ners were sent back to do more homework in the context of Mr. Nehru's general directive to adopt a "cautious" approach. How can the Congress Committee, then, take any position at all at this early stage on a matter which Mr. Dhebar and his colleagues regard as fundamental to the problem of fairer shares? Unless evidence is adduced to the contrary, suspicions will be justified that the Committee has made itself the cat's-paw for those trying to force the pace.

Mr. Dhebar and his colleagues have a good deal to say on many other matters—from land reform at one end to standardisation of consumer goods at the other. Their whole aim in discussing these diverse subjects is to strike a "socialist" stance without stopping to examine the implications of their often conflicting recommendations. Big business is bad, they seem to argue, but proceed coolly to suggest that smaller, less resourceful groups should be encouraged with Government finance to become big, it being conceded that bigness is often a technological imperative. In other words, the Committee wants to have the cake and eat it too because it affirms that the logic of size and location should receive greater recognition in the future.

Likewise, it faces both ways when it says that the industrial policy resolution is sound but machine-building and the production of key intermediate goods should be brought more fully under State control. A Committee which included Mr. Subramaniam should surely have known that machine-building must necessarily be a decentralised endeavour, because efficiency falls off sharply after the span of supervision reaches the critical limit. The State may well build giant enterprises like the Ranchi complex but their value to the economy will depend ultimately on how well geared the smaller producers are to meet its need for components and sophistications in consumer goods to damp down the consumption urge with the Committee's own proposal to use the carrot of higher prices to get the farmer to make a bigger effort. One of the lessons underlined by current procurement difficulties is that the more affluent farmers—they alone have surpluses to trade—need to be lured to the market-place by attractive city-made consumer goods. But to seek logic and consistency in the Committee's report is to regard it as a serious document. This it clearly is not, being so transparently intended to achieve undefined political ends within the Party.

STRENGTH OF RESERVE CURRENCIES

THE expansion of U.S. business is now well in its fourth year, and there is still no serious evidence of inflation in the country. Bankers and economists are naturally aware that this healthy development may be disturbed. The expansion may cease; or, continuing, it may generate the inflation that has been avoided until now. But already, after the longest period of continuous expansion in the peacetime history of the United States as a developed economy, it is evident that the cycle pattern has been either broken or considerably lengthened, and that inflation is not an inevitable consequence of years-long expansion. The current expansion of the U.K. economy began much later, and it is too early to say that it will follow the same course, but British observers are hopeful. Continuous expansion without inflation is official policy, and the behaviour of sterling, which has so far withstood the severe test of import expansion (much of it attributable to stock-building), suggests that no currency crisis such as has interrupted expansion in the past will frustrate this policy in the next few years.

These are the two countries which (with some assistance from others when needed) manage the reserve currencies. Until recently they were rated in the "growth chart" much lower than other industrial countries that were not similarly burdened with monetary responsibilities. In 1963-64, by contrast, their growth rates have exceeded those of the European Economic Community, which were previously at or near the top of the "chart". And the E.E.C. has not avoided inflation, to prevent the spread of which it is already in some degree restricting growth. This trouble has not yet afflicted

West Germany (though the authorities are apprehensively preparing defences against "imported" inflation), and the deutschemark is still one of the world's strongest currencies, but the other major E.E.C. currencies have lost their superiority over the dollar and the pound. Recent international discussions on strengthening the world's monetary system have continued to treat the dollar as a "problem", for a habit acquired over a period of years is not easily discarded; but in fact the pendulum is inclined to swing the other way, and it is not unlikely that within a year or two the "dollar problem" will be, as previously, a problem of scarcity. The relative stability of U.S. prices is not, of course, the only factor that has rapidly improved that country's balance of payments: the reduction of governmental spending abroad and the restriction of private investment abroad are others. The combination of factors eliminated the notorious deficit in the first quarter of this year. The balance may fluctuate for some time, but it will probably be established, much sooner than was recently thought, as a credit balance.

A world deprived of the flow of dollars emanating from the annual deficits of some thousands of millions of dollars that have been a characteristic of recent years, would be seriously deficit in liquid resources if no alternative liquidity were arranged but the authorities are considering alternatives. I should not be forgotten that excess dollars have been an embarrassment: it has been necessary to neutralise them, by accumulating them in central banks and by other such artificial means. While the outflow of dollars has statistically increased non-U.S. reserves, it has weakened rather than

strengthened the sense of financial security, for countries holding dollar reserves have not maintained their confidence in the dollar, and only with some difficulty have they been persuaded to refrain from converting dollars in excess of working balances. Usually, in the past, strengthening of confidence in one reserve currency has implied weakening of confidence in the other, as funds have been transferred on a massive scale; and a general scarcity of dollars would again cause trouble for sterling if it were not counteracted. But there is now a real possibility that the U.S.A. and the U.K., the two "Anglo-Saxon" countries which together are responsible for the reserve currencies, are being rehabilitated simultaneously, and that both their currencies will gain strength together.

This simultaneous rehabilitation would create an unfamiliar situation. The scarcity of dollars in the early postwar years was caused essentially by the weakening of Europe in the war, as a consequence of which many products were available in adequate quantities only from the U.S.A. This abnormality was gradually corrected years ago, and a similar scarcity of dollars cannot recur. It seems now that the circumstances in which the "Anglo-Saxon" countries' economic growth and exports lagged behind those of other sophisticated countries (mainly but not only European) were likewise abnormal. If the laggards have moved ahead, and can maintain their lead, a new situation is emerging. The difficulties of these two countries have in the past caused general monetary problems and hindered the growth of world trade. The world will be healthier if these difficulties are resolved. But one big monetary problem remains. While exchange rates are fixed, the relative positions of countries, and therefore of their currencies, vary, and monetary stresses occur periodically. As the U.S.A. is still the most important country, and the dollar is still the most important currency, the most acute stresses involve the dollar. The world is emerging from a period of surplus of dollars into a period of scarcity of dollars. And it has not yet broadened the base of monetary reserves enough to counteract this scarcity.

EXPANSION PROSPECTS FOR ALUMINIUM

THE chairman of the Indian Aluminium Company, Mr. H. V. R. Iengar, said recently that the Company was planning to put up a 30,000-tonne smelter on the western coast. This would form the nucleus of a much larger scheme for the integrated production of aluminium in western India. According to the Company's estimates, India's requirements of aluminium by the end of the fourth plan will be much larger than have been planned for so far. The Development Council for Non-ferrous Metals estimated that the annual demand for aluminium would rise from 50,000 tonnes at the beginning of the third plan to 120,000 tonnes in 1965-66. Although the output of aluminium has risen sharply from 18,250 tonnes in 1960 to 55,220 tonnes in 1963, the country has to depend considerably on overseas sources, the imports in 1963 being about 21,200 tonnes. As against an estimated demand of 82,000 tonnes for 1963, supplies amounted to only 76,400 tonnes. The main reason for the spurt in demand from 50,000 tonnes in 1961 to 82,000 tonnes in the electrical industries, since indigenous resources for producing copper are very limited and its import costs are high. There are also plans for making more extensive use of aluminium in the manufacture of motor-vehicles.

The third plan production target, which was originally fixed at 87,500 tonnes, has undergone several changes, and it now stands at 110,000 tonnes. But there has been a serious lag in implementing the licensed projects, and it is likely that only 73,000 tons of capacity will be established by the end of the plan. This will be made up of 35,000 tons belonging to the Indian Aluminium Company, 20,000 tonnes to the Hindustan Aluminium Corporation, 8,000 tons to the Aluminium Corporation of India and 10,000 tons to the Madras Aluminium Company. The smelter of the Madras Aluminium Company, which is being put up in Salem, is likely to be ready for commissioning by the end of this

year, while the other units are already in production. Hindustan Aluminium has been permitted to expand its capacity to 60,000 tonnes. But this is likely to materialise only during 1966-67, when the fourth plan will be a year old. The 30,000-tonne Sharavathy project (in Mysore) and the 20,000-tonne Koyana project (in Maharashtra), whose industrial licences had to be revoked, are now to be taken up by the public sector, although minority capital participation by private entrepreneurs on the lines of the Cochin oil refinery will be permitted. Both these, as well as the Hungarian-aided project in Madhya Pradesh which is to have an annual capacity of 30,000 tonnes, can obviously be implemented only during the fourth plan period.

Strangely enough, the Government of India has failed to take into account the economies of scale while licensing new plants. While it has been quick to increase the capacity of public-sector projects, even against the advice of collaborators—as in the case of the Heavy Engineering Corporation in Ranchi—it has been reluctant to license the optimum capacity for private ventures. By European standards, the minimum economic size of an aluminium smelter is 30,000 tons, while in the U.S.A. it is over 100,000 tons. None of the existing plants has a capacity of 30,000 tons. The biggest producer has, no doubt, a total capacity of 35,000 tons, but it is distributed over two smelters—one in Orissa and another in Kerala. The largest existing smelter can produce only 20,000 tons a year. Similarly, only one of the four projects originally licensed—the Sharavathy project—was for 30,000 tons; two were for 20,000 tons and the third for 10,000 tons. The importance of setting up bigger units to save on capital costs and spread overheads has often been emphasised by the parties concerned and by a National Productivity Council team. According to a study of the aluminium industry by the U.N. Economic Commis-

Bonus Report Criticised

Representatives of industry have strongly criticised the Bonus Commission's recommendations on the ground that if they are implemented, they will put a heavy burden on producers. Expansion plans will suffer, and if the industry happens to produce goods for export markets, its competitive position will be seriously impaired. One of the main objections to the Bonus Commission report centres on the suggestion to pay a minimum bonus of 4 percent of workers' annual earnings even when there are no profits. The second one relates to the disallowance of a specific provision for rehabilitation and super profits tax as prior charges for determining bonus. The third objection is to fixing a return of 7 percent on paid-up capital and 4 percent on reserves used as working capital, both taxable. The Engineering Association of India has recently sent a memorandum to the Central Ministry of Labour drawing attention to the implications of the Bonus Commission's recommendations. There is an obvious inconsistency between the Commission's suggestion to offer a minimum bonus of 4 percent of the workers' annual earnings even when there are losses and its definition of bonus as a share of workers in the prosperity of their concern. By not linking bonus with productivity and efficiency production will be jeopardised. The Engineering Association has suggested that bonus should be allowed only if profits permit, and that it should be subject to a maximum of 20 percent in a year.

The Bonus Commission has rejected the plea for allowing a special provision for rehabilitation as a prior charge on the ground that allowance had been made for normal depreciation. Since the Commission wants that 60 percent of the available surplus after meeting prior charges should be allocated for distributing bonus, a concern will be left with only 40 percent for other purposes. Considering that innumerable obligations have to be met out of the remainder such as surtax, additional return on capital and reserves, repayment of loans (including deferred payments, debentures and redeemable preference shares), provision for gratuity and reserves for contingencies, very little is likely to be left for meeting the needs of rehabi-

litation. A special provision for this purpose is particularly necessary because replacement costs of plant and machinery have been rising steadily. If industry were to remain efficient and competitive, the need for a specific allowance for rehabilitating plant and machinery is imperative.

As for the Commission's suggestion to adopt a system of "set on" and "set off", the Engineering Association says that it will create many complications and hamper production. If during a year of good profits a firm, after paying 20 percent of the available surplus as bonus, has to carry forward a further 20 percent to the next year, it will amount to assuring its workers that bonus at the maximum rate will be paid irrespective of whether production targets are fulfilled or not. Workers under misguided leadership can even dislocate the entire production programme of such a concern with impunity.

Perhaps the most illogical part of the Bonus Commission's report relates to the return on paid-up capital. The 7 percent recommended is completely unrealistic and does not take into account the facts of the capital market. As far back as 1950, the Labour Appellate Tribunal considered the fair return on capital to be 6 percent tax-free, which is equal to 8.57 percent taxable. The taxable return of 7 percent now suggested is equal to only 4.9 percent tax-free. It is difficult to understand how the corporate sector can attract risk capital when even Government securities yield about 4½ percent tax-free. Borrowing rates have gone up recently because of the Reserve Bank's dear money policy and industries have had to borrow from the public at as high a rate as 12 percent. The Engineering Association suggests that a minimum return of 10 percent should be allowed. This is a percentage which even Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, has suggested as being necessary for growth.

High Taxes Retard Growth

In his presidential address at the annual meeting of the Indian Chamber of Commerce in Calcutta on Friday, Mr. K. K. Birla strongly cri-

ticised India's taxation system. Referring to the multiplicity of taxes, he said that never in the economic history of any democratic country had such drastic and far-reaching fiscal changes been made in so short a time. The target for additional taxation fixed for the third plan has already been exceeded by the Central Government. It is estimated that the total revenue from additional taxation at the end of the current plan will exceed Rs. 1,900 crores. The lack of stability in the Indian tax system has been felt not only by Indian business men but also by foreign investors. Almost every year, there is a major change in the tax structure. A new tax is introduced, or an existing one is withdrawn, or a discarded measure is re-introduced, or drastic changes are made to give existing legislation an entirely new shape.

The super profits tax, which was introduced in the 1963 Budget, has now been replaced by the surtax. The dividend tax has been reimposed. The net relief granted to assessees through the replacement of the super profits tax by the surtax and the dividend tax is only marginal. Besides, when the super profits tax was originally levied, the Government stated that it was being introduced on account of the emergency. "That might have been one of the reasons, but there appears to be no justification for perpetuating the high incidence of the super profits tax on company profits by other measures which have the same result, though they bear different names". Mr. Birla said that the crippling effect of the enhanced gift tax and estate duty had not been fully realised. Under the gift tax, high rates have been introduced, which will affect not only the richer classes, but also the middle classes who, out of social obligations, offer gifts to their near and dear ones. To add to the harshness of the tax, it has been laid down that a gift given to the same person in earlier years will be taken into consideration for determining the rate of tax.

As for estate duty, whereas formerly its maximum rate was 40 percent, it has been increased to 85 percent in the new Budget. Moreover, while previously the maximum rate was levied on an estate of over Rs. 50 lakhs, now the maximum rate has been made applicable to all estates over Rs. 20 lakhs. Although the maximum rate of estate duty has been fixed at 85 percent in the new Budget, it will be much higher in practice. Citing a concrete example, Mr. Birla said that if a man died with his assets valued at Rs. 1 crore, he would be required to pay about Rs. 75 lakhs by way of estate duty. In order to pay this high duty, he would have to sell off his estate. But in doing so, he would be asked by the tax-gatherers to pay the capital gains tax. In income tax too, the rate on the highest income exceeds 88 percent. So about nine-tenths of the earnings of those belonging to the higher income brackets are taken away by the Exchequer. A sense of despondency has, therefore, been created by the expropriatory tax measures which, in effect, are retarding the flow of new investment in the economy.

Railway Expansion Plans

Taking a forward look at the country's transport requirements, the Railway Board has drawn up preliminary proposals for expansion during the fourth plan. These visualise a 50-percent increase in investment to cope with a 53-percent rise in originating traffic over the levels expected to be achieved in the current plan period. The provision for new traffic is modest. During the present plan, originating tonnage will increase (going by the estimates put forward in the mid-term appraisal) from 168 million tons in 1960-61 to 241 million tons in 1965-66—an increase of 43 percent despite the serious shortfalls in steel, coal and other bulk transport industries. If growth should indeed accelerate, as one very much hopes it will, the target of 370 million tonnes on which the railways are basing their planning is perhaps conservative. Although the physical target may be too low, the expenditure proposed does warrant a long second look. The close correspondence between the additional traffic the railways propose moving and the step up in investment suggests that, despite all the money that will have been spent on development over the 15 years of planning, economies of scale are nowhere in sight. This view,

may, however, need to be modified when one takes note of the backlog of replacements and renewals. At the last count, at the close of 1962-63, 27 percent of broad-gauge and 21 percent of metre-gauge locomotives were over-age. As for wagons, the railways were only a little better off. If a determined attempt is to be made to eliminate these arrears, it follows that the investment required in the fourth plan will be fairly high, notwithstanding any benefits supposed to accrue from the modernisation already completed.

From a technical viewpoint, the more interesting aspect of the railways' proposals is the declared long-term aim of switching over to diesel and electric traction. The steam engine is certainly not particularly efficient in its tractive effort because the coal burnt in the boiler to raise steam can be put to far better use in generating electricity. From the country's standpoint, coal burnt directly by the railways or used to generate power makes no great difference except the additional capital investment needed for transmission lines and the like. Since this is offset by an increase in line capacity (but for which the railways would need to be building extra lines), this is on the whole a decision which is consistent with the economic use of resources. The same argument does not hold good—not at least in the same form—for diesel locomotives. Diesels certainly represent a great improvement in efficiency, but they depend on what is still very largely an imported fuel. Until more oil is discovered or in the event of India striking it rich in off-shore drilling in the Persian Gulf, any increase in consumption must reckon with import constraints. This is an aspect with which the Railway Board is not directly concerned, but needs looking into at the policy level by those who will pass judgment on the proposals in the Planning Commission and the Finance Ministry. Another immediate consequence of the switch-over also needs to be noted. Domestic capacity in locomotives will not be sufficient to supply the 450 electric and 900 diesels that the railways propose to acquire. This will mean fairly substantial imports, and therefore a continuing dependence upon aid such as the World Bank and the U.S.A. have provided. This is a parameter which will need careful thought in the light of the estimates indicating declining availability of official aid, although the railways will argue that their total import requirements are going down year by year as domestic manufacture of rails, sleepers, etcetera, gets into stride.

The railways will, on present indications, undertake as much doubling and construction of new lines as during the present plan. In most cases, these steps for enlarging capacity are either already overdue (as on the east coast) or are planned to meet emerging regional needs (as in the Kandla port's immediate hinterland or in Assam in defence context). But what remains to be explained is the investment apportioned to improving efficiency on the routes already open. A U.S. team looking into the performance of the railways, in the context of Bokaro, pinpointed the deficiencies in signalling which prevent India from getting as much use out of each track as its counterparts elsewhere customarily get. Admittedly there are difficulties, such as insulation problems on tracks laid on steel ties or cast iron sleepers, which rule out a switch to automatic signalling. But these are not insuperable; the U.S. team gave the verdict that the railways may have found other solutions if they had not been content to plod along on conventional lines. Mr. H. C. Dasappa, Central Minister for Railways, seems to have taken this U.S. appraisal to heart. He spoke the other day of using computers to deploy wagons more rationally—an idea which the U.S. team had suggested. Since a piecemeal approach is hardly adequate, it would be interesting to know what else is being done to help the railways do better. The greater their efficiency, the less will be the need to invest in new capacity. Consideration of the railways' fourth plan proposals should proceed not merely in relation to the tonnage they may have to move, but also the efficiency norms they must attain.

Importance of Marketing

The vital rôle of marketing in a developing economy was explained by Mr. P. L. Tandon, chairman of Hindustan Lever Ltd., while delivering the first R. K. Sirkar Memorial Lecture under the

auspices of the Advertising Club in Calcutta last Friday. India offers a vast and untapped market, which is highly sheltered because of import restrictions. But far from reducing the importance of marketing, this factor invests it with greater significance. In fact, marketing is a growth factor in a developing economy since, by promoting consumption, it can spur productive effort. An international economist, Mr. Tandon pointed out, recently suggested that better supply and distribution of consumer goods could stimulate agricultural production by making the farmer want to earn more in order to buy the things useful to him.

In India, trading is an ancient tradition, and even a hereditary caste has been based on this vocation. The efficiency of the trade network may be seen from the fact that it operates on very low profit margins in normal times, although there have been abuses during times of scarcity. The great need today, according to Mr. Tandon, is to change the traditional trading approach to one of modern industry, and in this marketing is an important element. He defined marketing as "the chain of processes and creative thinking that spreads from the concept of the product through strengthening the 'want' for the product to when it is consumed". Since it involves a study of the needs of the consumer and the most efficient and economic method of satisfying them, marketing assumes great importance. It makes the consumer the supreme arbiter of what he will buy. Mr. Tandon said that this definition might not be quite acceptable to many in India since, because of scarcity, production might get all the emphasis and marketing might be regarded as a luxury. But marketing, in fact, made production meaningful and oriented it to consumer needs. An exclusively production-oriented economy would lose the efficiency and humanity which came from respect for the consumer in the same way as the Government that did not believe in consulting the public—the ultimate "consumers" of its policies—would be prone to make more mistakes in the long run. Advertising plays an important part in marketing. Having assessed the needs, said Mr. Tandon, it was the job of advertising to make the want sufficiently "felt".

RECRUITMENT OF TEA LABOUR

It is curious from what sources information is sometimes gained and how incorrect it can be. We noticed a small leaderette in a weekly contemporary a short time ago, announcing that shortly any amount of labour would be available for the tea districts; and we feel certain that our planter subscribers, who number not a few, would be only too delighted, if they thought there was any chance of such a thing coming off, but living in the thick of the fight, we fancy they do not view any statements of this kind, which have really no foundation, with a favourable eye, as such thoughtless statements, if they do no other harm, have a tendency to make the Government officials rather underestimate the gravity of the situation. The writer of this leaderette gives the panacea in "free" labour. We presume he refers to Assam, as "free" labour already exists in the Duars and Darjeeling. One has but to read the annual reports now appearing of Duars estates, to find out that "free" labour cannot be got at any price for some of the gardens there, so how would Assam fare in the competition if it was thrown open to "free" labour? The system of free labour has existed since the Duars first was opened out as a tea district, some 20 odd years ago, and Bengal, under which Government it is, naturally assists to foster its own industries, as opposed to outside ones, and views free recruiting with a favourable eye, instead of throwing every obstacle in the way of recruitment if the name of Assam is mooted. Whatever be the cause of it, there is no doubt that recruiting has had a set back the last three or four years. Whether this is due to the inimical attitude of Government officials in the recruiting districts, or to a "seven" years of famine instead of plenty, as has been the case in the Central Provinces, the fact remains the same, that the procuring, not of suitable coolies, but of coolies of any kind, in the well-beaten paths for such, has been almost impossible, even at fabulous prices.

FROM

CAPITAL
19th May, 1904

A Ditcher's Diary

I AM ALTOGETHER UNABLE TO OBLIGE MR. JUSTICE Tek Chand by doing what he thinks, entirely erroneously, is the duty of the Press: to propagate Prohibition. The sole duty of the Press is to tell the truth; and the truth about his team's 548-page report, of which ten thousand copies have been printed at immense cost to the public, is that the document is a monument to human stupidity. (A contemporary has already exposed the team's childish addiction to what must be called the artless aid of alliteration, besides quoting the glorious misprint: The "Bottle of Waterloo".) All I can suggest now, instead of crying over the paper already wasted, is future action, which is that somebody should prevent publication of the promised second volume. That is my adequate comment on the first. Attention does not appear to have been drawn yet to Chapter XIX in which diplomatic whisky, hard currency in corruption in "developing" countries, especially if there is a "free" Press, is dealt with. There is a statement showing quantities of spirits cleared by foreign missions for their official and personal use during 1963: here is ammunition for anyone seeking an American doctorate; that spirits, wines, beers and liquors are virtually lumped together (with no mention of liqueur—"strong alcoholic liquor sweetened and flavoured with aromatic substances", according to the C.O.D.) is perhaps proof of the team's innocence. The omission, however, from the list of an embassy recently figuring in some litigation seems a triumph of tact. The report does refer to the possibility that some foreign embassies are in regular business in duty-free irregular hooch. A colleague charitably suggests that many diplomats are paid no salaries and are required to live on their diplomatic privileges. On this I have a story. An Indian diplomatist abroad bought a car from a departing ambassador without prior sanction of a loan from New Delhi. He was duly reprimanded by the External Affairs Ministry for taking the loan out of the embassy funds; he was told that the receipt forwarded was unacceptable because it had not come from a regular motor-car dealer. The Indian diplomat wrote back, "The receipt was from a [I dare not name the region] diplomat; and if he is not a regular dealer in motor-cars, and various other things besides, who is?"

CONTINUITY OFTEN WEARS THE MASK OF COHERENCE. This piece of profundity occurred to me last week as I was listening to a friend who, after extensive travel in parts of the world where Indian news is scant, has just descended on the Indian scene and comprehends it not at all. (Do I? Do you?) He

asked me what was the immediate provocation for Sheikh Abdullah's release, just when Mr. Chagla at the United Nations was eloquently arguing a case the Sheikh was predictably unlikely to strengthen. My answer, such as it was, carried little conviction with my friend. If he was unable to compliment the Government of India on its handling of Kashmir and its lion let loose, he was full of admiration for the dexterity with which the Sheikh has been roaring since his release. Not a word out of turn, my friend thought, and yet his intentions made crystal clear to everyone—with the possible exception of Mr. Nehru and his advisers. (Who are they? I was asked; again, I was unable to answer.) In the decade of incarceration Sheikh Abdullah has certainly acquired a lot of diplomacy, I suggested. From the other side of the desk came a demurrer. The Sheikh's shrewdness and tact, my friend is convinced, are important articles. It has long been known that the Anglo-American interest in the Kashmir question is out of all proportion to their national interests involved; and I am always sceptical when Afro-Asian nationalists ascribe all their ills to foreign machinations. Yet it seems probable that the Sheikh has hidden mentors. What is manifest is that the decision to release Sheikh Abdullah was taken without any very clear calculation of the possible consequences. If the Sheikh is pressing his enormous bargaining advantages to the utmost, the Government of India has only itself to blame. Foreign observers should not be cursed if they discern in New Delhi's hesitancy a dormant guilty conscience. India rightly argues that any change in the status quo will be for the worse. My friend submits that a change, and for the worse, has been brought about by the Government of India itself, the change being the release of Sheikh Abdullah. Infinite is New Delhi's capacity to create embarrassments for itself!

THE ALMOST WORLDWIDE REACTION TO PRESIDENT Johnson's habit of lifting his Beagle dogs up by their ears strikes me as being, to put it mildly, a little surprising. I should have thought that most of us had better things to do than worry about other people's dogs. Characteristically, reactions to the discovery have differed. In the United States, opinion seems to be divided roughly according to whether or not one voted Republican at the last Presidential election. In Britain, where these matters are always taken more seriously than such comparatively minor ones as war, plague or revolution, the news has been received with much the same shocked horror as might be expected if Sir Alec Douglas-Home were caught shooting grouse on 11th August. Not since the Russians

grieved animal lovers by rocketing dogs into space has there been such a feeling of outrage in drawing rooms up and down that country; and not since Suez has the Atlantic alliance sustained such a blow. In India, the main reaction has been one of surprise that there should have been any reaction at all. But it must be admitted that the world is full of people who, either because they are on the verge of starvation and have other similarly petty problems of their own, or perhaps because they have no inherent sympathy with Beagle dogs, habitually do not show the concern over incidents of this kind which might properly be expected of their more sensitive fellows. We need bother ourselves no more about them. The only trouble, though, at least as far as I am concerned, is that I have to confess they include me. It might seem little short of heresy among animal lovers, but I cannot see why the practice of lifting Beagle dogs by the ears makes a man less qualified to be the President of the United States, or even implies that he is not otherwise capable of being a devoted husband and a loving father. There are parts of the world where a little playful cruelty is regarded as a mark of true affection, and appreciated as such by the objects of it. I once came across a working man in Paris who got drunk and beat his wife every Saturday evening; she worked hard and willingly all week as a lavatory attendant in order to earn enough money to buy him the liquor. If there is anybody who misses my point, I would advise them to search those horrified reports about President Johnson for any mention of protest on the part of the dogs. And I would remind the sceptical that a Beagle is a large animal and quite capable of defending its interest if it feels so inclined, even against the most powerful man in the world. The real lesson from all this, I suppose, is that people in high places should watch their public behaviour more closely. There was a similar outcry, if you remember, when Queen Elizabeth was caught surreptitiously licking her fingers after eating bread and butter at a dinner party.

TO SEE A SHAKESPEAREAN PLAY COMPETENTLY produced on the stage is always a pleasurable experience. This was certainly so in the case of *Much Ado About Nothing*, which The Amateurs presented at the New Empire last week as their contribution to the quatercentenary celebrations. The group's previous experiments in the sphere of Shakespearean drama have not always been an outstanding success, but the latest one was commendable indeed. *Much Ado About Nothing* is not, of course, one of Shakespeare's great plays; and, as a pleasant comedy, it suited the talent and the resources of The Amateurs well. Yet to ascribe their success to this fact alone would be doing them an injustice, for they had clearly worked hard through intensive rehearsals to achieve a degree of confidence and skill that one does not often associate with non-professional performances.

Type MK1, 15Amps automatic direct-to-line motor starters for motors up to 7.5 h.p.
Type MF1, 15Amps manually operated motor starters for motors up to 7.5h.p.
Switch-fuse gear—available as switch unit, fuse unit, and combined switch-fuse unit in ratings of 60/100 to 1000 Amps, 500 Volts

It is false economy to buy inferior switchgear. Of the finest quality, LT-LK is made in India in collaboration with the leading European manufacturers of switchgear—Laur Knudsen Ltd. of Denmark.

L&T also manufactures control panels (floor mounted, wall mounted or console type) for India's power generating and distribution stations and industrial installations.

SILICA BRICKS • FIRE BRICKS •
HIGH ALUMINA BRICKS •
INSULATING BRICKS • FIRECLAY
• FIRE CEMENT • STOPPERS •
SLEEVES • NOZZLES • TUYERS,
ETC.

THE BANK OF BANKURA LTD.

amalgamated with

THE UNITED INDUSTRIAL BANK LTD.

Registered Office:

7, Wellesley Place, Calcutta-1.

From 6th May, 1964.

THE BANK WITH SERVICE PLUS*

Even birds have the saving instinct. They know that a little at a time adds up into a store that helps in future. More than birds men need saving although it is not always an easy matter.

Saving with the United Bank is a pleasant habit.

- * You may open a Savings A/C with only Rs. 5
- * Your Saving earns interest @ 3% per annum.
- * You may draw by cheques.
- * You may draw 200 times in a year and as much of your money as you may need.

*Touch of personal
attention and
warmth of friendliness.

FDS-UBI

CAPITAL, 14th May, 1964.

Among the *dramatis personae*, Vimal Bhagat as Benedick and Anjali Malik as Beatrice—engaged as they were in "a merry war" and "a skirmish of wits" before they were tricked into marriage—were outstandingly good. Zahid Baig as Don Pedro, the prince, and Zia Ahmed as Claudio gave a competent performance too. Jacob K. Jacob as Leonato, the Governor of Messina, was a little weak and indecisive at the start, although he made up for it later; and Meera Bhagat as Hero, while looking as lovely as the character visualised in the play, seemed more subdued than she need have been. Ernani Giambuzzi, appearing otherwise in the minor rôle of an attendant, is to be complimented on his neat and imaginative management of the stage. The faults, such as they were, were minor; and it is no exaggeration to say that the evening, on the whole, was most enjoyable. I now look forward to *Othello*, which the Dramatic Club of Calcutta will be presenting next week, also as part of the quatercentenary celebrations. The D.C.C. and The Amateurs have in fact joined hands to commemorate the quatercentenary, and the Shakespeare Festival Committee, under whose auspices the plays are being staged, includes members from both organisations. The relatively recent phase of healthy rivalry between the two thus appears already to be leading to one of fruitful and cordial co-operation.

IF IN SPORT NATIONALISM IS BY NOW VERY MUCH an accepted thing, there is no reason, I suppose, why people should throw up their hands in horror when a mild provincialism makes its way into mountaineering. Congratulations, therefore, to the Bengali team that recently climbed Kabru Dome and just missed another difficult peak. Many of the boys were associated with the successful expedition on Nandaghunti and the gallant attempt on Mana two years later. I understand that mountaineering is fast becoming infectious in West Bengal, which is not really surprising. In fact, no people living right at the foot of the Himalayas could long ignore the call of the mountains. I am inclined to believe that, if there were no such distractions as politics which hereabouts often took the form of terrorism, Bengalis would have taken to mountaineering much earlier. The love of altitudes has ever been there; mist and mysticism have much in common besides phonetic affinity. Maharshi Debendranath Tagore took his son to Dalhousie when the Poet was a mere boy and travel was slow and painful. The Bengali team's recent success in the Sikkim Himalayas is the more remarkable because the equipment it could afford to carry was at its best inadequate. Although some romantics frown upon elaborate equipment—some go to the extent of disapproving even oxygen—a Himalayan expedition needs certain minimal aids besides a lot of courage. Here again I see something of the spirit of terrorism. Many are old enough to remember that those young men of the 'twenties and 'thirties attempted daring raids with weapons that children elsewhere would have scorned. It is a failure of leadership in Bengal that this indomitable spirit is so often dissipated in exercises in futility. I sincerely hope that the new enthusiasm for mountaineering will soon blossom in this State of gloom into many new creative ventures. The team received unexpected support from a large variety of quarters which, I hope, will not forget the boys on their return. Since most of the helpers were commercial concerns, it is in the field of commerce that I would like Bengali enthusiasm and adventure to regain their rightful place. I do not mind repeating that Bengal's culture, great as it is, still lacks a strong economic base.

AN ANGLICAN MINISTER WAS ASKED BY AN ORGANISATION interested in promoting better understanding between Jews and Gentiles to give a lecture to a Jewish Society. He chose Moses as his subject and was surprised to find that his views on the grand old patriarch did not appear to meet with the entire approval of his Jewish audience. After the talk he approached some of them and asked why.

"Well," said one, "we used to take a very good view of the old gentleman, but we now realise he made one big mistake. When he crossed the Red Sea if he had only turned right instead of left, the Israelis would have had the oil instead of the sand and the stones."

Guide for Investors

POOR OUTLOOK FOR NEW ISSUES

(BY A SPECIAL CORRESPONDENT)

THE outlook for the shares of new companies is considered poor since the confidence of investors has been shaken by the Budget. In spite of the marginal benefits given to the corporate sector in the form of special tax rebates for specified industries, the general prospect for equities has suffered greatly because of two new levies. The dividend tax will tend to restrain companies from paying higher dividends. It is unfortunate that this burden should be imposed on the corporate sector at a time when investors expect bigger dividends because of the Government's dear money policy. The growth prospects for equities have been affected by the capital gains tax on bonus shares. In view of these two imposts, combined with the fact that new companies generally take at least four or five years before they can declare dividends, investors have preferred to keep out of new shares. The apathy is increased by the heavy discount at which the majority of new shares are quoted.

The trend is unfortunate since it is essential to attract savings for industrial investment. The Chinese aggression towards the close of 1962, combined with the stiff Budget for 1963-64, had affected investment confidence. When Mr. T. T. Krishnamachari took over as Finance Minister, sentiment improved on his assurance that he would take steps to restore confidence in the capital market. Encouraged by his assurance, the new issue market too revived slightly during the last quarter of 1963. In the latest issue of *Company News and Notes* under the title "Study of Prospects issued during October-December 1963" compiled by Messrs S. M. Dugar and G. C. Banga, it has been shown that the capital issues during the quarter ended December 1963, amounted to Rs. 14.22 crores. This is an improvement over those for the previous two quarters. The striking improvement in preference shares during the quarter ended September 1963 was reversed in the quarter ended December 1963. Equity issues were more prominent than preference shares in the latter quarter, their share of the total capital issues being 86.3 percent and 13.7 percent, respectively, compared with 72.6 percent and 27.4 percent in the preceding quarter. There was a substantial increase in the percentage of shares taken by foreign collaborators, promoters, directors and their friends. There was, therefore, a corresponding decline in the percentage of shares offered to the public. Shares offered to the public amounted to 57.2 percent, those offered to promoters, directors and their friends formed 23.5 percent and those offered to foreign collaborators amounted to 16.7 percent. The corresponding percentages for the preceding quarters were 83.6, 14.1 and 2.3.

The participation of the financing institutions in the total share capital during the quarter ended December 1963 was significant when compared with their rôle in the preceding quarter. Their contributions amounted to 2.9 percent of the total capital issues, against nil in the previous quarter. About 51.2 percent of the project costs of various companies were met from the proceeds of share capital, while share capital formed only 35.2 percent of the total project costs in the preceding quarter. The next important source for financing

project costs were Indian commercial banks. Various financial institutions played an important rôle in providing long-term finance to meet the project costs of several companies. The Industrial Credit and Investment Corporation of India and the Industrial Finance Corporation advanced loans totalling Rs. 4.32 crores for financing project costs, while foreign agencies like the Agency for International Development, Washington and the U.S. Export-Import Bank provided funds to the extent of Rs. 2.81 crores. Foreign financial assistance in the form of share capital and long-term loans amounted to Rs. 5.55 crores during October-December 1963, compared with Rs. 4.84 crores for the quarter ended September 1963.

The total cost of raising capital amounted to 2.4 percent of project costs during the quarter ended December 1963, compared with 1.6 percent for the preceding quarter. The underwriting commission and brokerage accounted for 0.9 percent, against 0.7 percent in the preceding quarter while preliminary, pre-incorporation and other expenses on the capital issues accounted for 1.5 percent. The amount which was underwritten constituted 91.4 percent of the aggregate amount offered to the public by all the 23 companies which were surveyed. The corresponding percentage for the previous quarter stood at 83.7. Of the total amount, 75.5 percent was underwritten by institutional underwriters like Industrial Finance Corporation, Industrial Credit and Investment Corporation of India, State Financial Corporations, Investment Corporation of India, Life Insurance Corporation, general insurance companies and banks. The amount underwritten by these institutions accounted for 56 percent of the total issues in the preceding quarter. There was only one company which had appointed managing brokers. No payment, apart from reimbursement of expenditure actually incurred by them, was made to the promoters in connection with the capital issues.

Andrew Yule Jute Group Does Well

been operating at the maximum level.

Cheviot Mills Co. Ltd. has earned a profit of Rs. 37.56 lakhs, against Rs. 41.58 lakhs for 1961-62, after transferring Rs. 7.84 lakhs (against Rs. 7.87 lakhs) to depreciation. The taxable ordinary dividend of 25 percent, including an interim of 7.5 percent, has been repeated which amounts to a yield of 12.3 percent at the present price of Rs. 20.37 a share of Rs. 10 each. Taxation, including Rs. 2.50 lakhs for surtax on profits, is allocated Rs. 22.73 lakhs (against Rs. 12 lakhs), development rebate reserve Rs. 1.20 lakhs (against Rs. 6.73 lakhs) and general reserve Rs. 3 lakhs (against Rs. 12.49 lakhs). Gunny sales rose from Rs. 2.92 crores to Rs. 3.06 crores. Orders for machinery to expand modernisation of the fine side drawing, spinning and warp winding machinery up to 100 percent of the mill's registered loomage have been placed. Pre-beaming machines are being installed to cover all hessian looms. Orders have also been placed for 20 broad looms, together with all ancillary machinery, for the manufacture of carpet-backing cloth and for the construction of an extension to the main mill building for this purpose. In view of the large stock of jute which the mill has to carry, it has been found necessary to construct two more godowns. The estimated costs of these projects are Rs. 30 lakhs.

The profit of Delta Jute Mills Co. Ltd. has dropped from Rs. 38.24 lakhs to Rs. 37.85 lakhs, after providing Rs. 11.75 lakhs (against Rs. 12.20 lakhs) for depreciation. The taxable ordinary dividend has been increased from 12 percent to 16 percent, including an interim of 6 percent. The yield works out to 11.1 percent at the present price of Rs. 144 a share of Rs. 100 each. Taxation, including Rs. 2.90 lakhs for surtax on profits, absorbs Rs. 23.49 lakhs (against Rs. 13.65 lakhs), capital reserve Rs. 89,542 (against Rs. 1.84 lakhs) general reserve Rs. 3.50 lakhs (against nil) and development rebate reserve Rs. 96,000 (against Rs. 7.62 lakhs). The carry-forward amounts to Rs. 23,475, against Rs. 28,674 brought in. Gunny sales rose from Rs. 3.56 crores to Rs. 3.98 crores. Orders for machinery to extend modernisation of the fine side drawing, spinning and warp winding machine up to 100 percent of the mill's registered loomage has been placed. Pre-beaming machines are being installed for all hessian looms. The cost of the project has been estimated at Rs. 12 lakhs. The Central Warehousing Corporation has leased from the Company the major part of

Belvedere Mills for the storage of jute on account of the State Trading Corporation of India.

Orissa Minerals Pays the Same

THE profit of the Orissa Minerals Development Co. Ltd. for the year ended June 1963, has dropped from Rs. 6.83 lakhs for 1961-62 to Rs. 2.78 lakhs for 1962-63, after transferring Rs. 6.01 lakhs (against Rs. 6.02 lakhs) to depreciation, Rs. 7.03 lakhs (against Rs. 6.35 lakhs) to taxation and Rs. 6,000 to super profits tax relating to the previous year. A sum of Rs. 7.02 lakhs has been transferred from liability no longer required. The taxable ordinary dividend of 10 percent has been repeated which works out to a yield of 4.5 percent at the present price of Rs. 22.12 a share of Rs. 10 each. General reserve is allocated Rs. 80,000 (against Rs. 2 lakhs), statutory development rebate reserve Rs. 4,000 (against Rs. 1.41 lakhs) and staff compensation and pension reserve Rs. 27,778 (against Rs. 44,555). The carry-forward is Rs. 5,266, against Rs. 38,801 brought in.

Raisings of iron ore fell from 664,881 tons to 407,336 tons and despatches dropped from 650,797 tons to 386,749 tons. The output of manganese ore amounted to 57,528 tons, against 77,091 tons and sales declined from 64,166 tons to 54,031 tons. The directors have mentioned that the principal buyers have reduced their orders due to the relining of their blast furnaces and because of increased supplies of iron ore from their captive mines. The outlook for manganese ore has deteriorated further due to new sources of supply and because of the lesser dependence of the steel industry on the ore following technological advances in steel-making.

The total world production has been in excess of demand. The outlook for Indian manganese ore is not considered promising since the new sources of supply enjoy freight advantages over Indian ore. The Bolani mine is now equipped to produce and despatch at the rate of 2 million tons of iron ore a year. The Durgapur steel plant is expected to increase its offtake in the near future. An application has been submitted by the Company to the Agency for International Development, Washington, for a loan to meet the foreign exchange requirement of the expansion schemes. These projects are expected to produce 2 million tons of lump ore and 1 million tons of fines in order to meet the requirements of the Durgapur steel plant.

Indo-Burma Petroleum Repeats

THE directors of the Indo-Burma Petroleum Co. Ltd. have emphasised the increased competition in the report for the year ended December 1963. Sales in India were smaller than those for 1962. Sales in East Pakistan improved, but the

UNIVERSAL RADIAL DRILLING MACHINES

Armstrong Smith Ltd.

P. 17, MISSION ROAD, CALCUTTA-1

SOMEONE, SOMEWHERE HAS A SPECIAL ELECTRICAL PROBLEM

And **AEI** goes into action

The requirement: a microscope capable of magnification well over a million times. AEI's answer for the National Metallurgical Laboratory, Jamshedpur: the EM6. An electron microscope capable of direct magnification up to 120,000 times, the image it produces can be enlarged by photography well over a million times. The EM6 is being used to observe minute disorders in the arrangement of the atoms in a metal, an invaluable aid to metallurgists in their search for the Why and How of metal and alloy fatigue. Another highly sophisticated AEI instrument, the MS-3 Mass Spectrometer, is installed in the research laboratories of The Indian Association for The Cultivation of Science at Calcutta. It is used in the chemical and isotopic analysis of gases and volatile liquids; this institution is also equipped with AEI's RAYMAX-60 Diffraction Apparatus, used for quick accurate analyses of specimens. Precision AEI instruments like these are serving science the world over.

720 mile journey for oil

Three million tons of crude oil a year will soon be piped from the jungles of Assam to the refineries being built at Noonmati and Barauni. As a result, production of crude oil in Assam is expected to increase six times to three million tons per annum. The 720 mile pipeline makes 78 river crossings as it cuts through jungles, swamps and paddy fields. Radio signals giving temperatures, pressures and rates of flow along the pipeline will be received at a central headquarters. It will switch on by remote control the electrical motors operating valves and engine controls. Two independent communications systems will ensure absolute reliability. AEI is supplying part of it—a multi-channel carrier system and voice frequency telegraph equipment.

Ship to capture public imagination

'Canberra', the P. & O. Orient Lines' 45,000 ton passenger liner, is the newest and brightest addition to a proud fleet. Revolutionary in design, electricity has

helped in many ways to make the 'Canberra' a finer ship. Two of the world's largest marine propulsion motors, 42,500 shaft h.p. each, give her a swift, quiet 27½ knots. Electric drive allows the synchronising of propellers,

so reducing vibration. AEI has supplied this equipment and also the auxiliary turbine generators for the ship's power supply system, more than 90 miles of cable, and the turbine-compressors used in the air-conditioning plant.

Imagine 7000 horses in Bombay's docks

Last year, nearly three thousand ships entered Bombay docks to load and unload over 117 lakh tons of cargo. Without the cranes that swing these vast amounts of merchandise between wharves and ships, by day and night, the docks would come to a standstill. The cranes must be completely dependable. And that largely depends on the quality of their electrical equipment. As dock traffic increases, so new cranes must be installed. Seventy-two have been commissioned; they are equipped with AEI motors and controlgear totalling 5868 h.p. AEI will soon provide yet another eighteen sets of motors (totalling 1,314 h.p.) and controlgear for new cranes in Bombay's Alexandra Docks.

40 years is a responsible age

In India, AEI's activities date back about forty years and include association on the steel works at Durgapur, the important heavy electrical project at Bhopal and the Bhakra dam project. AEI has been manufacturing electrical equipment in India for over twenty years and a wide range of products is now serving industry and the home.

We don't usually indulge in name-dropping, but...

In our case it's justified. AEI is no newcomer. Its origins go back more than sixty years. Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, Siemens Edison Swan, Henley's, Ferguson Pailin, Birlec and Hotpoint. Worldwide, AEI operates 60 factories and employs 100,000 people. It produces everything electrical from lilliputian transistors to the world's biggest turbine generators.

Principal Products

Steam and gas turbines and generators • Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • Power and telephone cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters • Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

AEI

ASSOCIATED ELECTRICAL INDUSTRIES LIMITED
Represented in India by
ASSOCIATED ELECTRICAL INDUSTRIES (INDIA)
PRIVATE LIMITED, 18, Rajendra Nath Mukherjee
Road, Calcutta 1

AEI

Largest Supplier Of Electrical Equipment To India

profit margins in both the countries have shrunk. The Company did not trade in Burma during 1963. The exploration wells drilled in the U.K. failed to find oil or gas and it has now been decided to undertake a seismic survey over another part. The directors have been examining a number of projects which may offer suitable opportunities for investment.

The profit has amounted to Rs. 52.61 lakhs, against Rs. 54.64 lakhs, after transferring Rs. 6.28 lakhs (against Rs. 6.01 lakhs) to depreciation. An interim taxable ordinary dividend of 10 percent was paid earlier. The final taxable ordinary dividend of 7½ percent has been declared. A special distribution of 5 percent, subject to tax, has also been made to the ordinary shareholders since the final instalments of the agreed price for the acquisition of the Company's investments and marketing assets in Burma by the Government of that country, have been received. So the total distribution for 1963 amounts to the same figure of 22½ percent. At the present price of Rs. 22 a share of Rs. 10 each, the yield amounts to 10.2 percent. Taxation is allocated Rs. 31.15 lakhs (against Rs. 31.28 lakhs).

Good Outlook for Alcock, Ashdown

THE working results of Alcock, Ashdown and Co. for 1963 show an improvement over the previous year, with both sales and gross profit recording a rise. The increase in the gross profit is, however, much smaller, compared with the rise in the sales and work done. The gross profit at Rs. 30.85 lakhs shows an increase of hardly 6 percent, whereas sales and work done has risen by some 21 percent from Rs. 1.73 crores to Rs. 2.10 crores. The profit margin has been squeezed by the higher cost of stores consumed, enhanced wage bill and increased interest charges due to the substantial increase in borrowings. Appropriations include depreciation Rs. 3.81 lakhs (against Rs. 1.66 lakhs), development rebate Rs. 3.90 lakhs (against Rs. 48.412), taxation Rs. 9.78 lakhs (against Rs. 9.67 lakhs), general reserve Rs. 75,000 (against Rs. 4.80 lakhs), bonus for earlier years Rs. 34,996 (against Rs. 2.49 lakhs) and dividend reserve Rs. 10 lakhs. The dividend has been maintained at 19 percent, but it is on the increased capital, and the dividend distribution at Rs. 9.91 lakhs is about 10 percent more than in the previous year. The dividend is to be paid out of the dividend reserve. On account of the changes in the statutory tax deduction, the net dividend is placed at 15.2 percent, against 14.59 percent in the previous year, which also included a tax-free element and which benefit is no longer available.

The directors state that all the shops in the Company's defence works in Bombay were fully employed in one shift and most of them were also working partially or fully in the second shift. Improvement in turnover in the ship repair department has been maintained. The boat building yard was also fairly occupied with the construction of dredgers and barges. In his statement to the shareholders, the chairman, Mr. K. D. Ryall, says that 1963 was a period of consolidation and preparation for further advances and he has held out the hope of encouraging results for the current year, unless, of course, there are some material changes in the meanwhile. Progress to-date has been well maintained. The large quantities of steel received from indigenous producers and allocated from steel imports to cover the orders in hand for the next two years, resulted in the Company working overdraft and a very considerable increase in work-in-progress from

Rs. 44.39 lakhs to Rs. 1.485 crores by the end of the year. Since then, the overdraft has been substantially reduced, and as deliveries of fabricated structure increase, the work-in-progress figure should also come down. This, however, depends entirely on the receipts of steel from producers. The chairman says that while the overall steel position has considerably improved, there are still shortages in certain sections which are required for large Government contract that the Company has in hand for railway bridge girders and transmission line towers. With the decontrol of most of the categories of steel, these obstacles are likely to disappear. The Company has recently despatched to Nigeria its first export order for transmission line towers, and efforts are being made to secure further orders from abroad. The Bhavnagar extension which went into production last year and which is now working on one shift basis, is gradually building up its output. Provided necessary supply of steel is forthcoming, a considerable increase in output is expected this year. The boat building yard in Bhavnagar has received a further order for barges for the Gujarat Government and according to the present position of orders booked, the yard will be busy till the end of 1966.

Further progress is said to have been made in the diversification programme of the Company. The agreement for the manufacture of marine diesel engines has been finalised with Bergius Kelvin Co. of the U.K. Import licences for certain balancing machinery are awaited and the production of smaller horse-power engines is expected to commence by about the middle of 1965. Likewise, the Company has also made an agreement with Clyde Crane and Booth of the U.K. for the manufacture of cranes, other than the light industrial overhead travelling cranes, of up to 10-ton capacity, and the Government's approval is awaited.

B.I.C.C. Earns More

BRITISH Insulated Callender's Cables Ltd has done well during 1963. Sir William Mcfadden, chairman, has taken an optimistic view of the outlook in his statement circulated along with the accounts of the Company. (A fuller version of his statement was printed in the last week's issue of *Capital*.) The Company is expected to have another successful year in 1964. Sales and profits for 1963 have risen considerably. The group trading profit has improved by £4.2 million to £12.3 million, compared with that for 1962. There has been a substantial improvement in exports of the Company's products. B.I.C.C. has been busy in the sphere of railway electrification, particularly on the Euston-Crems scheme and in India. The Company has received many valuable contracts from the Indian railways for the latter's electrification schemes. Its overseas branches have made excellent progress.

Bisra Stone Lime Raises Dividend

THE Bisra Stone Lime Co. Ltd has increased the taxable ordinary dividend from 10 percent to 12.5 percent, including an interim of 5 percent, for the year ended March 1963. The yield amounts to 7.1 percent at the present price of Rs. 17.69 a share of Rs. 10 each. The profit has amounted to Rs. 13.51 lakhs, against Rs. 14.20 lakhs for 1961-62, after transferring Rs. 11.72 lakhs (against Rs. 8.07 lakhs) to depreciation, Rs. 9.40 lakhs (against Rs. 11.85 lakhs) to taxation and Rs. 1.10 lakhs to super

profits tax. Pension reserve is allocated Rs. 2.95 (the same), statutory development rebate reserve Rs. 1.93 lakhs (against Rs. 3.73 lakhs), general reserve Rs. 4.10 lakhs (against Rs. 2.50 lakhs). The carry-forward is Rs. 3,345, against Rs. 50,122 brought in. The output of limestone amounted to nearly the same figure of 1.5 million tons, but sales dropped slightly to 1.4 million tons. The production of dolomite rose from 455,052 tons to 497,869 tons and sales improved from 445,723 tons to 504,042 tons.

Andrew Yule Tea Group Results

THE results of the Andrew Yule group of tea Companies for the year ended December 1963, have been published. The profits of Rajgarh Tea Co. Ltd (an Assam garden) has dropped from Rs. 3.63 lakhs for 1962 to Rs. 1.59 lakhs for 1963, after providing Rs. 72,764 (against Rs. 71,147) for depreciation. The taxable ordinary dividend has been reduced from 17.5 percent to 12.5 percent, which gives a yield of 6.8 percent at the present price of Rs. 18.50 a share of Rs. 10 each. Taxation is allocated Rs. 68,000 (against Rs. 2.25 lakhs), development rebate reserve Rs. 7,000 (against Rs. 330) and general reserve Rs. 30,000 (against Rs. 40,000). The carry-forward is Rs. 36,997, against Rs. 38,418 brought in.

The crop declined from 2,307 quintals to 1,991 quintals due to the unfavourable weather. The average sale price showed a fall of 51nP a kilogram over that for 1962. The 1964 crop has been estimated at 2,300 quintals. Capital expenditure of Rs. 1.81 lakhs has been incurred on the extension of the tea acreage and for the construction of labour and staff quarters.

Basmatia Tea Co. Ltd (an Assam garden) has made a profit of Rs. 93,901, against Rs. 3.94 lakhs after transferring Rs. 1.18 lakhs (against Rs. 1.09 lakhs) to depreciation. The taxable ordinary dividend has been reduced from 20 percent to 7½ percent, which works out to a yield of 3.1 percent at the present price of Rs. 24.25 a share of Rs. 10 each. Taxation absorbs Rs. 45,000 (against Rs. 2.42 lakhs) and development rebate reserve Rs. 2,300 (against Rs. 600). The carry-forward amounts to Rs. 36,156, against Rs. 46,930 brought in. The crop declined by 483 quintals to 2,385 quintals and the average sale price dropped by 20nP a kilogram to Rs. 6.40 a kilogram. The crop was affected by an attack of red spider but stringent precautions have been taken to prevent a similar attack. The 1964 season has started well, and it is expected that the crop will show a satisfactory recovery. It has been estimated at 2,900 quintals for 1964. Extension of the tea area of 3.06 hectares was implemented towards the close of 1963. Although the directors fixed the extension programme for four hectares a year originally they have now decided to increase the annual target to eight hectares from the cold weather of 1965-66.

Podar Mills Fares Well

THE Podar Mills reports satisfactory results for 1963. Sales of cloth, yarn, waste and imported colours and chemicals have risen by a little over 7 percent from Rs. 2.60 crores to Rs. 2.79 crores, and the gross profit has gone up by nearly 20 percent from Rs. 21.96 lakhs to Rs. 26.08 lakhs. After providing Rs. 13.83 lakhs (against Rs. 6.40 lakhs) for depreciation, Rs. 5.10 lakhs (against Rs. 1.25 lakhs) for development rebate and Rs. 2.75 lakhs (against Rs. 1 lakh) for

taxation, the net profit amounts to Rs. 3.26 lakhs, against Rs. 12.29 lakhs in the preceding year. Taking into account Rs. 4.09 lakhs (against Rs. 8,869), being profit on the sale of fixed assets and Rs. 1 lakh, being excess provision for taxation for earlier years, and including Rs. 1.23 lakhs brought forward from the previous year, the disposable surplus amounts to Rs. 9.58 lakhs. From this, the directors have provided Rs. 2.37 lakhs (against Rs. 5.34 lakhs) for bonus to staff and workers. Preference dividend takes up Rs. 57,500 (the same) and equity dividend of 12 percent will absorb Rs. 6.60 lakhs (the same). After making various appropriations, there remains a small balance of Rs. 3,646 to be carried forward.

The directors state that since the textile industry's cost structure has been continuously under pressure, and cloth prices have been pegged at the 1960 level, the Company's performance during 1963 can be considered quite satisfactory. The Company is going ahead with its programme of modernisation and rehabilitation. During 1963, the Company added 5,400 spindles to its spinning capacity, thereby increasing the total spindleage to 38,000. The entire spinning department of the mill is being worked three shifts while the weaving department is working full two shifts and two-thirds of the capacity is worked third shift. The Company spent about Rs. 19 lakhs on modernisation and rehabilitation last year, thus spending nearly Rs. 1 crore in the past eight years. As a result of this, the Company has 75 percent of spinning department with new machines. The weaving department, too, has been modernised with the latest Barber Colman winding and warping machines and Schweiter auto-pirn winders and Lessona cone winders. The mill is now a highly rationalised unit with very low complement of labour.

The Company proposes to install a modern dyeing, bleaching, finishing and printing plant in Bombay at a cost of nearly Rs. 50 lakhs. It has already received a printing quota of 2 million yards a year. The Company also proposes to purchase additional new machinery besides installing additional spindles and looms to the Bombay unit. This programme of modernisation, rehabilitation and expansion is estimated to cost approximately Rs. 40 lakhs. The construction work of the new spinning unit of 25,000 spindles in Jaipur has started. Orders have been placed for indigenous machinery like ring frames, cards, doublers and the I.C.I.C.I. has agreed to give about Rs. 24 lakhs of foreign exchange loan for the import of other machinery like blow room line, fly frames, draw frames, combing equipment, doubler winders, etcetera. The Jaipur unit which is being built with capital assets worth about Rs. 1.5 crores is expected to commence production during the first half of 1965. The Company's subsidiary—the Jaipur Spinning and Weaving Mills Ltd—has also undertaken a substantial expansion programme. Its spinning capacity will be increased this year by additional 11,200 spindles, thereby having a total capacity of 26,880 spindles. The other subsidiary—the Sassoon and Alliance Silk Mill Company—has made very good progress. The Company has a share capital of Rs. 65 lakhs of which equity capital amounts to Rs. 55 lakhs. Its reserves and surplus total Rs. 54.8 lakhs. Its gross block of Rs. 1.49 crores has been written down to Rs. 88.56 lakhs. The Rs. 10-paid share of Podar Mills is currently quoted around Rs. 12, offering a gross return of 10.9 percent.

The Company's expansion schemes, including the setting up of the new mill in Jaipur and the processing plant in Bombay, are proposed to be financed partly by borrowing on the

fixed assets for which arrangements have been made and partly by raising additional capital of Rs. 95 lakhs, consisting of Rs. 55 lakhs in equity shares of Rs. 10 each and Rs. 40 lakhs in preference shares of Rs. 100 each.

The shares will be offered simultaneously to the Company's shareholders as rights and to the public. The necessary consent of the Controller of Capital Issues has been obtained. After the completion of the expansion programme, the Company's turnover is expected to rise to around Rs. 6 crores a year.

Ambika Silk Mills Pays Less

ALTHOUGH the dividend has been reduced from 20 percent to 15 percent, including silver jubilee payment of 2.5 percent, the working results of Ambika Silk Mills Ltd for 1963, show an improvement over the previous year's performance. Sales have risen from Rs. 1.78 crores to Rs. 2.42 crores, and the gross profit has gone up from Rs. 31.35 lakhs to Rs. 33.98 lakhs. The dividend for 1963 is on the increased capital of Rs. 25 lakhs (against Rs. 20 lakhs in 1962); even so, the total distribution is smaller at Rs. 3.75 lakhs, against Rs. 4 lakhs. Apart from the fall in the net profit as a result of larger allocations, especially for taxation, the directors have considered it advisable to reduce the dividend in order to strengthen the Company's internal resources by building up reserves.

Appropriations of the year's profit include depreciation Rs. 3.55 lakhs (against Rs. 3.02 lakhs), development rebate Rs. 27,150 (against Rs. 42,000), taxation Rs. 20.35 lakhs (against Rs. 17.31 lakhs), goodwill account Rs. 5,000 (the same) and general reserve Rs. 7.70 lakhs (against Rs. 3.50 lakhs). After making various allocations and some minor adjustments, there remains a balance of Rs. 21,367 to be carried forward, against Rs. 26,452 brought in. The proposed dividend is to be paid from general reserve. Continuing the policy of renovation, replacement and modernisation, the Company placed orders for further machinery worth Rs. 8.72 lakhs during 1963 and delivery is expected this year. The directors state that with the installation of new machinery, the profit earning capacity of the Company will be enhanced. Its fabrics continue to be in good demand.

Gokak Mills Raises Dividend

GOKAK Mills has done well in 1963. Sales have risen by about 13 percent from Rs. 4.29 crores to Rs. 4.84 crores, and the gross profit has increased by about 9 percent from Rs. 58.30 lakhs to Rs. 63.59 lakhs. The improved performance has encouraged the directors to step up the dividend from 12 percent to 14 percent. Appropriations include depreciation Rs. 13.27 lakhs (against Rs. 14.30 lakhs), development rebate Rs. 90,000 (against Rs. 1.22 lakhs), taxation Rs. 24.25 lakhs (against Rs. 20 lakhs), additional bonus for the previous year Rs. 1.91 lakhs (against Rs. 1.99 lakhs), staff gratuity reserve Rs. 15,000 (against Rs. 1.58 lakhs), contingency reserve Rs. 3.56 lakhs (against Rs. 3.35 lakhs), general reserve No. 1 Rs. 5.82 lakhs (against Rs. 64,000) and dividend reserve Rs. 10.26 lakhs (against Rs. 8.80 lakhs). No provision has been made for debenture

CAPITAL, 14th May, 1964.

redemption reserve which had received Rs. 4 lakhs in the previous year. The directors have taken credit for a sum of Rs. 1.34 lakhs (against Rs. 94,000), being the excess provision of previous years no longer required. The proposed dividend of 14 percent is to be paid of dividend reserve, and it will absorb Rs. 10.25 lakhs. After making various appropriations and some minor adjustments, there remains a nominal balance of Rs. 740 to be carried forward, against Rs. 244 brought in. No provision has been made for surtax or the dividend tax, the liability in this matter being estimated around Rs. 2.90 lakhs and Rs. 65,900, respectively, and the amount credited to contingency reserve will take care of this liability. The directors have not made any provision for the additional depreciation allowed for third-shift working, and this is estimated around Rs. 3.87 lakhs.

The directors state in their report that the Company's results for 1963 can be considered as satisfactory, especially when the working conditions which prevailed throughout the year are taken into account. In spite of considerable increases in costs since January 1961, no upward revision was permitted in yarn prices until February 1963, when the prices of counts up to 40s were increased and those of above 40s decreased. As the bulk of Gokak Mills' production is in counts under 40s, the price revision has benefited the Company. The directors have, however, added that in recent months, there have been further substantial increases in costs, but there has been no change in yarn prices. There was an increase in the Company's exports last year, but competition in export markets is increasing, particularly from countries like Pakistan, Hongkong and Japan, which have the advantage of cheap cotton and modern machinery and, unfortunately, today, the prices of Indian cotton are quite out of parity with world cotton prices. The Company has a paid-up capital of Rs. 73.21 lakhs, which is supported by reserves and surplus amounting to Rs. 95.68 lakhs. The gross block of Rs. 2.44 crores has been written down to Rs. 93.86 lakhs. The Rs. 100-paid share of Gokak Mills is quoted around Rs. 178 cum-dividend.

Ganges Rope Maintains Dividend

THE Ganges Rope Co. Ltd has maintained the taxable ordinary dividend at 20 percent for the year ended December 1963. The yield works out to 8.5 percent at the present price of Rs. 2.36 a share of Rs. 100 each. The profit has improved from Rs. 11.60 lakhs for 1962 to Rs. 14.62 lakhs for 1963, after providing Rs. 1.98 lakhs (against Rs. 1.59 lakhs) for depreciation. Taxation absorbs Rs. 9.76 lakhs (against Rs. 6.50 lakhs) and surtax on profits Rs. 1.14 lakhs. Development rebate reserve is allocated Rs. 13,740 (against Rs. 7,961) and general reserve Rs. 90,000 (against Rs. 80,000). The carry-forward is Rs. 6,552, against Rs. 17,856 brought in.

Sales rose from Rs. 1.05 crores to Rs. 1.13 crores. The directors say that taxation has absorbed 74 percent of the profit, against 71 percent for 1962. They add that unless the value of import licences is increased, the shortage of essential raw materials will be aggravated. The working during the current year is likely to be adversely affected.

Walford Transport Conversion Offer

WALFORD Transport Ltd proposes to convert 210,200 preferred ordinary shares of Re. 1 into 210,000 ordinary shares of Re. 1 each fully-paid up ranking simultaneously with the

CAPITAL, 14th May, 1964.

existing ordinary shares of the Company in all aspects. When the Company was floated in 1920, its capital consisted of only ordinary shares of Rs. 10 each. Due to subsequent adverse business conditions, it suffered losses and the value of each ordinary share was written down to Rs. 2.50 in 1925-26. Due to depression in the business of the Company in subsequent years, it had to reduce the value of its ordinary shares again in 1939 to Rs. 2 a share.

At the time of such reduction, each ordinary share was, however, sub-divided into one ordinary share of Re. 1 each and one preferred ordinary share of the same face value. The latter were given special rights to rank in priority to the ordinary shares in relation to dividends and return of capital in case of winding-up of the Company so that shareholders who had suffered such losses could obtain the benefit of the preferential rights for at least half of the shares originally held by them in the capital of the Company. Business conditions, however, improved in subsequent years, and the Company earned sufficient profits to pay substantial dividends to the preferred ordinary shareholders during the past few years. Accordingly, it is considered unnecessary to maintain two different classes of shares, namely, preferred ordinary shares and ordinary shares, in the Company's capital.

Prospects for Sankey Wheels

SANKEY Wheels has withstood the severe slump in the capital market well, and these shares have remained above par ever since they came on the market. At a time when several popular scrip of new companies can be had well below par, the Rs. 10-paid share of Sankey Wheels is quoted around Rs. 11.40, and the investors' confidence in the Company's future seems well justified. Mr. C. C. Desai, alternate chairman of Sankey Wheels, told the shareholders' annual meeting last week that the Company's lorry wheel project in Durgapur had been progressing most satisfactorily, and, barring unforeseen circumstances, initial production of commercial vehicle wheels was likely to start within a few months. It would, however, take some more time before production could be stabilised. As for the car-wheel plant acquired from Guest, Keen, Williams, as of 1st June, 1963, it was proposed to move this plant to Durgapur after the lorry-wheel plant had been commissioned. This plant is capable of producing on single-shift working many more wheels than are currently required by the motor-car manufacturers. For the present, this plant has been hired to Guest, Keen, Williams. Sankey Wheels purchased wheels produced in this plant, and sold them to various motor-vehicle and other manufacturing units in the country. The Company has been fortunate in having the benefit of an established market for these wheels from its very first year.

The Company has received import licences for raw materials required for the commencement of initial production of lorry wheels at the Durgapur factory. As the Company goes into normal production, its raw material requirements will naturally increase. The chairman has expressed the hope that the Government would continue to extend its full support concerning the supply of raw material. But the Company is also making active efforts to develop indigenous sources of supply of raw materials to the extent possible in order to save valuable foreign exchange. The chairman says that considering the needs of power and transport indus-

tries as well as the requirements of defence services and the inevitable mechanisation of farms, the demand for the Company's products is bound to grow substantially in due course. The Company's turnover during the current year is expected to be of the order of about Rs. 65 lakhs. Mr. Desai assured shareholders that they would not have to wait too long for the dividend. The Company is said to have dropped the proposal to manufacture tank wheels because of the restricted demand for them. But it intends to undertake the manufacture of tractor wheels at the appropriate time.

Escorts to Issue Bonus Shares

ESCORTS Ltd has shown a pre-tax profit of Rs. 37.99 lakhs for 1963, compared with Rs. 37.29 lakhs for 1962. After providing Rs. 13 lakhs (against Rs. 15.11 lakhs) for taxation, the net profit amounts to Rs. 24.99 lakhs, compared with Rs. 18.98 lakhs. The net profit has been arrived at after providing Rs. 15.31 lakhs (against Rs. 10 lakhs) for depreciation, Rs. 2.34 lakhs (against Rs. 5.66 lakhs) for development rebate reserve and Rs. 2.06 lakhs for trade marks partly written off. Total sales amounted to Rs. 4.51 crores, against Rs. 3.45 crores. Sales of the products manufactured by the Company totalled Rs. 2.63 crores, against Rs. 1.29 crores. A sum of Rs. 20 lakhs has been transferred to general reserve, so total reserves amount to Rs. 78.08 lakhs. This will be reduced by Rs. 22.40 lakhs after the issue of the bonus shares.

The directors have recommended the issue of bonus shares in the ratio of one bonus share for every five shares held by capitalising Rs. 22.40 lakhs out of the share premium account standing at Rs. 30.95 lakhs. These bonus shares will be exempt from tax in the hands of the shareholders. The consent of the Controller of Capital Issues for the issue of bonus shares has already been received. The Company has added new industrial units for the manufacture of such additional products as motor-car shock absorbers, automatic centre buffer couplers, railway pneumatic aid and vacuum brakes.

Standard Coal Earns More, Pays Same

THE Standard Coal Co. Ltd has earned a profit of Rs. 1.37 lakhs for the year ended December 1962, compared with Rs. 1.22 lakhs for 1961, after providing for all charges. The taxable ordinary dividend of 10 percent has been maintained. It amounts to a yield of 9.6 percent at the present price of Rs. 10.44 a share of Rs. 10 each. Taxation is allocated Rs. 49,088 (against Rs. 88,735). General reserve absorbs Rs. 40,000 (against nil) and the carry-forward amounts to Rs. 18,570, against Rs. 38,908 brought in. The Company's portfolio is representative of investments which are quoted in the Calcutta Stock Exchange with the exception of some shares costing Rs. 1.50 lakhs for which no quotations are available. The total market value of the investments for which quotations are available, together with unquoted investments, amounted to Rs. 32.51 lakhs as on 31st December, 1962.

The sale price for the Swardih colliery was received some years ago, but the formal sale deed could not be completed pending permission from the State Government for the transfer of this coal-bearing property. It has recently been acquired by the National Coal Development Corporation Ltd. The Company's claim for compensation is being pursued. The

Standard colliery property was sold and the price was received in 1952, but the Company did not obtain permission from the Government of Bihar to transfer the property. If permission is not meanwhile received,

the liability for the minimum royalty from 1952 to 1962 amounting to about Rs. 2.28 lakhs, will remain with the Company. The property has not been worked since the sale, but the ostensible buyer is in possession of the

HOW SHALIMAR WORKS ? ...No. 9 Iron Founding

Founding started in the Middle Ages making suitings for Knights by melting down pigs. When pigs became scarce, Alchemists invented a substitute which they named "Pig" iron. Today this synthetic material is universally used throughout the industry in producing scrap iron which is much in demand for making pigs and chapletts.

Ondal Coal Repeats

THE results of the Ondal Coal Co. Ltd for the year ended December 1962 has shown a profit of Rs. 37,340, against Rs. 82,912 for 1961, after providing Rs. 7,265 (against Rs. 7,812) for depreciation and Rs. 58,042 (against Rs. 97,436) for taxation. The taxable ordinary dividend of 7.5 percent has been repeated, which works out to a yield of 5.6 percent at the present price of Rs. 13.50 a share of Rs. 10 each. The carry-forward is Rs. 9,250, against Rs. 45,060 brought in. Raisings amounted to 153,984 tons and despatches to 158,797 tons. The arrangements for raising and selling coal from the Religara colliery have continued to work satisfactorily. The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of the shares in the Karanpura Mining Syndicate, 2,999 ordinary shares in Coal Shipments Ltd and 25,000 ordinary shares in Chora Coal Co. Ltd for which no quotations are available. The market value of investments of which quotations are available amounts to Rs. 13.07 lakhs.

Kalyanpur Lime and Cement Earns More

KALYANPUR Lime and Cement Works Ltd has earned a trading profit of Rs. 33.49 lakhs for 1963, compared with Rs. 33.14 lakhs for 1962. The net profit has risen from Rs. 14.60 lakhs to Rs. 17.78 lakhs, after providing for depreciation and taxation. The taxable ordinary dividend of 8 percent has been declared and the payment of preference dividends has been brought up to date. The carry-forward amounts to Rs. 5.05 lakhs, against Rs. 9.87 lakhs brought in. The output amounted to 149,169 tons, against 141,846 tons. The Company proposes to extend the capacity by a further 200,000 tons by the end of 1965.

Brushware Pays the Same

THE profit of Brushware Ltd has risen from Rs. 43,371 for 1961-62 to Rs. 1.59 lakhs for the year ended November 1963, after providing Rs. 1,227 (against Rs. 948) for depreciation, Rs. 248 for development rebate reserve and Rs. 85,654 (against Rs. 21,654) for taxation. The taxable ordinary dividend of 8 percent has been repeated and paid out of general reserve. The latter is allocated Rs. 76,000, leaving a carry-forward of Rs. 1,299, against Rs. 3,967 brought in. Sales rose from Rs. 6.15 lakhs to Rs. 11.01 lakhs due to the increased orders from the Government.

Dalmia Cement (Bharat) Earns Less

DALMIA Cement (Bharat) Ltd has earned a trading profit of Rs. 1.34 crores for the year ended December 1963, compared with Rs. 1.47 crores for 1962. The taxable ordinary dividend of 12 percent has been repeated. It works out to a yield of 9 percent at the present price of Rs. 13.31 a share of Rs. 10 each. Depreciation is allocated Rs. 20.30 lakhs (against Rs. 22.23 lakhs), development rebate Rs. 81,700 (against Rs. 97,300), rehabilitation reserve Rs. 1.91 lakhs, taxation Rs. 50.50 lakhs (against Rs. 70.50 lakhs),

development reserve Rs. 4.38 lakhs (against Rs. 4.99 lakhs) and general reserve Rs. 26.50 lakhs (against Rs. 13.50 lakhs).

Referring to the smaller profit, the directors pointed to the increased production costs. Lower despatches of cement, potteries and iron ore have affected the results. The Government's unrealistic formula in relation to packing charges has been responsible for the fall in earnings. The receipt of only Rs. 11.59 lakhs (against Rs. 24.67 lakhs) on account of the Company's share of profit from the partnership business in dead-burnt magnesite has contributed to the smaller profit. The production and despatches of dead-burnt magnesite have declined. The lower tax provision has been due to the replacement of the super profits tax by surtax on profits and because of the tax concessions allowed to the industry. The production of cement has suffered due to the stoppage of one of the factories for repair. The shortage of gypsum has also contributed to the smaller production. The ceramics division has done better. The Company has used the services of Yugoslav experts to improve the output and quality of pottery goods manufactured by the Company.

Sales of iron ore declined from 150,000 tons to 114,000 tons. Because of the Company's contract with the Minerals and Metals Trading Corporation of India Ltd, the balance of 80,000 tons of ore will be supplied by June 1964. The Company hopes to receive a fresh contract for the supply of 170,000 tons of high-grade iron ore for export to Japan against the Corporation's contract. It is also hoped that Japan may enter into a long-term contract for taking Indian ores from 1965. The Company has, meanwhile, been finalising plans to extend mining activities and to install a ropeway from the mines to the rail-head. Steps have been taken to explore the possibility of exporting dead-burnt magnesite. It is proposed to amalgamate the Magnesite Corporation of India Ltd, a subsidiary, with Dalmia Cement itself.

New Name of General Tyres

GENERAL Tyres Ltd has decided to change the name of the Company to Incheek Tyres Ltd, subject to the approval of the Central Government. The change is being made to avoid the similarity to the name of General Tire and Rubber Company of the U.S.A. The U.S. Company has registered the word "General" as a trade mark. So the Company had filed a suit in the Bombay High Court praying for an injunction against Tyres Ltd transacting business under its present name. Although the latter Company contested the suit, it has decided to alter its name in order to remove all possibility of any confusion between the name of the Indian Company and that of the U.S. Company. The suit has accordingly been disposed of by the Bombay High Court. The Registrar of Companies, West Bengal, has confirmed that the word "Incheek" may be adopted as a part of the Company's name.

Loans for Coromandel Fertilisers

LOANS totalling \$44,597,000 were recently signed in Washington for the Coromandel Fertilisers Ltd. Loans by the U.S. Export-Import Bank and the Agency for International Development will be used for setting up a \$68-million fertiliser plant in Visakhapatnam—the first private venture in this sphere in India. The International Minerals and Chemical

Corporation and the California Chemical Company—along with the Indian firm of E.I.D.-Parry Ltd—will be partners in Coromandel Fertilisers Ltd.

Industrial Containers Raises Dividend

INDUSTRIAL Containers Ltd has increased the taxable ordinary dividend from 10 percent for 1962 to 30 percent for the year ended December 1963. The yield amounts to 12.5 percent at the present price of Rs. 24 a share of Rs. 10 each. The profit has risen from Rs. 2.90 lakhs to Rs. 5.86 lakhs, after providing Rs. 76,454 (against Rs. 85,677) for depreciation and Rs. 11.39 lakhs for taxation. Development rebate reserve is allocated Rs. 246 (against Rs. 1,420) and general reserve Rs. 2.26 lakhs (against Rs. 2.13 lakhs). Sales rose from Rs. 74.85 lakhs to Rs. 1.10 crores. The demand for the Company's products rose greatly due to the emergency.

Alembic Glass Maintains Dividend

THE Alembic Glass Industries Ltd has fared badly during 1963. Despite an increase of about 9.5 percent in the sales from Rs. 2.01 crores to Rs. 2.20 crores, the gross profit of the Company is down by about 26 percent from Rs. 45 lakhs to Rs. 35.86 lakhs. The dividend, however, has been maintained at 12 percent, but the total distribution is a little larger as the new shares rank for proportionate dividend. Allocations include development rebate Rs. 1.30 lakhs (against Rs. 1.10 lakhs), taxation Rs. 16.80 lakhs (against Rs. 20 lakhs), general reserve Rs. 1 lakh (against Rs. 6.50 lakhs), surtax and additional tax Rs. 1.40 lakhs (against Rs. 3 lakhs) and dividend Rs. 13.99 lakhs (against Rs. 12.12 lakhs). A sum of Rs. 1.76 lakhs (against Rs. 1.61 lakhs) has been written back, being excess provisions no longer required. After making various appropriations, there remains a surplus of Rs. 15,521 to be carried forward, against Rs. 10,284 brought in. The fall in gross profit despite larger turnover is attributed to increased competition which obliged the Company to reduce the selling prices of its products. It has negotiated a loan of Rs. 1 crore from the Industrial Finance Corporation for the expansion of its factory in Baroda, and the establishment of a factory in Bangalore, which is expected to go into production in January 1965.

Camphor Plant Starts Commercial Production

CAMPBOR and Allied Products Ltd has started commercial production of synthetic camphor from indigenous turpentine at its plant in Clutterbuckganj in Uttar Pradesh. The plant, first of its kind in India, and claimed to be very modern, went on stream on 29th April. Trial production had been taken up in February. The chairman of the Company, Mr. C. C. Desai, told newsmen recently that the Company expected to market 450 tons of camphor during the remaining eight months of the year. In spite of the complicated manufacturing processes involved, the Company seems optimistic about increasing production to the installed capacity of 900 tons a year, within a short period of time. When in full production, the Company will be able to meet all the requirements of the country, and thereby save something like Rs. 36 lakhs a year of foreign exchange, which is now being spent on camphor imports. Necessary arrange-

CAPITAL, 14th May, 1964.

ments for the sale of the entire production of camphor on a guaranteed basis have been finalised. The retail selling price of indigenous camphor in tablet form is expected to be around Rs. 28 to Rs. 30 a kilogram.

The salient feature of the Company's camphor plant is the fractional distillation of Indian turpentine on a commercial scale which will make available for industrial use, for the first time, major constituents of turpentine, besides pinene, such as carene and longifolene. The Company has attached a modern research laboratory to the plant in order to develop the know-how required for the utilisation of the by-products of the camphor plant. The Company is finalising plans for the manufacture of various industrial chemicals such as aromatic chemicals, turpene hydrates, para menthane, carene hydro-peroxide, meta cresol, acetone, synthetic resins and synthetic pine oils, from the by-products. This will also help to save some valuable foreign exchange which is being spent on importing these industrial chemicals. The Company is also setting up a plant for the manufacture of formic acid and the plant is expected to start production by October 1965. With the implementation of these various plans, the Company expects to establish the first integrated terpene chemical industry in the country based on Indian turpentine. The Rs. 100-paid share of Camphor and Allied Products is at present available around Rs. 91.

Alembic Chemical Fares Well

THE Alembic Chemical Works Co. Ltd reports highly encouraging results for 1963. Sales are higher by about 16 percent at Rs. 4.10 crores, against Rs. 3.53 crores, and the gross profit has risen by nearly 17 percent from Rs. 63.28 lakhs to Rs. 74.11 lakhs. The dividend has been maintained at 12 percent, but since it is on the increased capital, the total distribution among equity shareholders will amount to Rs. 17.34 lakhs, against Rs. 13.88 lakhs in 1962. After providing Rs. 23.37 lakhs (against Rs. 20.88 lakhs) for depreciation, Rs. 7.92 lakhs (against Rs. 4.66 lakhs) for development rebate and Rs. 18.75 lakhs (against Rs. 16.25 lakhs) for taxation, the net profit for 1963 amounts to Rs. 20.59 lakhs, against Rs. 18.69 lakhs in the preceding year. With Rs. 82,986 brought forward and including a sum of Rs. 3.54 lakhs (against Rs. 8.12 lakhs), being excess provisions made in earlier years, but now no longer required, and Rs. 35,765 being the net profit on the sale of investments, the disposable surplus amounts to Rs. 25.32 lakhs. Out of this, the directors have provided Rs. 1.23 lakhs (against Rs. 2.98 lakhs) for donation, Rs. 3.50 lakhs (against Rs. 6.50 lakhs) for general reserve and Rs. 50,000 (against Rs. 1.50 lakhs) for gratuity reserve. Equity dividend absorbs Rs. 17.34 lakhs (against Rs. 13.88 lakhs) and preference dividend takes up Rs. 83,000 (against Rs. 87,000). After making various appropriations, there remains a balance of Rs. 16,265 to be carried forward. The Company has a paid-up capital of Rs. 1,595 crores, of which equity capital amounts to Rs. 1,445 crores which is supported by reserves and surplus amounting to Rs. 91.51 lakhs. The gross block valued at Rs. 3.54 crores has been written down to Rs. 2.15 crores. The Rs. 100-paid share of Alembic Chemical is quoted around Rs. 162.50.

Share Offer from Deepak Insulated Cable

DEEPAK Insulated Cable Corporation Ltd, which has been jointly promoted by Kirloskar Electric of Bangalore, Jyoti Ltd of Baroda and

CAPITAL, 14th May, 1964.

Bombay Metal Syndicate of Bombay, to undertake the manufacture of enamel-covered copper wires, popularly known as magnet wires and winding wires, and double and triple paper-covered copper wires and strips is offering 17,000 equity shares of Rs. 100 each for public subscription. The annual capacity of the plant, which will be located in Bangalore, will initially be 650 tons of enamelled copper wires and 200 tons of single, double and triple paper-covered copper wires and strips. The capacity will eventually be stepped up to double the initial capacity. The manufacturing programme of the Company covers a wide range of winding wires, enamelled, super-enamelled wires, solderable enamelled wires, oil-varnish coated wires, single, double and triple paper-covered conductors and strips to cater to the varying needs of the fast-growing electrical industry in the country. The manufacturing facilities will include modern wire drawing plants, enamelling plants and a testing laboratory equipped with modern electronic testing machines. The Company has secured the technical collaboration of the well-known Japanese firm of Furukawa Electric Co. Ltd, Tokyo, which will render comprehensive engineering and technical services and know-how for construction and operating phases of the project.

The demand for enamelled copper wires and paper-covered copper wires and strips in the country at present is considerably greater than the supply and with the growth of electrical industries, it is steadily growing. By the end of the third plan, it is expected to reach 30,000 tons annually. The current production of enamelled copper wires and strips is only 5,000 tons a year. It is estimated that by the end of 1965, the total licensed capacity together with the existing installed capacity will reach only up to 20,000 tons. The market for the Company's products is thus assured. The prospective investor can take considerable comfort from the fact that the electric winding wires industry has been included among "key" industries by the Government of India.

The capital cost of the project, which is to be implemented by Deepak Insulated Cable Corporation, is estimated at Rs. 60 lakhs of which Rs. 15 lakhs will be the cost of the imported component. The Company has already obtained the import licence for the procurement of plant and equipment from abroad. The I.C.I.C.I. has granted the required loan of Rs. 15 lakhs. The authorised capital of the Company will be Rs. 50 lakhs and the issued capital is Rs. 30 lakhs—all in equity shares of Rs. 100 each. The three promoters have subscribed Rs. 10 lakhs jointly and severally. Shares worth Rs. 3 lakhs have been reserved for the Government of Mysore. The balance of Rs. 17 lakhs is being offered for public subscription. The entire public issue has been underwritten. The subscription list will open on 26th May, and will close on 4th June or earlier, but not before 1st June. If all goes well, the factory is expected to go into production by about the middle of 1965. The board of directors consists of Mr. N. W. Gurjar (chairman), Mr. Ratilal M. Gandhi, Mr. R. L. Kirloskar, Mr. D. B. Amin, Mr. Prataprai G. Mehta, Mr. Krishnakant P. Mehta, Mr. Mukul Harkison-das and Mr. A. P. Mehta.

Kothari Textiles Cuts Dividend

KOTHARI Textiles fared badly during 1963. While its sales registered only a small setback from Rs. 2.14 crores to Rs. 2.11 crores, its gross profit at Rs. 23.08 lakhs showed a decline of nearly 16 percent over the previous year's figure of Rs. 27.43

lakhs. The dividend has been reduced from 8 percent to 6 percent and even for the payment of the reduced dividend, the directors have had to withdraw quite a large amount from the general reserve. The Company's working results last year were adversely affected partly by the rising cost of production as a result of higher raw material prices and increase in the wage bill and partly due to the loss of production as a result of power cut and strike. The directors state that there was a total shut down of both the Company's mills for 12 days in June-July 1963 due to a 100 percent power cut. The Company's No. 2 mills were also shut down for 13 days as a result of the strike. Further, both the mills were affected by a week of dislocation due to dispute concerning bonus. The total loss on account of these closures is estimated around Rs. 4.5 lakhs.

After providing Rs. 15.10 lakhs (against Rs. 15.51 lakhs) for depreciation, Rs. 1.57 lakhs (against Rs. 1.89 lakhs) for development rebate and Rs. 4 lakhs (against Rs. 5.75 lakhs) for taxation, the net profit for 1963 amounts to Rs. 1.62 lakhs, against Rs. 3.11 lakhs in 1962. A sum of Rs. 4 lakhs (against Rs. 3.50 lakhs) has been transferred from the general reserve to provide for the payment of dividend. Preference dividend takes up Rs. 1.40 lakhs (the same) and the reduced 6 percent equity dividend will absorb Rs. 4.03 lakhs (against Rs. 5.38 lakhs), leaving a balance of Rs. 31,244 to be carried forward, against Rs. 12,617 brought in.

In his speech circulated with the directors' report, the chairman, Mr. D. C. Kothari, has dwelt at length on the difficulties that the Company had to face during the year. Referring to the Central Wage Board's recommendation for a higher basic wage for textile workers and to the linking of dearness allowance to the cost of living index, Mr. Kothari says that over the past four years, the wage burden in the Coimbatore region has gone up by nearly 25 percent. The impact of increased surcharge on power and the extra sales tax on cotton and yarn levied by the Madras Government would be felt on the mills during the current year. The chairman has, however, expressed the view that the Company's working results for the current year are likely to show a substantial improvement over the performance last year. The Company spent Rs. 9.75 lakhs on renovation in 1963; nearly two-thirds of renovation programme has been completed, and it is expected to be over by the middle of this year. Considerable progress is said to have been made concerning rationalisation and the Company hopes to be able to complete this process by the end of this year with the co-operation of workers.

Adoni Spinning Raises Dividend

ADONI Spinning and Weaving Company has done well during 1963 and the dividend has been raised from 8 percent to 9 percent. While sales have recorded only a small improvement from Rs. 1.50 crores to Rs. 1.54 crores, the gross profit has gone up by nearly 38 percent from Rs. 24.45 lakhs to Rs. 17.68 lakhs. Improved results are attributed mainly to the increase in the selling prices of yarn of counts 20s and 40s from February 1963. After providing Rs. 6.25 lakhs (against Rs. 7.11 lakhs) for depreciation and Rs. 10 lakhs (against Rs. 6.75 lakhs) for taxation, the net profit for 1963 amounts to Rs. 6.45 lakhs, against Rs. 2.78 lakhs in the preceding year. With Rs. 53,126 brought in, the disposable surplus comes to Rs. 6.98 lakhs. The directors have allocated Rs. 1 lakh each to the dividend equalisation reserve and general reserve which did not receive anything in the previous year. After providing Rs.

1.56 lakhs (the same) for the preference dividend and Rs. 2.70 lakhs (against Rs. 2.40 lakhs) for equity dividend, there remains a balance of Rs. 71,631 to be carried forward.

The Company's liability for the surtax amounts to Rs. 1.06 lakhs. The dividend is not liable to the dividend tax because the Company paid its maiden dividend in 1960, and the Finance Bill exempts payment of dividend tax for a period of five years from the payment of first dividend. There was no significant addition to the plant and machinery during 1963 except conversion of some frames. During the year, all the 24,000 spindles worked three shifts for 352 days. In his chairman's speech circulated with the directors' report, Mr. D. C. Kothari has expressed doubts whether it would be possible to maintain the same level of profit because of the rise in cotton prices.

Marsden and Monogram Mills Cut Dividends

BOTH Marsden Spinning and Manufacturing and the Monogram Mills of Ahmedabad have reported disappointing results for 1963. In spite of an appreciable increase in their turnover, both the mills have suffered losses and have reduced their dividends which are to be paid out of the past reserves. Apart from the general increase in production costs, the working results of these mills are reported to have been affected by the disruption of normal production as a result of the programme of renovation and modernisation.

Monogram Mills' sales have gone up from Rs. 1.976 crores to Rs. 2.735 crores, but the Company has suffered a gross loss of Rs. 3.31 lakhs, against a gross profit of Rs. 10.08 lakhs in

1962. The dividend has been reduced from Rs. 9 to Rs. 6 a share. The provision for depreciation is higher at Rs. 8.10 lakhs (against Rs. 5.99 lakhs) and a sum of Rs. 27,950 (against Rs. 24,204) has been set aside for donation. The directors have transferred Rs. 12 lakhs (against Rs. 3 lakhs) from general reserve and Rs. 2.05 lakhs (against nil) from development and rehabilitation reserve in order to provide for the payment of dividend and for meeting other liabilities.

Sales of Marsden Mills have risen from Rs. 1.845 crores to Rs. 2.356 crores, but the Company has incurred a gross loss of Rs. 6.61 lakhs, against a gross profit of Rs. 9.83 lakhs in the previous year. The provision for depreciation is higher at Rs. 7.36 lakhs, against Rs. 6.31 lakhs, and a sum of Rs. 31,629 (against Rs. 26,294) has been provided for donation. The directors have withdrawn Rs. 14.50 lakhs from general reserve and Rs. 2.22 lakhs from the development and rehabilitation reserve to meet the dividend liability and for making other provisions. The proposed dividend, which has been reduced from Rs. 9 to Rs. 6 a share, will absorb Rs. 2.17 lakhs (against Rs. 3.25 lakhs). After making certain other adjustments, there remains a balance of Rs. 10,243 to be carried forward, against Rs. 34,669 brought in.

Earthmoving Equipment from Birlas

BIRLA Brothers of Calcutta propose to set up a new undertaking for the manufacture of crawler tractors and other earth-moving equipment. The factory, it is proposed, will be set up in Madras State, but the promoters have expressed

THE INDUSTRIAL DEVELOPMENT CORPORATION OF ORISSA LIMITED

(A GOVERNMENT OF ORISSA UNDERTAKING)

POST BOX NO. 78
BHUBANESWAR-1

PLANNING, DESIGN & ENGINEERING BUREAU

INVITES

REPUTED FABRICATORS, STOCKISTS AND SUPPLIERS TO REGISTER THEIR NAMES WITH THIS CORPORATION BY 1ST JULY, 1964, GIVING DETAILS OF THE FABRICATION POTENTIALITIES AND/OR THE MATERIALS AVAILABLE WITH LEAST DEPENDENCE ON THE FOREIGN EXCHANGE FOR PROJECTS UNDER THIS CORPORATION WHICH INCLUDE LOW SHAFT FURNACE, PIG CASTING MACHINE, COKE OVENS, BY-PRODUCTS, FERTILISERS PLANT PRODUCING UREA AND UTILITY SERVICES LIKE COOLING TOWERS, WATER TREATMENT PLANT, ETC. THE MATERIALS MAY BELONG TO THE CATEGORY OF ELECTRICAL EQUIPMENT LIKE TRANSFORMERS, SWITCH GEARS, MOTORS, CABLES AND OTHER SUBSTATION EQUIPMENT, ETC., MECHANICAL EQUIPMENT AND PARTS LIKE VARIOUS TYPES OF VALVES, PUMPS, TANKS (MILD STEEL & STAINLESS STEEL), PIPES, COMPRESSORS, WORKSHOP EQUIPMENT AND STRUCTURALS, ETC., INSTRUMENTS AND LABORATORY EQUIPMENT.

their willingness to locate the factory elsewhere should the Government so desire. The proposal is to set up a plant with an annual capacity of 240 crawler tractors up to 425 horse power, 240 dumpers up to 62 tons, 100 scrapers complete up to 40 cubic yards and 50 front-end loaders up to 3 cubic yards—all on a double-shift basis. Birlas are seeking the technical collaboration of Euclid Division of General Motors Corporation of the U.S.A. The collaboration agreement has not yet been finalised, but it is stated that the U.S. firm will be paid royalty at 5 percent of the net selling price of the equipment less the value of imported components.

The phased programme of manufacture starts with an indigenous content of 60 percent reaching 75 percent by the end of the second year. Imported capital goods worth Rs. 6.25 crores would be required for which loan from the A.I.D., the Export-Import Bank, the International Finance Corporation or other lending institutions would be arranged. At present, no firm in the private sector is licensed for the manufacture of crawler tractors. Of the other items of earthmoving equipment, only shovels are at present being manufactured by the Tata Engineering and

Locomotive Company and Hindustan Motors. The third plan targets for earthmoving equipment comprise 600 crawler tractors, 600 dumpers and scrapers and 125 shovels. The demand for earthmoving equipment by the end of the fourth plan is expected to be twice the targets set for the current plan. The scheme submitted by Birla Brothers is said to have been approved in principle by the Government of India and a letter of intent is likely to be granted soon subject to the condition that the terms of foreign collaboration are settled to the satisfaction of the Government and satisfactory arrangements are also made for financing the import of capital equipment.

Mahindras to Set Up Trailer Factory in Iran

MAHINDRA and Mahindra has finalised its project plan for setting up a factory near Tehran for the manufacture of high speed and agricultural trailers and accessory equipment. The project is being taken up in collaboration with two prominent Iranian industrialists and the British firm of Rubery Owen and

Company, with which Mahindras have a long and successful partnership in Mahindra Owen India Ltd. The project plans have been approved, in principle, by the Government of India and have been presented to the Iranian Government. The factory is likely to be established during the latter half of this year. The overseas venture will have an authorised capital of Rs. 60 lakhs. The international consortium will undertake a phased manufacturing programme, according to which machine tools and components will be exported from India until the new factory attains self-sufficiency in local production. The project will help relieve the Iranian transport problem and at the same time, provide that country with a modern industry which will produce road transport equipment and accessories of high quality. At present, Iran is inadequately served by a limited railway system.

South India Viscose Fares Well

THE net profit of the South India Viscose Ltd for the year ended December 1963 amounts to Rs.

CAPITAL, 14th May, 1964.

78,68,462, after providing full depreciation of Rs. 54,14,177 as required by the Act. Depreciation amounted to Rs. 1.59 crores in the previous year. The total depreciation provided up to 31st December, 1963, amounts to Rs. 2.85 crores. The loss brought forward from the previous year is Rs. 84,09,301. Although the earnings resulted in a surplus of Rs. 78,68,462, yet after making some adjustments and after deducting the profit of the year from the brought-forward loss, the balance of net loss of Rs. 5,19,324 is carried forward.

The directors state in their report that the staple fibre plant worked to its full capacity "except for the biannual maintenance and power failures". As for the rayon plant, the report says that out of 41 frames, 39 frames worked to their full capacity except for a total period of two months when the plant was out of commission "due to labour unrest, normal maintenance and power failures." The sulphuric acid and carbon-di-sulphide plants were in normal production for meeting the Company's entire requirements. Referring to production and sales the directors say that the products of the Company met with a good demand in the market and they compare favourably with international standards.

Discussing the prospects for 1964, the directors' report says that the Company expects to discharge fully the entire deferred payment and the demand loan of Rs. 1.20 crores out of its earnings before the end of the current year.

Southern Structurals Earns More

A MARKED rise in the profit has enabled the directors of Southern Structurals Ltd to raise the dividend to 9 percent for the year ended December 1963 from the previous year's 6 percent. The net profit amounts to Rs. 21,81,569, after providing Rs. 4,27,189 for depreciation. The previous year's net profit was Rs. 11,08,896, after providing Rs. 3,60,351 for depreciation. With Rs. 26,293 brought forward from the previous year, the total available for appropriation comes to Rs. 22,07,862. Out of this, taxation provision gets Rs. 12,42,000. A sum of Rs. 41,000 is written off towards preliminary expenses and brokerage. The proposed dividend on equity shares at 9 percent will absorb Rs. 5,66,348 (against Rs. 3,00,000). A sum of Rs. 300,000 is transferred to general reserve. The balance of Rs. 58,514 is carried forward.

The directors' report says that the "outturn" of railway wagons during the year was disappointing. Although the programme started with considerable promise, shortages were experienced later in relation to a number of items. There was scarcity of plates and sheets. There was also difficulty in getting some of the components from suppliers from West Bengal. The report also refers to the priority given to defence needs, to the detriment of civil requirements. Furthermore, in May-June 1963, there was a serious shortage of electrodes which continued right up to the end of the year. There was also the shortage of gas.

On the structural side, the Company's performance was better. The pace of fabrication which had been gradually built up, enabled the Company to deliver 830 tonnes of structurals in April 1963. The total value of bills submitted up to the end of the year for structural supplies and erection—mostly to meet defence needs—was a little over Rs. 97 lakhs. The Company has applied to the Government for permission to raise its annual capacity to 10,000 tonnes. It has also taken up a scheme for

CAPITAL, 14th May, 1964.

manufacturing cranes of different types. The directors hope to reach an agreement before long, with one of the best known Continental suppliers of crane. The report also says that the Metropolitan-Cammel Carriage and Wagon Co. Ltd, who are developing certain lines of mobile cranes and mechanical handling equipment, expect the Company to take up the manufacture of these items in this country.

During the year, the Company issued 300,000 equity shares as rights shares. Out of this, only 180,604 were taken up. The reason for many members not exercising their rights is traceable to the Central Budget for 1963 which, the directors say, totally upset the market. The directors feel that it is not only necessary that the balance of Rs. 13 lakhs be raised immediately, but the Company should also seriously consider issuing the Rs. 20 lakhs worth of preference shares by the beginning of July 1964, so that the Company does not suffer from a shortage of funds.

Ceat Tyres Skips Dividend

CEAT Tyres of India Ltd seems to have fared better during 1963 than in the previous year since both sales and the gross profit are higher. But the gross profit at Rs. 32.09 lakhs shows a rise of no more than 5 percent over the 1962 figure of Rs. 30.44 lakhs whereas sales have gone up by about 42 percent from Rs. 4.34 crores to Rs. 6.18 crores. The shareholders have still to receive their maiden dividend. Their only comfort is that unlike several other scrips, Ceat Tyre is still quoted above par—around Rs. 115. The directors have provided Rs. 24.09 lakhs (against Rs. 19.95 lakhs) for depreciation, Rs. 7.18 lakhs (against Rs. 6.66 lakhs) for development rebate reserve and Rs. 1 lakh (against Rs. 5 lakhs) for general reserve, leaving a balance of Rs. 32,186 to be carried forward, against Rs. 49,621 brought in. The Company has a paid-up capital of Rs. 2.76 crores and it is supported by reserves and surplus amounting to Rs. 84 lakhs, of which Rs. 40.25 lakhs is accounted for by share premium reserve.

Cellulose Products Earns More

CELLULOSE Products of India Ltd has reported encouraging results for the year ended March 1964. This has enabled the directors to recommend dividends on preference shares for four years—1959-60 to 1962-63. The ordinary dividend has been skipped. The turnover has recorded an impressive rise from Rs. 17.21 lakhs to Rs. 38.70 lakhs, and the gross profit has shot up from Rs. 5.71 lakhs to Rs. 14.39 lakhs. The ratio of gross profit to sales works out to 37 percent. Allocations includes depreciation Rs. 5.52 lakhs (against Rs. 4.62 lakhs), statutory development rebate reserve Rs. 3.96 lakhs (against Rs. 48,900) and taxation Rs. 10,000. After providing for the preference dividend for four years which absorbs Rs. 3.81 lakhs, there remains a balance of Rs. 27,163 to be carried forward. The Rs. 100-paid share of Cellulose Products is current quoted around Rs. 170.

Dharamsi Morarji Chemical Results Impress

THE preliminary report on the working of Dharamsi Morarji Chemical for the year 1963 shows an impressive improvement over the previous year's performance. The turnover has risen by about 24 percent from Rs. 2.33 crores to Rs. 2.90 crores,

and the gross profit has gone up by nearly 30 percent from Rs. 35.79 lakhs to Rs. 46.34 lakhs. The dividend has been maintained at 16 percent—Rs. 8 a share of Rs. 50—but with a larger number of shares participating the total distribution is larger at Rs. 6.62 lakhs, against Rs. 5.09 lakhs in the previous year. As in the previous year, the entire dividend is thought to be free of tax by virtue of the dividend coming out of the profits of industrial units exempt from tax. An application is being made to the income tax authorities for confirmation that no tax need be deducted by the Company while paying the dividend. The improved results of the Company are attributable mainly to the improved performance of the fertiliser factory in Kumbhari whose contribution to the total sales has gone up from Rs. 44 lakhs in 1962 to Rs. 84 lakhs in 1963. Of the total sales of Rs. 2.90 crores, fertilisers are said to account for as much as Rs. 1.99 crores and acids and chemicals for Rs. 86 lakhs. The Company's sales

of superphosphate are mentioned around 101,450 tonnes, against 83,992 tonnes in the previous year, representing nearly one-sixth of the total production of superphosphates in the country. Exports of alumina sulphate increased from 2,409 tonnes in 1962 to 5,661 tonnes in 1963.

After providing Rs. 6.04 lakhs (against Rs. 4.51 lakhs) for bonus to employees, Rs. 17.80 lakhs (against Rs. 15.37 lakhs) for depreciation, Rs. 81,000 (against Rs. 1.54 lakhs) for development rebate reserve and Rs. 6.75 lakhs (against Rs. 4 lakhs) for taxation, the net profit for 1963 is shown at Rs. 12.86 lakhs, against Rs. 8.76 lakhs in the previous year. A sum of Rs. 6.50 lakhs (against Rs. 5 lakhs) has been set aside for general reserve No. 1 and Rs. 6.51 lakhs (against Rs. 5.17 lakhs) has been taken to general reserve No. 2, comprising profits of new industrial units exempt from tax. After making these appropriations, there remains a balance of Rs. 9,897 to be carried forward, against Rs. 25,675

brought in. The dividend of Rs. 8 a share is to be paid out of general reserve No. 2, absorbing Rs. 6.62 lakhs (against Rs. 5.09 lakhs). The Rs. 50-paid share of Dharamsi Morarji is currently quoted around Rs. 130 offering a gross return of about 6.5 percent.

Star Textiles Pays More

THE Star Textile Engineering Works Ltd has raised the dividend for 1963 from 8 percent to 11 percent. The very brief preliminary report on the Company's working released along with the announcement of the dividend suggests that the Company has done extremely well during the year. Production has risen from Rs. 82.75 lakhs to Rs. 97 lakhs, and sales have gone up from Rs. 81.59 lakhs to Rs. 91.10 lakhs. While sales have risen by only 11.6 percent, the gross profit has shot up by about 77 percent

Caltex "STOP LOSS" reduces your paper work by 10% to 60%

If your purchase order costs are anywhere near today's high industry average, it can pay you to look into Caltex's "Stop Loss" Programme. You'll find numerous ways to reduce purchasing department time and expense.

Too often, purchasing costs rise because each department in a plant specified the lubricants it wants without reference to the purchases of other departments. This duplication results in a flood of purchase orders... rising clerical costs... paper backlogs

Caltex "Stop Loss" is a complete plan for organizing and centralizing lubrication on an efficient basis. There is no other programme like it. "Stop Loss" will help eliminate interdepartmental duplication, limit inventories to actually needed lubes, and reduce the number of lube purchase orders issued each month by 10% to 60%.

CALTEX (INDIA) LIMITED BOMBAY • NEW DELHI • CALCUTTA • MADRAS

Bata Sandals and Chappals are built to be liked, for their light-footed comfort, for their fresh-as-the-season style. When you first try them on, you'll feel the effect of their built-in comfort.

And you'll welcome their variety of style, that lets you choose the just-right for you.

Bata

from Rs. 7.75 lakhs to Rs. 13.75 lakhs. The profit margin as measured by the ratio of gross profit to sales has improved from 9.5 percent to 15.1 percent. The Company expects to continue its progress during the current year. The Rs. 100-paid share of Star Textile is currently quoted around Rs. 107, offering a gross return of a little over 10 percent.

Polson Earns More, Pays More

POLSON Ltd reports encouraging results for 1963 which have enabled the directors to step up the dividend from Rs. 14 to Rs. 22 a share, including a jubilee dividend of Rs. 2 a share. The Company's turnover has risen by about 6 percent from Rs. 1,679 crores to Rs. 1,775 crores and its gross profit has gone up by nearly

32 percent from Rs. 18.88 lakhs to Rs. 24.96 lakhs. Appropriations include depreciation Rs. 2.91 lakhs (against Rs. 2.64 lakhs), development rebate reserve Rs. 25,746 (against Rs. 29,284), taxation Rs. 11.60 lakhs, including surtax liability of Rs. 1.52 lakhs (against Rs. 9.97 lakhs, including super profits tax liability of Rs. 2.19 lakhs), doubtful debts Rs. 7,093 (against nil), donations Rs. 4,143 (against Rs. 55,706) and general reserve Rs. 2.20 lakhs (against Rs. 200). A sum of Rs. 1.14 lakhs has been written back, being excess provision of super profits tax for the previous year. Preference dividend absorbs Rs. 99,900 and equity dividend takes up Rs. 5.94 lakhs (against Rs. 3.78 lakhs). After making various appropriations, there remains a surplus of Rs. 1,368 to be carried forward, against Rs. 18,866 brought in.

The directors state that the Company has again had a very good year

for the sale of its butter, but its sales of coffee were adversely affected by import restrictions by Burma—the Company's main market. Besides, the Company has had to suffer considerably due to the sudden and steep rise in the price of chicory the import of which was banned by the Government. The prices of raw coffee also went up considerably during the year, and it became impossible for the Company to produce French coffee without raising its selling prices which in turn affected its sales. The Company has started marketing from October last tea under two brand names. Further varieties of tea in different packages to suit consumers' demands are being introduced. The Company has closed its Madras branch. A scheme for the issue of coupons to shareholders entitling them to purchase butter, coffee, flour and tea up to a total amount of Rs. 50 at a discount of 7 percent on current

CAPITAL, 14th May, 1964.

Cawnpore Textiles Profit Falls

CAWNPORE Textiles Ltd has repeated the taxable ordinary dividend of 10 percent for the year ended December 1963, but it has been paid out of general reserve. The yield amounts to 8 percent at the present price of Rs. 6.25 a share of Rs. 5 each. Although sales have shown some improvement, compared with those for 1962, the profit has dropped due to rising production costs, combined with the fact that the prices of finished goods could not be raised due to the voluntary control on prices. Export sales fell following keen competition in foreign countries. The programme of renovation and modernisation has made further progress. The Company has received an industrial licence to install additional 12,500 spindles and the work of installation has begun. Under the new move of the Government, the Company is entitled to install further 2,205 spindles.

The profit has dropped from Rs. 13.06 lakhs for 1962 to Rs. 9.98 lakhs, after providing Rs. 4.64 lakhs (against Rs. 4.30 lakhs) for depreciation and Rs. 1.99 lakhs (against Rs. 75,750) for development rebate reserve. Taxation absorbs Rs. 5.33 lakhs (against Rs. 7.08 lakhs), super profits tax relating to the previous year Rs. 80,000 and general reserve Rs. 5.20 lakhs (against Rs. 3 lakhs). A sum of Rs. 80,000 has been transferred from general reserve.

New Capital Issues

THREE companies have been authorised to raise further capital amounting to Rs. 74 lakhs. Of these, one is issuing bonus shares and the rest are issuing equity plus cumulative redeemable preference shares on rights basis. The consent of the Controller of Capital Issues in all cases is valid for 12 months. The following are the details:

Escorts Ltd, Delhi, a public limited company, will issue further capital of Rs. 22,40,000 divided into 224,000 equity shares of Rs. 10 each, as bonus shares on capitalisation of its share premium account to a like extent. The consent is subject to, among other things, the condition that the bonus shares will be issued after the equity shares have been called and paid-up in full in the ratio of one bonus share for every five equity shares held, to all the equity shareholders of the Company.

Mysore Kirloskar Ltd, Harihar (Mysore State), is to issue a further capital of Rs. 30 lakhs, divided into 15,000 equity shares of Rs. 100 each and 15,000 redeemable cumulative preference shares of Rs. 100 each, carrying a dividend not exceeding 9.5 percent a year, to be issued on rights basis. The proceeds of the issue will be used for financing substantial expansion of the Company's foundry capacity.

The General Industrial Society Ltd, Calcutta, a public limited company engaged in the manufacture of jute goods, etcetera, is issuing further capital of Rs. 21.60 lakhs divided into equity shares of Rs. 10 each, for cash at par, to the existing shareholders as rights in the ratio of one new share for every two shares held. The proceeds of the issue will be used for partly meeting cost of a factory to be established in Mirzapur district for the manufacture of aluminium foils.

wholesale rates plus sales tax is being introduced during the current year. These coupons will be posted along with dividend.

CAPITAL, 14th May, 1964.

The Stock Markets

DULLNESS PERSISTS IN SPITE OF GOOD COMPANY NEWS

Wednesday Evening.

THE Calcutta stock market has been dull during the past week. Turnover has been small and operators have generally been inclined to keep their commitments light. Although some companies have declared bigger dividends, Lyons Range is unimpressed since it is thought that the good news has already been discounted. Talk about substantially increasing investments in the fourth plan has had virtually no effect. The idea of allowing the private sector to play a bigger rôle during the fourth plan has created no enthusiasm.

Apart from uncertainties relating to the Kashmir situation, attention is concentrated on the forthcoming meeting of the A.I.C.C. in Bombay. The importance of this session arises from the fact that it will discuss the Dhebar Committee's report on socialism. Although the Committee has not touched upon bank nationalisation, it has recommended that greater powers should be vested in the Reserve Bank to control banks. Considering that the Reserve Bank already has ample powers to regulate banking operations, the idea of reinforcing the powers further is pointless.

Turnover is confined to clearing shares, but fluctuations have been restricted to a narrow range since bulls and bears have not been able to take a constructive view. The trend is, therefore, indecisive. The smaller carry-forward charges at the past clearing point to an improvement in the technical position. In the circumstances, it is hoped that selling pressure will continue to be light. But the prospect of an increase in support is remote since the outlook for equities has suffered a great deal following the Budget. Interest in cash shares has been negligible. Due to the absence of buyers, prices tend to decline on small offering.

Indian Iron have slipped back due to the disappointing production figures for April. The increase in the unofficial market prices of several steel items does not benefit the producers. In the engineering section, despite an increase in the dividend, Texmaco have dropped. Guest, Keen, Williams, Indian Standard Wagon and Jessop have also declined. Braithwaite have been about steady on good results.

In the miscellaneous section, clearing scrip like Hindustan Motors, Indian Aluminium, Indian Copper, Kesoram Industries, Indian Cable and Dunlop Rubber have slipped back in the absence of support. Metal Box, Alkali Chemical, Goodyear India and British Paints have been quoted at lower prices. Philips India have been steady due to the payment of a higher dividend. Among managing agency shares, Balmer Lawrie have not responded to the payment of a taxable final ordinary dividend of 15½ percent. Jardine Henderson and Martin Burn have been quiet. Isaac Holdens have dropped in spite of declaring a maiden dividend. Phillips Carbon have been subdued on incurring a loss. Hindustan Aluminium have weakened. Bank shares have been neglected, and so have electric company shares. In paper shares, Orient and Seshasayee have retreated due to profit-taking. Sugar shares have been difficult to transact due to the absence of buyers.

Jute shares have dropped in sympathy with the general trend. Turn-

over has been restrained since investors are worried about sluggish foreign enquiries for jute goods. Birla, Kinnison and Champdany have lost. Coal shares are subdued and stray business has been transacted in Amalgamated, Central India and Western Bengal. Cotton mill shares are neglected, although Bharat Commerce have met with scattered buying due to a good report. Limited business has passed in tea shares, but attention centres on good Assam and Dooars gardens.

Government securities are steady. Interest, particularly from banks, has been confined to short-dated loans, the prices of which have hardened due to the shortage of sellers. Medium-dated securities are about steady. The 3 percent Conversion Loan 1986 has been quoted at around Rs. 63.60.

Tata Steel Output

Messrs Tata Industries Private Limited, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during the month of April 1964 was: iron 128,300 metric tonnes; steel ingots 142,800 metric tonnes and salable steel 115,000 metric tonnes.

Bombay

OPERATORS REMAIN CAUTIOUS

BUSINESS CONFINED TO CLEARING SCRIP

Tuesday Evening.

THE Bombay stock market has been sluggish during the past week. Share prices have fluctuated narrowly and turnover has been restricted. Both bulls and bears are cautious, and nobody is inclined to extend commitments in the present circumstances. Although the new account opened in a steadier mood due to small carry-forward charges at the past settlement, the improvement was short-lived. Holders are inclined to take their profits at every bulge. Selling pressure is, nevertheless, light since operators seem to think that adverse developments have been adequately discounted.

Dalal Street is not impressed by the prospect of a bigger fourth plan since it is thought that most of the output targets are unrealistic in view of the inadequacy of resources. The All India Congress Committee session, due to be held in Bombay soon, has created a great deal of uncertainty since it will discuss the Dhebar Committee's report on socialism.

Business has largely been confined to clearing shares, which have generally retreated on profit-taking. Despite small selling pressure, some cash scrip have lost substantially due to the absence of support. Tata Steel have closed lower at Rs. 148.25. Among engineering shares, Tata Engineering have dropped sharply due to rumours that the Company may pay a lower dividend. Premier Construction, Larsen and Toubro and Mukand Iron have declined. Alcock Ashdown have, nevertheless, been

about steady on an optimistic assessment made by the chairman of the Company in his address at the annual general meeting. Among motor-vehicle shares, Hindustan Motors and Premier Automobiles have reacted due to profit-taking.

Cotton mill shares show widespread losses following selling pressure. It is apprehended that profits of mills during the current year may decline due to rising production costs. Century, Bombay Dyeing, Kohinoor, Simplex and Svadeshi have dropped. Standard and Morarjee have reacted on pressure. India United ordinary have been offered freely without attracting support.

Miscellaneous shares have moved down in sympathy with the general trend. Associated Cement have been quoted at a lower level while Digvijay Cement have met with scattered support on raising the taxable ordinary dividend from 10 percent to 13 percent on the increased capital. Sugar shares have been quiet. Belapur, Walchandnagar Industries and Phalton have been available at lower prices. Mining shares have been subdued, and Shivrampur Syndicate have been offered freely without attracting buyers. Scindia Steam have declined in steamship company shares.

Chemical shares have been quiet. Tata Chemical and Polychem have lost. Synthetics and Chemicals have declined sharply due to pressure. Rayon shares have not responded to the Government's move to change the procedure concerning the export of rayon fabrics. National Rayon have

declined. Voltas and Tata Oil have lost. Bank shares have been neglected, and scattered business has been done in Central Bank and Bank of Baroda. Electric supply company shares have been quiet. Ahmedabad and Tata Power have been sold at lower prices.

Madras

BIG DECLINE IN TURNOVER

CALCUTTA ADVICES SUBDUE MARKET

Tuesday Evening.

THERE have been narrow fluctuations in the Madras stock market during the past week. Turnover has declined considerably. Un-

inspiring advices from Calcutta and Bombay have restrained activity. Investors are refraining from buying shares because of the growing shortage of funds. The flow of bank credit into the stock market has shrunk as a result of the credit squeeze enforced by the Reserve Bank. The fear of bigger power cuts is a major restraining factor.

Business in Government securities is negligible, and transactions have been confined to a few selected State Government loans. Despite some interest in good preference shares, turnover has been small due to the absence of sellers. In banks, scattered business has been done in Indian Overseas around Rs. 139. Syndicate Bank have come to hand at Rs. 143.50. Electric company shares are sluggish, and small business has passed in South Madras at Rs. 11.10 and in West Coast at Rs. 13.50. Sugar shares show a

mixed trend. Deccan have dropped to Rs. 11.52 and Andhra to Rs. 13.79. E.I.D. have been about steady around Rs. 35.45. Mysore have been bought up to Rs. 28.35 and K.C.P. have met with support at Rs. 24.

Turnover in planting shares has shrunk considerably, although selected coffee shares have met with support due to the prospect of increased exports. Blue Mountains have been quoted at Rs. 2.40 and Cochin Malabar at Rs. 6.48. Consolidated Coffee have hardened to Rs. 22.10 and Ouchterlony have been transacted at Rs. 3.55. Business has passed in Periakaramalai at Rs. 3.49. Among coffee shares, Coffee Lands have been steady at Rs. 17.62, Rajendra at Rs. 10.42 and Swinton at Rs. 2.68. Rubber shares lack interest. Rajagiri have been available at Rs. 21.55, Vaikundam at Rs. 35.10 and Kailas at Rs. 5.95. Among tea shares, Peer-made have changed hands at Rs. 21.12,

CAPITAL, 14th May, 1964.

Twyford at Rs. 8.55 and Udayagiri at Rs. 15.50. Companies having tea and coffee plantations have been selectively bought. Chembra Peak have been quoted at Rs. 4.55, Kil Kotagiri at Rs. 4.46 and Neelamalai at Rs. 4.65.

Textile shares are sluggish and prices have generally declined. South India Viscose have retreated to Rs. 118. Travancore Rayon have been available at Rs. 22.60 on declaring a taxable ordinary dividend of 12½ percent. Balarama Varma have been quoted at Rs. 107.75 on declaring a taxable ordinary dividend of 10 percent. Bangalore Woollen have been easier at Rs. 257 and Buckingham at Rs. 272. Ramakrishna have been offered at Rs. 217.80 and Vijayalakshmi at Rs. 111.50. I. Ashm have been transacted at Rs. 130 and Madura at Rs. 33.20.

Among miscellaneous industries, Aluminium Industries have dropped

CAPITAL, 14th May, 1964.

to Rs. 20.30, but Ashok Leyland have been about steady at Rs. 7.10. Among cement shares, Dalmia have been bought at Rs. 13.10 and India Cement at Rs. 5.65. Orissa Cement have changed hands at Rs. 13.40 on declaring a taxable ordinary dividend of 10 percent.

PROFIT-TAKING KEEPS SHARES DULL

POLITICAL UNCERTAINTIES WORRY INVESTORS

IMPROVING THE WORKING OF SMALL BANKS

(BY A SPECIAL CORRESPONDENT)

According to the Reserve Bank Governor, small banks have played an important rôle in reducing the number of usurious money-lenders and in financing small industries. A seminar was held last year to exchange views on how to improve the working of small banks.

THERE was confusion about the position of small banks after the Palai Bank and Laxmi Bank crashed. The confusion was natural because the Reserve Bank—in its anxiety to eliminate the uneconomic units, initiated a policy of voluntary mergers. Such mergers, although apparently voluntary, were for all practical purposes forced on the smaller banks. This raised apprehensions among the latter. But nothing was done to define concretely the future of small banks. After Mr. P. C. Bhattacharyya took over as Governor

of the Reserve Bank, he addressed himself to improving the working of small banks. The branch expansion policies were given a new orientation and the importance of sound but small banks was recognised. Side by side, the weaker units were eliminated.

The Reserve Bank also took several steps to improve their working. One of them was to conduct seminars for small bankers. Three such seminars were held last year. What was discussed at these seminars remained a secret until the Reserve Bank pub-

lished the proceedings some time ago.

Financing Small Industries

The importance which the Reserve Bank attached to the development of small banks is evident from the tribute which the Governor paid to them during the seminar. According to Mr. Bhattacharyya, the small banks are responsible for reducing the number of usurious money-lenders. They also play an important rôle in financing small industries. Small banks have certain advantages

CAPITAL, 14th May, 1964.

over the bigger institutions where local contacts and knowledge play a big part. In view of these advantages, it has been recognised that small banks should be encouraged to grow.

The seminars brought together the chief executives of banks with deposits of up to Rs. 1 crore from all over the country. They discussed their individual experience with the senior officers of the Reserve Bank, the State Bank and the bigger banks. The Reserve Bank, it is learnt, has an idea to conduct such seminars in different parts of the country in due course. The object of the seminars will be to inculcate a better appreciation of what constitutes good banking among the chief executives of small banks. The importance of this cannot be exaggerated because the small banks employ their meagre resources in granting personal loans against the security of bullion and gold ornaments.

The diversification of the loan portfolio requires a more progressive attitude on the part of these banks, and the seminars held last year attempted to emphasise this aspect. The chief executive of a small bank, like his opposite number in a bigger bank, has an obligation to depositors, to borrowers and the shareholders' representatives—the board of directors. His manoeuvrability is, however, limited in view of the smallness of the resources. He requires to be imaginative, to secure useful deployment of the bank's funds.

Concept of a Sound Bank

The discussions at the seminar centred on the concept of a sound bank. A sound bank, it was said, is one which strikes a golden mean between safety, liquidity and profitability. This involves all the important aspects of commercial banking, such as the steps taken for mobilising the savings of the people and the policies followed in investment and lending operations, allocation of profits to reserves, the recruitment of staff and their proper training. The modern technique of balance-sheet analysis was emphasised. Specimen credit reports were circulated for the information of the chief executives of smaller banks and the system of control and supervision in vogue in well-run banks was outlined. The specimen of an ideal audit report was also circulated.

It is on the subject of advances that the seminar made a very constructive contribution. It laid down sound principles, some of which could well be followed by the bigger banks. It also laid down general safeguards and referred to cases when loans should not be granted to directors. The first safeguard is that normal standards of business prudence should be applied in granting an advance to a director. The second is that such advances should not exceed a reasonable proportion of the total advances of a bank. The safe amount which could be lent to a director of a bank prescribed because conditions vary from bank to bank.

The first prohibition is that clean advances to companies and concerns of directors and their friends and relatives should generally be ruled out. The second prohibition is that advances against shares to companies should not be granted if the purpose is to enable a director to acquire a controlling interest in a company.

Advances against Shares

As for advances against the security of shares of joint-stock companies, it was pointed out that such advances should not be permitted indefinitely even if they were adequately secured and the security was readily marketable. In granting

CAPITAL, 14th May, 1964.

such advances, it is necessary to ensure that the borrower has the means and the ability to repay them within the stipulated period; and, secondly that the purpose for which the advance is taken will itself generate enough income for repayment.

Some of the banks which joined the seminar were reportedly keen on entering into participation arrangements with larger banks. They had accumulated surplus funds following the reduction of the Gold Control Order. As deposits with other banks earn only a modest return, the anxiety of small banks to improve their earnings is understandable.

THE CALCUTTA MONEY MARKET

FRACTIONAL DECREASE IN ADVANCES

Wednesday, 13th May.

THE general level of advances has decreased fractionally in the Calcutta money market during the past week. The requirements of the jute and sugar mills are down, and so are those of the foodgrains and seeds trade. But the credit given to the cotton mills, and to the iron, steel and engineering units, is unchanged. The interbank market has been easier, with the call rate dropping to 5½ percent.

The exchange market has been quiet, with only a small supply of tea and gunny bills. The demand for remittances is moderate. In London, sterling has fluctuated narrowly, and shows a mixed trend.

SILVER WAS STEADY IN CALCUTTA during the past week, although turnover was limited. The price closed around Rs. 261.25. The price was quoted at 11½d in London and 129.3 cents in New York.

Gold was also steady in sympathy with silver and the price of 14-carat fetched Rs. 69.50.

DURING THE WEEK ENDED 8TH MAY, Government of India Treasury bills for Rs. 104,74,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 12th May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 18th May.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 13th May to 16th May at Rs. 99.266 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 6th May to 9th May amounted to Rs. 39.50 lakhs only.

RISES OF RS. 43.47 CRORES TO Rs. 2,576.90 crores in active notes and of Rs. 41.35 crores to Rs. 2,595.22 crores in the total note issue, were outstanding features of the return of the Reserve Bank of India for the week ended 8th May, 1964. The currency expansion was covered by raising rupee securities of the paper currency reserve by Rs. 44.98 crores to

Rs. 2,272.37 crores. Deposits of the Government of India rose by Rs. 4.41 crores to Rs. 53.75 crores and those of State Governments by Rs. 7.68 crores to Rs. 21.90 crores. Balances of scheduled banks dropped by Rs. 10.27 crores to Rs. 91.21 crores. Balances held abroad at Rs. 8.27 crores showed a decline of Rs. 1.09 crores. Investments rose by Rs. 6.55 crores to Rs. 186.26 crores. Loans to scheduled banks increased from Rs. 65.53 crores to Rs. 79.04 crores, of which advances against usance bills amounted to Rs. 20.99 crores (Rs. 22.58 crores). Ways and means advances stood at Rs. 56.57 crores, against Rs. 74.48 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 1st May, 1964, shows a drop of Rs. 7.50 crores to Rs. 618.82 crores in total deposits. Investments in Government securities are up by Rs. 1.99 crores to Rs. 232.58 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 1.06 crores to Rs. 378.32 crores. Cash and balances are, in consequence, shown at Rs. 28.32 crores or Rs. 6.26 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 1st May, 1964, shows Demand and Time liabilities at Rs. 1,246.27 crores (Rs. 40.70 crores on account of borrowings from banks) and Rs. 1,297.03 crores (Rs. 12.45 crores), compared with Rs. 1,254.57 crores (Rs. 41.44 crores) and Rs. 1,293.21 crores (Rs. 12.48 crores), respectively, in the previous week. Cash has declined by Rs. 2.42 crores to Rs. 60.22 crores, while balances with the Reserve Bank have risen by Rs. 8.11 crores to Rs. 87.03 crores. There is an increase of Rs. 3.80 crores to Rs. 618.89 crores in investments. Advances and bills discounted at Rs. 1,864.97 crores show a rise of Rs. 6.42 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.8 percent and 72.3 percent, against 5.6 percent and 72.9 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 15-5-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
15-5-64	18-8-64	2,00.00	Rs. 3.000%
8-5-64	11-8-64	2,00.00	Rs. 3.000%
1-5-64	4-8-64	2,00.00	Rs. 3.000%

BIRD'S CENTENARY YEAR

MINERALS IN
MULTI-MILLION
TONNES
FOR STEEL

India's rising steel production demands an increasing supply of raw materials. To help meet this demand, the total minerals output of the Bird-Heilers Group has increased in the last five years from just under 4 million tonnes to over 7 million tonnes per year. The Group is among the biggest mining organisations in the world—and still growing—producing coal, iron ore, limestone, manganese and dolomite.

Deploying the skills acquired over a hundred years, the Bird-Heilers Group is making important contributions to the economy... through planned diversification and expansion.

REVISING THE PATENT LAW FOR DRUGS AND MEDICINES

By Robendr Hoon

The Government's proposal to revise the patent law for drugs and medicines will retard the industry's growth and adversely affect research and development. Since unpatented goods will not be acceptable to countries which recognise and protect patents, it will also have serious repercussions on exports.

THE pharmaceutical industry is greatly concerned about the Government's proposal to abrogate patents for drugs and medicines. Representations have been made by the Indian Chemical Manufacturers Association, the Federation of Indian Chambers of Commerce and Industry, and the Pharmaceutical and Allied Manufacturers and Distributors Association. Between them, every section of the industry is fully represented. While each of these bodies have made suggestions in the light of their own appraisals, they are all unanimous on the point that no major change should be made in the existing century-old system without seeking the advice of those concerned.

Since independence, the drugs and medicines industry has made remark-

able progress. It has passed through the initial stages of basic development, and having established itself firmly, has now attained a stage where it has the resources for organised research. Indeed, for further advance, it has to take this step in right earnest, and inventive genius in India is not lacking. The revision of the patent law will not only retard growth but also adversely affect research and development. Therefore, at this stage, the search for inventions and new discoveries is of paramount importance. To stimulate it, the retention of the patent system is imperative. The fear has been expressed that "monopolies" result from patents. But the fear is unfounded because under the law an inventor cannot keep his discovery as a trade secret.

As an indication of the expense and effort that a research project entails, it should be remembered that the chance of success in any such venture is 3,000 to 1 against the manufacturer. The reward for the enormous expense on research, on processing likely ideas and on making them commercially feasible lies in the patent system. New avenues of production are thus opened, with an inducement for investing capital, which would hardly be forthcoming if the manufacture of a new invention was open to all without patent rights. Indeed, this is the reason why companies register every invention of significance as a matter of established routine, regardless of its immediate value, in the hope that it may have commercial possibilities at some later date. The fact explains why about

10 percent of the registered patents, mainly held by foreigners, are never put to use. It cannot be misconstrued as an attempt to deprive the country of technological knowledge.

An example usually cited in favour of abrogation is Italy, where no patent law exists for drugs and medicines. But it is significant that no discoveries of any importance have originated from Italy. Yet in spheres other than pharmaceuticals, and even in the closely related field of organic chemistry where there are patent laws, that very country has a fine record of inventions. Indeed one of the main objectives of the Italian pharmaceutical industry is to seek protection for new discoveries by the introduction of patent laws, and it hopes that this will materialise in the near future.

Prices Reduced

Since the patent system has little bearing on the price of drugs and medicines, the argument that the law needs revision on this account is untenable. India has seen a steady rise in the prices of most commodities. It is, therefore, particularly noteworthy that in the drug industry, prices have not only been maintained but have in many cases been reduced with improved methods of production or other economies in the manufacturing process. Prices depend on a number of factors. The cost of raw materials and labour, low productivity against high overheads of plant and equipment, the small scale of manufacture itself, the not infrequent power and other breakdowns on account of shortages, the high level of corporate taxation, the increased cost of distribution because of the large distances involved, the variations in climatic conditions and their effect on the potency of products—these are only some of the aspects the financial implications of which have to be considered in arriving at a selling price. Even so, the prices of finished drugs in India compare favourably with those prevailing elsewhere. Indeed, in some instances they are lower, and the impression that prices in India are higher than in other parts of the world is erroneous.

The Development Council for Drugs and Pharmaceuticals has strongly opposed the abrogation of patents because it is only by continuing them that the Indian sector of the industry can continue its progress. Likewise, for the foreign firm which invests or collaborates or establishes a subsidiary, it is of paramount importance that the patent law in India is based on the same principle as in the country which provides the "know-how". This indeed can be a deciding factor, because a guarantee of protection and security is necessary for creating the right investment climate. The patent protection hitherto available in India has undoubtedly aided the progress of the industry. The impression that the effect of the law has been inhibiting is not borne out by the phenomenal growth that the figures reveal. The increase in the manufactured value of pharmaceutical products from Rs. 11 crores in 1948 to Rs. 100 crores in 1962 is no mean achievement.

Effect on Exports

The abrogation of the patent law would also have serious repercussions on the export trade. Unpatented goods would not be acceptable in countries which recognise and protect patents. At the same time, the sale of products manufactured by copying patented processes would be restricted by overseas inventors where their inventions were protected by valid patents in other countries. The idea that the abolition of patent protection will help exports is incorrect.

GROWTH RATE AND OUTLAY FOR FOURTH PLAN DISCUSSED

(FROM OUR NEW DELHI CORRESPONDENT)

THE first skirmish between the "progressives" and the others in the Planning Commission took place last Sunday at the Prime Minister's residence. As already reported, the "progressives"—having decided upon a modest 7½-percent growth rate during the fourth plan—have placed the cost of achieving it at Rs. 20,000 crores. The Commission's Perspective Planning Division has stated in its paper on the growth rate during the fourth plan:

"It is an agreed premise of our plans that a high rate of growth sustained over a sufficiently long period is an essential condition for solving the basic economic problems of the country. The third plan aimed at accelerating the rate of growth from an average of 3.5 percent achieved during the decade 1950-60 to about 6 percent over the period 1961-76. Subsequent studies have shown that this rate of growth would not be adequate to make a significant impact on the problem of mass poverty and unemployment in the course of the next decade."

As for external assistance, the paper says that "it will decline from some Rs. 550 crores in 1965-66 to Rs. 350 crores in 1970-71 and will be nil within 1975-76." There appears to be no reference to private foreign capital. The paper adds: "After taking into account the resources available from net surpluses on current account, borrowings, external assistance, and the surplus of public enterprises, the gap to be covered is Rs. 600 crores in 1970-71 and Rs. 800 crores in 1975-76. This gap has to be covered primarily by additional taxation." The paper then concludes with the remark that "it seems premature to delve deeply into the problems of finance in too great a detail at this stage."

Export Earnings

The gap of Rs. 600 crores is based on the assumption that total annual export earnings will reach Rs. 1,225 crores in 1970-71 and Rs. 1,624 crores by 1975-76. The "progressives" are not, however, responsible for raising the resources for the fourth plan. If they were asked to raise the resources, the methods they will adopt are familiar. Addressing a meeting of parliamentarians last week, Mr. Krishna Menon, for example, claimed that foreign equity participation would make the country "bound hand and foot" and would shut out large areas of the world, such as Russia and the Arab countries. "It will lead to economic imperialism," he added. He also re-echoed the communist slogan for the nationalisation of banks.

Fortunately, the Central Finance Ministry has disapproved of the Rs. 20,000-crore plan. It does not believe that the rate of growth during the third plan will exceed 4.5 percent. The country has already been bled white in raising resources for financing both defence and development. It will not be an easy job to raise additional taxation of Rs. 120 crores a year. The Finance Ministry, therefore, wants the fourth plan outlay to be of the order of Rs. 15,000 crores.

The Central Minister for International Trade, Mr. Manubhai Shah, has joined issue with the "progressives". He has clearly told the Planning Commission that it would be

beyond the capacity of his Ministry to raise exports to Rs. 1,225 crores by 1970-71 and Rs. 1,624 crores by 1975-76. He has, in fact, refused to discuss the export target for 1975-76. According to his Ministry, these projections are obviously unrealistic. To take iron ore first, the prevailing world price is about Rs. 40 a ton. The price is lower for Goa ore, which is of an inferior grade. To increase exports from Rs. 40 crores to Rs. 135 crores, it is argued, India will have to raise the existing level of exports nearly three-and-a-half times. This is impossible because it will call for the expansion of port, railway and mining facilities on a scale which is clearly beyond India's means. Even a section in the Planning Commission favours the fourth plan outlay being fixed at Rs. 17,500 crores.

The stage of formulation of the second plan should provide some guidance in the present controversy. It will be recalled that Mr. K. C. Neogy, who was then a member of the Planning Commission, did not approve of the plan outlay and had threatened to write a minute of dissent. He was dissuaded from doing so by the then Deputy Chairman of the Planning Commission, the late Sir V. T. Krishnamachari. The latter evolved a formula that the plan outlay could be raised if agricultural production could be stepped up simultaneously with a reduction in farm prices. Meanwhile, even the balance-sheet of the second plan has not yet been made available to the country. All that is known is that agricultural production has stagnated and the high prices of foodgrains have added to inflationary pressures.

PLANNING

Review by U.S. Bank

The First National City Bank of New York has produced a balanced appraisal of India's economic progress through the three five year plans. The study pays a tribute to the Central Finance Minister, Mr. T. T. Krishnamachari, for his foresight in encouraging private foreign capital and for the tax reforms now embodied in the Finance Act. It says: "In view of the very substantial volume of outstanding international indebtedness, there is a growing belief that India is close to reaching the upper limits of the amount of foreign currency borrowing it can service. External repayment obligations during the current plan are reported at \$1,500 million and this may rise to \$2,000 million in the approaching fourth plan period. Thus emphasis is now being placed on 'softer' lending with longer terms, substantial grace periods and minimal interest."

"Significant for the future are the growing signs of realisation that the country should seek to supply a larger share of its foreign capital needs by attracting direct private investment rather than by borrowing abroad. The net inflow of such private funds since independence has been relatively small, although in recent years there has been evidence of greater interest. Total foreign private investment was reported at about \$1,400 million at the end of 1963, up from the equivalent of \$775 million in 1948. Since much of this

increase was achieved through retained earnings which could have been repatriated, it is an indication of investors-faith in India's long-run potential. The major share of direct private investment is British, reflecting India's historic ties with the United Kingdom. However, U.S. direct private investment is gaining and is now variously estimated at between \$200 million and \$300 million, with a substantial portion of this in oil refining.

Tax Reforms

"Taken together, the various tax reforms indicate a widening realisation that Government spending, even when bolstered by official foreign aid, cannot accomplish the national development goals unless reinforced by private enterprise. Despite this evidence of willingness to work in partnership, there is no basis of complacency. The new Budget carries public spending to an all-time high. Central Government development outlays are reportedly being raised by Rs. 300 crores while defence spending will be boosted by Rs. 50 crores. (Consolidated Government Budget estimates are not yet available for 1964-65). It is not likely that public financing of this magnitude can be arranged without adding further to inflationary pressures."

Referring to export promotion in India, the study says: "Until recently, relatively casual attention was given by India to measures for stimulating exports and earning foreign exchange. Instead, past emphasis was on saving foreign exchange through import substitution made possible by the growth of domestic manufacturing. But these new industries, with their initial heavy requirements for imported equipment, were often slow to yield their intended savings. Meanwhile, other import needs mounted and export earnings languished."

"Belatedly, export promotion is now being given higher priority. Several new Government agencies were established in 1962, to deal with international trade matters. Special tax rebates for exports are now in effect, the export duty on tea has twice been reduced, and price supports have been introduced for several export commodities. Last year's Budget appropriated Rs. 3 crores for developing new markets abroad and provided additional tax incentives for export sales."

"These various measures have already had marked success. Exports, registering a gain of 14 percent for the calendar year 1963, topped the equivalent of \$1,600 million. This equalled the record high earnings set in 1951 under the inflated price conditions of the Korean war. Last year's export volume was considerably larger than in 1951, but was offset by lower market prices. Further improvement in the trade balance came from a 10-percent cutback in imports to just under \$2,100 million. Although the trade gap was still nearly \$500 million, it was the best showing in seven years."

"With foreign aid continuing at a high level, India managed to add nearly \$100 million to its foreign exchange reserves last year and also to repay \$25 million to the I.M.F. However, at the current figure of

about \$600 million, India's international reserves remain close to minimum requirements for currency cover and maintenance of working foreign balances.

"Individual Indian exports have been subject to divergent trends. Jute and burlap manufactures, in spite of wide price fluctuations, have found fairly steady markets in Europe and the United States. Tea sales—mainly to Britain—are substantial in volume but lack potential for growth. U.S. purchases of manganese and cashewnuts likewise tend to remain at a fixed level. After some success in building up exports of cotton textiles to Asia and Africa, India has been losing ground to foreign competitors since 1958. Japan provides a slowly growing market for iron ore and other minerals, plus some of India's short-staple cotton. Spurred by price increases, sugar exports nearly doubled last year, but as with tobacco, pepper and vegetable oils, the mounting domestic demand leaves little surplus for export. Rising internal prices have put the exchange value of the rupee out of equilibrium in so far as export sales of most manufactures are concerned."

Leading Supplier

"Since 1959, the United States has been India's leading supplier, with its share of India's total imports rising from 16 percent in 1957 to 28 percent in 1963. Britain and the European Common Market rank next in importance as trading partners, followed by Japan. Bilateral trade with eastern Europe has been growing steadily. Total U.S. sales to India were a record \$800 million last year—a hefty 20-percent gain over 1962—but most of these shipments were financed through U.S. Government programmes."

"The bulk of U.S. exports to India consists of industrial equipment, foodgrains and better-grade cotton, with metal products and chemicals also important. For alert American companies, there are wide sales opportunities in connection with projects financed by international lending agencies and the U.S. Government. U.S. firms are also providing engineering and technical services for many of these development projects."

The study forecasts a good future for India. It says: "Over the past decade, India has put a substantial investment into the nation's basic economic underpinnings, or infra-structure as it is called in the jargon of economic planning. But much of this capital spending has been slow in yielding results. Natural time-lags of construction have been compounded by unexpected bottlenecks and administrative shortcomings."

"As these new facilities begin to make their contribution, the momentum thus created will add thrust to the process of development, easing the way for the next step forward. But the road ahead is a long one and India has chosen an arduous course. Instead of encouraging light manufacturing, it is still forcing the pace of heavy industry, thus postponing consumer satisfaction. The decision is basically a political one, but India is a democracy, and this choice has been accepted by the majority."

"Because of its key position in Asia, India is destined to play an increasingly important rôle in world affairs. There is good reason for confidence that today's investment must eventually bring a better life for India's many millions. The nation is moving through years of momentous transformation. The tasks are formidable, and India is seeking assistance where it can. The new tax measures are welcome evidence of an official desire to improve the investment climate for foreign private capital. Given the opportunity, private enterprise

enjoy unique JAL service on your next flight to LONDON and other gay cities of Europe

Leave Calcutta Sunday or Thursday evening (2220 hours) aboard a luxurious JAL DC-8 Jet. (Also by connection at Karachi.) Arrive in Rome for breakfast; London for lunch. Visit Cairo and Frankfurt along the way. Or, fly JAL's morning service east through Bangkok and Hong Kong to Tokyo,

where JAL's trans-Pacific jets leave daily for the U.S.A. Either way, JAL's wonderful hospitality will make your flight truly enjoyable.

NATIONAL EXPANSION

EIGHTEEN years ago, NATIONAL RUBBER MANUFACTURERS LIMITED commenced operations. Today, NRM represents the Largest single unit in India, manufacturing industrial and mechanical rubber products.

EXPANSION PROGRAMME

Encouraged by its phenomenal growth, 1963 sales nearly 979% higher than 1951, NRM plans to launch another large-scale expansion programme. This will substantially increase the manufacturing capacity of:

- Cycle Tyres and Tubes
- Industrial V-Belts

NRM will also start the manufacture of new products—

- PVC Conveyor Belting
- Reclaimed Rubber

In addition, NRM sponsored the first wholly Indian-owned automobile tyre company in 1961. Widespread consumer acceptance has proved the quality of its products.

NRM's dynamic policy will help to meet the growing demands for its quality products in the home and overseas markets. Increased exports will bring in more foreign exchange.

**NATIONAL RUBBER
MANUFACTURERS LTD.**

LESLIE HOUSE 19, Chowringhee Road, Calcutta-13

NR/G/4

will be a prime mover in India's economic development."

FINANCE COMMISSION

Terms of Reference

The President has, by a formal order (promulgated in the Gazette of India Extraordinary during the past week), constituted a Finance Commission under the chairmanship of Dr. P. V. Rajamannar, retired Chief Justice of the Madras High Court. The other members of the Commission are: Mr. Mohan Lal Gautam, a former Minister in Uttar Pradesh; Mr. D. G. Karve, retired Deputy Governor of the Reserve Bank of India; Professor Bhabatosh Datta, Director of Public Instruction, West Bengal; Mr. P. C. Mathew, Special Secretary to the Ministry of Finance is the member-secretary of the Commission. The chairman and members of the Commission are expected to assume office shortly.

The Commission, which is the fourth to be constituted after the Constitution came into force, has, under Article 280 (3) of the Constitution, to make recommendations to the President in relation to the following matters: (a) distribution between the Union and States of the net proceeds of taxes; and (b) the principles which should govern the grants-in-aid from the Centre to the States.

The President has, in addition, directed that the Commission should make recommendations on the following further matters:

(1) the assistance that may be granted by way of grant-in-aid under Article 275 to such States as are in need of assistance. In recommending this assistance, the Commission will be expected to take into account the revenue resources of the States during the fourth plan period other than those to be raised by way of additional taxation, the expenditure on the maintenance and upkeep of plan schemes completed during the third plan, the moneys required for the servicing of the debt, including the debt to be incurred in the fourth plan, setting apart of the proceeds of estate duty on property other than agricultural land, over specified limits for the repayment of the States' debt to the Centre and the scope of economy consistent with efficiency to be effected by the States;

(2) the changes, if any, to be made in the principles governing the distribution among the States, under Articles 269, of the net proceeds in any financial year of the estate duty in relation to property other than agricultural land;

(3) the changes, if any, to be made in the principles governing the distribution of the grants to be made available to the States in lieu of taxes on railway fares;

(4) changes, if any, to be made in the principles governing the distribution of the net proceeds of the additional excise duties levied in replacement of the States sales tax on the following commodities: (i) textiles, (ii) sugar, and (iii) tobacco.

and (5) the effect of the combined incidence of States sales tax and Union excise duties on the production, consumption, or export of commodities or products, the duties on which are shareable with the States and the adjustments, if any, to be made in the States' share of Union excise duties as a result of the increase in the States sales tax on such commodities or products over a limit to be specified by the Commission.

The scheme of devolution to be recommended by the Commission will cover the five years from 1966-67 to 1970-71, which correspond with the period of the fourth plan. The Com-

mission is expected to make its report well in time for the preparation of the Budget for 1966-67.

SHIPBUILDING

Expansion Schemes

The Mazagon Docks Ltd, Bombay, and the Garden Reach Workshops Ltd, Calcutta, have signed collaboration agreements with a Scottish firm for the construction of non-propelled bucket dredger and twin screw hopper barges. The firm, Simon Lobnitz of Glasgow, will supply designs and drawings for the construction of the vessels as well as the specialised dredging equipment and other items which cannot be built in India.

The non-propelled bucket dredger, capable of dredging 1,000 cubic yards of mud or silt an hour from a depth of 45 feet, will be built by the Mazagon Docks, Bombay. The hopper barges will be manufactured at the Garden Reach Workshops in Calcutta. They will be twin screw diesel-powered vessels, each with a capacity of 1,000 cubic yards.

The Mazagon Docks Ltd, Bombay, and the Garden Reach Workshops Ltd, Calcutta, were acquired by the Defence Ministry in April-May 1960 and marked a significant phase in the expansion of the nationalised shipbuilding and repair industry.

The Mazagon Docks has built passenger and cargo ships, deep sea and dock tugs, dredgers and rock breakers-cum-dipper dredgers. It is also equipped to carry out major repairs to passenger and cargo ships, and about 75 percent of the total repair work done at the Bombay port is handled by the Company. In a year, it can handle about 600 ships for minor repairs.

The Garden Reach Workshops Ltd is designed mainly for handling inland watercraft up to 2,000 tons and building-berths for shallow-draft vessels up to 1,200 tons of launching weight. Since acquisition, the accent at the G.R.W. has been on shipbuilding and general engineering work, in collaboration with renowned shipbuilders of the U.K., West Germany, Holland and Japan. It has specialised in the design and construction of shallow-draft vessels, including tugs, light naval craft, river steamers, water boats, barges and pontoons.

IRON ORE

Export Facilities

It is stated that the Government's policy is to provide fully mechanised facilities at certain selected ports for the export of iron ore. At Visakhapatnam, works are already in progress for installing a mechanical ore loading plant capable of loading at the rate of 2,600 tons an hour. The plant is expected to be commissioned by the end of this year. The total cost of the Visakhapatnam port ore handling project is about Rs. 7 crores, the expenditure in foreign currency being about Rs. 2.8 crores. The foreign exchange component of the project is being financed from the U.S. President's Asian Economic Development Fund.

The Orissa Government is building an all-weather port in Paradeep with mechanical facilities to handle 2 million tons of iron ore. The total cost of the project is about Rs. 20 crores. The cost of the ore berth is estimated at Rs. 90 lakhs, including a foreign exchange component of Rs. 16.38 lakhs which is proposed to be met out of the Yugoslav credit. As for the ore handling plant, the cost is estimated at Rs. 1.32 crores, the foreign exchange component being about Rs. 54.61 lakhs, out of which Rs. 42.71 lakhs has been found from the U.S.

aid and the balance of Rs. 11.90 lakhs will be met out of the West German credit. Contracts for the construction of the ore berth and ore loading plant have been awarded by the State Government. The project is expected to be ready by the end of 1965.

Mechanical Ore Loading Plant

The Madras Port Trust has drawn up a scheme for providing a mechanical ore loading plant at one of the berths in the new wet dock. The cost of the project is estimated at about Rs. 2.5 crores, out of which the foreign exchange component will be about Rs. 1.40 crores. The Madras Port Trust has proposed that the foreign exchange cost of the scheme should be met out of the anticipated savings in the loan of \$14 million granted by the World Bank to the Port Trust for development projects. The Bank's approval to this arrangement is awaited. The project will take about two-and-a-half years from the date of sanction to be completed.

It is also proposed to provide mechanical iron ore handling facilities as part of the new Haldia project. The total estimated cost of the Haldia dock project is about Rs. 30 crores, of which Rs. 14 crores will be in foreign exchange. An application has been made to the World Bank for a loan to cover the foreign exchange requirements of the project. The dock system is expected to be ready by 1968.

At Mormugao port, there is at present a privately owned mechanical ore loading plant. Its capacity is, however, limited to about 400 tons an hour. It is proposed that this port should be developed so that it can handle about 10 million tons of ore a year. A firm of consulting engineers has been appointed to prepare a technical report on the scheme for the development of Mormugao port. Firm proposals will be formulated after the receipt of the consultants' report which is expected by September 1964.

At Mangalore, a major port is under construction. It is proposed that one berth in Mangalore should be provided with a mechanical ore loading plant. The project as a whole is estimated to cost Rs. 15.42 crores, including a foreign exchange component of Rs. 3.82 crores.

CANADA

Loan for Atomic Station

Canada will lend India \$37 million to cover the purchase in Canada of equipment, materials, and services for the 200,000-kilowatt nuclear power-station to be built in Rana Pratap Sagar, Rajasthan State. The Export Credits Insurance Corporation has signed the financing agreement with the Government of India. The \$37 million will cover the foreign exchange cost of the \$74-million plant.

The agreement is in accordance with two other agreements formally signed in New Delhi last December.

RATES OF DEARNESS ALLOWANCE

Pay range Rs.	At present Admissible Rs.	Admissible from 1-2-1964 Rs.	Increase Rs.
70-109	17	20.50	3.50
110-149	20	25.50	5.50
150-209	35	42	7.00
210-299	40	50	10
300-315	Amount by which pay falls short of Rs. 340		
316-320			
321-380	20	35	11 to 15
318-384	Amount by which pay falls short of Rs. 400		
385-400			
401-580	—	20	20
581-600	—	Rs. 600 minus pay	19 to 20

under which Canada and India will co-operate in the construction of a nuclear power-station in India similar to the one that the Atomic Energy of Canada Ltd is building in Douglas Point, Ontario. The Douglas Point station—an advanced type of nuclear power plant that uses heavy water as the nuclear moderator and coolant and natural uranium as the fuel—will be completed by the end of this year and will be in full operation in 1965.

The foreign exchange cost of the project is being financed under special credits allocated by the Canadian Government to India under the assistance from the Aid-India Club. The repayment terms are an overall credit period of 20 years including five years' grace. The rate of interest is 6 percent.

AIRCRAFT ACCIDENTS

New Committee Formed

The Government of India has given further consideration to the problem of obviating aircraft accidents. A committee has been set up consisting of Mr. S. S. Khara, Cabinet Secretary, chairman, and Air Vice-Marshal Arjan Singh, Vice Chief of Air Staff, Mr. R. N. Kathju, Director-General of Civil Aviation as members. Mr. S. K. Mukherji, Cabinet Secretariat (Emergency Wing) is the member-secretary.

The following are the terms of reference of the committee: (i) to examine the existing regulations and arrangements (a) for flying and flying safety; (b) for clearing an aircraft as fit for flying; and (c) for the standards of training of a pilot in relation to the tasks he is entrusted with;

(ii) to examine the adequacy of the above regulations and arrangements and their implementation; and

(iii) to recommend remedial measures, if any, to minimise accidents.

The committee is expected to submit its report and recommendations by the end of July 1964.

DEARNESS ALLOWANCE

Rates of Increase Announced

The Government of India has decided further to increase the dearness allowance admissible to their employees drawing a basic pay below Rs. 400 a month and to extend the benefit of dearness allowance to those drawing a basic pay between Rs. 400 and Rs. 600 a month.

The average of the working class consumer price index for 12 months reached the figure of 135 in January 1964. In terms of the recommendations of the second Pay Commission accepted by Government, the rates of dearness allowance were reviewed by the Government. It has been decided to allow increases ranging from Rs. 3.50 to Rs. 15, according to pay, to the employees at present eligible for the allowance.

As recommended by the Commission, the Government has also con-

sidered the claims for dearness allowance of those in the pay-groups beyond Rs. 400. It has been decided to extend dearness allowance to employees in the pay-groups Rs. 400 to Rs. 580 at Rs. 20. The new rates of dearness allowance will be: Rs. 20.50 for pay up to Rs. 109; Rs. 25.50 for pay in the slab Rs. 110-Rs. 149; Rs. 42 for the slab Rs. 150-Rs. 299; Rs. 35 for the slab Rs. 316-Rs. 384 and Rs. 20 for the slab Rs. 400-Rs. 580—marginal adjustments for pay slabs Rs. 300-Rs. 315, Rs. 385-Rs. 399 and Rs. 581-Rs. 600.

These rates have been allowed retrospectively from 1st February, 1964. The new rates compare with the allowance at present admissible as follows:

Nearly 2.3 million civilian Central Government employees will benefit by this decision. The cost to the Exchequer is expected to be of the order of Rs. 14 crores a year.

COTTON TEXTILES

Pact on Exports to U.S.A.

A bilateral agreement to promote the orderly development and growth of cotton textile exports from India to the United States was announced last week by the two Governments. The agreement, made under Article IV of the Long-term Agreement on

international trade in cotton textiles, covers certain categories of cotton textile exports from India for a two-and-a-half year period from 1st April, 1964 to 30th September, 1966.

India's cotton textile exports to the United States in five principal categories—carded sheeting, print cloth, shirting, carded twills and sateens, fabrics not elsewhere specified and towels other than dish towels—are limited during the first six months of the agreement to an aggregate level of 18.5 million square yards, increased by 1.25 percent. The annual aggregate level for these categories (37 million square yards) will be increased by 2.5 percent for the next year and on a cumulative basis by 5 percent for the final 12-month period.

The agreement with India, effected by an exchange of diplomatic notes, is one of a number of such accords signed with other developing countries to provide for gradually increased access to the U.S. market by avoiding sudden, unrestricted exports which would not only disrupt the U.S. economy but bring on domestic pressures for restrictive measures.

In a separate note, the United States informed India of its concern over the rapid expansion of exports from India of certain types of cotton bedspreads and advised the Indian Government that, if the rate of these exports continue to grow substantial-

ly, the United States may request consultations under Article III of the Long-term Agreement.

PETRO-CHEMICALS

U.N. Aid being Considered

A proposal for financial assistance to the extent of \$1,004,100 for setting up a petro-chemical division in the Indian Institute of Petroleum, Dehra Dun, is being considered by the authorities of the U.N. Special Fund.

RUSSIA

Farm Machinery Supply Pact

An agreement for the supply of agricultural machinery for the first stage of the Central mechanised farm in Jetsar, Rajasthan, was recently signed here between the Governments of India and Russia. The Jetsar farm is the second biggest mechanised farm in the whole of south-east Asia.

The distinction of being the biggest mechanised farm in south-east Asia goes to the Central mechanised farm in Suratgarh, also in Rajasthan, set up with Russian help.

The present contract relates to the supply of agricultural machinery worth Rs. 6 lakhs for the first stage of the Jetsar farm. Contracts for

CAPITAL, 14th May, 1964.

machinery worth about Rs. 11 lakhs for the farm were signed earlier.

S.T.C.

High Profits Explained

The Government issued a statement last week on the so-called high profits of the State Trading Corporation and the Minerals and Metals Trading Corporation. The allegation related mostly to the import of items such as betelnuts and cloves, camphor, ball bearings, non-ferrous metals, etcetera. The Government said that there was a misunderstanding concerning the margin which is charged by these two Corporations between the landed cost of these commodities and the release price for distribution.

As far as exports are concerned, the margins of profit are, as a rule, small, varying between ½ percent to 3 percent. In fact, in such cases like groundnut oil, lemongrass oil and sodium bichromates, losses are suffered with the dual object of (a) promoting exports and earning the much-needed foreign exchange, and (b) to give price support to the primary producers of manioc meal, lemongrass oil, tobacco, etcetera.

On imports, the margin of profits varied from commodity to commodity depending upon its availability in foreign markets, its essentiality, the prevailing market prices, the relative availability of the indigenous products, etcetera. In a very large number of cases, the percentage of distribution margin charged varies from 0.4 percent to 10 percent.

The margin of distribution charged is as follows:

Items	Distribution margin charges
Fertilisers	about ½ percent
Copper	about 2 "
Zinc	about 2 "
Steel	about 4 "
Tools and alloy steels	about ½ "
Dye intermediates, pharmaceutical intermediates, sodium and chilean nitrate, caustic soda, sodium sulphate and miscellaneous basic chemicals	Below 10 "
Newsprint	about 1 "

In some scarce imported consumer commodities in short supplies, whose imports have been canalised through these corporations, they mop up a portion of the surplus profits which were available in these commodities due to their short supply and high ruling market prices. Such commodities are betelnuts, cloves, camphor, and mercury. "In such cases also, the corporations, while mopping up the excess profits, fix the release price, which is invariably lower than the prevailing market prices so that the prices tend to stabilise at reasonable levels and unduly large profits are not passed on to private hands without at all benefiting the consumer."

