of jute industry. The facts given below speak out clearly:

The jute industry in Pakistan is currently operating at a level of 325,000 tons annually, representing about 25 per cent of India's production, and there exist plans which envisage a further 20 per cent increase in production over the next eighteen months and a much greater increase over the subsequent three or four years. More broadloom units are under erection for increasing the manufacture of jute carpet backing, and there have already been some shipments of this fabric by Pakistan to America and Europe. Again, with growing experience in jute manufacture and the gradual emergence of a skilled labour force, the industry is well placed to switch to hessian production on a large scale if it should so decide. The jute industry in Pakistan enjoys certain distinct advantages: completely modern machinery and equipment, availability of superior quality raw jute at an economic cost, larger yield of raw jute per acre, lower wage rates, and direct export subsidy at a very liberal rate. These helpful factors, it is calculated, give the Pakistan jute mills *vis-a-vis* their Indian counterpart a cost advantage of Rs. 400 per ton in the case of sacking and Rs. 40 per 100 bags in respect of B. twills.

These appear to be hard facts; if there is any jugglery in them, it is for Mr. Manubhai Shah to prove it. India has been continually on the defensive all these years and no amount of export orientation, however desirable this may be, can, as Mr. J. V. Jardine Paterson, Chairman of the Indian Jute Mills Association for 1963, aptly remarked some months ago, alter the hard fact of India's inferior competitive strength.

In the long run, keen competition between India and Pakistan in jute goods markets will, of course, hit hard the interests of both the countries. Mr. Manubhai Shah did well to highlight this important factor very forcefully. He said:

"The prosperity of the jute industries of India and Pakistan lies in the avoidance of undercutting each other or a rate war. India and Pakistan should work together for the prosperity of this basic industry which is their main export earner. I appeal to the Pakistan jute industry and the Government for a co-operative approach in the field of jute exports."

While it is to be hoped that the appeal of Mr. Shah will not fall on deaf ears, one wonders whether an understanding on co-operative approach can actually be reached between the two countries. Given such an understanding, there is no reason why the two countries should not be able to expand jute industry, to raise production of goods and to sell them at fairly remunerative prices in the wide world.

Meanwhile, no effort should be spared to strengthen the competitive position of the Indian jute industry. Appropriately enough, Mr. Manubhai Shah emphasised the need for research and product development, with special stress on the manufacture of speciality goods which will earn more per ton than the conventional items. And reassuring is his statement that the Government would extend to the industry full co-operation for modernisation schemes and that, for improvement of mills, whatever components were needed would be procured. Production of jute goods, however, is only a part of the indusrty's operations. The other, perhaps more important, part relates to marketing. It was, indeed, a wholesome advice that Mr. Manubhai gave when he said: "The industry should ensure that not a single yard of jute cloth leaves the shores of India without testing, so that all exports can reflect a good image of India. With this end in view, the Government has decided to introduce statutory quality control and pre-shipment inspection from 1st January next Proper statistical quality control and inventory control must be maintained. Jute also must be tested to ensure that whatever leaves the shores of the country is 100 per cent tested."

One of the essential prerequisites for the successful production and marketing performance is the strengthening of the jute industry's agricultural base, for raw jute accounts for over half of the production costs. Despite all the loud talk of intensive development, neither the per-acre yield of raw jute nor its quality has shown any significant improvement. The average yield obtained in the 1963-64 season was no more than 2.77 bales (of 400 lbs. each), as against 2.41 bales in 1955-56 end of first Plan) and 2.40 bales in 1951-52. The per-acre yield in Pakistan is well above this figure, the actual average for the 1963-64 season being about 3.52 bales. Mr. Manubhai Shah seems to feel that the per-acre yield must be stepped up to at least 3.8 bales. An appreciable improvement (quantitative and qualitative alike) in productivity can be achieved only if, as Mr. Shah urged, the State Governments concerned provide the farmers with the requisite facilities such as distribution of fertilisers and supply of quality seeds. The record of these Governments in this respect has been poor. Who is to shake the State Governments out of the lethargy and how is one to do that? Mr. Manubhai Shah must address himself to these questions.

Index-linked Savings

Should the savings needed to support public sector development be provided with safeguards against depreciation of value at present available only to savings financing private sector investment in the form of equities? If so, how? These are the questions that are now posed before the Governments of several countries. There is a wide divergence of opinion among economists the world over on the answers to the two posers. This divergence of opinion apart, the findings of the special committee of experts in Sweden which recently reported on the usefulness of index-tied loans are very interesting. In the opinion of this committee, there are *no* convincing arguments for *not* extending the safeguards against depreciation of value which have been in use in certain fields to the credit market. The committee is, of course, aware of the practical difficulties in the way of the wholesale application of the principle, but it points out that an experiment ought to be made forthwith to test the suitability of index-linking in a Swedish context, the experiment being limited initially to savings bonds and loans suitable for investment by institutions. The more important conclusions arrived at by the committee may be summed up thus:

Savings would be encouraged by the availability of purchasing power guarantees for money invested on a fixed interest basis. The economy should profit from the fact that their (guarantees) advent would make it possible to determine interest rates policy independently of inflationary expectations, thereby making official economic management easier and more effective. The incorporation of stable value clauses in the State's contracts with bondholders and other creditors is more likely to serve to strengthen public confidence in the authorities' endeavour to defend monetary stability, rather than to weaken it. And there is certainly no reason why it should be regarded as a surrender to inflation.

The findings of the Swedish committee of experts have elicited some interesting comments from "Lombard" of *The Financial Times* (London). "Lombard" says that, in the great majority of countries, inflationary processes have become such a well-established feature of the economic scene (in spite of oft-repeated official assertions that the fight to restore monetary stability would be prosecuted with the greatest energy) that the authorities do not have to confess to failure to resolve the problem. Viewing the findings against the background in Britain, he observes:

"The point of greatest practical importance now is that it is going to be taken for granted by the public, whatever the authorities may be saying, that inflation will continue to erode the purchasing power of money indefinitely until positive proof is available—that is through the maintenance of monetary stability over a period of several years—that a decisive answer to the problem has been found. After all, it is the case that the inflationary phenomenon has been with us now for a quarter of a century. So it can hardly be surprising if it is coming to be regarded as a permanency.

"It is idle, therefore, for the authorities to go on pretending that stability is just round the corner. Rather should they strive to neutralise the disincentive to saving implicit in the public's belief that a continuance of inflation is inevitable by offering national savers an opportunity to obtain the security for their capital that they would get if official measures to re-establish monetary stability were fully successful. Seeing that the Exchequer is going to be left no worse off that way if inflation persists than it would have been had the Government fulfilled its promises to stabilise this is surely not a lot to ask."

With General Elections so near, it is highly doubtful whether the present Government in Britain will initiate any new economic measure of far-reaching effect, like the one described above. It remains to be seen whether the idea will appeal to the Government that comes into existence after the Elections. If the Labour Party were to win and form the Government, it might give due consideration to the proposal for index-linked savings in its efforts to mobilise resources for public-sector development.

Price-support For Agriculture

Dr. Williard W. Cochrane, an authority on U.S. agricultural price-support schemes and a former Director of Agricultural Economics in the U.S. Department of Agriculture, is presently in India as leader of the production incentive mission, mainly for the purpose of helping the Government to develop a price-support programme designed to provide incentives to the farmer for greater production. In the words of Dr. Cochrane, "the idea is not just to raise the price level of commodities for the cultivator, but also to stabilise price drops at harvest time." Initially, the aim is to determine the desired level of price-support, the price differentials from region to region, the quantum of purchases by the Government, storage requirements

and the cost of such a programme to the Government and, after drawing the outlines of the basic plan, Dr. Cochrane expects to prepare a schedule for American technicians to help the country work out operational details of the programme, if there is agreement between the Indian side and the American side on the basic plan.

As the situation exists, the farmer is not a substantial loser when the production is not sufficient, the reason being that a low production increases the prices of farm produce and the net return to the farmer may remain unchanged. On the other hand, a large production brings down the price substantially and the farmer's earnings may remain more or less unaltered in spite of his putting in larger efforts and investing in better seeds, fertilisers and improved implements. Accordingly, it is argued that there is no incentive for him to produce more. The reason may be the inelasticity of demand for agricultural produce. In these circumstances, there is great need for introducing some measure whereby the farmer can be assured of a reasonable level of price in spite of the rise in production. One can learn a lot in this connection from Britain, where this system is being practised and where the agricultural production has increased at a very fast pace, mainly due to the adoption of this system.

In India, however, agricultural production is very large as compared with that in Britain and the task in India is thus stupendous. From the point of view of size and the magnitude of operations, the U.S. offers a better example and the experience of that country will provide valuable guidance. The Government has, therefore, done well in inviting American experts to offer advice on and suggest the technique of operating price-support schemes. It is, however, obvious that, in order to operate any price-support programme successfully, large-scale purchases will have to be made by the Government and the storage capacity will have to be increased many times. Unless sufficient funds are available for these two purposes, it will be difficult to put the scheme into practice.

It is gratifying to note, in this connection, that these and other related lines of activity are to be undertaken by the proposed Foodgrains Price Stabilisation and Trading Corporation. This Corporation, incidentally, will have a capital of Rs. 100 crores and its main objects are: (1) to ensure fair price to the grower and to make available foodgrains at reasonable prices to the consumer; (2) to encourage production of foodgrains by financing food crops, giving guarantee on behalf of growers and by providing facilities like fertilisers, spray, crop insurance, etc.; (3) to provide proper storage facilities; (4) to organise and finance supermarkets and retail distributions to reduce costs to consumer; and (5) to undertake procurement wherever and whenever necessary. Dr. Cochrane's advice and assistance, it hardly needs to be added, may be particularly availed of in the matter of evolving suitable price, production and other related policies to further the Corporation's objectives.

The formulation of the plan and its implementation are, however, not an easy job, especially as the Indian Government lacks the necessary experience in taking over foodgrains and in storing and distributing them. Dr. Cochrane has himself stressed this point thus: "Organisation of such a programme is difficult even in the U.S. In India, it will be even more difficult, because we will have to reach so many more people and because civil service personnel needed for the programme are short in comparison with the magnitude of the problem." It would, therefore, be too optimistic to assume that the plan would work miracles with Indian agriculture. Nevertheless, it is necessary to make a beginning, however difficult the task may seem to be.

In his informal talk with journalists at New Delhi, Dr. Cochrane also stressed the importance of other factors like more irrigation and fertilisers to increase the agricultural production. In this connection, it is gratifying to know that an American consortium is negotiating with the Government of India for establishing five fertiliser plants in this country which together would have a capacity substantially more than that of all the Indian fertiliser plants now in operation or under construction. It is to be hoped that no ideological considerations by the Government will stand in the way of these initiatives yielding positive results.

Foodgrains Clearance At Ports

In the context of shortage and high prices of foodgrains, it is gratifying to learn from Press reports that there has lately been a distinct improvement in the handling of foodgrains (imported) at Indian ports. A few weeks ago, it will be recalled, acute congestion had developed at the Bombay and Calcutta ports, with the result that large quantities of imported foodgrains (wheat and rice) which were lying at the ports could not be cleared for distribution within the country. The "bunching" of ships at the docks was caused mainly by frequent strikes, "go-slow" tactics of stevedore workers, inadequate port facilities and slow progress of port development schemes. There was virtually an endless queue of vessels on the high seas waiting for a berth to unload their stocks. Thanks, however, to the initiative taken by Mr. C. Subramaniam, Union Minister for Food and Agriculture, a better inter-departmental co-ordination has been achieved, labour-incentive schemes introduced and some other difficulties also reduced greatly. Indeed, it is said that no foodship is at present waiting for a berth at the ports of Calcutta, Madras, Visakhapatnam, Kandla, Bhavnagar and Cochin, and, in Bombay, only one ship was recently waiting for a berth which must have by now been found.

The authorities, according to *The Statesman* of Calcutta, were able to unload about 600,000 tons of foodgrains from vessels in all the ports during the months of July and August. In Bombay port alone, the rate of discharge, which was a bare 102,500 tons in April, was as high as 202,300 tons in July and 245,000 tons in August. The improvement in position, it is said, has given the Government the confidence to handle about 600,000 tons of food imports every month during the period from October to February next. If the rate of handling the grains at the major ports cannot be improved further than this, it is due not so much to deficit berthing and unloading facilities as to inadequate transport and shed capacities in the docks. There are said to be other snags as well. While Bombay, Madras and Kandla have mechanical devices installed to unload foodships, especially tankers, Calcutta still has none. Further, it is considered doubtful if the grain silo under construction in the Calcutta docks will be completed by the end of this year. Even at Madras and Bombay ports, foodgrains have to be bagged and stitched manually before being sent out of the sheds by means of road transport. Consequently, the rate of unloading of ships has to be synchronised with the pace of clearance from the docks. Nearly 10-12 days are taken for unloading at 20,000-ton tanker in Bombay. The average daily clearance of foodgrains thus comes to only 2,000 tons. The shed capacity itself is just 3,000 tons.

Against this background, it is clear that, if the imported foodgrains are to have a salutary effect on the supply and price situation, the Government must seek to overcome the physical limitations of ports, besides making renewed efforts to improve the labour climate. The move of the Government of India to secure mechanical handling equipment for ports from abroad is, therefore, sound. The installation of this equipment, together with the functioning of the watchdog body (this has been set up to keep a continuous track of the problem relating to port traffic) and the services of a few U.S. maritime experts who are arriving in India shortly, will surely go a long way towards ensuring a more effective and speedier clearance of foodships.

INDUSTRIAL PRODUCTION

The general index of industrial production (base: 1956=100) rose by 11 points during January-May 1964 as compared with the corresponding period in 1963. The average index for the period was 170.9, as against 159.9 a year before. In terms of percentage, the rise in industrial production during January-May 1964 was 6.9 over the corresponding period of the previous year.

During the first five months of 1964, several important industries registered substantial increase in production as compared with the same period in 1963. The percentage rise in output was 18 in power transformers, 24 in machine tools, 30 in automobiles, 33 in rail wagons, 23 in sulphuric acid, 26 in caustic soda, 18 in rayon yarn, 23 in bicycles and 18 in electricity.

Notice

LYNX MACHINERY LIMITED

NOTICE

THE THIRD ANNUAL GENERAL MEETING of the Shareholders of LYNX MACHINERY LIMITED, will be held at the Indian Merchants' Chamber Hall, Churchgate, Bombay, on Tuesday, the 29th September 1964, at 4 p.m., to transact the following business:—

1. To consider and adopt the Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1964.
2. To declare a Dividend.
3. To appoint a Director in place of Shri C. C. Desai, who retires by rotation and is eligible for re-appointment.
4. To appoint Auditors to hold office from the conclusion of this meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

Notes:

1. A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

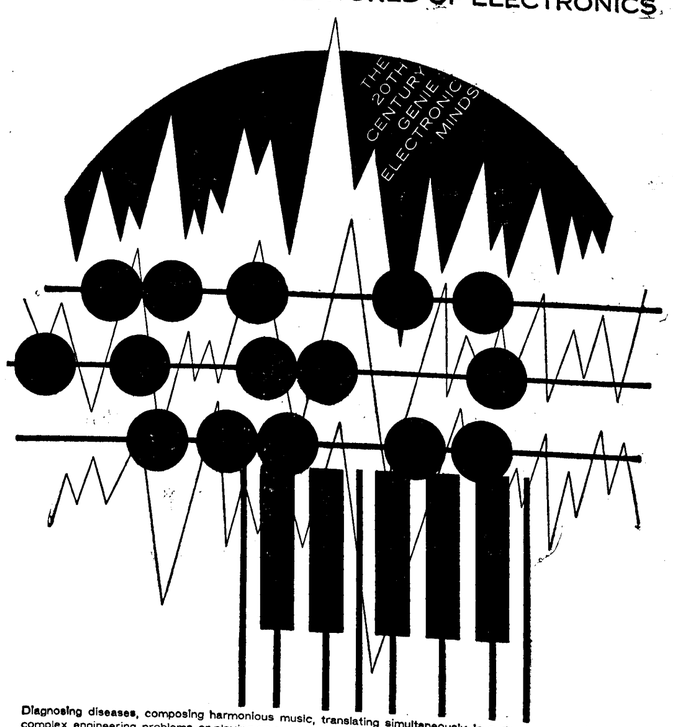
2. Notice is also given that the Register of Members and Transfer Books of the Company will remain closed from 17th September, 1964 to 3rd October, 1964 both days inclusive.

3. The dividend when sanctioned will be made payable on and after the 15th October, 1964 to those shareholders whose names stand on the Register on 3rd October 1964.

By Order of the Board of Directors,
B. L. KUCHERIA,
Secretary.

BOMBAY, 28*th August* 1964.
Registered Office:
43, VEER NARIMAN ROAD,
FORT,
BOMBAY-1.

THE BIG HURRY IN THE WORLD OF ELECTRONICS



Diagnosing diseases, composing harmonious music, translating simultaneously in a dozen languages, solving complex engineering problems or playing an expert game of chess, electronic computers are the miracle child of the present century. ■ Reading, writing and calculating at the speed of light, with 'memories' that learn by experience, these giant minds are freeing expert technicians from time-consuming mental drudgery, for more creative planning, making possible whole new industries and products, which assure greater employment and prosperity. ■ In making the electronic tubes that keep these computers twinkling, a highly specialised knowledge of gases is required. ■ It is this specialised knowledge of industrial gases and their diverse applications that Indian Oxygen affords Indian industry.

LONDON LETTER

SHASTRI'S ECONOMIC POLICY

GENERALLY APPRECIATED AS REALISTIC

From Our Own Correspondent

LONDON, 5*th September*

MR. Lal Bahadur Shastri, Prime Minister of India, in an interview to the correspondent of the economic weekly of London, *The Economist*, has given a broad outline of his Government's economic policy. The observations, though brief and general, are significant in that they throw some light on the thinking of the Shastri Government on an important aspect of the nation's economic life. From his remarks it appears that he wants his Government to devote more attention to medium and small-scale industries and also to agriculture without, of course, affecting the heavy industries already started.

The reasons are not far to seek: the country has already reached the limit of its sufferings and any further burden on the people may break the limit and create danger. So emphasis should be placed more on the implementation of the Plan and the realisation of targets already set rather than on big paper schemes. The whole energy of the nation would have to be concentrated on the implementation of the projects already started and then on making a start in key areas where it is necessary and feasible. According to Mr. Shastri, the fourth Plan must try to remove the bottlenecks that may otherwise develop and create more uncertainty. He is also straightforward in pointing out that his Government will not, however, ignore the long-term economic goal of self-sufficiency which was the aim of the late Prime Minister, Mr. Jawaharlal Nehru. Nevertheless, they must make allowance for the new situation that is developing faster. The stresses and strains that have shown up in recent months cannot be ignored altogether.

The Indian economy, according to Mr. Shastri, would have to be geared first, to meet the primary needs of the people—food, clothing, shelter and medicine—and then to pursue other objectives. But he categorically states that this shift of emphasis in economic policy does not mean that he is critical of the past or is willing to reverse the policy which Mr. Nehru had so carefully planned and assiduously pursued. What his Government would like to do is to respond to the compelling needs of the present.

Mr. Shastri's economic policy, as it appears from his interview to *The Economist*, has been welcomed and appreciated here as realistic and timely. According to the weekly itself, such a policy "has come close to expressing what has been on everybody else's lips for months past —less emphasis on big new projects and much more on meeting India's primary needs in food and shelter."

Commenting on another question of the correspondent, Mr. Shastri has expressed the hope that India might continue to get foreign assistance from America, Britain and other friendly countries at least in these difficult days. But he has also added that increasing importance should be given to domestic resources. Regarding private investment, he has categorically pointed out that his Government is not at all opposed to private investment—foreign and domestic—provided investors are willing to fit their investment into the framework of Indian society wedded to socialistic objectives. He has also stated that State vigilance will be there to control monopoly and excessive concentration. His economic policy as a whole and his policy towards foreign investment, in particular, have been described in the *Statist*, a leading London weekly, as "encouraging signs of a new and more realistic attitude to foreign investment in India."

Foreign Investment in India

The role played by international investment in the promotion and advancement of world economic growth has long been recognised as of vital significance. In the last century, foreign capital played a major role in the "take-off" stage of development in the economy of the U.S.A., Russia, Sweden and Canada. Hence, with a view to accelerating the pace of economic development in India, it is necessary that a congenial atmosphere be created through fiscal and monetary policies so that foreign investors can be interested in bringing equity capital and well-established organisations can co-operate in the industrialisation of the country. In this connection, it may be mentioned that an encouraging impression has been created here. The present condition of India has been regarded in business circles here as more conducive to foreign investment than is generally recognised. This has been very lucidly and clearly pointed out by Sir Percival Griffiths in his article in the Commonwealth Supplement of the *Investor's Chronicle*. In his opinion, India is economically and politically quite stable to create confidence in the mind of the intending investor. Maturity and stability of its economy have been demonstrated by its performances in the recent past. The economy has survived three successive shocks within a brief span of about "eighteen months."

The first shock, according to Sir Percival Griffiths, came from the taxation proposal of Mr. Desai in 1963. The second shock was administered by the Planning Commission's mid-term appraisal of the progress of the third Five-year Plan. The appraisal was frank and accurate, but the gloom it spread was unjustified. The third one came with the death of Mr. Nehru. The popular feeling in Britain was that the stability of India depended on Mr. Nehru, but this view was never shared by Sir Percival Griffiths. He expresses the sentiment now pre-

MR. BOWLES ON GOVERNMENT AND BUSINESS

AS an ardent believer in rural and agricultural progress, Mr. Chester Bowles, U.S. Ambassador to India, has made, and continues to make, an effective contribution to the evolution of this country's rural development programmes. And, as a votary of "mixed economy," he has always stood for a substantial but well-run public sector and for a large but enlightened private sector in a developing country like India. If his economic thinking suggests that rural development and industrialisation are complementary to each other, it also emphasises the point that "business needs enlightened liberal government and government needs enlightened private enterprise." It is characteristic of Mr. Bowles that he is as friendly and impartial as he is frank in expressing views and suggestions, and this is evident from his address before the All-India Management Association seminar on "Business and Society" in Calcutta on the 3rd instant. Although his observations have been generally addressed to the developing nations, their relevance to the situation in India is unmistakable. As these views and suggestions are those of a "friendly foreign observer" with an abiding sympathy for this country, they can scarcely be misunderstood either by businessmen or by political leaders and administrators, even if they may not be immediately in a position to act on some of the suggestions.

There is, for instance, nothing to cavil at in Mr. Bowles' four-point approach to "a mutually beneficial relationship between business and society in a democracy on the threshold of rapid economic development." No far-sighted and enlightened businessman will question the general need for accelerated rural development, urged first by Mr. Bowles on the ground that "every step that tends to improve the lot of the rural citizen broadens the market for manufactured goods." But even here not all businessmen may yet specifically recognise that India already has a vast rural market waiting to be tapped by manufacturers of newer products like fertilisers, low-cost building materials, stoves, cheap transistor radios, and so on. The second point made by Mr. Bowles pertains to investments and profits. Here, again, not all businessmen may yet be ready to restrain their natural tendency "to put their money into short-term schemes which produce a quick return." But they would do well to take note of his warning that such unproductive investments as speculation in urban real estate and scarce raw materials would only "give rise to the public mistrust of the business community." And they would also do well to heed his further warning that "the businessman who does not begin to think in terms of long-range investments in solid productive capacity will be missing a major opportunity to expand his operations and his profit."

Addressing himself to the government side, Mr. Bowles has made the relevant point that excessive regulation has the effect of unduly interfering with the free play of the market. His view, in this connection, is quotable for its forthrightness:

"Frequently such regulations are best imposed through fiscal incentives to productive enterprise rather than through administration, for experience indicates that most governments are neither equipped nor sufficiently flexible to handle the multitude of small choices which are the lubricant of any complex modern economy. Governments in new nations must be constantly alert to the danger that their licensing procedures might become cumbersome, that their allocation procedures might simply create costly black markets and that their regulatory legislation might invite evasion, corruption, and a general deterioration of business morality."

Mr. Bowles has finally urged that, while there is a manifest need for public investments in basic industries, such as power, transport, mining and some heavy manufacturing which are beyond the *immediate* capacity of the private sector, there should be no indiscriminate resort to public ownership "as a means of regulating enterprises which can operate effectively with private capital and management." In his view, the national interest would be "far better served by private enterprise operating in an atmosphere of encouragement and responsible regulation and in partnership with a well-run public sector." But, then, such a dynamic partnership between business and government—a partnership that "will reconcile the needs and the promise of industrialisation with the fundamental requirement of social justice in a free society"—will arise only if their mutual fears and suspicions give place to mutual understanding. It is here that Mr. Bowles' pregnant observations would need to be seriously pondered by government and private business:

"Any government of a developing nation that discourages and discredits private initiative will fail in its objective of rapid economic growth. Any private business that ignores the rights of its workers, the interests of its customers, and the responsibility of its government for the national welfare will remain a road block to progress.

"Business needs enlightened liberal government and government needs enlightened private enterprise. Neither can do without the other."

Wiser words have never been said before.

INTERNATIONAL LIQUIDITY

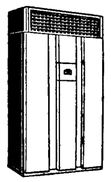
Briefly summed up, the achievements in the sphere of world economy during the last two decades may be described thus: A remarkable expansion of world trade; the convertibility of all major currencies; greatly reduced reliance on restrictions and on bilateralism; considerable, though still insufficient, progress in developing countries; high levels of employment; and avoidance of the extremes of inflation and deflation in most areas of the world. A part of the credit for all these achievements must certainly go to the International Monetary Fund, the I.M.F. for short. Well could the Fund's Managing Director, Mr. Pierre-Paul Schweitzer, claim, while presenting the annual report of the Fund at the annual meeting at Tokyo on Monday this week, that the record of the two decades since the end of the war, although not perfect, cannot be considered unsatisfactory and that the record looked even better, if one recalled the experience of the twenty years after the end of World War I. But there is still a pretty long way to go before the I.M.F. can boast of successfully fulfilling the four objectives for which it was set up, namely, high levels of employment, an adequate rate of economic growth, freedom of trade and payments from restrictions, and reasonable price stability. A mere improvement in international liquidity, on which so much emphasis has lately been laid, will not be of much avail; action in many fields other than that of liquidity will be necessary. Pinpointing this important aspect, the I.M.F. chief observed:

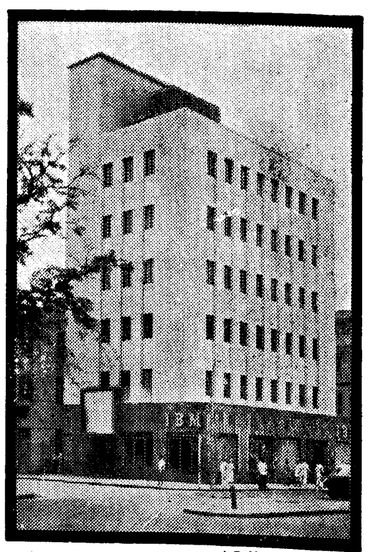
"In the past decade, a large part of the supply of international liquidity arose in the form of liquid claims on the United States, associated with the U.S. balance of payments deficit. It is unlikely that the payments deficit of the United States will contribute to the creation of reserves in the future on the same scale as it has done in recent years, and this would not indeed be desirable. Increased reliance has thus to be placed on other, more deliberate, measures to provide international liquidity as needed. It is obvious that any new developments in this direction raise many economic, technical, and also political problems. They deserve and will receive the most careful study..."

One of the specific suggestions now being actively considered by financial experts pertains to the reform of the present world monetary system. In examining this suggestion, it is necessary to bear in mind two vital factors to which the I.M.F. chief drew particular attention. First, the monetary system "is very much a going concern" and, in the efforts to supplement and improve this system, one must continually be conscious of the need for orderly development. Secondly, where decisions are taken to create and administer liquidity by deliberate international action, it is particularly important that the advantages of the multilateral institutional approach be kept in mind.

In the considered opinion of Mr. Schweitzer, since international liquidity in the form of reserves and access to credit comes into play where a country's world payments are in surplus or in deficit, any consideration of the role of liquidity or its adequacy must pay special attention to the manner in which disequilibria arise and the policies that are to be followed

YOU CAN COOL A WHOLE FLOOR OR AN ENTIRE BUILDING





I. B. M. Offices, Bombay

to eliminate them. He strongly felt that an increase in the quotas of Fund members at an early date is both justified and necessary. Over the longer run, according to him, there may also be a need for action to raise the unconditional liquidity of members. The various ways in which such an increase could be achieved through the mechanism of the Fund have been indicated in the annual report. (For details, *vide* page 258 of *Commerce* dated 15th August 1964.) Alluding to this issue, Mr. Schweitzer said:

"This is not a question for decision at this time. As the Executive Directors have indicated, it would require careful consideration from many points of view before any decision could be reached as to whether it would be appropriate for the Fund to undertake such operations,' and it is their 'intention to give these matters further study in the period ahead.' The Fund staff will also cooperate closely with the Study Group which has been set up by the ten participants in the General Borrowing Arrangements to investigate possible methods of adding to reserves by some form of international action."

Whatever the action taken by the I.M.F. to strengthen the international monetary system, there is no gainsaying the fact that a heavy responsibility is at the same time cast on the member-countries themselves. Mr. Schweitzer did well, indeed, to urge the surplus as well as deficit countries to pay due attention to the external impact of their financial policies. As he pertinently remarked, a co-ordination of monetary policies among the major countries—the need for such co-ordination is generally recognised—would undoubtedly be facilitated, if the responsible authorities were to give more weight to fiscal policies and rely less on monetary policies in regulating domestic demand, "leaving greater freedom for monetary policies to be adapted to changing international situations." Further, the countries in strong payments position which need to restrain overall demand should make every effort to lower any impediments to imports and capital exports. As for the developing countries, the advice which the I.M.F. chief gave at a Press Conference in Tokyo just prior to the opening of the Fund-Bank meetings was this: They should (*a*) strive for economic stability, (*b*) make more domestic capital available through savings, (*c*) create favourable conditions for the inflow of private capital from developed nations. In effect, what Mr. Schweitzer has urged is a reorientation of the economic and fiscal policies followed by the Governments of the developing countries. The plea is certainly timely, wholesome and pertinent and it has particular relevance to some countries—such as Ceylon, Burma, Indonesia and Ghana—where some of the policies taken recently by the Governments have shaken the confidence of foreign investors.

EXCISE ON ART SILK FABRICS

An important judgment relating to exemption of art silk fabrics from payment of excise duty was given by the Supreme Court last week. With this judgment, which upheld the verdict of the Bombay High Court, the position in respect of clause 12A(v) of the Central Excises and Salt Act, 1944 has been made very clear. Accordingly, no excise duty can be levied on art silk fabrics produced by or on behalf of the same person in one or more factories in which less than 25 powerlooms in all are installed.

The Supreme Court's judgment was a sequel to the batch of appeals by the Assistant Collector of Central Excise and Customs at Surat and the Union of India against the decision of the Bombay High Court which had earlier upheld the claims (for exemption) of Mr. J. C. Shah and two other businessmen of Surat. The facts of the case were as follows:

Mr. Shah owned a factory with nine powerlooms and he was also a partner in two other factories (with two annas and eight annas shares, respectively), in which there were 24 looms and 19 looms. He claimed exemption in respect of art silk fabrics produced in his own factory, as well as in respect of the goods obtained by him in the other factories, as the total number of powerlooms was less than 25. The tax authorities, however, rejected the claim on the ground that, since the asessee was a partner in two other factories, the looms installed in those factories should be added to the looms worked in the factory owned by him, in which case his claim inevitably fell outside the exemption granted by the relevant clause. They, therefore, issued a demand notice whereupon the respondent filed a writ petition in the Bombay High Court which was allowed. Similar writ petitions by two other parties affected were also allowed by the High Court and the concerned demand notices were quashed when the High Court found itself in agreement with the contentions of the weavers. The appellants (that is, the tax authorities) then appealed to the Supreme Court.

Rejecting the contention of the authorities, the Supreme Court bench stated that "every partner of a firm is in law the same person as the firm within the meaning of item 12A(v)" referred to above and that the contention of the authorities "is plainly inconsistent with the content of the said item and the object intended to be served by it in granting exemption to cases covered by it." Delivering the judgment, the Chief Justice of the Supreme Court observed that the production of art silk fabrics attributed to the two factories in which the respondent was only a partner could not be said to be production by or on behalf of the same person.

While the judgment of the Supreme Court, as already stated, has made the position clear in respect of exemption granted to art silk fabrics woven in small powerloom factories, it is necessary to mention one important point, namely, the prolonged delay involved in the settlement of disputes over the legal interpretation of tax laws. In the case under reference, the dispute arose as early as in October 1957, but it was not until last week that it could be resolved finally. In other words, the case has dragged on for almost seven years. One wonders whether such delays cannot be reduced.

ROURKELA AND FLAT PRODUCTS

It has been estimated by the National Council of Applied Economic Research in its "Reappraisal of Steel Demand" that the demand (5.7 million tonnes) for "flat" products like plates, sheets, strips, tinplate and skelp will be as much as 42.5 per cent of the aggregate demand (13.6 million tonnes) for rolled mild steel in 1970-71, as compared with 32.5 per cent in 1960-61. This anticipated ratio for the consumption of flat products is somewhat like what prevails now in West Germany, Belgium and Japan. Incidentally, the ever-rising demand for such products reflects the increasing tempo of activity, involving the use of large-diameter steel pipes, in oil and gas industries and power and irrigation sectors, as also of activity in shipbuilding, rolling stock and durable consumer goods industries. In other words, as industrialisation becomes more diversified and sophisticated, the demand for flat products is bound to go up, as projected by the National Council. That more than a fifth of this demand will be met by the public-sector Rourkela Steel Plant after the implementation of its present expansion scheme is, indeed, significant. It is even more significant that, although the yield of flat products is no more than two-thirds of the weight of ingots, as compared with the yield of about four-fifths in the case of non-flat products like structurals, rails, sleepers, bars, rods, wheels, tyres and axles, the expanded Rourkela plant, like the original plant, will be entirely devoted to the manufacture of the dearer and costlier flat products.

But the present expansion scheme, which is expected to be completed in 1966-67, will take Rourkela's capacity to only 1.8 million tonnes in terms of ingot steel or 1.2 million tonnes in terms of flat products. There is, of course, the current proposal to expand the plant's capacity from 1.8 million ingot tonnes to 2.5 million ingot tonnes during the fourth Plan period. The other two public-sector steel plants, namely Bhilai and Durgapur, are, on the other hand, scheduled for further expansion during the next Plan so as to raise their capacities to 3.0 million and 3.2 million ingot tonnes, respectively. A relevant question has been posed non-officially by Dr. G. F. Drath, General Superintendent of the Rourkela Steel Plant, in this connection. This is whether Rourkela's capacity could not be raised to 3.0 or 3.5 million ingot tonnes during the fourth Plan period so as to make it comparable to Bhilai and Durgapur and to the proposed Bokaro plant with its ultimate capacity of 4.0 million tonnes. The question has the added relevance that, unless the Rourkela plant is expanded to the more economic level of 3.0 to 3.5 million tonnes, it will be successfully challenged by Durgapur in the sphere of ingot steel production by the LD process and by Bokaro in the production of both LD ingot steel and flat products. So, if Rourkela (with its small 80-ton open-hearth furnaces and 50-60-ton LD converters), as compared with the 250-500-ton open-hearth furnaces and 150-to LD converters elsewhere) is to hold its own a bigger plan of expansion seems to be called for. This is not merely a question of national prestige but one of economic production of higher grade and better quality steels. It is from this point of view that Dr. Drath has outlined some suggestions for technical modifications and additional installations at Rourkela.

The more important of these suggestions are highlighted below:

(i) A fifth blast furnace should be added. This may be useful for making foundry-grade pig iron, while serving as a stand-by when one of the blast furnaces is blown out for relining purposes.

(ii) Some hot metal mixer cars of 250 to 300 tons capacity should be installed, in order to ensure more efficient and smooth blast furnace operation.

(iii) A pelletising plant with a capacity of 3,000-4,000 tons of pellets per day should be installed.

(iv) To enable quick disposal of the blast furnace slag, a plant for dry granulation of the slag should be installed.

(v) The four blast furnaces should be modernised by adopting the high top-pressure operation, constant humidification of the blast and fuel injection from the furnace tuyeres.

(vi) In the steel melting shop, the open-hearth furnaces should be dismantled and four advanced Kaldo furnaces of 100-ton capacity each should be installed.

(vii) The number of L.D. converters should be increased to six and the capacity of each increased to 60-70 tons from the present 50 tons. Furthermore, two hot metal mixers, each with a capacity of 2,000 to 2,500 tons, three new lime kilns and two new rotary kilns for burning of dolomite would have to be installed.

(viii) On the pit side, a continuous casting equipment with a capacity of 1.5 to 2.0 million tons of continuous cast slabs should be installed.

(ix) The capacity of the oxygen generation plant would have to be increased suitably.

Most of these suggestions, it will be seen, are calculated to ensure further modernisation of the Rourkela plant in the light of latest technical advances and add to iron and steel making capacity. They are also aimed at reducing production costs through saving in consumption of raw materials and higher productivity. Coming as they do from a German technical expert, they probably carry the implication that, if a bigger and bolder scheme of expansion at Rourkela can be decided upon, it may be appreciated and assisted by the Federal Republic of Germany. Now that the fourth Plan's schemes and projects are under discussion and formulation, the planners would do well to pursue Dr. Drath's suggestions, although these are "non-official" for the present. In any case, careful consideration of the question posed by him seems to be necessary in the interest of reaching the fourth Plan target for flat products.

ANOTHER DOSE OF SPURIOUS ELEMENT

The Government of India has decided to set up a special price fluctuation fund to meet the losses of the co-operative societies which they may suffer due to the outright purchases of agricultural produce. The fund will be operated by the State apex co-operative marketing societies. The scheme will be made applicable to 200 co-operative marketing societies during the current fiscal year and to 300 more societies in the next year. It was recommended by the State Ministers of Co-operation who considered the impact of fluctuation in agricultural prices on co-operative marketing in their conferences held in 1961 and 1963.

The contributions to the fund will be from the State apex co-operative marketing society, the selected co-operative marketing societies and the Government. Whereas the State apex co-operative marketing society and the marketing societies selected under the scheme will set apart 10 per cent of their net profits every year for this purpose, the Government will contribute an amount equivalent to two per cent of the outright purchases of agricultural produce made by the selected marketing societies at different levels in the previous year, subject to a maximum limit of Rs. 20,000 for each primary marketing society, Rs. 1,00,000 for regional or apex marketing society, and Rs. 2,50,000 for the national federation.

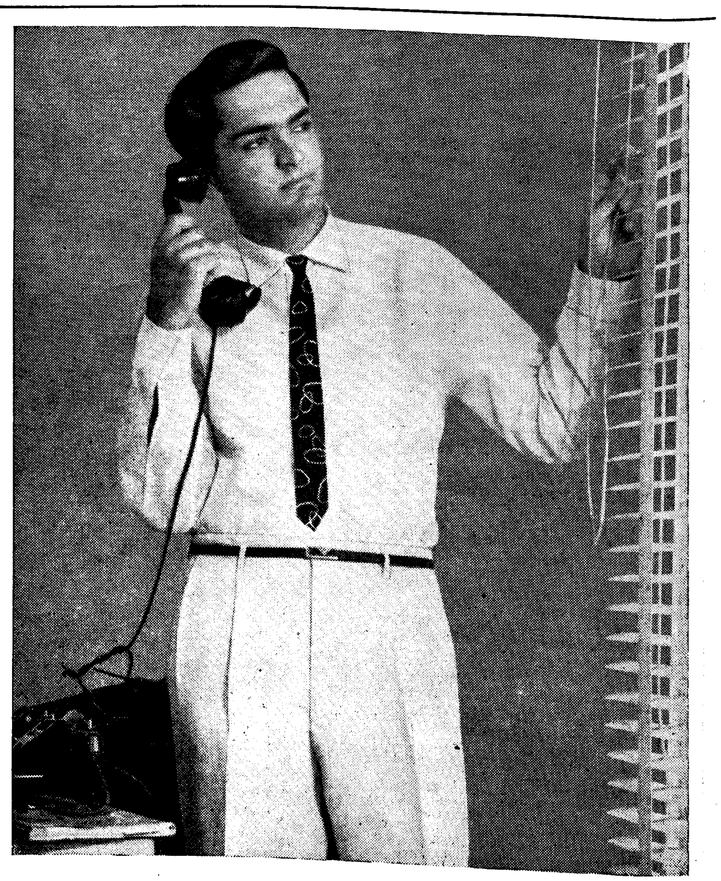
The outright purchases of agricultural produce will be made only from growers who are members of a marketing society or a service society in the area of operation of the marketing society. Each selected marketing society will fix a limit of outright purchases from an individual grower during one year, subject to a maximum of Rs. 750; and, as far as possible, purchases will be made after the produce is properly graded. The purchases made by societies on behalf of the Government and Government-nominated agencies like the State Trading Corporation will not be covered by the scheme. Commodities like sugarcane for which guaranteed prices have been fixed by the Government will also not be covered.

A part of the payment will be made by the apex society immediately after the loss and the balance payment will be made after going through the audited accounts and after the apex society satisfies itself that the loss is not due to any neglect on the part of the society or any reason other than fluctuation in price.

It seems that the food shortage and rising prices in the country have so much unnerved the Government that it has lost all balance of judgement. The present scheme is one of the examples of the failure of the Government to evolve some sound measures to solve the problem. On the face of it, the scheme suggests that the co-operative societies will be responsible for meeting a substantial portion of their loss by their own resources. But, as has been revealed by the Reserve Bank, a large number of the co-operative societies are running at a loss and many others are not able to make any noticeable profit. Thus, the clause implying contribution of 10 per cent of the profits of the co-operative societies to the fund will, for all practical purposes, remain only on paper and the entire burden will be borne by the exchequer.

The grading of the produce will present one of the most formidable problems. The scheme is silent whether the society will make purchases in the growers' village or in the marketing centres. In case the purchases are made in the village, it will be almost impossible to provide proper grading facilities in all the villages covered by the scheme. If the purchases are made in the market centres, the very idea of co-operative operations is lost, as the grower will have to go in that case through almost all the formalities and difficulties which he faces now in selling his crop. Even otherwise, as the total purchases from a grower in any particular year are not allowed to exceed Rs. 750, which may be the value of not one commodity but a number of items grown by him, the grading of a large number of very small lots will create its own problems even in the markets. Thus, the clause "as far as possible, purchases would be made after the produce is properly graded" will also remain in cold storage. Further, who is there to check the co-operator and see that he does not pocket something for himself by artificially inflating the losses? This type of corruption is alleged to be already widespread in many of the marketing societies, especially those pertaining to handloom weavers. The scheme also does not give any information about the customers to whom the marketing society will sell the produce. In the absence of any check on these dealings, there is every likelihood that this will be the second stage where the co-operator will get his share of profit by collusion with the buyers.

The Government has recently appointed a committee to weed out the spurious co-operative societies. It has been recognised that private profit on the part of co-operators is the main motive encouraging the entry of spurious elements in the co-operative movement. Whereas the need is to curb this motive, the Government is injecting into the society another dose of it. Honesty will be the first casualty and efficiency the second and the result will be a substantial increase in the number of corrupt societies.



COOL COMFORTABLE LIVING

WORLD BANK AND ITS AFFILIATES

CREDITS PROVIDED LARGER—TERMS LIBERALISED

THE International Bank for Reconstruction and Development (I.B.R.D. or World Bank, for short) has completed in June this year, eighteen years of its successful and useful operations and has entered the nineteenth year of working. Born at a time full of destitution left by the most destructive war in history, it has contributed much during these eighteen years to the striking economic progress that has taken place in most parts of the world, with the rising hope that its assistance to the pursuits of development and peace will continue undiminished in the coming years. Started with only member-Governments' capital to lend, the Bank now depends on private sources for a large portion of the funds needed for giving loans. Even of the capital provided by member-Governments, it was only the contribution of the U.S. Government and loans provided by the U.S. banks and other financial institutions that were readily available for the use of the Bank. Today, the Bank is able to use the capital subscribed by many of its member-countries, and has been borrowing funds from investors throughout the developed countries of the free world. First regarded only as a source of loans, today the Bank is also often looked to by its members as a source of advice on many different aspects of economic development. In the beginning the Bank was preoccupied with the emergency of reconstruction in the war-torn countries in Europe, but it was soon relieved of this task by the introduction of Marshall Plan. It could, therefore, quickly take up its task of providing long-term assistance to the economic development of its member-countries, particularly in the underdeveloped regions. Accordingly, over three-fourths of total loans and credits have been made available for the growth of the economies in the developing countries of Africa, Asia, Middle East and Central and South America.

Active and Introspective Year

The year 1963-64 was a very active year for the World Bank and its affiliated institutions, namely, the International Development Association (I.D.A.) and the International Finance Corporation (I.F.C.). For the second year in the history of the Bank, economic development commitments by all these three lenders exceeded thousand million dollars in loans, credits and investments. Of this total, the World Bank's loans at $810 million and investments by I.F.C. at $21 million were almost equal to the highest figures recorded in their history, while I.D.A. created a new record in its assistance, with development credits amounting to $283 million. The past year was also an introspective year for the institutions. In order to achieve the aims of tackling the problems of economic development more effectively, the Bank and its affiliates thought of broadening and diversifying their roles, by providing finance in increasingly flexible ways, furnishing technical and planning assistance to member-countries, building up local institutions to mobilise and channel capital for productive purposes and forming international consultative groups to co-ordinate the provision of external aid. In these ways the Bank and its affiliates have improved the effectiveness of their activities.

The Bank has decided to lay special stress on the development of agriculture and industries in the developing countries and to make large efforts in the field of education in these countries. It is being felt that as agriculture is the chief economic activity in the developing countries, a faster growth in this field is the basic requirement for their economic development. Experience in the past decade has shown that, unless more attention is paid to this sector, the increase in output may hardly be sufficient to take care of even the growth of population in these countries. As against a slow pace of growth in agricultural production in most of the developing countries, there has been a rapid growth in industrial production and additional encouragement in this field may result in highly beneficial results. But the growth of agriculture and industrial development alike depends in a large measure on the availability of educated, managerial and technical personnel and an increase in their availability is one of the important prerequisites for economic growth. Accordingly, the Bank has decided to provide a larger measure of stimulation and guidance in the fields of education, agriculture, and industry. It worked out co-operation agreements during the year with the United Nations Food and Agriculture Organisation (F.A.O.) and the United Nations Educational, Scientific and Cultural Organisation (U.N.E.S.C.O.) to help Governments of the member-countries in identifying and preparing projects for financing by the Bank or I.D.A. and to help in their appraisal.

Articles to be Amended

In order to provide greater impetus to industrial growth, it is proposed to amend the Articles of Agreement of the Bank and the I.F.C. to make it possible for the Bank to lend money to the Corporation for re-lending to private industry in the developing countries. Whereas the Bank itself is not authorised to lend directly to private companies except with a guarantee by the host Government, which private entrepreneurs often hesitate to seek or accept and Governments are often reluctant to grant, the Corporation does not seek any such guarantee. Specifically, the proposal is to empower I.F.C. to borrow from the Bank not more than four times its capital and surplus; currently, these aggregate $119.21 million. Four times this amount will mean additional resources of about $480 million or a total of nearly $600 million. As again t this, the I.F.C.'s total commitments so far are $111 million. Thus, if the proposal is approved at the current annual meeting at Tokyo, the I.F.C. have access to substantial additional resources for increasing its present activities and to make loans to private industrial enterprises with no equity features in appropriate cases.

The Bank has also decided to advance industrial credits of unconventional types, as, for instance, loans for maintenance imports. One such credit was made during the year by I.D.A. to India. This was not tied to a particular project; instead it was offered to a group of manufacturers in capital goods industries to make fuller use of their already existing capacity by importing components and materials which would not have been possible otherwise due to scarcity of foreign exchange. Further, the Bank has liberalised repayment terms to some extent in certain cases. One such liberalisation was the extension of the grace period, the period before the borrower must start amortisation payments; Liberia got this benefit. Another was the lengthening of the period of repayment; a loan to Columbia this year permitted repayment over a period of 35 years, as against a maximum of 25 years hitherto.

All this, however, does not mean that there has been change in the basic directions of the activities of the Bank or I.D.A. Their primary concern will continue to be the basic projects, especially those related to transportation and electric power, which require huge amounts of capital and have a more widespread and lasting effect on the economy. As will be seen from Table A, of the total Bank loans and I.D.A. credits amounting to $8,532 million by the end of June 1964, transportation accounted for 34 per cent and the generation and distribution of electric power 32 per cent. In other words, two-thirds of the total loans sanctioned were for these two activities. Industry was the next in importance with 15 per cent, and agriculture fourth with 8 per cent. The share of education projects was, however, negligible with less than one per cent. But it is expected that, during the coming years, there will be an improvement in the share of industries and that for agriculture and education projects will rise to a more respectable digit. In fact, in the year 1963-64 itself, the I.D.A. had provided three loans for education, as against only one till then.

Besides purposewise, Table A also gives a regionwise picture of the operations of the Bank and I.D.A. It will be seen that Asia and the Middle East have been by far the largest beneficiaries, accounting for 38 per cent of the total of Bank loans and I.D.A. credit. The other regions in the order of importance are: Western Hemisphere 24 per cent, Europe 20 per cent, Africa 12 per cent and Australasia 6 per cent. The reason for the largest allocation to Asia and Middle East is the awareness on the part of the World Bank authorities of the greatest poverty and the highest pressure of population in this region.

Table A: *I.B.R.D. Loans and I.D.A. Credits*
Cumulative Total on 30th June, 1964.

Post-war reconstruction	496.8	..	..	..	496.8	..

was partly due to the liquid position of the Bank and a decline of over $27 million in its funded debt. The total of these debts as at the end of June last is $2,491.84 million, of which no less than $1,884.64 million is due to investors in the U.S. Then come the investors in West Germany, their share in the obligations of the Bank being $275 million, followed by Switzerland $182.12 million, the U.K. $48.85 million, the Netherlands $38.27 million, Canada $28.97 million, Italy $24 million and Belgium $10 million.

A sum of $33 million which was earned by the Bank as loans commission, exclusive of the incomes mentioned above, was transferred to Special Reserve, increasing that to $288 million. Out of the total net income of $97 million, $47 million was transferred to Supplemental Reserve, raising it to $605 million. Thus, the total reserve improved by $80 million to $893 million. It is proposed to transfer the balance of $50 million of the net income to I.D.A. as a grant and thereby strengthen the resources position of this institution.

The membership of the Bank and the capital subscription continued to rise rapidly. During the year, seventeen new countries joined the Bank, bringing the total membership to 102. Both because of the rise in membership and the increase in subscriptions of some members, the subscribed capital increased from $20,730 million in 1962-63 to $21,186 million.

It may thus be seen that the Bank improved its financial strength considerably during the year. In view of this improvement the Bank took certain decisions and initiated some steps to make new and sometimes easier types of loans, relaxing the terms and conditions of loans and paving the way for increased operations by its two affiliates which can offer assistance on easier terms than the Bank itself. It has been found that in the case of many borrowing countries the debt service has risen much faster than the increase in export earnings, mainly due to the heavy concentration of maturities in short period. In view of these difficulties the Bank has become receptive to requests for loans with a longer period of repayments and extended grace period. The annual commitment charge of ¾ per cent on the undisbursed part of Bank loans has been reduced to ¾ per cent with effect from the start of the current fiscal year, and the reduction will apply to existing as well as new loans. It may be noted that the undisbursed portion liable for the commitment charge is presently over $1,500 million and the reduction in the rate of this charge will provide considerable help to the borrowing countries. In order to free more of Bank's income for its general operations. It has been decided that, with minor exceptions, all the income from loan charges will be considered as part of the regular income and the heretofore policy of treating a portion of loan charges, equivalent to one per cent per annum of the disbursed and outstanding loans held by the Bank, as loans commission and its automatic allocation to Special Reserve is no longer necessary. Similarly, it has also been decided to stop the automatic allocation of Bank's net income to the Supplemental Reserve Against Losses on Loans and Guarantees, as the finanical position of the Bank has become strong enough. In future the allocations to reserves, if any, will be decided whenever such use of income is considered necessary.

International Development Association

The chief aim of I.D.A. is to provide long-term credit at low cost and on easy repayment to the developing countries. Generally speaking, the terms of its credits are: No principal repayments are to be made for the first ten years; thereafter one per cent per annum is repayable in the next ten years and three per cent per annum in the final thirty years. The credits are free of interest but a service charge of ¾ per cent per annum is payable on the amounts withdrawn and outstanding in order to meet the administrative costs of the I.D.A. During the year 1963-64, new I.D.A. credits amounted to $283 million—as compared with $260 million in the previous year—bringing the cumulative commitments to $778 million. The disbursements were higher by $68 million at $124 million, bringing the cumulative total to $193 million. Of the total commitments of $778 million, the main beneficiaries have been India and Pakistan, getting allocations of $390 million and $179 million respectively. All the other twenty beneficiaries got allocations of less than $30 million each. The seventeen countries which became members of the World Bank during the year also became members of I.D.A. and the total initial subscription of all members rose to $987 million, as against $969 million at the end of 1962-63. The capital of I.D.A. is contributed mainly by the developed countries.

It was proposed by the Executive Directors in 1963 that the resources of the I.D.A. might be increased by $750 million by way of contributions from seventeen Governments of developed countries, fifteen of which were already members, and Belgium and Luxembourg had indicated their intention of joining. The amount also included the initial subscription of $8.6 million from these two countries. It was proposed that no country's agreement to contribute would become binding until twelve countries with prospective contributions, of at least $600 million had notified their consent to provide the proposed amount. This condition was met on 29th June 1964 and came as a great relief, as, by that time, the I.D.A. had committed almost all of the $782 million of resources available with it. With the commitment of $5 million from Sweden over and above its participation in general replenishment, the decision of Kuwait to make a replenishment contribution of $3 million, the carry forward of uncommitted funds of $4 million and the $50 million likely to become available in the form of grant from the World Bank, as already referred to, the I.D.A. will have over $800 million for new commitments in the period subsequent to the 30th June 1964. This will, however, not be adequate in order to meet the large demand for soft loans, especially as the repayments will be negligible for a considerably long period. There is as such great need for further augmenting the resources of I.D.A.

International Finance Corporation

The I.F.C., which was established in July 1965 as an affiliated institute to the World Bank, has completed eight years of its working. The purpose of the Corporation is to further economic development in the less-developed member-countries by investing—without Government guarantee—in productive private enterprises, both in the form of subscription to equity share capital and loans. The Corporation's commitments during the year amounted to $21 million, of which $12 million was in the form of subscription to share capital and $9 million in loans. The cumulative total of commitments at the end of the year amounted to $111 million. The major beneficiaries, in order of importance, each getting more than $5 million upto the close of the year, have been Brazil, Argentina, Columbia, India, Mexico, Peru, Chile and Pakistan. The disbursements in 1963-64 amounted to $15.6 million, bringing the cumulative total to $76.5 million.

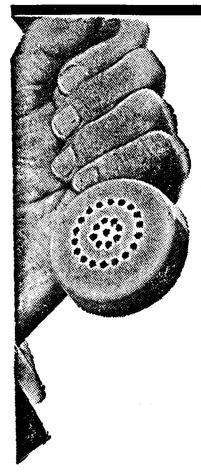
Five countries joined the I.F.C. during the year, raising its membership to 78 and subscriptions to $99 million. The financial position of the Corporation and the funds available for operational activities are shown in Table B.

Table B: *Funds Available*
(Million $)

Items	1962-63		1963-64	
	During year	Cumulative	During year	Cumulative
Capital	1.7	98.2	0.8	99.0
Net earnings	3.2	16.1	2.9	18.9
Profits on sales of investments	0.4	0.9	0.4	1.3
Repayments on investments	2.9	3.7	2.3	6.0
Sale of investments	6.7	16.9	5.5	22.4
Acquisition by others of securities covered by underwriting commitments	2.8	2.9	4.5	7.4
Total funds available	17.7	138.6	16.4	155.0
Net commitments made (after cancellations)	17.2	82.8	20.3	103.1
Balance available	0.5	55.8	—3.9	51.9

It will be seen from the said table that the increase in the availability of funds during the year has not been sufficient to meet the commitments and there was a net decline of $3.9 million in the balance available for operations. There is thus an urgent need for providing additional funds to the Corporation, especially because the value of the service rendered by the Corporation is being increasingly appreciated in the developing countries where the private sector has an expanding role. It is in this context the proposal to amend the charter of the World Bank referred to at the outset has to be seen.

Although lending of money continues to be the main activity of the World Bank, there are many other activities which play an important



"I am thinking of making a business trip to Australia and New Zealand"

part in the economic development of the member-countries. The Bank, for instance, helps the countries to formulate development programmes by sending general survey missions to make an inventory of economic resources, to analyse the needs and problems and sketch the general lines of development. In order to help remedy the lack of project planning in a good number of small developing countries, the Bank is taking and intensifying measures to assist its members in the preparation of projects. The Bank maintains an Economic Development Institute which helps improve the quality of projects in developing countries. The Institute also publishes from time to time literature on economic development. In co-operation with the Indian Institute of Management, Calcutta, the Institute has arranged for a course in project evaluation in India. The Bank is currently working on a proposal to establish a centre for the conciliation or arbitration of investment disputes arising between foreign investors and Governments. When the proposal materialises, it will create an element of mutual confidence which will contribute to a healthier investment climate and a larger flow of international private capital. Thus, the activities of the World Bank in the growth of developing countries are varied and, over the years, it has become perhaps the most important international organ to help to initiate and implement the development projects in the less developed countries of the world.

India and the World Bank

India has been the topmost beneficiary of the loans and credits, as well as of advice, provided by the World Bank and its affiliates and many of the existing large projects in the country came into existence only because of this aid. The Bank's first loan in Asia was made to India in 1949, and since then, of the total commitments made by the Bank upto June 1964, as much as 11 per cent forms the share of this country. In the case of I.F.C., India accounts for only ten per cent of the total commitments, but in the case of I.D.A. the figure is as high as over 50 per cent. It is because of the importance which the World Bank attaches to the development of this country that the Bank maintains a Resident Representative in New Delhi. It was chiefly due to the initiative of the Bank that the Consortium on Aid to India was established, which meets every year under the Chairmanship of the World Bank to consider the problems and needs for finance for the development of the country. During 1963-64, two meetings of the Consortium were held in which aid amounting to $2,070 million was pledged to the country—the share of World Bank and I.D.A. being $490 million. The I.D.A. sanctioned a loan of $90 million during the year—almost one-third of the total commitments in the year—for the import of components and materials. The I.F.C. also made commitments amounting to $6 million—equivalent to 30 per cent of its total commitments for the year—to help three Indian private companies (Lakshmi Machine Works, Mahindra Ugine Steel, and Fort Gloster Industries) by way of share capital and loans. The World Bank has thus become a highly valuable institution for this country both to give direct help and to secure aid from other countries.

JAPANESE CREDIT TO INDIA

The Export-Import Bank of Japan, together with private Japanese banks, will make available to the Government of India a credit of 21.6 billion yen for India's third Plan under an agreement signed recently between the Governments of the two countries. The credit will be used for further financing of Gorakhpur fertiliser factory, Gujarat State fertiliser factory and Durgapur alloy and tool steel plant and other projects, as well as for financing maintenance imports. Out of the total credit, 14.4 billion yen ($40 million) will be repayable in 15 years, including a grace period of five years, the remaining 7.2 billion yen ($20 million) being payable in 18 years, including a grace period of five years. The procedures for utilisation of the credit will be similar to those followed in the previous yen credits.

CO-OPERATIVE CREDIT FOR AGRICULTURAL PURPOSES

There has been a substantial increase in loans disbursed by co-operatives for agricultural purposes. Short-term and medium-term agricultural credit disbursed by co-operatives in 1962-63 amounted to Rs. 252 crores, as against Rs. 50 crores in 1955-56. Co-operatives in the States of Maharashtra, Uttar Pradesh, Gujarat, Andhra Pradesh, Madras and Punjab accounted for 70 per cent of the Rs. 252 crores. Short-term and medium-term credit disbursed by co-operatives in 1963-64 is estimated at about Rs. 290 crores. This is likely to go up to about Rs. 400 crores in 1965-66. According to a recent survey, co-operatives met 22 per cent of the total borrowings of cultivating families. At the end of 1962-63, credit and service co-operatives had covered, according to this survey, 81 per cent of villages. Of the 69 million rural households, about 25 millions had been covered by primary credit, service and multi-purpose societies.

As regards long-term credit, loans outstanding at the end of 1962-63 amounted to Rs. 68 crores, as against Rs 13 crores at the end of 1955-56. There has been a rise in the percentage of overdues over the last three years. They increased to 26 per cent in 1962-63, as against 20 per cent in 1960-61.

Considerable stress has been laid in the past on linking credit with marketing and with production programmes. Greater attention is now being paid, says the survey, to the strengthening of co-operative marketing societies. A scheme for building up a Price Fluctuation Fund for marketing societies has also been finalised with the object of assisting selected societies to go in for outright purchases of agricultural produce. In order to further strengthen the co-operative credit structure, particularly in areas of intensive cultivation, a detailed action programme is being implemented by State Governments for augmenting deposits, increasing share capital, further liberalising loaning policies, etc., so as to increase the flow of credit for agricultural production.

JAPANESE FOREIGN CURRENCY RESERVE FUND SYSTEM

The Japanese Ministry of Finance has recently announced the revision of its foreign currency reserve system by which the induction of short-term foreign money by Japanese exchange banks can be checked appropriately, as occasion demands and the conducting of sound foreign exchange business by banks can be ensured. At the same time, the revision aims at stabilising the flow of short-term foreign capital and maintaining the nation's international financial stature by improving the liquidity of foreign currency reserve assets held by banks in this country.

Under the revised system, which is reinforced as from 1st August 1964, the Japanese authorised foreign exchange banks are required to hold 25 per cent uniformly as based on the monthly average registered in July, of their short-term foreign currency obligations (including foreign currency deposits such as Euro-dollars, call money, clean loans received from foreign banks, and non-resident free yen accounts) as the minimum reserves in the form of liquid foreign currency asstes; for instance, cash, deposit money, call loans and foreign government securities. And for any amount exceeding the average balance, the banks are required to hold 35 per cent of the surplus in foreign government securities which have not been offered as mortgage.

I.F.C. COMMITMENT IN ARGENTINA

The International Finance Corporation has agreed to assist La Papelera Argentina, S.A., one of the largest paper producers in Argentina in financing the completion of a $24 million programme for modernising and improving the Company's paper plant, and expanding its annual capacity from 55,000 to 75,000 tons. The I.F.C. will lend $2.5 million and will receive the right to subscribe to 2.8 million common "Class B" shares of the Company. Other financing for the last phase of the project has been provided by the shareholders, who have subscribed $4.3 million, and by retained earnings amounting to $1 million. About $16 million had previously been provided for the expansion programme by the shareholders, from retained earnings, and from borrowings.

This is the I.F.C.'s fourth investment in Argentina, and will raise the Corporation's total commitments, in Argentine enterprises to $10.7 million.

MANCHESTER LETTER

U.K.-SINGAPORE TEXTILE ISSUE
GLOBAL IMPORT QUOTA SYSTEM FAVOURED

From Our Special Correspondent

MANCHESTER, *1st September*

THE line taken by the authorities in Singapore in banning the entry of certain British products and introducing strict licensing on others in retaliation for the restrictions placed on arrivals of cloth and garments into Britain is undoubtedly being closely watched in many other countries. So far, from Lancashire's viewpoint, there has been a gratifying response from sources which have not always recognised the justification of the case presented by the local industry for safeguards against the type of unrestricted competition which has steadily grown in the past decade. At long last, it seems that the substantial proportion of foreign goods entering the home market has been noted and appreciated.

Informed comment has, indeed, been outspoken in condemning the unilateral action adopted in Malaysia. The fact that Commonwealth ties are involved does not make a solution any easier, but the prospect of a showdown is certainly welcomed in Lancashire after so many years of apparent indecision in high quarters.

Threats Become Reality

Tactics such as those now being used in the Far East have frequently been threatened in the past, chiefly by negotiators in Hong Kong, whose position is somewhat less tenable as being a Crown Colony. In any case, it would be surprising if the British Government allowed itself to be browbeaten on such an issue, despite the importance of trade with a developing area within the Commonwealth.

Nevertheless, the facts have been clearly stated in numerous documents ever since the sudden change in policy when the so-called "ring fence" was erected as a means of stopping further inroads being made by foreign competitors whether within the Commonwealth or not. In the first place, the long-term cotton agreement, negotiated under the auspices of G.A.T.T., laid it down categorically that Britain alone among the traditional cotton textile manufacturing areas deserved special consideration in assessing the increasing volume of trade which should be available for the developing countries.

After further extensive prodding, the Government accepted Lancashire's strongly held view that the policy of taking action to restrict imports after their arrival was unrealistic, as it opened the door for every pioneering textile nation to establish a foothold within Britain's home market. On this particular point, the current crisis has flared up. In spite of repeated warnings, many of the newly emergent countries still seem to presume that their fledgling textile mills should be given scope to progress through the disposal of surplus exports to Britain.

Control by Licence

What they have failed to recognise is that the latest regulations give authority to the Government to place a ban on business before actual shipments are made. The licensing procedure now in operation enables the flow of forward orders to be kept under control; once it reaches a point where the Board of Trade and the Cotton Board consider subsequent arrivals will constitute a disruptive threat to home producers, an immediate standstill can be introduced merely by refusing to license further contracts.

The question of retaliation by economic pressures is always surrounded by emotional and often illogical patterns. So many overlapping factors arise in the present circumstances that it is difficult to judge the issue without prejudice. The position of the three major Commonwealth suppliers—India, Pakistan and Hong Kong—has a definite bearing on the way in which the present dispute is handled. At the same time, other areas will, in due course, wish to state their claim for consideration, a fair enough request is couched in reasonable terms.

Global Quota

All of which justifies the plan only lately submitted to the Government by the Cotton Board for the introduction of a global quota for the developing countries with whom no existing bilateral agreement has been drawn up. In its document on imports submitted to the Board of Trade, the Cotton Board offered as a negotiating concession a 25 per cent share of any increase in U.K. consumption of cotton manufactured goods being offered to exporters for division among countries covered by bilateral agreements and those subject to the global quota.

Complicating the immediate issue with Malaysia, however, is the usual absence of detail about the origin of the cloths and garments now the subject of import licensing. It has been alleged that a major proportion of the supplies are in fact emanating from Hong Kong, in the shape of either grey and finished cloth or made-up clothing. It is believed that only a handful of weaving firms are based on Singapore itself.

The licensing authorities must be vigilant in guarding against such methods of dispatching goods in a round-about way. Often enough they have a difficult task to perform in securing adequate information about the origins of particular goods, but powers recently taken enable a tighter grip to be maintained on the entry of suspect materials.

Peak Arrivals Exceeded

For the fourth month in succession, arrivals of cotton goods exceeded 70 million yards in July, bringing the aggregate imports to the highest level yet recorded. In the first seven months of 1964, the shipments from abroad amounted to 487,602,000 yards, as against the previous peak of 476,826,000 yards in the comparable period of 1961.

Unless some radical change in the situation occurs during the rest of the year, imports may well approach a volume of 850 million yards—over 100 million yards more than has ever been taken from abroad before. The cost of these purchases so far has been fractionally less than in 1961, but still involves expenditure of £40 million.

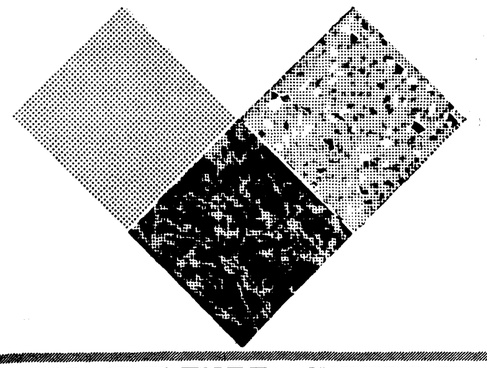
Mostly Grey Cloth

The major proportion of the larger imports has been in grey cloth, which accounted for 387,649,000 yards to the end of July, as against 290,041,000 yards in the same period last year. Of this extra 100 million yards or so, India has supplied an additional 60 million yards, with 164,305,000 yards, as against 102,703,000 yards.

Smaller quantities were shipped from Pakistan and Hong Kong at 35,964,000 yards (39,616,000 yards) and 44,272,000 yards (53,868,000 yards), respectively. China's share has increased from 23,013,000 yards to 34,377,000 yards and the undesignated foreign countries from 13,860,000 yards to 40,327,000 yards.

Supplies of finished cotton cloth imported during the seven months increased from 88,688,000 yards to 99,953,000 yards. The only big variation in the sources from which these goods were obtained was the marked rise in purchases from India, which more than doubled on the 1963 level from 7,550,000 yards to 16,476,000 yards. On the other hand, shipments from Hong Kong were nearly 4 million yards lower at 14,438,000 yards.

As a footnote to the import danger, it should be observed that arrivals of man-made fibre goods are steadily increasing too. Supplies of yarn from abroad this year have aggregated 15,872,000 lbs., as against 8,595,000 lbs., while purchases of cloth have risen from 34,627,000 yards to 53,115,000 yards.



GREATER STYLE
with new
VYNATILE
WONDERFUL PLASTIC TILES FOR FLOORS!

There's nothing like VYNATILE—the unique new floor covering! Strong, flexible and beautiful, VYNATILE does wonders for rooms—looks distinctive on any floor. Ideally suited to offices, shops, restaurants, showrooms, banks, theatres, homes and hospitals!

Choose VYNATILE in 180 cms x 90 cms sheets, in thicknesses of 1.5 mm. or 2 mm. Or ask for it in any economical size. Better still, take it as tiles to fit into your scheme of things!

VYNATILE...better in so many ways!

- So durable. Won't rot, crack, break or scratch!
- Can be used on any surface!
- Superbly finished. In 28 attractive colours and patterns!
- Can be wiped clean in seconds!
- Professionally laid to last for years!

BI-BL-4

FREE WORLD COTTON SUPPLY POSITION

PRODUCTION PROSPECTS PROMISING

IT looks as though the free world cotton supply position in the current (1964-65) season, which began on the 1st of last month, will be quite comfortable. Although the total estimated production of 36.8 million bales (of 478 lbs. net each) is slightly lower than that harvested in the previous season (1963-64), namely, 37.1 million bales, the actual available supply is expected to be larger: 59.0 million bales, as against 57.8 million bales. The anticipated improvement in cotton supply position is attributed to the marked increase in opening stocks which as on 1st August 1964 amounted to 22.2 million bales, as against 20.7 million bales on the corresponding date last year and 17.2 million bales two years ago. This, in brief, is the overall cotton supply position as lately assessed by the International Cotton Advisory Committee, Washington. A detailed analysis of the production prospects made by the Committee reveals a decline of half a million bales from the last season's level in the U.S. crop and a fall in output in certain other countries, notably Spain, Greece and Pakistan. But these declines will be made good to a considerable extent by rise in output in the rest of the world, so much so that the total production, as already stated, will be only slightly lower.

United States

In the U.S.A., there is the possibility of a better balance between supply and demand, as the official estimates in that country anticipate a substantial increase in total disappearance during 1964-65. A large increase in domestic consumption is predicted and it is expected that this will more than offset any anticipated decline in exports and places total disappearance on par with the current crop forecasts. If these

Free World Cotton Situation
(In million bales of 478 lbs. each)

	1964-65	1963-64	1962-63
Stocks, 1st August	22.2	20.7	17.2
Of which :			
United States	12.4	11.2	7.8
Other net exporters ..	3.3	3.7	3.9
Elsewhere	6.5	5.8	5.5
Production	36.8	37.1	36.8
Of which :			
United States	14.8	15.3	14.9
Elsewhere	22.0	21.8	21.9
Total supply ..	59.0	57.8	54.0

estimates prove correct, there will be little or no change in stocks in the U.S. at the end of the current season, though the carryover will continue at a relatively high level. The total area planted to cotton this year is estimated at 14.7 million acres. The cotton legislation passed in April last had very little effect on the area planted. With per-acre yield of 506 pounds, the production is estimated at 14.8 million bales which shows a decrease of 3.5 per cent from the actual output of 15.2 million bales in 1963-64. The crop is reported to have made good progress in most areas, but heavy July rains have caused some damage in Georgia and Alabama and insect population is increasing there. Some areas of Mississippi river delta have continued dry and plants are small, but well fruited and insects are well under control. The severe drought in North-west Texas and South Oklahoma has materially limited plant growth and fruiting of dryland cotton. In Central Texas, too, drought has reduced the prospects of good yields. The crop in the west, however, has made good progress during June and July last and larger yields are indicated. In California, a new record yield is expected. The carryover stock of cotton in the U.S. as on 1st August 1964 is put at 12.4 million bales which together with the production of 14.8 million bales, gives a total supply (during the 1964-65 season) of 27.2 million bales, the highest level since 1956-57. Disappearance during the current season is estimated by the U.S. Department of Agriculture at 14.8 million bales.

Mexico

Cotton production in Mexico is expected to exceed last season's level. The latest estimate is 2.2 million bales, as compared with 2.1 million bales in 1963-64. But this is still short of the crop of 2.4 million bales raised in 1962-63. Shifting to other crops due to shortage of irrigation water in Matamoros has been cited as a reason for the decline in production in that region. In the Delicias area also, similar conditions prevail and shifting to other crops is reported. This decline in acreage has, however, been more than offset by significant increases in acreage in Laguna, Sinaloa and Altamira. The total acreage estimated at 1.9 million acres, is slightly larger than in the previous season. Some improvement in total production is also anticipated as a result of the shift of considerable acreage to higher yielding varieties. Similarly, in Central America, cotton acreage continues to expand, though the rate of increase during the current season is expected to be more moderate than in recent years. In El Salvador, there has been an increase of 2.5 per cent in acreage. In Guatemala, new lands continue to be brought under cotton cultivation, though the increase in the current season is relatively less than during other recent years. In Nicaragua, the reported success of mechanical harvesting may provide the basis for a continued sizable expansion during the current season.

West Asia

The estimates prepared by the United Arab Republic Ministry of Agriculture place the total area under cotton in the 1964-65 season at 1.7 million acres, one per cent less than in 1963-64; it is the smallest acreage since 1954-55. Though the acreage of extra-long staples is slightly less than in the previous season, production is expected to increase because of the shift from the lower yielding Karnak variety to the higher yielding Menoufi variety. There has also been an increase in the acreage planted to Giza 45 and Giza 47, but the area planted to Deudera declined. The crop to date is progressing well and pest attacks have been well controlled with little plant damage reported. In the other Middle Eastern countries, there are indications that cotton acreage during the 1964-65 season is expected to recover to about 1962-63 level which had witnessed a setback because of adverse weather. In Turkey, late spring rains at planting time were favourable and it is estimated that about 1.65 million acres have been planted, an increase of five per cent over the last season when heavy rains and flood hampered normal planting. In the Aegean area, some shifting to the higher yielding cotton 100A variety has been in evidence. Shortage of water, however, may not allow production to increase in proportion to the larger acreage. In Syria, there is a three per cent increase in acreage over the 1963-64 level. The crop is developing well and, with sufficient water supplies and adequate insect control, yields could exceed last year's favourable level. Present indications are for a crop of 740,000 bales this season, as compared with 705,000 bales last year. In Iran, the production prospects have been marred due to drought in northern districts. According to trade reports, the 1964-65 crop may be well below last season's 530,000 bales, the shortfall being about 20 per cent.

India and Pakistan

As for India, if favourable conditions continue to prevail, there is, according to the Committee, reasonable ground for anticipating a crop roughly equal to the last season's record of 5,215,000 bales (of 478 lbs. net each). The area planted to cotton in this country is expected to be about in line with the last season, namely, 20 million acres and intensive cultivation methods are being encouraged to improve average yield.

Tentative estimates of acreage plant to cotton in Pakistan are about the same as in 1963-64, namely, 3.7 million acres. Production prospects in the N.T. variety zone have been affected by heavy rains which, it is said, have damaged 40 per cent of the crop in that region. As a result, production of the N.T. variety is expected to be lower than last year's production by 20 per cent. In other zones, the damage has been negligible and the overall crop is reported to be progressing satisfactorily at present. It, however, does not appear that yield per acre will reach last season's record level and total production will probably be slightly less than the 1.9 million bales produced last season.

Africa

African countries are showing indications of an increase in cotton production in the current season. The United Republic of Tanganyika and Zanzibar has issued increased quantities of planting seed to farmers which indicate an increase in cotton area of about 5 to 10 per cent, as cotton has become a cash crop there. While it is too early to determine yield potential accurately, the lack of rain in the lake areas since the beginning of May last has had a damaging effect. On balance, production will probably increase less than planted acreage, though a new record outturn may be forthcoming. In Uganda, the weather during June last was ideal for cotton planting in most of the zones. The demand for cotton seed was good and planting progressed in all areas. The preliminary estimates of planted area at the end of the month indicate that planting was about 50 per cent ahead of last season at that time. Planting was especially well advanced in the eastern region and crop prospects are reported to be good there. In Sudan, the acreage potential has been reached for the time being and the Gezira Board's draft budget for 1964-65 indicates that no significant change is expected in acreage from last year. There are variations

Cotton Yield Per Acre
(In pounds)

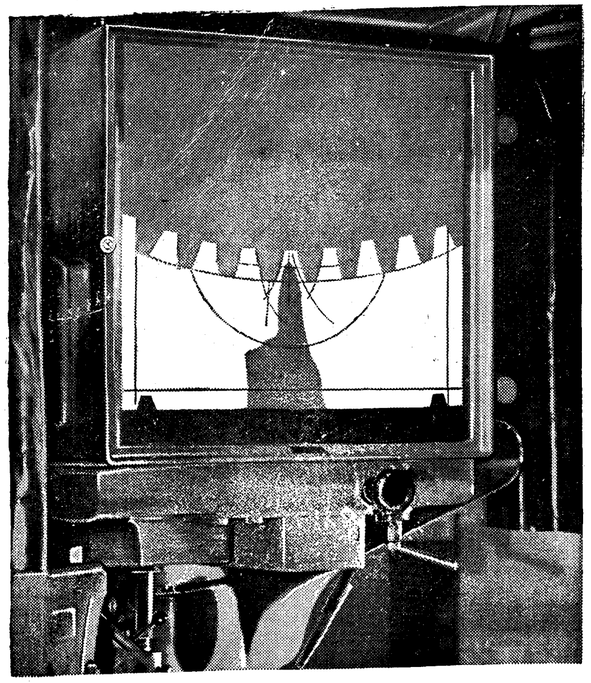
	1963-64	1962-63
Central America	634	681
U.A.R.	576	586
Mexico	517	560
United States	516	457
Syria	467	441
Peru	447	447
Columbia	403	398
Turkey	365	308
Greece	360	388
Spain	328	282
Iran	253	203
Pakistan	253	237
Sudan	209	320
Brazil	175	196
Argentina	159	229
India	127	124
Uganda	76	80
Others	131	137
Average ..	277	274
U.S.S.R.	585	555
Mainland China	239	249
Eastern Europe	239	273
Average ..	360	361
World Average ..	295	291

between average yield and production from year to year in that country. In the previous season, though there was a small change in acreage, the production fell by 35 per cent below the previous year. If insect damage is less severe this season, there is likely to be a sizable increase in production in the Sudan over last year's level of 480,000 bales.

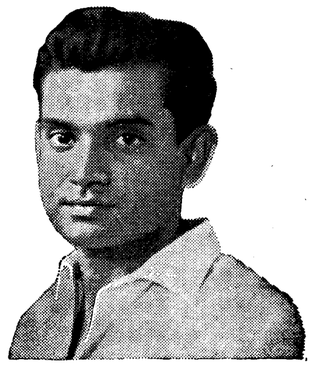
Latin America

Not much improvement is anticipated by the Committee in the production of cotton in the Latin American countries. In north Brazil, the new crop has made favourable progress and harvesting is underway in the Sertao and Serido areas. Heavy rains have delayed the start of harvesting in the Mata region but apparently have not damaged the crops. Tentative trade estimates indicate a crop of about one million bales this season, a slight increase over the 1963-64 crop. Information concerning production plans in south Brazil will not be available until late in the season. In Argentina, the planting usually begins in September and October. If weather conditions are favourable, the planted acreage could well increase by 5 to 10 per cent over last season's level of 1.4 million acres. Normal weather would be favourable to an improvement in yield and would further contribute to a somewhat larger crop this season. In Peru, the enforcement of a Government decree increasing the acreage that must be planted to food crops is likely to cause a slight decline in cotton acreage during the 1964-65 season. The current estimate of cotton acreage is around 600,000 acres, a decrease of about five per cent from last season.

It may be added here that the anticipated increase in production during the current season will be more as a result of increased yield per acre than because of acreage expansion. Table B shows the trend of yield per acre in the cotton producing areas during the last two seasons. Though in some areas, such as Mexico, Central America and the U.A.R., yield per acre has declined, the average yield per acre in the free world has gone up from 274 lbs. in 1962-63 to 277 lbs. in 1963-64. And, despite a decrease in the yield per acre in the communist world by one pound from 361 lbs. in 1962-63 to 360 lbs. in 1963-64, the average world yield per acre shows an improvement of 4 pounds from 291 lbs. in 1962-63 to 295 lbs. in 1963-64.



"This machine ensures accuracy of Typewriter parts up to 1/10,000th of an inch



It's the OPTICAL PROFILE GRINDER, housed in a special airconditioned chamber. Tools, dies and precision parts are machined on it, and *automatically* checked against magnified drawing office specifications — clamped on to a screen. The Grinder projects an image of the same part magnified to the same proportion—upto 50 times. I can see where the part falls short of specifications, and I machine it till its absolutely perfect."

Modern precision equipment like the Optical Profile Grinder and Ujjal Kumar Chatterjee who operates it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

Over the years people in India have come to expect the standards set by REMINGTON—the highly responsive touch, light positive shift, smooth carriage action, superior styling and finish—which make them so essential to distinctive correspondence.

MUKAND IRON AND STEEL WORKS LIMITED

IDLE CAPACITY IN RE-ROLLING INDUSTRY

CHAIRMAN, MR. KAMALNAYAN BAJAJ, URGES ADEQUATE SUPPLIES OF BILLETS

THE Annual General Meeting of the Mukand Iron and Steel Works Limited will be held in Bombay on the 26th inst. The Chairman of the Company, Mr. Kamalnayan Bajaj, in his statement to the shareholders points out that, while the available capacity in the re-rolling industry remains idle, it will be a national waste to allow the main producers to increase their capacity for similar products. In his opinion, adequate supplies of billets to the re-rollers will enable them not only to utilise fully their present capacities but also to develop additional capacities which they are in a position to do with much less investment. He has urged the Government to encourage the re-rollers to install large-scale billet-making plants. Referring to decontrol in March 1964, he says that there is a misapprehension in the public mind about an increase in prices. In fact, according to him, despite increase in costs, prices are comparable with those of identical products of the two main producers.

Following is the text of Mr. Bajaj's statement:

Since independence there has been a tremendous upsurge in all fields of national activity. Our beloved Prime Minister, Pandit Jawaharlal Nehru, was the inspiring and guiding force behind it.

Gandhiji lifted us from despondency, taught us to be upright and fearless, and led us to freedom, while Panditji was the architect of new India. He strove with dynamic energy and vision to build a prosperous country with the ideals of secular state and parliamentary democracy. His sobriety in international affairs and zeal for peace in the world and welfare of humanity attained for us a status and prestige in the comity of nations.

He has left us a great legacy, which casts on us a tremendous responsibility. Let history not judge that we proved unworthy of the heritage. May God give us wisdom and strength to fulfil it.

There was criticism and even genuine concern abroad that Panditji's consistent refusal to name a successor might lead to a war of succession, confusion and chaos. But his faith in his people was immense and he believed that they would do the right thing after him. This confidence was fully justified when the country unanimously chose Shri Lal Bahadur Shastri as his successor within a week. During these few months Shastriji has demonstrated the qualities of an eminent leader. We are happy with him. Let us lighten his burden by giving him our fullest co-operation. We wish him good health and long life in the service of the country.

Food Shortage and Remedial Measures

The immediate problem before the country is the grave situation created by shortages and spiralling prices, especially of foodgrains. Shastriji has rightly pointed out that an agitational approach will not help to solve the problem; on the contrary, it may lead to further complications. It is incumbent on us to seek a solution of our problems by mutual co-operation and understanding. The tendency to make political capital out of the people's sufferings is to be highly deplored and should be severely dealt with.

The Government has already taken a series of short-term measures which may yield results. But the disease is chronic and requires radical cure. The traditional approach, instead of bringing relief, has aggravated the problem. We must re-examine the whole issue with a fresh mind and find a new approach.

Artificial zonal controls, maldistribution, psychological fear of shortages, distrust of normal channels of distribution, curtailment of bank credit which has resulted in bringing out unaccounted money for hoarding, inflationary pressures, increase in direct and indirect taxes, gold control, ceilings on land holdings, rumours regarding demonetisation, and strikes and go-slow by dock workers and other essential services are among the main causes which have led to abnormal increase in prices.

Confidence should be created in the people that the Government is alive to their problems and is taking appropriate measures. There is no shortage of foodgrains to the extent it is commonly believed. The shortages are mainly felt in the ports and bigger towns. If ports are taken care of by freely supplying imported grains at controlled prices which should be fixed slightly lower than the prices prevailing in the interior, the pressures on interior areas will automatically be relieved. There will then be no need for zonal controls. If the prices gradually go down, cultivators will also start unloading their stocks.

Co-operation of normal trade channels should be enlisted and their services utilised for distribution as far as possible. The Government, employers and cultivators should pay part of the wages of their employees in foodgrains.

While holding of stocks for legitimate trade is a service to the people and should be encouraged by giving proper facilities, hoarding and profiteering are anti-social and should be put down with a firm hand.

A long-term solution rests on our capacity substantially to increase production in both agriculture and industry. The Government should reappraise its policies so as to ensure balanced development on all fronts and take measures to implement them.

Fourth Plan Targets

A mid-term appraisal of the third Plan has revealed a serious gap between the targets and achievements. It is heartening that the Planning Commission has recognised that while formulating the fourth Plan it is desirable to divide the projects into two specific categories consisting of core projects comprising basic industries and agriculture which will be fully implemented from available resources and non-core projects which are to be implemented depending upon availability of further funds. A somewhat similar suggestion was made in my address to the shareholders at the twenty-second annual general meeting in September 1960.

Retardation in Industrial Tempo

Fears were expressed when the Finance Minister announced his taxation proposals in the last Central budget that capital formation and industrial development would be retarded to a large extent. Certain marginal benefits were given later on, but on the whole there has been a setback in industrial tempo. Unless constructive and positive fiscal policies are framed, there is not likely to be any substantial improvement in the situation.

Unit Trust and Development Bank

Two important institutions set up by the Government are to be commended. The Unit Trust of India is designed to be an effective medium for transferring the savings of small and middle income groups to the corporate sector, at the same time ensuring reasonable return with minimum risk to the investors. The Industrial Development Bank of India will serve as an apex institution for co-ordinating the financing of industries through the existing agencies and also providing long-term finance for development. The assurance by Shri P. C. Bhattacharyya, Chairman of the Bank and Governor of the Reserve Bank of India, that no deserving industrial enterprise, which has a priority in the plans, would suffer for want of financial resources is very welcome.

Steel in the Fourth Plan

The country has been suffering from a chronic shortage of steel. It was feared that the situation would be further aggravated by the failure of negotiations with the U.S.A. for setting up the Bokaro plant. The determination of our Government to go ahead with the project has made it possible to get assistance from the U.S.S.R. The misunderstanding of the Western countries has also been largely cleared and we can expect help from them for two more plants in the public sector as well as for increasing the capacity of the two main producers in the private sector.

It has been repeatedly brought to the notice of the Government that while available capacity in the re-rolling industry remains idle it would be a national waste to allow the main producers to increase their capacity for similar products. It is to be hoped that while formulating the steel expansion projects in the fourth Plan due consideration will be given for the allocation of adequate supplies of billets to the re-rollers, not only to utilise fully their present installed capacities but also to develop additional capacities which they are in a position to do with much less investment. The Government should also encourage the re-rollers to install large-scale billet making plants.

Decontrol

There has been a misapprehension in the public mind that consequent on decontrol from March 1964 many items of steel have become scarce and there is a spurt in prices. As far as the re-rolling industry is concerned, the Steel Re-rolling Mills' Association periodically announces the selling prices of its members. In spite of the increase in costs of production, the selling prices have remained comparable with the prices at which identical products of the main producers are sold, although the Government's billet pricing and freight policies place the re-rollers at a considerable disadvantage.

Increase in Costs

Ever since the prices of scrap were decontrolled in August 1962, there has been a continuous upward movement in prices. Increases in excise duty on steel castings and D.A. to the employees have resulted in further increase in costs.

Expansion Programmes

The Company's expansion programmes both at Kurla and Kalwe are well under way. It is hoped that the Kalwe project will go into production by July 1965. The machine building and structurals project at Kurla is being implemented. In the steel foundry we expect to reach the target of 10,000 tonnes during the current year.

Exports

Our exports during the year were about Rs. 7.5 lakhs. Efforts for export promotion are being intensified.

Deferred Shares

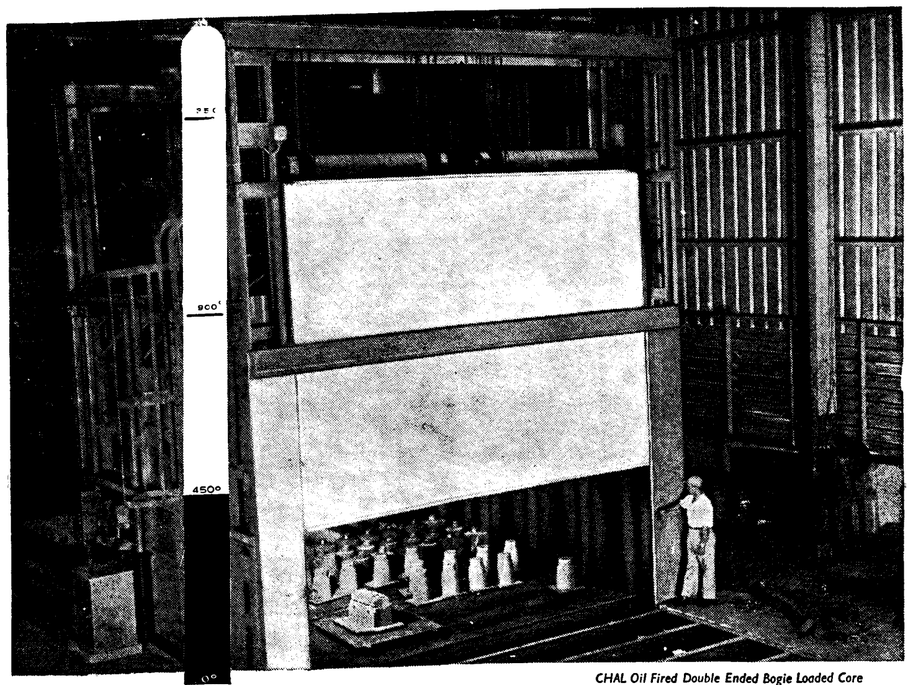
On representations made by the Company and the Federation of Indian Chambers of Commerce and Industry, the Central Government has amended the Income-tax Act with regard to tax liability on the notional capital gains deemed to arise on conversion of deferred into ordinary shares. However, the wording of the amendment still leaves some room for doubt. We are seeking expert opinion and further representation will be made to the Government, if necessary, to clarify the position.

Subsidiary

The progress of our subsidiary, The Batala Engineering Company Ltd., has been satisfactory. The Ballabhgarh project and expansion schemes at Batala are being implemented. With a view to broaden the capital base, 73,636 ordinary (equity) shares of Rs. 10 each are being offered to the public.

Conclusion

I thank the workers, staff and management for their efforts in achieving the progress which the Company has made so far. I am confident that with their co-operation the Company will continue to grow in the years to come.



CHAL Oil Fired Double Ended Bogie Loaded Core Drying Oven installed in a reputed steel foundry in India.

WELLMAN INCANDESCENT LOW TEMPERATURE HEAT TREATMENT OVENS

Wellman Incandescent India Ltd., in collaboration with Controlled Heat and Air Ltd., Smethwick—England, are now manufacturing in India industrial ovens for low temperature heat treatment up to a maximum of 450° C.

These ovens cover the whole CHAL range of products. Ovens for Stoving, Tinprinting, Drying, Metal Heat Treatment, Core Plate Varnishing, Maturing as well as Filtration equipment are available.

Wellman Incandescent are also specialists in Mechanical Handling Equipment and have commenced to manufacture progressively many products which hitherto had to be imported.

EXPANSION OF ALUMINIUM INDUSTRY

CONTINUANCE OF PROTECTION UNDER CONSIDERATION

THE aluminium industry in India may be broadly divided into two sectors—one covering the manufacture of unwrought virgin metal and the other covering semi-manufactures. In the first sector, there are now three large-scale units—Indian Aluminium Company, Aluminium Corporation of India and Hindustan Aluminium Corporation—with an aggregate installed capacity of 53,800 tonnes in terms of ingots, as compared with a total capacity of 17,800 tonnes in 1960 when only the first two units were in operation. Production, too, has gone up, more or less in correspondence with the increase in capacity, from 18,247 tonnes in 1960 to 55,223 tonnes in 1963. In the other sector of semi-manufactures, there are now 11 organised units (including the two primary producers, namely, Indian Aluminium Company and Aluminium Corporation of India). Their aggregate installed capacity, however, has increased from 19,000 tonnes in 1960 to only 26,200 tonnes in 1963, while their production of sheets and circles has risen from 15,788 tonnes to 21,350 tonnes during the period. As for aluminium foils and container sheets which belong to the second sector, the only unit which is engaged in their manufacture is India Foils Ltd. (formerly known as Venesta Foils Ltd.) which, as of now, has an installed capacity of 3,000 tonnes in its foil-making plant and 1,200 tonnes in its container sheet plant. The production of foils in this unit was 2,426 tonnes in 1960 and 2,420 tonnes in 1963, while the output of container sheets increased from 657 tonnes in the former year to 881 tonnes in the latter.

Both sectors of the industry are expected to expand further in the next two years, for licences have been granted for an additional capacity of 60,000 tonnes for ingots besides the expansion projects under way, 22,860 tonnes for rolled products and 4,200 tonnes for foils. According to the 1963-64 Annual Report of the Union Department of Mines and Metals, the production capacity for virgin metal will go up greatly when the expansion projects, as well as new projects, are completed. It is expected, in this connection, that the 10,000-tonne capacity smelter of Madras Aluminium Company at Mettur and the expansion programme of the Alwaye smelter of Indian Aluminium Company by 5,000 tonnes will be completed in 1964-65. The capacity expansion of Hindustan Aluminium Corporation's smelter at Renukoot from the present 1,000 tonnes to 60,000 tonnes is, however, likely to be completed only in 1966. As for entirely new projects which have been licensed, it is said that steps are being taken to expedite them. These projects, incidentally, if they fructify with foreign collaboration, will be located at Koyna (Maharashtra), Sharavathy (Mysore) and Korba (Madhya Pradesh).

As of now, demand for aluminium is far in excess of domestic production for, according to the different estimates just submitted to the Tariff Commission which is inquiring into the question of continuance of protection to the aluminium industry, it ranges from 70,000 tonnes to 110,000 tonnes for 1964, as will be seen from the accompanying table (Table I). In the recent past too, incidentally, the demand has been in excess of domestic production. It will be recalled, in this connection, that the Tariff Commission had estimated in its 1960 Report that the demand for aluminium would go up from the then 45,000 tonnes to 74,000 tonnes in 1963. But the apparent consumption of aluminium on the basis of domestic production and imports turned out to be about 73,000 tonnes in 1962 itself and 81,000 tonnes in 1963. This level of consumption in recent years, involving substantial imports of electrical grade aluminium in particular, has meant a foreign exchange drain of Rs. 6.7 crores in 1963, as compared with Rs. 10.4 crores in 1962, Rs. 7.8 crores in 1961 and Rs. 7.0 crores in 1960.

Table I also gives the different demand estimates for the next three years, namely, 1965, 1966 and 1967. The bulk of the estimated demand is for the manufacture of aluminium conductors (namely, A.C.S.R./A.A.C. and others) by the electrical industry. It will be seen from Table II that this accounts for up to 50 per cent of the entire demand. The rest of the demand is from other consuming industries like utensil-making, transportation, building and construction, food and farming, canning and packaging, defence and ordnance, etc. All these estimates have just been discussed by the Tariff Commission in its public inquiry opened by Mr. M. P. Pai, Chairman of the Commission, on the 2nd instant at Bombay. The Commission will, of course, be evolving a suitable basis for assessing the current and future demand for aluminium in the light of its present discussions. But, pending its assessment, it may be noted that, if the estimated demand by 1967 itself ranges from 145,000 tonnes to about 200,000 tonnes, the demand by 1971 is bound to be much greater. It is, therefore, realistic that the Working Group on Non-ferrous Metals has recently recommended a capacity target of 260,000 tonnes and a production target of 240,000 tonnes per annum by the end of the fourth Plan.

TABLE I—*Demand Projections*
(In thousand tonnes)

Estimated by	1964	1965	1966	1967
Director-General of Technical Development	98	110	125	145
Indian Aluminium Company	105	119	142	170
Hindustan Aluminium Company ..	111	138	168	202
Aluminium Corporation of India ..	110	125	145	175
Indian Non-ferrous Metals Manufacturers' Association (Calcutta) ..	102	123	149	181
All-India Non-ferrous Metal Industries Association (Bombay)	70	80	100	120

TABLE II—*Demand from Electrical Industries*
(In thousand tonnes)

Estimated by	1964	1965	1966	1967
D.G.T.D.	50	55	62	70
Indian Aluminium Company	47	52	62	75
Hindustan Aluminium Corporation ..	50	60	70	80
Aluminium Corporation of India ..	49	55	65	85
Indian Non-ferrous Metals Manufacturers' Association ..	50	59	70	82
All-India Non-ferrous Metal Industries Association	40	46	60	74

There can thus be no doubt that the aluminium industry will have to expand in a big way, if the foreign exchange drain is not to increase further in the years to come. As the industry is still in the stage of development, it has rightly advanced the plea for continuance of protection beyond 31st December 1964. Although the industry has been enjoying protection for over 15 years now, it has a long way to go before it can stabilise itself thoroughly. Incidentally, the protective duty prevailing now is 35 per cent *ad valorem;* it covers aluminium in any crude form like ingots, slabs, billets and bars and aluminium manufactures like plates, sheets, circles, strips and foils. There is also in force a concessional duty of 20 per cent *ad valorem* standard, and 10 per cent *ad valorem* preferential, on imports of alumina (which is an intermediate-stage raw material extracted from bauxite ore and then used in the manufacture of aluminium ingots). The industry's plea for continuance of protection beyond December this year has the added justification that its costs of production are higher than in the competing foreign countries—higher because of the high costs of electric power, raw materials, etc.

The industry has also other disadvantages. The high incidence of railway freight is one of them. Another is the relatively small size of the existing plants and the consequent denial to the country of the economies of scale. Since the burden of protection has to be borne by the public, the Tariff Commission must go into the question of Government's policy pertaining to the licensing of new units and expansion of existing capacities. It is this policy, one is told, that is chiefly responsible for bringing into existence plants of uneconomic size and for restricting their growth into large-scale units. The Commission would do well to examine the validity of this contention and make its recommendations without importing ideological considerations. As the State Governments are pursuing the policy of reserving all mineral rights to themselves, the prospecting plans of aluminium manufacturers are not having smooth sailing. This is yet another difficulty facing the industry. The continuing need for alumina imports, in view of the time lag involved in the commissioning of smelter capacity and alumina plants is yet another disadvantage which, it is said, cannot be avoided in the near future. If the industry is to expand on a massive scale in the face of these and other disadvantages, it can do so only with the help of continued protection.

