or the so-called trade practices. Such an approach will not only lead to a scientific basis of price determination, but also place every cotton in its rightful position on the basis of its intrinsic quality, thereby meeting fully the present criticism about inappropriate classification of different varieties. It will also obviate all troubles of the type witnessed in the case of Deviraj cotton of Maharashtra last year and that of Digvijay cotton of Gujarat this year. Mr. Swaran Singh said that if the grower was to get the maximum share of the cloth consumer's rupee, it was of the utmost importance that all-out efforts should be made to establish co-operatives of growers for the marketing of cotton on a much wider scale in all cotton-growing States. The Minister also drew the Committee's attention to the indiscriminate mixing of different cotton varieties and said that the malpractices continued despite enactment of the requisite legislation against it by a majority of cotton growing States. He urged the Committee to make recommendations which would ensure the enforcement of anti-mixing and other legislation relating to the cotton crop. But these are essentially administrative matters and there is little that the Committee can do about them. The view is widely shared that the evil of mixing is due largely to controls over the past several years. It does not follow that all controls must go; but they should if they cannot be administered honestly and efficiently.

In his welcome address, the president of the Indian Central Cotton Committee, Mr. A. D. Pandit, emphasised the need for organising regulated cotton markets with a view to ensuring adequate facilities to the farmer in getting him the real value for his produce. He said that "all the work of the agricultural scientist will be set at naught if there is no improvement in the marketing and if the farmer is not enabled to get for himself a fair proportion of the increased return from the land out of his additional investment he makes on the land." Mr. Pandit said that there was no dearth of knowledge on agronomy, soil chemistry, irrigation and so on. But what was lacking was a proper organisation to make adequate use of the available knowledge. The I.C.C.C. president said that all the varieties grown in the country were not responsive to high doses of fertilisers and there were also physiological problems. Due to boll shedding, 80 percent to 90 percent of the bolls were lost. Such waste must be avoided if the yield is to be stepped up. The problem of raising the output of cotton, as of other agricultural commodities, is essentially one of administration, and not of raising farm prices,

Foodgrains Output and Imports

The Government of India has recently decided to seek an extension of the period for imports under the present P.L. 480 agreement (which expires at the end of June 1964) and the conclusion of a new P.L. 480 pact permitting the import of 15 million tons of wheat and rice during a further period of four years from July 1964 to June 1968. It is now clear that foodgrains production under the third plan was overestimated. The present indications are that it would be difficult to realise even the revised target of 95 million tons and that the output by the end of the third plan would not exceed 85 million tons. The rise in foodgrain prices has been mainly responsible for an increase of nearly 8 percent in the general index of wholesale prices in 1963-64, which indicates a much greater rise in retail prices. An increase in the supply of foodgrains is, therefore, absolutely necessary if the rising prices are to be checked. India imported over 4.50 million tons of wheat at a cost of Rs. 183 crores in 1963. Imports of wheat in 1964 are likely to exceed 5 million tons, involving a heavier cost. But if the Government of India wants to build a buffer stock of 4 million tons of wheat and 2 million tons of rice and remove the shortage of foodgrains, it will be necessary to increase imports even if it means the spending of foreign exchange.

But the country should not be complacent about the food problem by depending on imports for building up buffer stocks and for overcoming acute shortages in the immediate future. The problem, in the ultimate analysis, would be solved

satisfactorily only if the production of foodgrains is increased. Although it may not be possible to produce more than 85 million tons of foodgrains by the end of the third plan period, against the original target of 100 million tons and the revised plan target of 95 million tons, it should certainly be possible to produce 125 million tons a year by the end of the fourth plan period provided proper efforts are made from the very commencement of the plan. In order to secure an increased output, it will not only be necessary to increase the use of better seed and more fertilisers and to intensify efforts to increase the country's irrigation potential, but it will also be necessary to improve the organisational and administrative set-up for agriculture in the States. There is at present a multiplicity of officials in most of the States, at both village and higher levels. It is, therefore, necessary to bring about a proper co-ordination in the activities of different officials. Moreover, it should be possible to achieve increased productivity of land if at the village level all the persons in charge of the work are placed under a single authority and if individual officers at the block and district levels are made personally responsible for achieving higher levels of production. Another important thing—as the experience of the package programme has shown—is to reduce the official element in the programme for increasing foodgrains production and to create interest and enthusiasm among the cultivators.

The Government has placed reliance on the policy of price support for agricultural commodities and on maintaining some sort of a parity between the prices of agricultural commodities and those of goods consumed by the cultivator to provide incentives to the latter for increasing the production of foodgrains. But as U.P.'s Minister of Agriculture, Mr. Charan Singh, recently pointed out both these methods were unsuitable for India. So it is not surprising that they have failed to produce satisfactory results. Mr. Charan Singh thinks that in the "free market" which prevails in India, it is impossible for the Government to maintain a price parity between agricultural prices and other prices in the market in any worthwhile sense. Besides, the policy of agricultural price support cannot possibly work satisfactorily in a country where cultivators are in a majority. Such a method has succeeded in the U.S.A. where some 8 percent of the people live on land and the remaining 92 percent of the people have enough resources to subsidise the production of agricultural commodities.

Planned Neglect of Agriculture

Agriculture has been correctly described as the Cinderella of the plans, although much lip-service is paid to its key rôle in the development of the country. Investment in this sector has been not only inadequate, but due to poor co-ordination of the activities of the various agencies concerned, it has not been possible to get much value for the money spent on farming. When crops fail, the usual official answer is to blame the weather or some other natural calamity. In fact, as more funds have been spent on agriculture in the successive plans, the return has steadily declined. Mr. M. J. Edwards, president of the Madras Chamber of Commerce, pointed out in the course of his address at the Chamber's annual general meeting last week in Madras, that agricultural production in India improved at an annual rate of 2.8 percent in the first plan, at the rate of 4 percent a year in the second, but the average of the extra farm output during the first two years of the third plan was a negative figure, as production during these years had actually fallen by 1 percent.

The economy as a whole is also showing a similar trend. The average annual outlay in the first plan was Rs. 41.16 crores, Rs. 54.29 crores in the second, Rs. 175.9 crores in the first year of the current plan and Rs. 212.1 crores in the second year. Yet the increase in the national income shows a disturbingly declining rate. Mr. Edwards stressed that this unsatisfactory rate of progress called for a searching enquiry whether all the money that was being spent was expended wisely. Equally it is necessary to adopt realistic policies in the matter of industrial expansion. Mr. Edwards gave the example of fertilisers to suggest that although

private enterprise could do much more in this field it has not been doing so. In the first place, the Government allowed the private sector to enter this line rather late, and now, the latter is not allowed to take any worthwhile part in the distribution of the commodity. This inability of the Government to take timely and correct decisions has led to waste and lost opportunities in other fields also. In spite of its profession to create an environment of growth for industries, Mr. Edwards said, most business men in India and would-be foreign investors visiting the country complained of a sense of frustration. New industrial schemes take not months, but two to three years to obtain all the clearances necessary. Mr. Edwards cited the instance of certain parties who wanted to promote a project of Rs. 30 crores, to show how frustrating it could sometimes be to start an industrial venture in India. They applied to a statutory body for a lease of the land for erecting their plant, but were told that the maximum period for the lease could be only 25 years, at the end of which "the buildings and plant would pass to the body at their written down value." The matter was still being pursued in Delhi. The project concerned would have a great import-saving value for India, he added.

Red-tape in National Laboratories

The work of the National Laboratories has recently come in for scathing criticism from the survey and planning unit of the Council of Scientific and Industrial Research. The main charge, it appears, is that while the expenditure has more than doubled between 1958 and 1962, there has been a "consistent decline" in the number of research papers a worker during the period. Apart from this quantitative deterioration in output, there has also been a fall in the quality of papers. This is particularly disappointing when one remembers that the expenditure on the laboratories increased from Rs. 50 lakhs in 1946-47 to over Rs. 8 crores in 1961-62. The increased expenditure has obviously led to diminishing returns. Much of the taxpayers' money, which was to be spent on improving the facilities at the laboratories, has been wasted. When the laboratories were established, it was hoped that they would provide a fillip to research. But bureaucracy has spread its tentacles so fast that the spirit of research in the laboratories has been stifled, if not totally destroyed. There are many a Dr. Joseph in these laboratories who because of the lack of opportunities, have succumbed to red-tapism and bureaucracy.

The fact that in 1961-62, the expenditure on the laboratories exceeded Rs. 8 crores, against Rs. 3.5

crores in 1957-58 when the output a worker in terms of papers was the highest, is an eye-opener. The authorities of the laboratories should be asked why the expenditure was infructuous and to cut it down as early as possible. It is small consolation to taxpayers to be told that the publication of a number of papers in foreign journals indicates that the standard of some papers is going up. Another serious charge against the laboratories is that a good number of patents developed in them have not been properly used. It has, therefore, suggested that this aspect should be examined carefully with a view to ensuring proper planning and better use of the results of research.

It appears that nothing short of a complete overhaul of the administrative system of the laboratories will produce any worthwhile result. The spirit of enquiry—and not self-advancement through manoeuvres—should be encouraged if scientists and research workers are not to get frustrated. The Council has criticised the low pay of a large number of scientists and the system of promotions based on age and seniority. That the National Laboratories do not appreciate the services of qualified and promising young scientists and research workers is evident from the fact that only four scientists below the age of 30 get a salary exceeding Rs. 1,000. It is small wonder, therefore, that India's budding scientists and research workers consider patriotism as secondary to self-interest when they are asked to come back from abroad.

The Council has also pointed to the large number of grades in the laboratories "without any clear demarcation of work". Clearly, Parkinson's law is in operation there as in other departments of the Government. Moreover, the large number of B.Sc.'s and under-graduates pose a serious problem for the laboratories. In some institutes, the Council points out, their percentage is as high as 77.4. Their presence affects the atmosphere of the laboratories, and they cannot be easily promoted to higher ranks. It is also not possible to use them in research. But if this is so, why were they recruited in the first place and maintained for so many years, causing a needless drain on the resources of the laboratories?

Raising Small Savings Collections

Small savings collections during the first ten months of the current financial year have been satisfactory, but indications are that this has given rise to undue complacency in the Government. The special factors which have so far helped to swell small savings have now spent their force

REFRESHING DIFFERENCE

Constant supply of hygienically cool drinking water during the long hot days of summer and monsoon raises the efficiency and morale in any establishment.

AIR CONDITIONING CORPORATION LTD.
Calcutta Bombay New Delhi Madras

and there is every likelihood that the tempo of collections may be difficult to maintain during the coming weeks. Renewed efforts are, therefore, necessary to boost collections by introducing new ideas and schemes.

Collections amounted to Rs. 81.2 crores in the first ten months of 1963-64, compared with Rs. 37.09 crores for the corresponding period of 1961-62. Subscriptions to national defence certificates and defence deposit certificates have been substantial. The popularity of these certificates has increased greatly since the interest rates on them were raised. The decision to raise the interest rate on post office savings bank accounts has been amply rewarded since these deposits have risen to Rs. 12.1 crores during the first ten months of 1963-64 from Rs. 9.9 crores during the same period of 1962-63. The introduction of cheque facilities has also helped to increase the collection.

Two factors are responsible for the good response to small savings schemes. The people contributed to these schemes on patriotic grounds. However, the patriotic urge to invest in small savings has now diminished to a large extent as the sense of emergency has disappeared. Secondly, the increase in interest rates under various savings schemes has been helpful in attracting funds. But these rates have again become unrealistic and under present circumstances are rather unattractive. The market rates of interest have gone up steadily, and the trend has been given a boost by the recent credit squeeze introduced by the Reserve Bank. If small savings are to be promoted, it is essential to raise the interest rates on the various savings schemes in line with market standards. It should not be forgotten that competition for deposits, particularly from small savers, has been greatly intensified during recent months. Commercial banks are likely to increase

their rates of interest on savings bank accounts since the Reserve Bank has virtually asked them to do so. The competition from commercial banks has been the greater, because in addition to the interest which they pay savings accounts depositors now virtually enjoy all the facilities which are given to current account holders. If post office savings banks intend to compete with commercial banks they have to provide the same facilities as commercial banks do. It is, therefore, necessary for post offices to introduce the cheque system more widely. It needs to be pointed out that the services rendered to depositors by post offices are poor, and they should be immediately improved. The present practice of harassing depositors in the matter of signatures at the time of withdrawing money from savings bank accounts should be given up. Unless depositors are allowed to deposit and withdraw funds more freely without unnecessary bother, the popularity of savings bank accounts will not increase.

If the present rate of collection is maintained, the total for 1963-64 may amount to Rs. 116 crores or so, which rate is about 50 percent higher than that of collections in the first two years of the third plan. Encouraged by this performance, the Central Finance Minister, Mr. T. T. Krishnamachari, has budgeted for a total collection of Rs. 125 crores for 1964-65. Even assuming that this optimistic expectation is fulfilled, it is almost certain that the third plan target of Rs. 600 crores will not be achieved. The annuity scheme for the higher-income groups would adversely affect their contributions to small savings. They will be lucky if they do not have to cut their existing rate of savings. As far as the small income groups are concerned, the Budget has no doubt allowed them to take a bigger take-home pay, but the extra money will be, it is feared, more than absorbed

by the rise in the price level. If prices continue to rise, the margin for savings will substantially shrink. In the circumstances, the campaign for small savings should concentrate attention on tapping savings from the working classes and the rural people, since a substantial part of the benefits of planned development has gone to these classes.

Paint Delegation Leaves

A six-member paint delegation is visiting the Middle East and east African countries for a period of six weeks to assess the market possibilities for Indian paints. The delegation, which is sponsored by the Chemicals and Allied Products Export Promotion Council, is led by Mr. P. C. Chanda. It is felt that the Middle East and African countries offer a big market for paints and related products. Apart from studying the market, the delegation will try to effect on-the-spot sales of such items as decoration and industrial finishes, marine paints and pigments. The Council points to the progress in production and exports of paints. The industry consists of about 53 major organised units and about 250 to 300 small-scale ones. About Rs. 20 crores to Rs. 25 crores worth of paints are being produced annually by the organised units. Exports of paints, pigments and related products from India during April-December 1963 totalled Rs. 30.4 lakhs, against only Rs. 29 lakhs during the whole of 1962-63. It is expected that exports of paints and varnishes will rise to Rs. 40 lakhs during 1963-64. While India's main markets for paints and related products are Afghanistan, Burma, Ceylon, East and West Pakistan, her exports to the Middle East and African countries have increased substantially during the past three years.

THE CALCUTTA INVESTOR

A REMARKABLE feature in commercial and industrial development in Calcutta is the extreme difficulty which exists for financing relatively small concerns. There is nothing sounder—using the word in its financial sense—than the small enterprise if properly managed; and yet to raise money in Calcutta except in lakhs of rupees and through the medium of the big Agency Houses is almost an impossibility. There are no real financial brokers, and the first thing the ordinary capitalist does if approached is to consult his solicitor whose verdict, as often as not, founded on sheer ignorance of the particular business in hand, is naturally of very little value. There are people, it is true, in Calcutta who have the effrontery to pose as financial links between capital on the one hand and industry on the other; but as a rule, these individuals are of a kind which the man who wants to borrow money would assiduously give a wide berth to. Their ideas of interest are appalling; their views on brokerage and commission ditto, and in fact their whole point of view is that of the money-lender—and an extremely usurious money-lender at that. The peculiar part of the situation is that the capitalist is ready enough, it would seem, to put his money into concerns which call for lakhs of rupees; though many instances could be cited in which these enterprises enrich nobody except the Managing Agents. There are a number of industrial concerns in Calcutta which have not paid a dividend for years; and as far as I can see never will. This is a strange condition of affairs truly. Little sympathy, however, is to be felt for the investor. Approach him with a perfectly genuine but small concern wanting perhaps anything from Rs. 10,000 to 25,000 to finance it offer him a personal control and stake in the venture and he consults—his solicitor! If he doesn't do this, or possibly after he has done so, he wants a very big rate of interest, raise all kinds of quite impractical and unnecessary objections to the enterprise in question, declines, in fact, to part with his money at any price and then possibly straightaway puts his capital into something connected with a big name and has the profound satisfaction of getting no dividend for years on end. He richly deserves his fate. There are scores and scores of enterprises in Calcutta which only want a reasonable amount of capital to bring a handsome return to those who have the courage to invest in them. There may be no remedy in sight for this state of things; but it is just possible that what we have written may set people thinking.

A Ditcher's Diary

NOT FOR ONE MOMENT AM I PREPARED TO BELIEVE that students were responsible, wholly or even mainly, for the disgraceful display of hooliganism in colleges and schools in Calcutta last week. Unrest had been simmering for several days; anger over Bhudev Sen's death was growing, even if among some it was mainly simulated; and the students of this city have not always been the models of sobriety and discipline one would like them to be. The scale of the vandalism, however, and the uniformity of its pattern, suggest that the organisation behind the disturbances was more expert and more powerful than a disgruntled minority of students could, on their own, ever manage. After the communal rioting in January, there came explanations galore from Writers' Building that stern action had not been immediately possible because the police force was lacking in strength, organisation and leadership. Accompanying the explanations were assurances that, with the arrival of the army, and with a little reshuffling in the higher ranks of the police hierarchy, the deficiencies had been entirely corrected. Sooner than the Government might have expected, the past week's events have now shown the assurances for what they were worth. Soothed, evidently, by promises from the police, several schools and colleges were persuaded to hold classes, although they had sensed the danger of possible trouble; several, subjected to hooliganism in which students were not the only participants, thereupon found police protection rare, or forthcoming only after the damage had been done.

THE CONCATENATION OF EVENTS, STARTING WITH THE clashes in Belghoria on Monday and leading through the hartal on Tuesday of last week to the subsequent disorders in the university area, confirms a general impression that the root of the trouble lay in a deliberate display of governmental pusillanimity. The leaders of the West Bengal Government may or may not be moved by the fact that some are beginning to look upon them as sheep in wolves' clothing; others as mice wrapped in snake-skins. They may console themselves with the thought that insults and degradation are the stock-in-trade of politics; and, therefore, to be accepted with equanimity. It may still take a long time explaining why the lives and limbs of children, many far short of their teens, should have been endangered by a Government intent from the start upon a display of low cowardice. The question of instituting a judicial enquiry into the death of Bhudev Sen is, to my mind, of no great importance. I should be surprised if many of the gentlemen who organised last week's vandalism, osten-

sibly to renew their demand for an enquiry, considered the issue of any great importance either. The harsh truth, it is more than likely, may be that the question of whether a judicial investigation should or should not have been held came in handy as an excuse for settling other, unrelated political scores. The state of the Congress Party in India today is such that scores are not settled always with the opposition groups alone; no less often, they are settled among Congressmen themselves. Not all may have forgotten the reports published some weeks ago, for instance, of Congressmen lining up outside the courts' doors to offer bail for hooligans the Congress Government of West Bengal itself had taken into custody after the January riots. The minds and lives of students, in the final analysis, are shaped by the social and political milieu in which they live. The line of distinction between politics and gangsterism, never very clear, has over the years been increasingly blurred. In a country where the entrenchment of politics in education has become dangerously firm, can the steady encroachment of gangsterism now be a great surprise?

THIS YEAR MARKS THE QUATER-CENTENARY OF William Shakespeare's birth, and thanks to the enterprise of our local amateur dramatic groups, the event will by no means go unmarked. The Amateurs propose to present *Much Ado About Nothing* early in May and the Dramatic Club of Calcutta will stage *Othello* later the same month. In Britain, I gather, the Shakespeare industry—for that is what it has become—is all set for the most profitable season in its history, during which it plans to relieve over a million tourists, and many more native Britons, of a staggeringly large sum of money, much of it in foreign exchange. Not that there is anything wrong in that; Shakespeare would have heartily approved, being no insignificant operator in the money-making business himself. But voices have been heard—none of them from Stratford-on-Avon it may be added—protesting that all this should not be going on when the question of whether or not Shakespeare actually wrote those plays has still to be settled. This seems to me to be taking altogether too purist a view of things; if the problem were ever satisfactorily solved, it would be a miracle. In the meantime, nothing is more certain than that somebody wrote the plays, so why should it not be Shakespeare? And having chosen the most likely culprit, if only temporarily, well then, he has to have a quater-centenary some time just like the rest of us. I have always regarded the controversy over the authorship of the plays as something of an

irrelevancy. I suppose it is possible that Shakespeare did commission them from Bacon, who preferred to remain anonymous for reasons of his own; but certainly it does not seem likely anybody else was involved. I know, too, that this theory is supported by the fact that there is no record of Shakespeare having had any education at all; by the odd coincidence that not a single original manuscript has ever been discovered; and by the evidence derived from the five available examples of Shakespeare's signature, that he appears to have found writing something of an effort. There is also some doubt as to whether he ever married Anne Hathaway, who almost certainly did not live in the cottage in Stratford which bears her name. But all this apart, I cannot see what good it does to question something which can never be satisfactorily proved one way or the other. So, as far as I am concerned, good luck to the Shakespeare celebrations. What puzzles me, though, is that so much fuss is being made of one Elizabethan dramatist while another, Christopher Marlowe, who by an odd chance has his quater-centenary this year too, goes relatively unsung. At least in his case there are no doubts about authorship, any more than there are about the genius which went into his work.

IT HAS BEEN A FREQUENT COMPLAINT OF MINE THAT Calcutta crowds will persist in regarding the results of Test matches with much the same spirit of nationalistic rivalry as they would the outcome of a war. Especially does this seem to be true where the M.C.C. is concerned—as if defeating the British at cricket could expiate all the lingering humiliations of imperialism. What a lot of nonsense; cricket should be played for sport not politics, whatever they may say in Lancashire and Yorkshire. The Australians, of course, have always been the worst offenders in this business of taking cricket too seriously. To them it represents a test of endurance and efficiency rather than nationalistic supremacy, but the consequences can be equally dismal for those who like to watch the game for its own sake. That is why I am glad to see the Australian cricketing authorities have decided to discourage this unsportsmanlike dedication, and interestingly enough they recommend that their men should aspire to the same standards of entertainment as the West Indian cricketers do. Readers may remember that I quoted a correspondent from London, who wrote to me after last season's concluding Test there, to say that Britain had never experienced a more interesting series, thanks to West Indian exuberance. Not that I am suggesting cricket should become pure entertainment, although fortunately the professionalism of the West Indians and their obvious love of the game prevented that happening in Britain. But I am all in favour of it being played with at least some consideration for the feelings of the spectators. Anything else would be just too purist; and after all cricket must live. I suppose there is a happy

medium in all this. Cricket is a sophisticated taste at the best of times. To exaggerate either the nationalistic or the professional aspects is to reduce it to absurdity, as indeed would be any movement to introduce something resembling the Harlem Globe Trotters' approach to baseball. It is all a matter of good sense really. Which is one of the most appealing features of cricket. Perhaps because it makes so little sense itself, it does eventually seem able to evoke the most sensible feelings in men.