While determining the release prices, the corporations have also been guided by the consideration that the release prices may not affect the interests of indigenous producers. For example, India produces about 40,000 tons of betelnuts and imports only 5,000 tons. The S.T.C. does not at all interfere with the purchase, sale and distribution of indigenous growers and traders of the country. It releases the imported betelnuts to distributors at prices somewhat lower than the ruling market prices of indigenous betelnuts. The margin charged by the S.T.C. on the distribution of betelnuts has been about 33 percent over the landed costs.

CAPITAL, 14th May, 1964.

London

NEW U.K. LICENCE PLANS FOR COTTON TEXTILE IMPORTS

(FROM OUR LONDON CORRESPONDENT)

SHORTLY after the publication of the returns which showed that Britain's imports of cotton goods had risen again to near their record high level, an announcement is made of changes in import licensing arrangements which should go a long way towards remedying the defects of the existing system. The "ring fence" which the Government last summer claimed to have put round the home market proved to have many holes in it, and in recent months, the Cotton Board has continually pressed for modifications and extensions to prevent further disruption of the domestic industry. The changes represent a substantial success for the Board and should encourage it to persist in its efforts to secure further improvements in the system.

There have recently been three or four instances where imports from a particular country have jumped from virtually nothing to several million yards within the space of a few months. Under previous arrangements, it was not until imports from a new supplying country had reached a substantial volume that moves were taken to establish a quota, and the size of the quota has been influenced largely by the volume already actually attained. By requiring specific licences for all imports from countries other than those expected, the growth of imports from a new source can be watched from the start and checked before the country concerned can point to a past performance at a high rate. At what the authorities consider to be the appropriate moment action, can be taken under the long-term arrangement for international trade in cotton textiles devised by the General Agreement on Tariffs and Trade.

The new arrangement should introduce greater stability into the course of imports and the condition of the home market. Lancashire now accepts that total imports will continue to be large, but it has been greatly disturbed by sudden big increases in supplies from new sources. The danger from such increases will be greatly reduced in future.

The official announcement giving effect to the Government's proposals stated that specific import licences will be required for all imports of cotton textiles to the U.K., except for those from dependent territories, most European and North American countries and countries with which there are limitation agreements. The move has been made as much for the sake of keeping peace with those countries with which Britain has agreements as for the Lancashire cotton industry; its major aim is to allow the Board of Trade to keep a watchful eye on any new and fast-growing sources of large-scale imports. Up to now, the Government has only discovered these new sources when it received the Customs imports figures and by then forward orders could have reached substantial figures.

Two recent cases in point were those of Macao, the Portuguese colony across from Hongkong, and South Korea. Between January and July, last year, not one inch of cotton arrived in this country from Korea, but in August there were 115,000 square yards, in October 231,000 square yards, in December

610,000 square yards and in January this year 1,183,000 square yards. And trade sources estimate that another 20 million square yards is on forward order for arrival in the next year or 18 months.

There is a similar story from Macao. No imports were recorded up to February last year. There were 2,000 square yards in March, and this had risen to 925,000 square yards in December and to 1,500,000 square yards in January. Korea has been sending mainly grey cloth, but the Macao imports have been made-up goods and since the U.K. has no important manufacturing plants, the suspicion is that the cloth has come from Hongkong. Republican China, or possibly, Japan. With all these countries there are limitation agreements.

Ceiling on Imports

Efforts to negotiate limitations with Macao and south Korea have so far failed to reach an agreement. In the meantime, Britain has imposed its own ceiling, based on the General Agreement on Tariffs and Trade recommendation of the amount imported in the first 12 months of the last 15 months. The amount on firm order, however, probably covers four or five times the annual ceiling.

At present, the Government is also discussing limitation agreements with Greece, Brazil, United Arab Republic, Israel and Malaysia, although it is not felt that there will be any massive upsurge from these quarters. The decision to introduce import licences, however, will make it clear if one is coming as well as giving the Government a reasonable warning should importers find any new source of cheap cotton goods. About 40 percent of the total U.K. consumption of cotton textiles is at present imported, mainly from Hongkong, India, Pakistan, with lesser amounts from Portugal, Spain, Yugoslavia, Malaya and the Irish Republic. In total, this amounts to about 530 million square yards of cotton piecegoods and 150 million square yards of made-up goods.

Britain, indeed, has probably the best record of any western country in admitting cotton goods from underdeveloped countries. Mr. Heath was careful to stress in the House of Commons when announcing the measure that it did not introduce a change in policy. Licences would be issued freely, he said, unless imports from any country affected were increasing in such a way that the Government found it necessary to request the country to exercise restraint on the basis of the G.A.T.T. long-term arrangement.

The new import licences will be required for yarns and threads, grey cloth, woven fabrics and made-up articles, but not carpets, mats, rugs, and shawls. Goods in transit on or before 30th April will be admitted without a licence up to 19th May and there is unlikely to be any difficulty about bringing in goods covered by irrevocable credits after that date, although import licences should be applied for in these cases. Mr. James Browning, president of the United Textiles Factory Workers Association, gave a qualified welcome to the move. It was in line with the Cotton Board policy. "The Board has been pressing for it for several months. It will be of some help but it does not go far enough," he said.

One Body for Employers

Proposals for a new industrial organisation embracing the three present bodies—the Federation of British Industries, the British Employers Confederation and the National Association of British Manufacturers—have just been published. The two independent "commissioners"—Sir Henry Benson, a chartered accountant, and Sir Sam Brown, a solicitor—having performed their complicated work, the matter now rests with the three existing organisations and their members. It is hoped, however, that the new organisation will be born early next year; a suggested name is "Confederation of British Industries".

Sir Henry and Sir Sam recommend—

that the new organisation should consist of individual companies, trade associations and employers' federations;

that the nationalised industries should join as associate members;

that it should concentrate in its early years on representing productive industries—raw materials production, manufacture, building and construction, and transport;

that it should have a strong regional organisation;

and, that to keep up with inflation, subscriptions should eventually be based on the amount members pay out in wages and salaries.

On the negative side, the report rejects the notion that the new organisation should have any power of compulsion over its members. It says: "It was suggested that if it were at some time to make an announcement that wage increases should generally be limited to, say, 4 percent, it should have the power to compel its members not to grant wage increases in excess of that percentage. We do not think it is desirable or practicable under present circumstances to give it powers of this character. Members will normally be reluctant to disregard, without good reason, the pronouncements and policy statements which are issued, but, in our opinion, each member must have the right to conduct its own affairs as it thinks fit." It, therefore, goes on to reject the idea of central wage negotiations on the Swedish model.

The new organisation, it considers, should take over the functions of the B.E.C. in discussing questions of labour relations with the Government, the T.U.C. and other bodies and should, in addition, "consider future planning in the field of industrial relations and the wider questions which affect employers and employees, such as productivity, national wage trends and related matters"; but it believes it "essential" that actual wage negotiations be left as at present to constituent firms and employers' associations and the appropriate unions.

The two commissioners have clearly leaned a long way in the direction of accommodating the smaller manufacturer, not only on regional organisation and the subscription basis, but also in representation on the central bodies.

ANNOUNCEMENT

ALUMINIUM EXTRUSIONS, ALLOY INGOTS, SHEETS, COILS, PLATES, CIRCLES & SLUGS.

Hindustan Aluminium Corporation, Ltd., has pleasure to announce that its Extrusion Press and Alloying Furnaces will shortly go into production, and the company will soon be in a position to supply Aluminium Extruded Shapes and Sections and Alloy Ingots of the LM series (and others, in case of sizable orders). The Rolling Mills are also expected to be installed sometime later, perhaps by the end of 1964, and Plain and Corrugated Sheets, Coils, Plates, Circles, Slugs, etc., would also be available in due course.

Interested parties which have not already indicated their requirements, in full detail, are requested to do so immediately, so that our production may be planned in advance. It would benefit all concerned if parties would please communicate with our RENUKOOT Sales Office, under advice to our CALCUTTA Sales Office. (Parties located in Maharashtra, Madhya Pradesh and Gujarat may also please keep our BOMBAY Sales Office informed of their requirements, and those located in Punjab, Delhi, Rajasthan, Himachal Pradesh, Jammu & Kashmir may also please keep our DELHI Sales Office informed of their requirements.)

Enquiries should indicate the product specifications in detail, the annual consumption of each item in Tonnes, the size of order and delivery schedule likely to suit their requirements, the purpose or end-use for which the material is required, etc.

"Hindalco" is already producing Aluminium Ingots of Commercial, E.C., Properzi and High Grades (upto about 99.8% purity); E.C. Wire Bars, Billets, and Re-draw Wire Rods.

PROFITS OF GUNNY PRODUCERS SHRINKING

THE latest reports of well-run jute mills forecast a less profitable outlook for the industry, although it is working at the maximum level after the I.J.M.A. Working Time Agreement was scrapped. The Wage Board award, together with bigger payments for power, fuel, lighterage, stores and essential spare parts and components have pushed up production costs. The prospects of getting a more normal supply of power have improved with the commissioning of additional power plants. But the popular belief that the stability of fibre prices, and the spreading of overheads on a larger output, might broaden the profit margin has been disproved.

For some time, gunny prices have been depressed, in view of the fact that supply has been running slightly ahead of demand. Consumers are not interested in entering into any long-term commitment. With Indian and Pakistani mills working to capacity and carrying stocks equivalent to about five weeks' output, overseas consumers are assured of an adequate supply of gunnies at any time. So the near-term prospects, it is said, are that gunny prices will tend to stabilise around the prevailing lower levels.

Trends in Jute and Gunny Prices
Analysing the divergent trends of raw jute and gunny prices, the Jute Bulletin published by the Indian Central Jute Committee says that despite the higher output, the profitability of jute mills has suffered. While the monthly average price of Assam Bottoms for ready delivery was Rs. 30.15 in January, Rs. 30.35 in February and Rs. 30.96 a maund in March this year, against Rs. 27.82, Rs. 28.89 and Rs. 28.30, respectively, for the corresponding months of 1963, that of 40in. 10oz. hessian was Rs. 47.28, Rs. 46.35 and Rs. 45.73 a 100 yards, against Rs. 50.97, Rs. 50.63 and Rs. 47.85. The average price of B Twills was Rs. 113.93 in January 1963 and Rs. 114.67 in February 1963, compared with Rs. 112.74 and Rs. 111.56 during the corresponding months of this year. At current prices, the simultaneous buying of raw jute and selling of sacking cannot leave much of a profit, while in hessian the margin seems to have been squeezed to between Rs. 75 and Rs. 100 a tonne, depending on the efficiency of the mill.

May-June Purchase Quota
The Jute Commissioner has issued a purchase quota of 190,000 bales to mills for the period from 11th May to 27th June. Of this, I.J.M.A. members will have to lift 175,000 bales and the rest 15,000 bales. With this allocation, the total quota released under the price-support scheme comes to 7.08 million bales—6.40 million bales for I.J.M.A. mills, 530,000 bales for the rest and 150,000 bales for the J.B.S.A.—absorbing as much as 94.4 percent of the season's officially estimated raw jute and mesta output of 7.51 million bales. Besides these quotas, the jute co-operatives purchased 160,700 maunds, roughly equivalent to 32,140 bales, in the primary markets and the feeder centres when prices tended to sag below the minimum levels. The remainder of around 387,860 bales, mostly of lower-grade jute and mesta, will be used to meet a small export demand and for miscellaneous purposes such as making ropes and twine.

Mesta Estimate for 1963-64
The official all-India final estimate of mesta for the 1963-64 season puts

the area at 952,000 acres and production at 1.805 million bales, against 937,000 acres and 1.684 million bales for the previous season. Bihar and Andhra Pradesh showed an increase in both acreage and output due to favourable weather conditions. The average yield an acre during the current season has been estimated at 758 lbs, against 719 lbs for the 1962-63 season.

West Bengal's jute yield is catching up with that of East Pakistan, says the annual report of the Indian Central Jute Committee for 1962-63. The average yield in the State during 1962-63 was 7.17 bales a hectare, against 7.38 bales in East Pakistan. In 1959-60, the corresponding yields were 6.51 bales and 9.65 bales. The Committee has also reported an improvement in the average quality of Indian jute.

Stocks Rise to Record Level

Mills reporting to the I.J.M.A. have shown a sharp increase in stocks during April from 125,200 tonnes to the all-time peak of 130,100 tonnes. This represents 1.155 months' output at the March level of production. Hessian inventories have risen by 4,500 tonnes to 47,900 tonnes, carpet-backing cloth by 1,500 tonnes to 20,000 tonnes and other goods by 300 tonnes to 16,500 tonnes. Stocks of sacking have, however, declined by 1,400 tonnes to 45,700 tonnes. At the end of April 1963, the total stocks were 90,900 tonnes—29,000 tonnes of hessian, 45,000 tonnes of sacking, 4,200 tonnes of carpet-backing cloth and 12,700 tonnes of other goods.

Pakistan to Oust Foreign Interests

The Pakistani Government will be progressively eliminating foreigners from the country's trade in an effort to provide more opportunities to local business men, according to Mr. Wahiduzzaman, Central Commerce Minister. The process has already been started in the jute industry. The Minister declined to identify the foreigners Pakistan intended to oust, nor did he mention a deadline for completing the process.

The Pakistan Jute Board will be holding a three-day session in Dacca next week to discuss the problems of jute marketing. Saying that the question of ensuring a fair price to growers was engaging the attention of the Government, the Minister stated in Dacca last week that the official price support scheme was being thwarted by the purchasers. The Central Government was experiencing difficulties in implementing the scheme since the Jute Marketing Corporation, which was responsible for buffer stock operations, was under the control of the Dacca administration. Rawalpindi was not inclined to accept Dacca's insistent demand for transferring the Jute Board from the Centre to the province, he added.

The Minister said that the World Bank President had assured sympathetic consideration to Pakistan's request for a loan to finance the expansion of the jute industry. The Government proposed to expand the broad-loom capacity substantially. The addition of 4,000 looms to the existing complement of 12,000 is expected to be completed during the second plan period.

More Jute Mills for Pakistan

East Pakistan will have 12 more jute mills with 250 looms each in the heart of its jute-growing areas in Choumohani, Khulna, Ghorasal, Nars-

ingdi, Chandpur, Bhairab and Chittagong, it is reported. The project cost of about Rs. 18 crores will be jointly financed by the Industrial Development Bank of Pakistan, the Industrial Development Corporation and private parties. Of the Rs. 15 crores required for each unit, the I.D.B. will contribute Rs. 1 crore in foreign exchange, the P.I.D.C. Rs. 10 lakhs and private entrepreneurs Rs. 25 lakhs. The remaining Rs. 15 lakhs will be obtained from the capital market by the issue of shares. As many as eight units of the proposed mills will be financed out of funds available from the fifth and the sixth U.K. credits.

Determining the Twist in Yarn

The Indian Standards Institution has prepared a draft standard method for determining the twist in yarn. It prescribes the process of finding such twists in terms of turns a metre using direct-counting type twist-testers. The method prescribed is applicable to single, plied or cabled yarn. The draft will soon be circulated among consumers, manufacturers and technologists for eliciting their comments before its finalisation as an Indian standard.

THE JUTE MARKETS

Manufactured Goods: But for a shortlived rally, listless conditions prevailed in the Calcutta gunny market during the past week. Prices hardened appreciably in the spot market earlier on reports that Argentina would issue a quota of 100 million yards of hessian for May-September positions. The Indian Government's tenders for about 10,000 bales

of B Twills for May-June delivery also helped. They were followed by hectic bear-covering, mainly in sacking, in the hedge market. But prices fell sharply when an I.J.M.A. statement showed that stocks with mills had increased during April to the record level of 130,100 tonnes. Mills emerged as keen sellers for all positions and transacted a fair volume of business. But they turned cautious when prices dipped below the previous week's levels after wide fluctuations in heavy goods and moderate movements in hessian. Towards midweek, there was a fresh flare-up on receipt of confirmation that a handsome percentage of the bulk Argentine order had come to Calcutta and on reports of fair hessian business with the U.S.A. The hand-to-mouth Government ofttake disappointed the trade. Despite an improvement in the draft situation, shippers complained of a shortage of ready bottom. The hedge market also relapsed into quietness after wide fluctuations induced by tired long liquidation, combined with a fair degree of short-selling. Turnover was fair, and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	May	June	July-Sept.	Oct.-Dec.
40in. 7oz.	33.20	33.40	33.65	33.65
40in. 8oz.	35.80	—	—	—
40in. 10oz.	45.10	45.20	45.70	45.70
B Twills	113.90	113.70	114.20	114.30
Corn sacks	114.50	115.00	115.50	115.65
Heavy Cees (Plain)	114.25	114.00	114.00	114.00
A Twills	134.50	135.50	136.25	137.25
Liverpools	127.50	127.50	128.00	128.00

Raw Jute: Easy conditions prevailed in the raw jute market during the past week. The issue of a purchase quota of 190,000 bales for the period from 11th May to 27th June failed to create an impression. Arrivals of quality jute were negligible in the agencies, though they commanded a premium over the minimum levels. A glut in lower-grade fibre and mesta increased selling pressure among holders who were

inclined to discount prices below the derivative levels. The progress of the crop in the early-sown low-lying areas was satisfactory and brisk interculture was going on. Intermittent heavy showers were reported in all the jute-growing areas, where soil preparation work was being done. These reports accentuated the nervousness of holders of low-grade fibre. Towards the close, mills lifted small lots of offgrade fibre and mesta against their quota. In the futures market, tired long liquidation and aggressive bear-hammering caused a sharp setback. Prices fell sharply after violent fluctuations. Turnover was fair and the undertone easy at the close.

Wednesday's quotations were as follows:

Landed at Mills (Basic Bottoms)	Current Prices		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Mid.	Rs. A Qtl.	Rs. A Mid.

I.J.M.A. PRODUCTION FIGURES FOR APRIL

The Indian Jute Mills Association reports the total production of jute goods for April as follows:

Description	Quantity	
	(a) Hessian	(b) Sacking
1. Gunny bags	7,545 tonnes (7,426 tons)	
(a) Hessian	1,97.73 thousand metres (2,16.2 lakh yds.)	
	1,43.1 lakh nos.	
(b) Sacking	37,850 tonnes (37,252 tons)	
(a) Hessian	8,29.87 thousand metres (9,07.6 lakh yds.)	
	4,09.4 lakh nos.	
2. Gunny cloth	36,866 tonnes (36,284 tons)	
(a) Hessian	12,38.19 thousand metres (13,54.1 lakh yds.)	

(b) Sacking	1,444 tonnes (1,421 tons)
26.77 thousand metres (29.3 lakh yds.)	
3. Carpet-backing	7,259 tonnes (7,144 tons)
55.55 thousand metres (60.8 lakh yds.)	
4. Other manufactures	12,737 tonnes (12,536 tons)
5. Total production	1,03,701 tonnes (1,02,063 tons)

Summary		
(000 metres and 00,000 yds.)	April 1964	March 1963
Hessian	14,35.92 (15.70)	15,71.85 (17.19)
Sacking	8,56.64 (9.37)	9,34.65 (10.22)
Carpet-backing	55.55 (61)	62.35 (68)
Grand Total	1,03.7 (1,02.1)	1,12.6 (1,10.9)

(000 tonnes and 000 tons)		
April 1964	March 1964	April 1963
Hessian	44.4 (43.7)	47.8 (47.0)
Sacking	39.3 (38.7)	42.4 (41.8)
Carpet-backing	7.3 (7.2)	8.0 (7.9)
Others	12.7 (12.5)	14.4 (14.2)
Grand Total	1,03.7 (1,02.1)	1,12.6 (1,10.9)
Hours worked	200.0	208.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

THE U.K. JUTE MARKETS FIBRE UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was very quiet in Pakistan during the past week, and no change took place in prices here. Dundee spinners showed a little buying interest, but this was mainly for spot parcels. It is expected that this type of buying will continue for the next two months as spinners are holding good stocks of raw material and further quantities are available ex warehouse Dundee. The quality of the fibre arriving in Dundee is still very good, and this may eventually persuade spinners to increase their holdings in preference to the new crop. The present season has been a very satisfactory one for spinners as the quality of jute received has been much better than previous seasons.

Although the new crop is making satisfactory progress in Pakistan only a few sellers are willing to make offers. The prices named are for short groups with Mill Hearts at £95 for August-September shipment. Business has already taken place at this level, but the quantities have been very small. Prices of old crop are irregular with Mill Firsts at £138, Mill Lightnings at £109, Mill Hearts at £94 10s and Grade Hearts at £78, c.i.f. U.K., for May-June shipment. Grade Tossa-2/3 ranged from £123 10s and Grade Tossa-4 from £105. Dacca Tossa-6 was named at £107 10s. The lowest price quoted for Outport Tossa-2/3 was £93 and Outport Tossa-4 £83 10s but business was transacted during the past week at £91 10s and £81 respectively, for May-June shipment.

Cuttings were quiet at £59 for S.N.C. and at £50 15s for N.C. Mesta was more or less unchanged at £85 for A, at £75 for B, at £67 for C and at £49 for cuttings, c.i.f. U.K., May-June. The Siam jute market was quiet. Offers were at £77 for grade A, at £68 for grade B and at £65 for grade C, delivered mill Dundee, for May-June shipment.

A little buying interest was shown in Calcutta goods here. Prices are at 69s 5d for 40in. 10oz. and at 50s 11d for 7 1/2 oz. a 100 yards f.o.b. Calcutta for May shipment, at 69s 7d and 51s 3d June and at 70s and 51s July-September. B Twills were at 176s 6d, 176s 10d and 177s for the respective shipment periods.

Commodity Markets

PEPPER SLUMPS AS BUYERS WITHDRAW

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PEPPER, which enjoyed a boom for some time recently, is in distress at present. If the earlier high prices were due to the interest shown by foreign buyers, especially those from the United States, the present fall is attributed to the withdrawal of this buying support. The fall is almost as steep as the rise which was witnessed in March-April. For instance, May delivery which started from Rs. 317 a quintal on the Cochin market in the middle of March, shot up to Rs. 404 early in April. It had come down to Rs. 358 by the end of April, and to Rs. 340 last week. Garbled ready was quoted last week-end at Rs. 331 a quintal, compared with Rs. 389 a month ago.

It is said that both the United States and Russia, which were by and large responsible for the activity in the pepper market in March-April, are at present keeping away from the Indian market. Reports from New York suggest that the buyers there are not willing to pay anything more than 36 to 37 cents a lb, against the Indian demand of 39 to 40 cents. The disparity is considered rather too wide for business to materialise. The United States is said to be getting pepper at cheaper rates from Indonesia, and this might be one of the reasons for the present disinterest of American buyers in Indian pepper. U.S. Stocks are said to be small, but this need not necessarily force American buying because the buyers might be content with the minimum stocks if they see a chance of getting their requirements at cheaper rates. The second largest buyer of Indian pepper, Russia, has already bought about 4,500 tons of Indian pepper since the beginning of the current season, and it is at present keeping away. This has also contributed to the present inactivity in the Indian pepper market.

The bulls in the market, whose position has been weakened to some extent, still maintain the view that the demand would revive. In their opinion, the position of Indian pepper is still statistically sound because over 60 percent of India's exportable surplus has already been shipped. There is yet another six months to go between now and the beginning of the next season and the disposal of the remaining 40 percent at reasonable prices should not be a problem for India. As against this so-called sound position of India, there is the threat of underselling, by Indonesia.

COFFEE

Price Boom Recedes

Coffee is another commodity which has recently experienced a reaction from the boom it had been enjoying since September last. According to the latest available reports, coffee was frantically in search of buyers last month, the markets being unsettled by ample stocks and the meeting of the International Coffee Council. Reports of the heavy unsold stocks afloat and the extension of the period for insisting on certificates of origin until August outweighed the news that the Brazilian crop will be only 6 million bags in 1964-65. The price advance which had run almost steadily since last September encountered rather heavy profit-taking and trade selling around the highs. The easiness was attributed to the reluctance on the part of the roasters to accumulate additional stocks at high prices. Contributing factors to the bearish sentiment were the continued delay

in passing legislation by the U.S. Senate for the International Coffee Agreement, indications that the U.S. State Department may press for further quota increases by August, and the Congressional enquiry into rising coffee prices. Senate action on legislation implementing the Agreement remains bogged down behind the Civil Rights fight. The Senate Finance Committee had finally reported a modified Bill by a close vote and the principal amendment would allow Congress to withdraw U.S. support after a 30-day warning period if it felt that prices showed an unwarranted increase. In view of the delay in the Senate, U.S. participation in the Agreement might not materialise even by the new target date of 1st June.

CASHEWNUITS

Kernel Rates Firm

The cashew market is at present in a cheerful mood. Kernel prices have been remaining firm at about 57 cents a lb with the United States as the main buyer. Business to the tune of about 20,000 cases are reported to have taken place recently and more are expected in the near future. Indian shippers do not expect that the prices will go down from the present level immediately because, according to them, there are still a lot of unfulfilled orders from abroad. Exports during the first four months of the year are placed at around 500,000 cases of 50 lbs each, and this is considered a good record. If this tempo is maintained, there cannot be any difficulty in maintaining last year's level.

The raw nut supply position is considered satisfactory as far as the price and quantity are concerned, but the quality of the imported nuts from Africa is said to be discouraging. The east African supply is damaged, according to reports. The African nut is at present available at around Rs. 770 a ton. According to one report

25,000 to 30,000 tons of raw nuts are still remaining unsold in east Africa. The harvest is in full swing on the Malabar coast. The Indian supply is estimated by the trade at around 65,000 tons, as against the official estimate of 80,000 to 90,000 tons. Indian nuts are now changing hands at about Rs. 950 a ton.

TEA

Need to Concentrate on Quality Grades

(BY A SPECIAL CORRESPONDENT)

AT a recent meeting of the Calcutta Tea Merchants Association, Mr. M. G. Patel, drew the authorities' attention to several matters, particularly the urgency of producing more quality tea. This is not easy, but an old-time factor seems to be operative today, namely, fine plucking, which still produces better tea than heavy plucking. Likewise, fine plucking yields less bulk and so acts as a restriction on production—this may prove very necessary during 1964.

The chairman noted that "more quality tea would get over the present paradox of exporting more and earning less foreign exchange". He made reference to the old topics such as the 900 million lbs target and talked about replanting and extension on virgin soil. In urging the revival of the International Tea Agreement, Mr. Patel was talking on sound lines.

Mr. Patel suggested that promotional activities in the U.K. should be directed to arresting the declining share of tea in the beverage market there. This would appear to advocate a drink more Indian tea campaign, but with the total change in the standard of living of the people in the past 40 years, the problem is perhaps already beyond solution. (This correspondent remembers paying farm labourers in Essex 2s 6d a day, that is 15s a week. Today, they earn something like £8 a week and can afford something more exciting than a thrice watered brew of cheap tea leaves.) It should, of course, be noted that living costs have changed. It would appear that tea has reached saturation point as far as consumption in the U.K. is concerned. But advertising may still be necessary to avoid further loss.

COMPANY AND PUBLIC NOTICES

GUEST, KEEN, WILLIAMS, LIMITED NOTICE

THE Thirty-fourth Annual General Meeting of the Members of Guest, Keen, Williams, Limited will be held at the offices of Jardine Henderson Limited, 4, Clive Row, Calcutta, on Friday, the 12th day of June, 1964 at 11-30 a.m., to transact the following business:—

- To adopt the Directors' Report and the Audited Accounts for the 52 weeks ended 28th December, 1963.
- To declare a Dividend.
- To appoint Directors in place of those retiring.
- To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following resolutions, a Special Notice as defined by Section 190 of the Companies Act, 1956 having been received by the Company under Section 281 of the Act in respect of Resolution No. 5 hereunder:—

5. As an Ordinary Resolution

That Sir Raghavan Pillai, who vacates office having attained the age of 65 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956 shall not apply to him.

6. As a Special Resolution

That, subject to the approval of the Central Government, the Articles of Association of the Company be altered as follows:—

In Clause 104 by deleting the word "twelve" and substituting in place thereof the word "fourteen".

7. As an Ordinary Resolution

That, with effect from 29th December, 1963, and subject to Central Government approval, Mr. Krishna Chandra Maitra, who has been appointed a Managing Director, be and is hereby authorised to receive remuneration for his services as a Managing Director in accordance with the terms specified in the Agreement dated 24th April, 1964 made between the Company of the one part and Mr. K. C. Maitra of the other part, or on such other terms and conditions as the Central Government may think fit to determine.

8. As an Ordinary Resolution

That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Ardesir Hormusji Sethna be and is hereby appointed a Director of the Company.

9. As an Ordinary Resolution

That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Nisith Ranjan

Banerjee be and is hereby appointed, subject to the approval of Central Government under Section 269 of the said Act, a Director of the Company.

10. As a Special Resolution

That, in view of the foregoing resolution that Mr. Nisith Ranjan Banerjee be appointed a Director of the Company, consent be and is hereby accorded to Mr. Nisith Ranjan Banerjee holding and continuing to hold an office or place of profit under the Company and being remunerated, subject to Central Government approval, for his services in accordance with the terms specified in a written communication dated 24th April, 1964 conveyed to Mr. Nisith Ranjan Banerjee by the Company, or on such other terms and conditions as the Central Government may think fit to determine.

11. As an Ordinary Resolution

That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Robert Brabender Ritchie be and is hereby re-appointed, subject to the approval of Central Government under Section 269 of the said Act, a Director of the Company.

12. As a Special Resolution

That, in view of the foregoing resolution that Mr. Robert Brabender Ritchie be appointed a Director of the Company, consent be and is hereby accorded to Mr. Robert Brabender Ritchie holding and continuing to hold an office or place of profit under the Company and being remunerated, subject to Central Government approval, for his services in accordance with the terms specified in a written communication dated 24th April, 1964 conveyed to Mr. Robert Brabender Ritchie by the Company, or on such other terms and conditions as the Central Government may think fit to determine.

13. As an Ordinary Resolution

That, due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. John Marshal Leighton be and is hereby appointed, subject to the approval of Central Government under Section 269 of the said Act, a Director of the Company.

14. As a Special Resolution

That, in view of the foregoing resolution that Mr. John Marshal Leighton be appointed a Director of the Company, consent be and is hereby accorded to Mr. John Marshal Leighton holding and continuing to hold an office or place of profit under the Company and being remunerated, subject to Central Government approval, for his services in accordance with the terms specified in a written communication dated 24th April, 1964 conveyed to Mr. John Marshal Leighton by the Company, or on such other terms and conditions as the Central Government may think fit to determine.

munication dated 24th April, 1964 conveyed to Mr. John Marshal Leighton by the Company, or on such other terms and conditions as the Central Government may think fit to determine.

The Register of Members of the Company will be closed from the 25th May, 1964 to 12th June, 1964, both days inclusive.

By Order of the Board,
R. B. RITCHIE,
Secretary.

Registered Office:
41, Chowringhee Road,
Calcutta 16.
25th April, 1964.

Note:—1. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and such proxy need not be a member of the Company. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

Note:—2. No application for warrants will be necessary and payment of any Dividend declared will be made on or after the 26th June, 1964 only to those Members whose names are registered in the books of the Company on the 12th June, 1964 or to their Mandatees. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Note:—3. The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 is being sent to all members of the Company.

BALMER LAWRIE & CO. LTD.

THE Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a final dividend of 15½ per cent for the year ended 31st December, 1963.

BALMER LAWRIE & CO. LTD.,

D. MANSON,
Managing Director.
21, Netaji Subhas Road,
Calcutta, 11th May, 1964.

BANKS PROSPER ON THE MILK OF DEFICIT FINANCING

THE past year has been a period of fairly satisfactory working for banks in this country. This is the main impression left by the annual report on the *Trend and Progress of Banking in India*, which was issued by the Reserve Bank on Saturday and covers the year 1963. The year began with a number of major uncertainties. The first arose from the Chinese invasion, which for a time not only decelerated the growth of deposits and advances but also threatened to throw the economy out of gear. The second was that the rise in Bank rate from 4 percent to 4½ percent at the beginning of the year seemed likely to depreciate investment portfolios and thus cut into banks' profits. Thirdly, at the end of February 1963, there came Mr. Morarji Desai's historic Budget; many feared that it would bring instability to the economy by raising production costs and selling prices; that the reduction in private savings would affect deposit growth; and that the demand for advances too might suffer with the sharp deterioration in the climate for investment and productive activity. The fourth uncertainty centred on the erratic nature of the Reserve Bank's credit policies. Bankers were never sure how frequently or drastically the policies might be amended from time to time, so they felt themselves unable to base their activities on reasonably long-term expectations. Last, but by no means least, towards the end of the year the banking laws were radically amended so as to give the Reserve Bank vast new powers to control the operations of banks; the amendments were made at the height of a major controversy about nationalising the entire banking system—a controversy which has not died down yet but to which the Reserve Bank report, oddly, makes no reference at all.

None of these anxieties could have been dismissed as baseless at the time. But if, in the event, bankers have emerged from the year moderately satisfied with their achievements, the reason is mainly one: their profits, after having fallen in 1962, have shown a fair recovery during 1963, the rise in the case of 29 of the larger Indian scheduled banks being about 8.5 percent (in after-tax profits). Earnings have increased because interest rates on advances have been raised and the average level of advances has been higher. Banks have also invested more money in Government securities, and obtained better yields from them. Although establishment expenses have gone up considerably, total expenditure has not risen as rapidly as earnings because interest payments on deposits have been kept down. Banks' success in checking the rise in their expenditure has indeed been remarkable considering that their branch expansion programmes have been implemented with great vigour.

From all this, however, the main conclusion which emerges is that banks would not have done half as well as they have if their deposits had not increased substantially. The increase has enabled them to raise their advances, expand their investment portfolios and thus achieve a bigger turnover. Much of the increase, however, is in a way fortuitous and, from the viewpoint of the economy as a whole, unhealthy in origin: the Reserve Bank

report points out that while branch expansion and deposit insurance have helped, a major factor responsible for the increase is "deficit financing by the Government as measured by the Government indebtedness to the banking system." If deficit financing has played havoc with the economy, but benefited banks, the satisfaction of the latter may be only temporary.

The Reserve Bank report, while adequate in its descriptive analysis, is unfortunately disappointing in that it offers no comment or guidance on crucial problems such as these. To say that the growth of deposits has been much faster in 1963 than in 1962 gives the impression that things are going reasonably well for the banking system. In fact, that is not the case, for banks have been floating along on a sea of "created" money rather than, as they should be doing, on one of genuine savings. By going in for reckless deficit financing, the Government could double the money supply and in the process bank deposits could perhaps be doubled too. But the "progress" achieved in this way can be no source of pride for either the banks, or the Government, or the economy. Many might have thought that it was the Reserve Bank's duty, in the circumstances, to highlight the fact that the progress of the banks has to be judged by their success in mobilising genuine savings; and then to indicate some of the ways in which this might be done. Instead, the Reserve Bank report merely mentions, in the briefest possible terms, the Governor's hint that the banks should take another look at their deposit interest rate structure, as fixed under the interbank agreement.

No indication is given whether the central bankers think that the rise in deposit rates should be selective or general. Nor is any indication given about how big the Reserve Bank feels the rise ought to be; the Government having declared that interest rates should correspond more closely to the real cost of capital in the economy, it could reasonably be expected that the central bankers would be a little more specific in translating the statement into more precise terms in so far as it concerned the banks. Finally, the report hardly touches on the crucial question whether interest rates on advances too would have to be raised if deposit rates are raised, in order to protect the bank's profitability. The Reserve Bank's "democratic" attitude may appear commendable if it implies that such questions should be resolved by free and frank discussions among bankers themselves. But democracy does not mean that leaders must not say precisely what they think. The Reserve Bank, as the leader of the banking system, unfortunately seems determined never to give its exact opinion, a practice which often creates the impression that it does not have any opinion at all to give.

Another disappointing feature of the Reserve Bank report is that it makes no critical analysis of the past year's credit policies. Due note is taken of the fact that at first the policies were restrictive; then, in October 1963, they were liberalised; and, then, in March 1964 they were again made restrictive. The familiar explanations are offered: when the policies were restrictive, the

trend in agricultural and industrial production was disappointing, and inflationary pressures were strong. On the other hand, when the policies were liberalised, the outlook for agricultural and industrial production was encouraging, and the economic mood needed to be improved. Towards the end of last year, most bankers were convinced that the policies had been liberalised because the earlier restrictions were thought to have hampered the growth of trade and industry; the Reserve Bank report, however, contains not the slightest hint of this realisation. Nor does it concede that the liberalisation of October 1963 was inspired more by the political need to boost the economic sentiment than by any optimistic assessment of the trend in agriculture, industry or prices.

Finally, the Reserve Bank report would never dream of saying so, but the truth is that the credit policy somersault of March 1964—performed less than four-and-a-half months after the liberalisation—was an act of panic. There was not the slightest evidence that the large increase in bank advances, although facilitated by the banks being allowed to borrow more freely from the Reserve Bank, had nourished speculation and thus contributed to the increase in prices. The central bank

kers nevertheless felt compelled to make a gesture; and that they did although, predictably, prices even so continued to rise. The conclusion emerges that there has been no fresh thinking on the efficacy of controls over bank credit. Habit refuses to bend before the fact that the influence of bank credit on speculation cannot be anything but minor, especially if the controls are applied with as great discrimination as the Reserve Bank claims they are. Speculation, to the extent that it is inflationary, is financed chiefly by the vast amounts of money circulating outside the banking system. The amounts of such money available for speculation in commodities, especially foodgrains, have been increased not only by the high levels of taxation, but also, more recently, by the sluggishness of the share, bullion and jute markets. It is possible that controls over bank credit, instead of checking speculation, might in these circumstances be actually helping to accentuate the influence of "unaccounted money" in the more volatile of today's commodity markets. This is among the most crucial problems facing the banking system, and one which needs to be analysed in detail if a rational policy for bank credit controls is to be evolved. But the Reserve Bank report, although ostensibly on banking, does not mention it.

THE CONGRESS DEBATE

THE continuation at the All-India Congress Committee session in Bombay of the debate on economic policies, begun by the Congress Party at its Bhubaneswar session, does not seem to have served any purpose at all. The arguments ran back and forth over already well-trodden ground with former leftist Ministers like Mr. Biju Patnaik, Mr. K. D. Malaviya and Mr. V. K. Krishna Menon raising once again the familiar demand for the nationalisation of private banks. That they should persist in their efforts to improve their popular image is not surprising, but it is strange that their extremist plea went largely unchallenged. The fact is particularly odd considering that the Congress Working Committee, after debating the issue at length both at Bhubaneswar and at the preceding A.I.C.C. session in Jaipur, has rejected the idea of bank nationalisation. Yet no one spoke up. Mr. U. N. Dhebar, head of the Committee whose report on the concrete tasks emerging from the Bhubaneswar resolution touched off the past week's debate, was curiously non-committal. Explaining his Committee's decision to avoid the nationalisation issue, all he had to say was that the original resolution contained no such directive. The answer is hardly adequate because the Dhebar report has interpreted its terms of reference very flexibly in other ways.

One cannot, therefore, avoid the suspicion that Mr. Dhebar chose to shirk the issue by seeking refuge in a technicality. This tendency to temporise exposes a basic weakness in the Party's higher echelons. Instead of joining issue with the leftist fringe, the Congress leadership prefers to leave its position undefined at these conclaves. Later, there will undoubtedly be statements which in effect reject the leftist position. But such reassurances often come too late and too haltingly for them to wipe out the impression created both within the country and abroad by leftist effusions. Anyone who has had the rare patience to read the long despatches from Bombay can readily see how the extremist viewpoint dominated the proceedings through others' default. Admittedly, Mr. Krishnamachari was most inconveniently taken ill and could not participate in last week's talking marathon, but there were any number of others who collectively share the responsibility for the policy to which the Finance Minister has given voice. Last, but not least, there was Mr. Nehru himself. His intervention on the Dhebar resolution was of a most curious kind; nothing of what he had to say had the remotest bearing on economic policy.

The banks apart, the discussion on the Dhebar report got bogged down in generalities. This was perhaps to be expected since the report itself is by no means a model of coherence. The All-India Congress Committee was quite lightly concerned over agricultural shortfalls, with Mr. A. P. Jain, who was himself at one time in charge of the particular portfolio in the Central Ministry, making two rather obvious points. First, agriculture has proved

a tricky charge to hold, resulting in frequent changes—seven Ministers in the 17 years since independence. No one, he alleged, had been in the job long enough to get on top of it, a curious argument because the individual in office is by and large only the instrument through whom the collective will of the Party and the Government finds expression. Continuity is by itself less important at this policy-making level than the consistency and purposefulness of the policies themselves. On this latter and more relevant issue, Mr. Jain was curiously silent; he chose to ignore the wide and often disastrous swings between pessimism and ambivalence about self-sufficiency in food. On a narrower and technical plane, New Delhi has been just as erratic in shifting the emphasis from large to small irrigation, from green manuring to chemical fertilisers, and so on.

Secondly, as the reports say, Mr. Jain, urged the "streamlining" of procedures in order to get the desired results in terms of farm productivity. In a situation where so many different inputs have to be delivered simultaneously to cultivators living in 600,000 villages, streamlining has to be viewed as a continuing task and not something to be undertaken sporadically under the goad of failures. A plea such as Mr. Jain made cannot, therefore, be taken as a serious contribution to the problem of agriculture unless he immediately proceeds to list the concrete steps he wants taken on an emergency basis. Equally pointless as a generalisation is Mr. Jain's exhortation to tailor agricultural programmes to the needs and potential of each area. This is already being done to some extent; any greater specialisation in cropping patterns would call for a large effort, which probably has to wait until the immediate and short-term goals for food and cash crops are fulfilled. Raw jute provides an example of a crop the output of which has now stabilised at a satisfactory level. This achieved, it is now possible to urge that unsuitable areas, such as parts of Bihar, should switch to other crops instead of growing a quality for which the market

CAPITAL, 21st May, 1964.

must inevitably shrink with the loss of sacking markets.

No discussion on the prospects for agriculture is possible without considering the incentives to the farmer. It is obvious that the end-result will depend on how effectively he can be motivated to deliver the goods. To leftists like Mr. V. K. Krishna Menon, former Defence Minister, this immediately raises the issue of land reforms—the part that tenancy arrangements still play in determining how much of the crop is retained by the grower himself and how much passes into the hands of intermediaries. That further reforms are necessary is not in dispute, because the laws so far enacted have admittedly left many loopholes. But if intermediary rights extinguished by law in one form have reappeared in other guises, it only confirms that there was a vacuum left in the countryside by hasty and ill-conceived legislation. To see the landlord-tenant relationship only in terms of the rents collected by the former is to miss the wider rôle played by intermediaries in the rural economy. Legal changes which touch upon only one part of the relationship are likely, therefore, to be infructuous, a lesson which the Congress should have learnt by now. It should have also recognised that the structural changes needed to remould village society must necessarily be gradual if violent upheavals are to be avoided. From this could have emerged a more realistic approach to tenancy reforms which geared changes to the pace at which alternative institutional arrangements could be made for providing credit, marketing and, above all, leadership to village communities. Professions of zeal are unlikely to be of any help in this challenging endeavour in which success depends wholly on the mobilisation of administrative and organisational skills.

As part of the programme, it will indeed be necessary to bring factories and farms closer together by appropriate measures of industrial decentralisation. The more sophisticated agriculture becomes, the greater will be its need for factory-made items. On the one hand, these will include better implements, artificial fertilisers and pesticides; and, on the other, consumer goods to nourish the farmer's desire for a better life and for a corresponding effort to enlarge his earnings. While the economies of scale will require concentration of production of basic items like steel or ammonium nitrate, there is logic in dispersing the processing of steel or the formulation of fertiliser mixtures in smaller units to meet the needs of local markets. In India's circumstances, it may well be necessary to extend the logic further than otherwise warranted to maximise employment opportunities.

Mr. Krishna Menon introduced, quite unnecessarily, a good deal of passion into his plea for rural industrialisation—a subject on which there really need not be any controversy at all unless one started to take extreme positions. For instance, power-looms may be necessary, but they do not eliminate the need for a large and growing textile mill sector since the country's total demand cannot otherwise be met at a reasonable cost to the consumer. This illustrates the need for a balanced approach to the problem, which aims at optimising benefits to the whole society rather than to any one section of it. In a democracy where votes would have to be won, some might be tempted to give primacy to sectional interests, but that would not make economic common sense. This is the obvious danger to guard against in the present context when people like Mr. Krishna Menon suddenly take it upon themselves to champion decentralisation.

THE FOREIGN EXCHANGE GAP

IF anything definite can be deduced from the dreams concerning the fourth plan emerging from the Planning Commission, it is that the foreign exchange shortage will become more acute and intractable than ever. According to the projections drawn up by an official working group on the basis of recommendations made by the planning groups for various industries, maintenance imports alone will require about Rs. 5,383 crores over the five-year period. Although the estimate has been reduced to Rs. 5,000 crores by the Economic Division of the Planning Commission on

the ground that the import policy will remain restrictive, the country's export earnings during the fourth plan may fall considerably short of even this figure. The Planning Commission has tentatively fixed an export target of Rs. 1,200 crores a year for the end of the fourth plan. But the Central Ministry of International Trade seems to think that a target of about Rs. 1,100 crores would be more realistic considering the present level of exports—in 1963-64 they amounted to Rs. 795 crores. Indeed, it would be a major stroke of luck if the export earnings during the fourth

CAPITAL, 21st May, 1964.

plan period averaged about Rs. 1,000 crores a year. Even so they may be hardly sufficient to meet the country's maintenance requirements.

Even assuming total earnings of Rs. 5,000 crores two other major requirements—development imports and the servicing of external loans—remain uncovered. A planning group has estimated the development requirements at Rs. 3,000 crores, but the total may actually turn out to be higher, depending on the investment programme of the fourth plan and international prices. An idea can also be formed of the magnitude of debt servicing. According to rough estimates, foreign loans may total nearly Rs. 3,000 crores by March 1966 and the interest on them may amount to about Rs. 100 crores, assuming an average rate of 3½ percent. Then there is the question of loan repayment. The repayment liability on credits offered up to 1963, it is estimated, may be as large as Rs. 116 crores in 1968-69. All these requirements, which are not likely to be covered by foreign exchange earnings, will have to be met out of external assistance. The aid-giving nations have reportedly indicated to the Government that assistance during the fourth plan cannot be much bigger than in the third plan. It is estimated that the net foreign aid may amount to only about Rs. 2,000 crores. It is obvious that the grandiose targets being visualised by the perspective planners will have to be pruned drastically if the plan is to correspond to the prospective resources.

It remains to be seen whether exports can at all reach the level of Rs. 1,200 crores, or even the Rs. 1,100 crores visualised by the Ministry of International Trade. This will involve a sharp rise from the present level of exports. It has to be borne in mind that the year 1963-64, when export earnings jumped by Rs. 81 crores to Rs. 795 crores, was itself attended with fortuitous circumstances favourable to Indian exports. Sugar fetched an unexpectedly large amount because of higher world prices. Likewise, the bigger earnings from tea exports were mainly due to higher prices—the average export price in 1963 was Rs. 5.92 a kilogram, against Rs. 5.84 in 1962. It cannot be expected that such favourable factors will continue year after year.

The Planning Commission visualises that as much as Rs. 500 crores will be earned by agricultural and agriculture-based commodities. The biggest earner in this category, jute goods, is facing increasingly severe competition from Pakistan. The price-support scheme for jute, along with fiscal and other statutory burdens, have made it difficult for Indian manufacturers to compete with Pakistani mills, who enjoy several advantages, including cheap fibre supply and export incentives. Indian tea has to compete with the supplies from Ceylon and east Africa, and according to present indications, competition from both will become more intense in the future. The Government has burdened the tea industry with a host of fiscal levies and statutory obligations, which have prevented it from going in for extensive modernisation and replantation. In the case of sugar, stifling controls and the Government's vacillating policies are affecting output. If exports are to increase at all, promotional efforts will have to be backed by far-reaching changes in the Government's policies. Planners of the export strategy will also have to take note of the expanding domestic market, and in the case of commodities like sugar, vegetable oils and cotton textiles, restraints on home consumption may become necessary, although they may be politically embarrassing.

In setting an export target of Rs. 1,200 crores, the planners visualise that "new manufactures", which consist mostly of light engineering goods, will earn Rs. 150 crores a year. A fundamental step for promoting the exports of engineering items is cost reduction. This is closely linked with the optimum use of installed capacity, which in turn depends on larger allocation of foreign exchange for importing raw materials, components and spare parts and the availability of adequate fuel, power and transport facilities. Fiscal levies on raw materials and equipment constitute a big element in industrial costs, so tax reliefs are important in any attempt to reduce costs. With the present disabilities continuing, it is unrealistic

to hope that exports of "new manufactures" will shoot up to Rs. 150 crores from the third plan

TRENDS IN GENERAL INSURANCE

THE Indian Insurance Year-book, 1963, which has recently been published, is much smaller than usual. It omits the customary graphs and illustrations, and also the bulky chapters on the contravention of the regulations concerning the limitation of expenses. Presumably, the size has been reduced as an economy measure. That does not mean that the Year-book is less useful, but one does miss the important tables giving the underwriting experience of insurers in India over the years in the fire, marine and miscellaneous departments. To make up for the omissions, the authors have, for the first time, introduced a mathematical analysis of the outflow on account of reinsurance transactions abroad.

The outflow on this account has been estimated at Rs. 1.84 crores in 1960, Rs. 3.27 crores in 1961 and Rs. 2.08 crores in 1962 for the Indian business of non-Indian insurers and for the total business of Indian insurers. The figures have been calculated by adding the profit of the gross direct business in India of all insurers to the profit of the gross direct business outside India of Indian insurers, and then deducting from the total sum the profit of the total net business of Indian insurers and the profit of the net business in this country of non-Indian insurers. The method of calculation does not appear to be incorrect, but the figures arrived at can be relied on only if the data used by the Controller of Insurance are adequate. Broadly, in the three years, there has been an outflow of varying amounts. In the gross direct business done outside India by Indian insurers, there has been a steady loss over the years, amounting to Rs. 82 lakhs in 1960, Rs. 1.11 crores in 1961 and Rs. 1.18 crores in 1962. The trend might encourage Indian insurers to think the matter over and reorganise their methods of acceptance. Even in fire insurance business in India, which has been profitable throughout, more profit is transferred outside India than is received. The same conclusion applies to miscellaneous insurance. Only in the marine department was there a profit in 1960. A scrutiny of the figures, and the method of evaluating the outflow, suggests that Indian and non-Indian insurers can perhaps retain more of the profits in the fire and miscellaneous sections in the country by exchanging business among themselves and by pooling their resources. This is partly true of marine business also, although here the Indian market may not have the full absorbing capacity. It also shows that professional reinsurers are unable to influence results, and there is scope for more professional reinsurers in India in this field. Some feel that the absorbing capacity of the Indian market has not yet been fully explored or utilised.

The direct business written in India has been profitable throughout. In the 1963 Year-book the Controller of Insurance has stated that profit from the gross direct business in India of all insurers was Rs. 5.6 crores in the fire section, Rs. 48 lakhs in marine and Rs. 2.72 crores in miscellaneous—giving a total of Rs. 8.8 crores. This is on the whole satisfactory. The total profit was Rs. 4.9 crores in 1960, and Rs. 7.74 crores in 1961. In the previous Year-book, the percentages of profit over the years were given on the gross direct business in India. The fire section showed a handsome profit and the balance, after accounting for claims, commission and expenses, went as high as 32.3 percent in 1957 and 26.2 percent in 1961. The experience of Indian and non-Indian insurers in their general insurance business written direct in India in 1962 shows that there is a profit of 32 percent for Indian insurers in the fire section and 32 percent for non-Indian insurers. In marine, it is 1.3 percent for Indian insurers and 12.1 percent for non-Indian insurers. In the miscellaneous section, the profit for Indian insurers is 13.4 percent, compared with 14.6 percent for non-Indian insurers.

Fire, motor and workmen's compensation insurance is tariffed in India. Marine is primarily

target of Rs. 30 crores—which, significantly, has not been achieved so far.

non-tariff; only a small part is tariffed. The profit ratio in fire has led to the view that the tariffs should be revised, conceding a certain part of the premiums to the insured. The gross direct marine insurance business in India has been profitable throughout, including the year 1962, when the profit ratio was 1.3 percent for Indian insurers and 12.1 percent for non-Indian insurers. In the net account, the profit for Indian insurers has been reduced to 0.3 percent, as against 11 percent for non-Indian insurers. This is a welcome departure for Indian insurers; after many years they have been able to turn the corner and show a profit in the net account. A study of the previous figures relating to the gross direct marine insurance business indicates that marine rates should not be tariffed. These rates, on underwriting considerations, are incapable of being tariffed. Experience and judgment are the basis for deciding them properly.

As far as the growth of general insurance business is concerned, it appears that the gross premium on business written direct in India by Indian and non-Indian insurers has reached the level of about Rs. 48 crores, compared with about Rs. 44 crores in 1961. Similarly, the net premium income in India has grown from Rs. 32 crores to Rs. 36 crores. The general insurance business of Indian insurers alone, including the gross premium written direct overseas, has gone up from a little over Rs. 41 crores to little over Rs. 45 crores, while the net premium has gone up from about Rs. 40 crores to about Rs. 44 crores in 1962. This would have been considered satisfactory had not the gross premium written direct outside India over the years shown a steady loss.

To eliminate the variations in premium income caused purely by changes in commodity values, the Controller of Insurance has divided the total gross premium on business written direct in India by Indian and non-Indian insurers each year by the corresponding index number of wholesale prices (revised series, with base year 1952-53 equalling 100). The resulting figures have been expressed as percentages of the figures for 1956. The premium income would change with changes in premium rates even if the goods and properties insured remain the same. An overall reduction of about 12 percent occurred in the fire insurance premium rates from 1st January, 1960. To eliminate the effect of this revision in the premium rates, the gross premium income of the fire insurance business has been multiplied by 100/88 for the years 1960, 1961 and 1962. The motor insurance premium rates were increased by about 12 percent from 1st January, 1958. But for want of sufficient data, no allowance could be made for this increase. The comparison with the index numbers of industrial production (base year 1956 equals 100) for the years 1956 to 1962 is given below:

	1956	1957	1958	1959	1960	1961	1962
Index number of general insurance business in India	100.0	100.9	105.4	113.6	129.0	144.3	155.3
General index number of industrial production*	100.0	104.1	108.1	116.9	129.8	139.3	149.8

* Source—Monthly Abstract of Statistics, Central Statistical Organisation.

The underwriting experience of Indian and non-Indian insurers in their total net business and net business in India, respectively, in 1962, shows that for Indian insurers there was a profit of 16.1 percent in the fire section, compared with 28.6 percent for non-Indian insurers. For the first time after many years, Indian insurers have been able to show a small balance of 0.3 percent in the marine section in the net account, compared with 11 percent for non-Indian insurers. Similarly, the experience in the miscellaneous section is 5.9 percent for Indian insurers and 11.1 percent for non-Indian insurers.

Current News and Comment

Increasing Rayon Textile Exports

The export promotion scheme for rayon and synthetic fabrics has been revised with effect from 15th May. Under the revised scheme, import entitlements have been reduced from 100 percent to 70 percent of the f.o.b. value of goods exported, and the concessional allotment of indigenous yarn against the surrender of 30 percent of import entitlements for the import of wood pulp to spinners has been discontinued. The new scheme has caused some uneasiness among manufacturer-exporters, as the allotment of indigenous yarn under the old scheme had provided the two-fold advantage of making yarn available at concessional rates and of an assured supply of yarn. Informed circles, however, hold that the modifications in the incentives are unlikely to have any significant impact on the export prospect.

Encouraged by past performance, the Silk and Rayon Textiles Export Promotion Council has fixed the export target for 1964-65 at Rs. 12 crores—about Rs. 2 crores higher than in 1963-64. The various measures outlined by Mr. D. N. Shroff, chairman of the Council, at a special meeting of the members suggest that the Council is making an all-out effort to boost exports to a new high level, in spite of the recent modifications in the export promotion scheme. The export plan for the current year covers institutional arrangements and steps to be taken to build up goodwill and confidence. In order to eliminate unfair internal competition, realise maximum export prices and improve the competitive capacity of the Indian exporter by making a co-ordinated approach, market-wise panels of exporters are being formed on the lines of the one already set up for Morocco. The panels would be open to all manufacturers at all times and nobody need have any fear of being left out. A special panel is being formed for east European and other rupee-payment countries as the trade with them has suffered on account of its being less remunerative. There is also a proposal to set up a panel of processors who would be required to abide by a code of good business practices and they might become qualified to get export promotion benefits.

To regulate the existing export activities as also to develop new markets, the Council proposes to set up soon a new trading body named Rayex (India) Ltd. This new organisation is likely to create a pool for the surrender of entitlement certificates and import licences and to arrange for the

import of yarn in bulk. The Council has decided to set up an export assistance committee to review the working of the export promotion scheme and other measures of assistance, and an inspection committee will be in charge of pre-shipment inspection. Regional offices are being established at important manufacturing centres with a view to developing and organising local initiative for export promotion effort. These regional committees will take steps to remove the local hurdles coming in the way of export trade and thereby try to ensure the implementation of the regional export targets. The organisational effort also includes the sending of delegations and study teams abroad, inviting overseas buyers to acquaint them with Indian material and the progress made by the rayon textile industry and participation in various exhibitions.

Manufacturers of rayon fabrics fear that with the withdrawal of the allotment of indigenous yarn at concessional rates, a rise in yarn prices is likely. This would push up the cost of production thereby increasing the loss element and hindering the export effort. Mr. Shroff assured the members that the Council had already drawn the Government's attention to such a possibility and the authorities had promised a close watch on the trend of yarn prices so that the export effort does not suffer. The chairman also assured that all outstanding commitments for the supply of yarn at concessional rates, estimated at over 4 million kilograms, would be honoured and that the yarn would be delivered without undue delay. Mr. Shroff said that there was considerable scope for increasing the exports of spun rayon fabrics, and he urged manufacturers and exporters to pay special attention to this item. Since the production of special types of fabrics catering to specific demands was linked with the available machinery and equipment, the Council is taking up with the Government the question of working out a scheme under which machinery could be procured on a deferred payment basis.

Efficiency of State Undertakings

Parliament's new committee on State enterprises has decided to examine the working of six of the largest and most crucial undertakings in the public sector during the coming year. Of them, three have been chosen for detailed examination because of their importance to the economy, while the operation of the other three will only be studied in a general way. The first in the former category is the Fertiliser Corporation of India, which has an important rôle to play in raising agricultural production. The second is the Rourkela steel plant, which Mr. C. Subramaniam, Central Minister for Steel, Mines and Heavy Engineering, once described as a "sick child". The third is the Oil and Natural Gas Commission whose work is of obvious importance in view of the search for oil in India. The three undertakings which the committee has selected for "general study" are the Shipping Corporation of India, the Life Insurance Corporation and the National Building Construction Corporation. Meanwhile, there is justifiable anxiety over the Central Government's latest commercial audit report. The report points out that although 34 Government companies showed a profit of Rs. 18.66 crores in 1962-63, before providing for taxation, as many as 12 incurred a loss of Rs. 31.04 crores. All the companies, taken together, thus suffered a net loss of Rs. 12.38 crores in 1962-63, against Rs. 10.60 crores in the previous year. The report adds that although 11 companies declared dividends amounting to Rs. 1.54 crores, the rate of return worked out to 6.4 percent on their paid-up capital and only 0.2 percent on the total paid-up capital of all the companies taken together.

The efficiency of State undertakings cannot always be judged on the basis of the returns on the capital employed. Some concerns are not expected to yield a profit since they are run on "welfare" considerations. But there are others which should be managed on strictly commercial principles and should, therefore, show a profit like any commer-

CAPITAL, 21st May, 1934.

cial concern. In this category, however, are a number of undertakings with a relatively long gestation period; they inevitably take time to yield adequate returns. In assessing the progress of State undertakings, the new committee will need to consider these differences. The inefficiency of State undertakings not only involves a national loss, but also recoils on taxpayers who have to bear a heavier burden. Yet the importance of keeping costs down has not yet been appreciated by the planners and administrators of India's State undertakings. Costs in State enterprises are high because of several factors. In the first place, there is the failure and inefficiency of the managements. But the latter can point out that they are left with very little autonomy and that their functioning is hamstrung by too many rules and regulations. Secondly, productivity in many State undertakings is abnormally low because of the lack of incentives and the absence of modern management practices. Thirdly, there is no uniform system of costing, and the authorities have paid little or no attention to the standardisation of accounting practices. Fourthly, costs in State undertakings are high because of the lack of competition.

These factors apart, the operation of State undertakings has often been affected by wastage, extravagance and carelessness. The Central Government's latest commercial audit report is replete with instances where wastage and losses could have been avoided by better planning and greater foresight. Investments in many State undertakings have exceeded the original estimates either because the prices of plant and machinery have gone up or because there has been an inordinate delay in commissioning the projects. The authorities of many public-sector undertakings in India have yet to appreciate that delays are expensive. Operations have also been hindered, as in the private sector, by the shortage of raw materials, transport and power. In submitting its report on public-sector undertakings, the new committee of Parliament will no doubt bear these factors in mind.

DEATH OF MR. J. N. TATA

WHEN the news came from Vienna a few days ago that Mr. J. N. Tata was no more, it was instinctively felt that "A Prince and a great man had fallen" in the ranks of the benefactors of the Empire. But the good he has already done will live after him, and the large projects he had planned, taken up by sympathetic and willing hands, will march onward to the goal of accomplishment. Mr. Tata was a man of vision. He thought imperially and then proceeded to translate his thoughts into imperial action. He was often blocked by men of whom it might be said that the only thing of obstruction about them was to sit in a state of obstruction and masterly inactivity in their Secretariats and draw imperial salaries. But Mr. Tata was not the man to sit down before official inertia, often born of pure imperial ignorance. Blocked in India concerning his great project for developing the enormous mineral wealth of our Central Provinces, he promptly went to London and saw the Secretary of State. On his return, he found his former obstructives full of smiles, and eagerly asking "What can we do to help your work?" It is one of the wise sayings of the olden time that "he that believeth shall not make haste." The man who has absolute confidence in his vision and that his plans will eventually work out all right can afford to wait. It was a good thing for India that Mr. Tata possessed the gift of patient quietness and confidence, or else his right royal scheme for the erection and endowment of a great Research University, proposed so far back as 1898, might have been lost to India. His death occurred just as the lengthened negotiations with the Government were nearing a satisfactory close. The Research Institute, when brought into being, will be a fitting memorial of the man who had the wisdom to plan and the unselfish generosity (with the co-operation of the Government) to carry out the great patriotic scheme for the benefit of the people of India. May the mantle of the worthy father fall upon worthy sons, to whom the path of all will be extended. The life of Mr. Tata ought to be an inspiring example to the noble sons of India of what one earnest hearted man can do with time and talents and wealth at his disposal for the benefit of the people among whom his lot is cast.

A Ditcher's Diary

HAVING EXPECTED NOTHING, I AM NOT REALLY disappointed at the outcome of the last session of the All India Congress Committee. On Kashmir, Mr. Nehru was as elusive as Mr. Sadiq was forthright. That there were obvious contradictions in the two speeches is perhaps a matter of detail; between them, however, they reflected the reality of India's Kashmir policy which is half a dozen mutually exclusive things clumsily lumped together. On China Mr. Nehru was again tentative in the extreme, although if the suggestion on posts in Ladakh means that the Colombo proposals are no longer the fetish they used to be with New Delhi there may be a breakthrough. Since I always eschew moral judgments in political discussion, I can see as much sense in an anti-Pakistan stance as in a friendly approach to that neighbour; at different levels an anti-China stand can be as valid as a positive effort to make it up with China. What does not make sense and takes India nowhere is a mixture of the two approaches; and it is no wonder that India's foreign policy in relation to her two most important neighbours is as destitute of a sense of direction as a frog is of hair. Not the least disquieting consequence of such protracted indecision is that even India's friends and spokesmen do not know what New Delhi may suddenly decide. There has been some evidence lately that the Russians, who had once fully accepted the Indian case on Kashmir and more than used their veto, are today not quite so sure about what to make of Sheikh Abdullah's statements and New Delhi's reaction thereto. If I were in Mr. Chagla's shoes in New York I would wonder if it was really wise to tell the Security Council so firmly that, so far as India was concerned, there was nothing to discuss over Kashmir. If I were the Tengku, I would wonder how serious India was about resisting the Chinese. The point is that I shouldn't be wondering so much over so many things. My wonderment produces only a harmless little paragraph in this diary; those in charge of executing and interpreting Indian policy, in New Delhi and abroad, simply do not know what is expected of them.

DINNER BY CANDLELIGHT IS SUPPOSED TO BE A VERY sophisticated and elegant affair although, personally, I like to see what I am eating. Trust the Corporation of Calcutta to go one better. Last week it held its weekly meeting in complete darkness. No, there hadn't been a power failure. A councillor switched off all lights in protest against something or other and, in the consequent darkness, threw new light on democracy. His act, he

said, was an assertion of his democratic rights. If the Corporation officials had put the lights on again, he claimed, this would not have been a demonstration of democracy. But, to coin a phrase, there is a silver lining to the Corporation's dark cloud. The meeting last week recorded maximum business. While the usual habit of our councillors is to adjourn meetings on some pretext or another, on that dark Friday Calcutta's municipal body passed 22 items, two of them described as vital. Perhaps this is the cure for the Corporation's malaise. No lights; and business as usual. But how long is this corporate buffoonery going to go on? Student indiscipline and juvenile delinquency are supposed to be worrying the country's leaders. What worries me more is the senile delinquency manifest in the misbehaviour of the elders elected to civic and legislative bodies, which brings contempt not upon a few individuals but on all democratic institutions and democracy itself. The funnier side of these goings-on is far less important than the grim portents they carry. In Germany the Nazis burnt down the Reichstag; the Weimar Republic was soon reduced to ashes. In East Pakistan a Deputy Speaker was done to death in the House he was presiding over; and see what has been happening there since. You can burn a legislature down as effectively with ridicule as with fire. The failure of Calcutta's civic body reflects and represents a wider failure; I suspect that the entire social fabric of the State is confronted with a threat I cannot precisely define and identify but cannot help sensing all around me. The frivolous irresponsibility of the councillors on Friday is only a symptom. Is there nobody in Bengal today to diagnose the disease?

APART FROM ITS ADMIRABLE CHARACTER, THE ONE incontrovertible feature of *Encounter* is that it loses money: about \$35,000 a year in round figures. There is nothing surprising in that: it is virtually impossible to make ends meet in a literary venture of this kind, and no prospective backer need be under any illusions about the fact. Yet I have been wondering whether Mr. Cecil King, chairman of the vast International Publishing Corporation, and the new "supporter" of *Encounter*, really appreciates what he has let himself in for. True, Mr. King has lost money before, and the £10,000 a year needed to keep the magazine alive would scarcely make a dent in his small change. But primarily he is a business man, not a philanthropist; and when in the past he has temporarily forgotten his real avocation, reversion to it has usually been rapid and quite fatal

for any money-losing project involved. The *Daily Herald* is a case in point, although I know that publication passed into his hands without any particular initiative on his part when he took Odhams over. Closer to the *Encounter* situation was that of the *London Magazine*, which Mr. King began supporting financially in 1954 when the circulation was 25,000 and ceased doing so two years later when it was down to 7,000. The theory that umbrellas are most urgently required when it is raining does not appear to be one with which Mr. King has much sympathy. Perhaps nowadays his philanthropy is of a more tenacious character. I hope so, because *Encounter* deserved sustained and consistent backing, and the Congress of Cultural Freedom, whatever its motives may have been, is worthy of sincere congratulations for having provided it over these first formative years. I am told that *Quest*, India's gift from the same sources, is also looking for a local backer. I can think of very few I could really recommend. That is especially true of prospective ones who might be concerned in publishing already, although certainly nothing could be stranger than to find *Encounter* being stabled alongside the *Daily Mirror*.

FRANKLY, THE THOUGHT THAT EGYPT MAY HAVE the atom bomb makes my blood run cold. Equally, I do not believe she has got it, at least not yet. She will soon, though, along with Israel too no doubt. And probably a number of other countries besides, not excluding the Chinese. The reality we have to accept is simply that nuclear weapons are the national status symbols of the second half of the twentieth century, and no country capable of acquiring them is going to resist the temptation for very long. Which generalisation, of course, includes India, there having been a noticeable revival of interest in the possibility here recently. I cannot imagine where it is all going to lead to. The idea of world peace being maintained on the basis of nuclear stalemate when a whole host of countries have the bomb, seems far-fetched. Take Egypt's case, for instance. Without in any way wishing to be numbered among the admirers of President Nasser, I do not think he would be foolish enough to use nuclear weapons, assuming he has them, when the consequences would so obviously be fatal for his country, for his own ambitions, and possibly for the world as well. But is the strength of his position such that he can resist the fanaticism of his followers in their persistent demand for a *jehad*? I do not think it is, or at any rate will not be indefinitely. What then are the chances of maintaining world peace in the absence of exclusive two-bloc nuclear balance on which it has relied since 1949? Perhaps not quite as remote as they may seem. Relations between Russia and the United States have improved recently, and the eventual possibility of their agreeing to act jointly on a guarantee of im-

diate retaliation against any Power resorting to nuclear war cannot be ruled out entirely. Especially—dare one say it?—if the most likely candidate for attention in the foreseeable future is not Egypt at all, but China. I wish I could see the United Nations assuming the rôle of the world's nuclear policeman. But at the moment it seems more likely that we shall have to rely on the one thing East and West really have in common—the fear that somebody else might push them into committing joint suicide.

PITIFUL WAS THE P.T.I. COVERAGE OF THE KASHMIR debate in the Security Council; A.I.R.'s unworthy comment. Why do I have to remind the agency correspondent that he is not a member of the Indian delegation to the United Nations but a reporter filing despatches full of facts and nought else? It is none of his business to tell his readers that Mr. Chagla scored a triumph or that Mr. Bhutto suffered a defeat; that the West has been pro-Pakistan or anti-. In the last fortnight we have been told one day that India is daily winning more friends, only to be told the next day that the prospects for India are bleak. Such oscillations between euphoria and melancholia, bad for the reader's health, would have been quite unnecessary if the reporter had stuck to his job and not ventured into comment and interpretation for which his competence seems limited. Journalists ill serve their only masters, the readers, when they act as disguised official spokesmen. One has only to go abroad for a few days or speak to foreigners to know that the outside world's acceptance of the Indian case on Kashmir or the Sino-Indian dispute is neither universal nor total. I am not suggesting that the outside world is right and India wrong, although both propositions may be correct. All I am getting at is that the country should know just where it stands vis-à-vis the rest of the world. This is what is being steadily made impossible by the officially-owned All India Radio and the officially-manipulated Press Trust of India. The public is being given the rosier side of the picture, depicting the unbounded success of Indian diplomacy; the many failures are not reported at all. "News management", it had better be known, is no longer an American monopoly. In fairness to P.T.I. it should be added that this is not the only news agency to "slant" news. I would warn the unwary against A.F.P. on Algeria, D.P.A. on East Germany, Reuter on the Middle East and A.P. on the Deep South.

IT IS OFTEN SAID THAT BRITISH IMPERIALISM'S most ghastly legacy is Victorian gothic architecture. If you agree with this, and like myself are one of those people who involuntarily shudder whenever they set eyes on Calcutta's Law Courts, you are unlikely to approve the latest scheme for extending the Houses of Parliament in London. In which case, you should find yourself in excellent company. To me, the idea of adding to the Palace of Westminster in the existing style amounts to piling one architectural monstrosity on another. The new building would certainly harmonise with the old, but what is the use of trying to harmonise with disharmony? It may be far better perhaps to adopt the rival scheme for a modern building on the other side of New Bridge Street and connected with the present one by an underground passage. That way at least the horrors of Victoriana need not be compounded. As one critic has put it: "To build a copy of a copy is just absurd". It has always puzzled me why the Victorian British should have chosen to revive a style of building design which, although admittedly the greatest of native English architectural achievements, was essentially religious in inspiration. Surely something in the classical tradition would have been more appropriate, as with Calcutta's Victoria Memorial. I know that good taste—although only relative—did prevail in the case of the Foreign Office building, the original design for which eventually finished up as St. Pancras station. But the survival of the gothic style in buildings ranging from the Houses of Parliament to public lavatories remains one of Britain's least attractive features.

THE DITCHER

Guide for Investors

ENGINEERING SHARES SLUGGISH DESPITE GROWTH PROSPECTS

(BY A SPECIAL CORRESPONDENT)

ENGINEERING shares have not responded to the payment of bigger dividends by leading companies like Jessop, Braithwaite and the Textile Machinery Corporation. Guest, Keen, Williams has reduced the taxable ordinary dividend from 14 percent to 12 percent, including an interim of 6 percent, but it has paid the final dividend on a share capital which has been subsequently increased by the issue of bonus shares through capitalising reserves. The payment of the bigger dividends has been possible because of bigger earnings, but investors have not been impressed because they think that the distribution should have been still bigger to compensate for the rise in interest rates. At the current prices of many engineering shares, the yield is far short of the market rate of interest. Support for these shares have hitherto stemmed from such considerations as growth prospects. In view of the impetus provided by the five-year plans, the prospects for engineering concerns are unquestionably good. But the big question is whether the investors feel that they have a share in the growth. The dividend tax and the capital gains tax on bonus shares imposed by the last Budget have also discouraged them.

Reports that the market prices of various items of de-controlled steel have risen above the prices fixed by the Joint Plant Committee have caused a great deal of concern to many engineering firms. Since the prices of many de-controlled items of steel were raised earlier by the Joint Plant Committee, production costs of engineering units are likely to be higher. Whether the effect of the increased prices can be absorbed by a bigger output, remains to be seen. Considering that many small engineering firms have to rely on market supplies of steel, their working is likely to suffer.

This apart, the latest results of engineering companies show that their production schedules have been interrupted by an inadequate supply of matching steel. There have been shortages of quality steel also. Judging by present indications, it looks as if the difficulties about steel supplies will not be relieved until the output of steel producers increases substantially.

For the time being, worry has centred on the recommendations of the Bonus Commission, which threaten to mop up the bulk of the profits of engineering companies. If they were to be implemented, the companies in general would be left with little funds to plough back for expansion and rehabilitation. This apart, production costs have tended to rise due to increased labour charges and higher prices of various raw materials. A more liberal supply of imported raw materials is in prospect, particularly as the Aid-India Club is expected to sanction substantial non-project aid at its meeting on 26th May. Engineering concerns, which have concentrated on producing goods for exports, are likely to get a higher quota of foreign exchange. But it

remains to be seen how the investors view these prospects.

Bird-Heilgers Coal Group Results

THE results of the Bird-Heilgers group of coal Companies have been published. The Burrakur Coal Co. Ltd has earned a profit of Rs. 40.39 lakhs for the year ended June 1963, against Rs. 35.75 lakhs for 1961-62, after providing Rs. 21.68 lakhs (against Rs. 23.86 lakhs) for repairs to machinery, Rs. 3.81 lakhs (against Rs. 3.39 lakhs) for repairs to buildings, Rs. 20.77 lakhs (against Rs. 20.79 lakhs) for taxation, Rs. 6.95 lakhs (against Rs. 2.22 lakhs) for statutory development rebate reserve, Rs. 1 lakh for debenture redemption reserve, Rs. 5.90 lakhs for general reserve and Rs. 15.56 lakhs (against Rs. 13.46 lakhs) for depreciation. The taxable ordinary dividend of 13 percent has been repeated at the present price of Rs. 15.69 a share of Rs. 10 each. The carry-forward is Rs. 10,459, against Rs. 90,768 brought in.

Raisings dropped from 1.33 million tons to 1.30 million tons and despatches from 1.37 million tons to 1.33 million tons. Licences for Rs. 73.82 lakhs have been received under the World Bank loan and orders have been placed for Rs. 39.62 lakhs of equipment. The balance of the equipment is expected to be received soon. The Company has applied for further licences and if these are granted, the value of the equipment ordered under the World Bank loan will increase by Rs. 6 lakhs. Deliveries under the latter licences are not expected until the second quarter of 1964. The second quarter of Budroochuck with amalgamation of Budroochuck with Modidih-Teetulumuri has been approved by the Collieries Voluntary Amalgamation Committee. Sand transported over the Company's rope-way system amounted to 630,251 tons, against 803,746 tons. The Loyabad coke plant produced metallurgical coke of 105,207 tons, compared with 104,847 tons. The Katras Beehive coke produced 13,780 tons and 10,470 tons were despatched. The Government of India has given a notice to the Company to acquire part of its Central Jharia leasehold under the Coal Bearing Areas Act.

In their report for the year ended February 1963, the directors of the Karanpura Collieries Ltd said that the Company has been allocated foreign exchange for Rs. 11.59 lakhs under the World Bank loan. Import licences for Rs. 10.08 lakhs have already been received and orders for machinery to the extent of Rs. 9.98 lakhs have been placed. The profit has amounted to Rs. 2.22 lakhs, against Rs. 2.38 lakhs for 1961-62, after providing Rs. 2.22 lakhs (against Rs. 2.25 lakhs) for depreciation, Rs. 5.71 lakhs (against Rs. 4.39 lakhs) for taxation, Rs. 1.03 lakhs for the super profits tax, Rs. 50,000 (against Rs. 40,900) for statutory development rebate reserve and Rs. 2.10 lakhs (against Rs. 75,000) for general reserve. The taxable ordinary dividend of 10 percent has been maintained. It amounts to a yield of 8 percent at the present price of Rs. 12.44 a share of Rs. 10 each. The carry-forward is Rs. 9,997, against Rs. 32,810 brought in. Raisings rose from 236,790 tons to 265,945 tons and despatches from 237,594 tons to 276,844

tons. The supply of wagons showed an improvement.

The Karanpura Development Co. Ltd paid a taxable ordinary dividend of 3 percent, against 5 percent and a taxable dividend of 9 percent, against 15 percent on founders' shares for the year ended December 1962. The profit has totalled Rs. 1.37 lakhs, against Rs. 1.35 lakhs for 1961, after providing Rs. 33,793 (against Rs. 2.60 lakhs) for taxation, Rs. 44,600 (against Rs. 13,600) for statutory development rebate reserve and Rs. 34,539 (against Rs. 26,406) for depreciation. General reserve is allocated Rs. 1.50 lakhs (against Rs. 1 lakh) and the carry-forward is Rs. 37,294, against Rs. 1.40 lakhs brought in.

The directors say that further 45 bighas of land have been acquired by the Government of India in the Karanpura field and claims for additional 1,248 bighas have been submitted to the National Coal Development Corporation Ltd. The Company's claim for Bachra has been heard by the tribunal and the decision is expected shortly. As for the Chordhara area, it has been decided that no useful purpose would be served by instituting a suit against the sub-lessees, Rajendra Collieries Ltd, since it is generally agreed that "they have little or no funds." The court is also not empowered to give permission to the Company to re-enter the property as it has been acquired by the Central Government, free from encumbrances. A further course of action is being considered. The Company has lost its entire royalty income from the Karanpura field with the exception of the small amount from mouza Argada. Raisings amounted to 1.7 million tons and despatches totalled 1.7 million tons.

Guest, Keen, Williams Profit Rises

SALES of Guest, Keen, Williams, Ltd rose from 13.06 crores for 1962 to Rs. 16.37 crores for the 52 weeks ended 28th December, 1963. But there was difficulty in obtaining adequate supplies of quality billets and deliveries from main producers were irregular. Production also showed an increase. The profit has risen from Rs. 1.28 crores to Rs. 2.17 crores, after transferring Rs. 51.14 lakhs (against Rs. 51.19 lakhs) to depreciation, Rs. 7.75 lakhs (against Rs. 6.08 lakhs) to additional depreciation reserve, Rs. 9.65 lakhs (against Rs. 9.75 lakhs) to interest on debentures and Rs. 13.91 lakhs (against Rs. 7.56 lakhs) to interest on overdrafts.

An interim dividend of 6 percent was paid earlier on the share capital of Rs. 4.21 crores. The final dividend of 6 percent has been declared on the increased capital of Rs. 6.32 crores. The yield amounts to 5 percent at the present price of Rs. 24 a share of Rs. 10 each. The dividend amounted to 14 percent, subject to tax for 1962.

Taxation is allocated Rs. 1.10 crores (against Rs. 55.60 lakhs) and a sum of Rs. 6.77 lakhs (against Rs. 9.12 lakhs) has been transferred to taxation equalisation reserve. The tax provision included an amount of Rs. 4.30 lakhs to cover the liability on account of the dividend tax. A provision of Rs. 26.34 lakhs has been made for tax payable on the issue of bonus shares. The additional taxation reserve of Rs. 1.20 lakhs created in the account for 1962 to meet the liability to super profits tax has been written back as no super profits tax is payable for the 1962 profit. There will be no liability for surtax on the 1963 profit. Development rebate reserve is allocated Rs. 6.93 lakhs (against Rs. 5.55 lakhs). Surplus tax provision for previous periods amounting to Rs. 91,859 (against Rs. 2.60 lakhs), and additional taxation reserve for Rs. 1.20 lakhs have been written back. General reserve is allocated Rs. 3.64 lakhs (against Rs. 6.15 lakhs), capital reserve Rs. 7,537 and debenture sinking fund Rs. 5,05 lakhs (against Rs. 5 lakhs). Additions to fixed assets amounted to Rs. 67.27 lakhs (against Rs. 53.09 lakhs). Provision has been made for Rs. 6.93 lakhs for development rebate reserve to earn the development rebate admissible on these additions. The debenture sinking fund has been used to buy from the market and cancel Rs. 10.25 lakhs of the Company's 6½ percent debenture stock for Rs. 1.50 crores. The ordinary share capital has been raised from Rs. 4 crores to Rs. 6.32 crores by issuing bonus shares through the capitalisation of reserves. Reserves amount to Rs. 5.12 crores (against Rs. 6.98 crores). Fixed capital expenditure has amounted to Rs. 6.69 crores (against Rs. 6.63 crores).

Elphinstone Mills Earns Less

THE preliminary report on the working of the Elphinstone Spinning and Weaving Company for 1963 shows that the Company has fared badly during the year. In spite of an increase of about 15 percent in the sales from Rs. 2.98 crores to Rs. 3.43 crores, the gross profit has declined by about 21 percent from Rs. 35.24 lakhs to Rs. 29.08 lakhs. The dividend, however, has been maintained at 18 percent, that is, Rs. 9 a share, although the Company has had to withdraw Rs. 2.65 lakhs from the past reserves to meet the dividend liability. Appropriations include depreciation Rs. 12.35 lakhs (against Rs. 9.82 lakhs), development rebate reserve Rs. 2.22 lakhs (against Rs. 3.07 lakhs), development reserve Rs. 73,940 (against Rs. 1.02 lakhs), bonus Rs. 3 lakhs (against Rs. 10.76 lakhs), taxation Rs. 5.60 lakhs (against Rs. 60,000),

IMPERIAL
COMPRESSORS, HOISTS
TROLLEY JACKS, CAR WASHERS

Armstrong Smith Ltd.

P-17, MISSION ROW EXTN. CALCUTTA-13

doubtful debts Rs. 4,000 (against Rs. 12,500), donations Rs. 56,224 (against Rs. 1.50 lakhs), general reserve Rs. 4.50 lakhs. The proposed dividends, ordinary and preference, absorbing Rs. 7.15 lakhs are to be paid from general reserve and since this is inadequate to meet the full liability, a sum of Rs. 2.65 lakhs has been transferred from the past reserves. After making various provisions, there remains a balance of Rs. 12,247 to be carried forward, against Rs. 5,844 brought in. The Rs. 50-paid share of Elphinstone Mills is quoted around Rs. 97, offering a gross return of about 10 percent.

Amar Dye-Chem Earns Less

AMAR Dye-Chem reports poor results for 1963. In spite of an increase in the sales from Rs. 1,428 crores to Rs. 1,495 crores, the gross profit is down from Rs. 36.59 lakhs to Rs. 30.38 lakhs. The dividend has been reduced from 9 percent to 8 percent, and even for the payment of the reduced dividend, the directors have had to withdraw a large sum from the reserves. After providing Rs. 20.75 lakhs (against Rs. 12.65 lakhs) for depreciation and nil (against Rs. 9.63 lakhs) for taxation, the net profit amounts to Rs. 8.67 lakhs, against Rs. 12.30 lakhs in the previous year. Out of this, the directors have set aside Rs. 6.62 lakhs (against Rs. 2.31 lakhs) for development rebate. A sum of Rs. 6.60 lakhs has been withdrawn from development reserve in order to provide for the payment of the proposed dividend. Preference dividend takes up Rs. 1.71 lakhs (the same) and equity dividend absorbs Rs. 7.20 lakhs (against Rs. 8.10 lakhs). The substantially higher depreciation that has been provided for 1963, is due to the additional depreciation allowance for the third shift.

A number of adverse factors are stated to have contributed to the setback in the gross profit. These include large imports of naphthols and bases against unused licences, shift in consumption pattern resulting in a large accumulation of finished products leading to a slowdown of factory's production, heavy interest charges, reduction in selling prices and larger discounts allowed on sales and cut in raw material licences necessitating the purchase of export promotion licences at huge premiums. The outlook for the current year, however, seems to be more encouraging. The directors state that business conditions have improved considerably since the last quarter of 1963. Sales for the first quarter of this year have been much better than in the corresponding period last year. New plants for reactive and T.P.M. dyes have been commissioned. This is expected to contribute substantially to the profitability of the Company. A major portion of the expansion initiated in earlier years is likely to be completed during the current year. There has been some delay in the implementation of the first phase of T.P.M. dyes programme. But of the T.P.M. dyes, three items—methylene blue, brilliant green crystals and malachite green crystals have been marketed and plants for two more—rhodamine and auramine—have gone into regular production. It is hoped that by the end of June 1964, all the plants of T.P.M. first phase will have paid from the general reserve and been tuned to work to the rated capacity. The second phase also is likely to be completed by the end of the current year. The acid plant was commissioned in December last and its two units are now working to the rated capacity.

The output will be doubled in the course of next four months when two

more units will be put into operation. The pigment plant is ready for operation and trial runs are being carried out. At present, there appears to be a clear shift in the consumption pattern of dyestuffs towards pigment printing colours. The Company has received necessary permission for manufacturing pigment printing colours. The manufacture of these colours is expected to compensate for the setback in business of naphthols and fast bases. Reactive dyes and pigment printing colours are said to be highly promising and the directors hope that the entry into these lines will in due course greatly enhance the prosperity of the Company. The Company also proposes to diversify its activities and it has obtained a licence for the manufacture of 240 tonnes a year of organic peroxides in collaboration with Novadel Ltd of London. The Company will be the first in India to make these products which serve as vital raw materials for a number of industries.

Dharamsi Chemical Fares Well

THE preliminary report on the working of Dharamsi Morarji Chemical for 1963 showed that the Company had fared much better than in the previous year. Its sales rose from Rs. 2.33 crores to Rs. 2.90 crores, and the gross profit increased from Rs. 35.80 lakhs to Rs. 46.35 lakhs. In the final report, the directors point out that the various schemes of expansion and diversification are making good progress. The contact sulphuric acid plant with a daily capacity of 300 tons is expected to go into production before the Company's annual general meeting on 9th June. As for the 100-ton alumina sulphate project in Ambarnath, the installation of equipment for a production of 70 tons a day has been completed, but the actual output has had to be kept down to 50 tons a day for want of sulphuric acid and steam. Civil construction work for the additional equipment required to achieve 100 tons a day is in progress. The installation of additional equipment required for 50 tons a day of alumina sulphate in Kumbhari has been completed. The production of this factory had to be curtailed because of the shortage of sulphuric acid. These difficulties are likely to disappear when the 300-ton sulphuric acid plant goes into production. The Company has been licensed to expand its capacity of chlorosulphonic acid from 1,010 tonnes to 6,600 tonnes a year. No progress has, however, been made in connection with the proposed manufacture of industrial explosives. Construction of the factory building of Borax Morarji Ltd in which Dharamsi Chemical has invested Rs. 7.50 lakhs, is in full swing. It is expected to go into production before the end of this year.

Caledonian Jute Repeats

CALEDONIAN Jute Mills Co. Ltd produced larger quantities of jute goods during the year ended November 1963, because of an abundant supply of fibre. Towards the second half of this period, the margin of profit was squeezed due to keen competition from the Pakistani mills and because of the absence of demand for jute goods from abroad. The prospects for the current year are not considered very promising since production costs have risen considerably due to the implementation of the Wage Board award. The charges for power, fuel and stores have risen in the meantime. The Company has been considering diversifying its activities to

achieve better results. It has installed further 15 broad looms raising the total to 30. Gunny sales rose from Rs. 1.81 crores to Rs. 1.87 crores, and stocks of jute goods dropped from Rs. 9.36 lakhs to Rs. 8.36 lakhs. The profit has improved from Rs. 17.55 lakhs for 1961-62 to Rs. 19.55 lakhs for 1962-63, after increasing depreciation from Rs. 3.68 lakhs to Rs. 6.79 lakhs. The taxable ordinary dividend of 15 percent has been repeated. The yield amounts to 8.6 percent at the present price of Rs. 175 a share of Rs. 100 each. Taxation is allocated Rs. 9.88 lakhs (against Rs. 11.22 lakhs), development rebate reserve Rs. 3.19 lakhs (against Rs. 60,346) and general reserve Rs. 3.61 lakhs (against Rs. 2.40 lakhs). The carry-forward is Rs. 7,332, against Rs. 9,234 brought in.

Travancore Rayons Disappoints

IN spite of an increase of nearly 10 percent in the sales from Rs. 3.13 crores to Rs. 3.43 crores, the gross profit of Travancore Rayons for 1963 is slightly lower at Rs. 58.06 lakhs, against Rs. 58.38 lakhs. And the dividend which had been reduced from 20 percent to 15 percent in 1962 has been further cut down to 12½ percent. Even for the payment of this reduced dividend, the directors have had to draw on the reserves. The gross profit of Rs. 58.06 lakhs is the lowest since 1957 when the Company earned Rs. 56.19 lakhs, but that was on a substantially lower turnover of Rs. 2.55 crores. The directors point out that the working results for 1963 would have been better had the rayon division worked throughout the year, but that was not possible because of the labour trouble. Allocations include depreciation Rs. 32.20 lakhs (against Rs. 26.75 lakhs), development rebate Rs. 8.50 lakhs (against Rs. 1.15 lakhs) and taxation Rs. 4.60 lakhs (against Rs. 17.73 lakhs). The directors have withdrawn a sum of Rs. 3 lakhs from dividend equalisation reserve to make up the shortfall in the amount available for dividend distribution. The proposed equity dividend will absorb Rs. 12.50 lakhs (against Rs. 15 lakhs) and preference dividend will take up Rs. 3.25 lakhs (the same).

The directors expect better results for the current year. Labour relations are normal. Production so far has been satisfactory and it is hoped that, in the absence of adverse developments, the output this year would set a new all-time record. Production is expected to exceed the rated capacity of 7½ tons a day. The new rayon spinning tubes which will greatly improve the quality of yarn are expected to be commissioned before the end of July. The production of rayon grade pulp from cotton linters on a commercial scale has been a success, and the rated capacity is likely to be reached shortly after installation of some additional balancing equipment.

Progress of India United Mills Scheme

THE India United Mills did extremely well during 1963. Its gross profit increased by about 50 percent from Rs. 86.62 lakhs to Rs. 1.30 crores, and the dividend was stepped up from Rs. 1.10 to Rs. 1.25 a share on equity shares and from 25.26p to 31.25p a share on deferred shares. Several factors contributed to the Company's improved performance last year. These include better utilisation of the spinning and weaving plants and of the processing capacity, adoption of realistic and profitable

manufacturing programme, the shift towards finer and fancy types of cloth and increased earnings from exports. Technical efficiency of the mills has shown a marked improvement and the recovery of yarn on cotton consumed has improved due to the reduction in the percentage of soft and hard wastes.

In his statement to the shareholders, the chairman, Mr. N. K. Petigara, says that the programme of rehabilitation and modernisation has been taken up very methodically and seriously. The additions to the plant and machinery during 1963 were of the order of Rs. 63 lakhs—the largest expenditure on modernisation and rehabilitation made by the Company in the last several years. The programme of further modernisation of the spinning department will cost about Rs. 1.30 crores. Orders for machinery worth Rs. 19 lakhs have been placed for the current year. The present installed capacity of the spinning section is 262,044 spindles and under the balancing licences granted to the Company, another 25,807 spindles will be added. These are already under order and will be commissioned by the middle of next year. Further, the mills have been granted 21,598 spindles under the general permission of 7.5 percent increase and the installation of these spindles is under consideration. The Company's quest for diversification continues. A separate terylene spinning section is being set up in one of the Company's mills with the intention of starting the spinning of terylene and other synthetic fibres and cotton blends. The setting up of this terylene spinning section is expected to enable the mills utilise the terylene fibre imported against export incentives in a more remunerative manner.

Although four months have already elapsed during the current year and the working has been fairly normal, the chairman has been extremely cautious in expressing an opinion on the outlook for the current year. He has drawn attention to the uncertainty about the cotton supply position, mounting interest charges and the ever increasing incidence of labour cost and excise duties. But the chairman seems hopeful that with the changes that have been made in the manufacturing programme, the higher working efficiencies obtained and installation of new plant and machinery, the Company's working results for the current year are likely to be as satisfactory as last year.

Rohit Pulp and Paper Shows Better Results

ROHIT Pulp and Paper Mills Ltd reports very encouraging results for 1963, with production, sales and profit showing impressive improvement over the previous year. The output has risen from 1,400 tonnes to 3,280 tonnes, sales have gone up from Rs. 26.03 lakhs to Rs. 64.08 lakhs, and the gross profit amounts to Rs. 7.06 lakhs whereas in the previous year, the Company had incurred a loss of Rs. 3.74 lakhs. After providing Rs. 3.18 lakhs (against Rs. 2.21 lakhs) for depreciation, the surplus of Rs. 3.88 lakhs has been adjusted against previous losses amounting to Rs. 5.11 lakhs, leaving a loss of Rs. 1.23 lakhs to be carried forward. In view of the loss carried forward, the directors have passed over the dividend. The Company's working during the current year is said to be much better than in 1963.

Good Prospects for Elecon Engineering

THE preliminary figures which had been released along with the

announcement of a 6 percent maiden dividend showed that the Elecon Engineering Company had done very well during 1963. Its turnover increased from Rs. 27.63 lakhs to Rs. 1.03 crores, and it made a gross profit of Rs. 16.27 lakhs, against a loss of Rs. 2.37 lakhs in the previous year.

Digvijay Cement Results Impress

SHREE Digvijay Cement Co. Ltd has raised the dividend for 1963 from 10 percent to 13 percent, and this on the increased capital, absorbing Rs. 22.61 lakhs, against Rs. 13.49 lakhs. The increase in the dividend is fully justified by the Company's impressive performance during the year. The turnover has increased by about 33 percent from Rs. 4.65 crores to Rs. 6.18 crores, and the gross profit has shot up by about 70 percent from Rs. 76.08 lakhs to Rs. 1.287 crores. After providing Rs. 32.63 lakhs (against Rs. 21.75 lakhs) for depreciation, Rs. 16.20 lakhs (against Rs. 11.21 lakhs) for development rebate reserve and Rs. 29 lakhs (against Rs. 17.65 lakhs) for taxation, the net profit amounts to Rs. 45.29 lakhs, against Rs. 21.62 lakhs in the preceding year. The directors have provided Rs. 4.73 lakhs (against Rs. 4.95 lakhs) for rehabilitation, research and development reserve and Rs. 19 lakhs (against nil) for general reserve.

This expansion has become necessary as contracts for complete plants such as coal handling plants, fertilizer plants, etcetera, generally include heavy structural work. The new structural shop is expected to go into production by the third quarter of the year. The total capital investment of the new structural shop is estimated at Rs. 12 lakhs. The necessary sanction for fabrication of heavy structurals has already been received from the Government. A few machines have also arrived at the site. When the structural shop operates at the full rated capacity, the additional sale will amount to some Rs. 30 lakhs a year. The Company has successfully concluded a technical collaboration agreement with Richard Sutcliffe Engineering Systems Ltd of the U.K. for the manufacture of various types of standardised surface installation conveyors and mining conveyors under licence in India, subject to the Government of India's approval. The Rs. 100-paid share of Elecon Engineering is currently quoted around Rs. 81.

Mahendra Electricals Makes Profit

MAHENDRA Electricals Ltd has made a gross profit of Rs. 8.22 lakhs during 1963—the first year of production. The Company's production amounted to Rs. 44.87 lakhs, and its sales amounted to Rs. 30.40 lakhs. After providing Rs. 6.06 lakhs for depreciation and transferring Rs. 7.50 lakhs to development rebate reserve, the year's working shows a net loss of Rs. 5.34 lakhs. This, together with the loss of Rs. 95,039 brought in and taking credit for Rs. 1,029 being excess provision for tax for the previous year, makes a total debit balance of Rs. 6.28 lakhs, which is being carried forward. Sales and production during the year were restricted, compared with the production capacity of the plant. This was due to the delays on the part of the Government in fulfilling the generating programme and coming into production of new cable makers at about the same time.

Efforts are, however, being made to increase the sales of products and consequently their output. The Company has obtained I.S.I. certification marks and fire insurance approval for its products. In his statement to shareholders, the chairman, Mr. R. J. Chinal, says that the progress of the Company is very much tied to the level of electric power generation and the consequent industrial progress of the country. He

feels that with the increase in power generation, the demand for the Company's products will necessarily rise. The current working of the Company is said to be much better than in 1963.

view that the ferro-manganese industry has tided over the initial period of depression and that it can look to the future with a measure of confidence. Exports by way of barter deals are proving somewhat remunerative and there is also a steadily increasing demand in the domestic market due to the expansion of steel plants. Under the recent barter deal for the export of 128,000 metric tons of ferro-manganese to the U.S.A. over a period of 18 months commencing from the middle of December 1963, Khandelwal Ferro has been allotted a share of 44,000 tonnes. Two shipments amounting to 18,500 tonnes have already been made and the Company is unlikely to have any difficulty in completing the entire quota. With the expansion of the steel plants in the country, the demand for ferro-manganese is steadily increasing and the Company expects to be able to supply about 15,000 tonnes during the current year to the steel plants.

The Company also hopes to make a profit by exporting ferro-manganese slag, the stock of which is now accumulating. A sample shipment of 1,500 tonnes has been made. Considerable progress has been made in the establishment of a steel tube mill as a separate unit of the Company. This project is likely to improve considerably the earning capacity of Khandelwal Ferro. The Government of India has offered adequate Belgian credit to cover the import of plant and machinery on deferred payment terms spread over 12 years. An import licence for Rs. 64.7 lakhs has been received. The Industrial Finance Corporation has agreed to guarantee the Belgian loan and grant a rupee loan of Rs. 77 lakhs. The construction of the project is expected to be taken in hand shortly.

Seajuli Tea Cuts Dividend

THE Seajuli Tea Co. Ltd (an Assam garden) has earned a revenue profit of Rs. 1.27 lakhs for the year ended December 1963, against a profit of Rs. 3.62 lakhs for 1962, after providing Rs. 34,180 (against Rs. 1,029) for depreciation and Rs. 22,000 (against Rs. 28,500) for bonus. The taxable ordinary dividend has been reduced from 30 percent to 25 percent to absorb Rs. 62,250. The yield amounts to 10 percent at the present price of Rs. 25.12 a share of Rs. 10 each. Taxation is allocated Rs. 54,000 (against Rs. 21.9 lakhs) and general reserve Rs. 50,000 (against Rs. 1.50 lakhs). The carry-forward amounts to Rs. 15,780, against Rs. 74,945 brought in. The crop declined from 207,643 kilograms to 201,112 kilograms and the average sale price dropped from Rs. 7.36 to Rs. 6.63 a kilogram. The 1964 crop has been estimated at 217,800 kilograms at a cost of Rs. 6.04 a kilogram.

Runglee Rangliot, Poobong Tea Results

THE reports of two Darjeeling tea Companies under the management of Duncan Brothers for the year ended December 1963 have been published. The Runglee Rangliot Tea Co. Ltd has reduced the taxable ordinary dividend from 7½ percent to 5 percent which works out to a yield of 1.7 percent at the present price of Rs. 300 a share of Rs. 100 each. The revenue profit has amounted to Rs. 2,834, against a loss of Rs. 3,382 for 1962, after providing Rs. 22,247 (against Rs. 24,126) for depreciation. Taxation absorbs Rs. 2,060 and development rebate reserve Rs. 3,500 (against Rs. 8,500). The carry-forward amounts to Rs. 6,363, against Rs. 6,741 brought in, after transferring

Rs. 2,000 from development rebate reserve. The crop amounted to 86,726 kilograms, against 85,234 kilograms and the average sale price rose from Rs. 6.64 to Rs. 7.21 a kilogram. The 1964 crop has been estimated at 95,000 kilograms at a cost of Rs. 6.89 lakhs. The start of the new season has not been very satisfactory due to drought and labour troubles.

The revenue profit of the Poobong Tea Co. Ltd has dropped from Rs. 1 lakh for 1962 to Rs. 34,269 for 1963, after transferring Rs. 10,311 (against Rs. 10,308) to depreciation. The dividend has been passed, but it amounted to 5 percent for 1962. Revenue reserve is allocated Rs. 50,000 (against Rs. 75,000) and development rebate reserve Rs. 2,500, leaving a carry-forward of Rs. 14,788, against Rs. 30,513 brought in. The crop declined from 122,495 kilograms to 112,874 kilograms, and the average sale price fell from Rs. 6.65 to Rs. 6.44 a kilogram. The crop for 1964 has been estimated at 120,000 kilograms at a cost of Rs. 8.18 lakhs. The directors say that the new season has not started well due to drought and hail damage.

Methoni Tea Cuts Dividend

THE Methoni Tea Co. Ltd (an Assam garden) has shown a profit of Rs. 2.26 lakhs for the year ended December 1963, compared with one of Rs. 6.22 lakhs for 1962, after transferring Rs. 59,125 (against Rs. 60,807) to depreciation. An interim dividend of 11 percent was paid earlier to absorb Rs. 1.10 lakhs. The yield amounts to 7.9 percent at the present price of Rs. 14 a share of Rs. 10 each. There will be no final dividend. The dividend amounted to 20 percent, subject to tax for 1962. Taxation absorbs Rs. 1.44 lakhs (against Rs. 3.76 lakhs) and development rebate reserve Rs. 370 (against Rs. 300), leaving a carry-forward of Rs. 14,959, against Rs. 8,441 brought in. The crop amounted to 350,854 kilograms, against 374,221 kilograms and the average sale price dropped from Rs. 7.12 a kilogram to Rs. 6.39 a kilogram. The 1964 crop has been estimated at 590,000 kilograms at a cost of Rs. 33.45 lakhs.

Nil from Ghusick Collieries

THE Ghusick and Muslia Collieries Ltd has again passed the dividend for the year ended March 1963. The profit has amounted to Rs. 7,080, against Rs. 921 for 1961-62, after transferring Rs. 2.22 lakhs (against Rs. 1.79 lakhs) to depreciation. Bringing in a loss of Rs. 6.24 lakhs, providing Rs. 1,723 for taxation and Rs. 30,000 for development rebate reserve, a debit balance of Rs. 6.49 lakhs has been carried forward. Raisings amounted to 203,733 tons, against 177,995 tons and despatches totalled 163,731 tons, against 156,218 tons. Efforts are being made to construct the second pit of Muslia colliery and to start raising coal. Capital expenditure has amounted to Rs. 4.29 lakhs and steps have been taken to install more machinery.

Share Offer by Cominco Binani Zinc

THE list for the offer of 839,993 ordinary shares of Rs. 10 each for subscription at par by Cominco Binani Zinc Ltd opens on 27th May, 1964. Out of the issue, 80,000 shares will be reserved for allotment to the shareholders in Metal Distributors Ltd in the proportion of three shares of the new Company for every 20

shares held in Metal Distributors. The remaining 80,000 shares, together with any shares not taken up by the shareholders of Metal Distributors, are being offered for public subscription. The shares allotted privately to the directors, promoters, their friends and associates will have to be held as long-term investments and cannot be disposed of within one year of the date of allotment. A sum of Rs. 2 a share will have to be paid on application and a further sum of Rs. 2 a share on allotment. Applications must be made for a minimum of 50 shares or multiples thereof. The entire public issue has been underwritten. The subscribed capital amounts to Rs. 1.26 crores, out of which a sum of Rs. 25.20 lakhs has been paid-up. Out of the subscribed capital, 840,000 ordinary shares have been taken up by the Consolidated Mining and Smelting Co. of Canada Ltd, the foreign collaborators, and 420,000 shares have been subscribed by Metal Distributors Ltd. Application has been made to the Calcutta Stock Exchange for permission to deal in and for an official quotation of the Company's share.

The Company has been sanctioned an industrial licence to establish a smelter in Alwaye, Kerala State, to produce zinc by the electrolytic process and such by-products as sulphuric acid and cadmium. The licence provides for an initial output of 12,000 tons of zinc a year which can be extended up to 20,000 tons a year. The by-products will be increased in proportion. The Company has already applied for a licence to import plant and equipment. The factory site is considered suitable from the point of view of water and electric supply. The chief raw material, zinc concentrates, will be imported as long as the indigenous raw material is not available. Metal Distributors Ltd has been appointed the sole selling agents for five years. The cost of the project has been estimated at Rs. 4.95 crores. The Industrial Finance Corporation of India has agreed to offer a loan of Rs. 99 lakhs. A loan of Rs. 38 lakhs will be given by the Kerala State Industrial Development Corporation and a loan of Rs. 70.32 lakhs will be sanctioned by the Export Credits Insurance Corporation of Canada.

The prospect is considered encouraging since zinc is widely used for various purposes. No zinc is produced in India now, although a unit has been licensed to produce 18,000 tons of zinc a year. This plant is being constructed in Rajasthan. Zinc is at present imported and in 1963 imports amounted to more than 73,123 tons valued at about Rs. 10 crores. The demand may rise to 187,500 tons by the end of 1965. The Company will also produce 45,000 tons of sulphuric acid a year. In view of the good demand for zinc and the by-products, the Company will have no difficulty in selling all its products. Commercial production may begin by the middle of 1966. The directors think that the Company will earn enough profits in due course and pay reasonable dividends. The foreign collaborators have a worldwide reputation as metal producers. The directors are Messrs G. D. Binani, W. S. Kirkpatrick, R. G. Edwards, A. O. Wolff, T. G. Harding, H. T. Fargey, D. D. Morris, D. K. Basu, Charat Ram, S. C. Gladstone, Ghanshyamdas Binani and R. K. Bagri. (Details of the issue have been printed on a later page in this week's issue of *Capital*.)

Raymond Woollen Shows Good Results

ALTHOUGH the dividend has just been maintained at 12 percent, the working results of the Raymond Woollen Mills for 1963 show an appreciable improvement over the previous

year's performance. The turnover has gone up by as much as 36 percent from Rs. 3.76 crores to Rs. 5.11 crores, and the gross profit has risen by about 23.5 percent from Rs. 60.87 lakhs to Rs. 75.21 lakhs. The directors have justified the maintenance of the dividend in spite of much larger profits on the plea that the Company needs vast sums for modernisation. Allocations include depreciation Rs. 9.70 lakhs (against Rs. 6.40 lakhs), taxation Rs. 34.50 lakhs (against Rs. 30.30 lakhs), development rebate Rs. 1.80 lakhs (against Rs. 95,000), deferred taxation reserve Rs. 2.50 lakhs (against nil) and general reserve Rs. 11.80 lakhs (against Rs. 10 lakhs). After providing for the proposed dividends which absorb Rs. 10.62 lakhs (the same), there remains a surplus of Rs. 14.825 to be carried forward, against Rs. 51,319 brought in.

The marked increase in the Company's turnover is attributed mainly to huge defence orders which amounted to as much as Rs. 2.38 crores, against Rs. 36 lakhs in the previous year. Sales to the civilian market dropped by about 40 percent because of the severe cut in the import of raw materials. Export sales, however, were considerably higher at Rs. 27 lakhs, against Rs. 15 lakhs in 1962. The Company is said to have made satisfactory progress in developing business in nylon hosiery articles. It secured import entitlements worth Rs. 24.81 lakhs for a consideration of Rs. 12.36 lakhs. With the subsequent requestioning of import entitlements worth Rs. 20.79 lakhs, the Company is now in a position to import plant and machinery worth Rs. 45.60 lakhs. The production and turnover of the engineers' files division showed further improvement in 1963. The Company's schemes for modernisation and development include the setting up of a wool combing division in collaboration with Sir James Hill and Sons of the U.K. The Company also proposes to undertake the complete modernisation of its worsted spinning section. The proposal to run Bainjath Banky Beharil Woollen Mills has been shelved for the time being.

Aspinwall (Travancore) Pays Again

THE working results of Aspinwall and Company (Travancore) Ltd for the year ended December 1963, are encouraging. The profit earned is a decent one (against a loss in the previous year) and a dividend of 10 percent (against nil) has been declared. The net profit for the year after depreciation and taxation amounts to Rs. 2,14,517, compared with the previous year's loss of Rs. 55,217. With the amount of Rs. 43 brought forward from the previous year, the total available for appropriation comes to Rs. 2,14,560. The interim dividend at 4 percent has absorbed Rs. 40,000. The proposed final dividend of 6 percent amounts to Rs. 60,000. The balance of Rs. 1,14,560 is carried forward.

Aspinwall and Company Repeats

ASPINWALL and Co. Ltd has earned a net after-tax profit of Rs. 2,51,148 for the year ended December 1963 after providing Rs. 3,01,300 for taxation, compared with the previous year's net profit of Rs. 3,04,583, after providing Rs. 2,91,443 for taxation. With the amount of Rs. 60,219 brought forward, the total available surplus comes to Rs. 3,11,367. Out of this, Rs. 2,188 is transferred to development rebate reserve. A sum of Rs. 44,914 is transferred to capital reserve being the profit on sale of

land and buildings. Dividend at 6.66 percent on preference shares amounts to Rs. 14,252. The ordinary dividend of 6 percent (the same) amounts to Rs. 2,15,280. The balance of Rs. 34,733 is carried forward.

Peermade Tea Cuts Dividend

LOWER crop and a reduction in the ordinary dividend to 17½ percent (from the previous year's level of 20 percent) are the features of working of the Peermade Tea Co. Ltd during the year ended December 1963. But the price realised for the Company's teas was higher than that of the previous year. The profit for the year before taxation amounts to Rs. 7,13,678, compared with the previous year's profit of Rs. 7,64,540. After deducting the tax provision of Rs. 3,56,000 (against Rs. 4,29,750), the net profit comes to Rs. 3,57,678. Adding to this profit, a sum of Rs. 69,839 brought forward from the previous year, along with Rs. 30,000 being excess provision written back, the total available for appropriation comes to Rs. 4,57,517. Out of this, a sum of Rs. 3,710 is transferred to development rebate reserve, Rs. 100,000 is transferred to general reserve (against nil). Dividend at 6.765 percent on the preference shares amounts to Rs. 10,147. The interim dividend at 5 percent on the equity shares has absorbed Rs. 85,000, and the proposed final dividend of 12½ percent on equity shares will absorb Rs. 2,12,500. The balance of Rs. 46,160 is carried forward. The crop for the year amounted to 1,069,078 kilograms (against 1,104,598 kilograms). The average sale price of tea amounted to 419.03nP a kilogram, against 383.73nP a kilogram. The estimated crop for 1964 is put at 1 million kilograms.

Nil from Calcutta Steam Navigation

THE Calcutta Steam Navigation Co. Ltd has shown a debit balance of Rs. 11,281 for the year ended June 1963, after transferring Rs. 2.42 lakhs (against Rs. 2.73 lakhs) to depreciation and Rs. 75,000 to development rebate reserve. The profit for 1961-62 amounted to Rs. 28,490. The dividend has been passed. The directors say that the lighterage freight did not improve. Since there has been an increase of 20 percent in the lighterage rates for gunnies, a profit may be earned during the current year, provided the labour situation remains normal.

Radhakrishna Mills Maintains

DECLINE in the profit in spite of higher sales and the maintenance of the 10-percent dividend feature the working of Radhakrishna Mills Ltd for the year ended December 1963. The directors say that the profits earned during the year were whittled down by the increase in costs. Sales amounted to Rs. 2,56,31,749, against Rs. 2,07,24,768 in the previous year. The profit for the year amounted to Rs. 15,60,015, after providing Rs. 6,72,119 for depreciation. This compares with the previous year's profit of Rs. 16,18,920, after providing Rs. 5,70,220 for depreciation. With Rs. 4,908 brought forward from the previous year, the total surplus comes to Rs. 15,64,923. Out of this, the directors have transferred Rs. 9,00,000 (against Rs. 8,46,534) to contingency reserve. A sum of Rs. 25,977 (against Rs. 1,40,525) is transferred to development rebate reserve. The proposed dividend of 10 percent will absorb

Rs. 6,30,450. The balance of Rs. 8,496 is carried forward.

The directors' report says that the working results for the first half of the year were not very encouraging and it was only in the second half that the profits took a turn for the better. The working of the weaving section was not encouraging as the ceiling prices for cloth remained stationary in spite of the increased cost of yarn. The selling prices for exportable cloth were not also attractive. The gross block of the Company stands at Rs. 1,26,22,027 and after deducting depreciation provided to the extent of Rs. 89,14,242, the net block stands at Rs. 37,07,785.

New Product from Eagle Paint

EAGLE Paint and Pigment Industries Private Ltd, Calcutta, will manufacture in collaboration with Messrs Cornelius Cremer and Company of the West Germany Corroless paint. Corroless paint to be produced for the first time here is a special rust stabilising paint. Made by Cornelius Cremer and Company of West Germany, Corroless not only makes use of rust but also serves as a priming paint. It has been developed for use in cases where good surface preparation such as sandblasting or cleaning with power tools is impossible. It is now being manufactured in 30 different countries.

Metal surfaces to be coated are merely wire-brushed to remove loose rust, scale and dirt, and the primer then applied by brush or spray. It dries in three hours. The usual paint finishes can then be applied.

Lucky Valley Tea Earns Less

LOWER crop and a price realisation around the previous year's level have led to a reduction in the profit of Lucky Valley (Nilgiri Hills) Tea Estates for the year ended December, 1963. But the dividend is maintained at 10 percent. The profit, before taxation, amounts to Rs. 1,02,008 (against Rs. 1,66,239). After deducting Rs. 49,000 (against Rs. 92,000) towards taxation provision, the net profit amounts to Rs. 53,008. With Rs. 36,576 brought forward from the previous year and with Rs. 14,300 being the excess provision for taxation for the previous year no longer required, the total available for appropriation comes to Rs. 1,03,884. Out of this, Rs. 4,418 is transferred to development rebate reserve. The proposed dividend of 10 percent will absorb Rs. 50,000. The balance of Rs. 49,466 is carried forward.

During the year, the Company produced a crop of 332,643 lbs of tea, against 343,350 lbs for the previous year. Although the first half of the year was promising, unfavourable climatic conditions, particularly in the third quarter, spoilt any chances of another record year. A further area of seven acres has been cleared during the year and planted with clonal tea. The estate cost of production a lb of made tea amounted to Rs. 1.52, compared with Rs. 1.41 a lb in the previous year. The average sale price realised amounted to Rs. 2.41 a lb, compared with Rs. 2.42 a lb in the previous year. The estimated crop for 1964 is placed at 315,000 lbs to be harvested at a cost of Rs. 1.57 a lb.

Kerala Lakshmi Mills Shows Loss

THE third annual report of the Kerala Lakshmi Mills Ltd for the year ended December 1963 says that

on account of the acute shortage of roofing materials such as A.C. sheets, which are now under Government control, the building to house the entire licensed spindles could not be completed in time. The spindleage installed at present is only 12,180, against the projected complement of 24,360 spindles. There has been some delay in receiving ring-frames from the indigenous manufacturers and the Company expects to get the remaining ring-frames before the middle of this year. The full complement of the licensed capacity may go into production soon thereafter. The report also says that the imported blow-room machinery and O.M. super-drafters have been received, and their erection is progressing. It is reported that there is very good demand for the Company's yarn. The working of the Company during the year shows a net loss of Rs. 4,82,871 (against one of Rs. 1,62,683 in the previous year), after providing Rs. 2,38,785 (against Rs. 33,689) for depreciation and Rs. 3,41,809 (against Rs. 1,24,134) for development rebate.

Better Outlook for Bombay Oxygen

THE chairman of Bombay Oxygen Corporation, Mr. Madanmohan R. Ruia, assured the shareholders at the Company's annual meeting that they could look forward to the future with confidence. Now that all the teething troubles have been overcome, the Company's working results for the current year are likely to be better than in the previous year. Sales during the first four months of the year have already exceeded the total turnover in 1963, which amounted to no more than Rs. 2.63 lakhs. According to Mr. Ruia, sales this year are likely to be around Rs. 25 lakhs, and the profit margin is expected to be about 15 to 20 percent. The capacity of all the four oxygen plants is 1.728 million cubic metres, and that of the acetylene plant is 576,000 metres a year on a three-shift basis. When all these plants operate at full capacity, the Company's annual sales would be of the order of Rs. 75 lakhs.

All the gas cylinders for industrial as well as medical oxygen and dissolved acetylene have been received from abroad. While striking an optimistic note about the Company's future, Mr. Ruia was quite cautious in making any positive commitment on the maiden dividend. But it seems likely that the shareholders will not probably have to wait for long before their investment begins to bear fruit. The chairman informed the shareholders that negotiations with foreign manufacturers for the welding electrode plant are likely to be finalised shortly. The requisite industrial licence was expected to be issued in about three months' time. Meanwhile, the Company has started marketing electrodes manufactured by one of the leading welding electrode manufacturers. The Rs. 100-paid share of Bombay Oxygen are quoted around Rs. 82.

Tubes and Malleables Pays More

TUBES and Malleables Ltd reports highly encouraging results for 1963. Sales have risen by 40 percent from Rs. 95.56 lakhs to Rs. 1,338 crores, and the gross profit has shot up by about 56 percent from Rs. 12.32 lakhs to Rs. 19.08 lakhs. Improved results have encouraged the directors to step up the total dividend from 17½ percent to 20 percent. The provision for depreciation amounts to Rs. 40,445, against Rs. 34,197, and taxation accounts for Rs. 12.65 lakhs, against Rs. 9.60 lakhs. A sum of Rs. 1.50 lakhs

(against nil) has been allocated to the general reserve, and Rs. 14,500 have been set aside for short provision for taxation relating to the previous year.

After providing Rs. 4.40 lakhs (against Rs. 3.49 lakhs) for the proposed dividend, there remains a small balance of Rs. 3,220 to be carried forward, against Rs. 4,212 brought in. The Company produced 5,418 tonnes of pipes, against 3,971 tonnes in the previous year. The directors state that with the commencement of production of pipes by the fifth mill—Ambika Mills—there will not be any scarcity for pipes in the country. The directors are hopeful of a further increase in the Company's turnover in spite of increasing competition. The Company's negotiations for Italian collaboration have not been successful, and negotiations with a British firm are now in progress.

Share Offer by Hindustan Polymers

HINDUSTAN Polymers Ltd, which proposes to set up a factory in Visakhapatnam (Andhra Pradesh) for the manufacture of power alcohol, styrene monomer and polystyrene and its co-polymers, is offering 127,400 equity shares of Rs. 100 each at par for public subscription. The list will open on 26th May and close on 4th June or earlier but not before 28th May. The Company has been licensed to manufacture annually 1.5 million gallons of power alcohol, 10,000 tons of styrene monomer and 7,500 tons of polystyrene and its copolymers including high impact copolymers by a continuous mass polymerisation process. The U.S. firm of Universal Oil Products Company is collaborating in the manufacture of styrene monomer and the British firm of B. X. Plastics will be collaborating in the manufacture of polystyrene.

The Company has an authorised capital of Rs. 5 crores consisting of Rs. 3 crores in equity shares of Rs. 100 each and Rs. 2 crores in unclassified shares of Rs. 100 each. The issued capital will be Rs. 3 crores in equity shares. Shares worth Rs. 30.61 lakhs have already been subscribed, of which Shree Ram Mills of Bombay, a promoter of the Company has taken up Rs. 30 lakhs. Shares of the value of Rs. 1,41,99,000 are being taken up privately—Rs. 30 lakhs by Shree Ram Mills, Rs. 51.99 lakhs by Shree Ram Mills, Rs. 51.99 lakhs by the promoters, directors and their associates, Rs. 20 lakhs by I.C.I.C.I., Rs. 20 lakhs by the Commonwealth Development Finance Company and Rs. 20 lakhs by Bakelite Xylonite Ltd, England. The balance of Rs. 1,27,40,000 is being offered for public subscription.

A. P. Paper Mills to Take Over Rajahmundry Factory

THE Andhra Pradesh Government has entrusted the management of the old and uneconomic Rajahmundry paper factory to West Coast Paper. Under the agreement signed between the State Government and Mr. G. D. Somani, this factory will be incorporated as a joint stock Company to be known as Andhra Pradesh Paper Mills Ltd, which will have an authorised capital of Rs. 2 crores in equity shares and Rs. 1 crore in preference shares. The West Coast Paper Mills, which will supply technical co-operation to the new unit, will subscribe for one-third of the equity capital. The State Government will also take up an equal amount, and the balance will be offered for public subscription. The capacity of the new paper mill is being raised from 60 tonnes to 100 tonnes a day, in order to make it an

economic unit. The new equipment is already at the site. The entire project, when completed, will involve a capital outlay of about Rs. 7 crores. Of this, Rs. 4 crores will be in the form of permanent capital and the balance in the form of borrowings from financial institutions. Arrangements are being made to start the erection work of the plant and machinery. It is expected that one paper machine will go into production within a year, and the rest of the plant within six months thereafter. The abundance of raw materials, water and power supply available at the factory's site are said to offer exceptionally favourable conditions for the successful working of the mills.

Southern Industrial Corporation Loses

THE working of Southern Industrial Corporation Ltd for the year ended December 1963, has resulted in a net loss of Rs. 3,06,320 after providing Rs. 1,76,283 for depreciation, compared with the previous year's net loss of Rs. 38,466, after providing Rs. 1,79,865 for depreciation. Adding to the year's loss, a sum of Rs. 1,27,130 being the loss brought forward from last year and a sum of Rs. 1,451 being the transfer to development rebate reserve, the total loss of Rs. 4,34,901 is carried forward.

The directors are hopeful about the future prospects of the Company. They feel that the loss will be reduced to a great extent in the current year since finished product inventories have been reduced and the Suhner-India flexible shaft machines and Speedometer cables are being marketed on a profitable basis. The Government of India has issued a licence to the Company for establishing the manufacture of close tolerance rolled products of copper and brass with foreign collaboration. The Company is negotiating with one of the largest non-ferrous metal semis manufacturers in Europe and the possibility of foreign collaborators participating in the capital of the Company is also being explored.

The chairman in his statement to shareholders says that during the year, the Company met with a number of unexpected problems which adversely affected the working results. Flexible shaft sales were far below expectations due to large imports of flexible shaft machines from rupee payment countries which were being offered at very low margins. The Company is no longer depending on a single supplier of wire. The motor-vehicle manufacturers having changed over to the Company's Speedometer cables, this section can be expected to work profitably.

Rajalakshmi Mills Earns Less

IN spite of a slight increase in the sales from Rs. 1.31 crores to Rs. 1.35 crores, the gross profit of Rajalakshmi Mills of Coimbatore for 1963 has fallen by 18.5 percent from Rs. 20.05 lakhs to Rs. 16.35 lakhs. The profit margin has been squeezed as a result of the continuous rise in the cost of raw materials and other working expenses without any corresponding increase in the selling prices of yarn. In spite of the lower profit, the dividend has been maintained at 15 percent. After providing Rs. 5.91 lakhs (against Rs. 6.17 lakhs) for depreciation, Rs. 92,500 (against Rs. 87,000) for development rebate and Rs. 4.25 lakhs (against Rs. 4.85 lakhs) for taxation, the net profit amounts to Rs. 4.25 lakhs, against Rs. 7.07 lakhs in 1962. A sum of Rs. 57,349 has been written back,

being excess provision made for bonus for 1962. The directors have set aside Rs. 15,000 (the same) for donation to Rangaswamy Educational Trust. Preference and equity dividends absorb Rs. 4.66 lakhs. After making certain adjustments, there remains a balance of Rs. 2,240 to be carried forward, against Rs. 4,998 brought in. The Company's new unit in Karamdai is getting ready for commissioning. The waste spinning plant has been erected and it is likely to be commissioned shortly.

Coimbatore Pioneer Pays the Same

IN spite of a decline in the net profit for the year ended December 1963, the directors of the Coimbatore Pioneer Mills have repeated the dividend of 15 percent. The net profit before taxation for the year amounts to Rs. 10,36,921, after providing Rs. 7,41,866 for depreciation and Rs. 2,10,071 for development rebate reserve. This compares with the previous year's profit of Rs. 16,42,150, after providing Rs. 6,48,447 for depreciation and Rs. 1,34,862 for development rebate reserve. With the amount of Rs. 615 brought forward from the previous year, the total surplus comes to Rs. 10,37,536. Out of this, the provision for taxation comes to Rs. 1,59,000 (against Rs. 8,76,000). The dividend at 8.45 percent on preference shares amounts to Rs. 8,450. A sum of Rs. 3,90,000 is transferred to general reserve (against Rs. 35,000). Provision for dividend tax amounts to Rs. 33,425. The proposed dividend at 15 percent on ordinary shares will absorb Rs. 4,45,665. The balance of Rs. 996 is carried forward. Sales amounted to Rs. 1,64,28,636 (against Rs. 1,61,25,520).

Tropical Plantations Repeats

THE directors of the Tropical Plantations Ltd have repeated the dividend of 8 percent for the year ended December 1963, which is the same as with previous years. The net after-tax profit for the year amounts to Rs. 2,50,474.76 after providing Rs. 53,324 for depreciation, and Rs. 2,06,000 for taxation, compared with the previous year's net profit of Rs. 2,00,691, after providing Rs. 49,002 for depreciation and Rs. 2,28,400 for taxation. With the amount of Rs. 14,062.15 brought forward from the previous year, and with Rs. 21,509.05 being excess provision written back, the total available for appropriation comes to Rs. 2,86,045.96.

Out of this, development rebate reserve gets Rs. 3,600 (against nil). Development reserve gets Rs. 50,000 (against nil) and Rs. 60,000 is transferred to general reserve (against Rs. 40,000). The proposed dividend at 8 percent will absorb Rs. 1,60,000. The balance of Rs. 12,445.96 is carried forward. The tea crop for the year amounted to 232,801 kilograms. The average price realised amounted to Rs. 2.99 a kilogram.

Madras Aluminium Makes Profit

THE possibility of starting production by the end of 1964, and a rise of about Rs. 2 crores in the cost of the scheme due to a reassessment of cost by the Industrial Finance Corporation of India, are the features of the directors' report of the Madras Aluminium Co. Ltd for the year ended December 1963. The Company has

earned a net profit of Rs. 55,387.24, after covering the loss in mining operations and trading of Rs. 1,46,999.84. This compares with the previous year's net loss of Rs. 56,125. The profit for the year has been possible, as the Company was able to earn substantial interest on call deposits, and by investment of funds not immediately required for the purpose of the Company's business. After providing Rs. 1,08,843 for income tax for the year ended December 1962, the loss carried forward to next year amounts to Rs. 13,455.76.

The report says that the local fabrication of indigenous machinery is in progress, and this is expected to be completed within the scheduled time. As for foreign machinery, some shipments have been received, and the bulk of the shipments are expected to be received during May-June 1964. The directors are hopeful that production can be started by the end of 1964. The erection of imported machinery including those produced indigenously, is in progress. All major civil constructions including railway sidings have been completed. The Company has approached the Industrial Finance Corporation of India for a loan of Rs. 1 crore, and the Punjab National Bank for a loan of Rs. 1 crore. The report says that after the factory goes into production, it is expected that the cash resources made available by the provision of depreciation, development rebate and tax holiday, will be more than sufficient to meet all the commitments including the Rs. 2-crore loans noted above.

As for expansion, the directors say that the Company has already applied to the Government of India for a licence to expand its smelter capacity from 10,444 tonnes to 20,000 tonnes of aluminium ingots and alloys, and its fabrication capacity from 7,500 tonnes to 15,000 tonnes a year. The Company has already been granted an industrial licence for the manufacture of 3,000 tonnes of E.C. grade wire rods. It has also obtained permission from the Government to import a proper plant to produce rods. Steps are being taken to get foreign exchange for the import of this plant, so that it may start production of rods simultaneously with the manufacture of ingots. The Government of India has also issued an industrial licence to the Company for manufacturing 3,500 tonnes of aluminium rolled products and 1,000 tonnes of aluminium extensions a year.

Steel Containers Cuts Dividend

STEEL Containers Ltd has reduced the taxable ordinary dividend from 20 percent to 17½ percent for the year ended December 1963. The yield amounts to 6.2 percent at the present price of Rs. 28.12 a share of Rs. 10

each. The profit has amounted to Rs. 5.43 lakhs, against Rs. 5.84 lakhs for 1962, after providing Rs. 43,791 (against Rs. 38,434) for depreciation and Rs. 8.21 lakhs (against Rs. 14.88 lakhs) for taxation. Development rebate reserve is allocated Rs. 53,120 (against Rs. 575), general reserve Rs. 1.45 lakhs (against Rs. 1.81 lakhs) and replacement reserve Rs. 1 lakh (against Rs. 2 lakhs). Sales declined from Rs. 1.14 crores to Rs. 94.22 lakhs. Production has been restricted by the shortage of steel sheets.

Bharat Suryodaya Issues Rights

BHARAT Suryodaya Mills of Ahmedabad has maintained the dividend for 1963 at Rs. 12 a share and the directors have also announced the issue of rights shares at par in the proportion of one right share for every four held. The Rs. 100-paid share of the Company is currently quoted around Rs. 165. The Company's working results for 1963 show an appreciable improvement over the previous year's performance. Sales have increased by 18 percent from Rs. 1.48 crores to Rs. 1.75 crores, and the gross profit has shot up by about 67 percent from Rs. 7.74 lakhs to Rs. 12.94 lakhs. From the year's gross profit, the directors have provided Rs. 72,000 for export penalty for 1962 and Rs. 1 lakh for bonus for 1963. The other appropriations include depreciation Rs. 23,000, statutory development rebate Rs. 65,000, taxation Rs. 2.05 lakhs, general reserve Rs. 2 lakhs and donation Rs. 16,000. The proposed dividends are to be paid out of the general reserve.

Prospects for Prabhat Udyog

IN spite of a labour strike for about eight months, Prabhat Udyog showed fairly encouraging results for the year ended August 1963. Its sales amounted to Rs. 82.16 lakhs on which it made a gross profit of Rs. 10.65 lakhs and declared a maiden dividend of 6 percent. And from what the chairman, Mr. Pratapsingh Shoorji Vallabhdas, stated at the Company's annual meeting on 25th April, the shareholders can look forward to better results for the current year. The labour trouble is over and with a view to achieving production, steps are being taken to introduce an incentive bonus scheme. Production during the current year so far has already shown some improvement over the previous year. The chairman said that the quotas for some of the principal items of raw materials were inadequate, but efforts were being made to get these quotas enhanced.

Meanwhile, the present shortfall was being met by purchases from the local market. In spite of still

competition from other manufacturers, there has been an improvement in the Company's sales this year, indicating the popularity of its products. Sales during 1963-64 are expected to rise to around Rs. 90 lakhs. The Company has plans for expansion. The foreign collaborators have submitted their report which is being examined by the board. As for overseas business, the chairman stated that the Company had recently executed orders received from Africa, Middle East and Far East countries and he expressed the view that the company would be able to develop a good market for its products in these regions. The Rs. 100-paid share of Prabhat Udyog are currently available around Rs. 72.

Cawnpore Sugar Passes Dividend

CAWNPORE Sugar Works Ltd has again incurred a loss of Rs. 16.69 lakhs for the year ended October 1963, compared with one of Rs. 21.74 lakhs for 1961-62, after providing Rs. 7.43 lakhs (against Rs. 7.25 lakhs) for depreciation, Rs. 3.71 lakhs (against Rs. 1.36 lakhs) for development rebate reserve and Rs. 2,000 (against Rs. 6,500) for agricultural tax. After bringing in a loss of Rs. 25.45 lakhs, a debit balance of Rs. 42.64 lakhs has been carried forward. The dividend has been passed. The directors say that the prolonged crushing season has contributed to the unsatisfactory results. There was a shortage of cane supplies. The first phase of the rehabilitation and modernisation programme for the factories in Marhowrah, Padrauna and Kathkuian has been implemented. So the working efficiency of these factories has improved during the 1963-64 season. Steps have been taken to develop sugarcane cultivation.

Borosil Glass Shows Good Progress

THE shareholders of Borosil Glass Works have no reason to feel disappointed over the Company's decision to skip the dividend for 1963. The working of the Company's Andheri plant (belonging to Industrial Engineering and Appliances Co. Private Ltd which has been merged with Borosil Glass) has been much better than in the previous year, but the dividend has had to be skipped because the new Company needs to conserve its resources for its Marol project. The Company's accounts covering the period, 14th December, 1962 to 31st December, 1963, reflect the working of the Andheri plant and the capital expenditure on the new project in Marol. The Company's turnover, after deducting Rs. 5.12 lakhs for excise duty, amounts to Rs. 39.46 lakhs which is nearly 15 percent higher than the previous year's figure. Operations of the Andheri plant have resulted in a pre-tax profit of Rs. 8.67 lakhs, against Rs. 7.50 lakhs in 1962.

The profit has been arrived at after transferring Rs. 4.26 lakhs to unallocated capital expenditure, and providing Rs. 2.32 lakhs for depreciation and Rs. 6,790 for development rebate. The directors have provided Rs. 4.90 lakhs for taxation and have transferred Rs. 1.53 lakhs to adjustment on amalgamation. The surplus of Rs. 2.23 lakhs has been ploughed back. Construction work on the new project in Marol, it is said, has reached an advanced stage and the major portion of machinery and equipment has been received. The directors expect the new plant to commence production in the last quarter of the current year.

Indigenous capital expenditure of this project is being financed princi-

pally from the funds raised by the issue of share capital last year. The Company has also been granted an eight-year loan of Rs. 71 lakhs by the Agency for International Development. Till the funds from A.I.D. become available, cash credit arrangements for Rs. 25 lakhs have been made with the First National City Bank, Bombay. During the current year, equity shares worth Rs. 40 lakhs have been allotted to Corning Glass Works, U.S.A., against the supply of machinery and equipment in terms of the technical collaboration agreement. In his statement, the chairman, Mr. G. W. Franks, says that the production of the Andheri plant represents only a fraction of the countrywide demand for the Borosil products, and this is evident from the fact that the imports of special type of glassware which are to be manufactured by the Company were of the order of Rs. 1.4 crores in the first ten months of 1963-64. These imports took place in spite of foreign exchange scarcity. The management is confident about a ready market for the Company's products. The Rs. 10-paid share of Borosil Glass is quoted around Rs. 11.36.

Cawnpore Textiles Disappoints

CAWNPORE Textiles reports poor results for 1963. Whereas sales are up by nearly 7.7 percent from Rs. 1.735 crores to Rs. 1.869 crores, the gross profit has fallen by 8.4 percent from Rs. 19.16 lakhs to Rs. 17.55 lakhs. The profit margin has been squeezed by the all-round rise in production costs without any increase in cloth prices. Allocations include depreciation Rs. 4.64 lakhs (against Rs. 4.30 lakhs), development rebate Rs. 1.99 lakhs (against Rs. 75,750), taxation Rs. 5.33 lakhs (against Rs. 7.08 lakhs) and general reserve Rs. 5.20 lakhs (against Rs. 3 lakhs). The dividend has been maintained at 10 percent—50p a share it will absorb Rs. 3 lakhs and will be paid out of the general reserve. The Company earned Rs. 6.11 lakhs (against Rs. 8.84 lakhs) by way of premium on cotton entitlements under the export promotion scheme. Implementation of the programme of renovation and modernisation is in progress.

The Company has received an industrial licence for the installation of additional 12,500 spindles, and the work in this connection has been taken in hand. Under the general permission given by the Government to all textile units to install additional spindles to the extent of 7½ percent of their existing total spindleage, the Company is entitled to install a further 2,205 spindles. It has a paid-up capital of Rs. 30 lakhs, which is supported by reserves and surplus amounting to Rs. 65.7 lakhs.

EXHIBITION OF TESTING MACHINES

An exhibition of material testing equipment manufactured in East Germany was organised in Calcutta last week by the Blue Star Engineering Company (Calcutta). Testing machines for use in metal, textile, paper, cellulose, rubber, plastic and construction industries were displayed. With the growth of industry and technology, testing procedures and methods have become exacting. This has necessitated the use of high precision instruments. Factories now have to be equipped with modern testing machines to examine the quality and standards of raw materials, industrial components and finished products. It is only through such rigorous instrumental testing of the inputs that the quality of the final product can be assured.

The Stock Markets

SHARES DROP FURTHER: A.I.C.C. DISCUSSIONS INDUCE CAUTION

Tuesday Evening.

THE Calcutta stock market has closed in a subdued mood. Not only has turnover shrunk considerably during the past week, but share prices have also dropped further. Business is confined to clearing shares. Although turnover in cash shares is negligible, their prices have declined due to the absence of buyers. The clearing took place on Tuesday since the working on Wednesday may be interrupted by the *hartal*. Carry-forward charges are smaller than those in the past settlement, but operators are unimpressed.

Lyons Range has taken a cautious view since speakers at the A.I.C.C. meeting in Bombay have again referred to the question of bank nationalisation. Although no decision has been taken on the Dhebar Committee's report on socialism and democracy, it is feared that the Government's economic policy may drift increasingly towards socialism. Meanwhile there is an inclination to await the Government's move to relax the margins on trading in the stock markets. For the time being, brokers are worried by the lack of business. Except for business of a jobbing nature, there is very little trading.

Indian Iron have retreated on tired bull liquidation, combined with pressure from bears. Engineering shares are quoted at lower prices. In the miscellaneous section, attention centres on clearing scrip, but their prices have declined. New shares, in particular, have suffered heavily. Phillips Carbon have nose-dived on incurring a substantial loss. Managing agency shares are weak on a predominance of sellers. Stray business has been transacted in electric company shares. Bank shares are neglected. In paper shares, Orient have lost on profit-taking. Seshasayee, Titagur and Bengal Paper have declined. Sugar shares are difficult to transact in the absence of buyers.

Interest in jute shares has declined appreciably. Prices of selected scrip like Birla, Kinnison and Champdany have dropped. Coal shares are subdued and their prices have fallen on a predominance of sellers. Stray business has been transacted in cotton mill shares at lower prices. A few transactions have taken place in tea shares.

Government securities are steady partly due to the support from the Reserve Bank and partly because of strong enquiries from banks for short-dated stocks. Medium-dated loans are about steady. The 3 percent Conversion Loan 1986 has improved further to Rs. 63.75.

Bombay

SMALL TURNOVER IN DALAL STREET DECISION ON MARGINS AWAITED

Tuesday Evening.

THE Bombay stock market has been dull during the past week. Share prices have fluctuated narrowly in restricted turnover. Operators are reluctant to extend their commitments either way due to various un-

certainties. Bulls are inclined to take their profits at every bulge.

Dalal Street is inclined to await the Government's decision on liberalising margin restrictions. The A.I.C.C. debate on the Dhebar Committee's report on socialism and democracy has given rise to fresh uncertainties. Concern is felt since the question of bank nationalisation has been raised again.

Tata Steel ordinary have closed around Rs. 147.50. Among engineering shares, Tata Engineering are depressed due to rumours of a cut in the dividend. Alcock Ashdown, Premier Construction and Larsen and Toubro have moved narrowly. Among motor-vehicle shares, Hindustan Motors have dropped on profit-taking, while Premier Automobiles are sluggish.

Turnover in cotton mill shares has declined appreciably. Attention centres on Century which have fluctuated both ways. Bombay Dyeing, Kohinoor, Swadeshi, Standard, Morarjee and Gokak have been more or less maintained. Business in miscellaneous shares has been small. Sugar shares are neglected. In cement shares, Digvijay are about steady since the Company may diversify its activities. Among mining shares, B.B. Petrol have gained, while Shivrajpur Syndicate have been weaker. Among steamship company shares, Scindia Steam have dropped on profit-taking. Chemical shares are quiet. Tata Chemical and Indian Dye stuff have declined. Interest in rayon shares is negligible, and National Rayon have been quoted at lower prices. Voltas are about steady, but Tata Oil have weakened.

Bank shares are neglected. Stray business has been transacted in Central Bank and Bank of India. In electric companies, Ahmedabad and Tata Hydro have changed hands.

Madras

SHORTAGE OF FUNDS WORRIES MARKET TURNOVER DECLINES CONSIDERABLY

Tuesday Evening.

QUITE conditions have prevailed in the Madras stock market during the past week due to the lack of support from outside centres. The earlier steadiness was temporary since operators and investors are worried over the growing shortage of funds. The A.I.C.C. debate on socialism and democracy has called for caution. There is some concern about the Prime Minister's health.

Turnover in clearing and cash scrip has declined considerably. Government securities are dull, although selected State Government loans have met with scattered support. Although interest is shown in good preference shares, business has been small due to the shortage of declared sellers. Electric shares are sluggish, and South Madras have come to hand at Rs. 11.10. Business in West Coast has been transacted around Rs. 13.50. Sugar shares are depressed, and Deccan have lost at Rs. 11.52. E.I.D. have been barely steady at Rs. 35.50

and Cauvery have been freely available at Rs. 100. Andhra have been quoted at Rs. 13.79 and Jeypore at Rs. 16.50.

Turnover in planting shares has dropped, although the prices of selected scrip have been about steady. Blue Mountain have changed hands at Rs. 2.37 and Cochin Malabar at Rs. 6.45. Consolidated Coffee have come to hand at Rs. 22 and Ouchterlony at Rs. 3.55. Periakaramalai have been done at Rs. 3.46. In tea shares, Kalasa have been taken at Rs. 4.10 on declaring an interim taxable ordinary dividend of 7½ percent. Non-such have attracted attention at Rs. 22.20, Parkside at Rs. 25.73 and Peermade at Rs. 21.25. In coffee shares, Lingapur have been steady at Rs. 5.25 on declaring an interim taxable ordinary dividend of 5 percent. Ossoor have been bought at Rs. 2.56, Rajendra at Rs. 10.42 and Swinton at Rs. 2.68.

Textile shares are depressed, and South India Viscose have dipped to Rs. 119. Travancore Rayon have been available at Rs. 21.90 due to the cut in the dividend. Lakshmi have weakened to Rs. 131 and Madura to Rs. 33.10. Vijayakumar have been transacted at Rs. 115 since the Company proposes to reorganise its capital structure. Vijayeswari have been done at Rs. 112 on declaring a taxable ordinary dividend of 10 percent. Buckingham have been softer at Rs. 270 and Bangalore Woollen at Rs. 252. Kadri have come to hand at Rs. 127.40 on declaring a taxable ordinary dividend of 9 percent.

Miscellaneous shares are easier in sympathy with the general trend. Ashok Leyland have dropped to Rs. 6.98, while Aluminium Industries have been steady around Rs. 20.15. In cement shares, Dalmia have been bought at Rs. 13.15 and India Cement at Rs. 5.52. Mettur Chemical have fluctuated around Rs. 13.30. Seshasayee Paper have dropped to Rs. 7.45 and Tube Investment to Rs. 201. Tubes and Malleables have been quoted at Rs. 10.45. The Company has called a general meeting to consider the offer of 56,600 ordinary shares of Rs. 10 each in Tubes and Malleables for every two shares of Rs. 10 each in Tube Suppliers Ltd. The latter scrip have been quoted at Rs. 10. Parry's Confectionery have weakened to Rs. 3 and Madras Rubber to Rs. 13.03.

THE WEEK'S TRANSACTIONS

THE AUTOMOBILE INDUSTRY . . .

helps raise national revenue

The automobile industry is currently contributing some 260 crores of rupees yearly to the national exchequer—towards the funds required for providing the nation with free education and medical aid, better housing and cheaper electric power, more irrigation works, greater agricultural production and a host of other public needs.

In the price structure of the Hindustan Ambassador, for instance, the Government's share constitutes about 33% of the total "on the road" price of the car in Calcutta (or 5140 rupees per vehicle).

Besides the automobile manufacturers, the producers of tyres, batteries, oil and a great many other suppliers all contribute their share in the form of taxes, duties and other fees. The ancillary industries which supply a large portion of the requirements of components of motor vehicles constitute another rich source of revenue to the Government. Cars like the Hindustan Ambassador today utilise more than 80% indigenous content, of which the ancillary industries supply articles worth some 3628 rupees per car. This represents 24% of the "on the road" price of this car in Calcutta.

A further contribution to the national exchequer is provided by the income tax paid by the increasing number of employees of the automobile and allied industries.

London

OPERATORS CHEERED BY ELECTION NEWS

LEADING INDUSTRIALS HIGHER

London, 20th May.

THE by-election results brought a turn-round in the stock market when the new account opened last Friday. Prior to this, the market had drifted lower in unsettled conditions, and at one time, showed fairly widespread losses. The "little elections" news was, from the Government's point of view, considerably better than had been feared, and brought buyers back into the market. The better tendency was maintained after the holiday week-end, but not expectedly, business failed to record any expansion. Leading industrials moved ahead strongly after the election results and often showed gains on balance. Rolls Royce were an outstanding feature, following their excellent results while Hawkers moved up for a similar reason. Company announcements continued to play a large part elsewhere. Marks and Spencer dipped on some disappointment with their statement and lost further ground later on adverse comment. Gilt-edged attracted a small demand, and recorded modest gains, but the new Liverpool 5½ percent stock, which was comparably oversubscribed, opened at a small discount. Greek bonds attracted support from time to time. Dollar stocks fluctuated with Wall Street. Interest in mining sections was at a low level, and prices for the most part drifted lower. In oils, Shell last ground following the quarterly report. Teas were often lower following disappointing dividend statements, while rubbers fell back on news of the Indonesian takeover of a British-owned estate.

BOOKS RECEIVED :

Industrial Finance in India. By P. C. Jain. (Published by S. M. Suneja for Suneja Book Centre, 24/90 Connaught Circus, New Delhi 1. Price Rs. 9.50, pages 338.)

Admars Annual Number, 1964. (Edited and published by V. Achuthan on behalf of the Admars Co., 6/174 Mahalakshmi Building, Sir Bhalchandra Road, Dadar, Bombay 14. Price Rs. 10, pages 274.)

THE RESERVE BANK REVIEWS PROGRESS IN BANKING

(BY A SPECIAL CORRESPONDENT)

The Reserve Bank's latest review of banking progress maintains its tradition as a dull narration of well-known facts. The size of the report has been reduced, so it does not adequately cover such important subjects as the future rôle of small banks, the branch expansion programme or the defects revealed in the course of inspection of commercial banks.

IT is a statutory obligation for the Reserve Bank to present a review of banking conditions each year. Such reports appear at the end of the busy season, but they contain a review of only the calendar year. At one time, the Reserve Bank used to give a perspective chapter, but now this has been dropped presumably because of the danger of the assessment becoming inaccurate with the

swift changes in events. As a result, the review has become a dull narration of well-known facts in the familiar officialise style.

The most distinctive characteristic of the latest review is its diminutive size. This could mean that the Bank is anxious to conceal from the public as much as possible about the results of its policies. Even a thorough

scrutiny of the report does not indicate what the Reserve Bank's policy is on the future rôle of small banks. The defects revealed in the inspection of banks are likewise concealed. When the Reserve Bank will issue licences to a large number of unlicensed banks—there remained 194 unlicensed ones at the end of 1963—has not been indicated. The report also does not adequately dis-

CAPITAL, 21st May, 1964.

cuss the branch expansion programme of banks. It should have been made clear how the Reserve Bank is going to ensure the spread of banking facilities to the unbanked towns.

The Liquidity Ratio

The liquidity position of several scheduled banks does not seem to be satisfactory. There were 16 scheduled banks out of 79 which had a ratio below the 28 percent which will become effective from 16th September, 1964. Apart from suggesting that certain banks should take steps to correct their over-extended position, the Reserve Bank has not done anything to ensure that there is an improvement in the liquidity of commercial banks.

The report shows that the Reserve Bank has been indecisive in pursuing its credit policies. For instance, the past year started with a rise in Bank rate and a policy of credit restraint. In the slack season of 1963, the Bank discovered that there was an "unusually large contraction" of credit. The accretion of deposits in the slack season was satisfactory. Side by side, the economy developed considerable sluggishness. As industrial production was rising, the Bank should have seen that the slack in the economy was due to the failure of agriculture. But it created a "psychology geared to expansion."

Half-way through the busy season, say, by mid-March 1964, the Bank discovered that bank credit was expanding at twice the rate of the preceding busy season and hastened to put the credit policy in reverse gear. That it has not succeeded in restraining credit expansion is evident from the increase in credit even in the last week of April. Banks' client have been left with the feeling that with the unpredictable policies of the Reserve Bank, it is difficult to plan their requirements from bank intelligently.

Right Approach

The Reserve Bank has been at pains to prove that it has succeeded in placing the banking system on a sound footing. This is a right approach in the context of the clamour for bank nationalisation. During 1963, deposits recorded a rise of Rs. 283 crores or 14 percent, compared with 13 percent in 1962. The rise in the investment portfolio of banks has been higher at Rs. 161 crores in 1963. The accretion to owned funds in 1963 was Rs. 4.4 crores, against Rs. 2.1 crores in 1962. The liquidity ratio of the banking system, excluding the State Bank, was restored to 33.3 percent at the end of 1963. Against this, banks are required to adhere to the enhanced liquidity ratio (28 percent) from only 16th September, 1964. A record number of offices were opened by scheduled banks during 1963 and the total number of six offices of scheduled and non-scheduled banks was around 5,500 at the close of the year.

Furthermore, the Reserve Bank made some progress in weeding out unsound banks. It undertook inspection on a large scale to instil confidence in depositors. The Deposit Insurance Corporation did useful work. The Credit Information Bureau functioned efficiently and tried to check "over-trading" by banks' customers by supplying them with useful information. The Bank has been cautious in using the wide powers it has been given by the Government. The Governor of the Bank made it clear on more than one occasion that these powers were a sort of "reserve" and would not be used indiscriminately.

As investments and advances were both bigger and at higher rates, banks

CAPITAL, 21st May, 1964.

were able to increase their profits during 1963. The Reserve Bank Governor hinted last March that banks should raise the rate of interest on deposits. One wishes that the Bank had outlined the various measures which the banking system should take to mobilise deposits. This is another sad but significant omission.

THE CALCUTTA MONEY MARKET

SMALL INCREASE IN ADVANCES

Wednesday, 20th May.

THERE has been a small increase in the general level of advances in the Calcutta money market during the past week. This is because the requirements of the iron, steel and engineering industries, and of the foodgrains and seeds trade, have risen. Cotton and jute advances are unchanged, but sugar credit has decreased slightly. In the interbank market, conditions are tight and the call rate has hardened to 5½ percent.

The exchange market has been moderately active, with a small supply of gunny bills and a fair number of tea bills. The demand for remittances has been moderate. In the London market, sterling has improved in relation to most of the major currencies, except the Swedish and Austrian.

DURING THE WEEK ENDED 15TH MAY, Government of India Treasury bills for Rs. 109,33,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 19th May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent and above were accepted in full, and those at Rs. 99.245 percent were allotted 80 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3.000 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 25th May.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 20th May to 22nd May at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 13th May to 16th May amounted to Rs. 3,54,25,000.

THE RETURN OF THE STATE BANK OF India for the week ended 8th May.

1964, shows a drop of Rs. 5.03 crores to Rs. 613.79 crores in total deposits. Investments in Government securities are up by Rs. 2.02 crores to Rs. 234.60 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 2.57 crores to Rs. 380.89 crores. Cash and balances are, in consequence, shown at Rs. 20.37 crores or Rs. 7.95 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 8th May, 1964, shows Demand and Time liabilities at Rs. 1,240.39 crores (Rs. 38.25 crores on account of borrowings from banks) and Rs. 1,296.57 crores (Rs. 12.20 crores), compared with Rs. 1,246.27 crores (Rs. 40.70 crores) and Rs. 1,297.03 crores (Rs. 12.45 crores), respectively, in the previous week. Cash has risen by Rs. 63 lakhs to Rs. 60.85 crores, while balances with the Reserve Bank have fallen by Rs. 6.73 crores to Rs. 80.30 crores. There is rise of Rs. 2.60 crores to Rs. 621.49 crores in investments. Advances and bills discounted at Rs. 1,871.81 crores show an increase of Rs. 6.84 crores. The ratios to total of advances and discounts are, in consequence, shown at 5.6 percent and 73.8 percent, against 5.8 percent and 73.3 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 22-5-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Acces. Rate

THE BIG HURRY IN THE WORLD OF NUCLEAR PHYSICS

The hurry is to find a compact source of energy that will be as prodigious as the sun and will not exhaust though the world live a million years. ■ Closest to the ideal is Uranium 235, a scant one milligram of which, when fissioned or "exploded", releases more energy than that obtained by burning millions of tons of coal. This great world of power will keep all of us going, and going well, when the present natural sources such as coal give out. Already atomic power stations are an actuality in many countries including India. ■ Shaping the giant pressure vessels enclosing the reactor cores demands a very specialised knowledge of welding. ■ It is this specialised knowledge and application of industrial gases that Indian Oxygen affords Indian industry.

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT OF THE PROPOSED ISSUE OF THE CAPITAL. INTERESTED PERSONS MAY OBTAIN COPIES OF THE PROSPECTUS FROM THE COMPANY'S REGISTERED OFFICE, BANKERS, BROKERS AND UNDERWRITERS.

COMINCO BINANI ZINC LIMITED

(Incorporated in India as a Public Company on 2nd August, 1962 under the Companies Act, 1956.)

Registered Office: Binani Buildings, 38 Strand Road, Calcutta 1.

EXISTING AND PROPOSED ACTIVITIES

The Company will manufacture Zinc in India by the Electrolytic process. The Industrial Licence issued to the Company provides for initial manufacture of 12,000 metric tonnes of zinc per annum to be expanded to 20,000 metric tonnes per annum and proportionate quantities of by-products like cadmium and sulphuric acid. These activities will be carried on in collaboration with the Consolidated Mining and Smelting Company of Canada Limited popularly known as 'Cominco' who own and operate the largest electrolytic Zinc Plant in the world. Besides contributing technical assistance, know-how and helping to train Indian personnel, Cominco has also subscribed for 8,40,000 Equity Shares in the Company. The work at site has commenced and it is hoped that the plant will commence production about the middle of 1966.

LOCATION OF FACTORY

Approximately 103 acres of land at Edayar near Alwaye has been allocated to the Company by Government of Kerala of which the Company has already entered into possession of approximately 96 acres. The site is on the bank of the navigable River Periyar.

SHARE CAPITAL

Authorised:

30,00,000 Equity Shares of Rs. 10/- each ... Rs. 3,00,00,000

Issued, Subscribed and Paid-up for Cash at par:

	Subscribed	Paid Up
7 Equity Shares of Rs. 10/- each, fully paid, subscribed for by the signatories to the Memorandum of Association ...	Rs. 70	Rs. 70

8,40,000 Equity Shares of Rs. 10/- each subscribed by the Consolidated Mining and Smelting Company of Canada Limited, of Quebec, Canada, upon which Rs. 2/- per share has been paid	Rs. 84,00,000	Rs. 16,80,000
---	---------------	---------------

4,20,000 Equity Shares of Rs. 10/- each subscribed by Metal Distributors Limited, upon which Rs. 2/- per share has been paid	Rs. 42,00,000	Rs. 8,40,000
	Rs. 1,26,00,070	Rs. 25,20,070

Present Issue:

8,39,993 Equity Shares of Rs. 10/- each in cash at par ... Rs. 83,99,930

Of this issue, 80,000 shares are reserved for the shareholders in Metal Distributors Ltd. who will be given a preferential allotment of three

shares for every twenty shares or as nearly as circumstances permit, registered in their name in the books of that company on 11th May 1964. THE REMAINDER OF THE ISSUE, TOGETHER WITH ANY OF THESE 80,000 SHARES NOT TAKEN UP BY SHAREHOLDERS IN METAL DISTRIBUTORS LIMITED ARE NOW OFFERED TO THE PUBLIC AT PAR FOR SUBSCRIPTION IN CASH.

TERMS OF PAYMENT

On application	Rs. 2/- per share
On allotment	Rs. 2/- per share

The balance of Rs. 6/- per share will be payable on one or more calls at such time and in such manner as the Directors determine. There will be an interval of at least Six months between allotment and the first call.

APPLICATIONS FOR SHARES MUST BE FOR A MINIMUM OF 50 SHARES OR FOR A MULTIPLE THEREOF.

APPLICATIONS

Copies of the application form and prospectus can be obtained from the Registered Office of the Company or from the Bankers, Brokers and Underwriters listed herein.

DATES OF OPENING & CLOSING OF SUBSCRIPTION LIST

The Subscription List will open at the commencement of banking hours on 27th May, 1964 and will remain open until the close of banking hours on 6th June, 1964 unless closed earlier at the discretion of the Directors if the issue is subscribed upto the full amount of the public offer; but not earlier than the close of banking hours on 29th May, 1964.