WORLD SHIPPING SITUATION

The world shipping situation during the year 1963 has just been reviewed in a report by the Maritime Transport Committee of the O.E.C.D. (Organisation for Economic Co-operation and Development. The report analyses supply and demand in shipping services during the year, reviews the situation of the freight market and deals with various developments in maritime transport. The tramp freight market improved in 1963, according to the report, both for dry cargo and for oil. The demand for cargo was accelerated further due partly to the economic requirements of Japan and partly to the failure of wheat crops in mainland China and the Soviet Union. It naturally resulted in movement of large quantities of grain from North America, Australia and other grain producing countries. A remarkable increase in demand for oil was also noted, and this trend is expected to continue.

The world merchant fleet continued to expand and at mid-1963 stood at about 146 million g.r.t., representing an increase of four per cent over the fleet in mid-1962. The increase was shared evenly between dry cargo tonnage (which represents two-thirds of world fleet) and tanker tonnage. The year was also notable for the continued increase in sizes and speeds in both categories of tonnage and for further developments in new techniques in shipping, often involving automation. On the side of nuclear propulsion for merchant ships, the report points out, there were considerable activities, particularly in West Germany, Norway, Sweden, Japan, the U.K. and the U.S.

The report notes with some dismay that modernisation of ports has not kept pace with the tremendous progress in shipbuilding and propulsion techniques and that in many trades the cost of unloading cargo in ports is rising. The report, therefore, has emphasised the need and advantages of investment in port development and draws attention to the small capital expenditure involved in comparison with the results.

The Government of Japan, according to the *Weekly Review* of the Bank of Tokyo, has recently taken steps to strengthen the Japanese shipping industry by merging the shipping companies and their subordinate companies, numbering 95, into six groups. It is said that this merger will enable Japan to strengthen the country's international competitiveness and to cope with the encroachment of foreign shipping. Incidentally, the Japanese tonnage at the end of fiscal 1963 aggregated 7,432,000 g.r.t., representing an increase of 6.4 per cent, or 446,000 g.r.t., over the previous year. The rate of transportation of Japan's export goods by Japanese ships declined to 49.6 per cent during the year under review from 52.4 per cent in 1962, whereas that for import goods scaled up to touch 49.6 per cent in 1963 from 45.6 per cent in the previous year.

CANADIAN WIND TUNNEL FOR INDIA

An aeronautical research wind-tunnel designed and manufactured in Canada has been sold to India, according to the Canadian Minister of Trade and Commerce. The Export Credits Insurance Corporation (of Canada) will accordingly lend $4.2 million to the Government of India to finance the purchase of Canadian equipment and services for the installation of a four feet square trisonic wind-tunnel in the National Aeronautical Laboratory at Bangalore. The tunnel will provide all the primary aerodynamic performance requirements for model testing and will be available to the Government and commercial research agencies.

The E.C.I.C. loan agreement was negotiated under the special credits committed to India by Canada under the Aid India Consortium. Including the credit under this agreement, the special credits for India have reached a total of $60.5 million. The present loan which carries 6 per cent interest is repayable in 23 semi-annual instalments after a four-year grace period.

A six-member team of Japanese experts in the field of petro-chemicals is arriving in New Delhi this week, on a three-week visit to India. The visit is being jointly sponsored by the Japan Consulting Institute, the Indian Investment Centre and the Indian Refineries Ltd. The members of the team are drawn from leading producers of petro-chemicals in Japan.

NEW PRODUCTS AND PROCESSES

New Isotope Makes Brighter Dials

LICENSING of a new radio-active isotope for use on watch and clock dials and aircraft instruments is expected to give a brighter light source for less money. The Atomic Energy Commission, Washington 25, D.C., has just licensed the use of promethium 147 as a source of energy to activate phosphors on hands and numerals. It costs only about 1.6 cents per dial, compared to 5 cents for the tritium used previously, and gives greater brightness to the phosphors.

Plotting the Depths

A device for periodically checking the changing profile of the sea bed in harbours, estuaries and coasts, so local authorities can confirm that depths remain adequate for boats and safe enough for bathers, has been designed by the Port and Harbour Technics Research Institute, Ministry of Transport, Yokosuka, Japan. The device consists of a robust but compact cylinder which is fired from the shore like a rocket. A rope and electric cable connects it to the shore and, as it is pulled back, a sensitive pressure head responds to the varying depths and transmits signals which are continuously recorded as a graph.

Glass Washing Machine

A glass washing and drying machine that produces a cold, dry, sanitised glass, polished to sparkling brilliance with cold water in a few seconds is manufactured by The Moreton Engineering Co. Ltd. in England. An average operator, it is claimed, can wash over 700 glasses an hour, thus supporting the manufacturer's description of the machine as "the fastest glasswashing and drying machine in the world." The secret of the rapid cleansing is to be found in the six specially-designed rubber squeegees which automatically conform to the various shapes and sizes of the drinking glasses.

Lightproof Fabric

A cotton fabric backed with aluminium and hypalon synthetic rubber achieves a very high degree of resistance to light, and has been finding applications as curtaining material for drapes and roller blinds in hospitals and schools. The hypalon coating also makes it impervious to oxidising chemicals and the curtains do not require lining. The base material introduced by the Progress Mercantile Co. of London, is a dyed cotton fabric in a wide range of plain colours. Two grades are produced, one with a single layer of dyed cotton and the other with cotton on both sides of the synthetic rubber layer. Its trade name is 'Columbus.'

Gas Scrubber

A simple, but effective gas scrubber is marketed by Airfilco of 49, London Wall, EC.2. Usually made up of one or more trays, it will operate at a pressure drop as low as 2 inches water gauge. In this form, it will absorb dusts and many noxious gases, while cooling gases by direct contact. A feature is that the unit can be converted to a high velocity venturi scrubber simply by replacing the lowest tray with an agglomerator. It will permit submicron particles to be removed from the gas and collected. Separation of the solids from the gas is effected by the intense scrubbing action of the inclined baffle trays which are submerged in a layer of water.

New Organic Reagents Developed

Analysis of the intermediate product of lead and zinc production has been speeded up nearly fourfold by an organic reagent called sulpharsazen, synthetised recently by Prof. Alexei Lukin of Moscow. The new preparation is also widely employed by geologists for a simplified hydrochemical analysis of underground waters as a guide to lead deposits. The scientist has developed 12 new organic reagents over the past decade. These enable analytical chemists to determine quickly and simply the concentration of various substances even if a few ions of these are present in solution. The new reagents are especially important for work with radio-active isotopes, scattered and toxic elements.

Super Insulation

A novel insulating material for use at very low temperatures used in cryogenics is now to be used by Cryosystems, 40, Broadway, London, S.W.1. This is a result of an agreement with the National Research Corporation of Cambridge, Massachusetts, U.S., and the insulation is called NRC2. This material combines the known reflecting and non-radiating properties of polished metal with the resistive insulation of polyester film and vacuum. Several very thin layers of the film are metalised and crinkled. The result is packed in a vacuum enclosure. NRC2 has a higher mechanical strength, more resilience and greater insulating value per pound weight than any comparable insulant. Uses are found in storage containers for liquid gases, spacecraft, transfer systems and superconducting devices.

Printing Without Pressure

Dry, powdered ink and an adaptation of the silk screen process are combined in an electrostatic printing system for which ink is supplied by the Sun Chemical Corporation, of 730, Third Avenue, New York 17. The Corporation says the system does away with the need for heavy pressures and close adjustments necessary in ordinary printing. As many colours as desired can be used. The design or letters to be printed are prepared on a metal screen, with the non-printing areas masked. The dry ink is then spread on the front of the screen and the paper backed by a plate with a negative charge, passed behind it. The ink takes a charge from the screen and is attracted by the backing plate. However, the paper intercepts the ink particles and they are deposited on it. The ink can then be fixed by infra-red heat or spraying with solvent and drying. The one requirement is that the paper or other material being printed shall not interfere with the electrical field.

High Efficiency Sealing Ring

An engineer-designed oil seal, marketed in Britain by Headland Engineering Developments of Melon Road, London, S.E.15, is claimed to be a new approach to the difficult problem of sealing bearings on rotating shafts. Called the V-ring, it is designed to seal axially, in contact with a surface at right angles to the shaft. The inventors say it is probably the only seal that can stand up to significant misalignment and eccentricity, even in the case of a pendular shaft movement. The seal is thus ideal for use with spherical bearings. If required to provide a seal against gas, fluids or other non-lubricants, the seal is filled with grease in the cavity between its lip and the sealing surface. Where bearings are subjected to splashes, flushing etc., the seal functions effectively since its lip throws off fluids by centrifugal force as soon as they touch it.

Automatic De-stopping Machine

Wherever bottles which are closed by means of internal screw stoppers are returned for re-use, the problem of removing the stoppers or caps has always been an expensive and time-consuming operation. The "Bratby" automatic conveyorised de-stopping machine manufactured by Bratby & Hinchcliffe Ltd. in England, is designed to perform this task prior to bottles being fed to the washing machine. Each bottle is rotated by a vertical belt, the stopper being rotated in the opposite direction at the same time and subsequently discharged into a chute.

Apparatus for Food Packaging

The Audio Electron of Amsterdam (Holland) is marketing a small, attractively designed electric apparatus for household use, whereby all kinds of food can be packaged air-tight, moisture-free, hygienically and compactly. Foods which are difficult to keep can be packaged efficiently by this apparatus and stored in the refrigerator, thereby enabling the refrigerator space to be better utilised. If a freezer is available, even whole meals can be packaged and frozen.

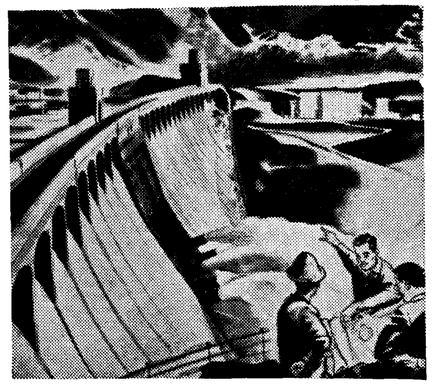
The apparatus consists of a box-shaped lower section and a lid hinged on to it. A seal-strip is attached to the front of the lower section. In the apparaus is a roll of double-walled foil, which is pulled outwards over the seal-strip. When the lid is depressed firmly, the seal-strip is heated and a buzzing tone becomes audible, from which the time can be determined. The sealing time varies from 1 to 4 seconds, according to the thickness of the material to be sealed. After sealing, the plastic must be allowed to cool for at least 2 seconds. Then another seal can be made. The apparatus is automatically switched off by releasing the lid. The standard model is designed for 220 volts. The watt consumption is very minimal.

Commercial Laser Welding System

The Korad Corporation, a subsidiary of the Union Carbide Corporation of New York, has manufactured a commercial laser welder. Known as Model K-15W, the laser welder delivers 5 to 15 joules of energy in pulses adjustable between 1 and 4 millisecond duration, at the rate of upto 1,200 pulses per hour. The first to be offered commercially as a standard equipment, the laser welder has produced high-quality spot welds in joining fine wires (0.015 to 0.30 in.) and in welding fine wires to foil. The new welder is expected to be widely used in the electronic manufacturing industry which normally scraps a good number of parts because of joining faults or failures.

The laser welder has three basic components: the control cabinet, a cooling supply cabinet and the laser welding head. The control unit requires a 240-volt, single-phase, 30-amp a.c. power input. It houses a power supply, lamp trigger unit, reprate control, remote control switch assembly, cable panel, and a large capacitor bank. The cooling supply system consists of a water chiller and a circulating pump that supplies deionized cooling water to the laser head. The laser welder head contains a ruby crystal rod, xenon flash lamp, and reflector. This unit is thermally insulated to prevent condensation on the reflecting surfaces of the ruby laser crystal, and is water-cooled to dissipate the heat generated by laser operation.

DEVELOPMENTS IN THE EAST



With the improving living standards in the East comes the prospect of trade expansion and of increasing opportunities for profitable marketing. The world-wide facilities of three great banking organizations, merged into a single comprehensive service, are at your disposal with up-to-date information and expert advice on all aspects of finance and trade in these areas.

RATIONALISATION OF TARIFF STRUCTURE

SPECIAL COMMITTEE STARTS WORK

ALTHOUGH the Government of India announced the appointment of the Tariff Revision Committee nearly six months ago, on 17th March to be precise, it was only on Thursday the 3rd inst. that the Committee held its first meeting. This delay was, perhaps, due to the preoccupations of Mr. Manubhai Shah, Union Minister for Commerce, with other matters and his consequent inability formally to inaugurate the meeting of the Committee. One wonders whether the Committee could not have begun its work much earlier without waiting for such formal ceremony. The terms of reference of the Committee had been clearly defined at the time of appointment, and there was no valid cause for the delay of six months which could certainly have been utilised at least for completing the spadework pertaining to its work. In view of this delay, the report of the Committee, it is said, will not be ready before August or September next year, whereas the Government had stated while announcing the appointment of the Committee that the report would be available within a year, that is, in March-April 1964. Incidentally, the strength of the Committee has been raised from 15 members to 19.

The terms of reference of the Committee are quite comprehensive. The Committee has been asked to examine the present structure of the Indian Customs Tariff (Import and Export) Schedule, with reference to the composition of products and pattern of import-export trade. In the light of this examination and bearing in mind the developments in and the changed pattern of trade that have taken place during the last few years, the Committee will have to recommend either of two alternatives, namely, whether to base the import tariff schedule on the Brussels tariff nomenclature or other national nomenclature or whether the country should adopt a separate import tariff schedule after necessary improvement. The Committee has also been asked to advice the Government regarding the lines on which the customs and tariff schedule should be revised, with particular reference to the need for (a) the creation of additional tariff items for articles of recent development and of commercial importance, (b) revision of the classification of machinery, iron and steel and textiles in the context of the changed pattern of trade, and (c) provision for the assessment of parts of articles; to recommend suitable amendments to the classification and nomenclature of the export tariff schedule; to review the substantive provisions of the Indian Tariff Act, 1934 and the Tariff (Amendment) Act, 1949, as well as other relevant legislations and to recommend modifications or amendments required in respect of them; and to make such other recommendations as may seem germane to the objective of the enquiry.

The Committee is not required to go into the question of the rates of duty applicable in respect of individual products or different classes of products. And it will not be concerned with the level of duty applicable under customs tariff.

Members

Considering that the task entrusted to the Committee is of great importance, it is only natural that the Government should have chosen as members persons who have specialised knowledge. The Committee is presided over by Mr. S. Subramanian of the Indian Statistical Service and consists of representatives of the Central Departments of Revenue, Technical Development, Iron and Steel, Industry, Mines and Metals, and Petroleum and Chemicals, officers from the Tariff Commission and C.C.I.'s Office, and representatives of F.I.C.C.I., A.M.I.O., Indian Importers Association and All-India Exporters' Chamber. The member-Secretary is Mr. S. Venkatesan of the Indian Revenue Service.

The appointment of the Tariff Revision Committee was a sequel to the plea for rationalising the customs tariff structure put forward by several official committees and commissions, including the Import and Export Policy Committee headed by Dr. A. Ramaswami Mudaliar. Such rationalisation, as Mr. Manubhai Shah stated while inaugurating the first meeting of the Committee, is a matter of considerable importance at a time when India is going all out to achieve expansion of international trade and elimination of barriers to trade. The basic structure of the present tariff schedule, it will be recalled, was adopted way back in 1934, following the League of Nations Draft Customs Nomenclature. So many changes have taken place since then not only in India but also abroad that the structure has now become inadequate and out of date. India's accession to the G.A.T.T., for instance, resulted in a number of commitments and the creation of new tariff items to provide for them. Further, the balance of payments difficulties and the introduction of import controls have changed the pattern of the country's imports and greatly reduced the importance of many tariff items. Again, the industrial progress after independence has led to a change in the pattern of imports in favour of machinery, components and raw materials and against finished articles. More and more goods have become liable to central excise duty and, consequently, to countervailing import duty. More recently, new classifications and nomenclature of production have been evolved to suit the changed pattern of world trade. One of them is the Brussels Nomenclature prepared by the European Customs Union Study Group in 1955 which claimed to have taken into account the common features of the tariff nomenclatures of the 17 European countries, as well as the latest technological and commercial developments.

How, against the aforesaid changes, the Indian tariff schedule has become inadequate and out of date will be evident from the instance cited by Mr. Manubhai Shah. Out of the total import revenue of about Rs. 320 crores annually at present, Rs. 38 crores, representing 12 per cent, come from a single miscellaneous item out of the 563 items in the tariff, namely, "all other articles not otherwise specified," which cover a mass of miscellaneous articles. On the other hand, there are sections of the tariff, such as those relating to iron and steel and textiles, which abound in sub-divisions that have now ceased to have significance.

Need for Revision

Emphasising the need for revision of tariff, Mr. Manubhai Shah said:

"India is no longer an exporter of only raw materials and semi-finished products, the international trade in which is not generally faced with much serious tariff barriers or other formidable obstacles. But, as India's exports expand and as her economy gets industrialised and, therefore, diversified, an increasing proportion of the exports will consist of manufactured goods. Fresh markets have, therefore, to be developed for many of these lines and it is very important that tariff and other barriers to those exports should be reduced as far as possible. On the international plane, a revision of Indian tariff is called for so as to make it an effective instrument for trade negotiations. On the national level, modernisation of the tariff is equally important. In 1963-64, the customs authorities dealt with approximately five lakhs foreign bills of entry and made as many individual assessments. If the number of the passengers who have to pay duty is added, the number of assessments will become much larger. Each of these assessments involves the application of at least one item of the tariff, often many more. Many of the consignments are of machinery or raw material or other articles vitally necessary for the country's internal needs or export manufactures. Delays in the clearance of such goods, for whatever reason, can obviously cause serious damage to the country's economy. In this situation, India cannot afford to have customs tariff that is out of date or unduly complicated or leads to frequent disputes between the customs administration and the trade. Hence the importance of the revision of the tariff."

These considerations apart, as India has greatly transformed and, indeed, almost revolutionised, as Mr. Manubhai Shah said, its concepts of foreign trade, exports and imports, it has also to modernise the tariff nomenclature, structure classification and contents in order to bring them in line with the emerging trends and developments in national economy and to bring them on par with the rest of the modern world usage. It is true that the Indian Tariff has undergone quite extensive amendments, but these amendments cannot take the place of the comprehensive revision that is necessary. It is to undertake such a revision that the Government has appointed the Tariff Revision Committee.

Difficulties have been experienced by industry and trade in the clearance of goods through the customs on account of the difference in the Import Trade Control and the Indian Customs Tariff classification. Such difficulties arise particularly in the case of items which are not specially classified in the I.T.C. and/or the I.C.T. schedule, the more so because the two authorities interpret the classification of stores from their respective standpoints, namely, the import control angle and the revenue angle. There are also instances of disputes, harassment, malpractices and abuses. All these should be reduced greatly, if not avoided altogether. It is, therefore, imperative that a customs tariff, like all legal enactments, must be precise, so that difficulties may not arise in interpretation and application, or, if they arise, they can be satisfactorily settled. This is a vital point which the Tariff Revision Committee wil have to bear in mind. It is also imperative that a customs tariff should be simple and easily understandable, without at the same time giving room for loopholes.

E.C.C.G. ISSUES TWO NEW GUARANTEES

Sometime ago, the Export Credit and Guarantee Corporation (E.C.G.C.) had introduced a packing credit policy. This guarantee renders it possible for the exporter to receive from his bank pre-shipment finance for the purpose of purchasing, processing and packing goods destined for the export market, somewhat above the line of bank's rating of his financial capacity. Experience showed that the arrangement had worked satisfactorily. Last year, exporters were able to obtain from banks as much as Rs. 4 crores on the strength of this guarantee; and in the first six months of the current year, the Corporation has already bypassed this figure. In view of the increasing popularity of this guarantee and its utility to exporters and banks—and the satisfactory experience in this behalf—the E.C.G.C. decided to increase its idemnity to banks from 50 to 66⅔ per cent and reduce the waiting period in respect of claims from six months to four months

While the packing credit policy has come to be regarded as a good security for the banks against risks involved in giving pre-shipment advances, it was felt by the banks that, if a similar instrument could be devised to cover their post-shipment advances, it would help them liberalise their lending policy. Accordingly, two new guarantees have been introduced by the Corporation: (i) Post-shipment export credit guarantee and (ii) export finance guarantee.

The post-shipment export credit guarantee will be issued to banks to protect them against any loss which may arise from purchase, discount or negotiation of an export bill. Normally, it will be a condition of the guarantee that it will be issued only in respect of such exporters as obtain a shipment-contracts policy. The guarantee will cover any loss sustained by a bank or financing institution due to the protracted default or insolvency of the exporter; and the Corporation's indemnity to the banks will be of the order of 66⅔ per cent of the loss incurred. In view of this guarantee, the banks would be in a position to discount bills which they may ordinarily accept only for collection. As the banks would be protected by the E.C.G.C. shipments/contracts policies, the risks involved would be relatively small. Therefore, the premium charged to would be small —namely, 5 paise per month per Rs. 100.

As a variant of the post-shipment export credit guarantee, the E.C.G.C. has introduced the export finance guarantee, with a view to finding for the exporter post-shipment finance in line with what he can get on the basis of the domestic value of his goods. This guarantee enables the bank to offer, on a selective basis, discounting facilities to exporters upto 125 per cent of the shipping documents; and the bank advance (i.e. 25 per cent of the f.o.b. value of the export bills) will be guaranteed by E.C.G.C.; and its indemnity to the banks will be to the extent of 75 per cent of the loss incurred in the event of the loanee's insolvency or default. To start with, the guarantee will apply only in respect of such exports as come within the purview of the export promotion schemes; but other items are not excluded and would be considered on merits. The premium rate for this guarantee will be the same as for the packing credit guarantee, viz., 10 paise per Rs. 100 for the first and second months and 8 paise for the third and each subsequent month. In the event of a claim, the amount due to banks in respect of the aforesaid guarantees would be reimbursed after four months of the due date of payment.

THIRD MAHARASHTRA COMMERCIAL AND INDUSTRIAL CONFERENCE

The Maharashtra Economic Development Council, an affiliate of the Maharashtra Chamber of Commerce, undertakes, from time to time, a study of the economic problems of the State, with a view to promoting the growth of trade, commerce and industry. The Council now proposes to hold the third Maharashtra Commercial and Industrial Conference in Poona on the 25th and 26th of next month. Mr. Naval H. Tata, an eminent industrialist, will preside over the deliberations which will be inaugurated by Mr. V. P. Naik, the Chief Minister of Maharashtra. Mr. Shantanurao L. Kirloskar, the President of the Maharashtra Economic Development Council who gave this information to the Pressmen this week, expects the Conference to discuss certain topics of economic importance for the State. Prominent among them will be the problems of agro industries, industrial finance and the development of backward regions. It will also deliberate on the economic development of Goa, though the latter is not part of Maharashtra.

It may be recalled that the first two conferences, arranged by the Council, were held in Bombay in 1956 and 1960; the first was presided over by Prof. D R. Gadgil and the second by Dr. C. D. Deshmukh. Many of their recommendations were well received by the authorities and several improvements have been brought about in the Government's policy for, and attitude towards, industrialisation of the State.

BUSINESS NEWS FROM EUROPE

FRANCE PONDERS CREDITS FOR RUSSIA

IS THERE A STERLING LEAK?—COTTON INDUSTRY GETTING TOGETHER

From Our Special Correspondent

IN an effort to get more trade with Russia, and probably other East European countries, France is believed to be willing to waive the usual Western five-year limit on credits. If she does, she is likely to provoke great opposition from her European competitors.

It has been accepted for some years that advanced countries should not offer better credit terms than five years and most countries have kept to this agreement, even though the principal sufferers have been the underdeveloped countries. One French bank has admitted that it has signed a credit agreement with Russia well over five years, though not as long as the 12 years that had been thought. At least two or three other French banks are also thought to be negotiating longer credits.

For France there are at stake orders worth £136 million and it is thought that the French Government will hardly be likely to pass over such an important market. For the rest of the industrial nations the question is whether to follow France and break the rule or whether to stick to it and risk losing valuable markets. West Germany and Britain are particularly concerned. Britain has potentially important Commonwealth markets crying out for longer-term loans than five years. Germany has always had a major share of trade with the East and any French moves to get part of it, especially in this way, would lead to a worsening of the political links between Paris and Bonn, which are already under strain in the post-Adenauer period.

Gentlemen's Rules Being Broken?

The sudden fall in the dollar premium market this summer has led Britain's financial authorities to the conclusion that there must be a "leak" in the dollar pool. A sum of up to one million has been mentioned. Although convertibility is a lot easier now than before 1958, British residents are still circumscribed in the ways they can acquire foreign currency for investment abroad. The major source open to them is the pool of money which has been built up by Britons selling foreign securities and transferring the proceeds into a special account.

Demand always exceeds supply in the pool and a premium has to be paid to get foreign currencies. In relatively stable times in Britain, or when there is inflation or economic uncertainty abroad, the premium is low—around seven to nine per cent. But when conditions are good abroad, especially on Wall Street, the premium rises, perhaps to 14 per cent. It has been as high as 22 per cent and the Bank of England is believed to be prepared to let it go up to 30 per cent before intervening.

When Wall Street is booming and there is the dual uncertainty of a looming general election and poor (and puzzling) trade figures in Britain, the dollar premium would normally have been expected to go up. In fact, over the summer, it has slipped down from around 14 per cent to 9.5 per cent, though it has climbed back above 10 per cent last week.

This fall indicates that investors found conditions suitable for keeping their money in Britain. In view of the coming election this cannot be so. Consequently, there must have been extraneous forces working on the premium; the authorities' fears are that there has been a dollar leak.

Leaks are a very serious problem for Britain and the last one to be discovered, the Kuwait gap of 1957, is thought to have cost Britain millions before it was plugged. Such leaks are all the more important because Britain is the banker for the Sterling Area, and an outflow could prejudice balances deposited in London by overseas members of the Commonwealth. Nor are the gold and currency reserves adequate for the amount of trade they have to finance. At the moment they are some way under £1,000 million, possibly half the amount really needed, and an appreciable outflow could lead to a sudden run on sterling.

Implicit Support of a Bank?

The present hole in the rules is believed to have been driven by traders working through Hong Kong. By its very nature this market is both volatile and surrounded by an air of intrigue. What has annoyed the authorities is the fact that to bend the rules, as these dealers are thought to have done, needs the implicit support of a British bank. There is little direct control over the commercial banks by the Bank of England, the latter preferring to operate by time-hallowed "gentlemen's rules." When they fail, the shock is all the more severe to the mandarins of the City of London.

If the flow of non-resident securities into the dollar pool does not dry up, then it is thought that there may be legal proceedings against the offenders. The Sterling Area as well as the offenders would take a knock if this happened, so it may be that the recent upswing in the premium indicates that the bending of the rules has stopped—for the present.

Part of the upswing, however, must be due, it is thought, to the persistent strain on sterling over the past few months which has forced the official sterling-dollar rate to its lowest point for three years—below 2.78½ dollars—and within range of the point where the Bank of England will have to come in with official support.

So far the authorities have refrained from acting, believing that, basically, sterling is strong enough to fight off the pressure on it without official support. The point would appear to be approaching when the Bank will have to intervene whether it wants to or not. Continual pessimism over Britain's balance of payments figures is making this support seem almost inevitable.

Making Cotton More Competitive

In an effort to beat the competition from cheap imported products, the European cotton textile industry is making serious efforts to integrate. But the existence of two trading blocks, the European Economic Community and the European Free Trade Association, is obstructing this attempt. The one major producer not entering wholeheartedly into this spirit of unity is Britain. Partly this is because the British textile industry is now recovering from the bad patch it fell into after the war when there was a great deal of obsolescent machinery and many inefficient firms. Partly, also, it is because the British industry does not seek the same sort of outlets as the rest of her partners in E.F.T.A.

The rest of the E.F.T.A. countries have largely common problems. They have small textile industries which are basically geared to the European industry. To be left out of Europe is a serious disadvantage for them. For there to be more unity between E.E.C. and E.F.T.A., two conditions would have to be fulfilled. First, E.F.T.A. and E.E.C. tariff rates would have to be harmonised. Second, a common policy towards third countries would have to be adopted.

Britain would play her part in the second of these objectives. But she may not be such an active participant in the former, since she is by far the largest consumer as well as producer and her markets are largely in the United States and the Commonwealth, whereas Europe caters largely to Europe itself. Even so, both the conditions are feasible and, if they could be brought about, the industry would be in a far stronger position. Textile tariffs in E.F.T.A. countries, with a few exceptions, do not differ all that much from the common external tariff of the Six.

As to a co-ordinated foreign trade policy, the Western European textile industries already receive special treatment under the General Agreement on Tariffs and Trade's long-term arrangement on international trade in cotton textiles. If such a policy can be reached on cotton textiles, it should surely not be impossible to reach some sort of agreement on all textiles, especially as cotton dominates the textile market with about two-thirds of total production.

If the European industry cannot agree on steps to make itself more efficient, it will suffer severely as the developing nations, build up their own textile industries. This threat is all the more serious, because countries like India, Pakistan, Japan and Hong Kong are concentrating on cotton goods. Because of their wage and cost structures, they can easily undercut the European industry.

Rayon and other man-made fibres play a far smaller role in the Asian textile industries, because they are less commercial, at the moment. This gives Europe a breathing space in which to consolidate the fibre industry before, inevitably, Asia catches up. Europe is not throwing away this advantage. New types of fibre are continually being perfected and introduced onto the market in commercial quantities. And new uses are also continually being found for these new products. For instance, vehicle tyres are increasingly being made with a proportion of new fibres.

In order to stimulate the introduction of new fibres and to bring their cost down, tariffs could be reduced on imported machinery. This has been suggested as a field where the Kennedy Round negotiators could achieve worthwhile results.

If the duty were lowered, there would be a better chance of the industrialised countries meeting the low-cost competition of the Asians. This is no overnight cure for the industry and could hardly have much effect for at least two or three years.

In the meantime, unless some positive action is taken, Europe will find itself being continually outsold in world markets as the Asians take a stranglehold on vital new markets.

Where have all the British Exports Gone?

What has happened to Britain's exports this year? At a time when they were expected to have done well, according to the Chancellor of the Exchequer, Mr. Reginald Maudling, they have disappointed. The monthly deficit on visible trade is now worse than during the bad year of 1960. Exports from all industrial countries rose by 18 per cent in the first quarter of this year but British exports increased by only eight per cent. And those sectors that were expected to do best, manufactured goods, have lagged. Such increases as there have been have come from relatively minor sections like live animals, food, clothing and minerals.

Among industries which have fallen badly behind in the first quarter are paper machinery, which dropped by 56 per cent compared with the same quarter of last year, aero engines, 26 per cent down, cycles, 26 per cent, ships, 18 per cent, and power machinery, 11 per cent. Groups which have also fallen, but less severely, are the vital electrical machinery, down three per cent, and electrical appliances, seven per cent, together with aluminium, eight per cent, plastics machinery, two per cent, and tractors, one per cent.

Woollen goods, other machinery, aircraft, switchgear and telecommunications have increased exports, but less than average. The Federation of British Industries is puzzled at the export performance, because reports from its members claim production, order books and exports all to be going well. Yet the official statistics show that production has been stagnant all the year, and exports rising only slowly. The view is mounting that British firms are not keeping an eye on production costs and that Britain is pricing herself out of important markets. The failure of British exports is the more serious because Germany, Japan and the United States have all done well this year.

South Africa Eyes New Markets

South Africa is seeking closer economic ties with the rest of the world. Although its economy is at present booming, the Government is trying to safeguard it, because most of the present boom has been self-generated. In particular, South Africa is trying to establish stronger links in Europe with France, with which trade has gone up by half in the past two years. She is also turning her attention to the Far East and in a bid to channel more goods through the important Hong Kong market is to hold a trade fair there at the end of next month. Trade with Britain, one of her staples, has risen considerably in the first half of this year. Exports went up 11 per cent and imports some 10 per cent.

Behind these moves is thought to be acceptance of the fact that the present scale of the boom cannot continue for ever. The year to the end of June was one of the best in the country's history; there was an eight per cent rise in gross national product (in real terms), internal stability and a steady balance of payments.

But most of the slack in the economy has now been taken up and further progress could

force up prices, unless imports increase—and these can only be allowed to increase if there are more exports.

Signs of tightness are already becoming apparent. There is a shortage of skilled labour and, in the long run, there is a need to find a substitute for gold as a major export commodity. There is also a need to keep the increase in private consumption in check, especially as nearly all the excess capacity has been taken up.

Spanish Economy Finds New Strength

Spain's economy is now stronger than it has ever been, in spite of some fundamental weaknesses in the heavy-industry sector. Most of the progress has been made since 1961. Spain lagged well behind the rest of Europe till 1959, when the peseta was devalued. It took two years to get over the currency change but since then the economy has come on in leaps and bounds.

The reserves now total 1,200 million dollars, as compared with some 40 million dollars in the late fifties, half of which is in gold. And in the first half of this year foreign earnings showed a bigger rise than payments. In that period, income rose 45.5 per cent, as compared with the first half of 1963, and payments went up 33.3 per cent. Earnings reached £538 million and payments £504 million and there were big increases in exports to Latin America, up (+212 per cent), Asia (+184 per cent), and Europe and Africa (both +56 per cent). Among individual countries, Italy took 124 per cent more Spanish goods and France 91 per cent, and there were good rises with Sweden, Germany, Liberia, Libya, South Africa, Japan, Columbia and Peru.

Citrus fruits are losing some of their importance because of the fall in orange prices. Quantity has remained fairly stable by comparison with olive oil, which has gone up 7.8 times. Vegetables and dried fruits among the established exports have been rising fast and in the new lines furniture, shoes and leather goods have all done well.

A development plan aims at increasing investment by £2,000 million by 1967 and raising the standard of living (the average wage is £140 a year). It is intended to create one million new jobs, increase industrial output by 40 per cent, improve 6,000 miles of roads, build three-quarters of a million new houses and double the number of tractors. By 1967, tourist income (from 17 million visitors: 11 million expected this year) is expected to be more than that from all visible exports.

Russian Wheat Recovery

Russia will probably not be buying wheat this year from the West. But most of the rest of the Soviet bloc will not be in so self-sufficient a position, according to reports received here. Harvests have been big enough to meet current domestic needs in Russia, but whether they will ever be sufficient to justify Mr. Khrushchev's claim that the country will "never again" have to go shopping in the West is still open to doubt.

Russia's own harvest is likely to hit 130 million tons this year, 30 million tons up on last year. Bulgaria is not in such a happy position. Preliminary figures reveal that many areas in that country will not reach their targets so that the 2.3-million-ton output, itself below the 2.6 million tons necessary, is going to leave Bulgaria with a big deficit to be met from the West.

An early-summer drought, followed by rains in August, have led to caution in Czechoslovakia over harvest results. The crop should be enough for present needs, but not enough to build up stocks. So the five-year contract with Canada last year is likely to be needed again. In the Balkans, a prolonged dry spell has affected output in Rumania, Yugoslavia, Bulgaria and Hungary. Even so, Hungary's crop is expected to be better than last year and may just enable that country to do without Western imports.

Rumania is fairly happily placed—last year she exported wheat to Russia—and should not have to resort to imports. But Poland, where only 13 per cent of farming is State-run, will probably have to buy abroad to provide pig food. Winter grains are expected to be good, though the total Polish harvest might fall below last year's.

Topical Briefs

Mineral oil products have been booming in *West Germany* this year, as more refineries have come into service. Total output in the first half of the year came to 27.4 million tons, about five million more than in the same period of last year. Production for sale was up 4.8 million tons to 25.1 million tons. As the new refining centres, mostly in the south and south-west, are some way from the Ruhr, fuel oil of all grades has shown relatively higher growth rates than the output of petrol and diesel fuel. The latest refinery to come into service is one at Mannheim owned jointly by the Wintershall concern and Marathon Oil, an American firm. There is still some uncertainty around the Ingolstadt refinery being built for the Italian E.N.I. concern. Building work on the pipeline across the Alps from Genoa has been held up in case leakages into Lake Constance, which it borders for part of the way, should occur.

Exports of *Portugal* are making inroads into some American markets where they have never had any success before. One example is sisal twine which jumped to the top of Metropolitan Portugal's dollar earnings, last year with goods worth £3.4 million, a gain of over half. Table wines have been another good export earner and, in the next two or three years, it is thought that they should bound ahead. Rather surprisingly, port has been merely holding its own. In raw materials, unmanufactured wool made big strides forward as did burlap and hardboard used as a veneer. In consumer goods, copper household ware, willow baskets and bags have all done well. In spite of the good results from these previously unconsidered fields, Portuguese exports in general to the United States have remained virtually unchanged. This is because some of the major exports, such as textiles, canned fish and mineral ores have slipped back.

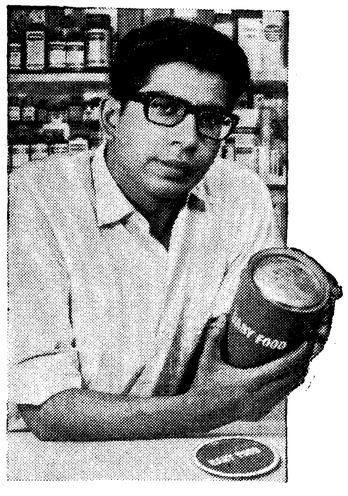
The Government of *France* has reorganised the marketing of *vin ordinaire*. Strict quality rules for wines benefitting from price support have been introduced to bring some sort of order to this market. Up to now support has been given on a quantitative base, a certain amount (85 per cent this year) qualifying irrespective of quality. This policy is thought to be responsible for the growing disaffection for ordinary table wines in France. Under the new system, wine which fails to reach a quality test will not be allowed on to the market; it will have to be sold to distilleries or wine-gum makers. The rest will be subsidised. One of the difficulties of such a test is that it will have to be based on chemical criteria since the Ministry of Agriculture lacks a staff of wine tasters. Alcohol content will then become the principal criterion, which is arousing some opposition.

Finland's economy has staged a recovery during the first half of this year. The growth of exports, the expansion of industrial production and the absence of the expected decline in housebuilding have largely accounted for the comeback, but it is too soon to know whether the recovery is permanently based. The usual growth indicators must be treated with caution since the same period of 1963 was affected by strikes, which shows the first half of this year in a better light. In January-May, exports went up by 23 per cent in value and industrial production by eight per cent, well above the forecasts for the whole of the year—seven per cent and eight per cent respectively. Consumer demand, prices and wages are all tending to rise, which could force Finnish goods out of world markets.

NUCLEAR POWER FOR GERMANY

The largest atomic power station in West Germany is at present being constructed by Siemens-Schuckertwerke at Obrigheim on the Neckar for a consortium of German power supply undertakings. The plant—the largest of its kind in Europe—will have a pressurised-water reactor and will supply 282 MW. at the generator terminals, corresponding approximately to the load demand of a city with a population of 600,000. The pressurised-water reactor will be operated with slightly enriched uranium. The coolant and moderator will be normal water. This atomic power station will, for the first time, place Europe on the threshold of economic power generation by atomic energy.

Farmers in Belgium have told the Government that they are dissatisfied with efforts being made to protect them against excessive imports of French wheat. The farmers say these imports, coming on top of an anticipated surplus of home-produced grain, are depressing prices in the Belgian market.



Yes, it's safe—because it's in a tamperproof container

The diaphragm you see here is one of the most reliable means of making sure that the product you buy has not been tampered with or contaminated on its way from the factory to the shop.

The foil diaphragm is a widely used pilferproofing technique. Others that you are familiar with are Roll Seal closures on bottled drugs and foods, laminated strip packs for tablets, sealed cans for processed foods, tear-off seals on pharmaceutical phials.

Pilferproofing methods, combined with indelible printing of trade marks and brand names on packages, introduced and promoted in India by Metal Box, are doing a good job in protecting public health and life.

Metal Box currently supply packages to more than 1,500 manufacturers who pack over Rs 120 crores worth of consumer products—all of them kept safe and pure in protective packages.

These figures are impressive—but they are not big enough. Adulteration of foodstuffs and racketeering in spurious drugs continue to be major evils in our public life. Strong, concerted action by Government and Industry alone can help to wipe them out. And Metal Box hope to play a major part in getting this good work done.

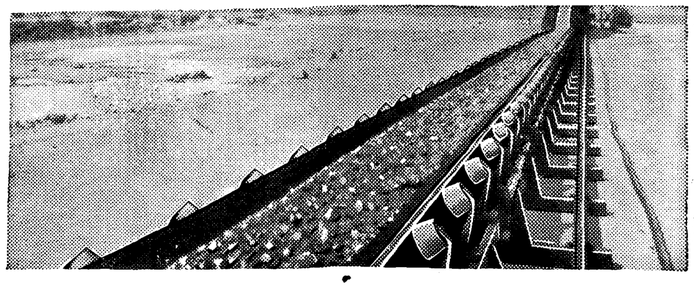
Here are the remarkable features of the

CONVEYOR BELTING WITH A COTTON/NYLON CARCASS

Read about

DUNLOP STARLON



Starlon's cotton/nylon carcass is a major break-through in conveyor belting development in India. These details tell you how Starlon will bring increased pay-offs!

Intensive tests have proved that conveyor belts with a cotton/nylon carcass are far more successful for heavy duty material handling service. Starlon is the result of these tests. It is backed by the world-wide technical know-how and experience of Dunlop and is specially constructed for extra heavy conveyor jobs.

Here's why Starlon means a much more profitable investment!

1. Improved flexibility—better troughing, smaller pulleys.
2. Less horse-power required.
3. Increased flex life.
4. Reduced number of plies—lighter and thinner.
5. Higher impact strength.
6. Greater tear resistance.
7. Better fastener holding properties.
8. Higher belt weft strength.
9. Lower capital cost; lower cost per ton carried.

Starlon Belting, 17240 metres long and 1524 mm wide, will shortly be supplied to the Neyveli Lignite Corporation for their mine expansion scheme. This is the largest single order for conveyor belting and yet another Dunlop achievement.

For complete details on Starlon, contact the nearest Dunlop office or write to:

BONUS COMMISSION AND AFTER

LABOUR LEADERS DISSATISFIED

By K. M. Chanana

THE concept of bonus has been a constant *bone of contention* on the Indian industrial relations front for quite some time. Since independence, considerable attention has been paid to this problem by the Government of India. In May 1948, the Government appointed a Committee on Profit-sharing, one of whose functions was to lay down principles for determining labour's share of the surplus profits, in a sliding scale normally varying with production. The recommendations of the Committee could not be of much assistance, as these raised questions of policy and principles, which could more appropriately be considered by the Legislature.

Actually, in the absence of clear-cut instructions on the subject from the Government side, the matter was largely left in the hands of Tribunals, while the Supreme Court judgments in various cases also helped build up an impressive case law on this vexed problem. Regarding the principles governing the payment of bonus adopted by the Tribunals, there had been considerable degree of unanimity since the enunciation of the formula by the Labour Appellate Tribunal in 1950—in the dispute between the Bombay Millowners' Association and Rashtriya Mill Mazdoor Sangh. This formula broadly set the pattern throughout the country. On the question of determining the 'available surplus' for distribution as bonus, which is the crux of all bonus disputes, the formula laid down by the Labour Appellate Tribunal in its Full Bench award of August 1957—subsequently upheld by the Supreme Court—in connection with the bonus dispute in Bombay textile mills, continued to serve as a guide.

Concept of Profit-bonus

But the concept of profit-bonus seemed to have become a constant source of controversy. Both employers as well as employees were not happy with it. Labour became dissatisfied with the Full Bench Formula of the L.A.T. In the second meeting of the 18th session of the Standing Labour Committee, the employers' representatives suggested that bonus, which was an uncertain element in wage-cost, should be altogether done away with. It was agreed that the question was one of evolving some suitable norms, so that the uncertainty associated with it was minimised. It was, therefore, agreed that the whole question should be examined by a Bonus Commission, to be set up for the purpose, with suitable terms of reference. This demand was also boosted by the Supreme Court judgment in 1959, in the case of the *A.C.C.* vs. *Workers*, that the legislature cannot abdicate its responsibility for legislation on the subject, if it feels that the claims for social and economic justice made by labour should be redefined on clearer basis. "It may also be possible," said the Supreme Court, "to have the question comprehensively considered by a high-powered commission which may be asked to examine the pros and cons of the problem in all its aspects by taking evidence from all the industries and all bodies of workmen."

Broad Features

So the Bonus Commission was set up. Apart from its usual terms of reference—laying down precise principles for determining the 'available surplus' for distribution as bonus, the Commission was to specify as to how far its recommendations were to be made applicable to workmen in public-sector undertakings. The broad features of the Bonus Commission recommendations were as follows:

The 'available surplus' from out of which bonus will be paid should be arrived at after deducting from the gross profits the following prior charges:

(i) Depreciation as admissible under the *Income Tax Act*;

(ii) Income-tax and super-tax;

(iii) return (*a*) at actual rate payable on preference share capital; (*b*) at 7 per cent on equity capital; and (*c*) at 4 per cent on reserves and surplus.

Sixty per cent of this 'available surplus', subject to a *minimum* equivalent of 4 per cent of the annual basic wages *and* dearness allowance or Rs. 40 whichever is higher; and a maximum equivalent of 20 per cent of annual basic wages and dearness allowance, should be distributed as bonus. The payment should be in cash.

Where the amount allocable as bonus exceeds the maximum of 20 per cent of the earnings, then the excess upto a further limit of 20 per cent is to be carried forward to be 'set on' in the succeeding years, upto a period of next four years. Similarly, where there is no 'available surplus' or the amount of 'available surplus' allocable as bonus is a sum less than 4 per cent of the annual earnings, then the whole of the quantum of 4 per cent or the amount necessary to make up 4 per cent as the case may be, should be carried forward and 'set off' in the succeeding years, upto a period of four years.

The formula will apply to those public sector undertakings which are not departmentally run and which compete with the establishments in the private sector. For this purpose, if not less than 20 per cent of the gross aggregate of the sales turnover of a public-sector undertaking consists of sales of services or products which compete with the sales of services or products by units in the private sector, that undertaking will be deemed to be competitive with the private sector.

Exemptions

Where in particular undertakings, employers and units have adopted or may adopt in future, annual bonus linked with production or productivity in substitution of bonus based on profits, the Commission's formula will not apply. Similarly, where industry-wise agreements already exist, the parties are at liberty to renew the agreements with such modifications, if any, as may be agreed to by them.

The formula will not apply to new concerns until they have recouped all early losses, including all arrears of normal depreciation admissible under the Income Tax Act, subject to a time-limit of six years.

The Commission finally recommended that its proposals should apply to all bonus matters relating to the accounting year ending on any day in the calendar year 1962, other than those cases in which settlements have been reached or decisions given.

The report of the Bonus Commission was unanimous, except for a minute of dissent from a member representing the private-sector employers, who differed from the main recommendations of the Commission on some matters of detail. According to him, in calculating the 'available surplus', besides the above-mentioned three charges allowed by the Commission, two other charges should also be deducted, namely, super profits tax and suitable rehabilitation allowance. Moreover, the rate of return on capital as a prior charge should not be less than 8.5 per cent for paid-up capital and 6 per cent on reserves. He had suggested further that, in case of certain industries like jute, plantations, coal and other mines, the limits of minimum and maximum should be fixed at 2 per cent and 10 per cent of the annual earnings, as against limits of 4 per cent and 20 per cent in case of other industries.

There can be no doubt that the recommendations of the Commission mark a milestone on the road to this important subject. Here the salient features of the recommendations may be recapitulated. First, the Commission construed the concept of bonus as "sharing by the workers in the prosperity of the concern in which they are employed." It may be noted that the word used is "prosperity" and not profit, which has become outmoded. Secondly, the rate of return on equity capital, namely, seven per cent allowed as prior charges for determining 'available surplus' is more than the usual 6 per cent allowed under A.L.T. Full Bench formula. Thirdly, for the first time, norms were recommended for distribution of bonus in public-sector undertakings. Departmental-run undertakings like Railways, Post and Telegraph, etc, are to be completely exempt from its recommendations, while in the case of other public-sector undertakings, which are not departmentally run and which compete, as per Commission's formula with private sector undertakings in their sale of products/services, these recommendations are to be equally applicable. Fourthly, and perhaps the most important, the principle of minimum bonus has been enunciated in clear terms. In other words, all units, including losing units, are compulsorily required to distribute a minimum bonus. This part of the Commission's recommendations was bitterly opposed by the employer's representatives, just as its inclusion in the Report was hailed by labour leaders.

Because of the very controversial nature of its recommendations, the Government of India did not announce its decision on the Commission's report quickly. As public-sector undertakings were involved and as not all of them were very sympathetic to the Commission's recommendations on the subject, a lengthy process of consultation and deliberation was gone into. Meanwhile, the patience of labour leaders was being exhausted and there were repeated demands that the Government should announce its decision on the report without any further delay. The Government's decision on the report was made known on 27th August 1964, accepting all the major recommendations of the Commission, subject to certain modifications relating to prior charges on gross profits for calculating 'available surplus' for distribution as bonus. The modifications introduced by the Government are:

(1) In computing the 'available surplus,' *all* direct taxes for the time being in force will be deducted as prior charges. Tax concession given to industry to provide resources for development —as, for instance, development rebate—will also be accepted as prior charges. (Steps are to be taken to ensure by law that the amounts involved in such concessions are used for the purposes for which they are given.)

(2) The rate of return on capital to be allowed as prior charge deductible before calculating 'available surplus' should be:

(i) The actual rate payable on preference share capital;

(ii) 8 per cent taxable, on paid-up equity capital—7.5 per cent in the case of banks;

(iii) 6 per cent on reserves—5 per cent in the case of banks.

(3) The Government considered it desirable that, beyond a certain limit, bonus should be paid in the form of securities or investment, instead of wholly in cash as recommended by the Commission. (This matter is to be further discussed and decided by negotiations with the parties concerned, including labour organisations, and, if necessary, by tri-partite discussions.)

The Government has also agreed that the Commission's formula will be applicable also to public-sector undertakings which compete with private sector.

Since the Commission recommended that its proposals should take effect from the accounting year 1962, the Government has also announced its decision *vis-a-vis* retrospective effect of the award. According to its decision, in those cases where any retrospection has been settled through any agreement or by a decision having been given, the matter ends there. In other cases, where a dispute is raised or is pending, it will be related to the accounting year ending on any day in the calendar year 1962. In all other cases, it will be related to the calendar year 1963.

Existing agreements between managements and their employees providing for a larger amount of bonus will not be disturbed, but, whenever a dispute arises, the Commission's formula will prevail.

Suitable legislation is to be introduced to give effect to the proposals which have been accepted by the Government.

Significance of Modification

The significance of the Government's modification of the Commission's formula may now be briefly commented upon. It will be seen that, in determining the 'available surplus', the Government's decision is more attractive, from the employer's standpoint, than the Commission's original recommendation on the subject. Not only *all* direct taxes have been made a prior charge on capital; but the rate of return allowed has been increased from 7 per cent to 8 per cent on equity capital, and from 4 per cent to 6 per cent on reserves. (This almost follows the suggestions made in the minute of dissent to the Commission, referred to above, from the member representing the private sector employers.) Of course, rehabilitation allowance has been disallowed. This concession to the private sector will not be easily conceded by labour leaders, who are bound to make much capital out of it. But there can be no doubt that, in granting these concessions, the Government's aim is to help employers plough back a part of the profits so vitally needed for the development and expansion of industry. It must be noted that, while aiming for economic and social justice for workers, the Government has also to ensure the continued prosperity of the industry. In other words, it has to see that, in order to have the golden egg, the goose that lays it is not killed by the desire of its beneficiaries to have more. It is no doubt a difficult task and the very fact that the Government

(*Continued on next page*)

INDIA AND KENNEDY ROUND

SIGNIFICANT BENEFITS POSSIBLE IF PRODUCTION AND PRODUCTIVITY IMPROVE

By A Special Correspondent

THE Kennedy round of tariff negotiations to be resumed shortly is of considerable significance to developing countries especially to India. Apart from effecting a 50 per cent cut in the customs tariffs of the U.S.A., U.K. and E.E.C. countries on a large number of products on a package basis, attempts will also be made for the first time to eliminate non-tariff barriers which hinder international trade. Such barriers include import quotas, import restrictions, mixing regulations, tariff valuation procedures, anti-dumping rules, internal taxes and so on.

India's export trade in recent years has shown a remarkable buoyancy. Although favourable international factors like the high price of sugar and the keen demand for oilcakes helped us to increase our earnings of foreign exchange in the last fiscal year, it must be admitted that the various measures adopted to promote exports have also been very useful. And, if the advanced countries show a more sympathetic attitude by the removal or reduction of import restrictions, India's exports could be stepped up more significantly.

Jute Goods

For example, high tariffs and quotas stand in the way of increasing the export of our jute goods which, in 1963-64, were the largest single earner of foreign exchange, accounting for Rs. 157 crores out of the total exports of Rs. 796 crores. In Argentina, for example, the tariff on all jute goods amounts to 60 per cent *ad valorem*, while in Canada it varies from 15 per cent for jute bags to 25 per cent on jute yarn. Japan's tariff works out to 20 per cent *ad valorem* on jute yarn, 25 per cent on jute cloth and 22 yen per bag on new jute sacks.

The following comments of the Srivastava Committee on tariffs and quota restrictions are worth recalling:

"The Committee views with concern India's inability to obtain reductions in protective duties, especially in the U.S.A., Japan and Argentina and Canada. The recent modifications in the U.S. import duties have meant only marginal reductions. A more significant reduction would assist speciality jute goods, especially those which are bleached and dyed to compete on more equal terms with paper in the field of consumer size packaging; it would also assist the growth of processed jute fabrics, including mixed fabrics of jute with other textiles, to develop a bigger market for furnishings. The Argentina import duty is the highest in the world; and in the last two years of high jute prices, has meant the loss of Argentina markets to packing materials produced in Brazil from Kenaf. In Japan, where there has been a progressive abandonment of packing materials made from rice-straw, the relative uneconomic domestic production of jute manufactures is being protected by a 25 per cent import duty."

The E.C.M. countries have set apart meagre quotas for Indian jute goods. In 1963, France granted a quota of only 1,000 tons for Indian jute goods. West Germany has no quota restriction on jute goods imported for re-export but those imported for domestic consumption are regulated by quotas. The quota assigned to India in the last year was 12.50 million DM. Italy restricts the import of jute goods by tariffs varying from 15 per cent to 22 per cent *ad valorem* along with a turnover tax of 2.5 per cent. Belgium has not officially laid down quotas for jute goods but the Belgium Jute Manufacturers' Association generally does not import them for internal consumption.

So far as the U.K. is concerned, the import of jute goods is restricted by means of the system of mark-up price. The operation of Jute Control in practice has restricted the import of jute goods into the U.K. Its effect, as the Srivastava Committee says, has been to maintain a 20 per cent import duty on common hessian, upto 40 per cent on certain constructions and to exclude completely wide hessians and other specialities, although sacking has enjoyed duty-free entry.

Cotton Textiles

As regards cotton textiles, their import into many countries is rigidly controlled. In the U.K., for instance, the import of Indian cotton textiles has been restricted to a maximum of 195 million square yards exclusive of handloom textiles. This restriction applies only to Indian textiles imported for home consumption, and not for re-export. The U.S. has restricted imports of Indian cotton textiles to an aggregate of 37 million square yards, which quota is to continue up to 30th September, 1966.

The quota allotted by France to Indian textiles for 1963 was 1,355 tons of which 950 tons were for grey cloth, 330 tons for cloth other than grey and the rest for other varieties. West Germany also had fixed a quota of 8 million DM for import of Indian textiles during 1963. Jute goods and cotton textiles are among the large earners of foreign exchange for India and it is obvious that, if the advanced countries agree to relax the restrictions, it might help to increase our exports.

Exception List

The U.K., the U.S. and E.C.M. countries have agreed to reduce upto 50 per cent their existing tariff on all industrial products except in those items where their own industries are likely to be affected by this cut. It is reported that each country has prepared an Exception List containing a list of items on which duties will not be cut. The details of such lists are not known. How far will India be able to benefit from the cuts will depend largely on the type of these exception lists.

So far as the U.K. and the Commonwealth countries are concerned, it is in the interest of India to see that the Exception List is made as large as possible. Most Indian goods at present enter the U.K. duty-free and if she agrees to cut the duties by 50 per cent, the preference enjoyed by India will be reduced or eliminated. This means that Indian goods in the U.K market may become more vulnerable to competition from non-Commonwealth countries like China, Russia, Hong Kong, Spain and so on. But in respect of countries other than the U.K. and the Commonwealth, it will be in India's interest to see that the Exception List contains as few items as possible.

Although at present India's exports consist largely of traditional goods, we have been steadily increasing the exports of non-traditional items. In the last fiscal year, for instance, India exported to the U.K. sewing machines valued at Rs. 1,92,000, electric fans at Rs. 3,74,000, iron and steel Rs. 6,70,000, sports goods Rs. 1,26,000 and cinematographic films Rs. 23 lakhs. To the U.S., we exported in 1963-64 non-traditional items like sewing machines worth Rs. 2 lakhs, footwear Rs. 27 lakhs, art works over Rs. one crore and iron and steel Rs. 1.7 crore. The value of such exports at present is comparatively small, but, over a period of years, their export is likely to increase appreciably.

An important aspect of the Kennedy round is that the developing countries will not be called upon to reciprocate in the matter of tariff cuts. This is as it should be. In fact, if the developing countries are able to grow at a fast rate, it will greatly benefit the advanced countries themselves by providing a stable market for their manufactured goods. India, for example, has been one of the best customers of the U.K. for her manufactured goods like machinery, transport equipment, iron and steel and other goods. It is significant to note that export of iron and steel from the U.K. to India recorded a big increase in January-May 1964 by 48.9 per cent to £5.9 million, as compared with the corresponding period of the preceding year. India was the second largest market for U.K. iron and steel, accounting for 6.7 per cent of the total value of these exports from the U.K. The U.S. and Canada stood first and third, respectively, as markets for iron and steel in the first five months of 1964.

Other Devices

Besides quotas and tariffs, there are other devices by which the advanced countries try to shut out imports. One such device is the customs valuation procedure under which the valuation of imported goods for assessment to duty is made on the selling price of the articles concerned within the importing country. In the U.S., for instance, this procedure is followed in certain cases as a result of which the customs duty collected works out to three or four times the rate shown in the tariff. Another device is to enforce sanitary regulations in such a rigid manner as to exclude imports of commodities like fresh or canned fruits and fruit products, pharmaceuticals and leather goods. Mixing regulations are yet another device to restrict imports. In some countries of Europe, for instance, importers of vegetable oils are obliged to buy a certain quantity of olive oil produced indigenously in order to entitle them to obtain the import licence. The levy of high internal duties, canalising import through monopoly concerns and manipulation of anti-dumping regulations —these are some of the other methods resorted to for curbing imports. The Kennedy round will rightly probe into these aspects also.

Even if India derives considerable benefit from the Kennedy round in the form of reduction of tariffs and removal of other restrictions, success in our export promotion can be achieved in a big way only when we set our own house in order. It is not adequately realised that responsibility for export promotion rests not on the Commerce Ministry alone but on all other economic ministries as well. More than anything else, what India needs at present is a continuous increase in production both in agriculture and industry, so that, apart from meeting the domestic demands, sufficient surplus becomes available for export. But agricultural production has been stagnating for the last few years and official policy still lays more emphasis on controls and regulations than on measures to increase output. Industrial expansion is not taking place in a dynamic way because of the depressed conditions of the capital market caused mainly by excessive taxation. The labour policy of the Government is also not calculated to increase production and bring down costs. It is clear, then, that, if India is really serious about export promotion, the various aspects of economic policy need careful reconsideration.

BONUS COMMISSION AND AFTER

(*Concluded from previous page*)

took so much time for coming to a final decision on the Commission's report attests to its difficulty.

The initial response to the Government's decision, from the labour leader's side has been, on the whole, unfavourable. It has been termed "reactionary and retrograde", "a serious blunder", and worse than even the Full Bench formula of A.L.T., to improve which the whole Bonus Commission was set up. Warnings have been issued already that labour will not take the Government's decision lying down and serious labour unrest has been predicted, especially in capital-intensive industries like coal, steel, electricity, heavy machinery, etc., to undo this injustice done to labour. According to another labour leader, after the Government's modification of the Commission's formula, "the 60 per cent of the available surplus meant for bonus distribution under the Commission's original formula would, in effect, become about 40 per cent."

As compared to labour's rather sharp reaction, the criticism from the employers' side to the Government's decision has been rather mild. The main line of the employers' reaction has been that, since the Government seemed to have accepted the principle of compulsory distribution of bonus even by losing concerns, it would be a misnomer to call it profit-bonus, as it almost amounts to a straight increase in wages. The disallowance of rehabilitation allowance as a prior charge will, it is said, seriously affect the modernisation and expansion of industrial units.

It is, of course, too early to forecast the lines the employers' and employees' organisations will take, in the long run, on the Government's modification of the Commission's formula, as its decision has only been just announced. But all indications seem to point to a hardening of labour leaders' attitude on the subject in the coming weeks, as they feel that they have been let down by the Government's decision. If this diagnosis is correct, then one may expect an increase in labour unrest in the near future. That, indeed, would be unfortunate in the present context of rising prices and inflationary spiral. But, when full details of the revised scheme are worked out, it will be seen that the initial fears of labour leaders were ill-founded. It has been truly said that in the field of employer-employee relations, an 'ideal' solution to a problem is one that leaves both the sides slightly dissatisfied with the decision.

"ALIND" SHOWS ALL-ROUND PROGRESS

DIVIDEND CUT RESTORED ON LARGER CAPITAL

A FULL recovery in results from the setback suffered in 1962-63 has been made by Aluminium Industries Ltd. [Managing Agents: Messrs. Seshasayee Brothers (Travancore) (Private) Ltd., Alwaye] during the year ended 31st March 1964. The proceeds of sales and service, which had receded from Rs. 617.57 lakhs to Rs. 573.89 lakhs in the previous year, have improved to Rs. 622.42 lakhs in the year under review. In spite of the lower turnover in 1962-63, gross profit for that year had increased by Rs. 16.69 lakhs to Rs. 73.80 lakhs. It is but natural that the higher turnover during the year under review should have pushed up the gross profit further to Rs. 83.87 lakhs. But the increase over the year amounting to Rs. 10.07 lakhs does not compare favourably with the increase recorded in the previous year, because other expenses, which had been higher by roughly Rs. 8 lakhs in 1962-63, have gone up by as much as Rs. 13.84 lakhs to Rs. 119.93 lakhs during 1963-64. Net profit, on the other hand, shows an expansion of Rs. 13.96 lakhs to Rs. 29.86 lakhs against a contraction of Rs. 7.27 lakhs to Rs. 15.90 lakhs in the previous year. The bulk of this expansion, reflects the scaling down of the tax provision from the previous year's pretty high figure of Rs. 39.50 lakhs (as against the 1961-62 figure of Rs. 18.20 lakhs) to Rs. 30 lakhs following an increase in the amount credited to development rebate reserve from only Rs. 69,250 to as much as Rs. 4.91 lakhs and also in the depreciation charge from Rs. 14.87 lakhs to Rs. 20.24 lakhs.

Including other transfers, the total amount carried to reserves is Rs. 6.91 lakhs, as against Rs. 3.69 lakhs a year before. Although this aggregate figure shows an increase over the year, as a portion of the available net profit it is lower, being roughly one-fourth as compared with about one-third in the previous year. The bulk of the profit (Rs. 22.72 lakhs to be precise) has been utilised towards restoring fully the previous year's three-point cut in the dividend rate of 18 per cent per annum and that, too, on the capital increased to Rs. 134.93 lakhs following the issue of 350,000 equity shares of Rs. 10 each at a premium of Rs. 3.50 per share.

The following comparative table gives a clear idea of the progress made by the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sales and service charges	622.42	573.89	617.57	435.73
Other income	1.59	0.69	0.99	..
Closing stocks	118.72	117.41	86.52	145.88
Materials and stores consumed	421.52	425.58	408.48	385.91
Other expenses	119.93	106.09	94.16	72.41
Gross profit	83.87	73.80	57.11	48.64
Managing Agents' commission	3.77	3.53	2.78	2.96
Provision for—				
Depreciation	20.24	14.87	12.96	10.98
Taxation	30.00	39.50	18.20	16.41
Net profit	29.86	15.90	23.17	18.29
To reserves	6.91	3.69	4.91	..
Dividend	22.72 (18%)	15.00 (15%)	18.00 (18%)	16.80 (18%)
Carry forward	0.70	0.48	3.27	3.00

Equity shares' market value (in rupees):	1964	1963	1962	1961	1960
High	22.75	23.30	25.10	24.80	29.20
Low	18.12	16.50	23.20	21.87	C.R. 21.70

What explains the marked recovery in sales during the year is the considerable diversification in the production of covered aluminium conductor to cater to the varying pattern of demand. Besides, the market conditions for the Company's products continued to be favourable. It may be noted in this context that the stocks at close show only a marginal increase from Rs. 117.41 lakhs to Rs. 118.72 lakhs, though production of both bare conductor and covered aluminium conductor had risen substantially.

The expansion of the covered aluminium conductor plant at Kundara and the construction of a new factory at Hyderabad (inaugurated by the Chief Minister of Andhra Pradesh on 29th January 1964) were completed during the year. The construction of the plant for manufacturing low voltage aluminium underground cable at Kundara is nearing completion. This unit is expected to be in production after two months. The import licence and foreign exchange for the expansion of the aluminium rod rolling mill at Kundara have been secured. Work connected with this expansion is now on hand. It is expected that the expansion work will be completed in the third quarter of 1965. The bare conductor manufacturing facilities at Kundara and Hirakud are also being enhanced through the installation of suitable balancing equipment.

In spite of the increase in paid-up capital, the "own" funds amounting to Rs. 213.57 lakhs (Rs. 134.93 lakhs in capital and Rs. 78.64 lakhs in reserves and surplus) are less than half of the total of outside finance of Rs. 568.38 lakhs comprising Rs. 45 lakhs in debentures, Rs. 284.42 lakhs in bank loans and Rs. 238.96 lakhs in current liabilities and provisions. The short-term indebtedness of Rs. 523.38 lakhs, comprising bank loans and current liabilities and provisions, is fully covered by current assets, book debts and investments aggregating Rs. 614.95 lakhs. The gross block, inclusive of construction works in progress and land development expenses, is carried in books at a cost of Rs. 281.53 lakhs (Rs. 239 lakhs a year before) and has been written down to a net block of Rs. 167.01 lakhs.

Currently quoted at Rs. 22.75 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer a net yield of 6.9 per cent.

MACHINERY MANUFACTURERS CORPORATION

With manufacturing operations continuing to be satisfactory both as regards production and despatches of the major products, namely, carding engines, the Machinery Manufacturing Corporation Ltd. (Managing Agents: Messrs. Mahindra and Mahindra Ltd., Bombay) has registered further improvement in its turnover and gross profit. Gross realisation from sale of products has risen by almost 20 per cent from Rs. 197.61 lakhs to Rs. 235.78 lakhs and the gross profit is correspondingly higher at Rs. 71.02 lakhs as compared with Rs. 59.16 lakhs for the year before. A more than proportionate part of this rise in gross profit has, however, been neutralised by the increase in all essential provisions. The remuneration payable to Managing Agents has taken up Rs. 4.34 lakhs as against Rs. 3.73 lakhs. Similarly, the provisions for depreciation and taxation are higher, the former at Rs. 13.34 lakhs as against Rs. 10.27 lakhs and the latter at Rs. 31 lakhs as against Rs. 17 lakhs. As a result, the net profit shows a decline of Rs. 5.82 lakhs to Rs. 22.34 lakhs. The credits to reserves have therefore declined in sympathy from Rs. 22.71 lakhs to Rs. 15.62 lakhs. The dividend on ordinary shares is unchanged at 15 per cent per annum.

The Company's progress during the past four years is clearly brought out in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961

Although the capital reconstruction effected during 1960-61 and the steady improvement in the Company's working since that year have undoubtedly strengthened its financial position, a continuation of this trend for at least a couple of years appears necessary if the financial structure is to be put on an absolutely solid ground. As at 31st March 1964, the Company's own funds aggregated Rs. 119.24 lakhs, comprising Rs. 38.96 lakhs in two classes of preference shares, Rs. 30.75 lakhs in ordinary shares of Rs. 10 each and Rs. 49.53 lakhs in reserve and surplus. Finances from outside totalled Rs. 202.51 lakhs, made up of Rs. 78.62 lakhs secured loan and Rs. 123.89 lakhs current liabilities and provisions. Fortunately, these are fully covered by current assets, investments and loans and advances aggregating Rs. 204.09 lakhs. Gross block stands at Rs. 206.51 lakhs and has been written down to Rs. 110.95 lakhs. Capital work-in-progress as at the date of the balance sheet is valued at Rs. 6.70 lakhs.

As regards the prospects for the current year, the upward trend in production and despatches is reported to have maintained during the first three months. While the order book position remains satisfactory, the Directors report a slowing down in the rate of intake new orders as also a perceptible trend in cancellation of existing orders.

Following a careful study of new developments in carding technology in Europe and America, the Company has entered into an agreement with Carding Specialists (Halifax) Ltd., U.K., for the production of a high production device. Collaboration for the manufacture of drawing frames has also been arranged with Whitin International Ltd., U.S.A. These two manufacturing proposals are under consideration by the Government of India.

The Rs. 10 paid shares of the Company are currently being quoted at Rs. 22.76 at which price, the yield works out to a little over five per cent (net) per annum.

MYSORE PAPER'S RESULTS

EXPANSION PROJECT NEARING COMPLETION

THANKS to the continued increase in costs of raw materials, chemicals and labour and the Government's inflexible pricing policy, the profit-margin of the Mysore Paper Mills Ltd. (Chairman: Mr. M. D. Shivananjappa, Bangalore) has registered a further decline during the year ended 31st March 1964. Following an eight per cent rise in the production of paper, the turnover of the Company has expanded by Rs. 7.32 lakhs to Rs. 130.31 lakhs but the gross profit has slipped by Rs. 2.30 lakhs to a new low level of Rs. 15.69 lakhs. The ratio of gross profit to sales (profit-margin), therefore, works out to 12 per cent, as against 14.6 per cent for the preceding year and 16.3 per cent for the year 1961-62. There has been a slight reduction in the provision for depreciation from Rs. 6.04 lakhs to Rs. 5.76 lakhs, but taxation has taken up only Rs. 0.79 lakh as against Rs. six lakhs for the previous year. The reason for the sharp reduction in the provision for taxation is that the Company has no assessable income for the year on account of the development rebate allowance amounting to Rs. 28.68 lakhs on plant and machinery erected, installed and taken into service. The small provision made in the accounts merely represents the possible liability for tax on the amount distributed as dividend. The resulting net profit is, therefore, technically higher at Rs. 9.14 lakhs as against Rs. 5.95 lakhs for 1962-63. Supplementing this surplus with Rs. 1.23 lakh written back from the dividend equalisation reserve and the amount brought forward, the Directors have proposed the payment of a dividend of nine per cent (as against 12 per cent last year) on the old and new shares alike—on the latter proportionately to the period in which the paid-up capital was effective. These claim Rs. 10.50 lakhs and leave a small carry forward of Rs. 1,662 as against Rs. 15,216 brought in. The amount of Rs. 21.51 lakhs compulsorily to be credited to the development rebate reserve under the Income-tax Act is being transferred from the general reserve without affecting the profits of the year.

The steady erosion in the profit-margin of the Company during the past four years is well brought out by the following comparative figures:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961

Low	12.40	12.60	13.50	C.R. 12.95 X.R.

The foreign currency loan of Rs. 70 lakhs sanctioned by the Commonwealth Development Finance Company Ltd., London, was drawn in full. A sum of Rs. 61.97 lakhs against a sanctioned loan of Rs. 70 lakhs was also drawn from the Industrial Credit and Investment Corporation of India and a sum of Rs. 55 lakhs against a sanctioned loan of Rs. 60 lakhs from the Industrial Finance Corporation of India in rupee currency up to 31st March 1964. The expenditure on developmental work till the end of March 1964 amounted to Rs. 278 lakhs, as against Rs. 150 lakhs as at the end of the previous year. The coal-fired, as well as the oil-fired, boilers, modern stock makers, the paper machine transformers and switchboards were all fully erected, installed and taken to service during the year. Steam, water and air supply lines were also provided to the completed unit. Erection of the caustic soda recovery unit is making good progress. There has been some delay in the supply of digesters and other essential parts of the pulp plant ordered indigenously but these have now been despatched and

(*Continued on next page*)

KESORAM INDUSTRIES' RESULTS QUITE ENCOURAGING

SHAREHOLDERS GET HIGHER DIVIDEND

A SUBSTANTIAL improvement in sales and gross profit and a bigger dividend for the equity shareholders characterise the working results of Kesoram Industries and Cotton Mills Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta) for the year ended 31st March 1964. Maintaining its upward trend, the turnover has advanced further by Rs. 136.33 lakhs to Rs. 15.77 crores and, since other income and closing stocks are also substantially higher, the gross profit at Rs. 257.51 lakhs shows a handsome gain of Rs. 59.21 lakhs or 30 per cent, over the preceding year's figure of Rs. 198.30 lakhs. Notwithstanding the further increase in other expenses—not necessarily related to production—the ratio of the gross profit to sales, that is, the profit-margin, thus works out to 16.2 per cent and shows a rise of 2.4 points over the previous year. Unfortunately, the position has changed at the level of net profit, due to increases in all essential provisions, in general, and in that for taxation, in particular. The provision for Managing Agents' commission is larger by Rs. 3.41 lakhs at Rs. 11.80 lakhs, that for depreciation by Rs. 12.79 lakhs at Rs. 95.28 lakhs and that for taxation by almost Rs. 45 lakhs at Rs. 53.28 lakhs. The resultant net profit is actually a shade lower at Rs. 97.15 lakhs as compared with Rs. 99.12 lakhs for the year before. Although no less than Rs. 57.43 lakhs out of this have been credited to reserves and Rs. 9.84 lakhs earmarked as before for payment of preference dividend, the Directors have still found it possible to raise the ordinary dividend, for the second year in succession, by two points to 15 per cent per annum. This claims Rs. 30 lakhs, as against Rs. 26 lakhs previously, and leaves Rs. 14,501 as a carry forward, as against Rs. 26,969 brought in. It is further interesting to note that a part of the dividend will be exempt from taxation, being covered under sections 85 and 101 (2) of the Income-tax Act and that an application has been made to the Income-tax Department for determining the exact quantum which will be tax-free.

The working results of the Company for the year under review and those for the three years preceding it are set forth in the following table:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sale proceeds	15,77.05	14,40.72	11,60.89	10,17.84

Carry forward	0.15	0.27	0.43	2.45

Market price of ordinary shares (in rupees):	1964	1963	1962	1961
High	30.00	28.87	35.00	38.25
Low	23.75	18.75	21.50	24.62

The Company's "own" resources as at the date of the balance sheet, that is, 31st March 1964, stand at Rs. 776.74 lakhs comprising Rs. 119.84 lakhs in two classes of preference shares of Rs. 100 each, Rs. 200.08 lakhs in ordinary shares of Rs. 10 each and Rs. 455.82 lakhs in reserves excluding Rs. 39.84 lakhs earmarked for the payment of dividends for the year under report. The book value per ordinary share of Rs. 10 each thus works out to Rs. 32.80, as against the present market price of Rs. 27.81. The outside finance at Rs. 773.87 lakhs very nearly equals the own funds and is made up of borrowings Rs. 499.81 lakhs and current liabilities and provisions Rs. 274.06 lakhs, including the dividend proposed for the year. On the assets side the net block is Rs. 839.80 lakhs and has been obtained by reducing the gross block of Rs. 1,298.53 lakhs (including Rs. 44.97 lakhs in capital work-in-progress) by Rs. 458.73 lakhs being the accumulated amount of depreciation to date. Investments, mostly in shares of companies in the same group, are shown at a book value of Rs. 56.87 lakhs, while current assets and loans and advances amount to Rs. 652.95 lakhs.

The modernisation of the Company's textile unit proceeded during the year as planned. A sum of Rs. 11.23 lakhs was spent by adding a number of modern processing machines, replacing a few conventional sizing machines by one high speed sizing machine and replacing plain looms by 96 automatic ones. Under the general Government permission, the Company has undertaken an expansion of the installed capacity to the extent of 7½ per cent in respect of the spindleage and 10 per cent in respect of the loomage by establishing a separate unit. Owing to insufficiency of space at the existing factory area, necessary application has been made for permission to set up the new unit at Budge Budge.

Despite sharp increases in excise duty and electricity rates, heavy export promotion losses, frequent work stoppages due to power shortages and a 13-day long strike during March 1964, the Company's rayon plants made satisfactory progress due to improvement in production techniques, higher efficiency and reduction in wastage. The transparent paper plant also showed "slightly" better results than previously. Although nominal reduction in excise duty has been given under the last budget, this section is still finding it difficult to compete with similar products manufactured by other processes enjoying a lower excise burden. The moisture proofing, printing and bag-making plants which were under erection during the year have recently started production, and sales of the transparent paper section as a whole are expected to increase after those plants attain full rated production. Installation of a second casting plant has been taken in hand and the plant may be put into operation during the current year. The construction work of the factory to manufacture spun pipes and fittings is going on satisfactorily.

As for the current year the Directors state that, in the light of the satisfactory working of the various units, the shareholders can look forward to a reasonably bright future.

The Rs. 10 fully paid ordinary shares of the Company are currently available at Rs. 28.00 and fetch a net return of about 4.3 per cent.

(*Concluded from previous page*)

are expected to be received at the factory site very soon.

During the year under review, the 10-lakh "new" equity shares of the face value of Rs. 10 each became fully paid and this has pushed up the issued share capital from Rs. 72.95 lakhs to Rs. 121.86 lakhs. This is supplemented by Rs. 61.02 lakhs in reserves and surplus. As stated earlier, the Company fully availed of the loans sanctioned to it by the various financial institutions and total borrowings therefore aggregate Rs. 203.92 lakhs including Rs. 3.10 lakhs as interest and commitment charges accrued on secured loans. Besides these, current liabilities and provisions total Rs. 59.33 lakhs, so that the total of outside finance works out to Rs. 263.25 lakhs as against "own" funds of Rs. 182.88 lakhs. Although this situation is somewhat abnormal things can be expected to improve once the benefits of the expansion of the factory begin to accrue. Inclusive of the additions of Rs. 165.68 lakhs during the year, the gross block stands raised at Rs. 335.63 lakhs and, on deduction of Rs. 127.77 lakhs as depreciation earned to date, a net block of Rs. 207.86 lakhs emerges. Current loans and advances total Rs. 115.79 lakhs, while development expenditure not adjusted to capital accounts is shown in the balance sheet at Rs. 122.48 lakhs.

The Rs. 10 paid ordinary shares of the Company are currently available at Rs. 12.50 *cum-div.* and on an *ex-div.* basis, fetch a net annual return of 6.1 per cent.

All banks deal in money.
We also deal with PEOPLE

There's nothing formidable about our Agent. Any little problem you bring up, has his most careful personal attention. What's it you'd be wanting? To open a current or savings bank account? Purchase or sell securities? Periodical remittances? Safe custody of investments? Your wish is his command.

And you don't have to have an appointment either. Just walk in and see him. Who knows, he might offer you a cigar!

Notices

THE DALHOUSIE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE DALHOUSIE JUTE COMPANY LIMITED will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta-1, on Wednesday, the 30th day of September, 1964, at 10 a.m. for the following purposes:—

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1964, the Balance Sheet as at that date and the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

4(*a*). To appoint a Director in the place of Khan Bahadur D. E. Avari, M.B.E., who retires by rotation, and, being 70 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in general meeting, specifically declaring that the age limit shall not apply to him; and in this connection to consider and, if thought fit, to pass the following resolution, of which special notice has been received by the Company:

"THAT Khan Bahadur D. E. Avari, who retires from the Board by rotation, be and is hereby reappointed a Director of the Company, whose period of office will be liable to determination by retirement of Directors by rotation, and, he having attained the age of 70 years, it is specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

4(*b*). To appoint Mr. M. R. Das, a Director, who vacates office at this meeting, and in this connection to consider and, if thought fit, to pass the following resolution of which prescribed notice has been received by the Company, the candidate having filed with the Company his consent to act as a Director if appointed:

"THAT Mr. M. R. Das be and is hereby appointed a Director of the Company, whose period of office will be liable to determination by retirement of Directors by rotation."

The Share Transfer Registers of the Company will be closed from the 16th to 30th September, 1964, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, 29*th August*, 1964.

Notes:—(*a*) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after the 10th October, 1964, to those shareholders so entitled whose names appear in the Company's books on the 30th September, 1964, or to their mandatees. No application for Dividend Warrants will be necessary.

(*c*) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of Special Business set out above are being sent to the Shareholders.

THE AUCKLAND JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE AUCKLAND JUTE COMPANY LIMITED will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta-1, on Wednesday, the 30th day of September, 1964, at 10.10 a.m. for the following purposes:—

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1964, the Balance Sheet as at that date and the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

4(*a*). To appoint Mr. M. R. Das, a Director, who vacates office at this meeting, and in this connection to consider and, if thought fit, to pass the following resolution, of which prescribed notice has been received by the Company, the candidate having filed with the Company his consent to act as a Director if appointed:

"THAT Mr. M. R. Das be and is hereby appointed a Director of the Company, whose period of office will be liable to determination by retirement of Directors by rotation."

4(*b*). To appoint Mr. R. G. Edwards, a Director, who retires at this meeting, and in this connection to consider and, if thought fit, to pass the following resolution of which prescribed notice has been received by the Company, the candidate having filed with the Company his consent to act as a Director if appointed:

"THAT Mr. R. G. Edwards be and is hereby appointed a Director of the Company, whose period of office will be liable to determination by retirement of Directors by rotation."

4(*c*). To appoint Khan Bahadur D. E. Avari, who has attained the age of 70 years and is not eligible for appointment unless approved by a resolution of the Company in general meeting specifically declaring that the age limit shall not apply to him; and in this connection to consider and, if thought fit, to pass the following resolution, of which special notice as required by Section 190 and 281 of the Companies Act, 1956, has been received by the Company from a shareholder:

"THAT Khan Bahadur D. E. Avari be and is hereby appointed a Director of the Company, whose period of office will be liable to determination by retirement of directors by rotation, and, he having attained the age of 70 years, it is specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

The Share Transfer Registers of the Company will be closed from the 16th to 30th September, 1964, both days inclusive.

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE following posts in the undernoted departments of the Reserve Bank of India:—

(A) **POSTS AND SCALES OF PAY:**

(i) Deputy Directors—Rs. 850-60-1150.

(ii) Research Officers—Rs. 430-430-55-815-EB-55-925-60-1045.

(iii) Junior Officers Grade II, in the Legal Department—Rs. 375-20-535-25-560-EB-25-660-30-720.

Note:—Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay the selected candidates in all categories mentioned above will be eligible to draw local pay, (at centres where it is admissible), house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) **QUALIFICATIONS:**

(i) *Deputy Directors, Economic Department*: Applicants should possess first or high second class Master's degree in Economics of an Indian or foreign University or a Doctorate degree in Economics of an Indian or foreign University. They must have experience of research work for at least five years in one or more of the following subjects: (*a*) Monetary Economics, (*b*) Banking Theory and Practice, (*c*) International Trade and Finance, (*d*) Agricultural Economics, and (*e*) Planning and Development.

(ii) *Research Officers, Economic Department*: Applicants should possess first or high second class Master's degree in Economics or Commerce of an Indian or foreign University or a Doctorate degree in Economics of an Indian or foreign University, and a period of research work in one or more of the following subjects: (*a*) Monetary Economics, (*b*) Banking Theory and Practice, (*c*) International Trade and Finance, (*d*) Agricultural Economics and (*e*) Planning and Development. Applicants are expected to be proficient in economic analysis. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (*a*), (*b*), and (*c*) above and experience of agricultural surveys in respect of (*d*) above.

(iii) *Junior Officers Grade II, Legal Department*: Applicants should be Advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's office or have practised independently, for at least 3 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of Banking and Company Law.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) **AGE LIMITS AS ON 1st SEPTEMBER 1964:**

(i) *Deputy Directors*: Candidates should be between 30 and 40 years of age but the age limit may be relaxed in the case of candidates possessing exceptional qualifications.

(ii) *Research Officers*: Candidates should not ordinarily be over 35 years of age but the age limit may be slightly relaxed in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.

(iii) *Junior Officers Grade II*: Between 21 and 27 years. The maximum age limit is relaxable but not beyond 32 years in the case of:—

(*a*) candidates possessing special qualifications and experience of value to the Bank; and

(*b*) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a *scheduled bank* payable at Bombay or by Postal Order. *The application fee is in no case refundable.* In the case of candidates belonging to Scheduled Castes/Tribes the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should *not* be sent) of certificates regarding age and educational qualifications, statements of marks secured in the graduate and post-graduate degree examinations and copies of two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay-1, so as to reach him on or before the 3rd October 1964.

5. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of the certificate to that effect from competent authority.

7. Candidates must be prepared to serve in any office of the bank in India or group of departments to which they are posted and to undertake tours when required.

8. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's offices.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgement Due." Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing in any form will be regarded as disqualification.

ATTITUDE TOWARDS, AND INDUCEMENT FOR, SAVINGS

SOME INTERESTING FINDINGS

THERE is a strong urge for saving in the urban areas in all classes of people irrespective of education and income, though, in actual practice, only 36 per cent of the households, most of them in the higher-income groups, are able to do so. The savings largely depend on the present financial position and the prospects for future betterment. Households experiencing a continuous improvement in their earnings generally save a higher proportion of income than the groups experiencing no change or deterioration. The most important motives for savings are protection against emergencies, provision for old age and children's education. The outlets for savings are investments in business, bank accounts, houses, real estates, small savings, currency in case of less educated, and securities among high-income groups.

These are the main conclusions derived by a sample survey of urban households conducted by the National Council of Applied Economic Research in 1960 to find out the attitudes and motives of people towards savings in the country. The findings are contained in a monograph, *Attitudes towards and Motivations for Savings* (Price: Rs. 10.50, Pages: 156) published recently by the Council. Although the coverage of the study is limited to urban areas (excluding Delhi) only and the sample of 4,650 households is not adequately large for a study of attitudes and motives based on interview method, as there may be a large element of error on the part of the respondents in understanding the questions put by the investigators, it is nevertheless a very useful effort in the sense that it gives information on a subject on which dependable data and information are scarce.

Monetary and Financial Status

As the saving capacity depends largely on the present and prospective monetary position, the households were asked about the change in their monetary and financial status and how the development plans contributed to it. It was found that, as compared with 1958-59, whereas 13 per cent of the families were monetarily better of in 1959-60, 64 per cent experienced no change and the position of 23 per cent actually deteriorated. The proportion of households having a rise in income was the highest for the managerial and administrative class and other white-collar workers, professionals and technicians. The proportion of households having a decline in income was the highest for traders, followed by farmers and professional workers. It will thus be seen that, by and large, whereas the wage and salary earners earned more, the self-employed did not fare well. As regards the expected change in income in 1960-61, whereas about one-fifth of the households could not predict the future, more than half expected no change, about 21 per cent expected a rise in income and only 6 per cent a decline. However, as stated in the monograph, perhaps the Indian respondents are reluctant to admit that they were getting larger income or they were likely to do so in the following year, and the proportion of those getting higher incomes might have been substantially higher than that recorded in the survey.

Inflation, Taxation and Corruption

What is even more important is that many of even those households which recorded a higher income or whose income remained unchanged, reported that they were worse off than they were in the previous year. The following table shows the proportions of households which reported changes in income and financial positions as compared with the previous year:

Position	*Change in income*	*Change in financial position*
Better off	13.1	10.6
About the same	63.8	50.4
Worse off	22.4	38.6
Not available	0.7	0.4
All classes	100.0	100.0

A large percentage of households, in whose case the financial position deteriorated even though the income did not deteriorate, complained of rising prices. Most of these people were the salary earners whose income did not rise to the extent of the rise in prices. Complaints about rising prices was not so frequent in the self-employed people who might have been able to compensate for this factor by increasing their rates of merchandise or service. Asked about the effects of the Five-year Plans on their economic betterment, it is surprising to know that only 9 per cent of the households felt that they benefited by planning, mainly because of the creation of new jobs. Most of the others complained of stagnation or deterioration due to inflation, higher taxes, corruption and nepotism.

Generally speaking, those whose incomes do not record any appreciation are more in need of savings. As against it, the survey found that the households experiencing continuous increase in income saved a higher proportion of their income than those having constant income. The reason may be found in the betterment of capacity of such people to save. The cost of living has been continuously rising and there is also a temptation among the urban people to have a better standard of living. Thus, the people whose incomes do not rise substantially find their saving capacity reduced year after year.

Attitudes Towards Investments

Asked about the attitudes towards various kinds of investments, the replies suggested that profitability and security were the most important motives, though liquidity was also mentioned by some. Thirty-one per cent of the households, mainly businessmen and managerial people, preferred to invest in business, 22 per cent in housing, real property and agricultural land, 13 per cent in bank deposits, 8 per cent in small savings like National Savings Certificates, less than 2 per cent in gold and jewellery and about one per cent in securities. Eight per cent of the households preferred spending the savings on education, marriage and durables and 17 per cent preferred holding in other ways, mainly currency. It may thus be seen that gold and jewellery did not seem to have any charm for the urban people even before the enactment of the Gold Control Order. Apart from business investments, housing and bank deposits are the popular ways of investment in urban areas. However, a substantial portion of the people, mainly uneducated or at the lower level of education, prefer to keep cash. The reason may be the difficulties which they may face in fulfilling the formalities of opening and operating a bank account. There is thus a need not only for popularising banking among these people but also to make the banking procedures simple and easily comprehensible.

Small Savings

Since National Savings Certificates are being used by the Government to mobilise the savings of the people, it may be worth noting that their performance has not been upto expectations and they do not play a very important role in the economy of the country. The main reason, according to the N.C.A.E.R.'s survey, is that as many as 70 per cent of the heads of families are not even aware of the existence of such a thing as National Savings Certificates and many more are familiar only with the name but unable to give correct details about them. Only 12 per cent of the people were able to give correct details about these certificates. Even among educated people (matriculates and above) almost half were not fully familiar and the percentage for uneducated was as high as 99. The survey, it is surprising to learn from the study under review, found the position to be almost similar to that in the case of familiarity with Five-year Plans. More than 50 per cent of the heads of households even in urban areas, we are told, had not even heard about these Plans and another one-fifth had only heard the name but did not know anything about them. Even in the case of educated people, about half of the matriculates and intermediates and one-third of the graduates and post-graduates could not give any details about these plans to support their knowledge about them. If this is the situation in the urban areas, which can boast of a larger percentage of literate and comparatively better informed people, the situation in the villages can easily be imagined. It is a sad commentary on the working of the Ministry of Information and Broadcasting and the Planning Commission that, in spite of their vociferous proclamations, Plan Publicity Weeks, Study Teams and the like, the achievements have been as poor as has been discovered by the investigators of the N.C.A.E.R.

Government Publicity

A study team on Five-year Plan publicity, appointed in April 1963 to assess the impact of Plan publicity conducted through the different media of mass communication and to suggest means for a more efficient and effective utilisation of the media, has just submitted its report to the Minister for Information and Broadcasting. The Committee is believed to have laid great stress on extending the benefits of mass media to the rural people. But it must not be forgotten that even in urban areas very little results have been achieved so far. The Committee has laid stress on close co-ordination not only between the various publicity organisations of the Central and State Governments, but also among the various organisations of the different Ministries at the Centre. The lack of such co-ordination seems to be mainly responsible for the failure of Government publicity. It is high time the Government stopped its policy of creating watertight compartments in administration which results in duplication of effort many times, more money being spent and poor achievements.

To revert to the study of the N.C.A.E.R. under review. As already stated, the accuracy of the results is subject to many limitations. Yet it gives a fairly good idea about the attitudes and motives for savings in the country. The importance of such studies in a planned economy cannot be exaggerated, as it is only by such studies that successful efforts can be made to improve the rate and collection of savings. It is, therefore, unfortunate that not much attention has been paid so far to this aspect and not much material is available in the country on this topic. The difficulties and shortcomings that will have be overcome in studies of this nature have been outlined by Dr. P. S. Lokanathan in the preface to the monograph under review. To quote him: "Lack of education on the part of respondents may complicate the collection of qualitative and attitudinal data which are readily available in Western countries. In addition, there are inherent sampling errors to which any sample survey data are subject. The N.C.A.E.R.'s experience is that, with the exception of certain questions on financial assets, survey data can be highly useful for studying the savings behaviour of the population and for learning something about their views on different types of savings. Nevertheless, it should be stressed that, in view of the rather low educational level of a majority of households even in urban India, one might doubt whether all the households correctly understood the implications of the various qualitative questions posed in the schedule on financial matters and other attitudes." These are the basic difficulties involved in any sample survey where interview method has to be used. All the same, enquiries of this nature must be pursued vigorously and continuously with appropriate improvements in the technique based on experience, for that is the only way to gather knowledge on this important aspect of our economy. The Council, therefore, deserves appreciation for giving the lead in this direction. Only, it is to be hoped that it will publish the monographs concerned with a minimum of delay and arrange for their prompt circulation to the Press.

Notice

THE VELLORE ELECTRIC CORPORATION, LIMITED

Registered Office:
MADRAS

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company, at No. 20, Second Line Beach, Madras-1, on Wednesday the 30th September 1964 at 3.30 p.m., for purposes of considering and passing a Resolution for increasing the share capital of the Company the details whereof is being sent to the members individually.

FOR CHANDRIE & CO. PRIVATE LTD.,

S. VENKATARAMAN,
Director,
Managing Agents.

MADRAS.
3rd September, 1964.

SYNOPSES OF COMPANY REPORTS

Pullangode Rubber and Produce Co., Ltd.

(*Managing Agents*: Messrs. Aspinwall & Co., Ltd., Fort Cochin, Kerala.)

Twenty-first Annual General Meeting—21st September 1964.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1964	1963
Sales—rubber and pepper	11,54	10,06
Closing stock of rubber and pepper	45	91
Gross profit	5,40	5,73
To Managing Agents' commission	49	51
Transfer to depreciation	47	52
,, ,, provision for taxation	2,07	2,07
Net profit	2,38	2,83
Balance forward	7	32
Appropriations:		
Transfer to general reserve	75	50
To tax adjustment relating to previous years	13	64
Proposed dividends (taxable) Preference	9	9
	(6.131%) 1,32	(6.131%) 1,65
,, ,, ,, Ordinary	(8%) 16	(10%) 7
Carry forward		
Market value of ordinary shares (in rupees):	1964*	1963
High	3.21	2.75
Low	2.75	1.73

* Upto 21st August 1964.

Extracts from the Directors' report: **Crop and Costs**: A record crop of 3,84,000 kgs. was harvested during the year. Expenditure and average sale prices for the last four years are compared below:—

	Crop Kgs.	*Estate expenditure Paise per kg.*	*Average sale price P.ise per kg.*
1960-61	3,13,433	224.58	344.77
1961-62	2,67,165	230.34	327.65
1962-63	3,54,000	174.21	309.26
1963-64	3,84,000	187.71	311.69

It is estimated that a crop of 3,25,000 kgs. of rubber will be collected for 1964-65.

Replanting: During the year 60.70 hectares have been completed and the work of replanting a further 60.70 hectares during the year 1964-65 is progressing well.

New Planting: During the year under review, 28.89 hectares were completed and the preliminary works are progressing in respect of 20.23 hectares new planting area during 1964-65.

Teak: It will be seen from the details of the property given above that an area of 104.30 hectares has been earmarked for teak planting and the work is progressing.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	*Assets*	Rs.
Capital*	18,00,000	Gross block	26,14,686
Reserves and surplus	5,91,847	—Depreciation	4,65,915
Other liabilities	5,12,729	Net block	21,48,771
		Current assets	2,29,931
		Investments	3,59,521
		Cash	1,66,353
	Rs. 29,04,576		Rs. 29,04,576

* Paid-up capital consists of 15,000—6 per cent. tax-free cumulative preference shares of Rs. 10 each and 8,25,000—ordinary shares of Re. 1 each.

Mysore Stoneware Pipes and Potteries Ltd.

(*Managing Agents*: The Mysore Industrial Development Co., Bangalore.)

Twenty-seventh Annual General Meeting—16th September 1964.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1964	1963
Sales of stoneware, pipes, refractories, etc.	15,51	12,27
Closing stock	1,14	1,72

Unclaimed credit balances written back	1	Nil
Credit balance brought forward	(a)	2
Appropriations:		
To contribution to National Defence fund	Nil	5
Transfer to development rebate reserve	4	9
,, ,, provision for bad and doubtful debts	8	5
Transfer to Employees retiring gratuity	Nil	7
Proposed dividend (taxable) equity	75 (12½%)	75 (12½%)
Carry forward	(b)	(a)

(a) Only Rs. 190. (b) Only Rs. 720.

Extracts from the Directors' report: Coal supply improved considerably during the year. Therefore, there were no hold ups in production, though under the system of distribution adopted by the State Government coal was very costly. The production of pipes and sales during the year are the highest in the history of the Company. The Company is continuing to use furnace oil in place of coal and the trials are still inconclusive. If there are no increases in the price of oil, it is likely that the use of oil will prove more beneficial than coal.

Despite the competition in the market for *Stoneware Pipes* and *Firebricks*, the demand for *Pipes* is brisk, and the Company has large indents on hand and is booked for a few months in advance.

As shareholders are aware, the building constructions etc. for the expansion in the output of *Stoneware Pipes* were completed nearly 18 months ago and the Directors are happy to say, the kilns and plant are maintained in very good repair. The management and labour utilising the good offices of the Chairman Sri A. Samba Murthy, have settled all the demands outstanding till the end of 1963, which needed an immediate cash payment of Rs. 1.2 lakhs. It is hoped the labour will avail of the incentive production bonus scheme, rise to the occasion, utilise the increased capacity of the plant and earn more by increased production. By these means the prospects of the Company will be better in the years to come, and the products in demand by the public, will be met promptly by the Company.

The experiments for making white *glazed sanitaryware* in the pilot plant are being continued.

It is now about 25 years since the Company started production and marketing its products. To commemmorate the occasion of the Silver Jubilee, the Directors recommend that a sum of Rs. 60,000 (Sixty Thousand) be capitalised and one bonus share for every ten shares be issued to the members.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	*Assets*	Rs.
Capital*	6,00,000	Gross block	17,89,155
Reserves and surplus	5,99,954	—Depreciation	10,18,397
Other liabilities	7,84,682	Net block	7,70,758
		Block in progress, etc.	7,653
		Current assets	11,73,395
		Investments	2,895
		Cash	23,066
		Miscellaneous expenditure	6,869
	Rs. 19,84,636		Rs. 19,84,636

* Paid-up capital consists of 60,000 equity shares of Rs. 10 each.

Indian Steel Rolling Mills Ltd.

(*Managing Agents*: The India Co. (Private) Ltd., Madras.)

Thirtieth Annual General Meeting—Held on 10th September 1964.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1964	1963
Sales	1,88,96	2,16,78
Closing stock	15,68	8,95
Gross profit	14,62	13,94
To Managing Agents' remuneration	58	38
Transfer to depreciation	3,02	2,81
To technical assistance remuneration	1,00	1,00
,, contribution to National Defence fund	Nil	10
Transfer to provision for taxation	4,26	5,20
Net profit	5,81	4,65
Transfer from repairs and renewals reserve	1,55	Nil
Excess provision for taxation written back	(a)	61
Other excess provisions written back	Nil	1
Appropriations:		
Transfer to development rebate reserve	1,50	43
,, ,, general reserve	1,03	Nil
To annulment of forfeiture of dividends	(b)	Nil
Proposed dividends (taxable) Preference	36 (7.15%)	36 (7.15%)
,, ,, ,, Ordinary	4,39 (9%)	4,39 (9%)
Carry forward	27	19
Market value of equity shares (in rupees):	1964*	1963
High	10.12	11.37
Low	9.70	9.90

(a) Only a sum of Rs. 278.48. (b) Only Rs. 131.25.
* Upto 21st August 1964.

Extracts from the Directors' report: The working results for the year under report have been satisfactory in spite of the closure of the Mills for over 20 days on account of power cut, heavy rain and cyclone. This stoppage resulted in considerable loss of production which accounts for the lower turnover. It has however been possible to maintain the profits at last year's level in spite of the lower turnover on account of better performance in the Wire Plant.