THE ANNUAL HOT-WEATHER EXODUS FROM THE TOP echelons of the Calcutta business world has been in train for some time, and will soon be approaching its climax with the retirement of Mr. A. R. Foster from the chairmanship of I.C.I. (India) early next week. Dick Foster's retirement follows the completion not only of thirty-one eventful years of service in India, but also, more recently, of an exceptionally successful tenure as president of the Associated Chambers of Commerce. The business world has for some years now acknowledged the force of the truism that the outlook for industry, and the harmony of Government-business relations, depend in no small measure on the personality of the Assocham president. Journalists are prone to believe that they would die if bluntness died; but, in India, business men know that, for them, success lies in the art of gentle persuasion and quiet diplomacy. Dick Foster's supreme achievement lay in the fact that he practised that art with great finesse and effectiveness. Circumstances have necessitated clearer recognition of the growing need for foreign private investment; of the interdependence of industrial and agricultural progress; and of the highly promising future for petrochemicals as catalysts in the new industrial technology. But if these shifts in attitudes conform in many ways to Dick Foster's own basic thinking, the coincidence cannot be dismissed as entirely fortuitous or negligible. Not the least of his achievements during the past few years has been his success in spreading a wider recognition of the need for productivity techniques and scientific management practices that must determine India's future as an industrial nation. But stoic seriousness and dedication to duty apart, Dick Foster enriched his life with a wide variety of human interests. The gay informality and lavish hospitality of the Fosters' home will remain as a byword in Calcutta society. He was a familiar figure on the golf course, at polo matches and at the Turf Club. From their many friends in those institutions, and from innumerable others outside, Dick and Nancy Foster will be taking with them the warmest good wishes for a long and happy retirement.

A CONSCIENTIOUS READER OF *Capital* COMPLAINED to me last week that the Diary is nowadays getting to be in the nature of an imprecise warbling on everything in general and nothing in particular. An engineer by profession, he offered the gentle reminder that we are now in the age of the technocrats; and journalists, if no one else, must move with the times. For a tentative offering, I have been in search of technical intelligence which might be of interest to faithful readers elsewhere who too may perhaps feel that this Diary has bereaved them of attention to the scientific achievements of the Nuclear Age. The following is my first gleaning by way of technical wisdom which I hope will be duly appreciated by those whose curiosity about linear accelerators may be slightly greater than my own:

An r.f. pulsed power of 1 MW at 202.5 Mc/s is fed into each of three high-Q resonators responsible for acceleration successively to 10, 30 and 50 MeV. At present one GHT6 thyratron pulses the final amplifier which supplies power to the second resonator (10 to 30 MeV) and another performs the same function for the third resonator (30 to 50 MeV). The modulator associated with the first resonator (0.5 to 10 MeV) is at present operated with an ignitron. The GHT6 valve will shortly replace this and another will serve the modulator used to pulse the common driver for all the final power amplifiers.

As the serials say, further instalments will follow. May readers survive long enough to enjoy them.

THE DITCHER

Guide for Investors

DISCOURAGING OUTLOOK FOR COTTON TEXTILES

(BY A SPECIAL CORRESPONDENT)

THE president of the Ahmedabad Millowners' Association, Mr. Kanchanlal Parikh, recently stated that the cotton mill industry had been crippled by the burden of increasing taxation and the rising cost of production. Unless an immediate reappraisal was made and steps were taken to save the industry, a majority of the units would find it hard to survive. Over the past three years, cloth prices have remained pegged under the voluntary price regulation scheme while the production cost has gone up by more than 11 percent. The assessable profits of the textile industry in Ahmedabad, said Mr. Parikh, had been reduced from Rs. 10.91 crores in 1961 to Rs. 5.20 crores in 1962 and for 1963, there was likely to be a further fall of 25 percent. What is true of Ahmedabad is true of the entire textile mill industry.

The working results of cotton textile mills in 1962, barring a few exceptions, showed a substantial setback over the previous year's performance. With mill cloth output down by about 150 million yards during 1963 and production costs continuing to rise, the industry's performance during 1963 cannot be expected to show any improvement; it could well be worse in most cases. The industry's export performance has, no doubt, recorded a small improvement, but exports have rarely brought prosperity to the mills. Exports are in fact being subsidised through various incentives. The basic truth is that the Indian cotton mill industry is fighting a losing battle with its obsolete machinery, the progress of modernisation being disappointingly slow. The industry has today some 14 million spindles and 200,000 looms, and the total outlay on the expansion, rehabilitation and modernisation programme is estimated at between Rs. 450 crores and Rs. 475 crores—a staggering sum indeed.

Mounting production costs have steadily undermined the industry's profitability which is already so low that it is unable to do full justice to shareholders, let alone build up adequate reserves for modernisation and rehabilitation. The increase in the contributions under the Employees' Provident Fund Act, the re-adjustment in the working class consumer price index and rising costs of stores, fuel and power and raw cotton, have placed further burdens on the industry which is consequently being obliged to take to newer and newer varieties in order to circumvent the voluntary price regulation scheme.

More from Dunlop Rubber

THE ordinary shares of Dunlop Rubber Co. (India) Ltd have dropped from Rs. 38.12 to Rs. 36.12 in spite of the decision of the Company to increase the taxable ordinary dividend from 15 percent for 1962 to 17.5 percent for 1963. At the present price, the yield works out to 4.8 percent. The stock market has reacted bearishly to the Company's decision to increase the authorised capital by Rs. 5 crores to Rs. 12.5 crores by creating 5 million unspecified shares

of Rs. 10 each. It is generally thought that these new shares have been created in order to issue rights shares in due course for raising funds to finance expansion. The market psychology has now changed, and any rights share issue tends to be interpreted bearishly rather than bullishly due to the deterioration in investment confidence. The Budget for 1964-65 has impaired the outlook for equities by two new measures. Firstly, a dividend tax of 7½ percent has been levied. Secondly, the Finance Minister has decided to impose capital gains tax on the issue of bonus shares.

There is, nevertheless, no reason to overlook the importance of Dunlop shares in the long term. The Company is a leading manufacturer of tyres, tubes and various other products. It has a record of excellent performance over many years. The shareholders have already been remunerated in the form of good dividends and by the issue of bonus shares. The financial position is very impressive. The ordinary share capital at present amounts to Rs. 4.50 crores divided into shares of Rs. 10 each. The preference share capital amounts to Rs. 70 lakhs divided into shares of Rs. 100 each. According to the balance-sheet for the year ended December 1962, reserves and surplus amount to Rs. 5.32 crores and fixed assets stand at Rs. 6.09 crores.

Elgin Mills Cancels Bonus Share Issue

THE earlier support for the ordinary shares in the Elgin Mills Co. Ltd. Kanpur, has disappeared with sellers predominating. The price of the scrip has dropped from Rs. 22.50 to Rs. 21.75 due to the disappointment over the Company's decision to cancel the issue of bonus shares in view of the Budget proposals. It was earlier decided to issue bonus shares in the proportion of one bonus share for every two shares held by capitalising reserves, and an application was submitted to the Controller of Capital Issues for his consent. It is reliably understood that the directors have now decided to withdraw the application.

The decision has obviously been provoked by the proposal of the Central Finance Minister to levy capital gains tax on bonus shares. This new levy, combined with the existing tax of 12½ percent on bonus shares, has been considered burdensome. Since the issue of bonus shares under present conditions will do good neither to the Company nor to shareholders, it is difficult to criticise the decision.

The move is nevertheless unfortunate from the standpoint of healthy company management. It should not be forgotten that a good company generally ploughs back profits into the business to conserve and employ funds for the use of the business. The shareholders concerned make the sacrifice by not taking bigger dividends, so they hope to be rewarded in due course by the issue of bonus shares. As a result of the use of reserves over a number of years, the gap between the share capital and assets, particularly fixed assets, becomes larger. At a stage when the fixed assets of a company get out of

alignment with the share capital, it is a sound principle to increase the latter by issuing bonus shares through the capitalisation of reserves. Elgin Mills is one such Company. Its share capital amounts to Rs. 78.20 lakhs divided into ordinary shares of Rs. 10 each to the extent of Rs. 63 lakhs and preference shares of Rs. 100 each for Rs. 15.20 lakhs. Reserves amounted to Rs. 2.11 crores as on 30th September, 1962. Fixed assets stood at more than Rs. 95.40 lakhs. So the issue of bonus shares, as was earlier decided upon by the directors, was more than justified.

Kasturbhai Textile Group Results

CONSIDERING the sad plight of the industry and with the profit margin gradually squeezed by the rising cost of production, the working results of the Kasturbhai group of textile mills for 1963 can be regarded as fairly encouraging although they have failed to please the stock market. Of the seven mills, namely, Asoka, Arvind, Arun, Ahmedabad, New Cotton, Nutan, Raipur and Saraspur, Arun, Nutan and Saraspur have reported a modest setback in the gross profit; others have registered small gains. Except for New Cotton, sales have been maintained or have shown a rise. Of these seven mills, Asoka has raised the dividend from Rs. 24 to Rs. 27 a share; elsewhere, the dividends have been maintained at the previous year's levels. Ahmedabad New Cotton has, in addition, announced a rights issue on the basis of one share at par for every two held.

The Asoka Mills has fared the best. Its sales are up from Rs. 2.53 crores to Rs. 2.63 crores and the gross profit has risen from Rs. 25.82 lakhs to Rs. 39.63 lakhs. Improved results are due primarily to the renovation and modernisation of the mills and the change in the pattern of manufacture made during the year. The Company spent Rs. 11.58 lakhs on the installation of machinery and equipment and extension of building under the reorganisation programme. The Company has been permitted to install additional 3,402 spindles and 96 looms raising the total to 44,770 spindles and 979 looms. Of the 96 looms, it has already installed 26 looms. Appropriations of the year's profit include depreciation Rs. 20.39 lakhs (against Rs. 20.28 lakhs), development rebate Rs. 5.77 lakhs

(against Rs. 5.82 lakhs), taxation Rs. 4.50 lakhs (against nil) and donation Rs. 1.22 lakhs (against Rs. 65,000). The proposed dividend absorbs Rs. 8.07 lakhs (against Rs. 7.71 lakhs).

Sales of Arvind Mills are virtually unchanged at Rs. 4.40 crores, against Rs. 4.39 crores, and the gross profit is slightly higher at Rs. 1.07 crores, against Rs. 1.01 crores. The dividend has been maintained at Rs. 30 a share. Allocations include depreciation Rs. 36.57 lakhs (against Rs. 32.29 lakhs), statutory development rebate Rs. 9 lakhs (against Rs. 12 lakhs), taxation Rs. 22 lakhs (against Rs. 24.77 lakhs), donation Rs. 2.68 lakhs (against Rs. 1.54 lakhs) and dividend Rs. 30 lakhs (the same).

In spite of an increase in the sales from Rs. 1.65 crores to Rs. 2 crores, the gross profit of Nutan Mills is slightly lower at Rs. 21.72 lakhs, against Rs. 22.31 lakhs. The dividend has been maintained at Rs. 22 a share. Appropriations include depreciation Rs. 8.13 lakhs (against Rs. 7.62 lakhs), development rebate Rs. 1.44 lakhs (against Rs. 1.36 lakhs), taxation Rs. 6.48 lakhs (against Rs. 6.99 lakhs), donation Rs. 87,450 (against Rs. 54,495), preference dividend Rs. 23,000 (the same) and equity dividend Rs. 5.49 lakhs (the same). The directors have had to withdraw Rs. 2.20 lakhs from the reserves to meet part of the dividend liability.

Arun Mills has maintained the dividend at Rs. 24 a share. Sales are slightly higher at Rs. 2.48 crores, against Rs. 2.45 crores, and the gross profit is a little lower at Rs. 40.85 lakhs, against Rs. 41.98 lakhs. The provision for depreciation has been reduced from Rs. 8.77 lakhs to Rs. 8.07 lakhs, and development rebate reserve gets Rs. 1.10 lakhs, against Rs. 2.25 lakhs. The amount set aside for donation is higher at Rs. 1.41 lakhs, against Rs. 76,156. Taxation accounts for Rs. 15.19 lakhs, against Rs. 14.70 lakhs and allocation to general reserve has been maintained at Rs. 4 lakhs. Preference dividend absorbs Rs. 50,000 (the same) and equity dividend Rs. 7.18 lakhs (against Rs. 7.16 lakhs).

The sales of Saraspur Mills have gone up from Rs. 2.22 crores to Rs. 2.68 crores, but the gross profit is a little lower at Rs. 25.01 lakhs, against Rs. 26.04 lakhs. The dividend has been maintained at Rs. 24 a share. Allocations of the year's profit include Rs. 9.69 lakhs (against Rs. 9.28 lakhs) for depreciation, Rs. 65,000 (against Rs. 3 lakhs) for development rebate, Rs. 1.13 lakhs (against Rs. 61,000) for donation, Rs. 7.83 lakhs (against Rs. 7.35 lakhs) for taxation and Rs. 7.42 lakhs (the same) for preference and equity dividends. The directors have withdrawn Rs. 2.90 lakhs from general reserve to meet part of the dividend liability.

In spite of a slight fall in the sales from Rs. 2.10 crores to Rs. 2.07 crores, the gross profit of the Ahmedabad New Cotton Mills has recorded a good rise from Rs. 19.85 lakhs to

KARNIK MAGNETIC CHUCKS AND EQUIPMENT

Armstrong Smith Ltd.

P. 17, MISSION ROAD, CALCUTTA 23

Sarin burns the midnight oil...looking into oil

The house is quiet. The family asleep. A neighbouring clock chimes midnight. One lone light glows in the room. The man in the chair barely stirs at the stroke of twelve. He is absorbed in a book on oil technology. His name is Jaswantra Sarin. His job: Sales Engineering Representative with Burmah-Shell, Calcutta. His function: to provide technical service to fuel oil and lubricants customers.

THERE'S A GOOD CASE FOR FUEL OIL

...and Sarin talks about it convincingly. Actively engaged in fuel development work, he has played a part in introducing to India a major technological break-through: the use of fuel oil in blast furnaces—an advance in technique and application. Sarin advises customers on correct lubricants and fuel oil selection; the use of equipment. He investigates fuel and lubrication problems as they arise.

BURMAH-SHELL are People in the service of the People

TODAY, AS EVER, PEOPLE LIKE SARIN ARE WORKING FOR YOU

Sarin frankly admits to being absorbed in his job. 'Next to my job,' he says, 'I love driving.' The call of the open road finds Sarin and his family off at weekends to picnic spots around Calcutta.

Sarin and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work...working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

Rs. 21.82 lakhs. The dividend has been maintained at Rs. 20 a share. The directors also propose to issue 10,000 equity shares at par. These are being offered to existing shareholders in the ratio of one share for two held. Appropriations of the year's profit include depreciation Rs. 14.88 lakhs (against Rs. 10.96 lakhs), development rebate reserve Rs. 5.90 lakhs (against 5 lakhs), taxation nil (against Rs. 2.10 lakhs), donation Rs. 82.951 (against Rs. 53.900), preference dividend Rs. 49,000 (the same) and equity dividend Rs. 3.99 lakhs (against Rs. 3.97 lakhs). The directors have had to withdraw Rs. 5.10 lakhs from general reserve.

The Raipur Mills has made a gross profit of Rs. 44.16 lakhs, against Rs. 39.96 lakhs in 1962. The dividend has been maintained at Rs. 24 a share. The provision for depreciation has been raised from Rs. 8.76 lakhs to Rs. 11.96 lakhs, and that for the development rebate from Rs. 3.10 lakhs to Rs. 5.45 lakhs. A sum of Rs. 10.50 lakhs (against Rs. 12.85 lakhs) has been set aside for taxation and another Rs. 1.43 lakhs (against Rs. 1.62 lakhs) has been provided for short provision for tax concerning the previous year. Donations account for Rs. 1.16 lakhs (against Rs. 67,000) and dividends absorb Rs. 12.45 lakhs (the same).

on 12th March, 1964. The production of crude oil amounted to 2.4 million barrels, against 2.3 million barrels.

The subsidiary Company, Pakistan Oilfields Ltd., has produced 307,552 barrels, against 182,166 barrels. The oil exploration programme is continuing. It has been mentioned that the policy of the Government of Pakistan is to encourage the use of indigenous fuel, so it has actively supported the formation of a new Company called Sui Northern Gas Pipelines Ltd. The object of this Company is to transport Sui gas to northern Pakistan. In view of the wishes of the Pakistani Government to control all indigenous gas distribution, it has been decided to sell the gas pipelines to Sui Northern for Rs. 45 lakhs under an agreement, which guarantees Attock Oil an outlet for all its gas at the existing ex-field price, but subject to a reduction for quantity. The system has already been taken over by Sui Northern from 1st January, 1964.

Bank of India Expanding

THE chairman of the Bank of India, Mr. A. D. Shroff, has devoted the major part of his annual statement to the shareholders to the controversy over the nationalisation of commercial banks. This is hardly surprising because despite the Central Finance Minister's firm stand

against the bank takeover, uncertainty continues about the future of the banking industry due to the increasing political pressure for the nationalisation of banks. Mr. Shroff says that a close study of the use to which bank deposits have been put will convince any objective student of the subject that commercial banks in India have been responsible for providing substantial resources, for both working and medium-term capital to industry, trade and commerce. Mere nationalisation of banks will not automatically provide additional funds for the development of the country. As long as the private sector is to continue to exist and play an important role in the economic life of the country, an agency has to be provided for the smooth running and expanding activities of the private sector. The most effective agency for that, Mr. Shroff says, is the commercial banks. In recent years, the latter have started playing an important rôle in providing medium-term finance to a number of industries. Besides, banks are making no small contribution towards Government, local self-Government bodies and public utility services in their borrowing programmes.

Mr. Shroff has refuted the allegation that big commercial banks cater only to big business and that they are owned and controlled by a limited number of persons. Of the total number of about 11,500 borrowers of the Central Bank as on 31st Decem-

ber, 1963, about 4,450 borrowers and sanctioned limits up to Rs. 10,000 and about 4,970 had sanctioned limits between Rs. 10,000 and Rs. 100,000. This means that nearly 82 percent of the total number of borrowers of the bank had sanctioned limits below Rs. 100,000. Of the over 12,000 shareholders of the bank, 11,179 are said to own shares between one and 100 each. Again, under the recent amendments to the Banking Companies Act, the voting rights of an individual shareholder, irrespective of his holding, are restricted to only 1 percent of the total voting rights. Mr. Shroff has expressed the hope that ultimately wiser counsels will prevail and that the political demand for nationalisation will yield to a better appreciation of the vital rôle played by banks in the developing economy of the country.

Referring to the operations of the Bank of India in 1963, the chairman says that they were quite satisfactory, with deposits increasing from Rs. 157.1 crores to Rs. 173.9 crores and advances moving up from Rs. 127.2 crores to Rs. 135.9 crores. After making provision for taxation, the profit of the bank increased from Rs. 1.11 crores to Rs. 1.25 crores. The bank opened 37 new branches in different parts of the country, bringing the total number of branches to 137. It has a programme of opening 20 to 25 new branches during 1964. Recently, the directors have decided to make an experiment of providing

Progress of Indian Iron Expansion Scheme

THE price of Indian Iron shares has dropped to Rs. 24.48 mainly due to the general deterioration in sentiment. The corporate news has in the meantime been fairly encouraging. The Company has launched a large-scale expansion scheme for raising the production of coal in the Jharia area from 240,000 tons to 1.5 million tons a year. The entire production will be used in the Company's steel works in Burnpur. The World Bank has agreed to provide the necessary foreign exchange for the project. An order worth more than £13 million has been placed with the General Electric Co of India (Private) Ltd. in conjunction with the G.E.C. (Engineering) Ltd. A substantial part of the winding installations will be executed locally while the remainder will be made in the U.K.

The installation will comprise all the necessary equipment to handle coal, materials and men. The G.E.C. expects to begin delivering the equipment towards the end of 1964, but the completion of the entire order may be spread over three years. Two sites, namely, Jitpur and Chasnalla in the Jharia area, are likely to benefit from the expansion scheme. The coal from mines in Jitpur will be transported by an aerial ropeway to a coal-preparation plant in Chasnalla, where together with the Chasnalla colliery coal, it will be washed and graded. Later it will be transported by an aerial ropeway over a long distance to the Burnpur steel works.

Prospects for Attock Oil

IN a statement issued by the Attock Oil Co. Ltd., it has been stated that the profit for the year ended December 1963, may not be as large as that for 1962, although production has been about 3 percent higher. The selling prices of the Company's products were reduced on 1st August, 1962, by the elimination of the remaining freight protection. The directors have declared an interim dividend of 1s. free of U.K. income tax, for each £1 unit of stock payable

Goodlass NEROLAC Paints

What a smooth, glossy appearance Goodlass Nerolac paints give! The colours go on so easily...resist all kinds of weather...bear up under wear and tear...to retain their beauty for years. It's taken decades of research to do it...and now you have the perfect paints... Goodlass Nerolac paints!

Acropolis, Athens

Here's how on your next trip to Europe or North America, you can avail of reliable KLM's jet services and see Athens on your way, at no extra fare!

Athens, one of the 44 key cities covered by KLM's network of air routes in Europe, is now served direct by both the KLM's flights from India. A nice opportunity to visit this increasingly popular city for a while, before continuing your journey. Read on for more interesting KLM facts...

1. A KLM DC-8 jet leaves for Europe on Saturdays from Calcutta, on Tuesdays from Delhi and on Mondays, Tuesdays, Thursdays, Fridays, and Saturdays from Karachi.

2. KLM's flight from Calcutta leaves on Saturday at 20.30 hrs., arriving Athens on Sunday 05.30 hrs.

3. From Athens, this flight goes to Zurich on its way to Amsterdam, providing you with yet another attractive possibility! Arrival: Zurich Sunday at 08.00 hrs. Arrival: Amsterdam Sunday 09.55 hrs.

4. KLM's flight from Delhi to Amsterdam leaves on Tuesday at 21.55 hrs., arriving Athens on Wednesday at 05.55 hrs. Arrival: Amsterdam (via Frankfurt) Wednesday at 10.05 hrs.

5. Both these KLM flights from India can easily be connected at Karachi by passengers from Bombay and also from Delhi and Calcutta.

6. In Amsterdam, these services link up with daily non-stop KLM flights to New York and with frequent flights to Houston, Montreal and Mexico City.

7. On the Amsterdam-New York route, KLM will have 24 DC-8 jet flights a week during the peak season—17 non-stop, 5 via Glasgow and 2 via Shannon.

8. Between Amsterdam and Montreal, KLM operates five/six DC-8 jet flights a week, with three of them continuing to Houston and Mexico City.

Attractive KLM facilities

9. KLM has its own air-conditioned resthouse at Karachi airport, called "Midway House". It has spacious, comfortable rooms with shower baths and provides many facilities such as a supervised nursery, a barber shop, a souvenir and carpet shop and a floodlit tennis court. The service there matches the standards of a good European hotel.

10. KLM offers many interesting side-trip possibilities. For example, on the normal round-trip fare from Calcutta, Delhi or Bombay to London, you can enjoy a side-trip to Copenhagen or Paris.

ATHENS—KLM's new gateway to Europe

Things to do in Athens: See the Acropolis by moonlight (a thrilling experience!); the Benaki Museum by daylight; go to a "taverna" (small typically Greek restaurant), try "Cocoretsi" (Greek speciality) or crisp "Kalamaria" (fried squid), drink "ouzo" (aniseed flavoured Greek aperitif); take a stroll during a cool summer evening throughout the picturesque winding streets of the old Plaka quarter and if you happen to be there during August/September, in time for the Festival of Athens, attend the remarkable performances of ancient drama, concerts and ballets.

11. Make your choice of a number of attractive organised tours, planned to provide visitors to Greece with comfortable and easy means of access to every point of interest in the country. Contact KLM for full particulars regarding the number of days involved and the routing.

12. From Athens, many important cities in Europe and North America are served direct. For example, London, Madrid, Paris, Rome, Vienna, Zurich, Frankfurt, Brussels, Geneva, Copenhagen, Milan, Munich, Amsterdam, New York, Detroit, Chicago etc.

13. KLM's multi-stopover plan lets you make more than one stop en route your final destination at no extra fare. For instance, if you are flying from Delhi to New York, you can visit Rome,

Frankfurt, Dusseldorf, Brussels, Paris, London, Amsterdam—all for the price of your ticket to New York. Ask KLM for details of other stopover possibilities.