DIRECTORS

- Shri G. D. BINANI**, 38, Strand Road, Calcutta-1. Industrialist and Chairman of the Company. Also a Director of: The United Commercial Bank Ltd., Metal Distributors Ltd., The Binani Metal Works Ltd., Multimetal Ltd., Star Metal Refinery Private Ltd. and of other companies.
- Mr. W. S. KIRKPATRICK**, 2820, Hill Park Road, Montreal 25, P.Q., Canada. President of The Consolidated Mining and Smelting Company of Canada Ltd. of Montreal, Quebec, Chairman of West Kootenay Power and Light Company Ltd., of British Columbia. Also a Director of: Amalgamated Metal Corporation Ltd. (England), Consolidated Paper Corporation Ltd. (Canada), and of other companies.
- Mr. R. G. EDWARDS**, Flat No. 11 Tivoli Court, 1A, Ballygunge Circular Road, Calcutta-19. (Alternate for Mr. W. S. Kirkpatrick), Stockbroker and Managing Director of: Place, Siddons & Gough Private Ltd., Also a Director of: Braithwaite & Co. (India) Ltd., British Paints (India) Ltd., Indian Iron & Steel Co. Ltd., Indian Standard Wagon Co. Ltd., Tita-gur Paper Mills Co. Ltd. and of other companies.
- Mr. A. O. WOLFE**, 90, Ballantyne Terrace, Dorval, Quebec, Canada. Vice-President, Research & Development of The Consolidated Mining and Smelting Company of Canada Ltd. President & Director of The Luster Corporation of Canada Ltd. of Walleburg, Ontario and National Hardware Specialities Ltd. of Dresden, Ontario. Director of Schultz Die Casting Co. of Canada Ltd. of Lindsay, Ontario.
- Mr. T. G. HARDING**, First National City Bank, 9, Brabourne Road, Calcutta-1. (Alternate for Mr. A. O. Wolfe), Manager, First National City Bank, Calcutta.
- Mr. H. T. FARGEY**, 2145, Hanover Road, Town of Mount Royal, Montreal, Quebec, Canada.
- Vice-President, Sales, The Consolidated Mining and Smelting Company of Canada Ltd.**
- Mr. D. D. MORRIS**, 410, Ritchie Avenue, Trail, British Columbia, Canada. Vice-President & General Manager, The Consolidated Mining and Smelting Company of Canada Ltd. Vice-President & Director of Pacific Coast Terminals Co. Ltd., Pacific Coast Bulk Terminals Ltd., West Kootenay Power & Light Company Ltd., Coast Copper Co. Ltd., Pine Point Mines Ltd.
- Mr. D. K. BASU**, Regal House McLean Street, Madras. (Alternate for Mr. D. D. Morris). Solicitor and Partner of: Orr, Dignam & Co. of Calcutta & Delhi, King & Partridge of Madras, Ootacamund & Bangalore. Director of: Fibreglass Pilkington Ltd., Arbor Acres Farm India Ltd. and of other companies.
- Shri CHARAT RAM**, 15, Sardar Patel Road, New Delhi. Industrialist, Director of: Delhi Cloth & General Mills Co. Ltd., Jay Engineering Works Ltd., Industrial Finance Corporation of India, Usha Refrigeration Industries Ltd. and of other companies.
- Mr. S. C. GLADSTONE**, 7, Ironside Road, Ballygunge, Calcutta. Merchant, Director of: Gillanders Arbuthnot & Co. Ltd., (Managing Director) Clive Buildings (Calcutta) Ltd., Mackintosh Burn Ltd., Multi-metals Ltd. and of other companies.
- Mr. GHANSHYAMDAS BINANI**, 38, Strand Road, Calcutta-1. Industrialist and Merchant, Director of: The Binani Metal Works Ltd. (Managing Director) Metal Distributors (U.K.) Ltd., London, Metdist Inc., New York, Multimetal Ltd., Multimetal Ltd., and of other companies.
- Mr. R. K. BAGRI**, Barrington House, 59/67, Gresham Street, London, E.C.2. Merchant, Director of: Metal Distributors (U.K.) Ltd., London, Metdist Inc., New York, Multimetal Ltd., The Binani Metal Works Ltd., Metal Distributors Ltd.

Vice-President, Sales, The Consolidated Mining and Smelting Company of Canada Ltd.

SOLICITORS

Orr, Dignam & Co., 29, Netaji Subhas Road, Calcutta-1.

AUDITORS

S. R. Baliboi & Co., 1B, Old Post Office Street, Calcutta-1.

BANKERS

HELPING DEVELOPING NATIONS THROUGH WORLD TRADE

By V. P. Chitale

While world trade as a whole has expanded, the share of primary-producing countries has continued to decline, largely because of the restrictive policies followed by the industrially advanced nations towards imports from the former. Even the I.M.F. has not extended adequate help in times of acute balance of payments difficulties.

In a decade dedicated to development, the World Trade Conference in Geneva is confronted with the growth-promoting problems of international trade. The proposed Kennedy round of negotiations on tariff cuts may pave the way for some positive action to minimise the terms of inequality in world trades among the richer and poorer nations. The conference is primarily concerned with the lifting of Customs barriers, and even if it may not achieve full success, it will constitute a first step towards the wider objective of helping the poorer countries. While tariff cuts no doubt contain vital elements of trade expansion, they are not the panacea for all ills that afflict the foreign trade of the less developed areas. The under-developed world does not stand to gain much by this isolated act. The problems of their exports are many and varied. A simultaneous action on the wider front of trade and payments is needed to rectify the growing structural disequilibrium in international trade.

The long history and the present status of under-developed economies in the international set-up, pose issues of fundamental importance; how far the foreign trade has a propulsive rôle in the growth of the economy? The classical economists gave an affirmative answer and their optimism was indicated in some cases. In the case of Britain, development was fostered by exports in woollen manufactures and cotton textiles; for Sweden, it was timber trade, for Denmark dairy produce, Canada, wheat, Switzerland lac-making and clock-making and Japan, silk. However, the experience of these countries cannot be easily universalised. Indeed, the historical experience of the numerous poor countries shows considerable growth in foreign trade, but only a slow rate of domestic development. The causes of under-development in case of these countries primarily originate from domestic obstacles to growth, obstacles which include factor immobility, price rigidity, restrictive tendencies in both factors and goods markets, ignorance of technical possibilities, limited knowledge of market conditions and few centres of entrepreneurship. But these growth-rewarding factors are further accentuated by perverse tendencies in international trade like the secular decline in the terms of trade for primary producing countries. The classical analysis, therefore, indicates at best only what it could be or ought to be, not necessarily what has been and is.

Balance of Payments Problems

The situation calling for immediate action is the unusual balance of payments vulnerability of primary producing countries, which is the direct outcome of two interacting forces, a downward pressure on export proceeds and an upward pressure on growth imports. A detailed analysis of these forces is highly rewarding in appraising the rôle of international trade and aid in the development of poor countries.

The slower rate of growth in the volume of world trade in primary products than in manufactures has, in fact, been a notable feature since mid-1930s. The restraining factor is

the sluggish demand of industrial countries for primary commodities. This has resulted in adverse terms of trade for the latter. The deterioration in terms of exchange between primary products and manufacturers has been considerably greater; since 1955 it amounted to 17 percent. While the volume of exports of under-developed countries increased by some 30 percent from 1955 to 1961, the value of their exports has risen by only 16 percent and much of this by only 16 percent of petroleum exports, which only benefited Venezuela and a limited group of countries in the Middle East. Excluding the exports of these countries, the increase in total exports of the remaining under-developed countries of the world was little over 10 percent in the last six years. The rise in the purchasing power of these exports in terms of manufactures has been only 5 percent.

The most important reason for sluggishness of demand is the structural change in the pattern of demand in industrial countries for imported primary products. The slow growth rate in exports of primary producing countries to industrial countries was concentrated in food and industrial materials. Professor Maizels has analysed these trends with rare insight and brilliance. As for food, beverages and other similar items, the fall in the import content of consumption is due in part to a shift in the pattern of demand and in part to the substitution of home output for imports. The main features of the demand shift have been the relatively small increases in the consumption of tropical beverages and vegetable oils, each of which has high import content, and the relatively large increases in meat consumption, with a low import content. The consumption of tropical beverages has reached saturation levels in high-income areas. The small increases for vegetable oils is due partly to a shift in consumer demand from soap to synthetic detergents and partly to the substitution of animal fat (tallow) for vegetable oils in soap-making. The great expansion in U.S. soyabean output accounts for the major decline in demand for oilseeds from primary producing countries. Another important substitution has been beet for cane sugar especially in the common market countries.

Restrictive Import Practices

The industrial countries follow highly restrictive import practices to protect domestic agriculture. The more important of these policies, apart from high tariffs, are quantitative restrictions on the import of cereals, dairy produce and other foodstuffs, and the support by subsidy or minimum price regulations of home production of beet sugar and oils and oilseeds. Fiscal taxes, that is, those on tea and coffee are also of importance in reducing the demand for imports from primary producing areas. The short-term prospects of increased exports from primary to industrial countries in these commodities through the elimination of Customs barriers can be rated high. However, much depends on the willingness of the advanced

countries to liberalise their import policies in favour of primary producers. The intransigent attitude of the E.E.C. countries in the matter of their agricultural protectionism, will prove a real stumbling block in any eventual settlement of tariff and quota problems. Here the interests of haves and have-nots are diametrically opposed. But the long-term prospects of a substantial increase in earnings from these exports are not bright.

For industrial materials, the pattern of change, as it affects the primary producing countries, has been similar to that for food. But the reasons lie less in protection and fiscal policies than in the changing structure of industry. The most important changes have been sharp increases in the production of engineering and chemical industries and small increases in textile industry. This shift in the output pattern has had a substantially adverse effect on the exports of primary producing countries, because the import content of engineering and chemicals production is very small, while that of textiles is relatively large.

The second operative factor has been the substitution of materials processed mainly in the industrial countries themselves for imported "raw" or "natural" materials. The main substitutions have been aluminium for copper and to a lesser extent for steel and other materials, man-made fibres for cotton and wool, synthetic for natural rubber, and plastic materials for a wide range of traditional uses of textiles, paper, wood and metals. This process of substitution has gone much further in the U.S.; but it is almost certain to spread increasingly to western Europe and Japan. These tendencies would indicate that it would be unwise to expect a faster increase in demand for industrial materials from industrially advanced countries.

Export of Manufactures

As for manufactures, the developing countries stand to gain if they are allowed to export freely to industrial countries. Textiles are by far the most important export item. The major factor restraining the growth of these exports has been that in the majority of industrial countries, domestic textile industries are protected by tariffs from the competition of "cheap" imports from developing countries. Among developed countries, Britain alone has accommodated free textile imports from Asian Commonwealth to the extent of 30 percent of her total textile consumption by voluntarily shrinking the size of the Lancashire cotton industry. Other industrially advanced countries are firmly committed to the protection of their domestic industry at any cost. They are, in fact, imposing fresh imposts and quotas on the imports of textiles under the pretext of market disruption. The bogey of market disruption is indeed irrational, especially in case of the U.S.A. and the E.E.C. countries, where textile imports hardly account 5 percent and 2 percent, respectively, of their total textile consumption.

In short, the under-developed countries are confronted with the im-

mediate danger of structural over-production for a number of tropical products and raw materials. The only remedy to this situation is a change in the structure of production through diversification of their economies. This is, of course, a long-term remedy and its effective application requires co-ordinated action by under-developed countries themselves.

But the prospects of any planned diversification of production structure will be seriously compromised by the very fall of their export earnings which is likely to result from a continuation of the current trend of prices. Price stabilisation is essential. Two kinds of arrangements are, therefore, necessary: (i) to stabilise commodity prices at a level which is in some reasonable relationship to the prices of manufactured goods; (ii) satisfactory arrangement to limit the production and exports of individual commodities to the extent needed to bring production and consumption into balance at a satisfactory level of prices. Both these objectives may be promoted by international commodity agreements. In spite of all efforts that went into the making of these agreements during the last 17 years, only five operative agreements were concluded but subsequently turned defunct.

International Commodity Agreement

The history and the working of these international commodity agreements show how difficult it is to reconcile the interests of producers and main consumers. The industrial countries virtually dictated the terms of agreement in their favour by their sheer bargaining strength. The International Wheat Agreement, for example, worked well until it operated in the interests of importing countries and when exporters insisted on some increase in the maximum price for the second four-year period (from \$1.80 to \$2.05 a bushel) the largest importer, the U.K., withdrew from the Agreement and was followed by other participating importers. It is, therefore, unsafe to rely on the willingness of high-income importing countries to guarantee to pay high prices for their imports than they need to pay in the free market.

The International Tin Agreement and International Sugar Agreement succeeded in the stabilisation of prices only on the basis of a rigorous implementation of export quotas. In the case of the former, the buffer stock arrangement was visualised, but it proved abortive, when the financial resources of buffer stock were exhausted in less than two years after the inception of the schemes.

The international commodity agreements have failed to achieve the twin objectives listed above. The short-term aspect of price stabilisation was met with partial success, but the long-term aspect of limiting the production remained fuzzy. The failure to secure the full participation of all producers in proposed agreements may be the root cause of it.

Over-extending Production

It should be stressed in this connection that primary producing countries will have to seek their own salvation through self-imposed restraint on production. This long-term objective is likely to be overlooked by developing countries, hard-pressed with foreign exchange scarcity and hence excessively obsessed with the immediate task of forced expansion of traditional exports through increased production. This policy may prolong and often accentuate the misallocation of resources by maintaining high-cost sources of production and encouraging further investment in, what in most cases, a sector with already over-extended capacity. The main solution is to salvage these countries from recurring foreign ex-

change crises. Turning to this aspect of balance of payments vulnerability, the exigencies of rapid development at home may force the under-developed countries into balance of payments deficits, with the heavy import bill unlikely to be financed by current export proceeds. The insufficiency of external resources may then constrain the rate of growth if short-term and long-term aid is not forthcoming in an adequate measure. In a world of pegged exchange rates, the first lines of defence in dealing with balance of payments deficits is for a country to draw down its available gold and foreign exchange reserves. The absolute level of these reserves was more or less constant in these countries during the 1950s. But due to the growth of imports and worsened terms of trade,

the ratio of reserves to imports and to exports fell by 20 to 25 percent during 1953-59. As for the second line of defence available in drawings from the I.M.F., the I.M.F. has not played a very significant rôle in providing assistance for shortfalls as shown below.

Low income primary producing countries: Short fall in export proceeds and drawings on the I.M.F. 1953-59.

	1953	1954
(1) Shortfalls in export proceeds from moving average of three preceding years.	2233	1937
(2) Gross drawings	106	63
(3) Repayments	53	82

(4) Net drawings	...	53	-19	
1955	1956	1957	1958	1959
469	395	675	1673	848
28	129	437	184	180
98	68	54	83	163
70	61	383	101	17

The I.M.F. has singularly failed to assist the under-developed countries to overcome the sort of liquidity problems which they face in implementing their development programmes. While agencies like the World Bank, and the I.D.A. exist for financing specific projects on a long-term basis, there is still a serious lacuna in the international financial system for financing short and medium-term needs of developing economies.

CAPITAL, 21st May, 1964.

Drawing rights of low-income primary producing countries in the I.M.F. may be enlarged to cover all short and medium-term contingencies, including those connected with export market instability. There is no reason why through greater co-operation and better understanding, a more effective *modus vivendi* could not be worked out between primary producers and the I.M.F. This could include, if deemed desirable, somewhat greater automaticity in drawing rights covering the first credit tranche, special additional quotas for the countries whose export earnings are especially unstable and may even include special arrangements by which advanced countries would make available short-term special assistance for countries afflicted by shortfalls in export proceeds.

CAPITAL, 21st May, 1964.

New Delhi

FIXING FOURTH PLAN OUTLAY AND GROWTH RATE

(FROM OUR NEW DELHI CORRESPONDENT)

THE Planning Commission, at a preliminary meeting last week, decided to send to the various working groups the model prepared by its Perspective Planning Division "as a tentative framework so as to obtain their views on (1) how far its various technical co-efficients were valid; (2) whether the outlays suggested were consistent with the fulfilment of the given physical targets; and (3) whether the targets could be realised within the stated time dimensions."

In addition to the so-called model, the Economic Division of the Planning Commission has prepared a paper called "macro-economic hypothesis for the fourth plan." Incidentally, between May 1962 and December 1963, 45 working groups with 100 sub-groups were set up in the Central Ministries to formulate proposals for the fourth plan.

The Commission is honest enough to admit that the fourth plan will start from a lower base than was either anticipated or projected. The main reason for this, according to the Commission, is the setback in agricultural production during the last three years and the lower rate of industrial growth than was originally planned.

The third plan proposed to accelerate the rate of growth from an average of 3.5 percent achieved during 1950-60 to about 6 percent over the period 1961-76. The Perspective Planning Division has, however, proposed a growth rate of 7.7 percent for the fourth plan. But the Economic Division has put forward two alternative rates of growth—6.6 percent and 7.2 percent. The other estimates are those given by the World Bank coal transport study team (4 percent) and the Reserve Bank (5 percent or 6 percent).

Annual Growth Rate in U.K.

In this context, it is worth quoting the report of the U.K. National Economic Development Council on the implications of an average annual growth rate of 4 percent for 1961-66. The Council selected 17 industries, whose views on the implication of the 4-percent growth rate are summarised as follows:

(a) The most rapid growth rates in the total output are forecast for four newer science-based industries—chemicals, electricity, electronics and petroleum; a consumer durable industry, namely, motor-cars, and two capital goods industries—heavy electrical machinery and machine tools.

(b) Intermediate growth rates in the total output are forecast for two service industries—the post office and distribution; for certain basic capital goods industries—building, civil engineering and building materials, iron and steel; and for agriculture.

(c) The slowest growth rates are forecast for coal and gas, which have to compete with alternative forms of energy, for paper and board, which is affected by the low cost of imported products; and for woollen textiles and chocolate and sugar confectionery. The domestic demand for which is not expected to expand as rapidly as the gross domestic product.

The report goes on to say that "it is necessary also to consider the implications of the faster rate of growth for the economy as a whole. Will there be enough manpower to meet the needs of all sectors of the eco-

nomy? Will there be sufficient exports to pay for the necessary imports? Will there be enough savings to finance the investment? Allowing for the needs of public expenditure and investment, will there be sufficient resources to provide a reasonable increase in consumer expenditure?"

"Broadly, employment and productivity provide the available resources, although they are interrelated; for example, investment will influence the rate at which productivity grows. The major part of the increase in national output of 4 percent a year will need to come from increased productivity. It is, therefore, important to make some assessment of the present underlying rate of growth of productivity, that is, the rate that will be achieved if the pressure of demand remains constant for some time."

"In the inter-war years, and in the 50 or 60 years before 1914, the output a worker rose at an average rate of some 1½ percent a year. From 1951 to 1961, the average annual increase in output a worker was about 2 percent. More recently, from 1955 to 1961, the average underlying rate of growth of productivity was faster, about 2½ percent a year. It seems quite probable that it has by now risen further and may be nearer 3 percent a year."

"The 17 industries employ about two-fifths of the manpower in the country. On the basis of a 4-percent growth rate in the gross domestic product, they expect to increase their total output by 26 percent between 1961 and 1966, an average of 4.8 percent a year, which is significantly faster than the growth of the gross domestic product. They expect to be able to do this with an increase over the five years of 0.8 percent a year in employment, an annual rate of increase in output a worker of 4 percent a year. This is substantially more than the rise of 3.2 percent a year required in the output a worker for the whole of the economy."

Technical Change

"Technical change plays a major part in making economic growth possible. A key factor in achieving a 4-percent growth rate will be the degree to which new investment embodies the results of up-to-date technical advance. Its effects will be seen both in improvement in the product and in a reduction in man-hours, materials, space, machine-time, and fuel and power a unit of output."

"Technical change calls for education, research, development and application. For sustained economic growth, basic research is essential. The achievements in science and technology, which will facilitate a more rapid rate of growth in the period up to 1966, however, will come, by and large, from the development and application of research results already achieved."

"For almost two decades now, it has been said that Britain is strong on the basic side but weak in applied work. There is evidence that in spite of major advances in some sectors, there is still great scope for improvement, especially in pioneering technology. Vacuum casting, synthetic rubbers, new looms, diesel electric locos are examples of technical development carried out abroad. Other

countries, some smaller than ours, have on a number of occasions taken the lead after we have established the scientific principles of a subject.

"In some directions, moreover, we have not been quick in introducing advanced techniques and processes. For example, machine tool manufacturers have tended to blame users for their reluctance to re-equip and some users blame manufacturers for lack of progress in design and failure to study their needs. Two urgent needs are, therefore, for measures to encourage a speedier application of existing knowledge in industry and commerce and a speedier introduction of new techniques, processes and materials."

The Indian planners are more concerned with finding employment than with increasing productivity a worker. The three plan documents do not make adequate reference to this aspect of the problem. The Planning Commission says that "a sharp increase in the rate of growth is also necessary for creating adequate opportunities for gainful employment and removing the constraints of foreign exchange. With this broad objective, one view is that while the existing pattern of income distribution may largely remain unchanged, it is only at higher levels of income, activity and productivity that the redistribution can take place meaningfully. Another view is that, while a minimum can be achieved only in the framework of rapid growth, this growth should not be allowed to take place in a way which perpetuates the existing pattern of income distribution."

"It is urged that once incomes are allowed to accrue at particular points, it is difficult to alter distribution later or to ensure minimum levels of income to the masses in as much as the theory of percolation of national wealth to the poorer sections has little relationship to reality. In any view, however, there is agreement that the maximum development of agriculture and the provision of an infrastructure by building basic industries, particularly metals, machine-building and fertilisers, would appear to be necessary."

Then again, the Planning Commission says: "It has been stated that one of the objectives mentioned in the third plan is to expand basic industries like steel, chemicals, fuel and power and establish machine-building capacity, so that the requirements of further industrialisation can be met within a period of ten years or so mainly from the country's own resources. The concerted development of basic metals, fuels, chemicals, heavy industries and machinery would not merely contribute towards increasing the sum total of national output but also freeing the country from dependence on external assistance by the end of the fifth plan. This would also be necessary in order to provide the inputs for agriculture and to provide equipment and raw materials for intermediate and small-scale industries."

The Twin Problems

"On the other hand, it has also been stated that the emphasis on the growth of basic and capital goods industries does not tackle the twin problems of employment and the standard of living. The gestation period in the growth of these basic industries

is long and does not provide immediate benefits to the people resulting in inflation due to the scarce supply of consumer goods. There is also some distortion in the pattern of investment towards the more profitable luxury goods industries to the neglect of what is needed by the masses. Disparities in wealth and income are also generated. It is held that in addition to the expansion of basic industries and a more far-reaching effort in agriculture, it is equally necessary to ensure specific consumption standards for the community as a whole. The incentive of mass consumption goods for greater production efforts by agriculturists and industrial workers should not be underrated.

"As for the rôle of the private sector, it has been stated that the amount of private-sector investment is expected to increase substantially in the fourth plan. Apart from the fact that agriculture and trade are in the private sector, there will be widening scope for investment in industry, large and small, road transport and construction activities, etcetera. In the third plan, it has been found that private-sector activities have not come up to expectations, particularly in the field of large industries. In order that the private sector may not act as a drag, it will be necessary to keep a close watch over its progress in the fourth plan affording such facilities as may be required. In this context, the policy in relation to big business houses, private foreign investment and joint production programmes would need to be carefully examined."

Quite Cris in India is the title of a book written by Mr. John P. Lewis. The book is based on a study which began in 1958. Referring to the formative stages of the third plan, Mr. Lewis says: "The advocates of boldness, who held the initiative in the debate almost from its beginning in late 1958, were helped no little by the fortuitous circumstance that Rs. 10,000 crores, which happened to represent quite a bold investment figure for third plan purposes, is a nice round number. Given the unfortunate Indian penchant for thinking and talking about planning in investment-focused terms, the catchphrase a Rs. 10,000-crore plan became entrenched in popular discussion early in the plan-formulation period and thereafter undoubtedly exerted an upward influence on the judgments of the more timorous."

"The political difficulty of cutting State plan requests to a figure that would be consistent with a total investment of less than Rs. 10,000 crores reinforced the big-plan advocates. Moreover, the more influential pieces of foreign advice to which the Government was exposed tended to support an ambitious third plan. This advice came from both the Russian and the American Government missions that conferred with Indian officials in 1959 and early 1960; from a World Bank mission in the spring of 1960; and, perhaps most influentially of all, from the 'Three Wise Men' team of international bankers who, at the request of the World Bank president, Mr. Eugene Black, made a survey of third plan proposals that same spring."

Big-plan Proponents

"Within the Indian Government, the key advocates of an ambitious third plan pressed their case unwaveringly: once consent had been won for a 'Rs. 10,000-crore plan', they re-examined their estimates of the needs and possibilities and raised their sights a few hundred crores higher; and once the feasibility of a somewhat larger programme had been conceded, the big-plan proponents nudged their rising figure up still another notch. The somewhat

The trademark 'Sanforized'—a reliable yardstick for measuring clothes that will not shrink out of fit

'Sanforized'—known to millions of consumers everywhere—signifies a standard of shrinkage control that is identical the world over. To maintain this uniform standard on cloth labelled 'Sanforized'...to assure that fabrics bearing this label will not shrink out of fit in washing... 'Sanforized' technical representatives are constantly on the job...visiting mills...checking fabric...helping the textile industry keep quality at a high level.

REGULAR, ALSO SURPRISE VISITS—are paid by 'Sanforized' representatives, every month throughout the year, to licensees, to examine each mill's records of wash tests and samples of fabrics to be labelled 'Sanforized'.

RANDOM SAMPLES—of fabric labelled 'Sanforized' are selected from the mills' warehouses for testing, to ensure that no out-of-tolerance material has been inadvertently marked with the trademark 'Sanforized'.

WASH TESTS—to determine shrinkage are carried out on the catalogued, measured samples of fabric, in each mill as well as in the U.S.A., in fully equipped technical laboratories.

TEST RECORDS—are made after the catalogued samples are re-examined and re-measured. Every mill keeps its own dossier of the results of the findings made by the technical experts.

REPORTS & SAMPLES SENT TO—the Standards Testing Laboratory of 'Sanforized' in the United States. This procedure ensures the world-wide uniformity of shrinkage control and recognition of cloth labelled 'Sanforized'.

Make sure YOU get the full measure of value of the cotton

you buy—look for the label **'SANFORIZED'** and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the registered trademark 'SANFORIZED'. The trademark proprietors use the trademark 'SANFORIZED', or permit its use by authorized registered users, only in respect of tested fabric which meets the trademark proprietors' strict requirements as to residual shrinkage.

For information: 'Sanforized' Service, 95 Marine Drive, Bombay 2.

bizarre result, since advocates of caution, although giving ground, also clung to their principles, is that the controversy over size has been carried forward, quasi-unresolved, all the way into the final third plan document itself. Thus in Chapter 2 of that document, which obviously is the product of the Planning Commission's Perspective Planning Division, it is stated that during the third plan period as well as during the succeeding ten years, real national income should be raised 'as nearly as possible' by an average of 6 percent a year, or about 34 percent over five years.

"Yet in Chapters 4, 5 and 6, which show the hand of somewhat more cautious analysts elsewhere in the Planning Commission and in the Ministry of Finance, the annual growth target is phrased as being 'something in excess of 5 percent a year,' or 31 percent from 1960-61 to 1965-66. Similarly, whereas the third plan's financial programme calls for a public outlay of Rs. 7,500 crores for investment and other development purposes, the price tags of all of the specific projects that the physical planners have incorporated in the programme add up to a total of more than Rs. 8,000 crores."

No further comment on the growth rate should be necessary. A similar exercise is in progress now. A Rs. 22,000-crore fourth plan and 7.7-percent growth rate a year is the current slogan, which will become louder and louder as the final stages of the plan are reached.

CZECHOSLOVAKIA

Credit Pact Signed

The Governments of India and Czechoslovakia recently signed the second economic collaboration agreement providing for a credit of about Rs. 40 crores. The new credit will finance the expansion of the boiler plant in Tiruchirappalli and the heavy electrical plant in Hyderabad, creating additional foundry and forge facilities for the existing foundries, two new machine tool plants, one tractor and power-tiller factory and two 110 MV power plants. Thirty percent of the equipment for these two units will be manufactured at the Hyderabad factory. The credit will also finance the import of components, etcetera, required for joint-ventures to the extent of Rs. 14 crores. Of this, Rs. 1.80 lakhs will be available for the Walchand Nagar cement machinery manufacturing factory to enable it to produce four cement factory units, producing 8,000 tons of cement a year. Each cement factory, according to current estimates, needs imported equipment worth Rs. 1.15 lakhs.

The credit will be repayable in rupees which will be used for the export of Indian goods to Czechoslovakia. The repayment period will be 12 years for the projects and eight years for components. The credit will carry interest at 2½ percent.

OIL

Working Group Set Up

The Government of India, it will be recalled, set up an Oil Price Enquiry Committee in 1960 under the chairmanship of Mr. K. R. Damle. The recommendations of the committee on the pricing of petroleum products were accepted by the Government and implemented with effect from 1st October, 1961. They will remain in force up to 31st March, 1965.

To evolve a suitable arrangement which will come into effect from 1st April, 1965, the Government has set

up a working group which shall examine and report on the following:

(1) the manner of determination of the ex-refinery prices of refined petroleum products, including bitumen produced by the refineries;

(2) the manner of fixing landed prices in relation to similar products which may be imported;

(3) the fixing of marketing and distribution charges of products mentioned in (1) and (2) above; and

(4) the determination of ceiling selling prices in relation to lubricating oils, greases and specialties.

The working group may also consider the possibility of linking prices with the physical supply areas for the products of individual refineries and consider the possibilities of uniform or pooled prices for the whole of the country or in different zones.

The chairman of the working group will be Mr. J. N. Talukdar. Mr. S. S. Shiralkar, Joint Secretary to the Central Ministry of Finance and Mr. N. Krishnan, Chief Cost Accounts Officer of the Ministry of Finance will be members, of the working group. Mr. N. R. Law, Under-Secretary to the Ministry of Petroleum and Chemicals, will act as the secretary of the working group. All correspondence shall be addressed to him. The working group has been asked to submit its report to the Government by 31st December, 1964.

Team to Visit Russia

The Secretary of the Central Ministry of Petroleum and Chemicals, Mr. K. R. Damle and the chairman of Indian Oil Company, Mr. N. Gopal-krishna, are leaving for Russia on 22nd May, to finalise the arrangements for the import of petroleum products which were included in the long-term trade agreement signed last year. Discussions will include the Russian demand for the change in freight rates from the Persian Gulf to Black Sea. India holds that such a change will wipe out price benefits and make the Russian products as expensive as those from non-Russian sources. Mr. Damle will also study offshore drilling operations, for which Russia has offered some aid. He will visit Rumania and Italy before returning to India next month.

Expanding Barauni Refinery

Russian specialists have completed blueprints for the expansion of the oil refinery in Barauni, Bihar. According to the project, the refinery, when reconstructed, will boost production from 2 million to 3 million tons a year. After reconstruction, the enterprise will be able to produce "two times more high-quality kerosene and five times more low quality kerosene." Besides, it will produce nearly 500,000 tons of diesel fuel. The construction of the refinery began in 1961.

FERTILISER

Progress of Schemes

Definite progress is reported towards implementing the fertiliser plan. The Government has issued a letter of intent to Birlas to set up a fertiliser factory in Goa. Out of the four projects licensed in the private sector, the Visakhapatnam project with Parry and Company as its sponsors, is well on its way. The Kothagudem project, in Andhra, is expected to move on because certain assurances relating to price have been given to U.S. collaborators, namely, Allied Chemicals. The licence granted to the sponsors of the Tuticorin project has been revoked and a show-cause notice has been issued to Shaw

Wallace and Rallis, who were sponsors of the Mangalore project. The Rajasthan project is still not out of the wood, as its licensee, Mr. B. L. Jalan, has asked for a change of the location from Hanumangarh to Kotah.

Two other developments are worth reporting, namely, the Central Ministry of Petroleum and Chemicals has been permitted to get project reports for four fertiliser plants to be located in Durgapur, Korba, Cochin and Madras, the last two being based on refinery gases. Secondly, Phillips Petroleum has shown interest in setting up fertiliser plants.

FOREIGN EXCHANGE

Aid for Producer-Exporters

Further foreign exchange facilities are proposed to be offered to manufacturer-exporters for the import of raw materials, components and spare parts required by them for the production of goods for export, according to a scheme drawn and approved by the Government of India. The scheme, which follows the recommendations of the Mudaliar and Mathrani Committees, is yet another important step in the export drive launched by the Central Ministry of International Trade. The scheme will be operated by the Export Credit and Guarantee Corporation.

Under the proposed scheme, commercial banks dealing in foreign exchange will obtain lines of credit from their principals, branches or correspondents abroad on the strength of an assurance from the Reserve Bank of India that necessary foreign exchange will be released to repay the credits by the due date. Against these lines of credit, exporters of proved export performance and recommended by the bank concerned will, on approval by a committee to be appointed for this purpose by the Central Government, be granted import licences for raw materials, components and spares. The committee will consist of the Secretary, Ministry of International Trade; Secretary, Ministry of Industry; Additional Secretary, Ministry of Finance; and the Director-General of the Department of Technical Development.

The exporter will be required to execute a bond undertaking to effect specified exports within a stipulated period. The import licences will be issued only for the value of raw materials and components permissible under the appropriate export scheme and required for the production of the goods to be exported.

In the event of any failure on the part of the exporter to fulfil his obligation to effect additional exports, the equivalent amount of foreign exchange will be debited to his entitlement as an actual user, in addition to other penalties under the scheme.

The facility will be available to manufacturer-exporters in specified industries. To start with, applications from manufacturer-exporters of only the non-traditional export items, such as covered by the Engineering and Chemicals Export Promotion Councils, etcetera, will be considered. The Export Credit and Guarantee Corporation will be the agency for the purpose.

STATE TRADING

New Ventures

The Government has decided to enter the sugar trade, the export of scrap iron and the production of cement, including cement machinery. The proposed Sugar Marketing Board is expected to function by November when the next sugar season starts.

The Board, which will have a chairman, managing director and seven or eight officials representing various Central Ministries like Food and Agriculture, Commerce, Finance will be in complete control of the distribution of sugar internally. It will also handle exports.

The main objective in constituting the Board is to ensure as uniform a price for sugar as possible all over the country. At present, prices vary from region to region and even from factory to factory, depending upon recovery from cane and the cost of production.

When the Board is set up, it will take over the entire sugar produced and distribute it, as far as possible, at a uniform rate. Instead of the State Governments nominating wholesalers, the Board will make its own arrangements. The former are believed to be agreeable to this proposal. The other important function of the Board will be to handle exports. This is now done by the Indian Sugar Manufacturers Association. The Government subsidises the exports.

The Central Government will shortly set up a special public-sector corporation to handle the export of scrap iron. The Central Ministry of International Trade is busy working out the details of the scheme.

The present policy is to allow the export of ferrous scrap to established exporters who have exported scrap during any of the three-year period ended March 1964. The exporters can choose their best year's export for the purpose of obtaining a base quota certificate. The overall quota for the entire export is determined and fixed by the Iron and Steel Controller taking into consideration the availability and requirements for indigenous consumption. Against actual earnings of foreign exchange by scrap exports, the base quota holders are permitted to import finished steel.

The Government has decided to set up a cement corporation with a view to expanding the production of cement in India. The corporation, will initially locate the areas where raw materials for cement, such as limestone, are available. It will also set up a cement machinery shop.

ZINC

The Smelter in Udaipur

The Central Government is likely to participate soon in the management of the zinc smelter plant in Udaipur. The Centre is likely to purchase shares for about Rs. 2 crores. The Rajasthan Government already holds shares for Rs. 25 lakhs. Together they will control over 51-percent of the shares.

An investment of about Rs. 38 crores will be necessary after five or ten years for increasing the plant's capacity from 18,000 tons to 50,000 tons. While the project report on the proposed Khetri copper smelter in the public sector has been received, the Centre has not yet been able to secure a loan for it from the World Bank or the International Development Association.

C.D.F.C.

Loan for Usha Martin Black

The Commonwealth Development Finance Co. Ltd is to make a sterling loan of £150,000 and a subscription of £45,000 to the equity of Usha Martin Black (Wire Ropes) Ltd. Calcutta. There is an urgent demand for the higher grades of steel wire and ropes in India for the coal and engineering industries and for port development.

London

SECURITY AND STATUS FOR BRITISH WORKERS

(FROM OUR LONDON CORRESPONDENT)

Employment Contract

BRITAIN is the first country in the world to give employees a legal right to a written statement about the main terms of their employment. This right, together with rights to minimum periods of notice for both employers and employees, is laid down in the Contracts of Employment Act, 1963, which comes into operation on 6th July. The Act is part of the Government's wider plans to give workers of all kinds improved status and greater security of employment. Examples of the possible ways in which written statements might be drawn up by employers are given in a leaflet containing guidance on the Act which has recently been published by the Ministry of Labour.

The Act applies to employees who normally work for their employers 21 hours a week or more, but employees in certain occupations are not covered by the Act—registered dock workers engaged on dock work, merchant seamen, fishermen, and Crown servants. Employees who are abroad and who ordinarily work for their employer abroad are also excluded, as are certain employees with fixed term contracts. The written statements need not be given to an employee who is the father, mother, husband, wife, son or daughter of the employer. The leaflet explains, in question and answer form, what the main provisions of the Act are, how they will operate, and how they affect both employers and workers.

The Act lays down minimum rights of notice. An employee will have a right to receive at least one week's notice after 26 weeks' continuous service, at least two weeks' notice after two years' continuous service and at least four weeks' notice after five years' continuous service. An employee will, in return, have to give his employer at least one week's notice when he wants to leave if he has been working for him for 26 weeks or more. Anyone who already has a right to longer notice will not be adversely affected. The provisions on notice apply to part-time employees if they work, or are normally expected to work, 21 hours a week or more for their employer. If a person works at least 21 hours a week for each of two different employers the provisions on notice can apply to both jobs.

The definition of an "employee" is obviously a necessity. Under the Act he or she is "an individual who has entered into or works under a contract with an employer, whether the contract be for manual labour, clerical work or otherwise, be express or implied, oral or in writing, and whether it be a contract of service or of apprenticeship. The Act, therefore, covers employees in all kinds of employment (except those mentioned earlier). However, people who work in partnership or, for example, as independent contractors or freelance agents as well as others who work under contracts for services are not covered. The Act does not prevent either employer or employee from waiving his right to notice on any occasion or from accepting a payment in lieu of notice, nor does it affect the right which either party has to terminate the contract without notice if the behaviour of the other justifies it. The question whether it

does in fact justify it depends on the circumstances of the individual case.

If it is agreed at the outset that a contract of employment is to last for a fixed period, then the rights to notice will not generally apply; both the employer and the employee will know from the start when the contract of employment is to end. There is an exception. For an employee whose contract of employment is a contract for a fixed term of four weeks or less, but who has in fact been with his employer for 26 weeks or more, the Act requires that the contract is to have effect as if it were for an indefinite period, and the minimum rights to notice will then apply. Apprentices come within the definition of employee in the Act, but a contract of apprenticeship will normally be in effect a fixed-term contract of some years' duration and no notice will need to be given under the Act before its completion. If an apprentice remains with the employer after completing his apprenticeship, his period as an apprentice counts for the purpose of qualifying for rights to notice under the Act.

The Act also contains detailed provisions about minimum pay during notice. These do not apply if an employee has a right under his contract to at least a week's notice beyond the minimum to which the Act entitles him. Nor do they affect an employee who is working his normal hours during notice. But they do apply if during notice an employee is not working for some or all of the normal hours because no work is provided for him, or because he is sick, or injured, or because he is on holiday. They also apply if an employee has no "normal hours." The broad principle underlying the minimum pay provisions is that the employee should receive during notice not less than he is entitled to under his contract for a normal week's work. Rights to notice and minimum pay during notice can be enforced in the same way as the terms of the contract. In other words, an employer or employee who considers that he has incurred loss because he has not been given the notice (or, where an employee is concerned, the minimum pay) to which he is entitled under the Act can bring an action for damages in the Courts if he cannot obtain satisfaction by other means.

From 6th July, employers will have a duty to give their employees written statements about their main terms of employment. An employer may choose whether to include in the statement particulars of the terms—pay, hours, holidays and holiday pay, sickness and sick pay arrangements, pensions and pension schemes, and notice—or to refer the employee for any or all of the particulars to documents which contain them and which he keeps reasonably accessible to the employee. The object is to give the employees a clear understanding of their rights and obligations under their contracts of employment. Examples of reference documents which an employer might find it useful to use are copies of collective agreements, works handbooks, wages regulation orders, and booklets about sick pay or pension schemes. The statements have to be given within

13 weeks of the start of the employment. Existing employees on 6th July must be given statements, but employers have until 5th October at the latest in which to do this. If the terms of employment change, for example because of a pay rise or promotion, the employer has to inform the employee in writing about the change not more than a month later; however, if the employer makes use of reference documents he need only see that these are brought up to date within a month of each change, provided that he gives an undertaking in a written statement to do this.

New Deal Needed in Industry

Mr. J. R. Edwards, managing director of Pressed Steel, is convinced that there is scope for a vast "package deal" in industrial relations in Britain on the lines of that concluded in Sweden in 1936. But he hoped British industry would not wait to be forced into making the deal by the Government, as had happened in Sweden. Mr. Edwards was speaking at a conference recently held in London at the instigation of the Minister of Labour, Mr. Godber, which was attended by about 30 leading industrialists who discussed the subject of "communications in industry." On the basis of papers prepared by Mr. Edwards, by Mr. Paul Chambers, chairman of I.C.I., and Lord Robens, chairman of the National Coal Board, there was a wide ranging review of both the principles and practice of the problem enlivened by descriptions of the work done in this field by those taking part in the conference.

Among the things which Mr. Edwards foresaw in a "package deal" were wage agreements with the force of contracts. He said that most existing industrial legislation and practice was designed in the days when it was still necessary to protect the servant from his master. But, according to Mr. Edwards, the modern employer was equally in need of security against breaches by his employees of the contract of service, not only in the interests of the business and its shareholders, but also in the interests of "the vast majority of his employees and of the industry as a whole." Mr. Edwards put in a word for the closed shop. He told the assembled industrialists that they might find it "equitable" to concede the closed shop "in order to secure that shop stewards are denied power without responsibility, a freedom which they now enjoy." He also criticised the proliferation of employers' organisation. This was a parallel in the multiplicity of trade unions recently criticised by Mr. Ray Gunter, the "Shadow" Minister of Labour. Mr. Edwards called Mr. Gunter's stand "courageous criticism indeed."

Communication of Ideas

Mr. Chambers emphasised that communication is a two-way operation and it is important for the top management to know what employees all down the line and right through the company are thinking and feeling as it is for these employees to understand the intentions of top management. This does not mean, however, that masses of detailed instructions have to be issued by or in

the name of the top management, or that everything said or suggested by every employee has to come to the notice of top management. On the contrary, the best communications are those which are achieved with the minimum of paper work. "In this matter of communication upwards, downwards, laterally and locally, the task is never done and is not solved by issuing a long directive. A good deal of patient work is needed all the time," he concluded.

Lord Robens felt it was impossible for us to contemplate with equanimity the prospect of the continued loss of millions of working days every year through labour disputes; the weakening of the U.K.'s competitive position by industrial conservatism or restrictive practices; or the danger of losing valuable repeat orders because of shoddy workmanship. All these dangers can be avoided, he felt, if the wide gulf between the boardroom and the shop floor can be closed; if there is mutual recognition of each other's policies; and if the community of interest between the boardroom and the shop floor is recognised by both sides. This means that management—for it is management's responsibility—must establish an effective bridge of communications throughout the length and breadth of British industry. What is important for any industrialist to remember is that communications within industry are so important that the task of ensuring them cannot be left to untrained junior staff. This is a job for experts and supervision at a very high level. The managing director should regard the exercise with the same importance as his production and sales.

It is impossible, anyhow at this stage, to assess the results of such a conference. Mr. Godber, the Minister of Labour, attempted the task of doing so. He summed them up under the following headings: (1) communications were an integral part of the business of management; (2) the essential need was for top management to take an active interest; (3) personal contact was essential when possible, but should be followed up by effective use of the written word and in other ways; (4) the supervisor was in a key position; he needed to be carefully selected, properly trained and given an opportunity to pass on information; (5) communications should be included in management training at all levels; (6) an important purpose of communications was to inform the workers of the policies and objectives of the firm; (7) communications was a two-way process; it was important for management to know what were their workers' attitude; (8) it was necessary to distinguish the functions of the shop stewards in this connection from those of the supervisors. The most important part of the supervisor's job is essentially to explain the management's policy. The shop stewards' function is to represent the views of their members.

Maiden from C.D.F.C.

The Commonwealth Development Finance Company, which has put cash to the tune of £28 million into 58 projects in 19 countries since it was set up in 1953, is paying its maiden dividend. Net profits have risen from £192,43 to £239,993 and the Company is paying a 3 percent dividend, which will absorb £134,670. Group reserves have increased from £992,552 to top the £1-million mark at £1,045,808. Lord Godber says in his annual report. Last year, the C.D.F.C. formed a subsidiary in Melbourne to carry out development financing in Australia and undertook 13 new commitments, involving a total investment of about £31 million in eight countries.

DROUGHT AFFECTS RUBBER PRODUCTION

(FROM OUR SOUTH INDIAN CORRESPONDENT)

RUBBER production suffered a major setback in March last, mainly due to the drought that was being experienced by the producing areas in Kerala and Madras since the beginning of this year. Kerala and Madras together contribute almost the entire natural rubber crop of India, Kerala alone accounting for about 90 percent of the total. The rubber growing areas of these two States on the western side of the Western Ghat have been experiencing an unusually severe drought from the beginning of this year, and most of the plantation crops grown in these areas are said to have been affected. Rubber appears to be the worst sufferer. According to the latest available report from the Rubber Board, natural rubber output in March 1964 was only 1,924 tonnes, 511 tonnes short of the production during the corresponding month last year. In spite of this, full production during the first quarter of 1964 was higher by 387 tonnes at 7,016 tonnes when compared with that of the same period last year. In January, the output was fairly large at 3,735 tonnes, compared with 3,142 tonnes of January 1963. Even in February which was one of the lean months as far as rubber production was concerned, the crop was 205 tonnes higher at 1,357 tonnes when compared with that of the previous corresponding month.

The rubber trees seem to have felt the impact of the drought more severely in March. Towards the end of March, there were a few scattered showers, but they were far from what was actually required for the plants to regain their normal vigour. Since then, there have been occasional rains, but the weather by and large continues to be dry and unfavourable for the rain-fed crops. Monsoon is to begin shortly, and in all probability the loss suffered so far due to drought might well be adequately covered in the coming months. The rubber growing industry in south India which has reached the take-off stage is likely to show marked progress this year also. If weather does not turn hostile in the coming months, there is every possibility of rubber production reaching the revised target laid down for it by the planners. In 1963, natural rubber production in India came to 37,000 tonnes, nearly 6,000 tonnes more than the output in the previous year. The present expectation in planting circles is that progress at this rate at least will be maintained this year, in spite of the temporary loss due to adverse weather. More and more of the newly planted high-yielding strains are reaching maturity, and are being tapped and their impact on the total production will be more pronounced than the loss already suffered on account of the drought.

Natural rubber supply was supplemented with imports from abroad which amounted to 6,130 tonnes during the first quarter of 1964. Consumption during this period was to the tune of 23,317 tonnes, including 3,201 tonnes of synthetic rubber and 2,048 tonnes of reclaimed rubber. The total stock of natural rubber in the country at the end of March 1964, was estimated by the Rubber Board at 16,092 tonnes, and that of synthetic at 3,012 tonnes. Both were larger when compared with that of the same date last year. Natural rubber stocks on 31st March, 1963, were to the tune of 13,485 tonnes, and that of synthetic were 2,589 tonnes.

CASHEW

Exports Rise

India has made Rs. 22.6 crores worth of foreign exchange through the export of cashew products during the financial year 1963-64. This was a Rs. 2.5-crore gain over the export earnings in the previous year. Exports of cashew kernels during 1963-64 amounted to 51,000 tonnes, valued at Rs. 21.5 crores. This was 2,600 tonnes more than exports during the previous year, and the value realised was higher by Rs. 2.1 crores. The United States continued to be the largest buyer of the Indian cashew kernels, followed by Russia, East Germany, United Kingdom, Canada, Australia and West Germany. The quantity imported by the major consumers with the figures for the previous year in brackets are given below: the U.S.A. 28,300 tonnes (27,000); Russia 8,000 (5,200); East Germany 3,400 (4,300); the U.K. 2,660 (2,500); Canada 1,600 (1,400); Australia 1,600 (1,600) and West Germany 1,300 (1,200). These are the figures supplied by the Cashew Export Promotion Council in Cochin.

Exports of cashew shell liquid during the financial year 1963-64 amounted to nearly 9,000 tonnes, valued at over Rs. 1.17 crores. This compares with 7,400 tonnes worth Rs. 74 lakhs exported during the previous year. The main buyers were the United States, the U.K. and Japan. With a view to popularising Indian cashew products abroad, the Indian Cashew Export Promotion Council has been taking part in almost all the international trade fairs. It had participated in the recent Homes and Industries Fair held in Perth (Australia). The Council is now participating in the New York Fair which opened on 22nd April. Apart from samples of all grades of cashew kernels, cashew shell liquid and publicly literature sent to the fair, the Council has arranged for the display of a plastic model of a cashew tree and photographs relating to various aspects of the cashew industry.

A four-member trade delegation sponsored by the Cashew Export Promotion Council has returned to India recently after a four-week visit to France and Italy. Mr. T. S. Menon (vice-chairman of the Council) who led the delegation said on his return that if the cashew exports to western Europe were to be substantially stepped up, the first thing to do was to conduct a vigorous publicity campaign to create consumer interest. He said that a representative of the Council who would be posted in Europe shortly would work in close co-operation with the Tea Promotion Officer in Europe. "Wherever the Indian tea goes, cashew should also be because it is good for both", he said. The delegation had made arrangements with a large department store for holding "Cashew Weeks", when cashew presentation packets will be freely distributed and elegant displays of folders and other publicity materials will be arranged, according to a note published in the latest issue of the *Cashew Bulletin*.

COFFEE

Higher Pool Receipts

According to the latest available report from the Coffee Board, receipts

of the 1963-64 crop into the Board's pool depots to the end of April amounted to 65,936 tonnes, compared with 52,075 tonnes of the previous season's crop. Quality-wise, the receipts were plantation 28,630 tonnes (24,147) Arabica Cherry 10,626 tonnes (8,565) and Robusta 26,680 tonnes (19,363). Figures within brackets indicate corresponding receipts into the pool last year.

The Board has sold for export a total of 13,402 tonnes, comprising 12,214 tonnes of Plantation, 340 tonnes of Arabica Cherry and 848 tonnes of Robusta, out of the 1963-64 crop until 13th May, 1964. Another 1,915 tonnes consisting of 1,277 tonnes of Plantation, 141 tonnes of Arabica Cherry and 497 tonnes of Robusta have been earmarked for the export auction on 27th May. Releases in the internal market to the end of April were to the tune of 10,292 tonnes, against 10,549 tonnes of the same period last year.

The Coffee Board chairman, Mr. Sitarama Reddy, is leading a delegation to the Middle East towards the end of this month to explore the possibilities of increasing Indian cardamom exports to these areas. He is the chairman of the Cardamom Development and Marketing Committee also.

TEA

Finding Cheaper Finance for the Gardens

A Special Correspondent writes: Tea growers have been urging an enquiry into the financial and other difficulties arising out of the Government's tax policies. It is interesting to note that a recent message from New Delhi that the Board of Trade at its latest meeting recommended the setting up of a committee to be formed of representatives of the State Bank, scheduled banks, the Indian Tea Association and others, to go into the question of finances for tea gardens. Such action should help the industry.

In Jalpaiguri, the Central Minister for International Trade, Mr. Manubhai Shah, attended a meeting of the Indian Tea Planters Association. Tea producers in both north and south India have made many representations to the Central and State Governments for relief from taxation and Mr. Shah stated that these matters as well as treating expenditure on replanting and new extensions as a charge on revenue rather as capital cost, was under the Government's consideration. The Centre, Mr. Shah said, had requested State Governments to treat such expenditure as a revenue item under the States Agricultural Income-Tax Acts so that a uniform pattern could be followed both for Central and State taxation.

The president of the Association, Mr. B. C. Ghosh, asked for better loan facilities. The Minister said that the two primary requirements of finance for development were for the cost of replanting, new planting and for machinery and equipment. The Tea Board's loan schemes, with a present fund of Rs. 10 crores, covered all these aspects. Out of this sum, nearly Rs. 5.9 crores had already been committed as loans by the Tea Board to different plantations.

With reference to financial relief, Mr. Shah said that the industry had pleaded that increasing costs and the burden of taxation left it with inadequate funds to finance its development programme and the Government was considering proposals that would give financial relief specifically for development and he hoped that the industry would gear itself much

CAPITAL, 21st May, 1964.

more in this direction. Such an approach would achieve better results than too much dependence and emphasis on loans.

Mr. Shah spoke of a rising trend in exports and said that as a result of the Tea Board's efforts, the export of special packets of tea to the E.C.M. countries from India had started. A number of firms and organisations in the E.C.M. countries had already agreed to pack and market blends of Indian tea. He thanked those countries which had helped bring about this year's E.C.M. decision to cut import tariffs on tea.

Tea exports last season totalled Rs. 133 crores. During the past year, difficulties had stood in the way of many estates producing a full crop. Wage payments to permanent labour were delayed and extra hands could not be employed to harvest more crop. This had resulted in the loss of 5 million lbs of tea last year and of at least Rs. 1 crore worth of foreign exchange. This year, the attitude of some of the banks had become stiffer. The prices of everything, except tea, were on the increase and higher expenses had to be incurred under every head. It was useless, he said, to expect the industry to set about achieving product and export targets in all earnestness unless the standing problem of finance was solved.

Mr. Ghosh said the West Bengal Financial Corporation was only interested in industries in and around Greater Calcutta. Until a cell for tea was established in the State Bank, there was not much hope of getting the required medium-term loan assistance from banks. The Agricultural Refinance Corporation was also refusing money for the construction of workers' houses. He suggested the provision of an interest-free plantation loan by the Tea Board till the time of production. After this stage, interest of about 3 percent could be charged.

Cables from London advise quality teas dearer in Mincing Lane.

Lower Quality at Cochin Auctions

There is a seasonal decline in the quality of teas that come up for sale at Cochin. The decline is more pronounced in the case of teas from higher elevations. According to the latest market report from Cochin, the high-grown Nilgiri brokens met with only restricted demand in the last sale at considerably lower rates and many were withdrawn in the absence of buying enquiry. The prices for most grades, however, were higher when compared with that of last year. The average price realised in the last auction for leaf grade showed a 56nP a kilo gain, when compared with the average for the corresponding sale last year. The Cochin sale average to the middle of this month at Rs. 5.17 a kilogram was higher by 7nP a kilogram, when compared with that of the same period last year. In the case of dust, the gain was more pronounced. The sale average of Rs. 4.60 a kilogram was 20nP more than the price realised during the corresponding period of last year.

HELP MILLS TO MODERNISE, SAYS EXPERT BODY

IN view of the growing competition from the Pakistani, British and European jute industries in world markets, an expert committee set up by the Indian Government has emphasised the urgent need for modernising the Indian mills. The Government has been advised to extend all assistance to the local industry in order that it may benefit from technological progress. The cost of modernisation has been estimated at Rs. 9 crores—Rs. 5 crores for improving the accessories and Rs. 4 crores for streamlining the standard looms. The committee has recommended that mills should be provided with special assistance by financial institutions. It has also suggested that the industry should be allocated foreign exchange worth Rs. 50 lakhs to help it to produce coated fabrics, non-wovens, chemical- and dye-treated fabrics, and mixed jute goods and yarn.

The annual production of jute mill machinery, spare part and accessories, it is estimated, will increase from Rs. 40 lakhs in 1966-67 to Rs. 8 crores in 1967-68 and to Rs. 10.5 crores during the subsequent years of the fourth plan. The Committee has recommended reallocating the permitted rated potential. For, with rapid changes in design, machines are being constantly improved and the industry's choice of equipment varies from time to time. As for preparatory and spinning machinery, it has recommended the formation of a consortium of the three licensed units, of which two have not yet started full production, while the third went out of production shortly after commencing work. Alternatively, it has recommended a substantial expansion of the unit whose machines have been well received by the industry.

The committee has estimated that the annual supplies of machinery during the fourth plan will amount to Rs. 13.8 crores, against a demand of Rs. 9.1 crores. In carding machines, the capacity should be expanded from 228 cards to 310 cards a year. In cop winders, the present potential should be stepped up from 72 to 160 a year, either by expanding the existing units or by setting up additional capacity for horizontal and vertical cop-winders of the auto-lifting type.

Setback in Production

The production of gunnies in mills reporting to the I.J.M.A. has declined sharply in April, compared with March. The decline in output is attributed to a number of festival holidays during the month, like the Bengali New Year's Day and Ram Navami. Besides, an increase in absenteeism caused a loss of man-hours.

Working at the maximum level or 200 hours during April (against 08 hours in the previous month) J.M.A. mills produced 103,700 tonnes against 112,600 tonnes) of jute goods. The output of hessian declined by 400 tonnes to 44,400 tonnes, of sacking by 3,100 tonnes to 39,300 tonnes of miscellaneous goods by 1,700 tonnes to 12,700 tonnes and of carpet-backing cloth by 700 tonnes to 7,300 tonnes. In April 1963, the mills worked at the same level for 208 hours, producing 105,400 tonnes—3,800 tonnes of hessian, 43,200 tonnes of sacking, 11,700 tonnes of other

goods and 6,700 tonnes of carpet-backing cloth.

U.S. Burlap Consumption

U.S. burlap consumption declined fractionally from 74.4 million yards in March to 74 million yards in April. The offtake was 77 million yards in April 1963. The average monthly consumption came to 75.80 million yards during the first four months of the current year, against 79.67 million yards for the comparable period of 1963 and 77.75 million yards for that of 1962. U.S. stocks rose during April from 272.6 million yards to 277 million yards. Of these, 155 million yards (against 150.4 million yards) were spot and 122 million yards (against 122.2 million yards) afloat. The closing inventories a year ago were 300 million yards—156 million yards spot and 144 million yards afloat. At the April level of consumption, the stocks will last 3.743 months. The corresponding stock-duration on the same basis was 3.896 months at this time a year ago.

Hessian Exports Rise

Hessian exports from India during the nine months ended March 1964 rose by 8.93 percent from 403,700 tons to 439,800 tons compared with the corresponding period of 1962-63. But sacking shipments showed a decline of 10.33 percent from 207,300 tons to 185,900 tons. The fall in the offtake of heavy goods was attributed to Pakistani competition in India's traditional markets, particularly in the U.K. and western Europe. Hessian exports to European countries rose by 12,000 tons to 100,000 tons. While shipments to the U.K. and other west European countries fell from 56,500 tons to 45,500 tons, exports to Russia and other east European countries increased from 31,500 tons to 54,500 tons and to the Americas from 269,100 tons to 290,800 tons. The offtake by the U.S.A. alone increased by 3,100 tons to 189,900 tons. Hessian exports

to African countries were up by 1,000 tons to 20,300 tons.

In sacking, supplies to Europe as a whole increased from 30,900 tons during July 1962-March 1963 to 31,600 tons during the corresponding period of 1963-64. Exports to the U.K. and west European countries fell from 22,100 tons to 14,000 tons, while those to Russia and west European countries increased by 100 percent from 3,800 tons to 7,600 tons. Shipments of heavy goods to the American zone rose from 40,600 tons to 47,000 tons and to New Zealand from 6,400 tons to 8,600 tons. Sacking despatches to all other destinations increased by 8,500 tons to 12,700 tons.

Sharp Decline in Despatches

An I.J.M.A. statement has reported a sharp fall in the despatches of jute goods during April from the mills reporting to the Association. Although port conditions were better, poor shipping instructions caused the setback in exports. They declined from 107,600 tonnes in March to 93,800 tonnes in April. Of the difference of 8,800 tonnes, exports alone accounted for 8,700 tonnes since they fell from 79,900 tonnes to 71,200 tonnes.

Hessian despatches showed the biggest fall from 46,900 tonnes to 40,600 tonnes, followed by sacking from 41,600 tonnes to 40,900 tonnes and carpet-backing cloth from 7,700 tonnes to 5,800 tonnes. The offtake of miscellaneous goods increased nominally from 11,400 tonnes to 11,500 tonnes. Exports of hessian fell by 6,200 tonnes to 35,600 tonnes, of sacking by 800 tonnes to 21,600 tonnes and of carpet-backing cloth by 1,900 tonnes to 5,800 tonnes. Internal consumption shrank by 100 tonnes to 27,600 tonnes during April. The consumption of hessian declined by 100 tonnes to 5,000 tonnes and other goods by 100 tonnes to 3,300

tonnes, while the offtake of sacking improved by 100 tonnes to 19,300 tonnes.

In April 1963, the total offtake was 104,800 tonnes—hessian 45,100 tonnes, sacking 42,100 tonnes, carpet-backing cloth 6,600 tonnes and other goods 11,000 tonnes. Exports absorbed 76,100 tonnes—hessian 41,600 tonnes, sacking 19,500 tonnes, carpet-backing cloth 6,600 tonnes and other goods 8,400 tonnes. Internal consumption totalled 28,700 tonnes—3,500 tonnes of hessian, 22,600 tonnes of sacking and 2,600 tonnes of miscellaneous goods.

THE JUTE MARKETS

Manufactured Goods: Easier conditions prevailed in the Calcutta gunny market during the past week. Sentiment was depressed by the general lack of overseas business. The Government offtake was on a hand-to-mouth basis. The issue of tenders for about 5,000 bales of B Twills for near positions failed to satisfy expectations. Market circles were still awaiting the outcome of the Iraq Government's tender for one million sand-bags and the Burma Government's tender for 31,000 bales of heavy Cees for May-August delivery. Towards mid-week, brisk covering against the West Bengal Food Directorate's tender for 400,000 bags of B Twills for mid-May delivery helped the sentiment in heavy goods. But the market received a setback on the announcement of U.S. burlap consumption figures for April. The sharp fall in the despatches of jute goods could be inferred from the I.J.M.A. gunny stock and production figures for April. As a result, mills emerged as keen sellers for all positions. But only small business was transacted in view of the hesitant attitude of overseas buyers and the slow pace of Government offtake. At the lower levels, mills became cautious and transacted only routine business. In the futures market, the trend was affected by tired long liquidation combined with aggressive short-selling. So prices fluctuated violently in both hessian and sacking for the May and August positions. At the lower prices, bears covered their open position and the market closed with a smaller loss in heavy goods than in hessian. Turnover was fair in sacking and moderate in

Raw Jute: Dull conditions prevailed in the raw jute market during the past week. Mills showed selective interest in better-grade fibre. But as the stocks of such jute were small and were in strong hands, they commanded a premium. Hence the off-take was more or less of a routine nature and was confined to small lots transacted around the previous levels. In lower grade fibre and mesta, holders were inclined to discount the rates below the minimum levels. But mills showed little interest in such fibre. Reports that the plants were thriving in the early-sown, low-lying areas of northern Bengal, lower Assam Valley, north-eastern Bihar and Tripura made them nervous and accentuated the selling pressure in off-grade stocks. Alternating showers and sunshine during the past fortnight helped in the completion of soil preparation work in Gangetic West Bengal. The seedlings were growing well. Farmers awaited a couple of heavy showers for transplantation work. In the futures market, Upper Assam White Bottoms for June fluctuated between wide limits on alternate bouts of long liquidation and bear-covering to close with a small loss on balance. Turnover was fair and the undertone hesitant at the close.

Tuesday's quotations were as follows:

THE U.K. JUTE MARKETS RESTRICTED ACTIVITY IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was quiet in Pakistan, and the E.P.C. values of the higher grades of both white and Tossa jute were reduced by £2 to £5 a ton last week. This made little difference to the prices quoted here as very few of the higher qualities were available. Registered sales of raw jute to the U.K. now total over 700,000 bales, which means that spinners have secured practically all their requirements from the present crop. The business taking place at present is confined to spot parcels and the prices being paid are low. There is no doubt that Dundee spinners have had a very successful season as far as raw material is concerned, but the same cannot be said about raw jute merchants as the bulk of the business has been transacted at under minimum export prices.

Offers continued to be freely made at £134 10s for Mill Firsts, at £108 for Mill Lightnings, at £94 10s for Mill Hearts and at £80 for Grade Hearts, c.i.f. U.K., for May-June shipment. Grade Tossa-2/3 was at £123 and Grade Tossa-4 at £105. Outport Tossa-2/3 ranged from £93 and Outport Tossa-4 from £83, May-June.

Although the new crop was reported to be making satisfactory progress in Pakistan, offers were still very scarce. The quantity of new crop jute bought by Dundee spinners is very small for the time of year. Offers were made at £92 15s for a group of Mill Hearts with single marks at £95. Grade Hearts were named at £81, c.i.f. U.K., for August-September shipment.

Cuttings were quiet and about unchanged at £59 for S.N.C. and at £50

10s for N.C. Some mesta prices were lower at £85 for A, at £75 for B, at £66 10s for C and at £48 10s for cuttings, c.i.f. U.K., May-June. Prices of the higher grades of Siam jute also tended easier. Offers were at £75 10s for grade A, at £69 for grade B and at £65 for grade C, delivered mill Dundee for May-June shipment.

The Calcutta goods market became easier, and hessian prices were at the lowest point touched this year. Values were at 68s 5d for 40in. 10oz. and at 50s 6d for 7½oz. a 100 yards f.o.b., Calcutta for May shipment, at 68s 10d and 50s 9d June and at 69s 7d and 51s 2d July-September. B Twills were at 173s 8d, 173s 8d and 174s 11d for the respective shipment periods. The Jute Control showed some buying interest of late.

There was little change to be seen in Dundee yarns and cloth. Spinners remain busy and have orders in hand for forward delivery. These contracts were placed some time ago, and there was less buying interest shown of late.

The cloth position was still rather mixed with some manufacturers better placed than others. Wide cloth for carpet backing was in good demand and hessian weavers in general remained busy. There was no improvement in demand for sackings, and some short time working was still in force in the heavy end of the trade.

U.S. BURLAP CONSUMPTION AND STOCKS

U. S. burlap consumption in April was 300,000 yards less than in March and 2.9 million yards less than in April a year ago. The total consumption for the first four months of 1964 is 16 million yards less than in the same period of 1963. Last month's bag cut-up was 53 million yards and piecegoods deliveries 21 million yards, compared with 57.7 million and 19.3 million yards, respectively, in 1963. U. S. spot stocks and float at the end of April increased from the end of March by 4.3 million yards. At 276.9 million yards, 154.7 million yards were spots (up 4.3 million yards) and 122.2 million yards were float (unchanged). Stocks represent about 3.6 months' supply.

A SURVEY OF CHEMICALS

Indian Chemical and Pharmaceutical Industry—1963 Survey (Published by the Indian Chemical Manufacturers' Association. Price Rs. 10 pages 300.)

The object of this survey is to give general and statistical information about the development of the chemical industry during 1956-63. Data have been collected from published and unpublished sources to present authentic information. Industries allied to chemicals and pharmaceuticals are also discussed. While comment is generally restricted to an interpretation of statistics, notes are given on prospects under the fourth Plan having regard to achievements to date.

The chemical industry serves fundamental human needs in diverse ways. It is also of importance to the economy, being a major consumer of goods and a provider of opportunities for employment. In India it had a late start. Initial development was entirely through small private enterprise without aid from the Government. However, recent years of planned development have seen rapid strides, a better use of indigenous raw material resources, and a greater emphasis on research.

Achievements in the field of organics play a vital rôle in the chemical industry. The Government is, therefore, stressing the development of petro-chemical resources, and requirement targets have been formulated in detail. In the sphere of medicines, the Pharmaceutical Inquiry Committee has considered various aspects of this important branch of the chemical industry. Steps have been taken to expedite development, which in the initial stages was somewhat haphazard. Export of pharmaceuticals is already earning foreign exchange. Attempts are being directed towards increasing this valuable trade. The survey contains notes on local manufacturers, the availability of important drugs in India and on the current import licensing position.

Another important branch is agricultural chemicals, broadly classified as fertilisers and pesticides. To increase production of crops, it is essential that soil conditions are well maintained. The importance of different types of fertilisers, therefore, becomes apparent. Summaries are given to indicate development in the first two plan periods. Targets for the future in the private and public sectors are discussed at length. The other group is pesticides, which in its broad sense, includes insecticides, fungicides, herbicides, desiccants and plant hormones. Loss in India on account of insect pests, plant diseases, etcetera, is estimated at over Rs. 400 crores. The problem is of considerable magnitude, but it has been tackled in only a small way so far. India is still largely dependent on imports for most of these products. A separate chapter deals with a wide range of miscellaneous heavy and fine chemical products, both inorganic and organic.

Acids, alkalies and allied products are also dealt with in the survey. These have a direct bearing on the chemical industry and statistics indicate a remarkable degree of progress in production. Dyestuffs and intermediates also play an important rôle in the national economy. However, these industries have been left mainly to private manufacturers, whose enterprise in the face of many difficulties is praiseworthy. Achievements in expansion of capacity and output, and diversification of the production pattern are discussed.

COMPANY AND PUBLIC NOTICES

HOPE'S METAL WINDOWS (INDIA) LTD.

NOTICE is hereby given to the members of the above-named Company that the Sixth Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday 11th June, 1964 at 3-30 p.m. to consider the Accounts of the Company for the year ended 31st December, 1963 and to transact other ordinary business.

NOTICE is also hereby given that the transfer Books and Register of Members of the Company will be closed from 5th June, 1964 to 11th June, 1964 both days inclusive.

By Order of the Board,

BALMER LAWRIE & CO. LTD.,
D. MANSON,
Managing Director,
Secretaries.

21, Netaji Subhas Road,
Calcutta, 1st May, 1964.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

INDIAN ALUMINIUM COMPANY, LIMITED

31, CHOWRINGHEE ROAD,
CALCUTTA-16.

NOTICE is hereby given that the Ordinary Share Transfer Register of the Company will remain closed from June 10th to June 15th 1964, both days inclusive.

The Directors of the Company at a meeting held on April 27th 1964 have decided to make the second (final) call, in respect of 801,276 ordinary shares of the Company issued on February 4th 1963, amounting to Rs. 10 per share to be applied towards the payment of the balance premium (making these shares fully paid up in respect of both the par or nominal value and the premium). The Board of Directors at the above said meeting have further decided that the amount of second call will be payable by those Members of the Company whose names appear in the Register of Members on June 15th 1964.

T. D. SINHA,
Secretary.

20th May, 1964.

Registrars' Office:

8, Clive Row,

Calcutta-1.

(Post Box No. 150)

THE CHAMPDANY JUTE CO., LIMITED

AT a Board meeting held to-day, the Directors decided to recommend to the Shareholders in General Meeting the payment of a final dividend at the rate of 25% or Rs. 2.50 per each share of Rs. 10/- for the year ended 31-3-64. The dividend will be subject to deduction of tax.

A notice calling the Annual General Meeting on 16th June, 1964, will be published shortly.

By Order of the Board,

JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, Netaji Subhas Road,
Calcutta, 19th May, 1964.

THE HATTIKHIRA TEA COMPANY LIMITED

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday the 16th day of June, 1964 at 11-45 A.M. for the following purposes:—

- To receive and adopt the Directors' Report and the audited accounts for the year ended 31st December, 1963.
- To elect Directors in place of the retiring Directors.
- To elect Auditors for the ensuing year, and to fix their remuneration.

AS SPECIAL BUSINESS:

- To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution namely:—

"That Mr. D. J. Naismith be and is hereby appointed a Director of the Company".

The Share Transfer Book of the Company will be closed from 9th June 1964 to 16th June 1964 both days inclusive.

OCTAVIUS STEEL & CO. LTD.,

I. P. GOENKA,
Managing Director,
Managing Agents.

Calcutta, 20th May, 1964.

Notes: (i) A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

(ii) In connection with the business to be transacted under Item 4 of this Notice, an Explanatory Statement has been sent to the Shareholders.

CALCUTTA STEEL COMPANY LIMITED NOTICE

NOTICE is hereby given that the Fifth Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at 4, Old Court House Street, Calcutta-1, on Monday, the 15th June, 1964 at 4-00 p.m. to transact the following business:—

Ordinary Business:

- To receive, consider and adopt the Directors' Report and the Audited Balance Sheet as on 31st March, 1964 and Profit and Loss Account for the year ended 31st March, 1964.
- To declare a dividend.
- To appoint a Director in place of Shri B. P. Khaitan who retires by rotation but being eligible offers himself for re-appointment.
- To appoint a Director in place of Shri G. S. Nevatia, who retires by rotation but being eligible offers himself for re-appointment.
- To appoint Auditors and fix their remuneration.

Special Business:

- To consider and, if thought fit, to pass with or without modification the following resolution to be proposed as a Special Resolution.

"RESOLVED that payment to the Directors of Commission @ 1% of the net profits of the Company as provided for in article 94 (2) of the Articles of Association of the Company be and is hereby approved and authorised for a further period of five years with effect from 1st day of April, 1964.

By Order of the Board,
R. N. BHOTIKA,
Secretary.

4, Old Court House Street,
Calcutta-1, the 28th day of April, 1964.

Notes: (1) The Register of Members and Share Transfer Books of the Company will remain closed from 6th June to 15th June, 1964, both days inclusive.

(2) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

(3) The Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 in respect of the Special Business is being sent to all the members of the Company.

(4) The Dividend when approved will be paid only to those Members whose names appear in the books of the Company as on 15th June, 1964 or to their Mandatees.

THE DEATH OF MR. NEHRU

IT is not possible even for the editorial "we" to be detached and objective about an event like the death of Mr. Jawaharlal Nehru, Prime Minister of India throughout the span of her independence but so much more besides. Another man will be holding the office before long; he will need all the luck in the world and more to begin to fill the mantle. All good wishes to him then. But, on Wednesday afternoon, it was possible to think only of the terrible void. Something has gone out of India without which India is less than India. Something has gone out of the world without which the world is a little less than itself. John Donne in one of his sermons spoke of every death anywhere in the world diminishing him a little. With Nehru's death, the whole world is diminished more than a little.

There have been so many occasions to criticise him on these pages and on this same typewriter, which now has the melancholy task of turning out a hurried obituary to be in time for the printer on Thursday morning. Perhaps that is as well. No time now for thoughts on the imperfections of Mr. Nehru's economic thinking which is the usual preoccupation of this journal. It is quite impossible at this juncture to launch upon a discussion on the economic consequences of Mr. Nehru. There is time only to grieve the loss of man, to savour the bitter yet enriching taste of a tragedy that is personal in a curious way. His death just gets into everybody's life.

To free India Mr. Nehru gave a breath of something that, in some reckoning, was not Indian at all. Many did not mind saying so at the time; others never stopped saying so, right to the end. At this point, when an era has ended and another not begun, it is quite impossible to say whether he has won or his critics have. Nor is the point immediately relevant. The fact that transcends every other consideration at this moment is that the flavour he brought into Indian life, be it alien or otherwise, has made a difference that will endure.

It is doubtful that the modern Indian languages have a precise equivalent of the English word "humanism". It may also be true that "secularism" has no local exact equivalent. "Socialism" and "communism" are variously translated. In the Indian languages "liberalism" can mean almost anything. That, it is suggested, is the measure of Mr. Nehru's distance from—and contribution to—political thought in India. The distance he bridged with incredible success; in the final analysis, only he could "sell" progressive ideas to the most orthodox and conservative elements in the country. If the concepts of humanism, liberalism, democracy and socialism get lost in indigenous translations, not only linguistic but conceptual, the country will have only itself to thank for it. India will not be the richer for discarding Nehruism because of its allegedly alien ancestry. It is a part of Nehruism that the "ism" is so loosely defined.

Mr. Nehru encouraged criticism of his régime; he exposed it to the hazards of general elections thrice in his lifetime. The magnitude of this achievement will not be clear to those who do not take time off to look at the world outside. Life in India acquired a lot of fat; corruption

is there for all to see. Public life is not clean; private life may be unspeakable. That there has been so much talk of all these phenomena is because there was a norm, a standard to measure others and ourselves by—and that was Mr. Nehru. The yardstick is now gone.

Not only did Mr. Nehru make it possible for the country to have a political dialogue for nearly 17 years—and "political dialogue" is a good enough definition of democracy; he also gave it a new idiom. In parts of south-east Asia they spoke of "guided" or "controlled" democracy. Some did not even bother to pay lip-service to democracy. Here in India Mr. Nehru's ultimate appeal was to the people; and the people responded to him magnificently. He remained an aristocrat in thought and feeling all his life; his love for the people, the common man, came above that.

Among certain groups one would, at a superficial level, expect few admirers of Mr. Nehru. That is what it would be if life consisted only of buying and selling things, only of making money and accumulating compound interest. But most people remember him in more ways than may be currently known to the younger generation. India had not attained freedom yet; only an interim Government had been formed in New Delhi, with Lord Wavell still as Viceroy and Governor-General. Mr. Nehru, however, had already embarked on the idea of a Cabinet Government, of which only he could be the leader. It took business and industry no time at all to recognise and welcome the significance of the changes coming over the Indian scene.

Mr. Nehru, in turn, showed always a great awareness of the importance of commerce and industry in the life of a free nation. His notions of freedom in trade and commerce were, of course, rather different from those of business men—although not in the objectives. Yet the fact remains that, under his Premiership, the economy held together and made considerable progress in the basic industries. More important than such details is the fact that Mr. Nehru's political thinking was closely tied to economic thinking, for he knew the utter hollowness of political independence unaccompanied by economic advancement.

In recent months the country had been warned more than once that it had better be prepared for an India without Nehru. We had all been asking all sorts of questions, relevant and otherwise. In New Delhi and in capitals abroad there was no end of speculation about who and what after Nehru. How distant all that talk seems in face of the cold reality of Mr. Nehru's death. The country must go on. There must be a successor. There must be a successor. The frontiers of the country must be guarded. The hospitals must continue to succour the sick. In the burning ghats dead bodies must be disposed of. Life can pause a little but never stop; and Mr. Nehru was the last man to wish it to stop. Yet, human beings as we are, we cannot help pausing for a while at this point of history which Mr. Nehru helped shape to a great extent. It is that life which shaped many of us and many outside India. Pause, then, a while, and say a prayer for a man whose greatness India alone could not contain and the world was the richer for what spilled over.

MORE NON-PROJECT AID PLEDGED

AS *Capital* goes to press this week, an announcement from Washington confirms that the Aid-India Club meeting ended on Tuesday, with members agreeing to provide India \$1,028 million—only slightly less than what she had asked for. Half of the total will be available, it is stated, as non-project aid, against only 40 percent last year. This should indeed help to give industrial production a boost by bringing more capacity into use with a larger inflow of industrial raw materials and components. While most members have maintained their pledges at the level of 1963, Canada has increased hers and Italy has cut her contribution. Belgium seems to have dropped out altogether from this year's list. This is no great loss since it has not been possible to use anything out of the \$20 million pledged by that country in the past two years. Satisfactory as this may be, one cannot miss the growing disenchantment among the aid-givers with India's economic performance. At the start of the third plan, India estimated the gap between her exchange earnings and her import requirements at Rs. 2,650 crores. Adding to this the Rs. 550 crores of repayment liabilities, the total deficit was put at Rs. 3,200 crores. Aid so far, excluding the pledges made this week, has been of the order of Rs. 2,366 crores, confirming that the expectations of external assistance implicit in the third plan are being met. But the promise of the plan is far from being fulfilled, the average growth rate being only 2½ percent a year so far, against a target of 6 percent adopted for budgeting resources, both internal and external. This wide gap between promise and performance inevitably raises doubts in the aid-givers' minds about India's ability to put their assistance to good use. From asking this to questioning the structural consistency of Indian planning is but a short step, and one that some of the donors have already taken.

It was expected that the Washington meeting would—while agreeing to extend support on the scale requested by India—also ask her to agree to an independent investigation of her achievements in some detail by the World Bank. The Bank already makes an annual report on the state of the economy, but this is a broad survey touching only upon the major policy issues. This is held to be insufficient to uncover the handicaps suffered by the economy at the "grass roots" level. India has been reluctant to allow such probing in depth, not only because this may abridge her freedom of action in domestic policy-making but also because of the embarrassment that may be caused to the ruling Party's concept of non-alignment if it should seem to give in to Western pressure in this matter. These objections, whatever their merit, are unlikely to be sustained. Had Indian performance been more satisfactory, she might have got away without submitting to an inquisition. But the chances are now fairly slim as New Delhi privately concedes.

A moral attitude based on an abstract principle like sovereignty is unlikely to help, however much one may cherish the old-fashioned notion of being master in one's own house. The truth, hard though it may be, is that India is dependent on external support for as much as a quarter of the total investment proposed in the third plan. This support cannot be claimed as a matter of right but only by an appeal to both the conscience and self-interest of the aid-giving nations. That this appeal may need reinforcing by proof of the use to which past help has been put is a common sense proposition even though it may hurt some sensitive egos. The same sort of logic requires India to establish, not only to her own satisfaction but also to that of the aid-givers, that the plans she is making for the future meet the test of prudence. This reference to the future is made the more necessary by the fact that India is seeking help not only for the needs arising out of the current plan but also for advance action on some aspects of the fourth plan. In sum, any concern shown by donor nations about the past or the future cannot be dismissed out of hand, especially after two years of very disappointing growth.

This concern, even if expressed somewhat more searchingly than in the past, need not alarm anyone unduly, not even redoubtable leftists.

The Western aid-givers and their collective agency, the World Bank, have no doubt an unmistakable preference for private enterprise. This is implicit in the Bank's lending policies which jib at supporting the public sector. The Bank's limitations are less a reflection of the general tenor of Western thinking than of its own special circumstances. Outside of the United States, State enterprise does not necessarily evoke feelings of outrage. It is, by and large, conceded that there may be many situations in which the State may need to intervene in industry, as for instance in the case of Renault in France, E.N.I. in Italy and the National Coal Board in the U.K. In developing countries where local entrepreneurs may lack resources for the large investments required in highly capital-intensive industries, their rôle may well need to be supplemented by the State—an argument which made sense outside of the extremist fringe even in the U.S.A. when advanced by Mr. J.R.D. Tata in relation to a Government-owned Bokaro. There is no reason, therefore, to assume that the Indian policy demarcating the areas of State and private enterprise will be somehow subverted if she permits the donor nations to take a closer look at the economy's working. This is not to say that the policy can remain frozen for all time to come; shifts may well be necessary—as has happened in the case of oil—to adjust to changing circumstances. In any case, the enquiry that the Aid-India Club wishes to make will have less to do with ideology as reflected in the ownership of enterprise than with the concrete results produced by it. The object will presumably be to make sure of the structural consistency of Indian planning in terms of material and other balances. The uneasiness felt abroad about the priority given to agriculture during the second plan illustrates the kind of problems about which the donors want to satisfy themselves. They have seen for themselves how imbalance between the starting and finishing ends in industry has sent India's maintenance import requirements soaring. Before committing themselves to continuing support to India over the next five-year period, they will indeed need to be reassured that every effort

is being made to co-ordinate and dovetail the development in related spheres.

The contemplated exercise need not be anything more than technical in character. Yet even a technical enquiry may well have policy side-lights as when concern over the slow rate of progress in fertilisers obliged the World Bank to take a look at pricing and distribution arrangements. Or again, a hard-headed appraisal of the steel programme may suggest that foreign exchange liabilities on account of new capacity may be reduced by allowing existing units to expand on a larger scale than now envisaged. If this short-run solution was commended to India's attention, it would not be because the two private plants would benefit but because it made sense in the immediate context of reducing the strain to which India would expose herself if a different split between expansion and new capacity was adopted. Policy implications such as this stemming from an objective enquiry into planning may not be wholly avoidable, nor for that matter the political debate this will almost certainly touch off.

Even so, India's interests need in no way be jeopardised. After all, the U.S. feasibility study on Bokaro only went to confirm the need for such a plant and to strengthen India's case for assistance in building it. Likewise, the discreet promptings of the World Bank in the matter of prices and other controls have not only done no harm but a great deal of good by persuading New Delhi's policy-makers to take a fresh look at issues on which their judgment was getting warped by the weight of old habits and prejudices. In fact, an outside verdict may even be helpful to New Delhi in getting wider agreement on matters like the rates for power or railway freights or touchy problems like industrial location. These advantages are, of course, only incidental, the main purpose remaining as before to provide evidence of India's capacity to absorb aid. The more convincing it is, the better should be the aid prospects. Not even the wildest of New Delhi's planners foresee any possibility of doing without aid for at least another ten years. It may well take longer if progress falters for lack of support in the interim period—a fact of life which should determine India's response to the Aid-India Club's wishes.

SODA ASH NEEDS PROTECTION

THE soda ash industry has made rapid progress since 1949 when it first came under the protective umbrella, and the progress has been particularly marked in recent years. From just 17,918 tonnes in 1949, the production of soda ash reached 148,216 tonnes in 1961 and rose further to 234,533 tonnes in 1963. The figure for the first quarter of this year is still better, being around 64,353 tonnes. The annual rated capacity of the four existing units—Tata Chemicals, Dhrangadhra Chemical, Saurashtra Chemicals and Sahu Chemicals—increased from 239,000 tonnes in 1961 to 279,000 tonnes in 1963 and, according to the Director General of Technical Development, their total capacity will rise to 352,000 tonnes in 1965, 402,000 tonnes in 1966 and 422,000 tonnes in 1967. In addition, E.I.D.-Parry proposes to set up a unit in Madras with a daily capacity of 200 tonnes with Japanese collaboration. Bigger indigenous production has led to a substantial saving in foreign exchange. Imports declined from 49,235 tonnes valued at Rs. 93.04 lakhs in 1961 to 14,585 tonnes valued at Rs. 25.56 lakhs in 1963. Manufacturers of soda ash do not expect the gap between demand and supply to be big in the immediate future, and they have estimated it around 21,000 tonnes in 1965 and 17,000 tonnes in 1966. The Alkali Manufacturers Association, which represents the four existing units, has suggested to the Tariff Commission, that protection may be discontinued from January 1965. This suggestion has been made on the ground that the industry is already enjoying a substantial measure of protection through the operation of import control and that there is no likelihood of a relaxation of these restrictions in the foreseeable future. Secondly, indigenous production has been increasing at a rapid rate and there is a prospect of achieving self-sufficiency in the near future. Furthermore, the State Trading Corporation, which is

importing soda ash, has been selling it at market rates which naturally acts as a protection.

The Tariff Commission is not impressed with the industry's plea for withdrawing protection, and for very weighty reasons. The purpose of protection is to regulate the supply of a commodity in relation to output and offtake and to find out its impact on domestic prices and consumers. Domestic production and imports should be equal to domestic consumption. If this is not the case and demand remains unsatisfied leading to high internal prices, then the plea for removing protection loses much of its logic. The manufacturers have themselves pointed out that even during the next three years, the industry would be unable to meet the demand and that imports would be necessary to relieve the shortage. Rejecting the demand estimates made by the manufacturers as being low, the Tariff Commission has put the demand at 401,770 tonnes in 1964, 417,500 tonnes in 1965, 494,620 tonnes in 1966 and 538,570 tonnes in 1967. These projections are said to have been based on the estimates given by the consuming industries. The chairman of the Tariff Commission, Mr. K. R. P. Aiyangar, says that there is no indication of the industry having reached a stage when it could discharge its responsibility safely to the satisfaction of consumers. While complaints about quality are few, the price of soda ash in India is about the highest in the world. Is the industry in a position to say confidently that even in the face of stiff competition in the event of de-protection, it will be able to expand steadily, increase production, reduce costs and meet the demand adequately at reasonable prices? This is the question which has been posed by the chairman of the Tariff Commission. And there seems little doubt that in the present stage of its development, the industry is not

in a position to stand on its own legs and face the challenging conditions of a free market.

The industry's request for discontinuance of protection appears rather odd when the output of soda ash is still inadequate and production costs and selling prices are very high. As for prices, it is perhaps necessary to point out that Government levies alone account for some 35 percent of the

Current News and Comment

F.I.C.C.I. Criticises Tax Policy

Stung by the criticisms heaped upon business and industry at the recent session of the All-India Congress Committee in Bombay, the Federation of Indian Chambers of Commerce and Industry has now replied in kind. It squarely puts the blame for the slow-down in the tempo of development on the Government's misconceived policies, and goes on to reiterate its disappointment with the last Budget. The Central Finance Minister, Mr. T. T. Krishnamachari, may have his own private reservations about some of these policies, but the verdict on the Budget is not going to please him at all. Reports from New Delhi suggest that the Finance Minister has been looking forward to some appreciation of his rôle as an objective arbiter between the "haves" and "have-nots". It seems to have surprised him that his Budget should have touched off vehement reactions, particularly from business men. This accounts, it is said, for his sullen refusal to take any notice of the behaviour of the stock markets or of general business sentiment. One hopes, however, that he will not let this initial disappointment cloud his judgment too long. As Mr. Krishnamachari himself said in his Budget speech, the central task is to infuse confidence among investors. If he has not succeeded at the first Sally, it only shows that the task to which he addressed himself was formidable, thanks to the legacy left by his predecessor. It might well be that he feels inhibited in making a bigger effort by the unpropitious political climate. If so, the answer now lies not in picking on business men for their failure to respond to budgetary gestures, but in educating the Party to recognise the seriousness of the economic situation.

Mr. Krishnamachari cannot tackle the Party single-handed, certainly not after the sessions in Bhubaneswar and Bombay where other members of the top leadership chose silence as the easy way out when faced with the demagoguery of the left. But unless the shrill voices are countered by a firm and clear-cut declaration of policy, there is every danger of their growing more strident and nagging. In the circumstances, there is no time to be lost by the Congress Working Committee in reaching some definite conclusions about the Party's future economic policies.

The Federation has quite rightly pinpointed the unfairness of blaming the price rises on traders alone, quite ignoring the levels of production and the increases attributable directly to the Government's own actions. Indirect taxes, F.I.C.C.I. claims, constitute 30 percent to 50 percent of the final price of several important commodities and are, therefore, a primary factor in the present inflationary situation. But if the resources gained by the Government through these levies on consumption were being more fruitfully used, one might have hoped for some relief in the long term—the relief that increased production would automatically bring by easing shortages. Unfortunately, however, investment trends hold out no such promise. More over, whatever investment is offering cannot be put to work either quickly or effectively because of official restraints. It is in this context that F.I.C.C.I. draws attention to the delays in licensing and to the "ideology" determining the distribution of responsibility between the private and public sectors on the one hand, and between small and large units on the other.

Mr. Krishnamachari has quite sensibly shown himself aware of the need for foreign investment to accelerate the economy's growth. But this investment cannot materialise unless the rupee component can be furnished by indigenous entrepreneurs. If the resources of the private sector are squeezed by high taxation, it cannot possibly

total cost of production. Expansion of the plants to the optimum capacity, efficient plant management, setting up of ancillary industrial units, utilisation of distillation wastes, economy in fuel consumption by use of dry lime, reduction in costs of transport and lowering of Government levies—all these seem necessary if the cost of production is to be reduced appreciably.

fulfil its rôle in joint ventures even if the official lending agencies help it. This is a truth which the Finance Minister fails to see because of the erroneous belief that new institutions like the Unit Trust can be relied upon to close the gap. The Trust can indeed play a valuable supplementary rôle, but cannot replace the private investor in a mixed economy. As F.I.C.C.I. says, the investor has little reason left to put his money in risk-bearing ventures because the rewards he may expect are undermined by multiple taxes. More than that, his faith in the future is being eroded by the frequent and far-reaching changes in fiscal concepts which have "almost every time gone against the tax-payers." And aggravating it all are the intemperate tirades against private enterprise in the Congress Party which the top leaders are doing little to discourage.

Reactions of U.S. Investors

It was fairly evident, even before last month's visit by a 40-man business delegation from the U.S.A. that investment opportunities in India are beginning to interest the larger American corporations. After all India is a very large market even if the bulk of her 450 million people still live at subsistence level. However halting the pace of development, the needs of plant, equipment and intermediate goods thrown up by planning are large enough to warrant giving India more than casual attention. That apart, India can perhaps provide a base for marketing to neighbours in Africa and Asia because she is better placed than most others in possessing industrial facilities like power and transport on the one hand, and skilled manpower on the other. But these attractions notwithstanding, the American investor is still inclined to temper his interest in India with serious reservations on several counts. This hard fact was somewhat obscured in the exchange of polite compliments during the U.S. business delegation's visit last month, but is brought once again to the fore by the ten-point memorandum which the visitors discreetly submitted to the Finance Ministry after their stay. The ten points do not, of course, provide anything like a full picture of the American investor's attitude, but their general tenor is unmistakable. Any doubts that remain should be cleared up by the conference which is shortly to be held in New York. On this occasion, which is to bring together the visitors to India and others interested in this market, discussion will be free and unfettered by the restraints imposed by the politeness customary among guests and hosts.

The ten-point memorandum starts off with the demand that the return earned on Indian investments should be comparable to what U.S. capital can obtain in other similarly placed countries. This is, of course, a demand common to all investors everywhere, and one which New Delhi regards as already met. In support of its view, New Delhi produces comparative figures of profitability which show India in a favourable light. For the argument to proceed any further, it is necessary to find out what the Americans think of these comparisons—an aspect on which the New York meeting should yield some information. In the meantime, one can only generalise that the level of current profitability is not always decisive, especially in the case of a country in which the tax structure is subject to frequent and violent changes. As for depreciation and dividend practices permitted by tax laws, the Americans specifically ask for "freedom" to reinvest locally for expansion and technological and quality improvements. Whereas improvements may not present a problem, freedom to expand may seem more difficult to concede be-

cause industrial capacity is something which New Delhi likes to determine in terms of plan priorities. Yet, when one considers the rate at which the Indian market is growing, expansion is almost axiomatic, more so in the key sectors for which foreign investment is being sought. Therefore, there need not be any serious hitch in meeting this demand in practice, even if theories dear to New Delhi's planners suggest otherwise.

Accommodation may prove far more difficult when the Americans ask for freedom to select raw material sources and to invest in distribution facilities alongside manufacture. In oil, where both these issues are of particular importance, Indian policy is moving in just the opposite direction. Any reversal of this would be open to serious political risks at home, quite apart from the economic considerations which oblige India to seek to retain control in both the fields. But even in these two areas an understanding may still be possible on the basis of a recognition of mutual handicaps. An example of this is provided by the Cochín refinery where the collaborator, Phillips Petroleum, has been given freedom to choose the source of crude, with marketing retained in Indian hands. An understanding should also be possible on the tricky question of foreign personnel. India, like other developing countries, wants her own citizens to benefit from the employment opportunities arising from collaboration ventures, but she should also be prepared to respect the investor's sentiment in wanting to retain a number of his own nationals to look after his interests. This is a matter on which no hard-and-fast rules can be laid down because requirements vary greatly from industry to industry. Indian policy has been fairly flexible and reasonable requests have usually been met. In the circumstances, the demand made by the Americans in this matter reflects less an irritation with the policy as such than with the tardiness in its implementation. If delays in sanctions were less than is now the case, this particular irritant could be readily eliminated.

Investing Life Funds

The chairman of the Life Insurance Corporation of India, Mr. B. K. Kaul, has been criticised by responsible opinion in the country for the L.I.C. declaring low bonus rates. The latter have obviously been the result of low interest yields on investments and the L.I.C.'s higher operating expenses. Mr. Kaul recently said that the benefits of favourable experience should be passed on to policyholders in the form of reversionary bonuses rather than in the form of a reduction in premium rates. Yet in the last valuation of the L.I.C., he did not fully implement this assurance. Analysing the root causes of the failure, he wrote to the chairman of the Planning Commission with refreshing candour and commendable forthrightness. Mr. Kaul's main complaint is that the I.F.C. and similar other institutions seek to raise medium-term loans at low rates in the hope of forcing them down the throat of the L.I.C. Many of these loans are quoted at a substantial discount even before the lists open. While these institutions charge interest rates at 7 percent or 7½ percent, they expect the L.I.C. to finance them at 4½ percent.

As long as life insurance is voluntary, the volume of business, the chairman said, could be increased only if the L.I.C. could show better working results year after year. Unless it can show that a with-profit endowment insurance policy is a good investment proposition, it cannot make a large impact on the masses. The L.I.C., the chairman added, had always been putting greater emphasis on its responsibilities to policyholders. The interests of the institution and policyholders will suffer if its working is not profitable. So its earnings from investments must be reasonable and adequate. The impression in Parliament and in the Government that the funds of the L.I.C. are to be treated as a reservoir for providing cheap credit to Government and semi-Government institutions, who in turn would earn higher interest rates on credits provided by them out of the funds obtained from the L.I.C., should be removed for the good of the L.I.C. and its policyholders.

While the I.F.C., the various State Financial Corporations and the central land mortgage banks

are charging a high rate of interest (as much as 7 percent to 7½ percent), it is odd that they should expect the L.I.C. to provide them with funds at a much lower rate of interest. A distorted view of the rôle of nationalised life insurance persists among these institutions, and they expect, as a matter of right, to draw funds from the L.I.C. at cheap rates as if the latter is merely a purveyor of cheap credit and has no obligations to the policyholders.

It has also been argued that the L.I.C. should not go about purchasing shares of private companies and thus lend support to the stock exchanges. They expect it to support new capital issues, particularly those which are not likely to get adequate public support. According to Mr. Kaul, the L.I.C. is not interested in supporting the stock exchanges. It is only interested in seeking a more satisfactory and progressive yield on its investments. Any other effect that its actions may produce are purely incidental.

Falling Profit Margins

The latest reports of some leading companies have shown bigger output and increased sales, but they have failed to restore investors' confidence. Apart from the harmful effects of the tax on dividends and the capital gains tax on bonus shares, the worry of the investors has centred on two main factors. Firstly, trading profits have not risen in proportion to increased sales since the margin of profit has been squeezed by higher production costs. Secondly, there has been growing discontent among workers due to the rising cost of living. It is, therefore, apprehended that there may be increased pressure from labour for higher emoluments.

Against this background of uncertainty, the analysis of the finances of 524 medium and large-sized public limited companies, which closed their accounts during the two quarters ended March 1963 and June 1963, made in the April issue of the *Reserve Bank of India Bulletin* is interesting. In terms of paid-up capital, these 524 companies account for about 41 percent of the non-Government and non-financial public limited companies sector. Companies belonging to sugar, cotton textiles, jute textiles, iron and steel, engineering, chemical and paper account for nearly 64 percent of the paid-up capital of the 524 companies. The analysis shows a higher growth rate in production and sales which stand at 9.3 percent and 10.1 percent, compared with 4.6 percent and 6.9 percent for the corresponding quarters of 1962. The pre-tax profits also show a higher rate of growth at 19.8 percent, compared with 4 percent. Since the tax provision has increased only fractionally, the profits-after-tax have risen by 19.3 percent. It is striking that the entire increase in the profits-after-tax has been absorbed by retained profits. In fact, the dividends have been reduced from Rs. 37.2 crores to Rs. 36.9 crores. The growth of gross fixed assets has been higher at 9.6 percent, against 8.6 percent. Internal sources have provided the bulk of the total funds for financing the assets formation, although their share has declined from 66.3 percent to 55.6 percent.

The main industrial groups, however, show divergent trends. There has been a striking increase of Rs. 12.4 crores in the profits-before-tax and of Rs. 8.7 crores in the profits-after-tax of the jute companies during 1962-63. The jute industry enjoyed prosperity partly due to a plentiful supply of fibre and partly because of the increased demand for jute goods from overseas countries. The profits-before-tax of iron and steel companies have risen by Rs. 4.5 crores, those of engineering companies by Rs. 4.2 crores and those of chemical companies by Rs. 1.9 crores. The profits-before-tax of cotton textile group have dropped from Rs. 17.8 crores to Rs. 9.9 crores largely due to increased labour emoluments.

It may be relevant to point out that of the internal sources which have largely contributed to financing the assets formation of the 524 companies, nearly 54 percent have come from depreciation provision alone. Reserves and surpluses have also risen to 35 percent of the total internal resources, compared with 26 percent. Among the external sources of finance, borrowings, mainly from banks, have provided Rs. 39.2 crores and have constituted about 49 percent of the total

external funds. Fresh issues of share capital have contributed a sum of Rs. 12.4 crores.

Progress of the Farakka Barrage

The West Bengal Government made repeated representations to the Centre for the construction of the Farakka barrage, mainly to provide a solution to the constant silting of the Hooghly which affects the navigability of the river. The decision to construct the barrage was delayed because of the Centre's apathy and Pakistan's protest that the irrigation system in parts of East Pakistan adjoining the barrage would suffer due to the inadequate flow of water. This controversial phase of the project passed into history after Parliament took a firm decision in 1961 to construct the barrage at an estimated cost of Rs. 70 crores. The decision was taken not only to improve the navigability of the Hooghly but also to improve transport facilities between West Bengal and other parts of the country. The project envisages the construction of a barrage across the Bhagirathi and a 26-mile feeder canal to divert the waters of the Ganges into the Bhagirathi. Situated 120 miles up the Hooghly, Calcutta port handles well over 40 percent of the country's exports and caters to the needs of a rapidly growing hinterland. Constant dredging to improve the drafts of the river is not a permanent solution. Silting delays the turnaround of ships which, for cargo vessels, means an increase in costs. Furthermore, due to poor drafts, ships have to go in and out of the port with less cargo necessitating the use of a large number of vessels.

Although a firm decision to construct the barrage was taken three years ago, its progress has suffered due to a number of administrative and practical difficulties. It will be recalled that after assuming office, Dr. K. L. Rao, Central Minister for Irrigation and Power, criticised the then Chief Engineer for its slow progress, and the project is now being implemented by a new Chief Engineer. The meeting of the Farakka Control Board held last week has recommended the widening of the road on the barrage to take four-lane traffic instead of two lanes as proposed earlier. The members hold the view that the change in the design of the barrage should be made in such a way that it does not upset the present construction schedule. A thermal power station capable of generating 3,000 kilowatts will be commissioned shortly to provide power for construction work. There is also a possibility of obtaining more power from the West Bengal State Electricity Board. The West Bengal Irrigation Minister, Mr. S. Bhattacharyya, said recently that the progress of the project would have been satisfactory had the project authorities been able to obtain Rs. 8 crores of free foreign exchange to import sheet piles and other equipment needed for excavation work. The equipment needed for the project have so far been imported from the U.S.A. and the U.K.

Meanwhile, because of changes in the plan, the cost of the project is likely to be higher than the earlier estimate of Rs. 70 crores. A final estimate of the cost will be prepared in the light of the changes made in the plan, and it is expected to be made public shortly. The Central Irrigation and Power Minister, Dr. K. L. Rao, who is an engineer himself, is trying to reduce the cost by effecting some changes in the design of cofferdams in order to economise on the use of special steel, which has to be imported. A final decision will be taken when the Minister's proposal is discussed at a meeting of technical experts in New Delhi shortly.

Rice Scarcity in West Bengal

A few weeks ago, rice prices in West Bengal, especially in Calcutta and its neighbourhood, began to shoot above the rates fixed by the State Government. For the better grades, the rise amounted to as much as 20 percent or 25 percent. The Government tried to bring prices down, first, by an empty threat—that it would nationalise the wholesale trade if the merchants did not behave. Secondly, it ordered the police to raid wholesalers' godowns to unearth hoarded stocks. Lastly, it asked its Food Department officials to procure

rice from the surplus districts. As information is scanty and the various reports emanating from official sources conflict with one another, there is no way of assessing the results which these measures have achieved. But rice prices in the open market have not yet fallen. What is worse, the commodity is not available in many of the city's markets. At one time, it was reported that the State Government had 150,000 tons of rice and a much larger quantity of wheat in stock, which it proposed to release in June or July. Now official sources neither deny nor confirm this. However, the Central Government's Regional Director of Food stationed in Calcutta claims that he has enough reserve stocks of wheat to meet West Bengal's requirements.

From this week, the State Government has doubled rice supplies to 1,600 ration shops in the Greater Calcutta area, to cover two million people. These shops will get 2,000 tons of rice a week. Even assuming that they are able to serve two million people efficiently, the remaining four million will be left to fend for themselves. The Government, according to Press reports, is considering a proposal to send a consumer to jail if he pays more for his rice than the rates fixed officially. The measure will make sense only if adequate supplies are available on the open market but there is no such assurance yet. In fact, retailers are complaining that they are unable to get rice from wholesalers at officially fixed rates. The Government believes that the latter have sufficient stocks to feed Calcutta's population for a few months, but are creating difficulties in order to defeat its anti-profiteering measures. It is, therefore, considering a scheme under which each wholesaler will be "tagged" to particular groups of retailers, so that he cannot evade the official measures. The wholesalers are now blaming the mills for not maintaining supplies. The mills in turn complain that *jotedars* (rice producers and stockists in villages) are not selling paddy to them at the officially fixed rates. The Government is apparently clueless as to where the root of the trouble lies. Meanwhile, more and more areas in the city are complaining that rice is disappearing from the shops.

PRINCIPLES OF INSURANCE

A SHORT discussion of the main principles underlying the theoretical side of Life Insurance may be found useful to the Indian public. At present this view of the problem would appear to have been left severely alone in the East, and whilst in England, Australia and Canada it has received recognition, it may generally be said that in India it is wrapped in the mystery of the unknown. One hears daily that a Company charges certain rates of premium—which may, or may not, compare favourably with those charged by its competitors—that it values on a particular basis; that it earns a certain rate of interest on its funds; that its "Expenses of Management" are such-and-such a percentage of its premium income; that its claims for any particular year are above, or below, the "Expected Claims" for that year, etc. etc., but how one, or all, of the matters affect its position and prospects can only be determined by a knowledge of the fundamental principles underlying actuarial science. It is, therefore, proposed to deal in an elementary way with one or two of these principles. The most important question undoubtedly is how to determine the security offered by a Company for the fulfilment of its contracts. After this we may consider the return to a Policyholder in the shape of Profits and how such Profits are earned by the Company. Finally, it is proposed to deal with the position of the contracting parties, i.e., the Company and the Policyholder in the event of the latter cancelling the contract. Dealing then with the question of Securities, it may first be mentioned that Life Insurance Companies are mainly divided into two classes termed "Proprietary" and "Mutual". In the former case the Share Capital is held by Proprietors, who receive a proportion of the Profits earned by the Company and in return guarantee the fulfilment of the contracts. In the case of "Mutual" Companies there are no shareholders, the whole of the Profits being distributed amongst the Policyholders entitled to participate.

A Ditcher's Diary

LAST WEEK'S HARTAL PROVIDED BOTH AUTHORITY AND the sponsors with an opportunity of self-congratulation. The trade unionists thought the affair was a grand success; and the Government thought the *hartal* was a total failure for the Opposition and an equal success for the Calcutta Police who, for the first time in years, made some effort to keep public transport moving in selected areas. The truth of the matter, I think, is that, although the city was not exactly dead, not much work was done in most offices. Enough was, though, to impress it upon the Opposition that a strike call is no longer the sure thing it used to be. Proportionately, the Government may have gained a little confidence in itself; on future occasions it may not look quite so helpless against a general strike as it used to until the last *hartal*. Weapons like a general strike are subject to the law of diminishing returns, as the political Parties should begin to realise. But what is the Opposition to do? The Government's failure to check the rise in prices is obvious; although another *hartal* was definitely not the best way of drawing the Government's attention to widespread distress, the Opposition was right to be concerned. Rather cleverly, I thought, the Government made the question stand on its head; it was not a question of rising prices, it was argued, but whether the public would submit to intimidation, for that is what it would amount to if people stayed away from work simply because a handful of politically-motivated men had asked them to. Talking to a policeman or two, I get the impression that the Calcutta Police are beginning to find ways of meeting the challenge of strikers. The first thing, it seems to me, is massive preventive arrests of all known trouble-makers. Legality of these arrests? Doubtful, except perhaps under D.I.R. It will be a good thing if Calcutta is spared the periodic paralysis of its life through strikes. It will be less good if the Administration displays no greater respect for the law than—the alleged law-breakers under preventive detention.

EVERY TIME I READ ABOUT MR. CHAVAN AND his "shopping list" in Washington, I picture him as a matronly American housewife who has walked into a supermarket to buy some tinned, sorry, canned food, some veg, some milk and perhaps a joint for Sunday. The pleasant vision doesn't last, for I am soon made aware that the Defence Minister is in the U.S.A. to buy, beg or borrow—not steal, I hope—things the primary purpose of which is to kill people. It will be argued, I know, that India wants F-104 supersonic fighter aircraft only to defend the cities in the plains

against hostile air raids. I am all for modernising the Indian army; the deficiencies discovered since the Chinese attack must be made good. Yet one would like to see evidence of a little more balance; something more of a sense of proportion. Having once neglected modernisation during the Menon years, India may now be picking up any kind of military hardware she may lay her hands on. "Hardware"—another harmless-looking word, like "shopping list". How inhuman we've all become! The other day a friend asked me, in jest, of course: "When do you think we'll be buying hydrogen bombs at Woolworths?" No pacifist by any means, I am still not amused at the casual mention of fearful weapons of mass destruction. The worst the Chinese have done to us is that we are fast becoming somewhat insensitive about the meaning and means of war. At least one Calcutta daily deplores India's repeated proclamation that she has no intention of making atom bombs. She may be forced to one day; I don't know any more than anyone else; but to view the prospect with unconcealed glee seems to me a dangerous trend. While I wish the Chavan mission nothing but success, I think it's already time to beware of the inevitable psychological change that will come over the country through its possession of dreadful weapons. Those who are advocating acquisition of these are the very people who will soon find excuses for demanding their use. A painful necessity all too easily converts itself into a positive virtue; neither alcohol nor hashish has half the intoxicating potency of gunpowder.

THINGS GET CURIOSER AND CURIOSER IN BURMA; and the first to be kicked or pushed around seem Indians. It is often said that the Commonwealth connection means less and less. Maybe; but, negatively, not being a member can mean a lot. If I remember, Brian Crozier in his *The Morning After* showed that Burma is among the countries in which the *per capita* income has actually gone down since independence. Severance from the Commonwealth is not the only or even the main reason for the political and economic chaos that has overtaken Burma. It seems tenable still that disassociation from former friends left the country with a sense of loneliness and without any norms of political behaviour. Like Mussolini once making the Italian trains run to time, General Ne Win was once praised for cleaning up the city of Rangoon. Whatever the value of his scavenging success, which is municipal, politically he seems to have accumulated an enormous heap of rubbish. He seized power from U Nu and then set up a record by handing back the Government to elected politicians. Then he came

back again, which is closer to the pattern evolved through history by ambitious soldiers. The reason for the withdrawal from power, I then thought, was that, while cleaning up the civil administration, the army found that it was acquiring all the vices of corruption and worse from the set-up superseded. Since then all sorts of economic activities have been taken over by the State, resulting in a total standstill in most fields. Then came the fantastic demonetisation, freezing virtually half the currency in circulation. Not only have all political freedoms disappeared under the dictatorship; there is actual distress. And Burma one remembers as a country where people were genuinely happy. The population is small; there's plenty of land; there's no dearth of rice. What else does a simple people want? In ruining this happy state of affairs General Ne Win's record seems to match only Dr. Soekarno's in Indonesia. I do not like people who look back nostalgically on the bygone British days. About Burma, I am beginning to wonder.

IT WAS NOT SURPRISING THAT MR. RUSK SHOULD have found it so difficult to convince the United States' N.A.T.O. allies that trade with Cuba is the ultimate in political sin. It is characteristic of the Americans, of course, to approach all international problems with the simple-minded, black-white attitude of a revivalist preacher. But one would have thought that even they might by now have grasped the fact that substantial material inducements are much more efficacious among nations than appeals to either morals or logic. The point holds especially true in this case, because there is scarcely one among the allies concerned whose own national interests are not now, or have not recently been, embarrassed by policies which the United States is pursuing for reasons of her own. Take Britain, for instance. Both the Prime Minister and the leader of the Opposition have agreed that Aden must be retained. Yet the threat from an Egyptian puppet régime in the Yemen is being sustained not only by Russian arms, but by U.S. aid to President Nasser as well. What would be the effect on U.S. opinion, I wonder, if Britain were to offer aid to Cuba besides trade? Similar is the case of Indonesia, which is not only threatening British interests, but is also relying on American aid for maintaining pressure on Malaysia, a country also linked by treaty with the United States. France, too, could point to several instances during the past few years when American money has bought the bullets used to kill Frenchmen, while Holland and Portugal are both still simmering over recent U.S. disregard for what they consider, rightly or wrongly, to be their legitimate and inalienable national interests. Why, then, should such countries inconvenience themselves over a matter which, however much the Americans attempt to represent it as part of the international struggle against communism in which all free countries have a moral obligation to participate, nevertheless appears to everybody else as a straightfor-

THE DITCHER

ward national conflict, and a not very edifying one at that? I would suggest that if the Americans want to dissuade their allies from trading with Cuba they should attempt to do so as part of a comprehensive agreement on trade and aid to communist Powers generally, in which the forfeiture of national interest on their part is at least as great as that demanded of the others. They might find the response more enthusiastic than they think.

LIKE MANY READERS WHO STILL CANNOT MAKE up their minds which Party is going to win Britain's coming general election, I have been studying rather carefully the results of the recent contests at Devizes, Winchester, Rutherglen and Bury St. Edmunds. And I must confess I am every bit as undecided as I was before. Certainly the Conservatives have done better than expected. But this often happens when a Party's star has been in eclipse for some time, and if I were Mr. Wilson I would not be particularly worried about it. What would bother me is the continued evidence it appears to provide that the Liberal Party is still regarded with such profound distrust by the majority of the electorate. Personally I am sorry it should be so. Liberalism is far more representative of enlightened, left-inclined opinion than is socialism, which tends to perpetuate there, as elsewhere, an outmoded class delineation that is extremely destructive of progress in a modern society. The Liberal Party, in fact, appears to be the victim of a general determination to hold on to class line-ups long after they have become obsolete. I have been wondering why this should be so, unless it is that in an increasingly complicated and fast-moving world the idea of belonging to one class or another provides some much-needed emotional security. It could even be a sort of modern substitute for the decline of family life which has been taking place in Britain and western Europe over the past few decades. But whatever it is, the truth has to be admitted that the Liberal Party, originally sectional rather than class-based, is falling between two modern class stools. I hope it will not fall so far that it ceases to exist altogether. There must be a place for it, I feel, when class in Britain eventually succumbs to the social changes which, or so we are told, are inevitably going to be induced by automation and the application of scientific technology to industry.

Othello, like *Hamlet*, is a play where dramatic reputations are destroyed more often than they are built. Yet such is the fascination of the two Shakespearean tragedies that no theatre group, however ill-equipped, seems to find satisfaction until it has staged them, with results that are not always happy. Frankly, when the Dramatic Club of Calcutta announced the choice of *Othello* as its contribution to the Shakespeare festival, I had my misgivings. But it is a genuine pleasure to be able to say that the D.C.C. gave an excellent performance at the New Empire last week. It had obviously worked hard, and, more important, found the right talent for such difficult rôles as those of Othello and Iago. Much of the credit for the success, however, goes to Xerxes Mehta for his brilliant production. I particularly liked his effort to find an inner meaning to the drama through the "fall of man" approach, as against the commonplace explanation of Othello's personal tragedy as being the result of the vicious intrigues of a cunning slanderer. If Colin Paterson did not act like a victorious warrior in the first half of the play, it was in keeping with Xerxes Mehta's interpretation of his rôle as a noble soul who went down before the evil forces of Venetian society—a society whose values had been challenged by the rise of the Moot. Apart from Colin Paterson's moving and dignified portrayal of Othello, Pat Scott was well suited to the rôle of Desdemona, the high-born gentle beauty, the scenes as the tragedy approached its climax were particularly well done. Dick Rodger was competent as the villain and Sheila Maunde was excellent as Emilia, her performance in the final scene of the murder scene truly sparkling. Not often in Calcutta are Shakespearean plays produced with competence and imagination. The D.C.C. is to be congratulated on having made perhaps the finest of the local contributions to the celebration of the quatercentenary.

Guide for Investors

HIGHER DIVIDEND FROM BRAITHWAITE

BRAITHWAITE and Co. (India) Ltd has done well for 1963. Production reached 28,569 tons which is the highest output achieved so far by the Company. The profit has improved by Rs. 18 lakhs to Rs. 1.24 crores, after providing Rs. 14.19 lakhs for depreciation and Rs. 7.03 lakhs for development rebate reserve. Taxation has, however, absorbed 79.21 lakhs out of which surtax on profits has amounted to Rs. 17 lakhs. Taxation has thus absorbed more than 63 percent of the profit. The taxable ordinary dividend has been increased from 14 percent to 20 percent, leaving a sum of Rs. 21½ lakhs for transfer to reserve.

Commenting on the prospect for the current year in his chairman's statement at the annual general meeting of the Company recently held in Calcutta, Mr. J. V. Jardine Paterson mentioned that the works should produce more than in 1963 due to the improved supplies of raw materials. (Fuller details have been printed on a later page in this issue of *Capital*.) As for the Angus works, turnover for 1963 was double that of 1962. The works has earned a small net profit. The order-book is well filled, and in view of the competitive prices for electric overhead travelling cranes quoted by the Company, more orders are expected. The loan agreements have been completed. Import licences have been received and orders for machinery have been placed. The machinery will arrive within the next 12 months. Considering that the supply of electric power early next year has been assured, there should be no delay in bringing the new equipment into operation. The directors are now considering the next phase of the expansion programme which will follow the completion of the first phase.

The export of pressed-steel tanks to Malaya has improved, but exports to other countries have been disappointing. Although the prospect of exporting to Hongkong is better, it may be difficult to sell products to Burma and Thailand. Efforts are, nevertheless, being made to develop export business. Although the decline in output during April and May 1964 following the shortage of welding electrodes has strained the relation between labour and the management, it is hoped that normal conditions will soon be restored. The supply of raw materials has since improved, and production has been satisfactory.

More Williamson Magor Tea Results

THE results of some more tea companies under the managing agency of Williamson Magor and Co. Ltd for the year ended December 1963, have been published. The East India Tea Co. Ltd (an Assam garden) has incurred a revenue loss of Rs. 2.49 lakhs, against a profit of Rs. 2.48 lakhs for 1962, after providing Rs. 91,387 (against Rs. 88,186) for depreciation and Rs. 52,813 for expenditure during the year written off. After transferring Rs. 2.50 lakhs from general reserve and making other adjustments, a credit balance of Rs. 1,256 has been carried forward. The dividend has been passed, but the taxable ordinary dividend of 10 percent for 1962 was paid. The crop fell from 494,612 kilograms to 458,567 kilograms and the average sale price

dropped from Rs. 6.30 to Rs. 5.85 a kilogram. The 1964 crop has been estimated at 517,000 kilograms at a cost of Rs. 5.95 a kilogram. In order to place the Company on a sound basis, the directors have decided to extend cultivation to a further 300 acres. The Company has been sanctioned a loan of Rs. 8 lakhs for the purpose by the Tea Board.

The Dimakusi Tea Co. Ltd (an Assam garden) has increased the taxable ordinary dividend from 25 percent to 30 percent, which works out to a yield of 11.9 percent at the present price of Rs. 25.19 a share of Rs. 10 each. The revenue profit has risen from Rs. 2.65 lakhs to Rs. 4.62 lakhs, after transferring Rs. 60,887 (against Rs. 67,061) to depreciation, Rs. 82,000 (against Rs. 50,000) to bonus and Rs. 51,725 (against Rs. 29,792) to managing agents' commission. Taxation is allocated Rs. 2.52 lakhs (against Rs. 1.40 lakhs), general reserve Rs. 1.17 lakhs (against Rs. 1 lakh) and development rebate reserve Rs. 2,600 (against Rs. 9,500). The carry-forward is Rs. 17,404, against Rs. 79,777 brought in. The crop rose from 297,513 kilograms to 374,657 kilograms, but the average sale price fell from Rs. 6.44 to Rs. 6.13 a kilogram. The crop for 1964 has been estimated at 337,500 kilograms at a cost of Rs. 4.95 a kilogram.

The Bishnauth Tea Co. Ltd (An Assam garden) has reduced the taxable ordinary dividend from 20 percent to 7½ percent. The yield amounts to 4.4 percent at the present price of Rs. 17.06 a share of Rs. 10 each. The revenue profit has dropped from Rs. 15.21 lakhs to Rs. 3.32 lakhs, after providing Rs. 2.26 lakhs (against Rs. 2.22 lakhs) for depreciation, Rs. 73,556 (against Rs. 1.10 lakhs) for expenditure during the year written off and Rs. 70,168 (against Rs. 2.76 lakhs) for managing agents' commission and managerial staff commission. Taxation absorbs Rs. 1.10 lakhs (against Rs. 8.84 lakhs) and development rebate reserve Rs. 34,500 (against Rs. 4,500). The carry-forward amounts to Rs. 22,421, against Rs. 2 lakhs brought in. The crop dropped from 1.52 million kilograms to 1.46 million kilograms and the average sale price declined from Rs. 6.71 a kilogram to Rs. 6.20 a kilogram. The crop for 1964 has been estimated at 1.56 million kilograms at a cost of Rs. 5.74 a kilogram.

Rights from Ahmedabad Advance, Tata Mills

TWO of the textile mills belonging to the Tata group, namely, Tata Mills and Ahmedabad Advance, have reported disappointing results for 1963. Sales are higher, but the profits are down and for the second year in succession, the companies have had to reduce their dividends. Both the companies have, however, announced the issue of rights shares at par and Ahmedabad Advance has, in addition, decided to issue bonus shares. Tata Mills has reduced the dividend from 20 percent to 18 percent, that is, from Rs. 5 to Rs. 4.50 a share. And rights shares are being offered at par in the proportion of one share for every three held. Ahmedabad Advance has reduced the dividend from 11 percent to 10 percent—Rs. 11 to Rs. 10 a share—and the rights shares are being offered at par in the ratio of one share for every four held. The rights issue will be made after the

one-for-five bonus issue by capitalising the entire share premium account of Rs. 10 lakhs. The bonus issue will not attract capital gains tax.

Tata Mills' sales have gone up from Rs. 4.90 crores to Rs. 5.22 crores, but the pre-tax profits, after providing for managing agents' commission and depreciation, is down from Rs. 24.81 lakhs to Rs. 18.24 lakhs. Allocations include development rebate Rs. 4.50 lakhs (against Rs. 4 lakhs), taxation Rs. 1 lakh (against Rs. 7 lakhs), gratuity reserve Rs. 30,000 (against Rs. 60,000) and dividend reserve Rs. 12.40 lakhs (against Rs. 13.50 lakhs), leaving a balance of Rs. 5,645 to be carried forward, against Rs. 1,422 brought in. The dividend will claim Rs. 11.80 lakhs (against Rs. 13.12 lakhs), and it is to be paid out of the dividend reserve.

The turnover of the Ahmedabad Advance Mills is higher at Rs. 3.11 crores, against Rs. 2.98 crores, while the profit, after providing for managing agents' commission and depreciation, has suffered a sharp decline from Rs. 14.38 lakhs to Rs. 6.63 lakhs. The provision for development rebate reserve has been raised from Rs. 1 lakh to Rs. 3.55 lakhs. Taxation accounts for Rs. 35,000 (against nil) and the allocation to the gratuity reserve has been maintained at Rs. 10,000. The balance of Rs. 2.70 lakhs (against Rs. 5.75 lakhs) has been transferred to the dividend reserve. Preference dividend will absorb Rs. 71,400 and equity dividend Rs. 5 lakhs, making a total of Rs. 5.71 lakhs (against Rs. 5.39 lakhs). A sum of Rs. 3 lakhs is being transferred from the general reserve to the dividend reserve in order to meet the dividend liability. In 1962, the Company had added as much as Rs. 7.50 lakhs to the general reserve. After making various appropriations, there remains a balance of Rs. 14,370 to be carried forward, against Rs. 10,945 brought in.

Prospects for Burmah Oil

COMMENTING on last year's results, which showed a decline in net trading income, Mr. W. E. Eadie, chairman of Burmah Oil, says profits from recently-acquired subsidiaries in Canada and Ecuador have largely offset the loss of income from Burma. But improved results of other subsidiaries were cancelled out by a loss by Assam Oil Company, wholly owned by Burmah Oil. Assam Oil had to pay a high price last year for its crude. Its results showed a "considerable improvement" this year, but the full benefit of reduced crude oil production prices, now in prospect, is not likely to be reflected in its accounts until 1965.

In Canada, the group interests are now vested in Great Plains Development Company in which Burmah has an equity interest of about 70 percent. This Company, with its expanded production, should now be self-financing and is expected to reach soon the dividend paying stage. Through its Canadian affiliates, Burmah has an interest in the Athabasca tar sands, which could be significant in the future. It has been estimated that these sands contain recoverable oil equal to the total of all other world reserves, but serious development has only been started recently. Burmah's general policy is to continue to work towards a broader international base for its operations

and by this means, as well as through its holdings in British Petroleum and Shell, to share in the overall growth of the world petroleum industry. Mr. Eadie makes no specific forecast for 1964, but considers future prospects encouraging.

Hattikhira Tea Skips Dividend

THE Hattikhira Tea Co. Ltd (a Cachar garden) has earned a profit of Rs. 45,217 for 1963, against Rs. 3.12 lakhs for 1962, after providing Rs. 84,505 (against Rs. 78,341) for depreciation. Taxation absorbs Rs. 36,000 and general reserve Rs. 50,000, leaving a carry-forward of Rs. 20,281, against Rs. 45,495 brought in. The dividend has been passed. The crop rose from 580,232 kilograms to 663,197 kilograms, and the average sale price improved from Rs. 3.97 a kilogram to Rs. 4.45 a kilogram. The 1964 crop has been estimated at 670,000 kilograms at a cost of Rs. 28.61 lakhs.

Bor Pukhuri Tea Incurs Loss

THE Bor Pukhuri Tea Co. Ltd (an Assam garden) has incurred a loss of Rs. 61,009 for the year ended December 1963, compared with a profit of Rs. 98,961 for 1962, after providing Rs. 35,026 (against Rs. 40,992) for depreciation and Rs. 5,000 (the same) for secretaries and treasurers' commission. After making all adjustments, a debit balance of Rs. 69,812 has been carried forward. The dividend has been passed. The crop fell from 258,733 kilograms to 250,399 kilograms and the average sale price dropped from Rs. 6.32 to Rs. 5.71 a kilogram. The crop for 1964 has been estimated at 292,700 kilograms at a cost of Rs. 5 a kilogram.

Loobah Tea Earns More, but Passes Dividend

THE Loobah Co. Ltd (a Cachar tea garden) has earned a profit of Rs. 59,885 for the year ended December 1963, against Rs. 23,090 for 1962, after transferring Rs. 17,316 (against Rs. 18,349) to depreciation. The dividend has again been passed. Taxation absorbs Rs. 41,000 (against Rs. 27,000) and general reserve Rs. 1 lakh. The carry-forward is Rs. 49,018, against Rs. 1.14 lakhs brought in. The directors have pointed out that in spite of their efforts it has not been possible to transfer the liquid assets amounting to Rs. 3.79 lakhs held in Pakistan, and the chances of remittance are remote. The crop rose from 151,283 kilograms to 171,112 kilograms, and the average sale price improved from Rs. 4.26 to Rs. 4.63 a kilogram. The 1964 crop has been estimated at 165,000 kilograms at a cost of Rs. 7.27 lakhs.

Indian Dyestuff to Expand

INDIAN Dyestuff Industries Ltd, Bombay, has applied to the Government of India for permission to undertake the manufacture of caustic soda/soda potash, chlorine, potassium carbonate, hydrochloric acid, chlorosulphonic acid, sodium chlorate, aluminium chloride and sodium metal. This is proposed to be done by transferring some of the licences granted to National Organic Chemical Industries Ltd, belonging to the same management. The proposal is to manufacture annually 34,560 tonnes of caustic soda/ caustic potash, 30,024 tonnes of chlorine, 1,500 tonnes of

THE AUTOMOBILE INDUSTRY . . .

lends a hand to food grain production

In order to achieve self-sufficiency in foodgrains and to attain the present target of 100 million tons or a per capita consumption of 17.5 oz. a day, we need expand our irrigation system, conserve soil, produce improved agricultural implements, introduce modern techniques of farming, manufacture more fertilisers, build warehouses and storage godowns, provide facilities for marketing and distribution operations.

Every one of these operations is largely dependent on the efficient, speedy, economic form of transport provided by the motor vehicle. In the construction of dams and canals or the building of factories and warehouses, road transport helps the quick movement of men and material.

Each vehicle produced by the industry also contributes in a large measure towards the funds required by the Government to meet the cost of the development programme of agricultural production. Fully one third of the "on the road" price in Calcutta of a Hindustan Ambassador car, for instance, goes to the Government in the form of direct and indirect taxes. Every ancillary industry that feeds the automobile industry also contributes its share to the Government.

Thus the automobile and ancillary industries help meet one of the country's prime needs—food production.

ISSUED BY HINDUSTAN MOTORS LTD., CALCUTTA.

CAR PRICE STRUCTURE :

Government taxes, direct and indirect :	33%
Raw materials, manufacturing and overhead expenses, salaries and wages, depreciation, profit etc. :	25%
Indigenous ancillary components :	24%
Imported components :	11%

THE AUTOMOBILE INDUSTRY IS A KEY INDUSTRY

ASPI/407

CAPITAL, 28th May, 1964.

potassium carbonate, 10,560 tonnes of hydrochloric acid, 1,200 tonnes of chlorosulphonic acid, 3,000 tonnes of sodium chlorate, 4,000 tonnes of aluminium chloride and 300 tonnes of sodium metal. The capacity for caustic soda/caustic potash, chlorine and sodium chlorate is higher than the capacity licensed originally to National Organic Chemical Industries.

The requirements of capital equipment for the project are estimated at Rs. 4 crores, of which Rs. 2.50 crores will be spent on imported equipment. Negotiations are in progress for securing necessary foreign collaboration for the project. Reliable reports indicate that the Government is agreeable to the proposal submitted by Indian Dyestuff Industries and that the requisite licences will be issued soon.

British India Corporation Raises Dividend

THE profit of the British India Corporation Ltd has improved from Rs. 1.36 crores for 1962 to Rs. 2.20 crores for the year ended December 1963, after providing Rs. 9.37 lakhs (against Rs. 8.62 lakhs) for depreciation and Rs. 1.75 lakhs (against Rs. 87,527) for development rebate reserve. The taxable ordinary dividend has been increased from 9 percent to 15 percent. The yield amounts to Rs. 9.62 a share of Rs. 5 each. The directors have pointed out that the maintenance of this dividend will depend on the high level of production which was achieved for 1963. Sales rose from Rs. 9.28 crores to Rs. 12.88 crores. Taxation is allocated Rs. 1.33 crores (against Rs. 77.54 lakhs) and general reserve Rs. 36.74 lakhs (against Rs. 20 lakhs). The carry-forward amounts to Rs. 23,545, against Rs. 253,254, brought in. The rehabilitation and modernisation of the woollen branches have made good progress and many consignments of machinery have already been received. These branches have produced improved results.

Simplex Mills Results Impress

THE preliminary report on the working of the Simplex Mills Co. Ltd shows that the Company has done exceedingly well during the year ended 31st March, 1964. The sales and gross profit are the highest for the post-war period and the dividend has been stepped up from 16 percent to 18 percent, that is, from Rs. 8 to Rs. 9 a share of Rs. 50. Compared with the previous year, the sales are higher by 14.2 percent at Rs. 3.44 crores and the gross profit is up by as much as 34.4 percent at Rs. 55.81 lakhs (against Rs. 41.53 lakhs). The increase in the profit looks all the more impressive since it has been achieved in spite of the rise in the cost of production, especially in items like cotton, dyes, chemicals, electricity, etcetera.

The provision for bonus for earlier years—1957 and 1959 to 1962—amounts to Rs. 10.90 lakhs (against Rs. 17.04 lakhs). The provision for depreciation has been raised from Rs. 18.74 lakhs to Rs. 22.94 lakhs, while development rebate reserve gets only Rs. 90,000, against Rs. 6.40 lakhs. Taxation accounts for Rs. 10.45 lakhs, against nil in the preceding year. The debenture issue expenses written off amounts to Rs. 16,000. After writing back excess provisions amounting to Rs. 28,000, the directors have transferred Rs. 10.89 lakhs to dividend reserve, leaving a surplus of Rs. 9,856 to be carried forward, against Rs. 24,547 brought in. The proposed dividend is to be paid out of the dividend reserve. Additions to the fixed assets during 1963-64 amounted to Rs. 7.61

lakhs, and orders for machinery totalling Rs. 17 lakhs were outstanding at the close of the year. The Rs. 50-paid share of Simplex Mills is currently quoted around Rs. 122, offering a gross return of about 7.8 percent.

Arvind Board Disappoints

THE Arvind Board and Paper Products Ltd has fared very badly during 1963. Sales have fallen from Rs. 65.75 lakhs to Rs. 53.38 lakhs and the gross profit has come down sharply from Rs. 15.81 lakhs to Rs. 8.19 lakhs. The dividend has been reduced from Rs. 15 to Rs. 11 a share. Appropriations include depreciation Rs. 4.31 lakhs (against Rs. 4.24 lakhs), development and rehabilitation reserve Rs. 12,353 (against Rs. 10,908), statutory development rebate reserve Rs. 37,057 (against Rs. 32,724), donation Rs. 3,800 (against Rs. 3,608), taxation Rs. 2.24 lakhs (against Rs. 6.94 lakhs) and other reserves Rs. 1.19 lakhs (against Rs. 1.75 lakhs). The proposed dividend will absorb Rs. 1.10 lakhs (against Rs. 1.50 lakhs) and this is being paid by transferring Rs. 1.10 lakhs from general reserve. After making various allocations, there remains a nominal balance of Rs. 654 to be carried forward, against Rs. 5,071 brought in.

British India General Insurance Pays More

THE British India General Insurance Company has raised the dividend for 1963 from 15 percent to 17½ percent, which seems well justified by the Company's improved performance during the year. The net profit is shown at Rs. 4.99 lakhs, against Rs. 4.69 lakhs. The total premium income has gone up from Rs. 1.24 crores to Rs. 1.457 crores; total claims are higher at Rs. 72.40 lakhs, against Rs. 68.09 lakhs and expenses have risen from Rs. 45.06 lakhs to Rs. 48.54 lakhs. The provision for reserves is higher at Rs. 78.46 lakhs, against Rs. 66.44 lakhs. Department-wise, the net premium income of the fire section increased from Rs. 49.34 lakhs to Rs. 58.24 lakhs, and claims registered an increase of Rs. 5 lakhs from Rs. 18.70 lakhs to Rs. 23.71 lakhs. The marine section also fared well. Its net premium income rose from Rs. 8.67 lakhs to Rs. 11.22 lakhs, and claims amounted to Rs. 9.11 lakhs, against Rs. 7.15 lakhs. The miscellaneous net premium income increased from Rs. 66.15 lakhs to Rs. 76.24 lakhs, while miscellaneous claims were lower at Rs. 39.58 lakhs, against Rs. 42.23 lakhs. The Rs. 10-paid share of B.I.G. is quoted around Rs. 12.48.

Lakshmi Vishnu Cotton Fares Well

THE working results of the Lakshmi Vishnu Cotton Mills for 1963 show a satisfactory improvement over the previous year's performance. While the turnover is only slightly higher at Rs. 5.57 crores, against Rs. 5.41 crores, the gross profit has gone up very substantially from Rs. 19.41 lakhs to Rs. 36.44 lakhs. However, due to the heavy increase in the provision for depreciation from Rs. 13.94 lakhs to Rs. 27.53 lakhs and with the statutory development rebate up from Rs. 8 lakhs to Rs. 9.63 lakhs, the year's working shows a net loss of Rs. 72,073 (against Rs. 2,53 lakhs). After charging Rs. 7.39 lakhs as bonus for the earlier years—1960 and 1961—and bringing in the previous year's loss of Rs. 10.61 lakhs, the total debit balance of Rs. 18.72 lakhs is being carried forward. In spite of all this,

the directors have thought it desirable to declare a token dividend of 3 percent, absorbing Rs. 2.69 lakhs. Preference dividend will take up Rs. 1.75 lakhs. The dividends, it is proposed, will be paid out of general reserve which was formed before the commencement of the Companies (Amendment) Act, 1960.

The directors state that a major portion of interchange of machinery has been completed. During 1963, the Company installed new machinery worth Rs. 64.20 lakhs, against Rs. 53.11 lakhs in the previous year. Further machinery of the value of about Rs. 25 lakhs is expected to be received during the current year, and the first stage of renovation is expected to be completed by the end of this year. The renovation programme will naturally help improve production and the Company expects a saving in coal consumption with the completion of electrification in all the departments. The directors have, however, cautioned against the rise in the cost of production, mainly as a result of the enhanced wage bill and other labour benefits.

Anglo-French Textiles Pays More

THE Anglo-French Textiles Ltd has reported improved profits for the year ended December 1963. So the dividend on ordinary shares has been raised to 15 percent from the previous year's 12 percent. According to preliminary figures, the gross profit before depreciation and taxation amounted to Rs. 33,85,488 (against Rs. 27,28,740). With Rs. 6,172 brought forward, the total comes to Rs. 33,91,660. Out of this, depreciation accounts for Rs. 8,23,285 (against Rs. 6,80,434). Provision for taxation comes to Rs. 3,95,000 (against Rs. 2,22,484). The preference dividend amounts to Rs. 1,08,000. Development rebate reserve accounts for Rs. 91,736 (against nil). A sum of Rs. 4,00,000 is transferred to modernisation loan redemption reserve. General reserve gets Rs. 3,00,000 (against Rs. 3,00,000). The ordinary dividend proposed at 15 percent will absorb Rs. 4,50,000 (against Rs. 3,60,000). The balance of Rs. 6,034 is carried forward.

Metal Distributors Earns More

THE profit of Metal Distributors Ltd has risen from Rs. 16.90 lakhs for 1962 to Rs. 18.22 lakhs for 1963. The dividend of 10 percent has been repeated. It amounts to a yield of 12.8 percent at the price of Rs. 3.94 a share of Rs. 10 each, on which a sum of only Rs. 5 had been called up during the year. Taxation is allocated Rs. 11.03 lakhs (against Rs. 12.20 lakhs), general reserve Rs. 1.88 lakhs (against Rs. 36,000) and depreciation Rs. 48,000 (against Rs. 57,000). Total reserves of the Company amount to Rs. 9.51 lakhs (against Rs. 7.66 lakhs).

Binani Metal Pays More

THE Binani Metal Works Ltd has increased the taxable ordinary dividend from 10 percent for 1962 to 12 percent for 1963. The yield works out to 9.5 percent at the present price of Rs. 12.62 a share of Rs. 10 each. Sales rose from Rs. 1.92 crores to Rs. 2.63 crores. The profit has improved from Rs. 15.32 lakhs to Rs. 23.46 lakhs, after providing Rs. 2.60 lakhs (against Rs. 3.64 lakhs) for depreciation. General reserve is allocated Rs. 2.50 lakhs (against Rs. 1.50 lakhs), and development rebate re-

Calcutta Steel Raises Dividend

CALCUTTA Steel Co. Ltd has increased the taxable ordinary dividend from 12½ percent for 1962-63 to 15 percent for the year ended March 1964. The yield works out to 10.3 percent at the present price of Rs. 14.56 a share of Rs. 10 each. The profit has improved from Rs. 14.47 lakhs to Rs. 20.92 lakhs, after transferring Rs. 6.44 lakhs (against Rs. 6.22 lakhs) to depreciation, Rs. 5,328 (against Rs. 35,768) to development rebate reserve and Rs. 32 lakhs (against Rs. 24 lakhs) to taxation. General reserve is allocated Rs. 5 lakhs (the same), leaving a carry-forward of Rs. 1.58 lakhs, against Rs. 65,077 brought in. Sales amounted to Rs. 3.57 crores, against Rs. 3.79 crores. The Company has concentrated on the production of wire rods, but its working has been interrupted by the shortage of raw materials and power. It is hoped that the supplies of raw materials will improve by the end of 1966. Although it has not yet been possible to assess the effects of de-control of many items of steel, the directors look forward to the future with confidence. A letter of intent for the manufacture of billets has been issued to the Company by the Government of India, and steps have been taken to prepare the project report.

Shivaji Works Pays More

SHIVAJI Works Ltd—a subsidiary of Kirloskar Oil Engines—reports encouraging results for 1963. The sales amounted to Rs. 34.60 lakhs, against Rs. 21.38 lakhs, in the preceding nine-month period ended December 1962. The gross profit increased from Rs. 2.28 lakhs to Rs. 4.73 lakhs. The dividend has been raised from 6 percent to 9 percent and the dividend for 1963 is on the increased capital.

After providing Rs. 1.62 lakhs (against Rs. 1.01 lakhs) for depreciation and Rs. 1.48 lakhs (against Rs. 49,000) for taxation, the net profit amounts to Rs. 1.32 lakhs (against Rs. 63,000) in the preceding nine-month period. With Rs. 2,939 brought forward and adding Rs. 1,612, being refund of income tax for 1960-61, and Rs. 480, being the excess provision for dividend for last year, the disposable surplus amounts to Rs. 1.37 lakhs. From this, the directors have provided Rs. 40,000 for general reserve, Rs. 4,945 for development rebate and Rs. 90,000 for dividend reserve, leaving a balance of Rs. 2,056 to be carried forward. The proposed dividend is to be paid out of dividend reserve.

Bombay Malleable Iron Castings

BOMBAY Malleable Iron Castings and Allied Industries Ltd is a new Company which proposes to set up a factory near Thana (Bombay) for the manufacture of malleable iron castings—fittings for high tension insulators, pipe fittings and motor-vehicle and railway components. The Company has been licensed to manufacture 2,400 tons of malleable iron castings a year on a two-shift basis. The project is estimated to involve a capital outlay of Rs. 1 crore and this

What makes
HOECHST
medicines

PRICELESS

RESEARCH!

Come now, everyone uses that word nowadays.

Yes, but at HOECHST research is a tradition. A tradition which includes Nobel Prize winners Koch, Ehrlich and von Behring. What's more, we spend a lot of money on research—Rs. 13 crores in 1962.

Good gracious! But money's not everything.

True. But research also means work and skill. Hundreds of highly qualified HOECHST scientists synthesise, study and test... thousands of compounds.

Hmm, it's beginning to form a picture.

And research is only one part. There are others:

modern automatic equipment, stern quality control, fierce testing and... (stop fiddling with your collar! experience.

But what does it all mean to me?

It means that the HOECHST medicines you buy in India have behind them worldwide research and experience—distilled from a century's pioneering work by HOECHST.

And this is what makes HOECHST medicines...

PRICELESS, exactly! That's why doctors prescribe them with confidence. Now, if you'll just roll up your sleeve....

HOECHST PHARMACEUTICALS

HOECHST generally pronounced HEXT

HP-74-210

is proposed to be met by the issued capital of Rs. 50 lakhs, a loan of Rs. 40 lakhs from the Industrial Finance Corporation and Rs. 10 lakhs by bank borrowings. The cost of machinery and equipment is placed around Rs. 45 lakhs of which Rs. 10 lakhs to Rs. 12 lakhs will be spent on imported machinery to be obtained from Poland and East Germany.

The Company has secured the technical collaboration of Centrozap of Poland. The authorised capital of the Company will be Rs. 1 crore—all in equity shares of Rs. 100 each. Of this, Rs. 50 lakhs is proposed to be issued in the beginning. Shares of the value of Rs. 20 lakhs are being taken up by the promoters, directors and their friends and the balance of Rs. 30 lakhs will be offered for public subscription. The factory is expected to go into production by the end of 1965. The board of directors includes Mr. H. M. Patel (chairman), Mr. Sultan A. Nathani, Mr. Tulsidas K. Vernekar, Mr. Gopaladas P. Parikh, Mr. Navnitlal M. Shah, Mr. V. Nimbhkar, Dr. C. S. Patel and Maharaja Virendra Singh Chauhan.

Pesticides Makes Profit

PESTICIDES Ltd commenced production early last year, and according to the preliminary report for 1963, the Company's sales amounted to Rs. 22 lakhs (against nil) and it earned a gross profit of Rs. 1.49 lakhs, against a loss of Rs. 13,983 in the preceding nine-month period ended December 1962. After providing Rs. 3.15 lakhs (against nil) for depreciation, Rs. 6,847 (against nil) as research expenses and Rs. 23,298 (against nil) as technical training expenses, the Company has incurred a loss of Rs. 1.95 lakhs, against Rs. 2,983. In the preceding period, a sum of Rs. 8,000 had been set aside for taxation while no such provision has been made for 1963. After adding the previous year's deficit of Rs. 9,680, a total deficit of Rs. 2.05 lakhs is being carried forward. Development rebate amounting to Rs. 4.65 lakhs has not been taken into account. Arrears of depreciation are placed at Rs. 3.04 lakhs. Estimated contracts to be executed on capital account not provided for amount to Rs. 1.40 lakhs. The B.H.C. malathion, zinc phosphide and copper plants worked satisfactorily during the year. The Company hopes to bring down the costs and consumption of raw materials by employing an improved method of manufacture. The parathion plant is expected to be commissioned by the end of the current year or the beginning of 1965. The Company is awaiting the capital goods import licence for the phenyl mercury acetate plant. It has plans to cover the entire agrochemical field in course of time. The implementation of some of these projects is estimated to cost about Rs. 50 lakhs. The Rs. 10-paid share of Pesticides is available around Rs. 7.60.

Western India Tanneries Fares Well

WESTERN India Tanneries reports improved results for 1963. Sales have increased from Rs. 59.17 lakhs to Rs. 64.19 lakhs, the gross profit has improved from Rs. 3.83 lakhs to Rs. 4.36 lakhs and the dividend has been stepped up from 12 percent to 13 percent, that is, from Rs. 1.20 to Rs. 1.30 a share (fully paid). Allocations include depreciation Rs. 31,144 (against Rs. 33,070), development rebate reserve Rs. 6,000 (against Rs. 1,600), taxation Rs. 1.82 lakhs (against Rs. 1.60 lakhs), general reserve Rs. 95,566 (against Rs. 54,000) and dividend Rs. 91,000 (against Rs.

84,000). After making these provisions and making certain other adjustments, there remains a balance of Rs. 9,987 to be carried forward.

Prospects for Tensile Steel

AFTER providing Rs. 13.41 lakhs for development rebate and Rs. 4.41 lakhs as full depreciation, Tensile Steel's working results for 1963 show a net loss of Rs. 20.93 lakhs. In view of the loss carried forward, the dividend has naturally been skipped. Shareholders can, however, look forward to better results for the current year. For the directors state that the two major handicaps—raw material scarcity and power shortage—which had been hampering production are expected to be overcome during the second half of the current year. The factory could not start operations earlier because of initial raw material paucity which, in fact, had compelled suspension of production operations for over two months. Moreover, the Company was confronted with power shortage and this difficulty still continues.

It is sanctioned full power only for one shift, and this position is expected to continue till the Dhuvran power station is commissioned. The directors add that after initial difficulties in the procurement of imported raw materials, the Company has succeeded in getting sizable allocations under (a) own import licence, (b) international credits and (c) barter entitlements. The allotment of high carbon wire rods till date almost covers the Company's requirements for a year. It has already received from the Gujarat State Financial Corporation Rs. 8.9 lakhs out of the loan of Rs. 10 lakhs granted to it. The first instalment of deferred payment of Rs. 2.99 lakhs due to one of the Company's collaborators and plant and machinery suppliers—C. Itoh and Co. Ltd., Japan, was paid off on its due date of 30th November, 1963. The Rs. 100-paid share of Tensile Steel is available at around Rs. 97.

Royalaseema Mills Cuts Dividend

A FALL in the profit of the Royalaseema Mills Ltd for the year ended December 1963, has led to a reduction in the dividend to 10 percent from the previous year's 15 percent. The net profit for the year amounts to Rs. 8,99,742, after providing Rs. 3,02,388 for depreciation. This compares with the previous year's net profit of Rs. 9,83,108, after providing Rs. 2,61,924 for depreciation. Adding to the year's profit a sum of Rs. 1,048 brought forward and also Rs. 55,000 transferred from dividend equalisation reserve, the total available for appropriation comes to Rs. 9,55,788.

Out of this, Rs. 5,103 has been transferred to development rebate reserve. Provision for the super profits tax for 1962 amounts to Rs. 92,475 and provision for taxation to Rs. 5,07,000 (against Rs. 5,34,000). The proposed dividend of 10 percent will absorb Rs. 2,97,840 (against Rs. 4,46,760). The balance of Rs. 2,570 is carried forward. The directors state in their report that production was maintained at a satisfactory level throughout the year. Sales set a new record during the year.

Travancore Electro-Chemical Shows Loss

THE working of the Travancore Electro-Chemical Industries Ltd for the year ended December 1963, shows a net loss of Rs. 63,617, against

one of Rs. 64,642 in the previous year. The directors' report says that the machinery for the calcium carbide plant has already arrived from Berlin. A major portion of the factory building has been erected at the site. The directors approached the Kerala State Industrial Development Corporation Ltd for a loan of Rs. 15 lakhs to complete the erection programme and the loan has now been received.

The report adds that the House of Somanis has now joined the Company by acquiring controlling interest in the managing agency Company. They have subscribed for the shares which the Company had issued but not allotted so far. The erection of the machinery has already been started. The directors hope that with the new management and the keen interest shown by the Government of Kerala and the Kerala State Industrial Development Corporation, the Company will go into production shortly and show good results.

Share Offer by Andhra Foundry

THE Andhra Foundry and Machine Co. Ltd which proposes to set up a factory near Hyderabad for the manufacture of cast iron spun pipes is entering the market to raise Rs. 45 lakhs through public subscription to meet a part of the cost of the project. The Company has secured the technical collaboration of Rhein Stahl Industrie-Planung GmbH, Essen, West Germany, which will also supply the equipment which will be required to be imported. The plant that is proposed to be set up will have an annual capacity of 24,000 tons of cast-iron spun pipes on a two-shift basis and it is expected to go into production by about the middle of 1965. The project is estimated to cost Rs. 1.02 crores, which is proposed to be met by the issued capital of Rs. 65 lakhs and a foreign exchange loan of Rs. 37 lakhs from the I.C.I.C.I.

The promoters expect a ready market for the Company's products. Whereas the country's requirements of spun pipes at the end of the third plan period are estimated around 800,000 tonnes, the present installed capacity is only around 300,000 tonnes. The Company has an authorised capital of Rs. 1 crore and the issued capital will be Rs. 65 lakhs, comprising Rs. 50 lakhs in equity shares of Rs. 10 each and Rs. 15 lakhs in 9.3 percent cumulative redeemable preference shares of Rs. 100 each. The subscribed capital is Rs. 10 lakhs in equity shares. The present issue consists of Rs. 40 lakhs in equity shares and Rs. 15 lakhs in preference shares. Of this, the directors and their friends and associates have taken up equity shares of the value of Rs. 10 lakhs. The remaining capital—Rs. 30 lakhs in equity shares and Rs. 15 lakhs in preference shares—which is now being offered for public subscription has been underwritten. The subscription list will open on 4th June and will close on 15th June or earlier, but not before 8th June.

National Ekco Pays the Same

THE National Ekco Radio and Engineering Co. Ltd has maintained the dividend for 1963 at 15 percent. According to the brief preliminary report, the Company's turnover is slightly higher at Rs. 1.28 crores, against Rs. 1.23 crores, and the profit after meeting all expenses and providing for development rebate reserve is a little lower at Rs. 22.39 lakhs, against Rs. 22.70 lakhs. The income tax liability is considerably lower at

Rs. 14.65 lakhs, against Rs. 16.77 lakhs and this is due mainly to the replacement of super profits tax by sur-tax. The provision for general reserve has been increased from Rs. 1.75 lakhs to Rs. 2.75 lakhs. After setting aside Rs. 4.60 lakhs (the same) for dividend reserve, there remains a balance of Rs. 43,782 to be carried forward, against Rs. 4,371 brought in. The proposed dividend absorbing Rs. 4.50 lakhs is to be paid out of the dividend reserve. The Rs. 100-paid share of National Ekco is currently quoted around Rs. 180, offering a gross return of a little over 9 percent.

New India Industries Does Well

THE full accounts of New India Industries Ltd for 1963 show a marked improvement over the previous year's performance and the directors' report holds out the promise of a still better performance in the current year. The Company's turnover in 1963 at Rs. 1.495 crores showed an increase of about 30 percent over the previous year's figure of Rs. 1.147 crores. The gross profit shot up by about 65 percent from Rs. 23.55 lakhs to Rs. 39 lakhs. In the preceding two years, 1961 and 1962, instead of dividend, the Company had only offered bonus shares in the proportion of one share for every ten held. For 1963, however, the directors have recommended a dividend of 15 percent. Appropriations include depreciation Rs. 14.98 lakhs (against Rs. 4.33 lakhs), development rebate Rs. 9.26 lakhs (against Rs. 1.29 lakhs) and taxation Rs. 6.85 lakhs (against Rs. 9.25 lakhs). After bringing in the previous year's surplus of Rs. 14,368 and writing back excess provisions amounting to Rs. 3,326, the directors have transferred Rs. 5.81 lakhs to the general reserve, leaving a surplus of Rs. 5,255 to be carried forward. The preference dividend absorbs Rs. 1.28 lakhs and equity dividend Rs. 6.60 lakhs; these are to be paid out of the general reserve account.

The directors state that the working of the camera factory remained satisfactory throughout the year. As for the photographic paper factory, after commencing trial production in March 1963, the factory reached rated production for one shift in September 1963. The working of the second shift is expected to be started very soon. The full production for the second shift will be reached within three or four months of its starting. The additions made to the fixed block during the year amounted to Rs. 1.03 crores, raising the total value of the gross block to Rs. 2 crores which has been written down to Rs. 1.31 crores. The Company has a paid-up capital of Rs. 58.98 lakhs, which is supported by reserves and surplus amounting to Rs. 63.57 lakhs. The Rs. 100-paid share of New India Industries is quoted around Rs. 370.

Outlook for Hope's Metal Windows

IN their report for the year ended December 1963, the directors of Hope's Metal Windows (India) Ltd pointed out that although production rose steadily, sales had to be made at uneconomic prices in order to reestablish the Company's products in a highly competitive market. But current working has become more profitable. The Company has incurred a loss of Rs. 3.50 lakhs, against a loss of Rs. 2.70 lakhs for 1962, after providing Rs. 1.45 lakhs (against Rs. 65,978) for depreciation. The dividend has again been passed. Sales amounted to Rs. 12.14 lakhs, against Rs. 1.36 lakhs. In June 1963, 120,107 shares of Rs. 10 each were issued for cash subscription at

par by the shareholders of the Company.

Progress of Omega Insulated Cable

THE fourth annual report of the directors of the Omega Insulated Cable Company (India) Ltd for the year ended December 1963, highlights the progress made by the Company during the year. The report says that the Company has made rapid progress in the execution of the civil works and the installation of plant and machinery. About 80 percent of the work is already completed and only one more consignment of imported machinery has to arrive and the same is expected before the end of May 1964. The factory is expected to start trial operations by the first week of July this year. The Company has already received import licences for some of the raw materials.

Omega Insulated Cable has already approached the Government for getting power, and for the immediately required raw materials, the directors are trying to procure them from some of the suppliers or from other cable factories on a loan basis. As for the market conditions, the directors state that there is a keen competition for the sale of V.I.R. and P.V.C. cables and a programme is being drawn up to establish a good sales organisation. Referring to the work done during the year, the report says that the

management has been successful in getting a licence for the import of machinery valued at Rs. 33 lakhs. After a scientific study of the location of the factory, the directors came to the conclusion that the original site was not suitable and they were able to obtain from the Government of Madras 16.28 acres in the industrial estate in Ambattur. The present programme of production will require only 1,200 kVA of power, whereas the Company has already a capacity for 2,250 kVA which will also be sufficient to meet the power requirements for 3,000 tons of A.C.S.R. and 280 miles of P.I.L.C. cables a year. The Company has been successful in getting a licence for manufacturing A.C.S.R. cables. The management has drawn the project report for P.I.L.C. project and the technical collaboration agreement with Sumitomo Electric Industries Ltd of Japan has been signed. The Capital Goods Committee has cleared the Company's import application for Rs. 51 lakhs for the P.I.L.C. project. The directors have also been able to persuade Sumitomo to consider supplying Rs. 51 lakhs worth of machinery under deferred payment terms.

Jeewanlal Repeats

JEewanlal (1929) Ltd has repeated the taxable ordinary dividend of 10½ percent for the year ended December 1963. The ordinary

share of Rs. 10 each has been quoted at par. The profit has risen from Rs. 7.32 lakhs for 1962 to Rs. 8.57 lakhs for 1963, after providing Rs. 2.54 lakhs (against Rs. 1.91 lakhs) for depreciation, Rs. 40,887 (against Rs. 38,475) for development rebate reserve, Rs. 17.58 lakhs (against Rs. 8.03 lakhs) for taxation and Rs. 97,500 for surtax on profits (against Rs. 30,500 for S.P.T.). General reserve is allocated Rs. 1 lakh, leaving a carry-forward of Rs. 10,083, against Rs. 8,747 brought in. Sales rose from Rs. 2.19 crores to Rs. 2.60 crores. The directors pointed out that taxation, including surtax on profits, has absorbed 69.7 percent of the profit. The Company is installing rolling mills in Madras. The necessary foreign exchange for importing equipment has been obtained. The rolling mills are expected to begin production early in 1966. The Company's funds for Rs. 1.81 lakhs has been blocked in Burma, but the Burmese Government has guaranteed safety of all foreign funds.

New Capital Issues

NINE companies, including a new one in Calcutta and a Central Government undertaking in Delhi, have been authorised to raise fresh capital totalling Rs. 19.71 crores. The following are the details:

Volta Ltd, Bombay, is to issue further capital of Rs. 1.02 crores. This

CAPITAL, 28th May, 1964.

is divided into 102,000 equity shares of Rs. 100 each for cash at a premium of Rs. 25 a share. The shares will be offered to existing shareholders of the Company in the proportion of two for every five shares held. The proceeds of the issue will be used for the Company's expansion schemes.