It will be observed from the above that the Company has had to provide a sum of Rs. 1,50,000 as development rebate reserve on the new assets commissioned during the year as against a sum of Rs. 43,000 claimed last year. Shareholders may be aware that for the Company to claim full tax relief an amount equal to 75 per cent of the development rebate has to be set aside in the accounts. This has been done and this reserve will be very useful for the development of the Company in future years.

Modernisation and Expansion: In the report last year, the Directors referred to the commissioning of the New Re-heating Furnace by the then Minister for Steel and Heavy Industries, Hon'ble Sri C. Subramaniam. The Furnace is now in full operation and is yielding good results. It is expected that during the current year production will substantially increase as a result of the operation of this new Furnace.

Modernisation and Improvements to the existing 10" and 14" Mills have been taken up and the replacement equipments ordered are being received. It is expected that the new 16" Mill for roughing down larger size ingots will go into commission during the current financial year. All other auxiliary equipments such as *Motor Rollers, Repeaters* etc. have all been received and will be put into commission in due course.

Continuous Wire Rod Mill: The Directors mentioned in their last report that the I.C.I.C.I. had agreed to advance the necessary Foreign Exchange and the Rupee finance required for the Project. The Heads of Agreement, the Mortgage Deed and all the other formalities have been completed in connection with this loan of Rs. 25 lakhs. Shareholders will be glad to hear that the Licences for importing the Continuous Wire Rod Mill was received from the Government of India in September 1963 and orders have been placed for the machinery. The Mill is expected to be delivered before June 1965. Arrangements are now being made for clearing the area and preparing the foundations etc. With the installation of the Continuous Wire Rod Mill, it will be possible for the Mills to produce 6 mm. rounds in larger quantities which will be of very great help to the Company in diversifying their production. There are very few Mills in the country producing such light section rods at present. The Continuous Wire Rod Mill will also be able to produce both coir and cotton baling hoops which are not produced by any other mill in this region and for which there is a great demand.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	*Assets*	Rs.
Capital*	53,82,682	Gross block	53,00,314
Reserves and surplus	4,91,325	—Depreciation	26,97,142
Other liabilities	76,88,599	Net block	26,03,172
		Block-in-progress	1,42,003
		Current assets	1,03,38,307
		Investments	11,890
		Miscellaneous expenditure	28,147
	Rs. 1,35,62,616		Rs. 1,35,62,616

* Paid-up capital consists of 49,995—5½ per cent cumulative preference shares of Rs. 10 each and 4,88,851—Ordinary shares of Rs. 10 each. Amount paid-up on shares forfeited is Rs. 4,151.81.

Midland Rubber and Produce Co., Ltd.

(Managing Ogents: Messrs. A. V. Thomas & Co. Ltd., Alleppey, Kerala.)

Twenty-seventh Annual General Meeting—17th September 1964.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1964	1963
Sales of tea, rubber and minor produce	52,01	42,63
Closing stock	3,10	4,15
Gross profit	11,71	4,38
To Managing Agents' remuneration	72	50
Transfer to depreciation	1,04	90
,, ,, provision for taxation	4,50	90
Net profit	5,45	2,08
Transfer from dividend equalisation fund	Nil	3,05
Balance brought forward	1	5
Appropriations:		
Transfer to development rebate reserve	16	2
,, ,, bad and doubtful debts reserve	11	Nil
Proposed dividends (taxable) Preference	1,10	1,10
,, ,, ,, Equity	(6.4%) 4,05 (10%)	(6.4%) 4,05 (10%)
Carry forward	3	1
Market value of equity shares (in rupees):	1964*	1963
High	11.60	11.50
Low	10.90	10.18

* High and low upto 21st August 1964.

Extracts from the Directors' report:

Crops:	1963-64		1962-63	
Estate.	*Estimate. Kg.*	*Crop secured Kg.*	*Estimate. Kg.*	*Crop secured Kg.*
Tea:				
Arnakal	7,15,000	8,16,800	7,50,000	6,73,700
Rubber:				
Perinaad	2,80,000	3,21,548	2,86,000	2,94,886
Sittar	1,25,000	1,22,100	1,08,000	1,17,650
Total	4,05,000	4,43,648	3,94,000	4,12,536

Tea: The production on the estate has come up to expectation and during the year under report, the Company has been able to secure 1,01,800 kg. over the estimate. The ex-estate cost of production has come down to Rs. 3.21 per kg. compared to Rs. 3.87 per kg. last year. The average sale price realised during the year was Rs. 4.52 per kg. against Rs. 4.33 per kg. during the previous year.

Rubber: Here again the production has been satisfactory considering the replantation programme which has been implemented. The ex-estate cost of production has been Rs. 2.07 per kg. against Rs. 2.18 per kg. during the previous year, while the average sale price was Rs. 3.18 per kg. against Rs. 3.19 per kg. last year.

Estimates for the year 1964-65 are as follows:—8,00,000 kg. of tea at Rs. 2.90 per kg. and 4,20,000 kg. of rubber at Rs. 2.37 per kg.

Capital expenditure is estimated at Rs. 5,14,251.

General: All the estates of the Company are reported to be in good condition. Additional machinery is proposed to be installed in the Arnakal Factory, taking advantage of the loan facilities offered by the Tea Board under its hire purchase scheme for machinery.

The South West monsoon has not been favourable, resulting in a loss of crop during the first quarter of the current year 1964-65. It is however hoped that this will not seriously affect the overall production. Replantation of old rubber areas is being carried on in accordance with a phased programme.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	*Assets*	Rs.
Capital*	57,70,000	Gross block	81,95,894
Reserves and surplus	17,28,641	—Depreciation	14,55,340
Other liabilities	14,47,194	Net block	67,40,554
		Block in progress	7,047
		Current assets	11,09,214
		Investments	1,97,045
		Cash	8,91,975
	Rs. 89,45,835		Rs. 89,45,835

* Paid-up capital consists of 4,05,000 equity shares of Rs. 10 each and 1,72,000—6 per cent cumulative preference shares of Rs. 10 each. Of the above shares, 1,35,000 equity shares are allotted as fully paid-up by way of Bonus shares by capitalisation of Rs. 8,45,500 from share premium account together with Rs. 5,06,500 from general reserve.

TREND OF MARKETS

MONEY TIGHT

(From Our Own Correspondent)

BOMBAY, *8th September*

Tight conditions prevailed in the short-term money market during the week under review. The supply of funds available, though it was quite large, was insufficient to meet the pressure of demand, with the result that borrowers had to look around for accommodation. Interest rates, as a consequence, tended to rise again. The inter-bank call rate for renewals jumped up from 3½ per cent to 4½ per cent and fresh money from 3½ to 4½ per cent, with stray transactions put through at 4 per cent. Calcutta, however, reported a slightly better trend, the call rate receding from 4¼-5 per cent to 3¾-4½ per cent.

Although the conditions in the money market were tight, there was good response to the 91-day Government of India Treasury Bills tenders for which opened today (Tuesday). The total amount offered (Rs. 4 crores) was twice the sum invited and also accepted. The average rate of accepted tenders was unchanged at Rs. 2.400 per cent per annum. But the Intermediate Treasury Bills evoked limited response, the amount of Bills actually sold from the 2nd to 5th inst. being just Rs. 1.29 crore, as against Rs. 2 crores a week before and Rs. 12.9 crores two weeks before.

An improvement of Rs. 2.19 crores to Rs. 97.80 crores in India's foreign exchange reserves occurred during the week ended 4th September. The improvement was accounted for entirely by balances held abroad which rose from Rs. 10.15 crores to Rs. 12.34 crores. The foreign securities held in the Issue Department of the Reserve Bank were unaltered at Rs. 85.46 crores. Deposits of scheduled banks with the Reserve Bank were higher by Rs. 3.25 crores at Rs. 95.16 crores. At the same time, the loans and advances obtained by them went up by Rs. 3.17 crores to Rs. 5.23 crores. Notes in circulation increased by Rs. 17.37 crores to Rs. 2,407.49 crores.

The statement of affairs of scheduled banks for the week ended 28th August discloses a small rise of Rs. 2.48 crores to Rs. 1,722.30 crores in credit to customers, an improvement of Rs. 8.62 crores to Rs. 2,677.74 crores in deposits, and an increase of Rs. 14 lakhs to Rs. 1.91 crore in borrowings from the Reserve Bank. During the same week, investments fell by Rs. 28.57 crores to Rs. 775.11 crores, as also total cash by Rs. 17.34 crores to Rs. 158.04 crores.

The Gilt-edged market ruled quiet. Business put through was restricted and values moved narrowly.

The Industrial Finance Corporation of India has decided in consultation with the Central Government and the Reserve Bank of India, to augment its resources by the issue of bonds for Rs. 6 crores. These bonds are fully guaranteed by the Central Government in regard to repayment of principal and payment of interest and are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act. They will have a maturity of 12 years and carry interest at 4½ per cent. The issue price will be Rs. 99.25 for Rs. 100 Bonds. The subscription list will open on the 15th inst. and will close on the 21st inst. or earlier as soon as the issue is fully subscribed. The Bonds are eligble securities for the purpose of advances to scheduled banks by the Reserve Bank of India under Section 17(4)(a) of the Reserve Bank of India Act and are also included in the list of approved securities of the State Bank of India. Arrangements will be made for the listing of the bonds with Bombay, Calcutta and Madras Stock Exchanges.

In the foreign exchange market, the Banks' buying rate for U.S. dollars improved by 25 paise to Rs. 477.50 per $100, while their selling rate was unchanged at Rs. 480.75. In New York, the pound sterling eased further *vis-a-vis* the dollar, the spot rate declining by 0.030 cent to 278.370-278.400 cents and the three months forward by 0.50 cent to 277.940-277.970 cents.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, *8th September*

The bullion market ruled distinctly bearish with a sharp fall in both gold and silver during the week under review. The steep decline in gold followed increased arrivals of contraband metal and reluctance of stockists to absorb the same. The fall in silver was due to lower offtake and better arrivals. Dealers, however, felt that the downward trend was only temporary, as with the demand for bullion picking up with the onset of the festival season, prices would rise again.

Silver began the week at Rs. 257, same as last week, and, after moving upto Rs. 258 on enquiries from upcountry centres, fell to Rs. 255.50 today. The weekly average arrivals and offtake of the metal were around 23 and 6 bars, respectively.

Fourteen carat receded from Rs. 72 to Rs. 67, because of higher offerings and lack of demand. Primary gold, in unofficial trading, touched a new low of Rs. 113, as against Rs. 121 a week before due mainly to increased arrivals of the hoarded metal. In sympathy, sovereign was quoted at Rs. 91, as against Rs. 93 last week.

The international price for gold in the London market was slightly lower at $35.07¼, as against $35.07¾ last week. The sterling price was steady at 251s. 11¾d. Both ready and forward silver remained unchanged at 112d. and 112⅛d., respectively, as also silver in New York at 129.3 cents.

About 20,000 goldsmiths, according to *Akil Bharatiya Swarnakar Sangh* would demonstrate before Parliament on the 17th inst., when the Gold Control Bill 1963 comes up for discussion. A mass petition signed by thousands is expected to be presented to the Speaker by the *Sangh*. The major demands of the goldsmiths are that their trade should be recognised as a cottage industry and that the Government should import freely gold from abroad and enrol their *Sangh* as a member of the All India Handicrafts Board.

The following table shows the trend of prices during the week under review:

	8-9-1964 (closing)	High	Low	2-9-64 (closing)
SILVER				
Ready (996 fine) ..	Rs. 255.50	Rs. 258.00	Rs. 255.50	Rs. 257.00
GOLD				
Ready (14-carat) ..	67.00	72.00	67.00	72.00
Sovereign	91.00*	—	—	93.00*
London—				
Gold	251s.11¾d.	252s.0d.	251s.11¾d.	251s. 11¾d.
Silver Ready ..	112d.	—	—	112d.
Silver Forward ..	112⅛d.	—	—	112⅛d.
New York—				
Silver	129.3 cents	—	—	129.3 cents

YARNS DULL

(From Our Own Correspondent)

BOMBAY, *8th September*

Trading in the yarn market was a dull and drab affair during the week under review. Demand from consuming centres was at a low ebb. The trend was easy in all sections. Art silk yarns drifted downward, for while supplies were larger, buyers were reserved. In sympathy with art silk yarns and following poor enquiry from Surat consumers, staple fibre yarns also drifted donwward. In the cotton yarn section, finer counts were particularly easy on reports of heavy accumulation of stocks.

The Federation of Powerloom Association of Maharashtra in a memorandum submitted to the Textile Commissioner has pointed out that the new order enforcing the quota system for supply of yarn on sized beams and weft perns has resulted in a further curtailment of supply and abnormal rise in prices. As the prices of cotton yarn on sized beams and weft perns are not controlled, according to the Association, it is very easy for mills to demand higher prices. The Association has warned that, since most powerloom units depend on Bombay mills for supply of yarns on sized beams any curtailment in quota will result in the closure of some units and cut in production in many units. The Madras State Handloom Industry and Trade Association has blamed the textile mills for non-availability of good quality yarns for handlooms. The present system of voluntary price and distribution of yarns, it says, will not work to the satisfaction of weavers. The Association has urged the Government of India either to implement the scheme properly or to scrap it altogether.

Exports of rayon and synthetic fabrics during the month of August aggregated 4.65 million metres valued at Rs. 48.9 lakhs, as against 3.48 million metres valued at Rs. 35.2 lakhs in the previous month. Singapore bought 1.03 million metres of fabrics worth Rs. 10.3 lakhs and Hong Kong 1.13 million metres worth Rs. 12.2 lakhs.

Among art silk yarns, National Rayon 150D and 120D eased by 2 P each, to Rs. 10.91 and Rs. 11.55, respectively. South India Viscose 120D shed 7 P to Rs. 13.13. Bright Century 100D and 75D were neglected at Rs. 13.46 and Rs. 18.57, respectively.

In the staple fibre yarn (2 x 34 French count) section, Kohinoor lost 6 P to Rs. 9.57. City shed a like amount to Rs. 9.55. Sitalaxmi receded by 17 P to Rs. 9.55. Vasanta fell by 50 P to Rs. 9.22. Sriram, however, put on 6 P to Rs. 9.28 on special support.

Cotton 50s Raja Laxmi declined by 50 P to Rs. 51.75. 68s Minerva was quoted lower by Rs. 2 at Rs. 85 and Citys by 50 P at Rs. 79.50. All other counts were dull at last week's levels. 68s Modern, however, proved to be an exception and went up by Rs. 2 on special demand.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	8-9-1964	2-9-1964
	Rs.	Rs.
Art silk yarn (per kg.)—		
National Rayon 120D	11.55	11.57
Century 75D	18.57	18.57
S. I. Viscose 120D	13.13	13.20
Staple fibre yarn-84 ×2 *French Count* (per kg.)		
Kohinoor	9.97	10.03
Premier	9.90	10.03
City	9.55	9.61
Cotton yarn - French Count (Rs. per 5 kg.)		
8s Podar	21.00	21.00
17s Modern	25.62	25.62
27s Madura	35.00	35.00
34s Madura	42.00	42.00
52s Pioneer	68.75	68.75
68s Finlay	106.70	106.70

G'NUTS TOUCH A NEW HIGH

(From Our Own Correspondent)

BOMBAY, *8th September*

Groundnuts and groundnut oil touched new high levels during the week under review on persistent demand, acute shortage of stocks and lack of offerings. Spot groundnut oil shot up to Rs. 2,925 per tonne. The October, November and December positions were mentioned at Rs. 2,275, Rs. 2,000 and Rs. 1,875, respectively. Similar was the trend in seeds. Against a spot price of Rs. 68 per 5o kg. for Khandesh quality. The new crop 15th October position was bid at Rs. 56, November at Rs. 48 and December at Rs. 47. Current firmness indicated that the market was carrying on a hand-to-mouth basis. With the approach of the festival season, demand from crushers tended to increase. Small quantities of new crop groundnuts (about a thousand bags) were said to have arrived in the market and they were sold at Rs. 60, but, in the light of the later spurt in prices, this price had lost its meaning. The outlook for the market depends not only on the tempo of new crop arrivals but also on the Gujarat Government's policy in regard to exports from the State. At one time, it was thought that the Government might release groundnuts and oil for export, but, so far, there have been no concrete indications.

Castor September ended its career smoothly with the outstanding positions, put at 150,000 tonnes, being squared up by mutual agreement at Rs. 183. It may be pointed out that the contract was so firm that it went unquoted for a long time, as no business was possible within the limits of the ceiling. There were fears that some kind of payments crisis might develop, but the market was spared of this ugly possibility, thanks to the good offices of the President of the Association. The Board of the Oilseeds Exchange proposes to amend its by-laws with a very to obviating any difficulties in the future. The March contract was mentioned at Rs. 175.62, but the undertone seemed to be steady. The volume of trading was rather small. In the spot section, castor Madras small was mentioned at Rs. 39.25 and Kanpur bold at Rs. 38.25. The firmness was in sympathy with groundnuts. Exporters of castor oil are worried that goods should be held up for want of staff to clean the holds but once the strike is called off shipments should resume to the relief of everybody concerned.

Linseeds maintained a steady tone, having rallied to Rs. 38.62, but the rally was mostly in sympathy with groundnuts. Spot linseed was also firm at Rs. 48.50 and oil was quoted at Rs. 20.10.

Cottonseeds January was better at Rs. 98.75, as against the last week's rate of Rs. 97.75.

The trade is eagerly looking forward to the meeting of the Export Advisory Council. In fact, the Council would be starting its deliberations just as these words appear in print and the anxiety on the part of the trade about the outcome is not difficult to understand against the background of the ban from the country of the exports of edible oils and a similar ban on the exports of groundnuts, oil and cakes from the State of Gujarat. The feeling in trade circles is that the time has now come to lift the ban, as overseas markets are extremely promising. Further, crop prospects are also satisfactory and, if the weather continues to oblige, we should be harvesting a record crop which is put by reliable trade sources at 3.8 million tons of groundnut kernels. It would not only be premature but unwise to talk at present in terms of quantity, though reliable sources think that it should be possible to sell in the overseas markets a minimum of 100,000 tonnes of groundnut oil to the sterling area countries, in addition to 50,000 tonnes to the East European bloc. These sources say that exports can be effected even without incentives. Currently, overseas prices are favourable. As against last year's price of £92 to £94, groundnut oil now fetches £115 to £122. It is rather unfortunate that, in the domestic market, groundnut oil has shot up to unprecedented levels, but it is satisfactory to note at the same time that distant deliveries show a bearish tendency. There is also an argument that the Government had better withdraw the incentives and let prices find their own levels here and sell abroad on their own merits. The case of groundnut oil is strengthened further by reports that prospects for the olive crop in Spain, Italy, Greece and Turkey are not very bright and that, consequently, the demand for groundnut oil would be boosted. Russia is expected to be in the market in a big way and Burma should be buying too, although reports that some time ago this country bartered our oil with China has left a bad impression here. Prospects for castor oil, too, are rated high.

Groundnut extractions are steadier on the whole, with spot material at Rs. 426, October at Rs. 422, November at Rs. 390 and December at Rs. 384. Spot expellers are mentioned at Rs. 507.

Notice

THE BANKURA DAMOODAR RIVER RAILWAY COMPANY LIMITED

Registered Office:

"McLeod House" 3, Netaji Subhas Road, CALCUTTA-1

THE BOARD OF DIRECTORS HAS DECIDED to recommend at the forthcoming Annual General Meeting of the shareholders of the Company to be held on the 30th September, 1964, the payment of a dividend of Rs. 1.61 paise per share for the year ended 31st March, 1964, subject to deduction of tax.

Notice is hereby given that the Register of Members of the Company will be closed from 20th September to 30th September 1964, both days inclusive.

By Order of the Board,

McLEOD & Co. LTD.,

C. HOCKLEY,

Director,

Secretaries & Treasurers.

2nd September, 1964.

October at Rs. 485, November at Rs. 435 and December at Rs. 428. Very little business is passing through, but the market is sustained by the fact that it has not much to offer. The U.K. is the only customer and is credited with having bought about 3,000 tonnes during the week. The East European countries are practically away from the market. They had bought substantial quantities earlier and further purchases have necessarily to await the renewal of barter agreements. U.K. advices are £38-10 for September, £38 for October, £36-7-6 for November and £35-12-6 for December. The market there has declined by 2s. 6d. to 5s. during the last few days. An interesting suggestion has been made by the trade for solving the raw material problem of solvent extraction plants. The Government may arrange for an import of 500,000 tonnes of soyabeans from the U.S. under P.L. 480 for the next four years and allot it to plants in Bombay, Saurashtra, Calcutta, Madras and Vishakapatnam.

The Government of India is arranging to import about 75,000 tonnes of sayabean oil from the United States under P.L. 480 for use in the *vanaspathi* industry to stabilise the prices of *vanaspathi* oil. This information was given in the Rajya Sabha on Monday this week by the Union Minister for Food and Agriculture, Mr. C. Subramaniam.

The following table shows the closing prices of oilseeds and oils as on 8th September as compared with those of the two previous weeks:

	8-9-1964	2-9-1964	26-8-1964
	Rs.	Rs.	Rs.
Groundnuts			
Vizam bold	67.50	65.25	64.25
Khandesh quality	69.00	66.50	66.00
Oil ex-mill	29.10	27.75	26.75
Oil Bly. Receipt	28.80	27.50	26.40
Castorseed			
September 1964 contract.. ..	183.00	183.90	181.50
March 1965	175.62	175.75	177.12
Ready Madras	39.25	39.25	39.50
Ready Kanpur	38.12	38.25	38.37
Oil S.S.S.	17.90	17.80	18.15
Oil commercial	17.25	17.30	17.55
Linseed			
September 1964 contract.. ..	44.04	44.87	44.84
March 1965..	38.62	38.84	39.16
Sold ready	48.25	48.00	48.50
Linseed oil	20.25	20.05	
Cottonseed			
September 1964 contract.. ..	91.50	90.00	90.00
January 1965 contract	98.75	97.25	96.25

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

GOOD EXPORT ORDERS FOR KIPS

(From Our Own Correspondent)

MADRAS, *7th September*

There was not much change in the kip market. The trend was steady to firm. Importers were not willing to pay increased prices and export trading was small with emphasis on fifths selection in cowhides and fourths in cowcalf. Locally, arrivals of light weights from tanneries met with fair clearance.

In the tanned skins section, demand for 8/9 lbs. goat skins and 5½/6 lbs. lower grades was brisk. Heavier averages were not in demand. There were good enquiries for fifths selection of middle class light weight sheep skins and a moderate volume of business for export was placed with the Continent. There was patchy call for prime and semi-prime sheep at unchanged levels. The Paris Leather Show takes place this week and the trade here expects good orders for tanned skins this month, in view of the presence of several E.I. tanners from Madras in Paris at present.

The raw goat centres ruled very firm.

In the last London Tanned Skins Public Sales, clearance of stocks was very poor, and no quotations were available.

Shipments during August 1964 were: 1,389 tanned cowhides, 132 cowcalf, 5 buffhides, 148 buffcalf, 236 goat and 136 sheep skins to the U.K.; 580 goat skins, 274 sheep skins and 816 cases of chrome and pickled goat skins to the Continent; 2 cowcalf, 20 buffhides, 5 buffcalf and 250 goat skins to the U.S.; 38 goat and 329 sheep skins to Japan.

COTTON FUTURES LISTLESS

(From Our Own Correspondent)

BOMBAY, *9th September*

Listless conditions prevailed in the cotton futures market during the week under review. The recovery witnessed towards the close of the last week could not be sustained. During the first three sessions of the week, there was some selling pressure by the Gujarat, Punjab, Delhi and Agra operators, influenced by fair weather reports from the Punjab. Stock market operators, too, turned their attention to cotton as sellers. On Saturday, the 5th inst., prices fell rather sharply. On Monday the 7th, however, a smart recovery was noticed in the futures section because of reported damage to crops in Akola and Amravati and consequent bear-covering and support from local bulls. But, on the last day of the week, the futures contract was again slightly subdued.

The Jarilla March 1965 contract which closed last week at Rs. 731 per candy, opened Re. 1.50 lower at Rs. 729.50 and dipped to Rs 726.50 on Saturday the 5th. After recovering to Rs. 733 on Monday, the contract closed a shade lower at Rs 730.75 on Tuesday, thus losing 25 paise over the week. There was no trading on Wednesday on account of *Ganesh Chaturthi*.

The Sewri spot market remained closed throughout the week, first on account of a Jain festival and afterwards due to labour strike.

In the new season, the total supply of cotton is expected to be around 96 lakh bales while the consumption by mills is not likely to go beyond 68 lakh bales. Some reports from the Punjab, however, indicate that the crop may suffer on account of untimely rains. This may push up prices of Bengal *Deshi* on which, it will be recalled, export duty of Rs. 25 per bale was abolished by the Government last week. The earlier expectations regarding better exports, on parity with Pakistan, may not, therefore, materialise. Despite all this, however, transactions to the tune of 5,000 bales have been reported with Japan, the main importer of this variety, though it is feared that the business is not going to be easy. As was expected, as an offshoot of official announcement abolishing export duty on Bengal *Deshi*, prices of this variety registered a decline in Pakistan. Favourable weather conditions are reported from other areas producing this variety of cotton.

COLOURY MEDIUM TEAS EASIER

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *3rd September*

In dust tea sale No. 35 held here today, a total of 276,000 kgs. was on offer. The market elicited good general demand. Plainer mediums were barely steady and sometimes easier, while others evoked good support and were sold at easier. There was strong demand for highgrowns which were dearer. Clean black grainy descriptions were the strongest feature of the sale and realised useful prices. Best C.T.Cs were about steady, but others were irregular, sometimes selling at dearer rates.

The average price realised in dust tea sale No. 35 was Rs. 4.45 per kilo, as against Rs. 4.51 a week ago and Rs. 4.52 in the corresponding sale last year.

As we go to press Messrs. Forbes, Ewarts and Figgis (Private) Ltd. wire:

"Sale No. 36: 595,000 kgs. offered. Good demand. Plain and low medium brokens barely steady. Fannings fully firm. Good mediums dearer. Highgrowns stronger. *C.T.Cs. irregularly firm.*"

STRONG DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *8th September*

Strong demand was a feature during export as well as internal sales held last week. Fresh arrivals of tea showed a steady increase. But for the interruption caused to shipping as a result of congestion and of incoming ships awaiting at the Sandheads, larger shipments of tea should have taken place this week. Bore tide restrictions, coupled with increased absenteeism among senior personnel at the port, contributed to the congestion. Tea accounted for a good portion of the forward space offering.

Note was taken of the increased support which quality teas received in London auctions held last week. This did not cause any surprise here, as U.K. tea stocks during the week ended 28th August aggregated only 107 million lbs., showing a decline of 3 million lbs. as compared with the previous week. Good liquoring new season's Assam teas met with keen attention in Mincing Lane last week, and prices gained.

Leaf on offer in the export sale held here last week amounted to 60,082 packages, which met with particularly strong demand. Bright Assam orthodox teas were a strong feature, but the rest of this category eased in an irregular trend. Fannings and O.Fs were in good demand and the lots having bright liquors were particularly favoured by buyers. Although legg-cut teas generally eased, a few selected lines hardened. The best C.T.C. teas met with good support at reduced prices, but prices for selected lines were unchanged. Medium C.T.Cs elicited more demand, and the broken teas were firm. Prices of the cleaner fannings gained on competition. Liquoring fibrous C.T.Cs were readily absorbed, while the rest of the C.T.Cs eased by 10 to 20 P. Whole leaf grades were fully absorbed at lower rates. The quotations per 1 kg. inclusive of excise duty were: Best Assam C.T.C. fannings Rs. 6.60 to Rs. 7.20; best Assam C.T.C. B.P. Rs. 6.60 to Rs. 7.00; medium Assam C.T.C fannings Rs. 5.80 to Rs. 6.30; clean plain pekoe Rs. 5.00 to Rs. 5.40; medium Assam C.T.C. B.P. Rs. 5.80 to Rs. 6.30; plain fannings Rs. 4.30 to Rs. 4.60; and plain B.P. Rs. 4.10 to Rs. 4.40.

Dusts on offer aggregating 33,076 packages in the last week's internal sale also met with strong demand. Medium C.T.Cs attracted firm support, prices for good C.T.Cs being maintained. Plain orthodox teas were steady, while the brightest Assams eased. Legg-cut teas were firm. The quotations per 1 kg. inclusive of excise duty were: Good Assam C.T.C. dust Rs. 6.20 to Rs. 6.50; medium Assam C.T.C. dust Rs. 5.40 to Rs. 5.70; legg-cut dust Rs. 4.90 to Rs. 5.30; medium Assam dust Rs. 4.90 to Rs. 5.60; and plain orthodox dust Rs. 4.20 to Rs. 4.50.

JUTE GOODS EXPORTS TO U.K.

(From Our Own Correspondent)

CALCUTTA, *8th September*

Although mills continued to accord only restrained support and were not prepared to buy raw jute at current prices, fibre prices remained unchanged at Rs. 40 to Rs. 43 a maund during the week under review. This was due to limited quantity on offer and disinclination of sellers to discount quoted rates. In the goods market, at one time during the week, prices fell sharply, but, since at lower levels buying in ready fabrics was brisk, prices rose as the week came to a close. In the Pakistan markets, fibre prices, which had declined to Rs. 40-45 a week ago from this season's peak level of Rs. 50-55, fell further this week to Rs. 35-40. This was the result of increased arrivals into the Narayanganj market, estimated at about 25,000 maunds a day, although a deterioration in condition was in evidence. A factor which is accelerating the declining trend in Pakistan markets is the disinclination of millowners to purchase fibre, in view of the uncertainty arising from labour troubles in mills. Shippers are also disinclined to buy unless prices move down further. This situation continuing, it is expected that, very soon, Pakistan prices would come down to about Rs. 30 a maund.

In India, it should be noted that the continuance of the higher prices for goods despite firm action to bring down fibre prices is acting as an encouragement for fibre prices to move up again. The extent of the fall in the quality of the Pakistan fibre is now believed to be greater than earlier apprehended. Fresh arrivals into the Narayanganj market are in wet condition, and it is reported that the higher grades are a worse buy than the inferior ones. Jute growers in Pakistan are being asked by middlemen not to sell at the present low rates, but the absence of good demand for reasons already stated has led to increased arrivals. Purchases in Pakistan by India are also likely to be slowed down, since, by the middle of last month, they had aggregated about 92,000 bales of long jute and cuttings, as against 93,000 bales in the whole of last season.

The revised arrangements in regard to import of jute goods into the United Kingdom, as announced by the U.K. Trade Minister, Mr. Edward Heath, a few days ago are aimed at reducing imports of the items which form a good percentage of the Dundee industry, and to free from Jute Control such items the production of which by the Dundee industry is small. Accordingly, goods which are of the greatest long-term interest to Dundee and which now represent a substantial portion of the cloth production in the U.K. will be subject to a fixed *mark-up of 45 per cent.* In other words, the earlier plan to lower the mark-up of these goods has now been given up. It is also stated that a further range of goods will be subject to a mark-up, including both fixed and variable elements; this will be 45 per cent for the first year, but the variable rate will be reduced every year. At the same time, it has been announced that the imports from India and Pakistan in respect of a range of cloth forming a substantial portion of British imports but representing only a limited percentage of Dundee's production will be returned to private trade. These arrangements—the full details of the range of goods involved in each category are now being eagerly awaited by the trade here—will be reviewed in 1967, and have been decided upon, it is stated, to provide a stable basis on which the Dundee industry can plan its future.

As already stated, fibre prices remained un-

THE BURDWAN CUTWA RAILWAY COMPANY LIMITED

Registered Office:

"McLeod House" 3, Netaji Subhas Road, CALCUTTA-1

THE BOARD OF DIRECTORS HAS DECIDED to recommend at the forthcoming Annual General Meeting of the shareholders of the Company to be held on the 30th September, 1964, the payment of a dividend of Rs. 1.61 paise per share for the year ended 31st March, 1964, subject to deduction of tax.

Notice is hereby given that the Register of Members of the Company will be closed from 20th September to 30th September 1964, both days inclusive.

By Order of the Board,

McLEOD & Co. LTD.,

C. HOCKLEY,

Director,

Secretaries & Treasurers.

2nd September, 1964.

Rs. 43 a maund; Assam bottoms Rs. 41; and northern bottoms Rs. 40. Since prices in mofussil markets tended to harden, sellers here were not inclined to discount rates, despite the absence of any large buying by mills. Further, the maintenance of higher prices for goods also encouraged holders.

Steady conditions were in evidence in goods. Prices rose as a result of increased support at lower levels. Encouragement was derived from higher advices from the New York burlap market, where 40" 10 oz. hessian rose from 12.25 cents a yard to 12.35 cents, and the 7½ oz. construction from 9.25 cents a yard to 9.20 cents. On Tuesday last, the feature was Government business involving about 6,000 bales of B. twills against September-October deliveries. Scattered business was also done with overseas countries. That explained the rise in ready B. twills from Rs. 137 to Rs. 137.75 and ready hessian 40" 10 oz. from Rs. 49.15 to Rs. 49.50. On Wednesday, there were wide fluctuations in the hedge market, as a result of which closing levels in ready goods with B. twills at Rs. 137.75 and hessian 40" 10 oz. at Rs. 49.55 were almost the same as on the previous day. At this stage, the hedge market was affected by selling pressure, and the decline in prices of ready goods attracted some business. This was on Thursday when ready B. twills eased to Rs. 137.00 and hessian 40" 10 oz. to Rs. 49.35. At these levels, good business was done and, at this, prices on Friday began to rise to push up ready B. twills to Rs. 139.75 and hessian 40" 10 oz. to Rs. 50. Over the week-end, prices continued to rise to reach Rs. 141.00 and Rs. 50.15, respectively. Prices continued to rise yesterday to reach Rs. 142.50 and Rs. 50.50, respectively.

In an attempt to limit purchases of fibre by mills in accordance with availability, the Jute Commissioner, Mr. G. C. L. Joneja, has fixed the maximum permissible quota for each mill in West Bengal for the current week, that is, from 7th September. Total purchases of mills, he has ordered, should not exceed 100,000 bales for this week. This measure has become necessary, since, although as a result of the series of steps taken by the Jute Commissioner including heavy marginal deposits for each transaction on raw jute in the forward market—total collections in this regard were in the order of Rs. 1 crore—prices began to recede a couple of weeks ago, increased purchases resulted in the checking of the downtrend. Arrivals are also showing a steady increase.

REACTION IN METALS

(From Our Own Correspondent)

CALCUTTA, *8th September*

While on the London Metal Exchange the week under review took both copper and tin to new highs a small reaction set in earlier in the Calcutta metal market, since consumers would appear to have reached the line of resistance. Such reaction was, however, short-lived.

Despite substitution of copper by aluminium—the National Metallurgical Laboratory is also contributing to this process by suggesting aluminium-based alloys for coins instead of copper and nickel. Meanwhile, the Government of India is shortly expected to issue a new 3-paise coin made of aluminium-magnesium compound—the demand in India for copper is expected to rise by the end of the fourth plan by 123 per cent, that is, to 250,000 tonnes from 138,000 tonnes at the end of the current plan period. It has also been reported that the Ministry of Steel and Mines has decided to set up a 30,000-tonne zinc smelter with Polish collaboration at a cost of Rs. 12 crores, and that the proposal to set up two more smelters based on imported concentrates, is being examined. There is also a proposal to step up ore output from the Zawar zinc mines to 50,000 tonnes from 18,000 tonnes as at present.

On the London Metal Exchange, spot copper wire-bars opened at £374 a ton and steadily rose to £398, the highest level reached so far. Spot cathodes touched £370 and spot-fire-refined copper £325, after opening at £354 and £310, respectively. Demand on London from Europe was heavy. Although demand for copper scrap in Calcutta was heavy, buyers were not prepared to follow the higher prices. This led to the fall in the price of utensil copper scrap from Rs. 680 per 100 kgs. to Rs 675, but soon the loss was made up. It is estimated that, by the end of this year, world copper output would have caught up with the increased level of demand, and a break in the high price is expected then. Had it not been for the loss of production in Chile and the United States, the change would have come still earlier. The fact that the price of aluminium is also rising—the current price is above £200 a ton—is a factor which is likely to slow down the pace of world substitution. According to the U.S. Copper Institute, free world output of refined copper in July was higher at 183,486 tons, as against 179,736 tons in the previous month; however, U.S. output of refined copper in the month was lower at 144,348 tons, as against 155,443 tons in June and 156,753 tons in May.

In London, spot tin rose to a new high of £1,385 a ton, as against £1,348 early in the week. The rising trend in Penang, indications of increased offtake by the U.S.S.R. and the deepening of the Indonesian-Malaysian discord were the factors that the world markets could not ignore. Against the background of the need to raise world output of tin, the decision by Australia to step-up tin output by 100 per cent is welcome. Australia at present produces about 4,600 tons a year and imports about 1,800 tons from Malaysia to meet the internal deficit. In Calcutta, the price eased from Rs 3,300 per 100 kgs. to Rs 3,200, but soon recovered. Spot lead in London rose from £107 a ton to £109¾ and sopt zinc from £115 to £118¾. In Calcutta, virgin lead on good demand rose from Rs. 307 per 100 kgs. to Rs 313, while zinc at Rs. 356 per 100 kgs. gained by a few points.

TREND OF SHARES

PROFIT-TAKING BY BULLS

(From Our Own Correspondent)

BOMBAY, *10th September*

IT was again a very short week—the Stock Exchange having been in session only for two days—Saturday and Tuesday. It is rather difficult to assess a market's performance in a holiday week or to talk in terms of trends on the basis of a two-day trading. Nevertheless, the behaviour of the market during the two days of official working and the limited but often significant turn in kerb deals indicated that the market was finding it hard to maintain its present high levels. The tendency was for bull operators to cash available gains and wait for more attractive levels to re-enter the market, but bear operators were not ready to sell short in a big way. The market had made a long upward journey during the past many weeks and it was time for it to pause for a while. It is possible that the market has chosen to pause, in other words the reaction which was due and necessary has set in. Although it is rather difficult to say with any measure of certainty whether this reaction is going to stay put, the fact that the tendency on the part of the market is more to sag than to recover shows that a further rise is unlikely for the time being.

Technical considerations apart, the trend of the market was adversely affected by reports such as continued patrolling by the Chinese in the Sikkim and Bhutan regions as well by possible measures by the Government to secure a larger measure of control over stock exchanges. However, reports that Mr. Jayaprakash Narain was trying hard at a workable solution to the Indo-Pakistan problem did help a mild rally, but just when the market was wondering whether J.P. could really achieve anything tangible, came the fall of the Shankar Cabinet in Kerala and the implied setback to the prestige of the ruling party as a whole.

Closing prices indicated generally all-round losses. Tata Steel, for example, eased from Rs. 162.25 to Rs. 160 and Indian Iron from Rs. 27.90 to Rs. 27.50. Wednesday's kerb level of Rs. 27/10 for Indian Iron was far below its recent support level of Rs. 27.45. The support level for Tata Steel is Rs. 158. In Thursday's kerb the rates were Rs 27.05 and Rs. 158.50 respectively.

Mill shares were generally weak, with Bombay Dyeing down from Rs. 61.60 to Rs. 61.10 and Century from Rs. 638 to Rs. 631.50. It was a pity that the rise in the interim dividend of Century—from 12 per cent to 14 per cent gross and the highest interim declared so far—fell flat on the market. Perhaps this was an instance in point of the right news coming at a wrong time, or may be it was a case of selling on good news. The shares had gained as many as 40 points during the last three weeks. Against its 6th August low of Rs. 609, they had touched a high of Rs. 648 on 27th August. The market's reaction could not be available on Friday, being a holiday, but in kerb dealings the shares were quoted at Rs. 644, although on Saturday they reacted sharply to Rs. 628 before rallying to Rs. 631.50 on Tuesday. In kerb dealings on Wednesday they were weak again, at around Rs. 624. The rate in kerb on Thursday was Rs. 625. Among others in this section, Standard eased from its last week's closing level of Rs. 675 to Rs. 648 in Saturdays' session, incidentally piercing its recent support level of Rs. 654. The rate was Rs. 657 on Wednesday in the kerb. Swadeshi, comparatively less active, during the week closed with a small on-balance loss at Rs. 265.

National Rayon came in for hard hitting and was among the worst sufferers during the week. Against last week's closing level of Rs. 381, the shares had moved further up by another point in the kerb but eased to Rs. 361 on Wednesday, of course in kerb. The decline continued to be induced by the difficulties of the yarn industries and the uncertainty regarding the expected cut in the excise duty. Among others in the rayon section, Gwalior Rayon was slightly shaded at Rs. 42 while Indian Rayon was unchanged at Rs. 59. So was Baroda Rayon at Rs. 76 but South India Viscose was one point down to Rs. 119. Chemical shares were well held and it was remarkable for Indian Dyestuff to have gained more than seven points at Rs. 302.50 in a weak market. Tata Chemicals were fairly steady but interest in these two shares were apparently sustained by anticipations of good corporate news. Sugar shares maintained a better tone with Maharashtra up by two points at Rs. 146, Phaltan up by one point at Rs. 114 and Walchandnagar fractionally better at Rs. 161.50. Belapur, however, was quiet at Rs. 231.

Tyre shares were dull but steady, while papers were weak, with Sirpur at Rs. 12.20 against Rs. 12.60 and West Coast at Rs. 171.50 against Rs. 173.50. Shippings were divergent. Scindia was steady at Rs. 16.44 against Rs. 16.32 but Great Eastern was easy at Rs. 14.12, against Rs. 14.52 a week ago. Motor shares were moderately active. Telco was mentioned at Rs. 274 x.d., x.r. on Thursday but, with all the factors out and discounted, public interest in these shares was limited. Premier Auto was shaded at Rs. 107.50, while Bajaj Auto in the cash section was done at Rs. 119. Hindustan Motor was done down to Rs. 18.32 on Thursday on Calcutta selling. Electricity shares were erratic and while the Tata group companies like Power and Andhra Valley were fractionally better, Surat in the Killick group was down by 5 points to Rs. 110 but Ahmedabad in the same group was steady at Rs. 104. Cements were weak with A.C.C. at Rs. 164.25 and Digvijay at Rs. 182.50 against Rs. 166 and Rs. 183 respectively.

In keeping with the trend in forward scrips activity in cash shares had considerably thinned down, though selected shares like Mahindra and Mahindra (Rs. 17.24), Sankey Wheels (Rs. 12.80), Borosil (Rs. 12.40) came in for keen inquiry. Bajaj Auto had been mentioned earlier and Chemical and Fibre was also in demand.

LONDON LETTER

(Concluded from page 441)

vailing here that "would-be investors can reasonably assume that for the foreseeable future there is plenty of scope for private industrialists within the limits laid down in the Industrial Policy Resolution." He ends his article with the note that "if one believes in enterprise, India has many attraction to offer."

This feeling has been further strengthened by the recent ministerial visit of Mr. Humayun Kabir, Minister of Petroleum and Chemicals in the Shastri Cabinet, to London. This is because Mr. Kabir, unlike his predecessor, has acknowledged the plain fact that "petrochemical plants become obsolete so fast that a high level of profitability is essential for the industry." This view has been appreciated in the *Statist* as realistic.

Daniel Plan

Foreign aids, loans and investments will go a long way towards solving the foreign exchange requirements of India but too much reliance cannot be placed on loans and aids from the long-term point of view. So increasing attention would have to be given to foreign exchange earnings to meet the unfavourable balance-of-payments position. In this connection, it is interesting to note the scheme of Mr. P. A. Daniel, Managing Director of a small-scale chemical manufacturing concern of Essex, England, which is gaining currency here. The scheme has shown how small-scale industries can help in this field. He is of the opinion that his scheme will help India to solve its foreign exchange problem within a period of five years. He wants to try his scheme first between India and Britain and then to extend it to the whole of the Commonwealth. In brief, his scheme is that the participating countries will build up a central organisation in their respective countries with export offices abroad. These offices will be used as show-windows where commodities will be exhibited and consumers will be able to place their orders through these offices. The central organisation will get orders through these offices from abroad and send commodities to them for sale. The organisation will get the supply of required commodities from the industries (small-scale and medium) at home on competitive basis and also supply their required import needs through hire-purchase system. Thus the small-scale industries will receive encouragement to increase production and thus help to meet the needs of foreign currencies in their respective countries. When the complexities of international trade are undertaken by such an organisation the industries will have no hesitation to participate in international trade. The scheme may receive the attention of the Government here after the General Election. The Government of India will do well to give some thought to the scheme in the meantime.

Notice

THE KATAKHAL LALA BAZAR RAILWAY COMPANY LIMITED

Registered Office:

"McLeod House" 3, Netaji Subhas Road, CALCUTTA-1

THE BOARD OF DIRECTORS HAS DECIDED to recommend at the forthcoming Annual General Meeting of the shareholders of the Company to be held on the 30th September, 1964, the payment of a dividend of Rs. 2.10 paise per share for the year ended 31st March, 1964, subject to deduction of tax.

Notice is hereby given that the Register of Members of the Company will be closed from 20th September to 30th September 1964, both days inclusive.

By Order of the Board,

McLEOD & Co. LTD.,

C. HOCKLEY,
Director,
Secretaries & Treasurers.

2nd September, 1964.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P. O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I—Interim Dividend. C.R.—Cum. Right. X.R.—Ex. Right.

Shares :—If a company has different classes of shares—as for example : ' A ' shares and ' B ' shares—these are indicated by the same letters ' A ' and ' B ' under the columns ' Paid-up Ordinary Capital ' and ' Paid-up ' per share.

Accounts :— Figures in the Accounts Closed column represent the months or the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

William Blake.

VOL. CIX. No. 2787 BOMBAY, 19th SEPTEMBER 1964 PRICE Rs. 2

INDUSTRIAL RELATIONS

THE Government's labour policy came in for strong, sharp and sarcastic criticism at the hands of Mr. Naval H. Tata, in his presidential address at the thirty-first annual general meeting of the Employers' Federation of India held at Bombay on the 10th inst. He was justified in doing so, for the Government's attitude to the militant sections of trade union movement in the country has been weak, vascillating, excessively tolerant and incongruous, with the result that well-behaved and responsible trade unions have been at a disadvantage. Further, the Government has been indulging for long in double standards of social justice, a stringent one for the private sector and another for the public sector which is not so stringent. Whatever may be the other merits of public sector, the industrial relations and the degree of social justice in that sector have not been commendable enough to earn for it the title of being a "model employer." In the past one year or so, there have been more labour disturbances in the public sector than in the private sector, as witness the hunger strike in the L.I.C., the rumblings in Rourkela, the disturbances in the Indian Airlines Corporation, the happenings in Heavy Electricals in Bhopal, the showdowns at Sindri, the problems of Pimpri and hold-ups in Bombay and Marmagoa Ports.

The charge of Mr. Naval Tata against the Government is that it is not prepared to practise what it preaches to the private sector and to give its workers those benefits that are thrust on employers in the private sector either through legislation or pressure or persuasion, ignoring the cost thereof to the community which it is that ultimately has to bear the bulk of the total wages to workers. There are wide disparities between the wages and dearness allowance paid by Governments to their employees and those paid by employers in the private sector. While the dearness allowance of a large section of workers in the latter sector is linked to cost of living index, the workers in Government establishments "are languishing on fixed D.A., unrelated to fluctuating cost of living." Mr. Naval Tata warned the Government that, if it persists in such double standards of social justice, employers cannot be blamed if they "feel doubtful about the sincerity of Government." This is rather a far-fetched conclusion, especially in the context of his glowing tributes to Mr. Gulzarilal Nanda, the erstwhile Union Labour Minister.

Rather than doubt the sincerity of Government, this journal would make two points on this issue. The Government is unable to practise what it preaches to the private sector, probably because of inexperience in handling workers, especially industrial, as employers. Most of the industrial units in the public sector are new and are being established in a hurry. It has been admitted by the Union Finance Minister that the public sector undertakings are suffering from a serious shortage of the right type of managerial personnel. In contrast to this, the private sector units have had long experience in working industrial laws, rules and other social security legislation. The other point, which Mr. Naval Tata, too, made, is that the Union Labour Ministry, as opposed to employing Ministries, has not yet learned the lessons of prescribing standards and laws which are out of tune with the requirements of rapid expansion in economic growth. One is conscious of the fact that, in a democratic society under a climate of rising expectations, it is not easy to ensure contentment among workers, especially when they are strongly organised as the industrial workers are and the purchasing power of the rupee keeps on falling year after year. But the Government, as well as the Party in power, has to bear in mind that industrial workers and employees of commercial undertakings constitute only a small section of the community and that there is a limit to which they can be favoured over the rest of the community. The country is, therefore, badly in need of a well conceived wage policy.

The failure of public sector enterprises and Government departments to shine as "model employers" provides a good opportunity for employers in the private sector to establish, to the satisfaction of their employees, in particular, and the public, in general, that, as employers, they are better than the Government and that the growing incursions of the State sector in almost every field of activity is not in the interest of working class as a whole. This calls for a new dynamic approach from the employers towards their employees and from the employers' associations to the live problem of industrial relations. They have to strive hard to dispel the impression among the working class that employers in the private sector are hostile to its welfare and to cultivate a feeling of friendship with workers. Somehow, ways and means must be found to end the perpetual conflict between capital and labour, as active co-operation and understanding between the two are absolutely essential for the survival of private enterprise in this country and for the progress of economic development in an atmosphere of stability. The task is difficult but not impossible, provided three conditions are fulfilled: (i) The employers must anticipate the problems of workers and try to find solutions for them without waiting for workers to agitate. This requires close co-operation between employers and workers, with the former taking the latter into confidence as far as possible. (ii) The Government should not try to drive a wedge between workers and employers, in order to make any political capital. On the contrary, the Government should actively foster friendship between the two by not decrying employers as capitalists and exploiters. There have been instances when Ministers in charge of Labour, at both the Central and State levels, have behaved not as dispassionate mediators but as agitators championing the cause of workers. (iii) Trade unions should be trade unions and not political bodies. Those in charge of such unions must place the interests of workers above those of their political ambitions and objectives. Further, the demands which they make on behalf of workers must not be to the detriment of consumers, or the economy as a whole.

The time is ripe for bringing about a better understanding between capital and labour. The employers in this country are no longer that unenlightened they used to be, say, before Independence. They have changed a lot for the better, partly under the pressure of social legislation initiated by the Government and partly as a result of the growing realisation that a contented worker gives higher production and, therefore, costs less than a disgruntled worker. The employers are neither ruthless nor unyielding, as is alleged by a section of trade union leaders. As for workers, they are no longer that illiterate, weak and defenceless they were years ago. They are now well organised and their minimum needs are protected by legislation. The time has come when further benefits for workers are linked to performance and productivity. There is, therefore, force in Mr. Naval Tata's contention that "there is no evidence of a dynamic approach in the thinking of the Government in the handling of its labour policy insofar as it affects the economy of the country and the growth of industry, so vital to create more employment." If inflation is to be kept under control, the Government must firmly resist the temptation to appease labour by conceding its extravagant demands.

The first thing the Government has to do is to stop lending sympathy and support to the actions and demands of irresponsible sections of trade unions. In its anxiety to shelter workers and to ensure industrial peace, it has not taken care to see that growth of trade unionism proceeds on healthy lines. Recently, it has gone to the extent of asking employers to deal with "unrecognised" unions, even in establishments where recognised unions are functioning well. This aspect was strikingly brought out by Mr. Naval Tata in his speech, as will be seen from the following extract:

> "Whilst in the name of 'guided democracy' Government have not hesitated to control industries and gear them to a socialistic approach to suit national ideologies, the workers, in the name of freedom of association, have been left free to choose even trade unions whose ideologies are in conflict with the political ideologies of the State. Whilst the desirable elements have enjoyed the patronage of the ruling party, they have been simultaneously exposed to the mischief and intrigues of the undesirable sections of trade unions in the name of democracy. With no built-in deterrents in our labour laws, the irresponsible elements enjoy the status of respectability, despite their anti-social and anti-national attitude. How can a responsible form of trade union movement emerge out of a system, where the law-abiding trade union is on par with the law-breaker and where the reward of an illegal strike is the grant of wage increase by a tribunal appointed by Government, where shouting, picketing and indiscipline are rewarded by hearing at the high levels of Government full of sympathy, and efforts to bring the Government to a standstill are considered a legitimate form of lodging a protest by trade unions for an alleged industrial dispute based on a grievance beyond the control of an employer ?"

If employers are to make a dynamic approach on the lines suggested by us and succeed, trade unions should be purged of le

should at least refrain from countenancing illegal strikes, giving recognition to trade unions the leaders of which are guilty of breaking the law, and winking at indiscipline among workers. "A distinction must be made in our labour laws," as was rightly stressed by Mr. Naval Tata, "between a genuine industrial strike arising out of an industrial dispute and a political strike intended to further political ends." This is necessary, because there have been several instances of gross abuse of trade union rights. The Industrial Truce Resolution, to which all the trade unions and employers gave their solemn support under the stress of Emergency caused by the Chinese two years ago, is virtually dead now, though the Emergency continues. It has been flagrantly violated by trade unions in their rivalry with one another and for political purposes. These acts have been condoned by the Government, while it has not hesitated to pull up the employers even for minor lapses. Such a partisan attitude on the part of the Government is not in its own interest, for, ultimately, tolerance of indiscipline results in economic waste and political instability.

LABOUR PLAN FOR "NEW BRITAIN"

THE forthcoming general election in the United Kingdom, like the presidential election in the United States, may have some surprise in store, although public opinion polls presently reveal a substantial Labour lead over Conservative in the former country and a much bigger Democratic lead over Republican in the latter. If, however, the pollsters' findings happen to be confirmed by election results in either country, it will signify the ascendancy of liberal-socialist forces in Britain and of liberal-conservative forces in the United States. The economic consequences of possible Labour rule for five years may thus be more far-reaching than those of continued Democratic rule in the other English-speaking democracy. This is not just a guess, for the Labour Party's election manifesto itself has proposed a comprehensive economic policy involving several structural changes. As the Party has been out of power for over a decade now, its manifesto has a natural ring of purpose and determination and cannot, therefore, be lightly dismissed as a "paper plan" forming part of the election-year ritual.

What is visualised in the Labour manifesto, launched with fanfare by Mr. Harold Wilson on the 11th instant, is a "New Britain." Even after allowing for some exaggeration in this portrayal, it is seen that the kind of development (or, is it readjustment?) envisaged for the British economy in an era of rapidly advancing technology and automation has undoubtedly some novel features. These, in short, pertain to (i) "a deliberate and massive effort to modernise the economy," in general, and industries, in particular, (ii) a faster rate of industrial expansion, (iii) the allocation of a sufficient part of the new wealth created to urgent and now neglected human needs like housing and to increased social security benefits, (iv) the imperative need for a revolution in the education system which could ensure the education of all citizens in the responsibilities of this scientific age, and (v) the problems of leisure in the age of automation. The series of measures contemplated, in this connection, would involve national planning on a scale and to a degree far beyond the "indicative planning" which the Conservative Party has come to espouse in recent years. Logically, therefore, the manifesto has pledged at the outset that "Labour will set up a Ministry of Economic Affairs with the duty of formulating, with both sides of industry, a national economic plan" and that "this Ministry will frame the broad strategy for increasing investment, expanding exports and replacing non-essential imports." As specific programmes involving larger public expenditure and greater public regulation have been outlined for industries, regions, foreign trade, transport, housing, education, health, leisure and social security, the kind of national planning that is likely to take shape under a Labour regime is bound to be more far-reaching and comprehensive than under a Conservative regime.

The programmes for industries, for instance, suggest that Labour continues to have faith in the nationalisation of steel industry and in an expanding public sector. Its pledge that "private monopoly in steel will be replaced by public ownership and control" represents more than a prestige stand at the present time, for the recent adverse judgment of the Restrictive Practices Court on the Heavy Steel Associations' price agreement has imparted a certain piquancy to it. But its other pledge that "the water supply industry, most of which is already owned by the community, will be reorganised under full public ownership" is not quite so alarming. When, however, the manifesto says that "the public sector will make a vital contribution to the national plan" and that the existing nationalised industries, besides being asked to undertake major expansion programmes, will be encouraged, with the removal of the present restrictions placed upon them, to diversify and move into new fields (such as exports by railway workshops and coal machinery manufacture by the National Coal Board), one may well wonder whether the "vital" role envisaged for the public sector in Britain does not resemble the "strategic" or "dominant" role visualised for the public sector in India. This accent on the public sector, taken along with two related proposals pertaining to industry-wise planning and subsidies for industries in the private sector, may be deemed disquieting for the reason that they would involve greater State control and regulation. One of these proposals, incidentally, is that, "within the national plan, each industry will know both what is expected of it (in terms of exports, investment, production and employment) and what help it can expect from the Government." And the other is that "a Labour Government will apply tests of the national interest before agreeing to subsidies for private manufacturing industries and will insist on a voice in the control, and a share in the profits, where public funds are involved."

There is, however, much to be said for the imaginative Labour idea of injecting modern technology more rapidly into industries. The manifesto has proposed, in this connection, that new advance should be directly stimulated by using research and development contracts which have hitherto been largely confined to military projects, and that a Ministry for Technology be set up to guide and stimulate advanced technology and new processes. Where, however, new industries, based on such research and development, are to be established, Labour has stated its preference for wholly public enterprise or for public enterprise in partnership with private industry. In sum, Labour's plan for industry has these principal ingredients—namely, no take-over by the State of any major private manufacturing industry except the iron and steel industry, expansion and diversification of the existing nationalised industries, industry-wise planning and regulation of the private sector, control of take-over bids and mergers, and public enterprise or public-cum-private enterprise in new industries developed by research and advanced technology. As Britain is a highly industrialised country, these programmes for industries are certainly the most significant ones in the Labour platform.

Some other planks in this platform are also significant, in that they are directly or indirectly related to industrial expansion. The idea of intensive regional planning is one of them. Its objectives are to control the location of new factories, to induce firms to move to areas where industry is declining, to establish new public enterprises where these prove necessary, to solve the problems of slum clearance and overcrowding and to develop new industrial towns. These tasks are to be carried out by regional planning boards under the general guidance of the proposed Ministry of Economic Affairs. The transport plank envisages "a national plan for transport covering the national networks of road, rail and canal communications, properly co-ordinated with air, coastal shipping and port services." The new regional planning authorities are also expected to draw up transport plans for their own areas. There is also the pledge that "British road services will be given all necessary powers to extend their fleet of road vehicles and to develop a first-rate national freight service."

As for housing, Labour has made no extravagant promise by way of "an election auction on housing figures," for it has recognised that the crucial factor governing the new houses that can be built—and, for that matter, the schools, hospitals, factories, offices and roads that can be completed—is the output of construction and building supply industries. Nevertheless, it has outlined a fairly detailed programme for the housing sector. A novel element in this programme is that, in order to end the competitive scramble for building land, a Crown Land Commission is to be established for buying land on which building or rebuilding is to take place. The Commission will not pay the inflated market price for land but only "a price based on its existing use value *plus* an amount sufficient to cover any contingent losses by the owner." It is expected that, as a result of such public acquisition, building land can be made available at cheaper prices. Under this system, the land will remain in public ownership, but the new owner-occupied houses built upon it will remain the absolute property of the owners. The other proposals envisage a policy of lower interest rates for housing, assistance to owner-occupiers by providing 100 per cent mortgages, a new programme of modernisation of old houses, accelerated slum clearance, increased State building of new houses both for rent and for sale, and use of new techniques of industrialised building. On the whole, Labour's plan for housing—a highly controversial issue in Britain—seems to be realistic.

On social services like education, health and recreation and on social security, Labour's stand has its own distinctive features. It is, in the main, a stand for drastic reforms in the major social services, so as to ensure further expansion of educational facilities at all levels in terms of "a phased and costed plan," to restore as rapidly as possible a completely free health service and implement a revised hospital plan, to end the present parsimony in the supply of public funds for outdoor recreation and to encourage and support independent film makers for both cinema and television. In regard to social security, Labour's pledge is to reconstruct the entire system so as to increase its benefits which are said to have fallen below the minimum levels of human need. One proposal here is to raise the existing National Insurance benefits and thereafter link them to average earnings. Another is to graft on a new wage-related scheme covering retirement, sickness and unemployment to the existing flat rate *National Insurance* scheme. These and other proposals relating to social services and social security, according to the Labour manifesto, can fructify only by stages "as economic expansion increases the national wealth." This, again, is a realistic—and refreshingly candid—approach on the part of Labour. It is also significant, in this context, that Labour has recognised that, if the Welfare State is to benefit one and all, the planned growth of incomes should be broadly related to the annual growth of production. But two unanswered questions are how growth with price stability could be ensured in the context of large-scale public expenditure and how that expenditure would be met.

As the United Kingdom continues to rely heavily on foreign trade, it is but natural that the Labour Party has paid great attention to it. The first objective of the party is to close the trade gap. For this it has proposed several short-term measures, such as use of the tax system to encourage industries and firms to export more, provision of better terms of credit, assistance to small exporters on a group basis and encouragement to British industry to supply those manufactures which swell the import bill in time of expansion. For the long-term, however, Labour has outlined no detailed plan, because, according to it, "a satisfactory trade balance will depend upon maintaining a steady and vigorous programme of long-term expansion." But, from the point of view of developing countries, in general, and Commonwealth countries, in particular, it is gratifying to find that the Labour manifesto has spelt out several measures for mutually beneficial trade expansion.

A new drive for exports through a Commonwealth Exports Council, building a firmer base for expanding trade through long-term contracts and commodity agreements providing guaranteed markets for Commonwealth primary produce, gearing development and capital investment programmes to Commonwealth needs and promotion of wider educational, scientific and technical contacts with Commonwealth countries—these are some of the proposals covering Commonwealth trade and relations. Above all, Labour has clearly expressed its readiness to discuss proposals for expanding the trade of developing nations, to increase the share of national income devoted to aid programmes not only by loans and grants but also by mobilising unused industrial capacity in Britain to meet overseas needs, to revive the concept of a World Food Board for the disposal of agricultural surpluses and to create a Ministry of Overseas Development for discharging Britain's responsibility for Commonwealth development and for multilateral assistance through the United Nations and its specialised agencies. In the related spheres of trade and aid, the Labour Party's programme is thus progressive, imaginative and forward-looking and will no doubt be greatly appreciated in developing countries like India even as is the almost identical stand of the U.S. Democratic Party on this vital question of the Development Decade.

MARKET GOSSIP

Liquidity Ratio Of Banks

WEDNESDAY, 16th September 1964, is a landmark in the history of commercial banks in this country, for on that day the new liquidity ratio under the Banking Companies (Amendment) Act of 1962 came into force. It will be recalled that, according to this legislation, the banks have to maintain a minimum overall liquidity ratio of 28 per cent, as against 20 per cent hitherto. This higher ratio became operative on 16th September this year, because the amended Act gave a time-limit of two years from the date of its coming into existence (that is, 16th September 1962, the day on which it received the assent of the President of India) for banks to prepare themselves for meeting this condition. Efforts were made by some banks to get this period extended, but the Governor of the Reserve Bank did not encourage this plea and had firmly told them long ago that no concession would be shown to them in this regard. It is not, therefore, incorrect to claim that, even months ago, banks must have reconciled themselves to the prospect of maintaining a higher liquidity ratio from this week onwards.

The main reason for the amendment insisting on a higher liquidity ratio was a decline by 10 points in the liquidity ratio of scheduled banks (excluding the State Bank) during the past decade —from 43 per cent in 1950 to 33 per cent in 1960 —and a rise in the advances-deposits ratio from 49 per cent to 70 per cent. In view of the expected further rise in advances in the subsequent years and in order to ensure the soundness of banks, the Reserve Bank thought it necessary to raise the liquidity ratio. The failure of the Palai Central Bank, which caused a widespread criticism of the Reserve Bank's capacity to safeguard the interests of depositors, was also an important cause for taking this decision.

The amendment has split up the overall liquidity ratio into statutory reserve balances, equivalent to 3 per cent of the total of time and demand liabilities in India, and liquid assets namely, cash or till money, gold, excess over statutory reserves, balances with the State Bank and with notified banks and unencumbered approved securities (mainly Government securities) equivalent to 25 per cent of these liabilities. This splitting was found necessary to enable the Reserve Bank to impose additional reserve requirements, if need be, at some future date, without giving any room for the scheduled banks to shift the impact by reducing investments in Government securities. It may be mentioned here that the Reserve Bank has the power to increase the cash reserves of scheduled banks upto 15 per cent. This means that the overall liquidity ratio can be pushed up to a high level of 40 per cent. In this manner, the Reserve Bank can restrict the credit creating capacity of all commercial banks.

As scheduled banks submit their consolidated weekly statement of affairs as of Fridays only, it will not be possible for us to know what exactly was their position in regard to liquid assets on 16th September. The latest figures available pertain to the position as of 4th September 1964. They show that the scheduled banks' cash balances stood at about 6 per cent of the liabilities and other liquid assets at about 32 per cent, giving a total liquidity ratio of 38 per cent. Currently, the banks are passing through the traditional slack season and the observance of higher liquidity ratio should cause no real difficulty. The testing time for them will be in the next (1964-65) busy season (November to May).

It may be noted here that, in the peak of last busy season, the liquidity ratio touched a low of 34 per cent, an uncomfortably low level in the context of the enhanced minimum ratio, for banks have always to keep a safety margin of 5 to 8 per cent for meeting unforeseen contingencies. It must not be forgotten, in this connection, that the above mentioned figures are for all scheduled banks, including the State Bank of India, the liquidity of which was as high as 48 per cent as on 4th September 1964; even at the height of the busy season it was over 40 per cent. If the State Bank of India is excluded, it is seen that the liquidity ratio of other scheduled banks touched a low 30 per cent (split up into 7 per cent cash and 23 per cent investments) in the last busy season. If this trend continues, it may become extremely difficult for many scheduled banks to maintain the minimum requirement of 28 per cent in the busy season that is ahead. The banks must, therefore, redouble their efforts at increasing their deposit resources and restrict such advances as are not meant for genuine productive purposes. Since there are limitations to what could be done in these directions in the next few months, it looks as though there would be a strong credit squeeze in the coming busy season, with money becoming pretty tight. Circumstances are likely to force the hands of bankers to raise their rates of interest not only on advances but also on deposits.

Annuity Deposit Scheme

It has taken full six months for the Union Finance Ministry to frame the Annuity Deposit Scheme. The introduction of the Scheme was first announced in the Finance Minister's budget speech on 29th February, but it was only last week that the *Gazette* notification containing the details of the Scheme was issued. This delay apart, it is a matter for some satisfaction that the Scheme published now is clear and precise with no ambiguities whatever. The taxpayers should, therefore, be in a position to assess the extent to which the payment of annuity deposits will actually affect them.

Under the Scheme, all individual assessees who are resident in India (excepting foreign nationals, registered firms, co-operative societies and companies) and whose total yearly income exceeds Rs. 15,000 are required to make annuity deposits, the amount of deposits being calculated at the rates mentioned below:

Income range (Rs.)	*Rate of deposit* (Per cent)
15,001-20,000	5
20,001-40,000	7½
40,001-70,000	10
Above 70,000	12½

The calculation is subject to marginal adjustments as specified in the second schedule to the Finance Act 1964. In calculating the amount of deposits, no account is to be taken of certain types of income such as capital gains, receipt of salary for a past year that was in arrears and share of income in an unregistered firm which is liable to make an annuity deposit in respect of its income. In the case of authors, playwrights, artists, musicians and actors, who are permitted to make at their option an annuity deposit upto 25 per cent of the amount of their adjusted total income, such additional annuity deposit will be allowed to be made only in respect of the income derived from carrying on a profession such as those described above and not in respect of income from any other source.

The first assessment year for which annuity deposits are to be made is 1964-65. But salary income earned during the accounting year 1963-64 (that is, assessment year 1964-65) is not subject to A.D.S., as it has already borne C.D.S. But on the salary income earned in the current financial year (1964-65) annuity deposits will have to be made. Advance annuity deposits are also to be made in the current financial year in respect of the income other than salaried income assessable for the assessment year 1965-66. The procedure for making deposits is outlined below:

For the current assessment year, deposits may be made on the basis of an assessment of income-tax made by the assessee himself or by the Income-tax Officer. Where a self-assessment has been made, the annuity deposit is required to be made within 30 days of an assessee's filing his income-tax return. However, assessees who have already filed their returns of income or file them by the end of September 1964, can make their annuity deposits by 31st October 1964. In cases where the assessment is made by the Income-tax Officer, he will also determine the amount of annuity deposit due and call upon the assessee to make the deposit. In regard to deposits to be made in advance for the assessment year 1965-66, the Income-tax Officer will issue a notice of demand. He will also lay down the number of instalments in which the deposit could be made and the dates on which they should be made. However, individuals who have not been assessed to income-tax so far and who expect their assessable income to exceed Rs. 15,000 should themselves make an estimate of their annuity deposit liability. They should inform the Income-tax Officer accordingly before 1st March 1965 and also make the deposit by that date. Assessees may make their annuity deposits even before they are formally called upon to do so by the Income-tax Officer.

Deposits can be made in instalments. When the deposit money is tendered (at all offices of the Reserve Bank and branches of the State Bank of India and its subsidiaries), an interim receipt will be given which would, after a given period, be exchanged for annuity deposit certificates. These certificates will be issued in denominations of Rs. 10, Rs. 100 and Rs. 1,000. Beginning from one year after the date on which the deposit is made, the depositor will receive an annuity of Re. 1.25 for every Rs. 10. The rate of interest works out to a little over 4¼ per cent. Payment of annuities will be spread over ten years.

An attractive feature of the Annuity Deposit Scheme is that, in computing the taxable income of a depositor, the amount of deposit at the rates mentioned earlier will be allowed as a deduction. But, when the deposits are returned in instalments, both the principal and the interest rate will be added to the total income of the assessee and subjected to tax. So, over a period, the assessee gets no benefit by way of relief in taxation. On the contrary, most of them may be net losers, as we shall presently show. The rate of interest payable on deposits is niggardly, being a bare 4¼ per cent. The Government ought to have raised the rate of interest, or, in the alternative, at least exempted annuities from income-tax, as was the case in regard to Compulsory Deposits, so that some of the disadvantages of the Annuity Deposit Scheme could have been offset.

Two disadvantages are worth mentioning. In the first place, in the case of young assessees whose incomes will normally rise in coming years, the repayments will add to their total income and if, as a result, the slab goes up, the incidence of taxation will be higher. The same result will follow, if the rates of taxation go up in coming years. Secondly, to the extent the purchasing power of money goes down—this is bound to happen—the value of annuities received by depositors will naturally be much less than it is at the time the deposits are made. The Annuity Deposit Scheme does not provide for any cover against such depreciation in value. Indeed, the very basis and spirit behind the scheme—a compulsory scheme at that—are opposed to the principle of equity and justice. It must be noted here that an assessee who is subject to the Annuity Deposit Scheme has no choice but to pay the deposit and the Government can collect it in the same way it does arrears of taxes. What is more, failure to pay the annuity deposits in time will attract a penalty which may be as high as 50 per cent of the deposit.

Salaried employees in particular would do well to remember that, unlike in the case of C.D.S., employers are not bound to deduct the annuity deposits from their salaries. It is unlikely that any of them will take the trouble of collecting the deposits and accounting them to the tax-collecting authorities. Accordingly, those who fall under the mischief of the Scheme must take care to save regularly a sufficient amount to meet this "deposit" liability when it falls due. Any of them who are not given to the habit of self-restraint on their purse must think of a foolproof method that will protect them against financial embarrassment at the end of the fiscal year and save them from the risk of having to pay a heavy penalty. The best thing would be to open a recurring deposit account with their banks and credit to it sufficient amount as soon as they receive their salary every month. All those who have not earmarked a part of their income in the last six months will have to think of saving a lot more in the next six months to cover the backlog of instalments.

Fund-Bank Meetings

There were no exciting developments in the annual meetings of the International Monetary Fund and the World Bank at Tokyo last week. There were some differences among the major powers in their approach to the problem of international liquidity. France, supported by West Germany, the Netherlands and Belgium, to some extent, favoured new arrangements to replace the existing ones. It was of the view that, instead of (*a*) increasing the resources of the Fund, (*b*) continuing the present arrangements under the Paris Club, and (*c*) relying only on the U.S. dollar and pound sterling to play the role of key currencies, a composite reserve unit backed by all the leading currencies in agreed proportions, should be evolved. But even the spokesmen of France admitted that there could be no sudden break from the present system which he described as a haphazard working of the gold exchange standard. To do so, he recognised, might result in a shrinkage, instead of an increase, in international liquidity. What France wanted was a gradual substitution of the present gold exchange standard by "some complementary means of increasing national reserves," especially as the supply of gold was unlikely to increase automatically in line with the world's needs. Moreover, the French plan was rather vague and full of loose ends.

Stated in simple language, the French contention is that, as both dollar and sterling have become soft, with their economies frequently getting unbalanced and becoming inflationary, accumulation of surpluses of the creditor countries in Europe in these currencies is not in their interest. And they have no choice now but to do so, for to insist on settlement of their trade surplus in gold would lead, sooner or later, to a break up of the Western Union.

France and its supporters were, however, in a minority. The system advocated by it, being more rigid than the existing ones, failed to evoke the appreciation of underdeveloped countries, including India, Britain and the U.S., as was only to be expected, opposed the French ideas and tried to show that its assumptions were not well-founded in fact. It was argued on their behalf that there was no sign of a world-wide inflation and that the Continental creditors could easily spend their foreign exchange surpluses by exporting capital freely and importing more from the rest of the world. In this stand of theirs, they had the support of Italy, an important E.C.M. country.

On the question as to who should control the international credit mechanism, France is of the view that any new form of liquidity should be exercised by the Bank for International Settlements or the Paris Club (also called Group of Ten) rather than by the I.M.F. Apparently, France and its Continental partners want to exercise greater control over the international credit mechanism, since their stake as creditor countries today has greatly increased; they had practically very little when the I.M.F. was established about twenty years ago. In this respect, too, they are in a minority, with the developing nations supporting the U.S. and Britain, both of which are for strengthening the hands of the I.M.F.

India's Finance Minister, Mr. T. T. Krishnamachari, unequivocally supported the Fund. He said:

"The Fund's activities and policies have been adapted progressively to the emerging needs of the members and I have no doubt that the Fund has to be a focal agency and point of action in respect of whatever decisions we reach for securing adequate international liquidity and strengthening the world's payments system."

He added that he happily supported the idea of an increase in the Fund's quotas and that the Executive Directors should proceed to formulate more precise recommendations on the subject. The only qualification he made was that developing countries should not be called upon to make an outright payment of the gold tranche (of the increase in quotas) in full to the Fund, as their gold reserves were inadequate, having regard to their developmental needs of foreign exchange. There seems to be a large measure of sympathy for this view, especially in the U.S. and Britain. These two countries themselves are said to be feeling that, if the share of gold—namely, 25 per cent— in the quota is retained as in the past, it would bear heavily on them.

The final outcome of the discussions was that there should be a 25 per cent increase in quotas and borrowing rights of the Fund. But there are yet several points to be settled. As already stated, there is the question of payment in gold. Whether the increase should be made in one jump or in several stages is another. A third one pertains to the selective increases in the quotas of certain countries (as, for instance, West Germany and

(Continued on page 528)

U.S. DOLLAR IS NOT OUT OF THE WOOD

By Questor

LONDON, 11*th September*

I NOTICE that Mr. Dillon has taken the meetings in Tokyo as another opportunity for impressing on European bankers and politicians that they should open up their capital markets more generously to foreign issues. In particular, he has urged that a larger proportion than in the past of the new capital which the World Bank will soon be needing should be raised outside the United States. His concern is readily understandable, since the U.S. balance of payments deficit is narrowing less rapidly than was generally hoped for earlier in the year and it is the capital side of the account which causes most anxiety.

The current account looks reasonably healthy at present. It is true that the Administration is apparently finding it difficult to reduce its expenditures abroad and that a flare-up in South East Asia could greatly increase its military outlays. True, too, that Americans seem to have taken holidays abroad in much larger numbers this year and to have spent more individually on them. But exports rose by 15 per cent in the first seven months of this year, as against a rise of only 8 per cent in imports, and Britain, for one, is finding it much more difficult to expand its sales in the U.S. than in other markets.

It seems permissible to connect this striking improvement in visible trade with the relative stability of unit costs of production over the past few years and to conclude that—barring such accidents as the snowballing of the Chrysler settlement—there has been a permanent change for the better in the competitive position of the U.S.

It is possible, unfortunately, that this has been matched by other changes of a semi-permanent nature on the capital side. In the first place, the interest equalisation tax—which is at present intended, in any case, to last only until the end of next year—already appears to be losing some of its bite. Both the relatively low payments deficit in the first quarter (annual rate of $800 million) and the relatively high deficit in the second (annual rate of nearly $3 billion) seem to have been a result of this tax to some extent. In the first quarter, new capital issues by foreigners almost dried up and U.S. investors were selling foreign stocks quite heavily on balance. In the second quarter, however, the volume of new issues more than doubled and the selling of foreign stocks slackened noticeably. Although the European capital markets have been more active in the past few months, there is no doubt that old borrowers will return to New York as soon as the tax disincentive is removed.

Also, the outflow of short-term capital appears to have grown, despite the fact that confidence in the stability of the dollar has been restored and that speculative influences are trifling at the moment. It is U.S. domestic capital rather than short-term foreign funds, in fact, which is causing most of the trouble. International interest arbitrage is growing and the Euro-dollar market, in particular, seems to be attracting U.S. investors more and more; while U.S. short-term rates remain relatively low, this attraction is more likely to continue increasing than to diminish.

At the same time, U.S. banks are lending to foreigners on a rising scale. It may be, as has been alleged, that a part of this rise is a direct counterpart to the temporary stop in foreign capital issues. But, on a longer-term point of view, there is no doubt that U.S. banks, many of which have been establishing new branches abroad, are fighting hard for foreign lending business. This, too, is a trend which is unlikely to reverse itself.

After the disappointing figures for the second quarter, the Administration is hoping for a payments deficit for 1964 of around $2 billion—a considerable improvement on the $3¼ billion deficit of 1963, no doubt, but still a considerable deficit. Confidence in the dollar is much greater than it was, thanks to the vigorous steps taken by Mr. Roosa to slow down the fall in the gold reserve: so far this year, in fact, despite the deficit, it has actually risen on balance.

But I think that it would be a great mistake to suppose that there is now no urgency about the problem, even though a U.S. deficit certainly helps, so long as it can be successfully financed, to keep world liquidity rising at the rate needed to oil the wheels of international trade. Once it appears that the Administration, while refusing to raise the price of gold or even to free the whole of the gold reserve for international use, is actually unable to eliminate its deficit, speculation against the dollar could easily begin all over again.

And this time, now that U.S. investors are getting into the habit of depositing money abroad, it could be on a scale much more difficult to handle. While the deficit persists, moreover, it will remain impossible for the U.S. to give a bold lead against France in the discussions about international monetary reform.

What therefore should be done? Action should be considered urgently on all the three different fronts open. First, inside the framework of wider policy, further steps should be taken to cut down Government expenditure abroad. Second, for all the satisfactory size of the trade surplus, the effort to increase exports and cut imports (including imports of services) must be continued. And third—I suggest this with great diffidence—the Administration should study the possibility of extending the precedent created by the interest equalisation tax and taking direct as well as indirect action to influence the pattern of capital movements.

I.D.B. — A MODEL FOR COPYING?

A few weeks ago, at a meeting of Western European Union, the British Foreign Secretary offered to make a contribution of $20 million to the work of the Inter-American Development Bank (I.D.B.). The first slice of $8 million is now being made available in the form of an issue of 20-year bonds on the London market. The operation has served to draw non-American attention to a bank which is little known, can easily be dubbed unnecessary, but which could form a useful model for a number of other institutions.

I.D.B. is relatively new among the international financial institutions. The idea of a bank to finance development in Latin America was first put forward nearly a century ago but was quietly forgotten when Argentina defaulted on debt payments in 1890 and so precipitated the Baring crisis. It was revived again after the last war, but dismissed by the U.S. Administration on the grounds that it could only duplicate the work of other institutions. It was finally launched, with the growth of U.S. interest in Latin American social and economic development, only in 1960.

Its shareholders are the Governments of the U.S. and nineteen Latin American countries; the U.S. is responsible for 43 per cent of its capital, Brazil, Argentina and Mexico together for another 35 per cent. Its original authorised capital was $813 million, of which rather more than half was left uncalled as a backing for its obligations.

Recently, however, this capital has been increased by $1,300 million, $1,000 million of it to be subscribed by existing members, the other $300 million by any new members, notably Canada. On top of this, and of money raised by bond issues, the Bank operates two special funds which provide soft loans for purposes like cheap housing, a Social Progress Trust Fund of $525 million supplied by the U.S. and a Fund for Special Operations of $220 million. It is now proposed to merge these two funds and to increase them by $900 million during 1965-67.

On ordinary account, the I.D.B. has so far authorised 89 loans, aggregating $414 million; on its two special accounts, it has authorised another 120 loans, aggregating $513 million. It is clear, therefore, that it has no difficulty in getting rid of its money. The fact that the Governments of Latin America pressed at the World Bank meeting in Tokyo for more soft loans from this source does raise the question whether the I.D.B. is duplicating, as the U.S. once feared it would, the work of the World Bank. If duplication means attracting more capital for Latin American development than would otherwise have been forthcoming, the answer to this question is fortunately yes. If it means undertaking work which the World Bank—or the U.S. Administration, the main source of its funds—could perfectly well have carried out for itself, the answer is no.

The I.D.B. has been able to carry out a special job in two different ways. From the point of view of raising funds, it has been able to increase the total by making use of the spare resources of the Latin American members themselves and by interesting and obtaining the participation of commercial banks.

From the point of view of investing them, it has been able in several cases to co-ordinate large infra-structure projects financed by the World Bank and to encourage economic integration in Latin America by putting it high on the list of criteria by which loan applications are judged. The Latin American members feel, to a much greater extent than with a larger body, that their common interests are being treated with understanding, that they themselves are contributing to the finance of development, and that the money is being put to the best possible use.

The success of the I.D.B. makes one wonder whether there is scope for establishing other regional development banks along similar lines—regional economic groupings, after all, are emerging in Africa and the Middle East as well as in Latin America. Again, the developing members of the British Commonwealth have recently shown themselves eager to equip it with new institutions, and a development bank is one obvious possibility. It would be extremely similar in form to the I.D.B., since its membership would include one fully-developed, several semi-developed and a large handful of only partly-developed members. It would be in line with tendencies which are already emerging in the Commonwealth — notably economic and technical assistance provided by members to one another and not only by Britain to the rest, and a joint demand for greater assistance on an international scale.

There are, however, two great differences. In the first place, there is no movement in the Commonwealth, as there is in Latin America, towards economic integration; in fact, the reverse is true. In the second place, Britain is in no position to provide the Commonwealth with as large a proportion of the outside development capital it needs as the U.S. is able to offer Latin America. Neither of these differences, however, need prevent a Commonwealth Development Bank from attracting public and private capital from outside and from investing it in projects with which private investment alone is unfitted to cope.

Food worth $77,000 will be provided to assist in the settlement of agricultural workers displaced by mechanisation of a sugar estate in Jamaica under a scheme, known as the Hayes Complece Farmstead, drawn by the F.A.O.'s World Food Programme. It is part of a co-ordinated Government programme in this area which aims to improve social conditions aggravated by mechanisation. An agreement to this effect was signed in Kingston recently. The total cost of the assistance given by the programme is more than $90,000, including transport, insurance and supervision. The scheme, which has already begun, includes work on water supplies, land settlement, housing and social welfare activities. Surveys of the area have been carried out, roads built and some houses constructed. Food is to be distributed weekly to each family for eighteen months to supplement food available locally. In all, 220 tons of food consisting of wheat flour and maize, dried and canned fish, canned meat, dried skimmed milk, cheese, butter and butter oil will be shipped to the Programme.

Notice

THE TATA MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Register of Debentureholders of the Tata Mills Limited will be closed from Monday, the 28th September to Thursday, the 1st October 1964, both days inclusive, in connection with the convening of a meeting of Debentureholders to consider certain modifications in the Debenture Trust Deed dated the 24th April, 1951.

By Order of the Board of Directors,

TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,

N. H. TATA,
Director.

Registered Office:
BOMBAY HOUSE,
24, BRUCE STREET,
FORT,

An aerial view of L&T's Powai Works

OUT OF THE ACHIEVEMENTS OF THE PAST, A PROMISE FOR THE FUTURE...

Consider almost any field of national development. Food and agriculture? Oil and mining? Power and irrigation? Steel?...Larsen & Toubro is in it.

Blast furnaces at Rourkela. Mining lignite at Neyveli. The first oil refinery in the Public Sector. A power station for Madhya Pradesh. A complex dairy, meeting the daily needs of a large city. A mammoth irrigation scheme changing near-desert tracts into arable land. These are but a few of the major projects where L&T's manufacturing skill, technical know-how and engineering experience have been effectively utilised in the service of the nation.

L&T's Fabrication Shop and Switchgear Factory at Powai is a dynamic industrial unit where many ideas originate and take shape. It fabricates and manufactures specialised plant and equipment for a variety of major industries; chemical and pharmaceutical, food processing, oil distribution, dairies, switchgear, fertilizers, petro-chemicals and paper. At Sion, Bombay, the Drilling and Mining Division manufactures drills and diamond bits used in mining enterprises all over the country.

Tractors, trailers, cranes and dredgers, supplied by L&T's Earth-moving and Agricultural Equipment Division are busy at many of India's major projects. Other important L&T Divisions are: Heavy Plant, Instruments, Industrial Appliances, Cooling Towers and Engineering Projects.

Behind many L&T undertakings is the collaboration from world-renowned manufacturers: GHH, Voith, Koppers, Caterpillar, Laur. Knudsen, Silkeborg, Christensen, Longyear, Audco...

With such varied activities, experience and worldwide contacts, L&T has steadily grown over the years. These significant achievements of the past hold a promise for a still brighter future.

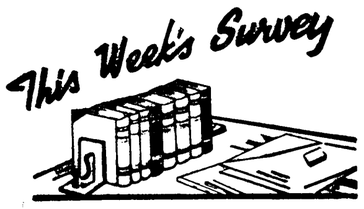
IN SERVICE LIES SUCCESS



CEMENT INDUSTRY

THE gap between demand for cement and its availability, according to an official estimate, has been widening rapidly in recent years. It has increased from 0.97 million tonnes in 1961-62 to 1.19 million tonnes in 1962-63 and to 2.33 million tonnes in 1963-64. As the aggregate production of 9.42 million tonnes in the private and public sectors together in 1963-64 has represented as much as 95 per cent of installed capacity, further scope for maximising output through fuller utilisation of capacity seems to be rather limited. But even this limited scope, if exploited, may well mean an additional production of 0.5 million tonnes on the basis of a possible hundred per cent capacity utilisation. It is from this point of view that the continuance, just announced, of the price incentive scheme for cement should be welcomed. The incentive formula, in this connection, envisages an extra price to cement producers, ranging from Rs. 2.50 per tonne to Rs. 5.50 per tonne in respect of production in 1964 *in excess of* the best annual production during the three years ended 1962. This extra price, which will not affect the consumer price, is meant to compensate the producers for the additional expenditure that they may have to incur in maximising production with the existing capacity. Although it has been urged by some leading cement producers that the price incentive should be linked with the *average* of the preceding three year's production, the Government has kept intact the basic features of last year's scheme presumably because it (the scheme) has led to a higher level of capacity utilisation.

The incentive scheme is thus good so far as it goes. It is, however, of no relevance to the growth of capacity, as distinct from production. That, even according to the Government's estimate, the third Plan's cement capacity target of 15.2 million tonnes per annum would be achieved only by the end of the first year (1966-67) of the fourth Plan may be noted in this connection. But this official expectation may not be fulfilled, if the industry's estimate is to be believed. Incidentally, the latter estimate is that aggregate installed capacity by the end of 1965-66 would come to no more than 11.5 million tonnes, if no energetic steps are taken to accelerate capacity growth in the current year, as also in the next. There is unfortunately no indication that such steps are under way. On the contrary, the Union Ministry of Industry and Supply seems to be more concerned currently with the fourth Plan target for cement and with the proposal for constituting a Cement Corporation in the public sector (*vide* Minister Dasappa's review at the Informal Consultative Committee of Parliament on the 14th instant). As the proposed capacity target of 25 million tonnes for the fourth Plan and the Cement Corporation proposal are interrelated and relevant only to the next Plan, the inference must be that the Government expects that the expansion schemes of existing cement companies and the licensed new units would fructify without any setback in the next two years. There seems to be no warrant for complacency on this score.

Be that as it may, one would be justified in asking whether the unrealistically high target of 25 million tonnes for capacity under the fourth Plan, as compared with the likely third Plan achievement of 11.5 million tonnes, is not intended to buttress the case for establishing a number of units in the public sector which, at present, has only two units—one in Mysore and the other in Uttar Pradesh. There is no need to wait for an answer, for Minister Dasappa himself has just said that the task of building up additional capacity of the order envisaged for the fourth Plan might not be achieved by the private sector alone and that, therefore, the proposed Cement Corporation would have an important role to play in helping to reach the target by setting up units of its own. But he has also added that the Corporation will have some role to play in enabling the establishment of private-sector units through some ancillary and supporting activities. The Corporation's operations in the matter of surveying, prospecting and proving limestone deposits in the country would also be of some help to the private cement companies.

Where, thus, the Corporation has the laudable objective of assisting the private sector in important ways, it may be prudent to entrust that sector itself with the responsibility for creating additional capacity through expansion of existing units and establishment of new units. But that will call for the reduction of fourth Plan target (25 million tonnes) to a realistic level in the light of performance in the second and third Plan periods, though from the point of view of the country's requirements of cement it is not an over-ambitious target. If the third Plan is going to increase capacity by less than 50 per cent, as compared with the actual capacity installed by the end of the second Plan, there is no reason to believe that the rate of growth could be more than doubled during the fourth Plan period. But there is also no reason to believe that the Government has learnt from the erstwhile experience of high cement targets and big shortfalls in achievement and that it would abandon the idea of establishing more cement units in the public sector as part of the activities of the proposed Cement Corporation of India.

TRADE IN FERROUS SCRAP

The trade in India's ferrous scrap, both for domestic use and for export, seems to have increased in recent years, thanks partly to the increased production of iron and steel. It is noteworthy that, though exports of only such varieties of scrap as are not consumed in the country have been permitted so far, such exports have increased from about Rs. 2.0 crores is 1962-63 to Rs. 4.9 crores in 1963-64 and to an annual rate of Rs. 5.0 crores in the first quarter of 1964-65. The internal market for scrap has also been booming, for the removal, in the course of last year, of distribution control on varieties of scrap other than usable defectives, re-rollable scrap and ingot mould scrap, has resulted in a somewhat higher level of prices. But these prosperous trends in both external and internal trade may or may not be lasting, considering that ferrous scrap has always been sensitive to quantitative and qualitative uncertainties, price fluctuations and transport difficulties. These handicaps do not seem to have been eliminated even after the implementation of some of the reommendations made by the Scrap Committee two years ago on export quotas and allotments for domestic use. The need for a sound and comprehensive policy in respect of scrap has, therefore, been felt all along. But it is only now that something like a coherent policy has begun to take shape, thanks to the constitution of a separate corporation for dealing with all aspects of scrap trade.

This corporation is a public limited company, registered in Calcutta last week with an authorised capital of Rs. two crores and an issued capital of Rs. 30 lakhs. Called the *Metals Scrap Trade Corporation*, it is a joint enterprise in which the Government-owned Minerals and Metals Trading Corporation, the ferrous scrap collecting and exporting interests and the domestic users of scrap (melting furnace owners) hold equal shares. The Corporation, which is expected to have an annual turnover of Rs. 10 crores, will undertake, through a countrywide network of agencies and by the provision of equipment facilities, the collection and processing of ferrous scrap so as to cater to both domestic furnace owners and export markets. The presence of the Minerals and Metals Trading Corporation as one of the three partners in this new Corporation is calculated to ensure the continued attention of the Government to the problems of the other two sectors. That private trade and private foundry industry will be equal partners with a public-sector agency is, incidentally, a salutary and significant development from the standpoint of understanding and collaboration between the public and private sectors.

The constitution of the Corporation certainly marks a welcome development for more reasons than one. In the first place, the proposed canalising of all ferrous scrap exports through the Corporation is most desirable from the point of view of ending the uncertainties which have always resulted from disorganised efforts and unhealthy trade practices. Moreover, the Corporation will be in a better position than individual exporters to negotiate long-term contracts with overseas parties for the export of scrap at favourable international prices. That similar long-term contracts for the export of iron ore to Japan, for instance, have been successfully negotiated by the State Trading Corporation may be recalled in this connection. The participation of the private sector in the Corporation will be of great help to its management, in that the know-how of trade will be readily available and the risk of missing the business or incurring avoidable losses can be considerably minimised. It, however, remains to be seen how far these advantages will be realised in actual practice. Of course, the objective of the new Corporation, unlike that of the S.T.C. in the matter of ore exports, must be to export scrap only after fully satisfying the domestic needs therefor. In other words, export of ferrous scrap should not have a higher priority than its domestic use in the production of steel castings and re-rolled materials.

It is in this context of more profitable and essential domestic use that some of the objectives of the new Corporation are particularly relevant. As indigenous foundries have a lot of capacity unutilised for lack of pig iron and steel, their raw material requirements would have to be met by better and more systematic collection of scrap for melting. Here the problem is not only one of collection but of processing. It is only an organised agency that can intensify scrap collection on a large scale from diverse sources all over the country. While it will be relatively easy to collect from engineering factories considerable quantities of scrap resulting from processes like punching, shearing and machining, the effort to collect disused capital scrap (discarded iron and steel articles, vehicles, rails, wornout machinery, etc.) is bound to be more taxing. But, then, this has to be done in an organised manner. When this is done by an organisation like the Metals Scrap Trade Corportion with its equipment facilities for processing the scrap in various forms like skull cracking, baling, briquetting and detinning, it will be even more of an advantage to trade and industry.

EXPORT-IMPORT TRADE

The urgency of the need for augmenting exports was stressed forcefully by Mr. Manubhai Shah, Union Minister for Commerce, while inaugurating the two-day session of the Export-Import Advisory Council held at New Delhi on the 12th and 13th inst. It was of the utmost importance, Mr. Shah said, that *all our plans and policies* (italics ours) were geared to the task of increasing the foreign exchange earnings *in every possible way* (italics ours). The industry and trade, he went on to say, must step up efforts to make available more and more goods for selling abroad; they must extend their maximum co-operation and all their patriotism in winning this battle for exports.

No one need ask as to why the increase in exports is so urgent, for it is only such an increase that will provide the country with the necessary external purchasing power for financing the large-scale import requirements in the next few years. An idea of the magnitude of the problem of financing imports can be had from the data furnished by Mr. Shah. Taking into account the maintenance requirements of industrial capacity in existence at the end of the current Plan and the likely additions to it during the fourth Plan period, the maintenance imports in the fourth Plan are expected to be of the order of Rs. 5,100-5,300 crores. In addition to these, requirements of development imports may range between Rs. 1,800 crores and Rs. 2,500 crores, depending on the dates on which the machinery projects would come to fruition, so that the supply of indigenous machinery and equipment coming out of these projects would help reduce the burden of machinery and equipment imports for the developmental programme. The total foreign exchange needs will thus vary between Rs. 6,900 crores and Rs. 7,800 crores.

There may, of course, be some scope for import reduction through import rationalisation and/or substitution of a few items of imports by the use of materials indigenously available. Mr. Shah himself urged intensification of efforts in this direction. And it is also possible that India will get large-scale foreign exchange assistance in the form of long-term credits and other means of financing imports of capital goods from friendly countries. Even so, it must be admitted that a considerable part of the import requirements will have to be financed from out of export earnings. Bearing all this in mind, the Planning Commission has fixed the aggregate fourth Plan export target at Rs. 5,100 crores, or an average annual earning of Rs. 1,020 crores, as compared with the average of Rs. 760 crores in the third Plan. In other words, the country will have to earn

Rs. 260 crores more per annum by way of exports. Even if this target were hit, the country would be faced with a gap in terms of foreign exchange for which suitable solutions should be found in due course. Emphasing this aspect Mr. Manubhai observed:

"The basic weakness of our balance of payments persists. In relation to our ever-increasing import requirements and our debt-servicing obligations, our earnings of foreign exchange by way of exports of goods and other sources, such as shipping and insurance, remain too inadequate. We have also to reckon with somewhat larger imports of foodgrains in the current year. It is, therefore, very necessary to maintain the maximum restraint on imports—consisting, of course, with the needs of essential production in the country—and to maximise exports of as many products as the nation can activise in the export push."

The increased export effort appeal of Mr. Shah is no doubt most timely, but mere appeals will not mean anything, unless they are followed up by concrete action to create conditions congenial for launching a more vigorous export drive. The need for such conditions was impressively highlighted by several members who participated in the discussions that followed the formal inauguration of the Export-Import Advisory Council's meeting. Emerging from the discussions are the following few suggestions:

Efforts should be concentrated on developing exports of finished and semi-finished products in preference to raw materials. Long-term policies should be evolved and the Government should not change them from time to time. The industry and trade must be enabled to investigate and explore foreign markets without difficulty and export industries must be given priority in getting raw materials and capital equipment.

Rates of customs duties must be reduced so as to help bring down costs in both consumer and capital goods industries.

The cargo handling facilities at the Calcutta port, the capacity of which has been strained by increased food imports, must be improved.

Industries which are required to raise exports must be allowed to expand their home market augmenting that production capacity.

There should be a definite orientation in our investment patterns in both industrial and agricultural sectors with a view to stepping up exports.

There should be an industrial truce with labour for five years so that industry could concentrate on exports.

Railway freight rates on items exported abroad must be lowered.

The Government should move in the matter of the dual contract rate system that is being imposed on Indian exporters by the Conference shipping lines and it should not allow the exporter to be burdened further with higher costs.

Closer liaison must be ensured between the country's export houses and the trade missions abroad.

Winding up the discussions, Mr. Manubhai Shah held out the assurance that the various suggestions put forward at the meeting would be sympathetically considered by the Government. Welcome, indeed, is his announcement that the export strategy might be recast to emphasise increase in the unit value earnings of exports and not merely increase in quantum. As a result of the revised strategy, he said, even the present quantum of exports could yield higher exchange earnings. Welcome also are his five other assurances. First, the Government will continue to do its utmost to meet the essential needs of industry in respect of capital goods, raw materials, components and spares. As a measure of long-term policy, emphasis will continue to be laid on export-oriented and defence industries. The plant and machinery needed for modernisation of textile industries, particularly cotton textiles and jute, will continue to be provided. Machinery, fertilisers and other requirements of agricultural sector and different industries would be made available in an adequate measure. Secondly, import priorities in future will be accorded to items in accordance with the extent to which they may lead to an improvement in exports. Thirdly, the Reserve Bank will be more liberal in allotting foreign exchange to businessmen to visit markets abroad for promoting sales of their goods or for initiating new ventures. Fourthly, the limit for clubbing small value licences will be raised from the present Rs. 5,000 to Rs. 10,000. And, fifthly, the Government will appoint a study team to locate the causes of delay in the disposal of applications for import licences and streamline the procedures. (Indeed, this Committee has already been appointed, with Mr. H. C. Mathur as the leader and some officials and non-officials as members.)

These assurances, together with the Rs. 10-crore import-export stabilisation fund (set up by the Central Government), which will make available on a revolving basis to manufacturers-exporters credits for importing necessary items, will doubtless strengthen the drive to boost the exports. The ultimate success on the export front will, however, depend partly on the improvement in the competitive capacity (quality-wise and price-wise) of Indian goods and partly on the willingness of the highly developed countries to import from India on a much larger scale than they do at present.

PUBLICITY FOR PLANS

Publicity for India's Five-year Plans is done mainly by the Ministry of Information and Broadcasting through its two constituents, namely, the Directorate of Field Publicity and the Song and Drama Division. The work of the Directorate of Field Publicity relates to organising meetings and discussion groups and the showing of films. Guidance notes and talking points on Government's price policy, employment position, small savings, potentialities of small industries, co-operative sector, family planning, programmes and progress of the Plans, etc. are also made available to the Directors of Information of the State Governments and the non-official organisations for reference and use. The activities of Song and Drama Division relate to the organisation of dramas and other media like Kavi Sammelans, Mushairas, Music Concerts and Song performances. The Division also releases pamphlets of national songs and poems.