14. When flying via Amsterdam, you can do a lot of interesting things at the airport. Shop for luxury bargains at the Tax-Free Shopping Centre. Buy a tax-free car at ShipSide Showroom. Take a Minotour of Amsterdam. Visit the airport's fascinating aeronautical museum.

15. All KLM flights to Europe from Calcutta, Delhi and Karachi arrive in Amsterdam next morning, offering immediate connections to London, Paris, Brussels, Geneva, Hamburg, and many other cities in Europe and also to New York.

16. Your Travel Agent will tell you more about the advantages of flying KLM. Get in touch with him or contact the nearest KLM Office, Calcutta—7, Chowringhee Road; Delhi—9A, Connaught Place; Bombay—Taj Mahal Hotel.

For free travel information on Athens, Zurich, Frankfurt, Amsterdam, New York or any of the 104 cities served by KLM in 68 countries, write to KLM, Calcutta.

banking facilities through mobile banks, to start with, in Gujarat and Delhi.

Ambica Mills Sales Up, Profit Down

THE directors of Shri Ambica Mills have deferred a decision on the dividend for 1963 as they wish to await the Finance Minister Mr. Krishnamachari's verdict on various representations against the tax proposals, especially the dividend tax. The Company's working results for 1963 show a setback from the previous year. In spite of some 13 percent increase in the sales from Rs. 5.56 crores to Rs. 6.29 crores, the gross profit is lower at Rs. 1.41 crores, against Rs. 1.50 crores. Appropriations include depreciation Rs. 19.39 lakhs (against Rs. 15.15 lakhs), development rebate reserve Rs. 11.13 lakhs (Rs. 4.67 lakhs), taxation Rs. 57.40 lakhs (against Rs. 67.20 lakhs), donation Rs. 1.03 lakhs (against Rs. 6.80 lakhs) and general reserve Rs. 45 lakhs (against Rs. 13.53 lakhs).

National Rubber to Issue Rights

NATIONAL Rubber Manufacturers Ltd has increased its profit from Rs. 11.41 lakhs for 1962 to Rs. 22.44 lakhs for the year ended December 1963. Bringing in Rs. 75,633, there is an available balance of Rs. 23.20 lakhs for distribution. The taxable ordinary dividend has been increased from 8 percent to 10 percent to absorb Rs. 5 lakhs. The yield amounts to 8 percent at the present price of Rs. 12.50 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 53.265 (against Rs. 46.307), taxation Rs. 11.80 lakhs (against Rs. 5 lakhs), dividend equalisation fund Rs. 2.50 lakhs (against Rs. 1 lakh) and general reserve Rs. 2 lakhs. The carry-forward amounts to Rs. 58,629. The Company has been granted an industrial license to expand the production of bicycle tyres and tubes, v-belts and fan-belts. It will set up a factory to reclaim rubber. It proposes to issue rights ordinary shares for Rs. 50 lakhs in the proportion of one new share for every share held on par to finance expansion.

Arbuda Skips Dividend

ARBUDA Mills—a subsidiary of Shri Ambica Mills—has again skipped the dividend for 1963 in order to reduce the brought forward losses. The Company's working results for 1963 are, however, better than in 1962. Sales have gone up from Rs. 2.07 crores to Rs. 2.49 crores and the gross profit is up from Rs. 16.98 lakhs to Rs. 17.51 lakhs. After providing Rs. 8.09 lakhs (against Rs. 7.66 lakhs) for depreciation, Rs. 1.27 lakhs (against Rs. 1.77 lakhs) for development rebate reserve and Rs. 31.450 (against Rs. 63,000) for donation, the net profit amounts to Rs. 7.82 lakhs, against Rs. 6.92 lakhs in the preceding year. This has been carried forward to reduce the past losses to Rs. 26.01 lakhs.

Krishna Industrial Corporation Repeats

THE working of Krishna Industrial Corporation Ltd for the year ended September 1963 has resulted in a net profit of Rs. 3,75,815, compared with Rs. 3,85,843. With the amount of Rs. 2,389 brought forward, and

with Rs. 59,307 being excess provisions written back, the total available for appropriation comes to Rs. 4,37,511. Out of this, the provision for tax amounts to Rs. 1,70,000 (against Rs. 1,85,000). Short provision for taxation in the previous year amounted to Rs. 10,548. Contribution to the National Defence Fund amounts to Rs. 5,000. A sum of Rs. 50,000 is transferred to general reserve (against nil). A sum of Rs. 2,01,750 is transferred to dividend reserve (against Rs. 2,52,000). The balance of Rs. 213 is carried forward. The directors have recommended a dividend of 8 percent (the same), and this dividend will be paid out of the dividend reserve.

The directors' report says that due to keen competition from new producers of carbon dioxide, the profit from the Vuyyuru unit has undergone a further reduction. A sum of Rs. 1,11,312 was received during the year from the Jeypore Sugar Company Ltd, being 25 percent of the profits of their Chagallu unit for the year ended June 1963, due to this Company, according to the arrangement. The erection of the Company's sulphuric acid and superphosphate plants in Nidadavole has been completed and this unit, it is expected, will go into production during March 1964. The workshops section of this unit worked to full capacity and contributed Rs. 1,38,713 to the profits of the year of account. Since the close of the financial year, the Company's appli-

cation to the Andhra Pradesh State Financial Corporation for a loan of Rs. 20 lakhs was sanctioned.

Bank of Tokyo Earns Less

THE Bank of Tokyo Ltd has earned a profit of Rs. 5.73 lakhs for the year ended December 1963, compared with one of Rs. 6.04 lakhs for 1962. Interest paid on deposits and borrowings rose from Rs. 46.63 lakhs to Rs. 59.84 lakhs while interest and discount earned improved from Rs. 77.73 lakhs to Rs. 91.83 lakhs. Deposits rose from Rs. 4.74 crores to Rs. 9.89 crores. Advances increased from Rs. 11.68 crores to Rs. 14.87 crores and investments from Rs. 1.33 crores to Rs. 3.35 crores. Cash stood at Rs. 1.02 crores, against Rs. 63.94 lakhs.

Bank of Baroda Profit Up

THE Bank of Baroda Ltd has declared a taxable dividend of 20 percent, including an interim of 8 percent, for the year ended December 1963. The profit has risen from Rs. 63.19 lakhs to Rs. 75 lakhs. Interest and discounts earned improved from Rs. 5.07 crores to Rs. 6.12 crores and interest paid on deposits and

borrowings rose from Rs. 2.97 crores to Rs. 3.47 crores. Deposits amounted to Rs. 140.17 crores, against Rs. 113.96 crores. Cash rose by Rs. 4 crores to Rs. 14.78 crores. Investments were up from Rs. 26.09 crores to Rs. 30.60 crores and advances jumped from Rs. 84.79 crores to Rs. 105.81 crores. The bank opened several branches during 1963. The total number of branches amounts to 189 in India and 15 in foreign countries. The bank took over the banking business of the Umbergaon People's Bank (Private) Ltd on 1st January, 1964. Out of the profit, the reserve fund is allocated Rs. 15.50 lakhs (against Rs. 12.75 lakhs), special reserve Rs. 20 lakhs and the bonus to staff Rs. 24 lakhs (against Rs. 22 lakhs). (The balance-sheet of the bank is printed on a later page in this week's issue of Capital.)

Maiden Dividend from Prabhat Udyog

THE Rs. 100-paid share of Prabhat Udyog Ltd is currently quoted around Rs. 70.30. This reflects essentially the continuing slump in the capital market. The Company's working results for the year ended August 1963, are not unencouraging and the shareholders have every reason to feel happy over the 6 percent maiden dividend. In spite of labour strike for about eight months during

ANNOUNCEMENT

HINDUSTAN ALUMINIUM CORPORATION LIMITED has pleasure to announce that its Rolling Mill and Extrusion Press are in the process of installation at Renukoot (Dt. Mirzapur) Uttar Pradesh and will soon come into production.

Enquiries from all interested parties for Plain and Corrugated Aluminium Sheets, Circles, Coils, Plates and extruded sections are solicited.

Parties located in Maharashtra, Madhya Pradesh and Gujarat may write direct to our Bombay office.

Parties anxious to work as our stockists should contact our Calcutta Office for terms & conditions furnishing full details about themselves.

Hindalco is also happy to announce that its alloy ingots of various specifications will be available from March/April, 1964. Enquiries from interested parties solicited.

EXCELLENT COVERAGE!**HARVEY CANVASES**

provide the finest, surest protection for men and material

When the safety and protection of men and vital materials are at stake, one can't afford to take risks. Nothing but the finest coverage material will do! That's why top-ranking manufacturers insist on Harvey Canvases—the strongest and most reliable fabrics for making superior quality tarpaulins, tent canvases, etc.

Harveys' Madura Mills are today India's largest producers of industrial fabrics. Through the years they have built up a world-wide reputation for consistently high quality. They have the men, machines and knowhow to produce a wide range of industrial fabrics such as Tyre Cords, Belting Ducks, Jacket Ducks, Light and Heavy Canvases.

What's more, Harveys can weave industrial fabrics to your specifications—however rigid. Recent expansion at Madura Mills, with the installation of up-to-date high-speed looms and precision machinery, has further increased Harveys' weaving capacity. They can now meet all your requirements in industrial fabrics - to your complete satisfaction.

For further particulars and samples, contact: **MADURA MILLS CO. LTD.**, Madurai. Managing Agents: **A. & F. HARVEY LTD.**

83-MMC-7C

26th March, 1964.

the year, the Company's total sales amounted to Rs. 82.16 lakhs on which it made a profit of Rs. 10.31 lakhs after writing off the preliminary and share issue expenses amounting to Rs. 34,031.

The directors have provided Rs. 1.34 lakhs for depreciation, Rs. 9,380 for development rebate and Rs. 4.05 lakhs for taxation. The proposed 6 percent maiden dividend absorbs Rs. 3.60 lakhs. After adjusting the deficit of Rs. 9,413 brought forward from the previous year, there remains a surplus of Rs. 1,366 to be carried forward. Prabhat Udyog Ltd. it might be noted, took over the business of Prabhat (Stove and Lamp) Products Pvt. Ltd. as a going concern in June 1961, and it raised Rs. 29.40 lakhs from the public in June 1962 for the expansion of its activities.

Southern Gas to Enter Market

THE Southern Gas Ltd which proposes to set up a factory in Udyog Mandal in Ernakulam (Kerala State) for the manufacture of oxygen and dissolved acetylene, will soon be in the market to raise Rs. 12.50 lakhs of equity capital through public subscription. The Company has been licensed to manufacture 60 million cubic feet of oxygen and 12 million cubic feet of dissolved acetylene a year. Initially, the Company proposes to establish a plant for compressing 30 million cubic feet of oxygen and 10 million cubic feet of dissolved acetylene. The total cost of the project is estimated around Rs. 40 lakhs, of which Rs. 31 lakhs is likely to be spent on land, building, plant and machinery and cylinders.

The import content of the Company's manufacturing programme is placed around Rs. 29 lakhs and it has already been given an import licence for Rs. 25 lakhs. The cost of the project is proposed to be met by the issue of share capital of Rs. 22.50 lakhs, loans of Rs. 14.50 lakhs and deposits of Rs. 3 lakhs. Machinery worth Rs. 6.30 lakhs is being imported from East Germany and cylinders worth Rs. 9 lakhs are being secured from Yugoslavia. The Company has an authorised capital of Rs. 50 lakhs, of which Rs. 22.50 lakhs is being issued for the present. Of the issued capital, shares worth Rs. 10 lakhs have been taken up by the promoters, directors and their associates. The balance of Rs. 12.50 lakhs to be offered for public subscription has been underwritten.

Blue Star-Worthington Share Offer

BLUE Star Engineering Company of Bombay and the Worthington Corporation of the U.S.A. have joined hands to undertake the manufacture of a wide variety of industrial refrigeration and air-conditioning equipment. The project is estimated to cost Rs. 45 lakhs, and it will be financed by share capital of Rs. 25 lakhs and borrowings of Rs. 20 lakhs. The Company has been licensed to import plant and machinery worth Rs. 14.43 lakhs. If all goes well, the factory will be ready for production by about the middle of next year. The construction work is likely to start soon. A new Company known as Blue Star-Worthington Ltd has been set up to implement the project. It will have an authorised capital of Rs. 50 lakhs—all in equity shares of Rs. 10 each. The issued capital will be Rs. 25 lakhs. Of this, Rs. 12.80 lakhs will be taken up by the U.S. firm. Shares worth Rs. 6 lakhs are being taken up by the directors, friends and employees of Blue Star.

The balance of Rs. 6.20 lakhs will soon be offered for public subscription.

New Capital Issues

FIVE companies have been authorised to raise fresh capital exceeding Rs. 2.33 crores. Of these, two are issuing bonus capital to existing equity shareholders in the proportion of one bonus for every five shares held. One company is floating debentures, another equity shares and the fifth equities plus preference shares. The debentures will be offered to the public for cash at par. One of the companies is a Central Government undertaking. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Century Spinning and Manufacturing Company Ltd, Bombay, is to issue Rs. 50,98,200 bonus capital in 50,982 equity shares of Rs. 100 each on capi-

talisation of the Company's reserves to a like extent. The bonus shares will be allotted to existing equity shareholders in the proportion of one bonus for every five shares held.

Bachhraj Factories Private Ltd, Bombay, is to issue further capital of Rs. 3 lakhs in 600 equity shares of Rs. 500 each, as bonus shares on capitalisation of reserves. The shares will be issued in the proportion of one for every five equity shares held.

Indian Drugs and Pharmaceuticals Ltd, Delhi, a Central Government undertaking, will be issuing further capital of Rs. 1 crore divided into 10,000 equity shares of Rs. 1,000 each for cash at par. The money will be utilised for financing the drugs and surgical instruments plants.

Dishergarh Power Supply Company Ltd will be issuing Rs. 30 lakhs debenture stock in units of Rs. 1,000 each carrying 7 percent rate of interest and redeemable in 1976. All the debentures will be offered to the public for cash at par. The capital will be used for the extension and

augmentation programme of generating station and distribution system.

Gujarat Insulators and Ceramics Ltd are to issue Rs. 50 lakhs capital in 400,000 equity and 100,000 preference shares of Rs. 10 each. All the shares will be issued for cash at par. The money will be used on the Company's project for the manufacture of H.T. and L.T. insulators.

you can cut maintenance costs up to 15% or more with Caltex "Stop Loss" Programme

Here's one plan for reducing major overhead costs that puts no premium on your record-keeping methods.

Whether you use a clerk or a computer, you can count on a Caltex "Stop Loss" Programme for substantial savings in maintenance expense... savings that can reduce costs up to 15% or more.

The key to this plant management plan for cost control is our exclusive Lubrication Control System. This flexible blueprint for economy helps slash costs in the primary areas of production and maintenance. It eliminates the high price that companies pay for unnecessary shutdowns. It extends machine life, reduces maintenance time and labour costs, and increases unit output.

SOMEONE, SOMEWHERE NEEDS ELECTRICAL EQUIPMENT AND TRAINING

And **AEI** goes into action

AEI is India's largest supplier of electrical equipment and the Commonwealth's biggest. 60 AEI factories and 100,000 employees the world over manufacture every type of equipment for the generation, distribution, control and use of electricity. Many of the important men in electrical engineering in India and abroad who buy and use AEI equipment were originally apprenticed in AEI factories. They are unanimous on one point: they owe a great deal to the intensive training given by AEI.

Remember how the acorn grew into an oak

From a small start in 1941 with 150 workers and an output of Rs. 1.5 lakhs annually, the AEI factory in Calcutta has grown into an important manufacturing unit. Today, it employs 726 men

and produces a wide range of electrical equipment. AEI also markets lamps and fans in India and plans to extend its lines of industrial and domestic appliances. 'The aim,' says Works Manager C. M. Meek, 'is to increase productivity using the same manpower and machinery.'

In India AEI produces

Transformers for power and distribution (Up to 5,000 kVA) • Transformers for electric furnaces (Up to 3,500 kVA) • Electric motors (Up to 500 h.p.) • Motor starters (Up to 100 h.p.) • Pumping sets (3.5 and 7.5 h.p.) • High voltage isolators (Up to 132 kV and 800 amps.) • Metal-enclosed unit distribution switchboards (Up to 300 amps. at 660 volts) • Bus-bar connectors (Up to 1,000 amps.) • Lighting fittings (Fluorescent, discharge and tungsten fittings of all types) • Electric furnaces (Heat treatment) • Electric furnaces (Melting) • L.T. circuit breakers (Oil circuit breakers up to 1,200 amps.).

Every month: enough cable soon to stretch from Bombay to Delhi and back! AEI, by virtue of the collaboration agreement concluded in 1960 between Tatas and W.T. Henley's Telegraph Works Co. (since merged with AEI, U.K.) are now progressively increasing the manufacture of world famous Henley cables in India. At the new cable factory near Poona, thermoplastic

and rubber insulated cables are manufactured for domestic and industrial use. The factory employs 400 people and output has already exceeded two million metres per month.

Planning 6,000 futures

AEI helps in the training of engineers the world over. In AEI's British factories more than 6,000 apprentices are undergoing training. 250 AEI U.K. trained engineers are now working at Heavy Electricals (India) Limited, Bhopal, where AEI are consultants; another 150 Bhopal-destined engineers are under training with AEI U.K. In addition 500 Indian engineers have taken their training in AEI's U.K. factories. This is a record believed to be unsurpassed by any other electrical engineering company operating in India. AEI's factory near Calcutta takes on 6 to 12 graduate engineers every year on a two year course. It also trains, by special arrangement with the Government, senior officers from defence services like the Navy. The training school at Bhopal, for which AEI are consultants, can train 3,000 men at a time. 6,200 trainees have registered so far; 4,200 have completed training; the rest are still under training. On graduation, some will be absorbed by the project; others will work at similar projects in different parts of the country. The Bhopal training school is fast becoming an important seat of technical learning in India.

40 years is a responsible age

In India, AEI's activities date back about forty years and include contributions to the Bhakra Dam power project (Punjab's latest and India's largest), the steel works at Durgapur and the 720 mile oil pipeline in Assam. Worldwide, AEI has many impressive achievements to its credit—the largest generating sets ever made for British power stations; locomotives and traction equipment for British and Indian railways; switchgear, cable and generators for the vast hydro-electric schemes at Kariba and Owen Falls in Africa; a large rectifier installa-

tion for the production of aluminium in Canada; turbo-electric propulsion machinery for the 45,000 ton P.&O. Orient passenger liner 'Canberra'...

We don't usually indulge in name-dropping, but...

In our case it's justified. AEI is no newcomer. Its origins go back more than sixty years. Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, Siemens Edison Swan, Henley's, Ferguson Pailin, Hotpoint and Birlec. The people, traditions and unexcelled experience of the parent companies remain unchanged.

Principal products worldwide

Steam and gas turbines and generators • Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • Power and telephone cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters • Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

The Stock Markets

BIGGER CARRYFORWARD CHARGES FOR LEADING SCRIP

Wednesday Evening.
THE Calcutta stock market has again been dull and quiet during the past week. Selling pressure has decreased slightly, but support has been lacking. The carry-forward charges, particularly for a few leading scrip, have been bigger than at the previous settlement. Indian Aluminium and Dunlop Rubber have been subjected to higher carry-forward charges due to the closing of books. The bigger carry-forward charges are responsible for a decline in the price of Birla Jute.

Lyons Range continues to be depressed since the outlook for equities has suffered greatly due to the latest Central Budget. At the annual general meeting of the Calcutta Stock Exchange Association held last Tuesday, the chairman pointed to the harmful effects of the new levies on the corporate sector. The replacement of the super profits tax by the surtax on profits is unlikely to give any relief to the corporate sector. In fact, some companies which have hitherto escaped the S.P.T. will have to bear the burden of the surtax. The provisions in the S.P.T. to make an initial deduction of 10 percent and carry forward any deficiency in profits have been scrapped in the case of the surtax. The changes in gift and wealth tax and estate duty will affect investment.

In the circumstances, investors have preferred to hold off. Weak holders have been compelled to sell to cut their losses. So share prices have dropped. Towards the close, selling pressure has declined mainly due to purchases by the Life Insurance Corporation and the Unit Trust.

Operators have also been disturbed by unfavourable political developments. The tension between India and Pakistan has been growing. Although the recent meeting of the Aid India Club has encouraged the hope that India will be given generous foreign assistance, sentiment continues to be depressed. The worry of investors centres on the dividend tax of 7½ percent and the levy of capital gains tax on bonus shares. In view of these two levies, it is difficult to see how the stock market will improve to any great extent in the near future.

Indian Iron have fluctuated narrowly. The news that the Company has begun implementing its programme to increase coal output for meeting the requirements of the steel works in Burnpur has been overlooked. Except for Texmaco, which have met with short-covering, engineering shares have generally declined. Guest, Keen, Williams, Burn, Jessop and Indian Standard Wagon have quoted lower. Scattered business has been transacted in Dalmia Iron.

Attention has centred on clearing shares in the miscellaneous section. Dunlop Rubber have dropped considerably on the news that the Company will increase the authorised capital by Rs. 5 crores to Rs. 12½ crores through the creation of 5 million unspecified shares of Rs. 10 each. The object is to raise funds to meet the needs of the expanding business. Union Carbide, Indian Oxygen and Metal Box have declined. India Steamship have weakened appreciably on a predominance of sellers. New shares have been depressed and most of them have quoted below par. Paper shares have been quiet and

turnover has largely been confined to Orient. Seshasayee, Titagur and Bengal have also lost. Bank shares have been neglected and stray business has been done in United Commercial and United Bank. Sugar shares have been difficult to transact in the absence of buyers. The poor outlook during the current season has been a major disincentive.

Jute shares have weakened and turnover has declined. The sluggishness of foreign enquiries for jute goods has caused a great deal of concern. The decision to force mills to cern. The decision to force mills to buy more mesta has been disturbing because they are already having large stocks of inferior and unusable fibre. Coal shares have slipped back. Interest and prices have been slack. The decline in the demand for coal is being interpreted bearishly. Prices of cotton mill shares have weakened, Elgin in the absence of support. Elgin have been offered freely on the decision to cancel the issue of bonus shares. Stray business in selected tea shares has been done and fluctuations have been narrow. It is feared that dividends for 1963 may have to be reduced, compared with those for 1962.

Government securities have been dull and quiet. Institutional support has been lacking in the belief that the Government may increase the rate of interest on its new borrowings. The 3 percent Conversion loan 1966 has quoted Rs. 63.05.

Bombay

SELLING PRESSURE DECREASES COMPANY NEWS HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market has started the new account in a slightly steadier mood mainly due to the abatement of the selling pressure. Purchases of selected shares by the Life Insurance Corporation and the Unit Trust have helped to reduce the size of floating stocks. Good corporate news has contributed to some short-covering. Hindustan Lever has announced a higher final taxable dividend of 80p a share, ordinary dividend of 14 percent making a total dividend of 14 percent for 1963, against 12 percent for 1962. For 1963, against 12 percent for 1962, Kohinoor Mills has increased the final taxable ordinary dividend from 11 percent to 14 percent, making a total of 21 percent for the previous year. 18 percent for the previous year. The Killick Industries has raised the taxable ordinary dividend from 5 percent to 7½ percent.

Buyers have nevertheless been cautious and reluctant to extend commitments. It is generally thought that the Central Budget has weakened investment confidence to a great extent. The decision of the Reserve Bank to retreat to a stringent credit policy has been bearishly interpreted. It is feared that commercial banks will reduce their credit supplies to the stock market.