Gujarat State Fertilisers Company Ltd, Ahmedabad, is raising further capital of Rs. 12,99,54,700 divided into 999,547 equity shares of Rs. 100 each and 300,000, 9.3 percent redeemable cumulative preference shares of Rs. 100 each to be issued for cash at par. Out of this, equity shares of the value of Rs. 5,11,54,700 and preference shares of the value of Rs. 1,53,00,000 would be offered to the public by prospectus and shares of the value of Rs. 5.35 crores (Rs. 3.88 crores in equity and the balance in preference shares) would be subscribed by the Government of Gujarat. The proceeds will be used for the manufacture of chemical fertilisers and allied chemicals.

Kerala Spinners Ltd, Alleppey, incorporated in Kerala, has been accorded consent to issue capital of Rs. 40 lakhs (including Rs. 10 lakhs raised already) divided into 40,000 equity shares of Rs. 100 each, for cash at par. The proceeds of the issue will be used for setting up a spinning mill with a capacity of 12,000 spindles.

The Hindustan Electric Company Ltd, Maharashtra, has been authorised to issue further capital of Rs. 1.40 crores divided into 120,000 equity shares of Rs. 100 each to existing shareholders on rights basis in the ratio of 1:1 and 20,000 irredeemable cumulative preference shares of Rs. 100 each carrying dividend of 8.75 percent (gross) to Messrs Brown Boveri and Company Ltd, Baden, Switzerland, for cash at par. The proceeds of the issue will be used for financing expansion schemes of the Company.

Wheels India Ltd, Madras, will issue further capital of Rs. 13 lakhs, in equity shares of Rs. 100 each, to be issued privately at par, partly for cash and partly other than cash. Of these shares of a value not exceeding Rs. 5.85 lakhs will be issued to Dunlop Rubber Company Ltd, (U.K.) at par against supply of plant and equipment. The proceeds will be used on the manufacture of wheels and top rollers for tanks.

Mayurakshi Cotton Mills Ltd, Calcutta, will issue capital of Rs. 60 lakhs for cash at par consisting of Rs. 45 lakhs divided into 450,000 equity shares of Rs. 10 each and Rs. 15,00,000 divided into 15,000 cumulative redeemable preference shares of Rs. 100 each carrying a dividend of 9.5 percent. The proceeds of the issue will be used for setting up a spinning mill in the district of Birbhum with 12,000 spindles.

Hada Textile Industries Ltd, Calcutta, a new company, has been granted consent to issue capital of Rs. 36 lakhs for cash at par consisting of Rs. 24 lakhs divided into 240,000 equity shares of Rs. 10 each and Rs. 12 lakhs divided into 12,000 9.5 percent cumulative redeemable preference shares of Rs. 100 each. The proceeds of the issue will be used for setting up a cotton spinning mill.

Indian Drugs and Pharmaceuticals Ltd, Delhi, a Central Government undertaking, will issue further capital of Rs. 2 crores divided into 20,000 equity shares of Rs. 1,000 each for cash at par. The proceeds will be used for financing the drugs and surgical instruments plants.

The Plantation Corporation of Kerala Ltd, a Government company, will raise capital of Rs. 80 lakhs, divided into 8,000 equity shares of Rs. 1,000 each, for cash at par. The proceeds will be used for rubber plantation.

CAPITAL, 28th May, 1964.

The Stock Markets

POOR TURNOVER DESPITE GOOD CORPORATE NEWS

Wednesday Evening.

THE Calcutta stock market has been shocked by the passing of Mr. Jawaharlal Nehru. Trading has been sluggish during the past week. Despite good corporate news, turnover has been small. Attention centres on clearing shares, which have fluctuated narrowly. Bulls are tired of waiting for a rise, so they are taking their profits at the earliest opportunity. Bears are not particularly aggressive due to various uncertainties. Since the market is almost without any buyer, share prices have tended to decline on even small offerings. Business in cash scrip has been negligible, although a few selected scrip have improved temporarily on good corporate news.

India Paper Pulp have gained because of the Company's decision to issue bonus shares in the proportion of two new shares for every five held by capitalising the share premiums. An application to the Controller of Capital Issues has been made by the Company for this purpose. The lack of support for shares is largely due to the growing shortage of funds. The supply of bank credit is restrained because of the squeeze imposed by the Reserve Bank. Institutional support is conspicuous by its absence.

The near-term trend is likely to be uncertain. The Aid-India Club has pledged foreign aid more or less on the scale desired by India. The proportion of non-project aid is also larger. However, investors are inclined to take a cautious view of the outlook for industries since profit margins have been squeezed by rising production costs. The Central Cabinet is likely to discuss the Bonus Commission's Report shortly. Unless the recommendations are substantially modified the working of industries will be seriously affected.

Indian Iron have fluctuated narrowly. Operators anxiously await the forthcoming dividend from the steel companies. Interest in engineering shares has been negligible. Stray business in Guest, Keen, Williams, Texmaco and Jessop has been transacted. Indian Standard Wagon have been barely steady due to the repetition of the ordinary dividend. Braithwaite have not responded to the payment of a higher dividend. Jay Engineering have lost due to the continuation of the strike. Binani Metal have been neglected despite the payment of a larger dividend.

In the miscellaneous section, attention centres on clearing scrip, but they have declined on balance. Indian Copper are, nevertheless, steady on producing good results, although the total amount of dividend paid on the increased capital is the same as was paid for 1962. Good-year India, Indian Oxygen and Associated Battery have dropped on pressure. Managing agency shares like Martin Burn, Balmer Lawrie and Jardine Henderson have been neglected. There is little interest in electric company shares.

New shares have declined on a predominance of sellers. Phillips Carbon have declined sharply on showing substantial losses. India Steamship have been freely offered. British India Corporation are steady on declaring a higher dividend. Among paper shares, Orient have fluctuated both ways. Seshasayee

and Bengal have declined. Sugar shares are difficult to transact due to the absence of buyers. The decision of the Government to increase the price of sugar produced in certain areas has been overlooked.

Turnover in jute shares has shrunk and their prices have declined. The growing accumulation of jute goods with mills has disturbed investors. Birla, Champdany, Barnagore and New Central are quoted at lower prices. Chitavalahave lost on a predominance of sellers. The move to decontrol soft coke and non-coking coal has had virtually no effect. Coal shares are being freely offered without attracting support. Central India, Western Bengal and East India have dropped. Cotton mill shares lack interest, although Dunbar and Bharat Commerce have met with scattered support due to good reports. J. K. Rayon have reacted on profit-taking.

Business in tea shares has been small, and the trend is generally downward. The disappointing dividends announced by the Gillanders group of tea companies have disturbed sentiment. Business is largely confined to good Assam and Dooars gardens. Scattered business in Teliapara and Dauracherra has been transacted.

Government securities are steady due to institutional support, particularly from the Reserve Bank. Prices of short-dated stocks are fully steady and those of medium-dated ones have been maintained. The 3 percent Conversion Loan 1986 has been quoted around Rs. 63.85.

Bombay

PASSING OF NEHRU STUNS MARKET

DECISION ON RELAXING MARGIN AWAITED

Wednesday Evening.

THE Bombay stock market has been stunned by the death of Mr. Nehru. Turnover in clearing and cash scrip has declined appreciably during the past week due to the reluctance of operators to extend commitments either way. For the time being, Dalal Street awaits the Government's decision on relaxing the margin on trading. Many in stock market circles think that even if the Government were to relax the margin, there would be little improvement in activity.

At present, brokers' books continue to be almost blank, and the trading ring has been thinly attended. Interest in cash shares has dropped due to the growing shortage of money. Whatever little funds were available have been mopped up by the recent issues. Dalal Street has not been impressed by the decision of the Government to readjust the ex-factory price of sugar. It is generally thought that unless a remunerative price is fixed for sugar during the coming (1964-65) season, production will not be stimulated.

Tata Steel ordinary have closed around Rs. 146.50 following tired bull liquidation. There is a general inclination to wait until the Company declares the dividend for the year ended March 1964. Engineering

shares have generally dropped. Tata Engineering, Premier Construction, Alcock Ashdown and Mukand Iron are quoted at lower prices. Among motor-vehicle shares, Hindustan Motors and Premier Automobiles have dropped.

Cotton mill shares too show losses. Century and Bombay Dyeing have declined due to profit-taking. Stand-alone have been subdued on a predominance of sellers. Svadeshi are, nevertheless, steady on corporate rumours. Morarjee, Gokak and India United ordinary have shed their earlier gains.

Trading in miscellaneous shares is listless. Stray business has passed in Belapur, Walchandnagar Industries and Phaltan in the sugar section. Among cement shares, Associated Cement have been neglected, while Digvijay have attracted scattered buying because of expansion prospects. Among mining shares, Be Be Petrol have gained on the possibility that the Company might receive compensation for war damages in the near future. Among steamship company shares, Scindia Steam have dropped on pressure.

Rayon shares are quiet, and National Rayon have reacted. Chemical shares have been offered freely without attracting buyers. Tata Chemical have declined, but Polychem have been a steady feature on producing excellent results. The latter Company has also increased the taxable ordinary dividend from 12 per-

Dena Bank was founded on
26th May 1938. The story of

its growth is the story of perseverance
and determined efforts to pioneer,
develop and bring modern commercial
banking to as many people as possible.

Since its inception, Dena Bank has
striven to live up to the four cardinal
ideals of its revered founder, the late
Shri Pranlal Devkar Nanjee -

**SOUNDNESS, INTEGRITY, EFFICIENCY
and SERVICE.** Today, with its 137 Offices
spread all over India, its sphere of activity
has enlarged and with it have grown the
faith and confidence of those it serves.

Now completing its 26th year,
Dena Bank looks ahead to many years
of fruitful service to commerce, trade,
industry, and the people at large—a
fulfilment of its mission that was started
in 1938.

HOW SHALIMAR WORKS? ... No. 10

Steel Fabricating

Steel fabrication is a comparatively modern art, as the essential part of this operation, steel is a newish material and extremely scarce. An important skill in this field is a clairvoyant ability to guess what a designer intends the thing to look like when all the bits are put together.

THE SHALIMAR WORKS LTD.
4 Garden Reach Road, Calcutta 23

SW 1273

cent to 16 percent. Voltas and Tata Oil have been quoted at lower prices. Stray business has been transacted in Central Bank and Bank of Baroda. Among electric companies, Ahmedabad and Tata Hydro have changed hands.

Madras

SMALL BUSINESS IN CLEARING SHARES INVESTORS WORRIED BY SHORTAGE OF FUNDS

Tuesday Evening.

THE Madras stock market has shown mixed trends during the

past week, although turnover has declined considerably. Business even in clearing shares has been negligible due to the absence of interest from outside centres. In cash shares, the trend is generally downward except in the case of some selected scrip. Investors are worried about the growing shortage of funds. The fear of a cut in power supply is also a restraining factor.

Scattered business has been transacted in Government securities, but attention has centred mainly on high-yielding State Government loans. Despite interest in good preference shares, business is restrained due to the shortage of declared sellers. Except for some interest in West Coast, Karaikkal and Vellore, electric company shares have been ignored. In banks, Indian Overseas have changed hands at Rs. 137.50 and

Canara at Rs. 76.25. Sugar shares are subdued and prices have declined. Deccan are available at Rs. 11.52, Andhra at Rs. 13.79 and Jeypore at Rs. 16.50. E.I.D. have been sold down to Rs. 35, but Mysore have been about steady at Rs. 28.33.

Planting shares show mixed trends. Only tea and coffee companies, which have produced good crops so far, have met with scattered buying. Blue Mountain have been quoted at Rs. 2.37, and Cochin Malabar at Rs. 6.45 Consolidated Coffee have lost at Rs. 21.97, and Ouchterlony at Rs. 3.45. Business in Periakaramalai has passed around Rs. 3.48. Tropical have been taken at Rs. 21.25 on declaring a taxable ordinary dividend of 8 percent. Anandam have been quoted at Rs. 14.50 on paying a taxable ordinary dividend of 15 percent. Neelamalai have been done at

CAPITAL, 28th May, 1964.

Rs. 4.75 on the decision of the Company to sell the Woolgooly estate at not less than Rs. 12 lakhs. Among coffee shares, Lingapur have changed hands at Rs. 5.25 on declaring an interim taxable ordinary dividend of 5 percent and Ossoor have been transacted at Rs. 2.45 on paying an interim taxable ordinary dividend of 5 percent.

Textile shares have, on the whole, dropped. South India Viscose have lost at Rs. 118 and Travancore Rayon at Rs. 21.12. Lakshmi have been easier at Rs. 131 and Madura at Rs. 32.75. Anglo-French have been available at Rs. 153 on declaring a taxable ordinary dividend of 15 percent. Gnanambikai have been done at Rs. 120.75 on paying a taxable ordinary dividend of 9 percent. Bangalore Woollen have been sold at Rs. 250 and Buckingham at Rs. 93.

Among miscellaneous shares, Aluminium Industries have been available at Rs. 19.72 and Ashok Leyland at Rs. 6.90. In cement shares, Dalmia have lost at Rs. 13.15, and Travancore have been transacted at Rs. 7.20 on declaring a taxable ordinary dividend of 6 percent. F.A.C.T. have been easier at Rs. 5.10, and Seshasayee Paper at Rs. 7.25. Enfield have come to hand at Rs. 10.87 on paying a taxable ordinary dividend of 7½ percent. Parry's Confectionery have reacted to Rs. 2.98 on a predominance of sellers and Spencer have weakened to Rs. 21.65. T. Stanes have, nevertheless, been steady at Rs. 30.50, but Textool have been freely offered down to Rs. 142.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available. All quotations are in Rs.]

WORKING OF DEPOSIT INSURANCE CORPORATION

(BY A SPECIAL CORRESPONDENT)

The Deposit Insurance Corporation has to depend on the Reserve Bank for supervising the working of insured banks. So it cannot have first-hand knowledge of their working. It requires more powers if the deposit insurance scheme is to be extended to co-operative banks.

ALTHOUGH the deposit insurance scheme was recommended by the Shroff Committee, the Reserve Bank introduced it only when the Palai Central and Laxmi Bank crashes revealed the necessity for it. The Cor-

poration started functioning from the beginning of 1962 and it recently released the report of its working during the second year. Since a suggestion has been made that the deposit insurance scheme should be extended

to co-operative banks also, it is interesting to examine the Corporation's working.

The amount of insurance cover provided by the Corporation is fixed for the present at Rs. 1,500 for each de-

CAPITAL, 28th May, 1964.

positor in a bank. The latest report shows that 78 percent of all deposit accounts and 24 percent of the aggregate amount of deposits were covered by the scheme. No doubt the total number of accounts with insured banks increased by 1.5 million between December 1961 and September 1963, but the percentage of those with balances not exceeding Rs. 1,500 an account—in spite of an absolute increase between the two dates—went down from 78.5 percent to 77.5 percent. The total deposits assessable to premium rose from Rs. 1,694 crores to Rs. 2,107 crores since the inception of the Corporation. The total number of functioning banks registered with the Corporation, however, came down from 285 to 280 due to voluntary amalgamation and winding up.

A further analysis of the data shows that the maximum benefit from deposit insurance has been accruing to small banks. In the case of 191 small banks operating at the end of September 1963, the coverage extended to 87 percent of accounts and 47 percent of total deposits. The coverage among the big banks (first five) was 72 percent of deposit accounts and 21 percent of deposits. When the scheme was formulated, the intention was to provide the maximum insurance cover to depositors in small banks. It is evident that the original aim of the authors of the scheme has been more than fulfilled by actual performance.

During 1963, the net accretion to the deposit insurance fund was higher at Rs. 109.9 lakhs, against Rs. 92.8 lakhs in 1962. The total claims for insured deposits already paid by the Corporation amounted to Rs. 6.5 lakhs. Excluding Rs. 80,000 recovered by way of reimbursements from the State Bank in relation to *pro rata* payments made to depositors of the Unity Bank, the net claims paid so far amount to Rs. 5.7 lakhs. Against this, a provision of Rs. 1.8 lakhs has been shown by way of insurance losses.

Although 94 percent of the fund was invested in Government securities, the income from investments was shown as Rs. 30,000 lower than in the previous year. It is difficult to explain the fall because the amount invested in Government securities, that is, Rs. 196.6 lakhs was larger than in the preceding year. Again, the rate of interest was higher on Government securities. There was an increase in the establishment expenses and, therefore, transfers to investment reserves were cut down to Rs. 30,000 or half of the previous year's level. The general fund comprising capital and reserves of the Corporation also stood higher at the end of 1963 than in the preceding year.

Various Difficulties

The Corporation appears to be handicapped in various ways. Firstly, it depends on the Reserve Bank for the supervision of the working of insured banks. It, therefore, does not have first-hand knowledge of the actual improvement of the standards of operation of insured banks. Again, it has no power to regulate the interest rates offered by member-banks. Although the Shroff Committee suggested that the Corporation should be given power to control the rates of interest paid by banks on various categories of deposits, it was not empowered to do so when it was established in view of the inter-bank agreement on interest rates.

In spite of an informal suggestion made by the Governor of the Reserve Bank some time ago that an upward revision of interest rates on deposits was necessary, the banks seem to be adopting a policy of "deliberate delay." Some of the banks have been threatening the Association that they would go out of the agreement while certain south Indian banks seem to be quoting rates higher than those permissible in view of the difference of opinion among bankers. It is high

CAPITAL, 28th May, 1964.

time the Deposit Insurance Corporation was empowered to regulate the rates of interest paid on different categories of deposits, since the bankers are unwilling to take quick action in this matter.

Procedural Delays

Secondly, procedural delays in meeting claims require urgent attention. The liability for the payment of the insured amount arose in the case of three banks during 1962 and 1963. There was another case in 1964. The Unity Bank Ltd was amalgamated with the State Bank on 20th August, 1962, but the payment was made only on 1st January, 1963. Although Section 18 of the Deposit Insurance Act has laid down that a list of depositors has to be given by the transferee bank to the Corporation within three months of the date of amalgamation, the list in the case of Unity Bank was received after about a year. Varying delays occurred in the case of other instances also. The Corporation can plead that it can take action only when the lists of depositors are actually received.

But the main point is that the Corporation should investigate the reasons for such delays and see to it that the time taken is not more than that stipulated in the Act. To enable such an investigation, the managers of the Deposit Insurance Corporation have to be men of stature. Furthermore, unless the Corporation is adequately strengthened, it will not be able to equip itself for the larger responsibilities it will have to shoulder if the coverage is extended to co-operative banks.

THE CALCUTTA MONEY MARKET FRACTIONAL FALL IN ADVANCES

Wednesday, 27th May.

THE general level of advances has declined fractionally in the Calcutta money market during the past week. The requirements of the iron, steel and engineering units have decreased, and so have those of the foodgrains and seeds trade. The credit given to the cotton, jute and sugar mills is unchanged. In the interbank market, conditions have eased after initial tightness and the call rate has dropped from 5½ percent to 4½ percent.

The exchange market has been active, with an excellent supply of gunny bills and a moderate supply of tea bills. The demand for remittances has been moderate. In the London market, sterling has suffered nominal losses against a number of major currencies.

SILVER WAS STEADY IN CALCUTTA during the past week due to good seasonal purchases. The price rose from the previous week's level of Rs. 261.25 to Rs. 261.75, quoted today. The London and New York prices stood at 1113d and 129.3 cents.

In sympathy with the rise in silver gold was also steady and the price of 14-carat increased from Rs. 69.50 to Rs. 71.25.

DURING THE WEEK ENDED 22ND MAY, Government of India Treasury bills for Rs. 28,63,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 26th May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3,000 percent a year. Tenders for Rs. 2 crores

of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 1st June.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 27th May to 30th May at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 20th May to 22nd May amounted to Rs. 20 lakhs.

DECLINES OF RS. 29.83 CRORES TO RS. 2,564.73 crores in the total note issue and of Rs. 27.69 crores to Rs. 2,542.76 crores in active notes were notable features of the return of the Reserve Bank of India during the week ended 22nd May, 1964. The currency contraction was adjusted by reducing rupee securities of the paper currency reserve by Rs. 30 crores to Rs. 2,242.27 crores. The securities were transferred to the Banking Department in which investments rose by Rs. 33.10 crores to Rs. 232.18 crores. Deposits of the Government of India increased by Rs. 3.25 crores to Rs. 54.94 crores and those of State Governments by Rs. 3.29 crores to Rs. 18.62 crores. Balances of commercial banks at Rs. 85.33 crores showed a small drop of Rs. 11 lakhs. Their loans from the Bank declined from Rs. 68.57 crores to Rs. 43.28 crores, of which advances against usance bills amounted to Rs. 7.39 crores (Rs. 13.85 crores). Ways and means advances stood at Rs. 54.32 crores, against Rs. 55.65 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 15th May, 1964, shows a rise of Rs. 1.19 crores to Rs. 614.98 crores in total deposits. Investments in Government securities are down by Rs. 4.01 crores to Rs. 230.59 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 1.08 crores to Rs. 379.81 crores. Cash and balances are, in consequence, shown at Rs. 24.46 crores, or Rs. 4.09 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 15th May, 1964, shows Demand and Time liabilities at Rs. 1,238.93 crores (Rs. 37.58 crores on account of bor-

rowings from banks) and Rs. 1,302.83 crores (Rs. 12.07 crores), compared with Rs. 1,240.39 crores (Rs. 38.25 crores) and Rs. 1,296.57 crores (Rs. 12.20 crores) in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 2.39 crores and Rs. 2.60 crores to Rs. 63.24 crores and Rs. 82.90 crores, respectively. There is a drop of Rs. 3.78 crores to Rs. 617.71 crores in investments. Advances and bills discounted at Rs. 1,863.01 crores show a fall of Rs. 10.80 crores. The ratios to total

liabilities of cash and balances, and of advances and discounts, are in consequence shown at 5.7 percent and 73.3 percent, against 5.6 percent and 73.8 percent.

THE FIRST BRANCH OF THE BANK OF America in India was opened in Bombay on 20th May. The bank will provide a full range of banking services and will specially help local importers and exporters by giving advice, information and business contacts in the U.S.A. and other countries.

MASSIVE TYRES

FOR MASSIVE WORK

The scraper and the dumper. Two powerful modern beasts of burden, indispensable for moving with continuous operation thousands of tons of earth at project sites. Tremendously heavy and strenuous work, requiring the toughest pneumatic tyres. Dunlop Power Grip and EM. 7 Earthmover tyres are proving themselves superbly in service ... at Koyla, Nagarjunasagar, Kosi,

Sharavathi, Beas ... In the iron ore mines of Bihar, Madhya Pradesh, Goa ... in the farflung coalfields of the National Coal Development Corporation and at many other project sites all over India.

The tread pattern and especially tough casings of these Dunlop tyres were developed after prolonged field trials in different kinds of terrain in many parts of the world.

DUNLOP

Longest tyre manufacturing experience in India

ANNOUNCEMENT OF PUBLIC ISSUE

(This is not a Prospectus but only an announcement of the proposed issue of Equity Capital, interested persons may obtain copies of the Prospectus from the Company's Registered Office, Underwriters, Brokers and Bankers.)

HINDUSTAN POLYMERS LIMITED

(Incorporated under the Companies Act I of 1956 on 29th November, 1962 as a public company limited by shares)
(Registered Office: C/o. Shree Ram Mills Limited, Fergusson Road, Lower Parel, Bombay-13)

EXISTING AND PROPOSED ACTIVITIES

The Company proposes to establish at Visakhapatnam in the State of Andhra Pradesh, a plant (i) for the manufacture of 1.5 million gallons per annum of Power Alcohol, (ii) with the technical collaboration of Universal Oil Products Company Inc., Des Plaines, Illinois, U.S.A. for the manufacture of 10,000 tons of Styrene Monomer per annum, and (iii) with the technical collaboration of B. X. Plastics Limited, Highams Park, London, E. 4, England, for the manufacture of 7,500 tons per annum of Polystyrene and its Co-polymers including high impact by a continuous mass polymerisation process.

LOCATION OF INDUSTRY

The location of the proposed plant, well-served by National Highways, Railway Transport and other essential facilities, will be on a site of about 250 acres at Visakhapatnam (Andhra Pradesh).

BRAITHWAITE & CO. (INDIA) LIMITED

STATEMENT BY MR. J. V. JARDINE PATERSON

Statement by Mr. J. V. Jardine Paterson, Chairman, Braithwaite & Co. (India) Ltd., at the Thirty-fourth Annual General Meeting of Members to be held in Calcutta on 18th June, 1964.

Production and Development
Clive Works

But for the slowing down of production at three periods during the year as mentioned in the Directors' Report, the target for the year of 30,000 tonnes would have been achieved. As it was, production reached 28,569 tonnes which is the highest so far achieved and 4% more than the previous year. It was unfortunate that production was again interrupted in January this year as a result of riots in the city and the associated curfews but it is confidently expected that, with the improved raw materials position, the Works will exceed their previous best during the current year.

Angus Works

Very satisfactory progress has been made and, as stated in the Directors' Report, the turnover for the year was nearly double that of 1962. In the fourth year of our operations in these Works, we have, in fact, shown a small net profit which, in view of the development charges to be incurred, must be considered a notable success. The order book is well filled and a number of outstanding quotations for Electric Overhead Travelling cranes are known to be competitive and are likely, therefore, to become orders. After many delays the loan agreements have been completed, import licences received and orders placed for the machinery which will enable the present phase of expansion to be completed. It is hoped that these machines will be received within the next twelve months. We have not yet received the electric power supply required for this expansion but we are advised that this will be available early next year and there should therefore be no delay in bringing these machines into operation.

Consideration is being given by the Directors to the next phase of the expansion scheme and details will be worked out so that this can follow on closely the completion of the first phase.

Work has continued on the housing scheme and three blocks comprising 18 flats for junior officers have been com-

pleted and occupied. Flats for senior officers are also well advanced.

Profit, Taxation and Dividend

The profit for the year, after providing Rs. 14,19,333 for depreciation and transferring Rs. 7,03,186 to Development Reserve, amounted to Rs. 1,24,47,705 which shows an increase of approximately Rs. 18 lakhs over the previous year. This result is most encouraging but once again very large sums are required for payment of taxes as, in addition to Income and Super Taxes amounting to Rs. 62,20,706, Rs. 17 lakhs has been provided for payment of Sur-Tax, making a total of Rs. 79,20,706 or more than 63% of the profit. It is interesting to note that this provision for payment of Sur-Tax is very nearly the same as that for Super-Tax in the previous year but is, of course, calculated on the increased profit referred to above.

The annual dividend on the Preference Shares has been paid in two instalments, absorbing Rs. 3,60,000 as against a single quarter's dividend of only Rs. 90,000/- required in the accounts for 1962. The Directors are now recommending an increased dividend on the Ordinary Shares at the rate of 20%, thereby leaving available for transfer to Reserve slightly more than Rs. 21½ lakhs.

Exports

There was further improvement in the export to Malaya of Pressed Steel Tanks in collaboration with the Technical Consultants, Braithwaite & Co. Engineers Limited. Results elsewhere were, however, disappointing and a second sales tour was undertaken towards the end of the year. Whereas there are possibilities of improving sales in Hong Kong, it is clear that conditions in Burma particularly, and to a less extent in Thailand, are not encouraging, though every effort will be made to develop business.

Labour

The severe drop in production in April/May, due to inadequate supply of welding electrodes, with the consequent fall in earnings from Production Bonus, resulted in labour agitation which took some time to settle. This, combined with the recent general demand throughout the industry for the setting up of a Wage Board, has unfortunately affected relations with our labour, but with the present healthy

position of the Company's order book and the vast improvement in availability of raw materials, it is expected that Workers will now be able to earn high rates of pay through Production Bonus, and the normal satisfactory co-operation between Labour and Management will be restored. The quantum of annual bonus to be paid was amicably settled under a bipartite agreement.

Management and Personnel

We are again grateful to our Managing Director, Mr. J. E. Bingham, for his successful conduct of the Company's affairs during the past year. His term of office as Managing Director of the Company expires on 30th June, 1964 but it has been agreed that application should be made to the Government of India for his re-appointment for a further period of one year. The Board also proposes to appoint Mr. J. E. Sawtell as a Managing Director and the necessary application in regard to his appointment and remuneration has been made to the Government of India. Mr. Sawtell has served the Company in various capacities and, since April, 1963, has been General Manager of Clive Works. He will take over from Mr. J. E. Bingham at the expiry of the latter's Agreement in 1965. On receipt of Government approval to the applications in connection with these appoint-

ments, the necessary General Meeting of Shareholders will be convened.

Mr. Y. S. Tayal, Secretary of the Company and Mr. A. D. Morley, General Manager of Angus Works left the services of the Company during the year. Mr. B. L. Mathur has been appointed Secretary of the Company, Mr. A. P. Sarkar the Financial Controller, and Mr. M. Dhar, Chief Engineer. Mr. K. R. Sundaram was transferred from Clive to assume responsibilities of the Works Manager, Angus. All these senior Executives have worked extremely hard during the past year and we are indebted to them and all other members of the Staff for all that has been achieved.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

1788
THE E.I.D.-PARRY GROUP
1964

DARE HOUSE at PARRY'S CORNER

Soon after he had founded his business in 1788, THOMAS PARRY acquired a site for his office and godowns at the corner of Esplanade and First Line Beach, strategically situated, as close as it was then possible to approach Fort St. George. It was not long before this corner became known as Parry's Corner which name it bears to this day.

On January 1, 1819 PARRY took into partnership JOHN WILLIAM DARE—"not only a fine businessman but also a great character".

DARE HOUSE, the Head Office of the E.I.D.-PARRY GROUP is named after him.

One-hundred and twenty-six years have passed since JOHN DARE'S death in 1838. Eventful years of steady progress for PARRY'S!

The E.I.D.-PARRY GROUP of today consists of E.I.D.-PARRY LTD., PARRY & CO., LTD., and a number of subsidiary and associated concerns, in all nine companies of substance, contributing to the country's economy through the manufacture of sugar, confectionery, fertilisers, industrial and potable alcohol, acids, chemicals, carbonic acid gas, sanitaryware, etc.

The GROUP provides employment to more than 10,000 people. The strong position it has achieved today gives it courage and confidence further to increase and broaden its activities to keep pace with the country's Five-Year Plans.

PP-367 M

INDIA TO BID FOR TWO IRANIAN OFFSHORE CONCESSIONS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India has agreed to the proposal of the E.N.I. of Italy and Phillips Petroleum to join them in the final bidding for two offshore concessions in Iran. When the areas were opened for bidding last year, the National Iranian Oil Company announced that "as the first step, any potentially interested party must apply for a questionnaire to be filled in and returned not later than 30th June, 1963, after which the applicants were to be notified whether they were qualified and if so, were to be informed of relevant procedures and given detailed information." In July 1963, some 20 companies, including Pauley Petroleum, Phillips Petroleum and the E.N.I. of Italy were declared as "potential" bidders for the offshore concessions. They were to share financially in an offshore seismic survey of the area.

Only those companies which are participating financially in the seismic survey, will be eligible to bid. If the seismic survey locates promising areas, the bidding for them will be stiff. It could include offers of joint participation with the National Iranian Oil Company, as provided in Iran's Oil Act. Those which do not want partnership may offer huge bonuses. The foreign partner may be expected to place N.I.O.C.'s share of production in the world market, along with its own share. Then again, financial participation in the seismic survey does not qualify a potential bidder to bid unless it can, in the interim period, fulfil the technical and financial qualifications which are regarded essential by the N.I.O.C. It was because of their search for an assured market that Pauley Petroleum, Phillips Petroleum and E.N.I. offered India a share in their holdings.

Package Deal

Pauley Petroleum had offered a package deal to the Government, which included 50 percent partnership to India in the Iranian concessions, the building of the Madras refinery on a minority participation basis but equal participation in a joint-venture to purchase and bring to India crude from the cheapest sources till Iranian concessions yielded oil and the search for oil in India on an all-risk basis with the proviso that the Company will join the Government on a 50:50 basis if oil is discovered. Meanwhile, three offers were to the Government. The State-owned E.N.I. of Italy and Phillips Petroleum made an offer to take India in their Iranian bidding, India contributing one-third of the cost of the Iranian venture. It was stipulated every decision of the tripartite combine will require 60-percent voting right. India, E.N.I. and Phillips will be 50 percent owners of the concession in case oil is discovered; the other 50 percent will be allocated to the National Iranian Oil Company. In other words, the joint venture will include the National Iranian Oil Company owning 50 percent and India, E.N.I. and Phillips owning the remaining 50 percent. India's contribution in foreign exchange over the five-year period is placed at \$7 million.

The second offer came from a combine of the American Oil Company, Gulf Petroleum and a French company C.A.F. to supply crude at comparatively cheap rates for a period of

five to seven years. On the basis of the contract, the combine also offered a loan to the Government of India, say, \$40 million at 5-percent interest to construct public-sector refineries in Madras or Haldia.

The third offer again came from Phillips Petroleum to explore oil in offshore areas at its own risk, with a provision to go into 50:50 partnership with the Government in case oil was found.

It should be obvious that the last two offers were not in conflict with the one made in Pauley Petroleum. The latter, for example, could have explored for oil in one area and Phillips Petroleum in another. Then again, the short-term contract for the supply of crude was not an integral part of Pauley's package deal offer.

Basis of Participation

The Government of India, as reported earlier, has decided to join the E.N.I. and the Phillips combine on a one-third participation basis. The project is estimated to cost about \$20 million. India's maximum risk, therefore, could be about \$7 million.

No specific reasons for preferring the offer of the E.N.I. and the Phillips combine are yet available. It may be that the Government of India did not like to put all its eggs in one basket. In view of the sharp criticism against the Cochin refinery deal with Phillips Petroleum, the Government should explain why it entered into another deal with a Phillips combine as a one-third partner. Will this deal be followed by a revision of the Cochin refinery agreement, taking away all its objectionable features? Meanwhile, with the Government going into the oil business outside India, the definition of "indigenous" crude has undergone a change as far as the existing refineries are concerned. The definition will include "all crude owned by the Government through exploration inside or outside India."

PATENT RIGHTS

Decision Taken

A long standing inter-Ministerial dispute over patent rights has been settled since the Central Cabinet has decided to retain in tact all existing patent rights which in future will be called "licences of right". Patents in relation to food, drugs, medicines, and pharmaceuticals will in future be only for process and not for products and will be valid for seven years, against 16 years as at present. They will be subject to a ceiling of 2 percent of royalty. In other cases, the validity of patent rights will be 14 years, against 16 years as at present. The Central Ministry of Health had urged the abolition of all existing patent rights and a ban on the grant of future rights, particularly in relation to medicines, drugs, food and pharmaceuticals. This was resisted by patent-holders, who made representations to the Government through their embassies in New Delhi.

This was followed by the appointment of a Cabinet sub-committee whose report had recommended necessary legislation to be brought before Parliament during its session

commencing next week. The amending Act will empower the Government to make rules which, among other things, will lay down procedures for acquiring rights during the validity of a patent. Anyone will be allowed to make use of a patent if it has not been issued provided he reaches satisfactory arrangements with the patent-holder in relation to royalty, etcetera. The patent-holder will have two remedies in case of a dispute. Firstly, the Controller of Patents will give him ample opportunity to explain his case. In the event of a patent-holder remaining unsatisfied, he could appeal to an Administrative Tribunal, to be set up to decide such cases and its decision will be final. The use of patent will not be held up during the proceedings of the Tribunal or by the Controller of Patents.

FOREIGN INVESTMENT

Prospects Discussed

Pointing to the recent I.T.T. contract as a significant and basic step in India's new programme to stimulate her economy, the U.S. Under-Secretary of Commerce, Mr. Franklin Delano Roosevelt, Jr., said that "the industrial development of any country is dependent on its means to communicate within its own borders and beyond with the rest of the world, and this applies especially to a country as vast, as populous, and as forward-looking as India." Mr. Roosevelt added that the formalisation of the agreement between India and the I.T.T. at this time served to emphasise India's policy of seeking foreign investment and gave an added impetus to additional U.S. private investment.

The agreement follows the visit by a special mission of 40 leading American businessmen in April as guests of the Indian Investment Centre. The purpose of the visit was to familiarise the U.S. investors with India's policy on private foreign investment and give them an understanding of the country's economic needs and problems. Both Mr. Roosevelt and the U.S. Assistant Secretary of Commerce, Mr. Jack N. Behrman, accompanied the mission.

The magnitude and seriousness of the problem confronting the people of India; the skill and determination which the Government and business leaders alike are exercising to solve these problems; the degree to which foreign investment capital is welcomed; the political stability of the country in spite of current possible changes in leadership and especially the desire of all to maintain an active and vigorous relationship to Canada in both trade and financial matters—were among the subjects of enquiry by 40 members of the trade and goodwill mission of the Vancouver Board of Trade during its brief stay in New Delhi recently. Mr. W. M. Anderson, leader of the delegation, expressed great appreciation for the extensive discussion arranged for the Government in which the fullest and freest opportunity for the exchange of views was provided. India's trading position; her fiscal policies; the degree to which foreign investment capital and technical skills are welcomed; the desire to retain for India substantial control of her resources and their development were all reviewed in some detail to the interest

and appreciation of the members of the Vancouver delegation.

F.I.C.C.I. Press Note

Meanwhile, the Federation of Indian Chambers of Commerce and Industry says in a Press note: "For a variety of reasons which mainly stem from Governmental policy, it is next to impossible to increase production. The delays in the issue of licences, in the utilisation of foreign exchange, in the ideology governing distribution of fields between the private and public sectors, as between small-scale and large-scale units, are not a little responsible for decreasing the tempo of production. On the agricultural front again, administrative failure has to be recognised."

"Investment is also a matter of sentiment and confidence. There have been far too many and frequent changes in fiscal concepts and measures, and almost every time they have gone against the taxpayer. He is apprehensive of what will be deemed income, capital losses and what rates he may be called upon to pay when he earns, spends, gifts away or bequeaths. If the individual Indian investor is frightened and crippled, foreign capital cannot replace him or work in combination with him. Indeed foreign capital which is so necessary for us may be discouraged, and it will be injurious to our plans and progress."

TELEPHONE

New Pact Signed

The Government of India signed last week a long-term contract with the International Telephone and Telegraph Corporation's Belgian subsidiary, namely, the Bell Telephone Manufacturing Company for the supply and local manufacture of automatic telephone switching equipment known as "Pentaconta". The project will be in two parts; initially, it calls for the supply of automatic telephone switching equipment including six local exchanges totalling 48,000 lines and four trunk exchanges totalling 670 junctions. The second part covers the establishment, jointly with the State-owned Indian Telephone Industries Ltd., of a unit to manufacture pentaconta equipment in India. The finance for the purchase of equipment will be supplied by the International Development Association, an affiliate of the World Bank. About 15 percent of the finance for the manufacturing unit will be supplied by I.T.T.'s finance associate and the balance from Belgian credit to India. When in full production, the unit will have an output of 100,000 lines of pentaconta equipment worth at least \$10 million.

At present, India's telephone network totals 518,000 lines, of which 357,000 are automatic. Of 48,000 lines of pentaconta to be imported under the I.D.A. credit, 30,000 will be placed in service at three exchanges in Bombay and the remainder in the Delhi and Madras areas. Trunk exchanges will be installed in Bombay, Delhi, Kanpur and Madras. Under an earlier agreement, I.T.T. collaborated with the Government in the manufacture of telephone cables.

COAL

Soft Coke Decontrolled

Taking into consideration the trends in coal production vis-à-vis the demand and the easy transport conditions prevailing in the country, the Government of India announced its decision to decontrol the distribution of soft coke for domestic consumption and Grades II and III non-coking coal with effect from 1st July, 1964. Simultaneously, with the removal of the distribution controls on these

grades of coal and soft coke, no distinction shall be observed between Grade II and Grade III non-coking coal for the purpose of supply to the consumer. This relaxation shall be applicable to the entire coal production in Singareni fields as also to the Grades II and III non-coking coal produced in all the coalfields in India, excluding Assam.

With the removal of distribution controls, the entitlement of any consumer to draw his supplies of coal of the grades mentioned above from the various coalfields, shall be determined by the zonal scheme applicable to each field and the principles of transport rationalisation already in force. Consumers would be free to enter into agreements with the producers of their choice in their respective authorised coalfield, either direct or through middlemen, for their supplies of coal or soft coke. They will not be required to route their applications for supplies of soft coke and coal of the grades mentioned above, through the Coal Controller or any other Central or State Government agency. They shall also be free to secure such supplies of coal without any limits concerning quantity.

Monthly Statement

Each working colliery shall be required to submit to the Divisional Superintendent of the Railways in whose jurisdiction the colliery lies with a copy to the Coal Controller, a monthly statement showing the destinations, quantity and the details of the consumers with whom they have entered into an agreement for the supply of soft coke and these grades of coal in that particular month. This statement should reach the office of the Divisional Superintendent concerned at least 15 days in advance of the month to which it relates. The Railway Administration will check the monthly requirements to ensure compliance with the rationalisation principles already in force and on the basis of acceptable movement demands of colliery, and frame the loading programme for each colliery every month. These programmes would be sent to the collieries concerned. The allotment of wagons for loading would be made after the indent have been actually placed by the collieries as at present. For each

consumer requiring 1,500 tonnes or more of coal a month, the collieries will be required to place the indents in the form of a block rake only; for this purpose, where necessary, collieries can also group themselves together to form a block rake, subject to the operational convenience of the railways. The details of actual coal loadings shall continue to be supplied by each colliery to the Coal Controller after the expiry of each month.

In view of the fact that these orders shall come into effect from 1st July, 1964, consumers and producers of coal on which distribution controls are being lifted, are advised to finalise their agreements well in time so that the collieries are in a position to submit their statements pertaining to the month of July 1964 to the Railway Administration concerned by 15th June, 1964.

Any consumer or producer of coal wishing to know whether the movement of coal from a particular colliery to a specific destination will be permitted, is advised to contact the Coal Controller or the Divisional Superintendent of Railways in whose jurisdiction the colliery lies.

SUGAR

Revision of Prices

The ex-factory prices of sugar for 1963-64 were fixed at the beginning of the season in November 1963 on the basis of the estimates of recovery of sugar from sugarcane and the duration of the season. It was decided to review these prices in the light of actual duration and recovery by the close of the crushing operations.

The Government of India has accordingly reviewed these prices and has notified the revised rates. It is explained that in some areas, namely, in the south where the season was nearly normal or better, the actual working results have been quite close to the estimates. However, in some areas in the north, on account of the diversion of sugarcane to gur manufacture and on account of frost and drought conditions, particularly in some districts of western Uttar Pradesh, Punjab, Rajasthan, Madhya Pradesh, south Bihar and Assam, both duration and recovery were adversely

affected. Some adjustments in cane prices have also been made in some areas.

The combined effect of these factors has been to disturb a comparative uniformity in costs which used to prevail over certain areas into considerable diversity and consequently it has become necessary to isolate high cost areas from others. It has, therefore, been considered necessary to sub-divide the west U.P. areas into (i) Meerut, Muzaffarnagar and Bulandshahr districts, (ii) Saharanpur and Dehradun districts, (iii) Rohilkhand and Agra Divisions and (iv) Lucknow Division.

The effect of the revision in prices is broadly as follows: (a) sugar price has been increased by Re. 1 a quintal in the case of factories in Maharashtra, Andhra Pradesh, Madras, Mysore, Pondicherry and Kerala.

(b) The prices have been revised downwards in the case of factories in Lucknow Division of U.P. and in Gujarat by Rs. 2 a quintal and in Orissa by Rs. 2.50 a quintal.

(c) In other areas generally the increase varies between Rs. 2 and Rs. 14.50 a quintal.

The revised prices come into effect immediately. Why the prices have been revised when the crushing season is over and sugar has passed on to the middlemen, is not disclosed. The increase in sugar prices will raise the cost of living index, leading to a demand for an increased dearness allowance. According to knowledgeable circles, similar increases in the prices of textiles and paper are regarded inevitable.

CEMENT

New Corporation

The Government of India has decided to set up a State-owned public limited company called the Cement Corporation of India, designed to further the development of the country's cement industry. The fourth plan estimates of demand for cement would call for a substantial expansion of the cement manufacturing capacity. Fresh capacity of at least 10 million tons a year may have to be

CAPITAL, 28th May, 1964.

created during the fourth plan period. The principal raw material of the industry is limestone. Inadequate knowledge of the country's limestone reserves has been one of the factors retarding the development of the industry in recent years. The survey and prospecting of cement-grade limestone in the country is thus one of the two principal objectives of the Corporation. The other would be the installation of sufficient capacity for the manufacture of cement in the public sector to help achieve the fourth plan production targets.

The Corporation's effects will be directed towards supplementing the activities of the private sector in expanding the cement industry. It will not only assist the growth of the public sector in cement, but will also facilitate private investment in the industry.

FINANCE COMMISSION

Terms of Reference

The fourth Finance Commission held a two-day session here last week. In addition to matters connected with the distribution of income tax and Union excise duties between the Union and the States and determining the principles governing the grants-in-aid of the revenues to the States under the provisions of sub-clauses (a) and (b) of Clause (3) of Article 280 of the Constitution, the Commission, among other things, is also required to make recommendations on the following:

"(a) The States which are in need of assistance by way of grant-in-aid of their revenues under Article 275, and the sums to be paid to those States other than the sums specified in the provisos to Clause (i) of that article, having regard to (i) the revenue resources of those States for the five years ending with the financial year 1970-71 on the basis of the levels of taxation likely to be reached in the 1965-66 financial year; (ii) the requirements of those States to meet the committed expenditure on maintenance and upkeep of the plan schemes completed during the third plan; (iii) and further expenditure likely to devolve upon those States for the servicing of their debt; (iv) creation of a fund out of the excesses, if any, over a limit to be specified by the Commission, of the net proceeds of estate duty on property other than agricultural land accruing to a State in any financial year, for the repayment of the State's debt to the Central Government; and (v) the scope for economy consistent with efficiency, which may be effected by the States in their administrative expenditure;

"(b) the changes, if any, to be made in the principles governing the distribution among the States under Article 289 of the net proceeds in any financial year of estate duty on property other than agricultural land;

"(c) the changes, if any, to be made in the principles governing the distribution among the States of the grant to be made available to the latter in lieu of taxes on railway fares;

"(d) the changes, if any, to be made in the principles governing the distribution of the net proceeds in any financial year of the additional excise duties levied on each of the following commodities, namely, cotton fabrics, silk fabrics, rayon or artificial silk fabrics, woollen fabrics, sugar, and tobacco (including manufactured tobacco), in replacement of the States' sales taxes formerly levied by the State Governments, provided that the share accruing to each State shall not be less than the revenue realised from the levy of the sales tax for the 1956-57 financial year in that State;

"(e) the effect of the combined incidence of a State's sales tax and Union excise duties on the production,

CAPITAL, 28th May, 1964.

consumption or export of commodities or products, the duties on which are sharable with the States, and the adjustment, if any, to be made in the State's share of Union excise duties, if there is any increase in the State's sales tax on such commodities or products over a limit to be specified by the Commission.

"The recommendations of the Commission shall, in each of the above cases, cover the period of five years commencing from 1st April, 1966.

Devolution of Revenue

"The present scheme of devolution of revenue from the Centre to the States, which has been evolved after taking into account the recommendations of the third Finance Commission and is applicable to the four-year period ending 1965-66, is as follows:

"(a) 66½ percent of the divisible net proceeds of income tax (other than corporation tax) are assigned to the States and distributed among them on the basis of population (80 percent) and collection (20 percent).

"(b) 20 percent of the net proceeds of the Union excise duties on all commodities other than motor-spirit, on which duty was collected in 1960-61 excluding those (but not excluding silk fabrics) on which the yield was below Rs. 50 lakhs a year (total commodities 35) are distributed among the States on the basis of population (as the major factor), relative financial weaknesses of States, disparity in levels of development, percentage of scheduled castes and tribes and backward classes in their population.

"(c) the grant-in-aid in lieu of tax on railway fares is distributed on the basis of compensation, namely, what States were getting before the tax was abolished.

"(d) the net proceeds of the estate duty are distributed between the States in proportion to their populations, except that the amounts collected from immovable properties are distributed on the basis of location of those properties;

"(e) in relation to the net proceeds of additional excise duties on textiles, sugar and tobacco levied in lieu of sales tax, the guaranteed amounts are first paid to the States, namely, the revenue realised from the levy of the sales tax for the 1956-57 financial year in that State and the balance on the basis of percentage increase in the collection of sales tax since 1957-58 and partly on the basis of population;

"(f) grants-in-aid of revenue of specified amounts are made to the States on an assessment of their needs based on a review of their budgetary position and the size of their committed expenditure out of revenues. Specific grants are also made to certain States for the improvement of their communications."

The fourth Finance Commission will review these arrangements. It will consider the modifications and adjustments, if any, called for in the present devolution scheme including the arrangements on grants-in-aid under Article 275(1) of the Constitution.

HEAVY ELECTRICALS

Russian Equipment

After successful negotiations between the State-owned Heavy Electricals (India) Ltd. and V/O Prommashexport, Moscow, contracts amounting to about Rs. 23.5 crores were signed here for the delivery of equipment, materials and the working drawings from Russia for the Heavy Electrical Equipment plant in Ranipet (Hardwar). The contracts also provide for technical assistance by Russian specialists during construc-

tion, erection of equipment and the commissioning of the project.

This will be the biggest heavy electrical equipment unit in south-east Asia and one of the largest in the world. It has been designed for the manufacture of units up to 300,000 kilowatts for thermal power-stations, up to 100,000-kW units for hydro power-stations; and electric drives up to 10,000 kW for use in the heavy machine building plant, Ranchi, coal mining machinery plant, Durgapur, and steel plants, etcetera. The total manufacturing capacity for steam and hydro turbo-units will be 2.7 million kW and of electric machines 515,000 kW a year. The annual output at full production is estimated at Rs. 40 crores.

Its importance to the economy is evident from the fact that while a total of 7 million kW of generating capacity will be installed during the third five year plan period, the plant alone will provide a potential of 2.7 million kW of power generating units a year.

Out of a total of 760 items of metal-cutting machine, 360 will be supplied from Russia and the remaining from indigenous sources. The Russian supplies consist of mainly large, unique and special machines such as screw-cutting lathes for machining items 14,000-millimetre long and 3,200-millimetre vertical lathes having a disc wheel diameter up to 12,500 millimetre; planers of 12,000 millimetre x 4,000 millimetre, etcetera. The total weight of the complex equipment supplied from Russia will exceed 23,000 tons.

Equipment for Obra Power-station

An agreement for the supply of equipment for the Obra thermal power-station was also signed here between the Uttar Pradesh State Electricity Board and Technoprom-Export of Russia. The deliveries of thermal equipment will be financed out of the rouble credit extended to India under the Indo-Russian agreement of September 1959.

The Obra thermal power-station in Uttar Pradesh, which is a third plan scheme, consists of five units of 50 M.E. each. According to arrangements so far made, about 2.5 million kW of equipment for nine power-stations in this country is to be supplied by Russia. The cost of these power plants (which includes the cost of the construction equipment in the case of some of the projects) amounts to about Rs. 95 crores.

S.T.C.

Exporting Salt to Japan

The State Trading Corporation will export 600,000 tonnes of industrial salt to Japan at a price of 22s a tonne during a period of two years from July 1964 to June 1966. The contract was signed by Mr. B. P. Patel, chairman of the State Trading Corporation with the Japanese Salt Importers Association in Japan on 13th May, 1964.

The contract with Japan provides for the supply of industrial salt by the State Trading Corporation to Japan during each of the two years, July 1964 to June 1966, of 300,000 tonnes of industrial salt at a price of 22s a metric ton, f.o.b. ports in Saurashtra and Kutch. The quantity in the second year is liable to be varied by 450,000 tonnes in the light of the performance of Indian shippers. The last contract entered into by the State Trading Corporation for the export of salt to Japan was for a quantity of 500,000 tonnes during a period of two years which would end in June 1964.

The Philippines and Malaysia have also shown keen interest in the import of Indian salt. Between the Philippines and Malaysia about 60,000

tonnes to 80,000 tonnes of Indian salt of good quality could be exported annually, subject to suitable shipping facilities.

Discussions were also held with the Japanese Government to advance the delivery dates for the supply of nitrogenous fertilisers contracted under the sugar-fertiliser barter deal. Initial talks for the supply of Indian tobacco were also held.

OFFICE ACCOMMODATION

Plans to Remove Shortage

Following the massive construction programme launched by the Central Ministry of Works and Housing, the chronic shortage of office accommodation in Delhi will be completely removed by the end of 1967. Office accommodation available in permanent buildings at the beginning of the current plan amounted to 1.5 million square feet. By 1967, accommodation available would be 5,936,000 square feet. This means a four-fold increase in the office accommodation and will be a little more than the requirements anticipated in 1967—5,787,000 square feet.

At present, there are 27 office buildings at different stages of completion in the capital which will cost over Rs. 11 crores. The Central Finance Ministry has just approved the construction of more office accommodation amounting to 1,490,000 square feet. With the addition of 1,535,000 square feet of office accommodation already available and 422,000 square feet in leased houses, the total accommodation by 1967 will come to 5,930,000 square feet.

As a result of this construction programme, the Ministry has decided to demolish old war-time hutments which have outlived their lives. The Ministry proposes to demolish all but 654,000 square feet by June 1965. This accommodation will be retained till June 1967 because it is in a better condition. The halls and sheds in the Exhibition Grounds (367,000 square feet), which are being used for offices, will also be vacated according to a phased programme by December 1965.

Building a Supermarket

The buildings which were requisitioned during the last war (104,000 square feet) will be de-requisitioned gradually to complete the process by December 1965. New Delhi is also building a super-market. Side by side, a super slum has been created. This has been done by converting the two massive looking blocks of the Central Secretariat, built at an enormous cost on what was once the Raisa Hill. Till August 1947, it was a showpiece of New Delhi.

In the ultimate analysis, the responsibility for the growing accumulation of dirt and of "slumisation" of the secretariat lies with the Central Ministry of Works and in particular with the Secretaries and Ministers using the buildings. In the olden days, there was a combined effort of the members of the Executive Council and Secretaries of the various Departments, who made the Ministry of Works do its job efficiently. The whole outlook has undergone a radical change. In the anti-British drive, even the British standards of cleanliness have been destroyed. So a dual process is on. On the one side, money is lavishly being spent to eradicate slums. On the other side, new slums are being created. The tragedy is that the taxpayer is made to pay even for creating slums.

FERTILISER

Ammonia Gas Plant

The Gujarat State Fertiliser Co. Ltd. of Baroda, has placed an order for

an ammonia synthesis gas plant with the Power-Gas Corporation Ltd., of Stockton-on-Tees, England. The plant will be erected near Baroda, and will employ the I.C.I. reforming process to produce the equivalent of 150,000 metric tons of ammonia a year. This will be the first application of the I.C.I. reforming process in India. Power-gas will also be responsible for the engineering of the carbon dioxide removal plant. The two plants are expected to be commissioned by the end of 1966.

When completed, the Gujarat project will represent one of the largest fertiliser complexes in India, and will result in a considerable saving of foreign exchange. It will also supply chemicals which are at present scarce in India.

A project for the production of protein-rich food through the development of poultry is to be initiated in Babugarh, Uttar Pradesh, with aid extended by the Australian Freedom From Hunger Campaign committee. Its object is to improve human diet and raise the levels of income of the rural population through increased production of eggs and poultry meat.

The project is expected to cost over Rs. 46 lakhs. Out of this, the Australian Freedom From Hunger Campaign committee will contribute \$130,000 (about Rs. 6.2 lakhs) for the purchase of equipment from abroad. The F.A.O. will provide the services of a poultry production expert for a period of three years. In addition to implementing the project, the expert will assist other State Governments in guiding and supervising the various poultry production projects under the applied nutrition programme.

An intensive poultry development programme will be undertaken within a radius of ten miles around Babugarh as well as at two other centres in Meerut district. The centres will provide 50 to 100 interested poultry farmers with the necessary facilities on credit which will be recovered from the sale proceeds of eggs and birds. They will also train departmental staff from various States for taking up similar projects in their respective States.

U.K. FACING DANGERS OF AN INVESTMENT BOOM

(FROM OUR LONDON CORRESPONDENT)

THE National Institute of Economic and Social Research of the U.K. maintains in its latest review that the Budget was "too mild" to achieve the slowdown to a normal 4 percent growth rate which the Chancellor had aimed at. Total output is now likely to rise by about 5 percent over the next 12 months. Unemployment may fall to below 1½ percent by the middle of next year. The balance of payments will probably show a deficit of £150-£200 million on current account in 1964; the total deficit, including long-term capital, may be about £300 million and this may well run at a similar rate in the first part of 1965. These are the chief post-Budget estimates.

Believing that demand will continue to increase at this high rate, the review argues that it will lead to strong pressure on resources, and particularly pressure on the balance of payments and on costs and prices. Here the Institute issues a warning: while it may be possible to relieve the balance of payments pressure by various expedients and to steady costs and prices by an incomes policy, "these measures cannot be very effective if demand is excessive. In fact, the regulation of demand is central".

The cause of the trouble is that the U.K. is now swinging into a

great investment boom. From now until the middle of 1965, fixed investment is likely to rise by about 9½ percent, though the change between the calendar years 1963 and 1964 will be more like 14 percent. The main rise in manufacturing industry's outlays for plant and equipment may not come until the third and fourth quarters of this year. Investment in housing has continued to rise rapidly. Pressure on the construction industry and the supply of building materials is growing fast, and the time may be approaching when the Government will have to control the timing of housing starts. Investment in the public sector apart from housing is, of course, also rising fast.

Personal consumption, on the other hand, seems to have risen very slowly since last autumn—by little more than 1 percent a year. Stockbuilding has already risen sharply and may not increase very much further. Exports are still growing at a fair rate, but the balance of payments has deteriorated as a result of the higher volume of imports—much of it for stock—and a sharp rise in the prices of primary commodities. So far, sterling has been cushioned against the effects of the U.K. payments deficit by the strong payments position of the overseas sterling area. The review concludes

that as world production and trade seem likely to have a good year, Britain may expect exports to go on growing at a rate of about 6 percent a year during the rest of 1964 and in the early part of 1965.

Pressure on Resources

It is interesting to find this group of highly qualified independent economists returning from their daring ventures of intellectual exploration to the cosy hearth of orthodoxy. But even the well-trodden path has its lions. "The difficulty is that a large investment boom, both public and private, has now reached the point where it cannot readily be checked. To stop projects halfway is wasteful, to apply disincentives is to induce an investment slump a long time later. The only exceptions are housing and perhaps office building; these might be regulated quickly, but this could not have a large general effect. Thus there is little choice but to ride out the investment boom and the consequent pressure on the capital goods industries".

Little faith is placed in credit policy as a regulator of home demand—unless a squeeze is so drastic that it destroys business confidence. The use of the tax regulator is now, in practice, limited to adding about £100 million a year to revenue. In short, the Institute does not think that much can be done between one Budget and the next. It accuses the Chancellor of having taken the risk of requiring "severe action at some future date" and perhaps another period of comparative stagnation in order to ease the pressure of demand.

This dismal fear of another "stop" at the end of the present "go" period has been felt by many people since the Budget. It is only fair to point out that the view is not at present shared by the stock market, which is behaving as if it is confident of sustained expansion for much more than another year. It never pays to disregard the collective wisdom of the stock market. But there are also one or two concrete arguments to be put on the cheerful side. The approach of the election is already causing the postponement of many industrial and commercial investment decisions. The remarkable stability of consumer spending since last autumn suggests that personal savings are running very high. As the Institute itself indicates, stock building imports have been so high lately that they may not go on rising at anything like this rate. Finally, one cannot altogether brush aside the considered view of the N.E.D.C. staff that the economy now has the capacity to "stretch" under pressure of demand.

Although the economists' fears did not have a very disturbing effect on markets, the same cannot be said of the April trade figures which followed a few days later. These turned out to be the worst since January. Exports in April were £337 million, against the record figure of £373 million in March. Imports were up to £457 million, against £451 million in March. With re-exports unchanged at £13 million, the April figures (seasonally adjusted) show a "trade gap" of £107 million, compared with £65 million in March. This is the largest gap on record ex-

CAPITAL, 28th May, 1964.

cept for the January figure of £127 million.

Trade Deficit

In balance of payments terms, the deficit on visible trade works out at £65 million, against £17 million in March and the peak of £73 million in January. In the last three months, February to April, exports were 5 percent more than in the previous three months (November to January). In the same two periods, imports were only 3 percent up. The balance of payments deficit on trade averaged £29 million a month in the past three months, and on this basis, the figures indicate a deficit for the year 1964 of about £350 million on visible trade and of £200 million for the balance of payments on current account. This is only slightly worse than recent unofficial forecasts have suggested. But the picture again darkens if one takes in the January figures.

The Board of Trade no longer believes that the shocking January results were much affected by a statistical freak. On the other hand, officials point out that imports have now been running at much the same high rate for four months, so at least they seem to have stopped rising. On the export side, they recall that a number of industries continue to report full export order-books. They are inclined to regard the April figures as just another sharp fluctuation and to maintain the previous view that exports are still on a rising trend.

The stock market was upset by the trade figures and share prices fell back on a wide front. Sterling also weakened in the foreign exchange market. But just when this new twist in the balance of payments has sent a familiar shiver of fear through the business world, it is reassuring to read an authoritative book which argues that the British people are steadily getting better at keeping the economy in balance. Written by Mr. J. C. R. Dow, who spent the first eight post-war years in the economic section of the Treasury and the next eight composing this book before returning to Whitehall, *The Management of the British Economy, 1945-1960*, describes the whole range of instruments used by successive post-war Chancellors, both Socialist and Conservative, first to maintain "high and stable" employment and later to restrain the pressure of inflation. As Sir Robert Hall, the Government's chief economic adviser during those years, says in a foreword, a great deal had to be learned about the timing, strength and direction of Government actions. This depended not only on skill but on statistical and other facts which were then extremely patchy.

Behaviour of Economy

Mr. Dow makes much of the "behaviour of the economy". This is a point on which the Press has often had a surer instinct than Whitehall, because it watches the markets and "listens to business men while the official economists wait for the statistics. But thanks to Mr. Dow and others—and to the F.B.I.—the Whitehall methods of watching the economy have been greatly humanised. Economic forecasting, which went so absurdly wrong in the days when Chancellors took pride in publishing their predictions, has become reasonably shrewd. As for the future, Mr. Dow outlines a programme that is refreshingly undogmatic. In theory, he would like to see a high and even excessive demand allowed to go on until productive capacity expands to meet it. In practice, he points out that the British economy is remarkably sluggish in responding to excess demand—possibly because the business climate is not sufficiently competitive.

CAPITAL, 28th May, 1964.

Jute

GOOD PROGRESS IN MACHINERY MANUFACTURE

THE Jute Machinery Manufacturers Association was inaugurated in Calcutta last week as an affiliated member of the Engineering Association of India. In his inaugural speech, Mr. S. C. Kela, chairman of the Association, said that since the second World War the jute machinery manufacturing industry had made commendable progress, satisfying as much as 70 percent of the machinery and replacement needs of the jute industry. Because of its timely development, the indigenous gunny industry has been able to step up its output to the third plan target of 1.3 million tons two years ahead of schedule. The output of jute machinery and replacements has increased almost tenfold from Rs. 37.83 lakhs in 1956-57 to Rs. 3.75 crores in 1963-64. Besides, it has been able to tap the overseas market as well.

Output Rises Rapidly

Mr. Kela said that the industry had to play an important rôle in developing and consolidating the Indian jute industry. Against an expected demand for jute machinery worth Rs. 9.18 crores a year during the fourth plan period, the supply from indigenous manufacturers may be around Rs. 13.80 crores a year. From experience it has been seen that machinery manufacturers are not able to reach their rated capacities. With an assured supply of essential imported components, raw materials and capital equipment, the industry may achieve 70 percent or 80 percent of its installed capacity. Mr. Kela appealed to the authorities to issue liberal quotas for importing essential materials to help the industry step up its production rapidly. He mentioned that plans had been finalised for manufacturing post-spinning, weaving and finishing machinery in the country. By the end of the third plan, the industry hopes to be in a position to manufacture the complete range of jute mill machinery.

Addressing the Association, Mr. G. C. L. Joneja, Jute Commissioner, expressed his satisfaction with the wide range of jute mill machinery produced in India and its excellent quality. Considerable progress has already been made and the assembly bays of Calcutta factories have been turning out intricate machinery, like light yarn spinning frames, winding machines, broad and narrow looms, automatic cop loaders and calendar bowes. He had no doubt that the industry would diversify its production to meet the varied demands of the jute industry.

Presiding over the function, Mr. S. K. Mookerjee, Finance Minister of West Bengal, said that the Indian jute industry had to modernise its machinery and equipment and diversify its production in order to remain competitive. He urged the machinery and component manufacturers to accelerate their efforts to ensure an easy supply of special-purpose machines and equipment.

Jute Delegation for Europe

A jute delegation left Calcutta for western Europe and North America last Monday. Led by Mr. G. C. L. Joneja, Jute Commissioner, the team consists of Mr. R. H. Morrison, chairman of the I.J.M.A., Mr. H. S. Singhan, member, I.J.M.A. Committee, and Mr. A. T. Robertson, Secretary, I.J.M.A. Mr. D. Duncan-Smith, chairman of the Calcutta Jute Fabrics

Shippers Association, will join the team in Europe.

Visiting Paris first, the team will attend the annual congress of the Association of European Jute Industry. India has been invited by the Congress—along with Pakistan and Japan—for the first time since its inception in 1954. Besides members from West Germany, Austria, Belgium, Denmark, Spain, France, Italy, the Netherlands, Portugal, Sweden and Switzerland, Irish and British observers will attend the meeting. The Indian team will get an opportunity to exchange views with members from European countries on undertaking joint publicity and other promotional measures to popularise the use of gunnies and other jute products.

The Indian delegation will later fly to New York on a three-week tour of North America. It also proposes to spend three or four days in Canada. In the U.S.A., the team will discuss various problems with the burlap trade and industry, representatives of agricultural and industrial consumers of gunnies and leading officials of the U.S. Department of Food and Agriculture. It is expected that the trade team will be able to get a clearer picture of the difficulties posed by U.S. restrictions on the use of burlap bags in packaging foodstuffs. The team will make an on-the-spot study of the growth and potentialities of the tufted carpet industry. It will also assess the pace of research schemes in evolving new uses for jute fabrics in the coated, decorative and protective ranges. These schemes were launched by the

I.J.M.A. in collaboration with the New York Burlap Council. During its return trip the delegation proposes to stop in Rome, London and Brussels for discussions with representatives of Italian, British and Belgian jute industries.

Package Cultivation Schemes

In view of the high price of rice, jute circles had feared a shrinkage in the acreage under jute due to diversion during the 1964-65 season. But timely showers over wide areas in Gangetic West Bengal, Burdwan, Midnapore, northern Bengal and Tripura have brightened the prospects of a double crop in many areas. Already, jute plants are thriving well in the early sown, low-lying areas of lower Assam Valley, Dinajpur, Jalpaiguri, Cooch Behar, Tripura and north-eastern Bihar. Considerable progress has also been reported in soil preparation and production of seedlings in Uttar Pradesh. In Andhra, about 2,000 acres are to be sown with jute; mesta too will be grown in many areas.

Meanwhile, the Central and State Governments have launched schemes for the intensive cultivation of jute and sugarcane simultaneously with paddy and wheat. A beginning is being made in Bihar with a package plan in Purnea and Saharsa districts. An important feature of the intensive jute cultivation drive is the linking of the crop with paddy. Latest pilot-scale investigations have shown that the jute crop provides the most effective manure for paddy on the same soil. Another aspect of the scheme will be the propagation of the hybrid

jute seed evolved by the Indian Council of Agricultural Research. The new seeds ensure a longer fibre with silken lustre. In West Bengal, the 24-Parganas, Nadia, Birbhum, Bankura, Midnapore, Hooghly and West Dinajpur districts have been selected for introducing package programmes on a pilot scale for the intensive production of jute and paddy. An experimental package programme yielded satisfactory results in the Burdwan district in the 1963-64 season. Block development officers have been asked to give full co-operation to district agricultural officers in implementing the scheme.

THE JUTE MARKETS

Manufactured Goods: Trading was interrupted in the Calcutta gunny market during the past week by a holiday. In spite of easier conditions at Sandheads, shipments continued to be slow due to the shortage of lighters. There were some space enquiries from the U.K., the U.S.A. and Cambodia for ready and near positions. The offtake for River Plate destinations by the late-May loader was also reported to be satisfactory. But for stray deals with the U.K. and the U.S.A. for ready and near positions, there was little fresh overseas business. The Indian Government's offtake too was a mere 1,500 bales of B Twills for May-June. These orders failed to satisfy market expectations. The lower levels attracted short-covering, generally in standard goods, for ready and near deliveries. Besides, some shipper-covering was also reported. After midweek, fresh enquiries were reported for moderate lots of non-standard constructions, in which a squeeze was felt. Mills showed a keenness to replenish their bookings, but were not inclined to reduce rates. In the absence of any stimulus from the spot market, conditions in the hedge market reflected the general trend. Opening on an optimistic note, hessian and B Twills for May continued to be firm on brisk

Rotorvanes

GIVE YOU

A POWERFUL
MECHANIZED

GRIP ON

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanizing to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for. The Rotorvane will help you make good tea.

Rotorvanes are offered in two sizes. The Automatic Initial Feed is shown with the larger machine.

The Portable intermediate feed conveyor is another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Acrotting Machine.

bear-covering against end-of-account adjustments. But towards the close on Friday, prices sagged on profit-taking. All outstanding transactions were converted into August contracts on payment of handsome contango charges. Prices also fluctuated widely against August contracts on alternate bouts of long liquidation and bear-covering. Turnover was moderate in the spot market, and fair in the futures market. At the close, the undertone was easy.

Wednesday's quotations were as follows:

	May	June	July-Sept.	Oct.-Dec.
40in. 7oz.	32.85	33.10	33.40	33.60
40in. 8oz.	35.75	—	—	—
40in. 10oz.	44.35	44.65	45.20	45.45
B Twills	114.05	113.55	113.65	114.00
Cornsacks	114.75	115.00	115.25	115.50
Heavy Cees (Plain)	116.00	114.50	113.75	113.75
A Twills	135.00	136.00	136.50	137.50
Liverpools	127.50	127.50	127.50	127.50

Raw Jute: Dull conditions marked trading in the raw jute market during the past week. With more than a month to complete the small quota of 190,000 bales, mills continued to show selective interest in better-quality fibre. But at the same time, they were not inclined to meet the extracting demands of the few small holders of such fibre. So turnover declined to a trickle, and prices continued to hover around the previous week's levels. Holders of mesta and lower-grade fibre were nervous on good crop reports from the early-sown low-lying areas. In other jute-growing areas, soil preparation and the production of seedlings were in full swing. In view of the slow movement of mesta, it was being offered at a discount from the operational minimum levels. But little business materialised. In the hedge market, Upper Assam White Bottoms for June opened on an optimistic note. But it lost pace on bouts of profit-taking and short-selling after wide fluctuations, closing with a sizable loss on balance.

Business commenced in September contracts since Monday. In these too, the earlier gains were not maintained due to profit-taking. A number of June contracts were converted into September ones on payment of the usual contango charges. Turnover was fair in the former and small in the latter. The undertone was hesitant at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)		T.S.D. Minimum	
	Current Rs.	Rs.	Rs.	Rs.
Assam-Agartala Jute	84.39	31.50	80.38	30.00
Northern Jute	83.05	31.00	79.04	29.50
Western Desal Jute	77.70	29.00	73.68	27.50
Selected Daissee	89.75	33.50	85.74	32.00
Assam-Agartala Tossa	85.74	32.00	83.05	31.00
Mesta:				
Assam-Northern	69.66	26.00	72.34	27.00
Local Daissee	69.66	26.00	72.34	27.00
Bihar Dist.	66.98	25.00	68.32	25.50

THE U.K. JUTE MARKETS

FIBRE IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

A STEADIER tone developed in the raw jute market in Pakistan last week. Offers were not so freely made, and this was most noticeable in the case of white jute. Some of the larger shippers remained out of the market, but it was difficult to ascertain the true position as there was a fair amount of delay in cables between Pakistan and the U.K. Offers being made here were still very irregular, but the lowest quoted rates were not attracting much attention from spinners and the business passing was small and mainly confined to spot parcels. Although the quality of jute has been very good this season, spinners are in no hurry to add to their stocks as they realise there will be ample fibre to meet all demands.

A few more offers of new crop jute were made, but in most cases, these

related to groups and not to single marks. The quantity of new crop jute bought by Dundee spinners was very small for this time of year. On the one hand, there are the prospects of large crops both in India and Pakistan, but on the other, there is uncertainty about trading regulations such as minimum export prices, E.P.C. values and the granting of licences. Under these circumstances, buyers are remaining out of the market for the time being at least. There were offers of groups of Mill Hearts at £93 and of Grade Hearts at £80 10s for August-September shipment. So far, no offers of new crop Tossa have been made here.

Old crop prices were at £134 for Mill Firsts, at £108 for Mill Lightnings, at £95 for Mill Hearts and at £80 for Grade Hearts, c.i.f. U.K. for May-June shipment. Grade Tossa-2/3 ranged from £123 and Grade Tossa-4 from £105. Dacca Tossa-6 was named at £107 10s. Outport Tossa-2/3 was quite freely available at £93 and Outport Tossa-4 at £83, May-June. Very little interest was shown in cuttings at £59 for S.N.C. and at £50 10s for N.C. Mesta was steady at £85 for A, at £75 for B, at £66 10s for C and at £48 10s for cuttings, c.i.f. U.K., May-June.

Only a few offers of Siam jute were being made here. Burma has been in the market and it is expected that further business will take place. Prices were at £75 10s for grade A, at £69 for grade B and at £65 for grade C, delivered mill Dundee for May-June shipment.

The Calcutta goods market became much easier for hessians, but sackings were steady. Hessian touches were now at the lowest level touched for a considerable time. Quotations were at 67s 7d for 40in. 10oz. and at 50s for 74oz. a 100 yards f.o.b. Calcutta for May shipment, at 67s 11d and 50s 3d June and at 68s 6d and 50s 6d July-September. B Twills were at 173s 9d, 173s 9d and 174s 3d for the respective shipment periods.

Dundee jute spinners are busy and they have orders in hand for delivery a fair distance ahead. Prices of all descriptions are firm and the quoted rates have to be paid in all instances. Manufacturers of hessians are fairly well placed, but there is a great lack of orders for sackings and tarpaulins. Short-time working is still in force in the heavy end of the trade, and there are no signs of any improvement in the position at present.

Books

MERCANTILISM: A STUDY

Mercantilism and East India Trade. By P. J. Thomas. (Published by Frank Cass and Co. Ltd, London. Review copy received from Rupa and Company, Calcutta 12. Price 35s, pages 176.)

This is a new impression of the book first published in 1926. The specific object of the monograph is to trace the beginnings of the conflict between protectionism and free trade. The author has made a comprehensive survey and collected hitherto unused material from a variety of sources. He has thus been able to throw new light on matters which were not fully appreciated due to lack of exploration into available detail.

Towards the end of the seventeenth century, the mercantile system in England became increasingly protectionist, particularly in the sphere of foreign trade. The East India trade featured prominently in this controversy. The East India Company was attacked by those who resented its monopoly and their resultant exclusion. At the same time, the trade itself came under severe criticism on national grounds because it entailed the export of bullion. The influence of these controversies on future business trends and the development of the doctrine of free trade is discussed at length by the author. This book is a valuable contribution to the history of economic thought.

MARKET DATA

Thompson Consumer Index of Markets. Second Series, 1963. (Compiled by the Market Research Department, J. Walter Thompson Company Private Ltd, Lakshmi Building, Sir Pherozeshah Mehta Road, Bombay 1. Pages 363.)

The success of a sales programme depends considerably on the availability of reliable market data. Until a few years ago, sales targets for particular areas had to be based either on population or, where a manufacturer had marketed his products earlier, on past sales. These criteria were not quite reliable since population did not always provide an index of ineffective demand, while past sales did not take into account the changes in consumer preference or purchasing power. So sales programmes had to be based largely on a number of inspired guesses. The deficiency of market data was, to some extent, removed when the first series of Thompson consumer indices were published in 1960.

The present book has broad-based the indices by including as many as 21 basic statistics, as against only 12 in the previous series. Besides, the latest statistics have been used in constructing the index numbers, and as a result they have become truer measures of the relative consuming potential of individual towns. The market factors in as many as 684 cities and towns of India, which have populations of over 20,000, have been presented in this volume.

A useful addition has been made in the form of a gazetteer of urban centres. It offers a town-by-town record of 36 kinds of data grouped into 19 categories, with short descriptions of each market in terms of geographical location, transport facilities, trade, commerce and industries. This should help greatly in understanding and interpreting the market potential of each place. This book will be of great value to manufacturers and distributors in drawing up

realistic sales and advertising programmes for their products.

ENGINEERING SURVEYS

Indian Engineering Industries, 1963. (Published by the Engineering Association of India, India Exchange, Calcutta 1. Price Rs. 25, pages 974.)

This book was originally published in 1945. The progress made by the engineering industry over the last 13 years, particularly since planning started in 1950-51, is clearly brought out in the volume, which is the eighth edition. The history and development of the industry from repair shop and the manufacture of simple consumer goods in the pre-plan period to the present is fascinating.

The book begins with an account of the activities of the Engineering Association of India. The first section gives the names and addresses of the various engineering firms; the second deals with the trade marks of various products along with the manufactures to which they are applied; the third consists of a buyers' guide; the fourth gives a comprehensive survey of the engineering industries. This section covers nearly 200 pages and gives a valuable survey of the iron and steel, re-rolling and the associated industries like tinplate, and bolts and nuts. The last section gives information on the set-up of companies in the industry.

Indian Engineering Association: Directory of Members. (Published by the Indian Engineering Association, 6 Netaji Subhas Road, Calcutta 1.)

The Engineering and Iron Trades Association, which was established in 1895, was changed to the Indian Engineering Association in 1912 and has been continuously in existence since then. Membership of the Association is open to all engineering firms in India. The members of the Association, meanwhile, comprise a substantial portion of the organised sector of the engineering industry. In eastern India alone, member-firms employ directly more than 200,000 persons and the total capital employed is more than Rs. 250 crores.

As part of its general programme to expand and develop its activities, the Association has issued this directory of members. It is divided into four parts: (a) an introduction giving briefly the aims and activities of the Association; (b) a section providing information on every member participating in the directory concerning the date of commencement of business, set-up and the products dealt with; (c) an index including a detailed list of products; and (d) a cross-index and an advertisement section. The method of indexing gives a quick and easy reference to sources of supply for a whole range of engineering products and services. The directory is produced as a loose-leaf publication so that the information is kept continuously up-to-date.

LETTERS OF CREDIT

The Law Relating to Bankers' Letters of Credit. By B. C. Mitra. (Published by the Indian Press (Publishers) Private Ltd, Allahabad. Price Rs. 22, pages 274.)

The object of this book is to present in a short and simple form the working of bankers' commercial letters of credit which have been described as "the crankshaft of modern commerce."

The book begins with the object and operation of letters of credit, deals with the relationships between parties to commercial credit transactions, the tendering of documents under a credit and negotiability and assignability of letters of credit. The relevant case laws, extracts from judgments, an well-arranged appendix, specimen letters of credit in vogue in India, the United Kingdom and the U.S.A., and extracts from the relevant English statutes and Indian Acts are the important features of the book.

The Hon'ble Chief Justice of the Calcutta High Court has said in his foreword that the author's "meticulous handling of this important branch of commercial law in a manner helpful to busy persons like judges, lawyers, bankers, merchants and executives leaves very little to be desired."

THE SOCIALIST GOAL

The Avadi Socialists. By "Vigneshwara" (N. Raghunathan). (Published by B. G. Paul and Co., 4 Francis Joseph Street, Madras 1. Price Rs. 5, pages 392.)

The socialistic pattern of society was formally accepted as the goal of the Congress Party in January 1955. But long before that, the present Government at the Centre had given unmistakable indications of the direction in which it was bent upon taking the country. The author brings out the change in the thinking of Mr. Nehru and how his thinking has been influenced by China. This volume, which is a collection of papers from a journal, deals with the danger to individual freedom and initiative implicit in the policy pursued by the present Government. In the preface, the author reviews the evolution of the Congress policies during the past eight years and shows how earlier fears have come true. There is a brief discussion on the goal of democratic socialism recently proclaimed at Bhubaneswar. The author's wit and wisdom make it a pleasure to read his articles.

CENSUS REPORT

Census of India 1961, Volume XVI, Part VI. By J. C. Sen Gupta. (Published by the Government of India Press, Calcutta. Price Rs. 2.80, pages 31.)

The popular notion is that census publications are full of figures, dry as dust and are of use only to politicians and students of economics. The book under review contains, apart from statistics, excellent photographs. This is the second of the series of monographs written on the analyses of the answers to some questions put to every family residing in the village of Kamnara in Burdwan district and deals with the socio-economic aspects of life in that village. This village is situated at a distance of approximately three miles from the Burdwan town. The geography of that village,

the customs of the people, the castes under which the 970 people living in 153 households are divided, are given in the first chapter. There are only four brick built houses of which one is a school building. The people are engaged either in cultivation or as agricultural labourers and a few work in rice mills. Majority of the people who are engaged in cultivation alone get nourishing food. Out of the 153 households, 79 are teetotallers.

The necessity for such studies cannot be over-emphasised and a publication of this kind deserves to be read by everyone interested in the future of this country.

FACTS ON INDIA

Facts about India. (Published by the Director, Publications Division, Ministry of Information and Broadcasting, Government of India, Delhi 5. Pages 189.)

This is the fourth edition of this official handbook. It has revised and brought up to date the information presented in the previous edition published in 1959. The book offers in handy form authoritative material on various facets of India. The first part deals with the land and her people, history and the constitution of the country. The second part gives useful information on the economic and social structure, while the third part is devoted to cultural aspects, including architecture, painting, handicrafts, literature and music.

Its usefulness lies in the fact that it presents within 189 pages a large variety of material. This is not to say that there is no scope for improvement. Apart from the irregularity in its publication—since 1951, when the first edition appeared, only four editions have been published so far—its scope could have been considerably widened.

CALCUTTA GUIDE FOR TOURISTS

Handbook to Calcutta and Environs. By Eardley Latimer. (Published by the Oxford Book and Stationery Company, Calcutta 16. Pages 138.)

The book deals exhaustively with the usual places of historical interest but introduces several places which are not generally mentioned in pamphlets meant for tourists. The author's aim is to emphasise the cosmopolitan aspect of Calcutta. The city owes its origin to an Englishman but its development has been shared not only by the English and the "sons of the soil" but by Greeks, Portuguese, Dutch, French, Swedes as well as by Jews, Armenians and Persians, all of whom contributed to its history. Buildings, gardens and monuments in the city survive as landmarks of these varied cultures. The author takes the tourist in four different stages with the help of maps and photographs.

All tyres may look alike - BUT

there is a difference with

Firestone

Look at the tread—there are thousands of non-skid angles that adjust automatically to give you skid protection in starting, stopping and on turns.

The exclusive gum-dipped cord body eliminates tyre growth and gives you outstanding protection against blow-outs and ply separation.

This name on the tyre is the most important difference. It's your symbol of quality and service.

INEFFICIENT IMPLEMENTATION RETARDS PLAN PROGRESS

By C. V. H. Rao

Inadequacies of an administration not equipped for development work and widespread inefficiency and corruption have stood in the way of implementing the plan schemes, including the most strategic and vital.

SPEAKING at the joint annual conference of the Indian Economics Association, the Indian Society of Agricultural Economics and the Indian Society of Labour Economics last December, the Central Finance Minister, Mr. T. T. Krishnamachari, emphasised the need to stick to the essential strategy of development, but said that as a corollary, it implied that "we should ruthlessly re-examine our methods of implementation of the plan targets and rectify our defects and shortcomings".

In this context, the mid-term appraisal of the third plan contains significant admissions by the Planning Commission and the Central Government that implementation in crucial sectors of the plan has fallen considerably below expectations. Among these are agricultural production, provision of employment opportunities, stabilisation of price levels and population control. These are significant aspects of the national plan. In effect, the shortfalls imply, as Mr. Asoka Mehta recently pointed out, that "we are one plan behind in efforts to attain the prescribed targets in respect of economic growth." It means also that to cover up the gaps in achievement during the current five-year period, considerably greater and a more strenuous effort over a longer period will have to be put in.

A situation has arisen in which, despite a new orientation being given to the economy which may result in quicker progress in agricultural and other spheres during the next one or two plan periods, the country would be lagging behind the targets of national and per capita incomes. What is urgently necessary is that the causes for the unsatisfactory implementation of the plan projects in the crucial spheres should be systematically probed and effective remedial action taken.

Mid-term Appraisal

The mid-term appraisal accords a primary place, among reasons for failures and deficiencies in the realisation of the targets, to the inadequacies of the administrative machinery. The various measures to orientate the functioning of that machinery during the last 12 years and to make the administrative personnel at different levels development-conscious has obviously not attained the desired success. The demands of the situation have found the machinery, by and large, wanting in vital respects. Red-tape and delays at different levels continue to be the bugbear. The planners remain helpless. While official procedures are being modified and improved to ensure expedition, they are not yielding the expected results because quite a number of administrative personnel, lack the requisite competence and experience.

Administrative delays have bred a grave and widespread evil—corruption. A vicious circle of delays in decision-making, ineffective administration, inefficient implementation, corruption and resistance to corruption, resulting only in further delays, has been created. Its impact on implementation is ordinarily bad; but on an administration entrusted with highly important development tasks it is worse. It is significantly reflected in the hurried formulation of plans and unrealistic estimates of costs, which eventually turn out to be much

higher because of the subsequent rise in the prices of construction materials and labour charges. In the process, much public fund is also wasted. It can be confidently stated that very few of the major irrigation or power projects are free from these evils.

Implementation has been lagging behind also because of the inefficiency of administrative personnel and the paucity of trained and qualified staff. There is clearly a connection between the inefficiency of an official and his indulgence in corruption, as he invariably tries to cover up his deficiencies by delaying public business and resorting to deceptive practices to overcome them. Inefficiency is also the sequel, in many cases, of nepotism, non-recognition of merit and capacity in public servants and the dominance of caste and sectional factors in recruitment and promotions in public service. Shielding of corrupt and inefficient officials by Ministers and inadequate appreciation of integrity only breeds further corruption and loss of efficiency, in even the more honest and really competent sections of the administrative personnel. The axe must fall at the root of corruption and nepotism, if administration as a whole is to be emancipated from its drawbacks and if efficient execution of programmes is to be ensured. To consider that laying down punctilious paper procedures and issuing circulars emphasising their observance would improve administration, is to be wilfully blind to the factors which actuate human beings in certain given circumstances. In an economy hitched to the objectives of economic and social development, this can only lead to unhealthy competition and denigration of merit.

Absence of Co-ordination

Over a wide field of administration generally, and in relation to plan schemes in particular, there is absence of co-ordination at different levels—co-ordination which is essential as between various Central Government Ministries, between the Central Ministries and the Planning Commission, between the Central and the State Governments and again between the various departments of the State Governments dealing with developmental work, and lastly, between the officials and the non-official agencies concerned with the implementation of different plan projects. Co-ordination, again, is something which should grow as a natural process; it cannot be imposed by executive orders, while its absence means delays in implementation, disaster to schemes and waste of public funds.

As India's five year plans aim at a socialist society, the growth of the public sector as an instrument, both of economic development and of achieving the declared economic and social goals, is taken for granted. At the same time, that sector has to justify itself in economic terms. This necessitates laying down in clear terms that public sector projects, undertakings and institutions engaged in the production of essential commodities and goods like steel, electricity, oil and fertilisers should bring a return on the capital invested in such projects or industries and should yield reasonable profits, while simultaneously their products should be available at competitive prices.

Speedy and efficient implementation and economic management of such

projects, therefore, occupy a vital place in national economic development. To demand that they should be models of efficiency and run on essentially business principles with an eye on returns, may appear a tall order but the aim should be to ensure that they try to act up to these ideals.

In his recent Budget speech, Mr. Krishnamachari not only stressed the importance of speedy execution of public sector projects, but also the need for their earning better returns. "Many of our public sector projects," he said, "are lagging behind the schedule of their construction and what is more disappointing is that their contribution to our resources is nowhere near the plan estimates", he said. It is of the utmost importance, he added, "that enterprises in the public sector should not only make profits, but should make good profits. By that I mean that they should give a good dividend to the exchequer and yet be able to build up reserves to finance their own future expansion." The view that they should function on a "no profit no loss" basis he characterised as "wholly unsound in any society", and more so in a State which seeks to own or control the major sectors in production.

Responsibility of States

Over a wide area of development, responsibility for the implementation of policies and programmes lies with the State Governments. In agricultural development, industries, power development, road transport, education, health and medical relief and social welfare, the States occupy a key position while the Centre functions mainly as a co-ordinating and, more especially, as a resource-finding and grant-providing agency. Unfortunately, not all State Governments have shown themselves effective or efficient instruments for these things. For instance, time and again, the States, or some of them, are called to account for not taking all the necessary measures to increase agricultural production or for improving and spreading education, and for failing to do other things which would have ensured uniformity in standards and helped a quicker realisation of the goals of the plans.

Subject to Constitutional provisions, therefore, the Centre should adopt a more effective supervisory and directional rôle in inducing the States to carry out their obligations for the plan. There should at least be a firmer audit control over the expenditure of grants made to them by the Centre. This will not be an easy thing to do because the States are zealous of their Constitutional status; nevertheless, it cannot be avoided, especially as more and more funds are being transferred to them for various purposes and programmes.

The implementation of a number of programmes, particularly those pertaining to agricultural and community development, are being transferred to panchayati raj institutions in many States. This predicated a strengthening of the panchayati raj administration on the one hand, and increasing competence on the part of the block extension staff of the other. At the moment, panchayati raj institutions in many States may be displaying a greater predilection for political manoeuvring and acquisition of power

CAPITAL, 28th May, 1964.

than for developing administrative competence and efficiency as units of local government.

This calls for both administrative experience and a genuine spirit of public service in the non-officials holding elective positions in these institutions and competence and a development-oriented outlook in the block staff. Between the district administration and panchayati raj institutions, a willingness to co-operate and work together to channelise services to the rural population is essential. Implementation of various rural development programmes implies the planning of production, provision of services such as the supply of seeds, fertiliser, implements, co-operative credit and other farming equipment to the people, reporting on progress, and evaluation of results. Similarly, co-ordination between the State Governments and panchayati raj institutions like samitis and zilla parishads should be close and intimate. At the State level, there should be an agency which could induce such co-ordination and function as a channel of communication between the two agencies. While some States have established this kind of machinery, others have not and even in those where it exists, it is doubtful if it is an effective channel.

At the district, block and village levels, the impediment to effective implementation is the dearth of trained technical personnel like extension officers and village level workers, doctors, midwives, and craft instructors. It would be desirable for State Governments, which have made progress in the implementation of the democratic decentralisation scheme, to create panchayati raj cadres in administration, engineering, co-operation, education, social welfare and so on, which would obviate their dependence on the revenue and other regular government departments for personnel to man their services. Simultaneously, it would be desirable also to eliminate opportunities for a few powerful non-officials like M.L.A.s and Members of Parliament, to monopolise elective positions under the scheme and thus handicapping the evolution of local leadership. In Andhra Pradesh, which has made some rapid strides in democratic decentralisation, steps have already been taken in these two directions.

Effective implementation of the plan schemes calls for institutional changes. Unfortunately, although the last 12 years have witnessed the establishment of a number of co-operative and social welfare institutions through the grants made to them by the Central and State Governments, not many have made a conspicuous mark. The record of even the Bharat Sevak Samaj in this matter is not very encouraging.

One important test of effective implementation of the plan schemes is whether estimates for irrigation, power and other projects are carefully prepared, whether maximum care is taken to economise in construction costs and whether construction work is on the whole efficient. There are standing instructions from the Planning Commission, repeated from time to time, pertaining to the planning investigation and preparation of project reports, including proposals for inventory control, choice of construction agencies, system of contracts, development and utilisation of technical manpower resources and completion reports on projects. Judging from the manner in which a number of important projects are delayed in execution and their estimates are ever increasing, it would seem that these instructions are honoured more in the breach than in observance. It is to be hoped that under the new dynamic Deputy Chairman, most of these deficiencies would be removed and planning would be more precise and its implementation more efficient.

CAPITAL, 28th May, 1964.

Commodity Markets

EXPORT DEMAND FOR QUALITY TEAS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA can offer better quality teas to the quality-conscious international market in view of the growing internal market. While countries like Ceylon, Indonesia, China, East Africa, Formosa and Turkey are rapidly increasing their output, they have to export practically their entire production. India, on the other hand, is in a position to absorb part of her crop locally. This view was expressed by Mr. N. S. Dhar, chairman of the Kanan Devan Planters Association in the course of his address at the recent annual meeting of his Association held in Munnar on 23rd May. He noted with satisfaction the increase of 418,000 kilograms in the 1963-64 tea crop in spite of the widespread frost incidence, prolonged drought, large-scale mite attack and lower acreage. He was confident that improved cultivation methods, increased use of fertilisers and better crop protection and replanting would yield good results. Better and fuller labour utilisation and improved work output were vitally needed to cope with the increasing crop and to control the mounting cost to some extent, he added. Group incentive schemes for standard work hours, direct weighing of leaf in fields and modernisation of factories had been helpful in the district.

He observed that the sales tax levy on export teas in Kerala continued as a "serious handicap" to the trade. He hoped that the levy would be at least made a single point one, or the tea industry would be given the facility of bonded warehouses. Mr. A. I. Menzies, chairman of the Central Travancore Planters Association, said in Vandiperiyar last week that the plantation industry in the district is facing four different problems: lack of resources for modernisation, unrealistic linking of fair return on capital to equity capital, denial of depreciation on field assets and excessive and overlapping taxation. He told the 19th annual meeting of the Association that taxation had reached a stage where all the benefits of increased production, cost reduction, increased prices and exports seemed to be shared between the Government and labour. He called for substantial relief in taxation to benefit the industry. He said the fair return on capital was wrongly related to equity capital that was grossly understated for most planting concerns. Most companies founded in the late 19th or early 20th century had been ploughing back their resources year after year.

"Today there can be two companies with the same yield, producing at the same cost, selling at the same price, but having two entirely different results in relation to their respective equity capitals, even when precisely the same income is made. The reason is the failure to value identical assets at comparable and in economically meaningful terms. In no other industry is there a parallel to this peculiar feature", he remarked. The chairman said that field assets in tea plantations should be treated on par with those on rubber plantations for purposes of depreciation. The Tariff Commission had recognised the need for allowing depreciation on tree crops according to their productive life, he pointed out. When this was not allowed to tea companies their profits were over-stated, taxes were heavier, and generally they appeared on paper to be more prosperous than

they actually were. The position assumed great significance with the new formula for computing surplus for determining bonus.

Mr. Menzies said that tea bore an excise duty which was steeply increased in 1963 and made non-refundable and also a sales tax imposed by the Kerala Government. Both the Centre and the State were reluctant to lose their incomes. He emphasised the need for linking fair wages with fair workloads. While for the average worker the output of tea was 443 kilograms, for south India it was only 384 kilograms, in the Kottayam District, against 482 kilograms in Madras State.

The Kanan Devan Planters Association chief deplored that tea producers faced yet another wage increase besides the Bonus Commission's recommendations when the industry needed reliefs, incentives and aids. There was a welcome lull in the spate of spiralling taxation. He was of the view that bonus should be linked to profits if workers' productivity were to increase. Labour absenteeism was one of the foremost problems facing the tea industry in south India today, he said, and added that in the case of men the extra income they got from private work after work hours and at week-ends was the main cause and in the case of women anaemia and large number of children contributed to absenteeism. "Moneys spent on family planning propaganda were just a stupendous waste when one thought of the effects of maternity benefits on labour in the plantation industry", the chairman, Mr. Dhar said. While effective family planning only could be an answer to the problem, the present Maternity Benefits Act which guaranteed three or even four months' leave with wages for any number of confinements certainly acted as an incentive for repeated pregnancies. Consequently, family planning overtures went unheeded in plantations, he added. The birth

rate in plantations was heavy at 47.2 a 1,000 for the last seven years, he said. The thought that the Government should consider restricting maternity benefit to a maximum of three or four living children, asking employers to spend the savings on other labour welfare measures.

The instant tea factory of the Tata-Finlays in Munnar is nearing completion, and production is to begin in this unit shortly. This factory will help India to take advantage of the fast growing demand for instant tea abroad. Forbes, Ewart and Figgis Ltd., the leading tea broking firm of Cochin, are of the view that the standard of tea production in south India has risen "considerably" and it might continue to do so. "Producers must be quality conscious and their product must be able to compete with any other tea producing areas", they exhort the producers in south India through their annual review for 1963 which has just been published. While on the one hand there are many other beverages which are making inroads into the traditional tea drinking markets, on the other, technological progress has been such that production has been steadily rising year after year in producing countries, and at the same time, new and previously considered unsuitable areas are being brought under cultivation. It is only the top quality product that will be able to hold its own in such circumstances and any indifferent product is exposed to grave economic risk, they say.

Expansion Plans in East Africa

A Special Correspondent writes: After a comparatively steady output in 1963, east African tea producers have opened the 1964 season on a stronger note. It has already been pointed out that old established interests financed from the U.K., have decided on an extensive development of certain parts of east Africa. It is further reported that a leading British bank, in conjunction with the Commonwealth Development Company, is studying the possibilities of financing tea expansion projects. Such moves indicate faith in the political stability of the countries concerned.

After a bumper crop in 1961, India's old planted areas proceeded to fall back in 1962 and again in 1963. Then came a favourable cold weather spell in 1963-64, with quite useful rain in many districts and the hopeful

view has been expressed that there may be an early start of the plucking season. Crop figures to the end April 1964 total 18,253,933 million lbs, compared with 12,738,152 million lbs in April 1963.

Ceylon reports a rise from 237 million lbs to 485 million lbs in 25 years. Ceylon has also been able to raise the yield per acre. North India records an advance from 171 million kilograms in 1938 to 263.2 million kilograms in 1963. South India moved up from 34 million kilograms to 82 million kilograms in the same period. Last year's known world crop amounted to 1470.6 million lbs, compared with 1,472.3 million lbs in 1962, but these figures exclude China or new producers such as Russia.

It is satisfactory to note that tea imports into the U.S.A. is making satisfactory progress over the years, but figures recently to hand seem to be contradictory. For example, one

for perfect SEALING

Alse 'Jason' BRAND

GUMMED TAPES

DIAMOND PRODUCTS LTD.

a subsidiary of JARDINES 4, CLIVE ROW, CALCUTTA-1

RETAILERS: LOHIA TRADING CO., 133, Canning Street, Calcutta-1.

authority quotes imports during 1963 at a lower level of 122 million lbs, compared with 125 million lbs in 1962. Another source reports the following figures as imports consumption in million lbs:

	Import	consumption
1950	93.7	69.7
1955	101.0	80.1
1960	107.8	86.1
1963	117.6	94.5

The above figures indicate a considerable surplus stock but it is also claimed that consumption has risen by over 24 percent, while actual expenditure on food in the U.S.A. has advanced by 36 percent over the same period (1950-63).

The brewing is most important with orthodox teas, but in the U.S.A. the consumption of instant tea is increasing. The factory in India is expected to go into production at any

time and developments are awaited with interest.

According to a correspondent in Ceylon "the Ceylon Tea propaganda Board renders to its industry a highly specialised and vital service. It must convince the world, not only that tea is the best of all possible drinks, but that Ceylon tea is the best of all available teas; its responsibilities do not even stop there and Ceylonese on work or holiday abroad have often been taken by surprise by the brew that is served in the name of tea. Ultimately, it is the quality of the drink that will go the longest way to make it popular. We have, therefore, not only to persuade our customers to buy more tea, but also to educate them to brew it better.

CASHEW

Firm Price Trend

The cashew market is at present ruling firm. Processed kernel has

overseas buyers at the handsome rate of 59 cents a lb. Brisk buying enquiry is reported from India's chief buyers, the U.S.A. and Russia. While America has bought about 30,000 cases recently, Russia has lifted about 40,000 cases of 50 lbs each, according to one report. Indian shippers are of the view that demand would continue to be strong for some time to come and there would not be any serious difficulty in selling their stocks at reasonable prices. Exports up to the end of April are placed at about 700,000 cases. Trade circles are hopeful that there will not be any difficulty in reaching the last year's figure of 2.2 million cases, if this trend is maintained. Raw nut prices are also keeping firm in sympathy with kernal price. Imported nuts from Africa are available at prices varying between Rs. 750 and Rs. 800 a ton. Indigenous nuts are fetching around Rs. 975 a ton. Most of the Indian crop has already been sold.

CAPITAL, 28th May, 1964.

CARDAMOM

Recovery in Prices

Cardamom prices have recently registered a smart recovery, particularly in Bombay where the shippers have been buying heavily, against encouraging export enquiries. This has led to a sharp fall in stocks there. Shippers are reported to have bought about 2,500 bags, while arrivals during the month were to the tune of only 600 bags. More orders are expected from abroad so much so that prices are not likely to fall from their present levels in the immediate future, according to some trade circles. Green cardamom medium variety is at present quoted at Rs. 16 to Rs. 18 a kilogram. Extensive damage to cardamom plants is reported from some important growing areas like the High Ranges of Kerala. This is the result of inadequate rainfall in these areas for the past three years and particularly the prolonged drought since November last year. This might lead to an appreciable fall in India's cardamom harvest this year.

GOLD

Russian Sales in 1963

The recent selling of gold by Russia gives a topical flavour to Samuel Montagu's annual bullion review. In company with Sharps, Pixley, whose annual review was issued a few days earlier, Samuel Montagu challenge the American Central Intelligence Agency's estimate of Russian gold production. Unlike Sharps, Pixley, Montagu do not venture an assessment of the present annual rate of Russian output, but clearly they regard the C.I.A.'s figure of \$160 million as being far too low. Actual sales by Russia last year they put at more than \$500 million.

Samuel Montagu say that in 1956 they had good reason to estimate that Russian gold sales of \$150 million were probably about one-third of production that year, and that 1957 sales of \$250 million were less than half the then current output. They point out that the 1963 sales were exceptional. The annual average over the last eight years has been about \$200 million. Sharps, Pixley's estimate of Russian output was about \$450 million to \$510 million a year, or between half and two-thirds that of South Africa. The C.I.A.'s estimate of Russian gold reserves was \$2,000 million, a figure with which neither Sharps, Pixley nor Samuel Montagu appears to quarrel.

CAPITAL, 28th May, 1964.

COMPANY AND PUBLIC NOTICES

INDUSTRIAL INVESTMENT

TRUST LIMITED

NOTICE

NOTICE is hereby given that the Thirty-first Annual General Meeting of Industrial Investment Trust Limited will be held at the Registered Office of the Company at 61, Apollo Street, Fort, Bombay, on Friday, the 26th day of June, 1964 at 4 p.m. (S.T.) to transact the following business:—

ORDINARY BUSINESS

- To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st December 1963.
- To declare a dividend.
- To appoint a Director in place of Mr. Arvind N. Mafatlal who retires by rotation and being eligible for re-appointment offers himself for re-election.
- To appoint a Director in place of Mr. Nawal S. Phatarphar who retires by rotation and being eligible for re-appointment offers himself for re-election.
- To appoint a Director in place of Mr. C. H. Campbell who retires by rotation and being eligible for re-appointment offers himself for re-election.
- To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

SPECIAL BUSINESS

- To consider, and, if thought fit, to pass the following Resolution as a Special Resolution:—
"RESOLVED that the Articles of Association of the Company be amended as under:—
(i) The present Articles 19, 20 and 21 be deleted and the following Articles be substituted therefor respectively:—

"Share Certificates.

19 (a) Every Member or allottee of shares shall be entitled, without payment, to receive one certificate specifying the name of the person in whose favour it is issued, the shares to which it relates and the amount paid up thereon. Such certificate shall be issued only in pursuance of a resolution passed by the Board and on surrender to the Company of its letter of allotment or its fractional coupons of requisite value, save in cases of issues against letters of acceptance or of renunciation, or in cases of issue of bonus shares. Every such certificate shall be issued under the Seal of the Company, which shall be affixed in the presence of two Directors or persons acting on behalf of the Directors under a duly registered Power of Attorney and the Secretary or some other person appointed by the

and the two Directors or their attorneys and the Secretary or other person shall sign the share certificate; provided that if the composition of the Board permits of it, at least one of the aforesaid two Directors shall be a person other than the Managing Director, if any, or a wholetime Director, if any. For any further certificate the Board shall be entitled, but shall not be bound, to prescribe a charge not exceeding Rupee one. Particulars of every share certificate issued shall be entered in the Register of Members against the name of the person to whom it has been issued, indicating the date of issue.

(b) A Director may sign a share certificate by affixing his signature thereon by means of any machine, equipment or other mechanical means, such as engraving in metal or lithography, but not by means of a rubber stamp, provided that the Directors shall be responsible for the safe custody of such machine, equipment or other material used for the purpose."

"Delivery of Share Certificates.

20. Any two or more joint allottees of a share shall, for the purpose of this Article, be treated as a single Member, and the certificate of any share, which may be the subject of joint ownership, may be delivered to any one of such joint owners on behalf of all of them. The Company shall comply with the provisions of Section 113 of the Act.

"Issue of New Share Certificates.

21(a) No certificates of any share or shares shall be issued either in exchange for those which are sub-divided or consolidated or in replacement of those which are defaced, torn or old, decrepit, worn out, or where the cages on the reverse for recording transfers have been fully utilised unless the certificate in lieu of which it is issued is surrendered to the Company. The Company shall be entitled to charge such fee, not exceeding Rupee one per certificate, for any certificate issued on splitting or consolidation of share certificates or for any replacement of share certificates that are defaced or torn or where the cages on the reverse for recording transfers have been fully utilised, or for issuing new certificates in replacement of those which are old, decrepit or worn out or where the cages on the reverse for recording transfers have been fully utilised, or for issuing new certificates in replacement of those

market unit of trading on sub-division or consolidation of the old certificates.

(b) When a new share certificate has been issued in pursuance of clause (a) of this Article, it shall state on the face of it and against the stub or counterfoil to the effect that it is "Issued in lieu of share certificate No. sub-divided / replaced / on consolidation of shares."

(c) If a share certificate is lost or destroyed, a new certificate in lieu thereof shall be issued only with the prior consent of the Board and on payment of such fee, not exceeding Rupee one as the Board may from time to time fix, and on such terms, if any, as to evidence and indemnity as to payment of out-of-pocket expenses incurred by the Company in investigating evidence as the Board thinks fit.

(d) When a new share certificate has been issued in pursuance of clause (c) of this Article, it shall state on the face of it and against the stub or counterfoil to the effect that it is "duplicate issued in lieu of share certificate No. " The word "duplicate" shall be stamped or punched in bold letters across the face of the share certificate.

(e) Where a new share certificate has been issued in pursuance of clause (a) or clause (c) of this Article, the particulars of every such share certificate shall be entered in a Register of Renewed and Duplicate Certificate indicating against the name of the persons to whom the certificate is issued, the number and date of issue of share certificate in lieu of which the new certificate is issued, and the necessary changes indicated in the Register of Members by suitable cross reference in the "Remarks" column.

(f) All blank forms to be used for issue of share certificates shall be printed and the printing shall be done only on the authority of a resolution of the Board. The blank forms shall be consecutively machine-numbered and the forms and the blocks, engravings, facsimiles and hues relating to the printing of such forms shall be kept in the custody of the Secretary or such other person as the Board may appoint for the purpose, and the Secretary or the other person aforesaid shall be responsible for rendering an account of these forms to the Board.

(g) The Managing Director of the Com-

pany for the time being or, if the Company has no Managing Director, every Director of the Company shall be responsible for the maintenance, preservation and safe custody of all books and documents relating to the issue of share certificates except the blank forms of share certificate referred to in clause (f).

(h) All books referred to in clause (g) shall be preserved in good order permanently.

(ii) The present Article 52 be deleted and the following Article be substituted therefor:—

"No fee payable on transfer or transmission. No fee shall be payable to the Company in respect of the transfer or transmission of any shares in the Company.

(iii) All the provisions of the present Article 195 after the first sentence thereof, beginning with the word "Provided" and ending with the word "control" be deleted.

(iv) The present Article 196 be deleted.

NOTICE is also hereby given that the Transfer Books of the Company will remain closed from Saturday the 30th day of May, 1964 to Saturday the 20th day of June, 1964, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

By Order of the Board,
KISHORE M. PREMCHAND,
Director.

Registered Office:—

61, Apollo Street,

Fort, Bombay,

Dated 15th day of May, 1964.

Notes:—1. The dividend when declared will be made payable at the State Bank of India, Bombay, on and after the 29th day of June, 1964. The dividend warrants will be posted to those shareholders whose names stand on the register on the 20th day of June, 1964.

2. Change of address, if any, should be notified to the Company immediately.

A Copy of the Notice and the Explanatory Statement required to be annexed thereto are being circulated to the Members.

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

Registered Office: 9, Wallace Street, Fort, Bombay 1.

By Order of the Board of Directors,
WALLACE AND COMPANY,
Secretaries and Treasurers.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to April 1964. As compared with March, the April index for Food reveals a rise of 12

points. The indices for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 609 and 321 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 6 points during April 1964.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons who have acquired shares are advised to effect registration of scrip in their names before 2nd June, 1964.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, Netaji Subhas Road,
Calcutta, 21st May, 1964.

NOTES:

- (1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member. The instrument appointing the proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the meeting.
- (2) The dividend, if declared, will be paid on or after 16th June, 1964, to those shareholders so entitled, whose names appear in the Company's books on 16th June, 1964, or to their mandatees.

THE GENERAL INDUSTRIAL SOCIETY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at its Registered Office at No. 15, India Exchange Place, Calcutta, on Monday, the 29th June, 1964 at 2-45 P.M. to transact the following business:—

1. To consider and adopt the Report of the Directors and of the Auditors and the Audited Accounts for the year ended 31st December, 1963.
2. To declare dividend.
3. To appoint Directors in place of the retiring Directors.
4. To appoint Auditors and to fix their remuneration.

The Share Transfer Book and the Register of Members of the Company will remain closed from 19th June, 1964 to 29th June, 1964, both days inclusive.

By Order of the Board,
For THE GENERAL INDUSTRIAL SOCIETY LIMITED,
K. C. BAGRI,
Secretary.

Registered Office:
15, India Exchange Place,
Calcutta, 21st May, 1964.

N.B. (i) The Directors have recommended dividend on Equity Shares @ Rs. 1.40 nP. per

share subject to deduction of tax under the Income Tax Act, 1961. If dividend on shares as recommended by the Directors is approved at the meeting, the dividend will be payable only to such shareholders whose names are on the Company's Register on the day of the Annual General Meeting. No application need be sent for dividend as relative Dividend Warrants will be posted to the shareholders by 10th August, 1964. Shareholders are requested to kindly notify immediately any change of address.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

INDIAN COPPER CORPORATION LIMITED

(Incorporated in England)

DIVIDEND NO. 38.

NOTICE IS HEREBY GIVEN that at the Fortieth Annual General Meeting to be held in Committee Room No. 2 (2nd Floor) of the Bengal Chamber of Commerce and Industry, Royal Exchange, Calcutta-1, on Wednesday, the 12th August, 1964 at 11-30 A.M. the Directors will recommend payment of a Dividend (No. 38) for the year ended 31st December, 1963 of 12% (2.88 pence i.e. 16 Naye Paise per unit of stock) subject to deduction of Tax, in respect of the Issued Capital of £2,056,950. Subject to confirmation of members, the dividend will be paid on the 7th September, 1964 to all members registered in the books of the Company at the close of business on the 15th June, 1964.

The Registers of Members will be closed from the 16th June, 1964 to the 11th July, 1964, both days inclusive.

The profit for the year ended 31st December, 1963 was £1,384,875 (against £1,351,771 for previous year), out of which have been provided £170,000 for depreciation (£170,000 last year), £21,694 for gratuity (£23,375 last year), £21,694 for decretal amount under Kyantite Suit compromise (£50,788 last year), £821,855 for Taxation (against £742,378), £26,597 for Development Rebate Reserve (against £15,136) and £98,000 for General Reserve (against £195,000), leaving a nett profit of £246,729 (against £175,094). With £570 brought in from 1962, the balance available is £247,299 (against £247,404) and after providing £246,834 for the abovementioned proposed Dividend of 12% subject to deduction of Tax (Dividend No. 37 of 18% subject to deduction of Tax last year—£246,834) the balance carried forward is £465 (against £570 brought in from previous year).

By Order of the Board,
E. A. JOHNSTON,
Secretary.

BRAITHWAITE & CO (INDIA) LIMITED
NOTICE

NOTICE is hereby given that the Thirty-fourth Annual General Meeting of the members of Braithwaite & Co (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday, 18th June, 1964 at 11 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1963.
2. To confirm the interim dividends paid on the Preference Shares and to declare a dividend on the Ordinary Shares
3. To elect a Director in place of the one retiring.
4. To appoint Auditors and fix their remuneration.

As Special Business:

5. To appoint a Director in place of Mr. D. Fordwood whose term of office expires at this Annual General Meeting and in respect of whom the Company has received a notice under Section 257 of the Companies Act, 1956 from a member proposing the candidature of Mr. D. Fordwood for the office of a Director.

The Transfer Books of the Company in respect of the Ordinary Shares will be closed from the 4th June, 1964 to the 18th June, 1964, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such dividend as may be declared on the Ordinary Shares will be made on or after 25th June, 1964 to those members whose names are on the Company's register on the 18th June, 1964.

By Order of the Board,
B. L. MATHUR,
Secretary.

Registered Office,
4, Clive Row,
Calcutta,
15th May, 1964.

An explanatory statement as required under Section 173 of the Companies Act, 1956, has been forwarded to the members.

CAPITAL, 28th May, 1964.

COAL COMPANIES

O., P., F. and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TASKS FACING THE NEW PRIME MINISTER

MR. Lal Bahadur Shastri's unanimous election as the leader of the Congress Parliamentary Party is but the first step towards the difficult transition involved in running the country without Mr. Nehru. It is gratifying that this first step has been accomplished so satisfactorily. As one belonging neither to the right nor to the left, but closely identified with the centre where the heart of the Congress Party unmistakably belongs, Mr. Shastri is well qualified to preserve balance and stability—the basic needs at the present time. This is, indeed, the reason why the choice fell on him, a choice that is certain to be hailed widely both within the country and abroad.

As Mr. Shastri surveys his responsibilities, his first concern as *primus inter pares* will naturally be to put together an able team. As *Capital* goes to press this week, the basis on which the new Cabinet is to be constituted is not clear. One may, however, infer from the manner in which the succession issue has been resolved that the final selection will be as much the Party High Command's as Mr. Shastri's. Political purists may cavil at this because the right to name his colleagues is indisputably the Prime Minister's. Yet it will be folly to ignore reality; in the void left by Mr. Nehru, no single person—however wide the support he commands—can expect to carry on without firm backing from the Party's political wing. For this reason, one may expect Mr. Shastri's choices to reflect less his personal inclinations than the balance of forces within the Party.

To recognise this necessity is not to ignore the handicaps inherent in yoking together people whose ideas may not always coincide. That Mr. Nehru was able to get away (though not always successfully) with an assorted team is not relevant since no successor can possibly command the authority he enjoyed as the tallest national leader after Mahatma Gandhi. In the difficult decisions ahead, both at home and vis-à-vis neighbours, preserving a clear sense of direction will be of the greatest importance. This implies, for one, speaking with a single voice and, for another, acting in concert because none of the pending issues can be resolved in isolation. Evolving a consensus should thus be Mr. Shastri's first task, but this he cannot possibly perform without a much greater degree of cohesion and discipline within the Party than was necessary while Mr. Nehru was there to provide an "umbrella".

It may well be that several of those whom the Kamaraj plan banished must now come back to lend support to Mr. Shastri. It is, however, necessary to be discriminating in this matter. While the victors and the vanquished may demonstratively embrace each other in a moment of camera-conscious emotion, bitterness is not that readily cast out of hearts. The simple moral to point is that synthetic reconciliations are of no value, and will ill serve the country in the days ahead. Considering that there are several grave problems to settle—Kashmir being the trickiest among them with its corollary of Indo-Pakistani tensions—the least that Mr. Shastri has the right to expect is that anyone who joins him at this juncture will unreservedly

support the line he is known to take in these matters. Anything less than this will not only be a liability to Mr. Shastri but also to the country because it will preordain the new régime to a poor start. And making a bad beginning could be a fatal mistake.

In the economic sphere, some hard decisions must soon be taken to pull the country out of the slough. On present indications, the third plan is unlikely to achieve much more than a 20-percent increase in national income over its full span. This is of the same order as the second plan, but more distressing is the fact that *per capita* consumption is hardly rising at the levels where want and hardship are most acutely felt. Since the outlay on the plan will be well up to targets, the disappointing outcome clearly reveals the lags, if not total failure, in translating investment into results. Faced with persistent shortfalls, the country is suffering today from a crisis of confidence which augurs ill for the new Government.

If the democratic idea—a tender plant which Mr. Nehru did so much to nurture—is to survive, the economy must do very much better than it has in past years. This is a truth which hardly needs stating but one that many have been inclined to overlook as long as Mr. Nehru's presence provided insurance against most risks. In fact, one might say that the country has been altogether too complacent, considering the high degree of vulnerability displayed by democratic institutions in neighbouring countries. Mr. Shastri and his new team will certainly not want to aggravate the risk; they have no time, therefore, to lose in tackling the malaise purposefully.

It is clear by now that Mr. Krishnamachari's first efforts since his return to the Finance Ministry last year have failed to push the economy forward. No other outcome was perhaps possible with the half measures to which Mr. Krishnamachari limited himself in the political circumstances obtaining after Bhubaneswar. For a more positive endeavour to be now initiated, Mr. Shastri's Government will need a fairly free hand which both the Party and public opinion may be willing to allow before attitudes once again get frozen. This opportunity must not be missed because of the high price that disappointment may exact. Leftist dogmas spouted by disgruntled politicians have no connection with the actual problems faced by the economy. If these gentlemen command an audience today, it is only because the economy is in bad shape. Once it starts moving, Mr. Shastri and his colleagues should have no difficulty at all in scotching the ideas which a faction has been popularising to manoeuvre itself into power.

Taking first things first, the new Government should start by putting an end to the uncertainties which have characterised decision-making in the economic sphere. It is an open secret that inter-Ministry tussles for supremacy have gained an added edge since January when Mr. Nehru suddenly took ill in the middle of the Congress session in Bhubaneswar. The effect produced by such wrangling in high places among India's friends abroad is particularly unfortunate. If their concern for the fate of the economy has remained muted in recent

weeks, it was largely because of their realisation that a difficult period of transition was upon India. It would be folly, however, to strain their patience, and hence the urgency of the overhaul that Mr. Shastri has to undertake at the topmost levels to streamline the decision-making process. If economic co-ordination is to remain the Finance Ministry's responsibility, as now seems likely, this function needs to be accorded its full importance to minimise (even if it is not immediately possible to eliminate) jurisdictional disputes.

THE SUCCESS IN GENEVA

EVEN before it ends, it seems safe to pronounce the United Nations Trade and Development Conference a success. This is not because it has yet produced any concrete policies; that was not to be expected. Nor is it due to the under-developed countries having been able to persuade the developed to agree on what steps are required to meet their needs; this they have patently failed to do. No, the reason is, quite simply, that the concerted point of view which has emerged among the under-developed, although it embodies many detailed differences of emphasis, has succeeded in putting the developed countries sharply on the defensive. Compared with the broad measure of agreement which has been obtained on the one side, the confusion which exists on the other has shown itself in a particularly unbecoming light. This is all to the good. The developed countries may now be forced into reviewing their policies and probably shamed into some measure of co-ordination, or else shown up as hesitant and insincere towards what has become accepted as the world's most pressing problem. If the Conference closes with no gain other than this one, it has still earned its place in history.

The great danger was that the Conference would degenerate into a propaganda forum. Some of the more cynical among the developed countries were probably hoping for just that. But, it has done nothing of the kind; its deliberations have shown exactly the right mixture of reason and force best calculated to get the under-developed nations' case across. Part of this success must be attributed to the fact that the two super powers, Russia and the U.S.A., appeared to have agreed in advance not to attempt to compete in their promises of aid or to use the occasion for attacking one another. A further part might be accounted for by the absence of China. Among the under-developed countries themselves there has been remarkably little enthusiasm for political hobby-horses, a fact which in itself is enough to encourage some of the less enthusiastic supporters of foreign aid in developed countries to rethink their established prejudices. Once it is proved that aid policies do not have to depend upon the cold war, or its mid-60s equivalent, considerable progress will have been made towards establishing the economic criteria which really ought to govern aid programmes. What is required now is that this initiative should not be lost, that the under-developed point of view be defined and co-ordinated to the stage where it can be used as the basis of a permanent pressure group. Which means that the most useful outcome of the present Conference might be a secretariat to handle continuing business and a further agreement to meet at, say, permanent official level every few years, perhaps even annually. There are plenty of examples of this sort of thing to go by; the Common Market mechanism is perhaps the best case in point.

To some extent, of course, the defensive attitude of the developed countries was intended. Their approach to the Conference has been cautious from the start, as well it might be considering what little they have had to offer. As expected, the most promising among the schemes expounded were those of Britain and France. They are also the least reconcilable, and serve most easily to illustrate the overwhelming degree to which short-term economic and political self-interest is at present confusing world development policies. But at least these two countries have made some attempt to meet the needs of the under-developed, at any rate in theory. Russia and the United States have not even done this, and the spectacle of the world's two most powerful economic units explaining in firm rounded terms their intentions of doing nothing more than

While he is engaged in setting the house in order, Mr. Shastri will very much need protection from distractions such as those created by leftist manoeuvres. This is where Mr. Kamaraj, whose stature has been greatly enhanced by the part he has played in the past week, comes in. The Congress president, one hopes, will now have less difficulty in dealing with the frothy demagoguery of the leftist group. The country has had evidence that their ideological outpourings are no more than a blind for frankly opportunist aims.

what they are already doing, has been rather a depressing experience. This approach may, however, have had the virtue of honesty, because neither the French nor the British plans owed any of their attractions to the possibility that they might eventually have to be implemented. Altogether, the developed countries seem set to emerge from this Conference with very little credit indeed.

In fact, leaving aside the Russians, the only point on which there appears to have been agreement among the developed is that the G.A.T.T. should not be replaced by a new world trade organisation. This was probably inevitable at a stage in the evolution of the G.A.T.T. which could be crucial to its future irrespective of whether or not it can be adapted to meet the needs of the under-developed. There is some substance in the claim that the G.A.T.T. should be given another chance to fulfil the purpose now being demanded of it, if only because so many of the successes which have been recorded in the field of world trade since the war are directly due to its agency. At least the G.A.T.T. has worked, while there is every chance, given the present rudimentary state of thinking on trade and development problems generally, which a world trading organisation would not be able to. The "action programme" of the G.A.T.T. does represent a possible plan on which the developed countries could agree, if ever discussion gets round to it. There would be little justification for following the advice of some of the more cynical delegations to the U. N. Conference that the under-developed members of the G.A.T.T. should withdraw from it altogether. When so much confusion exists, and current policies are mostly at cross-purposes, it is useful to retain even limited objectives.

The current state of disagreement among the developed countries has been dramatically revealed during the early stages of the Kennedy Round. True, it was widely realised from the beginning that the main issues behind these negotiations would be political rather than economic. But this does not explain why so many risks are being taken in a matter of such vital concern to developed and under-developed countries alike. Even accepting that it is necessary the U.S.A. must once and for all be forced out of its traditional protective shell, and that the E.E.C. should not allow itself to be manoeuvred into a position where it is making all the real sacrifices, the value of a 50-percent across-the-board tariff is too great just to throw away. It cannot yet be taken for granted that the Kennedy Round will result in any tariff reductions at all; and certainly there will be none for at least another year. This is simply not good enough when the world is in need of such a massive increase in trade, particularly the under-developed countries. It is little wonder under such circumstances that exasperation is being expressed about the working of the G.A.T.T. It was never really intended to be a political forum.

SOME DONORS REDUCE AID

FULLER details of the Aid-India Club meeting held in Washington last week have become available since *Capital* appeared last week. Of the total of \$1,028 million pledged by the consortium, two-fifths came from the United States which maintained its contribution at the same level as in the previous two years. Britain did the same, but West Germany, the second largest aid-giver among the ten nations constituting the Club, cut her pledge from \$99.5 million to \$95 million. That the cut was

At this stage in the proceedings, the future of the Kennedy Round does not appear by any means promising. Contrary to earlier expectations, France's Common Market partners have shown no inclination so far to resist her tactics, although they may well still do so if it becomes obvious that her real purpose is to sabotage the negotiations altogether. Up to the present, it can be accepted that they are generally in sympathy with the French aim of forcing the maximum concessions out of the United States and Britain before agreeing to the final tariff cuts. Fortunately, the U.S. approach has so far been propitiatory, as indeed only becomes a nation whose tariffs are perhaps the highest of any developed country in the world. It is sincerely to be hoped that this attitude continues—it might not have done so had Mr. Kennedy lived—because the consequences of a breakdown at Geneva may not only be a high tariff for the E.E.C., but probably the end of the G.A.T.T. as well. Many under-developed countries may at the moment be regarding this possibility with considerable indifference. If so, they would be wrong, because the G.A.T.T. remains the only forum where the developed countries can be effectively tackled as a body. Without it the doubt arises whether the problem of increasing world trade opportunities would not become solely the province of the U.N.O., and get obscured by politics. It is worth the exercise of a good deal of patience in order to avoid this contingency.

All this adds up to one thing: the initiative in trade and aid now lies with the under-developed. It will require considerable sense of responsibility if this is to be exploited effectively. Perhaps the main danger is that sectional interests should intervene to spoil the under-developed countries' chances of unity. More particularly is this likely to happen in such cases as the Commonwealth, or the associated countries of the Common Market, where special preferences are enjoyed. So far, it appears to be agreed that provided nobody suffers severely thereby, all preferences should be voluntarily relinquished. This is a sound start involving as it does some apparent measures of sacrifice on somebody's part. If the spirit could be perpetuated, the gains should be immense. The general choice among the under-developed seems to favour more the British scheme for greater liberalisation of trade in manufacturing combined with commodity agreements, than the French plan for commodity markets. This again shows an encouraging measure of appreciation of the general good and an understanding of future needs rather than present convenience. Finally, the call to the communist countries to throw open their markets and to abandon their preferences underlines the essentially unpolitical nature of the development problem.

If it eventually succeeds in doing nothing else, the U. N. Conference will at least have convinced the under-developed countries of their combined strength, and the developed of the need to take this seriously. It is now important that the initiative gained at this Conference should not be lost when it ends in June. So far there has been no talk in Geneva about the point raised earlier in this article that a permanent secretariat should be established to ensure that constant pressure is applied at the right points, at the correct time, and in the best calculated amounts. There is really no reason why the seeds for an eventual world trade organisation should not be laid during the next few years through a close liaison between the secretariat of the G.A.T.T. and one set up to represent the U.N. Conference. Now that the under-developed countries appear to have got the bit between their teeth, there is scarcely any limit to the constructive opportunities which may lie ahead. It is merely a question of devising the best method of exploiting them.

not larger is something to be thankful for in view of the growing West German preference for private investment in place of official aid. Perhaps this year's pledge is only in continuation of the past commitments for the projects in progress, and the axe may be applied when these have run their full course.

Among other countries reducing their pledges, the case of Italy and Japan deserves special note

because India has been relying upon expanding their association with industrial development. Italy is already active in the field of oil prospecting and pipeline construction, and there are hopes that she may come into the refining end of the industry quite apart from possible collaboration in off-shore drilling in the Persian gulf. The cut need not, however, mean any lessening of Italian interest in these fields since the aid pledge reflects possibly the fact that negotiations are still in progress with commitments still some way off. The same probably holds good in the case of Japan. Quite obviously, India will need a good deal more assistance than what has been immediately committed if Japanese intentions of participating in steel development are to materialise.

The cut in the Austrian pledge from \$7 million to \$1 million comes as a surprise. This is not because the use of the \$12 million agreed to in the previous two years has been particularly rapid, but because of the hopes held in New Delhi of interesting Austria in the heavy-pressure vessels and structural shop to be built in Wardha. This much-needed project was to be financed at one stage out of British credits. Davy-Ashmore was very much in the picture and had submitted a project report only to find that British credits having run out, India would have to shop elsewhere for the particular scheme. Belgium, as briefly noted last week, has dropped out of the list altogether—a fact which may be connected with the failure fully to utilise \$20 million pledged over the past two years. The new deal for telephone equipment put through with a Belgian subsidiary of an American company is about the only major scheme so far concluded. The idea of buying second-hand mining equipment has been obviously made no headway since little has been

heard after a National Coal Development Corporation team went out to make a technical evaluation.

No more can be usefully said about other pledges until one knows what projects have been picked up for financing by the respective aid-givers. The World Bank and its affiliate, International Development Association, have maintained their contribution at the level of last year—only \$5 million short of the highest ever level reached in 1961-62. More so now than before, India becomes the Bank's largest debtor—a situation which is not too comfortable for either the giver or the recipient because of the protests this gives rise to in certain quarters. But then India is the largest of the developing nations, accounting for two-fifths of the people living in the poorer two-thirds of the world. In addition, she has clearly been in a better position to absorb aid than many others because of her relatively well-developed administrative apparatus, the supply of human skills and above all the growing strength of the infra-structure.

These advantages are in danger of being offset by unfortunate and unnecessary performance lags. Even more distressing, as it now appears, is the fact that the Indian case presented to the Aid-India Club was a catalogue of intentions rather than a well-conceived list of candidate projects. Although India got in the end more or less the amount of aid she wanted—\$1,028 million, against \$1,150 million requested—grave doubts are reported to have been expressed about the state of preparedness to put the aid to use. In other words, the aid-givers took this time at least India's word for it that the schemes listed would be worked out. But the Club is likely to ask for more substantial evidence next time—an eventuality for which New Delhi should be prepared.

Current News and Comment

Price Problem in West Bengal

After 18 months of labour, the Price Enquiry Committee has submitted its report to the Government of West Bengal. The report is voluminous, since it contains no less than 300 pages with recommendations which are far-reaching in character. An expert body should not toe the official line as a matter of course; it should be able to make unbiased recommendations without trying to please those in power. But the majority of the recommendations of the Committee are in favour of increasing the State Government's control on the foodgrains trade. Presumably, the Committee was anxious that the State Government should not reject its recommendations, so it has formulated them in such a way as to conform to the policies of the ruling Party. For example, the Committee's recommendations on the need for greater Government control on the rice trade, nationalisation of all rice mills in the State and the acquisition of the entire marketable surplus of rice and paddy, smack of almost identical resolutions passed at the last Bhubaneswar session of the Congress Party. Its other recommendations are no less drastic since it has suggested the licensing of producers, importers, wholesalers and retailers in all areas; regulation of markets, mainly at the wholesale stage; the setting up of price advisory boards and sub-committees for each major commodity and the maintenance of buffer stocks. It wants prices to be controlled through Government orders.

But in making these suggestions, the Committee has not obviously considered the limitations of the State Government. It is doubtful that the State Government will have resources to take over rice mills when it finds it difficult to implement its third plan schemes without generous Central assistance. If the Government is to exercise greater control on the rice trade through the licensing of producers, importers, wholesalers and retailers, not only will the existing administrative machinery have to be expanded, but it will also be necessary to ensure that it works efficiently. But judging from experience, the State Government is unlikely to achieve any success in this direction since controls and regulations will encourage only corruption and red-tapism. Since the State Government has been unable to stabilise food prices so far, it will be too

much to expect that it will be able to control the foodgrains trade by taking over rice mills and by licensing traders. That, in the face of it, seems too big a task for the State to handle.

It is no wonder, therefore, that two members of the Committee have dissented from the majority recommendations. They have bluntly pointed out that the price problem in West Bengal has been aggravated by Government measures to achieve certain "social and ideological objectives in the context of planned economic development". The impact of excise duties, sales tax and increased railway freights—in addition to the rise in labour costs—has contributed to the rise in prices. The dissenting members have stated that "the rôle of traders in depriving the primary producers of their due share of the price paid by the consumer is misconceived, and the determination of a rational price policy on such a misconception, as suggested by the majority of the Committee, is therefore wrong". State trading in food, according to the dissenters, is fraught with difficulties, "which are almost insurmountable." Although the Committee in its report has paid more attention to stabilising food prices than to anything else, it rightly admits that the price rise is an all-India problem caused by large-scale investments under the plans.

Difficulties of the Chemical Trade

Indian chemical merchants are now between two fires. Firstly, the growing incursion of the State Trading Corporation into the chemical export and import trade, and even into the field of internal distribution, has been depriving a large number of self-employed people of their only means of livelihood. Secondly, indigenous manufacturers' policy of marketing their products through their own sales organisations has deprived the chemical trade of any opportunities to benefit from the rising production of chemicals in the country. Referring to these difficulties in his presidential address at the annual general meeting of the Indian Chemical Merchants Association last week in Calcutta, Mr. Atma Ram Kajaria, stressed that the trade performed a vital economic and social function as an indispensable link between the producer, importer and consumer; and, therefore,

immediate steps needed to be taken to remove the hardship and inconvenience caused to the normal channel of trade through the present official policy on the distribution of chemicals.

Explaining the background to the shortage of chemicals and the intervention of the S.T.C., Mr. Kajaria said that foreign exchange difficulties had led to a drastic reduction in India's imports. These fell from Rs. 41 crores in 1959 to Rs. 28.43 crores during the 11 months ended February 1964. The production of indigenous chemicals has increased, in some cases substantially, but the self-sufficiency which was visualised in a number of major inorganic chemicals like soda ash, caustic soda, and sodium hydrosulphate by the end of the third plan is not likely to be achieved; judging from the expected levels of production, large shortfalls ranging from 30 percent to 50 percent are likely to occur in the targets. Fearing that the chemicals shortage might lead to profiteering and maldistribution, the Government has been importing chemicals on its own account on a steadily increasing scale. Only actual users are allowed to import directly, and this has led to a gradual squeezing out of the established importers from the business.

But the S.T.C.'s handling of the trade in chemicals, including their internal distribution, has been far from satisfactory. In this connection, Mr. Kajaria referred to the Estimates Committee's report submitted recently to Parliament, which has observed that the canalisation of chemical imports through the S.T.C. has not benefited the actual user or the general consumer. The object of bringing down prices has not been achieved. On the contrary, instead of devising ways to regulate the prices and ensure that the consumer got the goods at lower rates, "the Corporation and the Government, appear to have reconciled themselves to the charging of high prices as the only way out." Mr. Kajaria suggested that if it was thought necessary to canalise chemical imports exclusively through the S.T.C., their internal distribution should be left to established importers, either individually, or through an organised association of theirs. The Government could keep a check on the importers' activities, if necessary. Mr. Kajaria also had a word of advice for the trade. Having almost lost the import business now, he advised that merchants should take to the manufacturing line. Large quantities of chemical and pharmaceutical goods including hydrazine, morpholine, dextrose-anhydrous and atropine sulphate are required to meet the defence needs. Most of these items are being imported, and there is great scope for setting up indigenous capacity.

Pre-shipment Inspection for Exports

Addressing the meeting of the Export Inspection Council in New Delhi recently, Mr. Manubhai Shah, Central Minister for International Trade, indicated that nearly 100 principal export commodities would have to be brought under compulsory pre-shipment inspection in the next few years. Quality considerations are vital for increasing India's exports, and one of the methods for improving the quality of goods is to introduce compulsory pre-shipment inspection. But it is possible to overdo this. Mr. Shah's suggestion that the Export Inspection Council should have its own super-inspection organisation at different export centres and that this organisation should carry out check-sampling and testing of pre-inspected goods may cause harassment to exporters and increase the cost of pre-shipment inspection.

In order to improve the quality of export goods, it is important to stimulate quality consciousness in producers. Fortunately, most Indian manufacturers of export goods are quality-conscious, but all do not have the facilities. The Export Inspection Council has, therefore, done the right thing in deciding to engage technically qualified persons to help establish a chain of laboratories and test houses for the benefit of exporters. The Council has decided to have a four-tier system of laboratories—central and regional laboratories, technical universities and research institutions, private specialised test houses and agencies—in order to increase the scope of facilities available to exporters and to devise quality-control methods. The specialised agencies would also be given finan-

cial assistance to establish new laboratories and to extend existing ones. The importance of packaging in quality control is now being more clearly realised in India; so the Council has decided that pre-shipment inspection should include also a check on packaging. The Ministry of International Trade proposes to set up an Institute of Packaging in Madras, which will co-ordinate its activities with the Export Inspection Council to ensure that goods are not damaged in transit.

Rise in British Exports

Britons are so exalted by the unfamiliar successes of their export industries that they may overlook the superior achievements of competitors. The increase of just over 6½ percent in the value of the U.K.'s exports in 1963 was the biggest in years (the corresponding figure for 1962 was less than 2½ percent, but it was the smallest increase achieved in that year by any major exporter of manufactures except the U.S.A. and Canada). The average increase of the principal 11 was over 8 percent, and each of the first four—Japan, the Netherlands, Italy and Sweden—achieved increases of more than 10 percent. The U.K.'s unimpressive performance could previously be explained, though not altogether convincingly, by the traditional direction of her exports, more than most other manufacturing countries', towards the primary-producing countries. But last year there was not much difference between the two categories in the rate of expansion of imports. So the U.K.'s performance gives cause for anxiety if no appreciable relative change has occurred in recent months, or if earlier changes will not soon benefit Britain.

Attention has been focussed on the change in relative costs between Britain and continental Europe, but its implications are difficult to assess. There is no doubt that costs, particularly wages, have risen in the last year or so more in the European Economic Community than in Britain. The Survey published recently by the United Nations Economic Commission for Europe diagnosed Europe's economic trouble as wage-cost inflation.

But M. Marjolin, vice-president of the E.E.C. Commission, attributes the rise in prices rather to the pull of demand. Whatever the main cause, the rise in the Community's prices has induced the E.E.C. Council of Ministers to accelerate the harmonisation of policies, specifically to combat inflation. The Council adopted a resolution to this effect and established machinery to continue co-ordination, but the practical value of these moves is debatable. Individual governments seemed to feel that they should be exempt from inconvenient decisions, and some outside observers feel that the Council will achieve little more than pious resolutions. But individual governments, particularly the Italian and French, had started to grapple with their internal problems before the new machinery was set up. In any event, Britain does not benefit automatically from the Continent's inflation.

It should be remembered that, while costs and prices were rising faster in the E.E.C. than in the U.K. last year, all the Six increased their exports more than the U.K. increased hers. The contrast may be less significant than it seems at first glance, as expansion (one might say inflation) of trade within the Community increased individual members' exports to other members. But the fact remains that in the later months Britain was losing trade in the Community. She gained a compensating increase in trade in the European Free Trade Association. But the United Kingdom Council of the European Movement has lately published a thought-provoking report suggesting that Britain has not made enough effort to gain the benefits of her membership of the Association. Another question is whether, if inflation in continental Europe offers new opportunities (whether in the region itself or in other countries to which it exports), Britain will take full advantage of them. A serious contender now is the U.S.A., whose costs have not been appreciably raised by the upsurge of U.S. business. The slightly inferior performance of U.S. exports last year is no reason for complacency; for a survey undertaken recently by the Association of British Chambers of Commerce showed that British exporters had experienced "some levelling off in the rate of growth of export business", and that

they expected that British export prices would rise somewhat in the next few months.

Assessments of competing power should, however, be reviewed in the light of statistics and charts published in London this year (in January and April) in *Lloyds Bank Review*. The bank's studies have confirmed that there is no close relation between domestic and export prices, and that over considerable periods some countries' export prices have actually declined against a strong upward trend of home prices. This demonstration of disparity should not have caused much surprise, for the chairmen of many British companies have told shareholders that profit-margins are lower on sales abroad than on sales at home. An encouraging factor in Britain's position now is the increasing interest of many companies in overseas markets where they have not been previously represented. There is a big export potential in these companies, but it will not be realised unless they assert themselves vigorously, using fully the financial resources of the City of London and the intelligence services of the Government, the banks and other institutions. These facilities themselves can be improved: better co-ordinated and more effectively publicised. Export prices reflect not only costs but also policies.

THE LONDON TIMES

THERE was a time when *The Times* had claim to be considered a great paper. It is so now in a sense, but the following will hardly enhance its record for accuracy:—"His Viceroyalty has been essentially a period of reform in every sphere, and while such is its domestic aspect, it had been externally a time of peace. Its characteristics have been, not an aggressive pushing forward of frontiers, but the systematic consolidation of those territories, which are already subject to our rule. Contributing, therefore, as it has done, so powerfully to the wellbeing and stability of India, it is not unnatural that Lord Curzon's Viceroyalty should have been uniquely successful in winning the confidence and depending on the loyalty of the Chiefs of Native States in India. The Delhi Durbar gave to that loyalty the most splendid outward expression that pagantry could give, and in itself embodied much of what has made the Viceroy's rule remarkable. Large and important as are the effects which this has already secured, they will, we may trust, only be intensified and widened by the period which Lord Curzon may still be expected to devote to the services of India. We have already expressed our views pretty candidly as to what we think of Lord Curzon's administration; and we are certainly in a very much better position to offer an opinion on that administration than is the London paper, which judging from many of its recent utterances, seems to rely on some inspired panegyrist from Simla or Calcutta. The Thibet Expedition is a surely sufficient answer to the unwarrantable assertion that there has been "no aggressive pushing forward of frontiers". The expedition, no matter what the ministerial excuses in the House of Commons may be, is entirely Lord Curzon's doing. The arguments which have been advanced in justification of the step will be seen, if critically examined, to be no arguments at all. Whether the Tibetans wanted to trade with us or did not want so to do, was their business. The so-called treaties that we had with Thibet were altogether of a kind which Great Britain, better than any other power, should have known were hardly worth making a casus belli. The violation of these so-called treaties and certain acts committed by detached parties or individual Thibetans have been ingeniously made the excuse for marching to Lhasa and placing a British Resident in that trans-frontier capital. We shall certainly come into conflict with China over this business, if not in the near future then later on. For once Thibet is in our sphere of influence, it is easy enough to conceive that excuses will be found at some later date for sending a mission across the Chinese frontier proper. And so the silly game goes on. To say that Lord Curzon's Viceroyalty has been uniquely successful in winning the confidence and deepening the loyalty of the Native Chiefs will cause a smile on the face of anybody who knows the real state of affairs. To find *The Times*, too, still harking back to that quite useless episode of bombastic vanity—the Delhi Durbar—is disheartening. It is another evidence of the abysmal ignorance of India, which passes for knowledge in London, and this ignorance will remain so long as an "inspired" article, with a political or party object in view, is part and parcel of English journalism at Home.

FROM
CAPITAL
9th June, 1904

A Ditcher's Diary

MR. NEHRU NEVER NAMED A SUCCESSOR—ENTIRELY rightly, in my view. Among the many historic names that came to mind in the hours following India's national tragedy was that of President Roosevelt; there was about Mr. Nehru something of the grand manner of F.D.R. and also his New Deal. He died suddenly when World War II was still on. An obscure Mr. Harry Truman succeeded the giant; and I was wondering who India's Sri Harry Truman might be. Mr. Morarji Desai? Well, his views on matters both solid and liquid are not mine. Mr. Jagjivan Ram? Well; I don't believe that seniority is all. But these are matters of detail. It was obvious from the beginning that the one qualification required of Mr. Nehru's successor was acceptability; and Mr. Lal Bahadur Shastri has been found, as I see it, the least unacceptable. Oddly enough, I rather like the choice. It has been suggested to me that what the country needs most today is Nehruism without Nehru. Given the chance he must be, Mr. Shastri may be the man who will pursue such a policy. Since giving free advice is a scribe's prerogative, I put it to Mr. Shastri that his best bet will be not even to pretend to be another Nehru. I return to my earlier parallel; Harry Truman is the model for him. And since, to my knowledge, Mr. Shastri has no daughter who plays the piano, his relations with the Press should be reasonably friendly. This is the place to remember that playing Truman is not nearly as easy as it may sound. Some of the toughest decisions of any U.S. Government were taken by the man from Missouri; he ordered Hiroshima and Nagasaki; and it was, again, he who sacked MacArthur. Mr. Shastri may have to take similar momentous decisions; he will take them better if he remembers that Mr. Nehru's departure from the world scene warrants an immediate diminution of the scale on which India must hereafter operate both internally and externally. Mr. Nehru laid himself open to some justified criticism on the score that he tried to make the country fit his stature in which success was bound to be limited. The task of his successor is to cut according to the cloth. Mr. Shastri's first political problem may be what to do with the children of India's non-revolution.

"THE LAST DAYS OF NEHRU": I CAN SEE the book rushing out of a monster of a press somewhere in Britain. Author? It could be Leonard Mosley, who wrote vividly if not accurately of the twilight of the British Raj. It could also be Malcolm Muggeridge who insisted on calling Mr. Nehru the last Viceroy of India. Glib commentators have recalled, in discussing India's recent years, both Bahadur Shah and Chiang Kai-shek; some have

thought of Sun Yat-sen too. Here in Bengal we are used to thinking in terms of Permanent Settlement, a system more derided than assessed. In the days since Mr. Nehru's death I had been thinking of dubbing the interregnum "Impermanent Unsettledness"—a tribute to the country and its leadership with all its faults. I also thought of Pericles: "When I see these young dead I realise that the spring has been taken out of our year. But, friends, remember, this is also the high summer of Athenian democracy". Nobody will doubt the high summer in Delhi at this time of year; about Indian democracy it is too early to speak. As I think more of it, I think the seventeen years of Nehru can well be likened to Permanent Settlement. Until the afternoon of 27th May, it did seem permanent, didn't it? Settlement is only another name for stability, for which free India has rightly been praised. Students of Bengal's history know that Cornwallis's system of land tenure did considerable harm to agriculture; they cannot, however, forget the system's contribution to Bengali culture. To the tenor of life in Bengal the idle rich brought a certain elegance, a certain style, traces of which can still be seen in the State. My summing up, necessarily tentative, of the Nehru era would not be far different. I am glad to find that at least one artist has written of Mr. Nehru's patronage of the arts in free India; the various academies are only a reflection of the late Prime Minister's interest in the finer things of life. There is some criticism of the various national scientific laboratories, nobody can doubt that Mr. Nehru created them. Was there also an air of decadence about it all? Well, a certain kind of civilisation is in decay the world over; is it not?

THE RUSSIANS ARE NOW THE WORLD'S MOST enthusiastic cinema-goers. This interesting piece of information I gleaned from the recent U.N.E.S.C.O. publication, *World Communications*, and I have been pondering the reason for it ever since. It could be because the Russian people's other entertainment facilities have not been keeping pace with the growth of their incomes. Their newspapers, I know, are simply not worth reading, except to learn what the Russian Government is thinking. Their television? Well, I do not know; but I suspect it is as dominated officially as many people would like the infant Indian television service to be. That leaves only the cinema for entertainment. And if there is one fact which, rightly or wrongly, stands out from the available evidence, it is that people increasingly look for some of this elusive quality in all the mass media of communications. Which explains why the

British are still the world's most avid newspaper readers; whatever they lack in other respects, Britain's newspapers are the world's liveliest. At present the British take 51 copies of newspapers for each 100 of the population, compared with only one in Africa. The trouble is, of course, that newspapers are traditionally the first victims of any government's desire to suppress free expression among its people, and their universal popularity has suffered accordingly. With radio and television, of course, it is usually a case of government monopoly right from the beginning, and because neither of these media requires for its appreciation a particularly high standard of literacy, it is scarcely surprising that unlike the Press the growth of their popularity should have exceeded that of the world's population. As a journalist I find this disquieting, because of all the mass media the Press is probably the least susceptible in the long run to complete government domination. I often say that the day I voluntarily leave this profession will be the one on which all its members become government public relations officers. It is alarming to think that apart from a few countries, of which India is happily one, this has already arrived.

IT IS UNLIKELY THAT ANY REGULAR READER OF THIS Diary will by now be in doubt as to what I think of Peace Corps, whether American or Russian. But a scheme I saw reported the other day, although with much the same stamp about it, has rather taken my fancy. I have said here before that one of the best contributions the United States could make to developing underdeveloped countries would be to export more of her private enterprise know-how; and this is what she is now planning to do. The scheme provides for the formation of a corps of retired U.S. business men to make available their money-making experience to up-and-coming entrepreneurs in developing countries. The first experiments are to be made in Latin America; later, if successful, the service may be extended to other parts of the world. It seems a very good idea, although I can foresee difficulties; perhaps the chief one is that anybody who has spent a lifetime in the jungle of American private enterprise is unlikely to be among the most diplomatic of human beings. Lack of tact can always constitute a problem, especially when dealing with people of a different nationality from one's own. But this might not be too much of a drawback in the kind of circles which are going to be interested in learning top-level American business methods; one might reasonably assume among them a certain appreciation of the value in business of a thick skin. The main advantage of the scheme, as I see it, is that it would at least be free of the problems associated with people who are usually too young or too academic to know what they are talking about, trying to impart knowledge to others who cannot understand them anyway. Which, of course, is what generally happens with Peace

GIVE YOU

A POWERFUL
MECHANIZED

GRIP ON

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanizing to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.

The Rotorvane will help you make good tea.

Rotorvanes are offered in two sizes. The Automatic Initial Feed is shown with the larger machine.

The Portable Intermediate feed conveyor leads to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Astringing Machine.

Corps. I have one suggestion to make. It is that a charge be made for all services rendered. That way they come to be regarded as investments and so will be put to the best possible use.

CRICKET USED TO BE PLAYED IN TOP HATS AND KNEE breaches. But I dare say that was before the days of the M.C.C., and it was certainly before those of the Tailor and Cutter. I see that this austere critic of men's fashions, for whom the ultimate sin is not to progress with the times, is currently backing the move for a change in the existing cricket "uniform". Why, it asks, should white shirt and flannels not be superseded by something more modern—and, it might have added, which the stylists of men's wear can transform into a better money-spinning proposition? It suggests shorts, in green or perhaps tartan, with matching accessories and other tricks to catch the eye. I cannot quite see it myself. All sports have an accepted outfit; to allow cricketers to indulge their own tastes would be to open the door on sartorial chaos. Besides, it would scarcely fit the image of this most sedate of sports. Tennis, perhaps, although not at Wimbledon, of course; but cricket, never. Mind you, there is room for improvement in the present outfit. Why, for instance, shorts cannot be worn in India's sunshine, or Australia's too for that matter, is a question many cricketers must have asked themselves, despite the obvious usefulness of flannels for hiding the goose pimples which are such an occupational hazard in Britain. I can see no reason either why it should not be possible to strip to the waist on a hot day. A cap is useful for keeping hair and sun out of the eyes, but a pull-over, as distinct from a buttoned cardigan, seems to me to be merely a nuisance when access to it can only be obtained head first. I suspect, too, that in this scientific age, some reduction could be made in the weight of a cricketer's impedimenta: pads and gloves are too ungainly and not sufficiently cool. But these points excepted, I still think there should be a measure of uniformity in cricketing clothing, and that it should remain predominantly white. There is, after all, the point to be remembered that against the usual green background of the cricket field, it is white which shows up best. Hence the sight screens. So far as I know nobody has yet suggested that liberties be taken with the colour of these, for fashion's sake or for any other reason.

BELEATEDLY, I HAVE BEEN READING DR. VERRIER Elwin's autobiography: *The Tribal World of Verrier Elwin* (Oxford University Press, Rs. 20) and what a wonderful book it is to read in anxious times as ours have been in the past ten days or so! Autobiographies are usually written by conceited people with more than a touch of exhibitionism in them. Dr. Elwin had neither. My particular reason for commending the book is that it contains aspects of India's recent history that could not have been revealed quite in this manner by any other man I can think of. And this social history needs to be recorded, for a generation is growing up which has no awareness at all of what the country has been through since the turn of the century. Towards the end of his life Dr. Elwin was involved in some controversy over attitudes to tribal life; but he was no stranger to controversy. When he and the Anglo-Catholic Church fell apart, a story told with wit but no frivolity, he was the subject of much disputation. His association with Mahatma Gandhi and the nationalist movement lost him many friends in his own community. He eventually became an Indian citizen, for he loved this country as nothing else. To Mr. Nehru Dr. Elwin was a friend, for the Prime Minister was a friend of the aboriginal tribes of India whose loss today is deeper than may be generally known. I knew Dr. Elwin only in Calcutta's sophisticated society where he discussed literature and such things. But, looking at him, I knew that, much as he enjoyed cultural discourses, his heart was in the tribal areas of India. I remember Dr. Elwin telling me, with that touch of sadness, that Mr. Nehru was in recent years so busy with other things that his interest in the tribals was not what it had been. With both Dr. Elwin and Mr. Nehru gone, will somebody have a thought to spare for the tribals? My reading of Dr. Elwin's book at this time was a tribute not only to the author but also, I suggest, to Mr. Nehru. And what a pleasure it has been to read the book!

Guide for Investors

SUGAR SHARES DULL DESPITE RISE IN EX-FACTORY PRICES

(BY A SPECIAL CORRESPONDENT)

SUGAR shares are not only depressed, but are also difficult to deal in due to the absence of buyers. The index for ordinary sugar shares has dropped from 124.1 to 123.9 (1952-53 equals 100) over the past year. Investors have not been impressed by the latest increases in the ex-factory prices of sugar sanctioned by the Government of India. The rises are belated and inadequate. When the ex-factory prices were fixed at the beginning of the 1963-64 crushing season, the Government indicated its intention of adjusting them during the course of the season, after examining such factors as the duration of the season and recovery. Now that the season has come almost to an end, the prices have been adjusted.

The quantum of increase, meanwhile, has varied from area to area. In the case of factories situated in certain areas, the prices have been reduced. The new prices, in all cases, relate to the 1963-64 season. For many factories in U.P. the prices have been cut since the season has been short following the diversion of sugarcane supplies for manufacturing *khandasari* and *gur*. The results of sugar factories situated in northern India during the 1963-64 season have been poor. Since many companies whose shares are quoted in the Calcutta Stock Exchange are situated in northern India, sentiment in sugar shares has deteriorated.

The sugar output during the 1963-64 season has been higher around 2.5 million tons. But it has fallen much short of the target of 3.3 million tons. The shortage of cane supplies has been about the most important factor contributing to the shortfall in production. Furthermore, cane cultivation in northern India has suffered due to drought and bad weather. In any case the results of sugar factories situated in U.P. and Bihar during 1963-64 will, it is feared, be as poor as in 1962-63. The latest increases in the ex-factory prices of sugar are not expected to compensate the producers adequately for the rise in production costs.

Considering the shortfall in production in 1963-64, it is feared that the shortage of sugar will be aggravated unless vigorous measures are taken to increase production in the next season. If sugar mills are to be assured of an adequate supply of cane, two measures will be necessary. Firstly, the price of cane for the next season (1964-65) should be fixed now. Secondly, the ex-factory prices of sugar for 1964-65 should also be fixed in advance. In fixing the latter, attention should be given to safeguarding the interests of consumers. Production of several factories has become uneconomic due partly to their small size and partly to their outmoded equipment. It is, therefore, necessary to take active measures to amalgamate uneconomic factories into more viable units. Factories should be urged to install modern equipment and rationalise their processes of production. Since the resources of many sugar companies have been depleted by the past few years' unprofitable working, it is necessary to consider the grant of long-term loans by Gov-

ernment-sponsored financial institutions.

Jardine-Henderson Group
Jute Results

IN their reports for the year ended December 1963, the directors of the Jardine-Henderson group of jute mills point out that the working results of the Companies have been adversely affected by various factors. Production costs have been boosted to the extent of about Rs. 30 a ton, following the implementation of the award of the Wage Board. They have urged the Government of India to take steps to ensure that no further increase in labour emoluments takes place without a corresponding rise in productivity. Costs have also risen due to emergency risk insurance premiums and increased charges for electricity and lighterage. The production of the mills has been running at the maximum level due to the abolition of the Working Time Agreement. Although the supply of raw jute has been adequate, the quality has deteriorated. Since the mills have been forced to buy raw jute up to the purchase quotas issued by the Jute Commissioner, they have been obliged to provide finance and storage space for substantial stocks of raw jute. It has been estimated that the mills have to spend about Rs. 3 a maund for insurance and other charges alone.

Greater emphasis has been placed on quality control throughout the mills and on pre-shipment inspection of goods. The poor quality of raw jute has been causing difficulties. It has been pointed out that although the offtake of sacking has been sustained to some extent by rising domestic consumption, the total sale has steadily declined as a result of increasing production in Pakistan. Because of stiff competition, particularly from Pakistani mills, the margin of profit on hessian and sacking manufacture has shrunk. There are indications that more countries have begun to take interest in Indian jute goods and it is hoped that the efforts made by the Government and the Indian Jute Mills Association will succeed in creating new markets, particularly for sacking, to replace those already lost. But it is difficult to prevent a further loss of markets unless positive steps are taken to offset the large price advantage enjoyed by producers of other countries.

Kamarhatty Company Ltd has undertaken to install machinery to complete the modernisation of the preparing and spinning departments. The sewing capacity of the mills is being increased. Plans to construct two additional godowns for raw jute have been made. The net profit has dropped from Rs. 54.55 lakhs for 1962 to Rs. 43.90 lakhs for 1963, after providing Rs. 93.90 lakhs (against Rs. 88.62 lakhs) for depreciation. A sum of Rs. 1.75 lakhs has been transferred from labour superannuation and welfare reserve. The taxable ordinary dividend of 20 percent, including an interim of 5 percent, has been repeated. It amounts to an yield of 11.2 percent at the present price of Rs. 179 a share of Rs. 100 each. Development rebate reserve is allocated Rs. 15,325 (against Rs. 96,816) taxation Rs. 30.33

lakhs (against Rs. 23.50 lakhs), debenture stock sinking fund reserve Rs. 1 lakh (against Rs. 2 lakhs) and general reserve Rs. 5.27 lakhs (against Rs. 1.36 lakhs).