It was felt for long that the achievements of these institutions have not been adequate to meet the desired extent of publicity for the Plans and that there was need to widen the impact and improve the efficiency of the measures. Keeping this factor in view, the Government of India appointed a Study Team on Five-year Plan Publicity in April 1963 under the chairmanship of Mr. Amar Nath Vidyalankar, M.P., to study the impact on the public of the Plan publicity programmes and to suggest measures to improve them. The Study Team submitted its report to the Government on 29th August 1964. The Committee's recommendations have been made in the light of its basic findings described below:

"Publicity at present," to quote the Committee, "is largely directed to urban-based educated classes, with disproportionate emphasis on English-educated sections; rural population, the major clients, have not yet received a square deal. While in urban areas the publicity effort needs point, direction and purpose, it needs to be more broad-based and extensively and imaginatively presented in rural areas. Whereas the 'printed word' publicity is the most effective means of addressing the educated sections in urban areas, it is a comparatively wasteful effort in rural areas for which radio, film, exhibitions and song and drama performances are the most suitable media."

The Study Team found that the performances of the Directorate of Field Publicity and Song and Drama Division have been neither adequately impressive nor fully purposive. Most of their activities are limited to the urban areas and, because of the shortage of field units, the coverage even in urban areas is very thin. Although there has been a sizable expansion of the media of mass communication, it has not been commensurate with the size and magnitude of the requirements. Moreover, there is very little of coordination between the publicity programmes of not only the Central and State Governments but even of the various Ministries at the Centre. The impact on people of the existing publicity programmes has, therefore, been tenuous, vague and diffused in content, with no section of the community having been touched in a forceful manner. The general public has come to view the publicity functionaries as propaganda boys of the Government, as their programmes are too much obsessed with ministerial pronouncements and conference proceedings.

In order to remedy the haphazard execution and lopsided approach of Plan publicity, the Study Team has made some important recommendations, involving changes at the organisational and administrative levels. Thus, it has recommended that the High-powered Committee for Direction and Co-ordination should be expanded and meet more frequently. To assist the Committee, a Central Publicity Planning Group may be set up, with a Director-General of Plan Publicity as its chief technical executive, and may include the Director of Song and Drama Division. The Director-General may have under his control and supervision a Directorate of Communications Research and a Directorate of Plan Publicity Evaluation and Intelligence. There should be a similar set-up at the State level, with each State having a Regional Director of Plan Publicity.

As regards the conception and execution of the programmes, the Team has recommended that there should be an increase in the duration of rural programmes of All India Radio, the number of community sets, the Radio Rural Forums, the Industrial Listening Forums and the Women's Listening Clubs, and organised listening should be started in schools and colleges. A field unit should be provided for every five blocks with mobile vans to organise more film shows (documentaries and newsreels) in rural areas, and their commercial exhibition should be extended to more urban areas. In view of the importance of the role of song and drama among the illiterate people, a local theatrical group for every fifteen blocks has been recommended. In order to ensure effective display publicity, the Team has recommended the utilisation of the services of private advertising agencies in an advisory capacity. As regards publicity through the Press, the Committee has recommended that the Press Information Bureau should organise unconducted tours for correspondents of metropolitan papers, as well as provide photo-*cum*-feature service, fortnightly digest of development news and background and reference services; and that *Yojana* should be published in all the regional languages and its free distribution should be made more liberal.

A perusal of the Study Team's summarised version of the report and recommendations suggests that, within the comparatively short period at its disposal, it has been able to go into most of the details of Plan publicity as it exists, and has put forward a number of commendable and practical measures to make the impact of publicity felt over a wider number of the people. Although the recommendations involve a great expansion of the field units, requiring substantial increase in expenditure, it may partly be met by the savings suggested by the Team at a number of places. For example, it has been recommended that the indiscriminate distribution of English publication is not fruitful and should, therefore, be discontinued below the district level. Similarly, the distribution of pamphlets and other printed material in rural areas should be discontinued. It has been further suggested that publicity material should be mailed directly to responsible officials such as Panchayat Secretary or school teacher, as it has been found that the material does not reach the proper targets below the Block headquarters. One recommendation of the Committee which deserves to be ignored is that the Government should start, through *zilla parishads*, small newspapers dedicated to local needs. It is no function of the Government in a democratic society to start newspapers. If it does, such newspapers will soon become victims of party politics and strengthen the factional spirit that is already rampant in the rural areas following the introduction of *Panchayati Raj*.

CASHEW KERNEL AND SHELL OIL EXPORTS

Exports of cashew kernels and cashew shell oil, two of the most important foreign exchange earners, have touched a new high. Cashew kernels worth over Rs. 9.8 crores were exported in the four months ended July 1964, as compared with Rs. 7.4 crores' worth in the corresponding period of 1963, representing an increase of over Rs. 2.4 crores. In terms of quantity, there was a rise of 1,629 tonnes in April-July 1964 over the exports in the same period of 1963 which aggregated 18,225 tonnes. The export of cashew kernels in July amounted over 5,820 tonnes valued at Rs. 1.4 crores, which is a record for foreign exchange earnings by cashew exports for any month. The exports in July 1963 realised Rs. 2.48 crores. The main buyers were the United States, U.S.S.R., East Germany, U.K., Australia and Canada.

Cashew shell oil exports also registered a record increase. Export earnings from cashew shell oil in the four months ended July 1964 was double that of the value of exports in the same period last year. The actual exports being 2,950 tonnes worth Rs. 35 lakhs, as against 4,644 tonnes valued at Rs. 70 lakhs. The main importers of cashewnut shell liquid were the United States, United Kingdom and Japan.

The Seventeenth All-India Plastics Manufacturers' Conference, organised by the All-India Plastics Manufacturers' Association will be held at Bombay on the 29th and 30th inst. Mr. Ashok Mehta, Deputy Chairman, Planning Commission has kindly consented to inaugurate the Conference which will be presided over by Mr. Radhakrishna R. Ruia. The Conference will discuss important subjects which are vital to the growth of the plastics industry in India, including the Plan targets for plastics during the fourth Five-year Plan. A symposium on plastics will be held on the 30th inst. at which eminent persons in the field of plastics will read technical papers. A film-show on plastics will also be held for the benefit of the delegates on the 29th evening.

AMERICAN LETTER

FORTHCOMING PRESIDENTIAL ELECTIONS

MANY REPUBLICANS IN BUSINESS DECIDE TO SUPPORT JOHNSON AND HUMPHREY

By N. Pattabhi Raman

NEW YORK, *12th September*

"HE'S terrific!" exclaimed Henry Ford II, Chairman of the Ford Motor Company, commenting some three months ago on President Johnson. At that time, Bary Goldwater was aspiring to be the Republican Party's presidential candidate, but he had not yet captured its leadership. In other words, Ford's enthusiasm for Johnson was based on the latter's own capabilities and performance rather than on a comparison of the Democratic and Republican candidates.

Ford's backing of Johnson held significance not only because he was a prominent Republican who had decided to cross the party line, but also because he reflected a considerable degree of business confidence in the Administration of Lyndon Baines Johnson. The late President Kennedy was an intellectual and a critic of the society for its disregard of unmet social needs. Furthermore, he attracted business hostility by his fierce attack in 1962 on the steel industry's attempt to raise prices in disregard of the public interest. While he sought later to close the emotional gap that followed, he never fully succeeded. But Johnson has succeeded where Kennedy failed. A middle-of-the-roader, he has vigorously pursued the legislative goals of his predecessor, but his personality, his way of doing things and his earnest attempts to woo the business community have earned for him the image of a man with whom one can do business. His much publicised measures to put a restraint on Government spending also have helped to divorce him from the usual Republican conception of a Democratic president as a profligate with the people's money.

National Independent Committee

Now that Senator Goldwater has been chosen the standard-bearer of the Republican Party, many influential businessmen, including Republicans of long standing, are translating their liking for Johnson into political support for him. An event of major significance occurred recently when 45 key business and financial leaders organised a National Independent Committee for President Johnson and Senator Humphrey. More than 30 of these are Republicans. The Committee consists of such names familiar to Indian readers as Robert B. Anderson, who was Secretary of the Treasury in the Eisenhower Administration; Eugene R. Black, a former President of the World Bank; John T. Connor, President of Merck & Co.; Henry Ford II; and Edgar F. Kaiser, Chairman of Kaiser Aluminium and Chemical Corporation.

The purpose of this Committee is to express the collective confidence of its members in the national leadership of President Johnson and Senator Hubert Humphrey, Mr. Johnson's running mate, and to enlist the active support of American business and financial leaders for their election in November. Explaining this in a statement, the members of the Committee said: "It is this Committee's purpose to indicate that it is the conservative course in our national life to follow a man who is a leader and who is leading well." The slap on Mr. Goldwater's face was clearly intended. Despite Mr. Goldwater's claim to represent Conservative America, many influential businessmen feel that he is a vehicle for extremism and irresponsibility.

Over the years, the stereotype of the Democratic Party has been that of a party closely identified with labour, while the Republican Party has been called the party of business. The growing business support for the re-election of President Johnson is blurring this stereotype of the Democratic Party. It is also helping Mr. Johnson's own aspirations to be the nation's unifier and the President of "all the people."

All this is not to say that businessmen are swinging to Johnson en masse. In fact, Goldwater too has the support of powerful businessmen such as George Champion, Chairman of the Chase Manhattan Bank, Ralph Cordiner, a former Chairman of the General Electric Company, and George Humphrey, a former Secretary of the Treasury and General Motors head. Also, how the rest of the business legion will vote in November is unknown. But it is noteworthy that so many of the top brass of the business world, usually supporters of the Republican Party, have come out openly for a Democratic President.

Senator Humphrey

The selection of Senator Hubert Humphrey as the Democratic candidate for Vice-President enabled those Republican businessmen who have crossed the party line to do so with less reluctance. Humphrey is a liberal who early earned the reputation of being a radical. He has been the champion of many progressive causes and a highly articulate one at that. While this type of man would normally be anathema to the U.S. business community, Humphrey has balanced his image by mellowing with experience and emerging as a responsible legislative leader. Today, his liberal convictions are as strong as they ever were, but he has also learned to be pragmatic. He has sought, and to a degree succeeded, in presenting himself to the business community as "a reasonable man." In recent weeks, he has met with several business groups who apparently like his defence of "reasonable profits" and freedom of initiative.

As for labour, the A.F.L.-C.I.O., the national confederation of trade unions in the U.S., has officially endorsed the Johnson-Humphrey team. Johnson is not organised labour's "beloved fidel." In fact, the trade unions vehemently opposed him when he fought with John F. Kennedy for Democratic nomination in 1960 and also when Kennedy chose him to be his running mate. His interim tenure at the White House has won him respect among labour leaders, but he is still not their hero. However, the trade unions are going all out for his victory in November, because, ironically, the Goldwater candidacy and the reactionary, "Goldwatered" platform of the Republican Party have left them no "choice." Despite the presence of Republicans in the supreme councils of the trade union movement, the labour leaders are unanimous in their belief that Goldwater, if elected the President of the United States, would seek to destroy the unions. To them, Goldwater is "the enemy."

If the trade union leaders were less than fully enthusiastic for Johnson until recently, in their case, too, the transition in their attitude was helped considerably by the choice of Senator Humphrey for the No. 2 spot on the Democratic team. In fact, the trade unions exerted considerable pressure for Humphrey's nomination.

The practice of the A.F.L.-C.I.O. officially endorsing a political candidate needs to be explained. Unlike in India, where the I.N.T.U.C., the A.I.T.U.C. and other trade union confederations are securely, though informally, tied to the apron strings of parent political organisations like the Congress Party, the Communist Party or the ever-changing party of the socialists, in the United States trade unions are "free." The A.F.L.-C.I.O. is not permanently committed to the Republican or the Democratic Party. On the other hand, it studies the voting records and the stated positions of various candidates on issues affecting labour and, on the basis of these "score-cards," rates each candidate as to his eligibility for the political support of labour. Thus, it endorses the candidate whose record makes it believe that he will be responsive to labour's needs and opposes the candidate who scores badly in its eyes. By labour's viewpoint, Goldwater had voted "wrong" on all listed roll-call votes in the Senate in the last six years, and his running mate, William E. Miller, had done only a trifle better in the House of Representatives.

Official endorsement by the A.F.L.-C.I.O. does not mean that its members will vote for the candidate of its choice. As in India, the worker exercises his franchise in the privacy of the voting booth and his trade union has no way of compelling him to vote one way or another. The union can seek to influence him, but it cannot force him to follow an official line. Recognition of this is to be found in the educational activities of the A.F.L.-C.I.O's Committee on Political Education (C.O.P.E.). This year, C.O.P.E. is doubling its efforts to educate trade union members and others on the election issues. Reflecting the concern about the possible adverse effects of the so-called "White backlash" on the election of the Johnson-Humphrey team, C.O.P.E. is paying particular attention to explaining what the Civil Rights Act of 1964 will and will not do. It is seeking to offset fears among white workers that the Civil Rights Act, an accomplishment of the Kennedy-Johnson Administration and a magnificent monument to the legislative skills of Senator Hubert Humphrey, will lead to the transfer of jobs from whites to Negroes or force the integration of neighbourhoods and thus contribute to possible decline in real estate values.

In the 1960 election, trade union support was influential in Kennedy's victory. In this year's crucial elections, labour would like to be no less influential.

PENSION FOR AUTO WORKERS

The United Auto Workers Union and Chrysler Corporation of the U.S. have agreed on the terms of a new contract calling for retirement benefits of up to $400 a month, early retirement, and improved working conditions for the Automobile manufacturing concern's employees. The precedent-setting contract is expected to set the pattern for subsequent negotiations with General Motors, Ford and American Motors, other giants in the industry. The major accomplishment of the contract relates to the basic pension rate, which is to be increased from $2.80 a month to $4.25 a month for each year of service, up to 30 years. In addition to this $127.50, a supplemental benefits fund made up of company and worker money in undetermined ratio would give the worker enough to raise the pension to a maximum of $400 a month, exclusive of social security until he reached the age of 65. At that time, he would receive only the $127.50 plus what was due to him under social security. The programme was set up to encourage workers to leave the plant at the age of sixty. A worker can also retire at the age of sixty-five and get up to 70 per cent of basic pay in retirement benefits. The union estimated the average retirement benefits for a worker at age sixty with 30 years' service would be $381 a month in 1965.

FINANCING OF SMALL-SCALE INDUSTRIES

SOME THOUGHTS ON GUARANTEE SCHEME

THE principles, practices and problems governing bank credit for the small-scale industries have been widely discussed during the last year: the institutional agencies which are interested in increasing the availability of bank finance to this sector range from the Central Small-Scale Industries Board and National and State Small Industries Corporations at one end to the industrial and urban co-operatives, on the other, with commercial banks and specialised financing institutions coming in between. Above all, the Reserve Bank has been making special efforts, over the years, to stimulate the flow of bank credit to the small-scale industrial sector in a variety of ways.

At the outset, it must be realised, if the problem is to be presented and analysed from an appropriate angle and in a proper perspective, that, while paucity of institutional credit may be a major impediment to the development of small-scale industries in India, it is not the *only* important problem: lack of modern techniques of production and organisation, lack of knowledge about the latest advances in machinery, absence of modern methods of marketing and shortage of trained personnel are all as important as the shortage of block or working capital resources. The problem is both that of organisation and incentives: the small-scale industries must be organised in such a manner that they could work efficiently in a competitive world, and their working, accounting and the security that they could offer, must be such as will provide incentives to the lending institutions to extend adequate and appropriate finance and credit to them.

History

The small-scale industries are neither new nor unique to India: their beginnings are very old and some of them were in fact obtaining bank finance even before the problem of finance for them came into prominence. But the small-scale industries had their first spurt of growth during the Second World War —the emphasis then was on quantity, not quality or cost. In the post-war years, with increasing shortages in the supplies and rising costs of raw materials, and with stiffer competition in marketing of sub-standard goods, considerable attention was paid to their problems and difficulties. Two Ford Foundation teams studied their problems and difficulties, one in 1954 and another in 1963 and spot-lighted attention on the need to deal with them in an integrated way from the earliest stages of establishment (land, plant and machinery) to the stage of marketing, including all the intermediate stages of finance, organisation, technique, research and incentives. In a way, it was only during the second Five-year Plan that small-scale industries came to be regarded as a major source of supply for many items. The second Plan also witnessed the beginnings of a positive and definite process of institutionalising finance for this sector. An idea of the degree of growth and the extent of achievements could be had from the fact that a total of Rs. 67 crores of long-term and short-term accommodation was received by the small-scale sector from the various organised financial agencies during the second Five-year Plan period as under:

Assistance to Small-scale Sector during Second Plan

	(Rs. crores)
Loans under the State Aid to Industries Act	12.91
State Financial Corporations	4.12
National Small Industrial Corporation ...	4.24
Industrial Estates	10.97
Industrial and Urban Co-operatives ...	0.92
Commercial Banks other than the State Bank of India	23.63
State Bank of India	10.13
	66.92
	(i.e. 67 crores)

At the end of the second Five-year Plan, 36,400 small registered factories has 38 per cent of registered factory employment, 17 per cent of the fixed capital assets of all registered factories, and produced 33 per cent of the gross output of all registered factories. There is hardly any doubt that there has been further growth since then, because employment provided by them has gone up from 1.3 million to over 3 million during the period.

The Economic Department of the Reserve Bank of India has been conducting half-yearly surveys of scheduled bank advances to small-scale industries and co-operative institutions. The latest available information relates to the *fifth survey for the period January-June 1963*. It will not surprise those who are familiar with the state of banking statistics in India that results of two subsequent surveys due on *December 1963 and June 1964 are not yet available*.

According to the fifth survey, half-yearly average of advances of scheduled banks to small-scale industries at the end of June 1963 was *Rs. 42.40 crores, as against Rs. 19.50* crores at the end of June 1960, Rs. 26.46 crores at the end of June 1961 and Rs. 34.10 crores at the end of June 1962. If outstandings at the end of June are *taken into account, the figures are slightly* higher—Rs. 20.73 crores in 1960, Rs. 27.14 crores in 1961, Rs. 34.59 crores in 1962, and Rs. 42.47 crores in June 1963.

Advances to small-scale industries formed 4.6 per cent of total bank advances to all industries at the end of June 1963, as against 3.9 per cent at the end of June 1961. The latest industrywise classification of these advances is available for December 1962. Light engineering and transport equipment industries were leading with 23 per cent share in total advances to small-*scale sector: textiles came next with 15 per cent* share, followed by metal products, pipes, tubes, etc. at 11 per cent. Chemicals, dyes and paints, *rice mills and other foods, vegetable oil crush*ing and refining, and electrical goods and radio sets, etc., were all about 6 per cent each. The residual 27 per cent was shared amongst leather goods, paper products, plastics, saw mills and others.

Objective of the Surveys

The main purpose of these surveys is to *determine the additional* borrowing quota available to the scheduled banks from the Reserve Bank of India at the Bank rate, on the basis of their lending to the small-scale industries: in the process, however, the Reserve Bank must be coming in possession of a considerable amount of additional information which are quite relevant for assessing the growth of bank assistance to small-scale industries. None of this information is, however, published regularly and systematically except in a very *casual* manner. One does not know, for example, anything more than the fact that the number of accounts of small-scale units rose from 11,900 at the end of June 1961 to 18,900 at the end of June 1963 and that the average amount of advance per account actually declined from Rs. 22,770 to Rs. 22,450 during the same period.

Confusion Over State Bank's Share

As regards the State Bank's share in the total advances to small-scale industries, considerable confusion prevails. In the *Report on Trend and Progress of Banking in India, 1962*, one finds that, out of the total *outstanding* advances of scheduled banks to small-scale industries at the end of June 1962 amounting to Rs. 34.59 crores, the State Bank of India and its subsidiaries together accounted for Rs. 17.64 crores or 51 per cent of the total. The same *Report* for the year 1963, however, shows that, at the end of June 1963, the State Bank and its subsidiaries accounted for Rs. 10.2 crores or about one-fourth of the outstanding advances totalling Rs. 42.5 crores. Obviously, one of the two figures is wrong. The *Report of the Central Board of Directors of the State Bank of India for the year 1963* gives a clearer picture when it says that, at the end of December 1963, the total assistance *sanctioned* by the State Bank to small industries under various heads aggregated Rs. 19.6 crores and the amount *outstanding* totalled Rs. 8.55 crores. The mystery of June 1962 figures above, however, still remains unresolved.

Further confusion is created by the manner in which the various Reserve Bank publications give statistics of bank assistance to small-scale industries. The *Report on Currency and Finance* for the year 1963-64 as well as the Report of *Central Board of Directors of the Reserve Bank of India* both give an impression to the layman that a large bulk of bank assistance to small-scale industries is provided by the State Bank of India and that very little is being done by the other commercial banks. The latest Directors' Report, for example, points out that out of the total outstanding loans aggregating Rs. 18.76 crores under the Gurantee Scheme of the Government and the Reserve Bank of India, the share of the State Bank of India alone was Rs. 11.08 crores: it does not, however, make any mention of the *total outstanding* loans both *within* the Guarantee Scheme and *without* it, and of the share of the State Bank of India and the commercial banks in that total which alone is a meaningful representation of the real measure of bank finance to this sector.

The Guarantee Scheme itself requires to be considered afresh. It was introduced in 1960 as a result of the recommendations of the Hyderabad Seminar on Financing of Small-scale Industries. The purpose was to enlarge bank lending to small-scale industries by enabling banks to share the risks involved with the Guarantee Organisation, which is the Reserve Bank of India. The Scheme, which began as an experimental measure, covering 22 approved districts, is now on a permanent footing, and applicable throughout the country. The institutions eligible for guarantee include State Bank of India and its subsidiaries, majority of scheduled banks, State co-operative banks and State Financial Corporations, including the Madras Industrial and Investment Corporation. The Scheme provides for sharing of losses between the lending institutions and the Guarantee Organisation, subject to the condition that the maximum amount recoverable in any one case will not exceed Rs. one lakh. The scheme has been modified from time to time, in order to liberalise its terms to enable the lending institutions to utilise the guarantees.

Progress Considerable

The Guarantee Scheme has made considerable progress. Since its inception in July 1960 up to the end of March 1964, the Guarantee Organisation received 9,800 applications for guarantee in respect of credit limits aggregating Rs. 40 crores, as against about 5,000 applications for Rs. 20 crores received up to the end of March 1963. Total applications accepted and their amounts were 8,600 for Rs. 33 crores upto the end of March 1964, as against 4,500 applications for Rs. 17 crores up to the end of March 1963. During 1963-64, the Guarantee Organisation has almost doubled its turnover.

Yet it is a curious paradox that only the State Bank of India has made the most frequent and the largest use of the Scheme: it is also rather strange that the guarantees have been invoked in respect of 14 advances only, the total sum paid in four years amounting to no more than a lakh of rupees.

Something to Think About

The fact that banks other than the State Bank and its subsidiaries make very little use of the Guarantee Scheme and rely upon their *own* judgment and evaluation of risks, means that they either do not consider the Guarantee Scheme useful or regard the formalities too cumbersome. The extremely small proportion of losses probably means that banks are too conservative in their lending and the Guarantee Scheme has not enabled them to *liberalise* their *eligibility* or *security* standards for lending. But the real factor behind the banks' reluctance to make use of the Scheme may lie in the fact that the Reserve Bank of India itself acts as the Guarantee Organisation. Banks prefer to act in a conservative manner and show success rather than liberal losses to their own credit supervisory and regulatory agency. If the Guarantee Organisation could be an independent *insurance* and *guarantee* institution (like the Export Risks Insurance Corporation or the Export Credit and Guarantee Corporation), banks could possibly be more liberal in approaching it for an insurance cover. It is high time that this aspect of the working of the Guarantee Scheme is examined by the Government and Reserve Bank.

The crux of the problem is not merely to increase the *quantity* of bank credit to small-scale industries, but also to cultivate a new *attitude* towards banks lending to this sector. In this, the otherwise informative Reserve Bank Reports are completely lacking in details. It is not known how far the Guarantee Organisation or the Reserve Bank has offered guidance to the banks in assessing the creditworthiness in a new way—not merely with reference to the security, means, equity, interest, safety, and profitability, but also in the context of future prospects based upon the financial viability, technical soundness and managerial ability of small industrial units. Nor is it known to what extent the banks themselves have given thought and attention to these problems. It is here that the State Bank of India has a special responsibility: more than any other bank, for it is the State Bank of India which has experimented with the problems of liberalising credit standards and techniques in lending to the small-scale sector. It would benefit both the banking system and the small-scale industries if the lessons of this experience are shared by it with the other banks and the public.

EXTERNAL ASSISTANCE FOR INDIA

PACE OF UTILISATION IMPROVES SLIGHTLY

THERE has recently been a slight improvement in the position regarding the utilisation of external assistance obtained by India from the countries abroad. The rate of utilisation—that is, the proportion of aid actually utilised to the total available for use—in the third year (1963-64) of the third Plan was higher at 25.0 per cent, as against 21.8 per cent in 1962-63 and 22.0 per cent in 1961-62. Welcome though this improvement is, the pace of aid utilisation cannot be considered quite satisfactory, as witness the huge amount of over Rs. 1,212 crores lying undisbursed at the end of March 1964; the amount is equivalent to almost two-fifths of the authorisations aggregating Rs. 3,274 crores (exclusive of P.L. 480 and P.L. 665 assistance amounting to Rs. 1,193 crores, as well as third country currency assistance) since India began obtaining aid for economic development. It may be true that, since a substantial part of loans granted by countries consists of tied loans—that is, loans given towards the implementation of specific projects—the projects naturally take time to execute. But there is no gainsaying the fact that the difference between authorisation and utilisation of aid is also attributable largely to the official red-tape and cumbersome procedural delays. Inasmuch as the slow rate of utilising foreign assistance affects industrial progress at this crucial stage of development, the Government of India has lately initiated several steps to speed up utilisation in the light of the important recommendations made by the special committee on foreign aid (Chairman: Dr. V. K. R. V. Rao). The impact of these steps on the pace of utilisation of foreign aid remains to be seen.

Much valuable data relating to aid received by India from different countries and institutions are given in the Seventh Annual Report (1963) in the series *External Assistance* published by the Union Ministry of Finance. These

data, together with the data furnished in a special study by the Reserve Bank Economic Department's Division of International Finance—the findings of the study are published in a special note appearing in the August issue of the Reserve Bank's *Monthly Bulletin*—provide a clear picture of the scale of assistance authorised by the Governments of the friendly countries and institutions abroad, the amount utilised, and the aid remaining unutilised when the fourth year of the third Plan commenced on 1st April 1964.

Authorisation and Actual Use

India, it will be recalled, relied mainly on its own resources for financing development during the first Plan. External assistance authorised was no more than Rs. 377 crores, of which only Rs. 197 crores were actually utilised, leaving a spill-over of Rs. 180 crores. As the tempo of development gathered momentum during the second Plan period, the country's foreign exchange reserves fell from Rs. 902 crores to about Rs. 304 crores. External assistance authorised in that period amounted to Rs. 1,401 crores and, with the carryover of Rs. 180 crores from the first Plan, a sum of Rs. 1,581 crores was available for utilisation during the second Plan period. But actual utilisation was just Rs. 890 crores, so that the balance remaining unused when the third Plan began (on 1st April 1961) was Rs. 691 crores. Including the Rs. 1,495 crores authorised in the first three years of the third Plan, the total available amount of aid comes to Rs. 2,186 crores, against which the sum actually utilised was Rs. 974 crores, with the result that the undisbursed amount at the end of the third year (March 1964) of the third Plan was as high as Rs. 1,212 crores. About Rs. 147 crores are estimated to have been authorised during the first quarter of the current year (1964-65).

The total aid authorisations up to the end of March 1964, as already stated, amount to Rs. 3,274 crores (exclusive of P.L. 480-665 assistance and third country currency assistance). The bulk of this assistance is accounted for by loans, the actual share of which comes to Rs. 2,959 crores. There are loans repayable in foreign currencies, some repayable by export of goods and yet others repayable in rupees. Surplus agricultural commodities are made available by the U.S. under P.L. 480 Programme on payment of their cost in rupees, the funds so created being utilised by the U.S. Government for giving loans and grants to the Government of India for financing approved developmental projects. Both Australia and Canada have also assisted India in the supply of foodgrains. In addition to the assistance in commodities, machinery and equipment necessary for the growth of various industries and infrastructure, India has been receiving technical assistance on a substantial scale from a number of countries.

The major portion of the aggregate foreign aid authorisation is for industrial development; the actual share devoted to this purpose (up to the end of March 1964) was Rs. 1,705 crores, representing 59 per cent of the total (Rs. 2,913 crores). The next biggest recipient of aid is "transport and communications" which has received Rs. 420 crores (14 per cent of the total), the share of railways alone being about Rs. 304 crores. The aid authorisations for projects covering steel and steel products amount to Rs. 381 crores (13 per cent of the total) and those for power projects aggregate Rs. 258 crores (9 per cent of the total). Agricultural development has secured an authorisation of Rs. 30 crores (just one per cent of the total). Assistance for iron ore project and wheat loans account for Rs. 13 crores (0.5 per cent) and Rs. 106 crores (3.5 per cent), respectively.

Interest Charges

The rates of interest charged on loans made available by Communist countries are generally lower than those on loans granted by countries in the free world, but the terms of repayment are rather stiffer, in that most of them are repayable in twelve years with very little grace period for the commencement of instalments. In the case of loans from the free world, the period of repayment is much longer, stretching up to 40 years in a good number of cases. In the case of loans from Russia and East European countries, the repayments are, of course, usually in rupees, but, unlike in the case of loans from the U.S., for instance, they can be repatriated immediately they fall due by purchases of goods and shipping them out of the country. In effect, therefore, they are as good as hard loans. The Czechoslovakian, Polish, Rumanian and Russian credits bear interest at the rate of 2½ per cent per annum. The rate of interest (in per cent) generally charged on loans obtained from some other countries are: Yugoslavia: 3; W. Germany: 3-6½; Denmark: 5; Austria and Britain: 5½-6; Sweden: 5¾; Japan 5¾-6; Canada, Italy and Netherlands: 6; France: 6-6.9/10. In the case of the U.S. loans, the rates of interest vary widely: ¾ per cent on A.I.D. loans (the borrowers in India are, of course, liable to pay a special charge ranging from 2⅛ to 5 per cent to the Government of India); 3½ to 5½ per cent on D.L.F. loans; 5½ to 5⅞ per cent on Eximp Bank loans; and 2½ per cent on wheat loan (of June 1951).

Position in 1963-64

The total aid authorised (including P.L. 480-665 assistance and third currency assistance) during the year 1963-64 was considerably smaller than in the previous year, being Rs. 455 crores, as against Rs. 651 crores. The fall was accounted for by all the sub-groups, loans declining by Rs. 151 crores to Rs. 440 crores, grants by Rs. 6 crores to Rs. 10 crores, and P.L. 480 assistance by Rs. 38 crores to Rs. 5 crores. Except for assistance from Switzerland and Denmark, together amounting to Rs. 4 crores, the entire loan assistance authorised during 1963-64 was extended by the members of the Aid-India Consortium. In this connection, it may be noted that, for the year 1963-64, Consortium members had promised assistance of Rs. 501 crores, raising the total assistance promised for the first three years of the third Plan to Rs. 1,627 crores. Of this assistance, a total of Rs. 1,429 crores was authorised as at the end of 1963-64. Aid yet to be authorised (Rs. 198 crores) comprised mainly assistance expected from the World Bank—I.D.A. (Rs. 105 crores) and the U.S.A. (Rs. 76 crores).

Taking into account an undisbursed amount of Rs. 1,594 crores as at the end of March 1963 and Rs. 455 crores authorised during 1963-64, total aid available for utilisation during the year amounted to Rs. 2,049 crores, consisting of loans of Rs. 1,578 crores (77 per cent), grants of Rs. 40 crores (2 per cent) and P.L. 480 assistance of Rs. 432 crores (21 per cent).

Utilisation of external assistance amounted to Rs. 590 crores during 1963-64, as compared with Rs. 451 crores in 1962-63, leaving a balance of Rs. 1,459 crores for use in the subsequent period. The appreciable rise of about 31 per cent in the rate of utilisation during 1963-64 reflected, according to the *Reserve Bank of India Bulletin*, mainly the larger availability of non-project assistance and also the advanced stage of execution reached by many projects receiving aid. Thus, the utilisation of loan assistance increased from Rs. 311 crores in 1962-63 to Rs. 395 crores during 1963-64 (or by 27 per cent). Utilisation of assistance under P.L. 480 Programme was also accelerated, in order to tide over the domestic food shortage. Imports under this Programme during 1963-64, at Rs. 185 crores, were sizably larger (by Rs. 59 crores or 48 per cent) than those in the preceding year.

‡ The figures do not tally with the cumulative totals for individual countries, since the table has been compiled from two sources, namely, the Finance Ministry's Annual Report on External Assistance (1963) and the article appearing in the August issue of the Reserve Bank of India's *Monthly Bulletin*.
Figures in brackets indicate the share of private sector.

U.S., The Largest Aid-giver

No other country has given so much aid for the economic development of India and on such liberal terms as the U.S. Out of the aggregate aid authorisations (including P.L. 480-665 assistance) amounting to Rs. 4,467 crores as of March 1964, the share of the U.S. alone comes to over Rs. 2,386 crores, representing more than half of the total. Assistance has been received under various programmes in the form of materials and equipment given either as outright grants or as long-term loans, as well as in the form of the services of technicians and the training abroad of Indian nationals. In addition, India has received donations in the form of relief shipments of agricultural commodities under Titles II and III of P.L. 480 valued at Rs. 4 crores and Rs. 85.73 crores, respectively. Further, third country currencies valued at Rs. 2.78 crores

were made available for the import of fertilisers and tube-well equipment against payment in rupees, out of which no loans or grants are contemplated. Against the total loan assistance of Rs. 1,523 crores, loans amounting to Rs. 873 crores (that is more than half) are repayable in rupees. The balance of Rs. 650 crores is repayable in dollars and includes A.I.D. loans amounting to Rs. 398 crores which carry a nominal credit fee of ¾ per cent and are repayable over a period of 40 years with a grace period of 10 years.

Soviet Russia, West Germany, the U.K., Canada and Japan are the other countries which have made available to India large-scale financial and technical assistance. The actual total aid authorisations made by these countries upto the end of March 1964 are Rs. 385 crores, Rs. 362 crores, Rs. 291 crores, Rs. 145 crores and Rs. 106 crores, respectively.

Among international agencies, the World Bank alone has granted India loans amounting to over Rs. 403 crores (as of March 1964): Rs. 248.83 crores to the public sector and Rs. 154.58 crores to the private sector. The World Bank's affiliate, the International Development Association, too, has extended aid on a liberal scale—a total of Rs. 142.82 crores. The U.N. Special Fund has given assistance worth Rs. 6.61 crores (up to the end of December 1963). Aid has also been obtained under the U.N. expanded programme of technical assistance from the W.H.O., U.N. Children's Fund, I.L.O., U.N.E.S.C.O. and other agencies. Among the private philanthropic organisations, the U.S. Ford Foundation alone has given aid amounting to no less than Rs. 17.23 crores and the Rockefeller Foundation has made available grants aggregating Rs. 7.20 crores (up to the end of March 1963) to private bodies and individuals. The total from these two private trusts comes to about Rs. 24.50 crores, equal to about seven per cent of the total of loans given by Russia.

Need for Further Assistance

The foregoing account signifies the measure of co-operation forthcoming from friendly countries and international institutions. Such co-operation, as the Finance Ministry's report says, has been a great encouragement in the initiation and maintenance of a cumulative process of economic growth. Emphasising the need for further sizable external assistance, the report observes:

"Rapid economic progress cannot be envisaged without a substantial increase in the outlays on steel, other metals, fuels, fertilisers, machinery in general, and the attendant requirements of transport, power and the like. The development of these resources, however, would itself require a substantial amount of imports in the initial stages, so that, in a sense, the availability of external assistance of a sizable nature over the interim period becomes the key to a more viable payment position in the long run."

While the continued inflow of large-scale external assistance is important, one should not overlook the heavy burden involved in servicing foreign loans. Besides the repayment of principal, interest charges run to several crores of rupees every year. The total amount actually paid by the Government of India by way of interest alone on its external debt was over Rs. 55 crores during the second Plan period, Rs. 34 crores in 1961-62, Rs. 47 crores in 1962-63, Rs. 59 crores (revised) in 1963-64 and Rs. 77 crores (budget) in 1964-65. Then there are the maturing instalments of the principal. Pointed attention to the onerous external debt servicing problems was drawn by Mr. T. T. Krishnamachari, Union Minister for Finance, in his speech at the Fund-Bank meeting held at Tokyo last week. He was certainly speaking on behalf of all developing countries when he appealed for steps to lighten the burden on past loans. These steps alone, however, may not be of much avail nor will the continued foreign assistance on more liberal terms be of any significant use, unless the developing countries accord increased opportunities to step up their exports (raw materials, semi-manufactures and manufactured goods) to the markets of the developed nations.

W. GERMAN CREDIT FOR INDIA

The Governments of West Germany and India signed an agreement for credits amounting to Rs. 45.24 crores (DM 360 million) for the fourth year of India's third Plan at New Delhi on Tuesday this week. The agreement follows West Germany's pledge of aid at the last meeting of the Aid-India Consortium. Of the total aid amount, a sum of Rs. 32.14 crores (DM 270 million) will be treated as governmental economic assistance and the balance of Rs. 13.10 crores (DM 110 million) as guarantee for suppliers' credits. The sum of Rs. 32.14 crores includes Rs. 10.71 crores for refinancing liabilities of the Rourkela steel plant, Rs. 6.55 crores as commodity aid for the purchase of goods and services in Germany, Rs. 4.76 crores for further financing of certain German aided development projects nearing completion, Rs. 7.14 crores for spending on new development projects, and Rs. 2.98 crores for the I.C.I.C.I., the Industrial Finance Corporation of India and the National Small Industries Corporation for granting loans to medium and small undertakings. The amount of Rs. 13.10 crores, which is in the nature of a suppliers' credit, will be utilised in two parts—Rs. 9.76 crores for the purchase of new ships which has already been agreed to and the balance of Rs. 3.34 crores is intended for the purchase of other goods and services.

The loan of DM 90 million (Rs. 10.71 crores is repayable in 16 years at 5.5 per cent interest. The other loans aggregating DM 180 million (Rs. 21.43 crores) are for a period of 25 years, including a grace period of 7 years, and bear an interest rate of 3 per cent. The terms of the suppliers' credit will be settled between the buyers and sellers in both private and public sectors.

West Germany has so far agreed to extend credits amounting to Rs. 405.90 crores (DM 3,409.56 million) towards assistance for India's development programme. Out of this, a sum of Rs. 140.06 crores (DM 1,176.6 million) was made available during the second Plan period and the balance of Rs. 265.83 crores (DM 2,223.3 million) for the first four years of the third Plan.

India has been importing from West Germany equipment for various industries, namely, automobile, chemicals, engineering, power, steel, etc. Among the important projects undertaken with German assistance are the Rourkela Steel Project, Rourkela Fertiliser Plant, Neyveli Briquetting and Carbonisation Plant, Neyveli Fertiliser Project, Durgapur Power Station (5th Unit), expansion of the Mysore Iron and Steel Works and its conversion into an alloy and special steel plant, new Government electric factory, Mysore, expansion of the Kalinga Pig Iron Plant, Kargali Coal Washery Extension, and the T.E.L.Co.

We can help EXPORTERS to expand their business by providing pre-shipment finance. We can advise EXPORTERS of trade enquiries, put them in touch with foreign buyers, and obtain credit information and status reports on foreign buyers.
We can give to EXPORTERS effective Letters of Introduction on our Foreign Branch Managers and Correspondents, provide them with Travellers' Cheques, Foreign Currency Notes, and Letters of Credit—when they travel.
We can collect and negotiate for EXPORTERS all types of foreign bills; give Excise guarantees where necessary and guarantees under Export Promotion Schemes; and buy various foreign currencies, at the finest rates, both "spot" and "forward".
We can advise EXPORTERS on matters concerning import restrictions, duties, etc. in foreign countries.
With our 14 branches overseas and correspondents in almost all parts of the world, we are well equipped to handle FOREIGN EXCHANGE BUSINESS of any description.

BANKING AND MONETARY STATISTICS

SUPPLEMENT PRESENTS REVISED AND UP-TO-DATE DATA

THE two volumes of *Supplement to Banking and Monetary Statistics of India*, published recently by the Reserve Bank of India, do more than supplement the earlier comprehensive volume on *Banking and Monetary Statistics of India* published a decade ago. The earlier volume gave at one place and on a uniform basis all available financial statistics from the earliest available period up to 1951, in order to serve as a standard source of reference both for bank officers and for research scholars. The supplement volumes not only bring the data up-to-date up to 1961, but also contain new sections on bank debits, balance of payments and financial corporations; they further incorporate several refinements in various statistical series, of which particularly noteworthy are the revised series on money supply and money rates.

Part I of the *Supplement* presents data relating to financial institutions like banks, co-operative societies, financial corporations, insurance companies and, of course, the Reserve Bank of India. Part II covers various aspects of financial statistics, namely, bank debits, and cheque clearances, currency and remittances, money rates and security markets, public finance and public debt and balance of payments.

Financial Institutions

The section on *all banks* presents the number and deposits of (i) all commercial banks classified into State Bank of India, Indian Scheduled Banks, Foreign Banks and four subgroups of non-Scheduled Banks, (ii) of co-operative societies classified into State Co-operative Banks, District Central Co-operative Banks, and primary societies subdivided into Agricultural Credit Societies and Non-agricultural Credit Societies, and (iii) of Post Office Savings Banks. Although the dates of closing the accounts are different for different classes of banks—the commercial banks close their year in December, co-operative societies in June and the postal savings banks in March—the figures and trends are broadly comparable; while the number of commercial banks came down from 499 to 292 between 1950 and 1961, their deposits rose from Rs. 998 crores to Rs. 2,125 crores; both the number and amount of deposits of co-operative societies have increased—the former has doubled from over 112,000 to over 224,000, and the latter have more than trebled from Rs. 72 crores to over Rs. 203 crores; the postal savings banks have also increased from less than 9,900 in 1950 to more than 17,200 in 1961, with their deposits rising from Rs. 186 crores to Rs. 467 crores.

The section on *commercial banks* gives detailed statistics relating to all commercial banks by class of banks as indicated above. Annual and monthly averages of weekly figures of principal items of assets and liabilities of the State Bank of India, Indian Scheduled Banks, Foreign Banks and all scheduled banks as well as all commercial banks are separately given. The *Supplement* points out the various minor differences and changes in the classification of these statistics: wherever the scope and coverage of individual items have undergone any change, it has been explained at the appropriate places. Such changes, however, despite the explanations, make the data uncomparable. For example, *cash in hand* was cash in hand prior to 1950, but includes cash with the Imperial or the State Bank and the Reserve Bank since then: similarly, *current deposits* exclude contingency accounts at one time, but include them at other. The most important change was in the definitions of net time and demand liabilities in 1960 as a result of amendments to the Reserve Bank of India Act: prior figures were all inclusive of inter-bank liabilities, later figures were net of inter-bank dues. These refinements in definitions are sometimes useful in formulating policies, but, unless they are carried backwards over a period of time, the lack of comparability will affect judgment.

Two tables classify the more important items of the assets and liabilities of banks of different sizes as indicated by their (i) paid-up capital and reserves and (ii) deposits.

Note: *Supplement to Banking and Monetary Statistics of India. Parts One and Two. Published by Reserve Bank of India. Price: Rs. 10.50 for each part.*

The classification of banks according to the former is made into five categories, with owned funds ranging from *below* Rs. 50,000 to Rs. 50 *lakhs and above*: deposit-wise classification is into eight categories, with deposits below Rs. 5 lakhs at one end and above Rs. 20 crores at the other. In some ways, these classified magnitudes give a more realistic picture of the banking mechanism of India and provide a better guide to policy-makers as well as practitioners. Similarly, the three frequency distributions of banks classified according to the ratio of reserves to paid-up capital of advances to deposits and of investments to deposits are truly revealing. It is generally recognised, for example, that the advances deposits ratio of the scheduled banks is high, but the distribution of banks shows that the number of scheduled banks having the ratio above 71 per cent has come down from 32 in 1950 to 23 in 1961, and that of banks below 71 per cent has remained constant at 59. The number of scheduled banks having reserves equal to more than 50 per cent of their paid-up capital having increased from 28 to 46 during the same period, and those having less than 50 per cent have come down from 45 to 20.

The *number* of banks in these frequency distributions however, gives only an incomplete picture of the banking system, for with the wide range of difference in size of banks, the size is more important than number.

The results of the various Reserve Bank's surveys of advances (both by purpose and security), investments (both by nature and maturity) and deposits (by ownership) have been summed up at one place in order to facilitate their comparative study. Income, expenditure and allocations from profits for all classes of commercial banks are presented in the form of a comparative table for all years from 1950 to 1961. The data on capital, reserves and deposits involved in banks which have gone into liquidation have been given for the first time in a new table. Between 1950-61, in all 514 banks have gone into voluntary or compulsory liquidation or have otherwise ceased to function and the total paid-up capital and deposits involved amounted to Rs. 12.92 crores and Rs. 54.91 crores, respectively, in the case of 391 banks in respect of which information is available. Looking at the year-to-year figures, it is noticed that, while the number of liquidations has gone down over the years, the number of banks which have ceased to exist, presumably as a result of mergers and amalgamations has been going up.

Branch Network

The data on branch network shows that, while the number of scheduled banks has fallen from 91 to 82, their offices have gone up from 2,890 to 4,487 between 1950-61. In the case of the non-scheduled banks, however, the trends are downward in both cases—the banks having fallen from 514 to 210 and branches from 1567 to 624. This reflects a strengthening of the banking system through amalgamations and/or extinction.

The most glaring inadequacy of the statistical data of commercial banks is that no effort has been made to present the statistics of deposits and investments of the State Bank of India and of the scheduled banks exclusive of the misleading P.L. 480 and P.L. 665 funds. It is known, since 1962, that this fortuitous accrual of deposits to the State Bank of India ever since 1956, has distorted the real trends in bank deposits and investments and it is high time that full disclosure is made of the disturbing effects and movements of P.L. funds. Some stray and inadequate efforts have been made in Reserve Bank *Bulletins* to present the scheduled bank deposits in proper perspective, but nothing has yet been done to regularise the investment statistics and to reveal the real growth of the State Bank of India independent of P.L. assistance.

The section on *co-operative societies* presents data on different co-operative societies, particularly with reference to their number and membership, principal assets and liabilities, turnover and profits. For credit societies, classification of overdues according to period and of loan according to security are also given. Between 1951 and 1961, the member of co-operative societies increased from 181,000 to 332,000, the membership of primary societies rose from 13.70 million to 34.24 million and the working capital of co-operative societies jumped up from Rs. 276 crores to Rs. 1,312 crores. Loans advanced by primary societies rose from Rs. 86 crores to Rs. 380 crores, and their overdues from Rs. 10 crores to Rs. 59 crores. Elaborate details of the working of State and Central Co-operative Banks, Grain Banks, Land Mortgage Banks, etc. are given, largely based on the R.B.I. annual publication *Statistical Statements relating to the Co-operative Movement in India.*

Financial Corporations

A new section on *financial corporations* presents data regarding the industrial financing agencies in India. The data given is most comprehensive in the case of the Industrial Finance Corporation of India, and the least elaborate in the case of Refinance Corporation for Industry Limited—both of which have now been absorbed by the Industrial Development Bank of India.

Analysis of loans approved for various types of industries by the Industrial Finance Corporation of India is given annually for all years from 1949-61; it could prove more useful if a progressive total is also given at the end of 1961. Further, it is not clear why similar data for the State Financial Corporations and the Industrial Credit and Investment Corporation of India are not given. Assets and liabilities are given for all the specialised financing agencies, but details of investments and operations are given only in the case of the I.F.C. and the S.F.Cs: no doubt the former does give a comprehensive picture of the institutions concerned, but the extent and quality of contribution made by them towards industrial financing and economic development could be judged only from data relating to operations and investments of those institutions.

The data presented in the section on *Reserve Bank of India* relates to the various functions performed by the Bank, namely, the issue of notes, loans and advances granted to Governments, other loans and advances including those to the scheduled banks and the State Co-operative banks, the reserves of the scheduled banks and the State Co-operative banks, etc. A comprehensive picture of the role of the Reserve Bank and of the structure and mechanism of co-operative credit is also given. Data on profit and loss accounts of the Reserve Bank have also been given, showing the surplus payable by the Bank to the Government—it rose from Rs. 9.91 crores in 1950 to Rs. 42.50 crores in 1961.

The data on *insurance companies* are largely drawn from the *Indian Insurance Year Books*. Since the business of life insurance—entire business of Indian insurers and provident societies, and Indian business of foreign insurers, with the only exception of postal life insurance —vested in the Life Insurance Corporation of India since 1956, the insurance statistics from 1950 to 1955 are presented in the old pro forma as given in the *Banking and Monetary Statistics of India*, while new tables are prepared in respect of the business of L.I.C. since 1956. Details of general insurance business are given, but they do not include the business of subsidiaries of L.I.C. doing general insurance business. One result of these peculiar arrangements is that the performance of Life Insurance Corporation cannot be placed in comparison with that of the insurers who preceded it: whether this is by deliberate design or a mere coincidence, this writer cannot say.

Financial Statistics

The data on cheque clearances show that both the number and amount of cheque clearances doubled between 1950-51 and 1960-61 from 26 lakhs to 55 lakhs and from Rs. 6,638 crores to Rs. 12,551 crores, respectively. The data relating to debits to deposit accounts with the scheduled banks, however, supply a more accurate and direct measure of deposit turnover than the data on cheque clearances. The data on bank debits are presented for the first time and go back up to 1937. Various changes in the scope of bank debits data have been made over the years, but they unmistakably show the improvement in the rate of turnover of current deposits from the low of 20 per cent in 1943 and 1944 to the maximum of 46 per cent in 1956 and 44 per cent in 1961. The rate of turnover of cash credits and overdrafts and the overall rate of turnover have remained more or less stable over the last four to six years. Since an overwhelming proportion of Government accounts are held at the Reserve Bank of India, data on debits to Government account are also given. The rate of turnover on Government deposits has gone up from 5 per cent in 1946 to 185 per cent in 1961.

The most important series amongst the statistics of currency, its circulation, absorption, imports, exports, etc., is the revised series on money supply. The main change in the revision of the data on money supply is the change from *net demand liabilities* to *net demand deposits*. It must be said to the credit of the Reserve Bank that the revised series on money supply has been carried backwards upto 1950 in order to provide comparable data for the Plan periods. The money supply with the public has continuously risen from Rs. 1,890 crores (Rs. 1,306 crores currency *plus* Rs. 584 crores deposits) in 1950 to Rs. 2,869 crores (Rs. 2,098 crores currency *plus* Rs. 771 crores deposits) in 1961.

Money and Capital Markets

The section on *money rates and security markets* draws a broad statistical outline of the performance of the money and the capital markets. It is for the first time in recent years that statistics of interest rates according to types and for different categories of institutions, prices and yields of different types of scrips according to their class are presented together. Uniform data on money rates were available only from May 1960 but, with a view to obtaining comparable data for periods prior to 1960, a comprehensive survey of money rates was conducted. Weighted annual and monthly average rates for the State Bank of India and selected major scheduled banks are presented separately covering every description of deposits. Bank rate and advances rates of the Reserve Bank of India and the *hundi*, advance and call rates of the State Bank of India are presented along with the unofficial *bazaar* bill rates. Extensive details of and trends in the yield on Government securities are also furnished. The number and paid-up capital of joint-stock companies and the yield on industrial securities are also included.

The section on *public finance* presents data on the receipts and expenditure and public debt of Central and State Governments; the original tables have been considerably recast and rearranged, so as to increase their scope and coverage, consequent on the structural, organisational and statutory changes as a result of planning, reorganisation of States, reformulation of taxation and fiscal policies and recommendations of Finance Commissions. The information collected in this section is very important, for it includes new tables on Plan outlays and on financial resources of the Plans, and gives the maturity pattern of Government securities, net absorption of Government securities by the *public*, ownership distribution of Government securities, etc., in addition to the debt and budgetary position of the Governments. Even if the data for 1951-61 are not comparable with those of the previous years as a result of various changes, it is immaterial, for one has at least a comprehensive and comparable picture for the Plan period.

Public Finance

Total revenue and capital receipts of Central Government rose from Rs. 406 crores and Rs. 104 crores, respectively, in 1950-51 to Rs. 877 crores and Rs. 1,127 crores in 1960-61. Even apart from the fourfold increase in the grand total of receipts from Rs. 510 crores to over Rs. 2,000 crores, the most significant aspect of growth is the tremendous increase in capital receipts which have far outpaced revenue receipts. Nevertheless, the total overall deficit over the decade amounted to Rs. 1,325 crores—roughly equivalent to the amount of deficit financing as measured by the net increase in Treasury Bills. The cash balance of the Government also came down from Rs. 150 crores to Rs. 45 crores during this period. To this must be added the position of the State Governments, the revenue and capital receipts of which went up from Rs. 368 crores and Rs. 128 crores to Rs. 987 crores and Rs. 580 crores, respectively, over the decade. The total outstanding public debt of the Central and State Governments (including foreign debt) rose from Rs. 2,614 crores to Rs. 7,039 crores between 1950-51 and 1960-61. Notable among the foreign debt is the spectacular increase in dollar loans as compared with sterling loans.

Another distinguishing feature of the debt position of the Central Government was that the total interest-bearing obligations at the end of 1961 at Rs. 6,281 crores were very inadequately covered by interest yielding assets totalling Rs. 5,090 crores, leaving an uncovered gap of over Rs. 1,100 crores. The total of outstanding small savings show a sharp increase from Rs. 126 crores to Rs. 786 crores during this period.

The maturity pattern of the Government of India rupee loans has undergone a significant change. Undated loans and loans maturing over ten years have remained stationary or increased only slightly. The largest increase from Rs. 319 crores to Rs. 867 crores is shown by loans maturing within five years, followed by loans maturing between five and ten years which rose from Rs. 343 crores to Rs. 756 crores.

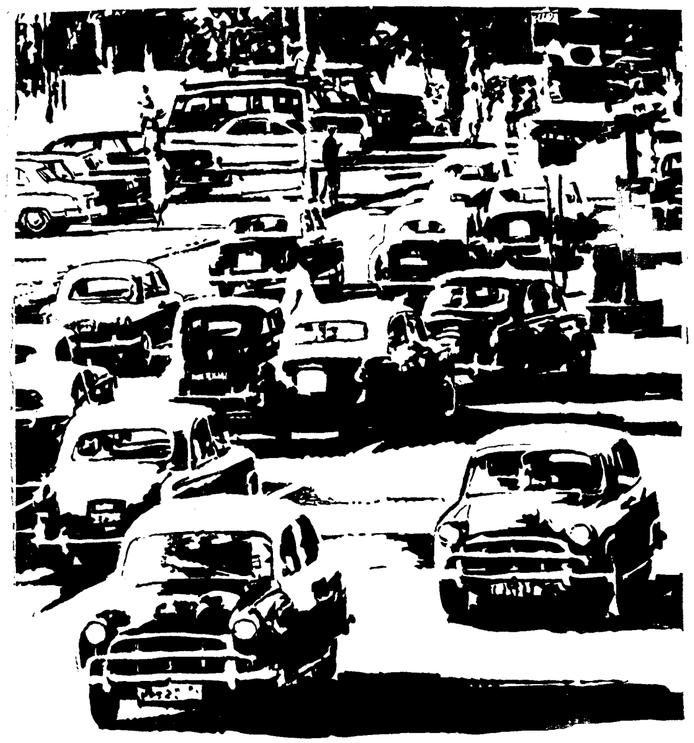
The ownership distribution of Government securities shows that the largest single holder was the Reserve Bank of India (Rs. 707 crores) whose holding together with that of the Governments themselves amounted to Rs. 975 crores. Next came the commercial and co-operative banks with a holding of over Rs. 600 crores. The net absorption of Central and State Government securities by the public over the first two Plans amounted to Rs. 748 crores.

The year-wise distribution of outlays in Five-year Plans spread over major heads of development shows progressive increases from Rs. 260 crores in the first year of the first Plan to no less than Rs. 1,118 crores in the last year of the second Plan.

The section on *balance of payments* is a new feature of the *Supplement* and covers various aspects of India's balance of payments on current, as well as capital, account. The regional tables show the distribution of balance with the sterling area, dollar area, O.E.E.C. countries, rest of the non-sterling area as well as international institutions. The Index Numbers of Imports and Exports show the quantum as well as the (declared) values of articles imported or exported and provide a valuable guide to the changing terms of India's international trade.

U.K. LOANS FOR INDIA

Seven loan agreements covering a total of £14.5 million, being a part of the £30-million aid programme for India in 1964-65 pledged by Britain at the Aid India Consortium meeting held at Washington on 26th May this year, were signed at New Delhi on the 9th inst. All the loans are made under Section 3 of the Export Guarantee Act of 1949 and have a maturity of 25 years, including a seven-year grace period on repayment of principal and a waiver of interest during the first seven years. The loans will benefit India's oil, heavy electrical, coal-mining and power-generating industries. They will also assist certain Indian private sector industries at present running below full capacity for lack of foreign exchange to purchase vitally needed maintenance and spares items. The balance of the £30-million aid programme for 1964-65 is being given mainly in the form of general purpose loans (one for £10 million has already been signed), from which the Government of India may, among other purposes, allocate funds for down payments on cargo ships to be built in British dockyards. The £30-million programme is additional to aid already announced for the Durgapur Steelworks.



Dunlop Gold Seal tyres are being bought by car owners in unprecedented numbers. There are good reasons. They give the highest mileage. Their proven grip on wet roads means that they are the safest tyres. Further, the strength of the casing assures maximum retreadability. You too can have these advantages by fitting a set of Dunlop Gold Seal car tyres.

MONTHLY ECONOMIC REVIEW OF U.K.

ORDERLINESS AND MODERATION IN EXCHANGE MARKETS

PRESSURE ON STERLING TACTFULLY HANDLED

By W. T. C. King
EDITOR OF "THE BANKER"

LONDON, *3rd September* 1964

THROUGH the peak period of Britain's summer holiday season—an unusually fine one this year—some interesting contrasts have emerged in the financial markets. Business confidence has been running high and the prices of equity shares on the Stock Exchange have been strong at a time when sterling has been under some pressure in the foreign exchange markets and when a number of commentators have been drawing attention to the problems of Britain's external balance of payments.

On the Stock Exchange, the general trend of ordinary shares prices has been upwards since early June. As I noted in my review a couple of months ago, the industrial ordinary share index of the *Financial Times*, after dropping back from its post-Budget high point of 352.5 to only 334.6, rose strongly during June, reaching 353.8 by early July. By the middle of that month, it had reached almost 360, and then in mid-August it at last succeeded in surpassing the all-time peak (of 365.7) attained in May 1961, on the eve of the big break on Wall Street. In the meantime, it had been down to only 252.8, in May 1962; and even last February it was no higher than 322.

Now, at the beginning of September, a renewed rise has established yet another record figure, 367. (The latest—as on 11th September—the index is 365.2.—ED.) The major part of the advance from the low point of 1962 is, of course, a reflection of the re-expansion of Britain's economy after the pause and mild recession of 1961-62, as the reflationary measures of 1962 and 1963 began to take effect. But, in the past month or so, the most significant determinant of stock market behaviour appears to have been political rather than economic. Investors seem to have been swayed chiefly by the ebb and flow of electoral forecasts, and especially by the several public opinion polls, as the time for Britain's general election draws near. It is interesting, nonetheless, that investment opinion has so readily shrugged off the uncertainties that have been debated on the economic front. These have several times provoked reactions in share prices, but, on each occasion, the uptrend has reasserted itself before long.

Pressure on Sterling

The focal point for the discussion of these uncertainties has been the behaviour of sterling, which has been trending downwards for the past three months. In terms of the U.S. dollar, the spot quotation dipped at one time last month to $2.78-13/32, the lowest point recorded for seven years, though at the moment of writing it is quoted slightly higher than this. During the spring, the rate stood at above its parity of $2.80, and did not dip below it until end-May. There are, however, technical reasons for the extent of the decline in recent months. It would be quite wrong to conclude that the pressure Britain has lately experienced on its external payments must have been of a magnitude comparable to that encountered when the spot dollar rate was last allowed to approach as closely to its lower dealing limit as it has recently done. Indeed, the sophisticated view of the exchange markets at the moment is that, if there is a puzzle to be solved, it is not why sterling has been under some pressure, but why that pressure has not been very much larger than the available statistics demonstrate.

The most direct measure of the pressure experienced in the foreign exchange market is the net movement in the central reserves of gold and convertible foreign currencies. These were trending upwards until the end of May, at which time they were standing at £986,000,000, as compared with £949,000,000 at the end of last year. They then started to decline, but only at a moderate rate—by £20,000,000 in June and £10,000,000 in July and now, in the latest month, by £33,000,000, to £923,000,000. But no less than £14,000,000 of the August outflow and £3,000,000 of that for June were attributable to special factors, to repayments of inter-governmental indebtedness. Excluding these transactions, therefore, the "true" decline over the three months amounted to £46,000,000, and was scarcely larger in August, when public discussion of the balance-of-payments problem reached its peak, than it had been in June.

Four Kinds of Strain

When all factors are considered, this is a much smaller rate of decline than might have been expected. Britain's external payments account has lately been exposed to at least four distinct kinds of actual or potential strain. The balance of payments on "identified" current transactions, as I reported here recently, swung into deficit in the first quarter of this year, and has certainly remained in deficit since. Secondly, the rate of net outgoings on long-term capital account increased very sharply early this year by comparison with the average rate of recent years (in the calendar year 1961 there had actually been, quite exceptionally, a net inflow of long-term funds). Thirdly, the late summer and early autumn are traditionally the period of seasonal strain, when heavy payments have to be made for imports of primary produce and tourist spending is at its peak. In recent years, these seasonal factors are thought to have been considerably less potent than they used to be, but they are certainly still of some significance, and at times they can also be reinforced by psychological factors, which may build on the expectation of seasonal strain. Fourthly, in recent months there has been the ever-present possibility that the uncertainties inherent in the impending general election might become a material factor in market sentiment.

It will be seen that there is a wide disparity between the pressures that might have been experienced in these various ways and the actual strain that has been borne by the gold and exchange reserves. During the three months in which those reserves have been falling, the "true' decline, as has been shown, was at an annual rate of some £180,000,000; yet this figure is only a little larger than the overall deficit—including the net outgo on long-term capital account as well as the identified deficit for the first quarter of this year alone. And it may be contrasted with the most actively discussed of recent unofficial forecasts: the National Institute of Economic and Social Research conjectured in August that, for the full year 1964, the overall deficit, similarly defined, might reach £500,000,000 with the current-account portion at possibly £300,000,000.

No Support Sought

The fact that the central reserves have been so little affected by the surrounding pressures does not mean that they have been cushioned, as has happened at times in recent years, by official drawings on available international credit facilities. In reply to a question in Parliament at end-July, the Chancellor of the Exchequer stated plainly that there had been no recourse to the facilities available with the group of central banks under the so-called Basle Arrangements. Moreover the whole of the $500,000,000 that can be drawn under the mutual "swap" arrangements with the United States remained available for use in case of need. Similarly, there had been no draft on the facilities available at the International Monetary Fund (I.M.F.). Any such drawings are, of course, always made public forthwith. Britain's facilities at the I.M.F. have, moreover, just been buttressed by the renewal for a further 12 months of the $1,000 million "stand-by" drawing right.

Sterling Balances

There seems no doubt that the major explanation of the relative immunity of the gold reserves from the pressures experienced on current and on long-term capital account is that, up to the middle of the year at least, Britain continued to enjoy a large net inflow of short-term funds. Britain's next external sterling liabilities have been rising steeply for five successive quarters. The latest statistics in the quarterly official series show that, in the second quarter of this year, the aggregate of these externally-owned sterling balances rose by no less than £83,000,000 to £3,822 million—by far the largest total since the present series of figures started at end-1962. This followed a rise of £52,000,000 in the first quarter of this year and one of £104,000,000 in the fourth quarter of 1963 and it brings the total net inflow since March 1963 up to £385,000,000 (in the preceding quarter, however, the first covered by the series, there had been a net outflow of nearly £100,000,000). By far the greater part of the inflow, especially in the current year, has come from countries in the oversea Sterling Area, and is notably a reflection of the strength of their earnings from the sale of primary produce. Over the past 18 months, the Sterling Area balances have increased by £288,000,000, to £2,580 million. Of this increase, £53,000,000 occurred in the first quarter of this year, and £70,000,000 in the latest quarter (a slightly smaller rise, however, than in the second quarter of 1963).

Balances of Non-sterling Countries

This important slice of the accretion of funds in London must be attributed rather to the international trading experience of the countries of the oversea Sterling Area than to factors that are or might be within the reach of influence from financial policy in London. This is not true, however, of the balances of non-sterling countries. In the aggregate, these balances rose by £17,000,000 in the second quarter of this year, to £621,000,000, after remaining unchanged in the first quarter. In both these periods, however, the balances of Western European countries were running down—by £13,000,000 in the first quarter and £17,000,000 in the second—a movement that was almost certainly dominated by local considerations, by the stringency experienced in most European money markets and by the fact that local money rates were being levered up as the means of countering inflationary tendencies. This outflow was fully offset, however, by the net inflow of funds from North America—to the extent of £8,000,000 in the first quarter and £28,000,000 in the second—doubtless in response to the higher level of short-term money rates maintained in London.

Spot and Forward

An important characteristic of conditions in the exchange market when sterling first started to weaken is that the depreciation of the spot rate was accompanied by a narrowing of the discount quoted for forward sterling (and in some instances by a swing of the discount into an actual premium). This had the effect of reducing the cost of covering the exchange risk when funds were transferred from the United States to London, so that, in spite of the rising tendency of the New York Treasury Bill rate, there still was a net advantage to be gained by switching to London even after provision had been made for repurchasing the dollars forward.

Significant Contrast

These figures of sterling liabilities, and this experience in the exchange market, make it clear that the pressures Britain was bound to encounter this year on current and long-term capital account have not been augmented—as on comparable occasions in the past they often had been—by any considerable speculative movements, in spite of the addition of electoral uncertainties to economic ones. This favourable contrast with earlier experience can be attributed mainly to two circumstances. The first of these is the new determination of central banks, since the strains on the international exchange markets in 1961, to co-operate in resisting speculative attacks on currencies, and the general knowledge now that massive resources are at their disposal for this purpose. The second circumstance arises from the particular tactics adopted by the British authorities on this occasion in the face of pressure. Formerly, before this array of co-operative strength was available to deter speculation, there was always the risk that, if the exchange rate was allowed to give way perceptibly in the face of pressure, that might in itself be seen as a reason for renewed sales, creating a danger of cumulative strain. On this occasion, with that risk no longer present, the authorities could with impunity allow the rate to fall back towards its lower limit—taking the strain, as the phrase goes, "on the rate rather than on the reserves." They have thus lowered the rate to the point at which a bear speculator could no longer expect to make any profit on a short sale—unless he was actually reckoning on a fall to below the lower dealing limit of the official spread. And this time, happily, the market has not had to contend with any such extravagant rumour-mongering as that.

This year's experience of orderliness and moderation in the exchange markets is, indeed, a remarkable tribute to the value and success of the new arrangements of the central banks and to the improved techniques of market management they have made possible.

MANCHESTER LETTER

FRESH TEXTILE IMPORT QUOTAS

INDIA, TOO, WILL BENEFIT

From Our Special Correspondent

MANCHESTER, *8th September*

FOR some time it has been evident that the three major Commonwealth exporting countries have been dissatisfied with part of the arrangements in the voluntary system of controlling imports of cotton goods into Britain. The ceiling quantities involved have not been disputed so much as the question of supplementary quotas based on the shortfall of shipments and the state of order lists in Lancashire.

Negotiations to effect some compromise have been taking place in conditions of some secrecy as the outcome cannot be calculated to create any enthusiasm among either British textile traders or suppliers in other countries. During the course of the present pacts, which are due to expire at the end of next year, no supplementary quotas have been issued, although a backlog of available quotas has built up for use by importers when order books in Lancashire exceeded the basic 20-week level.

The system itself was a complicated structure, involving aspects of trading in both exporting and importing countries which were subject to argument. In its place, special "once-for-all" quotas have been established, which will be added to the current ceilings already operating on a fixed basis in the case of each of the three countries concerned.

A Keen Disappointment

The new arrangements provide that Hong Kong, India and Pakistan may send an additional total of 9 million yards of cotton textiles to the United Kingdom beyond the current quota during the remainder of 1964. Next year, an extra quota of 12 million yards will be permitted entry during each half of 1965.

These supplementary imports will be made available to the countries involved in the same ratio as the basic quotas, so that India will again receive the lion's share. So far this year, shipments of grey cloth from India have already reached a total of 164 million yards, as against 44 million yards from Hong Kong and 36 million yards from Pakistan.

While the revised scheme is certainly simpler than the original plan, its disclosure at this particular moment, when it appeared that tighter control was being exercised on imports generally, can only be described as a disappointment to local traders. Not only are arrivals from abroad running at record levels, but the provision of additional quotas offers scope for foreign exporters to improve their position at the expense of Lancashire firms in the event of future demand diminishing.

Indian Visit

Mr. N. K. Bhatt, Assistant General Secretary of the Indian Trades Union Congress, who is on a visit to the North-West as part of a tour of Britain, said in Manchester that world-wide co-operation between trade unions was most important. "We can learn from each other by discussing such things as wages and social benefits between ourselves," he said, after talks with the largest Lancashire cotton union, the Weavers' Amalgamation. "The way the Lancashire cotton unions have grown and developed into strong organisations with full bargaining power is a source of inspiration to us," he added.

Cotton Board Travel Scholarships

To encourage young textile designers to seek inspiration abroad, the Cotton Board is offering a number of travel scholarships this year. Up to £2,000 are available for awards and, to qualify, designers must have spent at least five years working either in the British industry or as free-lance designers serving the industry. Winners of previous Cotton Board scholarships have been to Australia, United States, Mexico, the Far East, Scandinavia and Europe.

The Cotton Board said that a very great contribution to the effective marketing of the industry's products could be made by designers who had been given the opportunity to travel extensively and so bring to their work freshness, originality and a much greater awareness of market requirements.

British man-made fibre factories are turning out record amounts of yarn. In the first seven months of the year, production reached 473,670,000 lbs.—an increase of over 63,000,000 lbs. on the same period last year. Releasing the figures, the British Man-made Fibres Federation said:

"A persistent demand for most types of yarn and staple has continued through the summer months on both home and export account. The man-made fibre producers have continued to be hard put to meet the demands on their capacity."

Getting the Message Through

When the authorities in Malaysia withdrew their ban on the importation of other British goods pending further negotiations on the purely textile argument, the news was greeted with relief. Moreover, some of the observations made in newspaper columns which once castigated Lancashire for undue protectionism showed eventual recognition of the facts.

According to the leading British financial daily, the restrictions proposed by Singapore were an undisguised attempt to force the pace of negotiations between Britain and Malaysia and to obtain for Singapore's infant but rapidly growing industry a larger share of the British market for cotton goods. A trade war of this kind, it continued, between one Commonwealth country and another would have been an unhappy precedent.

On general terms, cotton traders would agree with such sentiments, but they have their own battles to fight and, as has frequently been stated in the past, to engage in such combat with the equivalent of one arm tied behind one's back is scarcely an equal struggle. Unprejudiced observers have now come round to the opinion that other Commonwealth suppliers may be tempted to experiment with the tactics used by Singapore, but views are changing and other industries faced with similar problems recognise the problem.

To quote the leader on the subject in *The Financial Times*:

"There is undoubtedly a strong case for admitting larger imports of the simpler manufactures into industrialised countries, but there is also a limit to what any one industrialised country can reasonably be expected to do alone. Britain's relatively liberal policy has already attracted large supplies of cheap cotton textiles from abroad; these now account for over 30 per cent of total domestic supplies, against the 6 or 7 per cent permitted in the United States and the Six."

Lancashire textile traders have been plugging these figures for many months. The article in question continued:

"Instead of fighting with one another for a larger share of the British market, Commonwealth manufacturers would be well advised to combine forces and bring pressure on other industrialised countries to follow the British lead."

New Trading Pattern

Changing economic patterns arising from the adjustments in trading relationships between developing countries and the older manufacturing areas, whether within the Commonwealth or not, are leading to big revisions in many spheres. It is clear that Britain and other members of the Commonwealth will continue to trade extensively with one another for many years to come, but as *The Financial Times* continues, their needs are no longer so nicely complementary and the importance of tariff preferences is steadily decreasing.

Such views fit into the picture already presented to the Board of Trade by the Cotton Board in its programme for dealing with the import arrangements to follow the current pacts with Hong Kong, India and Pakistan, due to expire at the end of next year. A slow process of reorientation not only of machinery and methods but also of ideas is taking place. Coupled with the highly important structural changes which are being carried out through mergers and a closer production-marketing link the prospect of a more stable industry is in sight.

INDUSTRIAL FINANCE CORPORATION OF INDIA

4¾% BONDS 1976

PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL GUARANTEED BY THE GOVERNMENT OF INDIA

AMOUNT OF ISSUE: Rs. 6,00,00,000

Issue Price Rs. 99.25 Per Cent

REDEEMABLE AT PAR ON THE 15th SEPTEMBER 1976

The Bonds are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act and are also eligible for grant of advances to Scheduled Banks by the Reserve Bank of India. They are on the approved list of securities of the State Bank of India.

Subscriptions will be received in cash or by cheques at the branches of the Reserve Bank of India at Bombay, Calcutta, Madras, New Delhi, Nagpur and Bangalore from Tuesday, the 15th September, 1964 but the list will be closed without notice as soon as the total subscriptions amount to Rs. 6 crores and in any case not later than the close of business on Monday, the 21st September, 1964. The Corporation reserves the right to retain subscriptions received upto 10% in excess of the sum of Rs. 6 crores.

Copies of the prospectus and application forms can be had from the offices of the Reserve Bank of India as also from the Head Office of the Corporation at Reserve Bank Building, 6, Parliament Street, New Delhi and its Branches at Liberty Building, 8, Marine Lines, Bombay-1, 23, Rajendranath Mukherjee Road, Calcutta-1 and Keshav Bagh, 38, Whites Road, Royapettah, Madras-14.

Arrangements will be made for listing of these Bonds at the Bombay, Calcutta and Madras Stock Exchanges.

Brokerage will be paid at the rate of 6 Paise per Rs. 100 to recognised banks and brokers on allotments made in respect of applications for the Bonds bearing their stamp.

NEW DELHI,
Dated: 24th August, 1964.

A. BAKSHI,
Chairman.

EXPORT TRADE IN COTTON TEXTILES

MR. NEVILLE WADIA REVIEWS RECENT TRENDS

IN the context of the continuing drop in international cotton textile trade, it is, indeed, gratifying to find that the declining trend in India's exports of cotton fabrics has been arrested. Actually, the trend of exports has been distinctly upward. The shipments of mill piecegoods are now running at an annual rate of over 550 million metres, as against the 488 million metres exported in 1963 and 468 million metres in 1962. The actual exports during the first half of the current calendar year aggregated 275.8 million metres, as compared with 250.3 million metres in the corresponding period of 1963, representing a rise of about 10.2 per cent. The foreign exchange earnings from textiles have gone up from Rs. 39.96 crores in 1962 to Rs. 41.02 crores in 1963. During the first half of 1964, the earnings amounted to Rs. 27.50 crores, as compared with Rs. 20.20 crores in the first half of 1963, an increase of 36 per cent. The improvement in export performance has been due largely to increased offtake by the European markets, particularly the U.K., France, West Germany, Belgium and the U.S.S.R. It would have been better still but for the keen competition from a number of countries, particularly Hong Kong, Pakistan, Taiwan, Communist China, Spain and East European countries. Despite such competition, it is notable that the average export price of mill cloth has shown a marked improvement. During the month of May, the average price realised per yard of cloth was 91 paise, as against 77 paise and 79 paise during the whole of 1963 and 1962, respectively. In the first few months of 1963, it will be recalled, the price realisation was very low, partly because of the operation of the compulsory export obligatory scheme; it was only in the later months of last year that an improvement occurred.

No Cause for Complacency

The upward trend of cotton mill cloth exports and the rise in export price realisation, significant though they are, should not, however, engender any sense of complacency, for there is still a long way to go before Indian textiles can successfully weather the growing competition in world trade. The force of this contention will be evident from a perusal of the speech which Mr. Neville N. Wadia, Chairman of the Cotton Textiles Export Promotion Council, delivered at the tenth annual general meeting of the Council held at Bombay on the 11th inst. Mr. Wadia said that, though exports upto July 1964 had been heartening, bookings for delivery had not been upto expectations lately, due to difficulties of getting supplies for export from mills. The impending introduction of the scheme requiring the mills to produce 43 per cent of their output in popular varieties for local consumption has created, according to

him, a situation where most mills prefer to wait and watch the impact of the scheme when implemented. Stating that export bookings had been affected in the meantime, Mr. Wadia feared that the free sales of 57 per cent in the local market might prove more attractive than selling for export. The fear is not at all exaggerated. The prices of some export varieties, it is stated, have already shot up by nearly 30 per cent and overseas buyers are not prepared to buy at such high prices. Whenever the home market offers more attractive prices, production is naturally diverted to domestic consumption, with the result that the supplies available to exports are affected.

Prospects

Speaking about prospects for exports, Mr. Wadia emphasised that the outlook for improving exports lay largely in Europe and the U.S.A. But he drew pointed attention to the apathy that developing countries like India were meeting at the hands of the industrialised countries. Here is what he said :

"... the implementation of the long-term International Agreement on cotton textiles ... has belied our hope for increasing our access to developed countries. The cardinal principle of the agreement, namely, that it is designed to facilitate economic expansion and promote the development of less developed countries possessing the necessary resources, such as raw materials and technical skills, by providing bigger opportunities for increasing their exchange earnings from the sale in the world markets of products which they can efficiently manufacture, needs to be implemented in the same zeal and in the very spirit in which the long-term Agreement was drawn. The principal architects of this Agreement have a duty to perform and a lead to give to the rest of the developed world progressively to open their doors to the textiles of less developed countries. Instead, what we see is the fullest advantage being taken of the 'disruption clause' of the Agreement for an outright negation of the spirit of the long-term Agreement by the U.S.A. Last year, four major categories of imports from India were restrained to a total figure of 30 million square yards. In February of this year, when a high-powered delegation from India negotiated with U.S. authorities, restraints were further extended to cover six categories and 25 new categories were stipulated for consultation, if and when necessary after specified levels are reached. This leaves no chance whatsoever for a reasonable expansion of our trade, with due regard to our competitive capacity in limited fields of production.

"Canada, a Commonwealth country and an important signatory of the long-term Agreement, followed suit and it was alleged that we were disrupting her industry. In February of this year, the Canadian National Revenue notified that imports from India have to bear a profit margin of 7 per cent over our costs. As a result, our bookings have been seriously affected and the chances of our taking a larger share of this market have become remote. Curiously enough, imports from Taiwan, China and other East European countries flood the Canadian market at prices 20 to 30 per cent lower than our prices. The sanctity of U.S. restraints or Canadian restrictions are far from understandable."

This is certainly an admirable summing up of the whole position. Mr. Wadia did well to reiterate, in this connection, his plea to Western countries to reserve a share of about 10 to 20 per cent of their internal consumption to be imported from the less developed countries. Assuring that he would pursue this point again at the forthcoming session of the International Federation of Cotton and Allied Textile Industries at Zurich, he declared: "A positive approach to the subject is imperative, if the less developed countries are to generate their economies and if the Western nations really mean to implement the long-term Agreement in the right spirit."

Britain's Attitude

Mr. Wadia was very critical of Britain's attitude towards India's exports of cotton textiles. He observed:

"Last September, we held prolonged negotiations with the Cotton Board in the U.K. on the subject of categorisation of grey and finished goods and a ceiling on finished goods. The discussions were cordial. We agreed to study the pattern of our exports under eight limited categories of grey goods, largely based on widths. We argued for a higher quota in finished goods in keeping with our changing pattern of trade and increasing exchange realisation. Agreement could not be reached on the ceiling for finished goods. A mutual understanding was reached that the question will be considered afresh in 1964 after we had time to marshall more facts. In December 1963, a surprise decision was taken at Government level to limit exports to the U.K. of finished goods to 25 million square yards in 1964. Considering the increasing trend in our exports of finished goods to the U.K. in 1963 and 1964, this decision came as a nasty shock. The limit agreed to is unrealistic and it would be unfair to allow the ceiling to be continued at 25 million square yards for 1965. In the forthcoming talks with the Cotton Board, we must take up this question *de novo* and arrive at a fair and equitable solution in keeping with Hong Kong's quota for finished goods which is out of all proportion to her manufacturing potential."

Since this journal has expressed its views on the quota regulation on more than one occasion, comment on the above remarks are superfluous. Suffice it to say that Mr. Wadia must be congratulated on his forthright remarks.

Export Promotion Programmes

A lucid account of the export promotion work in the field of cotton textile exports was given by Mr. Wadia. His review reveals that Weseur Associates, a consortium of manufacturers and exporters, has been set up to organise our trade with Western Europe on a sound and selective basis and to diversify export in a wider range of fabrics. With a fuller measure of co-operation from the industry and trade, the Consortium bids fair to expand our exports to West Europe considerably in the coming years. A first-hand appraisal of the marketing potentialities in Eastern Europe was made last July by a Sales Team, led by the Director-General of the Council. Spot sales were effected in a number of qualities in the U.S.S.R. and business negotiations discussed in Hungary and Yugoslavia. Texprocil,

in collaboration with the Indian Cotton Mills' Federation, participated in a big way in the Indian exhibition at Moscow. The Textile section was greatly appreciated and the Russian public took keen interest in Indian textiles. The sales team coincided its visit with the inauguration of the exhibition in Moscow and booked good business. Likewise, special efforts were made by Texprocil to promote exports to some traditional markets like Burma and Ceylon. A cloth committee and a yarn committee were set up for scrutinising bids against Burma tenders. A team was also sent to Burma to assist in the negotiation of business. The result was that India could book sizable business in that market. Similarly, a buying mission from Ceylon came here early this year and a fairly large business was transacted.

A vigorous campaign of market surveys was launched last year in the U.S., Australia, New Zealand, South-East Asia and West Africa. The Director-General personally carried out the surveys in the U.S., Australia and New Zealand. The findings were studied by the regional committees and continuing efforts are made to increase our exports in India's traditional, as well as new, qualities. The five regional committees set up with the object of constantly reviewing the export performance and recommending suitable measures for promoting exports to the respective regions, did excellent work. Many of their recommendations were accepted. The conciliation machinery of Texprocil has also been doing good work in the settlement of trade disputes, but, as its decisions lacked legal sanctions, the Council has decided to set up a full-fledged arbitration machinery as well. It is hoped that good use will be made of this new facility by the members and their clients. A significant improvement in the Standard Contract has been made with the introduction of a penalty clause for late delivery by mills.

Mr. Wadia very rightly pointed out that, in stepping up exports, the trade should concentrate on earning a higher price per yard by selling better quality goods. At the same time, it is needless to add—Mr. Wadia himself stressed the point—that there is the imperative need for steadily increasing the overall volume to reach the target of 800 million yards set for the third Plan.

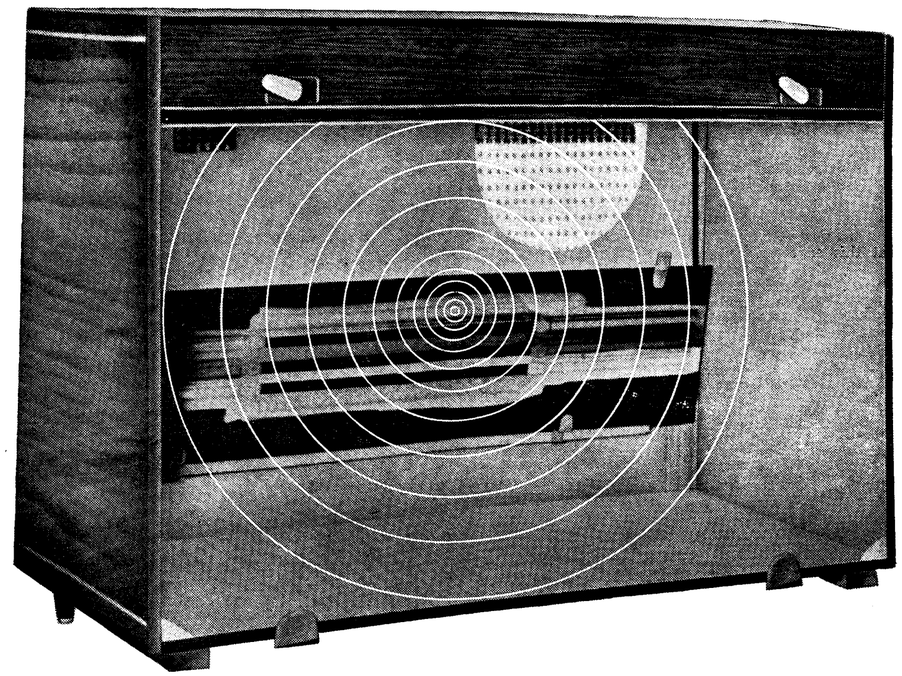
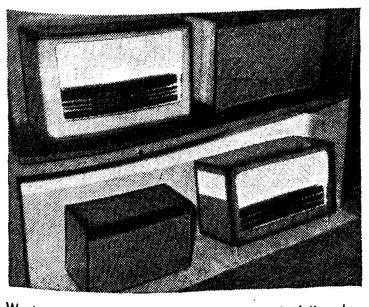
IN RADIOS the sound is the thing

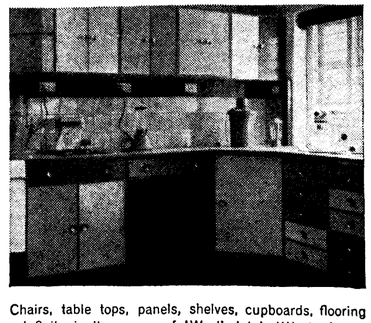


WESTERN INDIA PLYWOODS
make the specialised plywoods to express it best

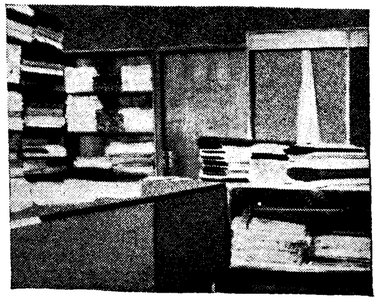
Different industries need different types of specialised plywoods. Makers of well-known radios, for instance, are highly selective of the plywoods they use for their cabinets. They have to be, and they choose 'WESTINDPLY' plywoods. Seasoned wood specially processed for resonance and low temperature and a wide choice of attractive veneers to suit modern interior decor combine to make 'WESTINDPLY' ideal for radio cabinet designs.
Western India Plywoods, the largest manufacturers of processed woods in India, make numerous varieties of specialised 'WESTINDPLY' plywoods to meet the industrial, architectural and defence needs of our country. They also manufacture 'WESTON' Hardboards, 'WIPEX' Paper laminates, Flushdoors and Block Boards.



Western India Plywoods supply a large part of the plywoods and hardboards required by India's leading radio manufacturers.



Chairs, table tops, panels, shelves, cupboards, flooring—infinite is the scope of 'Westindply', 'Weston' and 'Wipex'.



'Westindply' plywoods are made available in a wide variety of veneers to add prestige and modernity to showrooms.

OUTLOOK FOR SUGAR IN NEXT SEASON

MILLOWNERS WANT PARTIAL DECONTROL

IN exactly six weeks from now—on 1st November, to be precise—the current sugar season will end and the new season (1964-65) will begin. It would be premature, nay rash, to make any definite forecast about the level of white sugar production in the new season, whatever be the official reckoning now. When the current season began, it will be recalled, Ministers at the Centre and other officials in charge of sugar were very optimistic about the successful fulfilment of the 3.3-million-tons production target fixed for the season. But actual output has turned out to be no more than 2.6 million tons, representing a shortfall of as much as 21 per cent. There are, however, three encouraging factors that point to the possibility of a better production performance during 1964-65. One is the expansion in the aggregate cane-crushing capacity of the industry. Secondly, the sugarcane crop is expected to be larger than in 1963-64. And, finally, sugar mills may be accorded some fresh incentives to boost output in the light of the recommendations on the price and distribution system that the Sen Commission may put forward. That this expectation is quite justified is borne out by the following reply (daily press version) which Mr. C. Subramaniam, Union Minister for Food and Agriculture, gave to a question raised in the Rajya Sabha on Monday the 7th inst:

"A new sugar policy, including ex-factory prices, for the next crushing season will be announced before the end of the month. The Tariff Commission's formula for price fixing has become rather out-of-date. This is the reason why the Sen Commission has been appointed to consider the changed circumstances and to make recommendations after considering the total picture. In fixing the ex-mill prices of sugar, different profit margins for different factories have been provided, because the cost structure of each factory varies according to its capital structure. In Maharashtra and South, several factories have been set up in recent years, and their capital costs are much higher than those which had been set up earlier. It would, therefore, be unfair to provide the same margin of profit for all factories."

Cane Supplies

Fixation of ex-factory prices of sugar at a realistic level is, of course, to be widely welcomed. But the question is whether this step alone will be adequate. For the level of sugar production will depend on how long and how intensively the sugar mills will be able to work their cane-crushing plants. The working of these plants, in turn, will be influenced entirely by the availability of regular and adequate cane supplies. While the total cane yield may be larger, as is expected, it is very doubtful if, even with a larger yield, the sugar mills will be able to secure the requisite supplies of cane. The prices of *gur* and *khandsari* continue to rule pretty high and indications are that this trend will persist in the coming season too. Indeed, the prices of *gur* are well above those of white sugar. In the State of Maharashtra, for instance, *gur* is currently quoted at about Rs. 185 per quintal, whereas the controlled average price of white crystal sugar is only Rs. 116 per quintal, or a difference of Rs. 69. The difference will actually be much wider—over Rs. 100 per quintal—if the various taxes amounting to about Rs. 33 per quintal are excluded from the sugar price; *gur*, incidentally, is not subjected to the levy of any tax.

Diversion to "Gur" Production

When such is the position, it is but natural that sugar millowners should be deeply concerned about the keen competition offered by *gur* producers to obtain cane supplies. Presiding over the tenth annual general meeting of the West U.P. branch of the Indian Sugar Mills Association at Lucknow last week, Mr. M. L. Mody, the retiring Chairman of the Association, made a pointed reference to the large-scale diversion of cane for the manufacture of *gur* and *khandsari* in Uttar Pradesh. Because of the high prices of these sugar substitutes, their producers, he said, offered a highly attractive price for cane. The problem of cane diversion is acute in the State of Maharashtra, too. Addressing a Press Conference in Bombay on Monday this week, Mr. Gordhandas Jadavji Ruparel, President of the Deccan Sugar Factories Association, observed:

"The cultivators in *gur*-making areas have already started installing *kolhus*. The prices of *gur* are already ruling very high and, so long as there is no uniform policy of control on all the major uses of cane, diversion of cane to manufacture of *gur* due to its high prices is inevitable. Moreover, the *bagaitdars* or the companies who have so far been supplying their cane to the joint-stock sugar factories have, in certain cases, started manufacturing *gur* out of their cane. This will also have an adverse effect on the sugar production of the next year."

Position in Maharashtra

If the problem of cane diversion is not tackled energetically, sugar production in India will not register any notable increase during the next season. In Maharashtra, the production is expected to be just around the level of the current season, namely, 540,000 tons, whereas the industry has adequate capacity to produce no less than 700,000 tons. The output of the joint-stock sugar mills—they number 13 out of the total 32 factories—in particular, it is feared, may even be less than the 204,000 tons produced in 1963-644 (to which level it has declined from 243,000 tons in 1962-63), if steps are not taken to check undue diversion of cane away from mills and if adequate supplies of foodgrains are not made available to workers on the cane farms. In view of inter-district and inter-taluk restrictions on foodgrains, the sugar mills in Maharashtra are faced with the additional problem of supplying grains to workers. This problem, if it is not solved early by the authorities, may compel several mills to delay their crushing operations.

One of the specific proposals suggested to ensure adequate cane supplies to sugar mills pertains to partial decontrol of sugar. The proposal has been stoutly supported by both Mr. Mody and Mr. Ruparel. How the implementation of this proposal can check an undue diversion of cane supplies to *gur-khandsari* production has been well brought out by Mr. Ruparel. He says:

"I suggest that some quantities of sugar be reserved by the Government for basic domestic consumption and that a partial percentage of sugar production of the forthcoming season allowed with effect from the commencement of the next season. Such a measure would make available to the consumer at least some quantity of sugar at a reasonable price and higher realisation of free sale will thus enable the industry to meet the competition of cane from *gur*. Sugar would hence be available easily in the free market and this would effectively help to bring down the price of *gur*. If such sugar comes in the free market from all the sugar factories, the mentality of the public in hoarding sugar will be entirely changed and the sufficient quantity of sugar would thus be available in the free market to the public in general."

Doubts no doubt arise as to whether, in view of the decline that would follow in *gur-khandsari* production if the aforesaid remedy were followed, prices of these commodities will not rise further, instead of declining. Even so, the plea for partial decontrol, as we have stated on an earlier occasion, seems to be a practicable one and is worth a trial. It is necessary to add here that, if the Government accepts the plea for partial decontrol, the sugar mills should not try to exploit the consumer by unduly inflating the prices of sugar for "free" sale.

SUGAR PRODUCTION AND STOCKS

The total sugar production in the month of July 1964 amounted to about 9,000 tonnes, as against 5,000 tonnes produced in the same month last season. The total production during the season up to the end of July 1964 aggregated 2.51 million tonnes, as against 2.10 million tonnes in the corresponding period last year.

The offtake from factories during July (including 4,340 tonnes for export) was 198,000 tonnes, as compared with 240,000 tonnes including 46,000 tonnes for export) a year before. Total despatches during the first nine months of the 1963-64 season were 1.97 million tonnes (including 242,480 tonnes for export), as against 2.35 million tonnes (including 470,000 tonnes for export) in the same period last season.

The total closing stock of sugar with factories as on 31st July 1964 was 690,000 tonnes, as against 731,000 tonnes on the corresponding date last year.

SHAREHOLDERS' RELATIONS WITH MANAGEMENT

NEED FOR HUMAN APPROACH

By F. R. Ginwalla

THERE appears to be a strange and distressing unawareness among corporate managements of the need to stimulate the process of encouraging the shareholders to know about the affairs of the company in the profits of which they have undoubtedly a right to participate. The approach is not yet very refined or very elegant. The methods employed to stimulate it are at fault and in need of a fresh approach. There must be a maximum use of the methods to keep the shareholders informed. The effort should not be confined to more attractively produced sets of annual reports and accounts or to the sporadic visits of shareholders to the works.

There is little comfort in reflecting that an attempt is being made by some forward-thinking managements to produce their annual reports and accounts in an attractive manner, providing the maximum permissible amount of information in an easy and a really intelligent form. The hard fact, however, remains that most of the managements do not appear to take any active interest in the process of encouraging their shareholders to have an adequate understanding of the company's affairs. Their fears of trade rivalry and premature disclosure are largely exaggerated.

It must be well recognised that the very complexibilities of modern enterprise carried on in the corporate form undoubtedly imply an obligation on the management to communicate the essential facts about the company's working in a relatively simple form to the shareholders who have a stake in it and to all those to whom they are ultimately accountable.

In fact, a deeper analysis would show that the indispensable conditions of success in company management are two: the maximum permissible disclosure of information to the shareholders, and the cultivation of good shareholder relations. Such discipline of entrepreneurship is as important to an entrepreneur as the theory of composition is to the music composer or theory of strategy to the military leader.

Closer Links

There must be a realistic recognition of the ideal of cultivating good shareholder relations. Unless the management builds up more goodwill among the shareholders, the shortage of funds already being felt will grow more acute and the task of broadening investment interest and disseminating the ownership of shares among the general public as widely as possible will become more difficult. Closer relationship between managements and shareholders can be cultivated and personal interest in the working of the company can be created among the shareholders if information regarding finance, production, output, sales, labour relations, expansion programmes, export drive, and the problems of the industry in which the company is engaged were released to the shareholders from time to time. The shareholders must feel that they are being consulted. They need reassurances.

Company directors must remember that they are under an obligation to the shareholders who have voted them to the board. Bad relationship with the shareholders may well affect the ultimate survival of the company. They ought to know that, when the essentials of their job are forgotten or ignored, they loose their very usefulness to the community.

In the U.S.A., publication of detailed periodical reports is obligatory on the companies listed on the stock exchange. In other countries like the U.K., managements consider it their privilege to keep their shareholders posted with the latest developments. The issuing of progress reports through quarterly or half-yearly appraisals of the actual performance is unquestionably a symptom of a healthy tone of business. It seems that some of the company managements in this country look for excuses for keeping the shareholders uninformed. They have no cogent reasons. They fritter away their opportunities to attain the ideal described above, and only they know the reasons why. An element of compulsion, therefore, appears to be necessary and even desirable to keep the shareholders informed. It is well known that investors have an appetite for positive facts from which they can draw their conclusions. It is obvious that a compulsive legislation would not only provide a sound basis for making investment decisions but would also help evaluating investment results.

Many of the problems which confront the shareholders today are due to the inadequacy or effectiveness of measures to protect their equity from the risks of organisations that lack the discipline of entrepreneurship. Those who have assiduously examined the Indian Company Law cannot conceal their sense of disappointment at its several provisions which, though apparently stringent, do not provide for adequate means of information to the shareholders.

It is a common experience of shareholders that some chairmen hesitate to speak out at company meetings on issues touching the present or future prospects of the company. They shrug off questions as being either unintelligent or irrelevant or by telling them that everything is going just fine. The shareholders emerge from such meetings uncertain of everything except that they have wasted their time.

Illegal

It is unfortunate that at company meetings more attention is paid to tactics than to business principles. There are instances where the shareholders are even rudely interrupted when they are on their feet asking for information on the company's affairs. This is contrary to business ethics; in fact, it is illegal. The Government on its part must do everything within its power to ensure that the shareholders are not put in an awkward and humiliating situation whilst requesting information which the company has not made known to them.

It is, however, important to appreciate the true position of the shareholders *vis-a-vis* the company directors. The shareholders have no interest in the property of a company. There is nothing in the Indian law to warrant the assumption that the shareholders who buy shares, buy any interest in the property of the company. They have a right to participate in the profits, if and when the directors decide to divide them. The company is a juristic person and is distinct from the shareholders. The directors are not the delegates of the shareholders. They are rather their representatives in much the same way as the members of Parliament representing their constituencies are. If the directors were in fact delegates and not representatives, it would imply that they forgo whatever powers of independent judgment they might have, in order to fall in line with the wishes or demands of the shareholders. The shareholders have no power to compel directors to do anything which they honestly believe would conflict with the company's interests. The powers which are in the hands of the shareholders do not extend to interference with the management of the company or questions of company policy. These are matters for the directors to decide. Nevertheless, when appointing the directors, the shareholders trust them to act fairly. If the directors understand that their actions are directed to protect the interests of the general body of shareholders, they would rarely go wrong.

All profits ultimately belong to the shareholders, but their disposal is plainly the responsibility of the directors who collectively carry on the business for the company.

Subject to what has been stated above, the shareholders have an unrestricted right to obtain information affecting the profits. The profits are the guiding force of managerial efficiency. The shareholders are, therefore, entitled to correct and true appraisal of stewardship of the management.