Tata Steel ordinary have recovered to Rs. 146.75 after an earlier decline. Tata Engineering, Premier Construction and Mukand Iron have lacked interest in the engineering section. Motor-vehicle shares, like Hindustan

Motors and Premier Automobiles, have lost. Cotton mill shares have rallied slightly towards the close mainly due to short-covering after an earlier decline. Kohinoor have been steady on declaring a higher dividend. Century have recovered on prospects of a bonus issue which has been sanctioned by the Controller of Capital Issues. Bombay Dyeing, Svadeshi, Standard and Morarjee have closed with small gains. India United ordinary have weakened on a predominance of sellers.

Turnover in miscellaneous shares has declined considerably. In the sugar section, scattered interest has been taken in Belapur and Phaltan. Among steamship company shares, Scindia Steam have recovered due to short-covering. Mining shares have been subdued, and Shivrajpur Syndicate have been sold freely. In cement shares, Associated Cement and Digvijay have been about steady. Chemical shares have been quiet, and Tata Chemical have lost. Indian Dyestuff have been weaker, but interest has been shown in Polychem. Rayon shares have on the whole been quiet. National Rayon have recovered slightly after a sharp fall earlier.

Interest in cash scrip has been negligible. In banks, scattered support has been extended to Central Bank and Bank of Baroda. Among electric companies, Ahmedabad and

Madras

SELECTIVE SUPPORT TO PLANTINGS

PROSPECTS OF DEARER MONEY CAUSE WORRY

Tuesday Evening.

DULL conditions have prevailed in the Madras stock market during the past week. Reports of a mild recovery in Dalal Street have been overlooked. Turnover has shrunk considerably. Investors have been worried by the prospect of dearer money. It is also feared that the shortage of funds for the stock market would be aggravated in the near future. Except for scattered support to selected planting shares, investors have preferred to sit on the sidelines. Government securities have been dull, and stray business has been transacted in selected State Government loans.

In banks, Indian Overseas have quoted Rs. 146.50 and Canara Banking Rs. 73. Selected electric company shares have been steady on institutional support. Negapatam have been done at Rs. 10.70 and Vellore at Rs. 15.62. Sugar shares have been easier, and Deccan have declined to Rs. 11.87. E.I.D. have been available at Rs. 36.50 and K.C.P. have been about steady at Rs. 24. Madura have been offered down to Rs. 9.44; the Company has changed its name from Madura Sugar and Allied Products Ltd to Madura Sugars Ltd.

In the planting section, Ouchterlony have quoted Rs. 4.40 on declaring a taxable ordinary dividend of 12½ percent. Blue Mountain have been sold at Rs. 2.38 and Cochin Malabar at Rs. 6.40. Consolidated Coffee have come to hand at Rs. 20.50 and Periakaramalai at Rs. 3.41. Peermade have been steady at Rs. 20.62 on good crop reports. Interest has been taken in Thamarappally up to Rs. 16.40. Nenmeny have changed hands at Rs. 22.55, T.R. and Tea at Rs. 10.20 and Nonsuch at Rs. 23. Kil Kotagiri have been transacted at Rs. 4.90, Chembra Peak at Rs. 4.75 and Kumergode at Rs. 4.

Among textile shares, Bangalore Woollen have been steady at Rs. 246 on declaring a higher final taxable ordinary dividend of 18 percent. Buckingham have been quiet at Rs. 292. South India Viscose have recovered slightly to Rs. 130.50 and Travancore Rayon to Rs. 24.50. Madura have lost at Rs. 35 and Lakshmi have quoted Rs. 134.50. Anglo-French have changed hands at Rs. 153.50 and Adoni at Rs. 9.60. Ramnarayan have quoted Rs. 93 and Tirupati Rs. 10.15.

Business in miscellaneous shares has been small. Aluminium Indus-

tries have dropped to Rs. 19.40 and Ashok Leyland to Rs. 6.85. Cement shares have been weaker. Dalmia Cement have been available at Rs. 12.95 and India Cement at Rs. 5.60. Among engineering shares, Indian Steel Rolling have quoted Rs. 9.95 and Southern Structure Rs. 11. Mettur Chemical have declined to Rs. 13.45, while Seshasayee Paper have met with support up to Rs. 8. Standard Motors have been barely steady at Rs. 10.33 and Tube Investment have been done at Rs. 214. Business has passed in Binny at Rs. 282 and in Aspinwall at Rs. 8.60. Kirloskar Electric have weakened to Rs. 18.40 and Madras Rubber to Rs. 14.37. Parry's Confectionery have been wanted at Rs. 3.31 and Spencer have gained at Rs. 22.37. Textool have quoted Rs. 42.50 and Mysore Paper Rs. 12.40.

BRITISH-AMERICAN TOBACCO CO., LTD.

EFFECTS OF HIGH OVERSEAS TAXATION

The following is an extract from the speech of Sir Duncan Oppenheim, Chairman of British-American Tobacco Company Limited at the Annual General Meeting held on 19th March, 1964.

The growth that might be expected in the markets of the less developed countries is often inhibited by the high rates of excise duties charged and such growth as we have been able to achieve has not brought a proportionate contribution to the Group's profits because of the increasing rates of Company taxation.

We appreciate the difficulties that these developing countries have to face in financing development programmes which are essential if they are to improve their standards of living. It is all too easy, however, for governments to treat taxation of company profits as a ready source of income capable of unlimited expansion and to lose sight of the fact that unreasonably high rates of company and personal taxation, while providing much needed finance in the short term, must inevitably discourage the overseas capital which these countries need to attract if they are to attain their objectives. The growing practice of imposing additional taxes on dividends either upon the shareholder or upon the company itself is to be deprecated, particularly when, as in some recent instances, these taxes have been imposed at specially high rates on dividends paid to non-resident shareholders. This is a form of discrimination which is immediately discouraging to the flow of risk capital and the consequences of such a policy do not take long to show themselves.

Balance of Payments Deficit

The increasing deficit in the balance of payments of developing countries, taking into account inter-governmental aid, exports and all other available measures, can only ultimately be met by substantial investment of private

capital, the demand for which is higher now than it has ever been. The chances of attracting it depend very much on the commercial, fiscal, monetary and administrative policies of the country requiring it, for—being a scarce commodity—it will flow to the places which show the best promise of net profitability as a reward of efficiency and enterprise. The availability of pioneer and other concessions to new investors will not in itself be effective in attracting overseas capital if the prospect is that taxation will be too onerous when the pioneer period expires. Thus the maintenance of a reasonable level of taxation on existing investments is as essential for a country wishing to attract foreign capital as is the assurance of political stability, fair and non-discriminatory treatment and freedom to remit dividends and to repatriate capital eventually. Indeed, I regard excessive taxation, whether in the form of excise duties or in the form of profits taxation as a greater threat to the Group's expansion in the developing countries than the political risks that have attracted so much attention in recent months.

I am, of course, very much aware of the great economic difficulties facing those developing countries which, understandably, want to expand and diversify their economies as rapidly as possible. The difficulties are bound to be considerable and call for positive solutions, which should be arrived at by agreement between the developing and the industrialised countries. An important part of our business is bound up with the prosperity and economic welfare generally of the developing countries and accordingly we shall be watching with interest the proceedings of the United Nations Conference on Trade and Development which opens in a few days' time in Geneva, in the hope that positive results will come out of this Conference which will go some way towards helping these countries to achieve their objectives.

VISADEX
THE DASHBOARD OF BUSINESS

Work the VISADEX way to get the best out of your men, machines and materials.

VISADEX can tell you what you need to know at a glance. VISADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much... VISADEX, in short, affords greater control at less cost, besides keeping records secure.

Our VISADEX Representative will be happy to show you, without obligation, how simple VISADEX is to operate—either with Card Pockets or Brass Cardholders—and how easily it can meet your specific requirements.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA.

We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1963.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the position of the Bank, according to the best of our information and the explanations given to us and (ii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi are in conformity with the Balance Sheet and Profit and Loss Account as required by law; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, the Balance Sheet and Accounts have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and Accounts of the Local Head Offices at Bombay by Messrs S. B. Billimoria & Co. and at Calcutta by Messrs. Ray & Ray.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs S. B. Billimoria & Co. and at Calcutta by Messrs. Ray & Ray.

INDIAN REFRACTORY MAKERS ASSOCIATION

CHAIRMAN. MR. N. S. GILANI'S ADDRESS

The following is the Address of Mr. N. S. Gilani, Chairman, Indian Refractory Makers Association, at the Sixth Annual General Meeting of the Association held at Calcutta, on the 20th March, 1964.

Gentlemen :

I have great pleasure in welcoming our guests as well as our members to the Sixth Annual General Meeting of the Indian Refractory Makers Association.

Before I proceed to talk about recent events and future trends, it would not be out of place to mention that the Refractory Industry intends to play an active part in the current emergency and to its utmost to meet the critical needs of our national economy. Our Government has rightly stressed that the tension on our borders must not be allowed to detract us from our main task of building a strong industrial base and it is in this context that the contribution of the Refractory Industry will have to be judged.

Apart from the knowledge and understanding that some consumers have of refractory materials, the layman seems to know very little about our industry and hence it is necessary to refer briefly to its history. The story of the Refractory industry starts from prehistoric times when man first tried to harness fire for constructive purposes. Because of the necessity to provide or contain heat, heat-resisting clays have been used for diverse purposes with varying degrees of success and the march of science from the Fire-light stage to the Satellite age has been possible in no small measure due to refractories and their application. The material progress and industrial advancement now witnessed by us owes a great deal to the years of patient research which have gone into the field of refractories culminating in some spectacular developments during and after World War II. In our daily lives we are surrounded by man-made products, such as, textiles, alarm clocks, coins, plant and equipment for factories, glass for electric bulbs and cooking purposes, enamel ware and crockery, all of which have been made or fabricated from various metals and

non-metal, which could be treated or processed due to the availability of varied refractory materials for high-temperature furnaces. It is for this reason that the Refractory Industry is sometimes referred to as the Industry behind all industries. Refractory technology embraces a wide field including pure oxides for jet propulsion, nitrides and carbides for critical service conditions and a range of specialities to serve nuclear plants and space ships now literally reaching out for the moon and beyond. Although it may be some years before these critical products for such sophisticated uses enter the Indian scene, we have already in a small way seen the changes forced on us by fast-changing technology in the Iron, Steel, Chemical and other industries. The constant quest for new products and new lines of manufacture continues so as to keep pace with the fashions set by modern science.

Research and Development

The first point, therefore, that I would like to make on this occasion is to stress the importance of research and development as it is imperative for our Industry to keep ahead of the requirements of other industries. In this modern age without basic and applied research and development work, progress in any sphere cannot be maintained and, in my opinion, it is essential for each refractory plant in the country to have its own laboratory to enable progressive groups to work closely with their consumers and develop materials capable of withstanding the most severe operational conditions.

It is true that in the field of basic research millions are spent before returns are even considered, whereas in applied research and development work much laborious effort is required to translate available knowledge into products from known raw materials. We should not hesitate to look beyond our frontiers and seek the collaboration of those who already enjoy a fine reputation for the quality of their lines. Our Government will, I am sure, support progressive concerns who wish to acquire technical know-how from abroad to provide the country with critical products which are either in short supply or are still being imported.

e-I. The Industry has a good record as its growth pattern has been rapid compared to the developing needs of its consumers. Manufacturers will, therefore, need only small sums of foreign exchange to make substantial and significant contributions towards reducing the country's import bill. I am thinking here primarily of the Steel Industry which is our largest customer and takes approximately 70% to 75% of our total output. There are many refractory plants in the country which have the basic equipment to produce heavy duty and critical refractory materials and with a little balancing equipment can rapidly open up a wide and interesting field. I would, therefore, like to urge all manufacturers in India to develop their research facilities to serve the vast industrial base now being set up to ensure that the economy reaches a self-generating stage. Research, whether basic or applied, remains our responsibility primarily and it is difficult to say where the former ends and the latter begins. Without the former the latter cannot be sustained though not infrequently the latter contributes and leads to the former. Research is not a tool for use in an emergency—our very survival depends on it.

The contribution of research in the pattern of manufacture and consumption will be readily discernible from a recent American review starting from the last World War. The demand for non-clay refractories is on the increase throughout the world and this trend is now also noticeable in India.

Basic type refractories, such as, Chrome-Magnesite, Magnesite-Chrome and also Magnesite are of the non-clay variety which forged ahead in sales. In this field, the use of chemically-bonded bricks represents a new trend thereby obviating the necessity of large capital outlays on special-purpose kilns and enabling manufacturers to increase their output from existing facilities.

Firebricks have hitherto been sold in the form of shaped and fired products but today, according to a recent review of the American scene, firebricks represent no more than 2% of the total production of refractory materials. While this still represents the highest output in so far as shaped bricks are concerned, what is interesting is that plastics and castables together also account for 2% of the total tonnage of Refractories produced. Use of the latter categories are still on the increase. Their principal field of application is the construction of super-duty boilers and hot repairs to the eroded portions of a running furnace. The technique of "gunning" has reduced outage time for furnaces and thus helped in increasing output.

High Alumina Bricks

High Alumina bricks are opening up new horizons and here also, with our rich natural resources, rapid strides can be made to popularise the use of materials capable of giving a longer service life.

Gentlemen, I have deliberately devoted a great part of my address to you this morning by looking into the future as I believe that all progressive and dynamic organisations, while relying on their past experience, look ahead and bring modern technology into their plants and grapple with the problems

CAPITAL, 26th March, 1964.

of today and tomorrow. I do not, however, wish to minimise the contribution made by our Industry in the past or convey the impression that we, as an Industry, are lagging behind in India. Since the Steel Industry is our biggest consumer, we are inclined to relate our growth to the production of steel. The figures recently compiled by the Refractories Panel appointed by the Government of India clearly prove beyond doubt that ample capacity exists in the country to meet the needs of Fireclay, Silica and Basic materials. With the introduction of an all Basic Open Hearth Furnace, the consumption of Silica has steadily declined and before long the Steel Industry will consume very little except for the construction of new Coke Oven Batteries from time to time. The capacity released will, of course, be available for the production of other products. With the switch to all Basic construction together with the supply of better quality materials and greater operational experience, the consumption of refractories has shown a marked downward trend. At the end of the Second Plan the overall consumption in the Steel Industry with the conventional Open Hearth practice using Silica Roofs was estimated at nearly 90 Kg per ingot tonne and today the official figure is 57 Kg per ingot tonne. The average for the entire Steel Industry with the Basic Open Hearth practice is taken at 35 Kg for Firebricks, 14 Kg for Basic and 8 Kg for Silica per ingot tonne. The corresponding consumption figures for highly advanced western countries are now in the region of 7.5 Kg, 7.3 Kg and 2.8 Kg per ingot tonne respectively. The Hon'ble Minister for Steel has rightly emphasized the need to reduce costs and our Steel Industry will undoubtedly make efforts to match these figures in due course. We cannot, however, overlook the effect of this trend on the growth of the Refractory Industry.

Paradoxical though it may seem, the Industry while serving its customers, is actively helping to reduce the use of its products by improving their service life. The ignorant consumer with the

factory manufacturers are actually working against their interests but the demands of modern technology cannot be ignored and our contribution must always be measured in terms of our ability to keep ahead of new developments in other industries. For instance, the advent of oxygen lancing reduced the effectiveness of Silica Roofs in Open Hearth Furnaces. Basic linings made longer campaigns possible and thus reduced the melting cost of steel. The development of the LD and other processes using oxygen has brought further changes and it now seems that of the 18 million tonnes of ingot steel planned for the end of the Fourth Plan something like 0.5 million ingot tonnes will be LD steel. The transition from Silica to Basic linings was fairly rapid but then, again, the use of conventional Basic bricks will be short-lived as the trend in steel technology throughout the world is now towards the greater use of LD Vessels. This foreshadows a further decline in the pattern of consumption and for the 10.5 million tonnes to be made by the LD process this will be 25 Kg for Firebricks and 2 Kg for Basic with Silica virtually out of the picture.

Perspective Planning

While perspective planning is essential to ensure the availability of important raw materials required by basic industries, we cannot ignore the changes in the consumption pattern introduced by modern science and our approach must therefore be pragmatic. As an industry, we support Government's policy to force the pace of development in basic industries. Posterity will judge us by our efforts but will never forgive the present generation for not giving the nation the basic sineews of industry. The country's efforts in this regard will be directly

CAPITAL, 26th March, 1964.

related to its financial, technical and managerial resources making it imperative for those who guide the destinies of our country to make a realistic appraisal of our capabilities. Here I would like to state a few facts which might serve in some measure as a guide to indicate the pace with which we can traverse the road ahead. In 1950 the Steel production in the country was 1.3 million ingot tonnes, in 1962 it was about 4 million ingot tonnes and today it is nearly 6 million ingot tonnes. The Hon'ble Minister for Steel indicated towards the end of last year in the Lok Sabha that due to various factors the target of 10 million ingot tonnes set for the Third Plan may not be achieved until 1967/68. Gigantic efforts on a wide national front will be needed to achieve a target of 18 million tonnes by 1970/71 and while the Refractory Industry will willingly play its part, I would earnestly urge the Government to watch the actual growth of the Steel sector before embarking upon any large-scale expansions in our Industry for the simple reason that a new Steel Plant takes five to seven years to go into operation whereas much can be accomplished by the Refractory Industry within a short space of time at a fractional cost. By the end of the Third Plan the Refractory Industry will have a total installed capacity of 15.5 lakh tonnes per annum but, due to technological reasons and the improved consumption pattern, the total demand in the country by 1970/71 is envisaged at no more than ten Lakh tonnes. In the near future the ratio between actual production and installed capacity will widen as there is a point beyond which it is uneconomical to produce and sell. In case it has been forgotten I should perhaps point out that there has been no general price increase for refractory materials since 1960 and the recent trend due to the overall surplus has been downwards and continues in that direction. Costs during this period have not stood still and it seems to me that the Industry may have to bear with this cost-price squeeze until the Bokaro Steel Plant comes into being.

I, therefore, submit that due to the application of scientific methods it can be said that the Third Plan target of a million tonnes has now been converted into the Fourth Plan target to cater for an 18-million tonne Steel Industry. I am sure I will be expressing the view of all Refractory manufacturers today that since the industry will achieve an estimated installed capacity of 9.6 lakh tonnes by the end of 1964 and after taking into account what will definitely be added in 1965/66, there is no case for additional capacity to be put up in the country at this juncture. All of us agree that while healthy competition should prevail amongst different manufacturing units, no one including the Government would like to see chaotic conditions continue forcing marginal units to the wall and resulting in unemployment and industrial unrest. As manufacturers we are seriously concerned about the present recession in the Refractory Industry and with the additional capacity to come for which foreign exchange has already been released, it seems to me that this state of affairs will continue for a few years. Diversification and not expansion will be the salvation of our Industry for more reasons than one. Thus it should be possible for the Planning Commission to utilise the country's limited financial, material and trained manpower resources in other sensitive sectors of the economy. The traffic rules approach to not only call for a pragmatic approach to any problem but also require a well-considered allocation of scarce resources among competing industries.

Surplus Production

Against this background the Industry should cast its eyes beyond the shores of India to seek an outlet for its surplus production. During the past year,

your Committee has suggested to the Chemical and Allied Products Export Promotion Council to recommend to the Government of India to include refractories in all Trade Agreements with other countries and in their Trade Journals as one of the main commodities which can be exported in accordance with international standards. Africa, the Middle East and South-East Asia should be natural outlets and as their economies develop so should our exports. I need hardly emphasise the prime need to earn foreign exchange to meet the country's mounting import bill. Your Committee has also been engaged in the collection of data concerning freight rates from European and Japanese ports to some of India's traditional and potential markets. After this examination has been completed we hope to put before Government certain concrete recommendations to enable the Indian Refractory Industry to meet competition in neighbouring countries on an equal basis.

Any discourse about the Refractory Industry would not be complete without stressing the need for good quality raw materials. There is a shortage of plastic and high alumina clays and the problem of locating bloating clays and other raw materials, such as, high grade chrome ore, etc. still remains with us. The Refractory Industry has now become an important user of raw materials and with the help of the Geological Survey of India I hope it will be possible in the Fourth Plan to embark on a definite plan for surveying wide areas. I would like to commend the efforts already made by the Geological Survey of India and at the same time express the hope that they will be given adequate financial and manpower resources to carry out surveys in the States where vast industrial complexes are coming up. I have no doubt that the Planning Commission will bear in mind the time-factor necessary for locating and assessing our raw material resources and just as the Refractory Industry must keep slightly ahead of the Steel Industry, so must the Geological Survey provide the Refractory Industry in good time with data regarding good deposits to foster the development of critical products. With the rapid developments taking place in the Refractory Industry, it is vitally important to know whether the reserves are adequate for commercial exploitation. I am quite clear in my own mind that we must use the raw materials we have in our country and, where necessary with the aid of research, develop products suitable for our discerning customers. Here I would like to mention a specific pro-

Achieving Self-sufficiency

The entire emphasis in my address this morning has been on what the industry can do to help our country to achieve self-sufficiency. Self-sufficiency must not, however, be achieved at the expense of efficiency and Manufacturers must have a closer look at their own production methods, plant layout and level of productivity. This kind of introspective research is necessary for the adoption of modern and cheap methods of production. The proper deployment and use of managerial and technical talent is one of the essential prerequisites for the achievement of higher productivity. An enlightened management must develop its own in-plant training facilities and ensure the delegation of responsibilities and authority to give each individual the

maximum opportunity of exhibiting his talents. Despite the best efforts of a progressive management team the performance of any plant depends inevitably on the co-operation of the workers. Labour plays an important role and our products will never be able to achieve a reputation for quality and excellence without the active participation of the men who grease the wheels of Industry. Unfortunately, in our country, Labour Unions are frequently engaged in a struggle for power and competing demands by different groups have often retarded productivity. I have no doubt that many of our eminent labour leaders in the country are conscious of the role labour must play in Industry but, alas, in a number of cases at the lower operational level inter-group rivalry has often frustrated the drive for better results. In view of the difficult phase through which the Industry is now passing, I would appeal to our labour leaders and workmen to help the Industry through a critical period and not subject the companies to unreasonable demands or oppose schemes for rationalisation without which the prosperity of the majority may be endangered.

I would now like to touch upon an important aspect concerning technical education. Unfortunately, few of the leading universities offer degree courses in Ceramic Technology and I would request the Government to look into this matter because a balanced economic growth will demand in course of time a regional educational balance and it will be the duty of the senior universities in the four corners of the country to encourage our budding Engineers and Scientists to take an interest in the fascinating field of Ceramic Technology. Similarly, in large consuming centres, states, and cities, facilities for practical training in Steel Plants, should be provided so that the younger generation of technologists grow up to realise and appreciate the problems of complex operations.

Gentlemen, I have already taken up a great deal of your time this morning but before I close, I would like to take the opportunity of thanking my colleagues on the Committee who have supported me so ably during the tenure of my office and without whose help it would not have been possible for me to discharge my duties. I would also like to take the opportunity of thanking our Secretary, Mr. MacDonald for his untiring efforts on our behalf throughout the past year. I thank you gentlemen for listening so patiently to me this morning.

AUDITORS' REPORT
We have audited the above Balance Sheet of THE BANK OF TOKYO LTD. as at 31st December, 1963 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Bombay Branch audited under section 228 of the Companies Act, 1956 by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949 read with the provisos to sub-sections (1) and (2) of section 211 and to sub-section (5) of section 211 and section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :
(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found to be satisfactory.
(b) The transactions of the Bank which have come to our notice, have been within the powers of the Bank.
(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns added for the purpose of our audit have been received from the branches of the Bank.
(d) The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns.
(e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at December 1963 and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

(Registered Office: Mandvi, Baroda)

Directors' Report

The Directors have pleasure in submitting this Fifty-Fifth Annual Report together with the audited statement of accounts for the year ended 31st December, 1963.