Kankannarrah Company Ltd has made a profit of Rs. 45.55 lakhs, against Rs. 59.39 lakhs, after transferring Rs. 72.31 lakhs (against Rs. 68.66 lakhs) to depreciation. The taxable ordinary dividend of 15 percent, including an interim of 5 percent, has been repeated. The yield works out to 10.8 percent at the present price of Rs. 139 a share of Rs. 100 each. A sum of Rs. 1.75 lakhs has been transferred from labour superannuation and welfare reserve. Debenture stock sinking fund reserve is allocated Rs. 1 lakh (against Rs. 2 lakhs), taxation Rs. 33.55 lakhs (against Rs. 10.09 lakhs), development rebate reserve Rs. 11,762 (against Rs. 4,706) and general reserve Rs. 5.64 lakhs (against Rs. 2 lakhs). The installation of additional machinery to complete the modernisation of the preparing and spinning departments has been planned. Orders for equipment have been placed. The sewing capacity of the mills is being increased.

Titagur, Victoria and
Samnuggur Jute

IN the chairman's statement to the shareholders of the Titagur Jute Factory Co. Ltd, the Victoria Jute Co. Ltd and the Samnuggur Jute Factory Co. Ltd, a guarded view about the prospects for 1964 has been taken. The abolition of the Working Time Agreement has created a feeling of uncertainty about the price outlook for jute goods. As far as these companies are concerned, the substantial stocks of raw jute held have been covered by sales at a modest margin of profit and profits for the first three months of 1964 have been below those for 1963. The results for 1963 should be considered satisfactory in view of the fact that the profit margins were squeezed by high prices of fibre, combined with increased wages in the latter part of 1963. The purchases of substantial stocks of raw jute and their storing have placed heavy financial burdens on the companies. Due to an abundant supply of jute goods, their prices have fallen. The price of hessian has dropped by about £11 a ton, while that of sacking has been barely maintained. The competition from the Pakistani mills, particularly for sack-

ing, has increased steadily. They enjoy an advantage of about £30 a ton, in comparison with the Indian mills.

The profit of Samnuggur Jute has amounted to £197,841 for 1963, against £175,821 for 1962, after transferring £232,672 (against £273,961) to taxation, £17,411 (against £34,680) to development rebate reserve and £60,000 (against £30,000) to depreciation. The taxable ordinary dividend has been raised from 10 percent to 13 percent, including an interim of 3 percent. General reserve is allocated £90,000 (against £65,000) and machinery reserve £60,000 (against nil). The carry-forward is £2,892, against £8,338 brought in. Further progress has been made with the installation of modern machinery and electrification equipment in the north mill in which all production has been concentrated. Due to the shortage of power supply, complete electrification may not be possible before 1965. The south mill has been partially leased to the Government for the storage of foodstuffs and the remaining space has been used to stock raw jute.

Titagur Jute has reduced the taxable ordinary dividend from 13 percent to 10 percent, including an interim of 3 percent. The profit has dropped from £211,646 to £70,811, after providing £108,075 (against £43,698) for taxation, £35,855 (against £19,148) for development rebate reserve and £60,000 (against £30,000) for depreciation. Modernisation of machinery reserve is allocated £35,000 (against £30,000), leaving a carry-forward of £3,525, against £9,976 brought in. Further progress with the installation of modern machinery and electrification equipment in No. 2 mill has been made. But complete electrification may not be achieved before 1965 due to the shortage of electric power. A unit for the manufacture of cotton bagging has been installed in No. 1 mill, and it is working profitably. Arrangements are being made to use the remaining space for the manufacture of wide hessian carpet-backing.

The profit of Victoria Jute has fallen from £173,749 to £48,412, after providing £135,212 (against £39,023) for taxation, £4,738 (against £7,920) for development rebate reserve and £45,000 (the same) for depreciation. The taxable ordinary dividend of 10 percent, including an interim of 3 percent, has been repeated. Machinery reserve is allocated £25,000 (against £20,000), leaving a carry-forward of £1,951, against £8,551 brought in. The installation of machinery in No. 2 mill has made further progress. The No. 1 mill is being used for the manufacture of cotton-bagging and other special fabrics.

Champdany Jute
Earns Less

IN their report for the year ended March 1964, the directors of the Champdany Jute Co. Ltd take a cautious view about the outlook during the current year. The price of raw

IMPERIAL
COMPRESSORS, HOISTS
TROLLEY JACKS, CAR WASHERS

Armstrong Smith Ltd.

jute has been steady while jute goods rates have tended to decline due to the high level of production by the mills following the abolition of the working time agreement. Although the abolition has resulted in a marked increase in the production of other mills, the output at the Wellington mills has shown little change because they have already been working at full capacity for a considerable time. Manufacturing costs have risen due to the implementation of the Wage Board award, combined with rising prices of power and essential stores. It is unfortunate that the productivity of labour has not shown any noticeable improvement in the meantime. The expansion of the broad looms plant has been undertaken and 48 broad looms have been installed. Although the prospect for carpet-backing cloth is good, its production is now more or less in balance with the world demand. So the price may tend to fall in the coming months.

The profit has dropped from Rs. 36.63 lakhs for 1962-63 to Rs. 30.39 lakhs for 1963-64, after transferring Rs. 12.66 lakhs (against Rs. 9.84 lakhs) to depreciation. The taxable ordinary dividend has been reduced from 40 percent to 35 percent, including an interim of 10 percent. The yield amounts to 15.6 percent at the present price of Rs. 22.37 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 71,000 (against Rs. 3.76 lakhs) and general reserve Rs. 3 lakhs (against Rs. 12 lakhs). Taxation, including surtax on profits for Rs. 2 lakhs, absorbs Rs. 19.85 lakhs (against Rs. 11 lakhs). The carry-forward is Rs. 30,261, against Rs. 22,643 brought in. Sales rose from Rs. 3.39 crores to Rs. 3.80 crores while the stocks of jute goods declined from Rs. 6.82 lakhs to Rs. 6.05 lakhs.

Management Training in Union Carbide India

THE improved performance of Union Carbide India Ltd for 1963 has largely been due to operating efficiency, the improved use of capital equipment and the cost reduction programmes. Addressing the annual general meeting held recently in Calcutta, Mr. J. W. L. Russell, managing director, said that the improved performance will continue in future, considering that India's economy is developing. (A fuller version of his speech is printed on a later page in this issue of *Capital*.) The satisfactory results have been mainly due to the competent group of managerial and supervisory staff of the Company. They have helped develop the various products and methods of marketing. In spite of the shortage of managers and the competition to secure their services, Union Carbide India has not experienced any loss of senior and more capable employees due to the congenial atmosphere in the Company.

Union Carbide India has paid attention to the selection of the best possible human material. It has taken steps to use the skill and aptitudes of each individual to the best advantage and to assist him in the acquisition of new skill and ability. It has laid down that promotion from within the Company should take place whenever possible. This is why timed-training schedule has been fixed so that promotion may be given to fully-qualified executives to fill new positions as they arise.

The Company has concentrated on management training to enable the employees to discharge their duties competently. They have been given the opportunity to develop their skill and abilities so that they can fill responsible positions when they arise. Each manager has the responsibility of developing each of his subordinates. Each executive is first told what is

expected of him. At regular intervals, his actual performance is compared with that expected. From this comparison, a draft programme is drawn up so as to facilitate his progress. In addition to promoting management training for the Company's employees, Union Carbide India has supported the management training movement in India since its inception. It has attached great importance to training managers who are Indian nationals.

In every phase of operations, in manufacturing, in marketing and in administration, Indian managers are replacing internally-assigned executives. Mr. Russell pointed out that management development is more of an art than an exact science. So changes in the management training system of the Company will have to be made from time to time. He said that the cost of training managers should be overlooked since trained managers contribute to the increased efficiency of operations.

Martin Burn Light Railway Company Results

THE results of the light railway companies under the management of Martin Burn Ltd for the year ended March 1963 have been published. The Howrah-Sheakhalla Light Railway Co. Ltd has declared a taxable ordinary dividend of 4 percent to absorb Rs. 24,000, against a taxable dividend of 4.25 percent for 1961-62. Gross earnings have improved by Rs. 68,385 to Rs. 8.99 lakhs. Working expenses have amounted to Rs. 8.09 lakhs. The net earnings have, therefore, totalled Rs. 90,311, against Rs. 62,731. General reserve absorbs Rs. 15,000, leaving a carry-forward of Rs. 2,342.

The gross earnings of the Futwah-Islampur Light Railway Co. Ltd have amounted to Rs. 8.86 lakhs, against Rs. 8.51 lakhs and working expenses have totalled Rs. 8.60 lakhs, against Rs. 7.47 lakhs. As a result, the net earnings have amounted to Rs. 26,271. A sum of Rs. 6,000 has been transferred from contingency reserve. Bringing in Rs. 1,491 and making other adjustments the distributable amount is Rs. 21,501. The taxable ordinary dividend of Rs. 1.80 a share of Rs. 100 each has been repeated to absorb Rs. 20,695, leaving a carry-forward of Rs. 806.

The Howrah-Amra Light Railway Co. Ltd. has made gross earnings of Rs. 29.89 lakhs, against Rs. 29.80 lakhs. Working expenses at Rs. 26.81 lakhs show little change. The net earnings have, therefore, amounted to Rs. 1.83 lakhs. A taxable ordinary dividend of 4 percent has been declared to absorb Rs. 64,000, leaving a carry-forward of Rs. 6,372. The ordinary dividend amounted to 4.25 percent, subject to tax, for 1961-62.

The Arrah-Sasaram Light Railway Co. Ltd has declared a taxable ordinary dividend of 4 percent to absorb Rs. 86,772, leaving a carry-forward of Rs. 1,080. The dividend amounted to 5 percent for 1961-62. Gross earnings have amounted to Rs. 20.55 lakhs, against Rs. 30.04 lakhs and working expenses have totalled Rs. 17.25 lakhs (against Rs. 16.27 lakhs). Bringing in Rs. 2,918 and making other adjustments, the distributable amount is Rs. 87,852.

Indian Copper Fares Well

THE ordinary shares of Indian Copper Corporation Ltd have been subdued at Rs. 3.08 mainly due to the general apathy in the market following the sudden death of Mr. Nehru. The excellent results of the Company

for the year ended December 1963 have, meanwhile, been overlooked. The profit has improved from £1.35 million for 1962 to £1.38 million for 1963, out of which depreciation absorbs £170,000 (the same), decretal amount under kyanite suit compromise £21,694 (against £50,788), taxation £821,855 (against £742,378), development rebate reserve £26,597 (against £15,136) and general reserve £98,000 (against £195,000). Bringing in £570, there is a distributable balance of £247,299. A taxable ordinary dividend of 12 percent has been declared on the share capital which has been increased from £1.37 million to £2.06 million. A taxable ordinary dividend of 18 percent was paid for 1962. But the total amount of dividends paid for 1963 stands at the same figure of £246,834 as for 1962. The yield amounts to 5.2 percent at the present price of Rs. 3.08 a share of 2s.

Bright Prospects for Braithwaite

IN their report for the year ended December 1963, the directors of Braithwaite and Co. (India) Ltd point out that production during the current year is expected to show an improvement over that for 1962, due to the improved supply of raw materials. Production at the Clive works in 1963 was satisfactory in spite of the shortage of welding electrodes during the early part of year. The supply of steel has improved during recent months, so it has been possible to plan production for some months ahead. The additional area of land required for a steel stockyard has been secured from the Port Commissioners and it has greatly relieved congestion in the works.

Production at the Angus works was nearly double that for 1962, and the order-book is considered satisfactory. Import licences for equipment to complete the current expansion programme have been received and orders have been placed. The machinery is expected to be installed within the next year. The output of electric over-head travelling cranes has been satisfactory. The directors refer to the transfer of Rs. 8.09 lakhs from freehold-land to leasehold land in the balance-sheet. The sum was formerly paid towards the purchase of land at the Angus works. In May 1963, the Government gave notice to take possession of the land. But the directors have negotiated with the Government for a lease on payment of *salami* and an annual rent. The lease is renewable. So the original amount of Rs. 8.01 lakhs should be regarded as a part of the cost for obtaining the leasehold land. The Company's annual general meeting will be held on 18th June and has not been held already as was in last week's *Capital*.

Clive Row Investment Raises Dividend

CLIVE Row Investment Holding Co. Ltd has raised the taxable ordinary dividend from 7.5 percent to 8 percent for the year ended December 1963. The yield amounts to 9.6 percent at the present price of Rs. 8.37 a share of Rs. 10 each. The profit has amounted to Rs. 14.89 lakhs for 1963, against Rs. 15.09 lakhs for 1962. Taxation absorbs Rs. 3.50 lakhs (against Rs. 4.70 lakhs), leaving a carry-forward of Rs. 2.75 lakhs, against Rs. 2.45 lakhs brought in. Investment income amounted to Rs. 16.49 lakhs, against Rs. 16.47 lakhs and commission on some underwriting of new issues amounted to Rs. 6,000, against Rs. 43,000. The Company disposed of its small holding in North West Coal Company Ltd and a debenture in the

Royal Calcutta Golf Club was re-deemed at par. There was a profit of Rs. 464 on these transactions, and this has been transferred to capital reserve.

Nagri Farm Tea Repeats

THE revenue profit of the Nagri Farm Tea Co. Ltd (a Darjeeling garden) has dropped from Rs. 6.06 lakhs for 1962 to Rs. 1.26 crores 1963, after providing Rs. 1.68 lakhs (against Rs. 28,790) for depreciation. The taxable ordinary dividend of 35 percent has been repeated to absorb Rs. 1.05 lakhs. The yield amounts to 11.7 percent at the present price of Rs. 29.87 a share of Rs. 10 each. Taxation absorbs Rs. 70,000 (against Rs. 5.65 lakhs), building reserve Rs. 25,000 (against Rs. 1.75 lakhs), general reserve Rs. 1.25 lakhs (against Rs. 1 lakh) and development rebate reserve Rs. 1.12 lakhs. The carry-forward is Rs. 52,703, against Rs. 1.47 lakhs brought in. The crop declined from 214,750 kilograms to 207,707 kilograms, and the average sale price declined from Rs. 9.03 a kilogram to Rs. 7.66 a kilogram. The 1964 crop has been estimated at 223,900 kilograms at a cost of Rs. 6.35 a kilogram.

Hoolungoree Tea Cuts Dividend

HOO LUNG OOREE Tea Co. Ltd (an Assam garden) has earned a profit of Rs. 76,061 for the year ended December 1963, compared with a profit of Rs. 4.52 lakhs for 1962, after transferring Rs. 95,363 (against Rs. 1.63 lakhs) to depreciation and Rs. 64,312 to depreciation under-provided on block assets sold. The taxable ordinary dividend has been reduced from 20 percent to 15 percent. The yield works out to 7.5 percent at the present price of Rs. 200 a share of Rs. 100 each. Taxation is allocated Rs. 95,000 (against Rs. 2.13 lakhs), capital reserve Rs. 12.47 lakhs and development rebate reserve Rs. 500 (against Rs. 9,500).

The carry-forward is Rs. 8,314, against Rs. 58,569 brought in. The transfer of a sum of Rs. 12.47 lakhs to capital reserve has been due to the sale of the Company's Konikor Dalm division. A provision of Rs. 64,312 has to be made for certain assets, which realised less than their written-down value. The second instalment of Rs. 8 lakhs under the sale agreement, together with interest, was duly received on 30th December, 1963, leaving a balance of Rs. 5 lakhs, together with interest thereon due for payment on or before 31st December, 1964. The major part of the capital expenditure for Rs. 1.96 lakhs during 1963, represents the cost of expanding the Company's tea area. The crop for 1964 has been estimated at 2,900 quintals.

Debentures from Tata Mills and Ahmedabad Advance

THE preliminary results of the Ahmedabad Advance Mills and Tata Mills for the year 1963 had been released along with the announcement of dividends. They did not present the full picture although they clearly indicated that both the mills had fared badly during the year. The full accounts show that the gross profit of Ahmedabad Advance has declined from Rs. 23.97 lakhs to Rs. 16.94 lakhs, and that of the Tata Mills from Rs. 39.15 lakhs to Rs. 32.53 lakhs. The profits have fallen in spite of larger sales. The directors attribute the fall in profits to the continuation of the voluntary cloth price control

scheme, unremunerative export prices and higher costs of cotton, stores and other items of production. Trading conditions were dull until about the middle of 1963 mainly because of the Chinese aggression, but thereafter the off-take of cloth was good. Both the mills are said to be concentrating more on the production of bleached, printed and finished cloth with a view to improving their earning capacity. The directors have criticised the existing control over cloth prices which is said to have made cloth production uneconomical because costs have been rising whereas prices have been pegged at the levels obtaining some years ago.

The Ahmedabad Advance Mills installed during 1963 new plant and machinery of the value of about Rs. 23 lakhs, the important additions being a sanforiser, auto weft winder, felt calender, hot flue, super cotton cleaner, auto jiggers and automatic looms. Towards the end of the year, the value of the works under construction and machinery received at the mills but awaiting installation was Rs. 18 lakhs. As against the paid-up capital of Rs. 60 lakhs, the Company's gross block at the end of 1963 amounted to Rs. 2.66 crores which has been written down to Rs. 1.45 crores. Over the past five years, the Company's fixed assets have gone up by about Rs. 76 lakhs, largely on account of renovation and rehabilitation and this has been financed mainly from retained profits and borrowings. The Company needs further funds for renovation and rehabilitation. The directors have decided to increase the authorised capital from Rs. 60 lakhs to Rs. 1.10 crores by the creation of 50,000 equity shares of Rs. 100 each. Out of this, 10,000 shares are being issued by way of bonus on the basis of one share for every five shares held by capitalising reserves in the share premium account. The Company has also announced one-for-four right shares issue. It is also proposed to issue additional debentures of the nominal value of Rs. 70 lakhs and from that issue to pledge debenture of Rs. 40 lakhs with a bank against an additional demand cash credit of Rs. 35 lakhs. The debentures will rank *pari passu* with the existing 5 percent debenture 1966-71 of Rs. 30 lakhs.

New plant and machinery installed by Tata Mills during 1963 amounted to Rs. 29 lakhs. Important additions included super cleaners combers, a curing unit, a needling unit for the non-woven plant, high-speed drawing frames and dyeing jiggers. These will enable the mills to produce better quality of cloth at more profitable rates. Towards the end of the year, the value of works under construction and machinery received at the mills but awaiting installation was Rs. 27 lakhs. Further orders have also been placed for additional machinery of the value of about Rs. 9 lakhs in 1964. The Company had earlier received permission to instal 13,640 spindles, against its request for 20,000 additional spindles to balance production. Last year, the Company received further permission to instal another 6,336 spindles, being 74 percent of the total sanctioned spindle capacity. Of the 192 automatic looms sanctioned by the Government, 144 looms are under installation. During 1963, various non-woven products which would meet with the needs of the sugar, dairy, garment, laundry industries were further experimented with and in some cases, satisfactory results were obtained after considerable development work.

As against its paid-up capital of Rs. 65.58 lakhs, the gross block of Tata Mills at the end of 1963 was valued at Rs. 3.78 crores, which had been written down to Rs. 2.22 crores. Additions to fixed assets made over the past five years amount to Rs. 1.37 cro-

res, largely on account of rehabilitation and renovation. This has been financed mainly from retained profits and borrowings. The Company needs further funds for renovation and rehabilitation. It has already announced the issue of rights shares on the basis of one share for every three held. It is also proposed to issue additional debentures of the nominal value of Rs. 60 lakhs and from that issue to pledge debentures of the nominal value of Rs. 40 lakhs with a bank against an additional demand cash credit of Rs. 35 lakhs. The debentures will rank *pari passu* with the existing 5 percent debentures 1966-71 of Rs. 39.51 lakhs.

Concord of India Pays the Same

THE Concord of India Insurance Co. Ltd has repeated the taxable ordinary dividend of 20 percent for the year ended December 1963. The yield works out to 10 percent at the present price of Rs. 10 a share of Rs. 10 each on which a sum of only Rs. 5 has been paid-up. A sum of Rs. 4.38 lakhs has been transferred from the profit and loss account to the appropriation account. Bringing in Rs. 32,703, there is a distributable balance of Rs. 4.70 lakhs. General reserve is allocated Rs. 1.75 lakhs (against Rs. 50,000), leaving a carry-forward of Rs. 25,429. In the fire account, net premiums, after deducting all re-insurances, amounted to Rs. 38.59 lakhs and claims paid and outstanding totalled Rs. 19.02 lakhs.

After transferring a surplus of Rs. 2.60 lakhs to the profit and loss account, the fire insurance fund stands at Rs. 19.30 lakhs. In the accident account, net premiums, after deducting all re-insurances, amounted to Rs. 29.58 lakhs and claims paid and outstanding totalled Rs. 18.45 lakhs. After transferring a surplus of Rs. 3.92 lakhs to the profit and loss account, the accident and miscellaneous insurance funds have been placed at Rs. 14.79 lakhs. In the marine revenue account net premiums, after deducting all re-insurances, amounted to Rs. 17.65 lakhs and claims paid and outstanding totalled Rs. 13.40 lakhs. After transferring a deficit of Rs. 1.81 lakhs to the profit and loss account, the marine insurance fund stands at Rs. 17.64 lakhs. The fire, accident and marine insurance funds total Rs. 51.74 lakhs, showing a rise of Rs. 87,481 over those for 1962.

Colour-Chem Pays More

THE preliminary report on the working of Colour-Chem Ltd for the year ended March 1964, shows good improvement over the previous year's performance. The gross profit has gone up by nearly 39 percent from Rs. 1,224 crores to Rs. 1,639 crores. The dividend has been stepped up from 12 percent to 16 percent. What is more, the entire dividend is expected to be exempt from tax as it is being paid out of the tax-free reserves exempt under Section 84 of the Income Tax Act. The necessary application is being sent to the income tax authorities to seek confirmation on this point. After providing Rs. 9.36 lakhs (against Rs. 10.79 lakhs) for depreciation, Rs. 90.50 lakhs (against Rs. 64.29 lakhs) for taxation, the net profit for 1963-64 amounts to Rs. 69.51 lakhs, against Rs. 47.34 lakhs in the preceding year.

Allocation to general reserve has been raised from Rs. 26 lakhs to Rs. 41 lakhs, and dividend equalisation reserve gets Rs. 8 lakhs, against Rs. 6 lakhs. The provision for development rebate reserve is higher at

Rs. 55,722 (against Rs. 4,782) and gratuity reserve receives Rs. 52,300 (against Rs. 42,700). After providing Rs. 19.28 lakhs for special reserve, there remains a sum of Rs. 16,332 to be carried forward, against Rs. 1,134 brought in. The directors have transferred a sum of Rs. 20 lakhs from the special reserve to the dividend reserve which is to be used for the payment of the proposed dividend. The Rs. 100-paid share of Colour-Chem is currently quoted around Rs. 320, offering a tax-free return of about 5 percent.

Carron Tea Pays Nil

THE Carron Tea Co. Ltd (a Doars garden) has incurred a loss of Rs. 37,664 for the year ended December 1963, against a revenue profit of Rs. 97,006 for 1962, after providing Rs. 57,212 (against Rs. 56,556) for depreciation. Taxation absorbs Rs. 8,150 (against Rs. 27,500). A sum of Rs. 356 has been transferred from revenue reserve. The dividend has been passed, but a balance of Rs. 2,776 has been carried forward. The crop dropped from 280,187 kilograms for 1962 to 268,883 kilograms for 1963 and the average sale price fell from Rs. 4.70 a kilogram to Rs. 4.30 a kilogram. The 1964 crop has been estimated at 295,000 kilograms at a cost of Rs. 13.27 lakhs. The directors have mentioned that the start of the new season has been satisfactory.

Satgram Collieries Pays the Same

THE profit of Selected Satgram Collieries Ltd has risen from Rs. 10.14 lakhs for 1962 to Rs. 13.63 lakhs for the year ended December 1963. The taxable ordinary dividend of 10 percent has been repeated. It amounts to a yield of 8.5 percent at the present price of Rs. 118 a share of Rs. 100 each. Land and mining reserves have been allocated Rs. 50,000, special reserve Rs. 87,000, bad and doubtful debts reserve Rs. 25,000. Taxation reserve absorbs Rs. 10,000, general reserve Rs. 70,000 and development reserve Rs. 6.61 lakhs, leaving a carry-forward of Rs. 1,672. Raisings moved up from 551,413 tons to 649,513 tons and despatches from 526,368 tons to 637,946 tons. The directors think that with a fuller utilisation of the capital equipment, the Company should reduce the cost of production in the near future.

Good Results from Svadeshi Mills

UNLIKE Ahmedabad Advance and Tata Mills, which fared badly in 1963, the working results of Svadeshi Mills, belonging to the same group show an appreciable improvement over the previous year's performance and the dividend has been stepped up by Rs. 2 a share. The turnover is up by about 14 percent from Rs. 5.06 crores to Rs. 5.77 crores, and the profit after providing for depreciation and managing agents' commission, shows an increase of about 44 percent from Rs. 37.84 lakhs to Rs. 54.63 lakhs. The omission of the figures for managing agents' commission and depreciation in the preliminary report was hard to understand.

Allocations include taxation Rs. 23 lakhs (against Rs. 18 lakhs), development rebate reserve Rs. 5 lakhs (against Rs. 2.75 lakhs), gratuity reserve Rs. 50,000 (against Rs. 75,000), general reserve Rs. 6 lakhs (against nil) and dividend reserve Rs. 21.10 lakhs (against Rs. 16.50 lakhs). The

dividend has been raised from Rs. 17 to Rs. 19 a share, which restores the cut effected in 1962. Equity dividend absorbing Rs. 19 lakhs and preference dividend amounting to Rs. 1.07 lakhs are to be paid out of the dividend reserve. After making all the appropriations, there remains a surplus of Rs. 11,562 to be carried forward, against Rs. 8,176 brought in.

Shree Gopal Paper to Expand

SHREE Gopal Paper Mills Ltd has produced satisfactory results for the year ended December 1963, in spite of the rising production costs. Results have been satisfactory partly due to the improved efficiency and various other economies effected by the Company. Output rose from 35,126 tons for 1962 to 37,331 tons for 1963. Attention has been concentrated on producing quality writing and printing papers. In view of the substantial rise in the prices of chemicals, the directors are considering extending the capacity of the existing electrolytic bleach plant. It is proposed to extend the plant for producing 30 tons of caustic soda and chlorine a day. The existing output amounts to 1.5 tons of caustic soda, with almost an equivalent quantity of chlorine a day. The Company has applied to the Government to expand the existing output capacity for paper by 7,000 tons a year through the installation of balancing equipment. The scheme has been approved by the authorities. The Company has been asked to negotiate with the Industrial Credit and Investment Corporation of India and the Industrial Finance Corporation to import equipment for Rs. 35.5 lakhs. The *vanaspati* unit has worked satisfactorily. Its output has amounted to 4,285.43 tons, compared with 3,861.77 tons.

The profit has risen from Rs. 1.13 crores to Rs. 1.30 crores, after providing Rs. 67.35 lakhs (against Rs. 58.10 lakhs) for depreciation and Rs. 1.80 lakhs (against Rs. 2.90 lakhs) for development rebate reserve. A sum of Rs. 73,296 has been written back towards excess dividend provided earlier. The taxable ordinary dividend has been increased from 17.67 percent to 18 percent which works out to a yield of 7.2 percent at the present price of Rs. 24.87 a share of Rs. 10 each. Taxation reserve is allocated Rs. 57.25 lakhs, against tax provision for Rs. 60 lakhs, capital reserve Rs. 10,923 (against Rs. 6,177) and general reserve Rs. 42.50 lakhs (against Rs. 34 lakhs). The carry-forward is Rs. 43,420, against Rs. 73,294 brought in.

Ogale Glass Fares Well

OGALE Glass Works Ltd reports encouraging results for 1963. Sales have increased by about 16 percent from Rs. 88.81 lakhs to Rs. 1,029 crores, and the gross profit has risen by nearly 21 percent from Rs. 8.52 lakhs to Rs. 10.34 lakhs. The dividend has been maintained at 8 percent—40p a share—but it is payable on the increased capital of Rs. 25.75 lakhs, against Rs. 22.50 lakhs in 1962. Appropriations include depreciation Rs. 4.72 lakhs (against Rs. 3.28 lakhs), development rebate reserve Rs. 44,061 (against Rs. 43,395) and taxation Rs. 3.15 lakhs (against Rs. 2.40 lakhs), leaving a net profit of Rs. 1.48 lakhs against Rs. 1.93 lakhs. With Rs. 65,222 brought forward and adding Rs. 2,333 being excess provision for the dividend, the disposable surplus amounts to Rs. 2.16 lakhs. The proposed dividend will absorb Rs. 2.06 lakhs (against Rs. 1.80 lakhs), leaving a

balance of Rs. 9,536 to be carried forward.

The directors state that production on the automatic press at the Pimpri unit was started in March 1964. The working results of this unit for 1963 show a revenue deficit of Rs. 25,784, after providing Rs. 1.30 lakhs for depreciation and Rs. 50,820 by way of interest charges on the I.F.C. and bank loans. The Company has fully repaid the first loan taken from the I.F.C. A second rupee and dollar loan amounting to Rs. 7.23 lakhs has been obtained and used for the Pimpri unit. A further loan of Rs. 7.50 lakhs has been sanctioned by the Corporation, but it has not yet been availed of. The Company has on hand expansion schemes, part of which has already materialised. Last year, the Company offered 100,000 equity shares of Rs. 5 each at par, but quite a large number of these shares remained unsubscribed. The Company is now approaching the shareholders to take up these shares in order to expedite development work.

Investa Machine Tools Disappoints

INVESTA Machine Tools and Engineering Co. Ltd reports extremely disappointing results for 1963. In spite of an improvement in the turnover from Rs. 58.92 lakhs to Rs. 63.40 lakhs, the gross profit has declined from Rs. 9.84 lakhs to a mere Rs. 3.99 lakhs, which is hardly sufficient even to make full provision for depreciation for the year. The directors have been obliged to withdraw a sum of Rs. 1.33 lakhs from the general reserve. The provision for depreciation amounts to Rs. 4.99 lakhs (against Rs. 4.58 lakhs) and secretaries and treasurers receive their minimum commission of Rs. 25,000 (the same). No provision has been made for development rebate which had received Rs. 3.39 lakhs in 1962. After making these appropriations, there remains a surplus of Rs. 9,345 to be carried forward, against 1,664 brought in. The Company has passed the dividend on preference shares with the result that the preference dividend is in arrear for 15 years. Last year, the Company cleared arrears of preference dividend for 1947 and 1948.

Progress of Premier Fertilisers

THE working of Premier Fertilisers Ltd for the year ended December 1963, has resulted in a profit of Rs. 52,803 before providing for depreciation. The profit for the previous year was Rs. 7,069, after providing Rs. 5,446 for depreciation. The directors consider the working results encouraging, as it was the first year of operation and as the Company had to face an uphill task in the marketing sphere. Adding to the year's profit a sum of Rs. 56,804.10 brought forward, the total comes to Rs. 1,09,607.10. As this amount is small, compared with the amount of depreciation necessary to be provided for 1963 (which works out to Rs. 9,64,479), no depreciation has been provided and the profit has been carried forward.

The directors state that the provision to enable the Company to claim development rebate concerning fixed assets will be made in due course when a better profit is earned. The report says that production started from the end of January 1963. Being a new plant the initial teething troubles were there, and, therefore, increased production could be started only by about May 1963, and the rated capacity was attained in stages thereafter. In the sphere of sales, the report adds that in spite of severe

competition and in spite of the Company entering the field for the first time, it was able to market over 50 percent of the superphosphate produced. The sales of fertiliser mixture were encouraging. The Company has worked out plans to increase both production and sales of superphosphate and mixtures during 1964. In 1964, the Company opened a mixing-cum-sales unit in Tiruchirappalli and Tirunelveli in addition to those already functioning in Cuddalore, Madurai, Coimbatore and Bangalore. The directors expect better results this year.

Mysore Electro Chemical Share Offer

THE Mysore Electro Chemical Works Ltd, Bangalore, manufacturers of M.E.C. batteries will be shortly approaching the market with a share offer in accordance with the desire to increase its capital by Rs. 25 lakhs. The issue will be for Rs. 25 lakhs, of which Rs. 10 lakhs will be offered to the public. The Industrial Finance Corporation, New Delhi, is underwriting the issue in full. Preference shares worth Rs. 5 lakhs are fully subscribed by the Company's West German collaborators, Messrs Accumulatorenfabrik Sonnenschein. Shares worth Rs. 10 lakhs are being reserved for subscription by the directors and their friends.

The Mysore State Finance Corporation has sanctioned a loan of Rs. 14.30 lakhs to the Company for completing its expansion scheme. Apart from increasing the capacity for the manufacture of batteries—automotive, heavy duty, tractor, stationary, etc.—the Company will also launch a programme for producing special types of batteries for electronic flashes and other electronic equipment. Many items in the above list are special patents of the West German collaborators.

A Good Year for Dalmia Cement

DALMIA Cement (Bharat) Ltd has done well in 1963. Due to the reduced provision for taxation, the net profit has risen from Rs. 45.53 lakhs for 1962 to Rs. 57.65 lakhs for 1963. General reserve absorbs Rs. 26.50 lakhs. The Company has maintained the taxable ordinary dividend at 12 percent. In his chairman's speech at the annual general meeting held in Dalmiapuram, Madras, last Monday, Mr. V. H. Dalmia said that an increase in the dividend would have compelled the Company to pay a bigger dividend tax. (A fuller version is printed on a later page in this issue of Capital.) The ploughing-back of profits has been justified on the ground that it will reduce the liability of the Company for the surtax on profits.

Mr. Dalmia referred to the shortage of cement. In spite of all efforts, the shortage is likely to remain acute up to at least 1966. In that year, the installed capacity may amount to 14.2 million tons and the actual output to 11.6 million tons. So the proposal of the Government to remove or relax the control on ex works cement prices should be implemented without delay in order to encourage production. It is hoped that the cement industry in general will benefit from the limestone-prospecting efforts of the Cement Corporation of India which the Government of India has decided to establish for increasing production. The Government should also investigate the prospect of manufacturing blended cement by an admixture of fly ash and other pozzolanas. If the production incentive scheme is suitably modified, the output will be further boosted. The chairman said that the present system of computing pack-

ing charges had involved the Company in a loss of Rs. 3.27 lakhs for 1963, since the prices of second-hand bags had risen considerably. So the formula for fixing packing charges should be modified. The Company has also suffered losses due to the inadequate subsidy allowed in the case of coal transported by sea-cum-railway routes.

There has been increasing competition in world markets in exporting iron ore. The Company has taken active steps to reduce the mining and transport costs for its iron ore. It has finalised plans for laying a ropeway from the mines to the rail-head and for introducing substantial mechanisation in the mines. Due to a recession in the dead-burnt magnesite industry, the results of the Dalmia Magnesite Corporation, a subsidiary, have been affected. The requirements of the steel industry for dead-burnt magnesite may decline due to the improvement in the quality of indigenous refractories and because of technological changes in steel-making. Mr. Dalmia, therefore, hopes that the Government will not allow any further expansion in the production of dead-burnt magnesite. The Dalmia Magnesite Corporation, meanwhile, is trying to export magnesite. Dalmia Cement proposes to convert the deferred shares into ordinary ones at an early date. The conversion, it is reliably learnt, will not attract capital gains tax which will have to be paid when the converted shares are sold.

Share Offer by Vibgyor

VIBGYOR Ltd is offering 14,890 equity shares of Rs. 100 each at par to raise part of the funds required for financing its expansion schemes which are estimated to cost about Rs. 26.5 lakhs. The Company which is at present engaged in the distribution of paints and allied products, civil and construction engineering works and in painting and decoration, proposes to set up a fully equipped steel fabrication unit and undertake heavy engineering construction work in bridges, dams, buildings, etcetera.

Incorporated in September 1951 as a private limited company, Vibgyor was converted into a public limited company on 31st December, 1963. The authorised capital is Rs. 50 lakhs of which Rs. 30 lakhs has been issued. The subscribed capital amounts to Rs. 15.11 lakhs. It is now proposed to issue equity shares worth Rs. 14.89 lakhs, of which shares of the value of Rs. 12.75 lakhs have been underwritten. The subscription list will open on 8th June, and will close on 18th June or earlier, but not before 12th June. The Company's turnover has been increasing year after year and it is now said to have on hand contracts amounting to over Rs. 2 crores, comprising civil engineering works connected with thermal power stations, housing colonies and factories, etcetera. The Company has been paying dividends regularly and the last dividend was 8 percent for 1962-63. The board of directors consisting of ten members has the Maharaja Fatesingh Rao P. Gaekwad of Baroda, as its chairman.

Highland Produce Pays the Same

ARISE in the tea crop and maintenance of the ordinary dividend at 15 percent feature the working results of Highland Produce Co. Ltd for the year ended December 1963. The net profit for the year amounts to Rs. 7,64,876.28 after providing Rs. 1,01,972.62 for depreciation, compared with the previous

year's net profit of Rs. 7,30,177 after providing Rs. 89,092 for depreciation. With the amount of Rs. 15,645.05 brought forward, the total available for appropriation comes to Rs. 7,80,321.33. Out of this, the directors have provided Rs. 3,50,000 for taxation (against Rs. 3,25,000). A sum of Rs. 25,000 is transferred to reserve for development rebate (against Rs. 31,500). A sum of Rs. 75,000 is transferred to general reserve (against Rs. 100,000). The dividend on 6 percent cumulative preference shares (gross 6.76 percent) amounts to Rs. 20,280. The dividend at 15 percent on equity shares amounts to Rs. 2,70,000. The balance of Rs. 40,041.33 is carried forward.

The tea crop for the year amounted to 685,000 kilograms (against 670,200 kilograms). The all-in-cost of production was higher at Rs. 3.80 a kilogram, against Rs. 3.67 a kilogram. The average sale price for tea amounted to Rs. 4.62 a kilogram, against Rs. 4.39 a kilogram. The cardamom crop amounted to 22,510 kilograms, against 26,690 kilograms. The estimated tea crop for 1964 is put at 655,000 kilograms. The cardamom crop is estimated at 22,500 kilograms. The directors say that the policy of fine plucking for tea has been continued.

Virudhunagar Textile Maintains Dividend

A STEEP fall in the profit is reported by Virudhunagar Textile Mills Ltd for the year ended December 1963. The equity dividend is maintained at 6 percent (the same). As there were no signs of improvement in the market conditions and as the accumulation of stock continued, the Company had to stop working 56 looms for about five months during the year in order to avoid further accumulation of cloth. Thus the fall in production, increase in excise duty, increase in yarn ceiling prices without corresponding increase in cloth prices, payment of emergency risks insurance premium, levy of surcharge on electricity charges, all these factors contributed to the steep fall in profit.

The profit for the year amounted to Rs. 51,972, after providing Rs. 77,315 for depreciation, compared with the previous year's profit of Rs. 4,27,477 after providing Rs. 86,972 for depreciation. With the amount of Rs. 79,706 brought forward, the total available for appropriation comes to Rs. 1,31,678. Out of this, the provision for taxation amounts to Rs. 31,000 (against Rs. 2,50,000). The dividend on 5 percent tax free preference shares amounts to Rs. 15,659. The dividend at 6 percent on equity shares amounts to Rs. 73,098. The dividend at 6 percent on deferred shares amounts to Rs. 463. The balance of Rs. 11,458 is carried forward. Sales of cloth during the year amounted to Rs. 54,34,753, against Rs. 51,88,325.

Pathemara Tea Skips Dividend

THE Pathemara Tea Co. Ltd (a Cachar garden) has earned a profit of Rs. 68,688 for the year ended December 1963, compared with a loss of Rs. 49,484 1962, after providing Rs. 32,427 (against Rs. 32,205) for depreciation. General reserve is allocated Rs. 1 lakh, leaving a carry-forward of Rs. 35,010. The dividend has again been passed. The crop amounted to 225,257 kilograms, against 213,805 kilograms. The average price rose from Rs. 4.21 to Rs. 4.63 a kilogram. The crop for 1964 has been estimated at 230,000 kilograms at a cost of Rs. 10.08 lakhs.

The Stock Markets

LYONS RANGE CAUTIOUS ON CABINET UNCERTAINTIES

Wednesday Evening.

THE Calcutta stock market reopened last Monday after having closed due to Mr. Nehru's death. The earlier nervousness following his death has abated, and there has been a fair recovery because of short-covering, combined with replacement purchases. Towards the close, operators have turned cautious and activity is restrained. Although the election of Mr. Lal Bahadur Shastri as the Prime Minister has been welcomed, a good deal of uncertainty prevails concerning the formation of the new Central Cabinet. There is little doubt that Mr. Shastri will pursue Mr. Nehru's economic policy, but it remains to be seen whether he will take vigorous steps to accelerate growth.

The clearing on Wednesday passed off smoothly, and the carry-forward charges have been more or less the same as they were in the previous settlement. Turnover has largely centred on clearing shares, but selected cash scrip have also improved in sympathy with the general trend. Lyons Range is worried by the growing shortage of funds. The concern has been the greater because the Reserve Bank has decided to ask companies to furnish returns about the deposits they have accepted from the public. It is possible that some restrictions will be placed on accepting such deposits in due course. Reports that the Aid-India Club has pledged substantial non-project aid to India, have created little cheerfulness. The disappointment stems largely from the slow growth of industrial development. The Government's decision to ban forward trading in various commodities like groundnut, groundnut oil and linseed has caused some jitters.

Indian Iron have recovered mainly due to short-covering. But investors are inclined to wait until the two steel companies declare their dividends. Indian Iron has produced 108,073 tons of pig iron for May, compared with 111,269 tons for April. The output of steel ingot has declined from 82,319 tons to 81,394 tons and that of salable steel from 62,656 tons to 61,337 tons. Despatches of salable steel have improved from 51,565 tons to 59,630 tons. Among engineering shares, Indian Standard Wagon, Quest, Keen, Williams, Jessop and Texmaco have slightly recovered. Binani Metal have been steady on interested support. Jay Engineering have not responded to the calling off of the strike.

In the miscellaneous section, attention is largely confined to clearing shares which have recovered. Good-Year India and Indian Oxygen are quiet. Scattered interest has been shown in Metal Box and Alkali Chemical. Among managing agency shares, Martin Burn and Jardine Henderson have been steady. Bank shares have been neglected, so nominal business has been transacted. Electric company shares are subdued and scattered business has passed in Calcutta Electric. In paper shares, Orient have recovered on short-covering. India Paper Pulp have been steady on the prospects of a bonus issue. Sugar shares have been freely offered without attracting support. In cotton mills, Jay Shree Textiles have been steady on issuing rights ordinary shares in the proportion of one new share for every three held at par. J. K. Rayon have gained fractionally, but Elgin have been subdued. Coal

shares have lacked interest and only scattered business has been done.

Although the prices of selected jute shares have improved on balance, support has generally been lacking. Birla, New Central, Champdany, Kinnison and Barnagore have been transacted. The downward drift in jute goods prices has disturbed sentiment. Business in tea shares is restricted due to the disappointment about the latest dividend announcements. There was some business in Teliapara, Hasimar and Tezpore.

Government securities have been fully steady. There has been good support particularly from banks for short- and medium-dated stocks. It looks as if commercial banks have been shifting their funds into gilt-edged securities. The price of 3 percent Conversion Loan 1966 has been quoted around Rs. 63.85.

Bombay

SMART RECOVERY IN DALAL STREET TURNOVER IN CLEARING SHARES RESTRAINED

Wednesday Evening.

THE Bombay stock market has started the new account in a steadier mood after remaining closed as a mark of respect to the memory of Mr. Nehru. When the news of his death reached Dalal Street last Wednesday after official trading, sentiment in the curb deteriorated sharply and share prices tumbled due to nervous liquidation. With the election of Mr. Lal Bahadur Shastri as the leader of the Congress Parliamentary Party, there has been a smart recovery in Dalal Street. Bears in particular have rushed in to cover their open positions, but bulls have meanwhile been cautious. Operators are inclined to await the formation of the new Central Cabinet. Turnover in clearing shares has been restrained. Business in cash shares has been fairly satisfactory, and the prices of selected scrip have gained on balance.

Tata Steel ordinary were quoted around Rs. 145.25 and investors keenly await the declaration of the dividend for 1963-64. Among engineering shares, Tata Locomotive, Mukand Iron and Premier Construction have recovered. In motor-vehicle shares, Hindustan Motors have gained on short-covering, while Premier Automobiles have been sluggish.

Century have been an outstanding feature in the cotton mill section and the scrip has smartly recovered due to the talk of a bonus issue. Bombay Dyeing, Kohinoor, Svadeshi and Gokak have improved. India United ordinary, Simplex and Tata Mills have been steady. Standard have nevertheless been quiet on pressure, while Morarjee have improved.

Miscellaneous shares have slightly gained in sympathy with the general trend. In sugar shares, Belapur, Walchandnagar Industries and Phaltan have attracted scattered support. Among steamship companies, Scindia Steam have gained considerably due to brisk short-covering. Be Be Petrol have been steady among mining shares due to the prospect of the Company receiving war damages in the near future. Cement shares have been quietly steady. Associated

Cement and Digvijay have changed hands.

Among chemical shares, Polychem have been a firm feature due to the publication of satisfactory results. Tata Chemical have gained fractionally. In rayon shares, National Rayon have recovered on short-covering. Voltas and Tata Oil have been steady. Scattered business has passed in Bank of India and Central Bank. Among electric companies, Ahmedabad and Tata Hydro have been steady.

Madras

SHARES RECOVER AFTER EARLIER DECLINE

FIRMER BOMBAY ADVICES HELP SENTIMENT

Tuesday Evening.

THE Madras stock market has recovered during the past week after an earlier decline due to the death of Mr. Nehru. The improvement is largely due to firmer advices from Dalal Street. Business has, nevertheless, been restricted because operators and investors are inclined to keep their commitments light until the new Central Cabinet is formed. Prices of clearing shares have gained on short-covering, while interest has largely been confined to only selected cash shares.

Turnover in Government securities has been small. Prices of selected State Government loans have been fully steady. In banks, Indian Overseas have changed hands at Rs. 138 and Indian at Rs. 151. United India, among insurance companies, have been quoted at Rs. 6.40 on paying a taxable ordinary dividend of 10 1/2 percent. In electric companies, Naga-patnam have been steady at Rs. 10.87 and Kumbakonam at Rs. 11.75. Sugar shares have lacked interest, and their prices have tended to decline. Deccan have been available at Rs. 11.52 and Jeypore at Rs. 16.50. E.I.D. have been quoted at Rs. 34.50 and Madura have been easier at Rs. 9.44.

In planting shares, Blue Mountain have been transacted at Rs. 2.37 and Cochin Malabar at Rs. 6.40. Consolidated Coffee have dropped to Rs. 21.80 and Ouchterlony to Rs. 3.45. Business in Periakaramalai has been done at

The new Europa Jet takes to the air

This is the Europa Jet Boeing 727 . . . the most talked about short-to-medium range aircraft that ever came off a planning board. The Europa Jet combines the best of two worlds. It is the smallest jet in the Boeing fleet, yet its comfortable cabin is almost as large as the cabin of a huge transcontinental jet. The 727 needs precious little landing space, which means it can offer you jet service to out of the way places. And, thanks to its compact size, the 727 climbs so fast that it outdistances most of its noise on take-off. No wonder the Boeing 727 was famous in aviation circles long before it was ready to welcome aboard its first passengers. No wonder Lufthansa is proud to announce that they are the ONLY airline flying the all new Boeing 727 in Europe and the Middle East.

London

WEAK POUND FORCES DOWN SHARES

OILS EASE ON DEATH OF NEHRU

London, 3rd June.

THE stock market lost further ground during the past week. Business was quiet throughout, and the level of activity was at the lowest for many months. Selling was not on a heavy scale by any means, but buyers held off and prices drifted lower. Fears of further measures to strengthen the economy increased by the news of the tightening labour situation, while towards the end of the period, the weakness of sterling further upset the sentiment due to continued political uncertainties. Against this background, the steady flow of excellent company news failed to stem the drift to lower levels. After holding steady, values turned easier under the influence of sterling weakness. Insurance and property shares followed the general trend and recorded small losses. Rolls Royce and English and Overseas were again lower. There were occasional exceptions to the general trend assisted by higher interim statements of individual companies. Mining shares remained quiet, but prices as a whole held reasonably steady. Oils eased on news of Mr. Nehru's death and subsequently fluctuated narrowly. Tea also eased, but later rallied. Dollar stocks lost ground with Wall Street.

ROLE OF THE RESERVE BANK IN CO-OPERATIVE CREDIT

(BY A SPECIAL CORRESPONDENT)

The Reserve Bank has been assigned an important rôle for developing the co-operative credit structure. Apart from giving loans to apex co-operative banks, it has helped land mortgage banks by subscribing for their debentures. But the Bank should be given some powers over co-operative credit banks similar to the ones it now has over commercial banks.

ON Sunday, the Governor of the Reserve Bank, Mr. P. C. Bhattacharyya, addressed the concluding session of the Asian Regional Training Workshop on Co-operative

Management in Bombay. The objective of the workshop has been to organise courses in the management of self-help and co-operative projects. According to the Reserve Bank

Governor, the supply of credit to agriculturists in co-operative farms was started in India over half a century ago. The movement owed its birth and development to the zeal

CAPITAL, 4th June, 1964.

and initiative of some public men, who created consciousness among people for co-operation by their own selfless service. The basis of the scheme was, firstly, the integration of co-operative credit with co-operative marketing and processing, and secondly, a fusion of the co-operative credit structure itself with the general programme of agricultural development. The scheme has been fashioned primarily in the context of Indian conditions, but its basic structure and principles are likely to hold good for other similarly placed countries.

State Partnership

An important feature of the Indian scheme is State partnership in the co-operative organisation. There is no contradiction between State partnership and co-operation. During the initial stages, any co-operative unit with limited means finds it difficult to get on its feet unless a minimum amount of resources is placed at its disposal. The Government of India has, therefore, taken up a programme of assisting the growth of the co-operative movement through State participation in share capital and by granting loans and subsidies to co-operative institutions. The partnership with the State would be for a minimum period. Once the co-operatives expand their membership and increase in their strength, the State will withdraw from the scene.

The Reserve Bank has been assigned a crucial rôle for developing the co-operative credit structure. The Reserve Bank had a two-fold task in this direction, firstly, to provide short-term, medium-term and long-term financial assistance and, secondly, to help the co-operative institutions to improve their efficiency and remove their structural weaknesses. As for the first aspect, the progress achieved during the last several years has been remarkable. The Reserve Bank was giving loans to apex co-operative banks below Bank rate.

The total amount of loans outstanding at the end of each year rose from Rs. 3.10 crores in 1950-51 to Rs. 125 crores in 1963. The total amount of medium-term loans increased from Rs. 20 lakhs in 1954-55 to Rs. 10.60 crores in 1962-63. Long-term loans were granted to enable State Governments to participate in the share capital of co-operative credit institutions at all levels. Till 31st March, 1963, an aggregate amount of Rs. 31.20 crores was given for this purpose. Besides, the Reserve Bank has been assisting land mortgage banks by contributing to their debentures. During 1962-63, the Bank contributed Rs. 3.20 crores to such debentures. Recently, it set up an Agricultural Refinance Corporation. In quantitative terms, the progress, therefore, is impressive.

Training of Personnel

As for improving the efficiency of these organisations, the Reserve Bank now functions only as an adviser. It has initiated measures for the training of personnel at different levels. The Bank has a full-fledged Agricultural Credit Department to supervise the granting of financial assistance to co-operative farms. As co-operation is a State subject under the Indian Constitution, the Reserve Bank takes administrative action through the Registrars of Co-operative Societies. It is the "dyarchy" in the co-operative sphere which is partly responsible for the weak administrative structure of co-operative societies. The Reserve Bank should be given some powers over co-operative credit banks as it now has over commercial banks.

The co-operative movement in India is like an inverted pyramid which is spoon-fed from the above. A few years ago, when Mr. H. V. R. Iengar was the Governor of the Reserve Bank, he said at the Tamilnad Co-operative Conference that "the success of the co-operative

CAPITAL, 4th June, 1964.

effort in this country is inter-dependent on the prosperity of the agricultural sector and its ability to create adequate savings." India's agricultural production still remains low. As long as this situation prevails, the movement will have to depend for its progress on official financial support.

In other words, the superstructure of the movement will continue to remain on weak foundations. The co-operative organisations have also become a happy hunting ground for selfish middlemen and this will continue until co-operation really takes deep roots in the soil. What is urgently needed is to strengthen the movement from within and from down below even if this means an immediate sacrifice of the ambitious quantitative goals.

THE CALCUTTA MONEY MARKET

MODERATE DECREASE IN ADVANCES

Wednesday, 3rd June.

THERE has been a moderate fall in the aggregate level of advances in the Calcutta money market during the past week. The requirements of the jute, cotton and sugar mills are slightly down, and so are those of the iron, steel and engineering units. The credit given to the foodgrains and seeds trade is unchanged. In the interbank market, conditions are tight because of quarterly tax payments and the call rate rose sharply from 4 percent to 6 percent. It has softened to 5½ percent towards the close.

The exchange market has been fairly active, with a good supply of gunny bills and a moderate supply of tea bills. The demand for remittances has been excellent. In the London market, sterling has suffered slight losses against all important currencies except the Dutch guilder.

SILVER WAS STEADY IN CALCUTTA in the past week. The price advanced from the previous week's level of Rs. 261.75 to Rs. 262.25, quoted today. The London and New York prices stood at 111½d and 129.3 cents.

In sympathy with silver, gold was also steady. The price of 14-carat registered a rise from Rs. 71.25 to Rs. 72.75.

DURING THE WEEK ENDED 20TH MAY, Government of India Treasury bills for Rs. 18,65,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 2nd June. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 8th June.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 3rd June to 6th June at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 27th May to 30th May amounted to Rs. 5 lakhs.

THERE WAS A DROP OF RS. 16.24 CRORES to Rs. 2,526.52 crores in active notes during the week ended 29th May, 1964, according to the return of the Reserve Bank of India. The total

note issue was Rs. 3 lakhs larger at Rs. 2,564.76 crores. Notes held in the Banking Department consequently rose by Rs. 16.27 crores to Rs. 38.24 crores. Deposits of the Government of India dropped by Rs. 1.38 crores to Rs. 53.57 crores and those of State Governments by Rs. 1.62 crores to Rs. 17 crores. Balances of scheduled banks at Rs. 88.47 crores showed a rise of Rs. 3.14 crores. Balances held abroad declined by Rs. 1 crore to Rs. 12.13 crores. Investments at Rs. 235.70 crores showed a rise of Rs. 3.52 crores. Loans to scheduled banks declined from Rs. 43.28 crores to Rs. 32.45 crores, of which advances against usance bills amounted to Rs. 5.88 crores (Rs. 7.39 crores). Ways and means advances stood at Rs. 57.59 crores, against Rs. 54.32 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 22nd May, 1964, shows a drop of Rs. 4.88 crores to Rs. 610.10 crores in total deposits. Investments in Government securities are up by Rs. 1.97 crores to Rs. 232.56 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 3.27 crores to Rs. 376.54 crores. Cash and balances are, in consequence, shown at Rs. 22.32 crores or Rs. 2.14 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 22nd May, 1964, shows Demand and Time liabilities at Rs. 1,243.50 crores (Rs. 48.77 crores on account of borrowings from banks) and Rs. 1,308.84 crores (Rs. 12.14 crores), compared with Rs. 1,238.93 crores (Rs. 37.58 crores) and Rs. 1,302.83 crores (Rs. 12.07 crores), respectively, in the previous week. Cash has fallen by Rs. 1.13 crores to Rs. 62.11 crores, while balances with the Reserve Bank have increased by Rs. 38 lakhs to Rs. 83.28 crores. There is an increase of Rs. 2.87 crores to Rs. 620.58 crores in investments. Advances and bills discounted at Rs. 1,850.32 crores show a rise of Rs. 12.69 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.7 percent and 72.5 percent, against 5.7 percent and 73.3 percent.

another order
for **CELCON**[®]
came the other day

CELCON is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they

emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

CELCON is a trademark

UNION CARBIDE INDIA LIMITED

MR. J. W. L. RUSSELL'S ADDRESS

The following is the full text of Mr. J. W. L. Russell's address to the shareholders at the 29th Annual General Meeting of the Company held in Calcutta on 15th May, 1964:

Improved Performance

You will have noted from the Annual Report for 1963 that your Company has again enjoyed a successful year. This continually improved performance can be attributed to a number of factors such as an improvement in operating efficiencies, the improved utilisation of capital equipment and cost reduction programmes. In a developing economy, such as that which prevails in India today, there is no reason why this improved performance should not continue over the years to come.

There is another and a vital factor in this improved performance which I would like to single out for special attention. In the final analysis no business, industry or group of people can achieve its objectives unless a clear appreciation exists as well as a recognition of the worth of the individual members of the enterprise. The degree of success achieved depends largely upon the degree to which the individual is encouraged and stimulated to participate in the work of the group.

It follows that those who manage, those who encourage individuals to participate, are of the greatest importance to the success of your Company. Your Company is indeed fortunate in having a very talented and competent group of managerial and supervisory staff. Over the past few years your Company has grown at a very rapid rate. This has been made possible by the efforts of this group who have successfully coped with the many problems which have arisen. On the balance sheet you see recorded the profits made by your Company from the manufacture and sale of its various products. What does not appear on the balance sheet is the devotion, skill and abilities of the managerial staff who have developed the products and the methods of marketing.

Recruitment of Managerial Staff

Competent and experienced managers are not plentiful in India today and this condition while posing many knotty problems, is in itself a sign of the vigorous and healthy growth of Indian business and industry. It is because of this growth that there is now considerable competition within both the public and private sectors for the limited supply of managers of good calibre and potential. Despite such competitive conditions, your Company has not experienced to any degree, the loss of senior and more capable employees, which it is considered is due to the congenial atmosphere which has been created over the years amongst the employees resulting from your Company's philosophy towards work and management.

In essence, this philosophy states that, in order to develop and retain the body of managerial skills required for present and future operations, it is necessary to select the best possible human material, to utilise the knowledge, skills and aptitudes of each individual to best advantage, to foster the development of these and to assist in the acquisition of new skills and abilities. It goes without saying that a fair and adequate remuneration policy forms an integral part of this concept. Generally rising costs and the enhanced impact of taxation on this group of employees have given an

increased importance to this last factor. This is receiving very careful attention by the management of your Company.

The settled policy of your Company calls for promotion from within its own ranks whenever possible. This calls for a timed training schedule so that, as plans for expansion progress, promotion may be given to fully qualified executives in order to fill new positions as they arise. As a corollary, this policy also requires recruitment at the lowest level of management. Exceptions must, of course, be made from time to time in order to meet special circumstances as, for example, when venturing into new fields of activity, fields which require special skills and techniques not represented amongst existing staff. In such cases there is no hesitation in bringing in new skills, techniques and disciplines from outside your Company. One important advantage which is enjoyed in this connection is the ability to "borrow" from your Company's overseas associates, highly skilled technical and professional experts to help in the initial stages of these projects, who also act as instructors for their Indian colleagues.

Recruitment for the managerial group at whatever level involves a very careful selection process. Each applicant is interviewed by a group of senior managers who look not only for the evidence of the applicant's suitability and qualifications for the particular position but also for those basic traits of character which will enable him to rise within the managerial levels. An essential feature of this procedure is that it is a two-way communication process. It is just as important that the applicant should learn, through these interviews, as much about your Company, its practices and policies as is learned from him concerning his abilities and potential. Naturally, this is a time-consuming process and senior managerial time is a scarce commodity but the time and effort thus invested has paid rich rewards in the calibre of the employees.

Management Training

Managerial training in your Company has a twofold object: firstly, to enable the individual to discharge his assigned duties to the best advantage to himself and to your Company, and secondly to enable him to increase his skills and abilities to the greatest extent possible so that, as expansion takes place and new and more responsible positions are created, trained, qualified employees are advanced to fill these. Since each manager has as one of his most important responsibilities, the development of each of his subordinates, there are no gaps in the programme.

In practical operation this is, in the case of your Company, a process of communication and is, in its essentials, simplicity itself. The executive is first told what is expected of him. Then, at regular intervals his actual performance is compared with that expected and from this comparison a draft programme is drawn up so designed as to facilitate his progress. Finally, this is discussed with the individual thereby enlisting his co-operation in the preparation of his own annual development programme. The process might be likened to the art of the navigator of a ship at sea who, by determining the ships exact position and comparing this with that predicted, takes such action in changing course or speed as

may be required to correct any deviation from the planned progress in order to bring the ship to her destination at the appointed time. In essence this is a simple matter. In practice it is not quite so simple. Before a man can be told what is expected of him, the aims of the entire organisation must first be clearly established. From this, the objectives of each Division, Department and section can be formulated. Only when this has been done can the manner by which the individual is expected to contribute to the accomplishment of the task of the unit be stated. This is termed the Position Description system. Each managerial position is covered by a Position Description which sets forth the duties inherent in the position. Each of these Descriptions is in turn supplemented by a statement of Position Objectives, setting forth the results which the position-holder is expected to achieve and, as appropriate, the time by which they should be achieved. In preparing these, a conscientious effort is made to avoid specifying or indicating how the desired result should be achieved. Within the general administrative framework of your Company a wide area of freedom is allowed for experimentation and innovation and is considered to be a basic requirement for healthy managerial development.

At regular intervals each managers' actual performance is measured against his Position Objectives. This Appraisal is performed by the manager's immediate superior, assisted by two other managers senior to the one under appraisal. Based on this comparison an assessment of present performance and potential is made along with forecast of his progress over the next five years. The group also at this time prepares a tentative training programme for the person appraised, designed to foster demonstrated strengths and to help overcome deficiencies. The future, as well as the present, managerial needs of your Company are, of course, considered in drawing up each programme.

Finally, and this is of utmost importance, the main points of the appraisal, the good and the bad, are discussed privately by the manager appraised and his immediate superior in the organisation. The object of this Post-Appraisal conference is to give each manager an opportunity to see himself as others see him and to work out with him his own detailed development programme.

The development programme, as finally worked out, reflects the requirements of the individual and your Company. It can cover a period of months or years. It may, for example, call for intensive training in a particular branch or subject of a profession or for reassignment in order to broaden experience, for the acquisition of detailed knowledge of a particular process or product or for a grasp of the broad principles of management itself. While I will not burden you this afternoon with statistics your Company has vigorously supported the Management Training movement in India since its inception. It has assisted in the formation of several professional associations in the field and your Company's executives have served as guest speakers, lecturers and as members of directing staffs. Encouragement is given to managers to contribute material to the growing number of professional publications devoted to Manage-

CAPITAL, 4th June, 1964.

ment. In addition, of course, your Company has regularly sponsored its managers to membership in the course offered. A close association with similar bodies in the U.K. and U.S.A. exists and, as appropriate, executives have been sent for training to these. Your Company's overseas associates have been most co-operative in making their plans and research laboratories available for this purpose.

Indianisation

In applying this programme your Company realises the vital importance of placing first priority on those of its managers who are Indian nationals. This programme is succeeding. In every phase of operations, in manufacturing, in marketing and in Administration, Indian managers are replacing internationally-assigned executives. In these positions they are doing well. The single and temporary exception to this is in the Chemicals Expansion project. In this case experts have been "borrowed" from your Company's overseas associates who will not only assist in the initial stages of the project but who will also impart their special skills and techniques to their Indian counterparts. I do not anticipate any reversal of the present trend of "Indianizing" our management.

In all of this there is nothing mysterious or esoteric. What has been attempted is to apply good sense and simple justice in order to benefit both your Company and the individual.

I do not wish to imply that the system which I have described is a perfect one. Management development, even in the most advanced industrial countries is still more of an art than an exact science. Changes have been made in our system. I have no doubt that other changes will be made in future which will reflect changes in the structure, operations and needs of your Company. What I do state is that the programme I have described enables your company to base its managerial planning on reasoned, objective opinion. It serves as a constant reminder to executives at all levels that one of their chief responsibilities is the development of their subordinates. Although a staff service is provided to assist in the administration of the programme, responsibility is clearly defined as that of each senior to his subordinates. The plan has been well publicised and since there are no tricks, no hidden mysteries it has met with ready acceptance at all levels and has been no small factor in the development of that Company loyalty to which I referred earlier and which is regarded as the chief factor of success.

The question might be raised—and it is a fair question—what does all this training and development cost your Company? This has cost nothing when the entire picture is considered, i.e., the amount of money spent in training managers versus the return in the form of increased efficiency of operations and the cost reductions effected which can be attributed to the training programmes. In fact the programme has, after defraying all costs, produced an appreciable part of the profits shown on the balance sheet. This, of course, merely bears out the truth of the statement to which the management of your Company wholly subscribes, that executive talent is the most valuable asset, an asset which will continue to be fostered and safeguarded.

It is a far cry from the golden age of the Greek philosophers to the problems of industry in today's world, but the management of your Company believes that the axiom laid down almost twenty-five centuries ago, that "Man is the measure of all things" remains, and will remain, a sound guide to your Company's policy.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 4th June, 1964.

DALMIA CEMENT (BHARAT) LIMITED

CHAIRMAN, MR. V. H. DALMIA'S REVIEW

The following is a summary of the speech of the Chairman, Mr. V. H. DALMIA delivered at the Twelfth Annual General Meeting of the Company held at Dalmiapuram (Madras State) on 1st June, 1964.

Gentlemen:

I extend to you a very cordial welcome on the occasion of the Twelfth Annual General Meeting of your Company.

We are meeting today under the shadow cast over the length and breadth of our land by the sad and sudden passing away of our great leader, Pandit Jawaharlal Nehru, who, as the first Prime Minister of India has guided and shaped the destinies of our country since Independence. Not only was he the architect of modern India, but he was an acclaimed and accepted leader in the international sphere and particularly in the resurgence that has emerged in Asia and Africa. Above all else, he was a man of peace, who had dedicated his life to the ideal of the brotherhood of man and to the principle that all differences between men and nations be resolved by peaceful means. His loss will be mourned not only in the country of his birth but throughout the world where men of peace and goodwill meet. His passing away leaves a vacuum in our country which may perhaps never quite be filled. There could be no better tribute to his memory than our resolution to move together steadfastly forward in furtherance of his dream of a peaceful prosperous and united India.

The Gross Profit

The Annual Accounts and the Directors' Report for 1963 have already been circulated and I am sure you must have noted that the excellent results obtained in the previous year have been maintained. Though the gross profit is slightly lower at Rs. 134.05 lakhs compared to Rs. 148.62 lakhs in the previous year, on account of reduced provision for taxation, the net profit available for appropriation is higher at Rs. 57.65 lakhs compared to Rs. 45.53 lakhs in the last year. Rs. 28.50 lakhs have been appropriated to the General Reserve and a dividend of 12% subject to tax has been recommended on the Ordinary shares. Some shareholders have represented that the distribution of the net profit by way of dividend should have been increased and that it was unnecessary to make any large allocation to General Reserve. It would have been easy for your Directors to give in to the temptation of increasing the dividend, but on a long term view, they came to the conclusion that it was desirable to maintain a steady dividend and to build up the reserve position of the Company by adequate appropriations whenever the profits made that possible. More reserves would reduce Surtax liability in future years, whereas higher dividend would have meant more dividend tax and thus further drain on the Company's coffers.

Cement continues to be in very short supply throughout the country due to the slower rate of growth of the industry and partly to the more rapidly increasing demand. In 1963, the installed capacity reached 10.12 million tonnes against 9.72 million tonnes in the previous year, an increase of only 4%. Despite all efforts, it is likely that at the end of 1965-66, the installed capacity will be about 14.2 million tonnes with a production of 11.6 million tonnes as against the original Third Plan target of 15.24 million tonnes and 13.2 million tonnes, respectively. The demand for 1965-66 at a growth rate of 10-12% per annum was estimated

at 13.2 million tonnes. Later trends have however, indicated a faster rate of increase in demand. It is conceivable, therefore, that at the end of the Third Plan, the gap between demand and supply may be about two million tonnes per annum. The industry has read with much interest Press report about Government having under consideration a proposal to remove or relax the control on ex-Works cement prices allowed to the producers. Details of this proposal are not yet known but it is hoped that Government will see fit to accord this much needed relief to the industry which would then be better placed to find resources for its future expansions. The industry will watch with interest the progress of the Cement Corporation of India which the Government of India have decided to establish for increasing cement manufacturing capacity in the public sector. The industry hopes it will be allowed to benefit from the limestone prospecting efforts of the Corporation, which, as reported, will be one of its principal tasks. Manufacture of blast furnace slag cement has registered some ex-

Mr. V. H. Dalmia

pansion, but, so far, manufacture of blended cements by admixture of fly ash and other pozzolanas has not made much headway. I hope the Government will take more energetic steps in regard to the latter to mitigate the present scarcity.

Capacity Utilisation

Mainly due to better supply of coal and better rail transport facilities, the capacity utilisation of the cement industry in 1963 at 92.5% was the highest during the past decade. The incentive given by Government to the industry last year to increase production contributed to this to some extent. If the incentive is continued, it would be desirable that the incentive formula for higher production of cement from year to year should be linked with the average of the last three years' production and not, as was done last year, to the highest production achieved by a factory during any one year of the preceeding three years.

The formula adopted by the Government of India for computing the quarterly packing charges resulted in 1963 in a loss of Rs. 3.27 lakhs to your Company. Despite belated revision of the ratio of second-hand to new bags from 1:1 to 1:2, the loss still persists as the prices of new and second-hand bags in Government's formula for fixing packing charges are not in line with the actual procurement prices. Whereas the formula assumes that the price of second-hand bags is 65% of that of the new bags, the actual ratio may be 85%. It is hoped that the Government, while computing packing charges in future,

would take a more realistic view and give due regard to the factual position as represented by the industry.

Since last year, the position of the raising and distribution of coal has improved further, and, by and large, the cement industry is happily placed in regard to the procurement of its coal requirements. The Government have, therefore, decided that further conversion from coal firing to oil firing in cement factories situated at long distances from the Bengal-Bihar coal fields was not necessary, and your Company's proposal to resort to oil firing has been dropped. Movement of Bengal-Bihar coal by the rail-cum-sea route to certain industrial consumers in Western India has been discontinued. The bottle-neck of transport from the Bengal-Bihar Collieries via Waltair to the South, however, persists and your Company and certain other consumers of Bengal-Bihar coal are still compelled to obtain their supplies by the rail-cum-sea route. Though the coal subsidy is intended to equate, approximately, the cost of sea-borne coal with coal carried by the all-rail route, the subsidy actually paid leaves a substantial shortfall which has not been remedied so far despite your Company and others representing about this shortfall to the Government of India ever since the announcement of the subsidy formula in August, 1961. In your Company's case, for the coal received via Cuddalore Port, the shortfall ranged from Rs. 7.45 to Rs. 12.17 per tonne. The present shortfall is Rs. 9.54 per tonne which works out to about Rs. 6 lakhs per annum.

Railway Freight

Among the important items contributing to the shortfall in the coal subsidy are inadequate allowance for railway freight and handling charges. In the case of your Company, the element of railway freight from collieries to Calcutta Docks allowed in the formula left a shortfall of Rs. 0.70 per tonne in 1961, which has now risen to Rs. 3.50 per tonne. Similarly, the shortfall of Rs. 0.84 in 1961 in the element for freight from the port of unloading to the consuming centre rose to Rs. 2.41 in April, 1964. As against the provision of only Rs. 0.20 per tonne for shipping and handling charges at Calcutta Port, actual expenses vary from Rs. 2/- to Rs. 5/- per tonne. While representations have been made to Government for full compensation for the railway freight and other charges in the subsidy formula, it is regrettable that no increase has so far been granted even to cover the increases in the railway freight structure effected by Government itself. Presently your Company loses about 5% in unloading and handling at Cuddalore Port which aggregates to about 3,000 tonnes per annum and is equivalent to about Rs. 2.40 lakhs. As this loss is due to the compulsion under which your Company has to take supplies by the rail-cum-sea route, Government has been requested to compensate adequately for it. There is no provision in the ex-Works retention price allowed to the cement producers for the substantial shortfall in the coal subsidy as the cost of production was computed by the Tariff Commission on the assumption that under the subsidy scheme, coal moved by the sea-cum-rail route would be made available to the consumers more or less at the same rate as if it had moved by the all rail route. I hope the Government will make good this serious inadequacy in the subsidy, retrospectively, which discriminates unfavourably against those consumers, such as your Company, who are compelled to take Bengal-Bihar coal by the sea-cum-rail route.

There are indications of recovery from world-wide recession in the steel industry, referred to by me last year. Certain experts estimate the steel production to rise to 1200 million tons in 1961 against 400 million tons in 1961, for which the 1961 iron ore production of 500 million tons will have to be trebled during the same period of 30 years. On this basis, it is being planned to raise India's annual iron ore exports to 30 million tons by 1970 from 16 million tons targeted for the end of the Third Plan. There is, however, severe competition for iron ore in the International Markets, as a result of which in 1963, the Minerals & Metals Trading Corporation of India Ltd. had to concede reduction of Sh. 7 in the price of the basic grade iron ores to be supplied to Japan. This competition is likely to continue for some time and it is heartening to note that Minerals & Metals Trading Corporation of India Ltd. is actively seized with the need of reducing the end-costs of Indian ores to their foreign buyers. Among the measures planned are more mechanisation of mines, rationalisation of transport and development of Indian ports. I am happy to say that the Government of India has recently approved a Scheme costing about Rs. 1.5 crores for developing Cuddalore Port through which your Company's ore is being exported. I request the authorities to plan and execute this development speedily and in such a manner as would enable progressively higher loading rates being achieved without having to wait for the completion of the work.

Your Company realises the need of reducing mining and transport costs for its Iron Ore and is now finalising plans for laying a ropeway from the mines to the rail-head and for introducing a substantial degree of mechanisation in the mining. We hope, in this manner to further in some small degree the Minerals & Metals Trading Corporation of India Ltd.'s efforts to reduce their procurement cost of high grade Iron ore. We also hope that we will have their sustained support, which is so necessary, in the formulation and implementation of these plans.

Since last year, there has been a further recession in the dead-burnt magnesite industry, which is reflected in the results of Messrs. Dalmia Mag-

nesite Corporation, in which your Company is a partner. This is due to steel production having fallen short of the Third Five Year Plan target while the dead-burnt magnesite industry increased its capacity in anticipation of the steel target being achieved. This difficult position is likely to continue until 1967/68 when the Third Five Year Plan target of 10 million tons of steel production may be achieved. Even, if the target under consideration of 18 million tons of steel production for 1970-71 is reached, the increase in consumption of dead-burnt magnesite by the steel industry may be comparatively negligible as improvements in the quality of indigenous refractories and steel making techniques are reducing considerably consumption of refractories per tonne of steel production and as in new steel making processes, such as the LD process which will mainly be adopted for further expansions of India's steel industry, use of conventional refractories including basic will be replaced to a great extent by tarred Dolomite. Moreover, as the Dead-burnt Magnesite Industry can increase its capacity within about 1/3rd of the time required by the steel industry, I would earnestly urge the Government to defer for the time being any proposals for expansion in Dead-burnt Magnesite Industry, including the reported setting up of a Dead-burnt Magnesite plant in the public sector based on the Almora deposits of raw magnesite, until future consumption trends of Dead-burnt magnesite justify such expansion.

Exporting Dead-burnt Magnesite

Efforts to export dead-burnt magnesite from India have not met with much success due to severe competition, both in terms of price and quality, from foreign manufacturers and particularly the producers of sea-water magnesite, and to very unfavourable freight rates applied to cargoes from Indian ports. We hope Government will be able to reduce the discriminatory freight rates and extend special

export incentives to the industry to increase foreign exchange earnings and to enable the industry to utilise its idle capacity. Dalmia Magnesite Corporation, nevertheless, continue to make strenuous efforts to export.

The Scheme for conversion of the Deferred shares of the Company into Ordinary shares has been sanctioned by the Madras High Court and will take effect from the date to be fixed by your Board for this purpose. The implementation of the Scheme had been kept in abeyance on account of the apprehension that Capital Gains Tax might be attracted in the hands of the shareholders since the Central Board of Revenue had taken the view that the conversion amounted to a transfer and thus attracted the incidence of the said tax. I understand that there has been some rethinking on the part of the Government of India on this question and that it has now been decided that no tax should be levied at the time of conversion of shares of one

class into another. As a result, Capital Gains Tax would be levied only when the converted shares are disposed of. As soon as this position is confirmed by the Government, the Scheme would be implemented and I expect that this would be done in the course of this year.

I am happy to report that the relations between the management and the employees of the Company continue to be cordial. I would like also to congratulate Shri M. Palaniandi, President of the Dalmia Cement National Workers' Union, Dalmiapuram, on his selection by the National Productivity Council for training in Industrial Relations in the United States of America. In the end, I wish to express our appreciation of the sincere and devoted services rendered to the Company by all the executives, staff and workers.

N.B.—This does not purport to be a report of the proceedings of the General Meeting.

London

THE CITY VIEW OF INDIA AFTER NEHRU

(FROM OUR LONDON CORRESPONDENT)

It will probably come as a surprise to some, if not all, that the City of London reacted immediately to the news of Pandit Jawaharlal Nehru's death. With British interests as involved as they are in India's industrial development, it is natural that efforts are being made to assess the probable reactions to the passing of a man who dominated the Indian scene as much as did its Prime Minister and acknowledged leader for the past 17 years. The immediate effect of the news being released was a lowering of prices of oil, tea and rubber shares on the London stock market, it being felt that these interests might suffer either from a leftward shift in domestic policy or from a deterioration of Government as such. The precaution was deprecated by those City men who had intimate connections with India and they discounted the fears of the others, holding that it was much more likely, as one expressed it, that "things may well jog along much as they have done up to now."

On the other hand, it is interesting to find that in many quarters much more serious thought has been given to what may happen in India after the close of the Nehru era. The financial columns of the *Guardian* offer a comprehensive, if brief, review of City thinking on the subject when it points out that Mr. Nehru had not always been admired or liked in the City of London. His insistence on creating a "socialist pattern of society" in India led naturally to open conflict with established British business interests. The nationalisation of life insurance, the squeezing out of British managing agencies in the tea and rubber industries; the penal taxation of foreign companies and the hostile attitude to the oil companies—all these were often laid at the door of the late Mr. Nehru.

But a growing number of men in banking and industry came to accept the Age of Nehru as one of the facts of life. If progress along the lines of the four great development plans was halting and often disappointing, it was still progress. And there has been enough scope for British private enterprise to attract hundreds of firms into new and developing ventures in India. Many have found that when they got frustrated in wrangles with bureaucracy a direct appeal to the Prime Minister often produced a fair solution. For all the arguments of the past, the loss of a world figure and the end of an era are profoundly felt.

C.D.C. Finances Inadequate

The inadequacy of the financial margin on which the Commonwealth Development Corporation has to work on money lent by the Treasury is criticised by the Corporation in its report for 1963, which has just been published. This margin, it states, has narrowed year by year as the cost of Treasury money creeps inexorably upwards; 5.2 percent in 1963 compared with 4.7 percent in 1960. "It is a weakness of the arrangements as they stand," states the report, "that they do not give sufficient margin against the commercial and other risks which must be run by a concern engaged in the sort of business that C.D.C. must undertake if it is to fulfil the duty laid on it by Parliament."

Apart from this complaint, the Corporation reports with enthusiasm on

the prospects opened by the Commonwealth Development Act, 1963, which from July of last year restored the full scale of operations made possible when its predecessor, the Colonial Development Corporation, was set up in 1948. Until the Act was passed, the Corporation's activities had been steadily contracting, but now the volume of investment should be increased.

During 1963, the Corporation committed itself to support ten new projects of a capital value of £6.58 million, and approved plans for more investment in existing projects to a total of £3.86 million. In 1962, new commitments totalled £1.6 million and support for existing projects totalled £1.88 million. By the end of 1962, the Corporation had invested £91.8 million and committed itself to support schemes of a capital value of £119 million. The commitments were spread in this way: the Caribbean Islands (£20.6 million), east Africa (£22.98 million), central Africa (£24.3 million), High Commission Territories (£20.5 million) and west Africa (£13.1 million).

The operating surplus for the year was £4.75 million—£391,000 more than in 1962, but smaller than the increases in 1962 and 1961. The Corporation's investments carry no obligation to "Buy British," but its operations, the report states, assist Britain's balance of payments; net remittances of funds back to the U.K. in 1963 were £3.6 million, and in addition, there were £9.3 million worth of direct export orders in Britain from C.D.C. projects.

The report states that the Corporation encourages smallholder farming and has developed the idea of a large plantation or farm managed on commercial lines and surrounded by small farmers, the whole being under the joint control of the Government of the country and of the Corporation. The Corporation has also made an agreement with earlier associates for a third housing scheme in Jamaica; nearly 2,000 houses will now be able to be bought on instalments at a price

cheaper than those of the houses built under the earlier schemes.

Upward Export Trends

British exports continue on a rising trend. This is the considered view of the Board of Trade after a full analysis of the April statistics. The Board remains unperturbed by last month's drop in exports after the record February and March figures. No particular significance can be attached to month-by-month changes in this variable series, it states, pointing out that exports for February to April, seasonally adjusted, averaged £359 million a month, or 5 percent more than in the preceding three months. The statisticians admit, however, that the run of monthly figures leaves some uncertainty about the underlying rate of growth and that this comparison of three monthly periods may exaggerate it.

A major part of the wide fluctuation in recent months has been in the exports of engineering goods, which account for 45 percent of total exports. The Board points out that, besides the notoriously erratic ships and aircraft, these exports include a substantial amount of machinery, much of which contains items of high value which are delivered as large units and not evenly month by month. Taking the first four months of this year together to allow for these variations, exports of engineering products were at about the same rate as in the fourth quarter of 1963. Exports of motor-cars showed little change after their substantial rise last year. Against this, exports of other manufactured goods continued to increase and exports of non-manufactures ceased to fall.

The sterling area and E.F.T.A. are the only markets where exports have increased in the last few months. Exports to the Common Market have remained flat since the middle of 1963; sales to West Germany appear to be rising again, but exports to Italy and France have fallen this year. Exports to the United States have also fallen after the rise in 1963

while exports to Latin America and to Russia and eastern Europe have continued to decline.

The man comfort to be drawn from recent trade figures, therefore, is that imports have been growing less quickly in recent months. The seasonally adjusted average for February to April of £453 million is only 3 percent more than in the previous three months. The Board of Trade says this slower growth is probably associated with smaller increases in stockbuilding after the jump in the closing months of last year.

The detailed figures show imports of food falling back in the last three months, but imports of industrial materials still rising. The big increase here was in semi-manufactures, up £11 million a month. Imports of chemicals continued to grow and there were increases over a wide range of other semi-manufactured goods. Imports of iron and steel, at £12 million a month, were particularly large, more than twice what they had been a year earlier. But the steel-makers seem reasonably sure this will not continue.

Finished goods are also coming in in growing quantities. They accounted for an extra £8 million (15 percent) in February to April compared with November-January. Imports of machinery continued to rise and increases were widely spread among consumer goods, including a sharp rise in the imports of motor-cars and motor-cycles, which, at £4½ million a month, were half as much again as in the second half of 1963.

Western Europe (both Common Market and E.F.T.A.), north America and the non-sterling primary producers have reaped the main benefit of this rise in British imports. Excepting those from Australia, imports from the sterling area have continued the decline begun in the second half of last year.

MARTIN BURN LOOK BACK TO OVER 180 YEARS OF SERVICE TO INDIA

...to be able to compute this service by decades, not by years alone...to recall that our creed has consistently been the development of our country's resources through engineering and allied enterprises...to take pride in planning that makes the many units in our organization fall into a rational and complementary group and each one a leader in its particular field, a position which some of them, early pioneers in India, held even in the last century. For us looking back is a worthwhile proposition—an incentive to move forward.

AMONG THE COMPANIES IN THE MARTIN BURN GROUP ARE:

THE INDIAN IRON & STEEL CO. LTD.: With a million ton integrated steel plant at Burnpur, the largest foundry in the Commonwealth at Kulti and its own collieries and iron ore mines, IISCO has an enviable record in production efficiency.

BURN & CO. LTD., HOWRAH WORKS: Pioneers in foundry practice in India, in structural steel-work fabrication and the manufacture of rolling stock—the origins of the Company go back to the year 1781.

BURN & CO. LTD., REFRACTORY & CERAMIC GROUP: Apart from stoneware pipes and chemical stoneware, the works of this group—eight in number and located in four states—manufacture nearly all types of refractories to meet the requirements of India's steel industry, power undertakings, railways, ordnance factories—in fact, any industry requiring refractory material for the maintenance of furnaces.

THE INDIAN STANDARD WAGON CO. LTD., SANTA: The oldest Indian unit started for the specific purpose of manufacturing railway rolling stock—has been mainly responsible for building up the wagon building industry. Also manufactures springs, forgings, pressings and stampings for heavy industry as well as automotive components.

THE HOOGHLY DOCKING & ENGINEERING CO. LTD.: Established in 1819, the Company has a shipbuilding yard, a dry dock and extensive workshops at Salkia.

ROBERT HUDSON (INDIA) LTD.: A premier concern in its own field, the Company devotes itself to all types of light railway engineering—has important connections with the mining industries.

RAILWAY COMPANIES: Some of the first feeder railways in India, with six systems in four states.

ELECTRIC SUPPLY COMPANIES: Pioneers again in the generation and distribution of domestic power in India—serve 45 towns in Uttar Pradesh and Madhya Pradesh.

THE VAUGHAN BURN CRANE COMPANY LTD.: A collaboration with The Vaughan Crane Company Ltd. of Manchester... Hand operated and electric overhead travelling cranes and chain pulley blocks.

VISEDEX
THE DASHBOARD
OF BUSINESS

Work the VISEDEX way to get the best out of your men, machines and materials.

VISEDEX can tell you what you need to know at a glance. VISEDEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much... VISEDEX, in short, affords greater control at less cost, besides keeping records secure.

Our VISEDEX Representative will be happy to show you, without obligation, how simple VISEDEX is to operate—either with Card Pockets or Brass Card-holders—and how easily it can meet your specific requirements.

HARVEYS STEP UP THEIR INDUSTRIAL FABRIC PRODUCTION!

Now they can serve more industries than ever!

Harveys' Madura Mills—India's largest producers of industrial fabrics—have to date been supplying leading manufacturers throughout the country with a wide variety of light, medium and heavy industrial fabrics. The installation of additional new high speed looms and up-to-date precision machinery—among the world's most modern—now enables Harveys to accept many more orders of varied character.

Why you should come to Harveys:

Harveys never compromise on quality. Harvey industrial fabrics are equal to the world's best. The most modern machinery...highly experienced and skilled technical personnel...and relentless testing at every stage of manufacture—ensure that all Harvey fabrics are of unbeatable quality.

Harveys can manufacture to a variety of specifications. Whether it's Rayon Warp Sheet for tyres, or Canvas for the Shoe, Tent and allied industries—Harveys can produce it! Every yard of Harvey industrial fabrics conforms rigidly to specifications—a fact that has won Harveys the confidence of manufacturers in India and abroad.

COMPULSORY FIBRE PURCHASES STRAIN RESOURCES OF MILLS

WITH the lifting of the current quota of 190,000 bales, jute mills will have absorbed 7.08 million bales which is equivalent to 94.4 per cent of the estimated 1963-64 crop of 7.5 million bales. The completion of these quotas helped to maintain fibre prices around the operational minimum levels. But it is pointed out that mills' resources have been strained to the utmost by these purchases. Finding storage space too has been a problem. Stock purchases by the J.B.S.A. have also made increased demands on mills for storage space. This apart, incidental charges such as interest and insurance have amounted to about Rs. 3 a maund.

The latest reports of well-run jute mill companies refer to the excessively large supply of offgrade jute, which is suitable for producing only heavy goods. With the gradual shift in the pattern of production, Indian mills want selected-grade fibre for manufacturing hessian, carpet-backing cloth and other specialty fabrics. Since quality jute was in short supply, mills had to pay high prices with a consequent rise in production costs. Although steps have been taken to improve the quality of the fibre, they have not yielded tangible results so far. Understandably, the industry wants the minimum price of fibre to be fixed in relation to the grade in maximum use and not Assam Bottoms. It is felt that such a change will offer incentives to cultivators to produce better-quality jute.

Decline in Raw Jute Arrivals

The total arrivals of raw jute in Calcutta and mill stations during the ten-month period ended April 1964 were lower at 6,097 million bales, compared with 6,330 million bales for the comparable period of the previous season. Of these, 5,986 million bales (against 6,089 million bales) were of Indian origin and 110,260 bales (against 241,710 bales) of Pakistani origin.

Imports during April 1964 declined to 459,570 bales from 504,000 bales in the previous month. Of these 450,520 bales (against 489,600 bales) were of Indian origin, and 9,050 bales (against 14,400 bales) were from Pakistan. In April 1963, the total arrivals were 487,340 bales—467,380 bales of Indian origin and 19,960 bales from Pakistan.

Rise in Fibre Exports

Exports of raw jute from India rose by 127 per cent from 11,272 tonnes in 1962-63 to 25,657 tonnes in 1963-64. The foreign exchange earned also increased from Rs. 1.27 crores to Rs. 2.91 crores. Russia was the largest consumer of Indian jute absorbing as much as 21,476 tonnes, valued at Rs. 2.48 crores, during 1963-64. A bumper crop and the removal of the export duty on fibre explain the larger shipments of the commodity.

Despite the likelihood of a plentiful crop during the next season, the prospects of fibre exports are poor since India is hardly in a position to spare selected-grade fibre, which is in good demand abroad. Besides, jute prices are pegged at a high level in India. So Indian exporters cannot compete with their counterparts in Thailand and Pakistan.

New Uses for Jute

The Fabric Research Laboratories of Dedham, Massachusetts, U.S.A., has been exploring the prospects of using jute goods in the reinforcement

of rigid plastics. Pilot plant experiments in Calcutta have yielded satisfactory results. F.R.L. has been commissioned by the I.J.M.A. to carry on a two-year product development programme in the U.S.A. to evolve new uses for jute fibre and gunnies.

Hard plastics manufactured with jute or gunnies as the reinforcing material may be used as counter-tops, insulation panels for trailers and trucks and in various building jobs. It is also proposed to explore the possibilities of using jute as a membrane in the production of plastic pipes. The primary task of F.R.L. is to experiment on the production of decorative and coated fabrics, tarpaulins and industrial textiles. The programme also includes the development of other new uses such as jute fibre and fabric impregnated with resins to mould shells for luggages and as a substitute for fibre-glass.

Spurt in Pakistani Output

A sharp increase in the production and stocks of gunnies has been reported by the Pakistan Jute Mills Association for March. The rise is attributed to a longer working month and a small decline in despatches. The output of jute goods rose from 25,709 tons in February to 29,851 tons in March. Sacking rose from 17,053 tons to 20,623 tons and hessian from 7,076 tons to 8,267 tons, while miscellaneous goods declined from 980 tons to 961 tons. In March 1963 Pakistani mills produced 26,155 tons of jute goods—7,526 tons of hessian, 17,752 tons of sacking and 877 tons of other goods. For the nine-month period ended March 1964, the total output was higher at 244,618 tons, against 221,281 tons for the comparable period of 1962-63. The output of hessian increased by 6,418 tons to 69,082 tons of sacking by 15,289 tons to 166,785 tons and of miscellaneous goods by 1,630 tons to 8,751 tons.

P.J.M.A. member-mills reported a decline in jute goods despatches from 27,418 tons in February to 26,799 tons in March 1964. Export shipments fell

from 21,467 tons to 20,481 tons, while internal offtake rose fractionally by 367 tons to 6,318 tons. For the nine-month period ended March 1964, the total offtake was higher at 236,358 tons, against 214,459 tons for the corresponding period of the previous season.

Pakistani gunny stocks increased to 43,598 tons at the end of March from 40,645 tons at the close of the previous month. Stocks of sacking rose from 25,123 tons to 27,275 tons, of hessian from 14,098 tons to 14,820 tons and of other goods from 1,424 tons to 1,503 tons.

THE JUTE MARKETS

Manufactured Goods: Dull conditions prevailed in the Calcutta gunny market during the past week. Following the death of Mr. Nehru, there was a complete suspension of activities earlier in the week. A short-lived firmness induced by due-date covering in the spot and hedge markets was noticed on Saturday. But weak holders emerged as keen sellers to lighten their commitments. Mills also appeared to be concerned over the growing accumulation of stocks due to sluggish overseas and Government offtake. In the futures market, tired long liquidation and intermittent bear-selling caused a severe setback. Except for a shortage of lighters, conditions in the Calcutta port were considered satisfactory. In the absence of any overseas business or enquiry worthy of mention, the Indian Government tenders for about 7,000 bales of B Twills for June delivery failed to prop up sentiment. So prices drifted downwards in both hessian and sacking. Towards the close, lower levels attracted some short-covering, helping prices to regain some lost ground. Fluctuations were wide. Turnover was small in the spot market, and moderate in the hedge market. The closing undertone was easy.

Wednesday's quotations were as follows:

	June	July-Sept.	Oct.-Dec.
40in. 71oz.	32.60	32.90	33.25
40in. 8oz.	35.25	—	—
40in. 10oz.	43.95	44.50	44.90
B Twills	111.25	111.35	112.10
Cornsacks	112.75	113.00	113.50
Heavy Cees (Plain)	113.50	111.50	112.00
A Twills	134.50	135.00	136.25
Liverpools	125.50	125.50	125.50

Raw Jute: Subdued conditions prevailed in the raw jute market during the past week. Mills and mill agents were practically absent from the market. With the gradual shrinkage in fresh arrivals, small holders of selected-grade fibre were not inclined to part with their limited stocks at current prices, while mills tried to complete as much of their quota as possible with such jute. Holders of lower grade jute and mesta appeared to be concerned over the slow offtake. They were inclined to discount the rates below the derivative levels. But little business transpired in such fibre. A routine turnover was reported in marginal lots of better-grade jute around previous levels, generally for short and near positions. In the hedge market, Upper Assam White Bottoms for June and September suffered a major drift after wide fluctuations due to tired long liquidation combined with a fair amount of short-selling. Towards the close, lower prices attracted modest short-covering, helping to retrieve a part of the losses. Turnover was fairly heavy and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basic Bottoms)		T.S.D. Minimum Prices	
	Current Prices			
	Rs. A Qtl.	Rs. A Ma.	Rs. A Qtl.	Rs. A Ma.
Assam-Agartala Jute	83.05	31.00	85.74	32.00
Northern Jute	80.38	30.00	83.05	31.00
Western Desal Jute	75.02	28.00	77.70	29.00
Selected Daissee	89.25	33.50	91.09	34.00
Assam-Agartala Tossa	85.74	32.00	88.41	33.00
Mesta:				
Assam-Northern	69.66	26.00	75.02	28.00
Local Daissee	69.66	26.00	73.68	27.50
Bihar Dist.	66.98	25.00	68.32	25.50

G. B. OFFERS NEW MACHINES TO JUTE MILLS

Office: 3, Netaji Subhas Road, Calcutta-1.

THE U.K. JUTE MARKETS

FIBRE INACTIVE

(FROM OUR DUNDEE CORRESPONDENT)

THERE was change in the raw jute market in Pakistan during the past week. Offers were being made at the previous levels by most sellers, but some of the cheaper parcels were taken up by spinners and these were not now available. Very little buying interest was shown by Dundee spinners as they had already secured a large quantity of jute from the present crop. Any business passing in the fibre was confined to spot parcels.

Offers of new crop were being more freely made, but both buyers and sellers were unwilling to operate to any extent because of the uncertainty of the future. No announcement was made by Pakistan about the trading policy for the 1964-65 season. There is the question of minimum export prices and the granting of trading licences. The quality of the various grades of jute during the past season has been very high and it is not known if this will continue in the future.

Old crop offers were still irregular with the lowest rates at £134 for Mill Firsts, at £109 for Mill Lightnings, at £95 10s for Mill Hearts and at £81 10s for Grade Hearts, c.i.f. U.K., for June shipment. Grade Tossa-2/3 ranged from £123 10s and Grade Tossa-4 from

£105 10s. Outport Tossa-2/3 was named at £93 10s and Outport Tossa-4 at £84 for June shipment. Many sellers were asking considerably more than the above rates, but the marks in question were usually well above the recognised quality standard of the grade.

Offers of new crop were also irregular with the lowest rates for groups at £94 for Mill Hearts and at £81 for Grade Hearts, for August-September shipment. The quantity of new crop jute purchased by the U.K. was very small for this time of year. Cuttings were steady at £59 for S.N.C. and at £51 for N.C. Mesta was unchanged at £85 for A, at £75 for B, at £66 10s for C and at £48 10s for cuttings, c.i.f. U.K., for June-July shipment.

Only a few offers of Siam jute were being made here. Prices were at £75 10s for grade A, at £69 for grade B and at £65 for grade C, delivered mill Dundee for June shipment.

Prior to Mr. Nehru's death, the Calcutta goods market was very quiet and prices of hessians were at the lowest point touched for almost four years. Since then, the markets have been closed. At the beginning of the week, prices were at 67s 2d for 40in. 10oz. and at 50s for 7½oz. a 100 yards f.o.b. Calcutta for May shipment, at 67s 8d and 50s 4d June and at 68s 5d and 50s 6d July-September. B Twills were at 174s 6d, 173s 9d and 173s 9d for the respective shipment periods.

Exide Batteries still keep going when the rest have stopped

Silver Exide are the strongest, most reliable batteries under the sun. They are quality tested at every stage of production... that's why you're sure of a long and

trouble free life. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—and you'll still keep going when the rest have stopped.

Books

FACTORS PROMOTING PRODUCTIVITY

Productivity and Economic Growth. By Kehar Sangha. (Published by Asia Publishing House, Calicut Street, Ballard Estate, Bombay 1. Price Rs. 14, pages 121.)

Dr. Kehar Sangha's book adds nothing new either to the subject of productivity or to that of economic growth. The introductory chapter deals with productivity, productivity classification and factors affecting productivity. The general level at which the thoughts in the book flow is reflected in the introductory chapter. Dr. Sangha points out that productivity is classified as actual productivity, potential productivity, volume productivity and real productivity. The factors that affect it are stated as technical progress, quality of labour force, capital intensity, availability of raw materials and the socio-economic organisation.

The second chapter deals with the choice of the input factor. The chapter appears to emphasise that "productivity" refers to labour productivity. The arguments in favour of "labour" as a basis of reference in popular discussions on productivity are given as the availability of employment statistics, the assumption that the quality of a machine unquestionably reflects the rôle of labour (mental as well as physical) in the creation of the machine, the standard of living of a nation is limited eventually by the income created by each hour of work, and the labour force in any country is one of the most important resources. After advancing a case for using the term productivity for labour productivity, Dr. Sangha concludes the chapter after writing a few lines on capital productivity.

The third chapter is on methodology and measurement of productivity. The important items discussed are productivity indices, index numbers, gross national product index, value added and industrial and agricultural production indices. A few lines are written on the problems of productivity measurement and on the use of productivity ratios for economic decisions. Two observations made in this chapter are worth quoting: "It is a well-known fact that net national product (N.N.P.) ultimately depends upon the number of man-hours expended in producing that amount of output and services" (page 25). And on page 26: "It would scarcely be an exaggeration to say that higher output a man-hour was the chief determinant of the growth in real G.N.P." It is indeed true that there is not a single, strictly defined and standard method to find reliable estimates of productivity of a factor. But it is doubtful if any significant contribution has been made by Dr. Sangha on this topic.

The chapter on sharing gains in productivity begins with a historical note on wage theories. The discussion then runs on the following aspects: wages and national income, wages and value added, some devices of sharing gains, the case of controlled economies and free-market economies, wages and prices, escalator clause, improvement factor, reduction in working hours and redistribution of income. Nothing new emerges out of the discussion.

In the fifth chapter, Dr. Sangha has tried to analyse the relationship of productivity with other economic variables. He has considered productivity and employment, productivity

and inflation, productivity and the theory of factor proportions and capital productivity and population. He has also touched upon the input-output analysis.

The last chapter deals with productivity in underdeveloped countries. The first section is concerned with the listing of the general features of underdeveloped nations and the second section, with the aspect of development. As in the previous chapters, except for giving a sketch of what is known, nothing new has been noted in this chapter also. The book may not be of much use to students or research workers, as most of the concepts briefly mentioned in it are available in better and popular textbooks. However, Dr. Sangha has to be complimented for his courage to step into a most delicate field of current economic research.

SHIPPING JOURNAL

Shipping and Port Review: Annual 1964. (Edited and published by E. H. Tippoo, 8 Dharamtala Street, Calcutta 13. Price Rs. 12, pages 214.)

This issue has given extensive coverage to the Shipping and Shipbuilding Conference held some months ago in Calcutta. The publication is profusely illustrated and carries the speeches made at the Conference as also some other interesting articles. It is attractively got up.

JOURNAL ON MINERALS

Minerals and Industries. Edited by Arun Roy Chaudhury. (Published by J. N. Sen Gupta, 12 Stephen Court, 18 Park Street, Calcutta 16. Price Rs. 6, pages 89.)

This is a relatively new quarterly journal on a subject of major economic importance. The issue carries an interview with Jan Tinbergen, a leading economist, on the "Problem of Underdevelopment". There are also interesting articles on the uses of minerals as plant nutrients, and as fillers for industrial purposes, the transport of coal in pipelines and polymers.

The publication gives statistics relating to India's mineral output, exports and imports. A separate section carries quotations, both in Indian and U.S. markets. The articles are illustrated with maps and pictures. The journal aims at high production standards.

SUPER PROFITS TAX

The Law and Practice of Super Profits Tax. By S. V. Ghatalia. (Published by the Allied Publishers Private Ltd, 15 Graham Road, Ballard Estate, Bombay 1. Price Rs. 25, pages 339.)

A levy like the super profits tax is unprecedented in its character and has no parallel in any other country. It is a legislation which creates a notional base for a standard return irrespective of the correct yield which should accrue according to the economic structure obtaining in the country. In the latest Central Budget, the tax has been abolished. Nevertheless, Mr. Ghatalia's book will be found useful by legal practitioners and accountants.

Commodity Markets

OUTLOOK FOR TEA PRICES

(BY A SPECIAL CORRESPONDENT)

THE north Indian crop continues to make satisfactory progress and was 10 million lbs up by 15th May. The second auction was held in Calcutta on 25th May, but it was a small affair consisting of only 11,173 packages mostly from Darjeeling. But there was a fair demand for leaf teas.

On 26th May, 690,000 lbs of leaf tea were offered at the Cochin auctions which showed a further seasonal decline in quality and there was a marked falling off in demand: except for the best qualities, prices were easier with low mediums showing a decline; even tippy grades were easier. The comparison of prices with those of last year is as follows:

	1964	1963
Low Medium	Rs. 4.30-60	Rs. 4.00-4.20
Medium	Rs. 4.60-80	Rs. 4.25-4.75
Good Medium	Rs. 4.90-5.35	Rs. 4.50-5.10
Nitigri B.O.P.	Rs. 4.60-7.10	Rs. 4.50-7.20

The Gillanders Arbuthnot group of tea companies report somewhat disappointing results. The Williamson Magor tea results show that East India Tea worked at a loss, but Dimakusi increased dividend from 25 percent to 30 percent, while Bishnauth reduced the distribution from 20 percent to 14 percent. Of tea companies managed by the Octavius Steel Company, Hattikhira reports a small profit, but pays no dividend and Loobah advises similar results, both being Cachar or Sylhet estates, Borpukhuri, an Assam Company, incurred a loss and carries forward a debit. Those results for 1963 working when average prices were normal, make it difficult to forecast profitable working for many gardens in north India during 1964.

It is too early in the season to estimate the future price trend, but it may be remarked that accounts recently published for the Mimm tea company were disappointing. This is one of the oldest established Darjeeling quality producers, and the results compared very poorly with the 1962 accounts. This is important as there has been general expectation that quality producers will continue to do well in any case.

There seems to be little doubt that more tea will come on offer during 1964. There are also new areas to be fed, but it has to be noted they are new areas, not recently established markets, and although this correspondent expects the produce to be cheap this year, that is no guarantee that new markets will, in fact, materialise. As far as India is concerned, there has been a steady change from orthodox to C.T.C. manufacture and a recent report that demand for these grades is expected to be keen comes from authoritative sources.

For a long time, the trade has advocated propaganda to increase internal consumption. In this, Pakistan has fortunately shown the way by consuming about all its production of round 50 million lbs.

As already pointed out in these columns, Africa, Russia and even Persia and Turkey will be adding to supplies this season, so it is to be hoped the call for development of consumption in India has not come too late. To ship more tea in order to earn less foreign exchange has been recognised by the trade as a futile policy. The next few months will show if consumption is keeping pace with the supply.

The annual tea report of Messrs W. S. Cresswell and Co. Private Ltd says: "A disturbing feature of

the year was the failure for the first time in many years for internal consumption in India to record a gain. Final export figures are estimated at 363 million lbs from north India and 95 million lbs from south India, leaving an estimated 300 million lbs for internal requirements, compared with 288 million lbs from the 1962 crop.

With reference to new markets in Europe this firm notes: "The trade and industry were much encouraged by the news that the European Common Market countries had abolished the external tariff on entry of teas in member countries, but there still remain high internal taxes on teas which we hope the countries concerned may soon agree to reduce or abolish".

They further add: "Shipments to eastern Europe were more than double those of the previous season, but exports to West Germany, the Netherlands and the rest of Europe were a little lower, and shipments to Turkey were very much lower. (It has already been noted by his correspondent that Turkey is now entering the market as a producer.)

The importance of the India's off-take in relation to world consumption is well known to the trade and on this subject, Messrs W. S. Cresswell write: "The most realistic basis for calculating the consumption of tea in India is to deduct shipments from the crop taking the period 1st April to 31st March in the case of south India, and 1st July to 30th June for north India. This calculation will show the approximate amount of each season's crop retained in India, the figures for the last four seasons being as follows:

Tea retained in India (In million lbs)	
1960-61	268
1961-62	328
1962-63	288
1963-64	300 estimated

"Consumption in 1961-62 was estimated at 295 million lbs, and in 1962-63 at 310 million lbs, the increase being found from the very large carry-over from the previous season. Had consumption shown a further increase in 1963-64 we would have expected a much larger retained figure than 300 million lbs, or alternatively very high prices at the close of the season, and it, therefore, seems likely that there has been some falling off in the level of consumption in this country, during the 1963-64 period. This assumption fits in with reports from the distributive side of the trade, which indicate that poor agricultural crops in many of the tea drinking areas combined with a general rise in the cost of living and a sugar shortage in certain areas, have checked the growth of internal sales. While we are naturally much concerned at this setback to the steady expansion of the internal market, we hope it will be only a temporary phenomenon and that consumption in India will resume its upward swing in 1964-65."

U.K. tea stocks recorded a small decline from 139,991,656 lbs to 138,680,860 lbs during the week ended 22nd May. This was due to deliveries being 8,327,996 lbs, against landings of 7,017,200 lbs, but as the summer months are now on the way, deliveries around 8½ million lbs do not suggest a particularly strong demand. Prices during the week averaged 47.06d a lb, against 47.63d in the previous week and 46.53d a year ago.

COMPANY AND PUBLIC NOTICES

CAPITAL LIMITED

NOTICE is hereby given that an Annual General Meeting of CAPITAL LIMITED, will be held at the Bengal Chamber of Commerce & Industry, Calcutta, on Saturday, the 27th June, 1964, at 10-25 A.M., to transact the following business:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1963, and to receive the Directors' and Auditors' Reports thereon.
2. To appoint Auditors and to fix their remuneration.

As Special Business

3. To appoint a Director in place of Mr. D. C. W. Watkin, who retires, and in this connection to consider and, if thought fit, to pass with or without modification, the following resolution of which a notice has been received by the Company from a member under Section 237 of the Companies Act, 1956, and which will be proposed as an ordinary resolution:—

"Resolved that Mr. D. C. W. Watkin be and is hereby appointed a Director of the Company whose period of office shall be liable to termination by retirement of Directors by rotation."

By Order of the Board,

CAPITAL LIMITED,

P. C. GANGULI,

Secretary.

Registered Office:

5, Mission Row,
Calcutta, 30th May, 1964.

Note: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The explanatory notes in connection with the Special business to be transacted at the meeting, are being circulated to the members.

THE INDO-BURMA PETROLEUM COMPANY LIMITED

Registered Office:

Gillander House, Netaji Subhas Road,
CALCUTTA-1.

NOTICE is hereby given that the Preference Register of Members of the Company will be closed from the 17th June, 1964 to 2nd July, 1964, both days inclusive for payment of the dividend for the half year ending 30th June, 1964, on the 2nd July, 1964, at the rate of Rs. 2.914 per share (being the stipulated dividend of Rs. 3.50 per share increased by 11% to Rs. 3.885 less Rs. 0.971 being Income Tax at the Company's rate of 25%) subject to tax being deducted therefrom in accordance with the provisions of Section 194 of the Income Tax Act, 1961.

By Order of the Board,

STEEL BROTHERS AND COMPANY
LIMITED,

Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta-1.

29th May, 1964.

SHREE GOPAL PAPER MILLS

LIMITED

NOTICE

NOTICE is hereby given that the 27th Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at "Thapar House", 25, Brabourne Road, Calcutta, on Friday, the 26th June, 1964 at 3 P.M.

AGENDA:

1. To receive and adopt the Directors' Report and the Audited Accounts of the Company for the year ended 31st December, 1963.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect directors in place of those who retire by rotation.

(a) Shri R. P. Agrawal and Seth R. S. Khemka being longest in Office retire by rotation and being eligible offer themselves for re-election.

(b) Diwan Anand Kumar is due to retire by rotation and being 70 years of age, a notice has been received from a Shareholder of the Company proposing his re-election. A special notice is hereby given for passing the following resolution with or without modification as an ordinary resolution.

"That Diwan Anand Kumar, who is 70 years of age, be and is hereby re-elected a director of the company and that the age limit as specified under Section 280 of the Companies Act, 1956 shall not apply to him."

NOTES:

(i) The Share Transfer Books of the Company will remain closed from the 17th June, 1964, to 26th June, 1964, both days inclusive.

(ii) A member entitled to attend and vote at the meeting, is entitled to appoint a proxy to attend and vote, instead of himself and the proxy need not be a member of the Company.

(iii) Explanatory note pursuant to Section 173 of the Companies Act 1956 in respect of the item No. 3 (b) as referred to above has been sent to all the Shareholders along with the notice.

By Order of the Board,

KARAM CHAND THAPAR & BROS.
PRIVATE LIMITED,
Managing Agents.

Registered Office:

"Thapar House",
25, Brabourne Road,
Calcutta-1.
The 25th May, 1964.

THE ONDAL COAL COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE ONDAL COAL COMPANY, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 26th June, 1964, at 11-15 A.M., for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 31st December, 1963, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 17th to the 26th June, 1964, both days inclusive.

By Order of the Board,
PRAN PRASHAD,
Chairman.

Chartered Bank Buildings,
Calcutta, 21st May, 1964.

NOTES:

- (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.
- (b) The Dividends, if declared, will be paid on or after 15th July, 1964, to those shareholders to whom the Company's books on the 26th June, 1964, or to their mandatees. No application for Dividend Warrants will be necessary.

THE KARANPURA DEVELOPMENT COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE KARANPURA DEVELOPMENT COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday the 29th June, 1964, at 10-40 A.M. for the following purposes:—

1. To consider and adopt the Audited Accounts of the Company for the year ended 31st December, 1963, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

4. To appoint a Director in place of Mr. B. P. Ray, who retires, and in this connection to consider and, if thought fit, to pass with or without modification, the following resolution of which a notice has been received by the Company from one of its members under Section 257 of the Companies Act, 1956, which will be proposed as Ordinary resolution:—

"That Mr. B. P. Ray be and is hereby appointed as a Director of the Company."

The Share Transfer Registers of the Company will be closed from the 17th June, 1964 to the 29th June, 1964, both days inclusive.

By Order of the Board,

BRITISH PAINTS (INDIA) LIMITED

REGISTERED OFFICE:
32, CHOWRINGHEE ROAD,
CALCUTTA.

NOTICE

NOTICE is hereby given that the Fortieth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company on Friday, 26th June, 1964, at 11-30 A.M., to transact the following business:—

A. As Ordinary Business

1. To receive the Report of the Directors and to adopt the Audited Accounts for the year ended 31st December, 1963.
2. To declare a Dividend.
3. To elect Directors in place of Mr. J. T. Adamson and Mr. B. Gill.
4. To appoint Auditors and to fix their remuneration.

B. As Special Business

To consider and if thought fit, pass the following Resolutions with or without modification:—

(i) As a Special Resolution No. 1:

"That in view of the proposal contained in the succeeding Ordinary Resolution that Mr. Clifford James Harben be appointed a Director of the Company, consent be and is hereby accorded to Mr. Clifford James Harben holding and continuing to hold an office or place of profit under the Company as Works Director or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration as approved by the Central Government and set out in the Resolution of the Board of Directors passed on the 13th November, 1963, a copy of which has been signed by the Chairman and laid on the table for the purpose of identification."

(ii) As an Ordinary Resolution:

"That approval of the Central Government having been obtained to the appointment of Mr. Clifford James Harben as a Director and due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company, pursuant to Section 257 of the Companies Act, 1956, Mr. Clifford James Harben be and is hereby appointed as Director of the Company with effect from 1st January, 1964."

(iii) As a Special Resolution No. 2:

"That Mr. F. C. H. Rustonjee be and is hereby appointed as an Alternate Director for Mr. J. T. Adamson and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."

(iv) As a Special Resolution No. 3:

"Resolved that the Articles of Association of the Company be altered

in the following manner:—

By inserting the words 'without payment', between the words 'entitled' and 'to' appearing in the first line in the Article 13."

(v) As a Special Resolution No. 4:

"Resolved that the Articles of Association of the Company be amended by altering Article 14, so as to read as follows:—

If any Certificate be defaced, torn or old, decrepit, worn out or when the space on the reverse for recording transfer have been fully utilised, then upon production of such Certificate to the Directors, they may order the same to be cancelled and may issue a new Certificate in lieu thereof and if the Certificate be lost or destroyed, then, upon proof thereof to the satisfaction of the Directors and to such reasonable terms, if any, as to evidence and indemnity and the payment of out-of-pocket expenses incurred by the Company in investigating evidence, as the Directors think fit, a new Certificate in lieu thereof may be issued to the party entitled to such lost or destroyed certificate."

(vi) As a Special Resolution No. 5:

"Resolved that Article 15 be substituted by the following Article:—

For every Certificate issued in the last preceding Article, the Company shall charge no fee."

(vii) As a Special Resolution No. 6:

"Resolved that Article 41 be amended so as to read as follows:—

For the registration of each transfer and for each registration of transmission under the transmission clause, the Company shall charge no fee."

By Order of the Board,

S. R. ROY,
Director Secretary.

Dated at 32, Chowringhee Road, Calcutta-16, the 25th day of May, 1964.

ing longer-term advances to estates, so suitable measures will have to be taken to meet this need. The response from the State Financial Corporations and the Agricultural Refinance Corporation in providing long-term finance has so far been disappointing. The urgency of supplying long-term loans is great, especially since production has suffered due to the shortage of irrigation facilities. It was mainly because of drought that the crop in north India was small during 1962 and 1963. A disturbing factor is that State Governments have begun to requisition land belonging to estates which has not yet been brought under tea cultivation. As a result, many estates have found it difficult to extend the area under tea. Mr. Shah's assurance that the Central Government will try to dissuade the State Governments from acquiring land is, therefore, timely. The West Bengal Government has already agreed not to acquire land suitable for tea cultivation. It is hoped that other State Governments will follow suit.

Although exports of Indian tea have risen steadily since 1961, there can be no justification for

complacency since competition abroad is growing. Indian tea is being steadily priced out of a number of overseas markets. It is essential, therefore, that steps be taken to reduce production costs. The improvement in exports is due largely to the abolition of the export duty in the 1963-64 Budget. But it is unfortunate that the benefit of the abolition has been reduced by the imposition of heavier excise duties on all teas, even those that are exported. It is, therefore, hoped that the Government will consider giving a refund of the excise duty on teas which are exported in order to promote sales abroad. Instant tea has met with a good demand, and it will soon be produced in Kerala State. A few other parties have also shown interest in installing instant tea factories. It is an encouraging sign that efforts are being made to export special packets of Indian tea to the European Common Market countries. Many firms there have agreed to pack and market pure blends of Indian tea. Since the tariff on tea has been removed by these countries, there is scope for increasing sales appreciably.

The major causes for the inflationary pressures in the economy may be traced to the Government's own policies. As the Federation of Indian Chambers of Commerce and Industry recently pointed out, indirect taxes account for as much as 30 percent to 50 percent of the final price of several important commodities. The unprecedented fiscal burdens imposed by the 1963-64 Budget touched off a series of cost and price rises in an economy which was already bedevilled with shortages. The position is no better after the last Budget and the pressure on prices has only been intensified. Another important cause of inflation is the massive Government outlays on defence and development which have poured more money into the economy without a matching increase in output. The poor working of public-sector ventures, which have not yielded returns commensurate with the huge investments, is an equally important reason. Furthermore, the shortages have been aggravated by the rapid increase in population. Inflation can be mitigated only by creating the conditions necessary for increased production. In concrete terms, this means that the disincentives built into the present fiscal structure will have to be removed. Factories should be helped to overcome the shortages of imported raw materials and capital goods which have hampered production. Although industrial production has risen by about 10 percent in 1963-64, the increase is far short of the greatly enlarged requirements of the economy. The larger non-project assistance pledged by the Aid-India Club, coupled with the bigger export earnings in 1963-64, should be used to give industries a more generous allocation of foreign exchange for financing their maintenance imports. The fuller use of installed capacity will, by itself, help reduce production costs, besides increasing the supply of goods. Above all, agricultural output has to be stepped up considerably by vigorous implementation of the Government's "crash programme" of intensive cultivation. The State Governments have, no doubt, made a much bigger provision for agricultural programmes in 1964-65, the contemplated outlay being Rs. 147 crores, against Rs. 126 crores in 1963-64. But the fulfilment of expenditure targets alone will not bring about an increase in output, as experience shows. Steps must be taken to use the existing irrigation facilities more fully and to provide adequate quantities of fertilisers and improved seeds to cultivators at cheap rates.

TASKS BEFORE THE NEW CABINET

THE new Indian Cabinet that was sworn in on Tuesday starts its career at a time when the country is faced with a crisis of confidence. Prices, particularly of foodgrains which account for the bulk of the consumption expenditure of two-thirds of the population, are threatening to get out of hand. The stock markets lack cheer, and it is plain to see that their denigration by the Finance Minister is not doing any good at all. Exports have shown a healthy rise, but doubts persist whether the upward trend can be maintained.

Taking office in this difficult situation, Mr. Lal Bahadur Shastri and his new team will need to think of some first-aid measures even before they take up the larger and time-taking task of giving economic policy a fresh orientation. Mr. Nehru's illness since January came in the way of the reappraisal which was obviously needed after it became clear that the third plan was in for serious trouble. This piece of unfinished business may now be less difficult to tackle because a new Government, even though largely composed of the same familiar figures, is presumed to start with a clean slate. Mr. Shastri is committed to continuity but this need not prevent him or his colleagues from taking a pragmatic look at those things which are patently going wrong. The changes in portfolios, incidental to the succession, should help in inducing greater readiness to adopt a flexible outlook relating to the positions taken in the past.

The biggest challenge faces Mr. C. Subramaniam who switches from Steel, Mines and Heavy Engineering to Food and Agriculture. This Ministry has proved the graveyard of several reputations, not so much because of what the Ministers themselves did or did not do, but because of the political

handicaps they laboured under. That politics should loom large in agriculture is not at all surprising—the biggest block of votes, large part of it traditionally commanded by the Congress Party, is in the countryside. This makes an Agriculture Minister's task exceptionally difficult because he must not only show progress on the farms but do so without damage to the Party's electoral prospects. Mr. Subramaniam has, judging by his record in Madras and more recently in New Delhi, the ability to take unpleasant decisions he deems necessary to produce results. He has also a well-deserved reputation for drive, the quality most needed in his new job where the principal failing has been an inadequacy of organisation rather than of ideology.

That Mr. Subramaniam should be leaving the key sectors of steel and heavy engineering will be a disappointment to many who saw the languishing State steel plants gain a new dynamism during the two years of his régime. Mr. Sanjeeva Reddy who takes over the larger part of Mr. Subramaniam's former domain, will thus start with fewer disadvantages but before long he will have to be taking some politically difficult decisions. It is an open secret that the changes made in company laws by the Finance Minister in some haste last December are standing in the way of a firm commitment from the World Bank to the expansion of private-sector steel plants.

Sardar Swaran Singh, who takes over the new industry portfolio—embracing once again all of industry except textiles—has a reputation as a tough but tactful negotiator. These diplomatic qualities should be particularly valuable in the

tricky negotiations he will have to master-mind with foreign collaborators and others to maintain the tempo of industrial expansion. More than that, the bringing together of all industry under a single charge is a step in the right direction because the dividing line between the light and heavy ends—separated under the 1962 division of responsibilities—has never been easy. Also welcome is the restoration of Cabinet rank to the industry portfolio which it had partly lost after Mr. K. C. Reddy's exit from Government.

A new Cabinet seat for the Ministry of Irrigation and Power owes less to design than to accident. Mr. H. C. Dasappa, moved from the Rail-

ways Ministry, had to be fitted in somewhere and this apparently was the most convenient way for Mr. Shastri to do it. What remains unsettled, however, is the problem of co-ordination between agriculture and irrigation that Mr. S. K. Patil had raised before leaving the Cabinet under the Kamaraj plan. In India, where power generation is likely to gravitate more and more towards coal, its link with irrigation is not necessarily sacrosanct even though the weight of tradition favours its maintenance. In any case, it is to be counted as a blessing that both irrigation and power will continue to be looked after, although at one level lower than Mr. Dasappa, by Dr. K. L. Rao, easily the best available technocrat for the job.

Current News and Comment

Ban on Commodity Futures

Except for an element of surprise in the timing of the announcement because of the uncertainty about the new set-up in Delhi, the Government of India's decision to ban forward trading with effect from 2nd June in as many as 14 commodities (groundnut, groundnut oil, mustard seed, including *taramira* seed, rape-seed or *toria*, groundnut oilcake, mustard oilcake, including *taramira* oilcake, cotton-seed oilcake, sesamum oilcake, rapeseed oilcake, *methi*, coriander seed, aniseed, *arhar chuni* and *mung chuni*), was not altogether unexpected. Of these commodities, only groundnut, groundnut oil, groundnut oilcake and mustard-seed fall under Section 15 of the Forward Contracts (Regulation) Act, and forward trading in them is regulated through recognised associations. The other commodities are "free" and there are over a 100 registered associations, mostly in northern India, conducting trading in them. Many months ago, the Forward Markets Commission warned the registered associations that the freedom to trade in "free" commodities was being abused, and that forward trading in cereals, which is banned under Section 17, and in certain other commodities, which can be traded only through recognised associations, was going on in the guise of "free commodities".

About the beginning of April, the Commission made it abundantly clear that forward dealings in most of the "free" commodities would not be permitted after the expiry of the current contract at the end of May. Except for causing some unemployment among traders living on speculation, the ban on forward trading in "free" commodities will do no serious harm. In an economy characterised by serious shortages, the utility of futures trading can be seriously questioned and when there is clear evidence that the freedom to trade is being abused, it is unwise to allow these facilities to continue. It is indeed surprising that the Forward Markets Commission, which is known to keep a vigilant eye on forward markets, should have tolerated forward trading in "free" commodities so long, especially when the registered associations are known to have admitted that they were carrying on trading in banned or prohibited commodities under the guise of free commodities.

As for trading in groundnut, groundnut oil and mustard seed, the present ban represents no more than an official recognition of the virtual absence of trading in forward markets because of the arbitrary and low ceilings prescribed by the Commission for futures contracts. No business is known to have been officially recorded in groundnut oil futures for a few months because of the high premium enjoyed by ready groundnut oil over the ceiling for oil futures. Activity in groundnut has also been at a standstill for a long while. As against the ceiling of Rs. 241 a 250 kilograms for the hedge contract, groundnut ready Kanpur Bold—which is the most inferior variety—has been quoted above Rs. 250 for many months and the latest quotation is very much higher around Rs. 285. Only groundnut oilcake (expeller) futures had been very active, but here again speculative activity had recently shrunk to modest

proportions as a result of the penal margin of Rs. 100 a tonne.

The official Press note announcing the ban on forward trading expressed serious concern over the recent rise in the prices of certain essential commodities like groundnut, groundnut oil, mustard seed and some cereals. Various measures taken by the Forward Markets Commission to prevent speculative excesses like the fixing of maximum limit on price fluctuations and imposition of margins are said to have failed to produce much result. Official concern over the rise in prices is understandable, but the rise in prices should not be attributed only to speculation. Commodity prices have been soaring year after year, whereas there has been a steady decline in the volume of activity in the futures markets; the turnover in almost all the forward markets today is only a fraction of what it used to be in the '40s and '50s. The high premiums enjoyed by spot material over futures should have convinced the authorities that the present rise in prices is not due to excessive speculation and that it simply reflects the continuing imbalance between supply and demand, resulting from failure of oilseeds production to keep pace with growing requirements.

Increased production is the only effective answer to the problem of high prices. Naturally, this will take time. If the authorities are convinced that prices are on the high side, they must arrange to augment supplies by importing edible oils from the U.S.A. under P.L. 480. It should not be difficult to secure large quantities of soyabean oil from the U.S.A. This will not only help to keep domestic prices of oilseeds down, but will also release considerable quantities of costlier groundnut oil for export. Apart from augmenting supplies through suitable imports, the Government should carefully regulate the supply of credit in a manner which discourages hoarding or holding of stocks without adversely affecting production. Groundnut prices hold the key to the general trend of oilseeds prices. The promotion of groundnut oil exports through incentives has, no doubt, aggravated the situation, but the main reason for the high prices of groundnut is the marked increase in *vanaspati* output. Informed market men say that official figures of *vanaspati* production do not tell the complete story since not all the production is being recorded with a view to evading the heavy excise duty on *vanaspati*. The position is likely to worsen if, as market reports go, *vanaspati* prices are decontrolled.

Cloth Output and Exports

Indian mills' cloth output in April is provisionally placed at 429 million yards, the same as in the previous month, but 29 million yards more than in April 1963. The April figure raises the total for the first four months of 1964 to 1,668 million yards, compared with 1,601 million yards in the same period of 1963. Cotton yarn output in April at 176 million lbs is 2 million lbs less than in the previous month, but is 17 million lbs more than in April 1963. Yarn production during January-April amounts to 694 million lbs, against

647 million lbs in the corresponding period last year. If this trend is maintained, which seems likely because the supply of cotton is satisfactory and cloth offtake continues to be encouraging, yarn production can be expected to set a new record and mill cloth output should reach the level of 5,000 million yards. The increase in production is welcome, but the mill sector's performance cannot be regarded as encouraging since production is lagging far behind the third plan target of 5,800 million yards, which is the mill industry's share out of a total target of 9,300 million yards.

In order to reach the plan target, the mill industry will need to bring about a substantial expansion in its capacity and it will need to be assured of adequate supply of cotton. The Indian Cotton Mills Federation has estimated the total annual requirements of the textile industry for the remaining two years of the third plan around 1.6 million spindles, 2,100 carding engines and 17,000 looms. But the annual indigenous supply is not likely to exceed 900,000 spindles, 1,770 carding engines and 6,000 looms, both automatic and plain. The Federation's plea for allowing immediately the import of requisite machinery to meet the shortfall in domestic supply, therefore, deserves careful attention from the Government. But the question is not merely one of expanding capacity, it is also that of utilising the installed capacity effectively. An important factor which has been standing in the way of more effective use of capacity is the supply of cotton. The target for cloth production cannot be achieved unless cotton production can be stepped up from the present 5.9 million or 6 million bales to 7 million bales in 1965-66. The prospect seems far from encouraging and it might not be easy to make good the shortfall in domestic supply through imports.

Cloth stocks with the mills at the end of April totalled 250,100 bales (of 1,500 yards each), compared with 215,600 bales at the end of March. The increase is entirely under "sold but delivery not taken", which seems due to the trade's reluctance to lift the goods from the mills' godowns because of financial stringency. Unsold stocks have actually gone down from 97,500 bales to 97,200 bales. Stocks of yarn at the end of April were also higher at 102,800 bales (of 400 lbs each), against 91,300 bales at the end of March.

Shipments of mill-made cotton piecegoods from India during the first four months of the current year are provisionally placed at 194.9 million yards, compared with 198.3 million yards 'n the same period of 1963. In spite of the small decline in the volume of exports, the total value realised is considerably higher at Rs. 16.4 crores, against Rs. 14.6 crores. There has been a steady increase in the prices realised since the beginning of the year which is probably due to the abolition of the compulsory export scheme. The price realised in April works out to 88 paise a yard, compared with 85 paise in March and 80 paise in January. The corresponding figures for 1963 were 75p, 74p and 72p a yard. Shipments from Bombay port in May are provisionally placed at 35 million yards, valued at Rs. 31 million. This shows a considerable fall over the previous month's performance when exports totalled 45.6 million yards valued at Rs. 40.3 million. The unit value realised in May, however, works out to 86.6 paise a yard.

Problems Facing Cotton Textiles

The cotton textile industry, one of the oldest and largest in this country, has probably the highest percentage of obsolete and outdated machinery. Consequently, it is not able to produce quality goods and satisfy the growing preference for superior material at home as well as abroad. Referring to this problem, Mr. P. D. Bangur said in his presidential speech at the annual general meeting of the Bengal Millowners Association in Calcutta last week, that a recent inventory of the machinery in use showed that a large percentage of it was made before 1939. While textile manufacturers abroad are able to take advantage of the technological advances which have been taking place, the Indian industry is unable to modernise its equipment because of the foreign exchange shortage. As the additional depreciation allowance

for a third shift working of plant and machinery has been revived in the latest Finance Act, most of the textile units are now working a third shift. This makes it urgent to replace all old and worn-out machinery. The domestic textile machinery manufacturers are fully booked for years to come, and therefore, Mr. Bangur pleaded that the Government should consider the industry's plea for early delivery of new plant and equipment, and grant foreign exchange for all necessary imports.

Referring to the representations made by the Indian Cotton Mills Federation for revising the existing voluntary control of textile prices, Mr. Bangur said that the control scheme had now become unworkable in the absence of any provision for accommodating increases in the costs of raw cotton, labour, power and stores. Price control is, in fact, now affecting the textile industry's profitability. Mr. Bangur hoped that the Government would take a decision soon, as the matter had been pending for a fairly long time. But whatever decision is ultimately taken, it must take into consideration the production cost and profitability of the marginal units, without which "the industry as a whole will not be able to maintain its production at the highest pitch". The other major problem of the industry is in securing raw cotton supplies of the right quality in adequate quantities. Mr. Bangur said that while the output of raw cotton increased every year, the requirements of mills also grew, with the result that the gap continued to persist. The shortage of quality cotton has grown even larger. It is, therefore, necessary to take all possible steps to raise the output of raw cotton with special emphasis on improving its quality. Mr. Bangur felt that agricultural research in India was not being given the attention it deserved. An improvement in the ginneries was also essential. Since cotton forms the bulk of the industry's cost, the supply of good quality cotton at competitive prices is vital to the industry. Referring to the industry's own effort in this matter, Mr. Bangur said a sub-committee appointed by the Indian Cotton Mills Federation to explore how the Federation could help the farmer increase his cotton harvest, had already submitted its report, and this was being considered by different regional associations. Discussing the issue of rationalisation, Mr. Bangur said that this was as pressing a need as the replacement of old and outdated machinery. Textile industries all over the world are rapidly rationalising themselves in order to reduce costs and produce quality goods. India must do likewise if she is to increase her exports. Moreover, the Indian industry can pay its workers on a scale comparable to those paid abroad only when it is allowed to rationalise its working. Bigger wages can come only from higher productivity, and this will not be possible in the Indian textile industry as long as it has to manage with outdated plant and equipment and a redundant labour force.

The Prize Bond Puzzle

The first draw of the Government of India premium prize bonds, 1963, has revealed some incredible features which have understandably caused public resentment. Several bonds with consecutive numbers have had an uninterrupted run of luck which cannot be explained away as the whims of the goddess of fortune. In response to the public demand for a clarification, the Central Finance Minister, Mr. T. T. Krishnam-

achari, recently explained to both Houses of Parliament how a large number of prize bonds with consecutive serial numbers had won prizes at the recent draw in Bombay. The Minister tried to allay misgivings by saying that there was no manipulation. He conceded that the rules of the draw, which made it possible for consecutive serial numbers to win prizes, were "perplexing" and "clumsy", and might even be "unintelligent". But he hastened to add that there was no dishonesty among people who drew the lot. While the public should have full confidence in the honesty and integrity of the officials connected with a draw, it is necessary to see to it that the procedures followed are fool-proof and do not leave any scope for public resentment. Mr. Krishnamachari admitted the need for a complete revision of the scheme to make it more satisfactory. But he turned down a suggestion for appointing an official commission since he was convinced about the bona fides of the draw. The question of integrity and honesty apart, it is necessary to elicit the opinions of the public for modifying the scheme. This could have been done better by a non-official commission which might be expected to keep an open mind on the issues involved.

The Finance Ministry has explained that consecutive numbers have won prizes at the recent draw because of the existence of large blocks of unsold bonds immediately above the winning bonds. When an unsold number was drawn, it had been provided that the prize for it should be awarded to the nearest lower sold bond. This practice was adopted when criticisms were made against the unfair practice of including unsold bonds in the draw and as a result the Government itself won a substantial portion of the prizes. But it is obvious that the modified scheme has created new anomalies. People who had bought several bonds in a series were unfairly getting prizes in quick succession.

The premium prize bonds, 1963, according to the Finance Minister, were issued in denominations of Rs. 100 and Rs. 5, of which 650,000 of the former and 9.1 million of the latter were printed and distributed for sale throughout the country. Of these, only 347,155 bonds in the Rs. 100 denomination series and 4,735,016 in the Rs. 5 series had been sold. So it is obvious that there had been large blocks of unsold bonds at the recent draw. In his statement to Parliament, Mr. Krishnamachari said that the largest number of consecutively numbered Rs. 100 bonds that won prizes at the recent draw was 32 while in the case of Rs. 5 bonds, the figure was 79. He added that the premium prize bonds, 1963, would participate in one more draw under the same rules. "But the difficulty would not, however, arise in the case of the 1964 bonds, now on sale, because the notification relating to them had provided that in the event of an unsold number being drawn, the draw would be continued until a sold number was drawn." This is admittedly a better scheme than the present one, but it is a pity that the Finance Ministry could discover it only after two blunders—one in 1960 and another in 1964.

Maharashtra Financial Corporation

The Maharashtra State Financial Corporation reports all-round progress in its operations during the year ended 31st March, 1964. The Corporation sanctioned loans totalling Rs. 3,205 crores,

against Rs. 2,063 crores in the preceding year, while the actual disbursement amounted to Rs. 2,086 crores, against Rs. 1,654 crores. The amount sanctioned and the disbursement were the highest since the inception of the Corporation, raising the total amount sanctioned to Rs. 13,57 crores and the total disbursement to Rs. 8,37 crores. For the second year in succession, the Corporation did not receive any subvention from the State Government to pay the guaranteed dividend of 3½ per cent. The year's operations resulted in a profit of Rs. 9.43 lakhs, which showed an increase of Rs. 1.32 lakhs over the previous year's figure of Rs. 8.12 lakhs. The increase in profit is not commensurate with the increase in its advances as it had to pay a higher rate of interest on the funds it borrowed to supplement its resources. Its effective lending rate was 7 per cent, whereas it paid as much as 5½ per cent on its borrowings from the Refinance Corporation which amounted to Rs. 93.68 lakhs. This left only a meagre margin of 1½ per cent to meet its operational cost.

Out of the 213 concerns which received assistance from the Corporation during 1963-64, 163 small-scale units were sanctioned Rs. 96.56 lakhs, 39 medium scale concerns Rs. 1.19 crores and 11 large-scale units were sanctioned Rs. 1.05 crores. A study of the aid sanctioned on the basis of forms of management shows that 11 public limited companies were sanctioned loans amounting to Rs. 1.07 crores, 53 private limited companies Rs. 1.19 crores, 89 partnership concerns Rs. 70.5 lakhs and 60 proprietary concerns Rs. 23.75 lakhs. An industry-wise classification of the loans sanctioned shows that the machinery manufacturing industry, except electrical machinery, was the largest beneficiary, having been granted Rs. 71.38 lakhs, compared with Rs. 16.47 lakhs in the preceding year. Loans sanctioned to the metal products industry amounted to Rs. 15.74 lakhs (against Rs. 28.64 lakhs), chemicals and chemical products Rs. 37.78 lakhs (against Rs. 35.13 lakhs), the paper and paper products industry Rs. 31.15 lakhs (against Rs. 4.95 lakhs), the food manufacturing industry excluding the beverage industry, Rs. 24.37 lakhs (against Rs. 8.15 lakhs), the transport equipment industry Rs. 15.60 lakhs (against Rs. 1.23 lakhs), printing, publishing and allied industries Rs. 11.02 lakhs (against Rs. 2.80 lakhs), the textile industry Rs. 9.80 lakhs (against Rs. 13.77 lakhs) and the non-metallic mineral products industry Rs. 16.21 lakhs (against Rs. 32.92 lakhs). About 223 applications for Rs. 4.28 crores were pending before the Corporation at the end of March 1964.

INSURANCE OFFICES

WE drew attention in last issue to an unfounded case brought against the Universal Marine Insurance Company, and we now publish another column an article from the *Post Magazine* and *Insurance Monitor* on the position of Insurance Companies abroad. It will be observed that nearly every Government requires Insurance Companies to make some kind of deposit before they are allowed to commence business and we would commend the article in question to the attention of the Government. Insurance is a very important matter, whether for life, fire, or marine, and it is, we think, the duty of the Government to see that Insurance Companies are ordinarily able to implement their engagements. That they have at least some funds. Attention was drawn some time ago to the number of Provident Funds and Insurance Companies that were springing up like mushrooms all over Bengal, and if there was a legislative enactment such as indeed obtains in the United Kingdom, that no company or firm shall carry on the business of life insurance until they have deposited £20,000, it would be a step in the right direction. Our own idea is that every Insurance Company, whether fire, marine or life, doing business in India, should be required to make a deposit of at least £10,000 for each branch of the business. This deposit could be in Government paper and would yield the Insurance Company as good return as many of its other investments. But we think it is a scandalous state of affairs that an Insurance Company can open an office in India and receive premiums and then quietly close up its business when losses come to hand.

A Ditcher's Diary

MR. LAL BAHADUR SHASTRI HAS ACQUIRED SUCH A reputation for humility that, in some minds, it may take a little longer for him to appear as the country's chief executive who will be called upon to take decisions which will please some and hurt others. "Hurt" is the word. It is an essential condition of assuming and exercising power: you've got to be ready to strike and injure forces and men that are in your view enemies of the people and the country. I respect men that are kind and sensitive, incapable of taking unpleasant decisions. Such men, however, have no business to accept office; for them the home or the *ashram*. And then there are times when it is kind to be cruel—even as there are occasions on which it is cruel to be kind. I agree with Paul Valéry that, to be successful, one needs to be a little blind, a little deaf and a little heartless. I am preaching no Stalinism. But over the years I have observed with increasing distress the sight of powers unused and evils unchecked. The man who once spoke of hanging black-marketeers from the nearest lamp post had this remark hurled back at him time and again; Mr. Nehru was, quite frankly, incapable of doing anything vulgar; and hanging is a messy business. But a large section of the Indian people have begun to treat the authority of the State with unconcealed contempt; they have of late added not only to their wealth but also grown more powerful. It is quite unnecessary to identify these people; Mr. Shastri knows them as well as I do. The people of this country need to be convinced again that evil-doers will not go unpunished—as they have gone for too long. To put it bluntly, Mr. Shastri will need not only to be loved and respected but also, by some, feared. And those who know Mr. Shastri tell me that, in the politest of phrases, he can actually ask people to go to hell and see that they do in fact proceed thither. It will not be enough for the new Prime Minister to live simply; he will have to enforce the same standards on his colleagues and officials and then find out how, in these days of high taxation, it is still possible for a few to live extravagantly.

WHEN THE CONGRESS PARLIAMENTARY PARTY was still to choose its new leader, a friend with a lively imagination told me quite seriously: "The Prime Minister should be selected by the Public Service Commission". That, perhaps, is taking meritocracy too far; the Prime Minister must command political support. But once the leader is assured of the Party's confidence, he should be confident enough to choose his colleagues not so

much on the basis of their regional popularity as on that of merit. Administration is fast becoming a technical job in many ways; and while a purely political Minister may bring to his job a fresh mind or an open mind there are other requirements. The mind should not, as they say, be open both ways. But Mr. Shastri's first Council of Ministers is obviously tentative; he wanted no drastic changes so soon. That there was a certain amount of horse-trading over Mr. Morarji Desai's inclusion I do not doubt. It grieves me not at all that he remains out. Mrs. Indira Gandhi deserved a portfolio; it is to be hoped that she will forget her alleged association with certain newspapers and treat the Press with manifest fairness and impartiality. Mr. S. K. Patil gets back to the cabinet—never having discovered why he had once gone out. My colleagues in Delhi were obviously taken for a ride by somebody over the imminent exclusion of West Bengal's two Ministers in the cabinet, Mr. A. K. Sen and Mr. Humayun Kabir. At least for the time being, they stay on. If the composition of the Government is unexciting, what will be watched is its performance in the coming weeks and months. The policies of the Government are not nearly as bad as some critics make out; it is in execution that many things have gone wrong. The new Prime Minister should hold every individual colleague of his responsible for the failures of particular Ministries; the Ministers are there not to make speeches and open railway bridges but to supervise the work of bureaucrats under them. This is where the question of departmental competence comes in. As a bureaucrat of old once said, Ministers should not contribute only their illegible signatures to files.

THERE WAS SOMETHING DEEPLY MOVING ABOUT Mr. Nehru's last will and testament. I do not agree that it establishes him as a poet; and Mr. Nehru would have agreed with me. The document still shows a Mr. Nehru who loved nature, the rivers and the mountains. A friend suggests that Mr. Nehru was out only to demonstrate that he was a pagan. I am not so sure, although he did dissociate his love for the Ganga from any religious significance. It depends, I suppose, on how you define religion. Carl Jung, I think, found a better term: "the oceanic feeling". And this is literally true of Mr. Nehru. He did write of the ocean that washes our shores. Whenever confronted with situations like this I am reminded of Rudyard Kipling's story of Puran Bhagat; and a point to remember is that Mr. Nehru wrote his

testament ten years ago. Who knows whether this was, except in the legal sense, his last will? In the Kipling story, you may remember, a very successful Indian got all the things he coveted in life and then just disappeared in the Himalayas. This otherworldliness is perhaps a part of the oriental make-up; I think Europe and America are wrong in claiming that they are never seized with comparable feelings. But let his mind alone. Is there something to be said about the quality of Mr. Nehru's English prose, about which I saw something written the other day? I think he could write charmingly when he wanted to and was prepared to make the effort. Office did not altogether wipe out the feeling for words but it was quite impossible to maintain the personal style when so many speeches had to be made and so many things written on official files. Again, I think, an instance of quantity killing quality. If freed from politics, would Mr. Nehru have been a great writer or successful journalist? The question is like those "ifs" and "buts" of history. I have always believed that a man almost always becomes what he wants to be. Mr. Nehru wrote well, very well, because he was in politics which was the breath of his life. As a reluctant barrister-at-law he might never have written anything. And a loss that would have been to us all.

WHAT DO THEY KNOW OF INDIA WHO ONLY England know? My misquotation comes after reading last week's *New Statesman* and *Spectator* on Nehru. The former has a piece by V. Anant from New Delhi, in which we have some real gems. He is the more offensive because he makes fun of the kind of English some Indians write and speak—a genre of humour I have always abhorred. Now I quote Mr. Anant: "...the mourners...are all women, Indira Gandhi, Vijayalakshmi Pandit and her daughter, Krishna Hutheesingh". (Why do I have to tell an Indian who Krishna is or that the name is spelt Hutheesingh? Mr. Anant again: "Kamaraj, looking forbidding, like Kali himself, comes in and goes". (Who may this Mr. Kali be? I wonder.) Then we read of Nehru's grandson, Sanjay, who has elsewhere been called also Sanjeev recently. But who is his mother? Mr. Anant, or his proof-reader, has made it "mother India". The leading article in the *Spectator* speaks of "growing pressure for the further use of the Hindu language". (Italics mine.) The error is silly; but, I suggest, there is more to it. I am surprised that there has been so little comment on the manner in which some have mourned the death of Mr. Nehru. In spite of some use of the scriptures of other religions, the major ceremonies were unmistakably Hindu in tone and character. This Mr. Nehru would not have approved; he expressly said in his will that he wanted no religious ceremony. I respect the sentiments of the people who mourned in their believing and pious ways; they were undoubt-

'BEHAR' the dependable name in FIRECLAY & SILICA Refractories.

For nearly half a century BEHAR REFRACTORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other Industries in the country.

Our manufacturing range includes

SILICA BRICKS • FIRE BRICKS •
HIGH ALUMINA BRICKS •
INSULATING BRICKS • FIRECLAY
• FIRE CEMENT • STOPPERS •
SLEEVES • NOZZLES • TUYERS,
ETC.

edly sincere and spontaneous. Yet, the secular idea, by which Mr. Nehru set greater store than almost anything else, will need to be watched in the months and years to come. The *Spectator's* "Hindu language" struck me as unwittingly significant because the question of Hindi is in many ways at variance with the secular idea—or so it may seem to many non-Hindi-speaking Indians. Mr. Lal Bahadur Shastri is not a fanatic—not even, I hope, over Hindi.

A CORRESPONDENT WRITES FROM LONDON THAT HE has been amazed at the ignorance of India and her affairs revealed in Britain by the Press and public reaction to the death of Mr. Nehru. Apart from the inevitable professional appropriation of the subject by almost every journalist who has ever had even the remotest connection with India, all sorts of people have been embellishing the expression of their sincere regrets with their views on India, past, present and future. Almost without exception they have indicated a degree of anxiety concerning India's ability to carry on without Mr. Nehru, which seems to underestimate a people who have shown in the years since Independence a remarkable inbred talent for working a representative system of government. My correspondent admits that the death of great men is no time for frank objectivity. But he does regret the extent to which this huge and important country, so widely understood and respected among Britons, should have come to be identified in the British mind so exclusively with the personality of Mr. Nehru. Among all the nations with whom India has close relations, she tends to attach most weight to the opinion and attitude of Britain. And when this is so exclusively concerned with Mr. Nehru and the loss he undoubtedly represents, India's task may become more difficult. After pointing to the contrast with the comparative lack of British concern for the United States' future when Mr. Kennedy died, my correspondent goes on to say that the reason may lie in the weakness the British always have for "one of us". Having had a typical English upper-class education, it seems Mr. Nehru was for the rest of his life confirmed in British eyes as merely an Englishman in the garb of an Indian.

LORD BEAVERBROOK, WHO DIED THIS WEEK AT 70, was not a man universally loved. Indeed, so strong were his likes and dislikes, especially the latter, that he almost hated to be loved. The fact remains that he has left on Fleet Street a very personal and perhaps permanent impress. For him, as he proclaimed in his later years, journalism was propaganda, as Shaw had earlier said art was. In fact, journalism for him was business. And what a success he made of it! On this subject I always remember Somerset Maugham. Once he got together with friends to produce the script for a film "hit". They saw all the successful films and worked out the formulae of their attractive features. The mixture, then, was easy. Put them all together in a single film; and there you have "it". You haven't, as Maugham and Company soon found out. Not a producer would look at their synthetic child. The moral of the story is that you can produce salable muck only if you believe in it, believe that it isn't muck. Lord Beaverbrook was successful with the *Daily Express* because he sincerely believed this was the best kind of journalism. The rest of his genius consisted in making highly talented folk believe that this was indeed the best kind of journalism. With irritating smugness Christiansen has recorded how he came to be his master's voice and enjoyed it. I did not mind Lord Beaverbrook hating the Common Market and loving the Empire that isn't; if he declared in September 1939, that there was going to be no war, well, he made millions momentarily happy. What I do have against Lord Beaverbrook is that he brought into British journalism an inordinate amount of personal bile. His right to criticise the policies of Nehru, Mountbatten and Malcolm MacDonald is not in question; but he attacked these and other people with a singular lack of taste. All this will be forgotten; what will be remembered is the drive and total commitment he gave Fleet Street.

THE DITCHER

Guide for Investors

JARDINE HENDERSON TEA GROUP DISAPPOINTS

THE results of the Jardine Henderson group of tea companies for the year ended December 1963 have been recently published. The profit of the Baradighi Tea Co. Ltd (a Dooars garden) has dropped from Rs. 6.60 lakhs for 1962 to Rs. 4.48 lakhs for 1963, after transferring Rs. 1.72 lakhs (against Rs. 1.63 lakhs) to depreciation. The taxable ordinary dividend has been reduced from 25 percent to 15 percent, which works out to a yield of 6.5 percent at the present price of Rs. 23.25 a share of Rs. 10 each. Taxation is allocated Rs. 1.84 lakhs (against Rs. 2.76 lakhs), development rebate reserve Rs. 8.285 (against Rs. 15.521) and general reserve Rs. 75,625 (against Rs. 4.63 lakhs). The crop fell from 666,481 kilograms to 659,968 kilograms and the average sale price dropped from Rs. 5.13 to Rs. 4.93 a kilogram. Growing conditions during the current year have been favourable and so far the crop is ahead of that of 1963. The crop for 1964 has been estimated at 663,600 kilograms at a cost of Rs. 4.08 a kilogram.

The Dessai and Parbutia Tea Co. Ltd (a Dooars garden) has earned a profit of Rs. 3.37 lakhs, against Rs. 7.21 lakhs, after providing Rs. 85,678 (against Rs. 78,143) for depreciation. The taxable ordinary dividend has been cut from 15 percent to 12½ percent. The yield amounts to 6.9 percent at the present price of Rs. 181 a share of Rs. 100 each. Taxation absorbs Rs. 1.73 lakhs (against Rs. 4.55 lakhs), development rebate reserve Rs. 6,625 (against Rs. 2,213) and general reserve Rs. 52,057 (against Rs. 2.83 lakhs). The smaller crop, combined with a decline in the average sale price, has contributed to the unsatisfactory results. Since the production of green leaf from Green View estate was not available to the Company it meant a loss of 64,800 kilograms of green leaf. The crop fell from 597,724 kilograms to 474,509 kilograms, and the sale price declined from Rs. 6.12 to Rs. 6.22 a kilogram. The crop for 1964 has been estimated at 538,773 kilograms at a cost of Rs. 5.93 a kilogram. The estimated crop, it is expected, will be achieved since conditions so far have been very favourable. Further additions and improvements in the factory have been made.

The crop of Rydak Tea Syndicate Ltd (a Dooars garden) amounted to 1 million kilograms, against 918,337 kilograms, but the average sale price showed a fall. The 1964 crop has been estimated at 1.1 million kilograms at a cost of Rs. 3.94 a kilogram. At Rydak 13.69 hectares of new extensions were carried out, while at Kartick 5.59 hectares of uprooted areas were replanted and 2.90 hectares of new tea extensions were planted. Steps have been taken to provide additional irrigation equipment. The profit has fallen from Rs. 8.77 lakhs to Rs. 8.10 lakhs, after providing Rs. 2.63 lakhs (against Rs. 2.69 lakhs) for depreciation. The taxable ordinary dividend of 25 percent has been repeated. The yield works out to 10.1 percent at the present price of Rs. 24.69 a share of Rs. 10 each. Taxation is allocated Rs. 3.52 lakhs (against Rs. 4.26 lakhs), development rebate reserve Rs. 5,406 (against Rs. 8,661) and general reserve Rs. 1.32 lakhs (against Rs. 6.04 lakhs).

The Central Cachar Tea Co. Ltd has made a profit of Rs. 2.80 lakhs, against Rs. 1.74 lakhs, after transferring Rs. 51,980 (against Rs. 84,685) to depreciation. The taxable ordinary dividend has been increased from 5

percent to 7½ percent. The yield amounts to 10.3 percent at the present price of Rs. 73 a share of Rs. 100 each. General reserve is allocated Rs. 24,518 (against Rs. 1.56 lakhs), development rebate reserve Rs. 7,604 (against Rs. 4,563) and taxation Rs. 1.65 lakhs (against Rs. 1.35 lakhs). The crop rose from 315,866 kilograms to 330,923 kilograms, but the average sale price dropped from Rs. 4.92 to Rs. 4.85 a kilogram. The crop for 1964 has been estimated at 377,000 kilograms at a cost of Rs. 3.67 a kilogram. Some 16.59 hectares of new tea extensions were planted. New irrigation equipment has been provided. The Company has adopted the C.T.C. system of manufacture and the output has been satisfactory.

Indian Standard Wagon Repeats

IN the report for the year ended March 1964 the directors of the Indian Standard Wagon Co. Ltd pointed out that the large output of springs, forgings and wagons were maintained with difficulty since raw material supplies were insufficient. The uncertainty concerning the supply of raw materials prevents an accurate forecast of results for the current year. Stocks have nevertheless been larger, so there is more chance of obtaining matching steel to permit a steady flow of work. The order-book remains at its normal satisfactory level.

Turnover rose from Rs. 8.05 crores for 1962-63 to Rs. 8.75 crores for 1963-64, but the margin of profit has been squeezed. The profit has amounted to Rs. 53.93 lakhs, against Rs. 46.88 lakhs for 1962-63, after providing Rs. 6.77 lakhs (against Rs. 6.39 lakhs) for depreciation, Rs. 1.25 lakhs for taxation, Rs. 17.30 lakhs for contingencies, Rs. 1.55 lakhs (against Rs. 82,038) for statutory development rebate reserve. The taxable ordinary dividend of 15 percent and a cash bonus of 5 percent have been repeated. The yield amounts to 6 percent at the present price of Rs. 33.50 a share of Rs. 10 each. General development reserve is allocated Rs. 19.04 lakhs (against Rs. 15.54 lakhs), general reserve Rs. 12.75 lakhs (against Rs. 9.50 lakhs) and dividend adjustment reserve Rs. 5 lakhs (the same). It may be mentioned that out of the tax provision, a sum of Rs. 30.25 lakhs has been provided for surtax on profits.

British Paints Steps up Dividend

BRITISH Paints (India) Ltd has produced excellent results for the year ended December 1963. In their report, the directors take an optimistic view of the outlook. When the various expansion schemes are completed by the end of 1965, production and despatches, they think, will improve due to the better flow of men and materials. Sales rose from Rs. 2.36 crores for 1962 to Rs. 2.69 crores for 1963. The increased sales have been due to the concentration of the Company on producing higher-priced lighter products instead of low-priced heavy products. Fixed overhead charges have been reduced. The shortage of mild steel and tin sheet has restricted business, and the posi-

tion shows little improvement during the current year. There have also been shortages of some essential raw materials. The directors have, however, taken steps to expand manufacturing and selling facilities.

The profit has risen from Rs. 24.65 lakhs to Rs. 38.24 lakh, after transferring Rs. 2.78 lakhs (against Rs. 2.75 lakhs) to depreciation. The taxable ordinary dividend has been increased from 10 percent to 15 percent, including an interim of 7½ percent. The yield works out to 7.3 percent at the present price of Rs. 20.50 a share of Rs. 10 each. Taxation absorbs Rs. 20.40 lakhs (against Rs. 14.38 lakhs) and surtax on profit Rs. 4.30 lakhs (against Rs. 4.70 lakhs) provided for super profits tax for 1962), development rebate reserve Rs. 18,000 (against Rs. 20,000) and general reserve Rs. 8.35 lakhs. The carry-forward is Rs. 2,226, against Rs. 27,856 brought in. A sum of Rs. 2.10 lakhs has been written back from excess provision for super profits tax, since it is considered that Rs. 2.60 lakhs should be adequate to cover the liability on account of this tax for 1962.

Texmaco Pays More

TEXTILE Machinery Corporation Ltd has produced satisfactory results for the year ended December 1963. Production has improved in spite of difficulties concerning raw materials, components and labour. The output of textile machinery has risen appreciably. The products of the Company have been successfully sold in Russia. Technical collaboration with Messrs Zinser Textilmaschinen of West Germany has been entered into to improve the products. The machine tool division has done well and output has increased. The project for producing combination turret lathes is proceeding satisfactorily. The steel foundry has worked satisfactorily. The extension of the capacity from 3,000 to 9,000 tons is being considered by the directors. Suitable technical collaboration is being negotiated.

The rolling stock division has made good progress. It is proposed to expand production and develop many components which are in short supply. The output of water-tube boilers and sugar-mill machinery has been well-maintained, but the full capacity could not be used due to the shortage of orders. The Company has supplied equipment to the Damodar Valley Corporation and the Chandrapura thermal power plant.

Complete sugar plant with a cane crushing capacity of 1,200 tons a day has been manufactured. The Bihar Government has placed large orders for gates and gearings for the Sone barrage project. The cast iron spun pipe project could not make progress due to the non-availability of foreign exchange. The Company has taken vigorous measures to promote the export of its products.

The profit has risen from Rs. 1.18 crores for 1962 to Rs. 2.04 crores for 1963, after providing Rs. 26.29 lakhs (against Rs. 25.37 lakhs) to depreciation and Rs. 8.70 lakhs (against Rs. 6.50 lakhs) to contingencies. The taxable ordinary dividend has been increased from 12.5 percent to 15 percent which works out to a yield of 5.4 percent at the present price of Rs. 27.55 a share of Rs. 10 each. Taxation absorbs Rs. 1.24 crores (against Rs. 70.90 lakhs), development rebate reserve Rs. 4.87 lakhs (against Rs. 3.18 lakhs) and general reserve Rs. 42 lakhs (against Rs. 13.75 lakhs), leaving a carry-forward of Rs. 54,305, against Rs. 64,360 brought in.