One is aware that the Company Law requires that certain agreements must receive the approval of the general body of shareholders. But sometimes, attempts are made to by-pass the provisions of law relating to the disclosure of facts or the public policy enunciated by the State. The questionable clauses which cannot be incorporated in an agreement for placing before the general body are recorded in a separate document, the existence of which is unknown to the shareholders who have a right of inspection and approval, or the Government who has wide powers to interfere any vary the terms of contracts which are opposed to law or public policy. It might be argued that sometimes it is possible by private negotiations to arrive at an agreement which is more satisfactory from the industrial point of view of both the parties than the one concluded in public. It is hard to accept this argument which evidently pushes the basic objectives of the country to the background and lets them fade away.

Disclosure of Directors' Interest

The importance of the disclosure of directors' interest in contracts or arrangements to be approved at board meetings is well recognised. All such contracts or arrangements covered by Section 297 (Board's sanction to be required for certain contracts in which particular directors are interested) are required to be shown in the Register of Contracts which is open to the shareholders for inspection. The true purpose of this register has not yet been appreciated by some company managements whose philosophy and objectives are avowedly different from those underlying the Companies Act. An examination of the registers of contracts of some companies selected at random would reveal that they provide very little information to the shareholders.

It is common knowledge that, in some companies, the directors or the managing directors have their seats on the board as the nominees of those who assume virtually vital control of the company by reason of their large shareholding. Such a tendency is more noticeable in companies where Government has allowed majority participation of foreign capital. The directors or the managing directors of such companies are discouraged from advancing their own ideas or expressing their independent opinion because of their fear of jeopardising both their place on the board and their employment. They are mere ciphers and cannot be expected to represent the interest of the shareholders as a whole. In effect, the right of the shareholders to have their whiphand over the directors' appointments is defeated. This is precisely one of the reasons that has dampened the shareholders' enthusiasm in this country.

Chapter VI-B of the Companies Act recites the powers of the Government to prevent oppression or mismanagement. Under Section 409, the Government has power to prevent a change in the board of directors that would affect the interests of the company prejudicially, if such a change could be attributed to changes in the shareholdings in the company. The complaint to the Government could be made by the managing director or any other director, the managing agent, secretaries and treasurers or the manager. The section, unfortunately, does not visualise the situation that might arise in the circumstances just mentioned above.

The need for a human approach to the shareholders' problems and the effort to dispel their pessimism and infuse confidence in them hardly requires underlining.

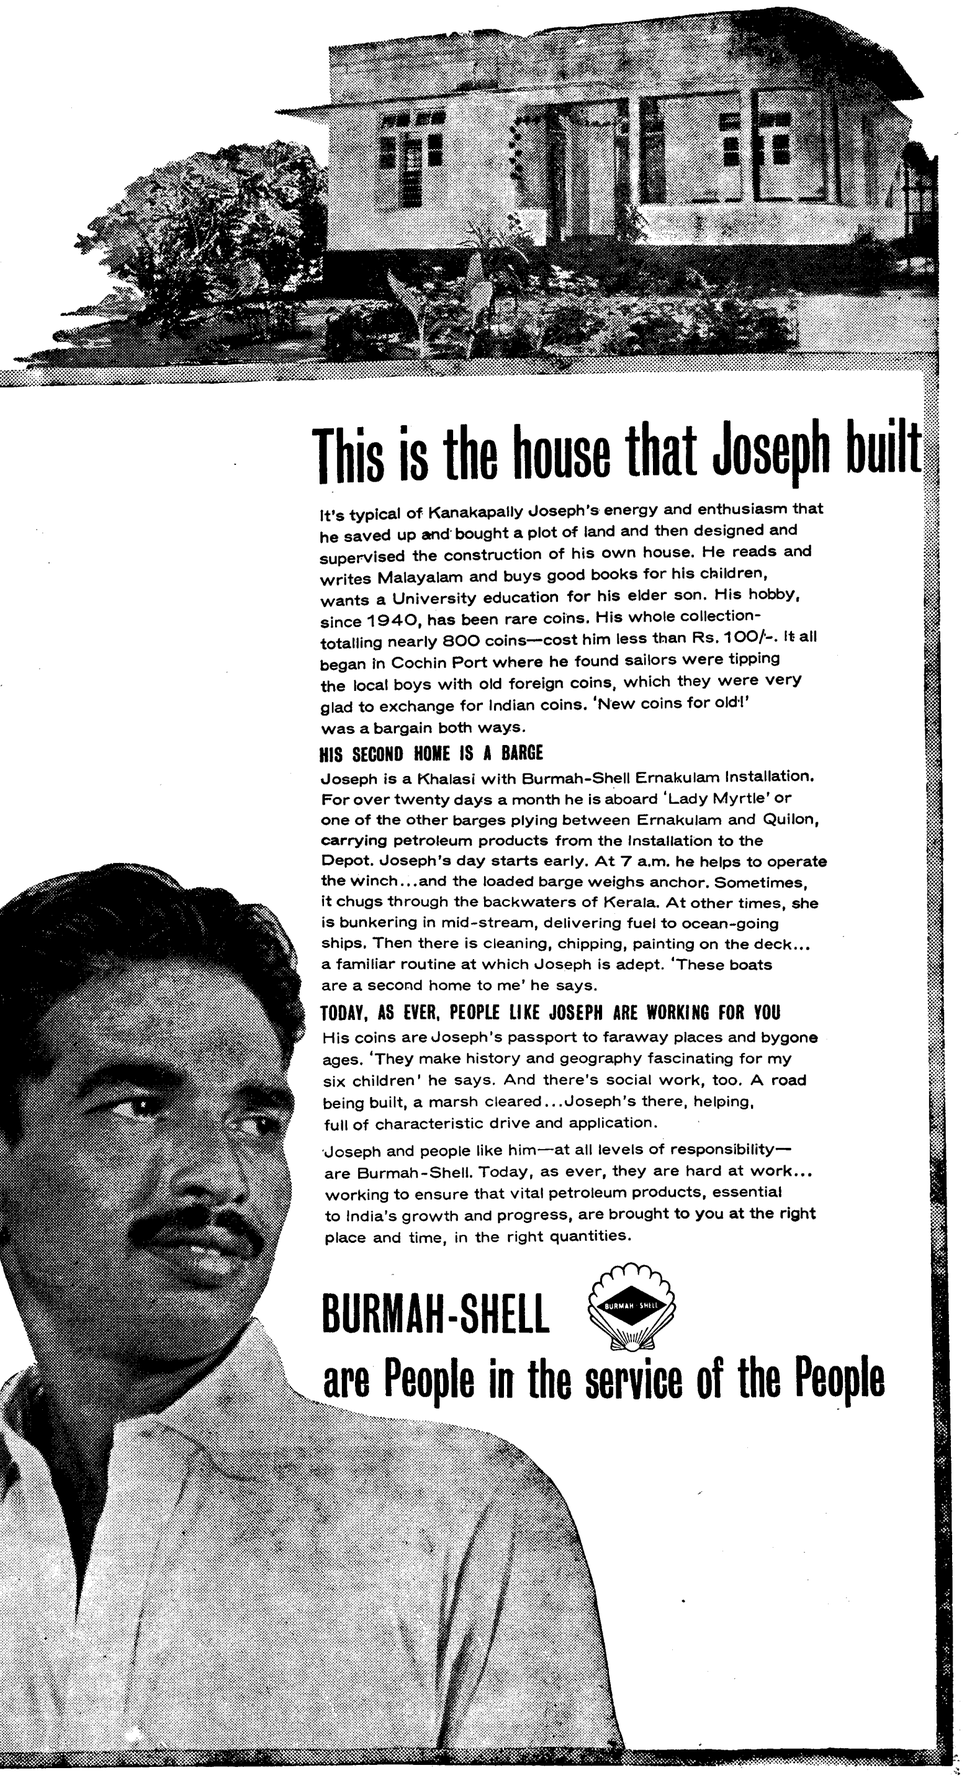
THE ORIENTAL MERCANTILE CO., LTD.
CALCUTTA • BOMBAY • KANPUR • DELHI • MADRAS



This is the house that Joseph built

It's typical of Kanakapally Joseph's energy and enthusiasm that he saved up and bought a plot of land and then designed and supervised the construction of his own house. He reads and writes Malayalam and buys good books for his children, wants a University education for his elder son. His hobby, since 1940, has been rare coins. His whole collection-totalling nearly 800 coins—cost him less than Rs. 100/-. It all began in Cochin Port where he found sailors were tipping the local boys with old foreign coins, which they were very glad to exchange for Indian coins. 'New coins for old!' was a bargain both ways.

HIS SECOND HOME IS A BARGE

Joseph is a Khalasi with Burmah-Shell Ernakulam Installation. For over twenty days a month he is aboard 'Lady Myrtle' or one of the other barges plying between Ernakulam and Quilon, carrying petroleum products from the Installation to the Depot. Joseph's day starts early. At 7 a.m. he helps to operate the winch...and the loaded barge weighs anchor. Sometimes, it chugs through the backwaters of Kerala. At other times, she is bunkering in mid-stream, delivering fuel to ocean-going ships. Then there is cleaning, chipping, painting on the deck... a familiar routine at which Joseph is adept. 'These boats are a second home to me' he says.

TODAY, AS EVER, PEOPLE LIKE JOSEPH ARE WORKING FOR YOU

His coins are Joseph's passport to faraway places and bygone ages. 'They make history and geography fascinating for my six children' he says. And there's social work, too. A road being built, a marsh cleared...Joseph's there, helping, full of characteristic drive and application.

Joseph and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work... working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL

are People in the service of the People

WORLD POPULATION AND AVAILABLE RESOURCES

AN OVERALL SURVEY OF PRINCIPAL DATA

THE available area for human habitation in the world is limited—only 135.7 million square kilometres or 84.32 million square miles—but the world population has been relentlessly rising in the past two decades, with the underdeveloped countries sharing a good proportion of the rise in numbers. The world population of 3,135 million in mid-1962 shows a 25 per cent increase over the mid-1950 level. In fact, since 1958, the rise has been at the rate of more than two per cent per annum, so that it has not been far behind the population growth of India. Of all the continents, Asia (excluding the U.S.S.R.), which accounts for 20.3 per cent of the world area, has about 56.3 per cent of the world's total population. At the other extreme, Oceania (Australia and others) has the smallest population of less than one per cent, though its share in the area is 5.4 per cent. Contrary to public notions of Asia being the most densely populated continent, the United Nations Statistical *Yearbook for 1963*, which includes a comprehensive statistical coverage of all aspects of economic activity in the world, reveals that its density is only 64 persons per every square kilometre. At the same time. Europe, with an area of 4.9 million square kilometres, has the highest density of 88 per square kilometre as against the world average of 23. Even South Central Asia, the area having the highest density in the Continent, has only 114 persons for every square kilometre as against Central Europe's 139. Both the Soviet Union and the United States, having a area of 22.4 and 21.5 million square kilometres respectively, have the same density of 10 persons for every square kilometre. Oceania (with an area of 8.5 million square kilometres), which includes Hawaii a State of the U.S.A., has the lowest density of 2 persons for every square kilometre. These interesting demographic trends are presented in Table I accompanying this article. The said table gives a comparison in population growth rates for two periods 1958 to 1962 and 1960 to 1962, in order to show how the growth in the more recent years compares with that in a little distant years. It will be seen that in most regions there has been a progressive increase in the growth rate with the passage of time. It is this secular increase in the demographic pattern of the world that poses a serious problem for the future.

The rate of growth in population during the period 1960-62 was very high in the regions of Central America (2.9 per cent per annum) and South-East Asia (2.7 per cent). The growth rates in the U.S. and Soviet Russia were almost identical (1.6 and 1.7 per cent respectively), with the former showing a nominal decline of 0.1 per cent in its growth rate if the four-year period 1958-62 is taken into account. Oceania, which has, as already noted, the lowest density per square kilometre, has maintained a high growth rate of 2.2 per cent per annum since 1958, while Southern Europe, having a high density of 88, has the lowest growth rate of numbers, namely, 0.8 per cent.

Agriculture

An analysis of the data on food for the teeming millions in the world, given in the *Statistical Yearbook*, shows that farmers all over the world (excluding mainland China for which figures are not available) produced more wheat, corn, barley and rice in 1962 than in the previous year. The total wheat crop in 1962 was 262 million metric tons, 5 million tons more than the bumper crop of 1958 and 25.5 million tons above the 1961 level. Nearly one half of this total was accounted for by the five largest wheat-producing countries—the Soviet Union (70.6 million), the U.S.A. (30 million), Canada (15 million, France (14 million) and India (12 million). No figures are available for China since 1960, but it may be noted that, in the three years 1956 to 1958, wheat production in China has moved up from 24 to 29 million metric tons.

An interesting feature disclosed by the U.N. *Statistical Yearbook* is that the U.S.S.R., the largest producer of wheat in the world, which had a lead of only 1.69 million metric tons over the U.S. in 1948-52, has increased its output tremendously in the decade ended 1962, from 32.75 million metric tons of 70.60 million metric tons, the corresponding figures for the U.S. being 31.06 million metric tons and 29.70 million metric tons. In other words, Russian wheat production in 1962 was more than twice that of the U.S. Despite this tremendous lead, Russia found it necessary to import large quantities of wheat from the U.S., Canada and others, when its crops failed in one year.

Other Food Crops

As regards other food crops, the U.S. produced 43 per cent of the world maize (corn) crop of 216 million metric tons in 1962. At the same time, the share of India, a predominantly agricultural country, was only 21 per cent of the total maize production. World (excluding China) rice output was 245.5 million metric tons in terms of paddy in 1962 showing a nominal rise of 3 million metric tons over the previous year. If China, the rice output of which used to be 80 to 85 million metric tons before 1960, is excluded, India was the largest producer with 48 million metric tons (paddy), followed by Japan (16.3 million), Pakistan (14.9 million) and Indonesia (13.4 million).

World production of barley in 1962 was almost 100 million metric tons, and stood 69 per cent above the 1948-52 level and 16 per cent above 1961. The U.S.S.R. was the largest producer of this grain in 1961, with 19.5 million metric tons. This was followed b the yUnited States (9.4 million), France (6 million) and the United Kingdom (5.9 million).

World production of oats in 1962 was 50.8 million metric tons. This was slightly lower than in the previous year and 18 per cent lower than the average for the period 1948-52. The fall in production between 1948 and 1962 was mainly due to the fall in the United States, which in 1962 produced 15 million metric tons, 29.5 per cent of world production. Canada produced 7.6 million metric tons. The next largest producer was the U.S.S.R. (5.6 million).

In 1962, the world produced about 264 million metric tons of potatoes, 7 per cent more than the average of the years 1948-52, but 6 per cent less than in 1961. The U.S.S.R. was the largest producer with 68.8 million metric tons. This production, which was 26 per cent of world production, was 18 per cent less than production in 1961 and over 22 per cent less than the annual average for the period 1948-52. Poland came second with 37.8 million metric tons of potatoes in 1962. Next in order were the Federal Republic of Germany (25 million), France and East Germany (13 million each) and the United States (12 million).

For 1962, the world production of all milk—from cows, goats, buffaloes and sheep—was estimated at 333 million metric tons, as against 348 million tons in the previous year and an average of 260 million metric tons in the period 1948-52. Of the 1962 total, cow's milk accounted for 91 per cent. Of this the United States produced 57.1 million metric tons. The total production of milk in the U.S.S.R. in 1962 was 63.9 million metric tons (19 per cent of total milk production). Other countries with large production in 1962 were: France (24.2 million), Federal Republic of Germany (20.3 million), United Kingdom (13 million) and Poland (12.9 million).

World meat production in 1962 was 65.2 million metric tons, nearly four per cent higher than the production in the previous year. While the United States was the largest meat producing country, with 13 million metric tons, Canada was at the other extreme with a meagre output of 1.1 million metric tons. The total fish catch for the world was a record high of 44.7 million metric tons, with Japan accounting for over 15 per cent. Almost all the developed countries recorded impressive gains in the fish catch in 1962, as compared to 1948.

Livestock

The data on livestock disclose a varying trend. While there has been an increase in the number of cattle, pigs and sheep in the four-year period 1958-62, that of horses showed a fall and mules and donkeys remained stable. Out of the world total of 939 million cattle in 1960-61, India had the largest number of 176 million. The United States and the U.S.S.R. came next with 97 and 75 million respectively. Australia accounted for 16 per cent of the world total of sheep. The number of mules and donkeys has been more or less constant during 1958 to 1962, but that of horses steadily decreased throughout the world between 1958-62 by nearly 15 per cent.

The output of cash crops such as raw cotton, tobacco, coffee and tea all over the world went up appreciably. In fact, the raw cotton output in 1962 at 11.7 million metric tons was a record which surpassed by 54 per cent the average yield during 1948-52. The share of America, the largest cotton producer, in the world total was nearly 30 per cent. Even India is estimated to have produced about 95 per cent more than the annual average production in 1948-52. Production of coffee in 1962 rose by nearly 72 per cent of the average 1948-52 output. The rise in tobacco output was about 37 per cent as compared with 1948-52 average and that in tea was 51 per cent.

This all-round increase in world agricultural situation was chiefly due to the increased use of fertilisers. Consumption of all commercial fertilisers in 1962-63—phosphatic, nitrogenous and potash—was 32.3 million metric tons, an increase of eight per cent over the total used in the previous year. As compared with the position in 1955-56 world consumption of fertilisers in 1962-63 was higher by no less than 52 per cent. Europe and America produced and consumed about 70-75 per cent of the world supplies of fertilisers. Even in Asia, there was a marked rise in fertiliser consumption. India's consumption of nitrogenous fertilisers was nearly 310,000 metric tons in 1961-62 as compared with a mere 63,000 metric tons in 1948-52.

Industrial Sector

A mine of interesting information is contained in the U.N. *Statistical Yearbook* on industrial production also. World production of basic raw materials, such as coal, iron ore and crude petroleum, in 1962, improved to some extent over the previous year. Coal production increased by 35 per cent between 1954 and 1962 and by 2 per cent as compared with 1961. The United States, U.S.S.R., United Kingdom and the Federal Republic of Germany together accounted for nearly 56 per cent of the world output of coal in 1962. Similarly, output of crude petroleum was eight per cent higher in 1962 as compared with 1961. The rise was more than 82 per cent between 1954 and 1962. The world production of iron ore (excluding Communist China) increased by nearly three per cent between 1961 and 1962. Soviet Union led the other developed countries in iron ore output, with 74.3 million metric tons. Crude steel output in 1962 also rose by two per cent to 361 million metric tons, mainly due to the rise in production in the Soviet Union to 76 million metric tons. But the United States remained as the largest producer of steel with 89 million metric tons. The Federal Republic of Germany, Japan, the United Kingdom and France, with production of 33 million, 28 million, 21 million and 17 million, respectively, showed a fall in their output by ½ to 1½ per cent as compared with 1961. Taking the countries of the European Economic Community (E.E.C.) as a unit, one finds that their production fell by ½ million metric tons or 0.7 per cent between 1961 and 1962. The total production of these countries in 1962 was 3½ million metric tons less than U.S.S.R. production, 82 per cent of the United States production and 3½ times the United Kingdom production.

At the same time, world textile industries used less raw cotton and raw wool than in the preceding year, probably owing to the phenomenal expansion in the use of man-made textile materials of cellulosic and non-cellulosic origin. Industrial consumption of raw cotton during the year was 9.9 million metric tons, which was five per cent less than the peak consumption witnessed in 1959-60. In 1962, industrial consumption of raw wool was 1.4 million metric tons, slightly less than in 1961. At the same time, production of man-made textile fibres and cellulosic fibres went up very rapidly. Rayon and acetate filaments rose by nearly 2.5 times during the fourteen years 1948-62. The United States was ahead of all the countries, accounting for some one-fifth of the total output in 1962. In the case of non-cellulosic fibres like nylon, orlon and other synthetics, the U.S. share was even greater, about 41 per cent.

Uneven Growth

Although there has been an all-round growth in industrialisation, the development has not been even. The persisting wide gap between the industrialised and less developed countries is best illustrated by the *per capita* consumption of certain vital commodities. Steel and electric energy are two of the key indicators used to depict the industrial development of nations. The Table II compiled from the data contained in the U.N. *Statistical Yearbook* clearly brings out this picture.

For purposes of convenience, only a few selected countries belonging to the two groups have been included. But the table contains enough data to bring out the great leeway that remains to be made up by the underdeveloped countries.

While Sweden leads the Western nations in *per capita* consumption of steel with 530 kilogrammes, Indonesia in Asia stands lowest among the backward countries with 2.5 kgs. In the case of energy, the United States with 8,263 kgs. (in terms of coal) stands high in the list. A country with the lowest *per capita* consumption of power is Nigeria with no more than 45 kgs. of coal equivalent. India is far behind even Turkey, another underdeveloped country in regard to both steel and energy consumption.

The 1963 *Statistical Yearbook* provides data on world and regional energy production, trade and consumption, classified by main sources—coal and lignite, crude petroleum, natural gas and hydro-electricity. All the figures are expressed as the equivalent number of metric tons of coal. In the eight-year period 1954-62, total world production of energy in terms of tons of coal equivalent increased from 3,025 million metric tons to 4,646 million or over one-and-one-half times. In 1962, the production of coal and lignite was 132 per cent of the 1954 level; crude petroleum 172 per cent, natural gas two times, and hydro-electricity nearly 1.8 times.

The proportions of the various forms of energy to total energy in 1962 and 1954 were as follows (1954 percentage in parentheses):

Coal and lignite 47 (55), crude petroleum 35 (31), natural gas 16 (12) and hydro-electricity 2 (2).

These figures show the shift from coal and lignite to crude petroleum and natural gas.

Figures of consumption have risen from 1,126 kilogrammes *per capita* in 1954 to 1,465 in 1962, averaged over the whole world. The rise in *per capita* consumption between 1954 and 1962 is only 30 per cent compared with a rise in production of 54 per cent between the years, because of the increase in population.

North America produced in 1962 one-third of all the world's energy, as against 40 per cent in 1954. In 1962, only 26 per cent of all energy was derived from coal. In Western Europe 87 per cent of all energy comes from coal. Total production from all sources in 1962 amounted to 573 million metric tons of coal equivalent, and *per capita* consumption was 2,747 kilogrammes. In some of the less industrialised regions of Africa and the Middle East, there is a marked upward trend in both the production and consumption of energy. In the Middle East, where practically all of the energy comes from petroleum, the output has increased 2.3 times between 1954 and 1962, and *per capita* consumption has risen from 200 kilogrammes in 1954 to 317 kilogrammes in 1962.

Countries with centrally planned economies produced 1,484 million metric tons of energy in 1962, 2.1 times more than in 1954. The share of coal in energy production between 1954 and 1962 declined from 84 per cent to 73 per cent. *Per capita* consumption of energy between these years increased by 74 per cent and totalled 1,352 kilogrammes in 1962.

Electric Energy

The data for almost 170 countries shows the growth in the production of electric energy. In 1962, the world production of electricity generated is estimated at 2,655 million kilowatt hours, 8 per cent more than in 1961 and 3.3 times as much as in 1948. The increase in electricity production was reflected in all countries, but to varying degrees. The percentage increase in Africa was 5 per cent; in North and South America, Asia and Oceania 7 per cent, and in Europe 8 per cent. Production in the United States increased in 1962 by 7 per cent and in the U.S.S.R. by 13 per cent. Of the 1962 total, North America accounted for 41 per cent (the United States, 35.5 per cent), Europe 30 per cent, the U.S.S.R. 14 per cent, Asia 10 per cent and South America 2 per cent. The principal producing countries in 1962 were the United States (943 thousand million kilowatt hours), U.S.S.R. (369 thousand million kilowatt hours), United Kingdom (160 thousand million kilowatt hours), Japan (140 thousand million kw.h.), Federal Republic of Germany (135 thousand million kw.h.), Canada (117 thousand million kw.h.) and France (83 thousand million kw.h.).

Transport

The development achieved by the advanced nations can well be visualised by comparing the progress attained by them in the field of transport. While railway freight traffic in the world as a whole expanded rapidly and reached a peak of 3,398 thousand million net ton kilometres in 1962, nearly four per cent higher than in 1961, the Soviet Union and Eastern Europe accounted for a half of this traffic. North America came next with a share of 29 per cent. Rail travel was more resorted to in Japan and the U.S.S.R. than in any other country in 1962, with 206,760 million and 189,300 million passenger kilometres, respectively. The number of motor vehicles in the world also showed a rise with North America possessing 65 per cent of the world's passenger cars and 53 per cent of the commercial vehicles. Europe (excluding the U.S.S.R. and Eastern Europe) accounted for 26 per cent of passenger cars and about 24 per cent of commercial vehicles. Oceania possessed the next largest number of passenger cars, followed by Asia (excluding mainland China, North Korea and North Viet Nam), Africa and South America, while the next largest number of commercial vehicles were in Asia (excluding mainland China, North Korea and North Viet Nam), followed by South America, Oceania and Africa.

The world merchant shipping fleet continued to expand in 1962, when the total tonnage of steamships and motorships had risen to 146 million gross registered tons, 4 per cent higher than in 1962, and nearly 24 per cent higher than in 1958.

Civil aviation continued its growth: in 1962, 3,240 million kilometres were flown by all of the world's airlines (domestic and international). This was an increase of 4 per cent over the previous year and nearly 28 per cent since 1956. Passenger-kilometres flown added up to 130,000 million as compared with 117,000 million in the previous year and 71,000 million in 1956. More mail went by air in 1962 than in any previous year—800 million mail-ton kilometres in 1962, 11 per cent more than in 1961 and twice as much as in 1956. These figures exclude mainland China, the U.S.S.R. and other countries which were not members of the International Civil Aviation Organisation.

World Trade

The data on world trade in the U.N. *Statistical Yearbook* for 1963 shows that exports (in terms of value) reached a record level in 1962 at $U.S.140,900 million, which is 5½ per cent higher than in 1961 and six times greater than the 1938 figure. Of the total world exports, the share of manufactured goods continued to grow during the post-war years, amounting to 56.4 per cent in 1962 (48.8 per cent in 1955), while that for food and raw materials declined to 32 per cent in 1962 (38.4 per cent in 1955). Among the manufactures, machinery and transport equipment showed a spectacular growth from a value of $16,900 million in 1955 to $33,100 million in 1962. They accounted for 41.8 per cent of the total exports of manufactures in 1962.

Many of the developed countries have emerged as important suppliers of food and raw materials to the regions in Eastern Europe and Asia. Communist China and other less developed areas in Eastern Europe have been steadily losing their ground as exporters of agricultural and other raw materials (34.9 per cent in 1962 as against 40.9 per cent in 1955). Although the developed countries have maintained their "dominant position" in the field of imports, the Eastern European countries, particularly the Soviet Union, are fast increasing their share. The Table III shows some of the highlights of world trade by commodity groups and regions.

It can be seen from the table that the advanced nations have increased their exports of machinery and other manufactured goods as well as food and raw materials to a great extent over the years 1955-62. Eastern Europe and other communist countries have at the same time increased their imports of foodgrains and raw materials from $3.5 billion to $5.1 billion.

The *Yearbook* figures also indicate that world (excluding mainland China, North Korea, North Viet Nam and Mongolia) industrial production was 7.4 per cent higher in 1962 than in the preceding year. The corresponding increase for 1961 was 5.3 per cent and the annual average rate of increase in industrial production during the period covered by the series (1950-62) was 6.8 per cent. Between 1950-62, world industrial production more than doubled (up 118 per cent). For the first time, the *Yearbook* contains figures on industrial output in the U.S.S.R. and the countries of Eastern Europe, showing that their production in 1962 was 3¾ times as great as in 1950. In the other countries of Europe, industrial output increased by 98 per cent over the period. Comparable increases for other regions were 140 per cent for the European Economic Community, 59 per cent for Canada and the United States, and 95 per cent for Latin America. The countries of Asia, paced by the economic recovery and growth of Japan, surpassed all other regions

(Continued on page 516)

Note: The U.N. publication *Statistical Yearbook* for 1963, referred to in this article, is a highly valuable publication, priced at $11.50 cloth bound or $9.00 paper bound. In 714 pages of tables and text, in both English and French, the volume presents authoritative international statistics on demographic economic, financial, social and cultural subjects.

THE INDIA CEMENTS LIMITED

CHAIRMAN, MR. P. SURYANARAYANA'S SPEECH

REALISTIC CEMENT PRICE POLICY URGED

A STRONG plea for a realistic cement price policy was put forward by Mr. P. Suryanarayana, Chairman of the India Cements Limited, in his speech at the Eighteenth Annual General Meeting of the Company held at Madras on Monday, 7th September 1964. Cement prices, he said, should be fixed at such a level as would ensure at least a net return of 10 per cent to shareholders, for, otherwise, there seemed to be little hope of the country achieving the phenomenal expansion in production capacity so much desired by the Government. Stating that cement was a vital construction material, he warned that an overall shortage of this commodity would definitely slow down all construction activity.

The following is the full text of Mr. Suryanarayana's speech:

GENTLEMEN AND FRIENDS,

On behalf of the management and on my own behalf, I extend to you all a cordial welcome to the eighteenth annual general meeting of your Company and place before you the annual accounts of the Company for the year ended the 31st March 1964, the Directors' report and the Auditors' report thereon.

Mr. Nehru

Since we last met, as you are all aware, the nation has suffered an irreparable and grievous loss in the very sad and sudden demise of our revered leader and beloved Prime Minister, Pandit Jawaharlal Nehru. Jawaharlal Nehru was not only a valiant fighter for our freedom under the leadership of Mahatma Gandhi, but also the principal architect of post-independent India. To Panditji, we owe a lot and in particular to the concept of planned development of this country. As Chairman of the Planning Commission during his full tenure of Prime Ministership, he was the author and originator of the three Five-year Plans, under which this country has made phenomenal progress in the social, economic and industrial development. May I request you all to observe two minutes' silence in honour of the great departed leader?

(The members observed two minutes' silence in memory of the late Prime Minister, Pandit Jawaharlal Nehru, all standing.)

It is no doubt a source of great relief to all of us in this country and to people elsewhere that after the death of Pandit Jawaharlal Nehru, Mr. Lal Bahadur Shastri has been unanimously and immediately elected to succeed the departed Prime Minister and it has been proved beyond doubt that we have an organised and disciplined democracy, that we can rise to the occasion in cases of emergency and we can set aside all petty differences. It is now certain that we can look forward with confidence to another era of peaceful, orderly and stable Government, which is a prerequisite for planned development.

Printed copies of the statement of accounts have been circulated to all the members and with your kind permission, I will take them as read.

Wages and Costs

The year under review brings us to the close of the third year of the third Five-year Plan, and perhaps this has been the most anxious period for both the planners and the people. On the one hand, the effect of spiralling prices on almost every commodity and, particularly that of food and other essential articles, keeps staring at one, while on the other hand, the lack of higher production both on the agricultural and industrial sectors, which is the need of the hour, is indeed perturbing the minds of the planners, the Government and the industrialists. The word "inflation" seems to be on everybody's mind and as far as I am able to see, none of the measures taken by Government so far appears to have curbed the tendency of rising prices. A developing country like ours, which is attempting to make the quickest progress, within the shortest time possible, has to contend with the basic fact of fewer resources available than what is required, to achieve the desired object. As long as the tendency persists to spend more money than the production costs of goods and services available at a particular time, so long will the inflationary trend, as is being witnessed now, continue. With the cost of living rising rapidly the demand for more and more wages cannot be avoided. Large wage increase, in turn, further raises the cost and inevitably leads to further upward rise in prices. In turn, this phenomena tends to make people lose faith in their money because they find past savings disappearing quickly. Unless very effective measures are taken immediately and put into action the inevitable consequences of the present trend is bound to lead to the most disastrous consequences. I trust both the Government and the people will present a united front to combat this situation.

New Plants

Coming to our own affairs, I am glad to inform you that there has been an all-round improvement in the affairs of the Company. The production at the Company's Talaiyuthu factory has been almost to rated capacity. The first unit of the Plant at Sankari went into commercial production during February 1964 and has been working satisfactorily since then. The Company will have the benefit of a full year's working of the Sankari Plant for the current year and an increase of 33⅓ per cent over its present production is expected for the year ended 31st March 1965. Work on the second stage of the Sankari Plant is well under way and every effort is being made to commission that plant by the latter half of 1965. As I have already reported to you on a previous occasion, your Company will be producing nearly a million tonnes of cement on the completion of the second stage at the Sankari Plant.

During the year under review, we have produced 528,554 tonnes of cement as against 419,149 tonnes of cement in the previous year. The statement of accounts has been in your hands for some time now and you would have noted the profit before the deduction of depreciation and the Managing Agents' commission has increased by Rs. 25,40,097 in comparison with the previous year. This is no doubt due to higher production and the consequent larger sales of cement. The production of clinker, cement and sales were higher at 534,349 tonnes, 528,554 tonnes and 526,777 tonnes, respectively.

Increasing Costs

There has again been a steady increase in the cost of production during the year on account of the increase in price of coal, freight rates and surcharge on electricity. As you know, these increases in the cost are beyond our control and naturally lower the profits of your Company. In spite of this, the Company has been able to show better working results during the year. Our appeals to the Government for adequate increases in the retention price has not met with full success. Between 1st November 1961 and 31st March 1964, the cost of production has gone up by Rs. 5.92 per tonne, while the price increases sanctioned by the Government during the same period has been only Rs. 3.75 per tonne. Even this *ad hoc* adjustment has not been given retrospective effect resulting in further losses to the industry. The recent increase of Re. 1.25 per tonne announced by the Government is applicable only from 1st July 1964, while the impact of the increased cost has been there even prior to the last increase granted during June 1963.

Planned Targets

In this connection, I would like to mention a point which has to be taken serious note of, if the cement industry is to progress and contribute its share to the country's planned and developing economy. Cement is a vital construction material required in every phase of the nation-building activity and an overall shortage of this commodity is certain to slow down all construction activity. The target of 13 million tons set up for the second Plan has still to be achieved at the end of the third year of the third Plan. It is rather surprising in this context to hear that the Government are envisaging a production target of 23 million tonnes during the fourth Plan. The reasons for the shortage in the estimated Plan targets are not far to seek. The cement industry is highly capital-intensive and there is very little scope for any ploughback of profits at the current level of return allowed by Government on the existing price structure. Unless the Government realise this and fix prices at more realistic levels to ensure at least a net return of 10 per cent to the shareholders, there seems to be little hope of our achieving the phenomenal expansion in production capacity so much desired by the Government.

Dividend

Some members have indicated their disappointment at the reduction in the dividend rate this year in spite of increased profits made during the period. You will appreciate that the entire profits came out of the existing unit at Talaiyuthu from which the expansion cost in the shape of development rebate on the new unit at Sankaridrug has to be met. A sizable appropriation towards the statutory development rebate reserve was required to be provided on the new unit at Salem. This has naturally reduced the profits which would otherwise have been available for distribution. It might perhaps be argued that a portion of the past reserves could have been utilised for payment of higher dividend than 6 per cent. But in view of the fact that the second unit at Salem is well under way, it was considered prudent to conserve the existing resources so that the overall financial position of the Company is strengthened to meet any future contingencies.

The reserves of your Company have gone up to just over Rs. one crore, as on the date of the balance sheet for the year ended 31st March 1964.

I am sure many members would have realised by now that with the completion of the expansion scheme, the future working of the Company will considerably improve.

I am glad to inform you that our educational institutions have had another satisfactory year of working and the results of the Sankar Institute of Polytechnic are highly encouraging. A new hostel has been constructed for the Sankar Institute of Polytechnic.

The relations with labour at the factory and the staff at the head office and also at the factories continue to be cordial as usual. I take this opportunity, once again, both on my behalf and on your behalf to tender our thanks to all the employees of the Company for their unstinted co-operation and hard work during the year. The Company looks forward to their continued services and co-operation in the years ahead.

I thank you all gentlemen, for giving me a patient hearing.

N.B.—*This does not purport to be a report of the proceedings.*

DEVELOPMENT OF RAJASTHAN STATE

SEVERAL INCENTIVES REQUIRED FOR INDUSTRIES

By S. R. Damani

IT was indeed gratifying that the Rajasthan Chamber of Commerce and Industry had recently arranged a symposium on the industrial development of Rajasthan. The occasion acquired an added importance with the presence of Mr. M. C. Sukhadia, Chief Minister of Rajasthan, and other Ministers, namely Mr. M. D. Mathur and Mr. Harish Chandra, who have much to do with changing the image of underdeveloped Rajasthan to that of a "developed State."

In April 1961, it will be recalled, a businessmen's convention was held at Jaipur and it was very beneficial in its own way. It actually made the beginning in a dialogue between Government and industry. The recent symposium was in fact a continuation of the same approach. It is needless to emphasise that such meetings and discussions between the industrialists and businessmen, on the one hand, and the Government representatives on the other, would go a long way towards removing the various practical difficulties, bottlenecks and impediments and help in achieving the commonly accepted goal of industrialising Rajasthan expeditiously by quickening developmental efforts. Such conventions or symposia, where the Government representatives are also present should be held by rotation in Calcutta, Bombay, Madras, Delhi, Jaipur, or at such other important cities considered advisable. This would provide a forum to appraise or reappraise the state of development achieved and focus the attention of industrialists and entrepreneurs on the potentialities, and the spheres where their co-operation is required. The Rajasthan Chamber of Commerce and Industry should consider this suggestion for action.

Development Potentialities

It is a recognised and established fact that, when Rajasthan was formed in 1949, it was very backward. It did not see political stability till November 1954 and, as a result, no proper concentration could be made on developmental activities in Rajasthan. It goes to the credit of Mr. M. L. Sukhadia, who has provided a stable Government to the State of Rajasthan since November 1954 when he took up the reins of Chief Ministership, that political stability has been achieved and, with it, energies have been diverted to developmental activities under the second and third Plans. Thanks to the common objectives of industrialists, entrepreneurs and Government, the whole face of Rajasthan is bound to be changed in the near future. This State has sufficient potentialities for development in the industrial, agricultural and mineral sectors and these have been established by surveys undertaken and completed so far. It is now left to the present generation to make the best use of such potentialities.

Surely Rajasthanis have contributed greatly to the industrial development of the country. The call to them to help their own State by putting it on the industrial map of India is legitimate and meaningful. It is left to them to change the image from backwardness to progress and development. However, the call is not only confined to Rajasthanis but to all industrialists and entrepreneurs who can come to Rajasthan and start industries. Of course, before any industrialist or entrepreneur can promote any industry, he has to consider the various difficulties and problems connected with land, labour, capital, availability of raw material and power, means of communication and transportation, distance between production centre and markets, Government policy, and so on.

The Government has no doubt devised rules for extending help in the matter of land and supplies of power to industries. But the means of communication and transportation poses a big problem, for all the cities are not connected with one another on the broad-gauge railway section. Kota and Sawai Madhapur are progressively developing, and there is great concentration of industries at Kota which may become the Kanpur of Rajasthan. Recourse to various other modes of transportation and transhipment for import of raw material or export of finished products becomes not only costly but cumbersome. However, industrialists will have to put up with it. This situation can be rendered less depressing if the Government devotes greater attention to the development of road transport.

In large-scale enterprise, capital plays a vital role. The performance of Rajasthan Financial Corporation is, no doubt, noteworthy, for it has financed 119 varied industries with an aggregate amount of Rs. 2.89 crores. But in regard to long-term finance for large-scale industries, the Government of Rajasthan should persuade the Industrial Finance Corporation of India to be liberal in sanctioning loans to the industries that are being established in Rajasthan—a State which is sufficiently backward and needs encouragement. It should also persuade the Corporation to reduce the rate of interest by one per cent. Such a measure would provide a good incentive to industrialists and entrepreneurs. If a tax holiday attraction is also provided to industrialists installing industries in Rajasthan, it would prove advantageous.

Cotton

A few words about cotton which is the basic raw material for textile industry. Besides other areas where quantitative and qualitative production of cotton could be improved, the northern part of Rajasthan, where irrigation facilities from canals will be available, could be developed for production of the best variety of cotton, namely, Egyptian and Sudanese cotton. Presently, the cotton produced in Rajasthan is short-staple which is used for coarse counts. If long-staple cotton is grown, it would enable the textile mills to manufacture finer qualities and thus to cater to the demands of the State. The Rajasthan State, in that case, would meet its own demand for long-staple cotton, and any excess production could be exported to other States. Cotton imports would be cut to that extent and reliance on import of long-staple cotton reduced, and the country will be able to conserve precious foreign exchange. In areas other than the Ganganagar Belt to which I have just now referred, we could have recourse to the idea of "model farm" for improvement in the qualitative and quantitative aspects of cotton production.

The Rajasthan Government has no doubt offered incentives in the form of: (1) concessions on sales tax on raw material used by the industries, (2) exemption of octroi on imported machinery for setting up new industries and expansion and renovation of industries, and (3) use of power for industrial purposes. It would, however, be quite encouraging if sales tax and octroi on use of raw material consumed in the industry are abolished. It would reduce the cost of production of the industry relatively and make its competitive position strong *vis-a-vis* units in other States which possess other advantages. This is a suggestion for action and the loss in sales tax and octroi would definitely be compensated by the increased share from income-tax collections which would further improve with the growth of industries.

What is disturbing to an entrepreneur is the delay at various stages when recourse has to be made to the Government for various purposes. In this connection, it will be useful to recall a case where the Chief Minister of a State gave prompt directions to the secretaries of different departments in the presence of the entrepreneurs themselves. What I mean is that such expeditious way of handling things at governmental level would inspire the entrepreneurs and speed up the pace of industrial development.

Agriculture as an Industry

At the same time, agriculture, which is a premier industry, cannot be given secondary importance. It would prove advantageous if agriculture is tagged on to industry in some way, so that each could take care of the other. Presently agricultural operations in Rajasthan are chiefly confined to manual labour. If Government takes an active interest, a scheme could be devised whereby industrialists and entrepreneurs could be invited to take an active interest in agriculture as an industry. It would thus pave the way for improvements in agricultural production, quantitatively and qualitatively, through improved means.

In our country, unfortunately, hardly any entrepreneur has taken to agriculture as an industry and invested, say, Rs. 20 to Rs. 25 lakhs therein as in any other industry. There are valid reasons for keeping aloof, but the Government could do something to devise a method whereby industrialists and entrepreneurs might feel interested in taking up agriculture as an industry and improve production through intensive or extensive cultivation and possible mechanisation. It is hoped that the Government would look into this idea.

Conclusion

In conclusion, it is suggested here than in the present circumstances, when developmental activities are to be accelerated in Rajasthan and when the Rajasthan Chamber of Commerce and Industry and the State Government are unanimous on putting Rajasthan on the industrial map of India, there should be a permanent office over here in Bombay, as also in Calcutta, to be headed by a R.A.S. officer who is fully equipped with the procedure of processing applications for establishment of industries in Rajasthan and who is posted with all possible information about the State of Rajasthan. Such an arrangement would establish liaison between the industrialists and the Rajasthan Government, and much of the time which is now wasted through correspondence could be saved and proper, authentic and correct guidance given to intending entrepreneurs. It is then and then only that industrialists and entrepreneurs could take a more active interest in the establishment of industries in Rajasthan.

I.O.B. is big enough to serve you...

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased". They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

Range of I.O.B. services: Savings and Current Accounts—Recurring and Fixed Deposits—Personal and Business Loans—Bills Payment Service—Gift Cheques—Travellers Cheques—Safe Deposit Lockers —Trade and Export Information and Advice—and whatever other specialised help you may need.

NEW SUSPENSION BRIDGE IN SCOTLAND

NOVEL FEATURES IN DESIGN AND CONSTRUCTION

THE development of National Highways in India involves, among others, the construction of dozens of road bridges, mostly over rivers. As many as 20 major bridges have been completed in the first three years of the current Plan as part of the National Highways programme. There are also several other road bridges which are under construction now. Some of these are not over rivers but over creeks (sea inlets) like the Thana and Bassein creeks in the Bombay area. It may be that these creek bridges will present difficult engineering problems in the course of construction—problems not dissimilar to those faced and solved at Queensferry (Scotland) where a road bridge across the Firth of Forth has just been completed and opened to traffic. The Forth Bridge, incidentally, is a marvel in structural engineering. It is mainly a suspension bridge, the suspended structure being nearly 6,000 feet long. But it has also extensions on either side into the approach viaducts and roads. The details about this bridge (according to a Supplement to *The Financial Times*, London, dated 4th September 1964) may be of interest to engineers and administrators who have to get bridges constructed over creeks, firths (estuaries) or river ports like the one on the Hooghly at Calcutta. And the details may be all the more interesting to them, if some of the new road bridges under construction or contemplation in India happen to be "suspension" bridges. Incidentally, the main elements of a suspension bridge are (i) towers built upon foundations, (ii) main cables fastened at their extremities to anchorages sufficiently massive to resist the pull exerted upon them by the cables, and (iii) a stiffening truss, slung at intervals from the main cables by steel wire ropes, which carries a grid of beams above which are the roadway and footpath decks.

Economy Considerations

A lot of fresh thinking, it is said, has gone into the designing of the new Forth Bridge which is the first long-span suspension bridge to be completed outside the United States and the fourth longest in the world. Such reappraisal of traditional structural features of a suspension bridge with its towers, cables, anchorages and a stiff, suspended deck has been done from the point of view of economy. The most striking result of fresh thinking is to be seen in the design of the towers in the Forth Bridge. For reasons of economy, these have been made as slender as possible, consistent with adequate stability during erection. The tower legs are made of welded high tensile steel box sections, each 47 feet long, with their ends machined square, to butt together. The diagonal bracing members are also hollow sections, completely sealed with a smooth exterior. The entire tower design is stated to be representative of the latest developments in welded steelwork design and fabrication. The relatively light weight of the towers in the Forth Bridge, as compared with riveted mild steel towers of conventional design, is particularly noteworthy, for the cumulative effect of the three contributory factors—choice of width, use of high tensile steel, and welding, each producing a saving of 20 to 30 per cent—is a weight less than half that of the conventional type.

Another novel feature of the Forth Bridge, adopted for reasons of economy, is the use of a light steel plate deck on the main span. On the half-inch steel plate has been laid mastic asphalt for a thickness of 1½ inches in the roadways section of the bridge. The cycle track and footway tracks are of thinner plating, surfaced with ¼ inch of rubber-bitumen. The stiffened steel plate decking has been laid on the bridge in panels eight feet wide, 60 feet long, and welded in place. It has been calculated that this steel deck, though in itself more expensive than concrete, has led to considerable overall economy by the saving in the weight of cable, for, on a span of 3,300 feet, each ton of deadweight requires half a ton of cable wire to support it.

The form of cable anchorage is yet another novel feature of the Forth Bridge. There are four separate anchorages, one for each end of each cable, each consisting of a massive block of concrete placed in a tunnel driven down into the rock at an angle of 30 degrees to the horizontal. Each strand shoe is connected by two high tensile steel bolts to a massive steel slab on the face of the anchorage, and the slab is secured to the concrete block by means of wire strands laid in steel tubes running the full length of the block and prestressed from the lower end. In this way the anchorages have been prestressed by forces considerably greater than the maximum pull from the cable, so that there is no possibility of the slabs moving away from the concrete.

Other New Features

Some other novel features of the Forth Bridge are equally notable. The attachment of the cable bands is one of them. The bands here are circular cast steel bands, one inch thick, cast in two halves and gripped on to the cables by steel bolts. The type of bolt used here is one developed for similar situations where a high degree of tightening is required with no risk of breakage. The bolts are reduced in diameter over the centre part of their length, so that they are capable of considerable stretch—several inches—before they break. By the use of a special nut and washer, they could be tightened to a stress per sq. inch about twice as high as that normally used, thus providing an increase safety margin against relaxation and possible slip of the band. Secondly, the twin sockets for the two loops of suspender rope, which are of unequal length, also represent a new feature. This is claimed to be the neatest arrangement for the attachment to the top chord member of the stiffening truss, where two vertical bolts hold each socket in place. Thirdly, a further innovation is the use of hollow steel box members, completely sealed wherever practicable. This construction has been adopted for the chords of the stiffening trusses and other members of the deck structure. The truss chord members, two feet square and 60 feet long, are sealed by welded diaphragms near their ends, so that the inferior surfaces require no painting. This form of construction thus reduces greatly the area of steel exposed to the weather. And, lastly, care has been taken to ensure that all parts that require painting are readily accessible and the initial protective treatment is the best that can be devised. All the steelwork has been grit-blasted and sprayed with metallic zinc before the application of priming and finishing coats of paint.

Why the Suspension Type?

The reason for choosing a suspension type of bridge is simply because it is the only one practicable for spans over 2,000 feet, according to the Resident Engineer of the Forth Bridge. He points out that the greatest load that any bridge has to carry, except for those of very short span, is its own weight. On a large span bridge, the traffic load is almost insignificant in relation to the weight of the bridge. In the case of the Forth Bridge, for instance, the stiffening truss and the suspended deck weigh about 16,000 tons, but the heaviest load permitted on the roads at present is no more than 250 tons.

About 100 firms were involved in the building of the Forth Bridge. Some of them supplied only miscellaneous tools, ropes and slings, and so on. But some others made much bigger contributions—fabricating more than 22,000 tons of structural steel, making 30,000 miles of steel wire and building approach roads and viaducts. It took only six years and £18 million (about Rs. 24 crores) to build this massive and marvellous bridge.

But managing and maintaining such a gigantic bridge efficiently are no less important than constructing it economically, for the traffic flow in this new highway link is expected to be in the region of five million vehicles a year in the early period of its life. Tolls are to be collected by seven booths covering the eight traffic lanes. Initially, two of these booths are to be fully automatic. For the first year of bridge operation, the charge has been fixed at 2s. 6d. for one journey for all classes of vehicles. In the manually controlled booths, the system of toll payment is this: as the vehicle approaches the toll booth, a red light shows, the driver stops and presents to the collector the required fare. The collector presses a button receipting the fare, and, in two seconds, a green light comes on, allowing the vehicle to proceed. In the case of automatic booths, the driver drops a half-crown into a basket arrangement, the coin is receipted and the green light comes on. If the automatic toll system proves successful, the number of automatic booths will be increased gradually as operators and travellers become familiar with the system.

NIMBUS WEATHER SATELLITE

The United States has just crossed yet another milestone in space exploration by launching Nimbus I weather satellite into orbit. The orbiting of this 830-pound weather-watcher is a further step towards the U.S. programme to develop an advanced meteorological satellite system.

The Nimbus satellite, which resembles a big 'awkward' bird, orbits around the earth 14 times a day, with its sharp television eyes examining the weather situation below. It has a flat bottom, skeletal frame, tapered head, and stiff ceramic wings. It employs a stabilisation system which keeps its cameras pointed at earth all the time. It has also a system by which infra-red (heat radiation) sensors automatically switch on, as the daylight cameras switch off, to get pictures of night-time cloud cover.

The satellite has two daylight camera systems one of which is named Automatic Pictures Transmission (A.P.T.) which was successfully tested on the eighth Tiros satellite last December. The A.P.T. system makes it possible for meteorologists of any nation to obtain photographs of the cloud cover over their own part of earth quickly and cheaply. This is done through the simple ground stations that command the satellites to transmit the pictures. The national A.P.T. stations for the first Nimbus flight include: Colaba Observatory, Bombay, and similar observatories in France, Canada, England, Hong Kong, West Germany, Denmark, Australia, Indonesia, Brazil, Switzerland and Republic of Argentina.

The other daylight photography system is an array of three cameras called 'Advanced Vidicon Camera System (A.V.C.S.). The pictures from this system (96 of them can be made during each orbit) are considerably more detailed than those from the other systems. The pictures taken from this system can be transmitted or stored on magnetic tapes and transmitted later to stations situated in Alaska and North Carolina in the U.S. The pictures thus taken are immediately relayed to the Goddard Space Flight Centre and the U.S. Weather Bureau's National Weather Satellite Centre, both in Maryland, where photographic negatives are produced within one minute after receipt of the pictures. Thus Nimbus' pictures, cloud temperature readings and other weather data are being provided to the world meteorological community for the purpose of advancing man's understanding of weather and aiding in weather forecasting.

EASTERN METALS REVIEW

The 1964 Mid-year Number of *The Eastern Metals Review* (edited by Mr. M. Vinayak, published from 38, Strand Road, Calcutta 1, and priced Rs. 5) discusses the various aspects of the mining industry, in general, and the non-ferrous metal industries, in particular, by bringing together a number of authoritative articles on the subject by experts. An editorial on the non-ferrous metals in the fourth Plan urges the planners not to set a too ambitious target for the industry as a good part of the capacity envisaged in the third Plan will spill over into the fourth. It adds that "the overall economic conditions in the country and the resources that can be deployed in implementing new projects without adding to the current inflationary pressures will have to be scrupulously studied." Mr. Manubhai Shah, Union Minister of Commerce, in an article on the export prospects for the manufactures of non-ferrous metals, narrates the steps taken by the Government to stimulate them. This special number also contains a comprehensive statistical survey of the metal industry, giving, among others, a country-wise breakdown of India's imports of non-ferrous metals in the first half of this year.

LD STEEL-MAKING PROCESS

The LD (oxygen-blast) steel-making process was introduced by a growing number of steel mills throughout the world during 1963. In the past year, 13 new LD steel mills were put into operation, boosting world steel production by about 30 per cent. At the outset of 1964, 63 LD steel mills with a combined annual capacity of about 48 million tons were operating. Another 65 LD steel plants with an annual productive capacity of nearly 60 million tons were under construction or in the planning stage in 1963. With the majority of these construction projects due to be completed by the end of 1965, LD steel-making capacity throughout the world is then expected to reach about 100 million tons annually. LD steel mills would then account for about a quarter the world's total crude steel capacity.

NEW PRODUCTS AND PROCESSES

New Synthetic Aviation Oil

A NEW high performance synthetic oil to meet the growing demands of new engines has been produced by Esso Research Limited, Abingdon, United Kingdom, the originators of the first synthetic aviation lubricant for use in gas turbines in 1949. Esso Extra Turbo Oil 274, the new product which will be available for international use, has superior properties in high temperature operation, giving aviation engine designers freedom to raise engine operating temperatures and to increase engine thrust. The new oil gives superior cleanliness at bearing temperatures 50°C. above those previously used. Flight trials of the new lubricant with British European Airways and British United Airways together with laboratory and engine tests carried out by Rolls Royce, Bristol Siddeley and the British Ministry of Aviation have thoroughly evaluated the new product. The new oil has ample load carrying ability, producing less deposit formations and is free from limitation due to corrosion of engine and airframe materials. It further improves performance and reduces operating costs.

Highly Versatile Rotary Press

A multi-purpose rotary press designed by a British firm of printing engineers for large quantity output will produce book sections, magazine sections, or folded business forms and brochures in a range of sizes which, it is claimed, have never previously been possible from one machine. It can be used for either letterpress or dry offset printing. The machine incorporates a number of innovations, including an entirely new type of adjustable jaw and tuck folder, the flexibility of which permits an exhaustive range of cross folds. This folder has introduced a non-orin bed linen into the marmum use of paper. Pin collecting cylinders, a traditional feature of cross folders, are not used, and there are, therefore, no holed page edges to be trimmed.

Non-iron Bed Linen

After numerous experiments, an Austrian firm has introduced a non-iron bed linen into the market which can be cleaned in any washing machine without requiring any special washing powder. It is non-shrinkable and has resistance to wear and tear. The non-iron sheet is a specially dense and fine threaded sheet-fabric from 100 per cent cotton which is very wear-resisting with little weight and volume. This fabric is manufactured according to a method where the cellulose molecules of the cotton are chemically interlaced by the introduction of bifunctional groups. This refinement differs completely from the so-called synthetic resin equipment and achieves altogether new effects. By the use of first grade basic materials, a high initial strength is obtained. Besides, tests have shown that the new non-iron sheets lose none of their strength after being cooked and washed twenty times in a washing machine, whereas normal linen goods lose 10 to 20 per cent of the quality after such a treatment. The handling of the new non-iron sheets is very simple. After the washing it can be wrung by hand or machine, the only important thing is that the washing is hung onto a well-stretched washing line. The linen becomes even smoother when drying. It should thus be put together straight after it is taken from the washing line so that creases are avoided which could be the case if it is pressed into a washing basket.

High Temperature Casting Alloy

A new casting alloy to meet the growing demand for improved high-temperature materials for aircraft gas turbines has been developed by International Nickel. Known as M22VC, it is a nickel-base alloy melted and cast under vacuum, which possesses outstanding rupture strength at temperatures in excess of 1,000°C. M22VC is now in an advanced stage of development and, although not yet in commercial production, it shows considerable promise and is being considered for turbine rotor blading and other high-temperature components. M22VC is basically a nickel-chromium alloy strengthened by additions of tungsten, molybdenum, aluminium and tantalum. It offers appreciable advantages over existing cast and wrought materials in terms of specific strength at high temperatures. Good castability with freedom from dispersed micro-porosity is exhibited by the alloy.

Semi-automatic Labeller

For manufacturers who want a fast labelling machine, but not one so fast and so expensive as a fully-automatic installation, Purdy Machinery Company Ltd., 41/2 Prescot Street, London, E. 1, has developed a semi-automatic labeller that has a speed of about 60 a minute. There are two versions of it—one for edge gumming only, the other for all-over gumming. Labels up to 5½ in. in height can be applied to round, oval or flat surfaces. A container is released to the labelling head each time a pedal is pressed. The rest is automatic. Their agents in India are W. H. Brady and Company Ltd., Brady House, 12/14 Veer Nariman Road, Bombay-1.

Tough Rubber Generating Plant

The Sperry Gyroscope Company Ltd., Brentford, London, has built the first industrial scale plant for continuously producing polyurethane elastomers—synthetic rubbers with extreme toughness and wear resistance. Besides making continuous production possible, the equipment is capable of producing various blends of the raw materials, controlled and mixed with accuracy, so that various qualities, such as hardness, can be "tailor made" for the job the material is to do.

Makes Clothes Look Better

Simplification of tailoring operations is one of the main claims made for the Solidot range of fusible interlinings which are now being produced by Staflex International, Staflex House, Bainbridge Street, London, W.C. 1. The interlinings are claimed to be particularly suitable for use in the manufacture of clothing made from lightweight cloths and to lead to a better "drape and handle" of the finished product. Puckering is much less likely to occur. The materials used for the interlinings consist of a cotton or canvas "carrier" cloth with adherent particles of resin. The method of applying the resin has not been disclosed in detail, but it is understood to be similar to the screen printing process. Fusing of these interlinings to the parent cloth must be done with the aid of an electrically heated press of the type normally used in the clothing industry.

Quick Metallic Coating

Vapourised metal film can be quickly and cheaply deposited on the ceramic tubes and rods used in the electrical industry in a system reported by Leybold-Anlangen A.G. Neigasse 23, Zug, Switzerland. It consists of putting the rods loosely into a wire mesh tumbler drum lined with synthetic resin and rotating the drum at about 90 r.p.m. above the source of the metal vapour. The rods move freely in the drum and are uniformly coated without being damaged. The company states that corrosion-resistant films can be applied to nuts and bolts in the same way.

Hydrogen Assay in Aluminium

The research laboratories of the British Aluminium Company, Norfolk House, St. James's Square, London. S.W.1, have developed an apparatus to determine the hydrogen content of aluminium and its alloys. All aluminium contains small quantities of hydrogen and if present in excess the gas can be harmful. In castings, the gas can form bubbles during solidfication and cause porosity and in wrought products, it can exert a disruptive pressure, opening up defects in the metal.. To carry out a determination, a sample of aluminium is heated to 500-600 degrees at which temperature the hydrogen it contains will readily diffuse out. The gas is pumped to a collection system for measurement and analysis. The quantity of hydrogen to be measured is very small and the main preoccupation in designing the apparatus and the operating technique has been to avoid error from spurious gas evolved from the apparatus or produced by reaction between water vapour and the hot sample.

High-speed Marking Machine

Lectroetch (Great Britain), of Spur Road, Feltham, Middlesex, has introduced a fully automatic electrochemical marker which is capable of marking up to 1,250 parts per hour. It automatically ejects parts after marking, and is designed for use in production lines where hand equipment is inadequate to deal with the quantities involved. Special units have already been used, for marking such components as small turbine blades, ball bearing races, twist drills and other small tools.

Screen Printing Flat Objects

A pneumatically-operated, fully automatic machine for screen printing flat objects at up to 2,000 strokes of the press an hour has been introduced by Gayler and Hall Ltd., 130 King Street, London, W.6. The maximum print area is 6 in. by 6 in. However, several small objects can be printed simultaneously—for example, ten ball-point pens giving a production rate of 15,000 an hour.

Cement Resists Chemical Attack

A new type of special-purpose cement with exceptional strength, adhesion and resistance to chemical attack has been developed by a British firm for on-site use. It is based on polyester resins used in conjunction with a specially prepared cement. It can be mixed with water on site. The cement has been specifically developed for such applications as industrial flooring as well as for road and airfield patching where it should prove an economic proposition. The firm plans to carry out a comprehensive development programme during the next two years.

Automatic Gear Box Production Machine

The Engineering Works at Strakonice in Czechoslovakia, has produced the "LSD 4" automatic production line for the manufacture of gear boxes for the new Skoda 1,000 MB passenger car which is being produced in a new motor-car factory at Mlada Boleslav. The production line is over 20 metres long, 7 metres wide, and does the work of 40 all-purpose machines. Only two workers are required for its operation. The production line has 17 positions and performs 26 operations including drilling, reaming, machining, threading, etc.

Reversing Direct-flow Turbines

Experimental research in the world has lately concentrated on the development of *Deriaz*, *Kaplan*, and *Francis* hydraulic reversing turbines. In the research institute of CKD Blansko, National Corporation, Czechoslovakia, the three types of reversing turbines have been developed. A reversing direct-flow *Kaplan* turbine has been installed in a project under construction under a head of 14 metres with a capacity (rate of flow) of 6 cu. metres per sec., turbine operation speed of 500 r.p.m., pumping operation speed of 750 r.p.m., runner diameter of 1,000 mm., and rating of 716 kilowatts. The unit has been designed as a monoblock in full accord with its size. The shape of the hydraulic profile ensures a high efficiency at both turbine and pumping operation.

Timber Preservative

A preservative which reduces the distortion of raw timber caused by damp is being produced by a British firm. It resists attack by fungi and insects and also strongly repels water while still allowing the timber to "breathe" as if untreated. Used as a pre-treatment of external joinery, before, or instead of, the application of a primer, it reduces the dimensional changes caused by the fluctuations in moisture content.. After treatment, joints remain tight and wooden door and window frames do not twist, split, crack, swell or shrink to the same degree as untreated timber. Used instead of varnish, the clear fluid permits the natural colour of the wood to show through. The water-repellent skin which is formed preserves the colour for several years. Re-treatment includes a pigment to restore natural colour.

New Signal Generator

A new signal generator, providing a high quality amplitude modulated output from 10 kc/s to 72 mc/s, is being produced by a British firm. It is believed to be among the first of its type to use semi-conductors throughout instead of valves. It is compact and can be used on a bench or in a rack. It can operate either from mains electricity supply or from a 24 volt battery, with simple switch adjustment. Each of the eight bands in the frequency range has its own permeability tuned oscillator and output stage. Carrier frequency can be checked against built-in crystal controlled sources at intervals of 10 kc/s. 100 kc/s or 1 mc/s, and can also be verified at points plus or minus 1 kc/s from these frequencies. At carrier frequencies of 100 kc/s and above, an incremental tuning control can be used to vary carrier frequency by very small amounts, giving high discrimination and tuning efficiency on an effective scale length of 4 km.

Pollution-free Chemical Production

A process of completely eliminating the atmospheric pollution that often accompanies the production of insecticides, fungicides, refrigerants, plastics and other chlorinated materials has been jointly developed by the Hooker Chemical Corporation and the Union Carbide Corporation's Carbon Products Division in the U.S.A. The successful disposal of 20 million pounds of liquid residues last year has been due to the development of a continuous process involving a self-sustaining reaction that decomposes waste by a high temperature reaction with air and steam. According to the Union Carbide Corporation which markets the disposal system, the gases from the reactor are first scrubbed with water and then the exhaust is left free of pollution.

Electronic Checking of Propeller Blade's Pitch

Variable-pitch ejectable propellers, which provide a stand-by electrical or hydraulic power supply in an emergency on VC 10 and Trident aircraft, are being tested by an ingenious technique, using a stroboscope in conjunction with a closed-circuit television system. Checking the pitch of these propeller blades at speeds from 6,000 to 9,000 r.p.m. is undertaken in strengthened, soundproof test-cells.

Using the new technique developed by E.M.I. Electronics etc. of England, a stroboscope "freezes" the propeller as it rotates on the test rig at a known speed. The light from the stroboscope is reflected along the line of sight of the camera by a polished stainless steel sheet with a central hole through which the camera looks. A camera views the blade in its plane of rotation and a picture of the blade root is clearly seen on the television receiver outside the test-cell. The blade root has a scale marked on it which lines up with a fixed pointer on the hub, and from this arrangement fine blade angle can be assessed within an accuracy of ±1 degrees. In this way, engineers can check whether, under flight conditions, the blade will rotate at the correct speed.

IDEAS IN BRIEF

One-step descaling and phosphate coating of metal components, instead of conventional multi-step systems, is possible by a new process developed by S. Klinghoffer, 39 Kund-manngasse, Vienna 3, Austria.

A new material has been developed in Poland composed of cellulose waste, mineral flours, dyes and viscous substances for use in building work. It is called "fluid wallpaper," and is produced by Institute of Building Technique, Warsaw, Poland.

A decorative strip material for clothing and shoes has been patented which involves fine filaments of PVC and pieces of glass, artificial gems or beads. It has been patented by D. Swarovski, Glasschleiferei, Wattens, Tyrol, Austria.

A method has been developed of forming thin, high-quality heat-insulating layers on components for use in aircraft, submarines and electronics equipment by Commissariat a l'Energie Atomique, 29 rue de la Federation, Paris 7, France.

Complex welded honeycomb structures between sheets of smooth metal—suitable for one-piece heat-exchangers and domestic radiators—can be simply produced by a new method invented by Vereinigte Deutsche Metallwerke, Amder Sandelmuhle, Frankfurt, West Germany.

New type grinding wheels are claimed to have longer life, greater hardness and better thermal conductivity. They are produced by Metallgesellschaft, 14 Reuterweg, Frankfurt, West Germany.

PLANS FOR EXPANDING I.A.C.'S SERVICES

SOME REFLECTIONS ON MR. PARAKH'S IDEAS

By Our Aviation Correspondent

IN a land of great distances and some 450 million people, an adequate and modern transport system ranks as one of the greatest single necessities. Air transport obviously remains—and is likely so to remain for some time—outside the reach of the vast majority. India is not singular in that regard. The expansion of India's existing air services, nevertheless, is a duty which Indian Airlines, as a monopoly carrier, has to discharge. In a most interesting article, published in a recent issue of *Indian and Asian Skyways*, Mr. J. S. Parakh, the Corporation's General Manager, outlines his plans for expansion.

As at present organised, I.A.C's services cater, he writes, "solely for the well-to-do, the business class, officials, and the tourist." There are, he goes on to say, "at least two or three million middle-class travellers waiting to convert their present modes of travel and to take to the air." Mr. Parakh is probably right. Opinions, however, may legitimately vary as to where it is that these millions desire to travel and at what price they can be diverted from surface transport to air travel. Let us hear Mr. Parakh's views on these points.

"We inherited," he says, "some very obvious routes in 1946-47. We still tinker with the same, making changes here and there, and in this the eighteenth year of post-war civil aviation, we are still following the same old basic pattern. . . . This can continue, and will have to continue to meet the demand of the type of traffic which has stabilised. What is needed now is to concentrate on a 'spoke pattern' of operation. It is this pattern which is going to be the biggest attraction for the common man and increase the passengers from a million to three million in an expansion scheme of the Janata type."

"Spoke Pattern"

The "spoke pattern" he envisages are services radiating from five or six major cities—Bombay, Calcutta, Delhi, Madras, Bangalore, and Hyderabad—linking important mofussil centres of population with their respective metropolitan cities. He cites, as an example, services to link Kanpur and Amritsar with Delhi. The former service to operate twice daily, the latter once daily. Both services would be operated by one aircraft which would thus achieve a daily utilisation of about nine hours. Services from other major cities would be operated on similar lines. In this manner, Mr. Parakh proposes to serve some 40 mofussil towns of importance—or, on average, six 'spoke' services from each of the major cities.

It is an interesting concept. Operationally, of course, the plan has much to commend it. Aircraft would be based on major airports, thus, presumably, facilitating maintenance, eliminating night-stops, and economising in crews. As demonstrated by the example given, satisfactory utilisation would be achieved. Where, if anywhere, doubts arise, it is on the question of the kind of demand which would be generated. Services of this nature have been tried in the past with very indifferent success. Assuming, however, that the plan is well conceived, its success must depend on two factors—convenience and price.

Convenience

So far as travel is concerned, convenience is a highly competitive factor. Unless, of course, the means of transport in question is the sole and only means of travel, its comparative convenience can be measured by its ease of access, the frequency of operation, and the saving of time involved. Now, almost everywhere, the drawback of very short haul air services—and those contemplated would be of this nature—is the quite disproportionate overall time of journeys *vis-a-vis* the actual time of flight. Formalities, and road journeys to and from airports, are, of course, responsible.

Mr. Parakh proposes to make these 'spoke' services of an austerity nature. There are to be no hostesses, no catering, and—though this is not clear—possibly, no reservations and no surface transport. Although, in the mofussil, airports could—and should—be close to the towns they serve, those at Bombay, Calcutta, Madras, and most other major cities, are not. A lack of free surface transport might detract very materially from the convenience of these services—and, incidentally, add considerably to the price.

Finally, the time factor. To create demand, the proposed air services will have to show a substantial saving of time over alternative means of transport. Convenience, we have to remember, is a competitive factor.

At What Price?

We come now to the second requirement for success—that of price. Mr. Parakh tells us that the fares on these services will be some 25 per cent less than the general level of fares prevailing today. These fares, then, will be approximately the same as those of first-class rail. It is a substantial reduction—but whether substantial enough remains to be seen. Be that as it may, at this level of fare, using Fokker Friendship or Avro 748 aircraft, the break-even load factor, it seems, would be in the neighbourhood of 80-85 per cent. In other words, out of the 45 seats offered, it would be necessary to fill 35 to make services self-supporting.

The question, then, is whether, at fares comparable to first-class rail, the demand would be sufficient to reach this rather ambitious target? A possible way to find out, perhaps, is to study the statistics of first-class rail traffic between the various terminals of the proposed air services. Without some such study, one is groping in the dark. One hazards the guess, nevertheless, that, for some years at least, air traffic would fall very far short of the target. One is inclined to the view that aircraft smaller than the Friendship or 748 might provide a better answer.

It is, of course, generally true that the smaller the aircraft, the higher the ton-mile or seat-mile cost of operation. In other words, if the Avro 748 requires a load factor of 80 per cent, a smaller aircraft might require a load factor of 90 per cent to break even. On the other hand, the hourly cost of operation would be less and failure to reach the required load factor would, consequently, be less costly. Moreover, the number of passengers needed to fill 90 per cent of the seats would be less. So much, of course, is obvious.

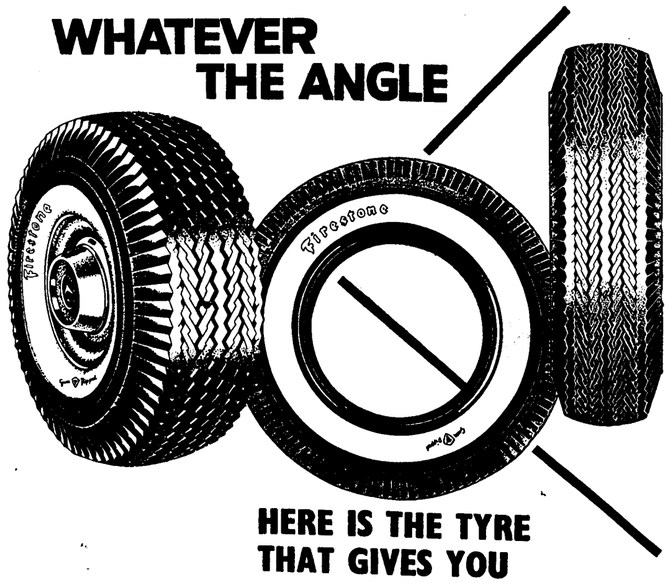
Type of Aircraft

And, on the subject of alternative aircraft, there is perhaps, an even more important issue to be considered. There is the question of airports. Some, at least, of the contemplated services will require the construction of airports, or, where these already exist, their enlargement to accommodate such aircraft as the 748. This will entail a costly building programme, which, if traffic fails to come up to expectations, will be money largely wasted.

Would it not, in the circumstances, be wise to study the possibilities of using STOL or VSTOL aircraft. Such aircraft would require much shorter runways and this might sensibly reduce the cost of the airport building programme. There are many STOL aircraft now available, some small and unsophisticated, others—such as the Breguet 941—larger and more costly. We can hardly doubt that VTOL or VSTOL aircraft will operate most of the very short haul routes of the future. Some three or four years from now, when I.A.C. comes to launch its expansion programme, the choice of aircraft will, doubtless, be wider. But now, perhaps, before the new airport construction is undertaken, might be the time to study the possibilities. As Mr. Parakh is well aware, the art of airline management is to foresee, rather than to wait upon, events.

It has been estimated that industrial workers in Germany are putting in 8.1 per cent fewer hours for 146 per cent more pay than in 1950. The average gross weekly wage in 1963 was DM. 172 (Rs. 206.50), as compared with DM. 70 (Rs. 84) in 1950. The average paid hours last year were 45.4 per week, as compared with 49.4 in 1950.

WHATEVER THE ANGLE



HERE IS THE TYRE THAT GIVES YOU EXTRA SAFETY

This is the tread pattern which reflects years of research on testing grounds and race-tracks to provide motorists with maximum tyre safety. Thousands of safety traction angles grip the road and make all the difference in easier steering and better traction when you start and stop. You know what you are getting when you buy Firestone.

JINDAL quality steel pipes

Quality steel pipes are essential for industrial and agricultural development. For carriage of all kinds of fluids and gases and fabricating structural jobs quality steel pipes count.
And **Jindal** make quality steel pipes ! Produced from the imported modern machineries and by the right technical skill at every phase of operation, **Jindal** steel pipes are available upto 4" (100 mm.) diameter according to IS. 1239—1958.

PIPES FOR PROGRESS

EXPORTS OF INDIAN GOODS TO U.S.A.

SOME LATEST TRENDS

By A Special Correspondent

A NOTABLE feature of India's foreign trade in 1963-64 was the increase of about Rs. 15 crores in our total exports to the U.S.A., as compared with the preceding year. This increase by itself cannot be considered substantial but then it should be remembered that in 1962-63, our exports had actually declined to Rs. 113.81 crores from Rs. 115.06 crores in 1961-62. The rise to Rs. 128.32 crores in 1963-64 was, therefore, encouraging.

The commodities, the export of which increased significantly, were sugar from Rs. 3.90 crores in 1962-63 to Rs. 10.34 crores in 1963-64, wool and animal hair from Rs. 33 lakhs to Rs. 1.33 crore, coffee from nearly Rs. 15 lakhs to Rs. 83 lakhs, raw cotton from Rs. 45 lakhs to Rs. 61 lakhs, cotton waste from Rs. 60 lakhs to Rs. 94 lakhs, natural gums from Rs. 1.32 crore to Rs. 2.01 crores, leather from Rs. 1.74 crore to Rs. 2.26 crores.

As regards jute goods, the trend in exports was as follows:

(Value in thousands of rupees)

	1962-63	1963-64
Jute twist and yarn	3,71	7,60
Hessian cloth	54,99,34	59,81,64
Sacking cloth	56,39	54,55
Webbings of jute	43,26	32,42
Jute hagging for raw cotton	4,68,23	4,66,21
Hessian bags	9,77	15,25
Sacking bags	5,53	3,51

It is seen that there was a substantial increase in the export of hessian bags and hessian cloth while there was a decline in sacking cloth, webbings of jute and sacking bags.

Other important commodities, the export of which to the U.S. declined in 1963-64 as compared with the previous year, were manganese ore from Rs. 2.08 crores to Rs. 98 lakhs, lac from Rs. 1.31 crore to Rs. 98 lakhs, essential oils from Rs. 71 lakhs to Rs. 31 lakhs, mica from Rs. 2.34 crores to Rs. 1.81 crore, grey sheetings from Rs. 1.11 crore to Rs. 4.83 lakhs; black pepper from Rs. 2 crores to Rs. 70 lakhs and tea from Rs. 6.32 crores to Rs. 5.75 crores.

Although our total exports to the U.S. were higher in 1963-64, our share in that country's imports continued to be negligible, being less than 2 per cent. The actual position in the first quarter of 1964 was as follows:

(In thousands of dollars)

	U.S. imports	Imports from India	Imports from India as percentage o total
January 1964	1,473,255	22,405	1.52
February 1964	1,322,260	18,221	1.38
March 1964	1,567,306	23,573	1.50

Another significant fact is the lack of progress in regard to the diversification in our exports to the U.S. No doubt, a variety of our engineering products is being exported to that country, but, apart from a few items like household sewing machines, cast iron pipes and fittings, the others are not important in terms of quantity or value. And even in household sewing machines, our export in 1963-64 received a setback—the number exported being 3,485 against 8.803 in the previous year. Footwear was another non-traditional item the export of which went up from Rs. 21 lakhs in 1961-62 to Rs. 34 lakhs in 1962-63 but dropped to Rs. 27 lakhs in 1963-64.

The prospects for our exports to the U.S., however, appear to be encouraging, in view of the remarkable buoyancy of the U.S. economy. The programme of tax reduction has given a strong stimulus to economic growth. The gross national product is now expected to reach $630 billion by the end of the current year. Other indicators of a fast growth are provided by the expenditure on new plant and equipment, higher trend in industrial production, bigger personal incomes, larger employment and boom in building activity.

The seasonally adjusted rate of expenditure on new plant and equipment for 1964 is placed at $44 billion, as against $39 billion in 1963, a rise of 12 per cent. The index of industrial production in June this year (1957-59=100) rose to 130.3 from 124.7 in June 1963, a rise of 5 per cent. The personal disposable income with the people is expected to reach an annual rate of $500 billion by the end of this year. The total civilian employment in June 1964 rose to 71.9 million from 70.3 million in June 1963, while new housing construction expenditure in June was $65 billion against $62 billion in June 1963.

Commenting on the prospects for imports in the U.S. in the current year, India's Consul General in New York says:

"Imports [illegible]

seasonally adjusted annual rate of $17,953 million, showing an increase of about 8 per cent over the $16.591 million annual rate for the corresponding period of 1963. The annual rate attained by imports in January-May 1964 is significant, in that it was in line with the earlier forecasts for the year. The U.S. economy bears all the encouraging signs of prospects for continued growth or at least sustained level of imports through the rest of the year. This is borne out by the predictions relating to various economic indicators."

According to U.S. statistics, the trend in the import of selected Indian goods into the U.S. in the first quarter of 1964 was as follows:

U.S. Imports from India

(In thousands of U.S. dollars)

Article	February 1964	March 1964	Total Jan.-March
Meat and meat preparations	43	23	126
Fish and fish preparations	549	766	1,697

Total including other articles	18,221	23,573	64,199

Although the demand for Indian goods in the U.S. may continue to show an upward trend in the coming months, we have to take note of the growing competition to some of our traditional items. For instance, in black pepper, a major item of our export, competition from Indonesia is increasing. In the first quarter of 1963, India supplied 3.9 million lbs. of black pepper to the U.S. against 5.9 million lbs. by Indonesia. But, in the first quarter of 1964, India's share had fallen to 2.0 million lbs., as compared with Indonesia's 6.4 million lbs., as shown below:

U.S. Imports of Black Pepper

(Figures in thousands)

	India		Indonesia	
	Lbs.	$	Lbs.	$
January	179	50	1,368	388
February	470	136	3,095	893
March	1,391	402	1,994	548
Total	2,040	588	6,457	1,739

In the import of castor oil, which amounted to about 19 million lbs. in the first quarter of 1964, India had no share at all because Indian prices were about 2 cents per lb. higher than the level prevailing in New York. The major suppliers were Brazil, West Germany and Japan.

In manganese ore, some new suppliers have appeared on the scene. For example, in January-April 1964, Gabon and Ivory Coast supplied 42,038 short tons and 22,588 short tons, respectively, whereas their share was nil in the corresponding period of 1963. At the same time, many countries were able to increase their share substantially. Thus, import from British Guiana went up from 53,275 short tons in the first four months of 1963 to 60.833 short tons in the similar period of 1964, Morocco from 9.930 short tons to 16,985 short tons and Republic of South Africa from 72,063 short tons to 91.230 short tons. India's share, however, declined sharply from 103,134 short tons to 26.168 short tons.

The import of Indian mica, including block, muscovite and splittings, in the first quarter of 1964 totalled 1,313,932 lbs. valued at $754,688, against 1,588,505 lbs. valued at $1,009,754 in the first quarter of 1963. It will be seen that the earnings were much lower in the current year, although there was no appreciable reduction in quantity. This was due to the fact that splittings formed the bulk of imports from India, accounting for 1,174,304 lbs. valued at $509,102. India's competitors in mica are Brazil and Argentina.

Imports of shellac from India in the first quarter of 1964 amounted to 3,200,492 lbs. valued at $648,055, as against 3,376,090 lbs. worth $840.989 in the similar period of 1963. The lower imports were due to the fall in demand. The U.S. total imports in the first quarter of 1964 were only 5,658,260 lbs. against 11,117,278 lbs. in the first quarter of 1963. The decline in the import from Thailand, our main competitor, was even more severe, from 7,509,895 lbs. to 2.190,188 lbs.

In spite of competition from other countries [illegible]

be stepped up by making more persistent efforts and by giving greater attention to regular and timely supplies, proper quality and competitive prices. Not only traditional but other goods have also good scope. For instance, the export of handicrafts has shown an increase in recent years. Handicrafts include many items like carpets, druggets and floor coverings, ceramics, toys and dolls, embroidered work, coir products, jewellery, metalware and so on. In these and in various other products, good scope exists for increasing our exports if only serious attempts are made to exploit this vast market.

INDIGENOUS HYDROFLUORIC ACID PLANT

Anhydrous hydrofluoric acid is a colourless, fuming and corresive liquid which is used for glass etching, enamel striping, steel pickling and metal cleaning. It is also used in the manufacture of sodium, fluoride, synthetic cryolite, other organic fluorides and organic fluorine compounds. At present, the entire requirements of this country for hydrofluoric acid and fluorine compounds are met by imports. The actual imports (annual) are about 75 tonnes of technical grade hydrofluoric acid and two tonnes of analytical reagent and chemically pure grade acids, besides several hundred tonnes of fluoride. Despite tremendous fluorspar reserves in the country, the benefaction of fluorspar has not yet been explored well enough to produce the acid grade fluorspar. The establishment at Thana (Maharashtra), of a pilot plant with a capacity to produce 500 lbs. of hydrofluoric acid, sodium fluoride sodium bifluoride, potassium fluoride, ammonium bifluoride and several other fluorides per day by the National Fluorine Corporation is, therefore, a pioneering venture, the daily capacity is expected to be raised to one tonne by the first quarter of 1965. The factory, it is claimed, has been designed, fabricated and installed without any foreign collaboration whatsoever. Plans are afoot to set up a good research laboratory for developing fluoride manufacture. It is proposed to set up another plant capable of producing 5 to 10 tonnes of fluorides and fluorine compounds per day.

WORLD TRADE IN APPLES

Despite an all-time record output of 15.8 million tons of apples in 1963-64, world trade in apples remained unchanged as in 1962-63 at 1.4 million tons though it was a little less than 1.8 million tons in 1961-62. The season was "particularly difficult" for exporters, mainly because Western Europe—the main market for apples—harvested a large crop, contrary to the rhythm of alternating good and bad years evident since 1954-55. According to a note in the latest *Monthly Bulletin of Agricultural Economics and Statistics*, published by the F.A.O., Rome, almost every country in the northern hemisphere, barring the United States, had a bigger harvest in 1963-64 than in the previous year.

The exports of apples in 1963-64 were below the record shipments in 1959-60 and 1961-62, due to a sharp fall in Argentina's shipments. The Federal Republic of Germany was the biggest importer of apples, taking more than 280,000 tons, followed by Britain with 112,000 tons and other West European nations with less than 30,000 tons each.

WORLD POPULATION

(*Concluded from page* 507)

in rate of growth, with industrial output multiplying four times between 1950-62.

According to the percentage distribution of value added, Canada and the United States accounted for 35.8 per cent of the world total of value added in the mining, manufacturing, gas and electricity industries in 1958; the U.S.S.R. and countries of Eastern Europe for 27.2 per cent; the other European countries for 26.5 per cent, with the European Economic Community accounting for 14.2 per cent of the world total and the European Free Trade Area for 10.1 per cent. Africa, Latin America, Asia (excluding mainland China) and Oceania combined accounted for 10.5 per cent of the global total. The industrialised countries were responsible for 92.2 per cent of the value added in industry in 1958 and the less industrialised for the remaining 7.8 per cent. Of industrial production in Asia, Japan accounted for 60 per cent and India for 18 per cent.

According to the U.N. *Yearbook*, total governmental expenditures during 1962-63 in most of the developed countries continued to rise, chiefly due to the increased defence outlays. Expenditures on education, public health and other services also increased in many nations. In many countries of Asia and the Far East, total expenditures increased at a faster rate than revenue, resulting in substantial deficits in their budgets. Along with higher defence outlays in many of these countries, the development expenditures were also maintained at a high level. Tax revenue also kept pace with the uptrend in expenditures, with direct taxes being relatively important among the total tax receipts. In certain developed countries, as, for example, Sweden, there was a substantial increase in the yield from excise duties and other indirect taxes, while the revenue from income-

HINDUSTAN MOTORS FARES WELL DESPITE HANDICAPS

LARGE A.I.D. LOAN FOR NEW PLANS

IN spite of frequent interruptions in the working of the plant due to non-availability of requisite licences for raw materials and components in time leading to stoppage of car production from July to September 1963, the Hindustan Motors Ltd. [Managing Agents: Messrs. Birla Bros. (Private) Ltd., Calcutta] has reported satisfactory results for the year ended 31st March 1964. The turnover has increased from Rs. 29.29 crores to Rs. 32.56 crores due partly to higher production in the heavy engineering division and partly on account of increase in the levy of taxes, as witness the substantially higher burden of customs, excise, port charges and sales tax amounting to Rs. 682.95 lakhs, as against Rs. 550.49 lakhs a year before.

Gross profit has, however, dropped slightly from Rs. 436.41 lakhs to Rs. 410.43 lakhs, because of the continuous rise in production costs and controlled selling prices. In contrast, net profit, which had receded in the previous year from Rs. 158.32 lakhs to Rs. 126.04 lakhs, has recovered to Rs. 146.97 lakhs, the improvement being due to a lower tax provision of Rs. 143 lakhs as compared with Rs. 222.50 lakhs in the previous year, which had been higher by Rs. 70.50 lakhs as compared with the provision for 1961-62 due mainly to the imposition of S.P.T. No doubt, the withdrawal of S.P.T. has gone a long way towards reducing the tax provision for the year under review, though it is not known what, if any, is the surtax liability. But this apart, the provision is lower also because the gross profit itself is lower and also because the amount credited to development rebate reserve is much more at Rs. 30 lakhs as compared with only Rs. 9.75 lakhs a year before. The general reserve has got again Rs. 25 lakhs.

The increase in net profit has thus been utilised to augment the reserves, while the dividend on the ten-rupee ordinary shares has been maintained at 11.5 per cent per annum and is to be paid out of dividend reserve to which an amount equal to the dividend liability of Rs. 93.09 lakhs has been carried from out of the year's profit.

The percentage distribution of the year's income, with the previous year's comparative figures given in brackets, is shown as: Materials and services 59.5 (60.5), salaries, wages and other benefits to employees 7.25 (6.75), Union, State and local taxes 25.25 (26), depreciation and development rebate 4.12 (2.75), dividend 2.09 (3.25) and working capital 0.75 (0.75).

The Company's progress in the past four years is compared in the table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sale proceeds	32,56.48	29,29.34	24,90.41	30,45.40
Other income	28.01	31.96	17.29	10.55
Stocks of finished goods and goods under process	134.33	119.55	96.98	110.05
Materials, stores and spares consumed	18,40.77	16,68.59	13,73.43	18,77.06

Preference	0.70	0.85	2.20	27.65
Ordinary	93.09	93.13	98.99	59.54
	(11.5%)	(11.5%)	(12.5%)	(12%)
Carry forward	0.13	0.03	1.26	2.76
Equity shares' market value (in rupees):	1964	1963	1962	1961
High	20.20	20.86	21.48	23.68	23.64
Low	17.16	15.28	15.00	17.68	14.32

The indigenous content of *Ambassador* cars and *Bedford* trucks will reach 90 per cent after imported machinery is installed during the current year. Demand for cars has increased considerably and manufacturers have represented to the Government for more foreign exchange in order to raise production. It is again shortage of foreign exchange that has come in the way of the Company's ability to maintain supply of spare parts to customers. However, a $23 million loan from the Agency for International Development, U.S., to import equipment for manufacturing *Bedford* engines and also for increasing the truck capacity to 15,000 a year has been sanctioned. Another loan of $2.95 million (the two make a total of $25.95 million) to cover the import of equipment required for manufacturing shovels in the heavy engineering division has also been sanctioned by the A.I.D. This division has made satisfactory progress and has booked orders for cranes with delivery periods extending to 1½ years. Import of some of the capital goods required for expanding crane production has been sanctioned by the Government and the import of the balance of equipment is to be allowed on the Company's securing necessary foreign exchange loan. A steel foundry shop under erection will make the Company self-sufficient in steel castings required for making earth-moving equipments. The Government has approved the proposal for manufacturing certain types of machine tools and the Company is looking for a suitable foreign collaboration.

Following the conversion of a further 1,833 out of 9,966 outstanding Rs. 100 fully paid 8.57 per cent preference shares into ten-rupee ordinary shares, the paid-up ordinary share capital has gone up to Rs. 809.50 lakhs and the preference share capital has correspondingly declined to Rs. 8.13 lakhs. The forfeited share account is shown at Rs. 1.97 lakh. Reserves and surplus, excluding Rs. 93.09 lakhs from dividend reserve for meeting the year's equity dividend liability for the year, amount to Rs. 287.15 lakhs. Current liabilities and provisions, including the year's equity dividend liability, amount to Rs. 689.57 lakhs and borrowings, including Rs. 277.37 lakhs from the A.I.D., are shown at Rs. 285.04 lakhs. The total short-term indebtedness thus works out to Rs. 697.24 lakhs, as against which current assets, book debts and investments aggregate Rs. 11.49 crores. The gross block, which has expanded considerably during the year from Rs. 10.71 crores to Rs. 15.67 crores, has been written down to Rs. 9.32 crores.

The net yield on the Company's Rs. 10 fully paid ordinary shares at their current market value of Rs. 18.40 *cum-div.*, works out to 5.2 per cent per annum.

(*Concluded from next column*)

432 days in the year out of which 300 days were in Indian ports alone. Rain and inclement weather resulted in further delay of 76 days while lightning strikes and labour troubles of various kinds were responsible for a further delay of 25 days. The slow arrival of cargoes to some of the ports necessitated holding up of the ships which were ready to sail and this contributed a delay of 54 days. Thus, through avoidable causes except for rain and inclement weather, the days lost by the Company, apart from normal holidays, were over 500. The fleet as a whole, therefore, spent in the liner trade 3,379 days in port and 2,301 days at sea; and, in the coastal trade, they spent 993 days in port and 282 days at sea. Nearly 60 per cent of the operating time in the liner trade and 75 per cent of the time in coastal trade was thus spent in ports. Such egregious delays lead to a tremendous loss of earning power of capital invested in ships.

In spite of the rough weather encountered by it during the past four years, the financial position of the Company is quite strong. The share capital continues to stand at Rs. 272.50 lakhs in equity shares of Rs. 10 each and is supported by reserves and surplus aggregating Rs. 165.25 lakhs. Borrowings at Rs. 1,151.76 lakhs are no doubt very heavy but the major portion of these—Rs. 1,151.74 lakhs to be exact—represents the loan taken from the Government of India for the acquisition of ships and is therefore properly reflected on the assets side in the net value of the fleet which as at the date of the balance sheet is Rs. 1,415.89 lakhs. Current and other miscellaneous liabilities and provisions are placed at Rs. 184.71 lakhs but are covered nearly two times by current assets, loans and advances, investments (chiefly in Government securities) and other miscellaneous assets amounting in all to Rs. 358.32 lakhs. During the year, the Company sold the smallest number of its 19 vessel fleet at a price slightly higher than its book value and this has brought the block account down from Rs. 23.80 crores to Rs. 23.33 crores. The depreciation accumulated on this block, as at 31st March 1964, is Rs. 9.17 crores.

Then ten-rupee ordinary shares are still quoted at a substantial discount, the price at the time of writing being Rs. 6.81.

INDIA STEAMSHIP TURNS THE CORNER

SHOCKING DELAYS IN PORTS

SPEAKING to the shareholders a year ago at the annual general meeting of the India Steamship Company Ltd. [Managing Agents: Messrs. Lionel Edwards (Private) Ltd., Calcutta], the Company's Chairman, Dr. A. Ramaswami Mudaliar, had characterised shipping "as an unpredictable industry," subject to influences some of which were outside the control of the management of shipping companies. Nevertheless, he had expressed the hope "that we have come to the end of deficit balance sheets." As the Company's annual report for the year ended 31st March 1964 reveals, this expectation has been fulfilled. For, as against the staggering loss of over Rs. 30 lakhs suffered during 1962-63, the Company has earned a modest net profit and, even though the ordinary dividend has again been skipped, with the unfavourable trend in trading results definitely arrested, the chances of the dividend being resumed in the very near future have immeasurably brightened.

The pursuance of the policy of rationalisation of sailings, initiated in the earlier years, and a close watch on expenditure under all heads have again paid the Company handsome dividends. Although the number of liner voyages completed during the year has declined by five to 43—those in the coastal service have, however, risen from 16 to 25—freight earnings have improved by Rs. 27.82 lakhs to Rs. 828.04 lakhs and, since expenses also have generally been lower, the gross profit has risen by about 50 per cent from Rs. 90.93 lakhs to Rs. 138.21 lakhs. No provision has again been found necessary for the Managing Agents' commission but that for depreciation has been stepped up to Rs. 128.64 lakhs from 120.96 lakhs. The net result is a profit of Rs. 9.57 lakhs as against a loss of Rs. 30.03 lakhs for the year before. Out of this, Rs. 1.62 lakh has been utilised for paying the dividend on the small preference capital for the year under review and the balance has been transferred to reserves.

The working results of the Company for the past four years are presented synoptically in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Freight earned	828.04	800.22	897.27	868.00
Other income	6.56	6.23	5.51	40.61
Port expenses	261.35	278.86	331.48	337.27

Ordinary				
Carry forward				
Market price of ordinary shares (in rupees):	1964	1963	1962	1961
High	7.31	8.44	8.34	9.62
Low	5.94	5.44	6.25	7.12

There was a phenomenon increase during the year under review in the operating expenses, port charges, stevedoring rates and costs rose further owing to the intransigence of the river Hooghly, the slow performance of dock workers, particularly in Calcutta, and acute congestion in the various ports served by the Company's fleet. The expenses in connection with special survey and drydocking of ships also went up, as the Company was compelled to carry out these in Indian ports, particularly in Calcutta, where, owing to inadequate facilities, attention paid to ships takes longer than in the U.K. or Continental ports. The adverse effect of these factors were, however, countered, to a large extent, by the policy of rationalisation followed by the management and the close watch on expenditure. Another equally important favourable factor was the 10 per cent increase in west-bound rate of freight made effective from 24th October 1963. Although its effect was reflected in the working results only to a limited extent, as it covered barely one-fourth of the working period, its contribution to obtaining a positive balance in trading result was substantial.

In his statement accompanying the annual report, Dr. A. Ramaswami Mudaliar, Chairman of the Company, explains at length the various difficulties faced by Indian shipping companies, in particular, and lays stress on the delays in Indian ports and the number of days lost by Indian shipping companies. It is unfortunate, he says, that, in spite of the repeated statements by the Chairmen of Indian shipping companies about the handicaps that they were seized with, little has been achieved in solving these problems or mitigating the hardships and handicaps that faced Indian shipping. During the year under review, for example, owing to berth delays, the Company lost

(*Continued in previous column*)

MUKAND IRON EARNS MORE

DIVIDEND MAINTAINED

BILLET supplies have again proved a great limitation on the operations of Mukand Iron and Steel Works Ltd. (Managing Agents: Messrs. Jeewan Ltd., Bombay). Against the 75 per cent allotment of the entitlement in the year 1962-63, the supplies shrank to 67.5 per cent during the year ended 31st August 1964, aggregating 53,989 tonnes, 6,852 tonnes less than the receipts a year before. The resultant setback in production of rolled products is reflected in a 15 per cent decline in their sales. Total sale proceeds have been lower at Rs. 614.54 lakhs as compared with Rs. 646.45 lakhs a year before. But this is the gross turnover and after excluding the excise duty amounting to Rs. 1.05 lakh, as against Rs. 16.30 lakhs in the previous year, net sales show a modest setback of Rs. 16.66 lakhs to Rs. 613.49 lakhs. Apart from the lower burden of excise duty following the shift in the levy from bars and rods to billets during the year, the setback in sales has been further narrowed down by the rise in production of steel castings from 7,624 tonnes to 9,564 tonnes (against the target of 9,000 tonnes) leading to an increase of Rs. 25 lakhs in their sales. Actually, sales of steel castings did not keep pace with their production because a large quantity of the centre buffer coupler casting could not be despatched for want of one of its fittings purchased from outside. It is largely because of this that stocks of finished goods at the close of the year have more than doubled from Rs. 25.44 lakhs to Rs. 57.18 lakhs.

Sales of steel castings have not only prevented a big drop in turnover but have also contributed a great deal to the spurt in gross profit from Rs. 76.20 lakhs to Rs. 100.21 lakhs. The profit has been substantially higher, in spite of scrap prices spiralling up from the pre-decontrol levels of Rs. 98 for melting scrap and Rs. 25 for turning scrap per tonne to Rs. 185 and Rs. 115, respectively. The resultant increase in the cost of scrap during the year under review was Rs. six lakhs. Further, we are told, that, though the Company is virtually free from all controls, its products have to be sold at prices in line with those of the principal manufacturers. Out of a net profit amounting to Rs. 32.30 lakhs (as against Rs. 25.34 lakhs a year before), the Directors have carried to reserves Rs. 15.25 lakhs (as against Rs. 19.55 lakhs) and maintained the ordinary dividend at 12 per cent per annum not only on 906,439½ Rs. 10 fully paid shares but also on 918,306 Rs. 2 partly paid shares, which were issued in February 1963 but which became eligible for dividend only from the year under review.

The following table compares the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sale proceeds	614.54	646.45	473.03	637.45

High	19.60	21.76	29.50	33.50	28.50
Low	16.75	16.24	18.76	23.12	17.00
		x.r.	x.r.		

Note.—Entire issued preference capital of Rs. 10 lakhs was redeemed on 31st March 1961.

The percentage distribution of income during the year, with the comparative figures pertaining to the previous year given in brackets, works out: Raw materials 43(48), staff expenses 18(17), stores 13(11), power and fuel 4(3), other operating expenses 8(8), depreciation 3(2), taxes 6(5) and reserves 5(3).

As noted earlier, the cost of scrap consumed during the year was higher by Rs. 6 lakhs. Provisional payment of a 7 per cent increase in D.A.—it is subject to future adjustments in case of a revision by the Industrial Court on the Millowners' Association's application in this behalf—following the Maharashtra Government's acceptance of some of the Lakdawala Committee's recommendations has inflated the Company's wage bill by Rs. 4 lakhs. Under the Finance Act, 1964, *all* steel castings (irrespective of weight) are dutiable at Rs. 50 per tonne, against only two-tonne castings before which attracted excise duty at the rate of 5 per cent *ad valorem*. The incidence of the duty in the case of the Company will now go up from Rs. 50,000 to Rs. 5 lakhs.