	This Year Rupees	Previous Year Rupees
The net profit for the year 1963 after providing for taxes, including Rs. 3,46,722.36 brought forward and after taking Rs. 14,70,408.19 nP towards depreciation on buildings and furniture, amounts to ...	78,46,969.92	66,21,722.36
An ad-interim dividend at the rate of 16% per annum subject to deduction of income-tax at the appropriate rates was paid for the half-year ended 30th June, 1963 which absorbed ...	16,00,000.00	12,00,000.00
Amount transferred to Reserve Fund ...	15,50,000.00	12,75,000.00
Amount transferred to Special Reserve ...	20,00,000.00	22,00,000.00
Provision for Bonus to staff ...	75,30,000.00	46,75,000.00
		* 16,90,000.00
Balance of profit to be carried forward to next year's account ...	2,96,969.92	3,46,722.36
* Final dividend at 16% p.a.	78,46,969.92	66,21,722.36

The Directors recommend to the shareholders payment of a final dividend at the rate of 20% per annum per equity share (making 18% per annum for the year) subject to deduction of tax at the appropriate rates for the half-year ended 31st December, 1963, to be paid out of the Special Reserve and which will absorb Rs. 20,00,000.

In terms of the Resolution No. 2(b) passed by the shareholders at the Annual General Meeting held on 8th April, 1963, your Directors have distributed dividend at the rate of 16% per annum subject to deduction of tax at the appropriate rates on the entire new issue of 1,00,000 equity shares for the half-year ended 31st December, 1962, which absorbed an additional sum of Rs. 70,000 over the amount recommended in the last report, leaving a balance of profit of Rs. 3,46,722.36 nP to be carried forward to the account of the year under report.

The business of the Bank during the year under review continued to be satisfactory.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of THE BANK OF BARODA LTD., as at 31st December 1963, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 53 Branches audited by us, 63 Branches audited by Branch Auditors and unaudited returns from 88 Branches for which exemption from the provisions of Section 228 of Companies Act, 1956 has been obtained from the Central Government under Rule 4 clauses (a) and (b) of the Companies (Branch Audit Exemption) Rules, 1961.

We Report that:

- We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- the reports on the accounts of the Branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

PROGRESS IN THE MANUFACTURE OF INDUSTRIAL MACHINERY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Standing Committee of the Central Advisory Council of Industries met here last week to review the development of the iron and steel, industrial machinery and cement industries. The following is the progress report on some of the important machinery-making units:

Boiler machinery: The target for the industry is Rs. 29 crores worth of boiler machinery a year by the end of the third plan. Out of these, the requirements of thermal power-station boilers will be about Rs. 20 crores a year. Most of the requirements of thermal power-station boilers will be met by the public-sector project under the Heavy Electricals Ltd. The installed capacity in the private sector is about Rs. 7 crores a year, which includes both thermal power-station boilers and industrial boilers. The major units are A.V.B. Ltd. Messrs Thaper Stainmiller and Messrs I. S. G. John Thompson with capacities of Rs. 3 crores, Rs. 2 crores and Rs. 1 crore a year, respectively. Production in 1962 was of the value of Rs. 2.62 crores and in 1963 Rs. 2.89 crores. It is expected that production will increase considerably in the next two years.

Dairy Machinery and equipments: The target fixed for the third plan period was of the value of Rs. 2.5 crores a year. The licensed and installed capacity is Rs. 2.59 crores. Production in 1962 was of the value of Rs. 32.69 lakhs and in 1963 about Rs. 48 lakhs. India's demand for dairy machinery can be fully met from indigenous sources.

Textile machinery: The third plan target for the industry is Rs. 30 crores worth of machinery. Against this, licences have been issued for Rs. 47 crores. The actual production of major items has reached Rs. 18 crores a year. Besides, components worth about Rs. 12 crores a year are also being produced. At the end of the third plan period, it is expected, the production of textile machinery, other than components, will reach the target of Rs. 30 crores.

In spite of the progress made by the indigenous industry, large imports of textile machinery are still being made. Furthermore, the demand for machinery is bound to increase substantially during the fourth plan period. With a view to raising output, the Government has adopted a liberal licensing policy.

Although the progress of the industry has been generally satisfactory, there are important gaps in the range of equipment now being manufactured in India. The manufacture of such important machines as draw frames, speed frames, winding and warping machines has not yet been started. This is because there have been rapid technological changes in foreign countries in producing these machines, so indigenous manufacturers have been reluctant to invest capital in this field. Some of the machinery manufacturers have, however, recently arranged collaboration with reputable foreign firms for the manufacture of these machines. It is hoped that their production in India will begin within a reasonable time.

Jute machinery: The production of jute mill machinery has made good progress. It increased from Rs. 37.8 lakhs in 1956-57 to Rs. 1.74

crores in 1960-61. The current rate of production is about Rs. 3.75 crores a year. The capacity so far created is about Rs. 17 crores a year in value, against the annual average demand of Rs. 9 crores. Some of the licensed capacity is idle as in the case of paratary and spinning machinery where only 50 percent of the capacity is being used since the designs are not acceptable to the industry. It is expected that with an expansion of the existing capacity, the industry will be able to meet the requirements of the fourth plan. The country's requirements are expected to be of the order of Rs. 9 crores a year.

Self-sufficiency in Tea Machinery

Tea processing machinery: India has become almost self-sufficient in tea processing machinery and there are practically no imports now. Ten units are engaged in the manufacture of these machines. Their output in 1963 was Rs. 1.64 crores. The indigenous industry is not only meeting the full requirements of the country, but is also exporting these machines to various countries.

Structurals and cranes: The third plan target for the structural industry is 900,000 tons a year. Against this, a capacity of 677,000 tons has already been approved. The installed capacity is 363,900 tons and the actual production in 1962 was 177,600 tons. The low use of capacity has been attributed mainly to the shortage of steel sections, particularly matching steel. This factor has also been responsible for comparatively slow development of capacity for the manufacture of heavy structurals. In the field of light structurals, however, the country has become almost self-sufficient. No new capacity for the manufacture of light structurals is, therefore, being licensed. The import of matching steel in limited quantities has been permitted with a view to removing the difficulties of the heavy structural industry. Close liaison has also been established between the structural industry and the steel plants to ensure that the demand for critical sections is adequately met.

ALLOY STEEL

U.K. Help for New Plant

A Conservative Member of the U. K. Parliament, Mr. John Osborn, was here last week. His firm, Samuel Osborn, along with Davy United, is negotiating to set up a 40,000-ton alloy steel plant in India in collaboration with Birlas, it is learned.

Three firms have been licensed for setting up alloy and special steel units in the Punjab State. They are as follows:

Name of firm

Globe Motors

Khemchand Rajkumar

Watkins Mayor and Co.

Licensed capacity a year (in tons)

6,000—silico-manganese spring steel

20,000—alloy constructional steel other than stainless steels

2,400—special steels

Indian authorities concerned and which is completely consistent with Canada's international treaty obligations, both bilateral and multilateral, was to apply so-called dumping duties designed to raise the invoice price of the goods in question to their fair market value. Adequate and

lovakian Embassy for the use of Czech credit of \$50 million recently offered to India. The expansion of the boiler plant in Trichy, the plate and vessel project, two machine tool projects, components for the plants under execution and their completion are some of the suggestions made by the Government to use the credit.

TRADE

U.N. Conference in Geneva

The current U.N. Trade Conference in Geneva may indicate that, in the last analysis, no country—advanced or under-developed—will destroy its own industry because of high-sounding platitudes. The case of the textile industry illustrates the point.

The West German textile industry complained that it was at a great disadvantage in the face of foreign competition. "It has, therefore, been appealing for some considerable time for protection against dumping and against the distortion of competition within the E.E.C., and also for the removal of Customs disparities in relation to countries outside the European Common Market. It can be assumed that this last problem will play a not unimportant rôle in the Kennedy Round within G.A.T.T. Another point is the difference in wages paid within the E.E.C. In the summer of last year a worker in the textile industry was paid 4.05 deutschemarks an hour in West Germany, 3.39 deutschemarks in France, 3.19 deutschemarks in Belgium, 3.06 deutschemarks in Holland, and 2.79 deutschemarks in Italy. This explains why Italian textiles are constantly gaining ground in the West German market. Lower wages alone make it possible for them to be offered at a lower price."

Meanwhile, the Canadian High Commission in New Delhi has sent the following for publication: "After extensive investigation in India by a Canadian official especially instructed for the purpose, it was found that certain textile imports from India to Canada were being valued on the relevant invoices at prices lower than those applying in India itself. It was, therefore, necessary under Canadian legislation, which is global in its application and completely non-discriminatory, to determine what action would be taken to ensure that marginal or under-valued imports did not compete unfairly with goods of a similar class or kind produced in Canada."

"The particular decision in the case of Indian textile imports, which was taken only after lengthy consultations in both India and Canada with the

Steps taken to relieve the congestion at pitheads include the following:

(i) Industrial consumers have been advised that they can take any amount of additional coal by submitting a programme direct to the Coal Controller, without being sponsored by the recommending authorities, as normally done.

(ii) Low priority consumers, like brick kilns, can ask for additional supplies, irrespective of their quotas.

(iii) In the meantime, a reassessment of consumers' demand (grade-wise) is being made in order to examine to what extent regionwise and gradewise production may in future be matched with such demand.

Production at the Jharia coalfield in Bihar will be increased as a result of an order worth over £1.3 million just placed with the General Electric Co. of India (Private) Ltd in conjunction with G.E.C. (Engineering) Ltd. Half the order—for three comprehensive winding installations—will be executed locally to the designs of G.E.C. and its sub-contractors, the remainder being made in England. The installations comprise five electric winding engines and all the necessary equipment for handling coal, materials and men—including feeders, conveyors, skip plant, ropes, tipplers, headgears, gantries and

indeed generous provision was made to ensure that goods delivered or in transit were not affected by this decision.

"The Canadian decision was based on obligatory provisions of Canadian laws as indicated above and that it bore no relation whatsoever to Canada's trading arrangements with third countries. Indian exports to Canada continue to enjoy preferential treatment, compared with those of non-Commonwealth countries and there was no discriminatory intention or effect in the Canadian action."

The French trade mission which was here told a different story. It is the seller who always goes about in search of a buyer, it pointed out. But the French trade mission has come to India to see what commodities it could buy from this country.

The French trade mission is representative of the pharmaceutical, tea, cotton, castor oil and castorseed, manganese ore, hides and skins, tobacco, jute and light engineering trades. Apart from meeting officials, the members of the team visited important commercial centres in India. Several members complained of the unco-operative attitude of the Indian Airlines.

A Canadian trade and goodwill mission will be paying a four-day visit to Delhi from 27th March. During its stay, the mission will meet Government officials and trade representatives. The 42-member mission includes leaders in Canadian trade and industry. The mission has already visited Spain, Italy, Greece and Turkey and is due to visit Thailand, Hongkong and Japan before returning to Canada on 12th April.

COAL

Production and Stocks

COMPETITION FROM PAKISTAN GROWING, WARNS I.J.M.A. CHIEF

ADDRESSING the annual meeting of the Indian Jute Mills Association in Calcutta last Friday, Mr. V. Jardine Paterson, chairman, warned that no amount of export orientation could alter the hard fact of India's inferior competitive position as against Pakistan in sacking markets overseas. It was rather facile to assume that the steady increase in Pakistani gunny output would eventually affect her ability to export fibre to jute industries located abroad and that these manufacturers, rather than India, would ultimately suffer. He suggested that the aim should be to "narrow the present wide competitive gap and thereby try to arrest the unnatural growth of the Pakistani industry". With Pakistani mills enjoying a cost advantage of Rs. 350 to Rs. 400 a ton due to their access to better-grade jute at cheaper prices and their wind-fall profits from the export bonus scheme, the jute industry in Calcutta was in no position to dictate the course of events, he added. It was rather disconcerting to find that jute mills had not been given the tax rebates allowed for vital industries in the Central Budget.

Describing the change in the pattern of production in India, Mr. Jardine Paterson said that during the five-year period ended 1963, the proportion of hessian to total production had risen from 36 percent to 41 percent, and that of other goods from 9 percent to 18 percent, while the share of sacking had decreased from 55 percent to 41 percent. Indian mills should not presume that they would be able to compensate the loss of their sacking markets by expanding trade in other lines. Pakistan had already been installing broad looms for the manufacture of carpet-backing cloth. In the course of the past few years, she had established wide and intimate business contacts with prospective markets and was fast exploring new ones where India had been doing good business so far. Again, with growing experience in jute manufacture and the gradual emergence of a skilled labour force, the Pakistani industry was well-placed to switch over to hessian production on a larger scale, should it so decide.

Marketing Prospects
Making a broad assessment of the marketing prospects, Mr. Jardine Paterson pointed out that exports of hessian and carpet-backing cloth had shown an encouraging increase. The rise had more than offset the disturbing fall in sacking exports, although one consolation was that the domestic market for sacking was expanding and now absorbed more than half of the industry's sacking output. Exports of hessian had risen by 22 percent from 385,000 tons in 1960 to 470,000 tons in 1963, while those of sacking had declined by 21 percent from 308,000 tons to 243,000 tons. The industrialised countries of the West, particularly the U.S.A., Canada, Argentina and the United Kingdom, were the principal markets for Indian hessian. With a post-war record burlap consumption of 912 million yards in 1963, the U.S.A. absorbed 35 percent of Indian hessian. Russia too had become an important consumer with an offtake of 42,000 tons. There were good prospects of a steady expansion of business with that country.

But for sacking, Mr. Jardine Paterson indicated, the outlook was

discouraging because of the major competitive advantages which Pakistan enjoyed. She had taken away many of India's former markets, especially in Australia, Africa, Peru and Burma. Cuba was about the only major market where "we have recently been holding our own".

Spurt in Gunny Offtake

Despite the shortage of shed berths and lighters and the continuance of draft restrictions in Calcutta port, gunny exports sharply increased from 59,200 tonnes in January to 66,700 tonnes in February. The clearance of a heavy lot of January-shipment cargo during the month helped in pushing up the offtake. Shipper circles said that there was a backlog of February cargo at the end of the month due to operational difficulties, which were of a seasonal nature. Because of the rise in export ports, the total offtake of gunnies from the mills reporting to the I.J.M.A. increased from 92,400 tonnes to 99,100 tonnes. Hessian rose from 38,700 tonnes to 42,900 tonnes, miscellaneous goods from 6,300 tonnes to 9,000 tonnes and sacking from 39,800 tonnes to 40,800 tonnes. Shipments of carpet-backing cloth, however, declined from 7,600 tonnes to 6,400 tonnes. Exports of hessian rose from 34,200 tonnes to 37,400 tonnes, of sacking from 14,900 tonnes to 18,300 tonnes and of other goods from 2,500 tonnes to 4,600 tonnes.

Internal offtake declined further from 33,200 tonnes to 32,400 tonnes due to seasonal factors and smaller Government purchases. The small increase in the offtake of hessian from 4,500 tonnes to 5,500 tonnes and of miscellaneous goods from 3,800 tonnes to 4,400 tonnes could not offset the decline in sacking from 24,900 tonnes to 22,500 tonnes.

In February 1963, the total offtake was 102,100 tonnes—41,800 tonnes of hessian, 45,400 tonnes of sacking, 5,500 tonnes of carpet-backing cloth and 9,400 tonnes of other goods. Exports constituted 61,100 tonnes—34,800

tonnes of hessian, 15,300 tonnes of heavy goods, 5,500 tonnes of carpet-backing cloth and 5,500 tonnes of miscellaneous constructions. Internal offtake was 41,000 tonnes—7,000 tonnes of hessian, 30,100 tonnes of sacking and 3,900 tonnes of other goods.

U.S. Burlap Consumption Falls

U.S. burlap consumption has slumped from 81.6 million yards in January to 73 million yards in February. The offtake in February last year was 89.9 million yards. The average monthly consumption for the first two months of the year has been 77.3 million yards, against 78.95 million yards in 1963 and 83 million yards in 1962. In spite of the much smaller consumption, U.S. stocks during February 1964 declined by 8 million yards to 283 million yards. Of these, 154 million yards (against 150 million yards) were spot and 129 million yards (against 141 million yards) were afloat. A year ago, the inventories were 304 million yards—151 million yards spot and 153 million yards afloat. At the rate of consumption in February, the stocks will last for 3.87 months. The corresponding stock duration a year ago on the same basis was 3.37 months.

Training in Jute Grading

A three-month training course in jute grading was inaugurated by the Indian Central Jute Committee in Calcutta from the middle of this month. Meant for the supervisory personnel of the State Government departments, co-operative societies and other bodies connected with the marketing of raw jute, it seeks to impart training in the principles and methods of jute marketing, the theory and practice of grading, the rôle of grading in curbing marketing costs and in ensuring a higher net income to the grower. The curriculum also includes the techniques of fibre classification according to quality characteristics. The Director of Economic Research, I.C.J.C., is in operational charge of the training programme, which will be arranged

thrice a year. There will be 25 trainees for each term—six each from West Bengal, Bihar and Assam, three from Orissa and two each from U.P. and Tripura.

I.J.M.A. Committee

The committee of the Indian Jute Mills Association for 1964 has been elected with Mr. R. H. Morrison as chairman and Mr. R. N. Bangur as deputy chairman. Other members are Messrs R. N. Adams, C. L. Bajoria, M. P. Birla, A. Clark, D. P. Goenka, R. P. Goenka, J. V. Jardine Paterson, D. E. Macintosh, D. C. B. Pilkington and H. S. Singhania.

THE JUTE MARKETS

Manufactured Goods: A mixed trend prevailed in the Calcutta gunny market during the past week. In spite of lower prices, overseas buyers continued to sit on the sidelines. The Government of India, too, was practically out of the picture. Lower consumption of burlap in the U.S.A. during February and a decline in U.S. inventories were bearishly interpreted. Mills were eager to secure orders even at lower prices, but except for scattered hessian business with the U.S.A. and Argentina for all positions, little turnover materialised. Towards midweek sacking hardened somewhat on local covering, but the firmness proved short-lived because of the emergence of a large number of mills as keen sellers for all months. At the close, top gains were partially trimmed on the publication of the despatch figures for February. Bigger hessian exports during February could not stop the sagging price trend, since mills seemed worried over the gradual accumulation of stocks. But there was little evidence of selling pressure, and prices closed with small losses from the previous week's levels. The futures market also continued to be depressed in line with the general trend. Fluctuations were narrow, turnover moderate and the undertone hesitant at the close.

Raw Jute: Steady conditions prevailed in the raw jute market during the past week. With the decline in daily arrivals from about 50,000 maunds to 40,000 maunds in the terminal markets, prices of selected-grade fibre tended to harden. But lack of mill interest kept them around the previous week's levels. Mills had practically completed the purchase of their March quota of 430,000 bales, generally in better-grade fibre for long positions. The stock of high-grade jute left over with holders was negligible, while there was a glut of lower-grade fibre and mesta. Prices of these grades tended to soften, but mills showed little interest in inferior fibre. Turnover was small, fluctuations narrow and the undertone cautious but firm in quality fibre. The undertone was hesitant in offgrade jute and mesta. In order to help the holders of mesta, the I.J.M.A. has requested its members to step up their purchases of such fibre. In the futures market, prices looked up after wide fluctuations in sympathy with the trend in the spot market. Shorts briskly covered their open positions, while bulls booked profits at the bulges. Turnover was fair and the undertone steady at the close.

Wednesday's quotations were as follows:

THE U.K. JUTE MARKETS

FIBRE NEGLECTED

(FROM OUR DUNDEE CORRESPONDENT)

WITH a steady demand from Continental countries during the past week, the raw jute market in Pakistan was firm. Prices of loose jute tended dearer, but so far there was little or no change in the rates asked for export. The outlook is that values will remain at present levels, provided the new crop continues to make satisfactory progress. Dundee spinners were difficult to interest, and business was confined to small quantities. This was only to be expected as they have obtained the bulk of their raw material requirements, and it is estimated that less than 100,000 bales from the present crop will meet the needs of the U.K.

Fewer offers were made, but prices were irregular, with the lowest rates at £146 for Mill Firsts, at £112 10s for Mill Lightnings, at £97 for Mill Hearts and at £82 10s for Grade Hearts, c.i.f. U.K., for March-April shipment. Offers of Grade Tossa-3 were scarce with prices ranging from £126 10s. Grade Tossa-4 was named at £108 10s. Output Tossa-3 was at £96 and Output Tossa-4 at £86, March-April.

Prices of cuttings were firm, and only a few parcels were available. This was due to large quantities being taken up by felt manufacturers. S.N.C. was named at £61 and N.C. at £53. Mesta was steady at £85 10s for A, at £76 10s for B and at £70 10s for C, c.i.f. U.K., March-April.

Commodity Markets

WORLD SUPPLY OF COFFEE SHORT

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PRESENT indications are that the international market for coffee might continue to be a sellers' market for some time to come. There was a steep fall in Brazilian production due to the drought, fire and frost of last August. Latest reports on the Brazilian crop are not encouraging. Private estimates place the 1964-65 crop at as low as 8.3 million bags. The prospects for 1965-66 are, however, a great deal worse. According to one estimate, the 1965-66 crop may not exceed 5 million bags. In the last two years, Brazil has either just fulfilled her quota or failed to make it. It is said that her stockpiles have not increased effectively since 1960-61.

The other factor is the International Coffee Agreement. There have in fact been complaints that the export quotas given to producers under this agreement are on the low side, and an artificial scarcity has been created in the market. The International Coffee Agreement Council recently decided to increase the export quotas for the balance of the current season by 2.3 million bags, representing about 5 percent of the annual total quota. The additional quota is made in two parts; 1,352,000 bags regular increase for the crop year and 948,000 bags for temporary and exceptional increase in individual quotas. The United States, one of the signatories to this agreement, has deposited its instrument of ratification with the U.N. recently, but the U.S. Senate is yet to pass the implementing legislation.

During January coffee prices reached their peak with trader and roaster buying gaining further momentum. According to one New York report, what had been a steady and orderly advance in actuals approached runaway proportions. Inability to buy forward shipment beyond March forced roasters to accumulate larger inventories of nearby coffee. Since then all markets have eased a bit, but there is a confident undertone and whenever anything takes on the appearance of a bargain, the buyers jump in. There is no selling pressure.

One London report says that Robustas which registered a marked improvement in price some time ago are at present the most neglected of all. Ugandas from origin are of

the same price as Salvadors so much so they are not enthusiastically bought by roasters at present. Uganda and Ivory Coast are the two countries likely to have the largest unsold stocks due to the inadequacy of export quotas granted to them. Uganda got a quota of 1.9 million bags, as against a crop of 2.9 million bags, and Ivory Coast was given an export quota of 2.3 million bags, against her crop estimated at 4 million bags. They were among the two countries who demanded larger export quotas to the Coffee Council.

India is another country which is not satisfied with the quota she got under the International Coffee Agreement. She has been pressing the Coffee Council for an upward revision of her export quota of 21,600 tons a year. India is expected to produce over 60,000 tons of coffee during the 1963-64 season. This crop is now reaching the Board's pool. A quantity of about 5,500 tons have already been sold for export from this crop at a price varying between Rs. 200 to Rs. 245 a 50 kilograms depending on the differences in quality. These prices are better, when compared with the prices ruling at this time last year.

The 1962-63 crop of 55,760 tonnes were distributed as follows: internal market 33,812 tonnes, export 22,411 tonnes and a carryover to the new season 537 tonnes. The average prices realised by the different grades of coffee in the internal and export sales during 1963 are given below: Plantation Rs. 207.50 (internal) Rs. 181 (export), Arabica Cherry Rs. 153 (internal) Rs. 148 (export), Robusta Rs. 147.50 (internal) and Rs. 126 (export) (Prices are for 50 kilograms exclusive of Central excise duty).