Kettlewell Bullen Textile Group Fares Well

THE Kettlewell Bullen group of cotton mills have done well for 1963. The directors say that the supply of raw cotton has been short of requirements. So active steps should be taken to increase it. In accordance with the decision of the Central Government, steps have been taken to buy additional equipment for increasing spindles and looms. The textile mills in West Bengal await the report of the tripartite committee for the assessment of work-load and rationalisation to be carried out in the cotton mill industry.

The profit of Dunbar Mills Ltd has amounted to Rs. 25.16 lakhs, against Rs. 30.54 lakhs for 1962, after increasing depreciation provision from Rs. 8.40 lakhs to Rs. 13.51 lakhs and transferring Rs. 2.52 lakhs (against Rs. 2.29 lakhs) to development rebate reserve. The taxable ordinary dividend has been increased from 15 percent to 17½ percent which works out to a yield of 6.4 percent at the present price of Rs. 27.25 a share of Rs. 10 each. Taxation absorbs Rs. 15.15 lakhs (against Rs. 20 lakhs), general reserve Rs. 2 lakhs (against Rs. 3.92 lakhs) and the debenture sinking fund Rs. 2.50 lakhs (the same). The carry-forward is Rs. 36,763, against Rs. 1.04 lakhs brought in. The Company has installed new machinery worth Rs. 17.90 lakhs for the replacement, modernisation and diversification programmes. It has also received licences for installing 12,040 spindles and 65 automatic looms. The directors are considering installing these equipment.

The profit of Bowreah Cotton Mills Co. Ltd has dropped from Rs. 17.77 lakhs to Rs. 14.73 lakhs, after increasing depreciation from Rs. 14.55 lakhs to Rs. 18.73 lakhs and providing Rs. 3.30 lakhs (against Rs. 3.97 lakhs) for development rebate reserve. The

KARNIK MAGNETIC CHUCKS

AND

EQUIPMENT

Armstrong Smith Ltd.

P. 17, MIDNIGHT HOUSE, CALCUTTA-1

taxable ordinary dividend of 15 percent has been repeated to give a yield of 6.3 percent at the present price of Rs. 23.75 a share of Rs. 10 each. The debenture sinking fund absorbs Rs. 2 lakhs (against nil) and taxation Rs. 8.75 lakhs (against Rs. 7 lakhs). The carry-forward is Rs. 7,833, against Rs. 1.94 lakhs brought in. The Company has installed new machinery worth Rs. 21.52 lakhs for the replacement, modernisation and diversification programmes. Orders for further machinery to the extent of Rs. 21 lakhs are outstanding. The Company has decided to install further spindles and looms. It has been allowed by the Central Government to produce a further 2 million yards of printed cloth a year. The construction of the printing shed has been completed, and the arrangements for the installation of modern cloth-printing machinery are being made. The printed materials will be produced during the current year.

Jay Shree Textiles to Raise Capital

JAY Shree Textiles and Industries Ltd proposes to increase the authorised capital to Rs. 5 crores divided into 20 million ordinary shares of Rs. 10 each and Rs. 300,000 preference shares of Rs. 100 each. It also proposes to raise funds for Rs. 71 lakhs by issuing new equity and preference shares and debentures for financing the expansion schemes. It has been decided to issue 245,000 ordinary shares of Rs. 10 each to the existing shareholders in proportion of one new share for every three held at par. The new shares will rank pari passu with the existing shares except that they shall not participate in the dividend which may be declared for 1964. The Company will also issue 7 percent 24,590 redeemable cumulative preference shares of Rs. 100 each at par to the existing shareholders in the ratio of one preference share for every 33 ordinary shares held. In addition, it will issue 7 percent debentures for Rs. 22 lakhs divided into 22,000 stocks of Rs. 1,000 each. These debentures are redeemable in January 1973 or at any time after 1st January, 1970, after six months' notice for redemption.

Svadeshi Mills Makes Good Progress

SVADESHI Mills did well in 1963. The turnover increased from Rs. 5.24 crores to Rs. 5.64 crores, the gross profit rose from Rs. 62.69 lakhs to Rs. 82.05 lakhs, and the dividend was stepped up from Rs. 17 to Rs. 19 a share. The directors state in their report that the Company's improved performance was due mainly to the production of better varieties of cloth which found ready consumer acceptance and to the economies as a result of the continuous process of renovation and rehabilitation of the mills. New plant and machinery of the value of Rs. 32 lakhs were installed during 1963. The important items were equipment for modernisation of existing blow room lines, drawing frames, automatic looms, a hank mercerising machine, materials for conversion of friction calendar to schriener ring frames, a test printing machine, etcetera. The new equipment will enable the mills to improve further the quality of cloth and achieve a better balance between spinning and weaving.

Towards the end of the year, the value of works under construction and machinery received at the mills awaiting installation was Rs. 27 lakhs. Orders have also been placed for new machinery of the value of about Rs. 29 lakhs. During the year, 9,680 more spindles were added to the 2,992 installed in 1962. Orders

for eight more ring frames, totalling 3,520 spindles remain to be executed. The installation of these spindles will enable the mills nearly achieve the required balance between spinning and weaving. The directors expect to work by the end of next year 288 additional automatic looms sanctioned in replacement of 265 plain looms. On the installation of all these looms, the Company's automatic weaving capacity will be about 42 percent of the total weaving capacity.

The Company is actively considering long-term plans for the further renovation and balancing of the mill plant in stages. They are already seized of the problems of large financial outlay which would be required for the purpose. The Company has finalised plans for the future expansion and modernisation of the processing departments with a view to fully processing the loom production. This will help the Company to meet market requirements and increase its profitability. The scheme for the issue of concessional cloth coupons to the shareholders for the purchase of cloth manufactured by the Tata group of mills up to Rs. 100 a shareholder is being continued and the new coupons carry a discount of 10 percent instead of 8 percent as hitherto.

Travancore Rayon Cuts Dividend

DESPITE a substantial increase in the sales for the year ended December 1963, Travancore Rayons Ltd records a lower profit for the year, compared with that of the previous year. Due to the heavy provision for development rebate and increased depreciation, the amount available for equity dividend has come down. The ordinary dividend is reduced to 12½ percent from the previous year's level of 15 percent. The directors' report says that the results would have been better than the previous year, had the labour co-operated with the Company. Protracted labour trouble and consequent loss of production have reduced the profit. For the payment of dividend, the directors have to transfer a sum of Rs. 300,000 from the dividend equalisation reserve.

Sales for the year amounted to Rs. 3,43,15,420 (against Rs. 3,13,03,515). The net profit amounts to Rs. 25,85,569.13, after providing Rs. 32,20,417.75 for depreciation and Rs. 1,25,182 for managing agents' remuneration. The net profit for the previous year was Rs. 31,62,866, after providing Rs. 26,75,202 for depreciation and Rs. 1,34,342 for managing agents' remuneration. Including the amount of Rs. 18,586.70 brought forward from the previous year, and a sum of Rs. 300,000 transferred from dividend equalisation reserve, the total available for appropriation comes to Rs. 29,04,155.83. Out of this, the provision for income tax comes to Rs. 4,60,000 (against Rs. 1,73,000). A sum of Rs. 8,50,000 is transferred to reserve for development rebate (against Rs. 1,15,000). The dividend on 5 percent preference shares amounts to Rs. 3,25,000. The equity dividend at 12½ percent amounts to Rs. 12,50,000. The balance of Rs. 19,155.83 is carried forward.

The September 1962 strike contributed to a considerable fall in the production of rayon yarn. The directors add that the production of yarn fell to about one half of the installed capacity. But production of cellulose film (Trayophane) was higher than last year. Production of rayon grade pulp from cotton linters was achieved on a commercial scale during the year. The full capacity has not been reached due to some balancing equipment which is still to come. But it is reported that this equipment has since been received and is now being

installed. The full rating capacity is, therefore, expected to be achieved shortly.

The directors have drawn particular attention to the steep increase in the excise duty on rayon. The report says that the impact of excise duty is felt in a growing measure year by year. While the Company paid in 1961 and 1962 excise duty to the extent of Rs. 58.58 lakhs and Rs. 68.04 lakhs, respectively (on rayon and cellulose film), for 1963, the figure was much higher at Rs. 84.81 lakhs. The increase in the levy of rayon yarn during the year was as high as 33½ percent, the total incidence amounting to nearly 30 percent of the selling price. The Finance Act for 1964 has brought in a further rise of 50 percent over the prevailing rate, thereby imposing a crippling burden on the industry.

Referring to the expansion scheme, the report says that the electrical carbon disulphide plant is ready for commission and production will start as soon as the position concerning power eases. Machinery for the six additional tube spinning machines has arrived, and erection is in progress. It is expected that the new machines will be commissioned in the next two months. Although the results of the year were much affected by the strike and unsettled conditions and the loss of production, conditions came back to normal by the beginning of 1964. Production has somewhat been stabilised now and in a way exceeded the previous performance. Prospects for the current year are said to be better.

National Tobacco Does Well

THE directors of National Tobacco Company of India Ltd mentioned in their report for the year ended December 1963, that the outlook for the current year is encouraging, although the trend of rising production costs is a disturbing factor. The 1964-65 Budget has given an overall relief to most cigarette manufacturers, but National Tobacco will get little benefit since tax on low-priced cigarettes has been increased while that on high-priced ones has been reduced. The Company has concentrated its production on low-priced cigarettes. The directors think that the cigarette industry will expand rapidly, provided there is no drastic change in the tax structure. Exports of unmanufactured tobacco reached a new record for 1963. In view of the entry of new buyers into India from foreign countries, the outlook for Indian manufactured tobacco looks fairly promising.

In spite of a nominal fall in all-India production of cigarettes, sales of the Company rose from Rs. 8.44 crores for 1962 to Rs. 11.81 crores for 1963, because the Company has concentrated attention on producing low-priced cigarettes. The demand for these grades has tended to increase. The profit has improved from Rs. 8.12 lakhs for 1962 to Rs. 8.84 lakhs for 1963, after transferring Rs. 8.78 lakhs (against Rs. 7.87 lakhs) to depreciation, Rs. 98,263 (against Rs. 41,333) to development rebate reserve and Rs. 17.39 lakhs (against Rs. 8.99 lakhs) to taxation. The taxable ordinary dividend has been increased from 7 percent to 8 percent which works out to a yield of 7.2 percent at the present price of Rs. 11.12 a share of Rs. 10 each. The carry-forward is Rs. 3.26 lakhs, against Rs. 3.61 lakhs brought in.

Good Results from Jaipur Metals

JAIPUR Metals and Electricals Ltd reports encouraging results for

1963. The turnover has increased by 11.4 percent from Rs. 2,302 crores to Rs. 2,564 crores, and the gross profit has gone up by about 27 percent from Rs. 23.79 lakhs to Rs. 30.24 lakhs. The dividend, however, has been maintained at 6 percent. This is being done with a view to conserving resources for the various development and expansion schemes which the Company has in view. Appropriation include depreciation Rs. 10.89 lakh (against Rs. 7.38 lakhs), development rebate Rs. 4.92 lakhs (against Rs. 3.5 lakhs), taxation Rs. 5.65 lakh (against Rs. 6.85 lakhs) and general reserve Rs. 3.61 lakhs (against Rs. 1.2 lakhs). After providing for dividend absorbing Rs. 3.48 lakhs (against Rs. 3.40 lakhs), there remains a balance of Rs. 3,016 to be carried forward against Rs. 6,068 brought in.

The directors state that the working of the factory both in the meter and metal divisions was quite satisfactory during 1963. The Company commenced during the year the production of A.C.S.R. and all-aluminium conductors and secured orders for Rs. 65 lakhs. In view of the Government policy to switch over to aluminium from copper, the prospect for this line of manufacture are considered to be bright. The Company has started the manufacture of components for the cyclometer unit and is at present manufacturing 75 percent of the parts required for cyclometer. It is expected that the Company will be able to manufacture the balance 25 percent parts during the course of the current year. A the machinery for the manufacture of magnets have arrived and have also been installed. The production is likely to start soon. Import licence for machinery for the manufacture of enamelled copper wire and cotton silk and paper covered wires and strips have been received and order for the same are being formulated. The industrial licence for A.C.S.R. and all aluminium conductors has been increased for a capacity of 3,000 tons a year, and the Company has applied for an import licence to import additional machinery from the U.S.A.

Industrial Investment Trust Earns Less

INDUSTRIAL Investment Trust Ltd reports a small setback in its working results for the year 1963. Income from dividends on shares and interest on debentures and securities is low at Rs. 9.53 lakhs, against Rs. 10 lakhs. The profit is down from Rs. 9.62 lakhs to Rs. 8.67 lakhs. The provision for depreciation has been reduced from Rs. 3.34 lakhs to Rs. 2 lakhs. The Company has made a profit of Rs. 1.78 lakhs, against a loss of Rs. 1.85 lakhs in the previous year on the sale or redemption of investments. While the previous year's loss was written off to the profit and loss account, the profit in 1963 has been transferred to the capital reserve. The dividend has been maintained at 1 percent which absorbs Rs. 6.50 lakh.

After transferring Rs. 33.0 (against Rs. 1.10 lakhs) from the investment reserve and Rs. 40.0 (against nil) from the dividend equalisation reserve, and providing for payment of dividend, there remains surplus of Rs. 1,890 to be carried forward, against Rs. 3,254 brought. The Company's investments at the end of 1963 stood at Rs. 1,225 crore compared with Rs. 1.24 crores at the end of 1962. Of these, quoted investments accounted for Rs. 97.56 lakh (against Rs. 1,028 crores). The Company undertook during the year 1 work of acting as registrars a transfer agents to three companies and rendered "issue house" service to five companies in connection with their respective public issues. Sir the end of 1963 up to 15th May, 19 the Company has received Rs. 36,

by way of redemption of debentures and has made the sale of shares which fetched Rs. 1.21 lakhs. Investment in shares during this period amounted to Rs. 82,183.

Lakshmiratan Engineering Does Better

LAKSHMIRATAN Engineering Works has done better during the year ended September 1963, in that both sales and gross profit are higher than in the previous year. But the increase in profit is too small in relation to the rise in sales. The turnover has gone up by nearly 74 percent from Rs. 93.15 lakhs to Rs. 1,619 crores, whereas the gross profit at Rs. 11.72 lakhs shows an increase of hardly 9 percent over the previous year's figure of Rs. 10.77 lakhs. After providing Rs. 9.31 lakhs (against Rs. 9.56 lakhs) for depreciation and Rs. 1.33 lakhs (against Rs. 50,000) for development rebate, there remains a surplus of Rs. 1.08 lakhs (against Rs. 71,276) to be carried forward. In view of the losses in the previous years and arrears of depreciation, no provision has been made for taxation in 1962-63. Dividends have been skipped and arrears of preference dividend add up to Rs. 4.32 lakhs.

The directors state that in spite of difficulties in securing adequate quantities of pig iron and other essential raw materials, there was an appreciable improvement in the Company's production which explains the marked increase in the year's turnover. There was a steady increase in the production of ring frames and automatic looms. The production of high drafting conversion materials for ring frames has shown an appreciable increase and the capacity is being expanded in order to meet the growing demand. The Company has taken in hand the manufacture of Simplex frames. The sale of 6 horsepower lister engines is reported to have gone up to an average of 350 engines a month. The Company has also started the manufacture of 12 horsepower engines. The Rs. 10-paid share of Lakshmiratan Engineering is available around Rs. 6.

Bright Prospects for Devidayal Cable

DEVIDAYAL Cable Industries did well in 1963; sales rose by about 10 percent from Rs. 1.15 crores to Rs. 1.26 crores, the gross profit went up by nearly 22 percent from Rs. 11.36 lakhs to Rs. 13.94 lakhs and the dividend was stepped up from 7 percent to 15 percent. And from what the chairman, Mr. H. T. Aggarwal, stated at the Company's annual meeting last week, the shareholders can look forward to still better results in the current year. The turnover during the first four months of 1964 is placed around Rs. 56.5 lakhs, compared with Rs. 30.23 lakhs in the same period of last year. The chairman is optimistic about the turnover reaching Rs. 1.70 crores this year. The Company's expansion schemes are said to be proceeding according to schedule. The additional capacity for super enamelled wires has been installed. In the case of D.P.C. wire and strip unit, the building is ready and machinery has been shipped in May.

The additional capacity will be installed by the end of the year. These additional capacities will help increase the Company's turnover. The delivery of the machinery for the steel and alloy steel wire mill unit is expected by the end of September 1964, and the unit is likely to go into production early next year. In accordance with the Government's policy, the Company, along with other cable manufacturers, has switched

Reinsurance Corporation Shows Good Results

THE Indian Reinsurance Corporation reports encouraging results for 1963. The gross premium income of all the departments was higher at Rs. 6.99 crores, against Rs. 5.87 crores in 1962. After fulfilling the statutory obligations and after taking into account the premium otherwise retroceded, the total net premium income of the Corporation in 1963 amounted to Rs. 3.89 crores, against Rs. 3.28 crores in the previous year. In the fire department, gross premium income amounted to Rs. 3.50 crores. The net premium was Rs. 1.47 crores, against Rs. 1.36 crores. Net claims paid and outstanding were Rs. 68.69 lakhs, against Rs. 62.20 lakhs. Reserves increased by Rs. 5.65 lakhs to Rs. 73.69 lakhs. In the marine department, gross premium income amounted to Rs. 1.63 crores. The net premium was Rs. 85.14 lakhs, against Rs. 74.12 lakhs. Net claims paid and outstanding amounted to Rs. 61.05 lakhs, against Rs. 55.01 lakhs, and reserves increased by Rs. 11.02 lakhs to Rs. 85.14 lakhs.

The gross premium income in the miscellaneous department was Rs. 1.84 crores. The net premium was Rs. 1.57

for 1963 is on a much larger capital following bonus and rights issue and the total distribution among the shareholders is, in fact, higher at Rs. 6.50 lakhs, against Rs. 5.58 lakhs in the preceding year. The profit margin is said to have been squeezed by the dull trading conditions in cloth, all-round increase in manufacturing costs and cut in the prices of super fine yarn.

The directors have provided Rs. 7.20 lakhs (against Rs. 9.29 lakhs) for depreciation, Rs. 45,000 (against Rs. 1.81 lakhs) for depreciation and Rs. 13.12 lakhs for bonus for the previous year. No provision has been made for gratuity for which a sum of Rs. 1.85 lakhs had been set aside in 1961-62. No provision has also been made for taxation and development rebate reserve which had received Rs. 9.24 lakhs and Rs. 1.60 lakhs, respectively. After writing back Rs. 7.95 lakhs, being excess provisions made earlier, the directors have transferred Rs. 45,000 to gratuity reserve and Rs. 6.55 lakhs to dividend reserve. The proposed dividend is to be paid from the dividend reserve. Additions to machinery made during 1962-63 amounted to Rs. 13.13 lakhs and further orders have been placed for machinery for the current year. The Company erected last year comprehensive shrinking range costing about Rs. 5.05 lakhs. It also erected 12,096 new spindles last year at mill

Modern Mills Cuts Dividend

IN spite of an increase of about 8 percent in the sales from Rs. 2,486 crores to Rs. 2,668 crores, the gross profit of Modern Mills Ltd for the year ended 31st October, 1963, is down by nearly 30 percent from Rs. 31.03 lakhs to Rs. 20.54 lakhs. The dividend has been reduced from 12 percent to 6 percent, but this does not represent any real hardship to the shareholders because the dividend

BUY NATIONAL DEFENCE CERTIFICATES

crores, against Rs. 1.18 crores. Net claims paid and outstanding amounted to Rs. 83.32 lakhs, against Rs. 50.57 lakhs. Reserves increased by Rs. 19.33 lakhs to Rs. 73.35 lakhs. The total departmental reserves—fire, marine and miscellaneous—showed an increase of Rs. 36 lakhs at Rs. 2.01 crores. The year's trading results showed a net profit of Rs. 12.21 lakhs, against Rs. 9.07 lakhs in 1962. Including the amount brought forward from the previous year, the total amount available for appropriations is Rs. 12.33 lakhs. The directors have transferred Rs. 3.50 lakhs to the general reserve and the balance has been taken to the dividend reserve. The proposed 8 percent dividend is to be paid out of the dividend reserve, absorbing Rs. 8 lakhs.

In his statement to the shareholders which has been circulated with the directors' annual report, the chairman, Mr. A. D. Shroff, says that although the profitability was slightly lower than in the previous years, the general insurance business recorded a satisfactory increase in the premium income from all the major classes of business. There was, however, a slowing down in the rate of growth of Indian fire premium income, mainly due to rate reductions made in the middle of 1962. The fire loss ratio showed a significant increase because of the two big losses, Rs. 54 lakhs in a rayon mill and Rs. 43 lakhs in a jute mill. Premium income in the marine section showed a satisfactory increase in India. The cargo business was fortunately free from any major casualty as a result of which, there was a small improvement in claims experience. Hull losses were, however, at a relatively high level. Indian hull business showed marginal results in 1963 because of a claim of Rs. 36 lakhs and rate reductions secured by most of the major fleets.

Mr. Shroff points out that an encouraging feature of hull insurance in India at present is the continuing rapid growth of the Indian mercantile fleet. During 1963, the total tonnage increased from Rs. 1.02 million gross registered tons to 1.23 million gross registered tons. In the miscellaneous section, the experience of business in India in 1963 was as good as in the preceding year. The rapid growth of premium income was well maintained in 1963. The classes of business showing good profitability were burglary, cash-in-transit, personal accident, engineering, etcetera. Mr. Shroff says that an important development which needs to be watched is the substantial reduction in aviation rates, following the satisfactory worldwide experience of aviation business, particularly for jet-aircraft, and the consequent breakdown of the London market rating agreement.

Clive Buildings (Calcutta) Earns More

CLIVE Buildings (Calcutta) Ltd has declared a taxable ordinary dividend of Rs. 13 a share of Rs. 150 each for the year ended December 1963, absorbing Rs. 1.30 lakhs. The profit has risen from Rs. 3.67 lakhs for 1962 to Rs. 4.57 lakhs for 1963, after providing Rs. 6,235 (against Rs. 6,966) for depreciation, Rs. 5,051 (against Rs. 8,367) for bad debts, Rs. 1,550 (the same) for contingencies and Rs. 44,942 (against Rs. 43,007) for redemption of the debenture sinking fund. The carry-forward is Rs. 4,995, against Rs. 51 brought in.

Mogul Line Skips Dividend

THE Mogul Line Ltd which had paid a dividend of 6 percent in

1962 has skipped the dividend for 1963. This follows the Company's disappointing performance during the year. Gross revenue by way of passage money, freight and messing, etcetera, has declined by Rs. 40 lakhs from Rs. 1.26 crores to Rs. 1.66 crores. And the gross profit has come down from Rs. 51.96 lakhs to Rs. 46.44 lakhs. After providing Rs. 11.12 lakhs (against Rs. 12.55 lakhs) for depreciation, Rs. 2 lakhs (against Rs. 9 lakhs) for tax at outports and Rs. 3.28 lakhs (against Rs. 3.33 lakhs) for rebate and claims, the net profit amounts to Rs. 30.04 lakhs, against Rs. 27.08 lakhs in the preceding year. Out of this profit, a sum of Rs. 23.20 lakhs (against Rs. 19.85 lakhs) has been allocated to reserve for special survey.

Besides, a sum of Rs. 30.45 lakhs has been transferred to this reserve from the general reserve to meet the heavy expenditure on special surveys on the Company's vessels. An expenditure of Rs. 85.25 lakhs incurred on special survey repairs for the three steamers has been adjusted with the result that there is no profit left. The Company is not liable to pay any Indian income tax for 1963. The Company has decided to enter the coastal trade to carry coal from Calcutta to various other ports. An order for the construction of one collier of 13,200 d.w.t. has already been placed in Yugoslavia. Efforts are being made to acquire three more similar types of colliers. The directors have also decided to enter the tramp trade and the possibility of acquiring four bulk carriers is being explored.

Same from Vijayeswari Textiles

A SUBSTANTIAL increase in sales and profits and the maintenance of 10 percent dividend feature the working results of Vijayeswari Textiles Ltd for the year ended December 1963. The net profit for the year amounts to Rs. 3,61,617, after providing Rs. 3,46,991 for depreciation, compared with the previous year's net profit of Rs. 1,93,985, after providing Rs. 3,18,947 for depreciation. With the balance of Rs. 2,967 brought forward, the total available for appropriation comes to Rs. 3,64,584. Out of this, the directors have transferred a sum of Rs. 1,87,000 to income tax reserve (against Rs. 7,000). Donations amounted to Rs. 1,726 (against Rs. 8,669). A sum of Rs. 5,100 is transferred to development rebate reserve, against Rs. 16,100. Gratuity reserve gets Rs. 10,000 (against nil). The dividend at 10 percent, against 10 percent, amounts to Rs. 1,60,000. The balance of Rs. 758 is carried forward.

Sales of cotton yarn amounted to Rs. 51,48,376, against Rs. 46,70,842. The directors state in their report that as there is no benefit of carry forward losses under the Income tax Act, 1961, after the year 1962, they have appropriated Rs. 1,87,000 towards income tax liabilities. Hence the directors are able to recommend only a dividend of 10 percent, in spite of higher profits for the year. The Company has been given permission to expand the installed capacity to 25,000 spindles, and also to install 100 automatic looms. The directors are taking steps to implement this expansion scheme.

Multimetals to Go on Stream by Year End

MULTIMETALS Ltd has shown a debit balance of Rs. 47,673 for the year ended December 1963, against a debit balance of Rs. 1.01 lakhs for 1962, after providing Rs.

2,397 for depreciation and Rs. 14,100 for taxation. All expenses relating to construction have been capitalised. The directors say that the construction of the plant in Kota is progressing. Orders for machinery have been placed. Initial production is expected to begin by the end of 1964 or early in 1965. In view of the need for more funds to implement the project, the Company has decided to call for the remaining Rs. 5 an ordinary share.

Marine and General Insurance Repeats

MARINE and General Insurance Co. Ltd has earned a profit of Rs. 1.48 lakhs for the year ended December 1963, against Rs. 57,675 for 1962, after providing Rs. 41,889 (against Rs. 32,638) for expenses and management, Rs. 37,165 (against Rs. 23,569) for depreciation on investments. The taxable ordinary dividend of Rs. 3 a share of Rs. 100 each on which a sum of Rs. 50 has been paid-up has been declared. The same dividend was paid for 1962. Taxation is allocated Rs. 75,000 (against Rs. 20,000), fire insurance fund Rs. 25,000 (the same), contingency reserve Rs. 25,000 (against nil) and investment reserve Rs. 25,000 (against Rs. 50,000). The carry-forward is Rs. 6,202, against Rs. 31,732 brought in. The fire department made a profit of Rs. 13,234. Net premiums of this department amounted to Rs. 7.12 lakhs and net losses to Rs. 4.49 lakhs. The miscellaneous department made a profit of Rs. 11,068; net premiums totalled Rs. 2.65 lakhs and net losses Rs. 1.67 lakhs. Net premiums of the marine department amounted to Rs. 2.09 lakhs. The department has earned a profit of Rs. 1 lakh.

Hooghly Flour Pays Again

THE Hooghly Flour Mills Co. Ltd has again returned to the dividend list and has paid a taxable ordinary dividend of 5 percent for the year ended December 1963. The yield amounts to 2.5 percent at the present price of Rs. 19.75 a share of Rs. 10 each. The profit has risen from Rs. 2.19 lakhs for 1962 to Rs. 4.58 lakhs for 1963, after providing Rs. 28,122 (against Rs. 32,721) for depreciation. Taxation absorbs Rs. 3 lakhs (against Rs. 1.84 lakhs), leaving a carry-forward of Rs. 1.46 lakhs, against Rs. 32,614 brought in. Production amounted to 323,817 quintals, against 301,951 quintals. The maximum selling prices of wheat produced except bran continue to be controlled by the Government. The extraction of *atta* constituted 45 percent for most parts of 1963. The wheat supplied by the Government of India has on the whole been satisfactory.

Anderson Wright Pays the Same

THE profit of Anderson Wright Ltd has amounted to Rs. 3.51 lakhs for the year ended December 1963, against Rs. 2.03 lakhs for 1962, after transferring Rs. 3,765 (against Rs. 4,428) to depreciation and Rs. 1.29 lakhs (against Rs. 2.13 lakhs) to taxation. The taxable ordinary dividend of 6 percent has been repeated. It offers a yield of 5.2 percent at the present price of Rs. 11.50 a share of Rs. 10 each. Debenture redemption reserve is allocated Rs. 1 lakh, leaving a carry-forward of Rs. 25,172, against Rs. 11,325 brought in. The directors pointed out that the results of the managed jute mills have been satisfactory while those of the managed

sugar companies have been unsatisfactory.

Bengal Potteries Cuts Dividend

BENGAL Potteries Ltd have reduced the taxable ordinary dividend from 12 percent for 1962 to 11 percent for 1963. The yield amounts to 6.1 percent at the present price of Rs. 4.50 a share of Rs. 2.50 each. The profit has dropped from Rs. 7.24 lakhs to Rs. 6.29 lakhs, after providing Rs. 12.14 lakhs (against Rs. 10.51 lakhs) for depreciation, Rs. 11.79 lakhs (against Rs. 12.74 lakhs) for development rebate reserve, Rs. 1.33 lakhs (against Rs. 1.57 lakhs) for the managing agents' commission and Rs. 5.50 lakhs (the same) for taxation. The carry-forward is Rs. 2,054, against Rs. 3,208 brought in. Sales rose from Rs. 2.16 crores to Rs. 2.33 crores. Although production rose, the profit has not increased in proportion due to the increased manufacturing costs. The output of fine china clay has begun. Production of high-tension insulators is being diversified and new ranges of products are being manufactured. The low-tension insulators produced are being supplied to the Posts and Telegraphs Department.

Oriental General Insurance Dividend Up

THE Oriental Fire and General Insurance Co. Ltd—a subsidiary of the Life Insurance Corporation—has stepped up the dividend from 6 percent to 8 percent though the pre-tax profit for 1963 is considerably lower at Rs. 29.61 lakhs, against Rs. 44.40 lakhs in 1962. The total net premium income at Rs. 5.838 crores shows an increase of nearly 19 percent over the previous year's figure of Rs. 4.922 crores. The net premium income from the fire section has gone up from Rs. 1.353 crores to Rs. 1.79 crores, and that from the miscellaneous section from Rs. 2.929 crores to Rs. 3.433 crores. The net premium income from the marine department, however, is slightly down from Rs. 64.02 lakhs to Rs. 61.51 lakhs.

The provision for general reserve has been reduced from Rs. 8.75 lakhs to Rs. 3.75 lakhs, while allocation to the reserve for doubtful debts has been raised from Rs. 76,000 to Rs. 4.58 lakhs. No provision has been made for investment reserve which had received Rs. 3.52 lakhs in 1962. A sum of Rs. 8.80 lakhs, against Rs. 6.60 lakhs, has been transferred to the dividend reserve. The proposed dividend absorbing Rs. 8.80 lakhs (against Rs. 6.60 lakhs) will be paid out of the dividend reserve. The Company's working during the current year so far is reported to be quite satisfactory.

Lakshmi Mills Maintains

ALTHOUGH the dividend has just been maintained at 20 percent, the working results of Lakshmi Mills Company, Coimbatore, for the year ended March 1964, show an impressive improvement over the previous year's performance. The sales have risen by 30 percent from Rs. 4.59 crores to Rs. 5.98 crores, and the gross profit has gone up by 32 percent from Rs. 77.14 lakhs to Rs. 1,018 crores. Appropriations include depreciation Rs. 30.83 lakhs (against Rs. 23.5 lakhs), development rebate reserve Rs. 6 lakhs (against Rs. 5.65 lakhs), taxation Rs. 35 lakhs (against Rs. 2 lakhs), donations Rs. 1.06 lakh (against Rs. 75,467), workmen's gratuity Rs. 2.65 lakhs (against Rs. 70,000) and dividends Rs. 21.3 lakhs

(the same). After making these appropriations, there remains a balance of Rs. 25,194 to be carried forward, against Rs. 17,087 brought in.

The directors have transferred the reserves under machinery replacement, depreciation, cotton fluctuation and contingency to the general reserve account which stands at Rs. 43.5 lakhs. During the year, the Coimbatore and Kovilpatti mills had worked three shifts from October last and in the Palladam branch, only staple fibre unit had started third shift working from January 1964. The total installed capacity of the three units is 147,920 spindles and 364 looms. During 1963-64, 15,232 spindles were commissioned in the Company's staple fibre unit in Palladam. The Company proposes to install another 8,768 spindles in Palladam to reach the licensed capacity of 24,000 spindles. Out of the 96 automatic looms ordered in the previous year, the Company received 64 automatic looms during 1963-64.

Jyoti Earns More

THE increase in the dividend by Jyoti Ltd (Baroda) from Rs. 9 to Rs. 10 a share is well justified by the Company's encouraging performance during 1963. Sales are up by about 25 percent from Rs. 2.04 crores to Rs. 2.56 crores and the gross profit has risen by about 18 percent from Rs. 20.17 lakhs to Rs. 23.72 lakhs. Allocations include depreciation Rs. 6.81 lakhs (against Rs. 5.52 lakhs), development rebate Rs. 1.42 lakhs (against Rs. 2.34 lakhs), taxation Rs. 7.70 lakhs (against Rs. 6 lakhs), gratuity Rs. 50,000 (the same), reserve for doubtful debts Rs. 10,000 (against Rs. 10,000), general reserve Rs. 1.20 lakhs (against nil) and dividend Rs. 5 lakhs (against Rs. 4.50 lakhs).

The directors state that the Company introduced during 1963 some special varieties of chemical handling pumps, self-regulating generators, new series of manually-operated motor protecting starters, oil-immersed contractors and air circuit breakers up to 1500 to 2000 amps. The Company's expansion plans progressed well during the year. The instrument transformer plant, which was set up in the middle of 1963, is working satisfactorily. The plastic moulding plant, commissioned last year, has already started meeting the full requirements of plastic moulding components for the manufacture of switchgears and switchboards.

The Company is now regularly producing hydro-electric generating sets upto 250 kW ratings and orders for 1,000 kW units are under execution. The Company is capable of manufacturing such units up to 3,000 kW ratings. The development of this line is expected to prove an important landmark in the progress of the Company. The hydraulic section of the research and development centre of the Company has already started working and the electrical rotating machine section as well as the switchgear section are expected to be ready in the next few months. The directors are making efforts to rationalise the range of manufacture, but at the same time, they are fully conscious of the need to develop newer and better products.

Same from Equitable Coal

IN their report for the year ended December 1963, the directors of Equitable Coal Co. Ltd pointed out that the estimated results for the first quarter of 1964 have not been as encouraging as those for the corresponding period of 1963. The Company apprehends that the demand for coal may not pick up with actual

and planned production for some time. Production during 1963, the Company's centenary year, fell short of that achieved in 1962, due to difficult mining conditions and because of fewer working spaces being available at certain collieries. Rail transport has shown an improvement, so stocks have not accumulated to unmanageable proportions.

There has however been a lack of demand for low-grade coal which is causing concern. Production costs continue to rise and the latest increases in selling prices have not neutralised the rises in production costs. The development of the Hurlidih colliery has progressed satisfactorily and raisings are due to commence shortly. Preliminary development work in the Kottadih collieries has been undertaken and good progress has already been made. The Company has availed itself of the World Bank loan to import equipment. The latter has begun to arrive at a time when profitability in the coal industry is at a low level. The financial resources of the Company have, therefore, been strained.

The profit has improved from Rs. 7.80 lakhs for 1962 to Rs. 10.11 lakhs for 1963. The taxable ordinary dividend of 10 percent has been repeated to give a yield of 4.5 percent at the present price of Rs. 22.44 a share of Rs. 10 each. Taxation absorbs Rs. 6.23 lakhs (against Rs. 3.28 lakhs), development rebate reserve Rs. 2.66 lakhs (against Rs. 3.87 lakhs) and debenture sinking fund Rs. 1 lakh (the same). The carry-forward is Rs. 1.58 lakhs, against Rs. 44,558

brought in. Raisings amounted to 1.8 million tons, against 1.9 million tons, and despatches to 1.9 million tons, against 1.8 million tons.

Andhra Cement Repeats

THE working of the Andhra Cement Co. Ltd for the year ended December 1963, has been affected by several adverse factors, resulting in lower sales and lower profit for the year. But the ordinary dividend is maintained at 9 percent. The net profit for the year amounts to Rs. 11,87,102, after providing Rs. 8,81,690 for depreciation, against the previous year's net profit of Rs. 14,43,157 after providing Rs. 9,38,505 for depreciation. The amount brought forward from the previous year is Rs. 2,172. Excess provision of bonus in 1962 written back is Rs. 5,601, and excess depreciation credited back amounts to Rs. 440. Excess provision for taxation credited back amounts to Rs. 45,000. Transfer from rehabilitation fund comes to Rs. 1,53,427 transfer from general reserve and to Rs. 45,000. After taking into consideration the above transfers and write-backs, the total available for appropriation comes to Rs. 14,38,742.

Out of this, donations amounted to Rs. 1,130 (against Rs. 51,515). A sum of Rs. 1,53,427 is transferred to rehabilitation reserve (against Rs. 1,62,335). Expenses not relating to the account amounted to Rs. 26,231. Provision for development rebate reserve comes to Rs. 81,500 (against Rs.

54,750). Provision for taxation comes to Rs. 5,15,000 (against Rs. 7,88,000). The dividend at 6 percent free of tax on preference shares (gross at 7.8 percent) amounts to Rs. 19,407. The equity dividend at 9 percent will absorb Rs. 6,39,286 (against Rs. 6,39,286). The balance of Rs. 2,761 is carried forward. The production during the year could not show substantial improvement over the previous years, in spite of a satisfactory supply of raw materials, including coal. Certain major repairs to plant and machinery, besides unforeseen repairs following unprecedented rains during the year, were carried out. The shortfall was also the result of heavy accumulation of stocks of clinker for want of timely releases. Clinker production during the year amounted to 1,66,219 tonnes, while cement production amounted to 160,114 tonnes. Cement despatches amounted to 1,61,514 tonnes. Cement sales amounted to Rs. 1,33,95,949 as against Rs. 1,43,43,843 in the previous year. The higher cost of production and inadequate increase in the retention price have contributed to the lower profit.

Progress of Seshasayee Industries

THE working of Seshasayee Industries Ltd for the year ended December 1963, has resulted in a net profit of Rs. 2,67,349 after providing Rs. 4,90,416 for depreciation, compared with the previous year's net profit of Rs. 12,742, after providing Rs. 3,91,784 for depreciation. Sales

during the year amounted to Rs. 43,37,668, against Rs. 26,01,705 during the previous year. The directors' report says that the operating results would have been much better but for some technical troubles on raw materials which adversely affected production in the ceramic section. But it is reported that these problems have now been brought under control and production for the coming year is expected to reach more than Rs. 80 lakhs.

While the foundry expansion has started its operation during the year, it has now been fully commissioned and the expansion of the ceramic section is expected to be commissioned by July 1964. Giving a period of two months for the teething troubles, the directors hope to reach their targets of production under expansion effectively from September 1964. The directors, therefore, expect higher profits for 1964. On production development, the Company has been successful in establishing a full range of transformer and switchgear bushings for 11 kV and 22 kV ranges. On transmission line requirements, the Company is meeting large demands for 11 and 22 kV pin insulators, post insulators for voltages up to 110 kV and disc insulators to build lines up to 220 kV. It is encouraging to note that the Company has now evolved a full range of transmission line insulators and hardware to building the 220 kV super grid lines—the highest in transmission lines in the country.

The expansion is expected to be completed in all phases by the end of

September 1964, when full production is expected. In the foundry section, apart from the manufacture of malleables for internal use, quite a large quantity of castings is being sold outside in the market. The directors say that due to increases in import duty, labour costs, etcetera, there has been a sizable increase in capital expenditure over estimates requiring another Rs. 25 lakhs, and the amount is to be borrowed from bankers.

Progress of Ultramarine and Pigments

ULTAMARINE and Pigments started production early in 1963. The Company first placed ultramarine blue OOB in the market in March last and it was received well. Although the production during 1963 was below capacity, the Company standardised several varieties of ultramarine blue which have been approved by D.G.S. and D. and all the other industrial consumers who have been importing the material from Europe. The factory has been working to full capacity since the beginning of the year. The Company's sales during 1963—the first year of production—totalled Rs. 8.31 lakhs and the stocks at the end of the year were valued at Rs. 5.45 lakhs. The directors state that the market for ultramarine blue remained dull during the year due to large stocks of imported goods with the trade as well as with industries. However, with

the complete ban on imports, sales from the beginning of the current year have improved and if this trend continues, the Company is likely to have a respectable turnover in 1964. The Company has executed a legal mortgage in favour of I.C.I.C.I for a foreign exchange loan of \$89,507 and a rupee loan of Rs. 7.30 lakhs granted to it.

After providing Rs. 3.38 lakhs for depreciation and transferring Rs. 2.53 lakhs to development rebate reserve, the Company's working results for 1963 show a deficit of Rs. 4.10 lakhs. Adding Rs. 2,573 brought forward, there is a deficit of Rs. 4.13 lakhs to be carried forward.

New City Mills Resumes Dividend Payment

NEW City of Bombay Manufacturing Company has returned to the dividend list after a break of five years. It was in 1957 that the Company paid its last dividend of 5 percent. The dividend for 1963 is 10 percent. The Company's working results for 1963 show a marked improvement over the previous year's performance. Sales are up by about 15 percent from Rs. 2.74 crores to Rs. 3.15 crores, and the gross profit has risen by about 21 percent from Rs. 21.86 lakhs to Rs. 26.54 lakhs. The provision for depreciation has been stepped up from Rs. 9.23 lakhs to Rs. 14.01 lakhs, but the amount set aside for development rebate reserve is lower at Rs. 2.61 lakhs, against Rs. 3.99 lakhs. A sum

CAPITAL, 11th June, 1964.

New Capital Issues

SEVEN companies, including two Government undertakings, have been authorised to raise fresh capital totalling Rs. 6 crores. One of them will issue the entire lot of preference shares to the State Government concerned. Two companies will issue part of the capital to their foreign collaborators. The consent of the Controller of Capital Issues in all cases is valid for 12 months. The following are the details:

Indian Telephone Industries Ltd., Bangalore, has been given consent to the issue of further capital of Rs. 75 lakhs dividend into 73,000 equity shares of Rs. 100 each to be issued privately for cash at a premium of Rs. 25 a share. The proceeds will be used for the manufacture of telecommunication equipment.

Cashea Shell Products and Chemicals Ltd., Bombay, a public limited Company, has been allowed to issue capital of Rs. 45 lakhs in equity shares of Rs. 100 each, for cash at par. Out of this, shares of the value of Rs. 15 lakhs will be offered to Indian parties resident abroad to be used for the import of the capital goods. The proceeds will be used for financing the manufacture of cashewnut shell liquid.

Indian Oil Company Ltd., a Central Government undertaking, has been allowed to raise further capital of Rs. 1.64 crores divided into 16,400 equity shares of Rs. 1,000 each to be issued privately for cash at par. The proceeds will be used for construction of installations and depots.

Assam Tubes Ltd., Sibsagar, will raise capital of Rs. 44 lakhs, divided into 340,000 equity shares of Rs. 10 each and 10,000 9.3 percent redeemable cumulative preference shares of Rs. 100 each to be issued for cash at par. Out of this, the entire preference shares shall be issued to the Government of Assam and equity shares of the value of Rs. 22 lakhs will be offered for public subscription by prospectus. The proceeds will be used for manufacture of G.I. pipes.

The Calcutta Salt Lakes Regional Development Company Ltd., a State Government undertaking, proposed to be incorporated in the State of West Bengal, has been given consent to the issue of capital of Rs. 1.5 crores. This will be divided into 15,000 equity shares of Rs. 1,000 each at par. Of this, shares of the value of Rs. 48 lakhs will be issued for consideration other than cash and the balance will be issued for cash. The proceeds will be used for taking over the land reclamation and development scheme in the Salt Lakes area in the eastern environs of Calcutta for commercial operation.

Suesson Textile Ball Bearings Products Private Ltd., Bombay, has been allowed to raise further capital (on conversion of the Company into a public limited one) of Rs. 49 lakhs divided into 290,000 equity and 200,000 cumulative redeemable preference shares of Rs. 10 each, carrying interest at 9.3 percent, for cash at par. Out of this issue, equity shares of the value of Rs. 10.40 lakhs and preference shares of Rs. 5.20 lakhs will be offered to the German collaborators of the Company.

Indian Rock Drills Ltd., Bombay, a public Company to be incorporated in the State of Maharashtra, has been granted consent to the issue of Rs. 75 lakhs in equity. Out of this Rs. 36 lakhs worth of shares will be offered to their U.S. collaborators. The proceeds of the issue will be used in the manufacture of roller rock bits and drag bits.

CAPITAL, 11th June, 1964.

The Stock Markets

NEW CABINET WELCOMED, BUT TURNOVER SMALL

Wednesday Evening.

THE Calcutta stock market has been sluggish during the past week. Turnover has been small and has been largely confined to clearing shares. Monday was a holiday, while on Tuesday attention was diverted to the immersion of Mr. Nehru's ashes. Although share prices have slightly recovered towards the close due to short-covering, there is a general inclination to keep commitments light until various uncertainties are cleared. Meanwhile, Lyons Range has welcomed the new Central Cabinet under the Prime Ministership of Mr. Lal Bahadur Shastri. But operators have become cautious since the new Government has indicated its desire to accelerate the pace of socialism.

There is a great deal of concern over the sharp rise in the prices of many commodities. The Central Finance Minister, Mr. T. T. Krishnamachari's statement in the Lok Sabha on rising prices has called for caution. Since he has stressed the need for State trading, particularly in foodgrains, Lyons Range is disturbed. Operators and investors cannot take a constructive view of the future until the new Government indicates to what extent it will allow the private sector to play its rôle in economic development.

Reports that the World Bank has not agreed with India's estimates of steel requirements by 1971, have created a great deal of uncertainty, particularly in relation to foreign aid. The Bank thinks that India's steel requirements have been greatly exaggerated, so it is apprehended that foreign aid for the expansion of the steel industry may be substantially reduced.

Indian Iron have gained slightly towards the close mainly due to short-covering. Meanwhile, investors await the declaration of the dividend for 1963-64. Reports that negotiations between the two private steel companies and the Government of India on the repayment of interest and loans given to them by the Government are proceeding satisfactorily, have helped sentiment. Engineering shares have fluctuated narrowly. Indian Standard Wagon, Texmaco and Guest, Keen, Williams have been prominent. Braithwaite have met with scattered support while Jessop have been neglected. Binani Metals have enjoyed influential support. Bhartia Electric Steel have been steady on a good report.

In the miscellaneous section, attention has centred on clearing scrip which have been steady towards the close due to the absence of selling pressure. Alkali and Chemical, British Paints and Metal Box have met with scattered buying. In managing agency shares, Jardine Henderson, Martin Burn and Balmer Lawrie have been taken. Bank shares are neglected. There is little interest in electric company shares. New shares are depressed. Hindustan Aluminium, Phillips Carbon and Isaac Holdens have dropped. In paper shares, Orient and India Paper Pulp have been steady, but Seshasayee and Titagur have been easier. Sugar shares are freely offered without attracting buyers. Bharat Commerce, Jay Shree Textiles and Dunbar are steady in the cotton mill section. J. K. Rayon have recovered on short-covering, but Elgin have been offered freely.

Although the prices of selected jute shares have recovered, turnover has been small due to the lack of foreign enquiries for jute goods. Birla, Champdany, Barnagore, Ganges and Auckland have changed hands. Coal shares have been subdued due to the uncertain outlook following the decline in the demand for coal. Central India, Western Bengal, Amalgamated and East Indian have slipped back. Business in tea shares is negligible, since investors have been disappointed by the latest dividends declared by many companies for 1963. The poor support to north Indian tea in the new marketing season has also restrained buyers.

Government securities have been steady. The 3 percent Conversion loan 1986 has been quoted around Rs. 63.75. The prices of short-dated stocks have been fully steady due to good institutional support. Medium-dated loans have been about steady. Scattered interest has been shown in selected State Government loans.

Bombay

PRICES RECOVER ON SHORT-COVERING CAUTIOUS OPTIMISM OVER NEW CABINET

Wednesday Evening.

THE new account in the Bombay stock market has started in a quiet mood. Support has been restrained by the higher budla charges levied in the past settlement. Towards the close, sentiment has improved slightly as Dalal Street greeted the new Central Cabinet with cautious optimism. Share prices have recovered moderately due to short-covering. Bears who had sold earlier due to the death of Mr. Nehru, have hurried to cover their open positions lest prices should recover. Bulls have, however, been cautious in extending their support due to the fact that the new Central Government will continue to pursue the old economic policy for socialism.

Dalal Street is inclined to await the move of the Government in relation to private enterprise. Operators have been disturbed since Mr. T. T. Krishnamachari, Central Finance Minister, has emphasised the urgency of introducing State trading, particularly in foodgrains. Investors have been discouraged by the growing shortage of funds. Turnover has largely centred on clearing shares and business in cash shares has been negligible. The absence of institutional support for equities has been a restraining factor.

Tata Steel have closed around Rs. 144.50 due to the satisfactory production figures of the Company for May. The announcement of the dividend for 1963-64 is being largely awaited. Among engineering shares, Tata Engineering, Mukand Iron and Premier Construction have recovered. In motor-vehicle shares, Hindustan Motors have rallied due to support from outside sources. Premier Automobiles have been sluggish.

Selected cotton mill shares like Bombay Dyeing, Svadeshi and Kohinoor have improved on short-covering. Towards the close, Century have weakened due to the observation by

the chairman that the Company will not issue bonus or rights shares in the near future. The expansion programmes of the Company have, however, made satisfactory progress.

Turnover in miscellaneous shares has been negligible. Among cement shares, Associated Cement and Digvijay have been about steady. In steamship companies, Scindia Steam have recovered on short-covering. In the mining section, Be Be Petrol have been steady on replacement purchases. In sugar shares, Belapur and Walchandnagar industries have met with scattered buying. Chemical shares have shown a mixed trend. Tata Chemicals have been quiet, but Polychem have been steady on producing good results. In rayon scrip, National Rayon have improved on replacement purchases. Voltas and Tata Oil have been steady.

Turnover in bank shares has been small. Bank of India and Central Bank have changed hands. Among electric companies, Ahmedabad and Tata Hydro have been bought.

Madras

DULL TRADING IN SHARES TURNOVER NEGLIGIBLE

Tuesday Evening.

THE Madras stock market has been dull during the past week. Business has been interrupted by

HOW SHALIMAR WORKS? ...No.10

Steel Fabricating

Steel fabrication is a comparatively modern art, as the essential part of this operation, steel is a newish material and extremely scarce. An important skill in this field is a clairvoyant ability to guess what a designer intends the thing to look like when all the bits are put together.

THE SHALIMAR WORKS LTD.

Look what you get with HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes. You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system. You get training for your instrument technicians in the most up-to-date

maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay. You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

Sold and serviced in India exclusively by

holidays for the immersion of ashes of the late Mr. Nehru. Although the formation of the new Central Cabinet has removed a great deal of uncertainty, operators and investors have been unwilling to extend commitments until the economic situation improves.

Turnover in clearing and cash scrip has been negligible, although share prices have fluctuated narrowly. In Government securities, only selected high-yielding State Government loans have met with support. In banks, Indian have changed hands at Rs. 151.50 and Indian Overseas at Rs. 138. Among electric companies, Salem-Erode have changed hands at Rs. 121.37 and West Coast at Rs. 13.50. Sugar shares have been easier on the predominance of sellers. Deccan have dropped to Rs. 11.35 and India to Rs. 8.87. E.I.D. have been available at Rs. 34 and Travancore at Rs. 7.20. Mysore have been done at Rs. 28.33 and Madura at Rs. 9.44.

In planting shares, Blue Mountain have weakened to Rs. 2.37 and Cochin Malabar to Rs. 6.40. Consolidated Coffee have been sold at Rs. 21.80 and Ouchterlony at Rs. 3.45. Business has passed in Periakaramalai at Rs. 3.47. Be Be have been freely offered down to Rs. 2.25. T.R. and Tea have changed hands at Rs. 9.20 on paying a taxable ordinary dividend of 8 percent. Parkside have been quoted at Rs. 25.73, Peermade at Rs. 21.25 and United Nilgiri at Rs. 23.22. Kil Kotagiri were quoted at Rs. 4.40 and Stanes Amalgamated at Rs. 13.75. Coffee shares have weakened due to the uncertain export outlook. Coffee Lads have been sold at Rs. 17.65, Cowcoody at Rs. 4.66 and Ossoor at Rs. 2.45.

In textile shares, South India Viscose have been available at Rs. 118.50 and Travancore Rayon at Rs. 20.85. Lakshmi have been offered at Rs. 131 and Madura at Rs. 32.55. Ramakrishna have been steady at Rs. 217.80 on declaring a taxable ordinary dividend of 23 percent. Janardana have been done at Rs. 57.50 on declaring a taxable ordinary dividend of 6 percent. Bangalore Woollen have been transacted at Rs. 248 and Buckingham at Rs. 270. Tirumurti have changed hands at Rs. 122.80 and Vizayalakshmi have

come to hand at Rs. 103.50. Anglo-French have been about steady at Rs. 155 but Asher have declined to Rs. 209.75.

Among miscellaneous shares, Aluminium Industries have been quoted at Rs. 19.30, but Ashok Leyland have been weaker at Rs. 6.79. In cement shares, Dalmia have been bought at Rs. 13.15 and India Cement at Rs. 5.55. In chemical shares, Metturr Chemical have been done at Rs. 13.15, but F.A.C.T. have been easier at Rs. 5. Seshasayee Paper have been barely steady at Rs. 7 while Mysore have met with scattered support up to Rs. 12.40. Enfield have been done at Rs. 10.87 and Tube Investment at Rs. 201. Seshasayee Industries have been freely offered down to Rs. 6.30 on passing the dividend, but United Electrical have been steady at Rs. 9.01 on declaring a taxable ordinary dividend of 8 percent. Spencer have been steady at Rs. 21.65, but Parry's Confectionery have been easier at Rs. 2.77. Textool have changed hands at Rs. 142.50 and T. Stanes at Rs. 30.50. Madras Rubber have dropped to Rs. 11.25, but Kirloskar Electric have been steady at Rs. 18.40.

London

SHARES RISE ON BID REPORTS WEAKNESS OF POUND HITS GILT-EDGED

London, 10th June.

BIDS, rumours of bids and company news provided the outstanding feature of the stock market during the past week. Otherwise,

interest and business in the market remained at a low level, but the general performance was not unsatisfactory. Prices lost ground prior to the week-end. The result of the Faversham by-election did not help, but a slightly better trend developed afterwards. The outstanding event of the week was, of course, Chrysler's partial bid for Rootes. A large business developed in Rootes, and both the ordinary and "A" shares were several shillings higher. Other motor shares were very firm. Elsewhere on the bid front, Pye made an offer for Ether Controls, Viyella for Bradford Dyers and Rank Organisation for the Pullin group. In addition, bids were on the way for Webb's Crystal Glass and William Tatton, while it became known that Rank Organisation had made approaches to Mecca. All these bid targets scored substantial gains. Gilt-edged provided the outstanding exception to the generally satisfactory performance. Recent weakness in sterling unsettled the gilt-edged, and prices drifted steadily lower. Banking, insurance, H.P. and property shares were no worse than dull. Industrials generally fluctuated within narrow limits. Good company news provided a number of features including Metal Box, J. Lyons, British and Commonwealth Shipping and Associated Cement. English and Overseas rallied well, but Rolls Royce fell sharply. Golds attracted a selective demand. Coppers were dull, but tins reflected the rise in the metal price. Oils were quiet and little changed. Harrisons and Crosfield issues were strong in quiet rubbers on the capital reorganisation scheme. Teas fluctuated narrowly. Dollar stocks fell back with Wall Street.

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange together with full details of latest balance sheets.

Published every Thursday.

WHATEVER THE ANGLE

HERE IS THE TYRE THAT GIVES YOU EXTRA SAFETY

IMPROVING THE WORKING OF THE STATE BANK

(BY A SPECIAL CORRESPONDENT)

The Government of India has shown a tendency to amend the Reserve Bank and State Bank Acts almost every year. In spite of last year's amendment, the Lok Sabha has once again passed a few more amendments to the State Bank of India Act to improve the bank's working. But many of the changes now proposed could have been incorporated when the Act was amended last year.

IT has become a habit with the Government of India to amend the Reserve Bank and State Bank Acts almost every year. Last year, for instance, the State Bank Act was amended to permit local boards to sanction advances, subject to certain ceilings. By another amendment, the bank was enabled to grant credit for extended periods to exporters even

though they may not themselves be engaged in any industry.

On 5th June, the Lok Sabha once again passed a few more amendments to the State Bank of India Act. The amendments were made, because since the establishment of the State Bank, its business and activities had increased considerably. So it was

considered desirable to set up a large number of local head offices and rationalise the bank's working by vesting some specific powers in the local boards. It will be seen that the State Bank Act was amended last year to give more powers to local boards. It was felt for a long time that the bank was over-centralised. But when the Act was amended last

CAPITAL, 11th June, 1964.

year, the changes now proposed could as well have been incorporated.

Duplication of Work

The Central Finance Minister, Mr. T. T. Krishnamachari, recently made two points. Firstly, it is the policy of the Government to allow subsidiary banks to grow on their own. Whenever there is a case for amalgamation, the Reserve Bank gives the first preference to the State Bank. It is only after the State Bank does not find it possible to integrate a bank that other banks are approached. While one would appreciate this policy, it is not known why the State Bank did not close down the overlapping offices of different subsidiaries. If a place like the Fort area in Bombay is taken as an instance, one would find offices of different State Bank subsidiaries almost every few yards. The resultant duplication of work could have been avoided. One of the reasons holding up the progress of modernisation in the State Bank is the shortage of space. A rationalisation programme for the offices of the subsidiaries, especially in congested cities like Bombay would go a long way in solving the space problem.

Secondly, the Central Finance Minister announced that it was proposed to open 390 more offices of the State Bank before 1968. This would work out to an average of 97 offices each year. The Minister said that the bank had made substantial progress. Against 766 branches and Rs. 275 crores of deposits in July 1955, the State Bank now has 1,670 branches and its deposits total Rs. 700 crores. The deposits of the bank had been more than doubled. Most of the new offices would be opened in places without banking facilities. It should be remembered in this context that there are still 1,000 towns in the country where no bank has opened a branch.

Amalgamation of Weaker Units

The policy of amalgamation of weaker units with the State Bank and the thinking on the branch expansion programme of the bank seem to have undergone a change in the last two years. After the Palai and Laxmi bank crashes, most of the amalgamations were forced on banking units in the private sector. During 1961, there was only one instance of amalgamation in Kerala and that too with a subsidiary of the State Bank. The change in policy was probably made following protests from banks in the private sector that they were made to pay the penalty for the weakness of the banking system. The State Bank—because of its size—is definitely in a better position to absorb the weaker units without weakening itself. Furthermore, whenever a weaker bank is amalgamated with the State Bank, the hold of the State on the banking system is correspondingly increased.

Likewise, the branch expansion policy has been changed probably because the Reserve Bank is unable to persuade the banks in the private sector to open offices in towns where there are no banking facilities. The Karve Committee, which was appointed to enquire into the branch expansion programme of the State Bank, recommended a slow-down in the programme because the emphasis on quantitative expansion, however desirable it might be, was resulting in deterioration in the quality of service. Besides, it was giving rise to serious administrative problems.

Aid for Small Industry

The working of the State Bank of India was recently criticised in Parliament. It was pointed out that it did not make any impact on the village economy. It was not assisting

CAPITAL, 11th June, 1964.

small industry and whenever it tried to do so, cumbersome procedures negated all the benefits accruing from such assistance.

Another point made during the debate was that the State Bank should systematically take over small banks. Amalgamation should be brought about in such a manner that the usual sources of credit do not dry up. It was urged that a mixed economy should not hinder the nationalisation of the banking system. Mr. Krishnamachari, however, made it clear that the nationalisation of banking should be the last step in any effort to control banks.

THE CALCUTTA MONEY MARKET MODERATE FALL IN ADVANCES

Wednesday, 10th June.

THERE has been a moderate decline in the general level of advances in the Calcutta money market during the past week. This is mainly due to the moderate decrease in the demand from jute and sugar mills. The requirements of the iron, steel and engineering industries have gone up slightly. There has been no change in the credit given to cotton mills and to the foodgrains and seeds trade. In the interbank market, the call rate declined sharply from 5½ percent to 4 percent, but has firmed up to 4½ percent towards the close.

The exchange market has been moderately active, with a small supply of tea bills. The supply of gunny bills has been poor. The demand for remittances is moderate. In the London market, sterling has been extremely weak because the liquidity reserves held in sterling by many European countries have been curtailed.

SILVER WAS QUIET IN CALCUTTA in the past week due to the reduced demand following the near-end of the marriage season. The price fell from the previous week's level of Rs. 262.25 to Rs. 250.75, quoted today. The London and New York prices stood at 111½d and 129.3 cents.

In spite of the heavy fall in silver, gold dropped slightly. The price of 14-carat declined from Rs. 72.75 to Rs. 72.25.

DURING THE WEEK ENDED 5TH JUNE, Government of India Treasury bills for Rs. 8,22,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 9th June. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3,000 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 15th June.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 10th June to 13th June at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 3rd June to 6th June amounted to Rs. 1,28,50,000.

RISES OF RS. 23.01 CRORES TO Rs. 2,549.53 crores in active notes and of Rs. 11.97 crores to Rs. 2,576.73 crores in the total note issue were notable features of the statement of the Reserve Bank of India for the week ended 5th June, 1964. The cur-

rency expansion was covered by decreasing foreign securities by Rs. 5 crores to Rs. 98.46 crores and by increasing rupee securities by Rs. 20 crores to Rs. 2,262.27 crores in the paper currency reserve. This was done by contra transfers to the Banking Department in which balances held abroad dropped by Rs. 1.67 crores to Rs. 10.49 crores and investments by Rs. 20.30 crores to Rs. 215.40 crores. Deposits of the Government of India declined by Rs. 2.94 crores to Rs. 50.63 crores and those of State Governments by Rs. 7.91 crores to Rs. 9.09 crores. Balances of scheduled banks at Rs. 87.71 crores showed a decrease of Rs. 76 lakhs. Loans to scheduled banks rose from Rs. 32.45 crores to Rs. 36.28 crores, of which advances against usance bills amounted to Rs. 7.78 crores (Rs. 5.88 crores). Ways and means advances stood at Rs. 63.18 crores, against Rs. 57.59 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 29th May, 1964, shows a rise of Rs. 11.23 crores to Rs. 621.33 crores in total deposits. Investments in Government securities are up by Rs. 35 lakhs to Rs. 232.91 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have fallen by Rs. 4.77 crores to Rs. 371.77 crores. Cash and balances are, in consequence, shown at Rs. 21.90 crores or Rs. 42 lakhs less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 29th May, 1964, shows Demand and Time liabilities at Rs. 1,266.43 crores (Rs. 47.46 crores on account of borrowings from banks) and Rs. 1,304.35 crores (Rs. 12.23 crores), compared with Rs. 1,243.50 crores (Rs. 48.77 crores) and Rs. 1,308.84 crores (Rs. 12.14 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 2.59 crores and Rs. 7.24 crores to Rs. 64.70 crores and Rs. 90.52 crores, respectively. There is a rise of Rs. 1.18 crores to Rs. 621.76 crores in investments. Advances and bills discounted at Rs. 1,838.44 crores show a drop of Rs. 11.88 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6 percent and 71.5 percent, against 5.7 percent and 72.5 percent.

TREASURY BILL MATURITIES

THE BIG HURRY IN THE WORLD OF ELECTRONICS

Diagnosing diseases, composing harmonious music, translating simultaneously in a dozen languages, solving complex engineering problems or playing an expert game of chess, electronic computers are the miracle child of the present century. ■ Reading, writing and calculating at the speed of light, with 'memories' that learn by experience, these giant minds are freeing expert technicians from time-consuming mental drudgery, for more creative planning, making possible whole new industries and products, which assure greater employment and prosperity. ■ In making the electronic tubes that keep these computers twinkling, a highly specialised knowledge of gases is required. ■ It is this specialised knowledge of industrial gases and their diverse applications that Indian Oxygen affords Indian industry.

MAHINDRA UGINE STEEL CO., LTD.

CHAIRMAN, MR. HARISH MAHINDRA'S SPEECH

The following is the Speech delivered by the Chairman, Mr. Harish Mahindra, at the First Annual General Meeting of the Shareholders of Mahindra Ugine Steel Company Limited held in Bombay on 9th June, 1964.

Ladies & Gentlemen :

I have great pleasure in extending to you a warm welcome to the First Annual General Meeting of the Company.

First and foremost, I would like to give expression to what is uppermost in our minds. We meet today in the shadow of the greatest tragedy to befall our nation since the assassination of Mahatma Gandhi in 1948. For seventeen years the unswerving hands of Prime Minister Nehru guided our nation through many a storm. Just when he seemed imperishable, Time and Mortality touched him. For our heritage he has left us his dreams and ideals to translate into reality. He set the infant democracy in his care on the path of rapid industrialisation. He showed determination, and faith in the nascent nation's capacity to take giant strides to ultimately keep pace with developed nations of the world. He called the industrial complexes that came out of the Plans the temples of modern India. In his last speech at Chowpatty, he measured his country's growth with the yardstick of its steel output. In his trust with destiny he put his faith in all of us who have to collectively make our minute contribution towards the realisation of his dreams. Therefore, we must remember his death to the day of ours.

New Prime Minister

Our nation is fortunate in its choice of Shri Lal Bahadur Shastri. The new Prime Minister is eminently suited to shoulder the burdens of the State during the critical years ahead. With him go our hopes, and aspirations for tomorrow's India.

In a small measure, in our own immediate world we have suffered the loss of our helmsman, my uncle, Mr. K. C. Mahindra. It is unfortunate that as the Project is taking off from the drawing board stage to field activity he is no longer with us.

As shareholders of the Company, you have had an opportunity to study the Prospectus of the Company published at the time of the Public Issue of Capital. It would, therefore, be redundant if today I should tread on the ground with which you are by now familiar.

Many of you may wonder why Mahindra & Mahindra Limited, basically an engineering house, should venture into the sphere of steel production. The founders, Mr. J. C. Mahindra, my father, and Mr. K. C. Mahindra were by professional training "men of steel." Mr. J. C. Mahindra was the Sales Manager of Tata Iron & Steel Co., Ltd., prior to the Second World War. He was appointed by the British Government as Adviser to the Government of India on steel supplies needed during

the war years, and in 1941 he became the first Iron & Steel Controller of India. Mr. K. C. Mahindra was associated with Messrs. Martin Burn Limited, Managing Agents of the Steel Corporation of Bengal Limited (now Indian Iron & Steel Co., Ltd.) In recent years, as Director of Hindustan Steel Limited, he took considerable interest in the development of the Steel Industry in India.

I may also mention here that right from its inception Mahindra & Mahindra Limited successfully established trading activity in steel on sound lines. Long before major imports were contemplated by the Government, they secured exclusive franchise for representing some of the leading French and British steel makers. This paved the way for the ultimate consolidation of the steel business—imported as well as controlled stock. Years of close association with the steel makers all over the world, and the resultant experience gained by them has infused a sense of confidence in that they can today augment, on a modest scale, the Government's efforts to develop the Alloy Steel industry in India.

Technical Collaboration

Your Company was fortunate in securing the technical collaboration of Aciéries Electriques d'Ugine of France, who have specialised in the manufacture of Tool, Alloy and Special Steel for over half a century. As co-promoters, Ugine have rendered invaluable assistance to your Company in bringing the scheme to its present fruition. The keen interest exhibited in your Project by Mon. Rene' Perrin, President General of Aciéries Electriques (whose name is connected with the renowned Ugine-Perrin Process of steel making), and his worthy colleagues have contributed in no small measure to the progress so far made on the Project.

The responsibility for raising the foreign exchange component of the Project was shouldered by the Promoters. The amount involved was substantial in the context of so many competing claims for foreign financial assistance. I would like to express our deep appreciation of the co-operation extended to us by the Financial Institutions, namely, the International Finance Corporation in Washington, the Industrial Finance Corporation of India, and the Industrial Credit & Investment Corporation of India Limited.

Steel Industry occupies the pride of place in the National Plans. Steel remains the most important industrial material in modern technology, and the conditions of its production and development will necessarily influence the rapid and substantial growth of our economy. Development of a branch of this industry—Alloy Steel—so vital to the industrialisation of the country, had, in the past, not been given the special attention it deserved. The emphasis has now shifted to the speedy implementation of Alloy Steel Projects. It is, therefore, imperative that development of the Special Steel Industry should be

accorded top priority by the Government.

The Steering Group for Iron and Steel has set the target for production of Tool, Alloy, and Special Steels at one million tons after analysing the various demand projections made by the National Council of Applied Economic Research, and other Organisations. The demand for Alloy Constructional Steel alone is estimated at 250,000 tons per annum. This represents 25% of the total demand for Tool, Alloy, and Special Steels which, ostensibly, is a conservative estimate of the demand that will unfold itself in the years to come. In the U.S.A., Alloy Constructional Steel alone accounts for about 75% of the total Tool, Alloy, and Special Steel deliveries.

Making Alloy Constructional Steel

Your Company will initially produce Alloy Constructional Steel. This kind of Steel finds its application in automobiles, transport, material handling equipment, machine building and other industries. These industries, which have been subjected to the vagaries of an imported supply, can then look forward to a dependable and regular supply from indigenous sources.

The capacity of your Plant will be 25,000 ingot tons or 18,000 tons of finished steel per annum. This will account for 7.2% of the estimated demand for Alloy Constructional Steel. There is a significant gap between the estimated demand, and the licensed capacity for Alloy Constructional Steel. It is, therefore, heartening to note that among the various measures proposed, the Steering Group has recommended that Plants, which have been licensed and have been making progress, should be encouraged to expand to economic sizes. This is a realistic approach which would prove to be beneficial to the country—both from the point of time, and cost.

The basic design work of the Shop Buildings and Ancillary Buildings has practically been completed. Contracts for structural steelwork are being processed. Construction work at the site has commenced, and the tempo of work will gain momentum immediately after the monsoon. If there is no major hold up in the receipt of construction materials, it is hoped that the main Shop Buildings will be completed by the end of 1965.

Manufacturing facilities which are being provided will, *inter alia*, include one 20-ton Electric Arc Furnace, Slag Furnace, High Speed Forging Press, Manipulators, Reheating Furnaces, Rolling Mill, Annealing and Tempering Furnaces. Orders for the major items of Plant and Equipment have been placed. Shipments of most of these items are expected to be made by July/August, 1965. The erection work of the major items of Plant and Equipment will take about 4 to 6 months. Trial runs of some of the units of the plant are likely to be made in early 1966.

I would like to caution that the task ahead of us is an arduous one. Manage-

CAPITAL, 11th June, 1964.

ment of a steel plant poses grave problems in finding talented managerial and technical personnel. Whilst some of the key men will undergo training in Ugine's plant, by and large, the operating crew will have to be trained in India.

The man power requirements of the Steel Industry in the Fourth Five Year Plan will increase considerably, and it is, therefore, of paramount importance that an orientation-cum-practical training course is arranged in the existing Steel Works in India for graduate engineers, diploma-holders, technologists and artisans. In-service training can, at the most, augment the above scheme and cannot, by itself, provide a solution to this problem. The sad experience of the new Steel Plants which viewed availability of skilled man power with complacency would indicate that immediate measures are necessary to organise suitable training facilities for the personnel required by all new steel units; otherwise, operational efficiency will be seriously impaired, and the time-lag involved in attaining normal production will not be reduced.

Optimum Output

When the Plant is geared for optimum output, the employment potential of your Company will be of the order of 1,200 people. This additional labour force in Khopoli region will accentuate the problems of housing in that area. The ribbon development of industries in Bombay-Thana road will gradually extend to Khopoli. The need for establishing industrial workers' colony in Khopoli region merits immediate attention of the State Housing Board. Unless congenial living conditions are created near Khopoli, it will be difficult to attract technicians to settle down in that area. State Government's assistance is also required in providing basic amenities, such as, adequate potable water supply, medical, educational and recreational facilities. I fervently hope that the State Government will extend its fullest co-operation to us in overcoming these problems.

I find myself agreeing with Barbara Ward, a noted and influential economist of our time, when she says that in India today—"..... Very large programmes of public investment under the Plans—combined with very strict control over imports—has given Indian private enterprise the best decade in its history." An economy based on total private enterprise remains a mere ideology today. It exists nowhere in the world. The ratio of public and private enterprises in a "mixed economy" may vary according to the different political, and economic factors prevalent in a country. A study of the Marshall Plan operations in postwar Europe has established beyond doubt that programmes of public investment act as a stimulus to private enterprise, and also set up a dynamic market economy. A conflict between the two sectors is to be avoided, as in the democratic, under-developed nations of the world both the streams of economic growth have come to stay. Therefore, I do feel confident that in the policy of "democratic socialism", to which our Government is committed, we will find an atmosphere conducive to the success of our enterprise.

In conclusion, I would like to offer my grateful thanks to all the shareholders, who have put their trust in this venture, and the members of the Staff for their devotion and hard work. I am truly fortunate in my colleagues on the Board of your Company. They have eminently distinguished themselves in the industrial, and the public life of our nation. I am, hence, assured of their experience, and sound advice at all times to guide me in this undertaking.

Thank you.

Note: This does not purport to be the record of the proceedings of the First Annual General Meeting of the Company.

CAPITAL, 11th June, 1964.

New Delhi

AID-INDIA CLUB PLEDGES MORE UNTIED HELP

(FROM OUR NEW DELHI CORRESPONDENT)

THE Aid-India Club held its tenth meeting in Washington on 26th May, 1964. The meeting was attended by representatives of the Governments of Austria, Belgium, Canada, France, West Germany, Italy, Japan, the Netherlands, the United Kingdom and the United States and those of the World Bank and the International Development Association. The International Monetary Fund sent an observer.

The purpose of the meeting was to discuss aid for India during 1964-65—the fourth year of India's third five year plan. The Aid-India Club held preliminary discussions on the same subject in Paris on 17th and 18th March.

At the beginning of the third plan, the Government of India estimated the total requirement of external assistance from all sources, including non-consortium countries and private foreign investment, at \$5,460 million. Against this, the members of the Club have already pledged \$3,417 million of aid to India for the first three years of the third plan. At the recent Washington meeting, they undertook to make additional aid available during the fourth year of the plan amounting to about \$1,028 million, subject to appropriate legislative action or other necessary authorisation. The new pledges for 1964-65 are as follows:

Countries	In million U.S. dollar equivalent
Austria	1
Canada	41
France	20
West Germany	95
Italy	36
Japan	60
Netherlands	11
United Kingdom	84
United States	435
World Bank and the I.D.A.	245
Total	1,028

Non-project Aid

The members of the Club considered it important that a substantial part of the aid during the coming year should be in the form of non-project assistance which could be used to finance maintenance imports. About half of the aid pledged at the meeting is expected to be in this form. The following table sets out the aid pledges made by members of the Club in each of the first four years of India's third five year plan:

	(In million dollar equivalent)				Fourth year total
	1961-62	1962-63	1963-64	1964-65	
Austria	—	5	7	1	13
Belgium	—	10	10	41	132
Canada	28	33	30	20	100
France	15	45	20	95	558
West Germany	225	139	99	36	134
Italy	—	55	65	60	230
Japan	50	11	11	11	33
Netherlands	—	84	84	84	434
United Kingdom	182	435	435	435	1,850
United States	545	200	245	245	940
World Bank and I.D.A.	250	200	245	245	940
Total	1,295	1,070	1,052	1,028	4,445

It was agreed that the Aid-India Club should meet again early in 1965. The following is an account of the liberal terms on which credits have been made available to India by some of the leading members of the Club:

Canada: The terms of loans are expected to be comparable to those of the International Development

Association. The maturities of the special export credits will be negotiated individually, but are expected to be in the range of 15-20 years; interest rates on these credits will be based on the Government's borrowing costs plus an administrative charge (giving an overall rate of 6 percent). The amounts of the Canadian pledge to be allocated for non-project assistance are currently being discussed with the Indian Government.

France: The French credit of \$20 million will be repayable over ten years from the delivery of the equipment or completion of the project. The rate of interest will be 5½ percent, including an insurance premium of the order of 1 percent. One-third of the total amount will be available for financing non-project imports.

West German Contribution

West Germany: The total pledge of West Germany is \$95 million (380 million deutschmarks) which is composed of the following four amounts:

(a) 90 million deutschmarks (\$22.5 million) of capital aid for a period of 16 years and at the interest rate of 5½ percent for the refinancing of Rourkela claims falling due for repayment in 1964-65.

(b) 180 million deutschmarks (\$45 million) of capital aid for a period of 25 years, including seven years of grace, at the interest rate of 3 percent (subject to the reservation that in suitable cases arrangements may be made for shorter periods of maturity and higher interest rates to be paid in rupees);

(c) 82 million deutschmarks (\$20.5 million) of guaranteed suppliers' credits for the delivery of ships for a period of ten years after delivery (namely 12 to 13 years in practice) at the normal market rate of interest; and

(d) 28 million deutschmarks (\$7 million) guaranteed suppliers' credits for deliveries other than ships for a period of up to ten years after delivery (namely, 12 years in practice) at the normal market rate.

The share of non-project aid in the total pledge is up to 170 million deutschmarks, namely, 90 million deutschmarks for the refinancing of Rourkela claims and 80 million

deutschmarks for commodities and development banks.

Italy: The Italian contribution of \$36 million will be made up of credits extended by exporters under the State guarantee scheme. The credits will be repayable over a period of ten years from the date of delivery, and the rate of interest will be that

prevailing in the market at the time, plus a small commission, giving an overall rate which is expected to be between 6 percent and 7 percent.

Japan: The Japanese pledge of \$60 million will be made up of \$20 million of 18-year credits and \$40 million of 15-year credits. All these credits will have a grace period of five years and will carry interest at 5½ percent. The Japanese Government will be ready to consider the use of part of the credits for non-project purposes.

Netherlands: The contribution for 1964-65; 26 million guilders will be in long-term loans (25 years, including seven years of grace, with interest at borrowing cost plus a small service charge) and 14 million guilders will consist of ten-year guaranteed suppliers' credits with interest at prevailing rates. The 26 million guilders of long-term loans will be available to finance the procurement of goods from any source. The whole of the Netherlands' contribution will be in a form that can be used to finance non-project imports.

Pledge by U.K. and U.S.A.

United Kingdom: The U.K. pledge of £30 million will consist of loans repayable over 25 years, including a grace period of seven years. No interest will be charged during the grace period. Subsequently, the interest payable on the amount outstanding will be related to that at which the U.K. Government can borrow on the date of each drawing. On the basis of current borrowing rates, this would mean that the interest charge over the whole period of the loan would probably average about 3½ percent. About two-thirds of the U.K. contribution will consist of non-project aid.

United States: The U.S. pledge of \$435 million will be made up mainly of development loans from the Agency for International Development. It is expected that such loans will be extended for periods of 40 years, including a ten-year grace period. It will have a rate of interest of 1 percent during the ten-year grace period, and one of 2 percent for the remaining 30 years. About 12 percent of the U.S. pledge (about \$50 million) will probably consist of loans from the Export-Import Bank. These loans will probably carry terms similar to those of recent Export-Import bank loans which have been for ten to 15 years, including roughly three years of grace with an interest rate of about 5½ percent. Of the total U.S. contribution, about \$275 million is likely to be in the form of non-project or general commodity aid.

From August 1949 to 31st March, 1964, the amount paid by way of interest on foreign aid was Rs. 227.92 crores for loans repayable in foreign currencies and Rs. 38.28 crores for loans repayable in rupees. The following are the details:

	(In rupees crores)	
	Repayable in foreign currencies	Repayable in rupees
U.K.	33.79	
West Germany	49.88	
U.S.A.	28.57	38.28
Japan	3.72	
Canada	3.38	
Kuwait	3.16	
Russia	9.28	
Poland	0.03	
Total	131.81	38.28

The amount of interest likely to fall due during the rest of the current plan period would be Rs. 126.05 crores for loans repayable in foreign currencies and Rs. 37.81 crores for loans repayable in rupees.

OIL REFINERIES

New Company Planned

The Government of India has agreed to form a new undertaking in collaboration with Bechtel Asian Corporation Ltd for designing, construction and supervision, at least in the initial stages, of the oil refineries in India. The U.S. Company will have 49 percent of the equity capital of the new undertaking and the Government of India 51 percent. Bechtel Asian Corporation is already looking after the working of oil pipelines. It is expected to build the Tarapore atomic power station for India as a sub-contractor.

The proposed Company should indicate the shape of things to come. It will build for India refineries in the public sector, presumably in Madras, Haldia and in the north-west region of India. As reported last month, the Government has received offers for the supply of crude on competitive prices and to provide India with credit, again at competitive rates of interest, if India enters into an agreement, say, for five to seven years.

The new undertaking should reduce India's dependence on foreign sources for the building and running of refineries. It will also provide consultancy services and should enable India to apprise the construction and working of the existing three refineries in the public sector, one of which in Nummati, Assam, is already functioning and the other two in Barauni and Koyali are now under construction.

The chairman of the Oil and Natural Gas Commission has gone to Rome to finalise the deal for offshore concessions in Iran with E.N.I. and Phillips Petroleum. The deputy chairman or Bechtel Asian Corporation, Mr. Dorman, is expected in New Delhi towards the end of June to finalise the agreement for the proposed joint venture.

KIPPING LOAN

Demand for Assistance

Enquiries show that the total demand for assistance from the last "Kipping loan" amounted to Rs. 17 crores, against the availability of Rs. 5.3 crores. The Government first selected industries which could be eligible for the credit and units within the selected industries. Some units were given full amount asked for while others were allocated a part of the sum demanded. The aid pledged by the United Kingdom to the Aid-India Club will have a similar provision for the "Kipping loan".

U.S.A.

Meeting of Business Men.

Following the visit to India of some top-ranking U.S. business executives in April last, there was a meeting of 150 companies in New York to discuss their reports. The U.S. President, Mr. Lyndon Johnson, had sent them a message, supporting the case for larger American private investment in India.

PIG IRON

Increasing Supplies

The total availability of pig iron is estimated at about 1.2 million tonnes, against an estimated demand of

RING UP 22-5257 GRAM: CECIGATECO

For STEEL ROLLING SHUTTERS,

GRILES, RAILINGS, W.GATES,

STEEL DOORS & WINDOWS.

THE CALCUTTA COLLAPSIBLE GATE CO. PRIVATE LTD.

77, NETAJI SUBHAS ROAD, CALCUTTA - I

over 2 million tonnes a year. Various long and short-term measures for augmenting pig iron supplies are being considered, including the following:

(1) The Government is considering the import of over 150,000 tonnes a year of pig iron during the next two or three years, under the Indo-Russian trade agreement and agreements with other countries in the rupee payment area. Negotiations for this purpose are being carried on.

(2) Letters of intent have been issued for a pig iron plant in Ratnagiri, Maharashtra, with a capacity of 200,000 tonnes a year, and for a pig iron plant in Goa with a capacity of 300,000 tonnes a year.

(3) A scheme for a pig iron production unit in Bihar with a capacity of 300,000 tonnes has been approved by the Licensing Committee.

(4) The upper limit of capacity for pig iron production units to be licensed in the private sector has been increased from 100,000 tonnes to 300,000 tonnes. Further applications for establishing more units in the private sector are being considered favourably.

(5) A substantial expansion of pig iron production of the Mysore Iron and Steel Works, Bhadravati, has been licensed.

(6) The installation of the fifth blast furnace in Durgapur and the sixth blast furnace in Bhilai in anticipation of the fourth plan expansion programme for steel is being expedited.

(7) The Tata Iron and Steel Co., Ltd and the Indian Iron and Steel Co. Ltd have also been requested to consider the feasibility of advancing the commissioning of one blast furnace each in anticipation of their steel expansion programme in the fourth plan period.

(8) A technical committee is studying the feasibility reports for setting up two new blast furnaces of 400,000 tonne-capacity in the public sector in the Goa-Hospet and Bailadilla-Visakhapatnam region.

CZECHOSLOVAKIA

Equipment for Indian Projects

The president of Technoexport, Praha, Mr. J. Jonas, re-affirmed at a Press conference that within the framework of the second economic agreement, the Czech equipment will be delivered to the following projects:

(1) Expansion of the high-pressure boiler plant in Tiruchirapalli for doubling the capacity.

(2) Expansion of the heavy power equipment plant in Ramachandrapuram for doubling the capacity through the introduction of new products apart from turbines and turbo-alternators produced in the first stage of construction.

(3) Two plants for the manufacture of machine tools, each with a capacity of 5,000 tons of finished products a year.

(4) An additional foundry and forge plant.

(5) Two 110-megawatt thermal power plants with at least 30 percent Indian participation (for this power plant a part of equipment will be supplied by the heavy power equipment plant in Ramachandrapuram which is being built as part of the first economic agreement).

(6) Factory for the manufacture of tractors and power tillers.

(7) Supply of jigs, tools and fixtures for the projects enumerated above.

(8) Supplies of components for the production programme of the high pressure boilers plant in Tiruchirapalli, the heavy power equipment

plant in Ramachandrapuram, the heavy machine tools plant in Ranchi and for cement plants of the Walchandnagar Industries.

(9) Such other industrial projects and programmes as may be agreed upon between the two Governments.

In the near future, the Indian Government will specify which Indian organisations will be entrusted with the setting up of these factories and where the new plants will be constructed, so that the Czech Foreign Trade Corporations and especially Messrs Technoexport will start immediate negotiations about the production programme of these plants, volume and co-ordination of deliveries, to facilitate the conclusion of all contracts by 31st December, 1967, and the production of necessary equipment in Czech factories in time.

An agreement, it will be recalled, for a credit of Rs. 40 crores was recently signed. The credit carries interest at 2½ percent. It is repayable in rupees, the rupees to be utilised for financing the export of Indian goods to Czechoslovakia. In the case of projects, the period of repayment is spread over a period of 12 years commencing one year after final delivery of equipment. For components, the period of repayment is eight years.

SULPHURIC ACID PLANT

Tenders Received

Eleven tenders had been received for the manufacture of sulphuric acid plant by the Pyrites and Chemicals Development Company Ltd. They had been invited on a turn-key basis. According to the terms of the tender, the plant should be ready for production within the maximum period of two-and-a-half years of the date of acceptance of the tender and the placement of a firm order. The value of foreign exchange involved in the project is Rs. 80 lakhs.

AIRCRAFT

Amalgamation of Depots

The Government of India proposes to amalgamate all the existing aircraft manufacturing depôts in the country and form a corporation to run them. The new corporation will have within its ambit the aircraft factories now being managed by Hindustan Aircraft Ltd, the aircraft factory in Kanpur, and the factories which are being set up in collaboration with the Russian Government for manufacturing supersonic aircraft.

MINIMUM WAGES

Revision Urged

The State Governments have been requested to revise upward the minimum rates of wages for those scheduled employments under the Maximum Wages Act where they were initially fixed at less than Re. 1 a day. While requesting the State Governments to bring it at least to Re. 1 a day, the intention was not to peg it down to a minimum of Re. 1 a day, but to revise it upwards, wherever it was less than Re. 1.

S.T.C.

Allocation of Imported Cars

The following order of priority has been recently decided for the allocation of imported cars acquired by the State Trading Corporation: tourist promotion, Rashtrapati Bhavan, Raj

Bhavans, defence requirements, Central and State Governments, public-sector undertakings, and sales to public through sealed tenders.

Some comments are called for. In the first place, the Government will have to maintain a large stock of components and spares for the maintenance of these cars. Secondly, the socialist-minded Government has been denouncing anti-social activities of black-marketers. Side by side, the State-owned State Trading Corporation has been selling cars through sealed tenders at prices which have no relation with their purchase prices. It being a State enterprise, the Corporation is not liable to capital gains tax.

R.S.N.

Loan Granted

The Government of India has agreed to grant a loan of Rs. 60 lakhs to Messrs Rivers Steam Navigation Co. Ltd in the following instalments to help it tide over its current financial difficulties: Rs. 25 lakhs on 25th May, Rs. 20 lakhs on 21st June, and Rs. 15 lakhs on 1st July. The first instalment of the loan has already been sanctioned.

Out of the loan of Rs. 2 crores, which the Government separately agreed to advance to the Company for the rehabilitation of its obsolete fleet, the Company has so far availed itself of a total sum of Rs. 44,05,261.

SHIPPING

Collaboration Offers

In all, nine offers of foreign collaboration with the following Indian shipping companies and individuals have come to the notice of the Government so far: the South India Shipping Corporation, V.M. Salgaocar & Irmal Ltd, V.S. Dempo and Company, Ratnakar Shipping Company, Indian Overseas Shipping Company, Apeejay Lines, Mauriyan Shipping Company (under formation), Shakti Shipping Company (under formation), and Harsha Tankers and Shipping Agency.

The offers seek participation in the capital investment of either the existing shipping companies or in the formation of new shipping companies. Foreign participation in the share capital of the shipping companies up to 40 percent is permissible under the Merchant Shipping Act, 1958. The Government is disposed to consider such proposals favourably, provided the conditions laid down in Section 21 of the Act are fulfilled.

Consultancy Firm Proposed

Mr. D. Nicolson, chairman of the Production Engineering Ltd of the U.K. came to New Delhi to discuss the possibilities of starting a shipping consultancy firm in India. The Company has already a consultancy tie-up with Rolls Royce, Fiat and a firm of Japanese shipbuilders. It also helped to compile a World Bank report on the requirements of components and spares for the Indian motor-car industry. Following the report, the World Bank invited the Joint Secretary to the Central Ministry of Heavy Engineering, Mr. R. V. Raman, to negotiate a loan to finance the import of spares and components for the Indian motor-car industry.

FOREIGN EXCHANGE

Scheme for Exporters

In accordance with the recommendations made by the Mudaliar

CAPITAL, 11th June, 1964.

and Mathrani Committees, the Government has approved a scheme in order to augment the foreign exchange facilities available to exporters for the import of raw materials, components and spare parts required by them.

Under the proposed scheme, commercial banks dealing in foreign exchange will obtain lines of credit from their principals, branches or correspondents abroad on the strength of an assurance from the Reserve Bank of India that necessary foreign exchange will be released to repay the credits by the due date. Against these lines of credit, exporters of proved export performance and recommended by the bank concerned will—on approval by a committee to be appointed for this purpose by the Central Government—be granted import licences for raw materials, components and spares.

The exporter will be required to execute a bond undertaking to effect specified exports within a stipulated period. The import licences will be issued only for the value of raw materials and components permissible under the appropriate export promotion scheme and required for the production of the goods to be exported.

TOBACCO

S.T.C. Signs Contract

The State Trading Corporation has entered into a contract for the export of 2,000 tonnes (about 20,000 bales) of various grades of flue-cured Virginia tobacco valued at about Rs. 46 lakhs to Russia from the 1964 crop. A substantial part of the tobacco for export under this contract has already been procured by the S.T.C. from the Guntur District Tobacco Growers and Curers Co-operative Society, Ongole, and moved to Madras port where it is awaiting shipment to Russia.

MINERAL ORES

Reducing Port Charges

The question of reducing the port charges on the export of mineral ores was taken up with the port trust authorities, it is learnt. The Madras Port Trust and the Calcutta Port Trust have agreed to a reduction in charges with effect from 1st April, 1964. The matter is being further pursued and steps are also being taken to increase the loading rate at the ports so as to reduce the overall port charges.

SOUTH AMERICA

Exploring Export Markets

A trade delegation has left for South America to visit Brazil, Argentina, Chile, Peru, Bolivia, Columbia and Venezuela during its seven-week tour. At present, India exports jute goods to many countries in the region, particularly Argentina. Textiles, tea and shellac are also exported by India to the Latin American countries. Chile exports to India copper and fertilisers, while Peru exports copper and cotton. Some other metals are also exported from South America to India. It is hoped to diversify and increase the trade by exporting engineering goods, industrial machinery, structural, chemicals, paints and varnishes, glass and ceramics, rubber goods and plastics and other manufactured goods from India. It is hoped that some of the new manufactures will find a market in these countries. There are also possibilities of importing essential raw materials needed by India's developing industries.

CAPITAL, 11th June, 1964.

London

MEETING NEEDS OF TRAINED PERSONNEL IN U.K.

(FROM OUR LONDON CORRESPONDENT)

EARLY in May the U.K. Industrial Training Act passed on to the Statute Book almost unnoticed, and the Minister of Labour named the 28 members of the Central Training Council who, under the chairmanship of Sir John Hunter, head of the Swan Hunter Group of Companies, are to advise the Minister on the exercise of his functions under the Act. They comprise six employers, six trade union leaders, two representatives of the nationalised industries, two of the recently appointed chairmen of industrial training boards, six educationists and six others with a specialised interest in industrial training. Ultimately, four other chairmen of industrial training boards will be added, but these seats are being kept in hand until boards have been appointed to cover a wider range of industry.

The main functions of the Council will be to keep under review the performance of the different boards and the adequacy of training arrangements in industry generally, and to advise the Minister on the use he should make of his powers to remedy deficiencies. It will give advice to both the Boards and the Minister on such questions as training methods, the use of tests and research—advice which the Minister has said “will not lightly be disregarded”. This relationship between the Council, the Minister and the Boards will, it is felt, prove to be one of the most fruitful aspects of the Act.

One aspect to which the Council may give particular attention is to training for occupations which are found in virtually every industry, such as commercial and clerical occupations. It may wish to recommend standards for these occupations which could be adopted by all the Boards concerned. The Council will be expected to consider proposals for the setting up of training boards in particular industries, and to consider other matters which may be of interest to the various boards, including the training of officers and instructors. It is also expected to assume the responsibilities for publication of booklets on training, such as have been issued by the Industrial Training Council, and to advise the Minister on the appointment of a board of directors to administer the Training Advisory Service.

The Industrial Training Act has three main objectives: (1) to ensure an adequate supply of properly trained men and women at all levels in industry; (2) to secure an improvement in the quality and efficiency of industrial training; (3) to share the cost of training more evenly between firms. To achieve these objectives, the Act gives the Minister of Labour power to set up industrial training boards and the first four to be established are those for engineering, construction, iron and steel and wool textiles. The establishment of the Central Training Council is provided for in the Act, which gives it the duty of advising the Minister of Labour “on the exercise of his functions under the Act and on any other matters relating to industrial or commercial training which he may refer to it”. The Act also requires the Council to report on its activities to the Minister from time to time, and whenever he may direct, and requires

the Minister to lay a copy of every such report before Parliament.

Influence on Progress

The Industrial Training Act could have an immense influence on Britain's economic progress, so it is good to know that the Minister is not content with the setting up of the first four Boards. He has already made it clear that he wants to get on with the task of setting up more Boards as fast as possible. A useful guide has just been published explaining what these boards aim to do and how they will go about it. The question now is how soon Mr. Godber's efforts can lead to the virtual revolution in industrial training methods which is still needed in British industry. If the training boards, and the sub-committees which they appoint, tackle their work with real determination it is clear that a great deal can be achieved. The boards, with their powers to impose a levy on all employers, to make grants to those employers who run approved courses and to provide their own training facilities direct, could change industrial attitudes to training radically. Or they could do very little. There are bound to be employers who regard the imposition of levies as an irritating interference and trade unionists who regard any attack on old-established systems of apprenticeship as intolerable. Together these could combine to defeat the object of the Act.

Can the Government overcome this kind of inertia? First, the Minister is likely to be in fairly close contact with the boards, since he will have substantial sums to add to those already raised by levy in each industry and will want to work out with the board members how the money should be spent. Secondly, the Act provides the Minister with a small inspectorate which will keep him informed on what the boards are doing and provide a flow of persuasive advice and assistance where it is needed. Thirdly, the Central Training Council will keep the whole system under review and advise the Minister on any failings. If the inspectorate is composed of men of sufficiently high calibre, if the Central Council does its job well, and above all, if the Training Boards throw themselves into their work, then a supply of trained people adequate to meet Britain's expanding needs will be in due course be forthcoming. But there are many “ifs” and it will need a lot of skill and energy to weave through them all successfully.

The whole conception of this scheme is sufficiently new and revolutionary to merit the explanation of its working which is provided in a small booklet, which has been made available by the Ministry of Labour, explaining the way in which the Boards will function and the Act will operate. Before he sets up a Board for any industry, the Minister will consult organisations representing employers and workers in the industry concerned. When he has decided that a Board should be set up, he will make, and lay before Parliament, an industrial training order giving effect to his decision. This order will include a definition of the industry for which the Board is to exercise its functions. Every Board will have a chairman (and possibly a deputy chairman) who will be a person with industrial or commercial experience.

There will be an equal number of employer and trade union members (appointed after consultation with appropriate organisations) and a number of educational members. Representatives of the Ministry of Labour, the Department of Education and Science and the Scottish Education Department will attend meetings of Boards, but will have no vote. It will be for the Minister to decide how many Boards are needed. This will be determined to some degree by the outcome of consultations with employers' and workers' organisations and by the way in which industries are defined. Because of the amount of work involved in setting up boards, however, it is likely to be some while before there are boards covering the full range of industry. The Act covers all activities of industry and commerce. That includes, for example, agriculture, distribution, finance, banking and insurance, in addition to manufacturing industries.

Duties of Boards

Boards will have two main duties: first, to ensure that sufficient training is provided; second, to publish recommendations on such matters as the nature, content and length of training for occupations in their industry (and also the further education which should be associated with the training). Before a Board can effectively start work it will have to put up proposals to the Minister on how it intends to exercise its powers. These proposals must have the Minister's approval. Once proposals have been approved, the Board will have to work within their framework unless and until new proposals have been submitted and approved. Separate proposals will have to be submitted for the raising of a levy. Before these can be put into effect, they must be approved by the Minister and incorporated in a levy order which will be laid before Parliament.

The Minister can direct a board at any time to submit proposals and if he is dissatisfied with them he can direct the board to revise them. In the last resort, if the board fails to submit satisfactory proposals, the Minister can declare it in default. In that case, the members of the board would be replaced by new members whom the Minister would be free to appoint without having to consult any interested organisation. The powers of a Board extend to all forms of training (including retraining) and to all occupations in its industry. This does not mean, however, that it is under an obligation to make recommendations for standards of training for every type of occupation. Many boards will, initially at least, probably concentrate their attention on technicians, craftsmen and operatives. First, it must find out how many people are already being trained. The Act gives both the Minister and the Boards (subject to the approval of the Minister) power to require employers to keep records and make returns, so that information about numbers being trained and other relevant statistics can be secured by the Boards. Secondly, the Board will have to prepare estimates of its industry's skilled manpower requirements in the future.

The Ministry of Labour's Manpower Research Unit, and the Economic Development Committee being set up by the National Economic Development Council, will be able to help in this. Finally, the Board will

have to draw up a programme designed to meet the training needs of its industry. It can provide its own training courses, or arrange for other organisations to provide training. But its main weapons will be its obligation to impose a periodic levy on employers, and its power to make grants to those whose training courses are approved by the Board. An employer who provides no training will have to pay a levy, but will get no grant from the Board: an employer who does approve training will pay the levy, but may receive grants towards the cost of training. In this way, an employer will have a greater incentive than before to see that his employees receive training, and in particular to see that the quality of training is of a standard approved by the Board. The only obligation on an employer will be to comply with requests for information and to pay a levy.

Obligations of Employers

The Act does not itself exempt any employer who comes within the scope of a training board from the obligation to pay a levy. But the Board may, if it thinks proper, propose that employers of a particular class should be exempted. Each Board, subject to the Minister's approval, will determine the rate of levy for its own industry, with voting confined to the employer and worker members only. The rate will have to be fixed in the light of the Board's general policy and plans; and it will have to be sufficient, together with the grant from the Minister, to meet the cost of the proposals put to the Minister. Firms will be able to appeal against assessment to special tribunals established by the Minister for the purpose, but not the rate of levy proposed and approved.

The levy will be an extra charge only on those employers who do not provide approved training. In effect, they will be paying, through the levy, for the training of the skilled men they recruit. But if a firm is doing its own training and its programme is approved by the board it may receive a grant which will offset all or part of the levy it pays. If it does more than its fair share of training it may receive more back in grant than it pays in levy. In this way, the Act will lead to a fairer distribution of the cost of training between one firm and another. The levy paid by a firm will, like other training expenses, be allowable in calculating the firm's profits for tax purposes, and grants will be liable to tax like other sources of income.

Boards will pay grants only to firms whose standards of training are in line with their recommendations. While no employer will have a legal obligation to follow the Board's recommendations, there will be a considerable incentive for him to do so. Firms will be subject to inspection by a board if they want a grant. Boards will have to satisfy themselves that grants are given only where standards are met. They can scarcely do this without some form of inspection—whether by officials or by members of local or district committees or in some other way.

The warm welcome which the White Paper on Industrial Training and the Act itself have received from employers, trade unions and educational interests is evidence of the recognition that industrial training arrangements in this country are capable of considerable improvement. The Act provides the machinery by which improvements can be achieved, but effective operation of that machinery requires that employers and trade unions show real readiness to re-examine existing arrangements, critically, and to accept the changes which such a reappraisal shows to be necessary.

DEADLY DISTANCE

THINKING DISTANCE
BRAKING DISTANCE

Road Safety
is a matter of life ...and death

(Issued in the interest of Road Safety by Burmah-Shell.)

FEET 10 20 30 40 50 60 70 80 90 100 110 120 130 140 150 160 170 180 190 200 210 220 230 240

A vehicle approaches you at only 20 mph. Even as the driver thinks of braking, the vehicle has advanced 20 ft. With brakes screeching, it comes another 20 ft. closer. 40 ft. before it comes to a stop!

No moving vehicle can stop dead. Study this graph. It shows distances needed by vehicles to stop, at different speeds. Double these deadly distances for heavy vehicles, and during the rains.

COMMITTEE TO BE SET UP FOR FIBRE DEVELOPMENT

IN place of a high-powered board under the Ministry of Food and Agriculture, as recommended by the Srivastava Committee, the Government of India has decided to set up a central committee for doing jute development work. It will consist of the State Agriculture Secretaries, and representatives of the Planning Commission, jute growers and the industry. The committee will also scrutinise all jute development programmes and offer advice to the Central and State Governments. It will be attached to the Indian Central Jute Committee, which has been in charge of all aspects of jute research during the last three decades. The Special Secretary to the Central Ministry of Food and Agriculture will preside over both the committees. A food and agricultural production commissioner will be entrusted with the task of supervising the jute development programme.

The Central Government has rejected the suggestion of the Srivastava Committee for an autonomous statutory board on the ground that jute is not a plantation crop like tea, coffee or rubber, whose development is being promoted by separate boards. A separate jute board, it is stated, will duplicate the functions of the State Governments which are already providing extension services to jute farmers. Besides, the Jute Commissioner has been supervising the orderly marketing of jute.

A phased nine-year programme has been drawn up for bringing the entire acreage under improved strains of jute. A package programme for intensive cultivation has been launched in three selected districts of West Bengal and two districts of Bihar. A number of steps have been announced to promote intensive cultivation and to provide improved seeds, adequate fertilisers and better retting facilities. The use of fertiliser-mixtures will also be popularised by subsidising them to the extent of Rs. 50 a ton. The Chief Development Officer of the I.C.J.C. has so far been helping the State Governments to formulate and implement better retting practices with Central financial aid.

Decline in I.J.M.A. Stocks

Mills reporting to the I.J.M.A. show a decline in the closing stocks of gunnies from 128,900 tonnes to 125,000 tonnes during May. Sacking fell by 3,500 tonnes to 41,300 tonnes, miscellaneous goods by 800 tonnes to 15,600 tonnes and hessian by 700 tonnes to 47,000 tonnes. Stocks of carpet-backing cloth, however, increased by 1,100 tonnes to 21,100 tonnes. At the end of May 1963, the inventories were 96,100 tonnes—32,400 tonnes of hessian, 45,700 tonnes of sacking, 5,400 tonnes of carpet-backing cloth and 12,600 tonnes of other goods.

Jute circles feel that the decline in stocks is due to reduced output following the loss of substantial man-hours during the month. Besides two days of closure due to the death of Mr. Nehru, there was an 11-day lock-out in a mill in the Barrackpore area and a four-day strike in a Kamarhatti mill.

Price Trends

Gunny prices have now reached a level where mills are just covered for their expenses in sacking and left with a profit margin of around Rs. 30 a ton in hessian. But consumers are sitting on the fence, awaiting a further decline in prices. On 6th June, 1963, raw jute, ready, basis

Assam Bottoms, was sold at Rs. 30 a maund and Upper Assam White Bottoms for September at around Rs. 30.62. B Twills, spot and ready, was transacted at Rs. 112.35 a hundred bags and hessian 40in. 10oz. at Rs. 51 a hundred yards. In the hedge market, hessian for August fluctuated between Rs. 49.42 and Rs. 49.08 to close at Rs. 49.16 and sacking for August moved between Rs. 113.70 and Rs. 112.85 to close at Rs. 112.90.

But on 6th June, 1964, Assam Bottoms, spot and ready, was quoted a rupee dearer at Rs. 31 a maund, and Upper Assam White Bottoms for September 62nP higher at Rs. 31.24. Spot B Twills, ready, was done at Rs. 111.70 and hessian at Rs. 44.20. In the hedge market, hessian for August moved between Rs. 44.60 and Rs. 44.44 to close at Rs. 44.56 and sacking for August fluctuated between Rs. 111.70 and Rs. 111.30 to close at Rs. 111.65.

The emergence of mills as keen sellers for all positions has, no doubt, contributed to the setback in the price trend. But tired long-liquidation, combined with aggressive short-selling, damaged sentiment in the hedge market on 2nd June when hessian for August dipped to Rs. 44 and B Twills for August to Rs. 110.40.

Floor Prices for Forward Deals

With a view to arresting such bear raids, the East India Jute and Hessian Exchange Association has fixed certain floor prices for hessian and sacking (August and November deliveries) from 3rd June with the prior approval of the Forward Markets Commission. The directive prohibits trading during any day whenever hessian prices rule at or below Rs. 44 a hundred yards or 25nP less than the respective closing rates for the previous day. In sacking, the minimum price has been fixed at Rs. 110.50 a hundred bags or 50nP less than the respective closing rates for the preceding day. Bear pressure seems to have abated since these restrictions were introduced.

Pakistani Industry Expands

Addressing the annual meeting of the Pakistan Jute Mills Association in Dacca early this month, Mr. M. M. Ispahani, chairman of the P.J.M.A., claimed that the Pakistani jute industry had secured a firm foothold in the world's sacking markets. He felt that it was time to direct its attention towards getting a larger share of the world's hessian business. Pointing out that the Indian jute industry had so far been enjoying a virtual monopoly in this sphere, he said that hessian offered better prospects in the long run.

Latest P.J.M.A. statistics show that Pakistan has been fast increasing her installed capacity. Of late, the emphasis has been shifted from heavy goods to hessian and carpet-backing cloth. That country has already expanded her hessian exports and shipped substantial lots of carpet-backing cloth. The average number of looms operating rose from 8,120 in 1961-62 to 8,837 in 1962-63, and the output from 271,081 tons to 298,161 tons. During the nine-month period ended March 1964 about 9,800 tons were in operation, producing 244,618 tons of gunnies. Although the capacity is expanding fast, at the March level of operation with about 11,000 looms, the annual output will be more than 350,000 tons. This is about 37.13 per cent of the third plan target of the Indian industry with a rated capacity of more than 70,000 looms in

January 1962. Besides, the Pakistani industry is setting up 12 mills with a loomage of 250 each in the heart of the jute-growing districts in East Pakistan. Another 500-loom mill is planned for Jaranwala in the Lyallpur district of West Pakistan. On completion of the projects by the end of next year, Pakistani loomage will rise to 18,000.

P.J.M.A. statistics show that the Pakistani industry produced 72,607 tons of hessian and 186,372 tons of sacking in 1961-62. The figures rose to 84,540 tons and 203,873 tons in 1962-63. For the nine-month period ended March 1964, they were 69,082 tons and 166,785 tons, respectively. Of the total output, hessian constituted 26.7 per cent and sacking 68.7 per cent in 1961-62. The corresponding percentages were 28.3 and 68.3 in 1962-63 and 28.2 and 68.1 during the nine months ended March 1964.

THE JUTE MARKETS

Manufactured Goods: Opening on a subdued note on reports of a decline in the spot and afloat burlap prices in New York by 0.05 cents a yard to 11.25 cents resulting from the apathy of the bag-makers, who held adequate stocks for near-term needs, the Calcutta gunny market looked up on the news that the U.S.A. had accepted Indian offers for 10 million yards of burlap. There were also scattered enquiries for sugar twills, woolpacks, and other non-standard constructions for ready delivery. But these were in short supply. The

Government offtake of about 500 bales of B Twills for June delivery failed to satisfy market expectations. Sentiment again suffered a setback on reports of heavy liquidation in the hedge market. But on Tuesday, the publication of the I.J.M.A. stock figures for May showing a decline in stocks induced a minor rally, helping hessian to erase the week's losses and sacking to close with a small gain. A shortage of lighters holding up smooth loading was reported from Calcutta port. The hedge market continued to be stable since the introduction of floor-price restrictions in hessian and sacking for August and November deliveries. Fluctuations were narrow. Turnover was small in the spot market and moderate in the futures market. The closing undertone was steady.

Wednesday's quotations were as follows:

	June	July	July-	Oct.-
			Sept.	Dec.
40in. 73oz.	32.90	33.15	33.25	33.60
40in. 8oz.	35.65	—	—	—
40in. 10oz.	44.10	44.25	44.60	45.10
B Twills	111.95	112.00	112.06	112.75
Cornsacks	113.75	114.00	114.25	114.50
Heavy Cees (Plain)	114.00	112.75	112.25	112.50

Liverpools	127.00	127.00	127.00	127.00

Raw Jute: Easy conditions prevailed in the raw jute market during the past week. Holders of substantial lots of off-grade fibre and mesta made frantic efforts to clear their stocks even at a discount from the derivative levels on the report that the new crop was thriving in the early-sown low-lying areas. Reports from Gangetic West Bengal and other adjoining districts also confirmed that the plants were well-developed and intercultural was going on in full swing. Alternate sunshine and showers induced expectations among growers of an early bumper crop. Besides, farmers were making use of the liberal facilities being extended by the Government for improving quality and yield. Some weak holders disposed of heavy lots of lower-grade

THE U.K. JUTE MARKETS

FIBRE RATES
UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was quiet in Pakistan, and some adjustments took place in the E.P.C. values. The higher grades of both white and dark jute were reduced by £2 to £4 a ton, but better quality cuttings were raised. This possibly shows the present trend of buying with most interest shown in the lower qualities. Despite the above alterations, little or no change has been made in offers here. Prices are still very irregular with the lowest rates at £108 10s for Mill Lightnings, at £95 for Mill Hearts and at £81 for Grade Hearts, c.i.f. U.K., for June-July shipment. Grade Tossa-3 was available to a limited extent at £123 10s and Grade Tossa-4 at £105. Outport Tossa-3 was at £93 10s and Outport Tossa-4 at £84, June-July. Cuttings were steady at £59 for S.N.C. and at £51 for N.C. Only a few offers of mesta were being made with prices at £85 for A, at £76 for B, at £67 for C and at £49 for cuttings, c.i.f. U.K., June-July.

More offers of new crop long jute were being made, but most of the prices quoted were for groups. Mill Hearts ranged from £94 and Grade Hearts from £81 for August-September shipment. Dundee spinners prefer to purchase named marks, but in very many instances, current E.P.C. prices are being asked and this is of little interest to buyers. Very few offers of Siam jute were being made in the U.K. and prices were more or less nominal. Values are at £75 10s for grade A, at £69 for grade B and at £65 for grade C, delivered mill Dundee for June-July shipment.

The Calcutta goods market became easier at the beginning of the week, and hessian prices touched their lowest point for nearly four years. Subsequently, a slightly steadier tone developed and quotations were at 66s 8d for 40in. 10oz, and at 49s 5d for 7½oz, a 100 yards f.o.b. Calcutta for prompt shipment, at 67s and 49s 7d June and at 67s 3d and 50s July-September. B Twills were at 170s 6d for all the above shipment periods.

Prices of Dundee yarns and cloth were firm, and a small but steady movement took place. However, the heavy end of the trade was still quiet, and some short time working was in force where sackings were concerned.

HIDES AND SKINS

The market continued quiet and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 2nd June and 8th June, 1964)

Cowhides: Wet salted (Ord.) 12,500 pcs. on the basis of Rs. 7.25 to Rs. 9; Wet salted (Slaughtered) 29,500 pcs. on the basis of Rs. 8 to Rs. 12 and Rs. 16 to Rs. 24; Wet salted (Ord.) 2,000 pcs. on the basis of 60 Paise a lb.

Goatskins: Wet salted (Daissee, Kustia) 60,800 pcs. on the basis of Rs. 310 to Rs. 325 and Rs. 360 to Rs. 370; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.75 a piece; Kissenganj 1,100 pcs. on the basis of Rs. 315; Kissenganj (Heavy) 4,200 pcs. on the basis of Rs. 510 to Rs. 520.

Bazaar Stocks

(8th June, 1964)

Cowhides: Wet salted 13,500 pcs. **Goatskins:** Wet salted (Daissee, Kustia, Killed) 93,000 pcs.; Assam-Dinajpur 289,000 pcs.; Muzafferpore-Patna-Pakur-Kissenganj 3,97,000 pcs.

CAPITAL, 11th June, 1964.

Commodity Markets

CASHEW PRICES RULE FIRM

(FROM OUR SOUTH INDIAN CORRESPONDENT)

ALTHOUGH the foreign buyers are less active now, the cashew market is ruling firm with the price of processed kernel ruling at 60 U.S. cents (approximately Rs. 2.85) a lb. This is a price considered rather "too high" by several foreign buyers of this protein-rich edible nut. Their reported disinterest is attributed by processors in Quilon to this "high price" of the kernel. The principal buyers, the U.S.A. and Russia, bought substantial quantities of processed kernels recently and their immediate requirements might have been adequately covered. This might be another reason for their keeping away from the market at present. This does not, however, mean that no business is taking place at present. The actual position is that buying is not so brisk as it was about a month ago. In spite of the present slackness in purchases by foreign buyers, there is no accumulation of stocks in the market, according to trade circles. Most shippers have entered into adequate commitments to keep them in good stead for the next two or three months, it is said. Therefore, the inactivity on the part of the foreign buyers now noticed does not worry them very much.

Export of processed kernels is running ahead of last year's. The Cashew Export Promotion Council has just announced that there has been a further improvement in exports during April at 185,000 cases of 50 lbs each, compared with 145,000 cases in the same month last year. Exports during the first four months of 1964 are estimated by the Council at 674,000 cases valued at Rs. 6.94 crores. This was a Rs. 34-lakh gain over that of the previous corresponding period. Shipments to important destinations during January-April 1964 with the figures for the corresponding period of last year in brackets are given below: U.S.A. 352,000 cases (401,000), Russia 98,100 (118,000), East Germany 67,500 (59,500), U.K. 51,600 (37,500), Australia 22,100 (27,900), West Germany 17,000 (12,700), Japan 9,800 (6,700), the Netherlands 8,600 (6,700), Canada 14,500 (16,100) and France 5,900 (3,800).

Export of cashewnut shell liquid has also registered a fair increase during this period. It amounted to 3,800 tonnes, valued at Rs. 53 lakhs, compared with 1,700 tonnes, valued at Rs. 20 lakhs during January-April 1963. As against this bright export picture, there are complaints from the processors that the quality of the rawnuts they have been getting from Africa this year has been far from satisfactory. Extensive damage is reported due to adverse weather in the producing areas. Consequently, the output of kernels may not be as large as it was last year unless the rawnut supply shows a substantial increase. The import of rawnuts from Africa last year was to the tune of 164,300 tons. Imports so far from the current season's crop is estimated at 130,000 tons. The available balance from this crop might come to another 30,000 tons to 40,000 tons, in the estimate of the processing circles in Quilon. The price difference between Angoch and Lourence varieties of African nuts had narrowed down considerably this season. The price of Angoch had declined because of its lower quality this time. The Angoch variety is at present quoted at about Rs. 800 a ton and the other variety Rs. 15 to Rs. 30 lower. Practically the whole of the Indian crop has reached the processing factories. The

crop, as usual, is estimated at the normal figure of 60,000 to 65,000 tons by the processors. The Indian crop was available at around Rs. 900 a ton.

LEMONGRASS OIL

S. T. C. Purchases

The State Trading Corporation will resume with immediate effect the purchase of lemongrass oil from Kerala as a measure of price support for its producers. It will buy lemongrass oil containing not less than 78 percent of citral at Rs. 11 and oil with 82 percent citral at Rs. 12 a kilogram. These prices have been fixed in consultation with the Kerala Government which took a very keen interest in getting this arrangement started last year resumed. The Central Government which instructed the S.T.C. to buy lemongrass oil this year also, responding to the request from the Kerala Government, has expressed the hope through a recent notification that the producers would fully co-operate with the Government in producing better quality and also by restricting their production to less than 80 percent of their last year's crop. Last year, India had produced as much as 1,300 tons of lemongrass oil of which the S.T.C. had bought about 1,000 tons. It was with great difficulty and at some financial loss that the S.T.C. could export about 400 tons from this quantity.

The world market for lemongrass oil has been slumping heavily during the last two years due to an excess supply, and also due to competition from synthetic substitutes. China and Guatemala have become serious

rivals to India in the world market for this essential oil. It was with a view to helping the producers of this oil who are confined to Kerala that the S.T.C. had entered the market under the price support scheme of the Government of India. It did really alleviate the distress of the producers by its purchases and the news that the S.T.C. is resuming the purchases is greeted with pleasure and relief by the producers. As overproduction has become a serious threat to the stability of the lemongrass oil market, it would be in their own interest if the producers voluntarily impose some restraint on production in the new season which has just begun in Kerala.

As in the previous year, the S.T.C. will open depots in Cochin, Alwaye, Calicut, Tellicherry, Muvattupuzha, Kuruppampady, Manantvadi, Taliparamba, Adimaly, Kothamangalam and Piravam where producers can bring their oil up to certain limits fixed for each of the depots. It will purchase in the coming six months quantities of lemongrass oil not exceeding 750 tonnes.

The S.T.C. director, Mr. K. P. U. Menon, said after a meeting with the Kerala Minister for Agriculture, Mr. E. P. Poulse, and officials of the State Government, that the State Government would be advising the lemongrass cultivators to reduce their production by 50 percent during the current season in view of the huge carry-over stocks from the previous season. The S.T.C. would buy only 750 tons of lemongrass oil this season, which represented only about 60 percent of the normal production in this country. Mr. Menon said that 88 percent of the world requirement of this essential oil was produced in Kerala. Lemongrass cultivation in Kerala covered as much as 70,000 acres. The annual yield from this cultivation was estimated at about Rs. 2.5 crores. Mr. Menon disclosed that the S.T.C. was having a carry-over stock of about 600 tonnes from the purchase it made last year. The Central Government had lost a few lakhs of rupees through this price support

measure. The Centre had now abolished the floor price fixed for exported oil. The exports would be canalised through the S.T.C. Exports would, however, be permitted through the normal trade channel with the prior approval of the S.T.C.

RUBBER

Natural Vs. Synthetic

A more rigorous competition between natural rubber and synthetic rubber in the coming years is forecast by the International Rubber Study Group which had its 17th meeting recently in Tokyo, Japan. The Study Group is of the view that those countries which are making earnest efforts to improve their efficiency in natural rubber production will be in a position to meet any challenge from synthetic. The key to successful competition with synthetic is progressive reduction in the cost of production of natural rubber and the experience so far is that this is possible.

The chairman of the Indian Rubber Board, Dr. Rama Varma, who attended this meeting of the International Rubber Study Group said on his return that synthetic rubber stocks were getting accumulated in various countries and consequently its price was also slumping. The Rubber Study Group felt that the chances for better understanding and co-operation between the producers of both natural and synthetic were getting brightened in view of the falling prices of both. There was now larger scope for joint action in sales promotion and market expansion. There was also need and scope for improving the quality of natural rubber. The Study Group felt that duplication could be avoided by sharing the knowledge gained through research in the various rubber research institutes. The director of the Malayan Rubber Research Institute would be visiting the Indian Rubber Research Institute in August this year on the basis of this recommendation.

in official circles what damage is being done by persisting in the policy of large-scale investment in public-sector heavy industry financed out of massive taxation. The argument that it somehow strengthens national security is ludicrous; by holding back the pace of economic advance it, in fact, endangers it. India cannot hope in the foreseeable future to produce herself all the weapons needed for her own defence. Only two nations in the world are at present able to do that; any attempt on India's part to do the same can only result in economic progress being disastrously retarded for the sake of acquiring a small number of weapons which, by the time they can be turned out, will be hopelessly obsolete.

The theory that the concentration on heavy industry will eventually be import-saving is another myth. Generally speaking, the more industrialised a country becomes, the greater is its reliance on foreign trade and the higher is the proportion of this taken up by manufactured imports and raw materials. This may not be true of Russia, but for India to expect to repeat the performance of that country without at the same time adopting its methods is simply unrealistic. Planning here has already vastly expanded the bill for "maintenance imports"; there is not the slightest evidence that this trend will not continue. In the meantime, the inflation, the loss of production in other sectors of agriculture and industry, the damage to national savings, and the spawning of bureaucratic practices, are all proving more than the economy can stand. This is obvious enough when viewed from abroad; the fact that it is only slowly being appreciated in India is something which it may be possible to explain, but scarcely to excuse.

An effective development policy, as Professor Shenoy infers, must concentrate on avoiding inflation, expanding exports, attracting private

foreign capital, diminishing the influence of the bureaucracy, improving productivity and savings, keeping taxation to the minimum, and encouraging effort and enterprise by all available means. There is a good case for examining the value of the rupee, as Professor Shenoy suggests, but this would produce few long-term benefits if undertaken in isolation from a drastic reform of economic planning as a whole. The criterion here must be whether inflation could be permanently cured; under existing circumstances, this would be obviously impossible. At present the value of the Indian rupee is being maintained by massive foreign aid. It may not always be so fortunate and future development policies, which do not provide for such a contingency, would certainly be unsound.

Increasingly India is being threatened with having to adjust her economic policies so as to allow for sudden reductions in foreign aid—perhaps made for purely political reasons—and in order to promote alternative methods of earning foreign exchange. This much the current trend of international thinking on aid problems makes clear. Under existing conditions as induced by the rigidities of planning, a reduction in the flow of assistance would constitute a national disaster. Clearly there is something wrong with a system based so heavily on foreign support, and unless India's planners can effectively diagnose what it is and devise the necessary adjustments before foreign benefactors become thoroughly disillusioned, the nation is in for a thin time indeed. It is the ultimate condemnation of current planning for self-sufficiency in this country that it is making us progressively dependent on foreign assistance. If that trend is not speedily reversed by amending the policy which Professor Shenoy calls Statism, then the present obvious risks will inevitably and rapidly become realities.

may be able to do better now with the larger resources allocated to them by the Finance Ministry, but the bulk of the requirements will still have to come from private savings. The Unit Trust cannot be expected to catch on if the small investor sees no prospect of capital gain in a market where equity values are severely depressed by the heavy fiscal burden placed on the corporate sector.

Finance is, however, not the only restraint on growth. Licensing policies are equally to blame, as is evident from the case histories compiled by the Indian Engineering Association. In the field of instrumentation, for instance, a licence has been refused to a private entrepreneur on the plea that the item is to be taken up in the public sector. The refusal would have been perfectly valid if the State enterprise could be expected to commence production within a reasonable period of time, but this was out of the question in the particular case cited. In another, a very attractive private scheme was turned down because something similar was contemplated by a State-owned enterprise at a far bigger cost. These cases apart, the ever present threat of the State branching out into new industries has an obviously deterrent effect because of the fear of unequal competition. Discrimination in the allocation of scarce resources and in the making of State purchases is not always easy to pin down, but it is a possibility which the affected industries know they may have to reckon with. Something more than generalised assurances of fair treatment are needed if the fears that exist are to be allayed.

Another major handicap resulting from the present policies is the disadvantage in which a serious entrepreneur is placed by the farming out of the capacity to be licensed among many applicants regardless of their qualifications or resources. The high proportion of licences which remain infructuous (but block serious aspirants nevertheless) tell their own story. The Swaminathan Committee's recommendations do not touch upon this issue, which raises the delicate problem of adjudicating between new entrepreneurs and the well-established ones who can reasonably be expected to fulfil what they set out to do. But even if the lapse rate in licences can be reduced by applying a stricter means test than in the past, the fragmentation of capacity to satisfy regional ambitions is far more difficult to tackle. The only possible solution is to determine the minimum viable size of units on the basis of objective technical appraisals by independent experts. This is a field where the Department of Technical Development can be expected to make a contribution if it is called upon to do so.

Armed with expert opinion, the administrative ministry may be better able to resist pressure from State capitals than it can do at present. In the now famous case of scooters, the Planning Commission had proposed that the capacity of 50,000 to be licensed during the third plan should be allocated between just two units, but actually seven were licensed. Many months later, the Minister in charge sadly confessed that there was no hope of bringing costs down to a reasonable level unless there was some measure of integration in the production facilities. He had the same plea to make concerning textile machinery, where again there was similar disarray. If such problems are to be avoided in the future, licensing will have to be placed on a rational basis from the start. Apart from the waste of resources implicit in needless duplication, it is a positive deterrent to the serious entrepreneur. The fragmentation may discourage him altogether from entering an industry where his participation may well make all the difference between fulfilment of targets and serious shortfalls. But these larger policy issues were unfortunately outside the purview of the Swaminathan Committee.

NEW PRICE POLICY FOR COTTON

THE Government of India has decided to maintain the floor and ceiling prices of cotton for the 1964-65 season at the same level as in the current season (1963-64). Marginal increases have, however, been made in the floor and ceiling prices of some of the varieties, in view of the improvement in their quality. Important among them is the increase of Rs. 8 a quintal (Rs. 28 a candy) made in the floor and ceiling prices of Digvijay

"A". Further, the varieties AK-235 and AK-277 have been included for the first time in the price schedule and they have been given the same floor and ceiling prices as for Gaorani 6 and 12. A premium has also been provided for saw-ginning in all varieties, excluding Bengal Deshi, at a uniform rate of Rs. 14.10 a quintal (Rs. 50 a candy) at the floor level and Rs. 21.10 a quintal (Rs. 70 a candy) at the ceiling level. In the case of Bengal Deshi,

the premium will continue at the existing level of Rs. 9 a quintal (Rs. 30 a candy). The prices specified in the schedule will be reduced for cotton which appears to have been deliberately mixed or watered. In such cases the minimum and maximum prices will be determined by the Price Control Committee after examining the samples submitted by the buyer or the seller. In the case of improved varieties of cotton approved by the State Department of Agriculture, if they are certified to have been grown in areas reserved for procuring pure seed for sowing and the crop has been rouged by removing off-type plants, the basic maximum price for the particular description of cotton shall be deemed to be increased by Rs. 14.10 a quintal (Rs. 50 a candy).

That the new cotton policy does not deviate materially from that in the 1963-64 season should cause little surprise. Growers have, no doubt, been agitating for an upward revision of ceiling prices—some had urged complete decontrol—but with Indian cotton prices already out of world parity and the textile industry bitterly complaining about mounting costs of production, the Government could not be expected to agree to a flat increase in the ceiling prices. But while resisting the growers' plea for a general rise in the ceiling prices, the Government has allowed an increase in the ceiling prices of Digvijay "A" and certain other selected varieties. This should reward discriminating growers as the increase is based on technical considerations such as spinning value and quality factors and not merely on staple length. Gujarat cotton interests and the State Government have been pressing for an increase of Rs. 75 to Rs. 100 a candy in the price of Digvijay "A", which has become extremely popular with spinners because of its improved quality. They are naturally disappointed with the small increase of Rs. 28 a candy,

but it is good to bear in mind that the increase that has now been sanctioned had been accepted by the Cotton Advisory Board on which growers are also represented. Moreover, a much bigger increase would have evoked strong protests from the textile industry which could not be easily ignored. Cotton growers in Maharashtra have every reason to feel happy over the recognition given to the varieties AK-235 and AK-277 grown in Vidarbha. The increase in premiums for all varieties, excepting Bengal Deshi, of saw-ginned cotton is welcome, and this will enable the farmer to meet part of the additional cost incurred in saw-ginning.

The official announcement of cotton policy does not make any mention about compulsory survey and distribution control. The omission is perhaps deliberate. Marketing policy must be clearly distinguished from price policy. While the policy relating to prices needs to be announced before the commencement of the sowing season—this time it is late by a month or so because sowings have been nearly completed in the Punjab and they are in progress in certain other places—the marketing policy should be announced only when it is possible to have a fairly clear idea of the crop. This will be some time in October. There is no need for compulsory survey and distribution control if the supply position is such as is likely to keep cotton prices well within the statutory ceilings. One might add here that far more important than the vexed question of prices is the need to step up production. It is idle to pretend that incentives in the form of higher prices can help much in increasing production. The problem of stepping up cotton production, as of many other agricultural commodities, is essentially organisational.

Current News and Comment

Agency for Building Steel Plants

Mixed motives seem to have prompted New Delhi to set up a steel plant construction corporation in the public sector. In India where the expansion of steel capacity can be assumed without break for many years, specialist construction agencies are certainly needed. If they can offer permanent careers to construction workers the team that is built up on one job can be transferred intact to the next. The accumulation of experience, now dissipated when teams are disbanded at the end of each contract, should bring benefits making for greater speed and sureness of execution. That, however, does not necessitate allocation of construction to the public sector since continuity could be preserved just as well by suitably timing the award of contracts to the numerous competent private agencies now in the field. This matter of timing will still be important for a public sector corporation to ensure that periods of idleness in between jobs do not needlessly inflate costs. If continuing work can be arranged for the latter, there is no reason, except ideology, to refuse to extend the same principle to private agencies. The more assured the work, the better will the agencies—whether public or private—be able to organise themselves to handle it.

Today construction companies cannot often get the best men since they prefer securer employment, even if less well paid, to intermittent work. There is also some reluctance to add to capital equipment because overheads may bear too heavily during idle spells. Unless assured of year-round work, a State-owned agency can no more overcome these handicaps than private concerns, except by over-charging its public-sector clients. This is a kind of book adjustment which may not worry New Delhi unduly but will certainly show up in the bills the tax-payer has to meet.

A developing economy with so much construction still ahead of it requires to foster a large number of agencies to cope with the work. This should incline the policy-makers to encourage growth in the private sector instead of inhibiting it by threats of exclusion from specific fields im-

PLICIT in the setting up of public-sector construction corporations. This is where ideology takes over to the detriment of common sense, the motive being that the profit of contracting should accrue to the State to help it enlarge its resources. At a steel plant, construction as a component of the total cost may be as much as 20 percent, but how much will the State gain by taking over? Real profit—if contract prices are not inflated to accommodate a sister Government agency—will in all likelihood be swallowed up by higher overheads which the public sector seems to incur. This will even more be so in contracting where flexibility—beyond the reach of the public sector almost by definition—has a direct bearing on cost. A case for the State stepping into contracting is thus difficult to make out except by reference to ideological considerations. Are these considerations valid in a country wedded to the concept of a mixed economy?

The shape which the steel plant construction corporation is taking shows that the policy-makers themselves have not been free from doubts. The agency was originally to have started with a paid-up capital of Rs. 20 crores. This was whittled down in the first round to Rs. 5 crores and finally to Rs. 1 crore, a clear evidence of the half-hearted support this brave socialist idea gets in New Delhi's highest echelons. A one-crore outfit can hardly make any impact; it may have been kinder, therefore, to drop the scheme altogether than to give it such an unpromising start.

Voluntary Cloth Price Control Ends

Quite a few prominent mills in Bombay and elsewhere are reported to have put up their prices by 10 percent to 15 percent from the beginning of this month. This marks the virtual end of the voluntary price control scheme which had been reduced to a farce in any case. That price control was being circumvented on a large scale, through the manufacture of innumerable new varieties which did not come strictly within the purview of the voluntary price control scheme,

has been common knowledge, although the Price Reviewing Committee, presided over by the Textile Commissioner, recently certified that the price stamping scheme had, by and large, been a success. In May, however, the Indian Cotton Mills Federation made it plain to the Government that it was no longer possible for the textile mills to carry out their responsibility in relation to the existing scheme of voluntary control of prices. It had represented that the scheme had become unworkable in the absence of any periodic revision of prices to cover the increase in the cost of cotton, labour, power and stores. Whereas cloth prices have been kept pegged at the 1961 level, there has been an appreciable increase since then in the industry's costs of production estimated at around 16 percent. The scheme did not provide any escalator clause for raising cloth prices to cover the increase in the costs of production due to factors beyond the industry's control.

The Government has long been apprised of the situation, but it has been unable to make up its mind on the vexed question. The delay in taking a decision on the Tariff Commission's report and on the industry's repeated representations for suitably revising cloth prices is intriguing. The Government's anxiety to hold the price line is understandable, but there is no reason why uncertainty over cloth prices should be allowed to persist indefinitely. The recent increase in cloth prices by certain prominent mills might have caused annoyance to it, but that is perhaps the only way of forcing the authorities to take a final decision at an early date.

Helping the Tea Industry

India's tea exports during 1963 were higher than those of the previous year, the respective figures being 224 million kilograms and 214 million kilograms. This was creditable in a year of reduced output. The crop outlook for 1964, it is generally thought, is better. But there is no guarantee that a higher production will automatically lead to bigger exports. For one thing, the tea crop is largely dependent on weather; for another, world consumption may not keep pace with the expansion in output. Yet if India must continue to increase her output in line with the plan target, the industry must be given every encouragement to promote production. Unfortunately, the Government's fiscal and labour policies have been hampering the efforts of the industry. The third plan production and export targets of 900 million lbs and 610 million lbs have already had to be revised downwards to 830 million lbs and 530 million lbs, respectively, because of the shortfall in tea output.

The Government is of the view that production holds the key to more exports, provided the output of quality grades expands simultaneously. The industry has no serious quarrel with this view, but it asks for the necessary facilities. As Mr. S. R. Daga, president of the Tea Association of India, said at the annual meeting of the Assam branch of the Association, held last week in Jorhat, the industry needs sympathetic approach from the Government "in obtaining finance for developing and expanding tea production, better irrigation facilities, reduction in taxes and the like." Obtaining finance, for example, has been an acute problem for the industry. Apart from the high cost of borrowing, procedural and legal difficulties have made the problem more complicated. Mr. Daga was happy that the Government and the Reserve Bank were now taking a closer interest in this matter and were willing to assist in all possible ways. The Indian Board of Trade at its recent meeting has set up an expert committee to go into this question. Since the Agricultural Refinance Corporation has not been able to provide much help, the industry hopes that the committee will approach the problem in a more helpful spirit.

The industry's internal resources have been depleted by the steep rates of taxation and the ever-growing welfare burdens on account of labour. The latter burden is likely to increase further because of the final award of the Wage Board, whose work is now almost complete. The Assam Government's new specifications for labour housing in tea gardens will add to the welfare obligations. Mr. Daga agreed that in the Central

Budget for 1964-65 some relief had been given in income tax, super tax and surtax to tea as one of the industries specified for the purpose, but what is not realised is that this relief would be available only on 40 percent of the assessable income. Tea being an export industry, it should have been given more relief to enhance its competitive strength. The continuance of the heavy excise duty is affecting exports since no refund of the duty is permitted on teas exported. The Government has also not so far accepted the plea for allowing the cost of new plantings as a revenue charge. Mr Daga hoped that the Government would soon give this fiscal relief to the industry, without which it would be impossible to raise the output of quality teas. It is time that a uniform tax policy was evolved by both the Centre and the States. While the Central Government is inclined to provide some relief, the Assam Government is adopting a contrary policy. For example, in its latest Budget, the latter has enhanced the rates of agricultural income tax and sales tax. These increases came on top of a substantial rise in agricultural income tax in the previous year. The Assam rates for these taxes are the highest in the country and they will hasten the financial debilitation of the tea estates.

Prospects for the Unit Trust

The Unit Trust of India, which was set up under an Act of Parliament in 1963, will start offering units for sale from 1st July. The Trust, as is well known, will offer an opportunity to small savers to invest in diverse types of securities. The stock markets are naturally interested in the Unit Trust's operations. The latter is reported to have made large investments out of its initial capital of Rs. 5 crores, although so far the effect of these purchases has been negligible in the market. Being the only organisation of its kind in India, the Trust should be careful to avoid the pitfalls of a monopolistic institution. It would have been better had the Government established several unit trusts on a regional basis or permitted the private sector to start them. This would have encouraged greater competition and created an urge to show better results through efficient working. It is a pity that in spite of its advantages, the unit trust idea was not given a practical shape so far.

At a Press conference in Bombay last week, Mr. R. S. Bhatt, chairman, said that the Unit Trust scheme would offer the triple advantages of safety, liquidity and steady return to investors. He added that the Trust would endeavour to reach the maximum number of investors through the agency of stock brokers of recognised stock exchanges and 36 scheduled banks, which together commanded a network of over 3,500 branches in the country. It will sell units of Rs. 10 each in multiples of ten from 1st July, and there is no ceiling on investment in units. Two guide lines have been laid down to ensure the safety of the Trust's investments. Investment in any one company will not exceed 5 percent of the value of the total investible funds of the Trust or 10 percent of the value of the securities issued and outstanding of such a

company, whichever is lower. Secondly, not more than 5 percent of the funds will be invested in the initial issues of new industrial companies; the Trust will prefer to invest in the new issues of existing undertakings.

The Trust, according to its chairman, will aim at an average yield of 6 percent. Ninety percent of the Trust's income would be distributed, and it would not pay any taxes on dividends received or paid out by it. Investments in units will be readily encashable since the Trust will buy and sell units at prices fixed by it on the basis of the quotation for its holdings. But the chairman added that he did not expect units to change hands frequently. "Units are a long-term investment for small and medium investors who can derive the benefit of appreciation over a period of two to three years."

Pakistani Budget: Taxes Rationalised

The Pakistani Finance Minister, Mr. Mohammed Shoaib, presented the 1964-65 Central Budget to the National Assembly on Friday. The Budget shows a surplus of more than Rs. 18.80 crores over the contemplated expenditure of Rs. 356 crores for the next financial year. The two main features of the Budget are the rationalisation of the tax structure and a liberal policy on imports to boost the country's industrial production. The rationalisation of the various taxes and duties, said the Finance Minister, would not have an adverse effect on the economy. The liberal import of various raw materials will help step up production and enable the authorities to bring down prices. Among the major concessions Mr. Shoaib offered to companies was the extension of the "tax holiday" by five years up to June 1970, a 10-percent rebate in the tax on the mining industry and the extension of the 5-percent rebate admissible to companies with an income of up to Rs. 25,000 a year and to industrial companies with an annual income of up to Rs. 50,000. The abolition of the wealth tax on private companies will, however, be compensated by an increase in the rate of wealth tax on individuals. Mr. Shoaib proposed that the foreign incomes of Pakistani enterprises remitted to Pakistan would be entitled to a tax rebate of 15 percent. Among other concessions announced by the Finance Minister were a reduction of the export duty on jute and cotton by 50 percent and the abolition of sales tax on cotton, locally-made furniture and some sports goods.

The Finance Minister has made a novel proposal to impose a rehabilitation surcharge of 1 percent on all commodities liable to sales tax in order to meet the expenditure on the rehabilitation of refugees coming into Pakistan. The excise duty on cigarettes has been raised by 25 percent and on tobacco by 10 paise to 60 paise a lb. Pakistan's defence expenditure during 1964-65 will total Rs. 129.65 crores. This is as much as 46.5 percent of the estimated revenue expenditure of Rs. 278.56 crores and 43.5 percent of the estimated revenue receipts of Rs. 297.37 crores. The defence expenditure shows a rise of about Rs. 7 crores over the revised Budget estimates and of more than Rs. 20 crores over the original estimates for 1963-64. As for foreign aid, the Finance Minister said that the consortium of western countries aiding Pakistan would disburse about Rs. 193 crores this year, which is an increase of Rs. 63 crores over the past year.

West Bengal Financial Corporation

In its latest report for the year ended March 1964, the West Bengal Financial Corporation has emphasised the need for stimulating the industrial growth of the State in order to increase the employment potential. Although the financial assistance extended by the Corporation to various industries has been steadily rising, there is still scope for encouraging industrial enterprises by providing more financial facilities. But if the Corporation is to perform its task more efficiently, it should have to be provided with bigger resources. Judging from experience, it looks as if the Corporation has not succeeded in doing all it could in providing financial facilities due to the shortage of resources. Applications for financial help amounting to Rs. 2.38 crores are pending with the

Corporation. It has reinforced its resources by borrowing from the Reserve Bank against *ad hoc* bonds and from the Refinance Corporation for Industry by way of refinancing. It proposes to accept deposits from the public since it is authorised to do so. But the directors doubt whether substantial deposits can be obtained from the public under the present circumstances. The Corporation has raised Rs. 2 crores by issuing bonds. It has recently decided to issue fresh bonds for Rs. 1 crore, and some scheduled banks have already agreed to subscribe to the new bonds. The lending rate of the Corporation has been maintained at 7½ percent.

The Corporation has been appointed an agent of the State Government for the purpose of routing funds to small-scale industries. But because of certain procedural difficulties, it has been restrained from doing so. The Reserve Bank has taken up the matter with the State Government, and it is hoped that the difficulties will soon be removed. Since technical advisers have been appointed by the Corporation to process loan applications, it is hoped that its work of financing will be facilitated. The Corporation's financial results for 1963-64 have been more satisfactory than those for 1962-63. The net profit has risen from Rs. 6.99 crores to Rs. 8.19 lakhs, after providing Rs. 2,761 (against Rs. 1,603) for depreciation and Rs. 2.18 lakhs (against Rs. 49,350) for reserve funds. Income tax absorbs Rs. 4.69 lakhs and the guaranteed dividend of 3½ percent has been declared. This is the third year in succession that the Corporation has been able to declare dividends without asking for any subvention from the State Government. Total subventions so far received by the Corporation to pay the guaranteed dividends amount to Rs. 11.87 lakhs, while reserve funds amount to Rs. 5.21 lakhs. There is a sum of Rs. 2.8 lakhs held in a special reserve fund representing dividends on the Corporation's shares held by the State Government and the Reserve Bank. Both these bodies have forgone the dividends. The Corporation sanctioned loans of Rs. 1.71 crores for 1963-64 and disbursements amounted to Rs. 1.29 crores. It also underwrote shares and debentures worth Rs. 25 lakhs.

POINTS ABOUT PENSIONS

INDIA, like the United States, is a great Pension Land; but the disabilities of the Pensioner in India, in contradistinction to the Pensioner's advantages at Home are worth devoting a little attention to; particularly as the revised rates of pensions for Departmental Officers with honorary rank and Warrant Officers of the Indian Army Departments have just received the sanction of the Secretary of State for India. The point to which especial attention should be drawn is the unfair discrimination which is made between a servant of the Government who draws his pension in India, and an individual of the same rank who draws his pension at home. We will take the case of what is called a "Commissary." Now a Commissary on full pension gets £216 a year if he takes his pension at home; and Rs. 216 per mensem if he stays in the country and draws his pension here. Now Rs. 216 per mensem at Rs. 15 to the pound sterling is only approximately £173 per annum; and why a man should be fined £43 per annum or 25 per cent of his pension for remaining in India we entirely fail to see. The men who obtain these pensions are, it should be remembered, men who have spent the whole of their services practically in India. They are domicile Europeans with, in most cases, their wives and families out here; and there is no particular reason, so far as we can see, to charge them a heavy impost for electing to spend the remainder of their lives in the country. If the man goes home, his pension has to be paid out of Indian revenues; and his income circulates at home. If the pension is paid here, his income naturally circulates here, and he is a factor, though doubtless a humble one, in directly contributing to the taxation, the trade and the up-keep of the country generally. Again, in theory at least, India is supposed to now possess a "gold standard," and at this rate a man who is entitled to £216 a year should receive 270 rupees per mensem. Pension, it should be borne in mind, is an allowance made by the state for services rendered.

A Ditcher's Diary

I AM NOT SO SURE THAT CRITICS ARE RIGHT in telling Mr. Lal Bahadur Shastri that he is unwise to be his own Foreign Minister. Granted that without the encumbrance of a portfolio the Prime Minister would have more time to carry out the all-important task of co-ordination; but I think there is much to be said for Mr. Shastri taking two early steps. One, to make himself better known to the world; and two, to get to know the world better. And both are easier done from the Ministry of Foreign Affairs. Mr. Grimond, the Liberal leader, almost moaned the other day that India will never again have a Prime Minister from Harrow. Well, London should be given an early opportunity of looking at the obvious non-Harrowian India has got instead. In the dialogue between New Delhi and London far too much was taken for granted on both sides. Teen Murti Marg and No. 10 spoke the same language—as the two No. 10s now never again will. The distance between Cambridge and Kashi Vidyapith is not so many miles as the crow flies but so many light years. London may well have to change its idiom while speaking to New Delhi. On the other hand, Mr. Shastri has seen too little of the world; and even at 60 one can learn a great deal from foreign travel. This wider perspective Mr. Shastri certainly needs. Even to me it often seemed that India was paying excessive attention to the world without and neglecting the problems within. With Mr. Nehru's departure, there is bound to be what a writer has called a calculated contraction in India's international involvement. From this may arise the other danger, that of forgetting that India is very much a part of a big world to which she cannot possibly be totally indifferent. Mr. Shastri needs to see for himself how modern countries run their governments. He needs to see the prosperity of the United States of America and western Europe to get the full measure of India's appalling poverty; he may then know what inhibitions the Indian economy must be rid of. From Russia too there is a good deal to learn. After all this is done Mr. Shastri may consider whether he should be Foreign Minister indefinitely.

WHEN A GOVERNMENT IS SHUFFLED PRETTY ROUGHLY only six days after its creation, suggestions inevitably get about that there's something wrong somewhere or that somebody is not very sure of himself. We may never know just what went behind Saturday's announcement; maybe nothing very serious, or so we must all hope. The point needs to be made still that Mr. Shastri will need all the co-operation he can get from his colleagues

in the Congress. At some point many Congressmen placed self above country and Party; the Party has never been the same since and the country has been the loser. I suggest that selfishness is not always the motive. I can, for instance, see Mr. Morarji Desai persuading himself that he wants to be Prime Minister simply because he is convinced that he is the best man, in India's interests, to be Prime Minister. Reallocation of portfolios may be caused also by considerations of status. Over the years certain assignments have gathered—or lost—a sort of undefined prestige; this ministry is important, that is not. Not having a portfolio at all can give the holder a very important position, as Messrs Krishnamachari and Shastri have shown in their different ways. With all that talk about No. 1 and No. 2 in the Government, I am wondering whether this business of ranking has not gone too far. In his book, *India Wins Freedom*, the late Maulana Azad had a great deal to say about the relative powers of the Ministry of Finance and the Ministry of Home. You may remember that in the interim Government of 1946 the Congress had to choose between Finance and Home and opted for Home while the Muslim League got Finance. According to the Maulana, Sardar Patel chose wrongly and thus strengthened the League's demand for partition. It is difficult to see that the League would have been less dangerous in the Home Ministry. The very remoteness of the argument should impress upon the contenders today that more important than what portfolios they get is how ably and authoritatively they conduct themselves not only in their respective ministries but also at Cabinet meetings. And do I have to remind the Government that it is not an uneasy coalition? Or, is it?

IN RETROSPECT IT SEEMS ALTOGETHER A GOOD IDEA that Sardar Pratap Singh Kairon was not Kamarajed last year as were Bakshi, Ghulam Mohammed and some others. That plan, however well conceived by the author, saved quite a few people from a number of probable embarrassments. It seems equally good that the Das Commission held its enquiry in public. As for Mr. Kairon's resignation and its acceptance, it has not so far happened to me to meet anyone who is sorry for his departure. If the findings were quasi-judicial, the subsequent decision had to be political. But both the Government of India and the Congress Party owe the people something more. It will be unfair to both the Das Commission and Mr. Kairon to withhold the report from the public. Publication will have to be fol-

lowed by further action according to the laws of the land—if, that is, the report reveals activities which in your case or mine would attract the I.P.C. Neither the Government nor Mr. Kairon must be allowed to get away with the idea that there is no equality before the law when the men involved are Congressmen in high office. From what I hear, the long-term effects of the Kairon years may be the more difficult to deal with. The whole administration is said to have been vitiated at almost every level; the political atmosphere just stinks. As Mr. Rajagopalachari pointed out at the time of the Malaviya episode, there should not be one kind of treatment for political delinquents and another for the ordinary citizen. This is where Mr. Nanda can make a beginning with his crusade against corruption: let the law take its own course and set officials free to proceed against ex-ministers as they do against any other set of people. Mr. Shastri will have to work hard to dispel the almost universal suspicion that there is political protection for the politically powerful. Against this background, it seems ominous that Mr. Kairon has threatened to continue in Punjab politics.

ON SUNDAY I HAPPENED TO PASS BY A BAZAR in the Bhowanipore area; and I saw the long queues before the shops. The sight was at once pathetic and infuriating. The impudence of the rice and mustard oil trade seems to match the impotence of the Government of West Bengal. After a lot of procrastination—during which, you may be sure, some people made money and others went without essentials—we seem to have come back to the idea of fair price shops. If it is true that there are 3,000 groceries in Calcutta, how long will it take the Government to evolve a comparable chain? If the plan is to find fair traders from among the existing ranks, the job of screening must be fantastic. At the stage of production, organisation is extremely difficult, as even Mr. Khrushchev has found in Russia. But even the retail trade is better organised than is usually believed; the wholesale trade is a well-knit unit. There is no reason why the Government should not be able to guide and control them and punish the guilty. At the slightest indication of trouble the police now round up thousands of suspected miscreants; and a good thing it is too. I do not believe that it is beyond the competence of the police to know just who the dishonest wholesalers and retailers are; and the arm of the Defence of India Rules is long. I have heard that the dishonest trade is the principal source of funds for almost all political parties. I do not dismiss the theory but I do not think this is the complete explanation. In the absence of exemplary severity in dealing with offending traders, they have been able to put about the notion among policemen that it is safer not to touch economic

criminals. It is not that a large part of the administration has actually been bought by the trade; just that a great many officials have been demoralised to the extent of conniving at evil even when the result is hardship and widespread distress. But, surely, basic deprivations have political consequences which can do the ruling Party no good at all? Mr. P. C. Sen's statistics impress me less and less.

IT WAS RATHER SAD, I THOUGHT, THE WAY A CLASH of personalities was allowed to interfere with the 20th anniversary of D-day. What ought to have been a subdued, solemn occasion, dedicated to the memory of those who fell in what was, after all, the greatest international military operation of all time, should never have been turned into an opportunity for raking up old personal controversies. I say this despite a shrewd suspicion that Lord Montgomery might be right when he claims the Americans took all the glory for the subsequent break-out, while the British were left to do most of the fighting. If Rommel had ever lived to write his memoirs, I imagine he would have regarded the battle for Caen as the wound through which his defensive strength was bled away. Patton's sweep to the east and the turning operation which followed, could hardly have been possible without continued British pressure at the hinge. I am also more than half inclined to believe Monty when he says that if his plan for a massive drive into the heart of Germany had been adopted, not only would the war have been over six months earlier, but all the difficulties which have arisen because the Russians were the first to get into Berlin, might have been avoided. There is, when all is said and done, nothing in Monty's record, both before D-day and since, to suggest that he would not have proved capable of doing exactly what he had in mind. But whether he was held back because Eisenhower wanted to reserve all honours for the Americans, or simply because the plan for a slower advance on a broader front was genuinely considered the best one, matters little now except to the historians. The operation was eventually a success, although the patient very nearly died, and we all know that despite his shortcomings in the field of diplomacy, Monty is a great soldier. So that is, perhaps where the matter ought to have been allowed to lie until it can be taken up again by those whose controversies will be sufficiently academic not to constitute an affront to the memory of the men who paid with their lives for the mistakes that were made.

THOSE WHO, UNLIKE MYSELF, FOLLOW U.S. INTERNAL politics closely, have been saying that Senator Goldwater's remarkable successes in his fight for the Republican presidential nomination have indicated that American isolationism is reviving. They may be right. Personally, I would not be surprised if they were because the setbacks U.S. foreign policy has met with recently are almost bound to have such an effect. The same would have been true for any country, even one without an established tradition of isolationist feeling. But I think the view that Senator Goldwater's support represents more than a simple, vague expression of frustration with world responsibility, owes more to an emotional interpretation of the scene than a reasoned one. It could, for instance, merely signify that the Republicans have no real faith in their ability to win the presidential election, because if there is one thing a Goldwater candidature will ensure, it is a victory for Mr. Johnson. But I do think the Senator's progress has some significance in the field of internal politics, and now that it has been reported he has decided to shift his ground and espouse the Civil Rights Bill, I suspect his popular support has been irretrievably damaged. Just occasionally every country throws up a Goldwater, or a Poudjare, and for a time their success is frightening. What rarely follows, however, is a smooth accession to power, and the reason is partly their essentially sectional appeal, but mainly the fact that their apparent popularity with the voters is due to their becoming identified as a gesture against existing authority rather than as an alternative to it. Perhaps the most alarming feature of the Goldwater interlude is the evidence it provides of the current shortage of Republican talent.

THE DITCHER

Guide for Investors

GUEST, KEEN, WILLIAMS DIVERSIFIES

THE growth prospects for Guest, Keen, Williams, Ltd have been stressed by Sir N. Raghavan Pillai, chairman, in his address at the annual general meeting of the Company held in Calcutta last Friday. (A fuller version is printed on a later page in this issue of *Capital*.) The Company has steadily grown, and its growth is likely to continue as years pass by. Capital expenditure during 1964-66 on plant expansion and rehabilitation projects is likely to amount to Rs. 7.50 crores, of which Rs. 2.50 crores represents foreign exchange. The chairman said that expansion would continue beyond this period. The construction of the new steel melting shop is making good progress and the stage No. 1 plant should begin production next year. The re-organisation of the rolling mills has been approved by the Government, and it includes the installation of a new merchant bar mill. The old plant in the Calcutta bolt works will be renovated by modern equipment. This should diversify the range of the manufacture of fasteners. The bright steel bar shop is being extended. The new plant has begun production and should contribute to the Company's earnings in 1964. The equipment at Bhandup works is being renovated and modernised. The capacity for wood-screw has been extended. The Government has approved the expansion of the self-tapping screw capacity and the plant will be installed next year.

Production for 1963 rose substantially, although working was interrupted by the shortage of various raw materials. There was a shortage of good-quality steel billets. But the output of rolling mills and the production of spring steel bars for transport services rose satisfactorily. There was a substantial rise in the production of bright steel bars, but the full capacity could not be used due to the shortage of free cutting steel. The equipment is being renovated to improve production in the forge. The output of crossing, slip-pers and points and crossings increased considerably. The Bhandup works did well in spite of unstable conditions in the market.

Turnover rose from Rs. 13.06 crores for 1962 to Rs. 16.37 crores for 1963. The pre-tax profit has improved from Rs. 1.28 crores to Rs. 2.17 crores. Taxation has absorbed a large part of the profit, but the chairman said that the Company would not be liable to surtax on profits for 1963. The taxable ordinary dividend of 12 percent, including an interim of 6 percent, has been declared and the cut of 20 paise a share in the total distribution has been mainly due to the payment of additional taxes on bonus shares and dividends. The authorised capital of the Company has been increased to Rs. 10 crores and the paid-up capital to Rs. 6.32 crores from Rs. 4 crores by issuing shares to the Tata Iron and Steel Co. Ltd in exchange for their holdings in the Sankey Electrical Stampings Ltd and by the allotment of bonus shares to the existing shareholders. The issue of debentures for Rs. 1.5 crores was fully subscribed.

The Company has invested Rs. 38.2 lakhs in the Sankey Wheels Ltd which has been formed to make passenger and commercial vehicle wheels. Sankey Electric Stampings Ltd, a subsidiary, has been amalgamated with Guest, Keen, Williams

with a view to improving the Company's operational efficiency.

Bird-Heilgers Coal Group Results

THE results of the coal Companies in the Bird-Heilgers group for the year ended December 1963, have been published. The Borrea Coal Company raised 220,596 tons of coal, against 206,745 tons in 1962, and despatches rose from 206,987 tons to 222,852 tons. The directors say that the overall output was lower than expected due partly to the difficulties experienced in collecting land for the 18 seam incline project in Aralgoria. The bulk of output was despatched to the Tata Iron and Steel Company. Since despatches have improved considerably, stocks have declined to a normal level. The profit has risen from Rs. 1.23 lakhs to Rs. 1.42 lakhs, after transferring Rs. 1.56 lakhs (against Rs. 1.40 lakhs) to depreciation, Rs. 4,012 (against Rs. 3,62 lakhs) to taxation, Rs. 53,000 to surtax on profits (against Rs. 45,000 for the super profits tax), Rs. 78,600 (against Rs. 1.16 lakhs) to statutory development rebate reserve, Rs. 2.83 lakhs (against Rs. 1.25 lakhs) to general reserve and Rs. 25,139 (against Rs. 25,000) to bad and doubtful debts reserve. The taxable ordinary dividend of 15 percent has been repeated to give a yield of 7.4 percent at the present price of Rs. 20.25 a share of Rs. 10 each. The carry-forward is Rs. 6,037, against Rs. 10,774 brought in.

The Ondal Coal Co. Ltd has incurred a loss of Rs. 2,057, against a profit of Rs. 37,340, after providing Rs. 6,232 (against Rs. 7,265) for depreciation and Rs. 1.32 lakhs (against Rs. 28,042) for taxation. After transferring Rs. 65,721 from general reserve and bringing in Rs. 9,250, the distributable amount is Rs. 54,400. The taxable ordinary dividend has been reduced from 7½ percent to 5 percent. The yield amounts to 3.7 percent at the present price of Rs. 13.50 a share of Rs. 10 each. Although the Company has obtained the opening permission from the Coal Board and has begun drilling, it has been restrained from carrying on any operations in connection with mining or prospecting by an injunction from the Calcutta High Court. The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of some shares in Karanpura Mining Syndicate, Coal Shipments Ltd and Chora Coal Co. Ltd. The market value of investments for which quotations are available amounts to Rs. 12.19 lakhs.