These are some of the new factors which will indirectly tell on the Company's operations during the current year. Billet supplies, a factor of direct consequence, are expected to be made available to re-rollers at a fixed price, since billets are not among the decontrolled items. But the Directors are silent on the point of actual allotment. The expansion of steel foundry is, however, well under way and an import licence for Rs. 35.75 lakhs is on hand. The current year's production target has been fixed at 10,000 tonnes. The Company has also received licences for the machine building and structural activity and it will soon sign an agreement with the Hindustan Electric Company Ltd. for the fabrication of mechanical and structural parts of furnaces to the designs of their Swiss principals, Messrs. Brown, Boveri and Company Ltd. All major items of equipment to be imported against a licence of Rs. 1.60 crore for the wire rod project are expected to arrive shortly. Exports of rolled bars last year amounted to Rs. 7.35 lakhs and are expected to improve during the current year.

The Company's share capital of Rs. 110.27 lakhs, including Rs. 1.25 lakh in 10-rupee deferred shares, is backed by Rs. 106.63 lakhs (excluding from general reserve Rs. 17.75 lakhs required for the year's dividend liability) in reserves and surplus. Out of secured loans of Rs. 126.68 lakhs (Rs. 30.95 lakhs a year before), Rs. 106.44 lakhs (Rs. 21.50 lakhs) represent bank borrowings and the balance long-term institutional loans. These bank borrowings, current liabilities (including the year's dividend liability) and provisions bring the total short-term indebtedness to Rs. 193.89 lakhs which is covered by current assets, book debts and investments aggregating Rs. 249.27 lakhs. The gross block of Rs. 231.72 lakhs (Rs. 199.99 lakhs a year before) has been written down to a net value of Rs. 134.51 lakhs. Capital works in progress in connection with the wire rod project are valued separately at Rs. 47.26 lakhs.

The Rs. 10 fully paid ordinary shares of the Company offer a net yield of 5.4 per cent per annum at their current market value of Rs. 18.72 *cum-div.*

The Renusagar Power Company Limited, a new public company registered at Renukoot in the Mirzapur District of Uttar Pradesh, has obtained official consent to issue capital of Rs. 350 lakhs in equity shares of Rs. 100 each. The whole of this will be subscribed by the Hindustan Aluminium Corporation Limited for cash at par. The money will be utilised for financing the setting up of a captive power plant capable of producing 125 MW.

GREAVES COTTON'S PROFIT BETTER

RESERVES STRENGTHENED

THE results of Greaves Cotton and Company Ltd. (Managing Director: Mr. N. M. Wagle, Bombay) for the year ended 31st March 1964 are quite impressive. The turnover of the Company, which had reached Rs. 784.42 lakhs in 1962-63, has gone up to Rs. 1,092.84 lakhs, recording an increase of about 40 per cent. The trading profit (excluding income from investments and remuneration from managed companies) alone has jumped up from Rs. 41.69 lakhs for 1962-63 to Rs. 50.19 lakhs, an improvement of 20.3 per cent. But, to some extent, this rise has been offset by a fall in investment income from Rs. 11.38 lakhs to Rs. 7.62 lakhs. Accordingly, the gross profit has risen by only a little over ten per cent, from Rs. 57.59 lakhs for 1962-63 to Rs. 63.64 lakhs for the year under review. The net profit before tax but after depreciation has also risen by almost the same percentage from Rs. 54.53 lakhs to Rs. 60.48 lakhs, as the provision for depreciation is only a shade higher at Rs. 3.16 lakhs. The dividend on ordinary shares has been maintained unchanged at 12 per cent per annum for the third year in succession. It takes up Rs. 16.20 lakhs and the dividend on preference shares requires Rs. 3.57 lakhs. The total amount payable by way of dividends is thus equal to a little less than one-third of the profit before taxation.

The manner in which this profit (before tax) has been appropriated is rather clumsy and may cause misleading impressions on those who do not know the intricacies of corporate accounting. In fact, the method followed by them provides a distorted picture of the reserves and surplus, as well as of current liabilities and provisions included in the balance sheet. After some minor adjustments, the entire pre-tax profit, together with the undistributed surplus, giving a total of Rs. 61.25 lakhs, has been transferred to general reserve. Then one is told that both the dividends and the liability for taxation will be met out of the reserves as and when they fall due. This arrangement may serve the ends of law, but it does unduly inflate the size of the reserves and understates the extent of liabilities. The Company, however, may have the satisfaction that it is not alone in following this practice and quite a few others also are indulging in it.

The tax liability—the Company does not attract any surtax in the year under review—is estimated at Rs. 28.47 lakhs, as against Rs. 23 lakhs last year. If this liability is adjusted against the profit, it is seen that the amount of profit conserved this year is Rs. 12.24 lakhs, the corresponding figure for the previous year being Rs. 11.76 lakhs. It will thus be seen that the benefit of improvement in profit for the shareholders in the form of dividend and additions to reserves has not been much.

The Company's progress in the past four years in terms of financial results is presented in the following table. While studying the table, readers must, however, bear in mind the qualifications made by us in the preceding paragraphs.

(In lakhs of rupees)

	For the year ended 31st March

† Before provision for taxation.
‡ Dividends for 1964 will be paid out of the general reserve.
§ For 1963, the dividends were paid out of dividend reserve.

A noteworthy feature of the Company's activities is that the sale of products manufactured in India is making a growing contribution to the turnover. Trading during the current financial year continues to show progress and, subject to any unforeseen developments, a further expansion in the Company's turnover can be

(Continued in previous column)

(Concluded from next column)

expected. But the profitability will depend upon the incidence of taxation and the trend of prices and costs, neither of which has yet attained a measure of stability in this country. One may, nevertheless, expect the level of profit to edge forward, as not all the increase in turnover is likely to be offset by higher costs and taxes.

The Company is essentially a trading and holding company. The manufacturing activities are carried out through a number of subsidiaries. Its own (net) block is only Rs. 23.63 lakhs, but its investments in subsidiaries, other companies, etc., are of the order of Rs. 212.77 lakhs. Its current assets, loans and advances amount to Rs. 556.88 lakhs, as against which it has liabilities in the form of loans and other working capital, as well as provisions, aggregating Rs. 510.63 lakhs. The paid-up capital of Rs. 185 lakhs (Rs. 50 lakhs in preference shares) is supported by reserves and surplus of Rs. 98.16 lakhs (approximate), after taking into account the liabilities in respect of dividend and taxation for 1963-64.

The Rs. 100 fully paid ordinary shares are currently quoted at Rs. 173.75, at which rate they offer a net yield of about 6 per cent per annum.

INDIAN CABLE'S ALL-ROUND PROGRESS BENEFITS SHAREHOLDERS

EXPANSION SCHEMES IN OPERATION THIS YEAR

NOTHING makes more sense to shareholders than a higher dividend. Their Company's impressive progress reports and expansion plans fail to carry much weight, when they find that the results do not come up to their legitimate expectations of a higher return on their capital. Shareholders of the Indian Cable Company Ltd. (Chairman: Mr. J. V. Jardine Patterson, Calcutta) also had such unsatisfying experience in the recent past, though they could hardly hold the Directors responsible for keeping the dividend unchanged at 22½ per cent per annum during the four years ended March 1963. Judged thus, the results of the Indian Cable for the year ended 31st March 1964 are fully satisfying. For the Directors have capped the Company's all-round progress during the year with an increase of 2.5 per cent to 25 per cent in the rate of dividend on the 10-rupee ordinary shares. What is more, they have held out promise of better prospects, since they state that all the expansion schemes which were under progress in the past few years are expected to go into operation during the current year.

Sales for the year under review amounted to Rs. 11.98 crores as compared with Rs. 10.48 crores in the previous year, showing an increase of about Rs. 1.50 crore or 14.3 per cent. Gross profit has gone up considerably from Rs. 175.86 lakhs to Rs. 211.26 lakhs. In spite of this big rise in profit, the tax provision has increased by only Rs. 10.40 lakhs to Rs. 103.40 lakhs. The tax incidence on the profit is actually lower at 54.5 per cent, as compared with 59.3 per cent a year before, due partly to the lower tax rate applicable to key industries and partly to the surtax burden amounting to Rs. 14.75 lakhs, as against the Rs. 16 lakhs payable in the previous year by way of S.P.T. Nevertheless, the incidence of taxation is still pretty high. The tax provision for the year allows for a relief of Rs. 6.34 lakhs in respect of development rebate and the amount credited to the reserve for this is much higher at Rs. 4.76 lakhs as compared with only Rs. 45,000 in the previous year. It is because of the lower incidence of tax for the year that net profit shows a greater improvement than the gross profit from Rs. 63.85 lakhs to Rs. 86.47 lakhs. The total for distribution, after making adustments, is, however, much lower at Rs. 97.04 lakhs, as compared with Rs. 143.56 lakhs, because the previous year's surplus brought in only Rs. 21,521, as against Rs. 50.15 lakhs in 1962-63, and the amount of excess provisions written back is Rs. 10.34 lakhs, as against Rs. 29.56 lakhs. It is because of the lower distributable surplus that the total amount of Rs. 34.78 lakhs carried to reserves is less than half of the previous year's figure of Rs. 87 lakhs. The dividend absorbs Rs. 62.16 lakhs, as against Rs. 53.05 lakhs a year before.

The following table mirrors the Company's progress in the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961

Low	33.00	30.00	34.19	31.25	29.12

* No preference capital since 1962-63, as such has been integrated with equity capital.

The Company's construction activity during the year continued at a high level. Of the major jobs, the construction work at the 250 MW. Dhuvaran Power Station in Gujarat and the Bhandara Explosives factory for the Defence Department were in an advanced stage of progress. The Company also completed during the year the cabling work at the New Cossipore power station in Calcutta and a number of other assignments in U.P., Maharashtra and M.P. Large orders for cabling in important power stations and in factory extensions have been booked. According to the Chairman, the development and expansion schemes could not be worked on as speedily as anticipated, because of the delay in local deliveries of structurals and equipments caused by all-round defence priorities arising from the Emergency. The expansion schemes for thermoplastic and paper insulated cables and for winding wires and strips are expected to go into production during the current year and their working will be determined by the availability of raw materials.

The Company's financial position is pretty sound. The paid-up capital of Rs. 248.65 lakhs is backed by reserves and surplus aggregating Rs. 370.14 lakhs. Borrowings, which have increased during the year from Rs. 91.80 lakhs to Rs. 148.75 lakhs, are all long-term institutional loans. Current liabilities and provisions amount to Rs. 481.99 lakhs and are well exceeded by current assets, book debts and investments aggregating Rs. 844.77 lakhs. The gross block is carried in the books at Rs. 402.36 lakhs (Rs. 348.32 lakhs a year before) and has been written down to a net value of Rs. 193.63 lakhs, with capital work-in-progress shown separately at Rs. 83.43 lakhs.

Currently quoted at Rs. 36.00 *cum-div.*, the Rs. 10 fully paid ordinary shares of the Company offer a net yield of 6 per cent per annum.

IMPERIAL TOBACCO

The results of the Imperial Tobacco Company of India Ltd. (Chairman: Mr. F. A. Collett, Calcutta) for the year ended 31st March 1964 confirm the fears expressed by the Chairman a year ago that the steep increase in the excise duties imposed by the 1963 Finance Act represented a substantially increased burden on the industry and that, with the trade undoubtedly likely to suffer, profits could not but be expected to show a "marked" decrease. Maintaining the upward trend, the turnover has, of course, risen from Rs. 50.03 crores to Rs. 55.43 crores, but most of this improvement of Rs. 5.40 crores merely represents the increase in customs and excise duties which have aggregately advanced from Rs. 21.64 crores to Rs. 26.30 crores. Further, there has been a sharp decrease in the value of closing stocks of cigarettes and tobacco from Rs. 362.44 lakhs to Rs. 292.88 lakhs; consequently, the gross profit has slumped to Rs. 345.79 lakhs from the previous year's all-time high level of Rs. 507.47 lakhs. Naturally, the essential provisions for depreciation and taxation get less, the former by Rs. 5.27 lakhs at Rs. 42.88 lakhs and the latter by as much as Rs. 76.09 lakhs at Rs. 189.97 lakhs. Even so, the net profit is as low as Rs. 112.94 lakhs, as against Rs. 193.26 lakhs for the year before. After adding to this Rs. 3.29 lakhs brought in and Rs. 2.50 lakhs withdrawn from reserves, the Directors have credited Rs. 19.40 lakhs as against Rs. 93.24 lakhs last year to the reserves. Since the balance available is inadequate to accommodate a distribution to the shareholders even at the previous year's reduced level, the dividend has been cut further by 1½ points to 6.5 per cent, subject to deduction of tax. This claims Rs. 98.54 lakhs (as against Rs. 121.28 lakhs last year), leaving a much reduced carry forward of Rs. 0.80 lakh as compared with Rs. 3.29 lakhs brought in.

The vicissitudes in the fortunes of the Company during the past four years are well reflected in the following comparative figures:

(In lakhs of rupees)

	For the year ended 31st March			
	1964	1963	1962	1961
Sale proceeds	55,43.07	50,02.52	45,90.59	42,17.62

Dividends	98.54 (6.5%)	121.28 (8%)	136.44 (9%)	136.44 (9%)
Carry forward	0.80	3.29	24.56	26.96

Market price of ordinary shares (in rupees):	1964	1963	1962	1961
High	10.06	11.25	13.37	13.19
Low	8.75	9.94	10.75	10.80

There has been no change in the Company's paid-up share capital during the year under review. It continues to stand at Rs. 15.16 crores, split into ordinary shares of Rs. 10 each. As against these, reserves, including the reserve for benefits for retiring staff (Rs. 6.3 lakhs) aggregate Rs. 11.35 crores, so that 'own' funds total Rs. 26.51 crores. With the full payment of the unsecured loan availed from banks, borrowings are nil, while current liabilities and provisions amount to Rs. 416.89 lakhs as against Rs. 532.15 lakhs. Inclusive of additions worth Rs. 58.94 lakhs (of this Rs. 9.60 lakhs represents cost of buildings and machinery under construction and in transit), the block account has risen in value to Rs. 12.95 crores and deduction from it of Rs. 4.44 crores by way of depreciation provided to-date, yields a net bolck of Rs. 8.51 crores, of which Rs. 4.90 crores (equal to more than half) are intangible assets, representing goodwill and trade marks, assets which do not contribute anything to the earning power of the Company. Investments are shown in the balance-sheet at book value of Rs. 14.52 lakhs and current assets, inclusive of loans and advances, at Rs. 22.02 crores.

The Rs. 10 paid ordinary shares of the Company are currently quoted at a discount, Rs. 8.75 *cum-div.*, and fetch a net annual return of 6.3 per cent. Even at this level, there are hardly any buyers for this scrip.

CAMPHOR AND ALLIED PRODUCTS LTD.

Thanks to the valuable technical guidance received from its collaborators, E.I. Du Pont De Nemours and Company of the U.S. and the American Hydrotherm Overseas Corporation, the Camphor and Allied Products Ltd. has been able to go into production within three years of its inception in 1961. This new Company has already produced about 100 tons of synthetic camphor from turpentine. The maximum daily output of 3,092 kilos of camphor in the last month and a half has been substantially above the installed capacity of the plant. The total sales of the firm's various products, according to its Chairman, Mr. C. C. Desai, who gave this information at the third annual general meeting of the Company held last week, were Rs. 30 lakhs till this September and they are expected to increase to Rs. 80 lakhs by the end of 1964. As the products are readily marketed, the Company, which has suffered a loss of Rs. 92,146 in its working upto the end of 1963, has every chance of bettering its financial performance during this year. The Company has negotiated with the Nepal and Assam Governments for permission to tap pine trees for oleo-resin gum in order to ensure a regular supply of the necessary raw material. Further, the Company has plans for setting up turpentine distilleries in Nepal and of establishing a small company for this purpose with the participation of influential local parties.

All this does not mean that the Company has no problems and difficulties. There has been a rise in the prices of turpentine and the State-owned I.T.R. factory has raised its price to Rs. 1.18 P per litre. The Company has made suitable representation in this regard to the U.P. Government for fixing a reasonable price. The Directors are hopeful of a satisfactory outcome.

The Company is actively engaged in developing the manufacture of ancillary products. Residual turpentine, which is mainly Carenes, is now being marketed as Grade I and Grade II turpentine. The market has been explored for the other by-products, namely: Turpene B, D, G and H, and sale of these have already started. Steps have also been taken to export some of the distilled turpentine. Actually, the first shipment of 10 tons will leave during this month.

ARBOR ACRES FARM INDIA

The Arbor Acres Farm India Limited entered the capital market on the 14th inst., with a small public issue of Rs. 3.06 lakhs in equity shares of Rs. 10 each. First incorporated as a private company in 1961, it was converted into a public company in January 1963. It has an authorised capital of Rs. 25 lakhs and a subscribed and paid-up capital of Rs. 9.44 lakhs. Shares of the value of Rs. 6.26 lakhs have been taken up by two American collaborators, namely, Arbor Acres Farm Inc. U.S.A. and International Basic Economy Corporation of U.SA., in equal proportions. The Company's total capital outlay is estimated at Rs. 34 lakhs which is proposed to be met by share capital (Rs. 12.50 lakhs), loans from A.I.D. (Rs. 12.50 lakhs) and bank borrowings (Rs. 9 lakhs). The Managing Director of the Company, Mr. S. B. Saran, told pressmen in Bombay on the 12th inst. that the Company's turnover was expected to be about Rs. 30 lakhs in 1964-65 and expand to Rs. 60 lakhs in 1965-66. He hoped that the Company would be able to pay a handsome dividend for 1965-66 as it would not have any tax liability till April 1967.

Arbor Acres Farm is the first company of its kind to secure sanction from the Central Government for entering poultry industry on a larye scale. Poultry raisinp has a tremendous potential in the country. The demand for chicken meat is estimated to be more than ten million chickens per year in Calcutta and Bombay alone. Then, there is the vast market for eggs. Bombay alone, it is said, consumes some 500,000 eggs per day. The Company has been established for developing the poultry industry by starting breeding farms in different parts of the country and running them on sound, scientific lines. The Company will raise both meat-type and egg-type breeding chickens. The first farm has already been set up at Talegaon near Poona. There are about 50,000 birds in the Company's farm and the number is expected to double within a year. Some 400,0000 chicks have already been sent to various parts of the country. The Company has also obtained orders from Hong Kong, Ceylon, Pakistan and Indonesia. Transport element forms the major component of the cost, because, in view of the perishability of the commodity, all supplies have to be sent by air. The Company is equipped with most modern and scientific techniques for detection and control of poultry disease, which is the major peril facing the industry in this country.

UNITED ELECTRICAL INDUSTRIES

The United Electrical Industries of Quilon (Kerala) has begun manufacturing A.C. motor control gears. The plant was formally inaugurated recently. The manufacture of these motor gears has been undertaken under a licence agreement with the Mysore Electrical Industries of Bangalore.

SYNOPSES OF COMPANY REPORTS

Ratnakar Shipping Co., Ltd.

(*Managing Agents*: Birla Gwalior Private Ltd., Calcutta.)

Fourth Annual General Meeting—30th September 1964.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1964	1963
Income from freight and charter hire	76,79	70,99
Other income	2,28	67
Gross profit	23,58	11,80
To Managing Agents' remuneration	95	20
Transfer to depreciation	13,97	10,12
Net profit	8,66	1,48
Appropriations:		
Transfer to development rebate reserve	7,00	1,47
,, general reserve	1,50	Nil
To dividends	Nil	Nil
Carry forward	18	2

Extracts from the Directors' report: During the year under review, the Company acquired two second-hand vessels and they have been renamed m.v. "Ratna Chandralekha" and m.v. "Ratna Manjushree" respectively. The vessels were partly on time charter and were partly operated by the Company on the coastal and the overseas trades.

The company has placed an order with a Japanese Shipyard for building a Tanker of about 53,000 d.wt. which will be delivered during the first half of 1966. All necessary sanctions for construction of the tanker have been obtained from the Government of India. This tanker is being built against a firm Charter Party with Messrs. Shell International Marine Ltd., London, for a period of 12 years. With the successful conclusion of the tanker deal, the Company now proposes to pursue actively other schemes for expansion of their fleet.

The fleet of the Company as on 31st March 1964, was insured for £18,44,375 in respect of hull and machinery, freight and disbursements against both marine and war risks.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	43,10,000	Gross block	2,21,57,304
Reserves and surplus	10,67,529	—Depreciation	30,05,090

* Dividends paid out of the dividend reserve.
† Upto 11th September 1964.

Extracts from the Directors' report: The working results for the year under review were affected by a strike in the Cable Factory which lasted three and a half months and also by a downward trend in jute goods prices.

During the year under review, the jute industry worked to its maximum capacity. The mills of the Company also worked to their maximum capacity.

The industry's production maintained a steady uptrend with 12.36 lakh tonnes for 1963 which is a record production in the history of the Indian Jute Industry. The significant feature of the demand pattern of jute goods is the growing internal consumption which rose to 3,33,000 tonnes during 1963 compared with 2,70,900 tonnes in 1960. The rise in the internal demand is expected to continue in view of the large increase planned both in agricultural and industrial production. According to estimates of Srivastava Committee it may reach the level of 6,00,000 tonnes by the end of the fourth Plan.

During the year the Company incurred capital expenditure of Rs. 51.56 lakhs which includes the cost of installation of *Carpet Backing Cloth* looms and modernisation as well as replacement of machinery in the spinning section.

Cable Division: The substitution of copper by aluminium was introduced in many of the sizes of cables. Further substitution for the remaining sizes, excepting flexibles, will be effected in due course.

As reported last year, the scheme for expansion has now been finalised. Orders for machinery have been placed in consultation with the Company's Technical Collaborators Messrs. British Insulated Callenders' Cables Ltd., London, and it is expected that the P.V.C. section of the expanded plant will come into production by the middle of 1965. In terms of the application made to Government for its second stage expansion, the Company has received a Letter of Intent to facilitate negotiations with its technical collaborators and financial institutions.

Finance: During the year, arrangements to finance the expansion activities of the Company were made with financial institutions. For the purpose of the Cable Factory's expansion, International Finance Corporation of Washington, U.S.A. has agreed to give the Company a loan of $812,000 (equivalent to Rs. 38.55 lakhs) of which $58,000 being the first instalment, was received by the Company in July 1964. The Directors are grateful to I.F.C. for the loan and it is hoped that its association with the Company will result in even better prospects for the Company.

The Directors also grateful to Industrial Credit and Investment Corporation of India, Bombay, for having agreed to provide the Company with a loan of $788,000 (equivalent to Rs. 37.50 lakhs) and a rupee loan of Rs. 22 lakhs. Out of the rupee loan, Rs. 5 lakhs has been received after the close of the year.

A mid-term loan of Rs. 50 lakhs was also arranged with the Bank of Baroda Limited under the Refinance Scheme of the Refinance Corporation for Industry Ltd.; for financing the Broad Loom Project and the further modernisation of the Company's jute mills.

The Company, during the year under review issued to the shareholders 31,500 New Ordinary Shares of Rs. 100 each at a premium of Rs. 90 per share which were fully subscribed, 50 per cent amount of which has been paid-up and the balance will be called up as and when required.

In terms of the agreement for the loan abovementioned, the Company has agreed to make available for subscription by International Finance Corporation of 10,000 New Ordinary Shares of the Company of the par value of Rs. 100 each at the price of Rs. 190 per share. The shares will, however, not be entitled to dividends if any, declared by the Company for the fiscal years ending on 31st March 1964 and 31st March 1965.

Accounts in brief as at 31st March 1964 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	99,75,000	Gross block†	4,64,48,321
5½% debentures	7,37,507	—Depreciation	2,65,86,760

Market value of ordinary shares (in rupees):	1964*	1963
High	132.00	156.00
Low	122.00	138.00

* Upto 4th September 1964.

Extracts from the Directors' report: *Taxation*: The attention of the shareholders is drawn to the incidence of taxation in the Company's accounts. The proportion of direct taxation including Surtax is 77 per cent of the profit of the year under review.

General Report: The Company's mill worked to its maximum capacity throughout the period under review. The Working Time Agreement of the Indian Jute Mills Association was abolished with effect from 1st February 1964.

The Carpet Backing Looms in the mill worked treble shift until 29th February 1964. Thereafter, it was found necessary to reduce one shift on the 168" R.S. looms, due to lack of orders. The 210" R.S. looms, however, continued to run on three shifts.

The following items of machinery were installed during the year and are working satisfactorily: 1—Screw Gill 2nd Drawing Frame; 2—4½" Spinning Frames and 5—Cop Winding Machines.

As a further step towards the completion of the modernisation programme, orders have been placed for the undernoted machinery for which import licences have been received: 1—Hopper Feed; 2—Full Circular Finisher Cards; 1—Screw Gill 2nd Drawing Frame; 2—High Speed Prebeaming Machines and 8—Onemack Looms. Orders have also been placed locally for 7—4½" Slip Draft Spinning Frames; 7—Cop Winding Machine; 3—High Speed Roll Winding Machines and 2—Roll UP Machines.

Minimum purchase quotas continued to be issued by the Jute Commissioner throughout last season and as a result, the mill has had to carry very heavy stocks of raw jute. This has put a great strain on the finances of the Company and has resulted in heavy bank charges and insurance premia.

The Jute Buffer Stock Association continues to operate satisfactorily and a regular turnover of stocks has been effected.

Although production in the jute industry has been at its highest peak during the year under review, the bulk of this extra production has been taken up by increased world demand. It is, however, extremely doubtful whether with the steadily increasing production in Pakistan, the present rate of production in India can be maintained without seriously affecting the parity between raw jute and finished goods.

Prospects for the current year are far from satisfactory. Reports from Jute growing areas have been favourable and it is expected that the current crop will be of the same size as the previous year's crop. The Pakistan crop is, however, reported to be smaller, and if production continues at the present rate, the carry over at the end of the current season will be substantially lower. The increased cost of production has also assisted in eliminating the margin of profit on simultaneous buying of jute and selling of manufactured goods, and the results for the current year are likely to be unsatisfactory.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	65,00,000	Gross block	1,92,46,048
4% debentures	15,00,000	—Depreciation	1,12,42,168

Low	110.00	85.00

* On the additions of plant and machinery relating to the year ended 31st March 1960.
† High and low upto 2nd September 1964.

Extracts from the Directors' report: *Operations*: *Caustic Soda Unit at Sahupuram*: The extended plant of the Caustic Soda Unit was put into operation in August 1963 and the production was gradually stepped up. However, during the months of August, September and October 1963, owing to breakdowns in the Rectifier Transformers as well as the filtration of all the Rectifier Transformers, production had to be stepped down.

Nevertheless, the production of caustic soda during the year under review increased by 27.7 per cent over that of the previous year. The increase would have been more, had the production not suffered from the breakdown and trippings as also from frequent power restrictions and shut-offs imposed by the Madras State Electricity Board during the year.

Salt Works at Sahupuram: The working of the Company's Salt Works was on a better footing during the year under report. A good quantity of brine was made available to the lessees and they produced about 26,000 tonnes of salt as against 10,500 tonnes in 1962-63. The entire quantity was purchased by the Company.

Soda Ash Unit at Dhrangadhra: The production of soda ash during the year was slightly higher than the level of 43,000 tonnes reached last year.

Soda Bicarb: The production of soda bicarb increased by 25 per cent over that of the previous year. The Company has recently started manufacturing B.P. quality soda bicarb in addition to the commercial grade which is being produced by the Company.

Future Outlook: The future outlook of the Company appears to be good in view of the growing demand for the Company's products and regulated imports from abroad. The

ference for the quality of the Company's products is on the increase.

Liquid Chlorine Plant: The implementation of the scheme to set up the Liquid Chlorine Plant made further progress during the year. The Company has furnished the guarantee to the Government of India to the extent of the C.I.F. value of the plant and machinery and a letter of credit under the Yen credit from Japan has been opened. The delivery of the plant and machinery covers a period of 10 to 16 months.

Poly Vinyl Chloride: The Plastic Resins and Chemicals Limited being the Company sponsored by this Company for the projects of P.V.C. and Calcium Carbide, have informed that in view of the changed conditions and circumstances and more so looking to the capital market condition, it is not feasible to proceed with the said projects and they have given up the same.

New Scheme Contemplated: The Company is now contemplating certain schemes for utilising Chlorine and will be approaching the Government as and when it takes concrete shape.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,67,50,000	Gross block	7,10,60,072
Reserves & surplus	1,68,31,530	—Depreciation	2,65,98,147

Low	114.00	124.00

* Upto 4th September 1964.

Extracts from the Directors' report: *Taxation*.—The attention of the shareholders is drawn to the incidence of taxation in the Company's accounts. The proportion of direct taxation is 60 per cent of the profit of the year under review. The high tax incidence will curb much of the programme of expansion and development which had been envisaged.

The undernoted items of machinery were installed during the year and are working satisfactorily: 2—Roll Formers; 2—2nd Drawing Frames; 1—4½" Slip Draft Spinning Frame; 1—Cone Winder and 3—Cop Machines.

As a further step towards the completion of the modernisation programme, orders have been placed for the undernoted items of machinery. Delivery is expected shortly. 2—Full Circular Finisher Cards; 1—2nd. Drawing Frame; 1—3rd. Drawing Frame and 12—4½" Slip Draft Spinning Frames.

Converter Division.—This section has been working satisfactorily throughout the year. Business in laminated goods has, however, become highly competitive as the installed capacity is in excess of indigenous demand. An acute shortage of polythene and polythene film has also hampered sales.

The polythene extruder/laminator has been fully occupied in executing export orders for extrusion coated hessian bags. Some difficulty has been experienced in obtaining drawback on excise and customs duty paid in respect of export orders. As a result, a considerable amount of money is now blocked and efforts are being made to obtain a release as early as possible.

In order to reduce the congestion in the area presently occupied by Converter Division, a new godown with an area of 20,000 sq. ft. is under construction and is expected to be ready by the end of September this year.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	46,49,200	Gross block	1,53,87,280

Transfer to statutory development rebate reserve	1,11	2,94
,, ,, general reserve	3,64	Nil
Proposed dividends (taxable) preference	1,37	1,37
,, ,, ordinary	3,00	6,01
	(5%)	(10%)
Carry forward	13	13
Market value of ordinary shares (in rupees):	1964†	1963
High	132.00	204.00
Low	111.00	129.00

* This includes surtax of Rs. 1,53,000.
† Upto 4th September 1964.

Extracts from the Directors' report: *Taxation*—The attention of the shareholders is drawn to the incidence of taxation in the Company's accounts. The proportion of direct taxation including Surtax is 89 per cent of the profit of the year under review. The high tax incidence will curb much of the programme of expansion and development which had been envisaged.

The carpet backing looms in the Company's mill worked treble shift until 29th February, 1964. Thereafter, it was found necessary to reduce one shift on the 168" R.S. looms due to lack of orders The 210" R.S. looms, however, continued to run on three shifts. The supply of carpet backing cloth is now substantially in excess of demand and conditions are not likely to improve during the current year.

The undernoted items of machinery were installed during the year are working satisfactorily: 3—2nd drawing frames; 1—finisher drawing frame; 7—modern cop winding machines; 10—roll formers and 1—high speed roll winder.

As a further step towards completion of the modernisation programme, orders have been placed for the undernoted machinery: 2—full circular cuttings finisher cards; 2—full circular finisher cards; 1—automatic jute hopper feed; 6—conversion sets for 2nd drawing frames; 10—conversion sets for finisher drawings; 1—90" high speed prebeamer with floor creel and 1—high speed automatic sizing machine.

Accounts in brief as at 31st March 1964 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	74,88,650	Gross block	2,37,45,098
5% debentures	25,00,000	—Depreciation	1,62,09,834
Reserves and surplus	48,00,604		
Other liabilities	1,88,93,401	Net block	75,35,264
		Block in progress	1,76,219
		Current assets	2,35,79,677
		Investments	23,66,841
		Cash	24,654
	Rs. 3,36,82,655		Rs. 3,36,82,655

* Paid-up capital consists of 15,000—7 per cent cumulative preference shares of Rs. 100 each; 48,000 ordinary shares of Rs. 100 each and 12,098 ordinary shares of Rs. 100 each allotted to shareholders of the Standard Jute Co., Ltd., as per High Court order dated 3rd March 1959—out of which 211½ ordinary shares amounting to Rs. 21,150 were not taken up by the holders of the Standard Jute Co. at the close of the year.

Note: Of the above shares 10,000 and 23,000 Ordinary shares have been allotted as fully paid-up by way of Bonus shares by way of capitalisation of capital reserve and general reserve respectively.

Amalgamated Electricity Co., Ltd.

(*Managing Agents*: Messrs. N. C. Javeri & Co., Bombay.)

Twenty-ninth Annual General Meeting—30th September 1964.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1964	1963
Sale of energy	1,66,47	1,33,58
Income from hire of meters and other apparatus	5,50	4,93

* Dividend payments out of dividend reserve.
† Upto 2nd September 1964.

Extracts from the Directors' report: The following table indicates the position of working since April 1961:

Year	Units generated and purchased	Total load in K.W.	Consumers
1961-62	8,28,00,971	42,657	82,594
1962-63	8,97,98,012	46,824	86,877
1963-64	10,02,74,753	50,205	90,532

Jalgaon undertaking of the Company has made reduction in rate for bulk supply to Bhusawal undertaking of the Company. Government of Maharashtra imposed at the time of extending the period of permission to Jalgaon undertaking to supply energy to Bhusawal undertaking, a condition to take Government approval for any change in the rates. Under the provisions of the Electricity (Supply) Act, 1948 it is the inherent right of the Company to reduce rates. The Government is, however, being approached for confirming the Company's action.

The erection of two sets out of the three of 1,800 B.H.P. each is nearing completion at Belgaum and Malegaon and the sets are likely to be tried and put into commission by the end of August or September 1964. The 600 B.H.P. set ordered for Bulsar Station has been diverted to Belgaum and put into commission by the end of July 1964. Two sets at Dohad and one at Belgaum each of 384 B.H.P., which were under erection as per last year's report have also been erected and put into commission. The import licence received for 700 B.H.P. set was got amended for 900 B.H.P. set. The same has been put into regular service in August 1964 at Jalgaon.

The 11 kv. supply lines of about five miles have been laid in Ajmer and the Rajasthan State Electricity Board has commenced supply of electricity at Ajmer to the extent of 3,200 kw.

The Solvent Extraction Plant though started in January 1963 worked under several adjustments till today due to number of defects and incomplete machinery. It has been all the time practically on trial run.

Accounts in brief as at 31st March 1964 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	1,48,58,320	Gross block†	3,66,91,595
Reserves and surplus	80,80,999	—Depreciation	1,03,99,754

,, ,, reserve for contingencies	Nil	3,00
,, ,, general reserve	25,00	15,00
,, ,, dividend reserve	Nil	50,51
Proposed dividends (taxable) preference	12,73	12,73*
,, ,, ordinary	38,17	38,17*
	(20%)	(20%)
Carry forward	87	93
Market value of ordinary shares (in rupees):	1964†	1963
High	40.00	40.70
Low	32.80	30.50

* Dividends paid out of the dividend reserve.
† High and low upto 11th September 1964.

Extracts from the Directors' report: Production during the year under review was a little less than last year. The cost of production recorded further rise due mainly to increase in the cost of chemicals, salary and wages, power and fuel, repairs etc. and higher incidence of interest. The increased cost in the absence of increase in the price of paper and boards, had to be absorbed by the company. However, it has been possible to maintain satisfactory financial results only due to better working efficiency of the Mills.

The Amlai Paper Mills Project, has made satisfactory progress. Most of the machinery and equipment from U.S.A. have arrived at the site and erection of the plant and machinery is progressing well. Despite delay in delivery of the indigenous machinery and equipment, the Amlai Mills are expected to go into production before the end of the current financial year.

Accounts in brief as at 31st March 1964 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	3,70,88,500	Gross block	11,43,48,322
Reserves and surplus	5,09,79,455	—Depreciation	5,38,45,400
Other liabilities	13,64,90,148		
		Net block	6,05,02,922
		Block in progress	10,71,14,756
		Expenditure during the period of construction	21,32,322
		Current assets	5,07,14,566
		Investments	18,60,877
		Share application money	75,000
		Cash	21,57,660
	Rs. 22,45,58,103		Rs. 22,45,58,103

* Paid-up capital consists of 1,20,000—7.86 per cent. cumulative redeemable preference shares of Rs. 100 each; 60,000—5.50 per cent cumulative redeemable preference shares of Rs. 100 each and 19,08,725 ordinary shares of Rs. 10 each. Of the above shares, 12,58,500 ordinary shares of Rs. 10 each, have been allotted as fully paid up by way of bonus shares by capitalisation of reserves other than capital reserve.

MUKAND IRON AND STEEL WORKS LTD.: ANNUAL MEETING

The Annual General Meeting of the Mukand Iron and Steel Works Limited will be held on the 28th of this month and not on the 26th, as was inadvertently mentioned on page 452 of *Commerce*

NEWS IN BRIEF

IT is proposed to set up *Panchayati Raj* finance corporations at Central and State levels for the purpose of advancing loans to institutions connected with *Panchayati Raj*.

The International General Electric Company of the U.S. has been asked by the Government of India to prepare a feasibility study and preliminary proposal for establishing a new heavy electrical plant.

The total contributions to the National Defence Fund, so far aggregate Rs. 57.95 crores. Of this amount, a sum of Rs. 33 crores has so far been authorised for the purchase of defence equipment and for the welfare of defence personnel.

A company in the public sector with American collaboration is expected to be floated for the development of fisheries, according to Mr. C. Subramaniam, Union Food and Agriculture Minister. Negotiations are said to be at a final stage now.

Workers who are getting higher quantum of bonus under bilateral agreements than what they are entitled to under the Bonus Commission's award will be given statutory protection, under a proposed Bill to be introduced in the Lok Sabha shortly.

The existing trade pact between India and East Germany has been extended for a further period of three years, that is upto 1967. In order to expand the volume of trade between the two countries, more attention will be paid to trade in non-traditional items.

Donations to the Jawaharlal Nehru Memorial Fund will qualify for rebate of income-tax under a Bill introduced in the Lok Sabha. The Bill, which seeks to amend the Direct Taxes Act, does not fix any limit in respect of donations to the fund. Any amount donated will, therefore, qualify for rebate.

The Life Insurance Corporation of India has decided to reintroduce joint-life endowment assurance policies covering both husband and wife provided the latter also has an earned income. This type of policy, it will be recalled, was discontinued in October 1960, owing to several abuses found in the working of the scheme.

The alloy and steel plant at Durgapur when it achieves its full capacity by 1966, will save foreign exchange worth Rs. 10 crores, according to Dr. G. P. Chatterjee, General Manager. The plant is being installed in collaboration with ten foreign companies, Japan being the main supplier. Already 2,000 tonnes of equipment have reached the plant site.

A ten-member Indian delegation of officials and industrialists, led by Mr. D. S. Joshi, Secretary, Union Ministry of Commerce, left Bombay for Nairobi on the 13th inst. The delegation will explore the possibilities of setting up sugar factories in Uganda in collaboration with the Government of Uganda. There are already two sugar factories and the Government is anxious to establish four more.

A big project in the public sector to manufacture 30,000 big tractors and one lakh power tillers annually will be launched in the near future, according to Mr. C. Subramaniam, Union Food and Agriculture Minister. The Punjab's claim to have the project located in that State will be considered, since the State has shown satisfactory development in agriculture production.

The emoluments of the employees of the State-own Heavy Electricals Ltd. of Bhopal have been raised with retrospective effect from 1st July 1962 to the same level as those of corresponding employees elsewhere receiving the Union Government's scales of pay and dearness allowance. An agreement to this effect has been reached between the I.N.T.C.-controlled Employees' Union and the management.

The U.K. Board of Trade has granted India an additional export quota of 4.16 million sq. yards of cotton textiles for the remaining months of the current calendar year. India's share constitutes 46 per cent of the total allotment of nine million sq. yards for three countries, namely, India, Pakistan and Hong Kong. Pakistan and Hong Kong are given 10 per cent and 44 per cent, respectively. The new quotas replace the original supplementary quotas for the export of cotton textiles to the U.K.

The Damodar Valley Corporation's fourth Plan power pogramme drawn up at an estimated cost of Rs. 86 crores, envisages the setting up of six generating units each with 156 MW. capacity and two hydel-generating units of 60 MW. capacity. The D.V.C. will have to meet, according to the estimate, a power demand of about 1,500 MW. by the end of the fourth Plan. At the end of the current Plan period, its installed capacity is expected to be of the order of 925 MW.

The Central Advisory Committee for Agricultural Labour, set up by the Planning Commission (Chairman: Mr. Shriman Narayan) has recommended the formation of labour co-operatives in rural areas. A detailed scheme is likely to be drawn up shortly for the guidance of State Governments. Further, the Committee urged the State Governments to utilise labour co-operatives to the maximum possible extent in the execution of various building and construction projects undertaken by them.

The State Trading Corporation of India proposes to enter into an agreement with the Japanese Textile Machinery Manufacturers' Association for the purchase of textile machinery. This step has been made possible through a Japanese Government loan. Under the agreement, the S.T.C. will buy blow-room machinery, draw and speed frames, automatic looms, calenders, worsted ring frames, spinning preparatory machines, automatic and semi-automatic looms and various other machinery required by the textile industry.

In order to earn a foreign exchange of Rs. 100 crores by the end of the fourth Plan, shipments of iron-ore will be raised to 25 million tons per year under a special export programme now being finalised. This was disclosed by Mr. Govind Narain, Chairman of the Minerals and Metals Trading Corporation at Delhi recently. A broad development project for the purpose has been approved by the Union Government and a Committee has been constituted to co-ordinate all efforts in the different fields.

The total number of persons employed in the public and private sector in Greater Bombay during the first quarter of 1964 was higher at 957,000, recording an increase of 1.3 per cent over the previous quarter. This is the finding of the Regional Employment Exchange, Bombay. The number of persons employed in the private sector was 579,000 constituting 60.5 per cent of the total. The share of the public sector was 378,000 (39.5 per cent of the total. More than half of the total employment is in the manufacturing industries, the highest (29 per cent) being in the textile industry, followed by manufacture of basic metals and their products.

The Monoplies Inquiry Commission has extended the date for the submission of views on the issues under its considerations from 15th July to the end of October next. The Commission's terms of reference are very wide and include a study of the restrictive practices prevailing in various trades and businesses. Accordingly, organisations representing the interests of traders, retail dealers or consumers who might be adversely affected by agreements or arrangements of a restrictive nature among those engaged in production or distribution, are specially invited to bring to the notice of the Commission their experience as well as their views in this regard.

A programme has been finalised by the Union Ministry of Steel and Mines for installing three additional aluminium plants and expanding the two existing units raising their installed capacity by 135,000 tonnes. It is proposed to raise the total capacity by the end of the fourth Plan to 300,000 tonnes, as against the expected internal demand of 260,000 lakh tonnes. The three new units proposed include Koyna Aluminium Corporation, Maharashtra (25,000 tonnes), Mysore aluminium project (30,000 tonnes) and the Korba project, Madhya Pradesh (30,000 tonnes) and the units at Alwaye, Kerala (10,000 tonnes) and the Hindustan Aluminium Corporation, Rihand, U.P. (40,000 tonnes) are to be expanded. Incidentally, the Indian Bureau of Mines has proposed for ten investigations to map out bauxite-bearing areas during the fourth Plan.

• • • •

From Abroad

The Government of Turkey has renounced the Turkish-Greek Trade and Payments Agreements signed in November 1953.

The total number of persons at work in West German industries increased from 20.4 million in 1950 to 26.9 million in 1963, while the number of farmers decreased by 247,000 to 1.3 million.

Soviet Russia has just signed a £30-million contract to buy a fibre plant from a British firm. The new factory will be built by the Poly-spinners Limited of Britain at Krasnoyarsk in Siberia. It will produce 50,000 tons of polyester fibre a year.

Turkey's first synthetic yarn factory, owned and operated by an all-Turkish Company (Sentetik Iplik Fabriaklari S.A.), has just begun production. Output is shortly expected to reach the rate capacity of 700 tons annually. At present, 15, 20, 40 and 60 denier nylon 6 yarns are being manufactured.

The year 1963 proved to be a good one for some hundred airliners which are members of the International Air Transport Association. The total traffic on regular services of member companies increase by 12.2 per cent to touch a high of 16.99 million ton kilometres in 1963. The airlines carried 135 million passengers, an increase of 13 million over 1962.

Britain is to make a further contribution of $700,000 (£250,000) to the World Food Programme, in addition to the $5 million (£1,785,000) originally pledged by it. This makes Britain the third-largest contributor to the three-year pilot programme which has been drawn up jointly by the United Nations and the Food and Agriculture Organisation to help developing countries.

In a bid to provide fresh capital to industry during the present economic crises, the Government of Italy proposes to set up common funds and investment trusts as private corporations for handling small savings. Strict limits will be set on the stocks that may be bought by the common funds. There will be a ceiling on the quota investible in a single corporation.

Under a plan drawn up by the Soviet authorities, "bird factories" will turn out 15,400 million eggs per annum and 811,000 tons of chicken meat by the year 1970. Various bodies have been instructed to work out plans for the cheaper production of installations, such as broiler-house, for the "bird factories" making use of domestic expertise and foreign experience.

PERSONAL

DR. S. Radhakrishnan, President of India, left New Delhi for the Soviet Union on the 11th inst., on a State visit.

Mr. L. M. Nadkarni, Chairman of the Marmagao Port Trust, has been appointed Chairman of the Bombay Port Trust

Air Marshal Arjan Singh, Chief of Air Staff, has been appointed a member of the Board of Air-India and the Indian Airlines Corporation.

Mr. T. T. Krishnamachari, Union Finance Minister, returned to New Delhi from Tokyo after attending the annual sessions of the International Monetary Fund and the World Bank.

Mr. M. N. Gogate, Member of the Maharashtra Chamber of Commerce, has been nominated to serve on the reconstituted National Railway Users' Consultative Council for the next two years.

Mr. Rana K. D. N. Singh, Finance Secretary, Government of Assam, has been appointed Chief Secretary to the Government of Goa, Daman and Diu. He is expected to assume charge of his new office next month.

Mr. Govind H. Seth, Senior Deputy Director-General of Shipping, has taken over charge as the Managing Director of the Shipping Corporation of India *vice* Mr. C. P. Srivastava who has now become a Joint Secretary in the Prime Minister's Secretariat.

Mr. S. V. Gupte, Additional Solicitor-General, has been appointed Solicitor-General of India in place of the late Mr. H. N. Sanyal. Mr. Niren De, a lawyer from Calcutta and a part-time member of the Law Commission, has been appointed Additional Solicitor-General.

Mr. Naval H. Tata has been re-elected President of the Employers' Federation of India for the current year. Mr. H. K. S. Lindsay, Dr. K. S. Basu, Mr. S. Anantharam and Mr. J. K. Srivastava have been elected Vice-Presidents of the Committees of Eastern, Western, Southern and Northern regions, respectively.

A "continuous brewing" plant at a cost of $10 million has been installed at Texas, in the U.S. by the Canadian Breweries, the World's largest beer producer. Continuous brewing, it is claimed, eliminates the "batch" process, and it can be more easily expanded to cope with increased demand with the result that the need to tie up capital in idle equipment is reduced. It is also claimed that this new process is so fully automated as to permit improved quality control of beer.

The U.S. Export-Import Bank has agreed to lend Japan about $140 million, of which $60.4 million will be made available at once for the purchase of 14 U.S. passenger jets. The remaining amount will be made available as loans to two electric power firms and a steel company. The loans are repayable in seven years. The Export-Import Bank loans granted to Japan so far comes $1,100 million, of which $3.36 million are outstanding at present.

Overseas aviation concern took a record £21.4 million worth of equipment from British electronics firms last year. The British electronics industry produced equipment during the year 1963 valued at £200 million of which £56.9 million worth was taken by the aviation industry. Biggest sales in overseas market were of ground radar and navigational aids, totalling £12.2 million. Equipment supplied for aircraft with overseas operators was worth £1.5 million. Sales of ground radio-communication equipment for use outside Britain aggregate £6.4 million with another £749,000 spent on airborne communication equipment.

A new scheme designed to provide a complete hospital planning and equipment service—from the construction of the buildings down to the linen service in the wards—has been announced by a group of four British companies. The new group—Associated British Hospital Equipment Ltd. has been formed to meet the growing demand from countries all over the world for a comprehensive service. The need is increasing particularly in Asia, the Middle East, Africa, and South America. From the outset, the new consortium will be able to arrange the construction of hospital buildings and provide a consulting service based on the wide experience of its member-firms. Other medical and scientific companies are expected to join the group in the near future.

Electricity has replaced the paraffin lamp in almost every home in Bulgaria. At the end of the last year, the electric network took in 4,700 towns and villages, that is 96 per cent of the population of Bulgaria. Electricity has not yet reached some of the smaller hamlets scattered about in the remote mountain districts of the country and consisting only of a few houses. In two or three year's time, however, they will also join the grid. The standard of living will be further improved in the near future. According to the targets set in the current 20-year long-term plan, at the end of the 1970-80 decade, there will be 150 radio sets per 100 families, 97 TV sets, 96 vacuum cleaners, and 10 refrigerators. In 1980, the output of electric power will reach 5,700 kw.h. per head of the population, as against 42 kw.h. in 1939 and the 1,100 of this year. The electric power produced will be sufficient to meet the increased need of all the people both in the towns and villages. In 1944, out of over 5,000 towns and villages only 491 had been connected with the main electric grid.

TREND OF MARKETS

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, 16*th September*

There was a distinct improvement in the tone of the short-term money market during the week under review. Demand for credit was no doubt quite heavy, but borrowers found no difficulty whatever in obtaining their requirements. For the supply of funds was plentiful, thanks to the return flow of money from mofussil centres. Consequently, inter-bank call rate drifted downward. The actual rate for renewals receded from 4½ to 2½ per cent and that for fresh money from 4½ to 3 per cent; yesterday (Tuesday the 15th inst.), the rates were lower still at 2 per cent and 2½ per cent, respectively. Conditions at Calcutta were also comfortable. Both renewals and fresh business took place at 1½-1¾ per cent, as against 3¾-4½ per cent a week before.

The easy trend of money is reflected in the persistently encouraging response to the 91-day Government of India Treasury Bills, tenders for which opened on Tuesday the 15th inst. The total amount (Rs. 3.04 crores) offered, though less than that (Rs. 4 crores) offered last week, was fifty per cent more than the sum (Rs. 2 crores) invited and also accepted. The average rate of accepted tenders was lower at Rs. 2.386 per cent, as against Rs. 2.400 per cent. The Intermediate Treasury Bills, too, elicited good support, the Bills sold from the 9th to 12th inst. aggregating Rs. 2.45 crores, as against Rs. 1.29 crore a week before and Rs. 2.00 crores two weeks before.

Despite comfortable conditions in the money market, it is somewhat curious that notes in circulation registered a further rise of Rs. 13.68 crores to Rs. 2,407.49 crores during the week ended 11th September 1964. Deposits of scheduled banks with the Reserve Bank, however, increased by Rs. 3.74 crores to Rs. 98.90 crores, while loans and advances obtained by them receded by Rs. 3.19 crores to Rs. 2.04 crores. India's foreign exchange reserves declined by Rs. 1.28 crore to Rs. 96.52 crores, the whole of the decline being accounted for by balances held abroad which fell from Rs. 12.34 crores to Rs. 11.06 crores. The foreign securities held in the Issue Department of the Reserve Bank were unaltered at Rs. 85.46 crores.

The total credit made available by scheduled banks to their clients went up by Rs. 13.49 crores to Rs. 1,735.79 crores during the week ended 4th September 1964. At the same time, their deposits receded by Rs. 20.98 crores to Rs. 2,656.76 crores. Even so, borrowings from the Reserve Bank rose by just Rs. 2.91 crores to Rs. 4.83 crores. Investments declined by Rs. 12.31 crores to Rs. 791.17 crores and total cash by Rs. 3.88 crores to Rs. 154.16 crores.

Activity in the Gilt-edged market was very much restricted, with values of Central and State loans remaining more or less unchanged at last week's levels. The response to 4½ per cent Industrial Finance Corporation Bonds 1976 was quite good, the list being closed on the very day of opening, that is, Tuesday the 15th inst. The actual subscription amounted to Rs. 7 crores, as against Rs. 6 crores invited. Subscribers for amounts upto and including Rs. 10,000 will receive full allotment. Other subscribers will receive allotment at about 94 per cent subject to a minimum allotment of Rs. 10,000.

In the foreign exchange market, the banks' selling rate for U.S. dollars improved by 25 P to Rs. 481 per $100, while their buying rate was unchanged at Rs. 477.50. In New York, the pound sterling weakened further *vis-a-vis* the dollar; the spot rate eased by 0.060 cent to 278.310-278.340 cents and the three months' forward by 0.050 cent to 277.790-277.820 cents.

SELECT COMMITTEE ON GOLD CONTROL BILL

(From Our Own Correspondent)

BOMBAY, 16*th September*

The bullion market continued to rule distinctly easy during the earlier sessions of the week under review, but staged a mild recovery on Monday last, and the recovery persisted yesterday and today. The earlier easiness was due to slack demand and increased arrivals. The two metals, however, picked up strength on Monday following firm upcountry demand. Consequently, prices staged a rise. The upward trend gathered momentum in the subsequent two sessions on reports of large-scale seizure of contraband gold (34,000 tolas) in Bombay. The recovery was in marked evidence in silver. Not only was the earlier loss completely made up, but the closing rate today was a shade higher. Gold, however, failed to recover the loss, so that it was quoted today lower than a week ago.

Silver began the week slightly lower at Rs. 255 and declined swiftly to Rs. 252 on increased arrivals and failure of stockists to absorb the same. It, however, recovered subsequently and closed at Rs. 256 today. The weekly average arrivals and offtake of the metal were around 22 and 8 bars, respectively.

Fourteen-carat gold receded from Rs. 67 to Rs. 64.50 before finishing at Rs. 66.50. Primary gold, in unofficial trading, touched a low of Rs. 106 in the earlier sessions, as against Rs. 113 a week before because of further arrivals of the hoarded metal. However, it rose to Rs. 109. Sovereign was quoted at Rs. 90½-91.

The international price for gold in the London market was higher at $35.08¾, as against $35.07¾ last week. The sterling price moved up from 251s. 11¾d. to 252s. 1¾d. Both ready and forward silver remained unchanged at 112d. and 112¼d., respectively, as also silver in New York at 129.3 cents.

The Joint Select Committee on the Gold Control Bill 1963 has recommended certain changes in the Bill in its report presented to Parliament on Friday this week. One of the changes exempts individuals having gold ornaments not exceeding Rs. 25,000 and families having jewellery not exceeding Rs. 50,000 from declaring their valuables to the Government. Any family consisting of a husband, wife and one or more minor children, or any two or more of them are also exempted from declaring its ornaments under clause 16 of the Bill, if the total weight of gold other than ornaments owned by such a family does not exceed 100 grammes. Another change suggested by the Committee empowers the Government to impose restrictions on the purity and weight of gold in ornaments manufactured out of gold ornaments other than those received as offerings by religious institutions. Yet another change empowers the Gold Control Administrator to cancel the licence of a dealer or refiner if he is found guilty of any smuggling offence. The Administrator can also exempt certain cases from the requirement of stamping of primary gold.

The Select Committee's recommendations have disappointed traders in the market. Despite assurances that ornaments would not be brought under the purview of Gold Control, the Select Committee, it is regretted, has suggested the inclusion of these ornaments above a certain limit. Some confusion seems to prevail over the exemption of holdings for families not exceeding 100 grammes. Previously, every individual was allowed to hold 50 grammes which meant that a family could easily hold without declaration more than 100 grammes. The total for a whole family is now fixed at 100 grammes. Further, the plea of the Select Committee for empowering the Administrator to impose restrictions on the purity and weight of gold ornaments remanufactured from old ones has made traders suspicious of the Government's intention to make changes in gold purity. They feel that it would have been better if the Committee had recommended measures to check smuggling and urged removal of quality control on purity of gold ornaments.

The President of the All-India Goldsmiths' Association has described some of the changes proposed by the Select Committee on the Gold Control Bill as a "clog on the fundamental right of the individual." The restrictions on the preparation of gold ornaments above 14-carat, he says, will only cause more hardships to the goldsmiths.

The rehabilitation of goldsmiths, which posed certain difficulties in the early stages, has now been tackled to a large extent, according to official sources. Of the estimated 300,000 goldsmiths affected by the Gold Control Order, more than 30,000, it is said, have been given loans aggregating nearly Rs. 3 crores to start new trades like merchandise in grocery and cloth. Ten thousand goldsmiths, especially skilled personnel, have been provided employment in factories like the H.M.T. and the I.I.T. of Bangalore. About 3,000 goldsmiths have been absorbed in ordnance factories after some training. Nearly 220,000 goldsmiths have taken licences to work as self-employed goldsmiths. The enforcement staff has been instructed not to harass the self-employed goldsmiths but to concentrate on dealers who with greater resources might attempt to evade the law. The number of dealers in gold ornaments has also come down from 27,000 to 22,000 after the Gold Control Order, and now only 12,000 have renewed their licences. The rest have taken to other forms of business. Similarly, the number of refineries has declined from 600 to 100.

The following table shows the trend of prices during the week under review:

	16-9-64 (closing)	High	Low	8-9-64 (closing)
SILVER				
Ready (996 fine) ..	Rs. 256.00	Rs. 256.00	Rs. 252.00	Rs. 255.50
GOLD				
Ready (14-carat) ..	66.50	66.50	64.50	67.00
Sovereign ..	91.00*	—	—	91.00*
London—				
Gold ..	252s.1¾d.	252s.¾d.	252s.0¼d.	251s.11¾d.
Silver Ready ..	112¼d.	—	—	112¼d.
Silver Forward ..	112¼d.	—	—	112¼d.
New York—				
Silver ..	129.3 cents	—	—	129.3 cents

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.73 tolas). London and New York quotations are per ounce. * Unofficial rate.

RECORD COTTON CROP PROSPECTS

(From Our Own Correspondent)

BOMBAY, 16*th September*

Following reports of satisfactory weather conditions in almost all the cotton producing tracts of the country, a record cotton crop is envisaged for the third successive season, namely, 1964-65. Besides the bounty of nature, cultivators' interest in the crop has also been sustained due to an extension of package plan to cotton cultivation and the continued stress on price incentive in the cotton policy for the 1964-65 season. The area under cotton cultivation is reported to have increased by about seven per cent. Intensive cultivation has been undertaken in Gujarat, the Punjab and Maharashtra with greater emphasis on higher yields per acre. There has also been an improvement in the supply of fertilisers and pesticides by the State agricultural departments. In the Punjab, however, some damage to *deshi* and staple varieties has been reported due to untimely rains that have flooded fields in Moga, Kaithal and Tarantaran districts.

Trading in the futures section truly reflected the current indications about the crop, as the prices remained subdued throughout the week. The Jarilla March 1965 contract ruled distinctly weak. Though it opened the week 75 paise higher at Rs. 731.50, it continued to drift downwards, so much so that today it touched a low of Rs. 726.75. It may be noted that the current contract had started its career on 30th July 1964 at Rs. 727 per candy. Towards the close, the rate spurted to Rs. 728.25, thus losing a net of Rs. 2.50 over the week.

After a break of about ten days, the spot market at Sewri resumed business on the 11th inst. Good activity was reported as the mills showed keen interest in Laxmi, 197/3, Surti, Digvijay and Jayadhar varieties. Prices, however, ruled easy. The following are the latest available quotations in respect of certain popular varieties.

Annigeri Laxmi Rs. 1,115, Bengal Fine Rs. 733 K, Bijapur New Rs. 1,040 K, Manavdar Kalyan Rs. 1,001, Navapura Rs. 1,141, Chopda Rs. 1,015-1,025, Rajpipla Rs. 1,125, Bardali Red Rs. 1,190 and Patiala Rs. 710 K.

There has been a new development regarding the transfer of quotas to exporting mills. Hitherto, it was obligatory for the exporting firms to import cotton in their own names. The Indian Cotton Mills' Federation, it will be recalled, had been pleading for the transfer of quota letters issued to these firms to mills. It is reported that the Textile Commissioner has agreed to such transfers.

Export demand for Bengal *deshi* variety has not been encouraging, despite the abolition of export duty. The prices in the meantime have gone down from Rs. 737 to Rs. 733 for the December delivery contract. To some extent, this state of affairs is attributed to the cheapness of Pakistan *deshi* cotton which is stated to be lower by Rs. 40 per candy than the Indian variety. Japan, the main importer, is said to have taken up 10,000 bales so far. It is withholding further purchases in expectation of a further fall in prices.

GOOD MEDIUM TEAS FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 10*th September*

A total of 595,000 kgs. was offered in tea sale No. 36 held here on Tuesday the 8th inst. Some bright liquoring Nilgiris were on offer, but quality was generally barely maintained. The market encountered good general demand for liquoring teas, the account being on fannings. Nilgiri brokens were fully firm to dearer, while their fannings were sold at irregularly higher rates. Good medium and medium brokens were keenly sought after and prices advanced by up to 20 paise. Their fannings were the strongest feature of the sale and prices were sometimes up to 50 paise dearer. Low medium brokens of poor appearance were sold at a discount, but the cleaner types and all fannings in this category can be quoted firm. Black leaf teas continued in strong demand and were sold well. Unorthodox types were irregular, but generally strong and dearer. The better whole leaf grades, particularly liquoring orange pekoes, were dearer, but others were frequently easier.

The quotations (per kg.) were:

	1964 Rs.	1963 Rs.
Low mediums	4.00-4.20	4.00-4.40
Mediums	4.20-4.80	4.40-4.90
Good mediums	4.85-5.35	5.00-5.40
Nilgiri B.O.P.	5.25-7.00	5.00-8.20

The average price realised in sale No. 36 was Rs. 4.57 per kilo, as against Rs. 4.45 a week ago and Rs. 4.54 in the corresponding sale last year.

In dust sale No. 36 held here today, 232,000 kgs. were offered. The market met with good general demand. Highgrowns were sold well but at irregular rates. All medium descriptions of good appearance and free from fibre were sold readily at rates above last. However, the more fibrous varieties generally declined in price. Clean black grainy types were the strongest feature of the sale and were sold at higher levels. Residuals elicited only fair demand at lower rates. Teas of unorthodox manufacture were sold well at generally firm prices.

The average price realised in dust sale No. 36 was Rs. 4.43 per kilo, as against Rs. 4.41 a week ago and Rs. 4.17 in the corresponding sale last year.

Colombo: There was good general demand with the market opening at dearer rates for all descriptions.

London: North Indian and other growths: There was strong demand and all descriptions were generally dearer, particularly best Assams.

Ceylon and South Indians: In Tuesday's sale, demand was selective and all varieties came to a lower market with the exception of useful teas which were about firm.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 37: 624,000 kgs. offered. Strong demand. Plain and low mediums about steady. Mediums irregular, sometimes dearer. Good mediums fully firm to dearer. Highgrowns closely following quality. All fannings stronger. Unorthodox firm."

ART SILK YARNS RISE

(From Our Own Correspondent)

BOMBAY, 16*th September*

The yarn market was devoid of any fresh development during the week under review. Art silk yarns ruled easy in the earlier sessions but staged a recovery later in the week, following a fall in arrivals from upcountry centres, stockists resistance to sell at reduced rates, and fears of non-delivery of yarn in Bombay for three weeks had induced some dealers to corner available supplies. Staple fibre yarns were sluggish owing to slack demand from Surat weavers. Cotton yarns ruled generally dull with limited turnover and narrow movement in prices.

Forward trading in staple fibre yarn is expected to be resumed on *Dasara* day, that is, 15th October. The bye-laws of the Association have already been amended as suggested by the Forward Markets Commission. The formal approval of the members is to be got at a meeting to be convened.

shortly. The bye-laws as amended, it is stated, make it possible for more members to participate in forward trading. A large number of cards are lying unsold with the Association and the F.M.C. is understood to have suggested to sell the same at Rs. 750 a piece.

Among art silk yarns, National Rayon 150D picked up 2 P to Rs. 10.93 and 120D strengthened by 13 P to Rs. 11.68. Bright Century C moved up by 15 P to Rs. 10.47. Bright Sir Silk 150 hardened by Re. 1.25 to Rs. 23.65. Bright Century 100D and 75D were fully maintained at Rs. 13.46, and Rs. 18.57, respectively. South India Viscose, however, eased by 6 P to Rs. 13.07.

In the staple fibre yarn (2 x 34 French Count) section, Kohinoor shed 7 P to Rs. 9.90. Vasanta lost a like amount to Rs. 9.15. City was a shade lower at Rs. 9.46. Sriram declined by 13 P to Rs. 9.15.

Cotton yarns of all counts, as already stated were quoted at levels prevailing a week ago. 34s Madura, however, was an exception in that they put on a rupee to Rs. 43. 68s Minerva also, gained a like amount to Rs. 86.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	16-9-1964	8-9-1964
Art silk yarn (per kg.)—	Rs.	Rs.
National Rayon 120D	11.68	11.55
Century 75D	18.57	18.57
S. I. Viscose 120D	13.07	13.13
Staple fibre yarn-34 ×2 French Count (per kg.)		
Kohinoor	9.90	9.97
Premier	9.90	9.90
City	9.46	9.55
Cotton yarn - French Count (Rs. per 5 kg.)		
8s Podar	21.00	21.00
17s Modern	28.50	25.62
27s Madura	—	35.00
34s Madura	43.00	42.00
52s Pioneer	68.75	68.75
68s Finlay	106.70	106.70

BAN ON FORWARD TRADING IN GROUNDNUTS AND OIL REMOVED

(From Our Own Correspondent)

BOMBAY, 16*th September*

Groundnuts and groundnut oil rose to unprecedented levels during the week under review. Oils touched Rs. 3,300 per tonne the rise over the week being Rs. 500. Throughout the week, there was a virtual scramble for groundnut oil, but sellers were few and far between. The volume of business put through at this high level was not larger than 15 to 20 tonnes. This was due not because there were no buyers but because sellers were holding off to their meagre stocks in anticipation of yet higher prices. This was on Tuesday; in the evening, prices did decline to around Rs. 3,000 per tonne. Even then, the quotation was Rs. 500 above that prevailing before the imposition of the ban on exports of seeds and oil by the Gujarat Government and Rs. 1,000 above that of a year ago. The rise in spot prices induced a similar upward move in distant positions, with October at Rs. 2,550, as compared with Rs. 2,025 a month ago. November at Rs. 2,025, as against Rs. 1,925 and December at Rs. 1,950, as against Rs. 1,735. There was a small volume of business in the distant positions.

It was only natural that seeds should have kept pace with the rise in oil prices. The market maintained an extremely firm tone on Tuesday. Business was done in Madras quality at as high as Rs. 79 and Karad was quoted at Rs. 75.50 and Kanpur Bold at Rs. 75. On Wednesday, deals in Latur seeds were reported at as high as Rs. 83. Madras quality was mentioned at Rs. 80 and Khandesh also at Rs. 80. Distant positions were proportionately lower. There was a tendency for prices of oils to remain quiet, but this was due mainly to technical considerations. Oil ready was mentioned on Wednesday at Rs. 31.50-32. Marketmen feel despaired of any decline worth the name in prices, for, as against the City's daily needs of 600 to 700 tonnes of oil, hardly about 90 tonnes are said to be arriving. Stocks of seeds are also reported to be absolutely meagre, although some new crop seeds have been coming from Khandesh in Maharashtra, as well as from the producing centres of Madras and Mysore. The *vanaspati* industry is apparently feeling the pinch of it and it seems to be drawing on its stocks. There is no knowing how long the present trend is going to last. At any rate, it is difficult to foresee any improvement in situation until new crop arrivals gather momentum which will not be earlier than the middle of next month.

Traders blame the Government for the present demoralised state of the market where the price pattern has lost both its meaning and perspective. The fetish of export ban seems to have been carried to such an extent in Gujarat that district officers are said to be banning the movement of goods from out of their respective areas. The general feeling now is that the Centre should step in and exert its influence on the State Governments which have banned movement of seeds, oils and foodgrain items and make them reverse their present policy. Such a move, it is felt, might help achieve a better balance of prices all over the country.

Another interesting point is the reversal of the price pattern as between groundnut and coconut oils. It may be pointed out that coconut oil has been fetching higher prices than groundnut oil, but, with the latter having shot up to Rs. 3,300, the former has been pushed far behind. The price of coconut oil is around Rs. 1,450. The firmness in linseeds and linseed oil is in keeping with the trend in groundnuts and oil here. It is also due partly to the continued top level of mustard oil in West Bengal. During the week, linseeds March closed at Rs. 39.66, while the spot rate was around Rs. 51. Oil was quoted at Rs. 21.20.

The decision of the Government of India to remove the ban on forward trading in new crop groundnut and groundnut oil has been welcomed as timely. The removal of the ban was, in fact, expected to be announced any moment as a logical consequence to the permission already granted for forward trading in castor, linseeds and castorseeds. It will yet take some more days for actual trading to start, as rules have to be formulated in the light of restrictions and safeguards which the Forward Markets Commission might choose to impose. The market, however, hopes that everything would be done soon enough to enable trading to start next week. The question may come up for discussion at the meeting of the Board of the Oilseeds Exchange to be held tomorrow (Thursday the 17th inst.). The general belief is that the system of ceilings might be given up and margins introduced in their place. With the crop in the new season placed at 3.8 million tonnes and considering the facilities for hedging allowed, it is likely that the market may take a healthy turn.

While the removal of the ban on seeds and oil has gladdened the trade, the lack of any mention of groundnut expeller cakes has caused great disappointment. It may be recalled that, in 1963-64, India exported about 800,000 tonnes of extractions earning Rs. 30.5 crores by way of foreign exchange. In the calendar year 1964, exports are expected to touch a million tonnes and trade estimates for 1965 are around 1.4 million tonnes. The pattern of trading in groundnut extractions have changed with the appearance on the scene of East European countries which buy in bulk to the tune of 5,000 to 10,000 tonnes at a time. It is, therefore, reasonable that manufacturers and exporters should have hedging facilities, and the feeling in the market is that the Government will appreciate this need sooner or later and allow forward deals in these too. Otherwise, the danger, it is feared, is that those who deal in these will be forced to take recourse to unauthorised trading.

Currently, the extractions market is firm with spot material at an all-time high of Rs. 440. Distant positions are easier with October at Rs. 435, early November at Rs. 410, December at Rs. 400 and Jan.-Feb.-March at Rs. 390. Overseas advices are also firm with September at £39-10, October at £39-5, November at £37-15, December at £36-10 and Jan.-Feb.-March at £35-10. Stocks in Bombay are very meagre. East European countries are presently out of the market.

Coming to the forward market, castor September went untraded during the week and the reason was obvious. So was the case with the linseeds and cottonseeds maturing contracts. There were no tenders in them either. This was only natural, in view of the much higher levels in the spot section. Spot linseeds were quoted on Wednesday at Rs. 51.25 and the March contract closed the week at Rs. 39.66. Castor March closed on a subdued note at Rs. 177.37 and sentiment was induced by reports that a steamer which left the other day failed to take around 6,000 tonnes of castor oil. Tenders in cottonseeds aggregated 100 tonnes (until the time of writing). Spot castor Madras small was mentioned at Rs. 40, as against the last week's rate of Rs. 39.50. Bihar Bold was mentioned at Rs 39, as against Rs 38.50. Oil commercial was done at Rs. 17.50, as against Rs. 17.40.

The following table shows the closing prices of oilseeds and oils as on 16th September as compared with those of the two previous weeks:

	16-9-1964	8-9-1964	2-9-1964
Groundnuts	Rs.	Rs.	Rs.
Nizam bold	75.50	67.50	65.25
Khandesh quality	78.00	69.00	66.50
Oil ex-mill	32.00	29.10	27.75
Oil Rly. Receipt	31.00	28.80	27.50
Castorseed			
September 1964 contract	183.00	183.00	183.90
March 1965	177.37	175.62	176.75
Ready Madras	40.00	39.25	39.25
Ready Kanpur	39.00	38.12	38.25
Oil B.S.S.	18.25	17.90	17.80
Oil commercial	17.50	17.25	17.30
Linseed			
September 1964 contract	44.94	44.94	44.87
March 1965	39.66	38.62	38.84
Bold ready	51.00	48.25	48.00
Linseed oil	21.20	20.25	20.05
Cottonseed			
September 1964 contract	91.50	91.50	90.00
January 1965 contract	102.00	98.75	97.25

N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA ARRIVALS INCREASE

(From Our Own Correspondent)

CALCUTTA, 15*th September*

Increased arrivals and the rising trend in output in the chief producing countries including India, explain the lack of liveliness in export auctions being held in Calcutta. In the export auctions held last week, although generally conditions were steadier, demand was selective. However, last week's sales for internal consumption witnessed an increase in demand. Bore tides on the Hooghly led to congestion of ships at the Sandheads, and tea claimed a good portion of all available prompt space in the week.

With expectations of a record world crop in this year—so far in this year output in the major producing countries has aggregated 745 million lbs., showing a rise of 24 million lbs. as compared to the corresponding period in the last year—prices obtained in auctions have been lower than last year. Tea output in North East India up to 15th August aggregated 274 million lbs., representing a rise of 52.5 million lbs. Naturally, overseas buyers prefer to go slow. Unless internal buying increases much faster than at present, difficulties in the disposal of the entire crop are apprehended. Although in recent years, world output has been increasing, no glut in supplies has occurred since the increase was more or less equal to the increase in consumption.

The U.S. Department of Agriculture, in a critical analysis of the situation, poses the question: Can the large 1964 harvest (over 2,300 lbs., as estimated) and future bumper crops be easily marketed or will stocks pile up? The Department apprehends the long-time threat of an oversupply. It also considers the production of low-to-medium quality teas another major problem. Considering the fact that prices in Calcutta auctions held so far in this season, have not even reached last year's level (but prices in several other world commodities and manufactures have moved higher) the Department's fear of oversupply is not altogether an underestimate of the situation. The U.N. Food and Agricultural Organisation had years ago already hinted at the possibility of a glut in tea by 1965.

Leaf on offer during the export auction held in the last week aggregated 65,965 packages. Demand was good but less general than in recent sales. Plain orthodox teas were unchanged, but fannings rose in a steadier trend. Medium orthodox teas eased, and the good Assam orthodox B.O.P. teas attracted less attention and dipped to lower levels. The O.F. teas met with good attention, the lots having bright liquors selling well. Good Assam B.P. teas and P.F. teas hardened. Legg-cut teas were firm. Competition raised prices of clean medium C.T.C. teas and the very few best kinds in good C.T.C. teas sold well. Plain C.T.C. teas met with competition and realised firm prices. The fibrous C.T.C. fannings also gained. Tippy teas gave way. Whole leaf grades also followed an easier trend, but the cheapest kinds sold well. Darjeelings met with a fair demand with buyers following quality. The quotations (in rupees) per kg., inclusive of excise duty were: good Assam C.T.C. fannings 6.80 to 7.20, good Assam C.T.C. B.P. 6.80 to 7.00, medium C.T.C. B.P. 6.00 to 6.20, medium C.T.C. fannings 5.90 to 6.10, plain C.T.C. B.P. 5.20 to 5.40, plain orthodox B.P. 4.10 to 4.30, clean plain pekoe 5.20 to 5.40, plain C.T.C. fannings 4.90 to 5.10, and plain orthodox fannings 4.30 to 4.60.

A strong and general demand met dusts offered in the internal auctions held in the last week, aggregating 35,333 packages. Plain orthodox teas were fully steady, with the brighter Assams being in the forefront. The plainer kinds were, however, only firm. C.T.C. teas were absorbed readily, with the medium lots realising higher prices. The quotations (in rupees) per kg., inclusive of excise duty were: good Assam C.T.C. dust 6.20 to 6.50, medium Assam C.T.C. dust 5.40 to 5.70, legg-cut dust 4.90 to 5.40, plain orthodox dust 4.20 to 4.60, and medium Assam dust 4.90 to 5.60.

A good general demand met yesterday's export offerings aggregating 71,858 chests, but prices recorded a mixed pattern. Good C.T.C. teas were somewhat irregular, selected lines realising higher prices. Clean fannings having good liquors advanced. Medium C.T.C. teas were about firm but irregular. Plain orthodox teas were in good form with exportable fannings being pushed up to higher rates. However, on declining support, good Assam orthodox brokens eased. The better liquoring Doars and medium Assams also eased. Darjeelings, though in good demand, realised only lower prices. Whole leaf grades were also generally easy but the plainer sorts were taken at higher rates. The quotations (in rupees) per kg., inclusive of excise duty, were: good Assam C.T.C. fannings 6.80 to 7.30, good Assam C.T.C. B.P. 6.60 to 7.10, clean plain pekoe 5.30 to 5.50, medium C.T.C. fannings 5.80 to 6.40, clean orthodox B.P. 4.10 to 4.30, medium C.T.C. B.P. 5.80 to 6.40, plain C.T.C. B.P. 5.10 to 5.50, plain C.T.C. fannings 4.90 to 5.10, and plain orthodox fannings 4.40 to 4.70.

RAW JUTE DECLINES

(From Our Own Correspondent)

CALCUTTA, 15*th September*

As a result of increased arrivals and the new system of ceiling on fibre purchases by mills, raw jute gave way during the week under review, the actual fall in price being Rs. 2 to Rs. 2.50 a maund. Goods, however, maintained the week's earlier levels, the spurt during mid-week proving temporary. Increased arrivals have been aided by the inclination among cultivators to sell, as well as by the improvement in transport following bright sunshine in the last ten days or so, thus drying away the accumulated rain water from feeder roads. Now that the sowing of the next paddy crop is complete, cultivators are paying more attention to selling their produce. Moreover, cash requirement in connection with the forthcoming *Poojas*—the biggest festival of the year in this part of the country—are also forcing the not-so-well-placed among the cultivators to seek buyers. Unless fibre prices fall to more reasonable levels, it is stated on behalf of mills that they would continue to suffer loss of simultaneous business in fibre as well as goods.

In view of increased arrivals, sellers exhibited keenness to locate buyers, and Assam bottoms fell from Rs. 42.00 to Rs. 40 a maund, daissee bottom from Rs. 43.50 to Rs. 41, and northern bottoms from Rs. 41 to Rs. 39. Prices are likely to fall further but it is by no means expected that they would touch last year's levels. This is because prices of essential commodities have risen; also the crop is not expected to turn out to be as big as last year's. If fibre prices are stabilised at around Rs. 35 a maund, that level would be considered fair. Fibre prices in Pakistan continued to fall this week, and buyers were reported selective inasmuch as, with the receding of flood waters offers have increased. Considering that, contrary to earlier expectations, arrivals of raw jute in India in July 1964 aggregated 326,000 bales, as against only 203,000 bales in July 1963, the fibre supply position in this year may be satisfactory. Arrivals in July 1964 were, of course, so high because they included releases from old crop holdings, in Pakistan, the crop is expected to be much lower than last year. According to the latest issue of the *Jute Bulletin* published by the Indian Central Jute Committee, world requirements of jute,

excluding Brazil and Communist China, are placed at 15 million bales, including about 8 million bales for Indian mills and about 2 million bales for the Pakistan mills. The crop in India is expected to aggregate 7.2 million bales and that in Pakistan about 5.5 million bales.

On Tuesday last, prices of goods gained as, according to figures released on that day, goods in stock with mills as at the end of August had fallen to 152,100 tonnes from 135,800 tonnes in the previous month. The largest fall of 3,700 tonnes was in sacking at 49,700 tonnes, as against 53,400 tonnes. Hessian was lower by 300 tonnes at 45,700 tonnes and miscellaneous goods by 600 tonnes at 13,400 tonnes. However, carpet backing cloth at 23,300 tonnes showed a rise of 900 tonnes. Following the release of these details, ready B. twills gained from Rs. 142.50 to Rs. 144 and in sympathy hessian 40" 10 oz. was unchanged at Rs. 50.50. Although at these levels, genuine interest was lacking, ready B. twills rose to Rs. 144.50, with hessian continuing unchanged at Rs. 50.50, in view of some interest in the hedge market. At these levels, selling pressure developed and that explained the recession of the rates to Rs. 142.65 and Rs. 50.05 on Thursday. On Friday, hessian 40" 10 oz. was unchanged, but B. twills slipped further to Rs. 142.25. Over the week-end, however, B. twills improved to Rs. 142.50 and hessian 40" 10 oz. to Rs. 50.00. Despite Government interest, B. twills during yesterday eased to Rs. 142.10 but hessian 40" 10 oz. was better at Rs. 50.25.

PEPPER IRREGULAR

(Messrs. Parekh and Co.)

BOMBAY, 15*th September*

Malabar black pepper during the week ruled irregular without showing any definite trend, as there was tussel between the bulls and the bears in local as well as in Cochin market. Reports of the deterioration in the political situation in Malaysia fail to enthuse New York dealers. Spot at New York, on the contrary, was marked down from $0.35 to $0.34. This had its bad effect on Malabar garbled which once went down to Rs. 344 before improving to Rs. 348.

The movements on the futures at both Bombay and Cochin were two sided. *Bhadrapad* in Bombay, after going down to Rs. 358, rallied to Rs. 368 under pressure of buying by bulls. *Asho* improved to Rs. 373. October delivery at Cochin, after receding to Rs. 358, improved to Rs. 366 in the wake of the report that about 200 tons of Malabar were purchased by one of the East European countries, Singapore was steady at $(M)115. New York remained quiet, as grinders remained out of the market; they were fairly covered and had no faith in the future selling policy of Indonesia. The future is uncertain. Ready Malabar was quoted at Rs. 180 per 50 kilos.

KIPS EASY

(From Our Own Correspondent)

MADRAS, 14*th September*

Arrivals of tanned cow hides into the Madras market was on the usual scale and clearance was good, except in the inferior fifths selection, for which demand was not yet in evidence both for export and internal markets. Export enquiries were brisk for light weight cowhides, but buyers declined to pay a penny more and trading was difficult. Importers did not seem interested in E.I. tanned buffcalf, in view of the very low prices which are offered by other countries.

There were several enquiries for tanned skins from France and a few orders have been booked, at increased prices; and further business is under negotiation. Locally prices rule firm, in the tanned as well as in the raw markets. Light weight and medium goat skins, middle class sheep skin fifths and inferior fifths selections and suede selections have been in the lime light. Heavy weight goat skins have been a drug on the market, but is expected to move once sellers become weak holders.

The following were the prices per lb. ruling in the local market for unassorted parcels:—Tanned cowhides 8/8½ lbs. average Rs. 2.00 to Rs. 2.06, tanned buffhides 12/13 Re. 1.80 to Re. 1.85 and tanned calfhides 1½/2 Rs. 2.50 to Rs. 2.62.

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 15*th September*

The world metal markets continued to rule buoyant during the week under review. On the London Metal Exchange, spot tin opened at £1,395 a ton and rose to £1,410 and spot copper wire bars at £410, also touched a new peak. However, the quotations closed lower than the above levels, that is, at £1,403 and £393, respectively. It has now become difficult to predict as to when the present boom would reach its height; however, it is expected that, since the rise has been rapid, the fall also, as and when it develops firmly, wou'd be rapid. In the Calcutta market, too, prices advanced. The prospect of a rise in industrial costs should cause a considerable amount of thinking by all concerned especially when the extent and degree of inflation have been much severer than apprehended by the planners.

Against this background, the suggestion made by the Magnet Wires and Cables Manufacturers' Association of Bombay for the creation of a buffer stock in non-ferrous metals is timely and interesting. This, it is stated, will mitigate the difficulties caused to consumers as a result of the delay in issue of import licences and also in arranging supplies from abroad. The Association points out that, if only a buffer stock of 1,500 tons of scalped copper wire bars is created and stored at different points in [illegible] same can be made to consumers who should be asked to replace the buffer stocks as soon as they get licences and the imports take place.

With limited supplies, the price of utensil copper scrap was maintained firm at Rs 680.00 per 100 kgs. Tin was also firm at Rs. 3,300 per 100 kgs. The world price is moving up as a result of the apprehension of demand outstripping supply. The labour situation in Bolivia is causing anxiety, and the Malaysia-Indonesia discord is no near a peaceful solution. Free world mine production of tin in concentrates totalled only 12,000 tons in May last as against 12,200 tons in the previous month. While Nigeria, Thailand and Bolivia suffered a shortfall, Malaysia recorded a slightly higher output. In the same month, free world smelter production of primary tin fell to 12,500 tons from 13,200 tons in April 1964. Lower production was reported from Malaysia, Belgium and Nigeria, while the U.K. recorded a small increase.

Spot zinc on the L.M.E. rose from £115¾ a ton to £123, and lead from £107¼ to £109¾. Higher levels were maintained in Calcutta.

"GUR" RISES AGAIN

(From Our Own Correspondent)

HAPUR, 14*th September*

Crystal sugar in the open market drifted lower because of subdued trend in *khandsari*. Supplies were further restricted for commercial establishments by 10 per cent, as the balance of their quota was replaced by *khandsari*. Fall in prices was also due to the increase in the monthly quota per unit from ¾ kgs. to one kg. Despite full control over distribution sugar in the open market was quoted at Rs. 170 to Rs. 175 per quintal, as against the controlled prices of Rs 131 to Rs. 136.

Khandsari tended to decline on selling pressure from stockists, because the stocks in godowns have been damaged due to heavy rains. Traders were worried that out of the heavy stocks frozen by the State Government, only a small portion have been released so far by the authorities. Though the local demand for *desi khandsari* against the released stocks was negligible, its purchases on behalf of the Punjab against permits was reported to be brisk. Permits for export to east U.P. were also received during the week, but still the quality of huge stocks left was said to be fast deteriorating due to rains. New *khandsari* production would commence some time in November. In the open market, *khandsari* is quoted at Rs. 125 to Rs. 155 per quintal according to quality as against the controlled rates of Rs. 109 to Rs. 126.

Ready *gur* sought further higher levels, as the stocks of dry variety were poor, and demand from the consuming areas of South was brisk. *Shakker* was firm on support from the Punjab and Rajasthan. Local stocks were around 1,000 quintals and total stocks in the neighbouring mofussil markets were estimated around 10.000 quintals. Two to three weeks are still left for the commencement of new *gur* production and, by that time, the entire stocks are expected to move out. With a bumper cane crop, increased acreage, no restriction on production from bullock driven *kolhus* and prevailing high prices of the commodity, *gur* production is expected to go up in the coming season. Week-end prices (in rupees per 40 kilogram) were *gur pansera* dry 42.50, dry-wet 35 to 36, wet 30 to 31 *shakker* 42 to 42.50.

FOODGRAINS TOUCH NEW HIGH LEVELS

(From Our Own Correspondent)

HAPUR, 14*th September*

Bullish trend continued in foodgrain prices and prices touched new high levels. Poor arrivals, in face of brisk local and east U.P. buying enquiry and restricted supplies through fair price shops, were main influencing factors. Harvesting of maize is on these days, and arrivals of new crop grain have begun in small quantity. If weather turns sunny, arrivals are expected to increase. While paddy and *munji* (rice) crop would be bumper, thanks to heavy rains during last two months, other *kharif* crops of maize and *juwar* have been adversely affected, due to waterlogging over wide areas.

Wheat prices advanced further by Re. 1.50 to Rs. 2.50 per quintal, according to quality, during the week on small arrivals, coupled with restricted supplies through fair price shops and good demand from local consumers and east U.P. traders. The commodity touched an all-time high level of Rs. 91.50 per quintal for average quality, and Rs. 93.75 per quintal for farm produce. Prices at fair price shops, however, were much lower at Rs. 43 per quintal. Arrivals were small and local stocks ran down to 1.000 quintals. Rice prices also touched an all-time high level and recorded gains of Re. 1.50 to Rs. 4.50 per quintal, because of tight supply position against good buying support. Week-end prices were: Rice *basmati* superior Rs. 122.50 to Rs. 125, *sela* Rs. 118.50 to Rs. 121.50, *mainpuri* Rs. 108.50, *ramajwayan* Rs. 110.50, *raimunia* Rs. 110.50 and *gadda* Rs. 108.50 per quintal.

Gram prices also ruled firm and prices advanced by Re. 1.50 to Rs. 2 per quintal on good east U.P. support and poor stocks. Prices ranged between Rs. 81.50 and Rs. 83 per quintal, according to quality. Among other coarse grains, after an early decline, maize prices improved on small arrivals and prices were quoted between Rs. 67.50 and Rs. 68.75 per quintal. Arrivals, however, were 2,000 maunds, mostly from east U.P. Barley and *bejhar* prices drifted lower on poor buying support and prices were ranged between Rs. 70 and Rs. 71.50 and between Rs. 67.50 and Rs. 70 per quintal, respectively. *Juwar* and *guwar* prices were almost stationary and trading was limited. Oats and *methi* prices, however, stayed steady due to [illegible]

THE MOUNTAINS AND MOLEHILLS OF BUSINESS

IF YOU ARE IN BUSINESS, YOU KNOW IT'S A CHALLENGE.. FOR MOUNTAINS OF INVESTMENT YOU MAKE A MOLEHILL OF PROFIT.. THAT IS IF YOU ARE LUCKY.. BUT IT IS NOT ALL A MATTER OF LUCK.. GOOD MANAGEMENT CAN HELP YOU, SO CAN BANKERS.. WHEN IT COMES TO BANKING 'CENTRAL' IS HARD TO BEAT.. IT OFFERS ALL KINDS OF BANKING FACILITIES AT 376 OFFICES IN INDIA, PAKISTAN AND U. K.. SO CALL ON US TODAY.. LET US HELP YOU MEET THE CHALLENGE OF BUSINESS...

MARKET GOSSIP

(*Concluded from page 487*)

Japan), in addition to the proposed overall increase of 25 per cent. Even the quota of India will have to be reconsidered under these selective increases, if it is not to loose its position on the Executive Board of Directors. Finally, there is the question whether the supplementary lending resources of the Paris Club also need to be increased. All these questions, together with the control of international credit mechanism, may not easily lend themselves to a quick solution, in view of the differences between the French camp on the Continent and the Anglo-American camp. In any case, nothing tangible is likely to take place, until the elections are over in the U.S. and the U.K. and the new Governments in these countries settle down to their work in right earnest.

At the meetings of the World Bank and its affiliates, the proposal to enlarge the funds of I.D.A. by transferring $50 million from the World Bank's reserves as an outright grant and to amend the Bank's charter in order to permit it to lend to the International Finance Corporation up to a maximum of four times the latter's capital and reserves (that is, up to $480 million) was endorsed without much ado. Accordingly, the I.D.A. and the I.F.C. are now assured of a significant increase in their resources. This is a heartening development for the underdeveloped countries.

Relief To Direct Taxpayers

The latest move of the Union Finance Ministry to remove some of the hardships caused to direct taxpayers under the Income-tax Act 1961, the Estate Duty Act 1953 and the Expenditure Tax Act 1957 and to provide some relief to assessees in certain cases is commendable. They do not in any way reduce the burden of taxation, but may give relief in procedural difficulties and unintended odd effects of the existing tax laws. The three Acts are being amended through the Direct Taxes (Amendment) Bill, which was introduced in the Lok Sabha on Thursday last week. The more important effects of the amendments proposed in respect of each of the three Acts are summed up below:

Income-tax Act: Three welcome concessions are proposed. They are: (1) When a company goes into liquidation consequent on its compulsory acquisition by the Government or any corporation owned or controlled by the Government, the distribution made by the liquidator (of the company) to the shareholders will not be chargeable to tax as dividend to the extent that such distribution is attributable to the accumulated profits of the company relating to any period prior to the three successive previous years immediately preceding the previous year in which the undertaking is acquired. (2) any special house rent allowance (not exceeding Rs. 300 per month) specifically granted to an assessee by his employer will be excluded from his total income. (3) A charitable institution or fund which receives a dividend on its holdings of equity shares in a company will be entitled to a credit in its assessment for a proportionate amount of the super-tax payable by the company in respect of the dividend on equity capital declared or distributed by it during the previous year for the assessment year 1964-65 or any later year.

Estate Duty Act: Two important changes are proposed. One, when the "accountable" person transfers any property comprised in the estate of the deceased and utilises the proceeds for paying estate duty, a deduction will be allowed from the estate duty of a proportionate amount of the tax which becomes chargeable under the Income-tax Act on the capital gains arising from such a transfer. Two, the Central Government can accept at an agreed price the assets comprised in an estate passing on the death of the deceased towards payment of estate duty, if the "accountable person so offers. Any balance (of the price) left after satisfying the amounts due under the Estate Duty Act will be adjusted against the amounts due under the other direct taxes acts from the deceased, his estate and the "accountable" person beneficially entitled to the asset in question. This provision is in accordance with the practice followed in many countries and discourage the tendency among tax collectors of placing an excessively high value on properties the value of which cannot be easily ascertained. Their object in doing so is to collect a larger amount by way of estate duty. Another outcome of this amendment could be the avoidance of depression on stock exchanges which might occur if large investments of the deceased assessee in shares and securities were to be sold in the market in order to pay estate duty. In such cases, the Government could take over the assets and dispose them of gradually, as and when market conditions are favourable.

Expenditure Tax Act: An assessee will be exempted from expenditure tax on the expenditure incurred by him on making a gift which is specifically exempted from gift tax under sub-section (1) of Section 5 of the Gift Tax Act 1958.

All these concessions are to be welcomed. And there need be no objection to the proposed inclusion of a new section in the Income-tax Act which prohibits registration of any property (other than agricultural land) valued at more than Rs. 50,000 without producing a tax clearance certificates from the Income-tax Officer concerned. This provision applies only to documents which are required to be registered under the provisions of clause (*a*) to clause (*e*) of sub-section (1) of Section 17 of the Indian Registration Act of 1908. Since the Act does not cover the shares, stocks and debentures of joint-stock companies which are exempted from compulsory registration under the Act, the transfer of these securities does not come within the purview of the proposed new section. The Government has apparently been prompted by the need to check evasion of tax or under-payment of tax by some parties who try to exchange properties for cash without the knowledge of tax authorities. True, the delay involved in obtaining income-tax clearance certificates may hinder private property transactions in some cases. But, on this score alone, it would be wrong to oppose the proposal itself, since there is large-scale tax evasion in the country. Delays, however, must be avoided. The Finance Ministry will do well to include in the Bill a specific provision which makes it obligatory on the part of Income-tax Officers to issue tax clearance certificates within a definite period after he receives the applications from parties wishing to transfer their properties.

The Food Debate

The Food Debate in Parliament ended unceremoniously, as was expected. With the Opposition parties having no unity of purpose, ideology and programme and speaking in divergent voices, the only common point that emerged out of the debate was a recognition by all that there was a food problem in the country which required to be solved on a war basis. But if this was the only thing to be achieved, where was the need for a debate? No Government spokesman or member of the ruling party had ever said that there was no serious food problem. With some Opposition members speaking for total nationalisation of trade in foodgrains and others denying the utility of it and the spokesmen of the Government and ruling party reiterating the measures already announced to meet the food problem, hardly anything useful or new emerged and the debate turned out to be a mere jugglery with words. But that is an inherent luxury of democracy. The Opposition is bound to make political capital out of the difficulties confronting the country and there is no meaning in anyone saying that one should not play politics with food.

Be that as it may, some of the speakers did bring out a few points which need to be considered. Mr. M. R. Masani, for instance, pointed out that, whereas he had no objection to the Government intervening in foodgrains trade through the Foodgrains Trading Corporation, it was most unfair that this Corporation should enjoy monopolistic rights in rail transport facilities. Mr. A. C. Guha (a Congress member) was critical of the Governments failure to persuade the surplus States to share their stocks with deficit States and urged a more or less uniform price for foodgrains throughout the country like that of steel. He accused the surplus States in the country of profiteering at the cost of deficit States. Dr. R. M. Lohia, who spoke in his usual manner quoting his own statistics of foodgrains consumption in the country, accused the "socialists, whether of the Congress or of the Communist Party" of following the forms of socialism such as State trading and banks' nationalisation and neglecting the true substance of the problem. He said that increased agricultural production was the crying need of the day and in this respect he was prepared to give lower precedence even to distributive justice.

All these are relevant points. The ultimate solution of the food problem is the rise in production and, as Dr. Lohia pointed out, to talk of bank nationalisation and give undue importance to State trading is to neglect the true substance of the problem. The point raised by Mr. Guha on food zones was also correct. Whereas the Government talks so much about the unity of the country, it has helped the States to create unnatural economic boundaries and the word "export" has come to be used commonly for movement of foodgrains from one State to another. If this attitude persists, the day is not far off when Maharashtra, or Bengal or Kerala or some other States may divert a part of their land to foodgrains at the expense of other crops for which the land is best suited. The result would be uneconomic utilisation of agricultural land, the supply of which is by no means so plentiful as to permit wasteful cultivation.

One, however, must not overstress the uniformity aspect, as was done by Mr. Guha. At no time prices of foodgrains or any other food article have been uniformly the same all over the country. Nor can they ever be, for, in areas where there is surplus production, prices are bound to be lower than in those that are in deficit. Again, prices are bound to vary between rural and urban areas even in one State. The comparison made by Mr. Guha with steel prices is most inept and the system adopted for ensuring uniform steel prices is clearly unworkable in regard to foodgrains. But what needs to be corrected and is unjustifiable is the glaring disparity in prices prevailing in surplus and deficit States. Such disparity in some cases is more than 100 per cent and has been possible because of the zonal system.

Mr. Subramaniam, who replied to the debate on the last day, mainly recited the points made by him from time to time. He, however, indicated that a decision on rice zones would be taken in October-November and on wheat zones in February-March. He informed the House that arrangements were being made for *ad hoc* purchases of rice in the coming *kharif* season until 1st January 1965 when the proposed Foodgrains Trading Corporation would come into being. He also said that, though there was no proposal to introduce full-scale State trading to capture the entire marketable surplus, the Corporation would purchase considerable quantities of foodgrains, so that it could influence the prices. His assessment of the prospects was that, with the arrival of *kharif* crop, the situation was bound to ease. He was of the view that the current crop had not suffered much from the floods from which many parts of North India and North East India have suffered this year.

A smooth solution of the food problem is, however, rendered difficult by the lack of agreement between the Centre and the States and between State and State on food allocations, the food policy and its implementation. Obviously, the Centre is not able to persuade all the State Governments to fall in line with its approach to the food problem.

TREND OF SHARES

EQUITIES EASY AGAIN

(From Our Own Correspondent)

BOMBAY, 17*th September*

BARRING intermittent rallies due more to short-covering than any fresh speculative support, shares tended to drift downwards during the week under review. Despite Thursday's moderate rally, the list showed generally small to moderate losses on balance. Sentiment was induced mainly by factors like the unseating of the Shankar Ministry in Kerala and its blow to the prestige of the ruling party as well as the no-confidence motion against the Union Ministry. It was not that the market was unaware of the party position in Parliament to doubt the outcome of the motion but yet operators preferred to be cautious and were awaiting the reply by the Finance Minister to the criticisms of the Government's economic and fiscal policies. There was also a feeling that the Finance Minister might not come forth with any measures for tax relief and this caused no small disappointment to a market which was even talking in terms of a supplementary budget and possible relief to the private sector. Apart from these factors, the continued reports of violations on our border from the Pakistani side and periodic threats from labour induced a tendency of caution among bull operators.

Steel shares presented a mixed front. Indian Iron which had been done down to Rs. 26.75 on Saturday, following heavy selling by Calcutta interests, rallied on short-covering to close the week a shade better at Rs. 29, while Tata Steel was fractionally easier at Rs. 158.75. Mukand Iron was distinctly weak at Rs. 18.44, against Rs. 18.76 in the previous week. Interest in steel shares will more or less be of a professional nature for some time to come, as most of the factors regarding the respective companies have become known and discounted. It is likely that the general investment public will not come into this field until some fresh developments present themseves.

For want of fresh developments again, cotton mill shares were comparatively less active during the week with the tendency for prices to sag. Standard lost nine points during the week to close at Rs. 641, but the week's low was Rs. 638, touched on Wednesday. Kohinoor also staged a small rally on Thursday, but yet it was down by two points on the previous week with the final quotation at Rs. 329. Svadeshi was unchanged at Rs. 265, but Century, which had been done down to Rs. 624 on Saturday, moved up to Rs. 628.50 which was one point above the closing level of the previous week. Bombay Dyeing was better at Rs. 60.90.