TEA

Offerings at Cochin

Auction

Mr. J. B. Irens, chairman of the Cochin Tea Trade Association, told the recent annual meeting of his association that in spite of the disincentive provided by the sales tax of the Kerala Government, more tea was coming to Cochin for auction.

Offerings in 1963 were 4.5 million kilograms more than that of 1962. The 1963 sales represented a 230 percent increase over the quantity put through Cochin auctions ten years ago. Mr. Irens pointed out that although tea exports last year increased by 3 million kilograms, there was a considerable shortfall in the offtake by a number of south India's traditional markets, particularly Australia, Russia imported over 7 million kilograms, an increase of 3 million kilograms over their 1962 offtake. However, with Russian buying confined to low medium and medium categories, coupled with a strong internal demand, the "bread and butter" teas were priced out of range of many overseas buyers to the benefit of Colombo.

The average price of leaf teas sold through Cochin was higher by 8nP a kilogram, over the 1962 price while dusts were sold at 50nP a kilogram higher than the previous year's. Mr. Irens said that although New Zealand was a potential market for south Indian teas, the south Indian gardens were severely handicapped by lack of direct shipping facilities enjoyed by Ceylon. This matter was under constant review. As a result of the representations made by the Tea Trade Association of Cochin, the rate of freight to the United Kingdom and the Continent, which was increased in August last, had been so adjusted as to bring the Malabar coast in line with Calcutta, thereby removing the anomaly between Cochin and Calcutta rates, Mr. Irens said.

J. Thomas to Open Branch in Cochin

South India is fast gaining in importance as a tea producer. Last year the production totalled 84.8 million kilograms which was 4.67 million kilograms more than in 1962. During the last ten years the output has risen by about 30 million kilograms. Consequently, Cochin's share in the country's tea exports has been steadily going up, the exports through the port in 1963 being 44 million kilograms valued at over Rs. 30 crores.

The offerings of tea in the Cochin auctions have increased likewise. According to Mr. J. B. Irens, chairman of the Cochin Tea Trade Association, the total quantities offered at the auctions have increased by about 230 percent since 1954. With the Cochin auctions acquiring greater importance, it is only natural that more and more tea brokers should take interest in them. J. Thomas and Company, prominent tea brokers of Calcutta, are shortly opening a branch in Cochin to participate in the auctions.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to February 1964. As compared with January, the February index for Food reveals a drop

of 8 points. The indices for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 609 and 321 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living dropped by 4 points during February 1964.

COMPANY AND PUBLIC NOTICES

INDIAN ALUMINIUM COMPANY, LIMITED

31 Chowringhee Road, Calcutta-16

NOTICE is hereby given that the twenty-sixth Annual General Meeting of Indian Aluminium Company, Limited will be held at its registered office, 31 Chowringhee Road, Calcutta-16, on Monday, April 27th 1964 at 11-30 a.m. for the following purposes:

- To receive and adopt the Balance Sheet as at December 31st 1963 and the Profit and Loss Account for the year ended December 31st 1963, together with the Reports of the Auditors and Directors.
- To declare dividends.
- To appoint Directors in place of those retiring.
- To appoint Auditors and to fix their remuneration.

As special business, to consider and if thought fit to pass with or without modification the following resolution of which special notice has been received:

"That Dr. C. L. Katial, who retires at this meeting and who has attained the age of sixty-five years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

The register of members and the share transfer registers of the Company will be closed from April 7th to April 27th 1964, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on April 27th 1964, or to their mandataries. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

Any member of the Company entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

By Order of the Board,

T. D. SINHA,
Secretary.

February 17th 1964

EXPLANATORY STATEMENT AND STATEMENT OF INTEREST AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT 1956

Item No. 5

Dr. C. L. Katial, who has been a Director of the Company since 1958, has attained the age of sixty-five years on July 15th, 1963. The proposed resolution seeks to obtain your approval of Dr. Katial's appointment and your declaration that the age limit specified in Section 280 of the Companies Act 1956 shall not apply to him. Your Directors feel that it is in the interest of the Company that the Board should continue to receive the benefit of Dr. Katial's experience and able guidance.

The Company has received Special Notices from two members notifying their intention to move the resolution set out in the Notice. Apart from Dr. Katial, no other Director of the Company is interested in this resolution.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE

NOTICE is hereby given that the 38th Annual General Meeting of the Company will be held at the Registered Office, "Dunlop House", 57B, Free School Street, Calcutta on Wednesday, the 22nd day of April, 1964 at 11 a.m. for the following purposes:

- To consider the Profit and Loss Account for the year ended 31st December, 1963, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
- To declare dividends.
- To appoint Directors in the place of those who retire by rotation.
- To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolutions of which numbers 5, 6, 7, 8 and 9 will be proposed as ordinary resolutions and numbers 10 and 11 as special resolutions:—

- As an ordinary resolution: "That subject to the approval of the Central Government of the under Section 269 of the Companies Act, 1956, Mr. James Alexander Moore, Deputy Managing Director (Finance) of the Company, whose term of office expires on 22nd April, 1964 in accordance with Section 317 of the above Act and the Central Government's approval dated 25th September, 1959, be and is hereby re-appointed with effect from 23rd April, 1964 as Deputy Managing Director (Finance) of the Company upon the same terms and conditions of service as presently govern his employment and the same remuneration as presently payable to him."
- As an ordinary resolution: "That Mr. Alan Grant McKay be and is hereby appointed a Director of the Company."

Notice of the intention to propose Mr. Alan Grant McKay as a candidate for the position of a Director of the Company has been received from a member in conformity with Section 257 of the Companies Act, 1956.

- As an ordinary resolution: "That with effect from 1st August, 1963 the terms and conditions of employment of and the remuneration payable to Mr. Alan Grant McKay, Deputy Managing Director (Works) of the Company, as evidenced in a letter dated 22nd April, 1963 addressed to him by the Company, be and is hereby approved, and that as such Deputy Managing Director (Works) of the Company he will continue to be governed by the said terms and conditions of employment and be entitled to the said remuneration which have been approved by the Cen-

tral Government from the date abovementioned."

- As an ordinary resolution: "That Mr. Krishna Padmanabhan be and is hereby appointed a Director of the Company."

Notice of the intention to propose Mr. Krishna Padmanabhan as a candidate for the position of a Director of the Company has been received from a member in conformity with Section 257 of the Companies Act, 1956.

- As an ordinary resolution: "That subject to the approval of the Central Government under Section 269 of the Companies Act, 1956, Mr. Krishna Padmanabhan be and is hereby appointed Deputy Managing Director (Sales) of the Company upon the same remuneration and upon the same terms and conditions of service as governed his employment as an Executive Officer in the wholetime employment of the Company immediately prior to this appointment as evidenced in a letter dated 24th December, 1963 addressed to him by the Company."

- As a special resolution: "That the authorised capital of the Company be and is hereby increased from Rs. 7,50,00,000 to Rs. 12,50,00,000 by the creation of 50,00,000 Shares of Rs. 10 each."

- As a special resolution: "That the Articles of Association of the Company be and is hereby amended in the manner following, that is to say:

By deleting from Article 4 the first sentence and substituting therefor the following new sentence, namely:

At the date of adoption of these Articles the share capital of the Company consists of Rs. 12,50,00,000 divided into 68,00,000 Ordinary Shares of Rs. 10 each, 30,000 Cumulative Preference Shares of Rs. 100 each, 40,000 Second Cumulative Preference Shares of Rs. 100 each and 50,00,000 Unclassified Shares of Rs. 10 each, which may be issued as Ordinary Shares or with such rights as may be thought fit."

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

The Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 9th April to 30th April, 1964, both days inclusive. Any dividends that may be declared will be paid, on or after 9th May, 1964, only to those members whose names appear on the above Registers on 8th April, 1964.

By Order of the Board,

S. K. ROY,
Secretary.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

COAL COMPANIES

O., Po., F. and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

ENGINEERING INDUSTRIES: A PLEA FOR REALISM

THE engineering industries stand at the centre of India's import-saving strategy of development. Orderly progress in these industries should, therefore, be the prime concern of New Delhi's policy-makers even if the State is taking upon itself a large part of the responsibility at the heavy-industry end. In fact, the State's own endeavours would become infructuous if, for instance, the steel capacity being created in the public sector was not matched by parallel advance in the processing and fabricating industries. This underlines the need for tackling the problems of growth in their totality by evolving a co-ordinated approach. Otherwise, uncovered gaps in the industrial structure—in themselves small and seemingly unimportant—are bound to cause serious difficulty, as was highlighted by the shortage of welding electrodes which threatened last year to bring the whole fabricating industry to a standstill.

Experience, one hopes, has made New Delhi wiser. Mr. Cecil Cargin, chairman, was evidently putting the most favourable construction on recent official moves when he said at the annual meeting of the Indian Engineering Association on Monday that there were "encouraging signs" of a more pragmatic approach towards the problems of industrial planning. But, as he himself added later, several misgivings remain. Of these, the most important undoubtedly is the increasing variety of industrial projects being taken up in the public sector which could just as easily be left to private enterprise and the resources thus saved applied to areas of greater need. The structural engineering project in Wardha (which in the event has failed to materialise during the current plan) provides a case in point; so also does the quite unnecessary zeal displayed by the Government in increasing the production of the simpler machine tools instead of directing attention to those types which call for the large investments that are beyond the capacity of tax-squeezed entrepreneurs.

Quite rightly, Mr. Cargin refused to commit the Association to taking an ideological stand on the division between public and private enterprise. By applying common sense tests of efficiency and economy, the choice can in most cases be made on rational grounds which admit of no controversy. If there have been some lamentable deviations from this sensible principle, is it because power-hungry overlords are busy building empires regardless of the cost to the country? The production of lorries in an ordinance factory specially created for the purpose was a scandalous example which deserved the notoriety it gained, but there are others of the same class still in the hatching. The Engineering Association in a memorandum to the V. K. R. V. Rao Committee pointed to two such examples, one relating to ophthalmic glass and the other to industrial instruments, in both of which private enterprise was prevented from going ahead to make room for costlier State-sponsored projects. It is perhaps no mere coincidence that both instances related to ventures undertaken by New Delhi with Russian collaboration.

But if the concept of the mixed economy requires the State to set up its own plants in spheres

where private enterprise is already active, the least one can ask is that the competition between the two sectors should be equal. In theory, New Delhi accepts that this should be so but discrimination is not unknown in the large area of decision-making where the executive enjoys discretionary powers. The discrimination, which usually takes the form of privileged access to scarce resources like raw materials, foreign exchange or transport capacity, cannot always be proved because the evidence requires access to official records which are not available to the aggrieved parties. Yet it exists nevertheless, drawing encouragement from the tendency of political authority to turn a blind eye to the goings on until a public outcry follows. Mr. Cargin's plea for "some" assurance from New Delhi of equality of treatment is thus valid, although no formal announcement will, in the nature of things, eliminate the need for vigilance against favouritism at the level of mutual back-scratching between civil servants in the Government and their counterparts in public-sector industry.

One will, of course, need to be outspoken for this vigilance to yield any results. The I.E.A. chairman took courage in both hands when he bluntly pointed to the general reluctance to criticise aspects of official policy because of the fear of being singled out for harassment under the very wide powers wielded by the Government officials. Charitably describing this fear as "largely unfounded", Mr. Cargin admitted nonetheless that there is a preference to remain silent and very few individuals care to speak their minds. The relationship between complaisant business men and compelling officials is one that the Santhanam Committee on corruption should be considering if it were not so busy chasing the wrong quarries. Enterprising research may well be able to establish some sort of correlation between efficiency and the degree of accommodation shown by individual businesses, a generalisation prompted by the comparison sometimes made between two industrial giants of eastern India. But since the complaisant business man suffers in the long run at the hands of officialdom as much as his more outspoken compeer, one may be sure that the former will climb on the wagon once it is firmly and definitely on the move. The solution lies, therefore, in pushing ahead in a "straightforward" manner, relying upon the basic identity of interests between the Government and industry in finding the right solutions.

On issues of more direct concern to engineering, Mr. Cargin was undoubtedly right to focus attention on the future of raw material supplies. The mere fact that a 17.5-million-ton target has been adopted for steel is of no consequence to the investor unless he can be assured that performance will not fall far short of promise. This assurance is made the more necessary by persisting shortfalls—the second plan target for mild steel was attained only in 1963-64, while the lag in achieving the third plan goal of 10 million ingot tons will again be of the same order. If people are to be persuaded to put down money for new ventures today, they will need to be assured that the

raw materials—chiefly steel and pig iron in the engineering sector—will be available to work new capacity when it is built. This is an assurance that New Delhi cannot give until it has made sure of the foreign exchange requirements of steel expansion. The engineering industry sympathises with the disability, but it may well ask whether Mr. C. Subramaniam, Central Minister for Steel and Heavy Engineering, is not making his task more difficult than it need be. He is trying perhaps to do too much at one time, forgetting that the changed international circumstances no longer require the competitive bidding which brought India a rush of offers for the first generation of new steel plants. Secondly, he adamantly insists that there is no room for private investment in new steel capacity even though the Finance Minister is clearly anxious to reduce the demand for official aid by switching to private collaboration ventures. This invests steel expansion with some uncertainty; hence the plea for advance notice of the manner in which shortages are proposed to be shared. If key industries such as structural fabrication, wagon-building and equipment manufacture were told unequivocally that they will have a prior claim on whatever is available, much of the hesitation in making investments in new capacity might be removed.

Some assurance is also needed about future import policies. Both Mr. Cargin in Calcutta and Mr. J. R. Armstrong, chairman of the Engineering Association's western region in Bombay, have un-

derlined the need for immediate steps to relieve the serious shortage of pig iron. In 1962-63, imports did not exceed 1,000 tons (against 119,000 tonnes imported in 1957) but more surely could have been done despite the foreign exchange stringency if New Delhi had bothered to calculate the import-saving benefits flowing from the better utilisation of engineering capacity. This apart, the wider issue of making progress more orderly by getting more out of installed capacity before rushing through hurried additions is one that obviously merits serious consideration, a point which Mr. Armstrong made while deploring the excessive preoccupation with rates of investment rather than with the end-results.

In the final analysis, engineering capacity will have to expand, both to meet rising domestic needs and to help India pay her way in the world. But expansion is not an end in itself and will contribute nothing to improve the lot of half-starved millions unless the surplus that highly productive modern industry can yield begins to be tapped. The surplus must be earned—it does not arise of itself—by making the most of installed capacity through efficient operation and purposive planning. A succession of new projects, as the Central Finance Minister recently said, gets one nowhere; it can only restrain growth instead of stimulating it. And while fresh projects are being conceived, it is to be hoped that filling the awkward gaps which exist today will get prior attention before other ambitious new schemes.

NEW THINKING ON OIL

THE Central Minister for Petroleum and Chemicals, Mr. Humayun Kabir, told the Lok Sabha recently that India is now in a "stronger" position in its dealings with the international oil industry. He said that the cost of refineries as quoted by intending collaborators was steadily falling, the range of offers for the proposed Madras and Haldia units being Rs. 10 crores to Rs. 12 crores, against the Rs. 16 crores estimated for Cochin. The argument, as Mr. Kabir should know, is far from conclusive because refinery costs cannot be considered in the abstract, separately from the complex of facilities provided for in the design. Secondly, a "tied" refinery like Cochin is really to be seen as an outlet for the collaborating company's surplus crude rather than an investment made for its own sake. This makes it extraordinarily difficult to compare offers unless the fine print (as the American would say) of the totality of the contract is carefully examined. Finally, it was hardly necessary for Mr. Kabir to seek to prop up his general assessment of India's bargaining position with a somewhat irrelevant reference to refinery capital costs.

The fact of a persisting world surplus in crude obviously puts large buyers like India in an advant-

ageous position. As an independent observer of the international oil scene recently commented in a well-documented study, countries such as India are well placed to "put the screws" on the western oil marketer. While Mr. Kabir's bargaining strength is not in dispute, the use that he should make of it requires a good deal of careful thinking. It is eminently possible to "persuade" oil companies to accept minority participation in new refinery companies, as in the Cochin example, but that does not automatically make State majority either desirable or necessary. India should indeed try to retain the final say on larger issues of policy, a position which any country seeking foreign collaboration in a basic industry would adopt. The need is greater in oil where the interconnecting ramifications among refineries, transporters and crude producers makes it difficult to treat the final outlet in isolation. But does this necessarily have to be buttressed by majority participation? To adopt this position would immediately raise doubts about the pattern of collaboration accepted in other spheres by India, besides making nonsense of the vast armoury of regulatory powers taken by the State.

The point at issue is fairly simple: should the insistence on majority be taken to the stage where it involves India accepting as a consequence fresh burdens of short-term commercial credits to help meet the gap between the foreign equity contribution and the total foreign exchange cost of the project? On the face of it, this might seem inadvisable after what Mr. T. T. Krishnamachari, Central Finance Minister, said in his Budget speech about the staggering repayment liabilities falling due in the next plan period. Investment, of course, does have its own price in terms of profit repatriation. But the choice, it seems from the manner in which the issue has been debated so far, is being made *a priori* without really going into the economics of the problem. This is unfortunate because the scale of refinery expansion required over the next seven years is likely to make the sums involved large enough to make an important difference to viability.

Mr. Kabir will also need to decide what should be the right stance towards the international oil companies already operating in India. Their readiness to adjust themselves to the new reality of the consumers' bargaining strength indicates their willingness to move with the times instead of standing rigidly by the letter of the refinery agreements. Both the Bombay refineries have shown that they can add to capacity at much lower cost than that required for a new unit of corresponding size because they will be building upon the facilities that already exist. In return for permission to expand, they are willing to scrap the old agree-

ments and operate on the same footing as other enterprises governed by the Industries (Development and Regulation) Act. Mr. Kabir's survey of the oil scene, while winding up the Lok Sabha debate on the grants for his Ministry, gave no indication of his thinking on this issue, even though his enunciation of a new policy of keeping refinery capacity 10 percent to 15 percent ahead of demand implies an early decision. Is it that Mr. Kabir—and his senior colleagues in the Cabinet, on whom he is leaning heavily for support—is deterred from getting down to the problem by the political influences that the expansion of the Bombay refineries had acquired during his predecessor, Mr. K. D. Malaviya's term of office? Mr. Malaviya, who gallantly said in Calcutta a few days ago that the Government's oil policies had suffered no change because of his departure, continues, however, to pursue his old vendettas. This was clear from his reference to the comparative costs of new refineries, which was in essence a thinly-veiled defence of the Cochin deal in preference to Shell International's alternative proposal for Madras. But surely Mr. Malaviya's sniping need not determine the course of Central policy-making even though Mr. Kabir, through a combination of unsavoury local circumstances, may be in no position just now to take a strong line.

The case of the Bombay refineries rests largely on where the balance of advantage lies. The point has been made that, with Koyali due to come fully on stream by early 1966, Bombay's economic marketing zone will not immediately require additional capacity. It has also been suggested that the savings in capital costs may be outweighed by the disadvantages of the terms visualised for the pricing and transport of crude. These are issues of fact and should be capable of an objective assessment, but not perhaps New Delhi's unspoken fear of excessive concentration of capacity within the control of the "majors" of international oil. The seven "majors", including Shell and Esso, have been accused of working so closely together as to constitute a worldwide cartel which all consumers should beware of. Hence the plea made for encouragement to "independents" (such as Phillips Petroleum now participating in Cochin) in countries as differently placed as France, Britain and now India. But will this fear still be warranted after the oil companies voluntarily surrender the refinery agreements to accept the discipline imposed by the Industries Act? This is a question which Mr. Kabir's Ministry should be looking into afresh to help decide the expansion issue on rational grounds.

The pattern of refinery expansion will have a large bearing on the pricing of products. It does not constitute an independent problem which makes one wonder whether a second enquiry into pricing is needed at this stage when the broader issues are still wide open. The Damle Committee's lament over the presence of several intermediaries between the existing refineries and the actual producers of crude may perhaps be repeated, as also its concern that discounts available in the Middle East are not being fully reflected in invoices to Indian refineries. But this is to miss the logic of "tied" outlets which informs the existing refinery agreements, as much in the case of the older ones as of the new unit in Cochin. This facet of international oil operations underlines the need for taking an integrated view of the pricing problem within the larger context of seeking a *modus vivendi* with the supplying companies. A narrowly conceived enquiry may again miss these dimensions and produce a report which makes the task of reconciling the Indian and foreign viewpoints more difficult.

Finally, Mr. Kabir has to recognise the connection between the oil refinery end of the business and its offshoots in petrochemicals. The bargaining strength he banks on has to be seen in the light of the equally pressing need to obtain foreign participation in the new petrochemical industries to which importance is now rightly attached as part of the endeavour to diversify the economy. In addition, the lags in agriculture leave India no choice but to seek the help that synthetics can give to meet deficits in such field as fibres and rubber. This reinforces the need for seeking an understanding with the oil investor who is, one way or another, becoming increasingly associated with chemical enterprise throughout the world.

COMPANIES IN WHICH THE PUBLIC ARE SUBSTANTIALLY INTERESTED

By K. C. Khanna

IT is by now generally accepted that companies are ideal taxpayers. Being less articulate than individuals or particular classes of individuals, they are slow to object to new and heavier impositions; so the taxes on them go on rising. And if a company happens to be one in which the public are not substantially interested within the meaning of the Income Tax Act, penal and discriminatory taxation is levied in complete disregard of equity and fair-play. It is not surprising, therefore, that the steep rise in the rate of super tax payable by a company in which the public are not substantially interested, which was announced in the recent Budget proposals, has not aroused strong public protest. Even the Finance Minister in his Budget speech referred only in a casual manner to this drastic increase from the existing rate of 25 percent to the proposed rate of 35 percent, leading to a total tax of 60 percent on income. All he said was: "I propose to increase the rate of super tax from 25 percent to 35 percent in the case of companies other than those in which the public are substantially interested or which are wholly subsidiary of public companies, namely, the group generally referred to as Section 23A companies".

It is true that he has proposed slight amendments to the provisions relating to the compulsory distribution of dividends by such companies but a limited relaxation of penal provisions affords no ground whatsoever for an arbitrary enhancement in the rate of tax payable. One is, therefore, unable to understand the reasons which have prompted the Finance Minister to propose this unjust increase in tax. The mystery deepens as one recalls the observations made by Mr. T. T. Krishnamachari in his Budget speech delivered seven years ago, on 15th May, 1957. Referring to companies in which the public are not substantially interested, he then stated: "My next proposal with regard to companies relates to the tax on undistributed profits of companies in which the public are not substantially interested. This tax has frequently been the subject matter of considerable arguments. The principle on which the tax is based is unexceptionable, namely, that individuals having income in the higher brackets should not be allowed to avoid payment of super tax by forming close corporations and not distributing their profits in such corporations. However, in the context of our development plans, we have to balance against the need to prevent super tax avoidance, the needs of companies for funds required for expanding industrial activities".

How is it then that Mr. Krishnamachari has suddenly started to disapprove of the companies whose requirements of funds for expansion were fully appreciated by him seven years ago? No explanation is forthcoming for this unwarranted increase in taxation except that it may be perhaps a case of the "seven-year itch"! What is worse, the increase in tax is with retrospective effect and some companies may find themselves in an embarrassing position, having already closed their accounts and distributed the profits.