The Standard Coal Co. Ltd has maintained the taxable ordinary dividend at 10 percent which works out to a yield of 9.6 percent at the present price of Rs. 10.44 a share of Rs. 10 each. The profit has dropped from Rs. 87,662 to Rs. 80,887, after providing Rs. 53,337 (against Rs. 49,088) for taxation. General reserve is allocated Rs. 30,000 (against Rs. 40,000), leaving a carry-forward of Rs. 4,723, against Rs. 18,570 brought in. The Company's portfolio is representative of investments which are quoted on the Calcutta stock market with the exception of certain shares costing Rs. 1½ lakhs for which no quotations are available. The total market value of all investments amounted to Rs. 28.58 lakhs on 31st

December, 1963. The Company has been awarded compensation by the Central Government for mining rights acquired in the Sowardih property amounting to Rs. 40,112, against a claim for Rs. 4.45 lakhs. The book value of the property stands at Rs. 1.30 lakhs. Arrangements are being made to withdraw the amount awarded and to refer the matter to a special tribunal in Ranchi.

The taxable ordinary dividend of the Sendra Coal Co. Ltd has been increased from 2½ percent to 3 percent. The yield amounts to 6 percent at the present price of Rs. 5 a share of Rs. 10 each. The loss has amounted to Rs. 3,257, against one of Rs. 14,281, after providing Rs. 295 (against Rs. 3,110) for depreciation and Rs. 54,434 (against Rs. 23,631) for taxation. After transferring Rs. 37,000 from general reserve and bringing in Rs. 5,159, the available balance amounts to Rs. 38,902. The carry-forward is Rs. 382. The Company's portfolio is representative of investments which are quoted on the Calcutta stock market with the exception of some shares in the Karanpura Mining Syndicate for which no quotations are available. The market value of all investments amounts to Rs. 17.64 lakhs.

In their report, the directors of the Karanpura Development Co. Ltd say that a further 998 bighas of land have been notified and acquired by the Central Government in the Karanpura field and claims for additional 1,367 bighas have been submitted to the National Coal Development Corporation. The Company's claims in relation to Bachra and Saunda have been heard by the tribunal and judgments given. The claim in relation to Bachra which has been sanctioned is not in favour of the Company, since a negligible amount has been awarded as compensation. So the Company intends to appeal against the award. As for Saunda, the claim sanctioned is more encouraging and it is expected that an award of at least Rs. 2 lakhs will be made, against a claim of Rs. 3 lakhs. Hearings in relation to claims concerning Gudi and Kurkuta have begun. The suit filed by the Company in relation to Karanpura royalties has been decreed in favour of the State of Bihar.

Raisings and despatches each amounted to 1.9 million tons of coal. The profit has dropped from Rs. 1.37 lakhs to Rs. 14,276, after providing Rs. 51,913 (against Rs. 34,539) for depreciation, Rs. 8,100 (against Rs. 44,600) for statutory development rebate reserve, Rs. 44,446 (against nil)

for capital reserve and Rs. 35,304 (against Rs. 33,793) for taxation. The taxable ordinary dividend of 3 percent has been maintained. The yield amounts to 9.6 percent at the present price of Rs. 9.69 a share of Rs. 10 each. The taxable dividend on founders' shares has also been repeated at 9 percent. The carry-forward is Rs. 1,570, against Rs. 37,294 brought in.

Gillanders Tea Companies Cut Dividends

THE result of the tea Companies in the Gillanders group for the year ended December 1963, have been discouraging as the dividends have been reduced all-round. The profits have dropped mainly due to smaller crops. The Betjan Tea Co. Ltd (an Assam garden) has earned a trading profit of Rs. 3.19 lakhs, against Rs. 5.57 lakhs for 1962, after providing Rs. 1.14 lakhs (against Rs. 1.16 lakhs) for depreciation. The taxable ordinary dividend has been reduced from 30 percent to 25 percent to give a yield of 8.2 percent at the present price of Rs. 30.37 a share of Rs. 10 each. Taxation is allocated Rs. 1.80 lakhs (against Rs. 3.21 lakhs) and development rebate reserve Rs. 2,556, leaving a carry-forward of Rs. 7,512, against Rs. 10,436 brought in. The crop dropped from 405,929 kilograms to 377,284 kilograms, and the average sale price from Rs. 6.66 to Rs. 6.20 a kilogram. The crop for 1964 is estimated at 424,600 kilograms, provided weather conditions continue to be as favourable as they are at present.

The Jutlibari Tea Co. Ltd (an Assam garden) has reduced the taxable ordinary dividend from 20 percent to 14 percent to give a yield of 5 percent at the present price of Rs. 27.87 a share of Rs. 10 each. The profit has fallen from Rs. 6.32 lakhs to Rs. 2.74 lakhs, after providing Rs. 1.30 lakhs (against Rs. 1.32 lakhs) for depreciation. Taxation is allocated Rs. 1.12 lakhs (against Rs. 3.44 lakhs) and development rebate reserve Rs. 4,400 (against Rs. 4,196). The carry-forward is Rs. 8,060, against Rs. 2,835 brought in. The crop dropped from 533,423 kilograms to 492,625 kilograms, and the average sale price from Rs. 6.50 to Rs. 6.23 a kilogram. The 1964 crop has been estimated at 557,700 kilograms.

The profit of the Tengpani Tea Co. Ltd (an Assam garden) has amounted to Rs. 2.56 lakhs, against Rs. 4.20 lakhs, after transferring Rs. 1.11 lakhs (against Rs. 1.05 lakhs) to depreciation. The taxable ordinary dividend has been cut from 22½ percent to 12 percent. The yield works out to 3.3 percent at the present price of Rs. 36.50 a share of Rs. 10 each. Taxation absorbs Rs. 11.59 lakhs (against Rs. 2.27 lakhs) and development rebate reserve Rs. 4,661 (against Rs. 10,174). The carry-forward is Rs. 3,546, against Rs. 364 brought in. There was a rise in the crop from 338,378 kilograms to 340,080 kilo-

Armstrong Smith Ltd.

P. 17, MISSION ROAD, 1ST FLOOR, CALCUTTA - 1

grams, but the average sale price fell from Rs. 6.81 to Rs. 6.52 a kilogram. The crop for 1964 has been estimated at 373,787 kilograms.

The Ananda-Bag Tea Co. Ltd (an Assam garden) reduced the taxable ordinary dividend from 20 percent to 12½ percent, which works out to a yield of 3.8 percent at the present price of Rs. 33.25 a share of Rs. 10 each. The profit has declined from Rs. 3.50 lakhs to Rs. 1.57 lakhs, after providing Rs. 1.01 lakhs (against Rs. 90,188) for depreciation. Taxation is allocated Rs. 75,055 (against Rs. 1.98 lakhs) and development rebate reserve Rs. 300 (against Rs. 12,631). The carry-forward is Rs. 3,367, against Rs. 3,627 brought in. Production amounted to Rs. 305,534 kilograms, against 301,064 kilograms, and the average sale price fell from Rs. 6.71 to Rs. 6.38 a kilogram. The crop for 1964 is estimated at 337,500 a kilogram.

The Gaikhatia Tea Co. Ltd (a Doorga garden) has earned a profit of Rs. 1.14 lakhs, against Rs. 3.65 lakhs, after transferring Rs. 1.08 lakhs (against Rs. 86,763) to depreciation. The taxable ordinary dividend has been cut from 11 percent to 7 percent. The yield amounts to 4.3 percent at the present price of Rs. 16.12 a share of Rs. 10 each. Taxation absorbs Rs. 67,098 (against Rs. 1.64 lakhs) and development rebate reserve Rs. 4,756 (against Rs. 9,201). The carry-forward is Rs. 1,890, against Rs. 2,548 brought in. The crop fell from 504,794 kilograms to 469,544 kilograms and the average sale price from Rs. 5.46 to Rs. 5.18 a kilogram. The 1964 crop is estimated at 515,320 kilograms.

Duncan Tea Group Disappoints

THE results of the Duncan group of tea Companies for the year ended December 1963, have been published. The profit of the Hantapara Tea Co. Ltd (a Doorga garden) has amounted to Rs. 5.23 lakhs, against Rs. 7.94 lakhs for 1962, after transferring Rs. 2.80 lakhs (against Rs. 2.64 lakhs) to depreciation. The taxable ordinary dividend has been reduced from 10 percent to 7.5 percent which works out to a yield of 6.9 percent at the present price of Rs. 108 a share of Rs. 100 each. Taxation absorbs Rs. 2.44 lakhs (against Rs. 3.51 lakhs), revenue reserve Rs. 1.50 lakhs (against Rs. 1.2 lakhs) and development rebate reserve Rs. 15,000 (against Rs. 5,500). The carry-forward is Rs. 14,755, against Rs. 24,266 brought in. The Company will be amalgamated with Birpara Tea Co. Ltd on 1st July, 1964. The crop amounted to 1.42 million kilograms, against 1.37 million kilograms, but the average sale price dropped from Rs. 4.76 to Rs. 4.52 a kilogram. The crop for 1964 has been estimated at 1.4 million kilograms at a cost of Rs. 59.77 lakhs.

Clevedon Tea Co. Ltd has earned a profit of Rs. 5.38 lakhs, against Rs. 8.03 lakhs, after providing Rs. 43,494 (against Rs. 44,785) for depreciation. The Company has declared a taxable ordinary dividend of 20 percent, but this dividend and those for the previous seasons will be paid as soon as profits can be remitted from Pakistan. Taxation is allocated Rs. 3.50 lakhs (against Rs. 4.55 lakhs), revenue reserve Rs. 1.50 lakhs, development rebate reserve Rs. 1 lakh and contingency reserve Rs. 3.80 lakhs. The carry-forward is Rs. 15,826, against Rs. 22,095 brought in. The crop amounted to 234,566 kilograms, against 224,804 kilograms, and the average sale price declined from Rs. 7.49 to Rs. 6.42 a kilogram. The 1964 crop has been estimated at 236,000 kilograms at a cost of Rs. 13.28 lakhs.

The Ellenbarrie Tea Co. Ltd (a Doorga garden) has reduced the tax-

able ordinary dividend from 10 percent to 7.5 percent. The yield amounts to 4.3 percent at the present price of Rs. 173 a share of Rs. 100 each. The profit has dropped from Rs. 1.36 lakhs to Rs. 98,827, after providing Rs. 35,499 (against Rs. 33,482) for depreciation. Taxation absorbs Rs. 40,000 (against Rs. 48,000), revenue reserve Rs. 50,000 (against Rs. 85,000), and development rebate reserve Rs. 1,500 (against Rs. 3,000). The carry-forward is Rs. 621, against Rs. 10,500 brought in. The crop rose from 225,971 kilograms to 234,951 kilograms, but the average sale price declined from Rs. 4.59 to Rs. 4.42 a kilogram. The crop for 1964 has been estimated at 210,000 kilograms at a cost of Rs. 9.38 lakhs.

The profit of Birpara Tea Co. Ltd (a Doorga garden) has declined from Rs. 5.75 lakhs to Rs. 3.08 lakhs, after transferring Rs. 1.37 lakhs (against Rs. 1.17 lakhs) to depreciation. The taxable ordinary dividend has been cut from 17.5 percent to 10 percent which works out to a yield of 6.3 percent at the present price of Rs. 160 a share of Rs. 100 each. Taxation absorbs Rs. 1.64 lakhs (against Rs. 2.64 lakhs), revenue reserve Rs. 120 lakhs (against Rs. 2.50 lakhs), capital reserve Rs. 10,000 and development rebate reserve Rs. 6,000. The carry-forward is Rs. 2,643, against Rs. 13,620 brought in. The crop improved from 669,958 kilograms to 679,448 kilograms, but the average sale price dropped from Rs. 5.01 to Rs. 4.71 a kilogram. The crop for 1964 has been estimated at 670,000 kilograms at a cost of Rs. 27.90 lakhs.

Dauracherra Tea Co. Ltd has earned a profit of Rs. 6.14 lakhs, against Rs. 8.01 lakhs, after providing Rs. 45,014 (against Rs. 41,910) for depreciation. Taxation is allocated Rs. 4.25 lakhs, including Rs. 40,000 for surtax on profits (against Rs. 8.35 lakhs), revenue reserve Rs. 2.50 lakhs, development rebate reserve Rs. 1,250 (against Rs. 17,000), and contingency reserve Rs. 8.89 lakhs. The carry-forward is Rs. 17,494, against Rs. 30,452 brought in. The directors say that they cannot propose any dividend due to non-availability of funds in India. The dividends proposed for 1959, 1960, 1961 and 1962 amounting to Rs. 4.80 lakhs could not be declared as no remittance was obtained from Pakistan. The sums previously set aside for meeting these dividends are now released, and the directors propose that the total amount of Rs. 4.80 lakhs be transferred to contingency reserve account. The crop rose from 203,558 to 233,398 kilograms, but the average sale price declined from Rs. 8.17 to Rs. 6.87 a kilogram. The crop for 1964 has been estimated at 218,000 kilograms at a cost of Rs. 12.67 lakhs.

Gungaram Tea Co. Ltd (a Doorga garden) has reduced the taxable ordinary dividend from 12.5 percent to 10 percent. The yield amounts to 7.9 percent at the present price of Rs. 126 a share of Rs. 100 each. Profit has declined from Rs. 4.67 lakhs to Rs. 3.79 lakhs, after transferring Rs. 1.39 lakhs (against Rs. 1.13 lakhs) to depreciation. Taxation absorbs Rs. 1.84 lakhs (against Rs. 2.16 lakhs), revenue reserve Rs. 1 lakh (against Rs. 1.85 lakhs), development rebate reserve Rs. 11,000 (against Rs. 10,000) and capital reserve Rs. 15,000. The carry-forward is Rs. 5,071, against Rs. 10,812 brought in. The crop improved from 722,909 kilograms to 802,864 kilograms, but the average sale price declined from Rs. 4.63 to Rs. 4.33 a kilogram. The crop for 1964 has been estimated at 750,000 kilograms at an outlay of Rs. 31.40 lakhs.

Phaskowa Tea Co. Ltd (a Doorga garden) produced a crop of 124,724 kilograms, against 126,816 kilograms and the average sale price declined from Rs. 4.64 to Rs. 4.39 a kilogram. The loss has amounted to Rs. 20,200, against a profit of Rs. 9,288, after providing Rs. 14,405 (against Rs. 15,274)

for depreciation. Bringing in Rs. 5,824 and making other adjustments, a credit balance of Rs. 2,974 has been carried forward. The dividend has been passed. The crop for 1964 has been estimated at 130,000 kilograms at a cost of Rs. 6.20 lakhs.

The profit of Rungamatttee Tea Co. Ltd (a Cachar garden) has risen from Rs. 33,759 to Rs. 58,231, after transferring Rs. 65,911 (against Rs. 55,680) to depreciation. The taxable ordinary dividend of 5 percent has been repeated which amounts to a yield of 5.1 percent at the present price of Rs. 49.25 a share of Rs. 50 each. Taxation is allocated Rs. 36,863 (against Rs. 37,109), development rebate reserve Rs. 10,000 (against Rs. 2,500) and investment reserve Rs. 10,000. The carry-forward is Rs. 1,285, against Rs. 4,316 brought in. The crop rose from 279,277 kilograms to 293,522 kilograms, but the average sale price declined from Rs. 4.46 to Rs. 4.34 a kilogram. The crop for 1964 has been estimated at 290,000 kilograms at a cost of Rs. 12.87 lakhs.

Macneill and Barry Earns More

IN their report for the year ended December 1963, the directors of Macneill and Barry Ltd say that the Company's relinquishment of the agency of the Rivers Steam Navigation Co. Ltd in 1964 and less favourable trading conditions in the jute, tea and coal industries, will bring about a substantial reduction in the income. Steps have nevertheless been taken to cover the losses as quickly as possible. The development programmes of the Company have been concentrated on the production of Fork lorries in collaboration with Lancing Bagnall Ltd of England. The acquisition proceedings by the Government of West Bengal for the Company's property at 37, Tangra Road, near Calcutta, are continuing. The Company has disposed of its holding in the Bhubandhar Tea Co. Ltd.

The profit has risen from Rs. 33.70 lakhs for 1962 to Rs. 45.30 lakhs for 1963, after transferring Rs. 1.93 lakhs (against Rs. 1.50 lakhs) to depreciation and Rs. 3.49 lakhs (against Rs. 1.51 lakhs) to interest on loans. The taxable ordinary dividend has been increased from 7½ percent to 8½ percent, which works out to a yield of 9.1 percent at the present price of Rs. 93.50 a share of Rs. 100 each. Taxation is allocated Rs. 19.50 lakhs (against Rs. 13.25 lakhs), general reserve Rs. 7.50 lakhs (against Rs. 6.50 lakhs) and pension reserve Rs. 1 lakh (the same). The carry-forward is Rs. 40,503, against Rs. 43,205 brought in. The improvement flowed from favourable trading conditions in the jute industry and from the increased profitability of the agency department, following a larger sale of mining machinery and equipment. The Company also benefited from the income from its leasehold tenancy of the land in Calcutta acquired from Kilburn properties Ltd and Meserhat Properties Ltd.

British India Corporation Fares Well

BRITISH India Corporation Ltd has produced excellent results for 1963. Turnover rose substantially and the profit has improved from Rs. 1.42 crores to Rs. 2.36 crores. The taxable ordinary dividend has been raised from 45 paise to 75 paise a share. A sum of Rs. 45.61 lakhs has been ploughed back in the form of depreciation, development rebate and general reserve. Commenting on the satisfactory results for 1963 in his chairman's address at the annual

general meeting of the Corporation in Kanpur recently, Mr. Satish Chandra said that the affairs of the Company had been consolidated to show tangible results. (A fuller version of the statement is published on a later page in this issue of Capital.)

The chairman said that except for the sugar factories managed by the Corporation, other departments had worked satisfactorily. The problems of the sugar factories are being tackled in a constructive way. The working of Cooper Allen and North West Tannery branches have shown considerable improvement. They have made profits instead of incurring losses as in the past. There have been increased capacities for footwear, chrome and bark leather departments. The results could have been better but for the shortage of imported materials. The Company proposes to introduce new lines in civilian footwear and to diversify the range of products. The Lal-Imli and Dhariwal woollen branches have shown excellent results and their output rose substantially. Steps have been taken to rehabilitate and modernise the equipment by installing semi-automatic looms. Meanwhile, foreign equipment from various countries is being imported.

Although the three cotton textile mills managed by the Corporation have done fairly well, their profits have been squeezed by the rising prices of raw cotton and stores in the face of voluntary control imposed on cloth prices. Steps have been taken to install more spindles and automatic looms. The latter are expected to be installed by the end of 1964. The new spindles will also begin production in the near future. The rehabilitation and modernisation programme of the cotton mill units is proceeding according to plans. The various sugar factories of the Company have suffered due to the shortage of cane supplies. The price of sugar has also been kept down to an uneconomic level. The Company has taken steps to modernise the equipment in the sugar factories and about Rs. 40 lakhs have already been spent for rehabilitating and modernising the factories. The subsidiary Companies, Brushware Ltd and Saran Engineering Co. Ltd, have also shown improved results.

Good Results from Shaw Wallace

COMMENTING on the satisfactory results achieved by Shaw Wallace and Co. Ltd for the year ended December 1963, Mr. C. M. A. Bathurst, chairman, in his statement to shareholders has said that the working so far during 1964 shows good progress. (A fuller version of the speech appears on a later page in this issue of Capital.) It is intended to expand and develop the traditional activities of the Company rather than to go in for diversification. This should help to improve production and sales in the various fields. The sale of fertilisers, including superphosphates, rose from 178,888 tonnes for 1962 to 187,762 tonnes in the following year. The sale of fertilisers dropped in north-east India due to the inadequate profit margins allowed by some State Governments. Since this difficulty is likely to be overcome, better results in West Bengal and Assam have been forecast.

Although the Company has decided not to manufacture fertilisers in Mangalore, other projects are being considered. The output of sulphuric acid and superphosphate in the Madras factory rose substantially. The Madras sprayer factory and the sprayer organisation in Calcutta have earned satisfactory profits. The Company has been allowed to enter into collaboration with Micron Spray-

ers Ltd of the U.K. for the manufacture of power sprayers. The output of glue in the Madras factory reached a new record and the unit has earned good profits. The production of wine and spirit in the Calcutta distillery increased considerably and the possibility of increasing the output is being considered. Tea produced by the Companies under the management of Shaw Wallace for 1963, showed a small drop over that for 1962, but prices for teas realised were disappointing. The Tinplate Company of India Ltd produced 84,107 tonnes, against 77,346 tonnes. An industrial licence for the modernisation and expansion of the unit has been obtained. It is intended to increase production by further 80,000 tonnes a year. The increased output is expected to be available by 1967. Referring to the collieries under the management of Shaw Wallace, Mr. Bathurst pointed out that stock accumulations have begun to run down at a satisfactory rate. If the demand for coal catches up with the supply, the collieries will resume maximum working without delay. The Indian Yeast Co. Ltd has reached a revenue-earning stage, although it will take some time to wipe off the accumulated losses of this Company.

The group profit of Shaw Wallace has risen from Rs. 70.16 lakhs for 1962 to Rs. 99.29 lakhs for 1963, after transferring Rs. 18.76 lakhs (against Rs. 20.46 lakhs) to depreciation. The taxable ordinary dividend has been increased from 7½ percent to 12½ percent, which works out to a yield of 8.1 percent at the present price of Rs. 15.37 a share of Rs. 10 each. Taxation is allocated Rs. 62.47 lakhs (against Rs. 47.35 lakhs) and general reserve, including development rebate reserve, Rs. 22.95 lakhs (against Rs. 14.07 lakhs). The carry-forward

is Rs. 25,301, against Rs. 76,764 brought in.

Good Results from Esso

ESSO Standard Refining Company of India reports encouraging results for 1963. Sales of its products recorded an increase of about 14 percent from Rs. 37.20 crores to Rs. 42.51 crores. The gross profit, however, is slightly lower at Rs. 4.68 crores, against Rs. 4.70 crores. Appropriations include depreciation Rs. 96.07 lakhs (against Rs. 94.11 lakhs), taxation Rs. 2,597 crores (against Rs. 1,823 crores), newly created reserve for super profits tax Rs. 41.02 lakhs (against nil), statutory development rebate reserve Rs. 2.05 lakhs (against Rs. 7.50 lakhs) reserve for privilege leave, annuities, etcetera, Rs. 2.81 lakhs (against Rs. 2.76 lakhs) and debenture issue expenses Rs. 52,712 (the same). After making these allocations, there remains a balance of Rs. 72.20 lakhs (against Rs. 1,533 crores) which has been transferred to general reserve No. 2 from which preference dividend absorbing Rs. 4.50 lakhs (the same) is being paid.

Foreign exchange savings generated by the Company during 1963 were of the order of Rs. 11.3 crores, raising the total foreign exchange saving effected since the start of the refinery to Rs. 46 crores. The Company exported considerable quantities of gasoline and asphalt during 1963. There was an appreciable increase in the manufacture of special products, particularly hexane. An agreement has been reached for erecting a lubricating oil manufac-

turing plant which will be jointly owned by the Government of India and Esso Standard Eastern Incorporated. The Company has plans for manufacturing Solvent 2445 used extensively in the textile industry. Debentures worth Rs. 80 lakhs were redeemed on 30th April, 1964, in accordance with the terms of the debenture trust deed.

Bright Prospects for Hindustan Aluminium

IN spite of the severe slump in the stock market which has hit particularly hard the shares of companies which have made their appearance over the past few years, the scrip of Hindustan Aluminium Corporation continue to command a premium—the Rs. 10-paid share is currently quoted around Rs. 12. The investors' confidence in the Company's future seems fully justified by its recent performance. It did fairly well in 1963 and from what Mr. M. P. Birla, who presided over the Company's annual meeting in the absence of its chairman, Mr. G. D. Birla, stated at the annual meeting, shareholders can look forward to the future with greater confidence. Last year, the Company produced 22,138 tonnes of aluminium, against the rated capacity of 20,000 tonnes. The production during the first five months of the current year is placed at 10,000 tonnes, and the turnover is around Rs. 3.50 crores.

Sales during 1964 are expected to reach Rs. 8.5 crores, yielding a gross profit of Rs. 3.5 crores to Rs. 4 crores, compared with Rs. 1.99 crores in 1963. The Company's profitability is expected to increase further in 1965 when

the fabrication plant will be in full operation making sheets, circles and extruded items. The Company is going ahead with its expansion programme. It has already received permission to increase the capacity from 20,000 tonnes to 60,000 tonnes. The expansion will be undertaken in two stages. The first phase, which will raise the capacity to 48,000 tonnes, will require a capital outlay of Rs. 13 crores and is expected to be completed by the end of 1965. The chairman, Mr. G. D. Birla, is already in the U.S.A. to negotiate a loan of \$11 million from the Export-Import Bank. The balance of the cost will be met from the Company's internal resources and P.L. 490 loans. Hindustan Aluminium is not likely to approach the shareholders with a rights issue for some time to come. Further expansion of the Company's capacity will be taken up at a subsequent stage. The Company is putting up its own power plant and this will be erected by its wholly-owned subsidiary—the Renuagar Power Company. Negotiations to secure foreign exchange and rupee loans are said to be under way.

Explaining the reasons for the delay in the payment of a maiden dividend, Mr. M. P. Birla pointed out that the aluminium industry was highly capital-intensive, necessitating large provisions for depreciation and development rebate. The Company provided last year about Rs. 1.95 crores by way of depreciation on a two-shift basis, but no provision had been made for development rebate. It is estimated that in 1964, the Company will have to provide about 4 crores for depreciation and accumulated development rebate reserve. The management expects to clear all the arrears of preference dividend in

Thermocole®—THE EFFICIENT INSULATION MATERIAL

TC 34(8)-511.

Thermocole® keeps your room so cool!

THERMOCOLE is foamed polystyrene. The lightest rigid insulation material. Its closed cells provide an effective barrier against heat, noise and moisture.

THERMOCOLE is versatile. It is ideal for insulating roofs, walls and floors in all kinds of buildings. One inch of THERMOCOLE insulates better than four feet of concrete!

THERMOCOLE false ceilings are very attractive. It is excellent for fabricating light-weight insulating partitions and doors.

THERMOCOLE is feather-light, yet strong, durable and easy to work with. It cuts structure and labour costs. Efficiency with economy—that's the insulation THERMOCOLE provides.

1966, and pay a maiden dividend in 1967. Mr. Birla said that the Company could have paid the preference dividend a little earlier, if it had not decided on expansion and had made smaller provisions for depreciation.

Caltex Oil Refinery Earns Less

THE Caltex Oil Refining (India) Ltd processed 7,771,988 barrels of crude oil during 1963, compared with 7,079,023 barrels in the previous year and its income from refining amounted to Rs. 2.63 crores, against Rs. 2.62 crores. The gross profit, however, declined from Rs. 1.46 crores to Rs. 1.415 crores. After providing Rs. 89.46 lakhs (against Rs. 90.55 lakhs) for depreciation, Rs. 34.25 lakhs (against Rs. 54.18 lakhs) for taxation and Rs. 64,885 (against Rs. 92,862) for development rebate reserve, the net profit amounts to Rs. 17.12 lakhs, against Rs. 68,519 in the preceding year. This together with the previous years' surpluses has been used to create a general reserve of Rs. 3,506 crores.

The Company has declared a dividend of 9.42 percent which will be paid out of the Reserve No. 2, representing profits exempt under Sections 84 and 101 of the Income Tax Act and this will absorb Rs. 42.4 lakhs. The directors state that the Company has started the production of liquid petroleum gas which is being marketed under the trade name "Calgas". The Company is continuing its discussions with the Government of India for the expansion of the Visakhapatnam refinery, and the sanction is expected shortly. The Caltex tanker movements in the Visakhapatnam port accounted for nearly 48 percent of the total port tonnage, and contributed Rs. 58 lakhs to the port's revenue by way of wharfage. The Company is said to have contributed about Rs. 29 crores to the Government of India by way of excise duty on its refined products.

New Monkhoosi, Darjeeling Tea Results

THE results of the New Monkhoosi Tea Co. Ltd and Darjeeling Tea and Chinchona Association Ltd, under the management of Macneill and Barry Ltd, for 1963 have been published. New Monkhoosi has earned a trading profit of Rs. 3.11 lakhs, against Rs. 2.75 lakhs for 1962, after transferring Rs. 83,455 (against Rs. 87,692) to depreciation. Taxation absorbs Rs. 59,000 (against Rs. 1 lakh) and Assam agricultural tax Rs. 1.10 lakhs (against Rs. 1.09 lakhs). General reserve is allocated Rs. 80,000 (against Rs. 25,000) and development rebate reserve Rs. 1,100 (the same). The taxable ordinary dividend of 7.5 percent, against 5 percent, has been paid. The crop amounted to 317,507 kilograms, and the average sale price was Rs. 6.07 a kilogram. The 1964 crop has been estimated at 333,868 kilograms.

Darjeeling Tea and Chinchona has maintained a taxable ordinary dividend of 30 percent. The trading profit has risen from Rs. 2.24 lakhs to Rs. 2.60 lakhs, after providing Rs. 48,315 (against Rs. 44,958) for depreciation. Taxation absorbs Rs. 58,000 (against Rs. 42,000) and West Bengal agricultural tax Rs. 65,000 (against Rs. 47,000). General reserve is allocated Rs. 34,000 (against Rs. 25,000) and development rebate reserve Rs. 960 (against Rs. 4,400). The carry-forward is Rs. 664, against Rs. 3,530 brought in. The crop totalled 322,932 kilograms, and the average sale price amounted to Rs. 5.92 a kilogram. The

crop for 1964 has been estimated at 319,329 kilograms.

Kumardhubi Fireclay Pays the Same

KUMARDHUBI Fireclay and Silica Works Ltd has repeated a taxable ordinary dividend of 15 percent for the year ended December 1963. The profit has amounted to Rs. 6.87 lakhs, against Rs. 8.24 lakhs for 1962, after transferring Rs. 13.36 lakhs (against Rs. 9.63 lakhs) to depreciation, Rs. 7.12 lakhs (against Rs. 11.56 lakhs) to taxation, Rs. 90,700 (against Rs. 4.28 lakhs) to statutory development rebate reserve and Rs. 1 lakh (the same) to debenture redemption reserve. General reserve is allocated Rs. 1 lakh (the same) and plant renovation reserve Rs. 1 lakh (against Rs. 1.75 lakhs). The carry-forward is Rs. 24,231, against Rs. 25,499 brought in.

Output dropped from 98,789 tons to 95,083 tons. The output of silica fell by about 7,000 tons. The directors mention that the demand for silica is diminishing due to technological changes in the steel industry. The modernisation programme in the old fire brick section has not yet been completed, but a higher production of fire brick has been obtained. The total sale value dropped from Rs. 2.26 crores to Rs. 2.08 crores. The directors are trying to diversify production and negotiations for foreign collaboration and technical know-how have reached an advanced stage. It is proposed to reconstruct tunnel kiln No. 1.

Orissa Cement Repeats

ORISSA Cement Ltd has earned a profit of Rs. 22.54 lakhs for the year ended December 1963, against one of Rs. 95.45 lakhs for 1962, after transferring Rs. 35.39 lakhs (against Rs. 36.62 lakhs) to depreciation and Rs. 2.80 lakhs (against Rs. 3.30 lakhs) to development rebate reserve. A sum of Rs. 45,480 has been transferred from development and rehabilitation reserve. The taxable ordinary dividend of 10 percent has been repeated which works out to a yield of 7.7 percent at the present price of Rs. 12.94 a share of Rs. 10 each. Taxation absorbs Rs. 9 lakhs (against Rs. 51 lakhs) and development and rehabilitation reserve Rs. 3.34 lakhs (against Rs. 4.08 lakhs).

Cement production dropped from 380,000 tonnes to 353,000 tonnes. The directors say that the Company has incurred substantial losses on packing charges for cement which have been fixed by the Government of India. This has happened due to the sharp rise in prices of second-hand bags. It has been pointed out that the recent increase in cement prices sanctioned by the Government does not fully cover the rising production costs. The demand for silica bricks has declined sharply. There has also been a drop in the demand for basic refractories due to the delay in executing the expansion programme of the steel industry. The output of fireclay refractories has been held down by the lack of balancing equipment which cannot be obtained due to the shortage of foreign exchange. The production of bricks has been hindered by the shortage of suitable raw materials. Since the demand for refractories from the steel industry has dropped, the present capacity for producing refractories is considered excessive. The Company has completed the second stage of the expansion programme for the basic refractory plant, and it is expected to produce superior-quality basic refractories. The Company had received an industrial licence to manu-

facture cement from blast furnace slag which is available as a waste product in the Rourkela steel plant. But the licence has been revoked since the Company has not found the Rourkela slag suitable for making slag cement.

Bhartia Electric Steel Pares Well

BHARTIA Electric Steel Co. Ltd has produced satisfactory results for the year ended December 1963. Production rose from Rs. 1.56 crores to Rs. 2.01 crores. There was a substantial improvement in the production of steel castings. The Company received a large order for couplers and their output rose considerably. The capacity to produce centre buffer couplers has been raised, and it is hoped that orders from the Railway Board will increase. The Company has entered into technical collaboration with Messrs Amsted Industries International of the U.S.A. to produce cast steel boggies. The demand for steel castings continues to be satisfactory and the order-book has been well-filled. The expansion programme has made good progress. Land in Barupur, near Calcutta, has been acquired and about Rs. 20 lakhs have already been spent on the expansion programme. The total cost may amount to Rs. 1.07 crores. An application has been made to the Industrial Credit and Investment Corporation of India for a loan of Rs. 70 lakhs.

The profit has risen from Rs. 11.83 lakhs to Rs. 18.72 lakhs, after transferring Rs. 6.03 lakhs (against Rs. 5.69 lakhs) to depreciation, Rs. 1.20 lakhs (against Rs. 30,000) to development rebate reserve and Rs. 25.50 lakhs (against Rs. 22.30 lakhs) to taxation. The taxable ordinary dividend has been increased from 12½ percent to 15 percent to give a yield of 9.8 percent at the present price of 15.37 a share of Rs. 10 each. General reserve is allocated Rs. 11.25 lakhs (against Rs. 12 lakhs), leaving a carry-forward of Rs. 2,263, against Rs. 5,246 brought in.

Walford Transport Pays Less

WALFORD Transport Ltd has earned a profit of Rs. 4.01 lakhs for the year ended December 1963, against a profit of Rs. 4.32 lakhs for 1962, after providing Rs. 70,355 (against Rs. 59,854) for depreciation, Rs. 6 lakhs (against Rs. 7 lakhs) for taxation. The taxable ordinary dividend has been reduced from 30 percent to 27 percent. The yield amounts to 8.5 percent at the present price of Rs. 3.19 a share of Re. 1 each. Development rebate reserve is allocated Rs. 972 (against Rs. 2,134), general reserve Rs. 1 lakh (against Rs. 1.95 lakhs). The carry-forward is Rs. 21,687, against Rs. 5,406 brought in. The Company's expansion programme in Gauhati, Assam, has made good progress. The project should be completed by the end of 1965.

Hindusthan Heavy Chemicals Loses

HINDUSTHAN Heavy Chemicals Ltd has incurred a loss of Rs. 16.75 lakhs for the year ended December 1963, against a loss of Rs. 8.61 lakhs for 1962, after providing Rs. 7.45 lakhs (against Rs. 3.56 lakhs) for depreciation. The dividend has been passed, and a loss of Rs. 18.90 lakhs has been carried forward. The unsatisfactory results have been partly due to the uneconomic size of the plant, and

partly because of the control on the selling prices of caustic soda, chlorine and hydrochloric acid. Sales amounted to Rs. 21.83 lakhs (against Rs. 21.06 lakhs). The Company has completed the first phase of the expansion scheme for the caustic and chlorine plants.

The output capacity has been increased to 13 tons a day. Full working for 1963 was interrupted by the shortage of electric power. The directors are considering to make the operations of the caustic and chlorine plants more economic. They think that the output capacity should be increased to at least 15 tons a day. So the Industrial Finance Corporation of India has been approached for additional financial assistance for the purpose. If the expansion materialises, the working of the factory may be placed on a profitable basis.

Progress of Dr. Paul Lohmann

THERE being no manufacture or trading during 1963, the accounts of Dr. Paul Lohmann India Ltd show only the capital expenditure involved in the completion of the fine chemical factory. The plant has already gone into production. Trial production began early in 1964. A phased programme for the manufacture of many chemicals has been drawn up. The Government has granted the Company licences for importing some essential chemicals. The directors hope that the factory will reach a satisfactory level of production when raw material imports arrive by the second half of 1964. As for the basic chemicals project, the terms of foreign collaboration await the Government's sanction. An application for a licence to import capital goods has also been made. The Company has incurred a loss of Rs. 5,719 for the year ended December 1963, after providing Rs. 21,880 for depreciation and Rs. 17,000 for taxation.

Mafatlal Petro-chemical Projects

THE two major petro-chemical projects promoted by Mafatlal House have now taken a final shape. One of them—National Organic—is likely to enter the capital market shortly. The chairman of the Mafatlal group of industries, Mr. Arvind N. Mafatlal, revealed at the annual meeting of the Standard Mills Co. Ltd that both National Organic Chemical Industries Ltd and Polyolefins Industries Ltd had finalised arrangements with foreign collaborators for the establishment of the projects. The Government of India's sanction is expected within a few weeks. Both the plants will be located in the Thana region. Raw materials have been assured and the construction work for the National Organic factory is likely to start after the monsoon. And if all goes well, according to plan, National Organic's plant will go into production before the end of 1966.

The capital cost of National Organic's project is estimated at Rs. 30 crores, of which Rs. 10 crores will be in the form of share capital and the balance will be obtained as loans and borrowings. One-third of the share capital will be subscribed by Shell International Chemical Company and its affiliates who are collaborating in the project. Another one-third will be taken up by the Mafatlal group, their associates and friends, and the balance will be offered for public subscription at an appropriate time. Out of the Mafatlal group's share of the capital, Standard Mills has offered to subscribe for shares worth

Rs. 75 lakhs. In addition, the shareholders of Standard Mills will be offered one share in the new Company for every two shares of Standard held by them. The offer to the shareholders of the Standard Mills is being made in response to repeated requests from them. The foreign exchange component of the project is estimated at Rs. 14 crores, of which Rs. 3.3 crores will come from the foreign collaborators' subscription to the Company's share capital and the balance will be obtained as long-term loans from financial institutions. Mr. Mafatlal informed the shareholders that the Company did not propose to have the public issue underwritten as the promoters were confident of its success. The public issue will be placed in the market at an opportune time. Justifying Standard Mills' investment of Rs. 75 lakhs in National Organic, the chairman said that the investment will prove quite profitable over a period of time.

Mr. Arvind N. Mafatlal also disclosed that it was proposed to set up a new Company to be known as Polyolefins Industries Ltd to undertake the manufacture of polyethylene from the raw materials supplied by National Organic Chemical Industries Ltd. The West German firm of Farbwerke Hoechst A.C. will collaborate in this venture. This project is estimated to cost about Rs. 8.5 crores. The issued capital of the Company will be Rs. 3.60 crores, of which Rs. 1.20 crores will be taken up by the foreign collaborators. The National Organic will take up shares worth Rs. 1.20 crores, and the balance of Rs. 1.20 crores will be offered for public subscription. The plant will be located in the Thana-Belapur area and it will have a capacity of 20,000 tons of polyethylene a year.

Referring to shareholders' suggestion to issue bonus shares by capitalising the share premium account of Rs. 52.01 lakhs, Mr. Mafatlal pointed out that this could not be done now because of the uncertainty concerning tax liability as the premium account had been created by the amalgamation of New China Mills and Indian Bleaching Works. Speaking about the outlook for Standard Mills, the chairman said that the working during the first five months of the year had been normal and that the Company hoped to maintain its performance for the whole year. Justifying large sums spent on renovation and modernisation of the mills—about Rs. 2.50 crores have been spent over the past five years—the chairman said that this was essential for maintaining the mills' efficiency. The replacement cost of the mills would be as much as Rs. 14 crores. Standard Mills shares which had been marked down to Rs. 569 on 13th June—the lowest for the year—rallied to Rs. 585 the next day, following the chairman's encouraging remarks about the Company's future.

Kislokar Pneumatic Rights Issue

KIRLOSKAR Pneumatic is offering 15,090 equity shares of 100 each at par to the existing shareholders as on 19th May, in the ratio of three new shares for every seven shares held. Shareholders having less than seven shares will be offered three coupons for each share held. The new shares will rank equally with the existing shares for dividend that may be declared for the year ended 31st March, 1965, in proportion to the paid-up value thereon. Additional funds are required for financing the Company's expansion schemes.

The Company is engaged in diversifying its activities by expanding the range of its production of com-

pressed air equipment and by taking up new articles for manufacture. It has signed an agreement with Westinghouse Electric International Company of the U.S.A. for manufacturing compressors and components of air-conditioning units. It has finalised a technical assistance agreement with Westinghouse Brake and Signal Co. Ltd of the U.K. for the manufacture of air brake compressors suitable for the railways. It also proposes to step up its production of air compressors, rock drills, pneumatic tools and refrigeration compressors to meet the growing demand in the country.

Triton Insurance Maintains

THE distributable balance of the Triton Insurance Co. Ltd has amounted to Rs. 3.05 lakhs for the year ended December 1963, against Rs. 5.06 lakhs for 1962, after providing Rs. 5.20 lakhs (against Rs. 5 lakhs) for taxation, Rs. 14,601 (against Rs. 19,640) for expenses of management of capital and Rs. 71,433 (against Rs. 77,906) for depreciation on investments. The taxable ordinary dividend of 50 percent has been repeated, which works out to a yield

of 9.6 percent at the present price of Rs. 130 a share of Rs. 100 each on which only Rs. 25 has been paid-up. General reserve is allocated 17,367 (against Rs. 4.14 lakhs).

In the fire department, the net premium amounted to Rs. 27.75 lakhs and the net claims paid and outstanding to Rs. 14.61 lakhs. After making all adjustments, the accounts show a profit of Rs. 2.38 lakhs. Although there was a marked deterioration in the results of business written in India, the bulk of the fire losses occurred overseas. The net premiums of the marine department amounted to Rs. 9.94 lakhs and the net claims paid and outstanding to Rs. 4.54 lakhs. The account shows a profit of Rs. 1.94 lakhs, after making all adjustments. The net premium of the miscellaneous insurance department amounted to Rs. 5.28 lakhs and the net claims paid and outstanding to Rs. 2.55 lakhs. There has been a profit of Rs. 65,430, after making necessary adjustments.

Travancore Cements Pays Less

TRAVANCORE Cements Ltd has reduced the dividend for 1963

from 7 percent to 6 percent. This follows the setback in the Company's working results during the year. Sales are a little higher at Rs. 74.51 lakhs, against Rs. 73.51 lakhs, but the gross profit had declined sharply from Rs. 15.32 lakhs to Rs. 12.46 lakhs. The profit margin has been squeezed by the increase in manufacturing costs. After providing Rs. 5.16 lakhs (against Rs. 5.62 lakhs) for depreciation, Rs. 4.20 lakhs (against Rs. 5.60 lakhs) for taxation and Rs. 13,034 (against Rs. 2,170) for development rebate, the net profit amounts to Rs. 2.97 lakhs, against Rs. 4.08 lakhs in 1962. After transferring Rs. 50,000 from the deferred taxation reserve and writing back excess provision for doubtful debts, the directors have provided Rs. 49,999 (against Rs. 50,372) for rehabilitation reserve and the proposed 6 percent dividend absorbs Rs. 3 lakhs (against Rs. 3.50 lakhs), leaving a sum of Rs. 11,408 to be carried forward, against Rs. 14,085 brought in. The directors state that the Company's request for treating it on par with other cement factories in the matter of increase of Rs. 2.75 a tonne from 1st June, 1963, has been turned down on the plea that the price allowed to it earlier had already been higher than that for other units. The Com-

ACCOCID

(ACID-RESISTING CEMENT)

Containing silicates of high purity, ACCOCID is proof against all strengths of inorganic and organic acids. ACCOCID is recommended for setting acid-resisting bricks for acid storage and pickling-tanks, acid towers and fume-stacks, reaction-vats and tanks, laboratory bench-tops etc.

ACCOSSET-50

(MONOLITHIC REFRACTORY CEMENT)

Composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals, ACCOSSET-50 gives good bonding strength and high heat resistance. Once it is dried and burnt ACCOSSET-50 becomes one with the bricks. Recommended for jointing, bonding, monolithic and rammed linings etc.

FIREBRICKS

With medium, high and super alumina content, firebricks are made to the required shape, size and quality. They resist spalling, abrasion and the various stresses induced by heat.

Share Offer from Mohatta And Heckel

MOHATTA and Heckel Ltd which proposes to set up a factory in Khopoli (Maharashtra) for the manufacture of all kinds of wires, wire rope and high tensile wire is offering 287,000 equity shares of Rs. 10 each and 15,000 preference shares of Rs. 100 each for public subscription. The plant will have an annual capacity of 5,000 tons of steel wire and wire ropes. George Heckel GmbH of West Germany is collaborating in the venture; it will provide not only the technical know-how, but also participate in the capital of the Company. The project is estimated to cost Rs. 1.25 crores which is proposed to be met from the issued capital of Rs. 65 lakhs, a loan of Rs. 35 lakhs from the I.C.I.C.I. and bank borrowings amounting to Rs. 25 lakhs.

The Company has received licences to import plant and machinery worth Rs. 45.25 lakhs. A part of the plant has already arrived. Construction of the factory building has started and, if all goes well, the plant is likely to go into production early next year. The Company has received licences to import the required raw materials. The Company has an authorised capital of Rs. 1 crore made up of Rs. 80 lakhs in equity shares of Rs. 10 each and Rs. 20 lakhs in 9.5

percent cumulative redeemable preference shares of Rs. 100 each.

The issued capital is Rs. 65 lakhs of which Rs. 15 lakhs is in preference shares. Out of the the equity capital of Rs. 50 lakhs, the promoters, directors and their associates have subscribed for shares worth Rs. 10.70 lakhs. The foreign collaborators have agreed to take up equity shares worth Rs. 10.60 lakhs. The balance of Rs. 28.70 lakhs in equity shares and Rs. 15 lakhs in preference shares is now being offered for public subscription. The list will open on 20th June, and will close on 2nd July or earlier but not before 24th June. The entire public issue has been underwritten.

Seebpore Coal Earns Less

THE profit of Seebpore Coal Co. Ltd has dropped from Rs. 5.60 lakhs for 1962 to Rs. 4.61 lakhs for 1963, after transferring Rs. 93,508 (against Rs. 65,815) to depreciation. The taxable ordinary dividend has been reduced from 35-7/5 percent to 28-4/7 percent, including an interim of 10-5/7 percent. The yield works out to 5.8 percent at the present price of Rs. 34.75 a share of Rs. 10 each on which only Rs. 7 has been paid-up. Taxation, including Rs. 14,000 for surtax on profits, absorbs Rs. 2.34 lakhs (against Rs. 3.35 lakhs). The super profits tax amounted to Rs. 70,000 for 1962. Development rebate reserve is allocated Rs. 52,000

(against Rs. 30,000) and general reserve Rs. 80,000 (against Rs. 75,000), leaving a carry-forward of Rs. 16,284, against Rs. 15,849 brought in. Raisings amounted to 122,801 tons, against 125,503 tons and despatches totalled 128,071 tons, against 115,817 tons. The output of Koithi seam coal from the limited area of the Pretoria property continued during 1963. The new winders have been installed in the Lachipur Colliery.

Shahdara (Delhi) Saharanpur Light Railway

THE gross earnings of the Shahdara (Delhi) Saharanpur Light Railway Co. Ltd have been Rs. 37.54 lakhs for the year ended March 1963, against Rs. 34.94 lakhs for 1961-62, while working expenses have risen from Rs. 32.68 lakhs to Rs. 36.28 lakhs. So the net loss has amounted to Rs. 1.21 lakhs, after making all adjustments. Bringing in a debit balance of Rs. 6,488, the total loss amounts to Rs. 1.28 lakhs which has been offset by transferring sums from general reserve. The dividend has been passed. The directors referred to the competition from road transport which is hindering the earnings of the Company.

Same from Cambodia Mills

ALTHOUGH the dividend on ordinary shares is maintained at 9

percent (the same) for the year ended December 1963, the profit of Cambodia Mills has fallen. The directors' report says that the cost of raw materials continued to mount and manufacturing expenses were also high. There was no corresponding increase in the selling price of yarn. Consequently, the margin of profit was considerably reduced. The profit for the year amounts to Rs. 4,96,149, after providing Rs. 2,27,101 for depreciation, compared with the previous year's profit of Rs. 6,09,784, after providing Rs. 2,49,419 for depreciation. With the amount of Rs. 8,270 brought forward the total surplus comes to Rs. 5,04,419. Out of this, bonus and expenses relating to the previous years amounts to Rs. 2,69,111. The dividend on preference shares at 9.1 percent amounts to Rs. 9,100. The equity dividend at 9 percent takes in Rs. 1,80,000. General reserve gets Rs. 40,000 (against Rs. 1,40,000). The balance of Rs. 6,208 is carried forward. The sale of finished goods amounted to Rs. 1,42,39,654 (against Rs. 1,41,16,932).

United Flour Mills Pays More

THE United Flour Mills Co. Ltd has increased the taxable ordinary dividend from 7½ percent for 1961-62 to 20 percent, including an interim of 10 percent for the year ended November 1963. The yield amounts to 7.2 percent at the present price of Rs. 27.81 a share of Rs. 10 each. The profit has improved from Rs. 2.26 lakhs to Rs. 3.16 lakhs, after providing Rs. 28,590 (against Rs. 30,201) for depreciation. Taxation absorbs Rs. 1.65 lakhs (against Rs. 1.92 lakhs), general reserve Rs. 1.75 lakhs (against nil) and development rebate reserve Rs. 4,957 (against nil). The carry-forward is Rs. 8,262, against Rs. 6,571 brought in. The maximum selling prices of wheat produced except bran continue to be controlled by the Government of India. The extraction of atta was kept at about 45 percent for most of 1962-63. The supply of wheat from the Government of India has on the whole been satisfactory. Production rose from 252,082 quintals to 270,731 quintals.

Twyford Tea Raises Dividend

A SUBSTANTIAL improvement in profit, a better crop, and the stepping up of the dividend to 7½ percent from 5 percent, feature the working results of Twyford Tea Co. Ltd for the year ended December 1963. The net profit of the year after taxation amounts to Rs. 2,28,222.15 after providing for depreciation, managing agency commission, and also after providing Rs. 2,30,000 for taxation. This compares with the previous year's net profit of Rs. 88,557, after providing Rs. 65,000 for taxation. With the amount of Rs. 1,113.51 brought forward, and with Rs. 20,000 being the transfer from provision for contingencies, the total comes to Rs. 2,49,335.66. Out of this, a sum of Rs. 57,455 is transferred to general reserve (against nil). A sum of Rs. 50,000 is transferred to dividend equalisation reserve (against nil). The proposed dividend of 7½ percent (against 5 percent) on equity shares will absorb Rs. 1,18,125. The balance of Rs. 23,755.66 is carried forward. During the year, the Company harvested 594.973 kilograms of tea at an all-in-cost of 355 cents a kilogram, against 403 cents in the previous year. The average sale price was 432 cents a kilogram (against 432 cents). The estimated tea crop for 1964 is put at 600,000 kilograms at a cost of 337.66 cents a kilogram.

The Stock Markets

BIG FALL IN TURNOVER DUE TO UNCERTAINTIES

Wednesday Evening.

THE Calcutta stock market has been sluggish during the past week, and turnover has dropped greatly. The clearing on Wednesday was uneventful, and carry-forward charges were about the same as in the previous settlement. Business, which has been largely of a jobbing nature, is concentrated on clearing shares. Although the selling pressure in cash shares is not pronounced, they have tended to drop on any indication to sell. New shares, in particular, have suffered greatly. The response to various new issues during recent weeks has been poor, and the bulk of the issues had to be taken up by the underwriters themselves.

Investors and operators are not inclined to take a constructive view because of various uncertainties. The growing inflationary pressure, combined with an unchecked rise in the prices of foodgrains, have caused a great deal of concern. Full-scale State trading in foodgrains is unlikely, but the market is anxiously awaiting the measures which the Government will take to stabilise prices.

Lyons Range is not impressed by the news that the Unit Trust of India will start selling units from 1st July, 1964. Although the long-term effect of the Trust's operations on the stock market is expected to be healthy, a large amount of savings may be diverted to the units because they may give a better return than what is available on equities. The main attraction of the units is that the returns on them will be substantially tax-free.

Reports that the International Development Association has sanctioned India foreign exchange loans to finance the production of commercial vehicles, industrial machinery and construction equipment, have created little excitement. Even the recommendations of the Swaminathan Committee to help industries by simplifying licensing, import and other procedures have been treated indifferently.

The stock market has, for the time being, diverted its attention to the prospects of relaxation in the margin system. The Government may announce its decision on the subject at an early date. It is likely that various stock exchanges may approach the Central Finance Ministry to expedite the decision if it is delayed.

Indian Iron have slightly recovered towards the close due mainly to short-covering. Bears are inclined to cover their open position in view of an early announcement of the dividend for 1963-64. Engineering shares lack interest, but Binani Metals have enjoyed influential support. Bhartia Electric Steel have been marked higher due to the payment of a better dividend.

Clearing scrip have attracted most attention in the miscellaneous section. Turnover has been largely confined to Indian Aluminium, Hindustan Motors, Indian Copper, Rohtas, Kesaram Industries and Dunlop Rubber. Purchases in Alkali and Chemical and Metal Box have been scattered. Among new shares, Phillips Carbon have weakened, while Chemicals and Fibres have been supported. Electric company shares like Calcutta Electric are dull. Scattered business in United Bank and United Commercial has been transacted. Shaw Wallace, among managing agency shares, have

gained on paying a bigger dividend. Except for Orient which have moved both ways, paper shares are neglected. Sugar shares are difficult to transact due to the absence of buyers. In the cotton mill section, only Bharat Commerce and Dunbar have been about steady.

Business in jute section has been selective with shares like Birla, New Central, Champdany, Barnagore and Ganges drawing support. The sharp decline in U.S. burlap consumption in May, combined with an increase in U.S. stocks, has disturbed sentiment. Coal shares lack interest and stray business in Western Bengal and Central India has been done. Tea shares have been generally dull due to the disappointing dividends declared by many companies for 1963.

Government securities are fairly steady. The 3 percent Conversion Loan 1986 has been quoted around Rs. 63.75. There has been good support for short-dated loans, which have hardened. The prices of medium-dated stocks are about steady.

Bombay

GOOD COMPANY NEWS IGNORED

BUSINESS CONFINED TO CLEARING SHARES

Wednesday Evening.

THERE has been a substantial drop in turnover in the Bombay stock market during the past week. Operators have been disinclined to extend commitments either way due to the growing concern about the rising prices of commodities. Dalal Street has been disappointed over the Government's delay in taking a decision on relaxing the margin system. In spite of good corporate news, bulls have preferred to keep their commitments light lest share prices drop further.

There has been a great deal of uncertainty over cloth prices. Turnover has largely centred on clearing shares and business generally has been of a jobbing nature. Investment support has been negligible, so turnover in cash scrip has been at a low ebb. Dalal Street has virtually shown no enthusiasm over the report that the Unit Trust will begin to sell units from 1st July. Meanwhile, operators have been disturbed by the growing shortage of funds. The support from institutions, especially the Life Insurance Corporation, has been negligible in recent weeks.

Tata Steel ordinary have recovered to Rs. 145.50 towards the close on hopes that the Company will soon declare the dividend for 1963-64. Among engineering shares, Tata Locomotive and Mukand Iron have gained slightly. Premier Construction have reacted on reports that the prospect for amalgamating Hindustan Construction, a wholly-owned subsidiary, with Premier Construction is remote. Larsen and Toubro have retreated on the news that the Controller of Capital Issues has permitted the Company to raise a further capital of Rs. 66 lakhs by issuing ordinary shares of Rs. 10 each at a premium of Rs. 2 a share. The proceeds of the new issue will be used to finance the Company's

be cut. National Rayon have dropped on pressure. Voltas and Tata Oil have been about steady.

In banks, scattered business has been done in Central Bank and Bank of India. Electric company shares have been steady, and support has been forthcoming for Ahmedabad and Tata Hydro.

Madras

PRICES STEADY IN SMALL TURNOVER

PLANTINGS SLUGGISH ON BAD CROP REPORTS

Tuesday Evening.

THE Madras stock market has been steady during the past week, although turnover has been limited. Better enquiries from outside sources, combined with short-covering, have helped to improve the prices of clearing shares. The news that the Unit Trust will start selling units from 1st July has been interpreted bullishly. Investors have, however, been cautious due to the growing

shortage of funds. The prospect of power cut has also called for caution.

Government securities have been fairly steady, and attention has centred on selected State Government loans. Although the prices of bank shares have been maintained, turnover has been negligible. Indian Overseas have come to hand at Rs. 139 and Indian at Rs. 151.50. In electric companies, scattered business has been done in Salem-Erode at Rs. 14.37 and in West Coast at Rs. 13.50. Sugar shares have been freely offered without attracting attention. Deccan have dropped to Rs. 11.22 and E.I.D. have been available at Rs. 34. Mysore have reacted to Rs. 28.33 and Jeypore to Rs. 16.50. Cauvery have been quoted at Rs. 96.50 and Madura at Rs. 9.44.

Planting shares have been hesitant due to unfavourable crop reports. Blue Mountain have been freely done at Rs. 2.35 and Cochin Malabar at Rs. 6.03. Consolidated Coffee have been taken at Rs. 21.80 and Ouchterlony at Rs. 3.45. Periakaramalai have changed hands at Rs. 3.43. Among rubber shares, Nilambur have been available at Rs. 12.75. Rajagiri at Rs. 21.50 and Travancore at Rs. 11.37. In tea companies, Mlamlam have been quoted at Rs. 34.60. Nonsuch at Rs. 22.25 and Peermade at Rs. 21.25. Coffee shares have declined on

balance. Coffee Lands have dropped to Rs. 17.65 and Ossor to Rs. 2.37, but Rajendra have been steady at Rs. 10.42.

In textile shares, South India Viscose have been done at Rs. 118.50 and Travancore Rayon at Rs. 20.65. Business has passed in Lakshmi at Rs. 131 and Madura at Rs. 32.55. Bangalore Woollen have been about steady at Rs. 248 and Buckingham at Rs. 270. Nataraj Spinning have been done at Rs. 7.50 on the decision to increase the Company's subscribed capital by issuing 50,000 preference shares of Rs. 10 each. Ramakrishna have been steady at Rs. 217.80 and Mettur at Rs. 277.50.

Among miscellaneous industries, Aluminium Industries have been quoted at Rs. 19.40 and Ashok Leyland at Rs. 6.60. In cement shares, Dalmia have been bought at Rs. 13.10 and India Cement at Rs. 5.53. Mettur Chemical have improved to Rs. 13.35 on replacement purchases, but F.A.C.T. have been quiet at Rs. 5.10. Seshasayee Paper have been sluggish at Rs. 7, but Enfield have attracted support up to Rs. 10.87. Parry's Confectionery have come to hand at Rs. 2.75 and Spencer at Rs. 21.65. T. Stanes have been supported up to Rs. 13.50, but Textool have reacted to Rs. 142.50. Madras Rubber has dropped to Rs. 11.25, but Kirloskar

CAPITAL, 18th June, 1964.

Electric have been maintained at Rs. 18.40.

London

ECONOMIC PROSPECTS TONE UP MARKET INDUSTRIALS RISE ON GOOD COMPANY NEWS

London, 17th June.
THE stock market took a distinct turn for the better during the

past week. There was some expansion in the volume of business, but even so, the market was quiet. The recent persistent small selling dried up, and with buyers more active, prices responded markedly in the current thin state of the market. The buying appeared to be based on a more hopeful view of the economic situation and rising hopes concerning the Government's prospects in the coming general elections. Meanwhile, the stream of good company news continued. Bids, both actual and rumoured, again provided a number of features. The main event on the bid front was Rank Organisation offers for Medcca. This came to nothing, however, and Medcca lost ground a good part of the rise which followed the first news of Rank's approach. Industrials recorded extensive rises of 1s and more. Virtually all sections participated in the advance. Among many issues to respond favourably to good company news were House of Fraser, De La Rue, Watney, Granada and Holman Bros. By contrast with the firmness of industrials the gilt-edged market lost ground, reflecting the uncertain performance of sterling in the foreign exchange market and Press talk of a possible rise in Bank rate. Banking, finance, insurance and property shares were steady to firm. Mining shares generally were subdued, and, apart from firmness in tins, were not greatly changed. Harrisons and Crossfields were a good feature again in quiet rubbers. Teas moved narrowly. Oils were better where changed. Dollar stocks fluctuated in line with Wall Street.

CAPITAL

Founded in 1888, is India's oldest and most widely read financial newspaper. It gives its readers in all parts of the world the most up-to-date service in Indian economic intelligence and information of any newspaper in the daily or weekly field, and includes a complete list of all shares and securities dealt in on the Calcutta Stock Exchange together with full details of latest balance sheets.

Published every Thursday.

TOMORROW MAY BE TOO LATE

This booklet contains simple rules of the road which every road-user must know. Read this little book. Follow its simple rules in your daily use of the road. It may save someone's life—perhaps your own.

The text of the Road Safety Code has been fully approved by State Governments and the Ministry of Transport.

IT'S FREE! The Road Safety Code comes in ENGLISH, HINDI, MARATHI, GUJARATI, BENGALI and TAMIL. It is available FREE in Calcutta from:
• Your nearest Burmah-Shell Filling Station;
• Offices of the Regional Transport Officers;
• Automobile Associations;
• Taxi Associations.

Road Safety
is a matter of life...and death
Issued in the interest of Road Safety by Burmah-Shell.

Money

THE CALCUTTA MONEY MARKET

SLIGHT DECREASE IN ADVANCES

Wednesday, 17th June.

THE aggregate level of advances has decreased slightly in the Calcutta money market during the past week. This is explained by the slight decline in the credit given to sugar mills. The advances given to the other major categories of borrowings, namely, cotton and jute mills, the iron, steel and engineering industries, and the food-grains and seeds trade remain unchanged. In the interbank market, conditions are easy and the call rate quotes 3½ percent.

The exchange market has been quiet, with a poor supply of tea and gunny bills. The demand for remittances is fair. In the London market, sterling has firmed up and regained part of the lost ground in relation to most of the major currencies except the French and Swedish.

SILVER WAS QUIET IN CALCUTTA during the past week due to the decline in the seasonal demand. The price fell from the previous week's level of Rs. 250.75 to Rs. 260 a kilogram, quoted today. The London and New York prices stood at 111½ and 129.3 cents.

In sympathy with silver, gold was quiet and the price of 14-carat declined from Rs. 72.25 to Rs. 71.25 a 10 grams.

DURING THE WEEK ENDED 12TH JUNE, Government of India Treasury bills for Rs. 100,89,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 16th June. The total amount offered was Rs. 2,34,00,000. Tenders at Rs. 99.255 percent were accepted in full, and those at Rs. 99.250 percent were allotted 85 percent approximately. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 22nd June.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 17th June to 20th June at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 10th June to 13th June amounted to Rs. 2.20 crores.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 5th June, 1964, shows Demand and Time liabilities at Rs. 1,257.48 crores (Rs. 45.33 crores on account of borrowings from banks) and Rs. 1,314.21 crores (Rs. 11.29 crores), compared with Rs. 1,266.43 crores (Rs. 47.45 crores) and Rs. 1,304.35 crores (Rs. 12.23 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 18 lakhs and Rs. 2.92 crores to Rs. 64.52 crores and Rs. 87.60 crores, respectively. There is a drop of Rs. 1.26 crores to Rs. 620.50 crores in investments. Advances and bills discounted at Rs. 1,835.76 crores show a fall of Rs. 2.68 crores. The ratios

to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 71.4 percent, against 6 percent and 71.5 percent.

THE RETURN OF THE STATE BANK OF India for the week ended 5th June, 1964, shows a rise of Rs. 2.77 crores to Rs. 624.10 crores in total deposits. Investments in Government securities are down by Rs. 2 crores to Rs. 230.91 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have diminished by Rs. 3.29 crores to Rs. 368.48 crores. Cash and balances are, in consequence, shown at Rs. 25.72 crores or Rs. 3.82 crores higher.

THE INCREASE OF RS. 4.45 CRORES TO Rs. 2,553.98 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 12th June, 1964, while the total note issue was Rs. 21 lakhs smaller at Rs. 2,576.52 crores. Notes held in the Banking Department consequently dropped by Rs. 4.63 crores to Rs. 22.53 crores. Deposits of the Government of India rose by Rs. 47 lakhs to Rs. 51.10 crores and those of State Governments by Rs. 8.30 crores to Rs. 17.39 crores. Balances of scheduled banks at Rs. 81.72 crores showed a decline of Rs. 5.99 crores. Balances held abroad dropped by Rs. 2.04 crores to Rs. 8.45 crores. Investments at Rs. 258.90 crores showed a rise of Rs. 43.50 crores. Loans to scheduled banks declined from Rs. 36.28 crores to Rs. 18.16 crores, of which advances against usance bills amounted to Rs. 5.27 crores (Rs. 7.78 crores). Ways and means advances stood at Rs. 45.20 crores, against Rs. 63.18 crores.

TREASURY BILL MATURITIES

CHAIRMAN, SIR RAGHAVAN PILLAI'S STATEMENT

The following is the statement delivered by the Chairman, Sir Raghavan Pillai, K.C.I.E., C.B.E., on the occasion of the Thirty-fourth Annual General Meeting held in Calcutta on 12th June, 1964.

I have great pleasure in welcoming you to this, the thirty-fourth Annual General Meeting of your Company. The Directors' Report and the Statement of Accounts have been circulated and been in your possession for some time, and I propose with your permission that they be taken as read.

We are meeting in the shadow of a supreme tragedy. The man who made India what she is to-day is with us no more. Few men, in any country, or in any age, have given of their all in the service of their country, of their people, and of humanity at large, as has Jawaharlal Nehru, in our country, and in our day. In him Nature wrought a rare synthesis of knowledge and understanding—of the ancient and modern, of east and west, of science and the humanities, and of materialism and spirituality, and we as a nation should be profoundly and eternally thankful that so unique a man should have been here to lead us in the hour of our greatest need. I count it the choicest among the blessings of my life that I had the privilege of working for him for close on eleven years first as Secretary of the Cabinet and later as Secretary General in the Ministry of External Affairs. I think of him as I knew him then—a man, before whom the dross in us seemed to melt away, and the magic of whose mind illumined and inspired our own. He is gone, and for us that remain I can think of no better wish than that we will, with renewed vigour and with his unseen guidance, go about our daily tasks, cheerfully as he would have wished, each resolved to help to fashion a new India fit in every way to take her place in this changing world, and yet not forsaking the traditional values of this ancient land.

Retrospect

In the lives of organisations as of men, there comes a turning point when the past, however distinguished, seems but a preparation for what is yet to come. That turning point has now come for your Company. Nineteen sixty-three has been an eventful year of outstanding significance in the history of your Company, and marks the beginning of a new period of increasing challenge as well as opportunity. The year has witnessed the consolidation of the gains from an earlier period of development; the merger of your Company and of its subsidiary, Sankey Electrical Stampings Ltd., making possible the more effective and efficient utilisation of the combined resources of the two companies; and a significant advance, beyond the stage of study and preparation, in the implementation of our further programmes of development. At a time when more than one business establishment in the country has celebrated its centenary, we must, I am afraid, count ourselves among the youthful, and for us the age of reminiscence still lies many decades away. Yet, though youthful, we can claim the advantage of vigorous growth, and it seems appropriate for us at this juncture to cast a backward glance at our own past, the better to assess our prospects for the future.

Our story opens with the formation in 1922 of Henry Williams (India) Ltd., which, in a small workshop at Shalimar, within the boundaries of the present Calcutta Works, started the manufacture of railway track and signal

materials. The intention was to develop the Indian interests of Henry Williams Ltd., Darlington, U.K., which was well established as a manufacturer and exporter of these materials to the Indian railways.

In 1931 a new company was formed, under the name Henry Williams India (1931) Ltd. for the purpose, *inter alia*, of acquiring the former company and expanding its activities. One of the earliest major developments had been the establishment of a Bolt Works in 1926, and in consequence rolling mills were installed in 1932 mainly with the object of securing a source of the special raw material required for the manufacture of bolts and nuts.

In 1934 Guest, Keen & Nettlefolds Ltd. acquired a major holding in the company, which was then given its present name, Guest, Keen, Williams, Ltd. Twenty-two years later, in 1956, the Company became a public limited Company, and Indian investors now have a vital stake in the fortunes of the Company.

During the years 1939 to 1945 the Company made a valuable contribution to defence production, and at the end of the war resumed the manufacture of similar products to the pre-war range. After a period of consolidation the Company embarked on a long term plan of expansion which still continues and indeed has been progressively accelerated.

Significant Step

The first significant step was the installation of a steel melting furnace in 1952. This was followed by a second furnace in 1958.

A new unit was built at Bhandup near Bombay for the manufacture of wood screws, and production started in 1958. Since that time the Bhandup Works has been substantially enlarged and numbers of other fasteners have been added to its range of manufacture.

At the same time much of the Calcutta Works was modernised, in particular the bolt works. A well equipped, modern toolroom was built in 1957. The manufacture of pressed steel car and trailer type wheels was introduced in 1960, and in 1961 the commissioning of extensive new rolling mills was completed, a project costing over Rs. 3 crores. In the same year the manufacture of bright steel bars was started. Fabricating and service departments have been generally improved and expanded in recent years, and the extent of overall development is clearly illustrated by the fact that the gross value of fixed assets in the Company's balance sheet has risen from Rs. 2.47 crores to Rs. 10.12 crores in the last ten years.

In December 1960 your Company acquired a controlling interest in Sankey Electrical Stampings Private Ltd. This company was formed in Calcutta in 1943, primarily at the instance of the Government of India, in order to establish an indigenous supply of electrical stampings for defence purposes and at a time of acute shortage of imports.

The first works was set up at Worli in Bombay and was later moved to its present site at Bhandup in 1946. The increasing demand for stampings in Eastern India prompted the company to establish a second works in Calcutta in 1950 and a third unit came into being in Bangalore in 1959.

Apart from pioneering the manufacture of electrical stampings in India, the company, by virtue of its association with Messrs. Joseph Sankey & Sons Ltd., U. K., was in the fortunate

position of being able to influence the negotiation of a technical collaboration agreement between that company and the Tata Iron & Steel Co. Ltd. in 1946 covering the manufacture of electrical steel sheets in India. That agreement with Tatas was an important milestone in the development of the electrical engineering industry in this country.

Diversification of Products

In recent years Sankey Electrical Stampings Ltd. has responded to the need for the diversification of its range of products by embarking on the manufacture of precision pressed components for various industries and several new ventures have been planned for the near future.

Finally we reach 1963, a year which has brought several important developments that have broadened the base of your Company's structure. Sankey Electrical Stampings Ltd. became a wholly owned subsidiary on the exchange of shares with Tatas, and on 10th December you approved a scheme of amalgamation whereby that subsidiary was to be merged with and operate as a division of your Company. I am glad to report that the consent of the Calcutta High Court has since been received and the amalgamation is effective retrospectively from the start of this year.

On 24th December 1963 you approved the Directors' recommendation of a bonus share issue in the ratio of one for two. The bonus share issue and the exchange of shares with Tatas constituted a substantial increase in the issued capital which in turn necessitated raising the authorised capital of the Company, and you will recall that an increase from Rs. 6 crores to Rs. 10 crores was approved at the shareholders' meeting on 24th December 1963.

To assist in financing expansion it was decided during 1963 to issue debentures amounting to Rs. 1.5 crores and as you may know that issue was fully subscribed in February this year. Another significant event during the year under review was your company's investment of Rs. 38.2 lacs, in the form of plant and cash, in Sankey Wheels Ltd., a newly formed company which is to make passenger and commercial vehicle wheels.

Thus, from its modest beginnings in the years between the World Wars, your Company has progressed steadily to a place of importance in our country's industry.

Board of Directors

I am pleased to inform you that Mr. K. C. Maitra was appointed a Managing Director of your Company with effect from 29th December, 1963. Mr. Maitra has been the Managing Director of Sankey Electrical Stampings Ltd. for the past 14 years, and, as already mentioned, that company has now been amalgamated with your own Company.

It is the intention also to appoint four additional Directors to strengthen the Board of your Company and the proposed election of Mr. N. R. Banerjee, Mr. A. H. Sethna, Mr. R. B. Ritchie and Mr. J. M. Leighton will be the subject of resolutions later at today's meeting. Mr. Banerjee and Mr. Sethna were Directors of Sankey Electrical Stampings Ltd. for a number of years, and Mr. Ritchie and Mr. Leighton are at present senior executives of the Company.

Production

A rise in the level of output and sales of all major products was achieved

CAPITAL, 18th June, 1964.

in 1963, but raw material supplies were again the limiting factor which governed the extent of the advance. In particular, supplies of steel billets, which constitute the raw material for the majority of the Company's manufactures, were unsatisfactory both in quantity and in surface condition, and it was only by virtue of comparatively large billet stocks at the start of the year that it was possible to maintain an adequate level of production.

At the end of the year stocks of good quality billets were critically low and output of various products has been adversely affected.

The output of the rolling mills rose again in 1963 in spite of irregular billet supplies, and in particular, production of spring steel bars for the transport services was increased satisfactorily.

Production of bright steel bars was twice the previous year's level of output but full use of the potential capacity of the plant could not be made owing to the continued shortage of free cutting steel in India.

In the forge, production was affected by plant breakdowns, and steps are being taken to replace some of the older stamps. Whilst competition and raw material difficulties limited the output of certain railway track material, the production of major items, including crossing sleepers and points and crossings, was substantially increased.

A small increase in the output of fasteners in the Bolt Works was achieved, but the manufacture of special and high tensile products was hampered by the lack of quality raw material.

At the Bhandup Works, in spite of unstable conditions in the market for wood screws and various other small fasteners, a substantial rise in turnover was achieved.

Operating Results and Dividends

The Accounts for the period under review have been with you for some time and you will no doubt have noted with satisfaction the improvements that have been achieved in the Company's operating results.

Turnover improved to Rs. 16,37,49,450 from Rs. 13,06,09,872 in 1962 representing an increase of 25.4%. The increased income from sales helped by vigilant efforts to exercise economies has earned for the Company a total surplus before taxation of Rs. 2,17,43,217 compared with Rs. 1,27,55,590 for 1962. The available profit for disposal has not, however, risen proportionately owing to a much higher charge for taxation which for 1963 amounts to Rs. 1,36,59,114 compared with Rs. 55,60,000 for the previous year.

The increased charge for taxation arises mainly from the issue of bonus shares in December last year for which an additional tax of Rs. 26,34,114 is payable calculated at the rate of 12½% on the face value of the shares issued. Furthermore a provision of Rs. 4,29,656 had to be made in respect of the new levy of 7½% on equity dividends introduced by the Finance Act 1964. It is unfortunate that the welcome exemption from the payment of additional tax in respect of bonus shares, when issued out of share premium account, came just too late for your Company to benefit as its bonus issue was made prior to 1st April 1964. As a silver lining to this disappointment, shareholders will have no doubt noted with some measure of relief that under the provisions of the Finance Act 1964, as finally passed, this bonus issue will not attract capital gains tax in their hands.

In my statement to you last year I had occasion to mention that the Company would have no liability to Super Profits Tax in respect of its profits for 1962 but that a provision of Rs. 1,20,000 on this account had already been made, based on the original proposals in the Super Profits Tax Bill. As you know, the Super Profits Tax has now been

CAPITAL, 18th June, 1964.

replaced by a Surtax, but it is estimated that no Surtax will be payable on the Company's profits for 1963. Accordingly, the provision of Rs. 1,20,000 made in 1962 has been written back in the 1963 Accounts.

After all required transfers and appropriations the profit available for disposal is Rs. 66,86,070. An interim dividend of 60 paise per share has already been paid and your Directors have recommended a final dividend also of 60 paise per share, making a total distribution of Rs. 1.20 paise per share for the 52 weeks ended 28th December 1963. The balance of Rs. 3,64,196 has been taken to General Reserve. Members of the Company will, I am sure, appreciate that the reduction of 20 paise per share in the total distribution for 1963 compared with that for 1962 was inevitable in view of the additional tax payable on account of the bonus share issue and the levy of 7½% tax on equity dividends, which amounts would otherwise have been available for disposal.

Whilst on the subject of the accounts, I should like to mention again some of the important features of the Balance Sheet.

The authorised capital of the Company was increased to Rs. 10,00,00,000 in December last year primarily to enable the bonus share issue to be made. The paid-up capital of the Company was also increased from Rs. 4,00,00,000 to Rs. 6,32,18,740 by the issue of 2,14,583 shares of Rs. 10 each to the Tata Iron and Steel Co., Ltd. in exchange for their holding in Sankey Electrical Stampings Ltd., and by the allotment of 21,07,291 bonus shares of Rs. 10 each out of the Company's share premium account.

Opportunity was taken last year of the Company's Debentures being offered at or below par to purchase and cancel Debentures worth Rs. 10,25,000 by utilising the amount standing to the credit of the Debenture Sinking Fund. The outstanding liability for debenture loan at the end of 1963 has therefore been reduced to that extent. The effect of this operation is fully reflected in the movement in the Debenture Sinking Fund Account.

On the other side of the Balance Sheet you will find an investment of Rs. 38,20,000 in equity shares of a new Company, Sankey Wheels Ltd. This is in accordance with a Resolution approved at your Annual General Meeting last year.

Sankey Electrical Stampings Ltd.

For our subsidiary, Sankey Electrical Stampings Ltd., the year 1963 was an abnormal one. At its major works at Bhandup, as a result of inter-Union rivalry, a large number of workmen resorted to 'go-slow' tactics which culminated in an unjustified strike. Weeks of tension followed, but, thanks to the unequivocal stand taken by the company, with the support of the findings of the State Evaluation Committee and of its own commendable record of labour relations, and thanks also to the understanding of the company's stand shown by those with authority and competence to judge, the strike was called off unconditionally after 108 days. I had intended to share with you to-day some thoughts evoked by this deplorable strike, but the recent constitution of a Court of Inquiry by the Government of Maharashtra to inquire into certain issues connected with the strike makes it inopportune for me to do so. Before leaving this topic, however, I should like to commend the devotion and loyalty displayed by all members of the management, the supervisory staff and those workmen who, during the period of the strike, worked under great stress, and at considerable personal risk, to ensure that essential supplies, in particular to the Defence services, were not interrupted. I should like at the same time to say a special word of gratitude to the company's wide circle of customers, both big and small, who, by their patience and forbearance,

though being put to serious inconvenience and worse themselves, gave strength and support to the company during those trying days.

Apart from this unfortunate labour trouble, the Company was hard put to it to obtain sufficient supplies of transformer grade steel which have all to be imported. In spite of these major handicaps, the Company was able not only to maintain but actually to increase its turnover to a small extent. The programme for diversification of the range of manufacture continues to make good progress, and in fact, the increase in turnover is due entirely to these new products. There is now in hand another important project, the manufacture of brake components for the automobile industry, which in due course will further augment turnover.

Future Development

Construction of the new steel melting shop is making good progress and the Stage 1 plant will be in production next year. A year ago I mentioned the proposed reorganisation of the rolling mills, and I am now glad to inform you that this project has since been approved by the Government of India. The reorganisation includes the installation of a new merchant bar mill in new buildings and will permit the running down of some of the old mills which have been in service since 1932.

Much of the old plant in the Calcutta bolt works is being replaced by specialised, modern equipment and this is expected to lead to improved quality and some diversification in the range of sophisticated fasteners manufactured.

Work started towards the end of the year on the extension of the bright steel bar shop. The new plant has since been commissioned and will contribute to earnings in 1964.

At the Bhandup Works certain out-moded machines were replaced during the year by modern, high production plant and a new material storage bay and pickling plant were constructed and commissioned. The expansion of wood-screw capacity was largely completed and the plant is now being worked up to the required level of efficiency. The Government of India granted approval for the expansion of self tapping screw capacity and it is hoped that the plant will be installed next year.

Many other projected schemes for expansion and modernisation are on the drawing board, and whilst newly installed plant is being carefully nursed into a state of optimum efficiency, plans for your Company's future continue.

To enable you to obtain a clearer idea of the scale of our development programmes, I should like to add that capital expenditure during the three years 1964-66 on planned expansion and rehabilitation projects is expected to be Rs. 7½ crores, of which a sum of Rs. 2½ crores represents foreign exchange. Expansion will naturally continue beyond this period, but as plans are under continuous revision in the light of changing demands and shifts in priority, it would not be realistic to give an estimate of the cost of such future expansion. By far the greater part of the foreign exchange required will be in sterling, and for this we shall be dependent on the liberal aid which, with a vast and invaluable fund of technical advice, we have been receiving from Guest, Keen & Nettlefolds Ltd.

Never since independence have the preservation of our national unity and the achievement of rapid and accelerated growth in industry and possibly even more in agriculture, been as urgent and crucial as now. Yet, it is to be doubted whether we are continuing to hold our own with other large and developing countries with whose standards of performance our own will necessarily be compared. More than ever before,

the pursuit of our national purpose must therefore today form the prime motive behind the efforts of us all. It is in this realisation that your Company will continue, within its capacity and its resources, to play its part in helping to build the industrial strength of our country and promote the well being of our people.

Finally, I should like to express on your behalf, and on my own, our thanks

to the staff and all employees who have worked keenly in the Company's interests during the year. Rapid growth and reorganisation bring many frustrations in their wake, and the success of the Company's operations is a tribute to the loyalty and enthusiasm displayed by its personnel.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE BRITISH INDIA CORPORATION LIMITED

CHAIRMAN, MR. SATISH CHANDRA'S REVIEW

Extracts from the address of Mr. Satish Chandra, Chairman, The British India Corporation, Ltd., at the 44th Annual General Meeting of Shareholders held in Kanpur on 6th June, 1964.

Friends,

At the time of issuing the notice for this 44th Annual General Meeting of the Corporation, none of us could ever have imagined that we would be assembling today under the shadow of a great national tragedy and an overwhelming sense of personal grief. On May 27, 1964, our beloved Leader and Prime Minister, Jawaharlal Nehru, passed away and with him ended a glorious chapter in India's history. With his nobility of character, humane approach to all problems, dedication to high ideals and the spirit of service and sacrifice, he moulded the lives, thoughts and deeds of our countrymen. The best homage that we can pay to this valiant fighter of our freedom struggle and the architect of modern India is to dedicate ourselves to his great ideals of national unity, secular democracy, social justice, universal brotherhood and world peace for which he worked, lived and died. Although it is not possible to fill the void created by his passing away, the work of the nation must be continued with perseverance and high endeavour on the foundation laid by him.

May I request you to stand silently in honour of his memory before I proceed with the normal business for which we are gathered today.

The Audited Accounts, Balance Sheet and Directors' Report for 1963 have already been circulated and with your consent I shall take them as read.

The period under review covers the first complete year of Management of your Company's affairs by the new Board of Directors elected by shareholders in the Autumn of 1962. You will recall the circumstances under which a General Meeting was specially convened, and an election held after several years. I am glad to report that the trading results for the year have been highly encouraging and show a substantial improvement over those of previous years. As you will see from the accounts, our turnover has increased from Rs. 928 lakhs in 1962 to Rs. 1,288 lakhs, i.e. by 38.8%. Surplus for the year amounts to Rs. 236.07 lakhs as compared with Rs. 142.10 lakhs, reflecting an increase of 66% over the previous year. A provision of Rs. 133 lakhs has been made for payment of direct taxes this year as against Rs. 77.54 lakhs last year.

In view of the satisfactory profitability of your Company, the Board after careful consideration have deemed it proper to recommend payment of a dividend of 15% on the Equity Capital i.e., 75 nP. per share as compared with 45 nP. paid last year. It will be appropriate for me at this stage to draw your attention to the fact that out of the year's earnings a total sum of Rs. 45.61 lakhs has been ploughed back in the form of Depreciation, Development Rebate, and General Reserves in order to strengthen the resources of the Corporation.

Leather Branches

The trading results of our Cooper Allen and North West Tannery Branches have shown reasonable improvement. As against recurring losses suffered in past years by these important branches of the Corporation, it has been possible

to return a moderate figure of profit this year. There was increased activity in the footwear, chrome and bark leather departments. Footwear supplies to Defence Forces and the National Cadet Corps were substantial.

Woollen Branches

During the year under review, our Lal-Imli and Dhariwal Woollen Branches have shown very good results. A record output was achieved by both the factories, which ran on a three-shift basis for most of the year. In view of a complete change in the normal pattern of production to meet the urgent needs of our Defence forces, four Wool Advisers including the Superintendent of our Woollen Branches, Mr. V. Calloway, were selected by the Government of India to plan production, negotiate prices, and arrange for raw materials. The team of Wool Advisers visited Australia, New Zealand and the U.K. to purchase suitable cross-bred wools. This co-ordinated effort on the part of Government and representatives of the woollen industry enabled supplies of raw materials for defence production to be made strictly according to specifications, and delivery schedules.

The plant rehabilitation and modernisation scheme is making fairly good progress. 72 semi-automatic looms imported from Poland at a cost of approximately Rs. 16 lakhs are now in process of installation. Most of the gilling, drawing and twisting machinery costing about Rs. 13 lakhs imported under rupee payment arrangements has already been received at the mills. An import licence for machinery worth about Rs. 25 lakhs for which an Essentiality Certificate has already been granted is, however, pending disposal. Import of this machinery is essential to enable us to derive the maximum benefit from the machines already purchased. Applications have also been submitted for the grant of import licences for carding, spinning, and winding machinery as well as automatic looms at a cost of approximately Rs. 60 lakhs.

The basic needs of our woollen factories for imported raw materials cannot by any means be met by the Government's present Export Promotion Incentive Scheme. I sincerely hope that allocations of import quotas will be made on the basis of a realistic assessment of the installed capacities as well as the magnitude of trading obligations of each unit. Full advantage continues to be taken by us of raw wool produced and synthetic fibres available in the country within the limits of their usefulness. If we are to remain in effective production, it is essential that the requisite quantity of imported raw materials should be made available. I must point out in this context that the value of basic licences last year was reduced by Rs. 32 lakhs and this year there has been a further reduction by Rs. 21 lakhs.

Cotton Textiles

The three cotton textile mills owned by the Corporation's subsidiaries, The Elgin Mills Co. Ltd. and Cawnpore Textiles Ltd., worked at full capacity during 1963 except for the period when production was adversely affected for a few days during October 1963 due to a serious power breakdown in the city of Kanpur. Despite a larger turnover, the profits in both the companies were lower than the previous year, due to enhanced labour costs and a general rise in the prices of raw cotton and all

stores and spares. Since 1960, the overall cost of production has increased by more than 18%, but no corresponding increase in the prices of finished goods could be made due to the voluntary price control agreement between Government and Cotton Textile manufacturers. The rapid advance in basic costs, which has caused profit margins to decline at a rate inconsistent with improved turnover, has now become a matter of concern to the Industry.

In addition to a licence granted to Elgin Mills in 1962 for the installation of 12,000 spindles, further licences for 12,500 spindles each were granted last year to the Elgin Mills and to Cawnpore Textiles.

The rehabilitation and modernisation programme of the cotton units is proceeding according to schedule. A sum of Rs. 44 lakhs was spent by Elgin Mills and Rs. 12 lakhs by Cawnpore Textiles during the financial year 1963. Further sums of Rs. 40 lakhs and Rs. 2 lakhs respectively have been spent by the two companies during the current financial year.

Elgin Centenary—Shastriji's Visit

The celebration of the Elgin Mills Centenary during the month of March 1964 was an outstanding event. On this momentous occasion which was indeed a landmark in the history of the Company, we had the privilege and honour of having Shri Lal Bahadur Shastri, now the Prime Minister-designate of India, as our chief guest. In his earlier capacity as the Union Minister of Commerce and Industry, he had taken a great deal of interest in the welfare of the B.I.C. Group of Industries. We are happy that he has now been chosen to guide the nation along the path shown by Gandhiji and Pandit Jawaharlal Nehru. We have no doubt that under his stewardship, the nation will continue to march forward with determination and unity towards economic progress and social emancipation.

Sugar

The four sugar factories of Cawnpore Sugar Works Ltd. and two factories of Champarun Sugar Co. Ltd. experienced another difficult year.

Apart from such factors as availability and quality of cane several other causes contributed to the adverse impact on profitability such as distress sales during surplus conditions and unremunerative controlled prices during the subsequent shortage, the old and out-moded equipment in the units and their uneconomic capacities. About 40 lakhs rupees have been spent for rehabilitation and modernisation in these sugar units and further investment is being made.

The sugar companies are fortunate in having secured the services of Shri S. N. Gundu Rao, formerly Director of the National Sugar Institute as their Technical Adviser. Under his guidance the working efficiency of the six sugar factories in the group has already improved.

Brushware, Saran Engineering, Beta Picker

There was an improvement in the volume of business done by our subsidiary, Brushware Ltd. which maintained its reputation for quality products. The development programme in the Saran Engineering Co. Ltd. is in process of gradual implementation. The Corporation continues to serve as Secretaries and Treasurers for both

CAPITAL, 18th June, 1964.

these companies, and as Secretaries for the Beta Picker Co. Ltd.

Labour Relations

The labour relations during the year were, by and large, harmonious. I cannot, however, avoid reference to a very regrettable set-back in Elgin Mill No. 1 during the month of March 1964, only a few days after the Centenary celebrations. An intractable and wholly unreasonable workers' strike was instigated over the issue of bonus voluntarily declared by the Company. Although in a year of decreased returns, bonus at a special rate amounting to Rs. 16.09 lakhs was sanctioned by the Management as against Rs. 10.64 lakhs in the previous year with the sole object of letting the employees of the Company experience in the Centenary year a sense of joy over the progress of their unit, some trouble makers chose to launch a perverse campaign of indiscipline and agitation which led to a completely unwarranted and unlawful stoppage of work for 20 days. The workers realised only after considerable suffering that their leaders had misguided them along a wrong path to the detriment of their own interests. They subsequently admitted that they had violated the Industrial Truce Resolution and the Code of Discipline. Let us hope that such unfortunate incidents will not be repeated. In addition to loss of wages by the workers during the strike period, the loss in the mills' productivity will have its impact on profits during the current trading year and consequently on the quantum of bonus which the Company may be in a position to pay next year.

General

I think, the shareholders will agree that the affairs of the Corporation have been fairly consolidated so as to show tangible results. Although the Corporation has during the year under review shown excellent results, there are many important tasks ahead of us. The future will certainly throw up new problems in the spheres of finance, management, industrial relations, productivity, cost control, and sales. With the sound inherent strength of your Corporation, however, I am confident that we shall be able to evolve rational solutions leading to greater stability and progress.

I regret to report the resignation from the BOARD of one of our Directors, Shri S. B. Bose, for reasons of ill-health. I am, however, pleased to welcome to the Board two new Directors, Shri B. P. Ray, the partner in a distinguished firm of Solicitors at Calcutta, and Mr. K. M. Wilcox. It is hardly necessary for me to introduce Mr. Wilcox, who has rendered long and meritorious services to the Corporation. Your Directors have thought it fit to invite him to join the Board and to appoint him as Deputy Managing Director subject to the approval of the Government.

To my colleagues on the Board I am deeply indebted for their valuable advice and guidance. Their mature judgment has been of tremendous help in finding solutions to many problems which have engaged the attention of the Management. I would particularly like to mention Shri B. P. Bajoria, the Vice-Chairman and Managing Director, whose perseverance and hard work have contributed a great deal towards the successful results of the Corporation during the year. I wish to express my thanks to all ranks of our employees for their loyalty, co-operation and steadfast devotion to duty.

Before I close, I wish to pay tribute to the gallant soldiers who either gave up their lives or suffered untold hardships on the battlefield in the defence of our motherland during the early days of the Chinese invasion. I am sure you would all like to associate with me in the expression of this humble sentiment.

Note: This does not purport to be the proceedings of the Annual General Meeting.

CAPITAL, 18th June, 1964.

SHAW WALLACE & COMPANY LIMITED

CHAIRMAN, MR. C. M. A. BATHURST'S REVIEW

The following review has been circulated by the Chairman, Mr. C. M. A. Bathurst, to Shareholders of Shaw Wallace & Company Limited.

The Annual General Meeting of the Company will be held in Calcutta on 29th June, 1964.

The Group profit before taxation amounted to Rs. 99.29 lakhs which is a record profit in the history of the Company. After deducting the amount required for taxation on the profits for the year and after making certain other adjustments there remains a profit of Rs. 38.29 lakhs as compared with Rs. 25.43 lakhs for 1962.

The improvement in the Group profits is largely attributable to the better results achieved by the Parent Company through certain of the Subsidiaries also contributed to the higher profit.

I give below comparable figures to show the profit before tax for the last five years:—

	1959	1960	1961	1962	1963
Rs. lakhs	77.80	82.84	58.19	70.16	99.29

The Directors are recommending a Dividend on the Ordinary Shares of 12½% which is an increase from the 7½% paid last year. The payment of a 12½% Dividend will allow the transfer to reserves of Rs. 13½ lakhs and it is considered that the payment of a higher Dividend at this stage would be unsound in view of the necessity to make financial provision to meet the Company's capital commitments.

I shall now comment on the various activities which are controlled by the Parent Company including the activities of our Subsidiaries and the Companies for which we are Managing Agents.

Fertilisers

The following are the figures of our Fertiliser sales including Superphosphate for the last five years:

	1959	1960	1961
Tonnes	131,885	155,625	183,464
	1962	1963	
Tonnes	178,888	187,762	

Fertiliser offtake was the highest on record and should continue to increase.

The most important factor inhibiting the more rapid growth in the use of fertilisers is the widespread shortage of credit facilities in the rural sector of the economy. There is little scope for a rapid increase in the use of fertilisers by plantation crops but the big break through must come from the agricultural or small farmer who at present does not have the resources to enable him to purchase fertilisers as and when required. If credit could be made available to be recovered after the sale of the crop then fertiliser consumption, and *ipso facto* food production, will increase very rapidly toward the targets set by the Government of India. Such credit can only be organised by Government through the medium of some form of rural credit bank.

In South India, our sales of fertilisers show an increase of 25% over the previous year. But in North East India there was a set-back to sales due largely to the inadequate profit margins permitted by certain State Governments. It is hoped that this difficulty will be overcome before the next fertiliser season, and with this prospect

in view we are extending our activities in West Bengal and in Assam.

You will recall that we had been issued with an Industrial Licence for the manufacture of Fertilisers at Mangalore and it was the intention to manufacture on the basis of 100,000 tons Nitrogen per annum in collaboration with a suitable foreign firm who would be interested in providing equity and technical know-how. Unfortunately, our efforts to find a suitable foreign collaborator have failed and we have therefore been forced to advise the Government of India that we are no longer interested in this venture. This does not mean the end of our efforts to enter the field of manufacturing nitrogenous fertilisers and other projects are at present under consideration.

Sulphuric Acid and Superphosphate

Our Factory at Madras worked at maximum capacity throughout the year and production of both Sulphuric Acid and Superphosphate showed an increase. Production figures over the last five years are as follows:—

	1959	1960	1961
(In tonnes)			
Sulphuric Acid	9,429	24,150	25,519
Superphosphate			
16% basis	26,849	71,545	68,441
1962	1963		
Sulphuric Acid	25,139	26,385	
Superphosphate			
16% basis	67,605	69,943	

During 1963, we were able to sell our total production of Superphosphate but this year due to the fact that two new units of production have recently begun manufacture there is likely to be increased competition which may have its effect on sales until demand once again catches up with productive capacity.

Agricultural Spraying and Dusting Equipment

A satisfactory profit was earned both by the Madras Sprayer Factory as well as by our Sprayer Organisation in Calcutta. We have recently received the approval of the Government of India to enter the Government of India to enter the manufacture of Power Sprayers and it is hoped that these will be on the market during the second half of this year.

Agrochemicals

Our arrangements to sell Insecticides and Fungicides produced by Tata-Fison Ltd. have ceased and we have recently completed our negotiations to sell the products of Sandoz (India) Limited and Flintrock Products Private Ltd. which will provide us with a comprehensive range of Agrochemical products to sell on an all India basis.

Glue

Production at the Madras Factory beat previous records and there was a noticeable improvement in quality and these two factors led to profit margins exceeding all previous levels. Comparable figures of production are as follows:—

	1959	1960	1961	1962	1963
Quintals	4,990	4,602	6,286	7,544	9,006

Wines & Spirits

At our Distillery near Calcutta the new Still which was install-

ed in the middle of 1962 worked throughout the year at maximum capacity and a substantial increase in production of 44% as compared with 1962 was achieved. Our Sales Organisation disposed of the total production and we are now examining the possibility of a further increase in production.

Restrictions on the imports of Wines & Spirits remain and it is our aim to continue to improve the quality of our products so that they match the imported products in all respects.

Shipping

I regret having to advise that as a result of the merger between Isbrandtsen Co. Inc. of New York and the American Export Lines we lost the agency for the Round-the-World Liner Service formerly operated by the Isbrandtsen Co. Inc. However, we continue to act as their Agents but they have few ships and operate mainly tankers and charter vessels.

I am, however, pleased to report that we have been successful in securing new Agencies, namely the Jayanti Shipping Co. Ltd. for Calcutta, the Hellenic Lines Ltd., of New York for Bombay and Madras and T. J. Stevenson & Co. Inc., New York for Calcutta, Chittagong and Chalna.

We continue to work in close co-operation with our main Shipping Principals, namely, the Hansa Line of Bremen whom we represent in Bombay and Madras and through our subsidiaries in Colombo and Chittagong.

Our Ship Chartering business operated through our Delhi Branch and in conjunction with our subsidiary, Cruickshank & Co. Ltd. showed good results and already this year we have been able to arrange for the charter of ten vessels.

In Ceylon, our Shipping Subsidiary, J. D. McLaren & Co. (Ceylon) Ltd. operated successfully under difficult and trying conditions.

Tea

Whilst world production in 1963 almost equalled that of the previous year, there was a further shortfall of 14 million pounds in the North East India Crop. I am pleased to report, however, that the total crop produced by Companies under our management recorded a small increase over 1962.

In keeping with the general trend of the world market prices obtained were disappointing and our earnings show a material reduction over the previous year.

The comparative figures of area under tea and the crops produced by estates under our Agency and Managing Agency are:—

	1959	1960	1961
(In acres)			
Area under Tea	24,130	24,510	23,471
(In maunds)			
Crop	309,081	304,916	336,772
(In acres)			
Area under Tea	23,279	24,010	
(In maunds)			
Crop	329,783	334,280	

A solution has yet to be found to the remittance difficulties of our Indian

Rupee Companies with estates in Pakistan and they continue to be heavily indebted to us. However, ad hoc remittances against expenses continue to be received from time to time.

Tinplate

Production at The Tinplate Company of India Ltd. during 1963 was 84,107 tonnes; thus for the fifth year in succession surpassing that of the preceding year. Comparative figures are:—

	1959	1960	1961	1962	1963
(In tonnes)					
	66,990	74,708	77,045	77,346	84,107

This outstanding performance is a tribute to the entire staff at Golmuri.

The Company has an Industrial Licence for Modernisation and Expansion and it is hoped that during the current year plans will be finalised to increase production by 80,000 tonnes per annum Cold Reduced Tinplate which should be available by 1967.

Coal

The Government of India having relaxed the regulations prohibiting the publication of coal production figures we are once more able to publish comparative figures of raisings.

You will notice from the figures given below that raisings have increased each year during the last five years. This is the measure of success achieved by the Collieries under our control in meeting Government's wishes for higher coal production.

Though despatches were satisfactory during the major part of the year, demand tailed off considerably during the third quarter with the result that unduly large stocks were accumulated at pit heads. Transport bottlenecks added to our difficulties and we were compelled to cut back raisings at some collieries.

I am happy to report, however, that as a result of intensified efforts by our Sales Organisation, and the co-operation of Government and the Railway Authorities, stock accumulations are beginning to run down at a satisfactory rate. We are confident that demand will again catch up with supply and

FOR

when this happens we shall be ready to resume maximum working without delay:—

	1959	1960	1961
	(In tonnes)		
Raisings	19,43,556	20,65,159	21,41,106
	1962	1963	
Raisings	22,81,297	25,51,942	

You will doubtless be interested to hear that we had the pleasure of a visit in April to our Coalfields in Madhya Pradesh by Mr. C. Subramaniam, Minister of Steel, Mines and Heavy Engineering, and we feel sure this visit will lead to a greater understanding of the importance of the out-lying coalfields due to their geographical location as being the nearest Coal

Mines to the important consumers in Western India.

Flour
The two Flour Mills under our Managing Agency had a satisfactory year and production reached record levels. Profit margins, however, continue to be disappointing.

Comparative figures of production are:—

	(In tonnes)	1959	1960	1961
Production		51,820	51,722	44,873
		1962	1963	
Production		55,402	59,454	

Walker & Greig (Coonoor) Ltd.
It was decided to transfer the

assets and liabilities of this wholly-owned Subsidiary to the Parent Company and this was effected as at 30-9-63. From that date onwards the activities hitherto carried on by Walker & Greig (Coonoor) Ltd. have been integrated with our Madras Branch but this subsidiary company will be kept in existence for the time being.

Operations during 1963 were satisfactory and made a modest contribution to our profits. The orders in hand should ensure an equally satisfactory result during 1964.

Yeast
I am pleased to be able to report that The Indian Yeast Company

CAPITAL, 18th June, 1964.

Ltd. has at last come on to a revenue earnings basis, though it will be some time yet before it will be able to make a contribution to our profits as the accumulated loss has not yet been made good.

Sales during 1963 doubled as compared with the previous year and measures to increase production to cater for the increased demand are well under way.

We are pioneers in India in the production of Baker's Yeast and our intensive efforts to popularise the use of yeast have proved successful. A Demonstration Van has toured the Country continuously and our Staff have demonstrated the use of yeast in numerous towns and villages throughout the Country.

Ceylon

The improvement foreshadowed for 1963 was fully achieved and the consolidated profits before tax of Shaw Wallace & Hedges Ltd. at Rs. 16,61,416 was double the corresponding figure for the preceding year. This excellent result was achieved despite the many difficulties which were experienced consequent on the unsettled conditions prevailing in Ceylon throughout the year. These difficulties were faced with imagination and determination by Directors and Staff and successfully overcome and our thanks are due to all concerned.

Bois Brothers & Co. Ltd., which was acquired in 1962 had a satisfactory year. The economies which should follow integration with Shaw Wallace & Hedges Limited sometime in 1964 should result in greater profitability.

The expansion of capacity by Ceylon Potteries Limited has not produced the high profit level looked for. Production problems which beset this subsidiary are proving more stubborn and intractable than we anticipated. No effort is however being spared to overcome the many problems that have arisen and we are confident that their solution will not now be long delayed.

Pakistan

Our Pakistan Subsidiary had a very successful year and a dividend of 25% has been declared.

Owing to the loss of the Agency for the Round-the-World Liner Service of Isbrandtsen Co. Inc. the Karachi Branch has become an unprofitable unit and a decision has been taken to curtail the company's activities in West Pakistan. Henceforth our main interest will be in East Pakistan concentrated on the Chittagong Office of Shaw Wallace Pakistan Limited.

Prospects

The Company had a good year in 1963 and so far 1964 shows good promise. It is now our policy to expand and develop in our traditional activities rather than to diversify and this policy will enable us to utilise to the full the considerable experience and know-how of our staff, both production and sales in our many activities.

Staff

It has become customary in the Chairman's Review to extend our thanks to all members of our staff in all grades of service. This is by no means a mere formality and I have no hesitation in affirming that it is through the loyalty and hard work of our staff at all levels that the Company has been able to achieve a record profit.

Note: This does not purport to be a record proceedings of the Annual General Meeting which will be held on June 29, 1964.

CAPITAL, 18th June, 1964.

New Delhi

WORKING GROUP ON OIL PRICES ISSUES QUESTIONNAIRE

(FROM OUR NEW DELHI CORRESPONDENT)

THE Working Group on Oil Prices, recently set up by the Government of India, with Mr. J. N. Talukdar as its chairman, has issued a comprehensive questionnaire to all the oil companies operating in India, including the State-owned Indian Oil Company. The main emphasis of the questionnaire is on the prices of crude and petroleum products, discounts obtained on both of them, the cost structure of the marketing organisation, the pattern of present and future demand, the availability of end-products in which India is in deficit and the plans for the expansion of refineries in the private sector. Here are some of the questions asked:

"1. What are the sources from which supplies of crude oil are obtained?"

"2. Indicate the quantities of indigenous and imported crude obtained from individual sources separately, together with specifications and prices paid for the quantities from each source with break-up.

"3. What were the lowest f.o.b. quotations ex-these sources and other nearby sources indicating the dates of change in the respective f.o.b. prices?"

"4. What are the rates of discount obtained on various dates on the supplies?"

"5. Indicate the ocean freight, rates of marine insurance, ocean losses, storage losses, in quantity and value.

Import of Crude

"Please state the changes introduced for import of your requirements of crude since July 1961 with particular reference to the following:

"(a) the changes effected in the arrangements concluded with your suppliers of crude and whether any remuneration is being paid to them for the services rendered by them and at what rates.

"(b) The manner of determination of the prices; and

"(c) the rate of discount off f.o.b. posting now available and the date from which applicable.

"If supplies of crude are being obtained from sources other than disclosed in 1961, please state: (a) the names, (b) when arrangements were concluded and for what period and for what portion of your requirements? (c) In what matters, the new arrangements differ from the earlier ones.

"Please furnish copies of your contracts now subsisting with your suppliers concerning the supply of crude.

"If better terms can now be arranged for obtaining part or whole of your requirements of crude, will you be prepared to switch over to such suppliers offering better terms, in what time and for what quantities?"

"What steps have been taken since 1961 to reduce or eliminate altogether the intermediary firms through whom your requirements of crude were obtained?"

"Are you aware of the report in Platt's Oilgram, dated 10th February, 1964, of the existence of discounts in the eastern hemisphere off f.o.b. post-

ing varying from 20 to 50 cents a barrel?"

"What efforts have you made, in the light of such reports, to increase the rate of discounts admissible to you (a) either on a regular basis, or (b) for particular shipments in a particular period.

"How have the discounts on crude available to you from time to time been accounted for in the refinery or marketing company?"

"As for indigenous crude, what is the basis adopted for pricing? If import duty is accepted, indicate the break-up into f.o.b. rates, discount, marine insurance, ocean freight, ocean losses, and any other loss.

"Indicate the capacity of refinery in terms of crude throughput since the year of inception, broken up into higher distillates, middle distillates, etcetera.

"Indicate the possible flexibility in production to suit the envisaged pattern of demand for the future for various petroleum products within a group.

Pattern of Production

"Indicate what steps are contemplated to rectify the lack of balances, if any, in the pattern of your production.

"Indicate the capital employed with the following break-up: (a) fixed assets and (b) working capital.

"Indicate the cost sheets for various petroleum products, showing the cost of crude and other refining expenses.

"What is the present basis adopted by you for pricing your products? Indicate the basis adopted by refineries outside India, you know of, for product pricing.

"Indicate the basis, if any, you consider more satisfactory other than import parity for pricing the various products. Give reasons for recommending such a basis.

"What do you think a reasonable profit margin for refineries and the factors that may have to be considered in fixing the margin?"

"What is the basis on which such a margin has to be assessed and the reasons for it?"

"What is your assessment of the demand of petroleum products for 1965, 1966, 1967 and 1968 broken up into different products and your share in it?"

"To the extent of your capacity to meet the future demand, what type of crude you are likely to obtain? Indicate the sources and the quantity likely to be obtained from each source.

Refinery Expansion

"Do you envisage any expansion of your refinery before 1968? If so, indicate the capacity of the expansion and the probable year of commissioning the added capacity along with details of the capital cost broken up into (a) requirements of foreign exchange and (b) others.

"What do you consider the least economic size of a refinery, consider-

ing the present and future pattern of demand?"

"What has been the average amount of the refiner's margin in terms of a tonne of crude processed separately over years 1961 to 1964?"

"What are the sources from which the various petroleum products are being imported? Indicate the quantity of each product sourcewise for the last five years. Indicate the quantities and the net f.o.b. prices of imports for the last five years.

"Indicate the rates of marine insurance on different petroleum products, as also actual figures of ocean losses from 1960 onwards.

"What were the lowest f.o.b. quotations, ex-Abadan, ex-Rastanura and ex-any sources from where bulk refined and other products could be obtained during 1962, 1963 and 1964 till date, indicating the dates of change in the respective f.o.b. prices for each product?"

"Indicate the percentages of discount on f.o.b. obtained on various petroleum products on different dates from 1962 onwards.

"Indicate the Customs and excise duty for each product since 1962 split up into recoverable and unrecoverable, separately.

"What is the capital employed in the distribution of petroleum products? Give the breakdown as follows (working capital and amounts allocable to the following for the last five years): (a) refined products, (b) bitumen, (c) greases, (d) lubricating oils, and (e) others.

"Indicate your estimate of demand on an all-India basis for inland sales for each petroleum product for years 1965 to 1968 and what proportion you expect will be yours.

Distribution Charges

"Indicate the estimated distribution charges—post landed charges—broadly analysed for each of petroleum products for the four years, 1965 to 1968, on a comparable basis with actuals with reasons for variations.

"Please state the changes since 1961 for the import of your requirements or suppliers of deficit products with particular reference to the following:

"(a) Changes in the arrangements with your suppliers abroad and whether any remuneration is now being paid to them for the services rendered by them and if so, at what rates?"

"(b) The manner of determination of prices payable to your suppliers.

"(c) The rate of discount off f.o.b. postings in Abadan.

"If better terms can be arranged for obtaining part or whole of your requirements of deficit products from sources other than those of your present supplies, will you be prepared to switch over to such suppliers offering better terms from (a) the western and (b) the eastern sources."

There are detailed questions relating to freight rates, compared with quotations for open spot charter rates of loading from Abadan to India, the existing arrangements for inter-company product exchange and "the possibility of linking prices with physical supply areas for products of indi-

vidual refineries and the introduction of a uniform or pool prices for the whole of the country or in different zones, which may be created for the purpose."

NAPHTHA

Working Group Set up

The Government of India has set up a working group with the representatives of the Central Ministries of Petroleum, Industry, Railways, Steel and Mines, Hindustan Steel Ltd, the Indian Oil Company and all private-sector oil companies to examine and establish, among other things, the following avenues of utilisation of naphtha, laying down quantitative targets in each case, namely, (a) substitution of refinery fuel by naphtha, (b) use of naphtha for existing and new thermal plants; (c) use of naphtha with high-speed diesel oil in railway locomotives; (d) use of naphtha for injection in blast furnaces of steel plants; (e) use of naphtha as town gas; and (f) the possibility of using a mixture of motor spirit and H.S.D. for use in motor-cars.

It is apprehended that the disposal of surplus naphtha might recoil on the future refining programme unless timely action is taken to study in detail the new uses. According to a recent study, the estimated production of naphtha in India will increase from over 3 million tons in 1967 to over 4.5 million tons in 1971. The study shows that after meeting in full the demands for motor-spirit, fertilisers, petro-chemicals and town gas, there should be a net surplus of naphtha of over 100,000 tons in 1966 and of over 300,000 tons in 1971. It is also felt that the required steps should be taken before 1966, so the working group has been appointed

O.N.G.C.

Aid from Russia

The Oil and Natural Gas Commission has entered into an agreement with Messrs Techno-export of Russia under which the latter will provide a seismic survey ship and 61 Russian specialists for carrying out the off-shore seismic survey in the Gulf of Cambay, to be completed within 16 months. Under another agreement, the Russian organisation will provide services of 12 to 15 senior oil specialists for assisting the O.N.G.C. for exploration, development and production of oil and gas.

The Indian Oil Company has also reached an agreement with Russia for the import of certain oil products, in which India is deficient. Russia has waived her earlier demand for a higher freight rate from the Black Sea, instead of from the Persian Gulf. The quantity of products, to be imported, remains unchanged.

SWAMINATHAN COMMITTEE

Final Report Issued

The final report of the Swaminathan Committee on industrial development procedures was released for publication last week. In its final report, the Committee has considered procedures and matters other than those covered by the recommendations in its interim report. The main recommendations in the final report are as follows:

(i) *Procedure for industries other than "key" industries*—For industries other than "key" industries, the Committee has expressed the view that for

another order for CELCON[®] came the other day

[®]
Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they

emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

[®]
CELCON is a trademark

CELCON[®]

ACETAL COPOLYMER
MADE BY THE CELANESE CORPORATION OF AMERICA

DUNCAN BROTHERS & CO. LTD. ARE THE EXCLUSIVE SALES AGENTS IN INDIA FOR CELCON:
31, NETAJI SUBHAS ROAD, CALCUTTA-1; 39, WITTET ROAD, BALLARD ESTATE, BOMBAY-1

various practical reasons, including the foreign exchange shortage, which make it difficult to get prompt clearance for the import of capital goods, it would not be practicable to follow the special procedures recommended for "key" industries. It has, therefore, suggested that, wherever the availability of foreign exchange is not the main limiting factor, after the issue of a letter of intent, all subsequent clearances, such as the import of capital goods, approval of foreign collaboration terms, and issue of capital should be given within three months from the date of receipt of the respective applications. A procedure for keeping a close watch on timely clearances has also been prescribed.

(ii) *Special procedure for certain industries other than "key" industries which are import-saving or are substantially export-oriented*—The Committee has listed a few industries in which substantial imports are at present taking place. It has recommended that the special procedure for "key" industries should be made applicable to these industries and also in the case of any other industries which the Government considers to be of special importance from the point of view of earning substantial amounts of foreign exchange through exports.

(iii) *Procedure relating to the licensing of raw materials and components*—As delays in the issue of licences for raw materials affect industrial production, the Committee has suggested that ways and means should be found for issuing licences within three months from the commencement of each licensing period. If, for any reason, this procedure is not found practicable, in the interests of ensuring continuous production, the Committee has recommended that *ad hoc* licences equal to 50 percent of the value of the licence for the first half of the previous licensing year should be issued. For the second half, the Committee has recommended that all licensees should be authorised by a general notification to use at least 50 percent of the value of the licence for the second half, pending the final announcement of the policy for the period. The Committee has also suggested that while issuing licences for raw materials, the limitations should normally be value-wise and not quantitative, so that the licensee has the discretion to import any of the permissible items listed in the licence in such proportions as may be necessary.

Import of Capital Goods

(iv) *Forms of application for industrial licences and licences for the import of capital goods*—The Committee has suggested some modifications to these forms, mainly with a view to ensuring simplification in some ways. Another consideration that has been taken into account is the extent of detailed information likely to be available to the applicant at the time of his application.

The Committee has recommended the submission of two applications for industrial licence, one, a preliminary application (along with the Treasury challan) to enable the issue of a "letter of intent" speedily, and the other a final application at a later stage at the time of the issue of a formal industrial licence. The consideration which has guided the Committee in suggesting two applications instead of one as hitherto is that at the time of initial application, the entrepreneur does not have a detailed, clear picture of all the items prescribed in the application form.

It is not unlikely that in relation to many of the items on which information has been furnished by the applicant in the preliminary application, the position may change sub-

stantially after consultations and negotiations with foreign collaborators and machinery suppliers, both indigenous and foreign. As the Licensing Sub-Committee's final decision on the conversion of a "letter of intent" into an industrial licence would depend on a correct final appraisal of all material factors, a final application is also proposed. In the case of "key" industries, this final application is to be considered along with the simultaneous consideration of the subsequent clearances relating to capital goods, foreign collaboration terms, issue of capital, etcetera. In the case of the remaining industries, the final application is to be submitted either along with the capital goods application or at some other suitable point of time when all the relevant final details are available to the applicant. This final application is to be considered by the administrative Ministry concerned before conversion of the "letter of intent" into an industrial licence.

(v) *Recommendations of the Committee after a year*—The Committee has stated that it is important that the actual working of the revised procedures should be studied over a period of time. Accordingly, it has recommended that it may be reconstituted after a year, with the same composition as far as possible, to study the results of the working of the revised procedures and to make suitable recommendations to the Government.

General Recommendations

(vi) *Other general recommendations*: The Committee has also made recommendations on

(i) residual action in cases where letters of intent and licences have already been issued for "key" industries;

(ii) form of the "letter of intent";

(iii) the issue of import licence for spare parts either received short or in damaged condition and replacement of which is made free of cost either by the supplier or on payment of the insurance company; and

(iv) procedure, in the case of "key" industries, for consideration of application for grant of loans by the Industrial Credit and Investment Corporation of India and the Industrial Finance Corporation.

The Government of India has accepted in principle the above recommendations of the Committee. As for its recommendations on the licensing of raw materials and components, the Government believes that it should be possible to issue licences within a period of three months from the commencement of each licensing period; every endeavour will be made to ensure this. If there is, however, delay the Government has devised a simpler alternative procedure to secure the object which the Committee had in view. Instead of issuing *ad hoc* licences, it is proposed to take action as follows:

"(i) In the case of industries where annual licensing is done and where the raw material requirements are not likely to be met from newly-developed indigenous sources, annual licences of the same value as for the previous year would be issued, subject to the condition that during the first half of the licensing period only 50 percent of the value of the annual licence can be used. There would be simultaneous authorisation for the use of an additional 25 percent from the commencement of the second half of the licensing period. The value of these licences would be suitably adjusted when the final policy for the period is announced.

"(ii) In other cases, licences for industry's requirements for the first

half-year will be issued of a value not exceeding the value licensed for the first half of the previous licensing period."

The additional authorisation of 25 percent of the value of the annual licence for the second half of the licensing period will not, however, be made in the case of established importers.

Appropriate steps are being taken to implement the Committee's recommendations.

I. D. A.

Credit Offered

The International Development Association (I.D.A.)—an affiliate of the World Bank—has extended a credit of \$90 million to India for the purpose of expanding her selected lines of capital goods manufacture. The credit will assist companies manufacturing commercial vehicles, industrial machinery and construction equipment to make fuller use of the existing capacity and to produce more goods, by enabling them to import components and materials on a larger scale than has been possible up to now because of the shortage of foreign exchange.

In the industries directly affected, the I.D.A. credit should make possible an increase of output averaging as much as 30 percent in the current year, ending 31st March next, of India's five year plan. The construction industry will also benefit, since the I.D.A. credit includes funds for the purchase of spare parts for heavy earthmoving and construction equipment already in India, for additional supplies of such equipment, and for transporters to move the equipment from one project site to another. The industries selected for I.D.A. assistance are of major importance to India's economic development. There is a ready market for their products—some have orders for as much as three years ahead—and the demand should continue to rise. In spite of numerous difficulties, the companies have been growing rapidly in recent years. Their operations are reasonably efficient and they have the other resources—for example, design, technical knowledge and quality control which in many cases are being provided under collaboration agreements with foreign firms—to make good the use of the foreign exchange to be made available.

The funds being provided for spare parts and construction equipment are expected to speed up the execution of various development projects throughout India, particularly in the fields of irrigation and electric power. The existing fleet of heavy earthmoving and construction equipment has not been fully used because of a scarcity of spare parts and problems of distribution. The Government is taking measures to ensure the maintenance in India of adequate stocks of spare parts and to expedite their delivery. In future, authorised representatives of foreign parts manufacturers are expected to undertake the primary responsibility for importing and stocking replacement parts and spares.

Financing Imports

The proceeds of the I.D.A. credit will be made available to the participating firms and agencies through the regular import licensing procedures of the Government of India. About \$75 million will finance imported components, materials and balancing equipment for factories producing lorries and buses, machine tools, cutting tools, heavy construction equipment, electrical equipment, such as

switchgear, motors and transformers, and similar items of capital equipment. The balance will finance imported equipment and spares for the construction industry.

The I.D.A. credit, together with similar assistance from other members of the Aid-India Club, will make possible the first substantial increase in three years in the allocations of foreign exchange for imports of industrial materials and components. Adequate imports of this type must be continued if a high rate of use of plant capacity is to be maintained. The I.D.A. credit to India is for a term of 50 years. Repayment of the principal will begin from 15th November, 1974, after a ten-year period of grace. Thereafter, 1 percent of the principal will be repayable annually for ten years and 3 percent will be repayable annually for the final 30 years. The credit is free of interest but a service charge of 1 of 1 percent a year on the amount withdrawn and outstanding will be made to meet the I.D.A.'s administrative costs.

HEAVY ELECTRICALS

Czech Technical Collaboration

An agreement for technical collaboration for the development of production at the Heavy Electrical's high-pressure boiler plant in Tiruvembur, Tiruchirappalli, was signed here last week. The agreement covers the following services:

(1) Technical co-operation and consultancy service for the production of: (a) high-pressure boilers ranging from 125 to 450 tonnes—steam capacity an hour. (b) Package boiler units with an output of 6 tonnes an hour above 22 atm. pressure—temperature 380°C. (c) High-pressure valves and fittings for the above boilers.

(2) Training of Indian personnel in the C.S.S.R. and working drawings for (a) the production of non-standard equipment in India; (b) test equipment; and (c) Factory lay-out, services, etcetera. The total payment for the various services amounts to Rs. 2 crores.

It will be recalled that an agreement was signed on 24th November, 1959, between the Czechoslovak Government and the Government of India for a credit of Rs. 23.1 crores for financing a number of projects in India, one of which was the high-pressure boiler plant.

A technical committee appointed by the Government had suggested the site for the plant in Tiruvembur, Tiruchirappalli, which was approved by the Government. After the preliminary report had been submitted by Czech experts, the basic details of the project were agreed upon and an agreement for the preparation of the project report was executed on 7th June, 1961. The project report was received by the end of August 1962. An agreement for the supply of machine tools and equipment from Czechoslovakia through the agency of Messrs Techno-export was executed on 30th May, 1963, and thereafter the construction work was started at the project site.

Messrs Techno-export are collaborating in the execution of a number of projects in India, prominent being the foundry-forge project in Ranchi, the heavy power equipment plant in Hyderabad and the high-pressure boiler plant in Tiruchi.

Recently, the Czechoslovak Government has agreed to another credit of Rs. 40 crores for the development of some of the existing and new projects, including the supply of components for the existing plants.

London

CONTRIBUTIONS TO PARTY FUNDS AS BUSINESS EXPENSE

(FROM OUR LONDON CORRESPONDENT)

DESPITE the fact that the bulk of Labour Party funds comes from trade union contributions, although not all trade unionists are necessarily socialists, the Labour politicians have always felt very strongly about the support which is given to the Conservative Party in particular—although it cannot be the only Party so supported—by business firms.

The subject came up for discussion in a Panorama programme on B.B.C. television the other day, when Mr. George Brown, deputy leader of the Labour Party, repeated Labour's pledge to change the company law so as to require the disclosure of companies' contributions to political party funds. "We will certainly insist that these be open and that, being open, these payments become subject to taxation," he said. Mr. Brown's adversary in the Panorama discussion was Mr. Enoch Powell. The Labour deputy leader commented sardonically that he would have preferred to debate the subject with Mr. Selwyn Lloyd or Viscount Blakenham, who had been invited in vain to appear, rather than with someone "on the periphery" of the Conservative Party.

"My objection is not that they have a lot of money," Mr. Brown said, "but that nobody quite knows whose money they are using." When Mr. Powell suggested that no political party would or could disclose the individual identities of its subscribers, Mr. Brown retorted: "I am not talking about the individual contributor who sends his 5s or £5. I am talking about the corporate contributions." In reply, Mr. Powell said it would be just as much an act of tyranny to expose by name a corporate person who contributed to a political party as an individual. "If a firm thinks it right to contribute, it seems to me a contradiction of the secrecy of the ballot and the right of a person to keep his politics to himself that its identity should be revealed," he added. Mr. Powell said that if the directors of a company considered that the company's interests and those of its shareholders were promoted by a particular course of action, then they had the right to take that action.

Mr. Martin Harrison, of Manchester University, who has made a study of political party funds, estimated that forms of gambling, such as raffles, draws and bingo, provided something like one-third of the finance of the Labour Party, at least in the constituencies. The position of political contributions as a business expense has always been rather vague, so it is useful to have some guidance from a leading expert in taxation. This is that the Inland Revenue was unlikely to allow companies which subscribe to the Conservatives or any other party or to the Economic League to count their contributions as a legitimate business expense. In any case, companies may not always be empowered to subscribe at all unless the directors can show that they have "an expectation . . . of service in return."

Survey of Opinions

Sir John Foster, Q.C., Conservative M.P. for Northwich and Recorder of Oxford, has prepared an opinion on such subscriptions at the request of Aims of Industry, Ltd. This body is devoted to the defence of free enter-

prise in industry and is, in some ways, a rival to the Economic League. He had a Press conference in London recently to explain his views on the tax issue. He said: "It is becoming a common experience for the boards of public companies to receive questionnaires from politically active shareholders asking for disclosure of any contributions their Company may be making to Aims of Industry and other organisations." The problem could be defined in two parts: (1) Is it within the legal powers of a company to make such contributions? (2) Can the contributions be treated as a legitimate business expense for income tax purposes?

In Sir John's opinion, a contribution is legally permissible provided it is made "to promote the prosperity of the contributing company", or if it "obtains specific benefits in return for its support." He went on to say that "only if a company were to make an entirely voluntary subscription, with no expectations of any service in return, would any question arise whether the subscription was within its powers." Citing a test case in which he himself had played a leading part (Joseph L. Thompson vs Chamberlain), Sir John recalled that the company in question (a Durham shipyard) had been forbidden to treat its subscription to the Economic League as a business expense for tax purposes. "The League's purposes," Sir John said, "were not confined to the company's trade and, therefore, although the payments were considered generally conducive to the furtherance of the company's interest, they could not be regarded as wholly or exclusively expended for the purposes of the company's trade."

Permission of Shareholders

Asked whether subscriptions to political parties by companies like Pisons (which says it subscribes to the Conservative Party) would be

permissible, Sir John said that he thought there might be circumstances in which subscriptions would be allowed and that they would certainly be permissible if the Company had received permission from its shareholders. On the other hand, according to his opinion, a company subscribing to a political party (or any other organisation) must do so in the "expectation" of receiving some service in return. He summarised the position as: "It's within the powers of a company (to subscribe) if it's for the benefit of the company; but the subscription is only tax deductible if it is wholly and exclusively for the benefit of the company. If a particular company is threatened with nationalisation by way of the expropriation of its assets and business, then in accordance with the decision in Tate and Lyle's case (Morgan vs Tate and Lyle) expenditure on the conduct of a campaign against the threat of nationalisation will qualify as expenditure incurred wholly and exclusively for the purposes of the company's trade."

"Aims of Industry makes its principal appeal for support by asking companies either alone or in combination to support it by financing specific campaigns for the direct benefit of particular industries and by subscribing to the various information and research services which it offers. Companies which support organisations such as Aims of Industry in this way can be sure that the sums they pay as the price of specific services will qualify as deductions for tax purposes." Sir John said that it was only in the rarest cases, and under special articles of association of a company, that shareholders enjoyed the right to know whether or not their directors were subscribing to Aims of Industry.

The Case of Steel Firms

Another of Labour's pledges is to renationalise the steel industry. As

a counter, the British Iron and Steel Federation has challenged the Labour Party to answer 20 key questions on this subject. In one of two new booklets issued in support of its anti-nationalisation campaign, the Federation states: "The Labour Party has not only refrained from explaining why it wants to nationalise steel, it has also noticeably refrained from explaining how. The electorate is being asked to sign a completely blank cheque. The Federation, which represents 262 firms employing nearly 300,000 workers, suggests in the booklet *Steel—Leave Well Alone*, that there are four principal areas to debate. These were: Has the industry provided enough steel? Is it produced efficiently? Is the industry staffed effectively? and is enough effort being put into selling?

The long-standing Labour charge that the steelmakers have not sought to provide enough steel to sustain rapid economic growth is disproved by the facts, the Federation claims. The industry, having invested £1,500 million in new plant since the war, is today able to supply all the steel Britain needs. No Government, including the Labour Governments of 1945-51, has asked the industry to expand faster, says the booklet, and "there is no reason whatsoever to suppose that a nationalised steel industry would have done better." It goes on: "Nowadays, when even the Labour Party acknowledges that steel capacity is today fully adequate, the nature of the issue has completely changed. With a major surplus of steelmaking capacity worrying Governments the world over, it is the Labour Party, not the industry, which is now in the dock on the expansion issue."

On the question of efficient production, the Federation says: "The criticisms advanced by the Labour Party about research in steel have been as ill-informed as they have been ill-intentioned." Between 1955 and 1962, research spending by the companies and by the British Iron and Steel Research Association rose by 112 percent, from £2.5 million to £7.4 million, it continues, and the latest returns suggest research spending last year rose to just over £9 million. At this level, research spending would be about 0.9 percent of estimated turnover, compared with 0.63 percent in 1961-62 and the 1 percent of turnover target set by the Iron and Steel Board's research report.

Protection of
your valuables
no more
a problem.

Your home is perhaps a vulnerable place for keeping costly jewellery and important documents. Why run the risk of losing your valuables by theft, fire and other hazards? The local head offices and branches of the State Bank of India afford facilities for the safe custody of your personal effects at moderate charges. Facilities are also available at local head offices and at a number of important branches for hiring lockers of various sizes. By depositing your valuables in the State Bank, you will save yourself the worry about their safety. Please contact the nearest Branch Agent for further particulars.

Jute

PAKISTAN REDUCES EXPORT DUTY BY HALF

THE decision of the Pakistani Government to reduce the export duty on all grades of jute by 50 per cent to £4 4s a ton has been accorded a mixed reception. While Dundee has welcomed it since it will be able to save about £500,000 a year on fibre costs, the Indian jute industry has been worried over the duty cut. British and Continental jute mills enjoy advantages in the shape of technical know-how and modern equipment. The cheaper supply of good quality jute will help them to increase their output and reduce production costs. This means that in the long run Indian mills will have to face keener competition in selling jute goods. They have already lost a number of important sacking markets to Pakistan. However, reports reaching local jute circles from Dacca indicate that the benefit of the duty cut has been offset for the time being by a spurt in fibre prices.

The decision to reduce the export duty, it is reported, has been prompted by the concern felt by Pakistan over the disposal of the forthcoming bumper crop. The Government's plan to restrict the acreage and output, it is stated, has not been implemented. So a plentiful harvest is likely. Since the gradual loss of its traditional sacking markets, the Indian jute industry has been concentrating on the production of hessian and other speciality fabrics. In particular, carpet-backing cloth has been enjoying a good market. So, during the last three years, the Indian industry has installed more than 2,000 broad looms at a heavy cost. The complement is being expanded gradually. The production of carpet-backing cloth has risen from 31,000 tonnes during the five months ended May 1963 to 38,500 tonnes during the comparable period of the current year. When Pakistan found that India was having good business in hessian and carpet-backing cloth, she too started producing these fabrics and the threat to Indian mills is growing.

Threat from Substitutes

Recently another threat has been posed by a synthetic substitute developed by a U.S. firm. It is a non-woven bonded fabric made from petro-chemical fibres. Claimed to be a good substitute for jute carpet-backing cloth, it is reported that the fabric has successfully passed through the tufting machines and has imparted excellent rigidity and uniformity to the finished carpet. The manufacturers propose to offer it at a price comparable with that of jute carpet-backing. Production of the fabric on a commercial scale has already been taken up.

Besides, the Abaca Development Board of the Philippines has produced a machine-made fibre from abaca which may also be used as carpet-backing material. The economy obtainable from the fibre has not yet been ascertained. Du Ponts of the U.S.A. have also developed a synthetic substitute which is undergoing comprehensive trials. Furthermore, several European and American petro-chemical concerns with surplus capacities for the production of polypropylene have developed non-woven materials which may also be used as a carpet-backing material.

The lesson that emerges from these is that the Indian industry can never rest on its oars. It must always be prepared to face unexpected competition from within and without. It

has also to continue its perpetual quest for new products, processes and ideas.

Production Declines in May

The production of jute goods has suffered a setback during May because of the loss of working time. Working at the maximum level for 192 hours (against 200 hours in April), mills reporting to the I.J.M.A. produced 101,600 tonnes (against 103,700 tonnes) of gunnies. The output of hessian declined by 1,000 tonnes to 43,400 tonnes, of sacking by 800 tonnes to 38,500 tonnes and of miscellaneous goods by 400 tonnes to 12,300 tonnes. The production of carpet-backing cloth, however, rose by 100 tonnes to 7,400 tonnes. In May 1963, the mills worked at the same level for 216 hours, producing 43,700 tonnes of hessian, 42,400 tonnes of heavy goods, 7,300 tonnes of carpet-backing cloth and 11,500 tonnes of other goods, making a total of 104,900 tonnes.

Burlap Consumption in U.S.A.

With users having adequate stocks for near-term needs, U.S. burlap consumption dropped from 74 million yards in April to 63.5 million yards in May. The offtake was 76 million yards in May 1963. The average monthly consumption works out to 73.04 million yards during the first five months of the current year, against 78.93 million yards for the same period of 1963 and 76.80 million yards for that of 1962. U.S. stocks at the end of May rose fractionally from 277 million yards to 278 million yards. Of these, 147 million yards (against 155 million yards) were spot and 131 million yards (against 122 million yards) afloat. The closing stocks a year ago were 296 million yards—174 million yards spot and 122 yards—174 million yards afloat. At the May level of consumption, the stocks will last 4.412 months. The corresponding stock duration on the same basis a year ago was 3.894 months.

THE JUTE MARKETS

Manufactured Goods: Steady conditions prevailed in the Calcutta

gunny market during the past week. Conditions in Calcutta port had deteriorated to some extent due to congestion of vessels in the docks and a shortage of lighters. Some prompt gunny loaders were affected. But there was brisk short and shipper-covering against ready positions in both heavy goods and hessian because of the decline in gunny stocks with mills during May. The trade's view that Calcutta mills had despatched more than they had produced during May was confirmed on the publication of the production figures for the month, which showed that the output was lower by 2,100 tonnes. In spite of a decline in U.S. burlap consumption from 74 million yards in April to 63 million yards in May, the statistical position seemed to be satisfactory. The Government offtake was about 6,000 bales of B Twills for June delivery. Besides, scattered business with overseas buyers was passing in all types of goods, especially in non-standard constructions, for ready and near positions. Some good foreign enquiries were reported during the week. Some of these might materialise soon. In the hedge market, sentiment continued to be governed by the trend in the spot market. Earlier, the action of the East India Jute and Hessian Exchange authorities had staved off the threat of fresh bear raids. Since then, prices fluctuated within narrower limits. During midweek, there was a mild setback following tired long liquidation in hessian and sacking for August positions. But lower levels attracted sizable bear-covering, helping prices to firm up and close with a gain. Sacking gained more than hessian in both the markets. Turnover was fair and the undertone firm at the close.

Wednesday's quotations were as follows:

	June	July	July-Sept.	Oct.-Dec.
40in. 7½oz.	33.50	33.50	33.55	33.70
40in. 8oz.	36.10	—	—	—
40in. 10oz.	44.25	44.50	44.70	45.05
B Twills	113.65	113.15	113.00	113.35
Cornsacks	115.50	115.75	115.75	115.75

Heavy Cees				
(Plain)	115.50	114.10	113.50	113.35
A Twills	135.00	135.50	136.00	137.25
Liverpools	127.50	127.50	127.50	127.50

Raw Jute: Easy conditions prevailed in the raw jute market during the past week with the gradual depletion of the stocks of selected fibres. Holders of lower-grade jute and mesta continued to be nervous following reports of good crop prospects. Earlier, there were reports that plants in the dry areas had been adversely affected by the delay in the advent of the monsoons. But the subsequent showers alternating with sunny days helped the jute plants. Interculture work was going on in full swing. No pest attack was reported. Mills and their agents were practically absent from the markets. A small turnover was reported in better-grade mesta at lower-than-derivative levels. New crop jute was also on offer and lucky deals were reported. But unless their prices come down to the official minima, turnover is likely to be restricted. In the hedge market, Upper Assam White Bottoms for June contracts were closed from 12th June. The remaining overdue deals were either settled or converted into September contracts on payment of the usual contango charges. Transactions in September contracts opened on an optimistic note with a gain from the previous week's level. Profit-taking at the bulges pared the top levels and the market closed with a minor gain after moderate fluctuations. Turnover was fair and the undertone steady at the close.

Wednesday's quotations were as follows:

SMALL BUSINESS IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

LITTLE change took place in the raw jute market in Pakistan during the past week. Although there were reports that supplies of white jute were becoming rather scarce, this made no difference to the position here, and offers were being quite freely made. Dundee spinners were still difficult to interest, and only a small business took place in the fibre. Both buyers and sellers here were reluctant to operate to any extent because of the uncertainty about the future. So far, there has been no announcement by Pakistan concerning the trade policy for the next season. Minimum export prices have not been fixed, and there is always the fear that quality standards may not be as high as during the present season. There are now rumours of devaluation of the rupee but although this has been denied officially, there are still doubts about this question.

The new crop in Pakistan is reported to be making good progress, and offers were made here at £94 for Mill Hearts and at £81 for Grade Hearts, c.i.f. U.K., for August-September shipment. Old crop prices were very irregular with the lowest rates at £122 for Mill Firsts, at £108

CAPITAL, 18th June, 1964.

5s for Mill Lightnings, at £95 for Mill Hearts and at £81 for Grade Hearts, c.i.f. U.K., June-July. Grade Tossa-2/3 was available to a limited extent at £120 and Grade Tossa-4 at £105 10s. Dacca Tossa-6 was at £107. Output Tossa-2/3 ranged from £93 10s and Output Tossa-4 from £83 10s, June-July.

Cuttings were steady at £59 for S.N.C. and at £51 10s for N.C., but less would be accepted for new crop. Mesta was at £87 for A, at £77 for B, at £70 for C and at £50 for cuttings, c.i.f. U.K., June-July. There were sellers of new crop Siam jute at £76 for Super A, at £71 for grade A, at £67 for grade B and at £63 10s for grade C, delivered mill Dundee for October-November shipment.

The Calcutta goods market became a little steadier during the past week, but there was very little buying interest shown in the U.K. at present. Prices were at 66s 8d for 40in. 10oz. and at 49s 9d for 74oz. a 100 yards f.o.b. Calcutta for June shipment, at 67s 5d and 50s 2d, July-September and at 68s 1d and 50s 9d October-December. B Twills were at 171s 6d, 171s 8d and 172s 7d for the respective shipment periods.

Dundee jute spinners were busy and have orders in hand for forward delivery. There is not much new business being placed at present because only small quantities of yarn are available for reasonably early delivery. The carpet trade continues to take regular supplies and prices are firm. Hessian manufacturers are fairly well placed and further orders continue to be received.

I.J.M.A. PRODUCTION FIGURES FOR MAY

The Indian Jute Mills Association reports the total production of jute goods for May as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
7,873 tonnes (7,749 tons)	
2,06,68 thousand metres (2,28.2 lakh yds.)	
1,30.1 lakh nos.	
(b) Sacking	
37,361 tonnes (36,771 tons)	
8,05,21 thousand metres (8,80.6 lakh yds.)	
3,95.1 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
35,571 tonnes (35,009 tons)	
11,99.41 thousand metres (13,11.7 lakh yds.)	
(b) Sacking	
1,174 tonnes (1,155 tons)	
24,33 thousand metres (26.6 lakh yds.)	
3. Carpet-backing	
7,353 tonnes (7,237 tons)	
57,05 thousand metres (62.4 lakh yds.)	
4. Other Manufactures	
12,292 tonnes (12,098 tons)	
5. Total Production	
(all kinds)	
1,01,624 tonnes (1,00,019 tons)	

Summary				
	(000 tonnes and 00,000 yds.)			
	May '64	April '64	May '63	
Hessian	14,08.09	14,35.92	14,39.11	
	(15.40)	(15.70)	(15.74)	
Sacking	8,29.54	8,56.64	9,17.46	
	(9.07)	(9.37)	(10.03)	
Carpet-backing	57.05	55.55	55.28	
	(62)	(61)	(60)	
	(000 tonnes and tons)			
	May '64	April '64	May '63	
Hessian	43.4	44.4	43.7	
	(42.8)	(43.7)	(43.0)	
Sacking	38.5	39.3	42.4	
	(37.9)	(38.7)	(41.7)	
Carpet-backing	7.4	7.3	7.3	
	(7.2)	(7.2)	(7.1)	
Others	12.3	12.7	11.5	
	(12.1)	(12.5)	(11.4)	
Grand Total	1,01.6	1,03.7	1,04.9	
	(1,00.0)	(1,02.1)	(1,03.2)	
Hours worked	192.0	200.0	216.0	

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

Commodity Markets

HIGHER TEA OUTPUT IN NORTH INDIA

(BY A SPECIAL CORRESPONDENT)

THE tea crop figure from north India up to the end of May this year stood at 57,771,205 million lbs, compared with 49,347,580 million lbs on the same date in 1963. There have been four small export auctions of tea this season, but the total so far disposed of only equals to half a Monday's sale offerings in the peak period. It is, however, encouraging to note that the demand for leaf teas is being maintained. Bright liquor Darjeelings and other good C.T.C. types are selling well, and on the London market good teas find ready buyers, but news from Cochin indicates an easier trend and Calcutta sales of Dust teas report easier conditions.

Weather conditions from upper and central Assam were too hot and dry and rain is badly needed in lower Assam. It is also hot in north Cachar, but fairly normal in the south. Similar conditions rule in the Doorgas where output was about normal. Darjeeling reports normal conditions, but the Terai has made less tea to date.

There is the expectation of another wage award and a comparison of results for 1962 and 1963 shows that profits have already been seriously curtailed in many respects. Mr. Manubhai Shah, Minister for Commerce, has already advised tea interests that their plea for revision of taxation is being considered by the authorities, so on a long term, there is hope of relief, but on the other hand, this is a matter which may well take a long time before favourable results follow. The tea industry, if it is to expand at an early date, needs a fiscal tonic now, for the increase in world consumption has been disappointing.

The major producing countries produced (in metric tons) the following quantities of tea: 1961—678,758; 1962—677,984; 1963—677,805, against imports for consumption 805,957 in 1961 and 816,360 in 1962. The figure for 1963 is not yet available. These figures make interesting reading, but unfortunately, they do not include supplies from China and other far eastern producers or from Russia which country is developing into a potential competitor.

In 1963, India's consumption was reported lower, but in cups of tea, it may yet show an increase: for as one of the local experts points out, infusions from C.T.C. grades are known to yield a greater number of cups from a lb of tea. Some estimate the figure at 20 percent. It is, therefore, reasoned that if the poundage consumed in India during 1963 fell to some extent, it does not follow that fewer cups of tea were imbibed by the population and, therefore, after a normal time lag, internal consumption may be expected to renew its upward trend, especially if a bumper crop causes cheaper supplies to become available.

Another point for consideration is brewing, as the question of correct brewing is fully as important as quality. A lot has been written about the Tea Board's propaganda in new markets; especially with reference to Europe. Exports to the Continent were at a record high in 1956 at 42,304 metric tons. Five years later, in 1961, they were 37,061 metric tons and in

1962 they were further down to 28,600 metric tons. Another market where much propaganda has been undertaken is the U.S.A. The year 1950 was a record with imports at 46,542 metric tons; 1954 was a fairly good year, but 1955 showed a fall to 37,185 metric tons. In 1962, imports recovered to 43,665 metric tons, but the estimates for 1963 show a figure of 36,876 metric tons. The same tendency may

be noted in exports to the U.K. The top figure was in 1956.

The trade seems to take a more encouraging view of the marketing outlook for the 1964-65 season. As very little tea remains by way of a surplus, the immediate outlook for the current season is said to be encouraging. As a leading tea booking firm said: "Looking further ahead into the second half of 1964, the trend will depend largely on the progress of the crop. If supplies increase sharply—they have not done so for at least two years now (but may do so during 1964), the trend could well be downwards. But if the increase is of normal proportions, the market should be reasonably maintained. Since world consumption has risen, any moderate increase in output should be taken care of. The review also

adds that if the crop for 1964 becomes exceptionally large, the producers of poor quality and badly-manufactured teas will suffer. But the possibility of a slump is thought to be remote. It is possible that buyers will be more discriminating and offer an encouraging prospect to the producers of good-quality teas. As for expansion of tea production, it is necessary to reinforce the confidence of producers. The costs of replanting and new planting are high, and returns are not commensurate with the large outlays involved. The provision of suitable loan facilities needs to be supplemented by tax reliefs and subsidies. Taxation at present is too high. A full rebate of excise duty on all tea which is exported should be granted. Replanting and new planting costs should be considered as a revenue charge without further delay."

A SQUARE Deal

Kirloskar

KIRLOSKAR LATHES PILOTS OF PROGRESS

COMPANY AND PUBLIC NOTICES

EQUITABLE COAL COMPANY LIMITED

NOTICE is hereby given that the payment of Interest for the period from 1st January, 1964 to 30th June, 1964 on the 5½% Registered Debenture Stock, 1963/68 of the Company will be made to those stockholders whose names appear on the Company's Register on the 30th June, 1964 or in accordance with their instructions.

For EQUITABLE COAL COMPANY, LIMITED,

MACNEILL & BARRY LIMITED.

A. N. MITRA,

Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta-1, 15th June, 1964.

BHARAT NIDHI LIMITED

Regd. Office, 5, Parliament Street, New Delhi.

NOTICE

THE Annual General Meeting of the shareholders of Bharat Nidhi Ltd. will be held at The Punjab National Bank Building, 5, Parliament Street, New Delhi, on Friday, the 17th day of July, 1964 at 3-30 P.M. to transact the following business:

- To receive and adopt the Directors' Report and the Audited Statements of Accounts for the year ended 31st December, 1963.
- To declare dividends on Preference and Ordinary Shares.
- To elect a Director in place of Shri B. P. Khaitan who retires by rotation and, being eligible, offers himself for re-election.
- To appoint Auditors for the current year and fix their remuneration. M/s. Sodhbans & Co., Chartered Accountants and M/s. Aiyar & Co., Chartered Accountants, retiring Auditors, being eligible, offer themselves for re-appointment.
- To consider and, if thought fit, to pass, with or without modifications the following resolution as Special Resolution:—

RESOLVED that Article 43 of the Company's Articles of

Association be deleted and be substituted by the following Articles which may be numbered as 43:—

"43—There shall be paid to the Company in respect of every registration of membership on transmission and of every registration of a transfer of shares, a fee not exceeding one rupee for each transfer or transmission. Notwithstanding anything herein contained the Directors shall have power to waive payment of such fee generally or in any particular case."

A member entitled to attend and vote at the meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
V. K. VERMA & CO.,
Registrars.

New Delhi,
12th June, 1964.

Note: As previously notified the Share Transfer Books of the Company were closed from 1st June, 1964 to 20th June, 1964, both days inclusive.

The dividends when declared will be made payable to those Members whose names appear in the Registers of Members on 20th June, 1964.

Explanatory Statement as required under Section 173 of the Companies Act, 1956

Ministry of Finance has suggested to Stock Exchange in the country that in the interest of wider and broader dissemination of share ownership among general public the companies listed on the exchanges should not charge any transfer fees on the transfer or transmission of shares as well as on the sub-division or consolidation of share certificates. This practice is followed by many well-known companies in India.

Your Directors are of the opinion that they should have the power to waive the charging of fee on transfer or transmission of shares. The amount of fee received by the Com-

pany for the above purpose during the year 1963 is not substantial.

As Article 43 of Articles of Association of the Company does not give any power to the Directors to waive the fee payable on transfers or transmission it is necessary that the above Article should be amended as shown in the proposed resolution.

Office of the Superintending Engineer, DELTA IRRIGATION CIRCLE Keshari Nagar, Bhubaneswar-1

TENDER CALL NOTICE

Sealed tenders are invited for supply of 25 (Twenty-five) Tons of G. I. Wire, 18G and will be received up to 3-00 p.m. of 20th July, 1964. The tenders will be opened on the same day in the presence of the tenderers or their authorised agents.

Sd/- B. MISRA,
Superintending Engineer,
Delta Irrigation Circle.

"PROGRESS OF THINKING" AT THE GENEVA CONFERENCE

By Dinesh Bahl

Below is the first of a series of articles making an on-the-spot assessment of the achievements and the trends of thinking at the U.N. Conference on Trade and Development which ended in Geneva recently.

GENEVA

NOT a great deal that is of specific, concrete and immediate advantage to the developing countries seems to have emerged from the U.N. Conference on Trade and Development which ended in Geneva a few days ago. There is, in consequence, a widespread feeling of disappointment among the poorer countries. But that does not mean that the Conference can be dismissed abruptly as a failure. The fact is that no precise and far-reaching concessions from the developed countries to the developing ones were to be expected almost from the very start. An unwieldy assembly of 123 nations representing not only a wide diversity but also a deep conflict of interests can hardly be the most propitious framework for detailed, across-the-table bargaining which brings precise changes in policies.

The main virtue of the Conference, then, is that it has provided the occasion for a "confrontation" of world importance between the rich and the poor nations; in this way, it has thrust before world attention many vital aspects of international economic relations more spectacularly than anything else could have done. Secondly, the exchange of ideas between the developed and the developing countries has been carried a significant stage further; in this sense, although the areas of practical agreement are not wide and are confined mainly to the expression of pious generalities, there has been "progress of thinking" and understanding of the trade and development problems of the poorer nations has been appreciably increased. Thirdly, the Conference has produced evidence of fresh approaches and a great diversity of new ideas—good, bad and indifferent—on the redressal of international economic unbalances. Last, but by no means least, for the developing countries an outstanding achievement is that they have demonstrated an extraordinary degree of unity—a unity which has found powerful expression through the concert implicit in the committee of 75; how far and how long the unity is likely to survive is a matter of opinion, but its existence has been an extraordinarily powerful influence throughout the proceedings of the Conference.

If disappointment persists in spite of these by no means inconsiderable achievements, the main reason is that the poorer countries started off in a mood of high hopes and slightly unbridled optimism. Many had expected that the richer countries would try to assuage the ire of the developing ones through modest but firm promises of an increase in international aid; almost no promises of the sort that were expected have been forthcoming. Others thought that apart from offers of aid, firm commitments would be made for liberalising trade in favour of the developing countries; here, again, commitments have by and large been postponed. The poorer nations have thus not succeeded in realising their hope that the Conference would provide an occasion for capitalising in a major way on the greater sympathy and understanding shown by the developed countries towards the problems of the former in recent years. The Conference, it was said, would serve to crystallise thinking and precipitate decisions. In fact, however, while the crystals of thinking have grown sharper and clearer, the decisions have not been precipitated. Still, even the former cannot be dismissed as altogether a negligible gain.

The attitude of the developed countries, led by the United States, is in a nutshell simply this. International conferences of the sort just held in Geneva, they say, do not yield fruit in a day, nor even in the three months the Conference has lasted. If through a process of wishful thinking, aided by such instruments as the Prebisch report, any of the developing countries persuaded themselves

that the Conference would be futile in case it did not lead to firm and major commitments, they have only themselves to blame. As far as the developed countries are concerned, the fruits of the Conference are certain, but they will take months or years to ripen and harvest. Through the Prebisch report, and during the subsequent discussions, the developing countries have given a clearer and more concerted idea of what they think should be done. Some of their suggestions have been accepted, even if only in general terms; others have been referred to more specialised groups, especially the continuing machinery set up by the Conference, for further study; and yet others are plainly unacceptable.

The developed countries say that if relatively few of the specific recommendations made in the Prebisch report, and amplified in greater detail in the reports of the five committees set up by the Conference, have been endorsed with anything near unanimity, the fact cannot be very surprising. As the developed countries see it, not all parts of the reports, in the final analysis, contain carefully balanced ideas—ideas framed after taking into account the political and economic realities of our times. In several areas of discussion, the developing countries have been fairly moderate, and have recognised their own responsibilities and obligations in pushing the development process forward. But, the developed countries feel, from the more heated discussions there have often emerged lists of demands that are not merely unrealistic but also impracticable. The trouble with these lists is that: (1) they appear at times to leave very little out; (2) they sometimes contain demands that, *prima facie* at least, seem incompatible in that they involve a sharp conflict of interests between the developing countries themselves; and (3) many of the demands have been pushed through with the overwhelming majority that the developing countries enjoy—a majority that has been consolidated by the unity of the 75 and that has often undermined their willingness to compromise.

The developing countries' general approach to the problems considered at the Conference, on the other hand, has been fairly clear-cut too. They start by pointing out that the international economic community has accepted, as a target for the U.N. Development Decade, that the rate of economic growth of the developing countries must be raised to at least 5 percent a year by 1970. The harsh truth is that these countries are still nowhere near achieving this target; with their population increasing rapidly, and their economic growth lagging behind, their progress in terms of *per capita* growth is even more dismal, adding a new dimension of seriousness to the whole situation. Nearly half of the Development Decade is over, so if something even approximating to the target is to be achieved, a sharply increased flow of resources from the developed to the developing countries is urgently necessary.

The developing countries ask: Are or are not the developed countries willing to increase the flow of resources in order to fulfil the target they have already accepted? And if they are willing, are they going to go on confining their promises to pious generalities, or are they going to take quick and specific decisions? The developing countries have, through the Conference, declared in precise terms the sort of decisions they consider necessary. Instead of stalling, it is for the developed countries to have demonstrated their sincerity and willingness to accept those decisions; and this they have so far not done in adequate measure. In reply to the complaint that the developing countries have offered precious little in return—that they are striving for a one-way traffic in concessions, through a process of highly-loaded bargaining—they say

that this is simply inherent in the situation. As one Latin American delegate put it to this correspondent, "We have nothing to offer but our poverty. Everybody knows it, and that is why everybody's here."

As far as the communist countries are concerned, there is little doubt that they have created on the whole a favourable impression among the developing countries represented at the Geneva conference. A number of them have voted frequently with the developing countries in the committees and at the plenary sessions. Among them is Rumania, who for her own private political reasons has used the Conference as a playground for exercising her anti-Russian and pro-Chinese attitudes. But such antics apart, under Russia's leadership the communist countries have made some impression by indicating that they expect very substantial increases in trade with the developing countries in the coming years. The point has not been missed, however, that what the communists have outlined are expectations, not promises or commitments. Furthermore, trade between the communist countries and the developing ones is still small in terms of international aggregates, so that even a minor increase can be made to sound like a grand multiplication of the commercial exchange.

The relatively favourable impression the communists have created is primarily by playing a passive rôle, which means that it has been created essentially only in a negative sense. Since most of the developing countries' trade is with the western countries, the concentration has been on the latter and the Russians have never really been pressed firmly to say exactly what they are prepared to do. The fact is that the communist countries have equivocated as often and as gallantly as the West on the issues which really affect them, such as joining in commodity support schemes and buying the developing countries' exports at higher prices. Russia, notably, has not subscribed to the formula that the developed countries should devote at least 1 percent of their national income to aid and investment in the developing countries; the evasion has been accomplished on the specious plea that the former imperialists should bear more of the development aid burden since they had exploited the developing countries in the first place. Another feature of the Russian performance is that, in presenting projections of her future imports from the developing countries, all sorts of commodities have been listed, from cocoa to bananas—but no mention has been made of rubber, since she has ambitious plans for manufacturing the synthetic substitute herself. The important point nevertheless remains that the communist countries have played their hand with quiet tact and diplomacy. Their attitude has created an impression that is in strong contrast to the one created by the American delegation which—perhaps feeling that the United States would have to foot much of the bill for any decisions taken at the Conference—has taken a stand so blunt, firm and uncompromising as to be widely regarded as tactless.

As the developed countries see it, the crux of the problem discussed at the Conference is that a sharply increased transfer of resources from them to the developing countries is involved; and the ways in which it is to be brought about is essentially a matter of detail. The former is, more than anything else, a political problem which calls for top-level political decisions in the developed countries themselves. The developing countries, on their part, agree that the problem is essentially political; but they feel that the leaders of the developed countries are dragging their feet. If they were to show greater initiative and courage, they could do much more than they are doing at present to accelerate the transfer of resources for the development of the poorer countries. It is pointed out, for instance, that despite the verbose speeches of many years, a majority of the developed countries have still not raised their foreign aid and investment to the target of 1 percent of the national income—and this at a time when they could easily afford the rise, considering that their national income itself has been rising much more rapidly. Stiff restrictions are maintained on imports from the developing countries, although to remove those restrictions would cost very little. Then, again, the steady deterioration in the terms of trade of the developing countries shows no sign of being reversed on any permanent basis, with the result that the shortage of foreign exchange resources

essential for development is becoming steadily more acute.

The developed countries, however, are convinced that within the political and economic limitations they have to work in, they have been doing pretty nearly all they could. In the Western democracies at least, they have their parliaments and electorates to answer to for major changes of policy, and to convince the latter is apt to be a slow process. They accept the point that they will have to do steadily more for the developing countries in the coming years. But they say that the pace of the increase in trade and aid cannot be decided by international conferences such as the one now ending in Geneva, nor by the developing countries who have dominated its proceedings. In the final analysis, the developed countries say, the pace of the increase has to be decided by the givers and not the takers, after mutual consultations. To leave the decision to the takers alone would amount to signing a blank cheque, which no country in the world would be prepared to do.

The poorer countries feel that, when pressed to say precisely how much more they are prepared to do, the developed countries have been altogether too evasive. Admittedly, on the whole horde of suggestions made at the Conference, firm pronouncements could not have been made. But the problems of aid and trade in the developing countries are by now fairly familiar, and on many of these at least the developed countries could afford to accept specific measures; that, after all, was one of the things the Conference was called for.