Price movements in National Rayon were not wide and, after being marked down to Rs. 362, the shares staged a mild rally and closed the week unchanged at Rs. 365. It seemed that operators have had their time with National Rayon and would rather leave it alone for a while. Moreover, there have been no new developments, the expected cut in excise duty and relief to the industry being an old story which did not come off. The other members in the group more than followed their leader, in that they closed the week with small losses—Indian Rayon was down from Rs. 59 to Rs. 57.50, Baroda Rayon from Rs. 76 to Rs. 72 and South India Viscose from Rs. 117.50 to Rs. 116.50.

A notable feature of trading during the week under review was the hectic activity in Indian Dyestuff. In initial dealings on Tuesday, the shares were bid up to a new high of Rs. 312, following the extremely encouraging picture drawn by the Company's Chairman, Mr. Arvind Mafatlal, at the annual meeting. That the Company had turned the corner with the likelihood of sales touching Rs. 3.5 crores in the current year and going up to Rs. 6 crores in 1965-66 were excellent as corporate factors but one did not know what happened for the shares to decline sharply to Rs. 300.50 in the same session. Perhaps it was a case of profit-taking. The rate at the end of the week was Rs. 296, showing a net loss of Rs. 7.75 over the week. Dhrangadhra, among other chemical shares, was slightly better—from Rs. 128 of the previous week to Rs. 130.50 in the week under review. The spurt of a few weeks ago to Rs. 93 in Synthetics and Chemicals went unsustained, the scrip having fallen further by four points during the week under review to Rs. 80. Tata Chemicals were slightly easier at Rs. 19.48.

Prices of sugar shares indicated a divergent trend, but, by and large, the undertone was weak. Belapur lost four points to close the week at Rs. 227. Maharashtra eased from Rs. 143 to Rs. 141. Phaltan and Walchand closed on a steady note at Rs. 113.50 and Rs. 161.50, respectively. Cements were easy, with A.C.C. down by four points to Rs. 160.75, but Digvijay managed to hold its previous week's level. Among engineerings, Telco and Voltas were quiet at Rs. 272.50 and Rs. 271.50, against Rs. 276 and Rs. 272 respectively a week ago. Larsen and Toubro failed to respond to the Chairman's hint at the possibility of a bonus issue and closed on a subdued note at Rs. 22.76. Scindia was rather unlucky, in that, after touching a new high level in the recent upward move at Rs. 16.60, it eased slightly to close the week at Rs. 16.40 as against Rs. 16.52.

Activity in cash shares was comparatively less during the week under review but this should not come as a surprise, for the cash section usually tends to be in the background whenever the forward section is in a mood to ease. However, fairly good business was put through in selected scrips such as Sandvik at Rs. 174, S.L.M. at Rs. 156, Gammon India at Rs. 14.40 and Associated Bearings at Rs. 105, the last named having declined by five points during the week. A feature was Anil Hardboard which were bid up from Rs. 165 to Rs. 180. Among automobiles, Hindustan Motors was quiet. So was Premier Auto at Rs. 107. Bajaj Auto, however, maintained a steady tone at Rs. [illegible]

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIX. No. 2788 BOMBAY, 26th SEPTEMBER 1964 PRICE Rs. 2

APPROACH TO FOURTH PLAN

THE leftists and communists in this country have been playing a clever game in recent months. They have been organising *hartals*, strikes, processions, meetings and picketing of Government offices as a protest against scarcity and sharp rise in the prices of necessities of life. At the same time, they have been accusing Mr. Lal Bahadur Shastri, in particular, and his Cabinet colleagues, in general, of deviation from the late Mr. Nehru's approach to, and policies on, planning, conveniently ignoring that his approach and policies themselves have been responsible, to a considerable extent, for the present economic difficulties and that, if the country were to pursue them further blindly, it would jeopardise both political and economic stability. The no-confidence motion moved in Parliament last week, even though its defeat was certain, was part of this new strategy of exploiting, to the maximum extent possible, the current economic difficulties and the people's devotion to the memory of Mr. Nehru for their political advantage. Even the leftists in the Congress Party (as, for instance, Mr. K. D. Malaviya and Mr. Krishna Menon) have not been free from this tempting opportunism.

In a democratic society, it is the privilege of Opposition to try to improve its public image at the expense of the ruling party. But it would be a great pity, if Mr. Shastri were to allow himself to be hustled into the Opposition trap and depart from the realistic stand he took shortly after he became the Prime Minister in regard to economic planning. Of course, Mr. Shastri has boldly asserted his right as the chief of the Government to modify the strategy of planning within the broad framework of the Congress Party's policy, if such modification was found necessary following changes in circumstances. This much is implied in his assertion that his "independent thinking" was in accordance with democratic concept, that there was complete freedom and opportunity for re-thinking old policies and formulating new ones, and that history was full of instances where a leader did not always find it possible to do exactly the same things which his predecessor did. Surely, Nehruism was different from Gandhism. And so was Stalinism as compared with Leninism. To give a latest instance. President Johnson's economic policies have not been exactly the same as those of his illustrious predecessor, the late Mr. John F. Kennedy. And yet none can say he has sacrificed the principles of his party.

It, however, remains to be seen to what extent the criticisms made in the debates in Parliament during the past ten days have influenced Mr. Shastri's thinking on the strategy of planning and the priorities to be accorded in the fourth Plan. He hardly dwelt on this subject in his marathon reply to the debate on the no-confidence motion. He might have thought that, since Mr. T. T. Krishnamachari had extensively covered economic trends and planning while intervening in the debate, it was unnecessary for him to deal with them. But the overall impression that one gets from Mr. Krishnamachari's observations is that there would be no significant departure from the emphasis placed on heavy industries *vis-a-vis* agriculture, consumer goods and consumer durables. The crux of his whole approach was that the present deterioration in the price situation was only a temporary phase and that, in preparing the fourth Plan, one should not allow one's vision to be blurred by passing difficulties. Look ahead; aim high; be ambitious; have self-confidence; be an optimist—all this exhortation may be inspiring, but it falls flat when confronted by the cold facts of the situation. It is a gross underestimation to say, as Mr. Krishnamachari does, that the present economic imbalance is of a temporary nature. On the contrary, it is the outcome of not merely stagnation in the production of foodgrains but also some chronic deficiencies in the economy. It would, therefore, be unwise to impose on the country another Five-year Plan involving a capital outlay twice as large as that envisaged in the current Plan. One must also not forget in this connection the onerous defence burden the country has to carry.

Analogies are no good substitutes for arguments. Nevertheless, they serve the useful purpose of lending force to an argument. The Indian economy today is suffering from overheat. It is in the position of a person who is running high temperature. The temperature has to be brought down, before he can be given nourishing food. He has to be placed on liquid diet till then and given a period of rest before being asked to do heavy work. The Government is aware of both the malady and the remedy, but does not have the political courage to act on right lines. Instead, it is resorting to a programme of rigid controls on consumers, trade and industry. These are only palliatives and their efficacy is minimised by the lack of willing co-operation from the public. It would be a grave mistake to superimpose a massive fourth Plan on an economy that is being propped up by controls and at a time when people are groaning under the weight of high cost of living and heavy burden of taxation.

This is not a plea for slowing down the pace of economic growth. On the contrary, it is a plea for a higher rate of growth based on stability and confidence among the people. It is quite possible that food production may show a progressive increase in the coming years. One must, however, proceed not on the assumption of possibilities but on sound measures which will positively yield increases in agricultural production. Mr. Krishnamachari may be right in contending that investments in heavy industries need not stand in the way of developing agriculture, that it is incorrect to say that enough resources have not been set apart for agriculture, and that development of agriculture itself needs the establishment of some heavy industries such as steel, cement, fertilisers and pesticides. At the same time, he has to concede that, notwithstanding the attention and resources devoted to agriculture all these years, production of agricultural commodities, particularly of foodgrains, oilseeds and subsidiary foods, has been lagging far behind requirements. Further, ever since the beginning of the second Plan, prices have been going up substantially year after year and the Government has been helpless. There is nothing in its policies to warrant the hope that, in the next 12 months, it will succeed in neutralising at least the major part, if not the whole, of the 15 per cent rise in prices that has taken place in the past one year. In the name of incentives to farmers, higher prices for agricultural commodities may be perpetuated and large sums of money will be expended by way of subsidies on food supplied through fair-price shops. More wages are to be paid to workers without necessarily resulting in an increase in productivity. Thus, more and more money is being poured into the economy, while the supply of goods is not increasing correspondingly. In these circumstances, how is one to feel confident that the economy can safely stand massive expenditures of the order now contemplated for the fourth Plan period?

In a way, both Mr. Lal Bahadur Shastri and Mr. Krishnamachari are conscious of the difficulties that lie ahead and this gives room to the hope that, when the Government comes down to brass tacks of the fourth Plan, the present shortcomings in the economy will be borne in mind. In a reply to a question in the Lok Sabha on Monday this week, as to whether he had suggested postponement of the execution of heavy industrial projects, Mr. Shastri said that (*a*) plans for new projects which were of national importance such as Bokaro steel would not be slowed down, and (*b*) it would be better to concentrate attention on projects already under implementation but lagging behind schedule, in order to quicken their completion, before taking up new projects. This is undoubtedly a sensible approach. Similar instances can be found, if one carefully reads the speech of Mr. Krishnamachari. In one place, for instance, he said:

"... to a much larger degree than in agriculture, the shortage of foreign exchange has been an inhibitive factor in the growth of industrial production. From this point of view, efforts have to be made in the following directions:

1. Complete the programmes in hand and secure as much output from each of them as possible.
2. Utilise idle capacity by augmenting supplies of required components and materials to existing units and giving preference to priority and essential industries, wherever the availabilities fall short of overall needs.
3. To give preference to expansion of existing units over establishment of new units wherever conditions justify; as this would help to secure additions to capacity with minimum investment.
4. In working out *inter se* priority between schemes of equal importance, to give preference to fast maturing schemes over those which are likely to have longer gestation periods.
5. Similarly, in the case of industries which offer export possibilities or import substitution, they would get preference over others not similarly placed."

If the same pragmatism that is apparent in the foregoing extract is displayed in regard to other aspects of the fourth Plan also, as, for instance, low-cost large-scale production of consumer goods *versus* decentralised production which is subsidised in some form or other, and if the attention paid to agriculture is more productive than has been the case so far, the desired rate of economic growth, namely, 5 to 6 per cent per annum, can be attained with a much lower level of capital outlay than the one now talked about.

MILLS *Versus* POWERLOOMS

IT looks as though the Powerloom Enquiry Committee (Chairman: Mr. Asoka Mehta) had decided on its recommendations even at its first meeting (held on 4th and 5th February 1963) shortly after it was constituted by the Government of India on 8th January 1963. How else is one to explain the utter disregard shown by the Committee to the sound advice on the future set-up of the cotton textile industry given by many who have an intimate knowledge of the industry in the course of both written re-

presentations and oral evidence? The Committee is so heavily biased towards the decentralised sector (the handlooms and the powerlooms) that it has completely overlooked the economics of the mill sector. The Committee wants the reservation of the entire additional cloth production (amounting to about 2,500 million yards) during the fourth Plan period for the decentralised sector, by freezing the mills' weaving capacity at the existing level, after taking into account the additions already agreed to. Not only that. The Committee also wants a freeze on the mill output of *dhotis* and *saris* at the 1963 level and the exclusive reservation of all coloured *saris* production for the handlooms. What is worse, it has urged further restrictions on processing capacity in mills and favoured certain measures which would virtually impose a ceiling on their spindleage too. These recommendations are, to say the least, deplorable and, if implemented, will (1) deny the consumers the freedom of choice and the opportunity of getting good quality cloth at an economic cost, (2) endanger the exports of cotton textiles, and (3) ensure a closed market for the existing textile mills which is the surest way of allowing them to become inefficient, irresponsible and unenterprising. It is, indeed, surprising that a prominent millowner of India, Mr. G. K. Devarajulu Naidu, who, incidentally, is the Deputy Chairman of the Indian Cotton Mills' Federation, should have associated himself with the other members of the Committee on the issue of curbs on mill sector.

The reasons adduced by the Committee in support of its recommendations are unconvincing. Let us see what these reasons are. The Committee points out, for instance, that the dominant position occupied by the mill industry for the supply of cloth to consumers in the country has not always helped in *stabilising* (italics ours) cloth prices. Who is it that is to be blamed for this state of affairs? It may be that some mills here and there have off and on put up prices to levels unrelated to their production costs. But it would be uncharitable to give a bad name to the industry as a whole and hang it. If the industry had not been saddled with too many restrictions by the Government on expansion, modernisation, rehabilitation, production and marketing (in some periods), it would have been in a much stronger position than it is today to make available for domestic consumption plentiful supplies of cloth at economic prices and to compete effectively in world textile markets. It is thus the powers-that-be who are responsible for the lack of stability in the textile markets.

In suggesting further curbs on the mill sector, the Asoka Mehta Committee forgets that such curbs, which, in effect, mean a sheltered market for the mill industry, may induce a number of units to indulge in malpractices, with the result that the interests of consumers will be at stake. If the Committee thinks, as, indeed, it does, that "the entry of the decentralised sector in a big way in the supply of cloth should serve to exert a healthy influence to the advantage of the consumers," it is sadly mistaken. Whatever be the official measures of support and encouragement, the powerlooms will not be able to serve the interests of consumers as efficiently as the mills. The cloth produced by powerlooms is less durable and more costly than that produced by the mills. The Committee itself admits that, with the growing preference of consumers for better quality processed and finished cloth, the marketability of cloth depends to a large extent not only on the fineness of the texture but also on its finish brought about by the different methods of processing—dyeing, printing, sanforizing, etc. Further, powerlooms' contribution to the Treasury can by no means be as significant as that of the mills. In any case, by no stretch of imagination can they be as efficient a producer of cloth as the mills. In fact, the Committee itself has admitted that the overall production and marketing disability suffered by the powerlooms *vis-a-vis* the mills is of the order of 18 per cent. It must be much more if what the millowners say is nearer the truth.

In saying all this, we are not holding any brief for the mill industry; we are really concerned with consumers and the need for building up a strong and sound economy without which political independence will become a sham. The continuously rising trend of population, the increasing purchasing power in the hands of people and the exigency of earning maximum foreign exchange through exports are bound to exert a considerable upward pressure in the demand for cloth in the coming years. The Asoka Mehta Committee fervently hopes that the entire additional demand for cloth can be fully met by the decentralised sector. As experience in the past ten years has shown, this is a vain hope. If the Government accepts this finding and gives effect to the suggestions made by the Committee, we can safely predict now that there will be a virtual cloth famine in the country towards the close of the fourth Plan period, that is, during the year 1970 and early 1971.

The powerloom sector does have a positive and definite role to play in future. But its development should not be fostered at the cost of the more efficient mill sector. Indeed, there will be no need for doing so, since there will be enough market for both the mills and the powerlooms in the years to come. In any case, it will be clearly wrong to compel consumers to buy more and more of cloth produced in the decentralised sector and less and less of cloth woven in the mills. Why should the consumers be denied the freedom to buy the cloth of their choice (consumers' sovereignty, as economists describe it) when the country is blessed with the necessary raw materials, skilled labour, and experienced entrepreneurs? What an irony that, while this country is sending out teams to help the Africans and other Asians to install modern mills with up-to-date equipment (we are not against this move), the people of this country should be asked to be content with cloth produced on looms which are certainly out of date!

While saying that the large-sized composite mills, equipped with modern spindles, automatic looms and other up-to-date machinery, are capable of meeting a significantly large part of the expanding demand for cloth (for both domestic consumption and export) at an economic cost, we are not oblivious of the fact that the decentralised sector also will continue to play a significant role as the supplier of piece-goods, *provided it is placed on a sound and viable footing.* The proviso here is very important. The productivity of the handloom industry is very poor and so the earnings of those who are dependent on it for their living are extremely low. Indeed, the handloom industry continues to be a sweated industry. If the lot of weavers is to be improved, it is imperative that as many handlooms as possible are converted into powerlooms. On this aspect, we shall say the Asoka Mehta Committee has been more forthright than even the Kanungo Committee in 1954 and its recommendations deserve to be welcomed. Unless, as a matter of policy, the Government embarks on a large-scale scheme of giving the handloom weavers a more efficient instrument of production to improve their lot, the Committee observes, the efforts and moneys spent from the exchequer for the different measures of amelioration of the condition of weavers would largely be set at naught.

A systematically phased programme for conversion of handlooms into powerlooms, it will be recalled, was first evolved by the Kanungo Committee and the scheme was included in the second Plan. But the implementation of the scheme was haphazard and, in 1961, the scheme itself was abandoned following the coming into existence of a large number of unauthorised powerlooms in contravention of the restrictions placed over the acquisition or installation of powerlooms. The Asoka Mehta Committee has done well to urge the revival of the scheme with larger financial assistance for meeting outlays on installation and working capital requirements. If this and other recommendations of the Committee are vigorously implemented, there is no reason why the transformation of handlooms into powerlooms will not take place "effectively and in a meaningful and satisfying manner." Care must, however, be taken to see that the assistance rendered by the State and other organisations is used properly. It is necessary to stress this point because there are reports of several instances where the money obtained by weavers has been utilised for purposes other than the creation of improved production facilities. There are also instances of assistance having been given to fictitious weavers.

The speedy implementation of the conversion scheme as envisaged by the Asoka Mehta Committee, together with the Committee's suggestions covering the pattern of growth, processing facilities and excise duty (details are given elsewhere in this issue), will make the powerlooms a viable sector of the cotton textile industry. The powerloom industry, which enjoys certain distinct advantages over both the mills and the handlooms, can certainly be made to stand on its own feet, without being a heavy burden on the mill sector or the public exchequer as the handloom sector has continued to be.

THE TORY MANIFESTO

THE British Conservative Party, in its stentorian manifesto for the General Election scheduled to be held in about three weeks from now, has extensively stolen the Opposition thunder—even to the point of appropriating the title of Labour leader Harold Wilson's book, *Prosperity with a Purpose*. The Conservative manifesto has held out the promise of "a planned increase of production, a planned expansion of exports, a planned application of science to industry and a planned new deal in social security" and, in so doing, has sought to distinguish its concept of *planning* from Labour's ideas thereon. This may not be a case of 'distinction without a difference,' for, while acknowledging that "all human activity involves planning," the manifesto proceeds to ask the black-or-white question whether national planning is to be done "by compulsion or by consent." The Conservative answer is that the kind of centralised and directed planning visualised by Labour would be "incompatible with the opportunities and responsibilities of a free society," that "a democratic country as mature as ours must be self-disciplined and not State-controlled, law-abiding without being regulation-ridden co-operative but not coerced," and that the National Economic Development Council created by the Conservative Government "gives reality to the democratic concept of planning by partnership." The implication here seems to be that the Labour concept of planning is somehow "undemocratic," and this may strike one as a pretty serious charge against a party of democratic traditions in "a democratic country as mature as Britain."

Be that as it may, the immediately relevant point is that the Conservative manifesto offers Britain a sophisticated liberal-conservative choice, based on a dynamic concept of "property-owning democracy" and involving a planned and measured extension of the Welfare State programme. What lends substance to the Conservative concept of "property-owning democracy" is easily told. In the first place, there is the priority proposed to be given to a policy for economic growth at "a steady four per cent per year." There is also the promise of measures to stimulate industrial competition and prevent earnings from outpacing productivity, so as to exert a downward trend on prices and thereby ensure "sustained growth without inflation." Further, the manifesto pledges continuation of fiscal, financial and other incentives for modernisation of British industry through innovation and automation and adds significantly that a system of free competitive enterprise alone is best suited to provide that flexibility and that response to new ideas and requirements in a rapidly changing world of industrial technology. The proposal to complete the denationalisation of steel is of a piece with the Conservative faith in competitive private enterprise.

It is the Conservative Pary's intention to stimulate the forces of competition, which make for efficiency and bring down prices, in private industry and trade. Noteworthy, in this connection, is the specific pledge to strengthen the Monopolies Commission, speed up its work and enlarge the Government's powers to implement its recommendations, as also to deal effectively with any merger or take-over bid likely to lead to harmful monopoly conditions. A related promise is to reform the Companies Act further for giving added protection to investors in the light of modern developments. New incentives for securing a still higher volume of savings (both corporate and individual), further encouragement to the present efforts for widening the field of share ownership, active steps to increase home ownership which now covers 44 per cent of families, large-scale building of new roads to provide for the increase in private motoring which prosperity brings, continuation of the Farm Improvement Scheme and the Small Farmers Scheme for modernisation of farming—all these lend further substance to the Conservative concept of "property-owning democracy." It may be noted, in passing, that many of the liberal reforms, proposed in the manifesto to impart dynamism to "property-owning democracy," would not have been canvassed by the Conservative Party but for the challenging impact of Labour's radical ideas and the misuse of freedom by a section of business community during the last thirteen years of Conservative rule.

The Conservative commitment to the Welfare State programme has, however, never been in doubt. It is, therefore, not surprising that the manifesto has spelt out several measures for using the growth of wealth to expand opportunities for the young through education or training, to safeguard and expand employment, to increase insurance benefits during the period of unemployment, to provide more generously for the old and the sick and the handicapped under the social security arrangements, to implement a hospital plan for enabling "every man, woman and child in the country" to have the best medical treatment, and to increase the facilities for rest and recreation. All these measures are doubtless calculated to enhance the security and well-being of the individual and, thereby his dignity, even as the proposed measures for strengthening "property-owning democracy" are designed to give greater reality to the concept of individual liberty. The Conservative manifesto is thus logical, in its own way, in claiming that its plans and programmes are in pursuance of the consistent Conservative policy of upholding "the British way of life, centred upon the dignity and liberty of the individual," and of creating "a social and economic climate in which men and women can develop their personalities and talents to their country's benefit as well as their own."

While the Labour manifesto, too, has promised greater and fuller security for the individual and recognised the need for ensuring that the growth of Government activity does not infringe the liberties of the subject, it has, in its own logical way, characterised Conservative goals as smacking of "dreary commercialism and personal selfishness." On the plane of individual and social morality, Conservative goals have been assailed by Labour on the ground that "the morality of money and property is a dead and deadening morality" and that, in its place, there is need to "reassert the value of service above private profit and private gain." Which type of morality, Conservative or Labour, is preferable will, of course, be decided shortly by the British electorate. For us, in India, this moral controversy does not have the same meaning as it has in Britain, for an average Indian, lacking the kind of individual economic security and well-being that an average Briton has, may well wonder whether the inter-related and complementary democratic ideals of liberty, equality and fraternity are not poorer to that extent in this country.

On regional planning, the Conservative manifesto seems to be no less sound than that of Labour. The goals of the Conservative programme, in this connection, are expansion of employment prospects, optimum use of national resources and even spread of prosperity throughout the United Kingdom. This programme, it is said, combines the provision of better communications, up-to-date social services and improved amenities with generous inducements to build new factories, install modern equipment and provide fresh jobs where they are most required.

On the subject of balance-of-payments, the manifesto concedes that the commitment to an annual growth rate of four per cent would involve a high level of imports and, therefore, necessitate a high level of exports, too. From the long-term point of view, what the Conservative manifesto says here is no different from that of Labour, for both are agreed on the need for steady long-term economic expansion. But, from the short-term point of view, the Conservative manifesto is rather complacent, in that its readiness to draw on reserves till exports balance with imports and its reliance on the new arrangements with the I.M.F., the European banks and the United States to strengthen the defences of sterling against speculative attack may not be of much avail. For, in the absence of a steady four per cent rate of growth so far, Britain's balance-of-payment deficit is currently running at an annual rate of £350 million, as against the gold and dollar reserve of £925 million, and, if this trend continues in the short-term, the consequent pressure on sterling may put a brake on the Conservative goal of growth at four per cent. If the Conservative *laissez faire* approach to Britain's foreign trade is not to fail completely, freer and wider world trade and an improved world monetary system to sustain it must become realities. That way both Britain and the developing countries, especially those of the Commonwealth, will equally benefit. But that prospect is not too near to enable the developing countries to manage with the present, or a lower, level of British aid. Of course, the Conservative manifesto states that, "as the British economy expands, so the level of aid will progressively rise." But, in this as in everything else, much will depend upon the Conservative Party's ability (?) to accelerate domestic economic growth and sustain it at the rate envisaged, if it is returned to power. The question mark here will apply equally to Labour in the event of its possible victory at the hustings.

MARKET GOSSIP

Company Law Changes

THE Companies Act Amendment Bill introduced in the Lok Sabha on Monday the 21st inst., has not so far caused any great excitement in the corporate sector. This is not surprising, because, in the first place, many of the changes are of minor importance and, secondly, they had been widely anticipated before. The Union Finance Minister had stated on more than one occasion in the past that the Government would amend the Companies Act in the light of the recommendations made by the Daphtary-Sastri Committee based on the findings of the Vivian Bose Commission. Moreover, the enlightened sections of the business community recognise the need for eliminating some of the malpractices indulged in by a section of the corporate sector.

No one can take any exception to the change proposed in the Bill which makes it an offence to apply for shares in the name of fictitious persons or to allot shares to such persons. Clause 8 of the Bill says: "Any person who makes an application for acquiring or subscribing for any shares therein or otherwise induces a company to allot or register transfer of shares therein to him or any other person in a fictitious name shall be punishable for a term of imprisonment which might extend to five years." Beneficial holdings above five per cent should be disclosed, so that the names of real holders of such shares, as distinct from those of the nominees by whom such shares are ostensibly held, are known. Similarly, no exception can be taken to the restrictions designed to curb the abuse inherent in the system of blank transfer, as, for instance, evasion of tax and cornering of shares quietly with a view to obtaining the controlling interest in a company. The restrictions proposed are: 1. Every instrument of transfer shall be in the prescribed form, bearing the date of issue stamped by the prescribed authority. 2. The said instrument is required to be delivered to the company within six months from the date of issue in the case of listed shares and within two months in the case of others. The time given for registering the transfers is sufficiently long as not to interfere with the forward trading in shares and healthy speculative activity.

The other more important changes proposed in the amending Bill are:

(*a*) All moneys received from applicants for shares must be kept deposited in a scheduled bank until the certificate to commence business is obtained or, where such a certificate has already been obtained, until the entire amount of the minimum subscription is received by the company. (*b*) The definition of the term "officer" will be widened to include any person in accordance with whose instructions the board or any of the directors of a company is accustomed to act (this change, it is said, will curb the tendency of appointing dummy directors on boards to implement policies of a dubious nature. (*c*) The promoters and directors of the company must ensure that the share capital reflects cash or other valuable assets and is not supported by mere book adjustments. (*d*) Inter-company loans will rank on a par with inter-company investments and will be subject to the same restrictions as the latter. (*e*) Companies will be prohibited from commencing any business not included in its objects without obtaining the prior approval of shareholders by a special resolution. (*f*) The Government will be empowered to issue necessary directions for conducting cost audit of companies engaged in manufacturing and mining activities. (*g*) No underwriting commission will be allowed on shares or debentures which are not offered to the public and a copy of the underwriting contract will have to be filed with the Registrar of Companies. (*h*) A company brought under voluntary liquidation should not be dissolved until the official liquidator has scrutinised its books and papers and made a report to the court that its affairs have not been conducted in a manner prejudicial to the interests of its members or to the public interest.

Few will question the intention of the Government to check fraudulent transactions in the private sector and use of questionable means to make personal gains at the expense of the investing public. It is, however, necessary to emphasise that care must be taken to ensure that the legitimate field of a company's enterprise and initiative is not unduly restricted or hampered.

Foodgrains Trading Corporation

Seven years have passed since the Central Government's Foodgrains Enquiry Committee, popularly known as the Asoka Mehta Committee, recommended the establishment of a Foodgrains Stabilisation Organisation, with an initial capital of Rs. 100 crores, for undertaking buffer stock operations so as to stabilise the prices of foodgrains. It was visualised by the Committee that, "whenever prices tend to fall, even if such a fall is not general but is confined to a particular locality, this Organisation should step in and start purchasing at reasonable prices" and that, "similarly, when prices tend to raise, this Organisation should sell at reasonable prices." The Committee explained further that the proposed Organisation should fix limits of prices at which it would buy or sell, within the range of prices to be fixed for its operations by the Government on the advice of a Price Stabilisation Board. The Organisation, if it began its operations with sufficient stocks at its disposal and sufficient funds to invest, was expected to become a dominant trader in the economy and thus be able to control a substantial proportion of the wholesale trade within three or four years in pursuance of a policy of "progressive and planned socialisation of the wholesale trade in foodgrains." As if to clinch the whole thing, the Committee finally emphasised that, "until there is social control over the wholesale trade, we shall not be in a position to bring about stabilisation of foodgrain prices." It would thus appear that the Asoka Mehta Committee had thought of the Foodgrains Stabilisation Organisation not as an end in itself but as a means to another end, namely, socialisation of wholesale trade.

This is the background against which the Government's current proposal to set up a Foodgrains Price Stabilisation and Trading Corporation, with a capital of Rs. 100 crores, should be viewed. The immediate question that arises is whether this proposal, ostensibly in pursuance of the Asoka Mehta Committee's recommendation, is meant to achieve the ultimate objective of "socialised wholesale trade." Of course, this objective has not been specifically included in the reported objects of the Corporation. These, incidentally, are:

(1) Ensuring fair price to the grower and making available foodgrains at reasonable prices to the consumer.

(2) Encouraging production of foodgrains by financing crops by giving guarantee on behalf of growers and by providing facilities like fertilisers, sprays and crop insurance.

(3) Conducting and encouraging research in increasing yields, prevention of losses by insects, pests, etc.

(4) Carrying on research on farm management in order to increase the efficiency of the grain growers.

(5) Encouraging mechanisation and application of modern science and technology to foodgrain production.

(6) Encouraging subsidiary foods, such as poultry, fruits, vegetables, fish and meat and taking steps to increase their production and consumption.

(7) Providing proper storage facilities.

(8) Organising and financing super markets and retail distribution to reduce costs to consumers.

(9) Encouraging and undertaking all kinds of food industries, including packing, preserving and processing.

(10) Taking positive steps to ensure balanced consumption of foodgrains.

(11) Running Corporation's own transport.

(12) Undertaking procurement, wherever and whenever necessary.

It will be seen from the above list of objects that only (1), (7), (8), (11) and (12) are directly relevant to trading and pricing. The other objects point to possible activities on a wide front ranging from agricultural production to food industries. Apart from the question whether it would be prudent and practical to entrust the Corporation with these additional responsibilities which could be better discharged by existing institutions, there is the consideration that, if the Corporation is to function effectively as a price stabilisation organisation, it cannot, in fairness, go beyond buffer stock operations and limited trading. It may be that, since there is no specific mention of possible socialisation of the entire wholesale trade, the Corporation's trading and stabilisation operations will only be of a limited character. In fact, it is stated, the Corporation, which is likely to begin functioning, under a separate statute, in January 1965, will operate initially for the purchase of rice only in the southern States, progressively step up its purchasing operations in other areas, eventually handle imported foodgrains and assume responsibility for providing adequate supplies to fair-price shops. But, unfortunately, the Union Food Minister has recently hinted at the possibility of the proposed Corporation ultimately taking over the entire foodgrains trade in certain circumstances. And he has also just told the panel of experts in agricultural administration that the Corporation will have the power to requisition foodgrains from the wholesalers. The Federation of Foodgrain Dealers' Association is, therefore, understandably perturbed over the ultimate goals of the Corporation. Whether these goals involve complete socialisation of the wholesale trade in accordance with the Asoka Mehta Committee's ideas should be clarified, so that all concerned—wholesale trade, public, press and Parliament—may have a clear picture of the Corporation's character before they support or oppose its constitution.

Raising Jute Yield

India's jute industry is predominantly an export industry, in that nearly three-fourths of its total output is sold abroad. Of the 1.33 million metric tons of jute goods produced during the financial year 1963-64, actual shipments amounted to 913,000 tons. Indeed, the industry surpassed the third Plan export target (900,000 tons) in the third year of the Plan itself; the actual output in 1963-64 also exceeded the target of 1.3 million tons fixed to be achieved by 1965-66. Creditable though the export performance is, it should not, it must be emphasised again and again, engender any sense of complacency. For competition from the Pakistan jute industry, which enjoys several distinct advantages, especially direct export subsidy and higher yield per acre, is tending to be keener and keener. At the same time, there is the growing competition from alternative packaging materials. Bulk handling methods, too, are becoming popular.

Judged against this background and in the context of the continuously rising domestic demand for jute goods—the total demand is expected to be around 400,000 tons by the end of 1965-66—

DELHI LETTER

TAKE-OFF INTO SUPERSONICS

ECONOMIC TIES WITH ASIAN AND AFRICAN COUNTRIES BEING STRENGTHENED

From Our Special Correspondent

NEW DELHI, 22*nd September*

THE Soviet promise to assist India in building the controversial Bokaro steel plant undeniably was the biggest foreign aid coup in the twilight of the Nehru era; and Indian Defence Minister Y. B. Chavan's successful negotiations for Soviet aid to strengthen the Army, the Air Force and the navy no doubt are a diplomatic stroke strengthening the hands of the Shastri regime. In May last, Mr. Chavan was able to persuade the American Administration to underwrite the bold Indian concept of a five-year defence programme launched in April 1964. Now the Russians have also agreed to come in in force to bolster the Indian defences against China. The American and British assurances of defence assistance are circumscribed by repercussions on Pakistan and the pressures to solve the Kashmir dispute between India and Pakistan. But, in the case of Soviet aid, the concept of military assistance is less inhibited. The Soviet Union is on the side of India in the dispute with both Pakistan and Communist China.

For the first time, the Defence Minister has unfolded the details of the five-year defence plan; since this defence plan has been discussed freely with the Americans, the British and the Russians, there was no purpose to be served by not taking the Indian Parliament and public into confidence. The discussions on Bokaro and the negotiations on air defence hardware have several parallels. In both instances, Delhi first turned to Washington; the Indian Government looked to Moscow only after it had been turned away at the portals of the U.S. Government. Both in Bokaro and in the projects to build supersonic aircraft, the technical problems also have been similar. Mr. Chavan has all but admitted that one reason for the delay in the M.I.G. projects has been the inadequate Indian reading of the technical capacity at home.

Agreement with Russia

The agreement now negotiated with the Russians provides the supplementary details to the agreement in principle made with the Russians in August 1962, when Mr. V. K. Krishna Menon was the Indian Defence Minister. It is now clear that the manufacture of M.I.G. completely with indigenous skill and materials will come at a much later stage than originally envisaged by some Indian experts. First, the Russians will supply M.I.G.-21 fighters for three squadrons. The Defence Minister did not specify the total number of M.I.G. planes which the Russians will supply, but the Indian Air Force fighter squadrons now normally have twelve planes *plus* four in reserve. This makes a total of forty-eight M.I.G. fighters for three squadrons. The Russians have already supplied six and another six are being delivered under an earlier agreement. Two M.I.G. planes were lost in an accident and the Russians have promised to replace these. Thus, the Russian supplies under the new agreement will cover thirty-eight M.I.Gs. for operational duty *plus* six for training. The Defence Minister also did not specify the price at which the M.I.Gs. are being bought and one reliable unofficial estimate is that each M.I.G will cost Rs 50 lakhs, *plus* extra for spare parts. The Air Force will also receive twenty MI-4 helicopters. Sixty M.I.G. planes are to be built in India, using sub-assemblies and equipment wholly supplied by Russia.

The Minister for Defence Production, Mr. A. M. Thomas, makes it clear that the detailed agreement which speeds the M.I.G. projects will not in any way affect the Defence Ministry's programme to go ahead with the programme to develop the Marut Hindustan Fighter 24 into a plane capable of Match II performance. The search for a suitable engine will go on. Rolls Royce is said to have developed an engine which can be married into the HF-24. M.I.G. missiles may also be adapted for the HF-24.

Apart from political considerations, American expert opinion seems to hold on to the view that, in the present state of economic and technical development, India will not be in a position to undertake two supersonic schemes side by side. Mr. Chavan has endeavoured to explain how the non-aligned stance of the Indian Government has enabled him *woo* and *win* over both Washington and Moscow. However, the final plunge into the M.I.G. deal may have repercussions in the U.S. Congress. American financial commitments have been specifically disclosed; Mr. Chavan mentions only the current fiscal year partly because of the American elections but the total is expected to be a minimum U.S.$50 million grants *plus* U.S.$60 million credits for defence purchases each year for five years. Mr. Chavan did not specify the actual amount involved in the arms deal with the Soviet Union, but other sources place it at between Rs. 70 and 75 crores. About seventy light tanks which are to be supplied for the army may cost about Rs. 5,00,000 each.

It is understood that Mr. Chavan has been able to negotiate better terms than, for instance, the Indonesians have been able to obtain. The period of repayment is said to be ten years and the rate of interest as low as two per cent. The repayment is to be made in rupees, or in other words through increased Soviet purchases of Indian goods.

It is relevant to calculate the total repayment commitments as a result of the economic and military assistance from the Soviet Union. Economic assistance so far firmly offered by the Soviet Union adds up to nearly Rs. 385 crores. There have been six credits: Bhilai steel project credit of 2nd February, 1955, for Rs. 64.74 crores; credit for industrial projects of 9th November, 1957, for Rs. 59.3 crores; credit for drug projects of 29th May, 1959, for Rs. 9.52 crores; first credit for third Plan projects of 12th September, 1959, for Rs. 178.58 crores; the Barauni oil refinery credit of 28th September, 1959, for Rs. 11.91 crores; the second credit for third Plan projects of 21st February, 1961, for Rs. 59.53 crores. From these loans the value of contracts placed by the end of 1963 was more than Rs. 272 crores; the actual amounts drawn until the end of last year as a result of deliveries of equipment and provision of technical services were around Rs. 194 crores.

The aid from Russia for the first one-and-a-half million tonne stage of the Bokaro steel plant will be specified after the detailed technical discussions now under way. It is, however, estimated by non-Russian steel experts that foreign aid for the Bokaro plant will not be less than Rs. 150 crores. When Mr. Anastas Mikoyan halted in Delhi in June soon after Mr. Nehru's death, Indian Ministers hoped that he would agree to Russians announcing in advance the amounts of Soviet aid that would be available for the fourth Plan period, 1966-71. While the third Plan was being prepared, the Russians announced their first credit offers nearly one and a half years before the Plan was scheduled to start. But this time the Russians have frankly told the Indian Government that the aid offers for the fourth Plan will be made only about the time the next Plan begins.

On the basis of offers already firmly made, including help for Bokaro construction, the total Soviet commitments are more than Rs. 630 crores, if one were to take Rs. 20 to 25 crores as the amount of earlier military assistance, made before the current M.I.G. and helicopter supplies deal negotiated by Mr. Chavan. The credit for the drugs plant was to be repaid in seven years; other economic development credits are to be repaid in 12 years and carry two and a half per cent annual interest. The totol repayment commitments will be an annual Rs. 60 crores within the next few years. This repayment has to be by the creation of a trade surplus with the Soviet Union. Russia's capacity to buy India's traditional goods like jute and textile goods, cashewnuts or footwear, is limited. The Russians are not known to have been enthusiastic over some Indian machinery they have examined.

Indian exports to the Soviet Union were worth Rs. 32 crores in 1961-62 and more than Rs. 52 crores in 1963-64. On calendar year accounting, Indian exports were around Rs. 50 crores last year. Plans are to increase the total trading between India and the Soviet Union to about Rs. 170 crores this year from around Rs. 100 crores last calendar year. This would mean raising the exports to over Rs. 80 crores. In the first half of this year Indian exports to the Soviet Union rose to Rs. 33 crores, from about Rs. 20 crores in the comparable period of last year. Imports during January-June 1964 were about Rs. 32 crores, about Rs. 5 crores increase from the level in the first half of last year. A much more spectacular effort in increasing exports to the Soviet Union will, therefore, have to be made, if the loan repayment commitments are to be met during the years in the end of this decade.

African Safari

Prime Minister Lal Bahadur Shastri's first 'real' foreign trip will be to Cairo where he will be a State guest for a few days preceding the conference on non-aligned Powers. India and the United Arab Republic under President Nasser have many things in common—a slightly higher degree of industrial development than their neighbours and a common attitude to territorial aggression as a result of both countries being victims of neighbouring countries' militant attitudes. An agreement signed in Delhi this week lays down the basis for technical co-operation between the two countries for industrial ventures. Simultaneously, there is to be an attempt to increase rapidly the trade between the two countries. In the financial year 1963-64, the two-way trade between India and the U.A.R. was worth about Rs. 25 crores; this year an attempt is to be made to increase the value of trade to Rs. 45 crores.

Although the Indian Government has been a major participant in the schemes of co-operation under the Colombo Plan—the biggest donor from within the region—and has also been providing a large variety of educational facilities for African and Asian students, many of these endeavours have been decentralised among various Ministries and organisations. Mr. Swaran Singh wants to bring these efforts under central direction. (Some time ago, this correspondent wandered without success through various departments in the Secretariat trying to make an integrated assessment of India's technical assistance to various African countries.) The first few weeks in office as External Affairs Minister have been utilised by Mr. Swaran Singh in getting to know the leaders of neighbouring countries face to face. He went out of his way to give a certificate of merit to the Ne Win regime in Burma and he has initiated economic co-operation ideas in relation to Afghanistan. In Nepal, it is more a question of re-emphasising what India has been doing to improve the economic fortunes of the Himalayan kingdom.

A delegation led by Mr. D. S. Joshi, Secretary in the Commerce Ministry, has already initialed an agreement with Uganda which will pave the way for the establishment of four sugar mills with Indian assistance. The overall investment, according to the Government of India, will be between Rs. 15 and 20 crores and the initial investment between Rs. 10 and 12 crores. India hopes to supply a considerable portion of the equipment needed for these Uganda mills.

An industrialists' delegation led by Mr. A. M. M. Murugappa Chettiar is visiting Ethiopia, Ghana, Kenya, Malawi, Nigeria, Northern Rhodesia, the Sudan, Tanganyika and Uganda. Apart from efforts to expand trade with these countries, the delegation is exploring possibilities of collaboration for factories in textiles, sugar, cement, solvent extraction, toilet requisites, soap, engineering goods and fertilisers and other chemicals. Birla Brothers want to expand their textile mill in Ethiopia. Malhotra and Sons of Calcutta are setting up a razor blades factory in Ethiopia. McKenzies Ltd. of Bombay are planning a glass and paint factory in Ethiopia. In Kenya, Rachoddas Goculdas of Bombay have been granted a licence for a textile mill. Morarji Brothers of Bombay and Jay Engineering of Calcutta are engaged in planning a fertiliser unit and a sewing machine factory, respectively. Atlas Cycles are interested in establishing a plant in Uganda. The Nigerian Government has permitted the establishment of a composite industrial unit to make a variety of light engineering goods and the Indian and Nigerian partners have floated a company to promote this project. Jute and textile mills in Northern Nigeria are also under consideration with Indian investment and technical collaboration. In Kuala Lumpur, the Finance Minister, Mr. T. T. Krishnamachari, recently initiated discussions for economic collaboration between Malaysia and India. A delegation from Malaysia will soon come to this country to explore avenues of technical and industrial cooperation. It will thus be noted that the Shastri regime is taking active steps for winning the friendship of all the neighbouring countries, wherever possible.

MARKET GOSSIP

(*Concluded from previous page*)

the industry will have to gear itself to the task of maintaining output at as high a level as possible. The level of output will, however, depend on the availability of adequate supplies of quality jute at a reasonable price. Increase in raw jute production must be achieved largely through intensive development, the scope for which is pretty vast. Despite all the efforts of the Governments (Central and State) during the last fourteen years to step up productivity, the average per acre yield of jute and mesta has remained at about 2.5 bales, as against the average of 3.5 bales obtained in Pakistan and 4.0 bales in Thailand. Unless the average yield is raised to at least 3.5 bales per acre, it would be very difficult for the jute industry, as the Indian Jute Mills Association (I.J.M.A.) rightly points out in the course of a statement issued to the Press this week, to face growing competition in foreign markets and it would be equally difficult for jute cultivators to enjoy a rising standard of living.

It is, therefore, gratifying to find that the jute development work undertaken by the Indian Jute Mills Association since 1961 has progressed very well. Instead of diffusing its energy over wide areas on small plots, the Association has taken up large compact jute growing areas ranging from 150 to 300 acres and given guidance to all cultivators on these blocks to adopt intensive methods of jute and mesta growing. The cultivators are also provided with implements, improved seed, and plant protection chemicals and equipment. Further, they are encouraged by means of a subsidy to apply nitrogenous fertilisers. The quality seed for improving the crop is sold though the Association's seed multiplication and distribution organisation.

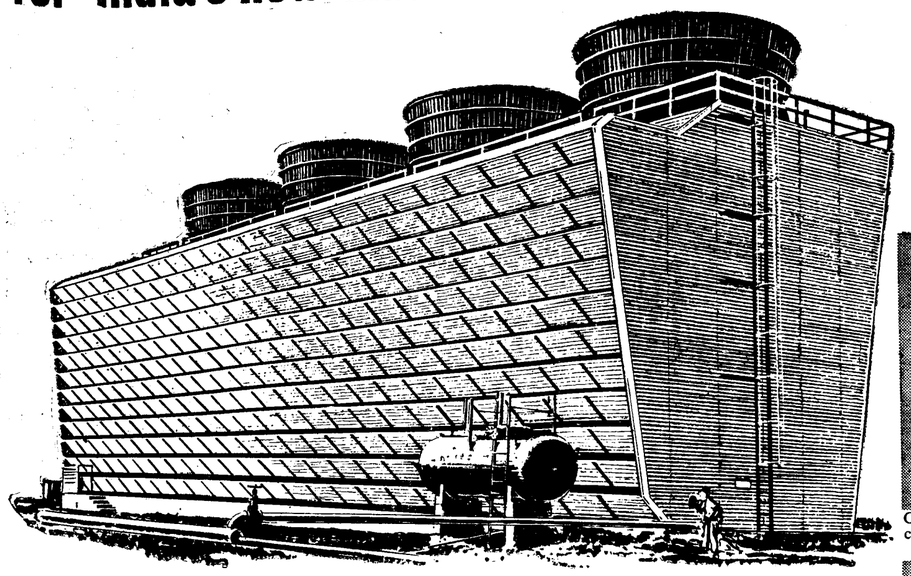
Starting with only nine intensive development blocks in W. Bengal, the scheme now covers seventeen blocks in operation. Lately, it has been extended to the other jute growing States too, that is, Bihar, Assam, Uttar Pradesh, Orissa and Andhra Pradesh. In the Nadia district of W. Bengal, the average yield of the block exceeded five bales per acre last year, as against the average yield of three bales for the whole district. A similar yield is expected this year in spite of adverse weather conditions. In the Murshidabad block, where the soil is said to be comparatively poor, yields amount to about 3.97 - 4.60 bales per acre, as against the district's average of only 2.75 bales. After demonstrating intensive cultivation, the Barmauki block in the Purnea district of Bihar has improved its average yield to 3.69 bales per acre. The Balajan and Nowgong blocks in Goalpara and Nowgong districts in Assam have also recorded higher yields. Even in Andhra, where the intensive method of cultivation was put into operation only last year (1963), the average yield per acre has gone up by 0.7 bale as compared with the average for the State.

Apart from increasing the acreage yield, the method of approach adopted by the Association has aroused the interest of cultivators in the 'yield' problem and each intensive cultivation block, it is claimed, has become an organic unit for further expansion with the initiative generated by the cultivators themselves. The cultivators of some of the blocks, we are told, are now forming their own Jute Development Committees for propagating the gospel of intensive cultivation amongst their neighbours. All these efforts are certainly laudable and it is to be hoped that they will be continued with renewed enthusiasm. Given such enthusiasm, there is no doubt that the country will be able to produce by 1970-71 the entire quantity of raw jute (8.0 million bales) and mesta (2.0 million bales) required to fulfil the proposed production target of 1.7 million tons for the fourth Plan.

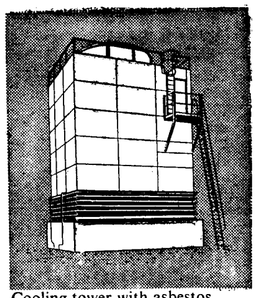
World's most advanced

WATER COOLING SYSTEMS

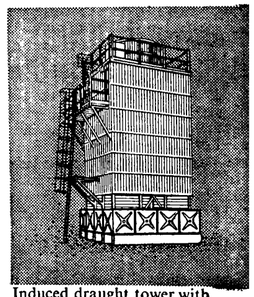
for India's new industries



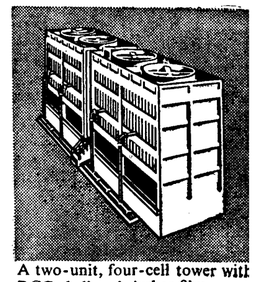
Induced draught crossflow cooling tower of timber and asbestos cement construction



Cooling tower with asbestos cement shell



Induced draught tower with timber shell



A two-unit, four-cell tower with RCC shell and timber film flow pack.

Larsen & Toubro brings to Indian industries the combined technical skill and manufacturing experience of two of the world's foremost specialists in water cooling equipment—Film Cooling Towers (1925) Limited, England and their American associates Slough-DeFlon Incorporated. Indian industries can now choose any type of cooling system to suit their particular need. The facilities at L&T's Powai Works enable manufacture of all components for a variety of towers.

Choice in cooling towers: The range of towers offered covers all applications. Cooling equipment of the smallest to the very largest capacity, is available with a choice of no less than six different types of pack. As with all L&T manufactured equipment, the latest improvements are incorporated in the design and construction of towers, giving you the best value for your money.

Serving many industries: FCT and S.D. have supplied cooling towers to industrial organisations throughout the world; L&T is currently supplying cooling towers to:

Punjab State Electricity Board, Faridabad • Industrial Development Corporation of Orissa, Barbil • Chemical Construction Corporation, Trombay • Chemical Construction Corporation (GB) Ltd. (2 towers), Namrup • Heavy Electricals India Limited, Bhopal • Central Power & Water Commission, Bhopal • Hindustan Lever Limited (2 towers), Bombay & Calcutta

TEXTILE MACHINERY

INDIA'S textile machinery manufacturing industry has been enjoying protection for several years now in respect of major items like spinning ring frames, spindles, spinning rings, fluted rollers, plain looms and automatic looms. Thanks to this protection and the growth of demand, the industry has more than doubled, for instance, its production of spinning ring frames and looms since 1955. The output of all items of textile machinery has come to Rs. 20 crores in terms of value, as of 1963-64, and is expected to be of the order of Rs. 27 crores in the last year of the current plan. Impressive as this growth is, it should not be forgotten that the country continues to import a lot of textile machinery, especially automatic looms, for modernisation and expansion purposes. This import bill, incidentally, is to the tune of Rs. 25 crores, as of 1963-64. Broadly, therefore the aggregate intake of machinery by the textile industry (covering cotton, jute, silk, rayon and woollen mills) presently works out to an annual rate of about Rs. 45 crores (Rs. 20 crores of domestic production *plus* Rs. 25 crores of imports).

From that level to an officially estimated average *annual* requirement (or intake) of Rs. 70 crores' worth of machinery (for not only rehabilitation and modernisation but also for expansion) during the fourth Plan period does not seem to be a big jump. But it is rather disappointing to learn from the inaugural speech of Mr. T. N. Singh, Union Minister for Heavy Engineering, at the first meeting of the Development Council for Textile Machinery, held at New Delhi on the 19th instant, that indigenous industry is expected to manufacture only Rs. 55 crores' worth of textile machinery per annum, on an average, during the next Plan period. In other words, self-reliance in this field will not be achieved for another six or seven years, if no energetic and timely steps are taken by Government and industry alike to diversify further the output of textile machinery so as to cover all such items as are being imported at present. Happily, in this connection, the Union Minister himself has recognised the need for establishing the manufacture of presently imported items like draw frames, speed frames, warping machinery and winding machinery. And he has also admitted that the existing capacity for textile machinery production is not being fully utilised principally because of the shortage of raw materials (pig iron, alloy, steel, etc.) and credit facilities. His twin assurance to manufacturers that the question of adequate supply of quality pig iron would be promptly taken up with the steel authorities and that the question of financial assistance would be pursued with credit agencies like the I.C.I.C.I. and other development institutions should be welcome to industry for what it is worth.

If this assurance is implemented by the Government in due course (we have our own doubts, because almost all the plans for increasing the production of pig iron included in the third Plan have failed to materialise and no alternative means of remedying the shortage of pig iron are in sight) and if, at the same time, the textile machinery manufacturers and the textile mill owners can evolve a joint machinery for consultation and assistance, there will be no difficulty in diversifying further the machinery manufacturing programmes. For its part, the industry would also do well to pursue its scheme for setting up an institute for research in designs for textile machinery. Now that the Government itself has offered assistance in setting up a central research and development organisation which could keep in touch with the latest technology in the field of textile machinery, the industry should lose no time in evolving an improved version of its scheme in the light of the Ministry's ideas. There can be no doubt that, when a design research and development organisation begins to function, it will go a long way towards the manufacture of advanced and up-to-date types of machinery which will be increasingly required for the modernisation and expansion programmes of textile industry in the years to come. But that is not all, for the ready availability of such machinery items would also enable aspiring and enterprising Indian industrialists, to establish textile mills in some of the developing countries of Asia and Africa.

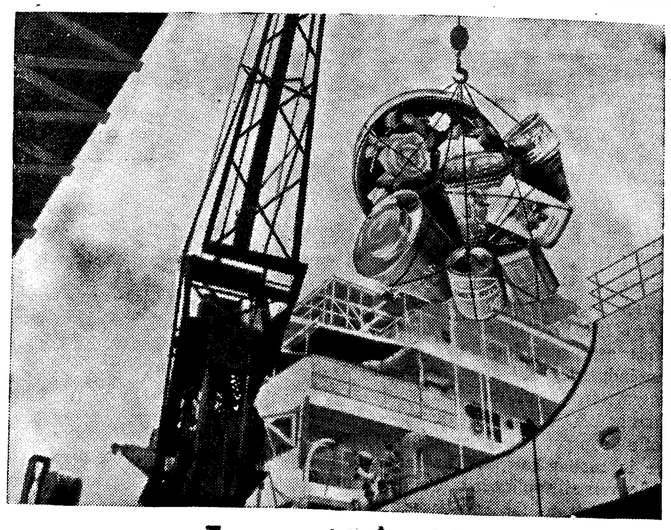
F.I.C.C.I.'S MEMORANDUM TO FINANCE COMMISSION

The memoranda submitted by trade associations and chambers of commerce to Finance Commissions are generally lengthy containing their views on the various issues referred to the Commissions and, in support of these views, copious statistical data are furnished. But the memorandum which the Federation of Indian Chambers of Commerce and Industry (F.I.C.C.I.) has presented to the fourth Finance Commission (Chairman: Dr. P. V. Rajamannar) is not so. Actually, the memorandum is brief to a degree. In the memorandum, the Federation has neither critically examined the present arrangements governing devolution of financial resources between the Centre and the States nor put forward any concrete measures for improvement. It confines itself only to certain broad features of Central-State financial relationship. One wonders whether the Federation, an apex body representing a considerable part of the business community, would and should not have enunciated, at least in broad terms, the principles underlying any rational scheme of financial devolution between the Centre and the States. By way of a general statement, however, the Federation urges that national resources "have to be assessed as a whole and allocated in an equitable manner on a functional basis." Elucidating its point of view, it says:

> "This is not to say that the autonomy of the States should be curtailed but certainly implies a co-ordinated and co-operative approach necessary for the successful implementation of the Plan. While assessing the resources and the needs, certain aspects, such as taxable capacity of different States, level of administrative efficiency and social services, and effective utilisation of funds, have to be looked into."

An important point stressed by the Federation is that the taxable capacity of States must be assessed and an appraisal made of the resources "they should be able to raise." The Federation has evidently in mind the fact that some State Governments have not cared to put in adequate effort to mobilise resources for development simply because they are sure of getting assistance from the Centre whenever their finances are in the red. No wonder there is a wide difference in the performance of different States in regard to tax effort.

The inadequate tax effort apart, there are some States which have not utilised the funds made available to them effectively. The Federation has done well to pinpoint this aspect quite forcefully. To quote it: "In the perspective of planning and our efforts to conserve resources for the best possible use, it has to be ensured that the savings of the country, which are mobilised through greater taxation and borrowing, are not dissipated over uses that do not add to the productive capacity or are outside the Plan priorities." The validity of this emphasis held good equally to both the Centre and the States. It is just as well to recall here that, during the second Plan period alone, an estimated sum of over Rs. 1,600 crores raised specifically for Plan purposes by the Central and State Governments was absorbed by non-Plan projects. No one will deny the possibility of unforeseen development necessitating diversion of resources away from Plan projects to uses outside the Plan. But within limits, utmost economy, as the Federation has stressed, must be exercised to see that the expenditures fulfil the essential targets laid down in the Plan. In this connection, the Federation has rightly emphasised that "optimum allocation of resources ensures, at the same time, that the investment financed from borrowings generates the necessary income for the repayment of loans." What the Federation means here is that, if the Finance Commission were to allocate resources to the States on the basis of their performance so far and their ability to implement plans, the outcome in terms of economic growth would be more satisfying than otherwise.



In quest of gold

More and more Indian manufacturers are today earning valuable foreign exchange by selling their products abroad. Exports of cashew nuts, fish, vanaspati, toiletries and other consumer goods in Metal Box packages alone earned over Rs 8 crores last year. That's a lot of foreign exchange, and for the nation it's as good as gold.

To sell in highly competitive overseas markets the product must be of the finest quality. *And so must the package.* It must be of the *right size* and must have the *right finish.* And an *attractive surface design* that will score over competition in sales appeal

All this requires research, experience, resources. Metal Box have them. They also have access to the fund of marketing and technical know-how of their world-wide associates. This is why Metal Box can provide a comprehensive packaging service as no one else can. This is why, too, so many packers come to Metal Box for advice, send their goods abroad in packages designed and manufactured by Metal Box.

And Metal Box customers are not located in India alone. Last year Metal Box exported nearly Rs 30 lakhs worth of containers, closures and machinery direct to packers abroad.

You see, word gets around.

MB

protective packaging

JWT/MB 1805 A

The Federation has urged the Finance Commission to take a broader view of the responsibilities of the Centre and the States in regard to implementation of some of the projects, so that there may be optimum utilisation of the available resources in the country. We believe that it is this particular point which is emphasised in the following para culled from its memorandum to the Commission:

> "Much more important than the division of resources is the manner in which the resources are utilised. It will be necessary that the Finance Commission or other authorities like the Planning Commission should work out a method by which it will be ensured that the finances of the States will be rationally allocated without, at the same time, involving too much rigidity which may delay the implementation of schemes, or reduce the autonomy of the States. To a certain extent, some of the schemes like irrigation and electricity can be taken over by the Centre and operated like other public sector industrial undertakings. How far this arrangement will improve the overall utilisation of resources cannot be determined on a priori basis. The Finance Commission has to address itself to these questions, apart from the limited aspects of the distribution of finances between the Centre and the States. For it appears from past experience that prudent expenditure, both by the Centre and the States, would be of greater importance than any sophisticated arrangements for the distribution of financial resources."

Another important point made by the Federation is that the Finance Commission should specify the limit beyond which the State Governments should not levy sales tax on articles subjected to the levy of Central excise duty that is shared with the State. The levy of excise and the further levy of sales tax at a high rate by States have certainly made the cumulative effect very burdensome with adverse consequences on production and export. A specific suggestion made by the Federation in this connection pertains to the amalgamation of States' sales tax with Central excise. Such amalgamation, it is true, will ensure smooth inter-State movement of goods and reduce greatly the scope for tax evasion, since excise duty is collected at the production end, while sales tax comes into operation in the course of actual sales. But the State Governments are unlikely to agree to this arrangement, for they are jealous of their autonomy. Further, the application of this system to some of the goods (such as textiles, sugar and tobacco) has not led to contentment among States, because the revenue derived under it is less flexible than the revenue through sales tax. Appreciating this contention of the States, the Federation believes that, "if the Finance Commission can devise a system of distribution of excise *plus* such additional excise as may be levied in lieu of sales tax, which would ensure to the States an increasing sources of income, the States would be willing to consider an extension of the scheme of amalgamation." But, if this method is not to prove too onerous on consumers, it would be necessary to ensure that the rates of additional excise duty in lieu of sales tax are not fixed at levels higher than the total of excise duty and sales tax.

AGRICULTURAL REFINANCE CORPORATION

The Agricultural Refinance Corporation, which was established on 1st July 1963 for the purpose of augmenting the available medium-term and long-term resources for financing the schemes of agricultural development, completed its first year of operations on 30th June 1964. It is meant for providing financial facilities for (*a*) reclamation and preparation of land, so that facilities for irrigation, in particular, are fully utilised; (*b*) development of special crops such as arecanut, coconut, cashewnut, cardamom, coffee, tea, etc., (*c*) development of mechanised farming, use of electricity through tube-wells, pump-sets, etc. and (*d*) development of animal husbandry, dairy farming, pisciculture (including co-operative fisheries) and poultry farming. The Corporation is mainly a refinancing agency and all the State co-operative banks, central land mortgage banks and scheduled banks, which are shareholders of the Corporation, are eligible for financial assistance. Under special circumstances, finance is also made available to the other co-operative societies. The period of loan is limited to 15 years, but in exceptional cases, it may be extended to 20 years. Interest on loans is charged at 5½ per cent per annum. Under the Agricultural Refinance Corporation Act, the repayment of principal and payment of interest have to be fully guaranteed by the Government, though there is also a provision to dispense with this guarantee if other security is made available to the satisfaction of the Corporation. In order to ensure that the State Governments take a demonstrable interest in all such schemes, the Corporation insists on a 25 per cent State contribution (relaxable in appropriate cases) to the special development debentures that may be floated by the Central land mortgage banks for financing special development schemes.

During the first year of its working, the Corporation approved of four schemes of agricultural development—three in Andhra Pradesh and one in Orissa—involving a total outlay of Rs. 6.37 crores. All the three schemes in Andhra Pradesh relate to reclamation and development of land covering an area of 196,000 acres as per following details:

(In lakhs of rupees)

Name	*Area*	*Total capital outlay*	*Corporation's share*	*State Government's share*
	Acres			
K. C. Canal Scheme ..	50,000	165.00	148.50	16.50
Kaddam Project Scheme.	25,000	75.00	67.50	7.50
Nagarjunasagar Project Scheme]	121,000	365.50	328.95	36.55

The one scheme in Orissa which has received the Corporation's sanction aims at developing coconut plantations over an area of 2,000 acres. The estimated capital outlay is Rs. 32.00 lakhs, of which the Corporation's share is Rs. 28.80 lakhs. In all the four cases, the funds are being provided through the respective State Co-operative Central Land Mortgage Banks.

It will be noted that the Corporation will be extending loans aggregating Rs. 5.74 crores, equivalent to a sum of 90 per cent of the total outlay in each of the schemes and the remaining 10 per cent will be contributed by the State Governments. This means that the provision of 25 per cent of the State contribution has been drastically relaxed in all the four cases and the exception seems to have become a rule. In addition to these four schemes, some other schemes are under various stages of examination, the important among them being a land development and reclamation scheme in Madras State covering 240,000 acres involving an outlay of Rs. 10.80 crores and three in Maharashtra with a total outlay of Rs. 11.17 crores, made up of Rs. 9.66 crores for a soil conservation scheme Rs. 68 lakhs for a levelling and bunding scheme and Rs. 87 lakhs for a lift irrigation scheme The Corporation has made no disbursements so far and of its funds amounting to Rs. 10.28 crores, Rs. 8.19 crores are invested in Central Government securities and Rs. 2.00 crores are kept as fixed deposits with banks.

Due to certain difficulties felt by the plantation industry in availing of the facilities offered by the Corporation it has been decided to liberalise the terms and conditions of financing Thus, the Corporation has relaxed its insistence on Government guarantee; it has extended the coverage to include all schemes of a composite nature covering almost all the long-term requirements of plantation industry including those for housing; it is prepared to provide refinance facilities for the discharge of old debts incurred for development purposes; and it is also agreeable to the borrower shifting his bank if found inevitable. All these concessions have been brought to the notice of scheduled banks and a conference of interested scheduled banks may be held in the near future to discuss the problem of finance for tea, coffee, rubber, cardamom, etc., plantations. Further, in view of the difficulties felt by the small planters (their number is pretty large in rubber plantations in particular) to get refinance through scheduled banks, the Corporation proposes to examine whether the organisation of a separate land mortgage banks exclusively for planters would solve their difficulties. This will be part of the

U.P. LETTER

AMBITIOUS FOURTH PLAN FOR U.P.

FOODGRAINS SCARCITY CONTINUES

From Our Special Correspondent

LUCKNOW, *22nd September*

ACCORDING to the blueprint of U.P.'s fourth Five-year Plan, prepared on the basis of the recommendations of the various working groups, it would be necessary to make a total investment of Rs. 10,800 crores in U.P. in the fourth and fifth Plans—of which Rs. 5,770 crores will have to be invested in the fourth Plan if U.P.'s *per capita* income is to be raised from Rs. 468 at the beginning of the Plan to Rs. 597 at the end of it—in order to achieve an average annual rate of growth of 7 per cent. But the resources, in terms of both money and materials, available to U.P. would not permit the investment of such a huge sum in the course of the next two Plans. In view of this, it has been suggested that the total outlay in the next two Plans may be reduced to Rs. 7,000 crores out of which Rs. 2,200 crores might be invested in the fourth Plan and the balance of Rs. 4,800 crores in the fifth Plan.

But even this level of investment is excessive and the State Government would not be able to find the necessary resources, in spite of the Central Government's assistance, to achieve this level of investment in the public and private sectors taken together. Apart from the availability of resources, the question is of actually implementing the necessary schemes. The experience of the first three Plans shows that, in U.P., the actual utilisation of the allotted investment in both the sectors has been rather poor. Then there is the question of inflationary consequences of such a huge rate of investment. It is a noble desire to increase the *per capita* income of U.P. to the level of the national *per capita* income and to achieve the same rate of growth which is being planned for the country as a whole, but planning, in order to be effective, must be realistic.

Outlay

On the basis of a total investment of Rs. 2,200 crores, the State's Draft Fourth Plan provides for an outlay of Rs. 1,400 crores in the public sector, as compared with a planned outlay of nearly Rs. 500 crores in the third Plan. It is difficult to see how the U.P. Government would find the necessary resources for such an ambitious fourth Plan. It is wishful thinking that the Centre would provide 80 to 85 per cent of the total outlay proposed in U.P.'s fourth Plan. It would have served a better purpose, if the U.P. Government had drawn up a more realistic fourth Plan.

A satisfactory feature of the U.P.'s Draft Fourth Plan is that proper attention has been devoted to the primary sector of the economy consisting of agricultural production, irrigation, flood control, co-operatives, community development and *panchayats*. In the Draft Fourth Plan, power, industries and roads account for 42 per cent, and agriculture and irrigation for 36½ per cent of the total outlay as against the corresponding shares of 32 per cent and 29 per cent, respectively, in the third Plan. Although social services have not been neglected, they account for a proportionately small percentage of the total outlay than in the past. The tentative totals earmarked for the different sectors in the Draft Plan are Rs. 125 crores for agriculture, Rs. 380 crores for irrigation and flood control, Rs. 450 crores for power, Rs. 55 crores for industries, Rs. 75 crores for communications, and Rs. 247 crores for social services.

Food Situation

The food situation in U.P. continues to be difficult and the prices of foodgrains continue to rise in spite of all the efforts which the Government appear to be making. The recent floods in the eastern districts and water logging in the western districts of U.P. have made the situation worse. The U.P. Government has been relying on the monthly Central quota of 1.05 lakh tonnes of imported wheat for feeding the ration shops. But, in recent weeks, the supply of wheat from the Centre has slackened. The Chief Minister, Mrs. Sucheta Kripalani, has expressed great anxiety on the reported desire of the Central Government to slash U.P.'s quota by some 25,000 tonnes per month, as that would make the situation worse. In fact, the U.P. Government had demanded a monthly quota of 2 lakh tonnes of imported wheat and any reduction in the present quota, which is already inadequate, would make the situation worse.

The anti-hoarding order which the U.P. Government had enforced under the D.I.R. on 4th August 1964 did not produce the desired result of bringing down foodgrain prices. The administration did not make as vigorous efforts as were needed to unearth the hoarded stocks of foodgrains. It has now been decided to strengthen the civil supplies administration in the districts, especially in the five *Kaval* towns of Kanpur, Allahabad, Varanasi, Agra and Lucknow, and to improve the working of the fair-price shops.

Fair Price Shops

The Genda Singh Committee, which was appointed by the U.P. Government to enquire into the working of fair-price shops, has recommended in its interim report a radical reorganisation of the district supply offices and issue godowns and the appointment of senior civil servants as district supply officers. The existing civil supplies staff in the districts, in the opinion of the Committee, is inadequate and low paid and the profit-margin of 3.62 per cent allowed for fair-price shops is not remunerative enough and should be increased. The Committee has stressed the fact that a stricter supervision in the issue of ration cards would reduce the pressure on fair-price shops—in Kanpur, for example, a stricter supervision has actually resulted in the weeding out of some 5 lakh units which works out at nearly 25 per cent of the total number of units registered with the fair-price shops!

The U.P. Government has accepted the recommendations of the Genda Singh Committee and persons belonging to the U.P. Civil Service have been posted as town rationing officers in the *Kaval* towns. A stricter supervision is now maintained on fair-price shops. The U.P. Government has also amended the U.P. Sales Tax Act of 1948 and the system of a single-point purchase tax at the first point of purchase has been adopted in the case of foodgrains and *gur*, as against the system of sales tax at all points of sales which was followed in the past. The object of this change is to reduce the incidence of sales tax on foodgrains and *gur* with a view to helping in reducing their prices. But all these efforts have not yet produced any noticeable effect on food prices in U.P.

The Government now seems to be waiting for the *kharif* crop of coarse foodgrains to come to the market next month to ease the supply position of foodgrains. In the past, the shortage of foodgrains in the State was created, partly because the U.P. Government agreed to export coarse foodgrains, especially maize, from U.P. The Chief Minister recently announced that, in future, U.P. would not export coarse foodgrains to the other States.

Sugar Industry

The sugar industry in U.P. has not been working satisfactorily, due partly to the old and worn-out machinery in most of the units and partly to the servere competition which the *gur* and *khandsari* units have offered it. Inaugurating the annual general meeting of the Indian Sugar Mills Association (West U.P. branch) at Lucknow, the Chief Minister, Mrs. Sucheta Kripalani, urged the U.P. industry to replace worn-out and outmoded plant by new and up-to-date machinery and to start the next crushing season early, so that, in 1964-65, U.P. might be able to produce 13 to 14 lakh tonnes of sugar. But the modernisation of plant and machinery by the U.P. sugar industry involves a huge financial outlay and the availability of some foreign exchange and, unless these difficulties are solved, it might not be possible to replace the old and worn-out plant in the U.P. sugar factories.

There is more hope for the U.P. sugar industry if the suggestion of Mr. M. L. Modi, President of the Association's West U.P. branch, is accepted, that the policy of selective control on sugar should be reintroduced, under which a certain proportion of factory production might be reserved for distribution at controlled prices and the balance should be allowed to be sold in the free market. This would enable the sugar factories to meet the competition of *gur* and *khandsari* units and to effectively increase the output of factory sugar in U.P.

The Chief Minister, Mrs. Sucheta Kripalani, told the Small-scale and Cottage Industries Board at Lucknow that the production in this sector in U.P. has increased by 9 per cent, as against the all-India average of 5 per cent. These industries made a special effort in supplying defence requirements to the extent of Rs. 6.35 crores in 1963-64, as against only Rs. 3.02 crores in the preceding year. In the first three months of the current financial year orders worth Rs. 2 crores have already been secured. An important fact emphasised by the Chief Minister was that the State invested nearly Rs. 2.9 crores in 300 new units in this sector in 1963-64. The main difficulty of the industries is the inadequate allotment of foreign exchange and scarcity of raw materials, both local and imported. Although the quota of stainless steel has been increased from 17 to 107 tons and that of pig iron from 14,000 to 33,000 tons, the small-scale and cottage industries continue to suffer because of the scarcity of raw materials. The step-motherly treatment which U.P. has received from the Centre in the matter of allotment of raw materials, according to the Chief Minister, is due to a feeling that U.P. is industrially backward and does not merit higher allotment. It should, however, also be emphasised that the machinery, technique and designs used by these industries are in most cases outmoded and need to be improved, if these industries are to stand on their own feet.

Silk Filature

A remarkable event this month was the setting up at Premnagar, near Dehra Dun, of the first co-operative silk filature unit at a cost of Rs. 2 lakhs. When this unit goes into production, it would process nearly one lakh lbs. of univoltine cocoons per annum for production of high-grade silk, which is at present being imported from Japan.

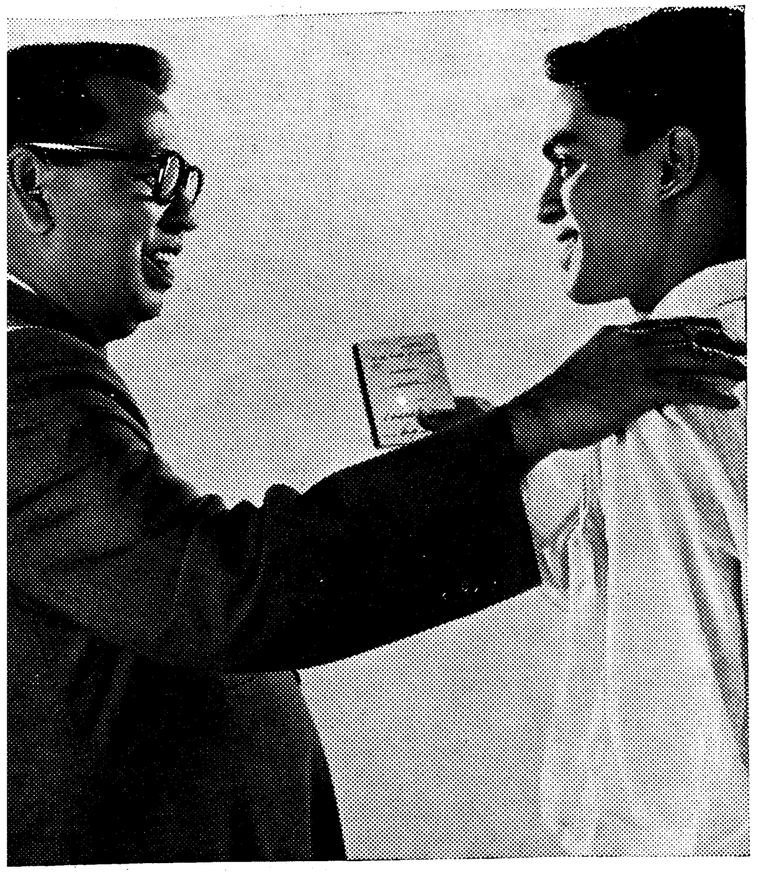
SURVEY

(Concluded from previous page)

Corporation's contemplated study of small plantations and their problems, with special emphasis on determining the appropriate agency for meeting their financial needs.

It would not be fair to the Corporation's management to comment on its performance on the basis of its first year of working. A perusal of the Directors' report and the observations of the Chairman, Mr. M. R. Bhide, suggests that the management has been active in preparing the ground for its work. A lot of touring of the country has been done to find out the problems and difficulties of agriculturists and to establish contacts. Meanwhile, it is distressing to learn from the speech of Mr. Bhide at the first annual general meeting of the Corporation, held in Bombay on Monday, 21st September 1964, that the response from the State Governments has been poor in sending worthwhile schemes for availing of the refinance facilities from the Corporation. Considering the vast potentialities for the development of agriculture and in view of the need for increased agricultural production, Mr. Bhide opined, "it is a pity that we could approve only four schemes during the first year." He emphasised that "while our officers can give the State Governments a general idea of the functions and working of the Corporation and help them in the preparation of sound schemes, the initiative in this regard has largely to come from the State Governments themselves." The Corporation has, therefore, asked the State Governments to prepare schemes for agricultural development and has suggested that Special Committees, consisting of the representatives of various concerned departments of the State Governments and the financial institutions eligible for assistance from the Corporation, may be constituted for this purpose.

The State Governments have been known for their slackness in organising and implementing agricultural development programmes drawn up by all-India agencies. The Planning Commission and the Central Government have complained about this factor a number of times. There is thus nothing new in what Mr. Bhide has stated. As a former experienced officer of Government, he has intimate knowledge of State Administrations. Probably, he also knows the ways and means of shaking them out of their lethargy.



"Earn your keep but keep your earnings"

Now that your son is earning, ask him to keep some of those earnings in a Savings Account with the State Bank of India!

EARNINGS AND EXPENSES OF BANKS

CONSOLIDATED PICTURE OF LAST YEAR

THE *Statistical Tables Relating to Banks in India* for the year 1963 (Price: Rs. 15) presents banking statistics relating to assets and liabilities as well as earnings and expenses of commercial banks compiled from special returns based on the balance sheets and profit and loss accounts of banks. Since the information on assets and liabilities of the banks is available from the other publications of the Reserve Bank of India long before the *Statistical Tables* are published, the main interest now centres on the earnings and expenses of the commercial banks.

The *Statistical Tables* give information on bank profits and performance in two forms. Table 3 (ii) on pages 12-13 entitled "Income, Expenditure and Distribution of Profit of several classes of Commercial Banks," is compiled from the profit and loss accounts of the concerned banks and presents the consolidated totals, of profit and loss accounts, as they are published, without any processing whatsoever. The scheduled banks are classified into four categories, namely, the State Bank of India, its Subsidiaries, other Indian Scheduled Banks and Foreign Banks: non-Scheduled Banks are classified into three groups on the basis of their paid-up capital and reserves. Data are usually given for the two latest years.

The data in this table are not strictly comparable. Banks follow three different methods in the treatment of tax provisions in their profit and loss accounts. Some banks treat provision for taxation as an appropriation of the balance of profit, while others charge the tax provision to their profit and loss accounts. Most of the important banks, however, disclose their income after making a provision for taxation in the same manner as "provisions for bad and doubtful debts and other usual and necessary provisions," an arrangement permitted by the Banking Companies Act. These differences in the treatment of tax provisions amongst banks renders the various profit and loss accounts incomparable, with the result that their consolidated totals do not reflect the real position. The picture of total income or of net profits or of the provision for taxation that we get from this table is far from correct. Some idea of the extent to which it is wide of the mark can be had from the fact that provision for taxation by all scheduled banks is shown at Rs. 55 lakhs for 1962 and Rs. 42 lakhs for 1963, whereas the actual provisions for these years have been Rs. 14.63 crores and Rs. 15.70 crores, respectively. It must, however, be said to the credit of the Reserve Bank that it has made the necessary qualification about the incomparability of figures in this table in the introduction to the publication under review. But one wonders what useful purpose a table like this serves.

Tables 8(i) and 8(ii) on pages 22, 23 and 24 which show the total earnings, expenses and allocations of banks on a more realistic basis are compiled from a special return submitted by the banks. Necessary adjustments have been made in these tables, so that they show total earnings, as well as net profits *before* providing for taxation and bonus, uniformly in all cases. It is, therefore, these tables that matter most.

Total current operating earnings of scheduled banks as a whole, according to these tables, amounted to Rs. 159.07 crores, consisting of Rs. 133.99 crores of the Indian scheduled banks and Rs. 25.08 crores of the foreign scheduled banks. This represents an improvement over 1962 of 11.4 per cent from Rs. 120.24 crores in the case of Indian scheduled banks and of over 15 per cent from Rs. 21.76 crores in the case of foreign scheduled banks. In addition to the current operating earnings, the banks' earnings include gains from revaluation or sale of assets—the total earnings of scheduled banks from this source in 1963 amounted to Rs. 1.25 crore, as against a mere Rs. 20 lakhs in the previous year.

The additional income was neutralised to a great extent by additional expenses. The expenses by way of interest, commission and brokerage on deposits, borrowings and other accounts rose from Rs. 55.87 crores in 1962 to Rs. 61.86 crores in 1963. This represents a rise of 13 per cent in the case of Indian scheduled banks and 17 per cent in the case of foreign banks.

The interest charges constitute 39 per cent of the total operating earnings of Indian and foreign scheduled banks alike. There is, however, a significant difference in the composition of the interest expenses in each case. The bulk of the expenses in the case of Indian scheduled banks represent the cost of interest on deposits and only a minor portion represents the cost of interest on borrowings. In the case of foreign scheduled banks, cost of borrowings constitutes almost one-third of their total interest expenses, the other two-thirds being the cost of deposits. This difference explains the fact that foreign exchange banks are much more active in the inter-bank call money market: it also explains the relatively greater eagerness of foreign exchange banks to bring down the rate of interest on the call money deposits. The other Indian banks, particularly some of the bigger banks and the bulk of the smaller banks, who play only a minor role in the call money market are understandably reluctant to give any competitive advantage in the cost of deposits or borrowings to the exchange banks. There is, however, no doubt that the question of call rates will have to be reconsidered again by the bankers, since the Governor and the Central Board of the Reserve Bank have thrown their weight in favour of the lower call deposit rates.

Another important factor regarding the structure of interest rates in 1963 is the fact that banks raised the rates of interest earned on advances but held down the cost of deposits: this widening of interest differential was a major factor in the improvement of bank earnings in that year. It is seen from the *Statistical Tables* that, at the end of December 1963, 33 per cent of deposits were at a rate of interest below 3 per cent and 27 per cent of deposits at zero interest, as against 36 per cent and 19 per cent, respectively a year before. Similarly, 88 per cent of advances at the end of December 1963 were at the rates of interest above 6 per cent, as against only 54 per cent of advances above 6 per cent at the end of December 1962. With the partial readjustments in interest rates with effect from August last, and with further modifications in the offing, the margin between the rates of interest paid and earned by the banks is bound to be lower in future, unless advances rates are also pushed up, as has been done by some.

The establishment expenses of the scheduled banks rose from Rs. 42.64 crores in 1962 to Rs. 48.89 crores in 1963 and constituted 32 per cent of the total operating earnings in the case of Indian scheduled banks (as against 31 per cent in the previous year), and 25 per cent in the case of foreign scheduled banks (as against 26 per cent in the previous year).

The total expenses went up sharply from Rs. 114 crores to Rs. 130 crores—a rise of 13.4 per cent over the previous year. The net profits before taxes and before bonus, however, improved only slightly, from Rs. 24.93 crores to Rs. 25.91 crores in the case of Indian scheduled banks and from Rs. 4.75 crores to Rs. 5.92 crores in the case of foreign banks, Together with the amounts withdrawn from published reserves (Rs. 10 lakhs for Indian scheduled banks and Rs. 40,000 for foreign banks) and the amounts brought forward, the total amount available for distribution was Rs. 25.91 crores and Rs. 5.92 crores, respectively.

The provision for taxes on profits rose from Rs. 11.82 crores to Rs. 12.31 crores in the case of Indian scheduled banks and from Rs. 2.80 crores to Rs. 3.39 crores in the case of foreign banks—a total rise of Rs. 1.07 crores. But, in terms of percentage of profit, the provision for taxes came down from 50.5 to 49.7 in the case of Indian scheduled banks and from 59.0 to 57.3 in the case of foreign banks. At first sight, this decline in the ratio of taxes to profits appears rather strange, for the banks had to provide for super profits tax liability on their profits for both the years—1962 as well as 1963—in addition to the usual corporation tax liability for 1963, in their accounts for 1963. On further thoughts, however, it appears that the banks' performance in the year has not been as prosperous as it appears to be at first sight. In addition to about Rs. 11 lakhs drawn from the *published* reserves during 1963, banks must have drawn substantially upon their secret reserves, in order to maintain their dividends and to meet the super profits tax liability.

Among the other allocations of profits, transfers to published reserves by the Indian scheduled banks amounted to Rs. 3.22 crores in 1963, as against Rs. 3.14 crores in the previous year, their ratio to profit declining slightly from 13.4 per cent to 13 per cent. Dividend payments rose fractionally from Rs. 4.89 crores to Rs. 4.90 crores, though their ratio to profit fell from 20.9 per cent to 19.8 per cent. It may be recalled here that dividends for 1963 were paid on a higher capital of Rs. 41.08 crores, as against Rs. 37.97 crores at the end of the previous year. Bonus payments to staff rose both relatively as well as absolutely: they increased from Rs. 3.31 crores to Rs. 3.83 crores in the case of Indian scheduled banks and from Rs. 43 lakhs to Rs. 66 lakhs in the case of foreign scheduled banks. The improvement in this pay-out as a ratio of profit was from 14.1 to 15.4 per cent for the former group and from 9.1 to 11.1 per cent for the latter group.

What are the prospects for bank profits for the current year? Very little quantitative information is available, but there are straws in the wind which give enough indications: the cost of banks' deposits is bound to be higher in 1964 since the bankers will have to concede the efficacy of higher interest rates; so will be the case in regard to establishment expenses, in view of the additional *ad hoc* benefits granted to bank employees. Although some of the banks have raised their advances rates, most banks have maintained their lending rates at the last year's levels. The pressure of the revised liquidity requirements now effective will actually be felt only in the first few months of 1965 when the busy season gathers momentum, but the size and pattern of banks' gilt-edged portfolios have actually been undergoing a chnage and the banks have already begun to reduce their commitments and discourage the borrowers. All these factors cannot but tell upon the profits of banks, for 1964.

Position at a Glance

(In crores of rupees)

	Scheduled Banks

FUTURE OF COTTON TEXTILE INDUSTRY

ASOKA MEHTA COMMITTEE ADVOCATES FREEZING OF MILL SECTOR

THE eagerly awaited and long overdue report of the Powerloom Enquiry Committee (Chairman: Mr. Asoka Mehta) was presented to Parliament on Thursday the 17th inst., that is, more than three months after it was submitted (in the first week of June). Presenting the report, Mr. Manubhai Shah, Union Minister for Commerce, merely said that the report was under Government's consideration. The Committee, it will be recalled, was appointed in January 1963, with a special request to complete its findings within six months. But, in view of the complicated nature of enquiry and the absence of data which, according to Mr. Mehta, "had to be specially collected in order to arrive at meaningful conclusions," the Committee had to seek extension of time on three occasions. It signed the report on 24th May and sent it to the Government on 5th June. The Committee consisted of, besides the Chairman, Mr. A. R. Bhat (President of the Federation of Associations of Small Industries of India), Mr. G. K. Devarajulu Naidu (Southern India Millowners Association), Nawab Aizaz Rasool (Vice-President, U.P. Industrial Co-operative Association), Dr. D. K. Malhotra (Joint Secretary, Planning Commission), Mr. M. Somappa (President, All-India Handloom Fabrics Marketing Co-operative Society) and Mr. K. R. Aravamuthan of the Textile Commissioner's Office (Member-Secretary).

Excepting for a note of dissent on the economics of working of the cotton powerloom sector by Mr. Bhat, the Committee's report is a unanimous one. The objection raised by Mr. Bhat in his note of dissent is fundamental, relating as it does to the methodology and the calculation of the disability suffered by cotton powerlooms *vis-a-vis* the composite mills. The observations of Mr. Bhat do not, however, affect the main recommendations of the Committee.

Role of Powerlooms

The Committee is positive and definite about the future role of powerlooms. The key paragraph in its report reads thus:

"We have recommended that the entire increased requirement of cloth of the country should be allocated to the decentralised sector and, for this, have given a phased programme of installation of powerlooms in the handloom sector totalling 110,000 powerlooms during the next seven-year period. These powerlooms will have to be installed both in the cotton and art silk weaving sectors. . . . Our commendation for earmarking almost the entire additional requirement of cloth in the remaining two years of the current plan and in the fourth Plan to the powerlooms to be installed in the handloom sector has been conceived as a programme for the welfare of the handloom weavers. The fear of technological unemployment amongst the existing handloom weavers being caused by the introduction of powerlooms is not real, since the powerlooms will be installed in the handloom sector for production of the additional requirements of cloth for the country. The emphasis in the developmental schemes for the handloom industry has so far been largely governed by the overall limitation that handloom should continue to be handloom. We have, however, now come to a stage where, unless, as a matter of policy, Government would embark on a large-scale scheme of giving the handloom weavers a more efficient instrument of production to improve their lot, the efforts and moneys spent from the Exchequer for the different measures of amelioration of the condition of the weavers would largely be set at nought."

Curbs on Mill Sector

In the opinion of the Committee, the entry of the decentralised sector in a big way in the supply of cloth during the fourth Plan period will serve to exert a healthy influence to the advantage of consumers. This, it is said, is in addition to the many gains, social and economic, such as diffusion of entrepreneurship and mobilisation of capital in dispersed areas flowing from the decentralisation of industrial activity. The Committee has urged that the additional production (or requirement) for the fourth Plan period should be exclusively in the decentralised sector; the additional production amounts to about 2,450-2,550 million yards, being the difference between the estimated output of 8,500-8,600 million yards in 1965-66 and the fourth Plan target (tentative) of 11,050 million yards (excluding *khadi* cloth). With a view to ensuring such exclusive reservation of additional production to the decentralised sector, the Committee has suggested the following curbs on the mill sector:

1. No further expansion of the mills' weaving capacity, other than the capacity already agreed to, must be allowed.

2. Production of *dhotis* and *saris* by the mil sector may be pegged at 1963 level. The actual packings of *dhotis* and *saris* in that year, it may be noted here, aggregated a little over 331 million metres and 318 million metres, respectively.

3. The production of all coloured *saris* should be reserved exclusively for the handlooms.

4. The processing capacity in mills must in future be allowed to be expanded purely on the basis of the mill sector's own requirements; further, in a period of three years, on a phased programme, the present permission to mills to process outside cloth may be discontinued.

5. Since the Committee has recommended the freezing of mills' weaving capacity and stressed the fact that the handlooms and powerlooms should be able to draw their requirements of yarn from the common pool of co-operative spinning mills, there will virtually be a ceiling on the spinning capacity of the mills in the non-co-operative sector too.

Interests of Consumers

Anticipating a question whether the allocation of a large share of production to the decentralised sector, which is suffering from certain inherent handicaps and consequently higher production costs, would be in the interests of consumers, the Committee observes:

"The various recommendations we have made in this respect should be taken together in assessing the impact on the consumers. The setting up of a large number of dispersed spinning mills supplying yarn of the required quality to the nearby clusters of powerlooms and facilities for preparatory weaving and processing of powerloom cloth, together with the improvements in marketing, should have the effect of reducing cost of production and distribution for the powerlooms and improving their competitive ability *vis-a-vis* the mills. We consider that, as an equal partner in the supply of cloth with textile mills, the market prices could be better stabilised, as the powerlooms would be able to put into the market cloth of comparable qualities. It may be relevant to mention, in this connection, that the dominant position occupied by the textile mill sector for the supply of cloth to the consumers in the country has not always helped in stabilising the cloth prices. A study of the behaviour of cotton textile prices since 1948 would reveal that there had been periodical spurts in cloth prices not wholly related to the cost of production and this situation had called for remedial measures from time to time like controls and excise adjustments to mop up profits. The entry of the decentralised sector in a big way in the supply of cloth should, therefore, serve to exert a healthy influence, to the advantage of the consumers."

Conversion Scheme

The Asoka Mehta Committee has reviewed in some detail the progress made in the implementation of the scheme for converting handlooms into powerlooms included in the second Plan, following the findings of the Kanungo Committee in 1955. It is seen therefrom that the scheme has not met with full success. The Government of India had decided to allow the installation of 35,000 powerlooms in the handloom sector during the second Plan, but not more than 13,470 powerlooms were sanctioned. Even out of the sanctioned looms, only 8,885 looms had been actually installed by the end of the second Plan and firm commitments made in respect of 2,243 looms. The poor progress is attributed not to the lack of enthusiasm on the part of weavers but to four other important factors:

(i) Insufficient financial assistance provided for working capital;

(ii) the condition imposed for implementing the scheme in handloom co-operatives in rural areas with population less than 30,000 which, in some cases, did not encourage the scheme;

(iii) absence of simultaneous arrangements for providing pre-weaving facilities, winding, warping, sizing, etc., for supply of yarn in sized beams as also post-weaving finishing arrangements; and

(iv) absence of arrangements to ensure that, in the allocation of looms in the co-operatives, the benefits arising therefrom did really get distributed among all the members of the co-operatives.

The Committee points out that the abrupt discontinuance of the scheme in 1961 was apparently not the appropriate solution of the problem created by the large number of powerlooms which had otherwise come up in the country. Urging the revival of the scheme, the Committee says that 10,000 powerlooms should be introduced in the co-operative sector of the handloom industry during the remaining period of the third Plan. The installation of these looms should be with Government assistance at the rate of Rs. 6,000 per loom and Rs. 2,700 for working capital, making a total of Rs. 8,700 for each loom. The total cost of erecting powerlooms, including that of buildings, is placed by the Committee at Rs. 10,000 per loom.

The Committee generally agrees with the pattern of assistance adopted for converting handlooms into powerlooms under the old scheme, but it suggests that conditions for installation of looms be modified in terms of the recommendations made by it and that the quantum of working capital provided be suitably raised. The Committee has also advocated an increase in the amount of working capital provided to looms already installed under the conversion scheme. In order to make sure that this transformation of handlooms and powerlooms takes place effectively and in a meaningful and satisfying manner, the Committee wants the All-India Handloom Board to be made responsible for implementing the scheme, as well as for ensuring that the handlooms and powerlooms maintain and improve their production. It also recommends that the Board be made a statutory body and provided with the required funds.

It is estimated by the Committee that, in order to meet the increased requirements of cloth during the fourth Plan period, an additional 60,000 powerlooms will have to be installed in the cotton sector and 40,000 looms in the man-made fibre sector. The allocation of these additional 100,000 powerlooms, according to the Committee, should be made on the basis of the number of handlooms registered in different States. The estimated total requirements of powerlooms for new installation and replacement every year till the end of the fourth Plan are put at about 32,000. The Committee has stressed the need for drawing up a phased programme for augmenting production of powerlooms; there should be no restrictions on the manufacture of these looms.

Financing

While the Committee has not worked out the total capital outlay that would be required for implementing its plan for expansion of powerloom sector on the aforesaid lines, it has provided an approximate idea of the cost of replacing and rehabilitating the existing powerlooms. The total investment (at current prices) in the cotton powerloom sector is estimated at about Rs. 18 crores. The capital cost (at current prices) of replacing 70,000 powerlooms spread over the next ten to 12 years is expected to involve an investment of Rs. 21 crores for looms only and a similar amount will be needed for ancillary, preparatory and processing facilities or a total of Rs. 42 crores. The aggregate outlay thus comes to Rs. 62 crores over ten or twelve years. The question naturally arises as to how this much of money could be raised. The relevant finding of the Asoka Mehta Committee is as follows:

"Our enquiries have revealed that almost the entire capital for the purchase of looms has been found by the loom owners themselves and in many cases by selling jewellery, mortgaging property, etc. In a number of cases, the more prosperous handloom weavers have been able to find finance from their own resources. In the case of *benami* ownership, intermediaries and even textile mills are reported to have financed the setting up of looms. For obtaining finance for working capital generally, the powerloom weavers are found to be virtually in the grip of cloth merchants and moneylenders. We would lay considerable emphasis on the importance of adequate working finance for the proper functioning of the powerloom industry in the country. In the light of the important role which the decentralised sector will have to assume in supplying the clothing needs of the country in future, all efforts should be made to ensure that the powerlooms obtain necessary finance at fair rates of interest. The State Finance Corporation, Government loans under the State Aid to Industries Act and commercial banks, particularly the State Bank of India, may have to step in in a big way to fill the gap. The resources of these financing institutions may have to be adequately augmented in order to make them take up these responsibilities."

Pattern of Growth

The pattern of growth for the powerloom industry as suggested by the Committee envisages clusters of about 300 powerlooms each not under one roof but in small units within convenient distance of each other, established in and around small towns. The Committee is inclined to feel that the scope for setting up powerlooms in rural areas with a view to providing rural employment and improving the economic conditions of rural population is at present rather limited. A unit of four powerlooms is considered as a fair average-sized unit to be worked by a weavers' family. The construction of industrial estates of the type now being established in the country for powerloom weavers is regarded as unsuitable. Instead, common weaving sheds, it is said, would be preferable.

The findings of the Committee concerning the art silk, ribbon manufacturing and woollen powerlooms may be summed up thus:

Art silk: There is no need for a vertical development in the rayon industry and the rayon spinners need not be allowed to install looms. The export incentive schemes have served to give an increasing stimulus to the production and export of art silk fabrics. The standardisation of the different varieties of art silk fabrics should serve to create confidence in the consumers about quality and durability.

Ribbon Manufacturing: The powerlooms should be allowed free expansion subject to the condition that no conversion of these ribbon looms to cloth looms takes place. These ribbon and tape looms will be registered by the Textile Commissioner.

Woollen: The existing controls on powerlooms should be continued.

Yarn Supplies

Inasmuch as the production performance of the decentralised sector of the cotton textile industry depends on yarn supplies, the Committee has examined this question carefully. According to it, of the present supply of yarn to the internal market of about 316 million kgs. per year, almost 45 per cent is supplied by composite mills and 55 per cent by spinning mills in the country. The assumption that 90 per cent of the total yarn availability as representing the consumption by the handlooms and powerlooms taken together, would still hold good. On the existing conditions, the pattern of yarn consumption has been revised in round figures to 68 per cent by handlooms, 22 per cent by powerlooms and 10 per cent by hosiery, rope making, etc. The average count of yarn spun by spinning mills was 27.5 in 1959 and this is reported to have gone up to 29.4 in 1962, while, in the case of composite mills, the corresponding increase during the same period is reported to be from 24.3 to 25.1. The Committee considers that both these sectors (handlooms and powerlooms) should draw their yarn supplies from a common pool. A compartmentalisation would unduly restrict flexibility in supplies and manufacture. In the future set-up, the replacement of handlooms by powerlooms will assume considerable importance and it would not be proper, therefore, to earmark spinning mills exclusively for either the handlooms or the powerlooms. The Committee recommends that, irrespective of any other regulations, there should be a strict control exercised on the quality of yarn made available by the textile mill industry for handlooms and powerlooms and suitable quality standards fixed for warp and weft yarn with appropriate price for each. It is apparent that, under the existing level of availability of yarn, the unauthorised powerlooms which have come up in recent years cannot work to their full capacity.

Pointed attention has been drawn by the Committee to the importance of enabling the powerloom owners to market their cloth direct, so as to derive the full benefit arising from the sale of processed cloth. The Committee favours the establishment of processing factories at different centres, preferably on co-operative lines, though it does not rule out provision of facilities by private entrepreneurs. The present difinition of "independent processor," it is said, adversely affects those powerloom units which have their own processing equipment, as excise duty is charged at full rates as for composite mills for fabrics processed by them. This has led to the closure of some powerlooms working in these units. It is recommended that this should be remedied and these factories treated as independent processors. On the same analogy, it is also recommended that independent sizing factories which have been given the concession of paying 80 per cent of the surcharge on sizing of yarn as applicable to mills may be allowed the concession, even if they work powerlooms and/or have other yarn processing operations.

Excise Duty

The Committee has criticised the present system of charging excise duty at different rates for different sizes of powerloom units and the concessions allowed for small units. These, according to it, constitute a major factor in causing unhealthy and undesirable distortion in the structure of the powerloom sector. The structure of excise duty as recommended by the Committee is as follows:

1. The existing exemption for powerloom establishments of four looms and below, as also the levy on the larger powerloom establishments, whether at compounded rates or otherwise, may be discontinued and the incidence shifted as a higher duty at the two key points—yarn and processing—where excise surveillance will be more effective.

2. Yarn in *hank form* upto and including 40s counts (Nf 34) should bear no duty. This exemption is intended to assist the handloom weavers. Handlooms are already enjoying this concession. Yarn of and above 40s supplied in *hank form* should continue to enjoy concessional rates as at present. Cone yarn and yarn in all forms other than 'hanks' of all counts should be subjected to excise levy.

3. A higher rate of duty on yarn delivered on sized beams, whether sized by the composite mills or independent sizing factories, may be levied. This may be in the form of a surcharge over the duty on cone yarn. It should be easy and necessary to bring mechanised sizing factories under excise control.

4. The existing system of charging processing duty on powerloom and handloom cloth may be continued. The rates may be increased, suitably taking into account (*a*) the complete abolition of excise duty either on compounded rates or on other basis for the powerloom establishments; and (b) the need for rationalising the excise rates so that different types of processing might bear different rates of duty, the rates themselves being higher for more sophisticated processing.