To appreciate the full impact of the increased tax it is necessary to ascertain the category and type of companies which will be affected by the proposed increase. For this purpose, it is necessary to discuss and analyse the relevant portions of Section 2(18) of the Income Tax Act which define a company in which the public are substantially interested and which read as under:

- "(18)
A company is said to be 'a company in which the public are substantially interested'—
(a) if
(b) if it is not a private company as defined in the Companies Act, 1956, and
(i) its shares (not being shares entitled to a fixed rate of dividend whether with or without a further right to participate in profits) carrying not less than 50 percent of the voting power have been allotted unconditionally to, or acquired unconditionally by, and

were throughout the relevant previous year beneficially held by, the Government or a corporation established by a Central, State or Provincial Act or the public (not being a director or a company to which this clause does not apply);

(ii) the said shares were at any time during the relevant previous year the subject of dealing in any recognised stock exchange in India or were freely transferable by the holder to other members of the public; and

(iii) the affairs of the company, or the shares carrying more than 50 percent of its total voting power were at no time during the relevant previous year controlled or held by five or less persons.

Explanation 1—In computing the number of five or less persons aforesaid—

- (i) the Government or any corporation established by a Central, State or Provincial Act or company to which this clause applies shall not be taken into account; and
(ii) persons who are relatives of one another, and persons who are nominees of any other person together with that other person, shall be treated as a single person.

The conditions laid down in sub-clause (b) of Section 2(18) of the Act are cumulative and it is apparent that (i) a company which is a private company as defined in the Companies Act, 1956, or (ii) a company more than 50 percent of whose equity capital was not allotted unconditionally to and beneficially held by the public throughout the relevant previous year, or (iii) a company whose shares were not traded in on any recognised stock exchange in India at any time during the relevant previous year or were not freely transferable by the holder to other members of the public (not necessarily in India), or (iv) a company whose affairs at any time during the relevant previous year were controlled by five or less persons, or (v) a company whose shares carrying more than 50 percent of the voting power were at any time during the relevant previous year held by five or less persons, will not qualify as a company in which the public are substantially interested. In determining the number of "persons" a company to which sub-clause (b) applies shall not be taken into account.

Obviously, Section 2(18) of the Income Tax Act creates a highly artificial definition of "a company in which the public are substantially interested", which, if strictly followed, will have extensive implications. As pointed out by the National Council of Applied Economic Research on page 77 of its study *Taxation and Foreign Investment*, "a wide range of companies engaged in *bona fide* production and manufacture which fall under the present provision of Section 23A cannot be deemed to fall within the category of companies intent upon aiding and abetting tax evasion for the personal benefit of their shareholders or any such purpose". The additional taxation now proposed will, therefore, impose a very heavy burden on many big and reputable companies which, merely because of the existing organisational structure established years ago, technically fall outside the scope of Section 2(18) of the Act, even though in fact the public are substantially interested in them.

Instances of such companies are those where the majority shareholding is in the hands of a private company and the private company in turn is owned by a company in which the public are substantially interested. The ultimate beneficiaries of such companies' activities are thousands of individual shareholders and the additional taxation which these companies will have to bear will finally be borne by this important section of the investing public. This is wholly wrong in principle and an amendment should be made to Section 2(18) of the Act so that the question of substantial public interest in a company is determined with reference to the ultimate share owner-

ship and not with reference to the status of the immediate shareholding company. The change is necessary because a large number of foreign investors may inadvertently be penalised by higher, taxation because of a technical non-compliance with the provisions of Section 2(18) of the Act.

The next question that arises is: Will a company which satisfies all the conditions mentioned in sub-clause (b) referred to above, and in which equity shares carrying not less than 50 percent of the voting power are held by one or more companies in which the public are substantially interested, be itself entitled to the status of a company in which the public are substantially interested? Since the word "public" includes a company in which the public are substantially interested, and as the word "person" excludes such a company, the answer is that if a company in which the public are substantially interested holds more than 50 percent of the equity share capital of another company, the latter company should be regarded as a company in which the public are substantially interested. Consequently, if shares carrying at least 50 percent of the total voting power are held by one or more "public" companies, the company in which the shares are held must be regarded as one in which the public are substantially interested if it fulfils the other statutory conditions.

A contrary view has possibly been expressed in certain quarters and the Income Tax Department is understood to have held in some cases that even a company in which the public are substantially interested should not be considered as a member of the public if such a company holds the controlling interest in the other company. Reliance is placed on certain observations of the Supreme Court in the case of Raghuvanshi Mills Ltd. reported as (1961) 41 ITR 613, in support of this view. On the facts of that case the Supreme Court observed: "The word 'public' is used in contradistinction to one or more persons who act in unison and among whom the voting power constitutes a block. If such a block exists and possesses more than 75 percent (as the law then stood) of the voting power, then the company cannot be said to be one in which the public are substantially interested".

The Supreme Court referred further to the facts of that case and remarked that in such a case the shares cannot be said to be "unconditionally" allotted to and "beneficially" held by members of the public. In this respect, reference is also made to the judgments of the Supreme Court in the cases of the Shree Changdeo Mills (41 ITR 667), Jayantilal Amritlal (43 ITR 331) and the Jubilee Mills (48 ITR 9). Accordingly, it is argued that if one or more public companies hold the majority of equity shares, these companies constitute a block and the shares held by them cannot be regarded as held by members of the public even though the public is substantially interested in the companies concerned.

For the reasons stated below, this view seems untenable. First, the cases referred to were decided on their peculiar facts which involved primarily the holding of shares by a group of individuals who were either closely connected with each other or who acted in concert to form, for instance, a firm of managing agents which controlled the interests of the managed company. The facts of these cases are, therefore, distinguishable from the proposition before us. In any event, the Supreme Court has held in the Jubilee Mills case (48 ITR 9) that the decision on the point should be based on the facts and circumstances of each case and no general principle of law can, therefore, be held to have been enunciated. In the circumstances, it is wrong to rely on certain observations of the Supreme Court torn out of context and to hold that a company is not a company in which the public are substantially interested, merely because a majority of its equity shares are owned by one or more "public" companies.

Secondly, it is submitted that the view, if upheld, will defeat the object of the legislature. In this connection the significance of the words in brackets at the end of sub-clause (b) (i) has to be noted. In terms of that provision, a "public" company is included in the term "public". If the shares held by such a company are not to be

regarded as shares held by the "public", there will be an apparent contradiction. It is a well-settled and accepted rule of construction that in fiscal statutes, the doubts, if any, must be resolved in favour of the subject and the intention of the legislature must be given full effect to and no part of a statute should be treated as redundant or inoperative. It must, therefore, be held that shares owned by a "public" company are held by the "public".

Thirdly, the view is contrary to the expressed intentions of the Government and in this connection reference may be made to an article written by Mr. A. K. Roy, then Secretary to the Government of India in the Ministry of Finance which appeared in the Annual Supplement to *Capital* of 19th December, 1957. Although the article was written in a different context, the following statements there throw light on the Government's intentions. "By the amendment just mentioned, it has been secured that a company, more than 50 percent of whose shares are held by one or more companies in which the public are substantially interested, will not attract

operation of this (23A) Section.....Even where two or more foreign public companies join together to form a company in India, such a company will not become a Section 23A company so long as their joint holdings exceed 50 percent of the equity shares".

In view of the above, the position seems to be clear but to remove existing doubts and to widen the scope of Section 2(18) of the Income Tax Act in conformity with the express and implied intentions of the Government, it is suggested that a new Explanation 1 be added to Section 2(18) somewhat on the following lines:

"Explanation 1: For the purposes of this clause a company which complies with all the provisions of sub-clause (b) and all its subsidiary companies as defined in the Companies Act, 1956, shall be deemed to be 'the public' and the shares (not being shares entitled to a fixed rate of dividend as aforesaid) held by the said company and its subsidiary companies shall be treated as shares held by 'the public'".

with other consequential amendments.

DISMAL OUTLOOK FOR FOOD

THE recent Lok Sabha debate on food and agriculture once again highlighted the Government's failure to raise foodgrains output, although the Central Deputy Minister for Food, Mr. A. M. Thomas, did not hesitate to make tall claims about the success of the Government's policies. The current rice crop, the Minister said, would be a bumper one. The basis of this optimism is the information available from the States which suggests that the rice crop during 1963-64 may be of the order of 36 million tons—or nearly 2 million tons more than the record crop of 1961-62. But judging from the prevailing prices of rice—the current rate in West Bengal is now Rs. 33 or Rs. 34 a maund for the fine variety—Mr. Thomas's assessment appears to be odd in relation to the facts. As it happens, the country faced food shortages and rising prices in years when production was stated to have reached record levels. Consumers were mulcted by traders in spite of official claims of increased production. Mr. Thomas claimed success for the official policy in checking the rise in prices but frankly admitted, like his predecessors, that agriculture in India remained a gamble on the rains.

Yet, with the growing pressure of population on the one hand, and tardy progress in agriculture on the other, the country is facing one of its biggest challenges. On the basis of available indications, India is precariously poised for another bad year as far as food supplies are concerned. Even according to optimists outside the Government, both the supply and price trends will be as bad as last year, if not worse. The prices of wheat have already gone up by Rs. 8 a quintal or so following the Central Food Minister's announcement on the creation of nine wheat zones in the country. The aim was, however, to the contrary—to stabilise prices within the zones and to isolate the deficit pockets whose requirements of wheat, according to the original proposal, were to be met from imported stocks. Meanwhile, official circles think that the shortfall in wheat production may only be marginal, that is, about 1 million tons, although the trade is inclined to place the deficit at around 2 million tons. An estimate of the shortfall or surplus in foodgrains has been made difficult by the lack of co-operation from the States who, despite reminders from the Centre to furnish statistics, have refused to oblige so far. What is worse, some States are still to make their first estimate of the *kharif* crops, let alone the *rabi* ones. These estimates are likely to be available some time in April; only long afterwards will the Centre and the States finally discover how far the country has been deficit in foodgrains during 1963-64.

Rainfall and weather conditions over major parts of the country are officially claimed to have been satisfactory during the *kharif* season except in some areas of north and north-west India. *Rabi* sowings, too, have been satisfactory, but the standing crops suffered considerable damage due to the recent cold wave in Punjab, Rajasthan, U.P., etcetera. Although the millet crop in Gujarat,

Maharashtra and Madhya Pradesh has suffered, there is unlikely to be any great shortage of the commodity. The Central Food Ministry reportedly thinks that the rise in rice production is likely to be offset by a decline in the production of wheat, millets and pulses. The foodgrains trade, meanwhile, has estimated that the gap between the demand and supply will be as much as 8 million tons. The Federation of All India Foodgrains Dealers Associations has, therefore, urged the Gov-

ernment to go in for larger imports. This appears to be the only solution under the circumstances since food production within the country cannot be raised overnight.

Moreover, it is through increased imports that the tendency to hoard can be effectively curbed. New Delhi has, therefore, done well in asking the U.S. Government to extend the P.L. 480 agreement for wheat. But it is doubtful whether the country can build a buffer stock of 4 million tonnes of wheat. Last year, it will be recalled, India imported about 4 million tonnes of wheat, but the total issue from the Central buffer stock amounted to as much as 3.8 million tonnes. In view of the shortfall in wheat production, what the country needs today is a larger buffer stock so that timely releases may help avert scarcity conditions. But apart from requesting the U.S. Government to extend the P.L. 480 agreement, the Government has done precious little so far to increase imports, although it is well aware that the country is heading for another difficult year as far as food supplies are concerned.

It is a pity that India is still faced with the food problem after more than a decade of experiments on the community development programmes, National Extension Service, package programmes and co-operatives. The Planning Commission's advisory panel on agriculture has just discovered that the incentives provided to the farmer have not been properly utilised. Meanwhile, the Bharat Krishak Samaj has assured the Government that it will pay Rs. 1,000 crores to the Exchequer after ten years if Rs. 100 crores is now spent in providing agricultural subsidies. On what basis this optimistic assessment has been made, the Samaj does not say. But it evidently believes that subsidies can work miracles in converting the shortfall in foodgrains production into one of positive surplus.

Current News and Comment

The New Conversion Offer

The conversion loan offer announced by the Government of India has not come as a surprise. The Reserve Bank had already started grooming the market by suspending outright sales of two Central loans—4 percent 1969 and 4½ percent 1986. The Government has now offered two new loans for conversion. The first is a short-dated 4 percent loan maturing in 1970 at an issue price of Rs. 99 a Rs. 100 nominal. It is repayable on 15th April, 1970. The second one is the long-dated 4½ percent loan, 1989, to be issued at par, and repayable on 15th April, 1989. The holders of 3½ percent National Plan Loan, 1964, and 3 percent Loan, 1964, have been given the facility of converting their holdings into either of the new securities, which will bear interest from 15th April, 1964. The interest will be paid half-yearly, on 15th October and 15th April, and will be liable to tax under the Income-tax Act. Applications for conversion will be received from 15th April, 1964 to 22nd April, 1964, both days inclusive.

In offering the conversion loans, it appears to have been decided not to issue any medium-dated loan. In 1963, one short and another long-dated loan were offered for converting the 3 percent 1963-65 loan and the 3½ percent 1963 loan. The total offer for conversion amounted to Rs. 138.79 crores, against maturities for Rs. 174.23 crores. The borrowing programme this year shows a similar pattern. Considering that the 3½ percent 1964 loan is due for repayment on 19th April for Rs. 158 crores, the conversion offer at this time is appropriate. The 3 percent Loan 1964 is due for repayment on 15th June for Rs. 30 crores. The present tightness of the money market will naturally not affect the new loans which will not require any cash.

The prospects for conversion are encouraging. To begin with, the long-dated 4½ percent loan, 1989, offers an interest of ½ percent more than was available on the comparable loan issued in 1963. The running yield of the short-dated 4 percent loan, 1970, amounts to 4.04 percent and the redemption yield to 4.19 percent. So the yield looks slightly

better than that available on the existing comparable securities. The offer of a higher interest rate on the long-dated loan is in accordance with the new dearer money policy. Although the rate of interest offered is not attractive by current market standards, it is unlikely to govern conversion in a material way due to two factors. First, Government securities are a narrow market since the public do not usually invest money in these securities. The support, therefore, comes largely from the Reserve Bank and the institutions. Considering that the bulk of the maturing loans are held by the Reserve Bank, the Life Insurance Corporation of India, the State Bank and provident funds, the success of conversion is almost assured. Whether commercial banks will go in for conversion is difficult to ascertain. Their finances have been strained by the requirements of the busy season. As in 1963, the bulk of their support may be confined to the short-dated loan. The Life Insurance Corporation and provident funds should prefer the long-dated loan because of the higher yield.

Although the Central Finance Minister, Mr. T. T. Krishnamachari, has given no indication of the size of borrowing for 1964-65, it is almost certain that the Government will float a second tranche of loans later as it did in 1963 to mop up cash subscriptions. The terms and conditions of the future loans for cash subscription this year are expected to conform more or less to those of the new conversion loans just issued. Apart from the support of the Reserve Bank, the Life Insurance Corporation of India, the State Bank of India and provident funds, commercial banks are likely to support the future new loans for cash subscription, as they will have to increase their investment portfolio to comply with a higher liquidity ratio by next September.

The Finance Minister has already indicated that for 1964-65 the Central Government will not adopt a combined borrowing programme for itself as well as the State Governments, as it did in 1963-64. In the latter year, the Centre borrowed on behalf of the States and out of the total borrowings the States were given a sum

of Rs. 100 crores. Although separate borrowings by the States generally exert an unhealthy influence on the market because most of the subscriptions to these loans are obtained by persuasion, if not by pressure, the principle of combined borrowing has probably been suspended for the time being, in order to instill a greater sense of financial responsibility among State Governments.

Attracting Foreign Capital

In a radio talk last week, Mr. G. L. Mehta, chairman of the Indian Investment Centre, pleaded for an "open-door policy" for promoting foreign investment in India in so far as it is consistent with the Government's policies. According to a recent study of the Reserve Bank of India, foreign private investment in this country increased from about Rs. 255 crores in 1948 to Rs. 690 crores in 1960. The gross foreign private investment in India increased over the period by more than Rs. 435 crores, as indicated by the above figures, although there was also some outflow of capital. During the past three years, the net addition to foreign private investment in India has been of the order of Rs. 50 crores to Rs. 60 crores a year. But this is insufficient for the country's requirement, so efforts should be made to increase the inflow of foreign capital into India. In the past, most of the private capital came from Britain, but in recent years the share of the latter has declined. The share of Britain, the U.S.A. and other countries comprising France, West Germany, Japan, etcetera, in 1960 was 65 percent, 16 percent and 19 percent, respectively, against the corresponding shares of 82 percent, 9 percent and 9 percent in 1955. This means that India has to make efforts not only to attract private investment from Britain, but also from the U.S.A. and other countries.

In recent years, foreign capital has come to India mostly in the shape of foreign aid which means loans from Government to Government or from specialised institutions in foreign countries to the Government of India. This kind of foreign capital has its own importance. But if efforts are made to attract private foreign capital into India through joint ventures or foreign collaboration schemes, the advantage will be that the payment of interest and the repayment of capital in future years will not be much of a burden as these concerns will earn higher profits through expansion and diversification.

The advantage of encouraging the inflow of private foreign capital into India is not only that technical knowledge and advanced management techniques come with it, but that it also encourages new entrepreneurs. The economic development of any country—especially of an underdeveloped country—is conditioned by the entry of new entrepreneurs into business. Contrary to popular belief, the joint ventures and collaboration agreements are not always between big giants. Mr. Mehta said that many small foreign enterprises had joined hands with small and medium-sized Indian entrepreneurs involving a capital investment of only Rs. 10 lakhs to Rs. 20 lakhs. The Central Finance Minister announced some tax concessions for private foreign capital in his 1964-65 Budget. But it is more important to reduce the formalities and to expedite the grant of permission and other facilities for starting joint ventures.

Working of the Tea Board

The Estimates Committee's report on the Tea Board is doubtless a well-intentioned document. It does a service by highlighting the lag in replanting—still about 86 percent short of the target set in 1956—and the inadequacy of the official financing schemes. But the Committee proceeds to blame the Board as if this statutory agency can make up for the industry-wide lag through its own unaided efforts. The Board undoubtedly has a large and important rôle to play, but it is naive to imagine that the marginal assistance it is empowered to extend to the industry can take the place of the capital that should be raised from within. By refusing to look at the taxation aspect, the Committee has blundered from the right ideas to the wrong conclusions—a pity, because the situa-

tion now prevailing in the industry calls an objective, high-level assessment.

The Lok Sabha body is not far wrong when it says that the target fixed for the third plan is unrealistic. If this has proved so, it is not because there is anything inherently impossible in increasing tea output by 87 million kilograms over a period of five years. There have been times when the crop has increased by 33 million kilograms in a single year, as in 1961—just as there have been years of stagnation or decline as in 1962 and 1963 because of adverse weather conditions. The fickle monsoon and the unpredictable temperature in crucial weeks can make all the difference, but the incidence of the vagaries of nature can be gradually reduced by spreading irrigation facilities. The real test of the determination to get to any particular target is the extent to which the industry is helped in overcoming the handicaps of the weather. This is largely a matter of providing the credits which industry, enfeebled by the tax-gatherer's exactions, cannot readily obtain on its own, and of releasing foreign exchange for the equipment which must still come from abroad. The Board, encouraged by the support extended to it by the Central Ministry of International Trade, has tried to do something in both directions. It is not its fault if anything it is able to do falls far short of what is required.

The basic issue relates to the state of industry's finances. Governmental help, whether extended for replanting or any other of the needs arising out of the bid to expand production, can play at best a marginal and supplementary rôle, but the brunt of the responsibility has to be taken by the industry itself. This implies looking at taxation policies afresh to assess whether the Central and State Governments levies leave enough behind with the industry to remunerate the shareholder and the industry to ploughing back profits. The provide a margin for ploughing back profits. The tax rebate offered to certain plantation industries in the latest Central Budget shows that the need to leave more in hands of companies is beginning to be recognised in New Delhi, but the exclusion of sterling companies denies the benefit to the part of the industry which, on a rough tally, accounts for 70 percent of the output. As the Hon. S. P. Sinha said at the Indian Tea Association meeting recently, the cost of replanting—Rs. 3,000 to Rs. 4,000 an acre—throws such a large burden that even the best-run companies find it difficult to arrange the resources required. The treatment accorded to this expenditure for tax purposes makes a difficult situation worse, but none of this is taken into account by the Estimates Committee in its excessive preoccupation with the Tea Board's sins of omission.

The Tea Board, like any other institution, is not a model of perfection. Even its best friends will readily agree that it has lately tended to acquire functions—financing, for one—for which it is ill-equipped. But it is a body which has generally been helpful and understanding, as is evident from the vigour with which it has brought the industry's problems to the attention of New Delhi's policy-makers. Its part in arranging supplies to the tea districts (except for food, which is a local matter to be settled between the gardens and the State Governments) and in bringing tea down for auctions was seen at its best in the dark days of the 1962 emergency. In relation to the larger function of assisting the industry to expand output and exports, it has done a good job considering the limitations under which it has worked. It could perhaps do better if it were invested with greater autonomy, as one trade body suggested. But it would be a mistake if chagrin over the unjust criticisms of the Estimates Committee were allowed to obscure the truth about the future of tea. This depends, first, on the entrepreneur's ability and willingness to make the large and uncertain investments needed. A long-term increase in exports must, by and large, follow a rise in output, and not the other way round. The concern over exports expressed by the Estimates Committee remains futile because of the failure to recognise that the Indian industry must look to economies of scale more than ever before if it is to remain competitive in the days ahead.

Progress of Co-operation

The co-operative movement in India, numerically speaking, has made great progress during the

past decade. According to the latest report of the Central Ministry of Community Development and Co-operation, the number of co-operatives of all types increased from 181,000 at the beginning of the first plan to 332,000 at the start of the third, i.e., nearly a two-fold increase in a decade's time. Correspondingly, membership of primary societies went up from 13.7 million to 34.2 million. The share capital of all societies rose from Rs. 45.46 crores to Rs. 221.57 crores, and their working capital from Rs. 275.85 crores to Rs. 1,312.09 crores. This rapid expansion, however, needs to be consolidated and the movement strengthened through a diversification of its economic activities. For instance, the marketing and processing sides of co-operation have not developed sufficiently, and the number of service co-operatives is still inadequate for the requirements of the rural sector.

It is, therefore, gratifying to find from the report that the authorities are now paying more attention to these aspects of the movement than to a mere increase in numbers. During 1963-64, for instance, attention was given mainly to setting up more marketing societies, farming and consumer co-operatives as against just agricultural credit societies. Even a fair proportion of the latter have already started undertaking one or more service functions. According to the report, already 2,200 primary marketing co-operatives cover most of the important secondary markets, and it is proposed to set up 62 more in 1963-64 and another 200 in 1964-65 with a view to covering all the important secondary markets in the country by the end of the third plan. During 1963, the value of agricultural produce marketed was Rs. 183 crores. About 2,400 new service co-operatives are to be organised during 1964-65. Agricultural credit, however, remains the main business of the movement, as it must. In 1962-63, a total of Rs. 256 crores of credit was disbursed among the members; in 1963-64, the State Governments have fixed the target at Rs. 380 crores and in the final year of the plan, it is expected that farm co-operative credit may reach the level of Rs. 400 crores. As for the comparative newcomer, consumer co-operatives, some 143 wholesale stores and 2,341 primary stores or branches had been set up by the end of December 1963, under the Centrally-sponsored scheme, and a more rapid expansion in this sector is contemplated in the following years.