The developing countries, in addition, are inclined to discount the seriousness of the extraneous complications which have prevented positive decisions. It has been explained, for instance, that both the United States and Britain are faced with general elections later this year—events which inevitably tend to make the climate unpropitious for major policy decisions on what, to electorates, are suspiciously expensive and remote subjects like international aid and trade. General elections are due to be held in France and West Germany too next year. There were vague hopes that the thaw in the cold war may slow down, or even reverse, the increase in military spending and thus release more resources for economic development. But the developed countries seem convinced that the change has not yet been so radical as to permit a sharp diversion of resources in this way—especially a diversion of the sort which would seem to imply a long-term commitment. Then there is also the perennial bugbear about external currency reserves and international liquidity—a bugbear which remains an astonishingly strong influence on the thinking of even those developed countries which are bursting with foreign exchange reserves.

Finally, among the European Common Market countries in particular, and the major trading nations involved in the Kennedy round of G.A.T.T. negotiations in general, there is a clear tendency to regard trade relations with the developing countries as a matter of only secondary importance; they feel that their own relations have to be sorted out first, and the developing countries can be attended to later. The vital differences among the developed countries of the West themselves on questions of trade policy have inevitably thwarted progress in this sphere. But on financial measures, such as aid, their differences are much narrower, so their attitude has been noticeably less negative.

These complications have inevitably tended to make the U.N. Conference on Trade and Development less fruitful than it might have been. Among the developing countries, however, there is a widespread impression that the complications, although real, need not have made the attitude of the developed countries as evasive, and therefore as negative, as it has been. The complications, in other words, are not decisive, but are being proffered as excuses for postponing decisions and action. They say, for example, that general elections are a recurring problem; international liquidity is a perennial one; and the G.A.T.T. negotiations look like going on till eternity too. The difficulties of the developing countries are clearly identifiable, separate and call for urgent action; they cannot be dismissed for later consideration until the developed countries have evolved harmony out of their own maladjustments and preoccupations.

The disappointments and the evasions notwithstanding, the work of the U.N. Conference on Trade

and Development is not such as will be easily ignored or forgotten. The work will be carried forward through the instrument of the continuing machinery represented by the Trade and Development Board which the Conference has decided to set up, and through periodic top-level meetings of the sort just ended. How great an influence the Board will be, it is still too early to say. What is certain is that the Board is a feeble instrument than the developing countries had intended the "continuing machinery" to be. In terms of its title, composition and voting procedures, it is a much diluted version of what these countries originally wanted. But the dilution of demands is the basis of international compromises, and the Western countries are certainly right in saying that "continuing machinery" which does not command their respect and support is as good as no machinery at all.

In the final analysis, it may be found that the Board could serve a useful purpose in constantly highlighting the problems of the developing countries and bringing them forcefully to international attention. The relations of the rich and

poor nations have hitherto been discussed only at infrequent and flashy confrontations, or at esoteric academic assemblies. The Board could provide the forum for a continuing, purposeful and practical dialogue over a comprehensive range of problems of economic development. Much will depend on the quality and the ability of the individuals who work on the Board and its subsidiary bodies, as well as on the shrewdness and effectiveness with which these institutions function in their first, formative years. The Board could stimulate an important change in the thinking and operations of G.A.T.T., which has hitherto displayed a somewhat excessive preoccupation with the problems of the developed countries to the neglect of the developing countries. The instinct of self-preservation among international institutions is not to be underestimated; if the Board were to become steadily more effective, the fear of being overshadowed by it could influence G.A.T.T. into becoming much more positive and livelier in its approach to the problems of the developing countries.

(To be concluded)

LEARNING FROM THE PAST

NO two countries' problems are identical, but there are common factors in most of them. Much of what Mr. J. C. R. Dow writes in *The Management of the British Economy, 1945-1960*, is relevant to the general and various local discussions on economic management. It is relevant particularly to Britain's immediate problem, how to avoid a repetition of past sterling crises while maintaining economic growth. This important book has been published by Cambridge University Press for the National Institute of Economic and Social Research, with which Mr. Dow was working while he prepared and wrote the book. For years previously (until 1954), he was with the economic section of the British Treasury. So he had exceptional qualifications for undertaking such a study. He does not pretend to have written the final authoritative word on economic management but he has clarified past errors and offered significant ideas for future action.

The first major error of postwar policy-makers was the assumption that full employment would be difficult to maintain when the immense resources devoted to war were returned to peaceful purposes. In the event, the tasks of physical reconstruction and of satisfying the more urgent of accumulated demands required all available resources for many years after the war. Yet this earlier phase was not the most difficult. The wartime system of controls was not suddenly dismantled; so inflationary pressures could be contained by regulation. Moreover, in a world where goods were generally scarce, it was comparatively easy to increase exports. It was in the subsequent period, when the more urgent requirements had been satisfied, that the basic problem was revealed: how to maintain steady growth, and so use re-

sources fully, without generating inflation and causing pressure on currencies.

The sterling crises of the 'fifties focussed the British authorities' attention on excess, or supposedly excess, demand. Mr. Dow's analysis of the authorities' actions to regulate demand is particularly important, and particularly relevant to the present phase of expansion. He believes that the symptoms of economic weakness, or, conversely, of economic strength, were often wrongly diagnosed, and that errors resulted particularly from superficial interpretations of changes in the gold and currency reserves. Whether because the available facts were inadequate or because—adequate or not—they were misinterpreted, actions to restrain or to stimulate the economy were mistimed and excessive. This criticism, published a month or two after an usually controversial Budget, is particularly important at this time. The conventional pointers indicate pressures on resources which in the opinion of some observers portend another sterling crisis, but the Chancellor of the Exchequer is virtually letting matters take their course. Had he, perhaps, independently of Mr. Dow, perceived the past errors of interpretation and correction and resolved to avoid repeating them? Mr. Dow's theories and Mr. Maudling's policies seem likewise to coincide. Theoretically, Mr. Dow believes, an excess of demand should be absorbed by an increase in supply, not corrected by restriction. Mr. Maudling perceives that in Britain, production is increasing, and his restrictive policy is apparently based on the idea that this expansion will in due time neutralise inflation.

However, Mr. Dow is not an abstract theorist. He has observed a regrettable characteristic of

the British economy, that it does not readily respond to an excess of demand. Are its responses more sensitive now than they have been in the past? Is there, anyway, a genuine excess of demand to which it should respond? Whereas efficient use of existing capacity is economical, expansion of capacity in excess of requirements is extravagant. Policy has often erred in the past as a consequence of wrongly assessing the relation between supply and demand, or, in genuinely inflationary periods, of attempting to remedy unbalance by correcting demand rather than supply. Particularly misguided was the recurring policy of restricting industrial investment when overall demand seemed excessive: basically, more, not less, industrial investment was needed to restore the balance.

However, industrial investment (including investment in stocks) is not determined simply by official policy; it is subject to business psychology, as reflected in the economic cycle. Mr. Dow believes that this cycle can be and should be

moderated by "direct promotion of economic growth"; and he believes that stabilising mechanisms such as an incomes policy can usefully complement the monetary and fiscal mechanisms that have promoted growth in the postwar era. He rejects the facile belief, which has often misguided financial policy, that the state of the economy can be quickly changed by fiscal action. But, as a constructive critic, he sees the improvements as well as the errors in technique, and he argues that Britain is evolving workable methods of maintaining balanced growth. It is a distressing thought that this achievement may be vitiated by the problem with which the policymakers mistakenly concerned themselves about the end of the war. In countries such as Britain it was easy to maintain full employment in the 1940s and the 1950s, but in the United States, permanent unemployment of millions of workers is a grim feature of the 1960s. One cannot be sure that this problem will not arise in other developed countries as their technology advances.

industry's only problem. As rightly pointed out by the Federation's president, the problem of fabricating plants for paper mills also needs to be considered urgently. Many schemes are known to have been licensed, but they remain unimplemented. The shortfall cannot be made good through imports from abroad because of the continuing scarcity of foreign exchange. Mr. Premchand Gokaldas has pleaded for the restoration of import trade in paper, at least in part, to established importers. For some years, paper imports are being affected either through actual users, or the State Trading Corporation or through an exporter against export incentives. The Federation president pointed out that such paper often came back to the market by the backdoor, and was sold at high prices. The trader had hardly anything to do with the high prices of imported paper. Mr. Premchand Gokaldas has suggested that sales tax on paper should be replaced by an additional excise duty. The collection of sales tax at the source through an additional excise duty would relieve the trade from the complexities of the law.

In his inaugural address, Mr. Asoka Mehta, deputy chairman of the Planning Commission, criticised paper mills for their tendency to resort to a multiplicity of varieties to escape the recommendations of the Tariff Commission. He said such an activity was harmful to the country and added that "if we want to have economies of large-scale production and reduction in costs, we must ensure that we do not proliferate in the manufacture of innumerable varieties." He advised manufacturers to take proper guidance from the trade and avoid the practice of charging higher rates under the pretext of change in varieties. Referring to the trade's plea for replacing the sales tax by an additional excise duty, Mr. Mehta urged the trade to bear in mind that sales tax was the States' only elastic source of revenue. Their claims had, therefore, to be taken into consideration in tackling this problem.

Small Rise in Industrial Output

The sluggish growth of industrial production during recent months has affected stock market sentiment. The latest data released by the Industrial Statistics Wing of the Central Statistical Organisation, Government of India, shows that the seasonally-adjusted index of industrial production (base 1956 equals 100) has amounted to 173.2 for March 1964, compared with 172.2 for February and 174.3 for January. The improvement in industrial production which took place during the last quarter of 1963 tapered off since the beginning of 1964. The spurt at the end of 1963 was largely the result of more favourable conditions and the mood of confidence generated by the assurances given by Mr. T. T. Krishnamachari, Central Finance Minister. Although the last Central Budget has given some minor incentives, their good effects have almost been neutralised by the new taxes levied.

But the average level of the index of industrial production in the first quarter of 1964 has been about 7.3 percent higher than it was in the corresponding period of 1963. The index stood at 160.1 for March 1963. The average level of industrial production during the 1963-64 fiscal year has shown a rise of about 9.3 percent over that for 1962-63. The rise amounted to 6.5 percent for 1961-62 and 8 percent for 1962-63. But this should not lead to complacency since it falls below the average annual target of 11.1 percent visualised in the third plan. Judging from current indications, it does not look as if the third plan target will be reached by the end of 1966. The working of industries continues to be interrupted by various difficulties, such as the shortage of raw materials, particularly the imported ones. To what extent the shortage will be relieved by the allocation of a larger non-project aid by donor countries remains to be seen. Furthermore, the shortage of power has been felt in some areas.

Plight of the Middle Classes

For the first time, a survey has been made of the economic conditions of middle class people in India. The findings are not very different from what one would expect them to be. That most of

the middle class people are living beyond their means, trying hard to keep the wolf off the door in a period of steadily rising prices, is well known. But that does not mean that the findings are superfluous. They show the precise nature of the problems facing the middle classes. The survey was carried out by the Central Statistical Organisation in collaboration with the Indian Statistical Institute and the National Sample Survey. According to the findings, the average income of middle class families in India (numbering in all 250,000 in urban centres, but the families surveyed were 36,000 spread over 45 cities) ranges from Rs. 200 to Rs. 250 a month, and the expenditure in most cases is generally in excess of incomes. This statistical average, however, does not show the disparities within the classes. There is a fair proportion of families—some 6 percent of the total—whose income is a mere Rs. 75 a month, and in most of the centres surveyed, the average income did not exceed Rs. 125 a month. Taking the country as a whole, the largest concentration of middle classes was found in the Rs. 150 to Rs. 200 income group. This shows that the average lower middle class family is only slightly better off than working classes. But considering that there are more earning members in working class families than there are in lower middle class units, the latter must be economically worse off. This also shows that the vast majority of the middle classes are not only living beyond their means, but are becoming poorer and poorer. Only 6 percent of the 36,000 families had an income above Rs. 500 a month, and only at levels of above Rs. 750 a month, did incomes (in 1958-59) either balance with expenditure or exceed it somewhat. The number of families in the 5 or 10 percent upper strata, presumed to be living well, is really small.

The pattern of expenditure, as shown by the survey, is in line with the normal middle class notions of living. In major cities, they spend relatively more on housing, household requisites, services and miscellaneous items and less on food, beverages, fuel and light. Yet, on average, a middle class family spends 44 percent of its income on food, beverages, tobacco and intoxicants. The most important item of food from the expenditure point of view is cereals, next being milk and milk products. Meat, fish and eggs show regional variations and occupy an important place in the diet of middle class families in Assam, West Bengal and Orissa, and also in a few other places like Bombay, Bangalore and Srinagar. Among the miscellaneous items of expenditure, transport and communications account for the largest share in 19 of the 45 centres, and education in six. The survey, however, is incomplete in two important respects; first, it covers middle class families belonging to those in public services or teaching; in other words, people with fixed incomes. This it had to do since its main job was to find enough data for constructing a middle class cost of living index, but it leaves out of account a large body of self-employed people like small traders who too belong to the fold. Secondly, the survey relates to the year 1958-59 and the subsequent adverse impact of inflation and taxes on people's living is not reflected in its findings. Had it been, the picture would have been even more depressing.

Slow Progress in Rehabilitation

The flow of displaced persons from East Pakistan to West Bengal continues in spite of official efforts to stop it. The Government of India has repeatedly urged the Pakistani authorities to create a sense of confidence among the minorities so that the large-scale exodus of migrants can be checked, if not stopped altogether. But efforts in this direction have not borne much fruit. The rehabilitation of those who have come over to West Bengal poses a formidable challenge to the Central and State Governments, who are obviously unable to cope with it. In spite of the fanfare of publicity for the Dandakaranya project, rehabilitation has not made much progress there. Many refugees have deserted the settlement. It is reported that some unscrupulous touts are behind the large-scale desertion in Dandakaranya. Inclement weather as also difficulties in adjusting to entirely new surroundings have also been responsible for Dandakaranya being unpopular.

Conditions in Dandakaranya being what they are, the authorities should have made special

effort to help the refugees to stay on till the rehabilitation schemes were completed. Refugees from East Pakistan naturally have a desire to settle in West Bengal, because of language and culture. The rehabilitation projects in other States could have attracted more displaced persons had they provided for reasonably decent living. Many of the projects in the eastern States unfortunately could not provide even the basic necessities. The West Bengal Government is reported to be urging the Central Rehabilitation Ministry to explore the possibility of rehabilitating more displaced persons in the Andamans and Nicobar Islands. But in order to avoid what happened in Dandakaranya recently, it is necessary to be cautious in exploring the possibilities of the project. Meantime, official and non-official agencies engaged in rehabilitation should try to inculcate a sense of self-help among the displaced persons. The Central Rehabilitation Ministry's scheme to organise a "development corps" from among the East Pakistan refugees is good in principle. But assistance under the scheme requires to be more generous if it is to prove attractive.

According to statistics maintained by the Central Rehabilitation Ministry, a total of 470,772 East Pakistan refugees entered West Bengal, Assam and Tripura between 1st February and 15th June of the current year. About 281,757 persons migrated to West Bengal, 128,995 to Assam and 60,620 to Tripura. The number of people who were sent to other States by the West Bengal Government for rehabilitation was 133,472 by 15th June. West Bengal has made repeated representations to the Centre that it is unable to accommodate any more refugees. The burden

of rehabilitating fresh migrants will have to be more evenly spread among all the States.

Woollen Mills in Difficulty

Despite repeated pleas by the Indian Woollen Mills Federation, which represents about 90 percent of the mills in the country, the Government has not so far decided on the allocation of imported wool for 1964-65. The Federation chairman, Mr. K. K. Birla, has now warned that if the Government does not meet the minimum requirements of raw materials during 1964-65, mills might be left with no alternative but to close down by September-October. India produces about 72 million lbs of raw wool a year, but this can be used mostly for the manufacture of carpets. Out of this quantity, some 30 million lbs are being exported and hardly 6 million to 8 million lbs are being used for the manufacture of coarse fabrics. The industry has, therefore, to depend largely on imported raw wool. On a two-shift basis, the industry's annual requirements of imported raw materials are estimated around Rs. 28.75 crores. But the industry was allocated no more than Rs. 5 crores in 1962-63. Together with export promotion entitlements and allocation for nylon fibre, total imports permitted are hardly worth Rs. 8 crores. This constitutes a mere 25 percent of the industry's requirements. If the industry is to manage with Rs. 8 crores worth of imported wool during the year or similar allocations in the future, it can work hardly 25 percent to 30 percent of its installed capacity on a two-shift basis.

Even the Planning Commission has estimated the annual allocation for raw material require-

In addition, there will be articles on industries such as oil, containers and packaging, paints, basic chemicals, power alcohol, tractors, bicycles, aluminium, plastics, electric transformers, soap, dairy machinery, non-ferrous metals and artificial fibre.

The Survey will be published along with CAPITAL of 2nd July and will be available at Rs. 5 a copy (postage extra). Registered subscribers will receive their copies free, but others should write for their copies immediately to the Commercial Manager, CAPITAL, 5 Mission Row, Calcutta 1. No copies can be sent by V. P. Post.

ments of the woollen industry at a minimum of Rs. 15.75 crores. Actual allocation continues to fall far short of the industry's requirements. The treatment meted out to the woollen industry appears odd in view of the fact that it has been put on defence priority. Shortage of the requisite raw material is by no means the industry's only problem. It is in urgent need of modernisation. It is estimated that in order to achieve some 50 per cent modernisation, the industry will need to spend about Rs. 18 crores in foreign exchange. But the amount so far sanctioned and used is only about Rs. 4 crores. Mr. Birla has urged that the Government should not hesitate to provide the remaining Rs. 14 crores at the earliest, especially when quite a number of countries are known to be willing to provide credit facilities on reasonable terms.

Reliable reports from New Delhi indicate that the Government has formulated a scheme for the modernisation of a selected group of woollen mills which might be in a position to switch over to manufacturing exclusively for the export market. The scheme is estimated to cost about Rs. 2.66 crores, which is likely to be discussed with the representatives of woollen interests at a conference some time in July or August. It is hoped that selective modernisation would enable the country to release about 2 million linear metres of woollen fabrics for export. This works out to hardly 1 per cent of the total woollen textiles entering world trade. The scheme is said to be linked with research and training facilities which the Government expects the industry to provide.

Over-production in Electric Meters

Electric meter manufacturers are passing through a crisis, and, oddly enough, the crisis is due to over-production. It is not that production has reached anywhere near the plan targets, but demand has failed to catch up with production. Estimates of the offtake have gone completely awry. The offtake of meters which was expected to reach 2 million a year by 1965 was actually limited to only 1 million in 1963 when production reached 1.12 million meters. So far, 33 units have been licensed with a capacity of 2.75 million metres a year. Of these ten are in production. Most of the existing units are about to complete their expansion also. The overall output, therefore, will be far more than at present. Demand estimates have gone wrong because of the delay in the implementation of electricity projects and the slow progress of rural electrification. The emergence of large surplus production has led to keen competition, under-cutting and great difficulties, particularly for the small units.

In his speech at the recent annual meeting of the Meter Manufacturers Association of India, the chairman, Mr. S. L. Khemka, drew pointed attention to the crisis of over-production facing the industry and said that the industry would have to struggle hard for survival if the Government did not take proper steps to remedy the situation soon enough. Mr. Khemka said that the prices of meters which were around Rs. 40, not long ago, had now come down to around Rs. 28 a piece. The cost of production was much higher than the present market price. The international price being around Rs. 11 a meter, it was impossible for the Indian manufacturers to compete with foreign suppliers unless the Government liberalised the export incentive scheme. He urged the Government to increase the export incentive for meters from the present 75 per cent to 200 per cent. Apart from a substantial increase in the export incentive, he suggested that the Government should be liberal in granting duty drawbacks. Export promotion alone cannot solve the problem of large surplus production. Mr. Khemka has suggested that the Government should ask manufacturers to limit their output in terms of the existing demand. The reduction in output should be on a graded scale.

Export Prospects for Paints

The paint delegation sponsored by the Chemicals and Allied Products Export promotion Council recently toured the Middle East and east African countries to assess the export prospects for Indian paints in those areas. It has pointed out that there is considerable scope for exporting paints

and related products to these countries. The average annual import of paints in the region is about Rs. 8 crores, of which India's share is roughly Rs. 3 lakhs or about 0.4 per cent. Preliminary negotiations by the delegation have already brought in orders worth about Rs. 2.5 lakhs and the prospective business could be estimated at about Rs. 5 lakhs to Rs. 8 lakhs. The delegation offered to collaborate with local entrepreneurs by providing technical know-how for establishing paint factories. The response, it says, has been quite encouraging and about a dozen firms evinced interest in the proposal. Of these, one firm in Nairobi and another in Baghdad have already started preliminary talks for collaboration with Indian manufacturers. A proposal received from an Ethiopian firm is being considered by another Indian manufacturer. Although paints for most of the Middle East and east African countries are imported from the U.K., Holland, Denmark, West Germany and the U.S.A., there is no prejudice against paints from other countries provided the quality is good and prices are competitive.

The delegation urges the Government of India to formulate export insurance schemes which "will ensure financial advances". This is essential in order to satisfy the demand for credit from importers for three to six months, which is offered to them by western countries. Another suggestion of the delegation is that exporters should be allowed to use the import entitlement licences for getting any commodity of their choice.

RAILWAY ENTERPRISE IN INDIA

THE main facts in connection with the working of the Indian Railway system during the past year have already appeared in these columns, but the subject is one of considerable interest, and importance, and we, therefore propose in a series of short articles to place the position of railway enterprise in India, as disclosed by the report for the year 1963 which has been recently issued, before our readers in somewhat greater detail. At the close of the calendar year, there were 26,955 miles of railway open for traffic. Of this total 19,554 miles were owned by the State, 3,263 miles by Native States and the balance, with the exception of 1,095 of line belonging to companies who merely received the free grant of land, were guaranteed in some form or another by Government or District Boards. With the exception, therefore, of some 4,558 miles of railway, the State may be said to have accepted the financial responsibility for the entire railway system of India. Of the total mileage, 14,476 miles are broad gauge and 11,420 metre-gauge and the small remaining balance of 2 ft. 6 in. and 2 in. gauge. It will, therefore, be observed that the metre-gauge system has assumed a more important position than is perhaps generally supposed. The mileage opened for traffic during the year was 1,029 miles, of which the more important contributions were, the final section of the Assam-Bengal Railway 96 miles, the Kalka-Simla Railway 59 miles, Nainpur to Seoni (B. N. Railway) 47 miles, Fyzabad to Sultanpur, (O. and R. Railway) 36 miles, and Godhra to Baroda (B. B. and C. I. Railway) 43 miles. In addition to this sanction was accorded to the construction of 1,267 miles during the year, of which the principal items were Ludhiana to MacLeodgunge (S. P. Railway) 156 miles, Pegu to Martaban (Burma Railway) 121 miles, additions to the B. and N. W. Railway system 148 miles, additions to the Rohilkund and Kumaon Railway 148 miles, to the Triton State Railway 121 miles, to the N. W. Railway system 165 miles and Ondal to Saintha, E. I. Railway) 43 miles. An additional 216 miles were sanctioned between the close of the calendar year and the 30th April 1964, bringing the total mileage under construction or sanctioned for commencement on the 30th April 1964 to 3,122 miles. During Lord Curzon's five years' Viceroyalty a total of 4,916 miles has been opened for traffic, and as it may be of interest to observe the rate at which the construction of railways has progressed under various Viceroyalties, we quote the figures for the six last Viceroyalties:

	Miles opened
Lord Lytton	2,621
Marquis of Ripon	2,469 (4 yrs.)
Earl of Dufferin	2,945 (4 yrs.)
Marquis of Lansdowne	3,928
Earl of Elgin	3,536
Lord Curzon	4,916

A Ditcher's Diary

IF NEW DELHI IS BUSY PATTING ITSELF ON THE BACK for its belated removal of Sardar Pratap Singh Kairon, it had better know that the main count on which it deserves any thanks is that the Das Commission's report has been made public. Not to publish it would have been as big a scandal as any of those dealt with by Mr. Das, who clearly indicates that there is further action to be taken against the guilty. The point is that many of the things now mentioned against Mr. Kairon were not unknown in New Delhi; I remember hearing some of the charges three or four years ago. Yet he was allowed to continue in office; he was defended even by Mr. Nehru, with some very curious logic, as I pointed out at the time. Mr. G. L. Nanda appears to have concluded already that half his work—rooting out corruption in two years of which less than a year and a half is left—has been accomplished with the departure of Mr. Kairon. Nothing of the sort. Mr. Nanda must have noticed that, although the bulk of the corruption concerned the Punjab Government, the Centre comes into it too. If Mr. Das has established that money was made in illegal and improper ways, Mr. Nanda should promptly enquire whether income tax was paid and, if not, why not. But, to go to the heart of the matter, it was not the Centre's abhorrence of corruption that brought the Das Commission into being; after a great deal of reluctance, the Government of India instituted the enquiry because political pressure from Punjab itself was overwhelming and irresistible. If corruption were the inspiration, there would be hundreds of Das Commissions in the country today. New Delhi's right to discipline the States is sadly circumscribed by the fact that New Delhi itself is not impeccable. Another point. Mr. Kairon could not possibly have pulled off all the things he did without assistance from a large number of associates and officials; they are culpable too. No, Mr. Nanda's work has only begun; and it should not be restricted only to New Delhi and Chandigarh. Mr. Kairon will have a right to complain if others get away with worse.

ONE ONLY HOPES THAT MR. KAIRON'S WISE-AFTER-the-event dissociation from the activities of his two sons is prompted by sincere repentance. The repentance, if so it really is, has come too late to be of any worth. Until quite recently, like Luther himself, Mr. Kairon was asserting, "Here I stand, I cannot do otherwise." The air of injured innocence and vicarious suffering assumed by him seems to suggest that his sons were playing off their own bats, keeping him in the dark about

their activities. But this does not tally with the facts as brought out by the Das Commission's report. The weight of the report has been greatly enhanced by Mr. Das's insistence on rigorous proof before accepting any allegation against Mr. Kairon. The two principles, which have guided the enquiry, are that no one can be condemned on suspicion, however strong, and that one must be presumed to be innocent until the contrary is proved by dependable evidence. So Mr. Das has held that the majority of the charges against Mr. Kairon have not been proved, and has accepted the validity of only a few of them. This, however, gives a keener edge to his strictures. To come back to Mr. Kairon, I do not know what value to attach to his statement that he accepts the Commission's verdict with all humility, particularly in the context of the bravado voiced by his henchmen in the Punjab Congress only a few days ago. Now that Mr. Kairon has been elbowed out of public life by the force of events, the attempts to strengthen his hold on the Party set-up should not be countenanced by the Congress. If he cannot be trusted with power in the Government, he cannot be permitted to wield it through backdoor methods. It shouldn't be possible for him to create a ministerial marionette which he can work from behind the scene. If he does so, Punjab politics will continue to be what it has been all these eight years.

MUST I KNOW SOMETHING ABOUT THE HOYLE-Narlikar thesis on gravitation before I congratulate them on the sensation they have made? I don't think so. I have read what has appeared in the lay Press; if I am not already an expert in this department of physics, it is entirely my fault; and for once this is no mock humility. A certain amount of national pride is inevitable and not altogether undesirable when an Indian scientist makes world news; and I am not at all sorry that some people have been impelled to have another look at India's outlay on scientific research. I have to return to a point made frequently in this diary. To put it briefly, in a generally effete society it is futile to expect particular institutions to remain insulated and vigorous. The various national laboratories have produced more intrigue than science because that is precisely how all other institutions have been behaving. Mr. M. C. Chagla has graciously offered a job to Dr. Narlikar; the latter, I hope, will thank the Education Minister and continue his good work in Britain. I can see some sense in appealing to Indian doctors and engineers abroad to return home; they have specific jobs to do which are not being done because

they are not here. Fundamental research, however, knows no frontiers. If Dr. Narlikar wants to come back, he should certainly be given every opportunity for research. On the other hand, if he does not, I think it's entirely his business. For one thing, in India he will not have the partnership of Professor Fred Hoyle; and that's probably as essential for him as is the atmosphere of King's, Cambridge. It may be argued that in India Dr. Narlikar might train other Indian researchers. He well might; but Shaw said the right thing when he bluntly declared that an artist's first duty is to his art. A scientist's to his science; patriotism comes a long way later. Meanwhile I am glad that local efforts have been made to correct the notion that Hoyle and Narlikar have rewritten or undone Newton and Einstein; in science one only carries on the work of one's predecessors. Only in science is progress cumulative and continuous.

NO DOUBT IF I WERE TO SUGGEST THAT THE N.A.T.O. allies should subscribe to a statue for Mr. Mao Tse-tung I would be considered to have gone completely mad. Yet after reading the reports about the treaty Mr. Khrushchev has just signed with Dr. Ulbricht, I think it would be a most appropriate gesture. As far as I can see, what the Russian leader has done is to serve notice on the West that the Berlin crisis is over for the time being, at least as far as he is concerned. And why should he have decided to be so reasonable all of a sudden? Why, Chinese pressure of course, what else? This is yet another instance of how the Sino-Russian quarrel is changing the face of international politics; and there are going to be others to come. In the meantime, I can see a reasonable prospect ahead that the problem of German unification may also be on the way to solution. That is, of course, if Mr. Mao continues to oblige. At present, apart from the ordinary human desire for the devil one knows, the Russian reluctance to accept a united Germany stems from the fear that such a unit would fall under western domination. I do not think any considerations about maintaining Dr. Ulbricht and his communists in power will influence the Russian point of view one way or the other when it comes to the crunch. Now, for the price of losing another satellite, the Russians could cover their western approaches by agreeing to German unification provided it takes place under the kind of neutral regime which has proved so successful in Austria's case. I cannot see the western allies objecting too strongly to the proposal, if only because they would then have to stand the odium of a refusal to incur. But I can see good reasons why it might not necessarily be in their long-term interests, which could possibly be identified more with ensuring Russia's continued weakness on both her main frontiers. Perhaps I am looking too far ahead; after all, there is nothing in the wording of the treaty to suggest that the Russians are in fact angling for German unity. But the main-

A NICHOLAS (N) PRODUCT

spring of my thinking is the suspicion that the world, and myself included, has probably not yet grasped the full extent of Russia's anxiety never to be committed militarily on two fronts at once.

LIBERTARIANS IN INDIA MUST HAVE BEEN HORRIFIED to read of the latest constraints on freedom in Ceylon. No diplomatic mission can show a documentary that has not been approved by the Public Performance Board. No foreign mission can extend an invitation to any Ceylonese citizen or organisation except through the Ministry of Defence and External Affairs. The same Ministry has prepared a "suspect index" of foreign journalists whose presence in Ceylon is considered undesirable—by the Ceylon Government, of course. All these things are obvious milestones on the road that leads to dictatorship, of which Mrs. Bandaranaike already gives a fair enough imitation. Now is the time to say that, while in India we enjoy an agreeable degree of freedom, efforts have from time to time been made to introduce here, in one form or another, each of the restrictions Ceylon should be ashamed of. The Chinese missions in India once got away with a great deal of reprehensible activity; but India has her own way of asking foreign missions to "go easy". It is no secret that in India too invitations from foreign countries have to be "channelled" and "processed". India does not actually forbid the entry of "undesirable" journalists from abroad; but even Indian journalists find it difficult to visit parts of the country; and I am not talking about conditions since the emergency. No organised society is or can be without all restraints. What I find odious is official attempts to stand between an individual and his friends in other countries. And I remember a European diplomat once telling me that if he routed every invitation through the Government it would in every instance go only to a relation of a Minister or a Secretary. Questions of such nepotism apart, these restrictions soon degenerate into petty tyranny in the hands of petty officials. Freedom of travel within the country is a fundamental right; but the Indian judiciary has not yet unequivocally said that an Indian citizen cannot be deprived of a passport without the State showing good reason for refusal.

I AM ENTIRELY SERIOUS IN SUGGESTING THAT THE Corporation of Calcutta take out a patent for its immortalising process. As soon as somebody dies, the Councillors get together and do two things. The first is to declare a few holidays; and the second is to rename a part of a road after the dead man. This, in short, is the road to immortality. If the process is to be patented, I suggest the brand name be "instant immortality". When I asked recently a taxi driver to take me to Gurusaday Road, he didn't know what I was talking about: Chittaranjan Avenue is still better known as Central Avenue; so Chowringhee Road between Dhurramtolla and Park Street may continue to be known by its present name for quite some time although it has been rechristened Jawaharlal Nehru Road. But thinking of Nehru and the Corporation, I looked up the still very readable *Autobiography* and found that Nehru had indeed been connected with the Allahabad Municipality. He writes:

Municipal work in all its varied forms began to interest me, and I gave more and more time to it. Some of its problems fascinated me. I studied the subject and developed ambitious notions of municipal reform. I was to find out later that there is little room for ambition or startling development in Indian municipalities as they are constituted today. Still, there was room for work and a cleaning and speeding-up of the machine, and I worked hard enough at it.

I wonder if Mr. Nehru did not feel about the same way after seventeen years of his slogging with the machinery of the Government of India and the Planning Commission. The disillusionment is in part inevitable; there never was an organisation without imperfections. Yet if a contemporary has in print wished the Calcutta Corporation's extinction—a wish widely shared—the main reason may be that the Congress Party never took municipal administration seriously. Experience gathered at that level in the 'twenties might well have been useful when full responsibilities came. Even the Calcutta Corporation might have been less useless if the Congress had not set out to wreck it. Nehru will look after his memory; what we want is a cleaner Chowringhee.

THE DITCHER

Guide for Investors

DISAPPOINTING RESULTS FROM DUNCAN TEA GROUP

THE result of the Duncan group of tea Companies for the year ended December 1963, have been published. Killcott Tea Co. Ltd (a Dooars garden) has earned a trading profit of Rs. 2.58 lakhs, against Rs. 6.19 lakhs for 1962, after providing Rs. 1.60 lakhs, against Rs. 1.63 lakhs for depreciation. The taxable ordinary dividend has been reduced from 15 percent to 10 percent to give a yield of 6.6 percent at the present price of Rs. 15.25 a share of Rs. 10 each. Taxation absorbs Rs. 1.37 lakhs (against Rs. 2.80 lakhs), revenue reserve Rs. 25,000 (against Rs. 3.10 lakhs), development rebate reserve Rs. 10,500 (against Rs. 4,500) and investment reserve Rs. 25,000 (against Rs. 5,000). The carry-forward is Rs. 3,728, against Rs. 32,899 brought in. The crop dropped from 824,799 kilograms to 789,297 kilograms, and the average sale price fell from Rs. 4.59 a kilogram to Rs. 4.47 a kilogram. The crop for 1964 has been estimated at 800,000 kilograms at a cost of Rs. 33.30 lakhs. The start of the new season has been satisfactory, although about 33,869 kilograms of tea had to be sold from Killcott division as green leaf because of the fact that the extensive factory alteration has not been completed on schedule.

The directors of Teliapara Tea Co. Ltd have not proposed any dividend in spite of the good profit since no funds have been remitted to India from Pakistan. The dividends proposed from 1960 to 1962 could not be declared due to the absence of remittances from Pakistan. The total sum of Rs. 4.95 lakhs set aside for paying these dividends, is now realised and has been transferred to contingency reserve account. The sum of Rs. 7.95 lakhs originally provided for taxation will no longer be necessary, so it has been transferred to contingencies reserve account. The trading profit has dropped from Rs. 12.34 lakhs for 1963 to Rs. 6.22 lakhs for 1962, after providing Rs. 1.08 lakhs (against Rs. 93,231) for depreciation. Taxation is allocated Rs. 3.87 lakhs (against Rs. 15.25 lakhs), revenue reserve Rs. 3 lakhs, development rebate reserve Rs. 19,500 (against Rs. 33,500) and contingencies reserve Rs. 12.90 lakhs. The carry-forward is Rs. 10,230, against Rs. 29,229 brought in. A sum of Rs. 7.95 lakhs has been transferred from excess tax provision and Rs. 4.95 lakhs from provision for dividends. The crop amounted to 375,942 kilograms, against 364,737 kilograms, and the average sale price dropped from Rs. 8.08 a kilogram to Rs. 6.80 a kilogram. The crop for 1964 has been estimated at 417,000 kilograms at an outlay of Rs. 24 lakhs.

Nagaisuree Tea Co. Ltd has incurred a loss of Rs. 20,130 for 1963, against a profit of Rs. 3.32 lakhs for 1962, after transferring Rs. 1.02 lakhs (against Rs. 75,289) to depreciation. A sum of Rs. 65,000 has been transferred from investment reserve. The taxable ordinary dividend has been cut from 15 percent to 5 percent. The yield amounts to 3 percent at the present price of Rs. 165 a share of Rs. 100 each. Development rebate reserve is allocated Rs. 7,500 (against Rs. 23,000) and capital reserve Rs. 5,000, leaving a carry-forward of Rs. 6,927 against Rs. 14,856 brought in. The crop fell from 507,732 kilograms to 467,868 kilograms and the average sale price from Rs. 4.76 a kilogram to Rs. 4.62

a kilogram. The 1964 crop has been estimated at 490,000 kilograms at a cost of Rs. 22.79 lakhs.

New Cinnatollah Tea Co. (an Assam garden) has earned a trading profit of Rs. 2 lakhs, against Rs. 5.91 lakhs, after providing Rs. 63,156 (against Rs. 62,414) for depreciation. The taxable ordinary dividend of 5 percent has been repeated which works out to a yield of 1.1 percent at the present price of Rs. 455 a share of Rs. 100 each. Taxation is allocated Rs. 1.23 lakhs (against Rs. 3.40 lakhs), revenue reserve Rs. 50,000 (against Rs. 2.60 lakhs) and development rebate reserve Rs. 4,500 (against Rs. 12,500). The carry-forward is Rs. 1,148, against Rs. 11,827 brought in. The crop rose from 298,696 kilograms to 323,182 kilograms, but the average sale price fell from Rs. 7.64 a kilogram to Rs. 5.59 a kilogram. The crop for 1964 has been estimated at 310,000 kilograms at a cost of Rs. 17.81 lakhs. The start of the new season has been satisfactory, although the excessive early rainfall might affect the quality of the second flush.

Kotamullai Tea Co. Ltd (estates are situated in Assam, Cachar and Travancore) has earned a profit of Rs. 1.96 lakhs, against Rs. 1.20 lakhs, after providing Rs. 1.04 lakhs (against Rs. 89,934) for depreciation. The dividend has again been passed. Taxation absorbs Rs. 1.40 lakhs (against Rs. 24,000), revenue reserve Rs. 20,000 (against Rs. 120 lakhs) and development reserve Rs. 12,500 (the same). The carry-forward is Rs. 4,715, against Rs. 1,628 brought in. The crop improved from 488,346 kilograms to 586,302 kilograms, but the average sale price dropped from Rs. 4.97 to Rs. 4.63 a kilogram. The crop for 1964 has been estimated at 560,000 kilograms at a cost of Rs. 27.37 lakhs. The new season has begun satisfactorily in Assam, but not in Kotamullai which has experienced a severe drought.

Ledo Tea Co. Ltd (an Assam garden) has made a profit of Rs. 14,836, against Rs. 14,202, after transferring Rs. 1.06 lakhs (against Rs. 77,532) to depreciation. The dividend has been passed. Revenue reserve is allocated Rs. 45,000 (against Rs. 1 lakh) and development rebate reserve Rs. 3,000, leaving a carry-forward of Rs. 2,866, against Rs. 8,744 brought in. A sum of Rs. 13,000 has been transferred from development rebate reserve. The crop amounted to 300,000 kilograms, against 281,500 kilograms. The average sale price fell from Rs. 5.30 to Rs. 5.06 a kilogram. The 1964 crop has been estimated at 300,000 kilograms at an outlay of Rs. 17.46 lakhs. The new season has started well due to early rainfall.

Duncan Brothers Earns Less

THE profit of Duncan Brothers and Co. Ltd has declined to Rs. 10.03 lakhs for 1963 from Rs. 10.84 lakhs for 1962, after providing Rs. 1.58 lakhs (against Rs. 1.35 lakhs) for depreciation, Rs. 26.15 lakhs (against Rs. 10.75 lakhs) for taxation, out of which surtax on profits absorbs Rs. 5.52 lakhs. The super profits tax absorbed Rs. 4.15 lakhs for 1962. The taxable ordinary dividend has been reduced from 14 percent to 12 percent, but the ordinary share capital

has, meanwhile, been raised by issuing rights shares in the proportion of one new share for every five held. The yield amounts to 8.8 percent at the present price of Rs. 137 a share of Rs. 100 each. Capital redemption reserve is allocated Rs. 1.50 lakhs and development rebate reserve Rs. 24,000. The carry-forward is Rs. 22,124, against Rs. 2.42 lakhs brought in.

The satisfactory working of the jute mills contributed to the group profits substantially. But the directors say that the impact of the surtax on profits and the dividend tax was heavy. Results of the tea companies under the management of Duncan Brothers have suffered due mainly to sharp rises in production costs. The directors have taken steps to improve the productivity and the quality of teas by adopting modern techniques. The Company's tea warehouses enjoyed a successful year. As for wool-combing by Isaac Holdens, the directors hope that the full licensed capacity will be reached by 1965, due to the arrival of the foreign equipment. The dye plant has suffered due to the shortage of dye-stuffs. The capacity of this department will improve, if more dyestuffs are produced in India. The working of Phillips Carbon Black suffered for 1963, due to the shortage of power and the high excise duty on imported oils. There are good prospects for increasing the production of the factory during the current year and better results are expected. Negotiations with the Government are proceeding to install a further capacity for 10 million lbs. Schrader-Seovill has begun to manufacture valves. It is hoped to make 100 percent of the product in the factory when further equipment is imported from abroad and installed in the factory. It is expected that National-Standard Duncan will begin to produce head-wire in the near future as the factory will undertake trial runs soon. An application has been made to the Government for diversifying the products of this factory. The Cochin refinery is likely to be ready for production by the end of 1965.

Bridge and Roof Pays the Same

BRIDGE and Roof Co. (India) Ltd has repeated the taxable ordinary dividend of 30 percent for the year ended December 1963. The yield works out to 5.7 percent at the present price of Rs. 52.25 a share of Rs. 10 each. The profit has amounted to Rs. 23.91 lakhs, against Rs. 21.52 lakhs for 1962, after transferring Rs. 12.48 lakhs (against Rs. 9.40 lakhs) to depreciation and Rs. 12.12 lakhs (against Rs. 9.60 lakhs) to taxation. General reserve absorbs Rs. 4.91 lakhs (against Rs. 6.20 lakhs) and development rebate reserve Rs. 3.28 lakhs (against Rs. 3.94 lakhs). Turnover rose from Rs. 3.86 crores to Rs. 4.37 crores.

Balmer Lawrie Cuts Dividend

THE results of Balmer Lawrie and Co. Ltd for the year ended December 1963 were adversely affected by the difficult trading conditions, particularly for tea. But the reduction in the profit was partly offset by the improvement in trading profits

from other sources. In view of the liability to tax under the surtax on profits and the dividend tax, the directors have decided to cut the taxable ordinary dividend from 25 percent to 22½ percent, including an interim of 7 percent. The yield amounts to 8.9 percent at the present price of Rs. 254 a share of Rs. 100 each. The profit has dropped from Rs. 29.41 lakhs for 1962 to Rs. 24.86 lakhs for 1963, after transferring Rs. 3.46 lakhs (against Rs. 3.03 lakhs) to depreciation and Rs. 22.90 lakhs (against Rs. 22.22 lakhs) to taxation. Development rebate reserve is allocated Rs. 56,953 (against Rs. 78,579) and general reserve Rs. 6.28 lakhs (against Rs. 14.12 lakhs).

British India Electric Earns More

BRITISH India Electric Construction Co. Ltd has repeated the taxable ordinary dividend of 15 percent for the year ended December 1963 on the increased share capital. The yield amounts to 5.2 percent at the present price of 29.12 a share of Rs. 10 each. The profit has risen from Rs. 14.08 lakhs for 1962 to Rs. 22.04 lakhs for 1963, after transferring Rs. 3.31 lakhs (against Rs. 2.46 lakhs) to depreciation. Taxation absorbs Rs. 1.250 lakhs (against Rs. 9.23 lakhs), development rebate reserve Rs. 1.10 lakhs (against Rs. 95,225) and general reserve Rs. 4.69 lakhs (against Rs. 2.60 lakhs). Sales rose from Rs. 1.17 crores to Rs. 1.58 crores. Sales of switch-gears and electric motors improved.

Octavius Steel Tea Group Results

THE results of the Octavius Steel group of tea Companies for the year ended December 1963, have been published. The Chundeecherra Tea Co. Ltd (a Sylhet garden) has earned a profit of Rs. 6.06 lakhs, against Rs. 7.17 lakhs for 1962, after providing Rs. 1.03 lakhs (against Rs. 78,036) for depreciation. The directors say that the Company has not been able to transfer profits from Pakistan, so it has not been possible to pay dividends due to the shortage of funds in India. Taxation absorbs Rs. 3.32 lakhs (against Rs. 3.92 lakhs), development rebate reserve Rs. 13,506 (against Rs. 13,434) and general reserve Rs. 2.50 lakhs (against Rs. 3 lakhs). The carry-forward is Rs. 6,017, against Rs. 2,216 brought in. The crop amounted to 232,138 kilograms, against 214,907 kilograms and the average sale price fell from Rs. 7.92 a kilogram to Rs. 7.61 a kilogram. The crop for 1964 has been estimated at 254,012 kilograms at a cost of Rs. 11.93 lakhs.

The Grob Tea Co. Ltd (an Assam garden) has halved the taxable ordinary dividend from 6 percent to 3 percent. The yield amounts to 2.5 percent at the present price of Rs. 5.94 a share of Rs. 5 each. The profit has dropped from Rs. 3.91 lakhs to Rs. 45,819, after transferring Rs. 3.33 lakhs (against Rs. 3.27 lakhs) to depreciation. Taxation is allocated Rs. 11,000 (against Rs. 2.10 lakhs) and development rebate reserve Rs. 10,943 (against Rs. 3,574). A sum of Rs. 75,000 has been transferred from hail insurance reserve. The carry-forward is Rs. 21,017, against Rs. 12,112 brought in. The crop amounted to 1 million kilograms and the average sale price dropped from Rs. 6.17 to Rs. 6.09 a kilogram. The 1964 crop has been estimated at 1.08 million kilograms at a cost of Rs. 64.30 lakhs.

The profit of the Oodfabari Co. Ltd (a Dooars garden) has amounted

economy has many aspects

A random exercise in Scissors may bring enormous cuts. Laws of economy are not as simple as any indiscriminate cutting down of prices. A low price is quite tempting, but not necessarily rewarding in the long run. Especially, when it's a question of transporting goods, considerations of safety, quick movement, delivery at exact place etc. have to be given priorities. Economy includes all these aspects.

JWTA VB 6223 AR1

to Rs. 83,393, against a loss of Rs. 4,124, after providing Rs. 1.05 lakhs (against Rs. 79,751) for depreciation, Rs. 44,000 (against Rs. 16,656) for development rebate reserve and Rs. 500 for taxation. A taxable ordinary dividend of 7½ percent has been declared, which absorbs Rs. 48,000. The yield works out to 5.5 percent at the present price of Rs. 13.75 a share of Rs. 10 each. A sum of Rs. 15,382 has been provided to cover short provision for taxation relating to earlier years. A sum of Rs. 80,000 has been transferred from general reserve. The carry-forward is Rs. 249. The crop rose from 326,073 kilograms to 349,153 kilograms, and the average sale price from Rs. 3.55 to Rs. 4.42 a kilogram. An extension of 8.07 hectares was planted. The crop for 1964 has been estimated at 351,500 kilograms at a cost of Rs. 14.34 lakhs.

Record Output from Bengal Paper

COMMENTING on the satisfactory results achieved by the Bengal Paper Mill Co. Ltd for the year ended December 1963, the directors refer to the record output of 22,567 tonnes. The new paper machine also contributed to the increased output. Production costs have risen due to the higher prices of raw materials, chemicals and stores. The supply of chemicals at reasonable prices has been inadequate. It is hoped that the Government will soon increase the price of paper to compensate the producers for the increase in production costs. The expansion scheme of the Company has been completed and the factory has reached an output capacity for 100 tonnes of paper a day. The Company has been granted an industrial licence to increase its paper production by a further 21,000 tonnes a year. The total ordinary share capital has been increased to Rs. 73.07 lakhs by the issue of new shares, combined with the conversion of convertible loan stock into ordinary shares.

The profit has amounted to Rs. 3.52 lakhs, against Rs. 15.18 lakhs for 1962, after providing Rs. 29.83 lakhs (against Rs. 12.85 lakhs) for depreciation, Rs. 31.40 lakhs (against Rs. 1.26 lakhs) for development rebate reserve. A sum of Rs. 11.35 lakhs has been transferred from general reserve. Capital reserve is allocated Rs. 10,000 (the same). The taxable ordinary dividend of 20 percent has been repeated which works out to a yield of 7.3 percent at the present price of Rs. 27.37 a share. The payment of the dividend is subject to the approval of the Industrial Finance Corporation.

New Dooars Tea Incurs Loss

THE New Dooars Tea Co. Ltd has incurred a loss of Rs. 73,566 for the year ended December 1963, against a profit of Rs. 2.31 lakhs for 1962, after transferring Rs. 4,278 (against Rs. 8,115) to depreciation. The ordinary dividend has been passed, but the usual preference dividends have been paid. Sums of Rs. 15,000 have been transferred from excess tax provision and Rs. 70,000 from general reserve. The carry-forward is Rs. 2,723, against Rs. 6,049 brought in. The disappointing results have been due to the severe hail damage, rising production costs and less favourable market conditions. The crop declined by 507 quintals to 5,902 quintals and the average sale price fell from Rs. 5.10 to Rs. 5.01 a kilogram. The crop for 1964 estimated at 6,750 quintals is expected to be reached considering the prun-

ing programme which is being carried out. Capital expenditure amounted to Rs. 4.83 lakhs.

Kettlewell Bullen Tea Group Results

IN their report for the year ended December 1963, the directors of the Kettlewell Bullen group of tea Companies say that the smaller crop of the Joonktollie Tea Co. Ltd (an Assam garden) has to be attributed to drought. It amounted to 493,352 kilograms, against 521,184 kilograms. The average sale price dropped from Rs. 5.49 to Rs. 5.42 a kilogram. So the profit has declined from Rs. 6.03 lakhs for 1962 to Rs. 3.91 lakhs for 1963, after transferring Rs. 1.11 lakhs (against Rs. 1.22 lakhs) to depreciation. The taxable ordinary dividend of 15 percent has been repeated. The yield amounts to 10.7 percent at the present price of Rs. 140 a share of Rs. 100 each. General reserve is allocated Rs. 1 lakh (the same), development rebate reserve Rs. 470 (against Rs. 8,727) and taxation reserve Rs. 2.05 lakhs (against Rs. 3.10 lakhs). The carry-forward is Rs. 16,491, against Rs. 81,941 brought in.

The Mothola Co. Ltd (an Assam garden) has made a profit of Rs. 1.27 lakhs, against Rs. 1.23 lakhs, after providing Rs. 44 (against Rs. 55) for depreciation. The taxable ordinary dividend of 35 percent has been repeated which works out to a yield of 6.9 percent at the present price of Rs. 507 a share of Rs. 100 each. General reserve absorbs Rs. 1.25 lakhs (against nil) and taxation reserve Rs. 65,000 (the same). The carry-forward is Rs. 21,812, against Rs. 45,423 brought in. The crop rose from 122,745 kilograms to 179,058 kilograms. A further 28 acres of land have been brought under plantation. Arrangements are being made to plant further acreage during the next cold weather.

Banarhat, Choonabhutti Tea Pay Less

THE results of the Banarhat Tea Co. Ltd and the Choonabhutti Tea Co. Ltd (Dooars gardens) in the management of Andrew Yule and Co. Ltd for the year ended December 1963, have been published. Banarhat has earned a profit of Rs. 8.20 lakhs, against Rs. 11.19 lakhs for 1962, after transferring Rs. 4.39 lakhs (against Rs. 3.74 lakhs) to depreciation. The taxable ordinary dividend has been reduced from 21 percent to 17 percent which works out to a yield of 7.4 percent at the present price of Rs. 230 a share of Rs. 100 each. Taxation absorbs Rs. 2.60 lakhs (against Rs. 4.95 lakhs), development rebate reserve Rs. 30,000 (against Rs. 5,000), general reserve Rs. 50,000 (the same) and capital reserve Rs. 1,200. Supplementary dividends for 1959, 1960 and 1961 on 4,000 preference shares at the rate of 0.07 percent have also been paid. The carry-forward is Rs. 28,826, against Rs. 41,581 brought in.

The crop dropped by 745 quintals to 14,099 quintals, but the average sale price rose from Rs. 4.86 to Rs. 5.15 a kilogram. The crop for 1964 has been estimated at 15,150 quintals. Capital expenditure amounted to Rs. 12.54 lakhs. The Banarhat division has switched on to C.T.C. manufacture from the beginning of the current season. The modernisation of the two factories has been completed, but expenditure on machinery and plant is likely to be at a considerably reduced level for some time to come. The Company will have to incur considerable expenditure on the statutory cons-

truction of houses for the labour force.

Choonabhutti Tea has cut the taxable ordinary dividend from 20 percent to 7.5 percent. The yield amounts to 3.6 percent at the present price of Rs. 211 a share of Rs. 100 each. The profit has dropped from Rs. 2.82 lakhs to Rs. 84,373, after providing Rs. 1.68 lakhs (against Rs. 1.56 lakhs) for depreciation. Taxation is allocated Rs. 8,000 (against Rs. 1.26 lakhs), development rebate reserve Rs. 1,400 (against Rs. 6,000) and capital reserve Rs. 1,308. The carry-forward is Rs. 42,753, against Rs. 43,000 brought in. A sum of Rs. 7,000 has been written back from excess tax provision. The crop fell by 1,207 quintals to 4,007 quintals due to a severe hail damage. The average sale price improved by 38p to Rs. 5.07 a kilogram. Capital expenditure amounted to Rs. 2.41 lakhs. The crop for 1964 has been estimated at 5,250 quintals.

Colour-Chem Increases Dividend

COLOUR-CHEM Ltd has stepped up the dividend for the year ended March 1964, from 12 percent to 16 percent, and the preliminary figures released along with the announcement of the dividend showed that the Company had done exceedingly well during the year. The directors' full report says that production was quite satisfactory during the year, and the demand for the Company's products was good. Sales recorded an impressive rise of 50 percent from Rs. 2.75 crores to Rs. 4.11 crores, and the gross profit rose by 40 percent from Rs. 1.28 crores to Rs. 1.79 crores. Production and sales since the close of the financial year are stated to have been satisfactory, but the directors have hinted that the Company's profit margin is likely to be squeezed by the enhanced excise duty burden.

The Central excise duty on pigment emulsions has been increased and duty at 24 percent *ad valorem* has been imposed on binder materials. The total duty payable on all the Company's products during 1964-65 is estimated around Rs. 50 lakhs, compared with Rs. 1.18 lakhs paid in 1963-64. This burden is, however, being shared with the Company's customers. The phthalocyanine blue project has not been commissioned since indigenous components of the sulphuric acid reconcentration plant have not been received. Efforts are being made to expedite their delivery and start the manufacture of phthalocyanine blue as early as possible. Further, plans to start the manufacture of new products are being finalised with the Company's foreign collaborators.

Larsen and Toubro Rights Offer

LARSEN and Toubro Ltd has received the sanction of the Controller of Capital Issues to issue 660,000 equity shares of Rs. 10 each at a premium of Rs. 2 a share. These shares will be offered to the existing shareholders in the ratio of two new shares for every five held. The issue will be made some time in September or October. Additional funds are being raised in order to finance the Company's expansion programme which is already in progress. The Company has yet to release its working results for the year ended March, 1964, but according to well-informed sources, the Company has fared much better than in 1962-63. Its sales are reported to be up by about 40 percent over the previous year. The Rs. 10-paid share of Larsen and

Toubro is currently quoted around Rs. 22.20.

Outlook for Ceat Tyres

IN spite of an increase of about 42 percent in the sales from Rs. 4.34 crores to Rs. 6.18 crores, Ceat Tyres' gross profit in 1963 increased by only 5 percent from Rs. 30.44 lakhs to Rs. 32.09 lakhs. The Company's performance in the current year is unlikely to be any better. The chairman, Mr. P. A. Narielwala, made it very clear to the shareholders at the Company's annual meeting that there was no chance of a maiden dividend for 1964, and he was unable to say how long the shareholders might have to wait for their investment to bear fruit. Mr. Narielwala explained that there was a slump in the motor-vehicles tyres market; the demand for tyres had gone down substantially because of the reduction in the number of lorries made available for civilian use. While it was becoming increasingly difficult to effect sales, the cost of raw materials, both indigenous and imported, has gone up considerably. The increase in the prices of tyres effected by the Company some time ago had been fully absorbed by the increase in the cost of raw materials.

The chairman, however, assured the shareholders that the management was doing its utmost to operate the plant efficiently and economically. Comparing the results of some of the new tyre companies with Ceat's, Mr. Narielwala said that while some of them had incurred losses, Ceat was able to keep its head above water and provide full depreciation and development rebate. He said that the Company would be able to do better if the tyre market improved. The Company's present output is around 700 tons a month, and it is hoped that the rated capacity of 1,000 tons will be reached by the end of this year. The chairman told the shareholders that the Company had represented to the Government for allowing the benefit of the excise duty concession of 5 percent on the first clearance of Rs. 1 crore worth of turnover granted to those companies which started production after 1st April, 1962.

Ceat Tyres is not entitled to this benefit at present as the Company went into production before this time. The benefit from this concession, if allowed, is estimated around Rs. 5 lakhs. The chairman stated that there was no prospect of exporting tyres at a profit. However, in view of the benefit of import entitlements, the Company was trying to establish export market for its products. The Rs. 100-paid share of Ceat Tyres which had been marked down from Rs. 115 to Rs. 96 after the release of the Company's working results for 1963 declined further to Rs. 86, after the chairman's encouraging assessment of future prospects at the annual meeting on 16th June.

General Industrial Society Expanding

COMMENTING on the working of the jute mills in their report for the year ended December 1963, the directors of the General Industrial Society Ltd say that the Company has increased the production of jute goods since the abolition of the working time agreement. Trading conditions for the current year are not considered bright since the prices of manufactured goods have dropped while those of raw jute have been maintained at a steady level due to the price support scheme of the Government. Production costs have,

meanwhile, risen considerably due to the enhanced charges for power, fuel, shipping, stores and wages. The Company has installed 63 broad looms and proposes to install a further 27 of these. Meantime, the prices of carpet-backing cloth have declined due to the increased supply. So the directors will have to take a decision on further expansion in the light of conditions which prevail from time to time. The cast-iron foundry has worked satisfactorily and the output has risen. The supply of principal raw materials, however, continues to be short. The Company has completed the modernisation and expansion of the cotton mill. The latter has worked satisfactorily and is likely to do better in the future. The Company has been granted a licence to install a further 7,000 spindles and 100 looms. The new spindles will be installed during 1964. It is proposed to manufacture 12,000 tons of aluminium foils a year in a unit which is to be built near the factory of the Hindustan Aluminium Corporation Ltd. The directors are trying to obtain the necessary foreign exchange to implement the project. Although the Company has received the official sanction for issuing further ordinary shares, the directors do not think that they will issue these shares for the time being. Arrangements have been made to get the issue of 12,500

cumulative redeemable preference shares underwritten.

The profit has risen from Rs. 19.56 lakhs for 1962 to Rs. 21.05 lakhs for 1963, after providing Rs. 20.80 lakhs (against Rs. 9.86 lakhs) for depreciation. The taxable ordinary dividend has been increased from 13 percent to 14 percent which works out to a yield of 10 percent at the present price of Rs. 14 a share of Rs. 10 each. Taxation absorbs Rs. 6.50 lakhs (against Rs. 10 lakhs), general reserve Rs. 1.60 lakhs (against Rs. 2.30 lakhs) and development rebate reserve Rs. 6.97 lakhs (against Rs. 3.35 lakhs). The carry-forward is Rs. 9,681, against Rs. 16,522 brought in.

Sone Valley Portland Cement Repeats

THE Sone Valley Portland Cement Co. Ltd has repeated the taxable ordinary dividend of 8 percent for the year ended December 1963 which works out to a yield of 9.2 percent at the present price of Rs. 4.34 a share of Rs. 5 each. The profit has dropped from Rs. 16.83 lakhs for 1962 to Rs. 12.18 lakhs for 1963, after providing Rs. 4.71 lakhs (against Rs. 4.50 lakhs) for depreciation. Development rebate reserve is allocated Rs. 64,100 (against Rs. 6,500) and

taxation reserve Rs. 5.55 lakhs (against Rs. 8.80 lakhs). The carry-forward is Rs. 6,195, against Rs. 7,167 brought in.

The cement output amounted to 229,220 tonnes, against 234,640 tonnes. The directors say that the price of cement fixed by the Government does not compensate the producers for rising production costs due to the increased prices of coal, railway freight and labour. The royalty on limestone has also been raised. The packing charges fixed by the Government have involved the producers in losses because the prices of second-hand bags assumed by the Government are much lower than their market values. In view of the low profitability of the cement industry, the Government should carefully consider how to implement the recommendations of the Bonus Commission in relation to the cement industry. Unless concrete incentives are given to producers, the shortfall in cement production will be difficult to remove.

Straw Products Results Impress

STRAW Products Ltd has produced satisfactory results for the year ended December 1963 which is the

CAPITAL, 25th June, 1964.

Company's silver jubilee year. The production capacity rose from 3,600 tonnes in 1939 to 30,000 tonnes in 1963. J. K. Paper Mills in Orissa has begun production and the output has been satisfactory. Production amounted to 15,737 tonnes of paper and sales for 1963 exceeded Rs. 3 crores. The forests leased to the Company by the Government of Orissa are being developed scientifically. The Bhopal factory has done well and produced 12,022 tonnes of straw boards. Sales amounted to Rs. 1.53 crores. The directors say that the factory has suffered due to the competition from smaller units producing less than 5,000 tonnes a year since the latter enjoys tax concessions. The present prices of paper are uneconomic since they do not cover the rising production costs. The new paper mills, in particular, have suffered in view of their high capital investments in comparison with those of the older mills. Capital investments of a new factory amount to Rs. 3,500 a tonne while the Tariff Commission has fixed the fair selling prices on the basis of capital investment ranging from Rs. 1,100 to Rs. 1,300 a tonne. The new factories will continue to suffer unless the paper prices are increased to a more realistic level.

The gross profit has amounted to Rs. 61.70 lakhs for 1963, against Rs. 10.97 lakhs for 1962. Depreciation absorbs Rs. 42.45 lakhs (against Rs. 6.15 lakhs) and general reserve Rs. 13 lakhs (against Rs. 11 lakhs). The preference dividends up to 1960 have been provided for. The ordinary dividend has been passed. Development rebate for Rs. 1.06 crores has still to be provided for. The carry-forward is Rs. 18,014, against Rs. 43,574 brought in.

Thakurdass Surekha Iron Foundry Does Well

THAKURDASS Surekha Iron Foundry Ltd has produced satisfactory results for the year ended December 1963. Sales rose from Rs. 2.68 crores to Rs. 4.04 crores. The profit has risen from Rs. 7.01 lakhs for 1962 to Rs. 15.74 lakhs for 1963, after transferring Rs. 1.63 lakhs (against Rs. 1.42 lakhs) to depreciation and Rs. 23,000 (against Rs. 8,100) to development rebate reserve. A taxable ordinary dividend of 12 percent has been declared to absorb Rs. 2.68 lakhs. Taxation is allocated Rs. 9.50 lakhs (against Rs. 3.70 lakhs), and general reserve Rs. 3.50 lakhs (against Rs. 1.25 lakhs). The carry-forward is Rs. 4,186, against Rs. 9,287 brought in.

The Company obtained orders for 31,500 tons of cast-iron sleeper plates from the Railway Board. The total output rose from 64,000 tons to 81,000 tons, although pig iron continued to be in short supply.

Patrakola Tea Skips Dividend

IN spite of the large profit earned by the Patrakola Tea Co. Ltd for the year ended December 1963, the dividend has been passed due to the non-availability of funds in India. The dividends proposed for 1962 to 1964 amounting to Rs. 57.60 lakh could not be declared since no remittance was received from Pakistan for this purpose. These sums which were set aside for paying the dividends have now been realised and the directors propose that Rs. 57.6 lakhs be transferred to contingency reserve account. A sum of Rs. 38.5 lakhs provided earlier to cover additional tax liability has now been transferred to contingencies reserve

CAPITAL, 25th June, 1964.

account because the tax liability may not arise.

The profit has amounted to Rs. 53.30 lakhs for 1963, against Rs. 77.15 lakhs for 1962, after providing Rs. 3.51 lakhs (against Rs. 2.81 lakhs) for depreciation. Taxation absorbs Rs. 37.50 lakhs (against Rs. 90.15 lakhs), revenue reserve Rs. 20.50 lakhs, development rebate reserve Rs. 61,000 (against Rs. 1.16 lakhs) and contingencies reserve Rs. 95.92 lakhs. Sums of Rs. 57.60 lakhs have been transferred from proposed dividends and Rs. 38.32 lakhs from taxation provision written back. The carry-forward is Rs. 14,001, against Rs. 26,078 brought in. The crop amounted to 1.9 million kilograms, against 1.8 million kilograms, but the average sale price dropped from Rs. 8.16 to Rs. 6.83 a kilogram. The crop for 1964 has been estimated at 1.9 million kilograms at an outlay of Rs. 1 crore. The start of the new season has been satisfactory.

Same from Naga Hills Tea

NAGA Hills Tea Co. Ltd (an Assam garden) has increased its profit from Rs. 1.25 lakhs for 1962 to Rs. 2.19 lakhs for 1963, after providing Rs. 1.10 lakhs (against Rs. 1.02 lakhs) for depreciation. A taxable ordinary dividend of 10 percent has been repeated, which works out to a yield of 4.7 percent at the present price of Rs. 21.25 a share of Rs. 10 each. Taxation is allocated Rs. 1.12 lakhs (against Rs. 9,000), general reserve Rs. 50,000 (the same), capital reserve Rs. 4.44 lakhs (against Rs. 15,201) and development rebate reserve Rs. 520 (against Rs. 27,500). The carry-forward is Rs. 34,082, against Rs. 21,008 brought in. The crop fell from 326,748 kilograms to 304,796 kilograms, but the average sale price rose from Rs. 5.55 a kilogram to Rs. 5.94 a kilogram. The crop for 1964 has been estimated at 340,000 kilograms at a cost of Rs. 4.79 a kilogram. It is proposed to extend the planted area by 60 hectares by 1966.

Kettlewell Bullen Pays More

KETTLEWELL Bullen and Co. Ltd has increased the taxable ordinary dividend from 10 percent to 14 percent for the year ended December 1963. At the present price of Rs. 132 a share of Rs. 100 each, the yield amounts to 10.6 percent. The profit has improved from Rs. 9 lakhs for 1962 to Rs. 11.94 lakhs for 1963, after providing Rs. 33,073 (against Rs. 34,373) for depreciation and Rs. 6.10 lakhs (against Rs. 5.50 lakhs) for taxation. General reserve is allocated Rs. 5.50 lakhs (against Rs. 7 lakhs), leaving a carry-forward of Rs. 6,548, against Rs. 86,447 brought in.

Hooghly Docking Cuts Dividend

THE Hooghly Docking and Engineering Co. Ltd has reduced the taxable ordinary dividend from 12½ percent to 10 percent for the year ended December 1963. But the ordinary share capital has, meanwhile, been raised from Rs. 12.50 lakhs to Rs. 17.50 lakhs by issuing bonus shares through the capitalisation of reserves. The yield amounts to 5.6 percent at the present price of Rs. 89 a share of Rs. 50 each. The profit has amounted to Rs. 3.81 lakhs, against Rs. 3.80 lakhs for 1962, after providing Rs. 94,829 (against Rs. 94,167) for depreciation. Development rebate reserve is allocated Rs. 2,000 (against Rs. 5,000) and general

reserve Rs. 2.07 lakhs (against Rs. 2.99 lakhs). The carry-forward is Rs. 3,237, against Rs. 5,801 brought in. The net value of completed work billed amounted to Rs. 1.55 crores (against Rs. 77.24 lakhs). The directors explain that the drop in the ratio of sales to gross profits is due to the keen competition in the field of construction work, in which the margin of profit is low. Work-in-progress at the end of December 1963, amounted to Rs. 1.04 crores, against Rs. 1.30 crores at the end of December 1962.

Rewa Coal Raises Dividend

THE profit of Rewa Coal Fields Ltd has risen from Rs. 13.36 lakhs for 1962 to Rs. 19.17 lakhs for 1963, after transferring Rs. 4.16 lakhs (against Rs. 2.80 lakhs) to depreciation. The taxable ordinary dividend has been increased from 10 percent to 20 percent, including an interim of 5 percent. The yield works out to 7.8 percent at the present price of Rs. 25.50 a share of Rs. 10 each. Taxation absorbs Rs. 9.31 lakhs (against Rs. 7.01 lakhs) and general reserve Rs. 6½ lakhs (against Rs. 2½ lakhs).

the total surplus comes to Rs. 3,31,601. Out of this, provision for taxation comes to Rs. 1,88,000 (against Rs. 1,75,000). A sum of Rs. 68,150 is transferred to general reserve. The dividend on preference shares at 7.8 percent (gross) amounts to Rs. 9,453. The dividend on equity shares at 12½ percent (against 13 percent) amounts to Rs. 58,775. The balance of Rs. 6,623 is carried forward.

A sum of Rs. 2.13 lakhs (against Rs. 1.81 lakhs) has been transferred to development rebate reserve, leaving a carryforward of Rs. 8,453, against Rs. 11,063 brought in.

Capital expenditure amounted to Rs. 9.18 lakhs (against Rs. 14.88 lakhs). Raisings moved up from 536,226 tonnes to 681,597 tonnes, and despatches from 527,981 tonnes to 644,068 tonnes. The directors say that the demand for middle and low-grade coal fell, but they hope that the situation will improve towards the close of 1964. They also mention that the introduction of box wagons for carrying coal has added to the difficulty of selling coal, because it can only be supplied to consumers who are used to handling these wagons.

Ganesh Flour to Raise Fresh Capital

GANESH Flour Mills Co. Ltd, Delhi, has decided to raise additional capital amounting to Rs. 24.50 lakhs by the issue of equity

Keep Production rolling with Caltex "STOP LOSS" programme

When a machine bearing fails, it's not the cost of replacement that's expensive, it's the lost production. A Caltex "Stop Loss" Programme can virtually eliminate the most common cause of bearing failure—improper lubrication.

HOW "STOP LOSS" WORKS: Caltex Lubrication Engineers help you set up a fool-proof system of lubrication control. From woodyard to shipping platform, they see to it that every piece of equipment gets the right amount of the right lubricant at the right time. The results: maintenance costs down as much as 15%, number of major lubricants required reduced to as few as six, purchasing simplified.

Production is worth a lot of money—keep it rolling with Caltex "Stop Loss" Programme.

THE BANK OF INDIA LTD.
T. D. KANSARA, General Manager

shares and preference shares. Additional funds are required to finance the Company's expansion programme. It proposes to issue 108,000 equity shares of Rs. 12.50 each at par in the ratio of two shares for every 11 already held. In addition, 88,000 9.3 percent cumulative redeemable preference shares of Rs. 12.50 each are being issued at par in the ratio of four new shares for every 27 equity shares held. The new preference shares will be redeemable not earlier than 30th September, 1975, and not later than 30th September, 1980. These will have a preference on dividend as well as capital over the old and new equity capital, but will rank after 1st and 5th preference shares.

Pussimbing Tea Passes Dividend

THE profit of Pussimbing Tea Co. Ltd (a Darjeeling garden) has amounted to Rs. 15,481 for the year ended December 1963, against Rs. 1.04 lakhs for 1962, after providing Rs. 13,200 (against Rs. 700) for depreciation. The taxable ordinary dividend has been passed, but the preference dividends for 1957 and 1958 have been paid. The carry-forward is Rs. 5,216, against Rs. 6,852 brought in. The crop dropped from 116,997 kilograms to 95,502 kilograms and the average sale price from Rs. 5.95 to Rs. 5.81 a kilogram. The crop for 1964 has been estimated at 126,000 kilograms. The crop up-to-date has amounted to 35,302 kilograms, against

25,572 kilograms for the corresponding period of 1962.

Good Results from United Electrical

THE 1 percent increase in the dividend of United Electrical Industries, Quilon, from 7 percent to 8 percent, for 1963, provides little indication of the Company's impressive performance during the year. And the expansion programme that the Company has on hand holds out the promise of still better results in future. During 1963, the Company sold 110,000 meters against 76,000 meters in the previous year. Sales realisation rose by about 46 percent from Rs. 35.70 lakhs to Rs. 51.73 lakhs, and the gross profit shot up by as much as 132 percent from Rs. 5.14 lakhs to Rs. 11.96 lakhs. The provision for taxes amounts to Rs. 7.15 lakhs, against Rs. 3.32 lakhs. Allocation to general reserve has been raised from Rs. 1 lakh to Rs. 4 lakhs. The proposed ordinary and preference dividends absorb Rs. 1.51 lakhs (against Rs. 92,000). After making these appropriations, there remains a balance of Rs. 35,000 to be carried forward, against Rs. 1.04 lakhs brought in.

The directors state that there was a considerable increase in the production of single-phase meters during 1963 and that it will show a further increase in the current year. Full expansion contemplated in the production of these meters, is likely to

be achieved by the end of this year. The Company has decided to take up the manufacture of motor starters in collaboration with Mysore Electrical Industries. The scheme involving a capital outlay of Rs. 6 lakhs has already been taken up for implementation. The plant, it is expected, will be commissioned in the course of next few months. The Company also proposes to undertake the manufacture of some other equipments, in collaboration with foreign concerns. Negotiations have already been completed with certain firms on the Continent and the Company will soon be approaching the Government of India for the approval of the collaboration agreements.

More from Indore Malwa

THE Indore Malwa United Mills made a good showing in 1963. Despite a slight setback in its sales from Rs. 3.96 crores to Rs. 3.82 crores, the gross profit increased impressively from Rs. 15.75 lakhs to Rs. 23.94 lakhs. The dividend has been raised from Rs. 7.50 to Rs. 8 a share (Rs. 100-paid). From what the chairman, Mr. Kudilal Govindram Seksaria, stated at the Company's annual meeting, the improvement noticed in 1963 is unlikely to be carried much further during the current year. The chairman says that 1964 would be a year of stress and strain. Costs, particularly of cotton, are rising at an alarming rate. He, however, hoped that with the completion of

the present modernisation and renovation programme, the competitive capacity of the Company would improve and the shareholders could expect the results for the current year to be as good or slightly better than in 1963.

The Company's working during the first five months of the current year has been normal, and it will be producing more processed cloth this year than in 1963. The new machinery purchased last year has been commissioned, and is working satisfactorily. Mr. Seksaria pointed out that the textile industry was in the grip of persistent cost inflation. Production costs are said to have risen by about 15 percent since 1962 whereas cloth prices have been pegged at the 1961 level. He hoped that the Government would suitably revise cloth prices in order to ensure a fair return to the shareholders, and at the same time leave adequate margin for the industry to modernise and rehabilitate itself. Referring to the changes in taxation in the last Budget, Mr. Seksaria said that Indore Malwa would not be required to pay any surtax for 1963. The amount of third shift depreciation allowance is being worked out and the same will be adjusted in the current year's accounts. The chairman informed the shareholders that the Company was receiving bulk orders for mineral khaki from the Defence Department, and its supplies are being approved and accepted.

National Tannery Earns More

THE National Tannery Co. Ltd has increased its profit from Rs. 1.24 lakhs for 1962 to Rs. 1.55 lakhs for the year ended December 1963, after providing Rs. 1.21 lakhs (against Rs. 79,868) for depreciation. A taxable ordinary dividend of 4½ percent has been declared to absorb Rs. 42,750. Capital reserve is allocated Rs. 18,575 (against nil), development rebate reserve Rs. 49,700 (against Rs. 40,000), taxation Rs. 38,400 (against Rs. 38,000) and general reserve Rs. 35,000 (against Rs. 46,000). A sum of Rs. 14,627 has been provided for taxation for earlier years. The carry-forward is Rs. 6,268, against Rs. 35,391 brought in. Sales rose from Rs. 45.25 lakhs to Rs. 64.56 lakhs. A sum of Rs. 3.31 lakhs has been spent on additions to plant and machinery. A further loan of Rs. 8.25 lakhs has been sanctioned to the Company by the West Bengal Financial Corporation to increase its capacity for manufacturing chrome-tanned goat skins.

Engel India Machines

ENGEL India Machines and Tools Ltd has produced its report for the year ended December 1963. Since the factory has not yet started production there has been no earning, and the Company has incurred a loss of Rs. 57,176 during construction. The construction of the factory started in September 1963, and it is expected to be completed by the end of 1964. Out of the loan of Rs. 25 lakhs sanctioned by the Industrial Finance Corporation of India, the Company has already received a sum of Rs. 14 lakhs. The remaining balance, it is expected, will be received in the near future.

Samla Colliery Repeats

SAMLA Colliery Ltd has made a profit of Rs. 11.07 lakhs for the year ended December 1963, against Rs. 9.10 lakhs for 1962, after provid-

ing Rs. 4.22 lakhs (against Rs. 4.14 lakhs) for depreciation. A taxable ordinary dividend of 7.5 percent has been repeated. Development rebate reserve is allocated Rs. 75,000 (against Rs. 1.15 lakhs), general reserve Rs. 2 lakhs (against Rs. 1 lakh) and taxation Rs. 5.50 lakhs (against Rs. 4.45 lakhs). The carry-forward is Rs. 3,953, against Rs. 15,405 brought in. Raisings increased from 373,658 tonnes to 403,010 tonnes, and despatches from 360,534 tonnes to 370,952 tonnes.

Sutna Stone and Lime Cuts Dividend

THE profit of the Sutna Stone and Lime Co. Ltd has dropped from Rs. 15.23 lakhs for 1962 to Rs. 8.80 lakhs for 1963, after transferring Rs. 2.45 lakhs (against Rs. 2.17 lakhs) to depreciation. The taxable ordinary dividend has been decreased from 35 percent to 20 percent to give a yield of 7.1 percent at the present price of Rs. 28.31 a share of Rs. 10 each. Taxation absorbs Rs. 5.40 lakhs, including Rs. 82,000 for surtax on profits, against Rs. 9.80 lakhs, development rebate reserve Rs. 46,000 (against Rs. 85,000) and general reserve Rs. 2.13 lakhs (against nil). The carry-forward is Rs. 5,375, against Rs. 21,096 brought in. The directors hope to improve the results for the current year by taking suitable measures for promoting sales.

New Asiatic Insurance Does Better

THE New Asiatic Insurance Co. Ltd has made a profit of Rs. 61,917 for the year ended December 1963, after providing Rs. 6,436 for foreign taxation, Rs. 1,082 for expenses of management, Rs. 67,687 for loss on sale of shares, debentures and redemption of securities. A sum of Rs. 1.44 lakhs has been provided to cover losses from fire insurance and miscellaneous insurance accounts. The directors have mentioned in their report that the Controller of Insurance has not given the Company permission to start business other than insurance. The Company has in the meantime been carrying on only investment business. The surplus of Rs. 1.20 lakhs for 1963 has been adjusted, against the previous loss, and they hope that the outstanding losses will be written off completely during the current year. The Company has been advised to file an application in the court to get the refund of deposit with the Reserve Bank of India which has been kept under the Insurance Act. It is expected that after the release of the deposit, it will be easier to obtain sanction for undertaking other business or industrial activity.

Hyderabad Asbestos Results Impress

HYDERABAD Asbestos Cement Products Ltd reports excellent results for 1963. Sales have gone up by about 63 percent from Rs. 2 crores to Rs. 3.27 crores, and the gross profit has shot up by nearly 73 percent from Rs. 42.41 lakhs to Rs. 73.57 lakhs. Dividend has been stepped up from Re. 1 to Rs. 1.50 a share (40 percent to 60 percent), but the total distribution amounts to no more than Rs. 1.77 lakhs (against Rs. 1.18 lakhs). Appropriations include depreciation Rs. 10.91 lakhs (against Rs. 5.55 lakhs), development rebate reserve Rs. 4.87 lakhs (against Rs. 3.32 lakhs), taxation Rs. 34 lakhs (against Rs. 12 lakhs), general reserve Rs. 12 lakhs (against Rs. 5 lakhs) and contingencies Rs. 5 lakhs (against nil). After

providing for the proposed dividend and making some minor adjustments, there remains a balance of Rs. 1.07 lakhs to be carried forward, against Rs. 60,147 brought in. The directors state that the Company has been permitted to expand its existing factory and to establish another production centre in Ballabgarh in the Punjab. The new factory in Ballabgarh is expected to go into production this year. The Rs. 2.50 paid share of the Company is currently quoted around Rs. 22, offering a gross return of a little over 7 percent.

Edward Textiles Fares Well

EDWARD Textiles reports fairly encouraging results for 1963. Although the sales have registered only a small increase from Rs. 2.37 crores to Rs. 2.60 crores, the gross profit has gone up from Rs. 5.35 lakhs to Rs. 8.54 lakhs. The directors have provided Rs. 14.55 lakhs (against Rs. 9.10 lakhs) for depreciation, Rs. 1.41 lakhs (against Rs. 5.84 lakhs) for development rebate reserve and Rs. 9.32 lakhs (against nil) for bonus for previous years. Writing back Rs. 3.30 lakhs, being excess provision for statutory development rebate reserve for the previous year, the accounts show an overall loss of Rs. 13.44 lakhs. This, together with the deficit of Rs. 9.39 lakhs brought forward from the previous year, making an aggregate loss of Rs. 22.83 lakhs, is being carried forward.

The dividend has been maintained at 6 percent and this is being paid out of the general reserve as in the preceding year. Orders for machinery to the extent of Rs. 7.65 lakhs remained unexecuted at the end of the year and further orders for machinery worth Rs. 2.75 lakhs have been placed since then. The Company has deferred for the time being the issue of 5,000 9.3 percent cumulative preference shares of Rs. 200 each, which had been approved by the shareholders at the Company's last annual meeting. The issue has been deferred because of the depressed conditions in the capital market.

Binod Mills Pays the Same

THE Binod Mills Ltd has done well during 1963, in that both sales and gross profit are higher, although

the increase in profit is too small in relation to the rise in sales. Sales have gone up by about 17 percent from Rs. 3.88 crores to Rs. 4.54 crores, whereas the gross profit has recorded only a modest improvement from Rs. 14.75 lakhs to Rs. 15.06 lakhs. The dividend has been maintained at 7 percent. After providing Rs. 12.40 lakhs (against Rs. 10.40 lakhs) for depreciation, the pre-tax profit amounts to Rs. 2.66 lakhs, against Rs. 4.35 lakhs. After taking credit of Rs. 3.77 lakhs for items relating to previous years, the directors have provided Rs. 1.20 lakhs (against Rs. 5.65 lakhs) for development rebate reserve.

The proposed equity dividend absorbs Rs. 4.20 lakhs (the same) and preference dividend accounts for Rs. 1.20 lakhs (against Rs. 7,112). No provision has been made for taxation as in the previous year. After making various appropriations, there remains a balance of Rs. 7,597 to be carried forward, against Rs. 23,604 brought in. The Company has received a loan of Rs. 98.33 lakhs from the Industrial Finance Corporation for financing its Bimal Mills project. It has also raised Rs. 58.93 lakhs by the issue of shares. The cost of the project is stated to have gone up by Rs. 44 lakhs. In order to meet this shortfall, the Company is seeking an additional loan of Rs. 25 lakhs from the I. F. C., and it has also approached the Madhya Pradesh Financial Corporation for a loan of Rs. 20 lakhs.

Tirumurti Mills Pays More

A SUBSTANTIAL improvement in profits and sales marks the working of Tirumurti Mills Ltd for the year ended December 1963. Sales amounted to Rs. 1,04,13,786, against Rs. 83,23,424 in the previous year. The profit amounts to Rs. 3,27,586, after providing Rs. 3,04,955 for depreciation. The previous year's profit was Rs. 1,36,910, after providing Rs. 2,46,465 for depreciation. Out of this, Rs. 90,000 (against Rs. 38,240) is transferred to development rebate reserve. Provision for taxation amounts to Rs. 1,35,240 (against Rs. 16,512). The proposed dividend of 7 percent (against 6 percent) amounts to Rs. 1,02,346. These appropriations have absorbed the available surplus.

The directors state that the price of raw materials continued to be high during the year. There was increase

in wages, cost of electric energy, stores consumption, insurance, etcetera. The export prices of yarn and cloth were much below the local selling prices. The report adds that there was no profit in the weaving department because the ceiling prices of cloth remained the same in spite of an increase in the cost of production of yarn. Under the circumstances, the profits for the year are considered satisfactory.

Gnanambikai Mills Raises Dividend

THE working of Gnanambikai Mills Ltd for the year ended December 1963, shows a profit of Rs. 2,66,647, after providing Rs. 1,13,260 for depreciation. The previous year's profit was Rs. 2,71,044, after providing Rs. 1,08,844 for depreciation. Out of the profit, the directors have provided Rs. 40,996 (against Rs. 27,023) for development rebate reserve. Provision for taxation amounts to Rs. 1,30,454 (against Rs. 1,72,732). The dividend on preference shares at 8.45 percent (subject to deduction of tax) amounts to Rs. 1,749. The proposed dividend on equity shares at 9 percent (against 7½ percent) amounts to Rs. 83,448. A sum of Rs. 10,000 is transferred to general reserve.

Total sales for the year amounted to Rs. 46,68,046, against Rs. 45,77,264. The directors' report says that the price of cotton remained at a high level during the year. There was an increase in the cost of production also. The export of yarn under the compulsory scheme caused a loss to the Company. The directors are, however, making arrangements to increase the spindleage to 25,000.

Brunton (Engineers) Shows Loss

THE directors of the Brunton and Co. Engineers Ltd say in their report for the year ended December 1963, that the Company's working results for the year have not been satisfactory. After providing Rs. 50,246 (against Rs. 53,340) for depreciation, there is a net loss of Rs. 46,887, compared with the previous year's profit of Rs. 98,859. Including the loss of Rs. 46,887 for the year, the total loss in the balance-sheet stands at Rs. 3,74,162. The directors say that the Company has concluded a technical collaboration agreement with

Sri Ramalinga Choodambikai Mills Earns Less

A FALL in the turnover and profit feature the working results of Sri Ramalinga Choodambikai Mills Ltd for the year ended December 1963. The directors state that the

KUSUM COAL CRUSHER for CRUSHING COAL

**KUSUM ENGINEERING
COMPANY LTD.**
25, SWALLOW LANE
CALCUTTA-1, INDIA

price of raw materials and wages rose without a corresponding increase in the selling price of the yarn. Due to a strike, production was much affected during the year, so the turnover was low. Furthermore, the low selling price for export reduced the profit margin considerably.

The net profit for the year amounts to Rs. 3,18,601, after providing Rs. 5,66,961 for depreciation. The previous year's profit was Rs. 8,90,951, after providing Rs. 6,33,875 for depreciation. With Rs. 258 brought forward from the previous year, the total available for appropriation comes to Rs. 3,18,859. Out of this, donations amounted to Rs. 700. Bonus for previous years in excess of provision amounted to Rs. 69,369. A sum of Rs. 57,844 is transferred to general reserve. The dividend at 10 percent (against 7½ percent) amounts to Rs. 1,90,328. The balance of Rs. 618 is carried forward. Sale of finished goods amounted to Rs. 1,02,00,138 (against Rs. 1,13,61,080).

Progress of Sakthi Pipes

THE report of Sakthi Pipes Ltd for the year ended December 1963, says that no profit and loss account has been prepared as the factory is in the construction stage. So the revenue expenditure incurred less the sundry income by way of interest receipts have been shown under the head "unallocated expenses". As on 31st December, 1963, this amounted to Rs. 3,84,997. The report says that necessary arrangements for the erection of the factory buildings and the construction of staff quarters have been made. The work for the installation of machinery is expected to be completed by August 1964. The Company has been granted a loan of Rs. 64 lakhs by the Industrial Credit and Investment Corporation of India, for meeting the foreign exchange requirements. But there has been some delay as some of the conditions of the Corporation were not accept-

able to Messrs Banque de Brussels, bankers to the Company's collaborators. Alternative arrangements have been made through Messrs Morgan Gaurantee Trust Company of New York for opening the letter of credit. The report adds that in spite of best efforts, there has been some delay due to procedural formalities in opening the letter of credit.

Port Shipping Pays Dividend Again

THE Port Shipping Co. Ltd has returned to the dividend list and has declared a taxable ordinary dividend of 12 percent for the year ended December 1963. At the present price of Rs. 14.25 a share of Rs. 10 each, the yield works out to 8.4 percent. The profit has risen from Rs. 4.14 lakhs for 1962 to Rs. 5.51 lakhs for 1963, after transferring Rs. 1.63 lakhs (against Rs. 1.37 lakhs) to depreciation. Taxation absorbs Rs. 1.02 lakhs, development rebate reserve Rs. 1.62 lakhs and general reserve Rs. 1.05 lakhs, leaving a carry-forward of Rs. 17,363, against Rs. 4,392 brought in. Freight rose from Rs. 32.02 lakhs to Rs. 36.39 lakhs. The Company participated in the contract between the Calcutta River Transport Association and the Calcutta Port Commissioners for the carriage of foodgrains from the Haldia anchorage during the winter months. The Company entered road transport business in order to provide better facilities and quick delivery of materials to its clients. It has become necessary for the Company to add to its fleet specially designed lighters due to the diversification of products by jute mills.

Nil from Udayagiri Rubber

THE directors of the Udayagiri Rubber Co. Ltd have passed over the ordinary dividend for the year ended December 1963. The profit for the year amounts to Rs. 35,256, after providing Rs. 11,855 for depreciation. The previous year showed a loss of Rs. 42,641, after providing Rs. 11,429 for depreciation. The dividend at 7.84 percent on preference shares amounts to Rs. 6,272, leaving a balance of Rs. 28,984 which is carried forward.

The tea crop for the year amounted to 138,470 kilograms, against an estimate of 133,900 kilograms. The estimated crop for 1964 is 140,000 kilograms. The average price realised for tea amounted to 354nP a kilogram.

New Capital Issues

SEVEN companies have been authorised to raise fresh capital aggregating Rs. 7.31 crores. Out of these, one company is issuing its capital on rights basis, two are issuing equities and another two are offering equity shares plus preference shares. Five of the companies are offering part of their capital for public subscription. Foreign collaboration is involved in the case of two companies. Excepting one company which has been given permission to float its issues until 16th November, 1964, the consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Mysore Acetate and Chemicals Co. Ltd. Mysore, is to issue capital of Rs. 2,25,00,000 in equity shares of Rs. 100 each, partly in cash and partly for consideration other than

cash. The money will be used for the manufacture of cellulose acetate in Mandya. Out of this issue the Government of Mysore would subscribe for Rs. 50 lakhs in addition to Rs. 30 lakhs to be taken up by Mysore Sugar Co. Ltd, a wholly-owned undertaking of the State Government. The foreign collaborators Von Kohn Universal Corporation of the U.S.A. and Chematur of Sweden will be offered shares of the value of Rs. 58.5 lakhs and Rs. 9.5 lakhs, respectively. Out of the balance, such number of the shares as would qualify to be listed on stock exchanges would be offered to the public.

Jayshree Chemicals Ltd. Calcutta, was given consent in 1963 for the issue of Rs. 90 lakhs consisting of Rs. 70 lakhs in equity and Rs. 20 lakhs in preference for the manufacture of caustic soda, chlorine, bleaching powder, etcetera, at Ganjam, Orissa. To enable the Company to meet capital requirements as now revised, another consent has been given for the issue of Rs. 30 lakhs consisting of Rs. 20 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in cumulative redeemable preference shares of Rs. 100 each carrying a dividend of 9.5 percent free of Company's tax, but subject to deduction of taxes at source at the prescribed rates. Out of these, such number of shares of each kind as would qualify each kind of scrip to be listed on the recognised stock exchanges will be offered to the public by prospectus.

In supersession of an earlier consent for an issue of capital of Rs. 1,249 crores, Madras Tube Company Ltd, Madras, has now been given permission to issue capital of Rs. 1,39,93,000 divided into 999,300 equity shares of Rs. 10 each, and 40,000 preference shares of Rs. 100 each, for cash at par. Out of the issue, a suitable number of equity and preference shares which will enable the Company's scrip to enlist with the recognised stock exchanges will be offered for public subscription. The capital will be used for setting up a new undertaking in Madras for the manufacture of welded steel tubes. The consent remains valid for 12 months from the date of its earlier issue, that is, until 10th November, 1964.

Larsen and Toubro Ltd. Maharashtra, Bombay, engaged in the business of engineers, contractors, and manufacturers, will be issuing on a rights basis further capital of Rs. 66 lakhs (nominal) divided into 660,000 equity shares of Rs. 10 each for cash at a premium of Rs. 2 a share.

The Mysore Chemicals and Fertilisers Ltd. Mysore, is to issue further capital of Rs. 1 crore, for cash at par. Of the issue, shares of a value not exceeding Rs. 10 lakhs may be offered to the Government of Mysore and the remaining shares will be offered for public subscription. The capital will be expended on the installation of a new plant in the existing factory premises for manufacture of caustic soda and chlorine.

Hindustan Photo Films Manufacturing Co. Ltd. Ootacamund, a Central Government Company, is to issue equity capital of Rs. 60 lakhs in 6,000 shares of Rs. 1,000 each for cash at par. The money will be used for the manufacture of raw films for cinema industry, etcetera.

Transformers and Electricals Kerala Ltd. a new company incorporated in Kerala, will be issuing capital of Rs. 1.10 crores for the establishment of a factory with Japanese collaboration for the manufacture of power transformers. The issue will be made to the Kerala State Industrial Development Corporation Ltd to the extent of Rs. 25 lakhs, the Kerala State Government—Rs. 28.60 lakhs, Hitachi Ltd of Tokyo—Rs. 28.60 lakhs, and Rs. 27.80 lakhs will be offered for public subscription.

The Stock Markets

SHARES RECOVER SMARTLY ON SHORT-COVERING

Wednesday Evening.

THERE has been a smart recovery in the Calcutta stock market during the past week. The prices, especially of clearing shares, have hardened because of brisk short-covering, combined with replacement purchases. Although turnover is concentrated on clearing shares, prices of selected cash scrip have also improved due to the absence of sellers.

The cheerfulness has been caused mainly because of optimism about the dividend of the Indian Iron and Steel Company for 1963-64, which is likely to be announced shortly. The Company's transfer books will be closed from 1st August to 22nd August for the purpose of the dividend. The market has welcomed the meeting between the members of the Calcutta Stock Exchange and the chairman of the Unit Trust of India. Lyons Range is inclined to think that in the long run, the Unit Trust will have a good effect on the stock market since it will buy a substantial volume of equities for investment. But the short-term effects of such purchases may not be as bullish as has been made out. Since the units of the Trust will mop up substantial savings, the flow of funds to the stock market is likely to diminish.

Operators are encouraged by the hope that New Delhi will soon relax the margin system. The relaxation will, no doubt, help stimulate speculation in clearing shares, but it may not by itself broaden investment support until the outlook for equities is improved by suitable modifications of the fiscal and monetary policies. The advent of the slack season, combined with a larger return of funds into the banking system, has impressed the stock market, although it is doubtful whether banks will direct a considerable part of their resources into stocks and shares.

The concern over rising prices, particularly of foodgrains, continues. Attention centres on the meeting of the State Chief Ministers which is being held in New Delhi. Unless effective steps are taken to restrain inflationary pressures, various distortions will appear in the economy.

Indian Iron have improved to Rs. 25.02, after profit-taking at every bulge. All offerings have nevertheless been absorbed without much difficulty. Selected engineering shares have gained. Burn have been supported on producing good results. Interest has been shown in Guest, Keen, Williams, Texmaco and Braithwaite Bhartia Electric Steel have improved on good report. Jessop have been sluggish.

Clearing shares are prominent in the miscellaneous section. Hindustan Motors, Indian Aluminium, Indian Copper, Kesoram Industries and Dunlop Rubber have risen. Support is forthcoming for Alkali and Chemical, Union Carbide. British Paints, Metal Box and Associated Battery. Among managing agency shares, Balmer Lawrie, Jardine Henderson and Martin Burn have been steady. Among new shares, Philips Carbon have recovered. Hindustan Aluminium enjoy support on prospects of expansion. Electric company shares are sluggish and stray business in Calcutta Electric has been done. Orient Paper are active in the paper section; Bengal

Paper have been steady on a good report. Shree Gopal have been supported. Seshasayee are steady.

Selected jute shares have improved in sympathy with the general trend, although turnover is limited. Birla, Ganges, Anglo-India, Champdany, Kinnison, Auckland and New Central have attracted support. Coal shares are neglected and business has been small. Burrakur, Bengal, Central India and Western Bengal have changed hands. In cotton mills, Bharat Commerce, Elgin, Dunbar and Jay Shree Textiles are steady. J. K. Rayon have gained on producing good results. Investors are nevertheless cautious due to uncertainty concerning the price of cloth. Business in tea shares has been limited, and attention has generally centred on selected Assam gardens.

Government securities are steady. The 3 percent Conversion Loan 1986 has been quoted around Rs. 63.75. The prices of short-dated loans have been fully steady due to good institutional enquiries. The prices of medium-dated stocks have been about steady. Selected State Government loans have met with scattered institutional buying.

Bombay

SHARES RISE ON EASIER MARGIN HOPES

BUSINESS CONFINED TO CLEARING SHARES

Wednesday Evening.

THE Bombay stock market started the new account last Monday in a cheerful mood. Sentiment has taken a turn for the better due to

many favourable circumstances. Turnover is, however, largely confined to clearing shares, which have scored handsome gains on replacement buying, combined with short-covering. Although business in cash shares has been limited, their prices have gained considerably due to the absence of sellers.

Dalal Street is optimistic that the margin system will be relaxed. Activity in the stock market, it is generally thought, has been affected by the present stringent margin rules. During the past couple of months, turnover has declined to almost a trickle, and brokers have generally found it difficult to defray even recurring expenses.

The buoyancy has been due largely to hopes that the Tata Iron and Steel Company will declare a higher dividend for 1963-64 within next few days. Dalal Street has been impressed by the way in which the new Central Government has tackled domestic political problems. Although rising foodgrains prices have caused a great deal of concern, it is generally thought that the Chief Minister's conference which is being held in New Delhi, will formulate concrete measures to tackle the shortage of food. Operators have been encouraged by easier money conditions and they hope that the supply of bank credit to the stock market will increase.

Tata Steel ordinary have risen to Rs. 151. Among engineering shares, Tata Engineering have attracted support on dividend prospects. Premier Construction, Mukand Iron and Alcock Ashdown have been bought. Among motor-vehicle shares, Hindustan Motors have gained on support from Lyons Range. Premier Automobiles have improved fractionally.

The prices of selected cotton mill shares have hardened on brisk short-covering, combined with replacement purchases. Century, Bombay Dyeing,

a new dimension to investment

The Unit Trust of India—established by an Act of Parliament—offers you a unique form of investment which is safe, brings a steady return and is liquid enough to realise when you are in need of funds. This is: Units under the Unit Scheme, 1964.

The object of the Unit Trust is to pool the savings of the community by sale of units and to invest them in well chosen securities of diverse types. The investment policy of the Trust is to build up a balanced portfolio of investments, yielding an average return of over six per cent per annum.

Barring expenses limited by statute to a maximum of five per cent of the income, the Trust will distribute the balance to the unit holders as dividend.

Income from dividend up to Rs. 1,000 is free of income-tax in the hands of unit holders.

The management of the Unit Trust is vested in the Board of Trustees consisting of representatives of the Reserve Bank of India, State Bank of India, Life Insurance Corporation, commercial banks and business and financial institutions.

Each unit will be of the face value of Rs. 10. You can buy ten or a multiple of ten units. There is no upper limit to investment in units.

The Trust offers the initial sale of units at par from July 1 to July 31.

By investing in units,
you get
these advantages:

- Safety of Capital**
- Assured Income**
- Promise of Capital Growth**
- Spread of Investment**
- Tax Concessions**
- A Share in the Nation's Growing Industrial Prosperity**

Details of the unit scheme and application forms will be available at over 3,500 offices of the following banks from July 1:

State Bank of India, Bank of India Ltd., Central Bank of India, Punjab National Bank Ltd., United Commercial Bank Ltd., Allahabad Bank Ltd., Bank of Baroda Ltd., State Bank of Bikaner & Jaipur, State Bank of Hyderabad, State Bank of Indore, Bank of Maharashtra Ltd., State Bank of Mysore, State Bank of Patiala, Bank of Rajasthan Ltd., State Bank of Saurashtra, State Bank of Travancore, Indian Bank Ltd., Devkaran Nanjee Banking Co., Krishnam Baldeo Bank Ltd., New Bank of India Ltd., Syndicate Bank Ltd., Tanjore Permanent Bank Ltd., United Bank of India, Union Bank of India Ltd., British Bank of the Middle East Ltd., Chartered Bank, First National City Bank, Hongkong and Shanghai Bank Ltd., National & Grindlays Bank Ltd., Netherlands Trading Society Ltd., Mercantile Bank Ltd., Oriental Bank of Commerce Ltd. and India Overseas Bank Ltd.

Unit Trust of India

Amar Building, Pherozeshah Mehta Road, Bombay-1.

DA 64/119

Kohinoor and Svadeshi have risen. Standard have attracted interest on prospects of diversification of activity. India United ordinary, Tata Mills, Gokak and Morarjee have been transacted at higher prices.

Although turnover in miscellaneous shares has been limited, the prices of selected scrip have gained. In cement shares, Associated Cement and Digvijay have been steady. Among sugar shares, Belapur and Walchandnagar Industries have attracted support. In steamship companies, Scindia have gained on short-covering. Great Eastern Shipping have been steady. Be Be Petrol have been prominent in the mining section. Scattered support has been forthcoming for Shivrajpur Syndicate on the news that private traders will be allowed to export manganese ore.

Among chemical shares, Tata Chemical have improved on hopes of a higher dividend. Rayon shares have been very steady. National Rayon have gained on short-covering. Voltas have been steady. Indian Dyestuff have improved due to support from Ahmedabad interests in particular. A small turnover in bank shares has been transacted. Central Bank and Bank of Baroda have been done. Electric company shares have been cheerful. Ahmedabad Electric have soared to a new high for many years. Tata Hydro have changed hands.

Madras

MARKET STEADY ON OUTSIDE SUPPORT TURNOVER CENTRES ON CLEARING SCRIP

Tuesday Evening.

THE Madras stock market has been steady during the past week due to broadening support, particularly from outside sources. Turnover centres on selected clearing scrip. Investors have been encouraged by the prospect that the supply of credit to the stock market may improve due to the advent of the slack season. It is also thought that the Government may take active steps to stimulate activity in the stock market. The news that the Unit Trust will begin to sell units from 1st July has been interpreted bullishly.

Selected State Government loans have been bought. In bank shares, Indian Overseas have been done at Rs. 140 and Indian at Rs. 152. In insurance companies, United India have been steady at Rs. 640. Among electric companies, Karaikkal have changed hands at Rs. 10.25 and Vellore at Rs. 15.62. Sugar shares have been neglected. E.I.D. have been available at Rs. 34 and Andhra at Rs. 13.55. Deccan have dropped to Rs. 11.20 and Kothari to Rs. 6.65. Mysore have been barely steady at Rs. 28.33 and Travancore have been freely sold down to Rs. 7.20.

In the plantation section, Blue Mountain have been bought at Rs. 2.35 and Cochin Malabar at Rs. 6.30. Consolidated Coffee have hardened to Rs. 21.90 and Ouchterlony to Rs. 3.45. Periakaramalai have been transacted at Rs. 3.43. In rubber shares, Rajagiri have been wanted up to Rs. 21.50 on declaring an interim taxable ordinary dividend of 10 per cent. Be Be have been done at Rs. 2.27 and Nilambur at Rs. 11.65. T.R. and Tea have changed hands at Rs. 9.50 and Woodland have come to hand at Rs. 6.80. Among tea shares, Peermade have been steady at Rs. 21.25, Parkside at Rs. 25.73 and Nelliampathy at Rs. 3.93. In the coffee group, Amalgamated have been

done at Rs. 10.01, Coffee Lands at Rs. 17.65 and Kumergode at Rs. 3.78.

Selected textile shares have improved all round. South India Viscose have gained at Rs. 119.50 and Travancore Rayon have risen to Rs. 20.65. Lakshmi have been bought at Rs. 131 and Madura at Rs. 32.85. Cauvery Spinning have been transacted at Rs. 16.25 on declaring a taxable ordinary dividend of 10 percent. Buckingham have come to hand at Rs. 267 and Bangalore Woollen at Rs. 248. Mettur have been steady at Rs. 277.50 and Premier at Rs. 280. Ramakrishna have been done at Rs. 217.80 and Sarada at Rs. 96.

Among miscellaneous shares, Aluminium Industries are steady at Rs. 19.50, but Ashok Leyland are sluggish at Rs. 6.50. Dalmia Cement have been bought up to Rs. 13.62 and India Cement up to Rs. 5.55. Mettur Chemical have gained at Rs. 13.45. Seshasayee Paper have hardened to Rs. 7.12 and Mysore Paper to Rs. 12.50. Enfield have been taken at Rs. 10.87.

Parry's Confectionery have recovered to Rs. 2.72 and Spencer have changed hands at Rs. 21.65. T. Stanes have been steady at Rs. 30.50 and Textool at Rs. 142. Kirloskar Electric have been wanted at Rs. 18.40 and Madras Rubber have been quoted at Rs. 11.25.

London

RECOVERY SUSTAINED BY TRADE FIGURES

GILT-EDGED BETTER AT CLOSE

London, 24th June.

THE stock market made further progress on renewed buying prior to the week-end, but an easier trend developed subsequently, and although showing fresh gains on the week, prices were below their best levels. The further improvement followed persistent but small investment buying in a thin market, encouraged by the much better overseas trade figures for May, and the subsequent modest decline in prices was mainly a natural reaction after a fortnight of rising prices. In addition, political uncertainties, both at home and abroad, because the flow of good company news during recent weeks is gradually slackening. Gilt-edged drifted lower, while the rest of the market improved, but took a turn for the better after the week-end, and the earlier falls were recovered. Industrials turned easier after the week-end, but not all the earlier gains were lost. Good features included Leyland, Plessey Metal Box, Rolls Royce, Wiggins Teape and Marks and Spencer. The politically sensitive steel, insurance and property shares improved prior to the week-end, but prices eased off later. Firmness in tin shares reflecting the rise in the metal prices was the best feature of mines. Gold shares by contrast lost ground or nervousness concerning the political situation in South Africa. Oils rubbers and teas fluctuated within narrow limits. Dollar stocks generally improved following Wall Street

Money

THE CALCUTTA MONEY MARKET

CALL RATE DECLINES FURTHER

Wednesday, 24th June.

THERE has been a moderate decrease in the general level of advances in the Calcutta money market during the past week. This is due to a slight decline in the credit given to jute and sugar mills and to the foodgrains and seeds trade. The requirements of the cotton mills and the iron, steel and engineering industries remain unchanged. In the interbank market, conditions have been easier and the call rate has been around 2 percent after rising to 3½ percent.

The exchange market has been moderately active, with a fair supply of gunny bills. Tea bills have been in poor supply. The demand for remittances has been fair. In London, sterling has lost against most of the important currencies except the Belgian franc.

SILVER WAS QUIET IN CALCUTTA during the past week. The price declined from the previous week's level of Rs. 250 to Rs. 248.25, quoted today. The London and New York prices stood at 11½d and 129.3 cents.

In spite of a fall in silver, gold was steady. The price of 14-carat rose from Rs. 71.25 to Rs. 71.75.

DURING THE WEEK ENDED 19TH JUNE, Government of India Treasury bills for Rs. 55,87,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 23rd June. The total amount offered was Rs. 4,27,00,000. Tenders at Rs. 99.255 percent and above were accepted in full, and those at Rs. 99.250 percent were allotted 43 percent approximately. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.995 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at Bangalore, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to the close of business on 27th June, 1964, and at Bombay up to 11 a.m. on 29th June.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 24th June to 27th June at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 17th June to 20th June amounted to Rs. 13.32 crores only.

DECLINES OF Rs. 36.70 CRORES TO Rs. 2,517.28 crores in active notes and of Rs. 32.85 crores to Rs. 2,543.67 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 19th June, 1964. The currency contraction was adjusted by reducing foreign securities by Rs. 5 crores to Rs. 93.46 crores and rupee securities by Rs. 30.02 crores to Rs. 2,232.20 crores. Balances held abroad in the Banking Department dropped by Rs. 1.06 crores to Rs. 7.39 crores, while investments at Rs. 284.02 crores showed a rise of Rs. 25.12 crores. Deposits of the Government of India rose by Rs. 14.30 crores to Rs. 65.40 crores but those of State Governments declined

limiting factors for the use of fertiliser, namely, inadequate moisture.

EXTERNAL DEBT

The Growing Burden

India's anxiety to increase her exports and to depend more and more on foreign private capital investments rather than on economic aid from abroad has its genesis in the growing burden of her external debt. The liability of principal repayment and payment of interest on the loans secured by the Government of India up to December last, during the current financial year and the next 11 years totals \$3,639.2 million as the following figures show:

Year	Principal (\$ million)	Interest
1964-65	126.5	121.4
1965-66	184.2	133.6
1966-67	220.3	134.4
1967-68	230.2	125.0
1968-69	243.4	115.8
1969-70	237.6	104.7
1970-71	230.7	94.3
1971-72	221.3	83.4
1972-73	210.0	74.1
1973-74	209.8	64.5
1974-75	192.4	55.8
1975-76	179.2	46.6
	2,485.6	1,153.6

EUROPEAN INVESTMENT

New Survey Report

The Adviser to the Indian Investment Centre, Mr. Joseph P. Bourdrez, who recently made an appraisal of the prospects of investments in India from various European countries, says in a report that the European companies would be interested in making investments in India more from the point of view of "integrated growth" of the company concerned rather than from the financial point of view. The majority of the suitable companies in Europe, he adds, will be very selective in deciding where new overseas investments should be made. Banks and public funds from Europe may become more readily available for investment in developing nations as a result of Government credits and because of official agreements for the protection of capital. But the initiative generally will have to come from individual managements.

Mr. Bourdrez has found in the European nations a general feeling of basic goodwill towards India's efforts to develop her industrial potential. But there is widespread ignorance and also "misinformation" on India's policies, conditions and potentialities. With a view to correcting these wrong impressions, the Indian Investment Centre is expected to open its first branch on the Continent in Düsseldorf, West Germany, by the autumn of this year. Another branch may later be set up in Paris.

TAX HOLIDAY

Scheme Being Examined

The Central Government may examine the case for making the tax holiday incentive available for five years from the date of profitable operation of an industrial unit, instead of the first five operating years as hitherto. An indication to this effect is stated to have been given

STATE TRADING IN FOODGRAINS OPPOSED

(FROM OUR NEW DELHI CORRESPONDENT)

ALTHOUGH the new Central Food and Agriculture Minister, Mr. C. Subramaniam, has been reluctant to say so, it is reported that he does not favour State trading in foodgrains at the present juncture. The main reason for this stand appears to be that the administrative machinery required for any large-scale State trading in foodgrains cannot be created overnight. Mr. Subramaniam thinks that the checking of a further rise in food prices is the most important task before him. He has been consulting his colleagues in the Government about this matter since he assumed charge of the Food and Agriculture portfolio and has sought the advice of the State Chief Ministers during the three-day conference starting from 24th June.

The problems relating to the rise in foodgrain prices were also discussed a few days ago by the Prices Sub-Committee of the Congress Parliamentary Party and the Prices Committee of the Central Government. Both these bodies have also expressed the view that State trading in foodgrains may not be a feasible proposition at this stage. The Prices Committee has recommended the statutory fixing of maximum wholesale prices for the principal foodgrains and a stricter enforcement of the Wholesale Trade Licensing Order. It has further suggested the strengthening of the enforcement machinery in the States with the Central Government's financial assistance and the notification of maximum retail prices for the information of the general public on the basis of the statutorily fixed maximum wholesale prices.

Strict Measures Urged

The Prices Sub-Committee of the Congress Parliamentary Party has, however, asked for more strict measures against hoarders and profiteers in foodgrains and, if necessary, the seizure of stocks under the Defence of India Rules. It has also expressed the view that to induce farmers to market their surplus foodgrains, they should be provided with adequate price incentives and other allurement in the form of supply of essential commodities, such as cement, steel, kerosene, cloth and sugar, at fair prices and in adequate quantities. The Sub-Committee feels that unaccounted money is operating in the foodgrains trade, so the Government should devise measures to eradicate this evil. It has also urged the Government to explore the possibilities of importing more rice in the near future. Among the Sub-Committee's other suggestions to meet the problem created by rising prices are: (1) provision of simple channels for agriculturists to save and invest; (2) devising of monetary and fiscal measures to mop up the surplus purchasing power; and (3) the reduction of unproductive expenditure. At their conference, the State Chief Ministers will be expected to consider all these steps, along with the crucial question of whether or not to embark on State trading in foodgrains and a review of the working of the various food zones in the country, which have created wide disparities in prices by accentuating the upturn in prices in the deficit

areas and depressing them in the surplus producing States.

The State Chief Ministers will also be required to advise on how the agricultural development programmes can be accelerated during the 1964-65 and 1965-66 agricultural years and also on the advance action to be taken under the fourth plan. The Central Finance and Food and Agriculture Ministers and the Planning Commission held discussions on this matter last week with a view to drawing up a crash programme for agriculture, particularly for the development of animal husbandry, poultry, vegetable marketing and fisheries. They also reviewed the progress of the "intensive agricultural district programme" and the "intensive cultivation programme" for noting the difficulties hindering their effective implementation. Remedial measures are proposed to be taken immediately to remove these difficulties.

Meanwhile, foodgrains are being rushed from the Central stocks and the surplus producing States to the vulnerable areas. Sizable supplies of wheat and rice were authorised to be sent last week from the Central reserve and Madhya Pradesh to Maharashtra and Gujarat.

CHEMICAL FERTILISERS

Fourth Plan Requirements

An 11-point programme has been suggested by the experts of the Planning Commission for popularising the use of chemical fertilisers during the fourth plan period. The experts are of the opinion that India has to rely more and more on fertiliser nutrients as the major input for additional farm production. They have estimated the optimum requirements of fertilisers for all crops on the basis of the fourth plan tentative production targets of 120 million tonnes of foodgrains, 13.5 million tonnes of sugarcane, 10 million tonnes of oilseeds, 8.5 million bales of cotton, 8 million bales of jute, 2 million bales of mesta, 35,000 tonnes of pepper, 3,850 tonnes of cardamom, 26,000 tonnes of ginger, 135,000 tonnes of cashewnuts, 480,000 tonnes of tobacco, 60,000 tonnes of lac, 110,350 tonnes of arecanuts, etcetera, and at the present level of technology—at 3.66 million tonnes of nitrogen, 2.33 million tonnes of P₂O₅ and 810,000 K₂O. The targets suggested for application of chemical fertilisers during the five-year period are 2 million tonnes of nitrogen, 1 million tonnes of P₂O₅ and 350,000 tonnes of K₂O.

The 11-point programme suggested by the experts is as follows: (i) Supplies are likely to be a major bottleneck. It is essential that immediate arrangements are made for setting up the requisite number of manufacturing units, and also for getting supplies from abroad on a long-term basis to fill the gap.

(ii) The prices at which fertilisers are sold to farmers, which are more than twice as high as those in the U.K. and the U.S.A. and the highest in the world, excluding Spain, should be substantially reduced either through a direct subsidy or otherwise. Subsidy is already available on the sale of phosphatic fertilisers to the extent of 25 percent which is

shared on a 50:50 basis between the Centre and the State Governments. It is, however, found that many State Governments do not avail themselves of this opportunity because they have to share the cost of subsidy. This point may be taken into account while fixing the pattern of financial assistance for the fourth plan.

(iii) A subsidy of 20 percent for nitrogenous fertilisers has been recommended by the Planning Commission's Working Group on Agriculture. It will be necessary to reduce the price of fertilisers to the farmer by 20 percent, partly by reducing the cost of production of fertilisers, partly through tax relief and partly through direct subsidy.

(iv) It is essential to improve the internal distribution arrangements. The increase in the number of distribution points to about 20 percent and the easy availability of credit in U.P. and Punjab resulted in an immediate increase in the fertiliser consumption. It is necessary to provide about 20 more distribution points a block with the necessary arrangements for storage.

(v) Distribution of fertilisers may be entrusted to private parties where adequate co-operative organisations do not exist. Likewise, where the arrangement is through private agencies, it may also be entrusted to co-operatives.

(vi) Bulk purchases above a specified quantity, say, one tonne, for sales from district headquarters may be charged at wholesale rates.

(vii) The margin of retailers may be increased so as to provide an inducement for increasing the sales of fertilisers. In some States, the margin is as low as Rs. 660 a tonne and the number of intermediaries as many as four. The former should at least be doubled while the number of intermediaries should be balanced—one at the district level and one at the village level.

(viii) Cheap, prompt and easy credit facilities should be provided. A certain percentage of co-operative loan should be earmarked for the supply of fertilisers in kind.

(ix) Fertiliser godowns should be constructed at vantage points and suitable financial assistance given for the purpose. The Warehousing Corporation should also be used for this purpose, and the difference between a reasonable rate of storage for fertilisers and the rate charged by the Corporation should be met by a subsidy. Small godowns should also be constructed at the village level. The total number of such godowns will be about 100,000. New constructions would not be necessary at many places. Some of the places might be covered by rural godowns owned by co-operative societies. Elsewhere, arrangement should be made for the construction of subsidised godowns by co-operatives or panchayats.

(x) The existing concessions about the offseason rebate, movement of fertilisers by road and transport subsidies in remote and inaccessible areas should be continued.

(xi) Above all, a policy of assured intensive irrigation should be followed so as to remove one of the basic

What makes
HOECHST
medicines

EXPERIENCE!

What kind of experience?

Experience that extends over a century of pioneering work in the field of medicines.

That makes you rather ancient, doesn't it?

Ancient, but not old-fashioned. Our outlook is modern: ceaseless research, up-to-date equipment, stern quality control and testing. These are the invisible ingredients which make HOECHST medicines—

Priceless, I see.

What's more, this experience goes behind every medicine we make—wherever we make it. Whether in Germany or in our plant in Mulund near Bombay.

Does my doctor know this?

He certainly does. That's why he prescribes HOECHST medicines with confidence. So, uncork that bottle and drink to your health...cheers!

HOECHST PHARMACEUTICALS

HOECHST generally pronounced HEXT

© 1964

to the U.S. business men who visited India in April last.

This important change in the corporate taxation will specially benefit the industries having long gestation periods. Such industries were given a valuable concession in the last Budget also, whereby they were allowed a rebate on super tax in addition to the 25-percent development rebate.

The Government of India is also examining the incidence of import duties on capital goods. The U.S. business men favoured the scaling down of levies on machinery imports by India, especially on machinery not being manufactured in the country, in the interest of accelerating industrial development and keeping down the cost of setting up units in new lines of manufacture such as petro-chemicals.

COAL BRIQUETTING

New Units Sanctioned

The Central Government, it is understood, has recently sanctioned the setting up of two low-grade coal briquetting plants—one in the Bengal-Bihar coal belt and the other in the Madhya Pradesh coalfields. Both the plants are expected to be commissioned during the third plan period. Besides producing smokeless fuel for domestic use, the two briquetting plants will yield many valuable by-products which can be processed into various chemicals. India's first briquetting plant, it may be mentioned, is already being constructed in Neyveli. But it will convert lignite into briquettes.

COPPER SMELTER

New Unit Planned

A Bombay firm, it is learnt, has shown interest in setting up the second imported concentrates-based copper smelter in the country. The first copper smelter of India, that of the Indian Copper Corporation, was allowed to expand its capacity some time ago, for producing copper from imported concentrates in addition to from indigenous ore.

The capacity of the Bombay firm's smelter is envisaged around 18,000 tonnes a year. It also proposes to produce about 24,000 tonnes of sulphuric acid annually.

In view of the rapidly increasing demand for copper, the Planning

Commission's Working Group for Non-ferrous Metals made a fervent appeal in its report for vigorously investigating the possibility of setting up one or two copper smelters based on imported concentrates. It also suggested that long-term arrangements be made with foreign firms for importing copper concentrates. The processing of these concentrates can save a good deal of valuable foreign exchange.

RAILWAYS

Plan for Electrification

The Railway Board, it is understood, has decided to speed up the electrification programme on the Mughalsarai-Allahabad section of the Northern Railway to cope with the rapid rise in freight traffic generated by the successive five year plans. In 1962-63, the throughput on this section, both in the up and down directions, ranged around 30,000 tonnes a route kilometre a day.

MANGANESE ORE

Decision on Exports

The manganese ore export trade will be thrown open to the private sector from next year. This was announced by Mr. Govind Narain, chairman of the State-owned Minerals and Metals Trading Corporation, here last Friday. The Corporation hopes to fulfil its present barter commitments in this commodity by the end of the current year. No barter deals for the export of manganese ore will be entered into hereafter.

Any person who can export manganese ore on his own will be allowed to do so. The services of the M.M.T.C. will, however, be available to those who find it difficult to revert to their export trade. In their interest, the M.M.T.C. will enter into long-term agreements with foreign buyers. This will ensure for such mine-owners a steady offtake as well as a fair price.

The decision to stop manganese ore exports on a barter basis, it is explained, has been taken in view of the desire on the part of foreign buyers to have direct trade links with Indian mine-owners and exporters of manganese ore, on a long-term basis.

The outlook for manganese ore exports from India is now said to be brightening up. It may be possible

to export nearly 1 million tonnes this year.

BARAUNI REFINERY

Unit to Go on Stream

The first 1-million-tonne unit of the Barauni refinery is expected to go on stream in the next few days. Trial runs, it is stated, have already started and crude oil is being stored for regular operations.

MIDDLE CLASS

Findings of Survey

Some interesting facts about income-distribution, employment and service conditions, and expenditure of middle class population in India have been included in a survey conducted for the first time on a national scale in 1958-59. The survey was started with the aim of facilitating the construction of middle class cost of living indices and to ascertain conditions and levels of living of middle class families.

The survey covered about 36,000 families in 45 selected cities and towns. It was carried out on the advice of the Technical Advisory Committee on the Cost of Living Index Numbers and was a co-operative effort of the Central Statistical Organisation, the Indian Statistical Institute and the National Sample Survey. Reports dealing with other aspects like sources of income, expenditure patterns, savings and investments, indebtedness, education, health and housing conditions are now being prepared.

Defining a middle class family as one depending mainly on income derived from paid non-manual employment in non-agricultural sector, the report states that there are about 2.5 million families in urban areas and they constitute about one-seventh of the total number of families. The 45 cities covered under the survey account for about one-third of the total.

The average size of a family is mostly between four and five. It increases with income and is about twice as high in the top income-groups as in the bottom groups. The size is somewhat larger in the southern and western regions than the eastern and northern. The larger cities generally have smaller families than the smaller cities.

As for income distribution, the report says that in most of the cities

CAPITAL, 25th June, 1964.

and towns, 99 percent of the families have incomes of less than Rs. 1,000 a month, about 94 percent of less than Rs. 500 a month, about 5 to 6 percent of less than Rs. 75 a month. The largest concentration appears to be in the range of Rs. 150 to Rs. 200. In major cities, namely, Bombay, Calcutta, Delhi and Madras, about 41 percent have incomes exceeding Rs. 1,000 a month and about 16 percent to 17 percent more than Rs. 500 a month. In the majority of centres, the average incomes of middle class families range from Rs. 200 to Rs. 250 a month. In bigger cities and expensive places, such as hill stations, incomes are larger and exceed Rs. 350 a month in Bombay, Calcutta and Delhi.

The lower middle class (defined as the lower 50 percent) families have in a majority of centres an average income ranging from Rs. 100 to Rs. 125. In major cities, they get between Rs. 175 and Rs. 200. Calcutta and Madras show greater disparities in incomes than Bombay and Delhi and among minor cities, Hyderabad and Bangalore than Poona, Nagpur, Ahmedabad, Kanpur and Lucknow.

Average Monthly Expenditure

The average monthly expenditure varies from Rs. 148 in Jammu to Rs. 388 in Delhi, the level in major cities exceeding that in minor cities and towns.

The reported level of expenditure is generally in excess of that of income, except at the higher levels (say, above Rs. 750 a month); it is to be noted, however, that in family budget studies based on the interview method, expenditure is usually exaggerated while income is somewhat understated.

Expenditure of the top 25 percent of middle class families is three to four times that of the bottom 25 percent, the top 10 percent spending four to six times and the top 5 percent five to eight times as much. Inter-centre differences in the level of expenditure are much higher in the case of upper income groups than lower income groups.

An average middle class family spends 44 percent of its income on food, beverages, tobacco and intoxicants, 4 percent on fuel and lighting, 12 percent on clothing, bedding, footwear and headwear, 14 percent on housing, household requisites and services and 26 percent on miscellaneous items. In major cities, middle class families spend relatively more on housing, household requisites, services and miscellaneous items and less on food, beverages, etcetera, and fuel and light.

In the eastern region, the expenditure is relatively less on fuel and light and more on housing, household requisites, etcetera, while in the western it is more on clothing and miscellaneous items and less on food, beverages, etcetera.

The most important food from the point of view of expenditure is cereals, the next being milk and milk-products. Meat, fish and eggs show large regional variations and occupy an important place in the diet of middle class families in Assam, West Bengal and Orissa and also in a few other places such as Bombay, Bangalore and Srinagar.

Among the miscellaneous items of expenditure, transport and communications account for the largest share in 19 of the 45 centres and education in six. Transport and education are both expensive in Bombay and Delhi; transport is expensive in Madras and education in Calcutta.

As for employment and service conditions, the survey shows that the average number of employees a family varies from 1.01 to 1.32. In

CAPITAL, 25th June, 1964.

other words, about one in every four is employed.

Principal Economic Activity

The principal economic activity in which middle class employees are engaged is public services, the next important being teaching. In terms of occupation, clerical workers predominate, followed by teachers. The average length of service ranges from 8 to 16 years, most of it confined to one establishment. Middle class employees apparently stay stable in their chosen careers once they settle down. They work at an average six to seven hours a day. Teachers usually work fewer hours and salesmen longer.

In a large proportion of cases, middle class employees get no rest interval during working hours. Among those who do, the majority of them about half an hour.

The majority of employees are entitled to casual leave or earned leave or both. Most of them do not get any sick leave in addition. A substantial proportion in some of the centres do not seem to be entitled to casual or earned leave. Conditions of service in commercial establishments appear to be less satisfactory on the whole than those in public bodies.

About 3 percent of the employees have had to undergo unemployment at one time or another during the preceding year. A majority of them were, however, fresh entrants to the labour force. The reasons for unemployment in other cases were mainly retrenchment, dismissal or termination of contract. The average duration of unemployment works out to 21 weeks an unemployed person.

A comparison of the average incomes and expenditures of the middle class families with those of working class families in the same cities shows that the average income and expenditure of the former is about two to three times that of the latter. The income and expenditure of the lower middle class which are roughly about half the overall level may, therefore, be regarded as slightly higher up, if at all, in comparison to the working class.

Compared with the working class, the middle class population shows a distinctive expenditure pattern even at the same level of income. The bottom 25 percent of the middle class whose incomes are comparable to those of the working class spend about 50 percent of their resources on food, 30 percent on fuel, housing and clothing and 20 percent on miscellaneous items such as education. The working class families spend more on food and correspondingly less on other items. On the other hand, the lower middle class families seem still to conform to traditional expenditure pattern to traditional values attached to better housing, clothing, education, medical and personal care—a feature distinguishing them from the working class population.

U.S.A.

Loan for Methanol Plant

An agreement has been concluded between the Government of India and the United States providing for a loan from the latter amounting to \$7.8 million (Rs. 3.7 crores) for the construction of India's first methanol plant in Trombay. The project will make India self-sufficient in methanol, a key chemical used in the manufacture of plastics, drugs, resins, synthetic fibres and dyestuffs. The loan is to be channelled through the U.S. Agency for International Development.

The methanol plant will be constructed by the Fertiliser Corporation of India Ltd, adjacent to its

Trombay fertiliser plant and will commence production in late 1965, using synthetic gases produced during the course of fertiliser manufacture.

Earlier, loans from the United States totalling Rs. 27.7 crores are meeting both the foreign exchange and the rupee costs of the fertiliser plant itself, which will produce 420,000 tons of chemical fertilisers a year, making it India's largest producer of fertilisers. It is estimated that the application of this amount of fertiliser will increase annual food production by more than 1 million tons.

A portion of the new loan will be used for the installation of ancillary facilities, including a sulphuric acid plant and an argon gas recovery plant in connection with fertiliser production.

The Fertiliser Corporation of India Ltd has entered into a contract with the Girdler Corporation, Louisville, Kentucky, U.S.A., for design, fabrication and erection of the methanol plant, which will have an annual production capacity of 33,000 tons.

At the present time, India's total requirements for this chemical are met through imports. The plant's production will result in a foreign exchange saving equivalent to Rs. 4 crores a year, and will make available an essential raw material for the manufacture of a wide range of both industrial and consumer goods.

Argon gas, which is used primarily for arc welding, will be obtained as a by-product in the synthesis of ammonia, a principal ingredient of nitrogenous fertilisers. The argon gas recovery plant will have an annual production capacity of 116,820 cubic metres.

AIR CORPORATIONS

Progress Achieved

Fuller details now available show that both Air-India and the Indian Airlines Corporation continued to make steady progress during the half-year ended 31st December, 1963. They carried more passengers and cargo than during the corresponding period of 1962. The other highlights of the progress of civil aviation in India during this period were:

- (1) completion of the work connected with the development of Madras (St. Thomas Mount) airport so as to make it suitable for use by heavy inter-continental jet aircraft;
- (2) introduction of Boeings on Air-India's service on the Bombay-Madras-Singapore-Djakarta route;
- (3) introduction of Viscount aircraft on the Indian Airlines Corporation's services to Kabul; and
- (4) installation of radar aids at Calcutta and Madras.

In the second half of 1963, Air-India, on its scheduled services, flew 7,862,744 kilometres, carrying 106,363 passengers, 3,537,045 kilograms of cargo and 631,021 kilograms of mail, against 7,442,473 kilometres, 93,156 passengers, 2,832,338 kilograms of cargo and 710,040 kilograms of mail during the corresponding period of 1962. The capacity ton-kilometres operated was 141,790,935, against 130,495,633 in the same period in 1962. The figures of revenue ton-kilometres pertaining to passengers, cargo and mail for July-December, 1963, were 47,728,495, 19,586,521 and 3,959,311, against 40,231,872, 16,224,887 and 4,354,881, respectively, during the corresponding period in the previous year.

The overall revenue load factor during the period under review was 50.3 percent, against 46.6 percent in the corresponding period of 1962.

The Indian Airlines Corporation flew during July-December 1963, on its scheduled services, about 15,461,476

kilometres, carrying 439,360 passengers, 15,002,778 kilograms of cargo and 3,923,942 kilograms of mail, against 15,629,265 kilometres flown with 409,291 passengers, 16,565,254 kilograms of cargo and 3,497,620 kilograms of mail during the corresponding period of the previous year. The capacity ton-kilometres operated during the period were 64,030,532 against 60,017,777 during July-December 1962. The figures of revenue ton-kilometres pertaining to passengers, cargo and mail were 30,722,618, 8,487,380 and 3,949,890, against 28,016,896, 9,149,482 and 3,372,320, respectively, during the corresponding period of 1962.

U.N.O.

Aid from Special Fund

India is among the 42 developing countries and territories which will benefit from a new \$85.2 million aid programme approved at the Hague (Netherlands) on 18th June, by the governing council of the U.N. Special Fund. Two projects were approved for India. The other countries in the Near East and south Asia benefiting from the new programme include Afghanistan, Ceylon, Nepal, Pakistan, Turkey and the United Arab Republic.

The programme's 49 new development projects are in four broad categories: surveys of natural resources, training of specialists needed for economic and social development, agricultural and industrial research, and development planning.

One of the two projects approved for India will bring the Special Fund into a new area of activity, that is, advanced telecommunications. Assistance to India, at her request, will be provided in a programme of research and training in the use of satellite communications. Its purpose is to find the most economic means of improving India's telecommunication links with the rest of the world and to train telecommunication engineers and personnel in the advanced techniques of satellite tracking and relay.

Of the total \$85.2 million aid programme approved, the Special Fund will contribute \$39.9 million. Countries benefiting from the programme will contribute the remaining \$45.3 million.

The Fund depends on voluntary contributions of U.N. members. The United States has pledged to contribute \$4 for every \$6 contributed by other Governments, thus matching two-thirds of all contributions to the Fund. Last year, the U.S. contribution was nearly \$30 million.

The new Special Fund allocations bring to 421 the number of projects the U.N. has approved for assistance during the past five years at a total cost of almost \$919 million.

POLAND

New Trade Pact Signed

A message from Warsaw suggests that India has signed a new pact with Poland to govern trade between the two countries during 1965 and 1966.

As a result of the agreement, the volume of Indo-Polish trade is expected to increase to Rs. 38 crores, both ways, by 1966. There will be a considerable diversification of goods to be exported by India, including engineering goods, cotton textiles, and various items of manufactured goods. There will also be an expansion of various items of manufactured goods to Poland, particularly iron ore, manganese ore, mica, jute goods and tobacco. Poland is also interested in importing de-oiled linseed cakes from India. Poland will export to India steel, machine tools, textile machinery, and various chemicals.

FAIR OUTLOOK FOR U.K. ECONOMY

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Chancellor of the Exchequer, Mr. Maudling, claimed the other day that the Government's economic policy was working out precisely as expected. He said there was no sign of any runaway boom in consumer demand. On the contrary, there was some evidence to suggest, both from employment statistics and from information coming in from business men, that the pace of expansion was slackening a little. Mr. Maudling agreed that it was essential not to be complacent. "But I do not think that just because things are going well at present, we must assume that it cannot continue," he added. "There is as much danger in being afraid of success as there is in being over-confident."

The Chancellor's buoyant mood was aimed at an influential audience, the Institute of Municipal Treasurers and Accountants meeting in Bournemouth. These are the officials who are largely responsible for advising local authorities throughout England and Wales on financial policy. Although he did not mention it, Mr. Maudling was speaking in the context of the latest enquiry by the

Federation of British Industries, based on replies from 651 firms. The F. B. I. concluded that there was no indication that the increase in business activity would come to an end during the next four months. In other words, the business barometer seems to read "set fair" from now till the General Election.

"There is no doubt now at all about the expansion," Mr. Maudling asserted. "Business has been advancing right across the board, from consumer goods to steel and shipbuilding. At the same time, prices have remained encouragingly stable in the light of the increase in import prices." Claiming that it had been "a bold decision" to confine to £100 million the extra revenue raised by the Budget, the Chancellor gave two reasons for it: (a) over-caution could have brought a serious setback to expansion; (b) if further action is needed at any time to restrain the economy it can be taken. This was obviously a reference to the "regulator" by which purchase tax and other Customs and Excise duties can be varied at short notice.

The early stages of any vigorous expansion, he said, were bound to place a strain on the balance of payments. Industrialists were stocking up with raw materials for example, and these had to be paid for before they were turned into manufactured goods and exported. Mr. Maudling went on: "I have said on many occasions that I would regard it as perfectly sensible and proper to call upon our international sources of credit, such as the I.M.F., for assistance in such circumstances. The condition of doing so, however, is to make sure that our domestic economy remains sound. If this is so, and if we can contain costs and prices, then, with rising world trade, our exports should be capable of expanding to the level needed to pay for our long-term import requirements."

But there were aspects of the present situation which differed from previous periods of expansion. The reserves position was strong, and we could call upon greater and more varied help in support of sterling. The overseas sterling area was also in a much stronger position. At home, there was the great expansion of industrial capacity, with industry more conscious of the need to restrain costs and prices. There also was not the same opportunity as there has been in the past for an uncontrolled expansion of bank lending or consumer credit. He continued: "But although there are these reasons for confidence, we must watch the present situation constantly and with great care. There has certainly been a growing pressure on resources which has reflected itself, for example, in the shortage of skilled workers in many trades over large areas of the country."

Stable Prices

Prices, he said, had remained remarkably stable in the light of the increase in the price of imports, but pressure could begin to build up if care was not exercised. But this growing pressure on resources was the counterpart of the vigorous expansion of production and employment in the last 12 months. We must be

on our guard to ensure that the pressure did not get too strong. On the evidence available, the Chancellor did not see signs that the expansion had reached an unhealthy point. This, he said, was not the mood of industry, or of the stock markets. There was still a substantial amount of spare industrial capacity over a wide range of industry. Consumer credit was expanding fast, but it showed no sign of getting out of control. While retail business was doing well, there was yet no sign of any runaway boom. He added: "Finally, while the employment figures show a substantial increase in the demand for labour, we have not yet returned to the acute shortages which we saw, for example, in 1960-61. I think there is some evidence to suggest, both from the employment statistics and from the evidence coming in from business men, that the pace of expansion is slackening a little". It was nevertheless essential that we should not be complacent at this testing time, and that we should watch the rapidly changing situation with the greatest care. But just because things were going well, it was a wrong assumption to think they could not continue in that way. There was as much danger in being afraid of success as there was in being over-confident.

The great majority of British manufacturers are optimistic about business prospects both at home and in the export trade. This is the upshot of the latest enquiry made by the Federation of British Industries. Replies from 651 firms were analysed and compared with the views expressed on the last enquiry, in February. Business confidence was shown to have grown still further. The Federation reports that the growth of the total trade of manufacturing industries continues to expand more steadily. Half the firms still say that the shortage of orders or sales is likely to be a main factor limiting output in the next four months. A third expect to be limited by shortages of skilled labour, and one-sixth by general labour scarcity. There seem to be no significant shortages of raw materials or components, although conditions vary in different industries. Summing up, the F.B.I. says: "There is no indication that the increase in business activity will come to an end during the next four months".

Export Enquiry

Particularly striking are the results of the separate export enquiry. Ninety percent of the sample continue to be either as optimistic about export prospects as they were four months ago, or more so. A steadily increasing number of firms report rising export orders and export deliveries. These views are in welcome contrast to the poor export figures reported by the Board of Trade in recent months, and they seem to support the Whitehall view that the "underlying trend" of exports is still upward.

In view of this, the good trade figures for May came as a great relief to the financial markets. They bear out the opinion of the Board of Trade, the Bank of England, and the Chancellor himself that the underlying trend of British exports remains upward in spite of the setbacks in

CAPITAL, 25th June, 1964.

January and April. On this assumption, Mr. Maudling hinted last week that he may not have to intervene again this year to restrict demand. As long as exports go on expanding at a reasonable rate and the rise in imports does not get out of control, a deficit can be tolerated during this stage of the business cycle.

It would have been strange if export shipments had shown no improvements after the persistent reports from industry of increasing orders from abroad. In fact, the seasonally adjusted figures show exports in the period March to May, 2 percent higher than in December-February. In the first five months of this year, they were 4 percent more than the average for the year 1963. Imports in the March-May period were 1 percent more than in the previous three months—indicating a slow-down in the building up of stocks here. In the first five months of the year, they were 13 percent more than the average for 1963. If these trends continue for a while, as they seem likely to do, there is no reason to fear a critical deficit this year.

Trade Expansion

The simple difference between the import and export figures for May, seasonally adjusted, was £67 million, against £107 million in April. The Board of Trade, which describes the calculation as "misleading," estimates instead the "deficit of visible trade" in balance of payments terms. This fell from £53 million in April to £20 million in May. While these figures give no grounds for jubilation, they are compatible with allowing the expansion of the economy to continue for the present. The expansion itself seems to be responding to the built-in stabilisers which tend to come into operation when activity nears the limits of resources. The index of industrial production for April is estimated by the Central Statistical Office at 126 (seasonally adjusted). At this level, the index has shown no change since January. The Treasury says that the latest figures "seem to support the view that the pace of expansion may have been moderating." In the period February-April 1964, the index was 1 percent higher than in the previous three months.

That happens to be equivalent to an annual increase of 4 percent, which would be barely sufficient to produce the overall economic growth of 4 percent at which the Chancellor is aiming. Progress is, of course, different between one sector of industry and another. For manufacturing industries only—excluding mining, construction and utilities—the April index is at the same level as the revived March figure, and 1 point below the levels of January and February. This decline is attributed to a fall in the food, drink and tobacco group. In other manufacturing industries, there appears to have been no significant change in the level of production lately except for motor-vehicles, which registered a further rise in April.

Commenting on the May trade figures, Mr. Edward Du Cann, Minister of Trade, Board of Trade, said that the performance of British exporters in 1963 and in 1964 had been "superb". It had always been expected that during a period of economic expansion, imports would rise with the need for more materials in industry. What mattered was not the figures for any particular month but the trends. These were that the growth of imports had slowed down, and exports went on increasing. It was essential that exports should expand still further. Britain was doing very well, Mr. Du Cann said, but could and must do better.

NEW SELF-FINANCING SCHEME FOR IMPORTING MACHINERY

WITH a view to stimulating the exports of jute goods, various measures have been adopted by the Government of India. Special emphasis has been laid on the modernisation of mills in order to cut production costs and turn out better material. A new self-financing scheme has been launched. Under it, mills are allowed to pay for the cost of imported machinery and equipment, within a stipulated period, out of their own foreign exchange earnings. The allocation of foreign exchange has also been liberalised. The value of the licences granted for importing foreign machinery and equipment totalled Rs. 5.4 crores during the ten-month period ended January 1964. This amount represents about a three-fold increase, compared with the corresponding figure for 1961-62.

In the field of exports, long-term bilateral trade agreements with Russia and the east European countries contain a specific provision for selling Indian jute goods. A number of trade delegations have been sponsored to the east and west European countries, Africa and the U.S.A. for exploring export possibilities. Besides, market research and product development work are being carried on by the I.J.M.A. and the I.C.J.C. Overseas visitors to the New York World Fair have evinced keen interest in the Indian Jute Pavilion. Some of them have already sent out enquiries to the Government of India and the industry. The enquiries are for some new products as well.

Spurt in Gunny Offtake

An I.J.M.A. statement shows an increase in gunny offtake from the mills reporting to the Association from 98,800 tonnes in April to 104,500 tonnes in May. Exports rose by 4,400 tonnes to 75,600 tonnes and internal consumption by 1,300 tonnes to 28,900 tonnes. The offtake of hessian increased by 3,200 tonnes to 43,800 tonnes, of sacking by 1,500 tonnes to 42,400 tonnes, of carpet-backing cloth by 400 tonnes to 6,200 tonnes and of other goods by 600 tonnes to 12,100 tonnes. Exports of hessian rose from 35,600 tonnes to 40,100 tonnes, of carpet-backing cloth from 5,800 tonnes to 6,200 tonnes and of miscellaneous goods from 8,200 tonnes to 9,000 tonnes; exports of sacking, however, dropped from 21,600 tonnes to 20,300 tonnes. The increase in the internal consumption of heavy goods from 19,300 tonnes to 22,100 tonnes was partly offset by a fall in hessian offtake from 5,000 tonnes to 3,700 tonnes and in other goods from 3,300 tonnes to 3,100 tonnes.

In May 1963, the total offtake was 99,900 tonnes—40,900 tonnes of hessian, 42,000 tonnes of sacking, 6,100 tonnes of carpet-backing cloth and 10,900 tonnes of other goods. Exports absorbed 75,300 tonnes—37,700 tonnes of hessian, 23,200 tonnes of sacking, 6,100 tonnes of carpet-backing cloth and 8,300 tonnes of other goods. Internal consumption totalled 24,600 tonnes—3,200 tonnes of hessian, 18,800 tonnes of heavy goods and 2,600 tonnes of miscellaneous goods.

U.S. Imports of Hessian

Imports of hessian into the U.S.A. during the four-month period ended April 1964 declined to 332 million yards from 397 million yards for the comparable period of 1963. India's exports declined by 65 million yards to 280 million yards and Japan's by one million yards to 1.2 million yards. Pakistan's share rose fractionally

from 33.3 million yards to 33.7 million yards. In weight, the total imports declined from 120,420 tonnes to 107,051 tonnes. For the first four months of 1964, India's share of the total was 85 percent (91,009 tonnes), against 86.9 percent (104,695 tonnes) during the corresponding period in 1963.

Hessian Bookings

Out of a total of 57.55 million yards of hessian booked by the U.S.A. during April, India's share was 90.8 percent (52.25 million yards) and Pakistan's 8.6 percent (4.94 million yards). Of these, 23.68 million yards were for April delivery (23.23 million yards from India and 420,000 yards from Pakistan), 21.54 million yards for delivery in May-June (19.57 million yards from India and 1.82 million yards from Pakistan), and 12.33 million yards for further forward positions (9.46 million yards from India and 2.7 million yards from Pakistan). Forward purchases at the end of April totalled 97.86 million yards—76.76 million yards from India and 20.56 million yards from Pakistan. Of these, 60.24 million yards were for May-June delivery—50.01 million yards from India and 9.85 million yards from Pakistan. July and further forward contracts totalled 37.63 million yards—26.75 million yards from India and 10.71 million yards from Pakistan.

THE JUTE MARKETS

Manufactured Goods: Opening on a subdued note, the Calcutta gunny market flared up on Thursday on reports of an Indian Government tender for 7,800 bales of B Twills for

June delivery. Heavy goods and odd constructions became buoyant, especially for short and near positions. Hessian was barely steady in sympathy with the general trend. Overseas business in hessian was of a day-to-day nature, despite a hardening trend in ready and afloat burlap prices in New York. The rising price trend induced brisk short- and shipper-covering helping prices further after wide fluctuations. Conditions in the Calcutta port were not quite satisfactory. No doubt, waiting at Sandheads had been shortened, there was not much of a draft restriction and the berth position was easier. But the shortage of lighters still continued to cause worry. Enough cargo space was available. Most of it had to be filled up with tea. The end-June loader for River Plate destinations was believed to have done well. At the higher levels, most mills emerged as keen sellers and did fair business. On Monday, there was a short-lived modest rally following active covering induced by the threatened jute workers' strike in East Pakistan. From Tuesday reports of an increase in gunny despatches—particularly exports—during May helped sentiment further. But the top gains were partially trimmed towards the close when more mills wanted to sell. The hedge market continued to move in line with the general trend. Bears hastened to cover their open positions at higher prices and bulls booked profits at the bulges. But fluctuations were kept within limits so as not to attract the floor price restrictions imposed earlier this month by the East India Jute and Hessian Exchange Association. On Monday, interest revived

following brisk buying by some operators on reports of damage to the crops due to heavy rains in the lower Assam valley. The turnover was fair in heavy goods and moderate in hessian. The former closed with a comfortable gain and the latter with a minor gain, on balance. The closing undertone was firm in sacking and steady in hessian.

Wednesday's quotations were as follows:

	June	July	July-Sept.	Oct.-Dec.
40in. 7joz.	33.75	33.75	33.75	33.85
40in. 8oz.	36.40	—	—	—
40in. 10oz.	44.40	44.70	44.90	45.25
B Twills	114.85	114.90	114.60	114.60

A Twills	128.50	128.50	128.50	128.50

Raw Jute: The raw jute market opened on an easy note because of selling pressure from weak holders of lower-grade jute and mesta during the past week. Lack of mill interest and good crop reports made them nervous. They were inclined to discount the rates below the derivative levels. But mills and mill agents continued to stay out of the markets practically during the major part of the week. Some lucky deals were concluded for nominal lots of the new crop at levels higher than the official floor. With the approach of the due date, conditions were reversed. Since Monday mills and their agents started lifting the balance of their purchase quota of 190,000 bales, mainly in better grades of mesta at higher prices. Another factor stimulating the upward trend was the report of some damage to crops in the low-lying early-sown areas of the lower Assam valley due to widespread and heavy rains. Unlike the previous seasons, mills had not shown much interest in the new crop so far. Sellers, too, were not inclined to fill up their order books with transactions at a discount. Presumably, this was due to the stocks of fibre already held by mills on their own and on buffer stocks ac-

THE U. K. JUTE MARKETS

DETAILS OF PAKISTANI DUTY CUT AWAITED

(FROM OUR DUNDEE CORRESPONDENT)

SINCE the announcement that the duty of raw jute exported from Pakistan has been reduced by 50 percent, the position in Dundee has become obscure. There is still doubt when this reduction comes into force, and at the same time no statement has been made by the Jute Board about minimum export prices or E.P.C. values. It is understandable that a certain amount of delay is bound to take place, but business in raw jute is more or less at a standstill. As a result of this, many sellers have withdrawn from the market for the time being and others are offering at E.P.C. levels and state that the basis is the new export duty of Rs. 10 a bale. Dundee spinners are remaining out of the market until more news is received about the position.

Offers being made last week were at a higher level than before the Pakistani Budget, but this was mainly as a safeguard for sellers. Mill Lightnings were named at £10 10s, Mill Hearts at £9 8s and Grade Hearts at £83, c.i.f., U.K., for June-July shipment. Grade Tossa-2/3 was named at £122 and Grade Tossa-4 at £105 10s. Outport Tossa-2/3 was at £93 15s and Outport Tossa-4 at £83 15s, June-July. Offers of new crop were at £97 for Mill Hearts and at £84 for Grade Hearts, August-September. Dacca Tossa-6 was named at £108 10s, Outport Tossa-2/3 at £96 10s and Outport Tossa-4 at £86 10s, September-October. The general feeling was that prices would return to their former level in due course. Cuttings were at £59 for S.N.C. and at £52 for N.C. No offers of mesta were being made at present. The Siam jute market was quiet and offers of the new crop were being quite freely made here. Prices are at £76 for super A, at £71 for grade A, at £66 10s for grade B and at £61 10s for grade C, delivered mill, Dundee, for October-November shipment.

Little change took place in the Calcutta goods market during the past few days. Quotations are at 67s 4d for 40in. 10oz. and at 50s 7d for 74oz. a 100 yards f.o.b. Calcutta for June shipment, at 67s 10d and 50s 9d July-September and at 68s 6d and 51s October-December. B Twills were at 173s 1d, 173s 7d and 173s 9d for the respective shipment periods.

Commodity Markets

ANOTHER LARGE COFFEE CROP FOR INDIA

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE size of the last season's coffee crop is swelling beyond all previous expectations. Receipts from this crop into the Coffee Board's pool had reached 66,500 tonnes by the end of May, according to the latest available report from the Board. This was 12,248 tonnes more than the receipts from the previous crop in the same period a year ago. The highest harvest on record was in 1960-61 when the total yield came to 67,587 tonnes. There was only a gap of 1,087 tonnes between this record and the receipts into the pool of the 1963-64 crop to the end of May 1964. The inflow had not stopped fully. When the whole lot is received, there is a possibility of the actual size of the 1963-64 crop becoming larger than the 1960-61 crop. Even if it fails to break the previous record, the difference between the 1963-64 crop and the record harvest of 1960-61 will be insignificant.

The Coffee Board has sold for export 15,318 tonnes up to 3rd June, 1964, from the 1963-64 crop, and another 2,507 tonnes were earmarked for sale on 24th June. The internal release during the first five months of this calendar year was to the tune of 13,389 tonnes, or, on an average, 2,678 tonnes a month. On this basis, it does not appear that the Board will make available for internal consumption this year anything more than 35,000 tonnes, leaving a balance of a similar quantity for export. As against a production of 55,825 tonnes, India could export about 30,000 tonnes last year. India is one of the producers whose request for an increase in the original export quota allotted under the International Coffee Agreement has been partially conceded. She can now export 5 percent more than the original quota of 21,600 tonnes to the member countries of the agreement. The revised quota places the total world export during the 1963-64 coffee year which will end on 30th September, 1964, at 47,172,004 bags of 60 kilograms each.

The fourth plan target for natural rubber production will be 75,000 tonnes, if the recommendations of the

rubber product sub-committee of the working group set up for the plantation industry were accepted by the Central Government and the Planning Commission. The Committee has just finalised its report. The third plan target was 45,000 tonnes. This is expected to be surpassed by about 5,000 tonnes in 1965-66 because of the splendid performance of the new plants which are being brought under tapping.

India's export earnings from spices during the first 11 months of the last financial year registered a gain of Rs. 1.38 crores at Rs. 13.4 crores, when compared with that of the previous corresponding period. This was in spite of a fall of Rs. 81 lakhs in the earning from pepper which is her major export item among spices. These figures just made available by the Spices Export Promotion Council in Ernakulam disclose that export earnings from cardamom, chillies, curry powder and paste, turmeric, celery and some other seeds registered gains during this period when compared with that of the same period a year ago. On the other hand, there was a fall both in quantity and value to the tune of 2,189 tonnes and Rs. 81 lakhs in the case of pepper. The decline was mainly due to the lower offtake by the U.S.A. The value of export to that country suffered a loss of Rs. 1.24 crores. Exports to Russia, on the other hand, registered a smart gain of Rs. 63 lakhs. In ginger, there was a decline quantitatively by about 1,356 tonnes, but the earnings were higher to the tune of Rs. 11 lakhs.

CARDAMOM

Damage to Crop

Cardamom cultivation in south India, particularly in an area of Kerala, has been damaged extensively due to drought which was prolonged and severe this year. Consequently, this season's crop is expected to be smaller and its arrival also is likely to be delayed. Last season's crop

CAPITAL, 25th June, 1964.

itself was smaller at around 3,000 tons, against 3,390 tons of the 1962-63 season.

Cardamom, which had to suffer a price slump a couple of years ago, has been able to regain most of its lost ground. Green medium variety is now quoted at Rs. 17.50 to Rs. 19.50 a kilogram, against Rs. 13.50 to Rs. 16.50 a kilogram at the turn of the year and Rs. 16.50 to Rs. 18 a kilogram at this time last year. Certain control measures introduced by the Government of India with a view to ensuring a reasonable return to the grower and a fall in supply, are said to be the reasons for the recovery in prices that has started from last year.

In the meanwhile, there are reports that some of the important buyers abroad are annoyed over the increase in the price of the Indian cardamom. Saudi Arabia which took about one-third of India's export last year, is said to be considering measures to check the "speculative spurt" in the price of cardamom. If controls are introduced, then India's export trade with that country might be adversely affected, in the opinion of exporters in Bombay.

TEA

Export and Taxes

The chairman of the Nilgiri Planters Association, Mr. J. W. Lawrence, has pleaded, while addressing the latest annual general meeting of his association, on 18th June, that all teas exported should be given exemption from sales tax levy. He said that in the highly competitive world market this exemption would undoubtedly give a boost to this country's tea exports. The teas sold through the Cochin auctions are now liable to pay a sales tax to the Kerala Government. He said that the tea area in his district had increased by 20 percent to 60 percent in the past ten years. From about 13,000 hectares, 11 million kilograms of tea were produced last year, which would work out to 83 kilograms a hectare. This was a high yield for any district of this elevation. Nevertheless, the overall position of planters in the Nilgiris as producers and their return as investors had suffered a reverse. "Despite the increase in production and the better prices realised in sales, we have not improved our ability to earn more save more and invest more in India's industrial growth", Mr. Lawrence added.

CAPITAL, 25th June, 1964.

COMPANY AND PUBLIC NOTICES

(Situation Vacant)

RESERVE BANK OF INDIA

APPLICATIONS are invited for the following posts in the Reserve Bank of India:—

(A) POSTS AND SCALES OF PAY:

(i) Deputy Chief Officers, Department of Banking Operations: Rs. 1275-75-1575.

(ii) Banking Officers:—

Rs. 430-430-55-815
EB 55-925-60-1045.

Note: Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates in both the categories mentioned above will be eligible to draw local pay (at centres where it is admissible) and house allowance at rates prescribed from time to time. Dearness Allowance is also admissible to Category (ii) at rates prescribed from time to time.

(B) QUALIFICATIONS:

(i) Deputy Chief Officers: Applicants should have a minimum of 15 years' commercial banking experience out of which not less than five years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy.

(ii) Banking Officers: Applicants should (a) have a minimum of five years' commercial banking experience out of which not less than three years should be in a responsible position. Preference will be given to applicants with high academic qualifications who have made a special study of Economics, Banking, Commerce or Accountancy or (b) be Chartered Accountants with a minimum standing of five years.

Candidates who have applied for these posts in response to previous advertisements issued during the last three years need not apply again.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) AGE LIMITS AS ON 1ST JULY 1964:

(i) Deputy Chief Officers: Candidates should not be over 45 years of age.

(ii) Banking Officers: Candidates should not ordinarily be over 35 years of age but the age limit may be slightly relaxed in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or Bank draft on a Scheduled Bank payable at Bombay or by Postal

Order. The application fee is in no case refundable. In the case of candidates belonging to Scheduled Castes/Tribes, the fee will be reduced to one-fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the Graduate and post-graduate degree examinations and two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 25th July 1964.

5. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of a certificate to that effect from a competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India, and to undertake tours when required.

8. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's Offices.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post-Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing in any form will be regarded as disqualification.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

COAL COMPANIES

O. Po. F. and Dd. Indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. P. next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po. and Dd. Indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE AUTOMOBILE INDUSTRY

To rush men and material to threatened frontiers, motor vehicles are the quicker, more flexible, more economical means of transport.

In times of emergency, defence production may call for the mobilisation of suitable factories such as provided by the automobile and ancillary industries. They offer the scope for quick conversion of production to defence needs. They can turn out special types of vehicles to transport the army of men and their equipment more speedily, even to regions unapproachable by other means.

This is not the only way that the automobile industry serves the country's defence.

Each vehicle sold provides the Government with a large share of money in the form of taxes, duties and levies. An Ambassador car, for instance, contributes some 5140 rupees or one third of the "on the road" price of the car in Calcutta to the Government in this form. This revenue and those received from the ancillary industries that are largely dependent for their existence on the automobile industry provide to Government the wherewithal to meet a substantial portion of the cost of defence requirements.

supports national defence

CAR PRICE STRUCTURE :

Government taxes, direct and indirect :	33%