5. With the above changes, the excise pattern on grey mill-made cloth may be revised to provide for (i) an increase in the excise duty on yarn to equate with the increased levy on yarn, which goes to the decentralised sector, (ii) a suitable reduction in the basic duty on grey cloth, the additional excise duty in lieu of sales tax being continued, and (iii) increase in the excise duty on different types of processing to provide for progressively increased rates for more refined processes after taking into account the reduction in the basic duty for grey cloth.

6. The excise duty on processing by the independent processors may also be correspondingly increased for the different types of processing with due provision for exempting an initial quantity and for charging reduced rates of excise for powerlooms and handlooms.

The problem of unauthorised powerlooms has also been examined by the Committee. There are said to be about 12,000 unauthorised cotton powerlooms and 3,000 non-cotton powerlooms. The Committee has suggested the shifting of the incidence of taxation from cloth to yarn and processing as a measure to discourage unauthorised growth. It has also suggested a registration scheme under which powerlooms may formally be registered on payment of a fee. Compulsory registration is not favoured.

A brief reference to the powerloom industry as it is today and as has been found by the Committee may now be made here. There are in all about 82,000 cotton powerlooms and 60,000 art silk powerlooms, the number of persons employed ranging from 164,000 to 210,000 in the former (1½-shift working) and 140,000 to 180,000 in the latter (1¾-shift working). The numbers include owners and men employed on preparatory equipment, etc., but exclude persons employed in the processing of powerloom cloth, distribution and marketing.

The total production capacity of the existing cotton powerlooms on the basis of two-shift working is assessed at about 1,600 million yards.

It is reported that there are nearly 2.2 million commercial handlooms in the country. The average production per loom per day is barely three yards, assuming that all the looms are active. If this production can be doubled, as is claimed by some, the total output by the 2.2 million handlooms can reach the figure of over 4,000 million yards. The current annual rate of output is, however, estimated at 1,000-1,100 million yards of powerloom cloth and 2,050-2,150 million yards of handloom cloth.

The powerloom establishments fall under four broad classifications: owner-operated units (mostly single looms), units operated by both owners and hired labour, units operated wholly by hired labour and units rented out on monthly payment basis. The earning of a powerloom weaver-owner or a paid weaver is Rs. 100 per month or above in several of the principal centres accounting for about two-thirds of the total number of looms. In other centres, the monthly earnings vary from Rs. 50 to Rs. 90. The weighted average earning for all the powerlooms for which data have been collected comes to Rs. 86.50 per loom per month and the gross return to the owner is estimated at Rs. 75 per loom per month.

The overall wage element in the cost of production is assumed to be around 50 per cent. The element of power and fuel in the total cost of production in the powerlooms is more or less the same as in the mills. The repair cost in powerlooms is much less than in the textile mills. There is not much of a difference between the mills and the powerlooms in regard to depreciation. The expenditure on sundry expenses and overheads in the powerloom establishments is almost 400 to 500 per cent of that in mills. The interest charges incurred by the powerloom establishments are heavy which is one of the factors for the high incidence of overheads in the powerloom sector. Taking together the elements of cost excluding "wages" in the "manufacturing charges" according to the above cost data, the net handicap suffered by the powerlooms *vis-a-vis* the mills is about 25 per cent. On an overall basis, as compared with mills, the powerlooms suffer a handicap of 25 per cent in the "yarn cost," 25 per cent in the "manufacturing charges" excluding "wages" and an advantage of 50 per cent in "wages." The net handicap suffered by the powerlooms at the production end will be 8 per cent *vis-a-vis* the mills. The marketing disability for powerloom cloth, including the consumers' bias, is assumed at about 10 to 12 per cent. As a rough guide, the overall handicap suffered by the powerlooms is placed at about 18 per cent *vis-a-vis* the mills.

These figures, incidentally, give a picture quite different from the one given by the mill sector which has for long complained of severe competition from the powerloom sector. It is for the representatives of the mill sector to prove that the data furnished in the Asoka Mehta Committee's report are wrong.

PRODUCTION PERFORMANCE

(Yarn in million kgs. and cloth in million metres)

	1964*	1963	1960	1956	1950
Yarn	936	892	788	758	533

INAUGURAL MEETING OF TEXTILES COMMITTEE

The inaugural meeting of the Textiles Committee, a body corporate established by the Government of India for implementing measures to ensure quality control of textiles and textile machinery produced in India and for the conduct of technological and economic research, was at Bombay on the 16th inst. The Chairman of the committee, Mr. R. G. Saraiya, presided. Welcoming the members, Mr. Saraiya gave a brief account of the working of the Cotton Textiles Fund Committee which has now been replaced by this Committee. He also drew attention to the enlarged scope of the functions of the Textiles Committee under the Textiles Committee Act, 1963 and stated that, in order to augment its resources, the Committee might have to levy a small fee for inspection.

The Committee then discussed the budget proposals and considered schemes for inspection of indigenous textile machinery and mixed fabrics. It also formed the various Standing Committees and *ad hoc* committees and decided to hold its next meeting in Bombay on 6th October when Mr. Manubhai Shah, Union Minister for Commerce, is expected to be present.

TEXTILE MACHINERY — A CORRECTION

Commerce carried an article entitled "Textile Machinery Industry" in its issue of 22nd August 1964 (*vide* page 312). The article contains a statement showing the annual requirements of textile machinery during the third and fourth Plan periods. The value of such equipment given at the end of the table has been incorrectly shown. The value of the machinery required for rehabilitation and modernisation alone during the third Plan period is expected to exceed Rs. 200 crores. The estimate of total investment in fixed assets, including buildings, in the fourth Plan period is Rs. 225 crores.

MANCHESTER LETTER

TEXTILE PRICES TEND TO RISE

MR. HEATH ON COTTON INDUSTRY'S PROBLEMS

From Our Special Correspondent

MANCHESTER, *15th September*

FOR promises and pledges and sympathetic understanding of problems there is no time quite like a General Election period. But, in fact, it would be less than fair to Mr. Edward Heath to suggest that he was on a political platform when he spoke to a luncheon meeting of the Manchester Chamber of Commerce. Nevertheless, the Secretary of State for Industry, Trade and Regional Development made a number of points of special significance to the cotton industry.

Mr. Heath pledged the Government's determination to do its utmost to secure a further period of stability for the industry, gave an assurance that the Government was now working out what form of special protection should be adopted, and reiterated that, in the controversial field of imports from low-cost countries, we can "rightly call on others to do more."

"Cotton must have a fair deal and I am determined to ensure this," declared Mr. Heath. Describing the Cotton Board's document *The Case for a viable U.K Cotton Industry* as helpful and constructive, he said it was recognised that the industry was facing a special problem of readjustment to the modern world. A further period of stability would give it the opportunity of continuing the process of modernisation, of bringing about a better industrial structure, improved product design, increased machine utilisation, new production techniques and new selling methods. But in saying this, the fact had to be faced that whatever the Government did would involve some difficulties in relation to Britain's international commitments.

A Fundamental Problem

This, of course, is the dilemma and has been right from the start of the import problem. While other nations can pay lip-service—and little more—to the cause of the developing nations this country and the cotton industry, in particular, has had to bear the heat and burden of the day. In spite of everything that Lancashire has done to try to make this clear, it is a fundamental problem that many of the industry's detractors cannot or will not see.

It was hopeful to find Mr. Heath naming the Cotton Board as the first of the 24 authorities with which his North-West Study Group has so far had consultations. The North-West survey, he said was one of the most ambitious projects so far undertaken. Among the questions being examined was that of the scope for creating new growth points in the region, why there was economic expansion in some parts of the North-West and decline in others, and what would be the total bill for removing unsightliness and clearing dereliction in the region (more important than many people realise, perhaps, if the region is going to hold on to its workers and halt the migration of population).

On the broad industrial outlook for the region, Mr. Heath was optimistic. "I think we can say that the North-West has reached the point where it is poised for a fresh period of expansion," he told his audience. "This advance can be achieved provided that industry is ready to adopt new techniques and new equipment, to abandon restrictive practices and to give full rein to imaginative and constructive management."

Running the New Giants

Following the current vogue for strengthening control and administration in the regions, Courtaulds Ltd. is setting up a Northern Board with an administrative office and secretariat in Manchester. The development is clearly allied to the group's successful bids worth £37 million for the Lancashire Cotton Corporation and Fine Spinners and Doublers. Members of the new board include Col. J. B. Whitehead of L.C.C. and Mr. W. T. Winterbottom of Fine Spinners and Doublers.

Hardening prices for many goods have been a feature of 1964 and textile products have been no exception to the general rule. The figures issued by the Board of Trade showing the general trend of price movements are based on the index number ruling in 1954 taken at 100.

For some time the cost of average cotton cloths, which make up the portfolio of fabric constructions provided by the industry to the Board of Trade, has been running at 5 per cent below the level of ten years back, but a steady rise has taken place throughout the first half of the current year. As the table below shows, May marked the month when values were identical with a decade ago; subsequently, the upward movement has continued:

	Cotton cloth		Rayon cloth	
	1964	1963	1964	1963
January	96.7	95.5	111.9	111.7
February	97.4	95.5	112.2	111.3
March	98.3	95.3	112.9	111.2
April	99.2	95.1	113.8	111.1
May	100.0	95.0	113.9	111.1
June	100.4	95.0	114.4	110.9
July	101.4	95.0	114.4	110.6
August	..	94.9	..	110.8
September ..	..	94.9	..	110.8
October	..	95.0	..	110.7
November ..	..	95.9	..	111.4
December ..	..	96.4	..	111.8
Annual averages—				
1962	96.8		112.8	
1963	95.3		111.1	

Although the trend of prices for standard rayon cloths has followed much the same pattern as cotton fabrics, the actual percentage increase has not been as large. The low point in each case was reached about a year ago and, whereas cotton materials have moved up in price by nearly seven points, goods in the man-made fibre range have advanced slightly less than four points.

In contrast, however, the rise in the index for cotton yarn in the twelve months to July 1964 has been from 89.0 to 95.2, while spun rayon yarn has hardened from 96.8 to 105.0. In the case of hosiery and other knitted goods, the increase has been far less marked, being from 96.6 to 98.6. In made-up clothing, only a small rise is shown from 109.8 to 111.8. The average raw cotton price increase during the year has been 1.3 from 71.3 to 72.6.

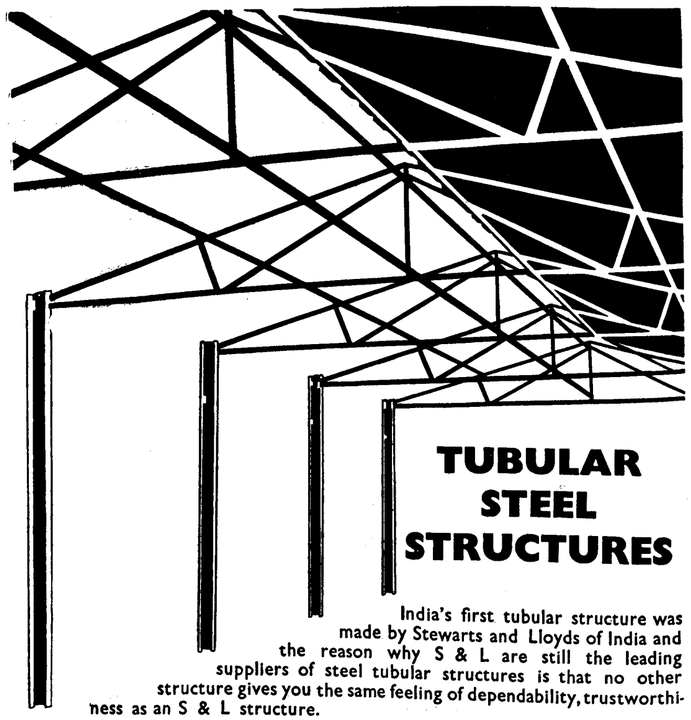
In view of the many different overhead charges which have to be faced by producers, notably the "package deal" wage advance, together with shorter hours and longer holidays over the next three years, there seems to be little likelihood of any reduction in values. Despite the imponderables which have arisen as a result of the events of the past month or two, customers can scarcely be blamed for continuing to purchase further ahead, as more favourable opportunities of buying goods on a price basis cannot be anticipated.

Progress in Pakistan

In contrast to the much bigger shipments of both grey and finished cotton cloth to this country from India so far this year, the quantity of fabric taken from Pakistan has shown a slight reduction. At the end of seven months, arrivals amounted to 36 million square yards of grey cloth, as against 40 million square yards in the same period of 1963.

Yet the progress of Pakistan's cotton textile industry since the partition in 1947 has been remarkable. At the outset, the country contained only 17 mills, whereas, by 1962, the number had increased to over 200. This, of course, was in line with the industrialisation of Pakistan on a wide scale, but cotton textiles, as always, provide a strong magnet to those searching for ways to sustain the economy of a developing nation.

Very substantial progress was made during the 1950's, by which time the number of spindles installed had reached nearly 2,000,000 and about 30,000 looms were running. Of the total industrial labour force in the country, 34 per cent was employed by the cotton textile industry. Rather smaller targets have been set for development in the five years ending in 1965, by which time the aim is for 2,500,000 spindles and 40,000 looms to be working.



TUBULAR STEEL STRUCTURES

India's first tubular structure was made by Stewarts and Lloyds of India and the reason why S & L are still the leading suppliers of steel tubular structures is that no other structure gives you the same feeling of dependability, trustworthiness as an S & L structure.

All S & L roofing structures are delivered complete in every respect with trusses, purlins, columns, hook bolts for roofing and all necessary studs, nuts and washers.

Write today for your requirement of these sturdy and dependable tubular steel structures.

We at Remington Rand have been with typewriters a long time—you can say we have always been the first with typewriters. That's why we are so careful about them—careful about things that matter, like *precision, touch.*

The equipment we've invested in at our factory—the Optical Profile Grinder and the Type Aligning Projector—are for just this reason: that the typewriter you invest in is *perfect.* The care we take over accuracy—1/10,000 th of an inch in machined parts, tools and dies, and the perfect alignment of types and typebars, you can call us fussy—even finicky. But then that's why Remington Typewriters are such a good buy.

Our attention to detail means you get precision balanced typebar action that flashes to and from the paper, keys that don't stick even with several typebars in flight, finger-fitted keys designed to cushion finger tips, smooth carriage and lighter, more rhythmic, highly responsive typing.

Remington Typewriters are now better than ever

That's why we are so proud of....

COTTON SITUATION IN INDIA

NEED FOR RAISING PRODUCTIVITY STRESSED

WITH growing population and rising purchasing power in the hands of the people as a result of development plans, the demand for cotton piecegoods is bound to expand continuously in the next few years. There is also the need for augmenting the much-needed foreign exchange through larger exports of cotton textiles, which constitute the third largest earner of foreign exchange for the country. Appropriately enough, the Planning Commission's working group for cotton textiles has fixed (tentatively) the fourth Plan production target for cotton piecegoods (including *khadi* cloth) at a fairly high level : 11,200 million yards, as against the current annual rate of output of about 8,300 million yards. The additional quantity of cloth that will have to be produced (annually) between now and the end of the fourth Plan (1970-71) will thus be as much as 2,900 million yards. The successful achievement of the fourth Plan target will depend on the supply position in respect of raw cotton. It is estimated that, by the end of the fourth Plan, the country will require anywhere between 8.5 and 9.0 million bales (of 392 lbs. net each) of raw cotton. The third Plan target, it will be recalled, is fixed at 7.0 million bales and the actual production in the 1963-64 season is estimated at 6.15 million bales. The gap that is to be covered between the actual output in 1963-64 and the fourth Plan target will thus be around 2.35-2.85 million bales. The task of obtaining this much additional output is by no means easy. Indeed, there is no exaggeration whatever in the note of warning struck by Mr. A. D. Pandit, President of the Indian Central Cotton Committee, in his speech at the 90th half-yearly meeting of the Committee held at Bombay on the 19th inst., that, unless a " big effort " was made to get over the " critical obstacle " in the next two or three years, the country would be in " serious difficulties." And quite wholesome was his plea that the country must abandon its continued dependence on P.L. 480 cotton supplies as early as possible and that all efforts must be concentrated on augmenting domestic production.

Productivity and Research

Mr. Pandit did admit that the crop estimated for the current (1964-65) season would be another record one, but he cautioned by saying that one could not be absolutely certain about the crop, even if one was going to harvest it tomorrow. A larger cotton crop, Mr. Pandit said, would ensure adequate supplies to mills and enable cultivators to clear their produce at remunerative prices. Mr. Pandit pointed out that it was only through increased production at home that the country could bring about a substantial improvement in the supplies of cotton. Such an increase will be possible only if earnest measures are taken to augment productivity of cotton lands, for the country can ill-afford any further diversion of areas from other crops. It is, therefore, natural that, in the ensuing years of planning, both research workers and administrators have a big job to perform. In this connection, Mr. Pandit severely criticised the way in which research studies are being conducted in India and said :

" Research is not some magic word. If you indulge in incantation throughout the year with your research, you cannot grow large crops. Today's miracles can only be performed by very hard work. It has been stated that science enjoys a great prestige in all developing countries, but the prestige it carries is more in the form of lip service rather than hard work. Many of the observers, particularly in the F.A.O., have remarked that, although there is a considerable body of generalised scientific knowledge in agriculture available in the developing countries, that knowledge is not particularised for specific micro-climatic or micro-ecological conditions . . . our research is not problem-oriented. We know for a fact that our yields are very low. In cotton . . . our average yield is about one-fourth that of other cotton growing countries, and yet we do not know precisely what are the limiting factors. It is often said that only about 15 per cent of our area is irrigated and, therefore, our yields are low. But then there are countries like Sudan and Uganda, which grow a lot of their cotton under unirrigated conditions. Why are they able to get 400 lbs. of lint per acre and we get 60 or 70 lbs. on our unirrigated lands? These matters require investigation. It is possible that there may be certain fundamental factors, either in our soils or in the timing of our rainfall or in the distribution of rainfall which prevent us from getting same responses to nutrients as are obtained in other countries. But we should then definitely know these, and yet our scientists have not been able to find an answer to many of these problems."

Seasonal Factors

Despite the fact that the cotton crop has been showing improvement during the last three years in respect of yields, it cannot be said that the improvement has been due to the application of science and technology to cotton. Alluding to this aspect, Mr. Pandit remarked:

" I would grant that you have evolved varieties, the plant breeders have done a good job, we have replaced *desi* and short-staple cottons by medium and long-staple cottons, but, as far as yields are concerned, I am not able to say that the somewhat improved performance of the last three years have been due to something that either the agronomists or the extension workers have done. We have to thank only the good seasons for the good performance. Take the last year 1963-64. Compared to the previous year, the total increase has been only of the order of 1.5 lakh bales in the total production of the order of 54 lakh bales. Well, a two per cent rise can easily be accounted for by seasonal factors. We know that seasonal factors can exercise a much greater influence than of the order of two or three per cent, and here we have a large acreage under unirrigated cottons. The agronomists and soil scientists here have to join hands to prove that it is possible to get something of the order of 200 or 300 lbs. lint per acre under those conditions. If application of fertilisers is not possible because of inadequate water resources, we must find how we can conserve moisture in the soil. If it is not possible to take successive crops of cotton in a particular soil on account of lack of moisture, we must find a rotation crop which will make it possible to take a crop of 200 to 300 lbs. per acre, so as to restore the moisture conditions and the fertility of the soil. But I would urge again that our scientists should direct their attention to the specific problems, instead of adopting the classical attitude of research for the sake of research."

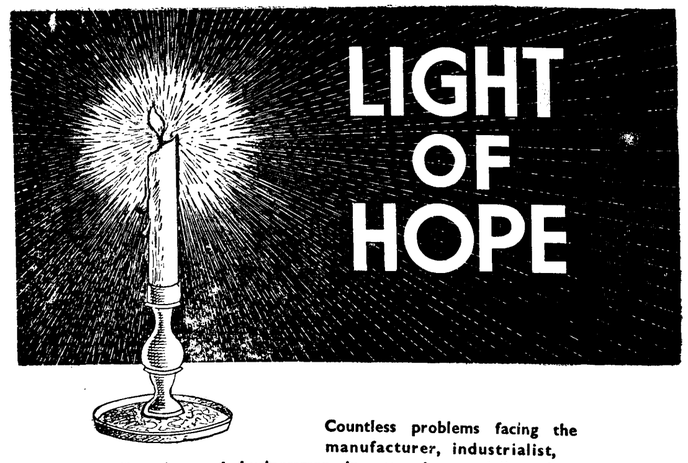
Marketing

Closely connected with the problem of raising production of cotton is that of marketing. In the absence of a good and effective distribution of crops, supply to mills becomes irregular and inadequate. As Mr. Pandit stated, marketing of cotton in this country cannot be regarded as satisfactory at present. Regulated markets, according to him, are still very scarce. Some States have not effectively implemented the Agricultural Products Markets Act. Recalling that marketing of cotton during the 1963-64 season was comparatively free from complaints, he said that, given goodwill on both sides, there was definite scope for evolving a satisfactory marketing system. It may be mentioned in this connection that the inclusion of AK. 277 and AK. 235 in the price schedule for the 1964-65 season, has provided encouragement to growers and substantial production is reported in Vidarbha. The authorities have also increased the differentials of some varieties in order to encourage the cultivator to grow these varieties in the respective areas.

Referring to prices of cotton, Mr. Pandit said that, though the raising of prices of cotton provided a solution, it was only a short-term measure. Indeed, he warned that such a course would recoil on the farmer himself in the long run. Mr. Pandit emphasised, and rightly so, that, besides ensuring remunerative prices to cultivators, it was necessary to provide physical facilities for cotton marketing. To quote him:

" The conveniences to the cultivator like a place of stay, proper arrangements for parking his carts, keeping his produce etc. are almost absent from every market. There is not enough space to clear the daily arrivals which results in the cultivators having to spend two or three days in the most unsatisfactory conditions and at very high cost and I wish the market committees were more active in providing the necessary facilities, both to the buyer and seller alike. There is a lot to be done in this respect and the Cotton Committee has unfortunately not paid much attention to this aspect. But we are always afraid of stepping on the toes of the State Governments and we do not like to take a thing which should properly be handled by them. I think, if we do provide better facilities for marketing—I am not talking about the price level now but just the physical facilities—so that the produce from the villages can be cleared within the least time and sold without any unreasonable deductions, we would have given more satisfaction to the farmer even at the present price levels."

The Central Cotton Committee President has certainly done well in pinpointing the urgency for adopting measures for ensuring higher productivity of cotton lands and providing proper marketing facilities. If these were efficiently implemented, the need for raising cotton prices, which are already sufficiently high, could be avoided. Since cotton accounts for a substantial part of the production costs of spinners and weavers, care must be taken to see that its price is kept at a reasonable level.



Countless problems facing the manufacturer, industrialist, financier and businessman in general, are daily solved by the Allahabad Bank's specially trained and experienced personnel. As a trusted partner in the country's industrial upsurge, the Bank's contribution in keeping the light of hope alive in the great future of India, is indeed considerable.

Nearing a century of service to the country the Bank's 100 offices are daily adding to the record of progress.

BOMBAY CITY'S TRAFFIC PROBLEMS

SHORT-TERM AND LONG-TERM SOLUTIONS DISCUSSED

THE population of Greater Bombay has increased from 1.7 million in 1941 to 4.5 million at present and is expected to be about 7.0 million by 1975. The number of vehicles, too, on the City's roads has increased from 38,000 in 1955 to over 110.000 now and is bound to increase enormously over the next decade. While the increase in population has aggravated the problem of transporting commuters to and from places of work, the steep increase in the number of vehicles has led to the problem of traffic congestion. These twin problems call for expert study and public discussion, so that the City's planners and administrators may be in a better position to evolve realistic solution for them. The Bombay Electric Supply and Transport Undertaking (B.E.S.T.) has, therefore, done well to organise a seminar with a view to focussing attention on specific problems of transport in, and development of, the City. The seminar, inaugurated by Mr. S. K. Patil, Union Minister for Railways, at Bombay on the 19th instant, has discussed five papers pertaining to the City's traffic and development problems.

The most important of these papers is the one entitled "Bridging the Gap," by Mr. G. A. Sharma, General Manager, B.E.S.&T. Undertaking. Mr. Sharma has highlighted, at the outset, the fact that Bombay, with its population of 4.5 million, has a total fleet strength of only about 1,300 buses for carrying about two million passengers daily, as compared with about 1.5 million passengers carried daily by the suburban railway system. London, on the other hand, with its population of 8.5 million, has 7,000 buses for carrying about seven million passengers per day. Glasgow, which has practically the same population as Bombay, has about 1,400 buses for carrying about 1.1 million passengers per day. A Bombay bus, it is said, carries, on an average, as many as 2,000 passengers per day, as compared with about 1,000 passengers carried by a London or Glasgow bus. There is thus a case for increasing the number of buses in Bombay. In fact, the B.E.S.&T. Undertaking has plans to increase its fleet to 2,000 buses during the next ten years. But, then, the proposed addition of 700 buses (2,000 *minus* 1,300) is intended to carry an additional 1.5 million passengers per day as the City's population increases to 7.0 million over the next ten years. The acute peak-hour traffic problem will not, therefore, be solved by the addition to the total fleet strength.

Peak-hour Traffic

It is seen from Mr. Sharma's paper that this peak-hour traffic problem, caused by the concentration of inward and outward traffic for about four hours in the morning and about four hours in the evening, is being partially tackled by about 300 buses which are operated only during those restricted hours but which are not deployed during the rest of the day in view of slack traffic. As the peak-hour services are not in a position to earn even the "fixed" charges of about Rs. 100 per day per bus and the Undertaking has to bear the loss (80 paise per bus km.) on account of the "variable" charges of such services, the financial impact of additional uneconomic peak-hour services on the B.E.S.&T. Undertaking's operations will be evident. If additional peak-hour services are thus ruled out, there seems to be be no alternative to the staggering of working hours in the City's commercial, industrial and administrative offices. In this connection, the B.E.S.&T. Undertaking has requested certain offices—Government and private—to advance their opening and closing hours to the extent of half-an-hour so as to broad-base the highly concentrated evening peak. This measure, it is hoped, will enable the Undertaking to carry more passengers without proportionately augmenting the fleet.

The General Manager of the Undertaking has pointed out that additional peak-hour services are also out of question for the simple reason that the average cost of operation of a bus now is Rs. 95,000 per year and its average earning only about Rs. 85,000. The Undertaking incurred a loss of about Rs. 40 lakhs last year. The loss is expected to be of the order of Rs. 100 lakhs in the current year. In his considered view, certain economy and efficiency measures (such as operation of additional 'limited' stop services along heavily loaded routes, rationalisation of stops, rearrangement of bus services on a medium-distance pattern, operation of non-stop personalised services, increase in carrying capacity by increasing the number of standees, increase in operational ratio, etc.) may yield about Rs. 40 lakhs, while the remaining Rs. 60 lakhs of the gap will have to come by increasing the fares. The fact that the total traffic carried from 8.00 to 20.00 hours is 83 per cent and during the remaining nine operational hours just 17 per cent strengthens the case for the kind of two-pronged remedy outlined by the General Manager. That bus fares in Bombay could be conveniently increased is implicit in the point made in another paper, that by the Chief Engineer (Transport) of the B.E.S.&T. Undertaking. The relevant point is that all other nationalised bus transport undertakings in India are levying a fare of 5 paise per passenger-mile, as compared with only 3.5 paise per passenger-mile charged by the B.E.S.&T. Undertaking.

A Novel Proposal

One novel and highly commendable proposal of the Undertaking pertains to the operation of non-stop personalised services. This is how Mr. Sharma has described the nature and significance of the proposal:

"It is proposed to operate non-stop buses from the suburbs to Fort area during the peak hours. On such personalised buses, a flat fare of 75 paise will be charged for a single trip. Monthly passes will also be issued at the rate of Rs. 35 per month. The personalised services will, it is hoped, be mostly patronised by car owners and will, thus, reduce the congestion of vehicles on the roads. One bus load can remove car parking congestion to a length of 900 metres. The first articulated trailer bus which will be delivered shortly will be operated on the personalised service from Santacruz/Khar to Flora Fountain. My personal opinion is that as an inducement to travel by public transport we must think in terms of offering first class streamlined bus service to the motorist, who, in which case, will not bring his car to the city every day. It is time that we divided road passenger transport operation into two classes, namely, large capacity buses with maximum standees at comparatively low fares for the average citizens and more comfortable streamlined luxury coaches for the benefit of the private car owners to replace the high cost service rendered by taxis. This measure alone will take away the congestion on the roads and permit unrestricted freedom of running conditions for public transport buses. These measures will bring in further benefits by way of faster travel to the passengers at large."

The Deputy Commissioner of Police (Traffic), Mr. M. S. Kasbekar. has discussed. in his paper, the long-term traffic problems of Bombay City from a new angle. In his view, structural changes in economic and housing conditions. together with considerable increases in motor vehicles traffic, have produced fundamental changes in the main traffic components. The resulting traffic problems can no longer be resolved by means of road building, traffic organisation and traffic control alone. They can be resolved only by town renovation and traffic reorganisation. To achieve these tasks, town planning and traffic planning should be co-ordinated. The general building plan must, therefore, be supplemented by a general traffic plan.

Master Plan Criticised

The Municipal Master Plan of December 1963, according to Mr. Charles Correa (Architect), is disappointing, for it is not designed to give Bombay City a structural pattern that will endure beyond the immediate plan. In his paper, Mr. Correa has pointed out that the Master Plan accepts the present situation of high population concentration in the south and of north-south traffic, visualises an even more enormous flow of traffic north-south every day, and, to meet this flow of traffic, proposes a system of highways and tunnels. This problem and the proposed solution (involving an overall cost of Rs. 500 crores) can both be avoided, if the City's traffic is reoriented, to the maximum extent possible, on an east-west axis. Mr. Correa has recalled, in this connection, that one of the panel reports of 1959 had suggested a Kurla-Karjat highway with a bridge accross Thana Creek. A project for constructing this bridge is no doubt already under way. If, however, a serious start is to be made in diverting traffic from the north-south to an east-west direction, his suggestion is that the highway bridge should be designed as a major artery with the clear objective of opening up the mainland on the east of the creek for early development. This Kurla-Karjat project link, he has urged, should be taken as the starting point of an alternative plan so as to bring about a new pattern in the expansion of Bombay. Mr. Correa's suggestion is very interesting. Its far-reaching implications would need to be studied further.

Underground Railway *vs.* Monorail

The paper by Mr. P. G. Patankar, Engineer-in-charge (Way and Works), B.E.S.&T. Undertaking, has discussed the economics of possible underground railway network for Bombay. The suggested network of about 32 km., connecting Victoria Terminus and Churchgate with Mahim and Sion, may cost about Rs. 64 crores. This, according to him, is the principal answer to the City's traffic problem and Mr. S. K. Patil, too, has strongly supported the idea on the ground that the City "cannot do without it." Mr. Patankar himself has argued as follows:

"The underground railway is the principal answer to the City's traffic problem and at least the survey for the scheme should be sanctioned immediately. . . .Construction of the underground railway will not endanger the existing buildings or any other structures. However, apart from the high cost of the railway, let it be clearly understood that, in addition to the innumerable difficulties in constructing the underground railway through the heart of a busy and congested City, there will be substantial temporary inconveniences to many of our citizens."

In view of the expensive and difficult character of this underground railway project, it may be prudent for the Railway Ministry not to be hustled into accepting it. All other alternatives for relieving traffic congestion in the City should be carefully examined before a decision is taken on the underground railway project. The alternative possibility of constructing a "monorail" system (above the roadways) should also be thoroughly examined to see whether its construction would be easier, simpler and cheaper. It may be necessary, in this connection, to send a couple of experts to Tokyo (Japan), where a monorail system has already begun to operate on a part of its stretch in the heart of the City, to study its economics and operation from the point of view of its applicability to Bombay.

USE OF RADIOISOTOPES IN WATER SURVEYS

An important survey on the use of radioisotopes in discovering sources of underground water, its quality and the quantity available was given by four British scientists at the recent "Atoms-for-peace" Conference in Geneva. The survey is a curtain-raiser for the International Hydrological Year, which will be observed in 1965 under the auspices of U.N.E.S.C.O.

The four scientists, who are working with the International Atomic Energy Agency, said that radioisotope techniques in water surveys were relatively new and offered advantages that no other method could match. At the same time, the most careful control was exercised by health physicists in any application of these techniques. The isotopes most frequently used, they continued, were Iodine 137 and bromide 82. They were injected at certain intervals by probes which released measured amounts of the isotope. By this method, direction as well as the speed of underground water could be determined.

Radioisotopes could also make easier one of the hardest problems in assessing water resources —measuring the flow of rivers. The stage has now been reached, according to the scientists, when isotopes could provide useful information to the hydrologist.

HUNTERSTON NUCLEAR POWER STATION

The world's biggest nuclear power station, at Hunterston, Scotland—which produces enough electricity to supply a city of half-a-million people—is to be made even bigger. The station, originally designed to produce 300 megawatts of electricity, has reached an output of 323 mw. since beginning operation in July of this year. It is now proposed to install an additional turbo-generator with a nominal capacity of 60 mw.

An official of the station said last week that studies since the two reactors of the station came into operation had shown that there was plenty of power left unharnessed to drive the extra generator. There might even be sufficient power in reserve to step up production with yet another generator in the future.

150-TON HOVERCRAFT PLANNED IN U.K.

Plans for a 150-ton Hovercraft designed to carry 24 cars and 200 passengers at 80 m.p.h. were announced in London last week. It is said that the craft could be adapted to carry 600 passengers. To be known as the VA-4, it will be 133 ft. long and 71 ft. wide, and will be powered by three Bristol Siddeley Proteus engines of 3,400 h.p. each. It will be able to cruise for 3½ hours at a time. A flexible skirt system will enable the craft to operate at 50 m.p.h. over 6 ft.-high waves. The new craft could be in operation in two years' time, according to the spokesman of the manufacturers, Vickers-Armstrongs.

NEW PRODUCTS AND PROCESSES

Storing Oil in Water

A BOTTOM-LESS tank for storing oil afloat in water has been developed by Malmö Flygindustri, a subsidiary of Sweden's large rubber manufacturers, Trelleborgs Gummifabrik. Known as the Seatank method, it is said to eliminate explosion risks and reduce fire hazards and to be applicable wherever the water depth is large enough in harbour basins, lakes and water-filled rock chambers. The tank is built of glass-fibre reinforced polyester plastics and has a specially designed roof which keeps the tank afloat. Since the tank always remains filled, either with oil or water, no evaporation or formation of gases takes place. Another advantage is that the tank needs no conventional cleaning as solid impurities in the oil separate by their own weight and drop through the open tank to the sea bottom. The unit is further easy to camouflage and to move to another site and is claimed to be comparatively cheap. The palyester structure is corrosion-proof and has high resistance to all commonly used fuels. Each tank can be provided with a separate pump on top of the roof which makes it an individually operating unit and dispenses with the need for land-based pumps. Since there is virtually no back-pressure in the tank, it can be filled very quickly, thus reducing tanker discharging time. A special device warns of overfilling, while another prevents water from entering the pumping system in the final stages of emptying the tank.

The manufacturers claim that there is no risk of fish or other marine animals entering the fuel from below. When used in Northern climes, the tank can be combined with a perforated compressed-air hose placed on the sea bottom. The air bubbles rising to the surface keep moving warm bottom water upwards which prevents the formation of solid ice. The low interior static pressure on the tank walls has made it possible to make the walls comparatively thin. Even so, they withstand very heavy explosions in the immediate proximity. When the tank is filled with liquid, shock waves pass right through the tank without causing damage.

Music Typewriter

A typewriter for reproducing musical notation is to be manufactured by The Imperial Typewriter Company of Leicester, England. The machine operates vertically as well as horizontally. The vertical movement covers the 22 elevations required for musical notation over three octaves. The movement is achieved by a bank of keys which move the type face up or down to the desired level, while the paper remains static. This feature also makes the transposition of music from one key to another a matter of copy-typing instead of calculation. The musical symbols have been broken down into basic parts which are produced on 46 keys. By combination and superimposition of the parts the whole range of symbols is covered.

Industrial Bubble Gum

Containers, pipes and so on that hold or convey gasses—air, oxygen, town gas, ammonia, and many others—tend to develop leaks, however slight. Now industrial (anti-corrosion) Services, 138, High Street, Waltham Cross, Herts, England, has produced a very simple leak-detecting material, a sort of industrial bubble gum. It is called Leaktest AC2. This is a slow-drying, slightly viscous, water-soluable, non-corrosive liquid, which can be painted over a gas container or pipe, welded seam, connections and anything else to be tested. The material is free from oil or grease, harmless to the skin, and can be used on hot surfaces. The material shows a bubble for a very small leak or a foam of bubbles where the leak is more or the pressure is higher.

Metal Bonder

A U.S. General Electric product (inquiries to International General Electric Company, of New York, 296, High Holborn, London, W.C.1) called RTV-60 is now being used as a bonder of metals. It is a liquid silicone rubber catalysed into a solid at room temperature. It was used for sealing the U.S. Mercury capsule. The solid adhesive will withstand high temperatures and its immediate use is for bonding load plates to the metal skins of high-speed aircraft, including those travelling at 1,500 m.p.h. Already, it has undergone 200,000 load cycles at 50 lbs. per square inch in fatigue testing of advanced aircraft. Temperatures up to 500 degrees F. have been used.

Photo-Electric Control Unit

Designed for ease of installation and maintenance, a photo-electric transistor control unit introduced by an English firm has a plug-in relay "drive circuit" and a plug-in control relay. It is an exact and reliable means of controlling any function when a light beam directed at a photo-electric receiver is made, interrupted, or varied in intensity. It is also available in versions for use with resistance level, inductive proximity, capacitance proximity and temperature sensing probes, and as a delay and interval timer.

Self-cleaning Filtration Plant

A filtration plant capable of dealing with 300,000 gallons of raw water an hour, automatically cleans its own filters. It never needs to be stopped for cleaning. In continuous operation, 24 hours a day, seven days a week, only the motor and gears will need periodic servicing. It is developed by B. Thornton Ltd. of Yorkshire, England. The plant uses as its working principle the pressure drop between filtered and raw water. Filtered water is used to clean the filters by backflushing, taking two to three per cent of the total flow. The washing water, which is automatically and independently discharged, removes up to three per cent of insoluables and a wide variety of sediments and impurities. The removal of sludges and deposits is continous and completely automatic. The plant is installed directly in the pressure pumping line and occupies little floor space in relation to its filtering capacity. It is available in various capacities from about 4,000 gallons an hour upwards.

Quickly Made Steel Casings

A machine that makes it possible to produce all sides of a washing machine or refrigerator casing from steel coil at the rate of one every ten seconds is now undergoing tests at Redman Tools, Worcester, preparatory to being installed by the Frigidaire Division of General Motors, at a factory in London. The coil, said to be the first of its kind, is punched, notched and pierced in the flat to accommodate hinges, doors and other fixtures. Subsequent operations, including automatic seam welding, provide the finished shape to the casing.

Portable Circular Saw

A portable, petrol-driven circular saw which will cut steel, wood, stone and brick, is being introduced by the Homelite division of the Lambretta-Trojan Group of Surrey. The saw weights 21 pounds and when cutting plywood, wall-board or non-ferrous metals an 8½ inch blade, which gives a 2¼ inch deep cut, is used. For cutting steel and stone, the saw is fitted with abrasive wheels.

Metric Range of Torque Wrenches

A range of metric dial-reading torque wrenches and recording instruments comprising 14 models and covering a torque range from 5 kg. cm. to 600 kg. m. has been introduced by Precise Torque Ltd., Ascot Drive, Derby, England. The wrenches, which both apply and register the load, cover the lower limits of the range from 5 kg. cm. to 80 kg. m., while three purely recording instruments, used between the loading device and the work, measure torque up to 150 kg. m., 300 kg. m. and 600 kg. m. The recorders claim to be among the most accurate in the world, may be set to give "live" indications while the load is being applied—the pointer returning to zero immediately the load is removed—or "record" indications in which case the pointer remains at the position of maximum torque until released by a re-set button.

Vapour-deposited Plastic

Vapour-deposited plastic is being tried in America to coat the inside of tins for food, although the system can also be used to put a plastic surface on any small metal part. As developed by Radiation Reseach Corporation, of Westbury, New York, the system introduces the part into a monomer gas, such as styrene vapour. The gas is ionized and the ions attracted to the charged metal part. Here they settle and cure into a plastic coating which can be as thin as .000.000,4 or as thick as .002 in. When used to line tins, the gas is pumped into the inside and there ironized. The coating is said to be uniform and to have a higher softening temperature than plastics applied by roller coating.

Brittle-necked Ampoules

Ampoules with brittle necks that snap off easily for instant use by doctors, veterinary surgeons and chemists are manufactured by R. Anrep, 29, Rue Carnot, Suresnes, Seine, France. When the ampoule is made, its neck is rubbed by the spinning edge of an aluminium disc to produce frictional heat and a chemical interchange between glass and aluminium that leads to the formation of a brittle area localised at a groove. The degree of interchange is controlled by the speed of the disc and excessive brittleness is cured by subsequent annealing.

Analysing Fluoride

Automation for determining fluoride in water supplies at the rate of 40 tests per hour is announced by Technicon Instruments Company, of Hanworth Lane, Chertsey, Surrey, England. The new system for automatic fluoride analysis also permits continuous monitoring of fluoride additives to municipal drinking water supplies. Industry can employ the new development on site automatically to detect and control fluoride in process streams, plant wastes, waste waters, etc. The method is based on an inverse colorimetric reaction. Fluoride cocentration is directy proportional to the degree of decolorisation of the lake formed with zirconium and 'SPADNS.' The sampe merged with the SPADNS-zirconium lake, is segmented by air and mixed. The resultant stream is passed into a time-delay coil and then into the colorimeter where the decrease in absorbance is measured in a 15 mm.. flow cell at 605 millimicrons.

Fresnel Lenses

A range of fresnel-type lenses available in a variety of optical plastics has been announced by the U.K. Optical Bausch and Lomb, of Bittacy Hill, Mill Hill, London, N.W.7. The number of rings per inch may be as high as 100 for lenses of certain sizes and these may be designed to give varying degrees of correction depending on the use. They can be used to replace optical projection condensers, magnifying viewing screens, corrector plates, signal lamp glasses, etc. Advantages claimed by the new lenses are low weight and bulk, impact resistance and lower cost than the glass equivalent in any quantity.

THE PORTRAIT OF A SUCCESSFUL YOUNG MAN—

- He has a steady job with excellent prospects. He has a Savings Bank Account with The Bank of India Ltd. and keeps aside every month a minimum amount as soon as he gets his salary.
- He makes use of the services of The Bank of India Ltd. —(a) to buy first class securities (b) to keep them in Safe Custody and (c) to collect the dividends regularly.
- He takes advantage of the Free Remittance facilities and Standing Instructions facilities offered by The Bank of India Ltd.
- He has appointed The Bank of India Ltd. as trustees for his life insurance policy under the Married Women's Property Act. The interests of his family are in the safe hands of the Executor and Trustee Department of The Bank of India Ltd.
- He knows that in case of any financial problem, big or small, he can expect able and willing guidance from The Bank of India Ltd.

THE BANK OF INDIA LTD.

T. D. KANSARA, General Manager

THE INDIA STEAMSHIP COMPANY LIMITED

CHAIRMAN, DR. RAMASWAMI MUDALIAR, ANALYSES PROBLEMS OF INDIAN SHIPPING

DELAY IN PORTS AFFECTS PROFITABILITY

THE Annual General Meeting of the India Steamship Company Limited was held at Calcutta on Thursday, 24th September 1964. Addressing the shareholders, the Chairman of the Company, Dr. A. Ramaswami Mudaliar, stated that one of the reasons for the losses incurred by shipping companies was excessive delay in ports in loading and unloading cargo. He urged the shippers and the Government to take a realistic attitude towards the question of increases in freight rates as the shipping industry was also faced with the problems of rising costs of operation. Dr. Mudaliar added that the cumulative effect of these hardships and handicaps was a reduction in the profitability of the industry. If the industry were to make a reasonable profit, the Chairman stated, either the freight rates should be fairly increased or the amenities and conveniences at Indian ports greatly improved.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

GENTLEMEN,

The audited accounts and Directors' report for the period ending March 1964 have been in your possession for some time and with your permission I shall take them as read.

At the outset I would like to refer the great loss that the nation has sustained in the passing away of Prime Minister Mr. Jawaharlal Nehru in May of this year. For over 16 years since the attainment of Independence by India, Mr. Nehru guided the destinies of the nation and steered the country clear through many dangers and pitfalls, both external and internal. His outstanding contribution to the nation has been the great impetus that he gave to the industrial and social development of the country. His broad vision, great insight and deep appreciation of modern advances in science and technology enabled him to guide the industrial progress of the country. More that that, his vision of a society broadbased on social justice and affording equal opportunities for all citizens, led to his determination to prevent the nation from falling back into archaic and superstitious ways of thought and life and saved the country at a time when the tendency was to enshrine all the past as glorious, irrespective of merits and demerits of the traditions we inherited. Whatever reservations some may have regarding Mr. Jawaharlal Nehru's stewardship of the nation, none can gainsay the invaluable worth and value of the two distinctive assets which he has left to the nation. I trust that no corroding influences will destroy these precious assets.

Mr. Shastri

For some time, it was a hackneyed question in India and elsewhere: "After Nehru, Who?" Some believed with faith in Providence that "the hour will find the man." It is a matter of supreme thanksgiving that the nation, in its saddest and most critical hour, was destined to find in Mr. Lal Bahadur Shastri the right person to be Prime Minister and leader of the nation. I can testify from my own experience how the unanimous choice of Mr. Lal Bahadur Shastri was received with great relief and with equal admiration by the many nations of the world as it was received by the Indian public. Mr. Lal Bahadur Shastri, without being personally known to many abroad, had somehow impressed his character and integrity, his modesty and sense of fair dealing as much on the people abroad as on his own countrymen. His leadership of the nation and the guidance that he will give to the country in the solution of its many perplexing problems, both internal and external, will be safe, prudent and practical. We join with others of our countrymen in wishing him all success in the great task and willingly offer our full co-operation in the work that lies ahead.

We, who are connected with Indian shipping, have reason particularly to welcome his Prime Ministership as he has been the architect of modern Indian shipping development. It was during his Ministership of the Transport Department that Indian shipping got a special impetus for expansion, development and courageous progress. His sympathy and understanding of the needs of Indian shipping, both in the public and private sectors, was responsible for the turn that Indian shipping took in its expansionist activities since 1954. I feel certain that his beneficent influence will be felt by Indian shipping.

Freight Rates

In my speech at the last meeting, I indicated that it was inevitable that the freight rates from East to West would be increased and that it was generally recognised both by shippers and Government that this increase was justified in the circumstances in which shipping lines were working on the India-UK.-Continent route. I had stated that the Conference had increased the rate by 12½ per cent while the Indian lines had pressed for an increase of only 10 per cent. The percentage proposed by the Conference was justified on the ground that, with the many exceptions that were made, with reference to commodities which were called sensitive and could bear only a lower percentage of increase, the effective rate would only be a total increase of 10 per cent. The increase proposed was not approved by the Maritime Freight Commission and by the shippers, and the Indian lines, at a later meeting of the Conference, induced their colleagues to accept the lower figure of 10 per cent. This increase was effective from 1st October 1963 so that, as the Directors' report points out, the effect of this increase was felt only for three months of the year under review through the completed voyages that took place after 1st October.

The year resulted in a net profit of a little over Rs. 9 lakhs after setting aside Rs. 128 lakhs for depreciation and after deducting all other charges. As you are aware, the result of the working of the Company last year showed a loss of nearly Rs. 30 lakhs. I trust that the continued loss over the last few years has been definitely arrested and that a period of profit-making has begun. Even so, I cannot feel happy or satisfied any more than the shareholders, of the small profit that has been made this year.

It is unfortunate that, in spite of repeated statements of the chairmen of Indian shipping companies about the handicaps that they are seized with, there has been little achieved in solving these problems or mitigating the hardships and handicaps that face shipping, and particularly Indian shipping. The delays in Indian ports have been referred to more than once and it has been pointed out how Indian shipping loses by the number of days it is held up unnecessarily at loading and unloading ports in India. Except for one or two ports, delays have continued to the same extent in the major ports of Calcutta and Bombay. Owing to berthing delays your shipping Company lost 432 days in the year out of which 300 days were in Indian ports alone; rain and inclement weather has resulted in a further delay of 76 days. These artificial and natural handicaps have been aggravated by lightning strikes and labour troubles of various kinds which resulted in a further delay of 25 days. The slow arrival of cargoes to some of the ports, necessitating the holding up of ships which were ready to sail, has contributed a further delay of 54 days. Thus, through avoidable causes except for rain and inclement weather, the days lost by your shipping Company apart from the normal holidays was over 500 days. It must be admitted with appreciation that there was considerable improvement over the situation last year only at the port of Madras. The piece-rate system, which has not been accepted so far as Calcutta port is concerned, has further added to the delay in the turnround of ships. The rate of discharge or loading is only a third of what it is in the port of Bombay where the piece-rate system prevails. When it is realised that more than half the trade of India moves through the port of Calcutta and that it serves a vast hinterland, the importance of energetic action being taken in Calcutta at various levels for remedying this acute state of affairs becomes obvious. Plans are no doubt under way for execution of long-range solutions of these difficulties; but the immediate present is of more concern to all shipping lines and particularly the Indian shipping lines.

Port Delays

To the delays in ports in India has been added in recent months similar delays encountered in some of the Western ports owing to labour strikes and even go-slow tactics. The delays in Western ports though comparatively shorter, are of considerable significance because the harbour and port charges and other incidentals of ships' delays in Western ports are very much higher than similar charges in Eastern ports. It is under these conditions which prevailed during the year that the earning capacity of shipping lines in the U.K.-Continent-India trade has to be judged.

There are certain extraneous factors which are having an increased impact on the consideration of freight rates and on normal profits, particularly for Indian shipping lines. The problem of earning foreign exchange and the consequential question of balance of payments has necessarily loomed large in recent times. India particularly, and the less-developed nations are seeking to meet their requirements of foreign exchange for imported plant and machinery and raw materials for their industrial development and must, therefore, to a reasonable extent, concentrate on increasing their exports to various markets of the world. There have been many incentives considered in this connection for promoting exports. While I agree with this policy, I must reiterate that some shippers at least are taking advantage of the anxiety of the Government to increase exports and are constantly clamouring for a decrease in freight rates and objecting to even small increases. Shipping is as much an industry as any other industry and, while land-based industries can cope with increasing cost of production due to a rise in labour cost or raw materials by an increase in the prices of the articles they produce, it is considered by some that shipping, in spite of the fact that all these increases affect them equally, could not adjust its freight rates suitably. It is essential that a more realistic attitude towards shipping should be taken by both shippers and ultimately by Governments and I feel certain that better results, even from the point of view of foreign exchange, will accrue from this altered attitude towards shipping lines.

The facilities that are available at ports in India are so poor in other directions also that they form a severe handicap to Indian shipping lines. It has been a matter of great concern that the dry-docking and repair facilities in Indian ports leave very much to be desired. If, with this factor, Indian shipping lines are compelled to do the dry-docking and shipping repairs only at Indian ports as is often the case, not merely the resulting cost, but even more the resulting delay in carrying out this work, seriously affects the earning of these companies. During the year under review, your ships had to spend on an average 15 days for facilities for dry-docking and special survey. If this was done in a foreign port to which the ship had to go for discharge or loading, the average number of days would have been about 5. The cumulative effect of all the factors I have referred to above makes it difficult for Indian shipping, whether coastal or overseas, to make a reasonable profit unless one of two things occurs: either the freight rates are fairly increased or the amenities and conveniences at Indian ports are radically improved.

I feel that the time has come when the Committee in charge of national harbours is reconstituted with defined aims and objectives consistent with the needs of the times and their recommendations are not only seriously considered but given prompt effect to, so that, apart from long-term suggestions, immediate improvement may be made in the directions mentioned above.

I have referred to this long catalogue of grievances and deficiencies merely to explain the financial position of the Company. I feel confident, as I said, that we have turned the corner and that a more favourable balance-sheet may be presented in the succeeding years. But shipping companies must be assured of fair conditions of working in Indian waters and in overseas ports. When I find as a result of the year's working in the liner trade that your ships spent 3,379 days in port and 2,301 days at sea and that on the coastal trade they spent 993 days in ports and 282 days at sea, that is, nearly 60 per cent in port in the liner trade and 77 per cent in the coastal trade, I must confess that there is something radically wrong in the manner in which Indian shipping companies generally were obliged to work. The loss is as much to the nation as to individual shipping companies.

Expansion of Shipping

The need to expand Indian shipping is obvious and it is in this direction that some additional earning of foreign exchange may be expected. But the immediate increase in foreign exchange earnings of Indian shipping lines can well be brought about—and comparatively easily—with altered conditions in Indian ports. I have advocated the expansion of Indian shipping but always with the basic idea that they will really increase the cargo carried to and from India. There is need for more tramp shipping, for tankers and for bulk carriers of appropriate size, and if attention could be concentrated by new entrepreneurs or even by established shipping companies on these kinds of ships, it will help the country as much as it will be of help to them. It will be disastrous if shipping companies which have an ambition to enter the liner trade cut into the existing trades of Indian shipping companies on routes in which they have established themselves after great difficulty and considerable initial loss. They will only be dividing the income which the Indian shipping lines are now earning to the detriment of both themselves and of old-established lines. Given proper guidance by the Ministry of Transport in increasing the tonnage of Indian shipping and in fair and proper utilisation of such tonnage, there is every reason to believe that Indian shipping can expand on healthy lines.

Thanks

Our thanks are due to the Minister of Shipping for his continued help and guidance and to the officers of the Ministry, the Secretary, the Director-General of Shipping and his deputies and assistants, who have always given useful advice and timely help.

Tribute

I should like, on behalf of the Board and myself, to convey our sincere appreciation of the work of the officers and staff, both afloat and ashore. Theirs has been devoted service in the interests of the Company. I should also like to express my thanks to the shippers, brokers and forwarding agents for their firm support and for the confidence they have reposed in us and in the quality of our service.

BUSINESS NEWS FROM EUROPE

BRITAIN GIVES FEWER HOLIDAYS THAN CONTINENTAL COUNTRIES

E.E.C.'S GROWTH RATE SLOWS DOWN

From Our Special Correspondent

THE worker with the most holidays in Europe lives in Italy. On top of a month's annual holiday, he enjoys 15 separate public holidays during the year. Some executives do even better and it is not exceptional for them to have up to two months off.

No other country approaches this record, though some individual companies provide their workers with very good holidays. West Germany, Denmark, Belgium, Norway and Holland all treat their workers well and France and Spain are not far behind. Two of the largest industrial countries are among the worst. The Soviet Union has only five public holidays and Britain has only six.

The number of separate days off is closely related to the Roman Catholic calendar and, after Spain (18) and Italy (15), comes France (11). West Germany, which has a large Roman Catholic population, also has 11, as does Finland.

Annual holidays vary very much within a country. In West Germany, for instance, manual workers have to be given at least 15 working days after being six months with a firm. Over the age of 35, they get 18 days; youths under 21 get 24 working days. For established staff 24 to 28 days is not uncommon.

France, too, is well up the scale in the number of annual days' holiday given, though this is because many firms offer well over the union or legal minimum. The legal minimum is a fortnight, but the Renault agreement last year, by which all the employees got a month from the giant car firm, has persuaded many other firms to follow its example. The Italians, on top of their month's holiday, also get 13, and in some cases, 14 months' pay a year, as do the West Germans. France also pays a holiday bonus of approximately a week's pay to everyone.

Poland has a good record in Eastern Europe with at least 24 working days holiday for manual workers and frequently a month for the rest. Sweden also gives a month. At the other end of the scale, the Portuguese are the worst off with a mere four days' annual holiday.

In Switzerland, there is no set minimum, each canton legislating for itself. In some, the minimum is as low as a week, but the more common appears to be three weeks. The same is true of Spain. A week is the legal minimum, though

Number of Public Holidays

Spain	18
Italy	15
Germany	11
France	11
Finland	11
Norway	10
Denmark	10
Belgium	10
Holland	8½
Britain	6
Russia	5

most workers appear to get around three weeks and some white-collar employees get a month. This distinction between manual and white-collar workers is seen almost everywhere. Manual workers seem invariably to get fewer annual holidays.

The Dutch have made at least 17 working days a general rule, and there are another two days which can be taken at any time in the year. And in Norway a recent Act provides for the extension of the holiday period from 18 to 24 days.

These figures would appear to show that the British worker is at a decided disadvantage, as compared with his counterpart on the European Continent. There has recently been a move in Britain to increase the number of public holidays and some unions are pressing for longer annual holidays. Again, it is the white-collar workers which have led the way and some groups have managed to get a month's holiday. But these are the exception and the fortnight introduced after the war is still the general rule.

Can Europe Keep up the Pace?

Economists are beginning to cast doubts on the ability of the Common Market to maintain the rate of economic growth that it sustained during the later fifties. They point out that the rate has tailed off considerably since 1960 and that the figure for 1963, the last full year available for comparison, is even lower. During the period 1954-60, the European Economic Community grew by 5.6 per cent a year, with Germany and Italy above average, Holland and France slightly below and Belgium less than half the average. (Britain, by comparison, grew by 2.6 per cent.)

Since then, the rate has slowed down to five per cent (while the British rate has grown to three per cent), with only Italy doing better than average and Germany sliding right back to 4.6 per cent, as compared with 7.5 per cent in the earlier period. For 1963, the rate of growth is down to 4.3 per cent, this time with Italy and France above average and the Netherlands equal to it. Britain had by then increased her rate of growth to 3.6 per cent, but still lower than the lowest Common Market rate, Germany's 3.9 per cent.

These figures conceal considerable divergences. The German growth rate fell by a third between 1960 and 1963 and there was also a drop in the Dutch rate of increase. However, the Belgian economy grew substantially, while the French and Italian rates of growth maintained the same pace. Recently, however, there have been signs that the German rate of growth has been picking up again. The same is true of France, where a moderate slowing in the early sixties has been followed by a gathering of speed.

The Dutch pattern is roughly the same as the other two but Italy, partly because of the big leeway that had to be made up on the rest of the Common Market, continued its rate of increase further into the sixties and has only recently shown a marked falling-away in growth.

It is difficult to know from this experience, especially when productivity of labour is taken into account, just which way the Common Market will go in the next five or ten years. The sharp rise in productivity, especially in Germany, Belgium and France between the start of 1963 and the first quarter of 1964 (even allowing for the relatively low start point because of the bad winter) is encouraging; it amounted to seven to eight per cent in all. But it is difficult to know, especially where Germany is concerned, if the rise is a true one or has been the consequence of short-run influences, such as the better use of plant and machinery and an increase in female labour.

Another bull point, however, is the steady level of investment in Belgium and Germany which has come at the same time as there has been an increased willingness to save a larger proportion of personal incomes. On the other side of the medal, big queries surround the performance of Italy. The Italian economy is undergoing a fairly severe buffeting and the present political set-up is not considered in some quarters to be one inspiring confidence in finding solutions to the crisis.

Nor is it clearly evident that the inflationary tendencies in the rest of the Common Market are being tackled with sufficient resolution to reduce their impact and keep economies on a stable footing. There is an increasing danger that these countries will be forced to use monetary mechanisms, with their consequent effect in holding back capital formation and prejudicing future growth.

K.'s Visit Seen Mutual Russo-German Triumph

The announcement that Mr. Khrushchev is to pay an official visit to West Germany is a major diplomatic triumph for both Russia and Germany. The Soviet leader has been angling for this visit for a long time, and behind his determination is believed to be a wish to extend trade with Germany. German industrial goods, given attractive credit facilities, could help Russia enormously.

For West Germany, the visit marks the rehabilitation of the country in the eyes of the rest of the world. She has recently been courted, as the *entente* with France has come under increasing strain, by Britain and America as well as Russia. On top of the visit of the Soviet leader, there is to be one from Britain's Queen next spring.

The question of credit facilities for West German goods will undoubtedly be given top priority by the Russians. The Germans, while wanting the trade that credits for longer than the normal five years would bring, would also want some political concessions from the Russians, probably over Berlin or East Germany. Russia, it is thought, may play hard on this point, because opinion in Germany is already moving towards liberalising trade facilities with her. It has managed to get longer credits from Britain, France and Italy, and Germany would not want to see her three competitors get all of this important trade.

Russia may also be hoping that better terms and conditions for the rest of the Eastern bloc will come from the visit. She herself is not the only Communist country that wants to trade more with West Germany, and it could be that she hopes to pave the way for a big boost in trade generally across the Iron Curtain.

Has Italy Acted Strongly Enough?

Serious doubts are being expressed in Italy over whether new measures to set the economy on its feet will work. The main criticism is that the Government has not gone far enough, and, where it has acted, it has only acted in a half-hearted way. One of the major measures was an increase in turnover tax (from 3.3 per cent to four per cent) on all goods, except foodstuffs, petrol, fertilisers, pesticides, agricultural machinery, seeds and credit operations. Another major measure was the transfer of some welfare charges paid by industry on wages to the State.

The main criticism of the former is that it will only add to the cost of living at a time when it is essential to keep it in check. Since wages are pegged to the index, it implies that they will rise soon, in spite of the fact that foods have been excluded from the increased tax.

The turnover tax is a "cascade" tax which has to be paid every time a product changes hands, even in the course of its manufacture. Its increase is expected to bring in another £138 million a year.

However, it is thought that exports will benefit from the measure in two ways; at first there should be a reduction in labour costs and

Number of Annual Holiday Days

Italy	1 month
Poland	24 days to 1 month
Sweden	1 month
Norway	24 days
Germany	15 to 24days
Switzerland	7 to 21 days
Belgium	10 to 21 days
Holland	19 days
Denmark	18 days
Greece	7 to 14 days
Britain	Fortnight
France	,,
Russia	,,
Portugal	4 days

at the same time the tax refund paid on exports will be increased.

A serious omission, though, is considered to be that a wages standstill has not been faced. Here the Italian economy is thought to be weakest and, unless wages can be brought under control, all other measures could be undermined.

Israel Shows the Aid Flag

In spite of the fact that she has no large financial resources at her command, Israel is now steadily providing more technical and financial aid for the emerging countries of Africa. The stage has even been reached where many countries now consider the employment or secondment of Israeli technicians to be an essential part of their development.

These excursions by Israel began after Suez and have included participation with Ghana in a shipping line, with Liberia and Nigeria in construction companies, hotel building in Tanganyika and farming in many countries.

Israel has managed to develop this special position in Africa because of her own unique position. Except by the Arab States she is not considered to be a "colonial" power, seeking to exploit the Africans.

Israel is also much sought after because she has had to face, and has overcome, most of the problems which confront the new nations. She has had to create an economy from minimal organisation while all the time threatened by an outside force.

Equally important is the character of the Israeli technicians who have gone into black Africa. Although white men they have sought no privileges or preferential treatment (unlike some envoys, from both East and West) and have been content with the same conditions as the people they have been training. This has increased the admiration for Israel enormously.

Israel obviously is not pursuing such a policy out of complete disinterest. She clearly hopes to create a climate of opinion among the Africans which could go some way to easing the burden on her from Egyptian threats—and to providing useful markets for her own exports.

France Has a Better Year So Far

The French economy has been "satisfactory" so far this year. This verdict, by the Organisation for Economic Co-operation and Development, comes after a year in which there was a definite economic slow-down in France. This year, however, the economy has picked up again. Output has continued to expand, the rise in prices has remained within manageable bounds and exports have recovered well.

The signs are, however, that rougher weather is ahead. Private productive investment has stopped growing and is considered unlikely to revive spontaneously in the near future. Uncertainties over the future course of demand are augmented by difficulties in raising finance due to pressure on costs combined with the freezing of prices. And the net effect of the public finances on the economy is more restrictive than last year. The problem for the future is to keep labour and productive level of capacities fully occupied and there has been a fall in order books and the demand for industrial consumer goods in particular has been faltering.

Turkey to Develop Dairy Industry

Turkey is to develop a modern dairy industry under its current five-year economic plan. It has relatively large supplies available of home-produced milk, normally providing just under 300 lbs. per head annually, as compared with about 330 lbs. in Britain. But quality is indifferent and there has so far been little attempt to develop dairying as a source of protein foods.

Except on a few model farms run by the State, animal husbandry and feeding are poor and milk comes largely from multi-purpose animals. Only about half is produced from cows, the rest coming from goats and buffaloes which are primarily bred as draught animals. The relatively few special dairy cows in Turkey are mainly the result of cross-breeding native strains with Swiss Browns in the past five or six years. A large proportion of the livestock in Anatolia is fed by migration to summer mountain pastures in the east, often involving drives of many miles. This affects both meat and milk quality adversely.

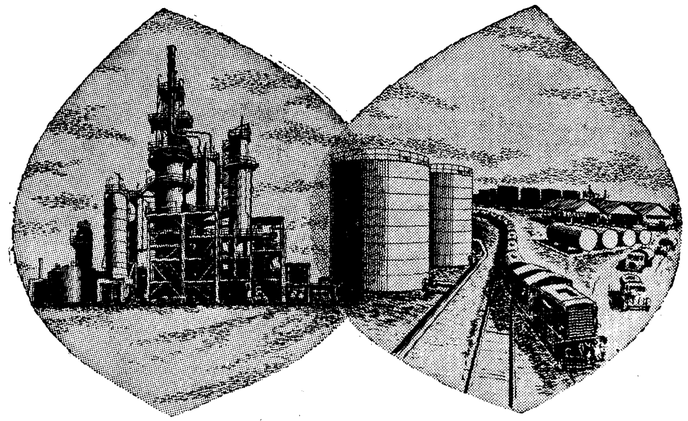
Dairy plants hardly exist in Turkey, except near the two or three largest cities and on a few State farms. Although yoghurt—the traditional fermented milk drink—is produced in villages on a large scale, cheese production is small and the tiny butter output is of poor quality. Now, along with efforts to improve animal husbandry, the Government is to build a major plant in Istanbul for milk processing and the production of butter, cheese, ice-cream and yoghurt; and another at Kars, the main milk producing centre, for powdered milk, bulk butter and cheese. Both plants are to be financed partly by an initial credit of £540,000 from the Swiss Government. Switzerland will also establish a cheese-making school at Kars, provide managers for the new enterprises and train Turkish dairy technicians, partly in Switzerland itself.

Topical Briefs

Oil consumption was higher in ***Britain*** in the first quarter of the year than a year ago. In the quarter, there was a five per cent rise in consumption, which pushed the figure for all products up to 16.43 million tons. Another million tons went to bunkers for ships engaged in foreign trade. The greatest proportionate rise was recorded by bitumen, which sold twice as much as in 1963. But this is not a "true" increase, since the first quarter of 1963 was badly hit by the severe winter when hardly any road-work was carried out. Consumption of petrol went up by almost a fifth and, with the number of cars on the road going to double soon, this part of the industry should increase output all the time. Not all oil products rose. Burning oil fell by 26.9 per cent, mainly because the product is especially susceptible to temperature changes. There has also been a rise in demand for oil for central heating, reflecting the increase in this form of heating in private households.

Spain is worried that a big rise in wages could lead to inflation and affect the Development Plan. In the past five years, hourly wage rates have gone up by 13.1 per cent and brought about a situation bordering on inflation, according to the Commissioner of Spain's Economic Development Plan. In the first five months of this year, industrial production has gone up by 11.7 per cent, as compared with the same quarter of last year, a figure well above the 8.5 per cent set as a target by the Plan. And, in the first half of the year, exports have gone up by almost half—43.4 per cent to be precise.

Austria's economy has grown at twice the rate in the first half of this year as in 1963. Industrial production is rising at an annual rate of eight per cent, double the figure for last year. According to a report from the Institute for Economic Research, demand in most sectors has continued to expand and the brisk inflow of new orders, as well as the upward revision of industry's investment plans, has given a stronger-than-expected push to the basic and capital goods industries. And, for the first time since the present boom started in the spring of last year, the output of capital goods in the May-June period rose faster than that of consumer goods.



Indian Refineries Ltd. merge with Indian Oil Co. Ltd.

to form **INDIAN OIL CORPORATION LIMITED**

The Indian Refineries Limited and Indian Oil Company Limited have merged to form the Indian Oil Corporation Limited. With an authorised capital of Rs. 75 crores, the Corporation will rank among the 10 biggest companies of the country, judged from the capital investment.

The Corporation has two divisions—Refineries Division and Marketing Division. The Refineries Division will manage the public sector refineries and the Marketing Division will distribute not only the entire production of public sector refineries but also the deficit products imported from abroad. Spurred by the increased tempo of industrialisation, mechanisation and growing defence requirements, India's demand for petroleum products is bound to grow and INDIANOIL will contribute its share towards meeting the nation's needs.

The Corporation will ensure that only such quantities and qualities of products as preferred by the market would be produced by the refineries. Better co-ordination and greater efficiency will result in economical operation and better service to consumers.

AGAINST STATE TRADING IN FOOD

SOME REVEALING DISCLOSURES IN W. BENGAL

By A Special Correspondent

"Mustard oil produced in West Bengal jails is being sold to consumers at Rs. 2.80 per kg., as against the ruling market rate of Rs. 2.50. Considering that the prisoners do not get the normal wage for their work and that jails, unlike oil mills in the private sector do not work on commercial principles and with the object of earning profit, we do not find any justification for the very high rate in which jail products are sold in the market as compared with the rate charged by the privately-owned mills. This is one more instance of the private sector being wrongly accused of profiteering and the public sector being more expensive."

THESE are extracts from the minute of dissent appended to the report of the Price Enquiry Committee of West Bengal, which was released a few days ago. The Committee was set up in June 1962 to enquire into the rise in the prices of essential commodities in West Bengal and to recommend specific measures for holding the price line. Dr. Bhabatosh Dutta, an eminent economist and a member of the fourth Finance Commission, was the Chairman of the Committee. It consisted of 11 members of whom five represented the State Government and six were from trade and industry. Two members, Mr. S. R. Biswas and Mr. J. C. Das Gupta, have submitted a minute of dissent.

Broadly speaking, it may be said that, while the majority of the Committee have favoured greater State intervention to regulate prices, the two members who have dissented have strongly opposed State control.

Main Recommendations

The main recommendations of the Committee are summarised below:

(i) All movements of rice and paddy from West Bengal should be banned.

(ii) Orissa's surplus rice and paddy (3 lakh tons) should come into the hands of the West Bengal Government.

(iii) For the present, the Central Government should arrange for another 4 lakh tons of rice reaching West Bengal Government's hands in a normal year.

(iv) The West Bengal Government should receive 10 lakh tons of wheat from Central supplies annually. On account of the population increase, imports of rice, and if that is not possible, of wheat may have to be increased by 1 lakh tons annually, if normal rice production rises by 10.6 per cent per year as in the ten years ending 1961-62.

(v) The West Bengal Government should take over all the rice mills in this State and buy up the marketable surplus of paddy in the State.

(vi) Other processors of paddy like husking machines with boiling arrangements and "chira" mills should obtain their paddy from Government and should not be allowed to purchase paddy from the cultivators.

(vii) The West Bengal Government should distribute all the wheat and wheat products under modified rationing, barring flour to be exported outside the State or released to bakeries, etc., under strict system of control, if necessary.

(viii) The West Bengal Government should distribute internally procured stocks (8 lakh tons) as well as imported rice through a system of modified rationing in all urban areas as well as among non-cultivating and other deficit families in rural areas, the scale being 12 ozs. per adult per day, with 4 ozs. extra for heavy manual workers and 8 ozs. per day per child on the basis of 50 per cent rice and 50 per cent wheat/wheat products generally. A scale of 12 ozs. of cereals per adult per day was considered to be the maximum desirable in the days of statutory rationing.

The Committee has recommended an extension of the licensing of producers, importers, wholesalers and, if possible, retailers also. The Committee believes that comprehensive licensing will be able to provide the Government with full information about the market structure. The licensed producers or dealers will be asked to supply data regarding incomings, outgoings and stocks at specified intervals and such information, it is stated, will prove immensely valuable to Government in arriving at policy decision.

Although the Committee was called upon to probe into the prices of cereals, pulses, fish, mustard oil and cloth, it has concentrated on the problem of rice, because the stabilisation of rice prices by itself will be a restraining factor on the upward pressure on other prices. The Committee recognises that holding the price line is essentially the task of the Government of India, since it has to be tackled from the point of view of fiscal and monetary policies. But, at the same time, the State Governments also can play an important role by helping to increase the supply of commodities and by ensuring that the available supplies are equitably distributed.

The Committee lays considerable stress on the need for increasing production and for improving the transport facilities. It has also recommended the creation of a "small but high-powered" Price Advisory Board to be attached to the Chief Minister's Secretariat. This Board will be assisted by a number of sub-committees for important commodities or groups of commodities. These sub-committees will be composed of three classes of members—representatives of producers and dealers, senior Government officials and representatives of consumers. The Board will be consulted by the Government about prices and it may also offer advice on its own initiative.

Disagreement with Main Suggestions

Mr. Biswas and Mr. Das Gupta have expressed their disagreement with the main recommendation relating to State trading. They say that State trading should be resorted to only on "very strong grounds." It would be justified, provided the rice mills and traders had taken an undue advantage of the situation brought out by the maladjustment between demand and supply. But no such development has taken place in West Bengal during the last ten years.

"It is difficult to understand," they say, "why a long-term programme should be suggested only on the basis of the experience of a particular year when the rise in prices took place due to certain extraordinary circumstances." The year 1963 was a bad one for the *Aman* crop in West Bengal, the yield of which was 39.1 lakh tons, against 43 tons in 1962 and over 48 lakh tons in 1961.

Other factors that led to the abnormal increase in prices were the gradual non-functioning of the Eastern Zone and the comparatively slow and irregular release of stocks by the Central Government through the modified ration shops. They also quote with approval the following arguments advanced by the Asoka Mehta Committee, which are as valid today as in 1957:

(a) "Full control, in the sense of complete rationing and procurement of the kind that we had before 1953, will involve a large increase in Government's commitments for maintaining supplies to the rationed population.

(b) Large-scale procurement through a rigid system, whatever may have been its merits in an emergency, will be strongly resented by farmers, if introduced as a regular feature in a developing economy, and may have adverse effects on the production as well as marketed surplus of foodgrains. If the production and marketed surplus of foodgrains go down as a result of such procurement, the difficulties facing the country will increase rather than decrease before long.

(c) In any system of rationing, leakages tend to increase in course of time. Not only does the number of ghost cards tend to increase, but foodgrains also tend to be smuggled into rationed areas and sold in the black market even under the strictest regime of food controls.

(d) Rural areas being left out, urban areas will have assured supply of foodgrains at low prices, while the non-farm population in rural areas will have to face accentuated shortages and high prices.

(e) This system is also likely to prove very costly.

(f) An extensive system of procurement and rationing would have a justification if it succeeded in preventing the rise in prices that might otherwise occur. This implies depressing the cultivator's return for the sake of the urban consumer. On this score alone, the system may be found to be widely unacceptable."

There are also certain administrative and financial problems. There are over 38,500 villages in West Bengal. If all the mills are taken over and private trading is prohibited, the Government will have to procure paddy amounting to over 12 lakh tons direct from surplus growers. The scheme will involve bulk handling of rice of about 15 lakh tons, besides the 10 lakh tons of wheat at present handled by the Government. The responsibility for feeding 207 lakh people in urban and rural areas through modified ration shops will also prove too costly.

There is, indeed, considerable force in these arguments against State trading, but it is doubtful if the Government will pay heed to them. If industrial and commercial enterprises of the Government do not work well, the people may be affected only to some extent. But, if State trading in food fails or does not work satisfactorily, then millions of people will be directly and intimately affected. State trading, moreover, is also likely to divert attention from the task of growing more food.

Backwardness of W. Bengal

In this context, it is relevant to refer to the observations made by the National Council of Applied Economic Research. In a techno-economic survey issued recently, it was pointed out that, although the yield rates of the major crops were generally higher in West Bengal than in India as a whole, these rates did not compare favourably with those in many other States. Thus, in 1957-58, the rice yield in W. Bengal was 870 lbs. per acre, as against 1,252 lbs. in Madras, 1,110 lbs. in Mysore, and 1,114 lbs. in Andhra. Its jute yield was 964 lbs. per acre, as against 1,254 lbs. in Assam. Its sugarcane yield was 3,283 lbs. per acre, against 5,104 lbs. in Andhra, 6,294 lbs. in Madras, 6,338 lbs. in Bombay and 5,406 lbs. in Mysore. The yields of minor crops like oilseeds, *jawar* and tobacco were below the national average. The N.C.A.E.R.'s survey further revealed that the irrigation system of the State was not adequate for intensive crop production. Rice, together with minor food crops, accounts for 98 per cent of the total irrigated area and sugarcane for 0.9 per cent. But only 23 per cent of the total area under paddy and 45 per cent under sugarcane are irrigated. In 1956, only 1.1 million acres or 10 per cent of the total area of paddy were under improved seeds. As regards fertilisers, the survey observed that the *per capita* availability was only 1.3 lb. of nitrogen, as against the minimum requirement of 30 lbs. About improved agricultural practices the survey said: "The existing agricultural practices in the State need to be considerably improved. Such practices as timely sowing, adequate inter-cultural operation, adequate application of local manures or green manuring, plant protection measures, etc., are expected to raise the yield by about 50 per cent. The farmers could be induced to take to the Japanese method of paddy cultivation which has proved to be more productive. If these methods

OIL PRICING IN PERSPECTIVE

SOME LIGHT ON A MUCH MISUNDERSTOOD SUBJECT

THE subject of oil pricing is one in which misunderstandings abound and familiar questions frequently recur. Those best qualified to answer the questions are the men engaged in the day-to-day conduct of the oil business. But they do not always have the time or the inclination. It is thus fortunate that one authority in this field, Mr. H. Gripaios, should have agreed to present a paper on international oil prices to this year's meeting of the British Association for the Advancement of Science. This paper * provides lucid answers to some of the recurring questions.

The Oil Market

Why is there no oil exchange in the sense that there are exchanges for other internationally traded commodities? In the first place; says Mr. Gripaios, 70 to 75 per cent of the industry is vertically integrated, and, where this is true, crude oil does not have to be bought and sold on a commodity exchange. Secondly, the non-integrated companies tend to enter into fairly long-term arrangements for the acquisition or disposal of supplies.

In view of the great variety of crudes produced and the wide differences between countries in the pattern of demand for petroleum products, many of the transactions between producers and refiners are unique in certain respects—e.g., in type of crude, quantity involved, duration of supply, point of delivery, payment terms, the buy-back of refined products surplus to local requirements, and so on. In many cases, indeed, a "tailored" crude is supplied. Thus, there are not enough transactions on comparable terms to permit the establishment and effective functioning of an oil exchange.

This does not mean that buyers and sellers are unable to sound the market. There is no difficulty in an age of rapid communication in keeping buyers and sellers fully informed, so that the industry can function on an international scale. And few could doubt to-day that it operates under highly competitive conditions. While the eight largest groups of oil companies market some 65 per cent of the oil consumed in the international sector of the industry, a great many companies handle the remaining 35 per cent.

However, the twin factors of vertical integration and long-term contracts for crude place the main emphasis of day-to-day competition at or near the points of final consumption. As with other commodities, there is a two-way influence between the prices paid by the ultimate consumer (exclusive of taxes) and the prices ruling at earlier stages of the industry. For example, final selling prices influence and are influenced by ex-refinery prices for products, these in turn influence and are influenced by delivered prices of crude—which will be affected, in turn, by f.o.b. prices in the producing areas. It is to be expected that at each stage there will be a margin sufficient to provide the ocean-transport, refining and marketing sectors with an appropriate profit.

* * * *

One popular misconception is that world market prices for oil are related to U.S. prices and costs—as in fact they were when the United States was the predominant source of supply. Once the supply situation moved into surplus, competitive pressures resulted in international oil prices falling to levels more closely related to the lower costs ruling in areas outside the U.S.A.

A variation of this misconception is that European selling prices are related to Caribbean product postings, which are geared to the high cost of Venezulean crudes, although the European market is supplied mainly with low-cost Middle East crudes. In fact, the growth of refinery capacity in consuming areas such as Europe has resulted in local product prices being influenced by the competitive prices of crude oil—e.g. from the Middle East—and the local refining and marketing conditions. Caribbean product postings no longer have much significance in Europe except in those countries that import appreciable quantities from across the Atlantic: in such cases Caribbean postings plus freight costs set the ceiling for local products prices.

Trading Between Affiliates

What bearing does all this have on the transfer prices applied to transactions between affiliated companies? Surely these can be fixed on an arbitrary basis? Not so, said the speaker. It must be remembered that most of these transactions involve an international frontier and that, for tax purposes, the Governments concerned take steps to ensure that the prices charged are commercially acceptable. Double taxation agreements reinforce the process. Where these exist, the "as if independent" or "arm's length" test is usually applied, thus compelling the affiliates of international groups to conduct their affairs in a fully defensible manner.

It does not, of course, follow from this that transactions between affiliates will take place at the lowest price prevailing in the market. Nor should they, asserted Mr. Gripaios. If a buyer of crude enjoys absolute security of supply as well as flexibility in regard to quantity; if he has the option to be supplied with an alternative material; if he has the right to sell back products for which he cannot find an outlet—then he must pay a price that takes account of these privileges. And this is generally the relationship existing between affiliates.

There is a second compelling reason why such transfer prices tend not to be at the lowest levels ruling in the market. This is that the whole of the potential surplus of crude oil production—at present perhaps 20 per cent in excess of current requirements—must seek outlets among the relatively few uncommitted r finers, which possess only about 7 per cent the free world's refinery capacity. "Extreme low prices, unrepresentative of the market as whole, are bound to result when almost fo tons of crude oil address themselves to each t of uncommitted refiner's outlet." These e tremely low prices are thus the direct resu of the existence of contractual arrangemen covering the bulk of the trade; for, if the latt did not exist, the ratio between uncommitte supplies and outlets would be something lik 6 : 5 (120 : 100), instead of the present 4 : 1.

Sometimes exceptionally low prices ma be due to a producer finding himself in t position of having to make sales in order fulfil concession commitments, but of being u able to find a refiner whose needs match t specification of the proffered crude. In suc cases, the seller may have to quote a substa tial discount in order to clinch the dea Though there is no sound reason for applyin these special prices to other transactions, Go ernments of consuming countries and refine already committed would be less than huma if they did not cast a wistful eye at these lo priced deals. This applies particularly to co suming countries with balance of payment problems.

Meeting Outside Competition

What prices then do apply to integrate transactions? The key consideration is that i tegrated companies must meet competition they find it—which means supplying refinin and marketing affiliates at prices which enabl them to operate at a reasonable profit. Allow ing for geographical differences, prices in di ferent countries or localities tend to equivalent levels to the extent that competitive pressures are the same.

In other words, the availability of crude oil supplies, and the activities of the many companies operating in the industry, result in competitive pressure, which in turn influences oil selling prices in consuming areas. The affiliates of integrated groups have to meet this competition, which means that they need to obtain their supplies at prices that are reasonably related to final selling prices.

The normal working of economic forces may, of course, be interfered with by Governments, which are always in a position to influence the environment in which oil companies operate. By affecting the competitive pressures, which in turn influence price levels, Government interference may enhance or diminish the attractiveness of individual markets. But, according to the speaker, companies operating on an international scale will not be interested in continuing to supply a country at prices that are not reasonably in line with those obtainable elsewhere.

As regards the general level of oil prices, there has been a decline on the world market since the Suez emergency. This decline, coupled with the maintenance of posted prices for crude above the level of market realisations, has bitten into oil company profits. Hence the weighted average return on average net assets of the seven leading international oil companies was no more than 11.6 per cent last year, which compares with a return of 11.5 per cent in the same year for 2,000 leading companies in 40 different manufacturing industries in the U.S.A.

This rate of return, argues the speaker, is rather close to the minimum required to generate or attract capital to the oil industry to sustain the anticipated rate of growth. Each gallon of daily sales needs to be backed on average by more than £40 of capital investment; and the O.E.C.D. Special Committee for Oil recently estimated the capital needs of the international sector of the oil industry during the next decade at more than £26,500 million ($74,000 million), a figure roughly equivalent to the entire national income of the United Kingdom last year.

Bearing in mind the paradoxical fact that oil companies are unlikely to attract outside investors if they are not earning enough to generate their own development capital, it looks as though profit-margins cannot be squeezed much further without jeopardising future expansion. The implication is that further price reductions are unlikely, except in circumstances where there is still scope for cutting costs by improvements in efficiency.—*By Special arrangement with Petroleum Press Service.*

* "International Oil Prices." A lecture by Mr. H. Gripaios, of Shell International Petroleum, to the Economics Section of the British Association for the Advancement of Science, Southampton, 31st August 1964.

SAY GOODBYE TO YOUR FRIENDS BUT NOT TO YOUR MONEY!

TODAY experienced travellers do not carry cash; it can be lost or stolen. Wherever you go in India, carry Bank of Baroda Travellers' Cheques—they're absolutely safe. No one but you can cash them. And so easily too...just sign your Travellers' Cheques in the presence of the bank official on duty. □ Your Bank of Baroda Travellers' Cheques can be cashed almost anywhere in India—at any branch of the Bank of Baroda, or the State Bank of India and also through the offices of many accredited agencies throughout India. Next time you travel, carry safe, convenient Bank of Baroda Travellers' Cheques—available in denominations of Rs 25, Rs 50 and Rs 100 from your local Bank of Baroda Branch.

AGAINST STATE TRADING IN FOOD

(*Concluded from page* 552)

become popular, it would be possible to improve the yields by at least 10 per cent, which, for foodgrains alone, would mean an additional production of 450,000 tons a year."

It will be clear thus that the State Government has vast work to do for improving agriculture; and it seems unwise that it should think of undertaking trading on a large scale, with all its costly complications.

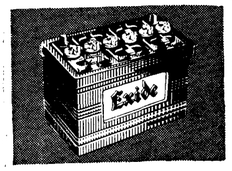
Apart from rice, fish is a food item of great importance to West Bengal. But the State Government appears to have done little to increase its production. The minute of dissent of the Price Enquiry Committee refers to the negligence and inactivity of the Government Department to mobilise the water resources of the State to step up production of fish. It says that "while funds have been continuously lapsing during the entire period of Five-year Plans, the Department has not done much to resuscitate the derelict rivers, tanks, ponds and other sources of supply."

An interesting revelation made in the report deserves mention. About ten years ago, Mr. Van der Heyden, an expert in fishery from F.A.O., made some recommendations for increasing the production of fish in West Bengal. But till now his report has not even been published and no action taken thereon. The minute of dissent says: "It was with great difficulty that we could obtain from a reluctant Department of Fisheries a copy of this report. We were informed that the report was a confidential document, though, on a perusal thereof, we have not been able to find out the reason for keeping it secret."

All this seems to show that the task of increasing food production has yet to acquire that sense of urgency and seriousness that it ought to have not only in West Bengal but in many other States as well.

Exide Batteries still keep going when the rest have stopped

Everywhere you go motorists agree Silver Exide are the strongest, most reliable batteries under the sun. They are made from the finest materials and are quality tested at every stage of production. . that's why you're sure of a long and trouble free life. Exide Batteries are known and trusted all over the world. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—fit the finest battery money can buy and you'll still keep going when the rest have stopped.



SILVER Exide

A product of Chloride and Exide Batteries (Eastern) Limited.

Add prestige to the profits

Produce quality goods. Your brand will get a better name plus profits. Quality goods are produced on such good machines as RL RI Lathes. People who value quality production insist on RL RI Lathes. Technical Data: 380 m/m Dia. Swing.

WORLD OILCAKE PRODUCTION AND TRADE

INDIA BECOMES SECOND LARGEST EXPORTER

A STEADY upward trend is seen in the world production of important vegetable oilseeds such as groundnuts (unshelled), cottonseed, linseed and castorseed during the years 1961-62 to 1963-64. The output of groundnuts which was 11.4 million and 11.7 million tons (including that of China) in 1961-62 and 1962-63, is unofficially estimated at 12.0 million tons (excluding that of China) for 1963-64. Production of cottonseed (inclusive of China), which was 16.08 million and 16.9 million tons in 1961-62 and 1962-63, respectively, is unofficially placed at 17.2 million tons for 1963-64. Similarly, the world production of linseed and castorseed which was 600,000 tons and 3.05 million tons, respectively, in 1962 was better at 700,000 tons and 3.4 million tons in 1963. The somewhat larger output of these seeds is reflected in the world production of oilcake, which has maintained a continuously rising trend from 1957. In fact, the world oilcake production (excluding that of China, the Soviet Union and most Eastern European nations for which reliable data are not available) in 1963 was a record of 27.4 million tons, thanks principally to the increased output in the major producing countries like the United States and India. The latest issue (September 1964) of the *Tropical Products Quarterly*, published by the Intelligence Branch of the Commonwealth Economic Committee, London, which contains a comprehensive analysis of the world oilcake production and trade, shows that oilcake output rose from 19.8 million tons in 1957 to no less than 27.4 million tons in 1963, *vide* Table I accompanying this article.

The expansion in the output of all types of oilcakes in 1963 as compared with 1962 was smaller at 5 per cent, as against 8 per cent in 1962. Soya meal cake accounted for the bulk—about two-thirds—of the total expansion in the production of oilcake in 1963. While groundnut and cottonseed cakes were only marginally larger, rapeseed cake production was lower and that of linseed cake remained practically unchanged.

A country-wise analysis of the production of oilcake and meal shows that the United States leads the rest of the countries, with an output of 12.8 million tons in 1963 (about 47 per cent of the world's output). Nearly one-third of its output is made up of soya meal cake (four million tons). India comes next among the leading oilcake producing countries, with an estimated total of 2.8 million tons in 1963. Its production was also larger, thanks to an improvement in the output of groundnut and sesame. Taking the oilseed producing Commonwealth countries as a whole (such as India, Pakistan, Canada, Uganda, Ceylon, Malaya and Nigeria) one finds that production of oilcake was slightly better at 4.20 million tons in 1963 as compared with 4.05 million tons in 1962. In countries outside the Commonwealth also, it rose from 16.4 million tons to 17.05 million tons. In the major oilseed importing countries in Western Europe, however, the growth was only nominal, from 4.19 million tons in 1962 to 4.27 million tons in 1963. This was in contrast to 1962, when output rose sharply by over 14 per cent. Another major oilseed importing country, namely, Japan, expanded its oilcake output by one-fifth to a record of 1.52 million tons in 1963. Soya meal accounted for nearly 59 per cent of Japan's total.

The world's six major oilseed producing countries, namely, the United States, India, Argentina, Egypt, Pakistan and Canada, together accounted for some 18.4 million tons of oilcake in 1963 or 66.7 per cent of the total world output. Of these, only Argentina experienced a slight fall from 1.1 million tons in 1962 to 1.09 million tons in 1963, owing to lower output of linseed. Among the oilseed importing countries, Japan, as stated earlier, increased its output of oilcake in 1963 by 250,000 tons to 1.52 million tons in 1963. Britain's output went up only nominally by 5,000 tons to 636,000 tons, the increase in soya meal production being nearly offset by smaller outturn of copra and palm kernel cake. In the two leading E.E.C. countries, France and West Germany, output showed a slight fall, from 535,000 tons and 1,131,000 tons in 1962 to 513,000 tons and 1,122,000 tons respectively in 1963. This was due to a decline in the production of soya meal and groundnut cake. In Algeria, oilcake output remained unchanged at 50,000 tons in 1963. While in Taiwan China there was a marked rise in oilcake output from 63,000 tons in 1962 to 90,000 tons in 1963, Israel showed only a small rise from 163,000 tons to 171,000 tons.

Table III: *Exports of Oilcake and Cake Equivalent of Oilseed Exports from the Major Oilseed Producing Countries*

(In 000 tons)

	1957	1960	1962	1963
Groundnut	1,082	1,433	2,070	2,180
Soyabean	3,190	4,826	5,034	5,636
Cottonseed	693	939	1,118	1,212
Rapeseed	133	137	209	199
Sunflower	483	654	653	460
Sesame	80	120	128	125
Copra	859	783	744	801
Palm kernel	420	427	379	385
Linseed	829	901	914	869
Others*	84	155	262	258
Total	7,853	10,375	11,511	12,125
Of which :				
Cake	2,677	4,022	5,322	5,623
Seed (in terms of cake)	5,166	6,353	6,189	6,502

* Exports of oilcake mainly unspecified by type.

Oilseed cakes are used mainly as cattle-feed in most parts of the world. In Western Europe, the demand for cakes remained somewhat restricted owing to (*a*) the high level of prices, which in turn was due to the rise in the prices of vegetable oils themselves, (*b*) a fall in prices of certain livestock products, (*c*) a slight decline in the number of livestock themselves, and (*d*) an improvement in the supplies of farm fodder from 1963 crops. Nevertheless, world oilcake exports (in terms of quantity) touched a record of 5.6 million tons in 1963. Only, the increase, which was of the order of 6 per cent, was very much lower than the 25 per cent rise registered in the previous year from 4.27 million tons to 5.32 million tons. Exports of oilseeds in terms of cake were also larger, being a record of an estimated 6.5 million tons in 1963, but here also the increase was of a smaller magnitude than that in the previous year (from 5.6 million tons to 6.19 million tons). The proportion of total exports from the oilseed producing countries moving as oilcake was 46 per cent, the same as in the previous year. Among the oilseed producers, the principal cake exporters are the U.S., India, Canada, Brazil, the Philippines and Sudan. All of them were able to step up their exports in 1963, but Argentina and Soviet Russia exported somewhat smaller quantities. Owing to a decline in the supplies from Argentina, India became the world's second largest exporter of oilcake in the past year. The exports of oilcake and seeds in terms of cakes from the principal oilseed producing countries are highlighted in Table III.

It will be noted that after slumping from 10.37 million tons to 9.87 million tons in 1961, world exports of oilcakes (in the form of both cake and seeds in cake equivalent) had picked up in 1962 and maintained the upward trend in the following year. It will be further noted that exports of all types of oilcake and cake equivalent of oilseeds, save those of rapeseed, sunflower, sesame and linseed, went up during 1963. Exports of soya bean cake (in the aggregate) increased considerably from 5.03 million tons in 1962 to 5.6 million tons in 1963, chiefly due to the phenomenal increase in output in countries like the U.S. The rise in the exports of other types of cakes such as groundnuts and cottonseed, however, was only small. The rather sharp fall in the exports of sunflower and linseed cake is attributed to the lower output in their principal growing countries, namely, Soviet Union and Argentina.

As in the case of production, so also in the case of exports the United States held the lead, with its exports reaching a record of 1.4 million tons in 1963, an increase of more than 25 per cent over the previous year's level and more than 100 per cent over the 1961 level. Indeed, the high level of American shipments in the last two years was the outstanding feature of world trade. The U.S. provided in 1963, 25 per cent of total supplies from the oilseed producing countries, as compared to 22 per cent in 1962. Its main shipments consisted of soya meal (about 1.3 million tons in 1963), to Western Europe, Canada, Italy and Spain. Argentina, which had been the world's second largest exporter since 1959 and the first before that year, yielded place to India, as a result of a fall in its shipments from a little over million tons to 872,000 tons. India won the second rank by narrow margin, its exports being 895,000 tons, as against 716,000 tons in 1962 and 493,000 tons in 1961. Commenting on India's performance as an exporter of oilcakes, the *Tropical Products Quarterly* says:

"The rise in Indian exports in recent years has been remarkable; compared with 1957, supplies have risen more than tenfold. The increase has been principally in the form of defatted groundnut meal, as a result of the use of more solvent extraction plant. Exports of groundnut meal have in fact been encouraged by various incentives at the expense of groundnut cake, because of the greater efficiency of oil extraction by solvent methods; total exports of groundnut cake and meal alone in 1963 were 765,000 tons. The more extensive processing of cottonseed in recent years has resulted in an increasing export trade in cotton cake; shipments in 1963 reached 69,000 tons, as compared with 26,000 tons in 1962. The United Kingdom took 392,000 tons of total exports in 1963, and Eastern Europe 312,000 tons in 1962."

It will thus be seen that the U.K. was the principal customer of India for its oilcake. This country must, therefore, do its best to sustain this market.

The shipments from Brazil, Canada, Philippines, Sudan and Burma were also at a higher level in 1963, as compared with the previous year. While Brazil exported a good deal of groundnut, soya and cotton cakes and Canada soya meal, Philippines sent out increased quantities of copra cake following an improvement in copra processing facilities. Canada exported the bulk of its soya to the United Kingdom in 1963 as it is duty-free, and imported soya meal from the United States for its own consumption. A fuller picture of exports of oilcake and meal from the principal exporting countries can be had from Table II published on the previous page.

An interesting point that needs to be noted is the emergence of Brazil also as an important exporter of oilcake. There has been a phenomenal growth in its exports. From a mere 1,000 tons in 1957, they have increased by more than 200 times to reach 230,000 tons in 1963. This has been possible because of the increase in production during the period, from 320,000 tons to over 700,000 tons in 1963. In contrast is the picture provided by Soviet Russia. After rising sharply from 190,000 tons in 1957 to 566,000 tons in 1959, its shipments had fallen to just 220,000 tons. This reduction may be due partly to fall in production and partly to a rise in domestic consumption.

Imports

The pattern of oilcake imports in 1963 was considerably different from that of 1962. Bringing out this change, the *Tropical Products Quarterly* observes:

"In 1962, the increase in entries of oil cake was most marked among the larger importers; in 1963, purchases by the smaller importers showed the greater rise, Italy and Spain being the most outstanding examples."

In Britain, the world's largest importer of oilcakes, imports fell to a low ebb of 1.10 million tons in 1963, the lowest since 1958. West Germany took its place, having imported 1.27 million tons in 1963. Britain's imports consisted of all items of oilcakes, actual quantities of the major items being: groundnut 560,000 tons, soya bean 210,000 tons, cottonseed 170,000 tons, sunflower 60,000 tons and linseed 200,000 tons. Its main suppliers were: India 405,000 tons, Canada 220,000 tons, Burma 150,000 tons, Argentina 67,000 tons and Nigeria 65,000 tons. With West German and Italian imports higher and little change in the purchases of Netherlands and France, the total imports by the E.E.C. countries in 1963 were more by 3 per cent. Record imports were made by the Scandinavian countries, Yugoslavia and Switzerland. Spain increased its intake of oilcake from a mere 2,000 tons in 1957 to 190,000 tons in the year under review. Eastern European countries such as Hungary, Czechoslovakia and Bulgaria also appear to have expanded their imports.

Outside Europe, which happens to be the chief market for oilcakes, there are relatively few importers. In the past year, Canada imported, as already noted, some soya meal and the U.S., for instance, purchased less of soya meal and cotton cake. Even Malaya which usually imports copra cake from Indonesia, took less. Japan, which is also a relatively small importer of less than 100,000 tons, took only 64,000 tons, though this was more than twice the quantity of oilcake it took in the previous year.

Table I: *World Production of Oilcake and Meal in Certain Selected Oilseed Producing and Importing Countries*

* Exports from these countries are derived from the processing of imported oilseeds.

U.N. CONFERENCE ON PETROCHEMICALS

Thirty-two developing countries have been invited to nominate participants for the first United Nations inter-regional conference on the development of petrochemical industries in developing countries. Organised by the United Nations, in cooperation with the Government of Iran, the Conference will be held at Teheran from 16th to 30th November 1964. About 65 participants from developing countries will be selected to discuss, with experts from the petrochemical industries in developed countries, technical, economic and other aspects of the establishment and operation of petrochemical plants in developing areas. About 100 petrochemical experts will be invited to make a contribution in the form of papers or lectures. Also attending the Conference will be representatives of interested specialised agencies, such as the United Nations Educational, Scientific and Cultural Organisation, the International Labour Organisation and the International Bank for Reconstruction and Development, and representatives of the four United Nations regional economic commissions (for Africa, Asia and the Far East, Europe and Latin America). Thus, the total attendance will be close to 200. Field trips to petrochemical plants and refineries in Iran will be included in the programme of the Conference. The Conference is being convened in response to a recommendation of the United Nations Committee for Industrial Development, as part of the work programme in the field of industrialisation, and the project was approved by the Economic and Social Council in 1963.