Paying Metropolitan Bank Depositors

The arbitrary way in which the Reserve Bank has withheld the payment of deposits insured under the deposit insurance scheme in the case of the depositors of the former Metropolitan Bank Ltd (which has since been amalgamated with the United Industrial Bank Ltd) shows how a good scheme can lose its value due to the inefficiency and callousness of the implementing authority. The Metropolitan Bank Ltd stopped payment after a moratorium was imposed by the Reserve Bank early last October. The payment to depositors was resumed in February when the Metropolitan Bank was amalgamated with the United Industrial Bank. Under the deposit insurance scheme, sums of up to Rs. 1,500 an account are insured, and should be paid without any hesitation. But when payment to depositors was resumed by the United Industrial Bank in February, every depositor having up to Rs. 1,500 was given a cash credit for only 70 percent of his deposit which could be drawn immediately. The remaining 30 percent, it was stated, would be credited as soon as the Reserve Bank paid the full insured amount of Rs. 1,500 an account. Since the Reserve Bank has not yet paid the amount, the United Industrial Bank has not paid the remaining 30 percent.

The entire proceeding is unsatisfactory. The fundamental principle of insurance is that its benefit should be paid to the insured as soon as the contingency against which insurance is taken, arises. The growing unpopularity of the Life Insurance Corporation is largely due to the fact that the payment of claim has not been prompt. The inauguration of the deposit insurance scheme has been of great psychological value in instilling confidence among bank depositors. It is, therefore, to be regretted that the scheme is being brought into disrepute by the Reserve Bank's mishandling.

It has not been possible to ascertain whether the depositors of the Metropolitan Bank could

have been paid up to the insured amount during the period of the moratorium. Anyway, it is worth while exploring the possibility of paying at least the insured amount to the depositors even during a period of moratorium, if the deposit insurance scheme is to have its beneficial effects. There is no justification for withholding payment of the insured amount after the amalgamation scheme has gone through. To put forward the plea that it has not been possible to do the needful due to administrative difficulties merely proves how a good scheme can be wrecked by bureaucratic inefficiency.

Progress of Indian Shipping

The Central Minister for Transport, Mr. Raj Bahadur, told the Lok Sabha last week that by the end of the third plan, India would achieve the revised shipping target of 2.5 million g.r.t., against the original target of 1.3 million g.r.t. and the National Shipping Board's expectation of 1.4 million g.r.t. He added that the shipbuilding capacity would be increased from three ships a year to six ships a year by 1968. The capacity of the Indian ports has increased to 48 million tons and would reach 60 million tons by the end of the third plan. But in spite of this praiseworthy progress, much leeway still remains to be made up.

It has been estimated that Indian trade and industry has to pay about Rs. 150 crores a year for shipping freights. It is a legitimate aspiration that Indian shipping should earn at least half of it, i.e. Rs. 75 crores a year. Although in the case of "linear cargoes"—machinery, equipment, jute, tea and textiles, for example—Indian shipping carries 30 percent to 50 percent of India's foreign trade, in the case of liquid "bulk cargoes", such as crude oil and petroleum, and in the case of dry "bulk cargoes", such as wheat, fertilisers, and ores, the share of Indian shipping in the country's foreign trade is only 3 percent to 4 percent. Mr. Raj Bahadur pointed out that the share of Indian shipping in the expanded world trade had increased from 12 percent in 1961 to 15 per-

cent in 1963 and was expected to increase further to 18 percent by the end of 1964. But a concerted effort is needed to increase the share of Indian shipping in bulk cargoes. The Minister assured the Lok Sabha that with the acquisition of 19 more bulk carriers for overseas routes, the share of Indian shipping in bulk cargoes would increase. But it is necessary to expand the capacity for carrying bulk cargoes faster than has so far been planned. With the recent depression in the world shipbuilding industry, India had an excellent opportunity to place orders for more bulk carriers. But much still remains to be done in this direction.

The position of Indian shipping is still weak in passenger shipping. True, passenger ships are expensive, so their acquisition poses a serious problem in the context of the present foreign exchange difficulties. But since shipping provides an opportunity for the training of young men in seamanship, which is of vital importance for the defence of a country like India with a huge coast line, the development of both freight and passenger shipping is a matter of vital importance for the country. This apart, Indian shipping needs to be developed since it may help the country to earn substantial foreign exchange in the future.

The position of Indian shipping is much more satisfactory as far as coastal cargoes are concerned. But unfortunately, operating costs have increased and the Government has imposed numerous restrictions on coastal shipping. So it is a sound suggestion that costs and freight rates should be referred to the Tariff Commission so that shipping companies engaged in the coastal trade are able to earn reasonable profits.

Role of Refrigeration

The refrigeration and air-conditioning industry in India has made remarkable progress during the past decade or so. A number of large contracting firms with adequate know-how in designing and application of the refrigeration and air-conditioning technique have emerged, and production of

almost the whole refrigeration plant has now been made possible with the manufacture of compressors within the country. The products of this industry can no longer be looked upon as luxury items for the rich as the industry covers several items which are more essential than the commonly used refrigerators and air-conditioners. Refrigeration, apart from preserving valuable foodstuffs for domestic use, makes it possible to export foodstuffs like fish, froglegs, etcetera, which earn about Rs. 5 crores of foreign exchange annually.

In the field of industry in general, refrigeration and air-conditioning is an essential adjunct of many vital industries, namely, textiles, chemicals, pharmaceuticals, ammunition and, atomic energy. It is also of immense use in preserving life-saving products like antibiotics, vaccines blood banks, etcetera. Even air-conditioning by itself is not a luxury in India's tropical climate as it contributes to greater efficiency and productivity. The exhibition organised recently by the Refrigeration and Air-conditioning Trade Association in Bombay brings out clearly the rôle that this industry plays in several vital spheres of the country's developing economy.

Maharashtra's Minister for Industries, Mr. S. G. Brave, who inaugurated the exhibition conceded that the refrigeration and air-conditioning industry had an increasingly important rôle to play in the country's fast developing economy. And he assured the industry that he would do his best to remove the difficulties that were hampering its growth. Mr. Barve said that the Maharashtra Government itself had plans to open cold storage plants and to promote co-operative societies for providing such facilities in rural and other areas. Speaking on the occasion, the president of the Refrigeration and Air-conditioning Trade Association, Dr. J. M. Rane, pointed out that in spite of the vital rôle that the refrigeration industry played, it had been relegated to low priority through a misconception of its rôle.

POWER FOR JUTE MILLS

IT is astonishing with so many new Jute mills going up here with all the newest improvements in their spinning and weaving machinery, that with the exception of a small installation at an existing mill, none of the Companies should have thought of adopting electricity in place of steam as a motor power for driving their machinery. Quite a number of the Dundee millowners are considering the advisability of adopting the new system. Messrs. Cox, Brothers and Co. fitted up an electric installation in their large establishment some time ago, and it is pronounced to be a complete success. And now the last mail brings the news that Messrs. James Scott and Sons, Ltd., of Dundee, have decided to replace their steam driving power by electricity. Altogether dynamos capable of producing 2,000 horse power are to be introduced for the purpose of working all their machinery. The two firms named are amongst the wealthiest, and most successful of those engaged in the Jute industry, and the decision they have made in reference to the use of electricity may well set Calcutta Mill Agents, Directors and Managers to consider the question of its economical adoption as a motor power for the mills on the banks of the Hughli. The Jute Mills on the river banks are beginning to suffer considerably for want of labour. This is the time when numbers of the workers take leave to visit their country homes, but in addition to this cause there is a great deal of sickness prevalent, and production is beginning in some cases to be seriously affected. In addition to the absence of the ordinary workers through illness I am told by a visitor to the General Hospital, that he never saw so many European Mill Assistants there at one time as there are at present. Asking a pretty shrewd Mill Manager the other day to what he attributed so much sickness amongst the people at present, he replied: "Weel ye see, its no for me to say muckle, but its a' on account o' that cursed electric-light business. We were bad enough afore, workin' frae daylight to dark, but the lengthenin' oot o' th' oors baith at the beginnin' and the end o' th' day is simply bringin' the labour, baith European an' native, to the breakin' point. Take my word for it, the electric light, whatever else it may do, does not increase the dividends to the Shareholders and the sooner they understand that the better."

FROM

CAPITAL
7th April, 1904

A Ditcher's Diary

MR. NEHRU, SAID MR. NEHRU TO AN INQUISITIVE Lok Sabha on Monday in reference to his recent illness, has "recovered a great deal". If the Prime Minister considered himself in a position to give so heartening a reply with somewhat exaggerated aplomb and assurance, it must indeed be true; and, should doubts remain, suitably worded bulletins could no doubt be coaxed out of the medical experts now joined to the Prime Minister's entourage in support of what might otherwise be discounted as a subjective, interested and lay claim. The unfortunate truth, however, is that recovery from what was by no means a minor illness is apt to be a slow process; past the age of seventy-four it is apt to be slower still. With perhaps unintended frankness, Mr. Nehru himself later admitted that he was still not fully fit; and many who heard the Prime Minister's brave effort by way of a broadcast last week might pardonably have wondered whether the warm, familiar but now weak voice came from an A.I.R. studio or from a hospital bed. Mr. Nehru's reluctance formally to shed the responsibility of high office even in the midst of physical adversity is understandable. There remains a nation to serve: there is the power and the glory of it all; and, perhaps no less important, there is a creeping horror of loneliness which haunts us all in our advancing years. But the alternative, during a process of recovery which by all accounts must still take time to complete, is not altogether enchanting. I once wrote sceptically of troikas and triumvirates; and a triumvirate of a sort has embellished the New Delhi scene for some months. Mr. Nanda's affectionate letters to Mr. Shastri notwithstanding, the results of the experiment so far have not been wholly encouraging. Mr. Nehru may sincerely believe that such ugly ideas as grooming successors, appointing a deputy or sinking into fuller retirement provide no answer; and the sureness of his political instinct, once, was indeed unquestionable. A solution still has to be found in a situation where, since Mr. Nehru's illness, the country has entered a new and more disturbing phase of drift and indecision. For the nation's sake, no less than for the Prime Minister's own, a fundamental change may be necessary. When the time comes for making the change, Mr. Nehru may find comfort in the knowledge that the greatness of men, in the last analysis, lies in themselves and not in their designations.

ALTHOUGH NO GREAT LOVER OF EUROPEAN RENAISSANCE architecture myself, I have always regarded

London's St. Paul's Cathedral as one of the finest examples of its kind, at least so far as Britain is concerned. I suspect I would have preferred the old Gothic cathedral, destroyed by the Great Fire; but as a symbol of the remarkable capacity of London for self-regeneration, St. Paul's is impressive enough. What I have never been able to understand is why Wren did not square the west front with the approach up Ludgate Hill, although I realise he had plans for the whole area which never materialised. Now, 300 years later, it appears his vision is to be frustrated again; a correspondent tells me that a wing of the new Paternoster Development will obscure all but the extreme pinnacle of the northern tower of the west front from anybody approaching along Fleet Street up the hill. Just after £10,000 has been spent on cleaning it too; understandably, voices are being raised. But what intrigues me is that they should have left it so late. The Paternoster Development was planned years ago. Part of the project was to demolish—where Hitler's bombers had not already obliged—the old buildings which have obscured so much of the Cathedral throughout the centuries, and the concept of a piazza, common enough on the Continent but unusual in Britain, was plain enough from the model which was constructed for the benefit of London's planners. And that seems to have been where the trouble arose. Models are generally viewed from above, or at any rate from an angle of elevation. They are seldom studied carefully from an eye level point of view, and it is easy to forget that this is how the majority of human beings will see the finished article. This is what appears to have happened in the case of St. Paul's; it does not seem to have occurred to anybody that the vista of the west front was threatened until the obstacle was under construction and, to quote an authority, would "cost the earth" to re-site. So much for planning. Now some apologists are trying to console the public for another 100 years or so during which St. Paul's will be overshadowed, by representing it as an historical custom among the British to permit their greater buildings to be encroached on by less permanent structures. They might be right: I seem to remember that this was one reason given for the fall of Fort William, Calcutta, in 1756.

NO ART FORM, PERHAPS, HAS GROWN MORE IMPRESSIVELY in popularity, and contributed more to human understanding, than the motion picture over the years. The horrors of television may have invaded the scene in the culturally under-

developed homes of the world; but I remain part of the shrinking minority which believes that once the novelty of it all has faded away, the cinema will re-emerge as among the greatest portrayers of art, understanding and reality in the twentieth century. The striking feature of the films shown during the Swedish Film Festival in Calcutta this past week was not merely their quality; *The Magician* excepted, they were, to my mind, superb almost beyond expectation. The more striking aspect, perhaps, was that they were firmly rooted in the ideas and legends and traditions of a society that was utterly foreign to the majority of the local audiences; and yet, by highlighting brilliantly aspects of the universality of human experience, they created, for all, drama of tremendous emotional impact. That, if I may say so, is the test of greatness in cinematic art: it must appeal not merely to the narrow audience towards which it may have initially been directed; nor merely to pretentious quibblers born within the quackery of professional criticism; but to a wider world—to those ordinary men and women who, in the midst of their humdrum lives, are capable of acquiring a new understanding, a new appreciation and a new insight into human experience through what they see on the screen. In my judgment, the finest of the films shown was *The Virgin Spring*, directed by Ingmar Bergman and based on a medieval folksong, which depicts a primitive drama of violence and revenge in a Christian setting. *Wild Strawberries*, also by Bergman, and *Miss Julie*, directed by Alf Sjöberg, were in their own different ways masterpieces too—the former, in particular, being a memorable portrayal of the spiritual death that overtakes men in the midst of worldly success. To attempt to describe or analyse films of such calibre in a few brief words would be pretentious, indeed foolish and philistine. Common sense persuades one to desist from the effort—to say no more than that we owe a debt of deep gratitude to the Cine Club of Calcutta and to the Swedish Trade Commissioner for the four evenings of glory during which these films were shown. A festival of Hungarian films is, I gather, scheduled for May. God willing, may the organisers not inaugurate it with seemingly interminable speeches of the sort which marked the inauguration of the Swedish Festival. Cinematic art, if I may be permitted to say so, is not appreciated the better for being preceded by oratorical rubbish.

IT'S ODD THE RELATIONSHIP BETWEEN FRANCE AND Mexico. The French behave for all the world as if their dearest wish is to exorcise the ghost of poor old Maximilian, while the Mexicans, despite what they consider they once suffered at the hands of Napoleon III, appear to have nothing but respect for their former patrons. It is, I suppose, what a psychologist might call a "love-hate" complex. Anyway, I am glad that President de Gaulle

did not suffer a Maximillian fate, or even, for that matter, a Nixonian one. But of course he is much too wily a political bird to have taken any such risk. The significance of what happened to Maximillian has not been lost on de Gaulle. He knows well enough that oppressed nations are apt to go to drastic lengths when they consider themselves threatened by a foreign tyranny. But now the tyrant is not France; rationally or otherwise, the Latin American countries consider it to be the United States, and the President is fast emerging the world over as the symbol of opposition to U.S. domination. I suspect de Gaulle would like to be regarded as rather more than that. He has realised, quite rightly in my opinion, that the world is sick and tired of the insane nationalistic and ideological posturings which have been known during the past 17 years as the "cold war". To the main contestants, Russia and the United States, this conflict has been conducted with all the solemn dedication of a religious crusade. But other nations have not always shared such attitudes, at least not with the same degree of fanaticism. Hence the enthusiasm in Latin American countries for any symbol of freedom from the rivalries of the "great two". The important thing is that the world has become utterly exasperated with the cold war, and is prepared to grasp at anything which promises escape from it. President de Gaulle is fast becoming that thing. I could almost cheer for him myself.

GEOFFREY POWELL'S RETIREMENT FROM THE EDITORSHIP of the *Statesman* on Tuesday marks the end, not of an era, but of an episode in the history of a famous newspaper. Great institutions, like great families, have their traditions, which they love, cherish and nurture; but times change, and men too, and in the process traditions are apt to be remoulded by the personal preferences and professional qualities of those entrusted with their continuance. The *Statesman* was once noted for its blend of elegance of language, and courage and outspokenness of expression, all of which made it not only a distinguished newspaper, but also a powerful participant in the hurly-burly of Indian politics. If in later years the participation became more inhibited, circumstances were perhaps no less responsible for the change than the personalities fated to cope with them. Many to this day recall the audacious resolution of Alfred Watson which survived two attempts at assassination in the heyday of terrorism in the early 1930s; the fiery brilliance of Arthur Moore's editorship; the greatness the *Statesman* achieved in exposing the disastrous miscalculations, or worse, which led to the Bengal Famine; and the courageous campaigns of Ian Stephens for sanity in the midst of the blood baths that started with the Great Calcutta Killing of August 1946. If comparable examples of powerful advocacy for causes, political and humane, have been relatively rare in recent years, the reason may lie partly in the cautious attitudes nurtured by the wider social climate: despair has blurred the challenge of causes, as often as discretion has blurred the forthrightness of those who might have fought for them. More and more newspapers in India today seem to be moving towards the conviction that in silence lies the signpost to survival and success. The *Statesman* could never fall victim to so unbecoming a conviction. But perhaps the times have changed, and the years of Geoffrey Powell's editorship have been to him a period of relative placidity in Indian political life. Those few who had occasion to know him will remember him as a gentle, kindly and lovable man, with a distaste for controversy, indeed almost for opinion. In two years, he gave the *Statesman* a different character through unswerving caution, hard work and reclusive endeavour. If in the process he won critics, but no enemies or admirers, therein may lie the measure of his achievement.

AN EXCEEDINGLY BEAUTIFUL YOUNG NURSE was walking along the hospital corridor. A staff doctor, passing by, observed that she was, to understate the situation—*décolletée*, and proceeded to scold her for this immodest exhibition of her charms.

Blushing, the nurse murmured, "I'm sorry, sir, but it's those medical students again—they never put anything back where they find it".

THE DITCHER

Guide for Investors

DUNLOP RUBBER RAISES DIVIDEND

SALES of the Dunlop Rubber Co. (India) Ltd touched a new record of Rs. 40.74 crores during 1963, compared with Rs. 37.13 crores in the previous year. The profit amounts to Rs. 3.28 crores, against Rs. 3.30 crores, after transferring Rs. 59.83 crores (against Rs. 60.80 crores) for depreciation. The taxable ordinary dividend has been increased from 15 percent to 17.5 percent to absorb Rs. 78.75 lakhs. The yield amounts to 4.8 percent at the present price of Rs. 36.56 a share of Rs. 10 each. Taxation is allocated Rs. 1.59 crores (against Rs. 2.35 crores). The smaller tax provision is due to the over-provision of Rs. 24 lakhs for super profits tax for 1962, a higher development rebate for 1963 and a net reduction in taxation of nearly Rs. 11 lakhs in view of the latest Budget proposals. Development rebate reserve absorbs Rs. 10.25 lakhs (against Rs. 3 lakhs) and general reserve Rs. 1.06 crores (against Rs. 20 lakhs).

At the annual general meeting, due to be held on 22nd April, 1964, a special resolution will be moved to increase the authorised capital of the Company from Rs. 7.50 crores to Rs. 12.50 crores by the creation of 5 million unspecified shares of Rs. 10 each. The object of increasing the share capital is to provide funds for meeting the possible future requirements of the Company and the expanding nature of its business. In order to retain flexibility of the capital structure, the new shares have not been classified. The financial position of the Company is impressive considering that against an issued share capital of Rs. 5.20 crores, divided into preference shares for Rs. 70 lakhs and ordinary shares for Rs. 4.50 crores, reserves amount to more than Rs. 6.23 crores. Fixed assets at cost less depreciation stand at Rs. 6.46 crores. The debenture stock redemption fund amounts to Rs. 45.44 lakhs and investments total Rs. 6.12 lakhs.

Sen-Raleigh Handicapped by Raw Material Shortage

SPEAKING from the chair at the annual general meeting of Sen-Raleigh Ltd in Calcutta last Tuesday, Mr. Abhijit Sen took a cautious view of the Company's business outlook. (A fuller version of his statement is printed on a later page in this issue of *Capital*.) In spite of a satisfactory demand for its products, the financial results for the year ended September 1963, were disappointing. The Company has had to pass the ordinary dividend for the first time in some years. Production has been hampered by an acute raw materials shortage. Some sections of the factory had to be laid off for more than three months or so. The profit has declined from Rs. 23.37 lakhs for 1961-62 to Rs. 11.62 lakhs for 1962-63. It was, therefore, necessary to conserve resources to finance the expansion schemes, Mr. Sen said.

As for expanding bicycle production, a scheme has been undertaken on the hope that the material flow required will be forthcoming. The profit is expected to improve with more production, but production costs have in the meantime risen. The Company has taken steps to control costs as far as practicable. Besides this, the selling prices of

various products have been voluntarily controlled. An encouraging factor is that the demand for bicycles and various components has begun to improve. In fact, the Company has not been able to satisfy the full requirements for some components. The directors have, therefore, decided to take up the question of increasing the output of components in the near future, after the bicycle expansion scheme has been in full operation.

As for the house-service meter scheme, a batch of trainees has been sent to the factory of the Associated Electrical Industries Ltd of the U.K. The import application for the plant that protection to the bicycle industry had been withdrawn. The Government has asked the manufacturers to control their prices voluntarily. Although retailers have also been asked similarly to control prices, it is doubtful whether they will do so.

The bicycle industry has shown a satisfactory export performance. The Company has exported more. But export has been hampered by widespread pilferage in Calcutta port. This has created a great deal of concern among foreign buyers. The Government should take immediate steps to stop pilferage. It should be noted that the export of bicycle has so long been promoted by the operation of a pool run by the Cycle Manufacturers Association, of which Sen-Raleigh is a member. Each member contributes to this pool on the basis of production and draws from the pool a subsidy on exports. The Government has now formulated a scheme under which any manufacturer who is not a member of the pool, will be able to draw a direct subsidy on exports without contributing towards this subsidy fund. Since new comers in the export field will enjoy straight support on more favourable terms than have hitherto been available to the members of the Association, it is feared that the former may undercut prices to compete against existing exporters.

Jay Shree Textiles Earns More

JAY Shree Textiles and Industries Ltd has made a trading profit of Rs. 55.97 lakhs for 1963, against one of Rs. 43.09 lakhs for 1962. An ordinary dividend of 10 percent, subject to tax, has been declared to absorb Rs. 7.88 lakhs. The yield amounts to 6.3 percent at the present price of Rs. 15.75 a share of Rs. 10 each. Depreciation is allocated Rs. 9.49 lakhs (against Rs. 8.11 lakhs), taxation Rs. 20 lakhs (against Rs. 16.55 lakhs), development rebate reserve Rs. 2.69 lakhs (against Rs. 8.60 lakhs) and general reserve Rs. 13.25 lakhs (against Rs. 1.25 lakhs). The carry-forward is Rs. 12.265, against Rs. 12.038 brought in. Sales rose from Rs. 2.20 crores to Rs. 2.97 crores.

Bharat Commerce Repeats

BHARAT Commerce and Industries Ltd has earned a trading profit of Rs. 43.36 lakhs for 1963, compared with one of Rs. 39.84 lakhs for the previous year. Depreciation

absorbs Rs. 16.06 lakhs (against Rs. 11.62 lakhs), development rebate reserve Rs. 9.61 lakhs (against Rs. 5.88 lakhs) and contingency reserve Rs. 1.50 lakhs (against Rs. 2 lakhs). There is no provision for taxation which was allocated Rs. 6.25 lakhs for 1962. A taxable ordinary dividend of 15 percent has been repeated to absorb Rs. 7.50 lakhs. The yield works out to 6.7 percent at the present price of Rs. 22.31 a share of Rs. 10 each. General reserve is allocated Rs. 6 lakhs (against Rs. 5 lakhs), leaving a carry-forward of Rs. 3,758, against Rs. 17,588 brought in. Sales rose from Rs. 3.32 crores to Rs. 4.30 crores.

Asiatic Oxygen Making Good Progress

ASIATIC Oxygen Ltd has made good progress. Presiding at the annual general meeting of the Company held in Calcutta last Monday, Mr. B. L. Jalan said that the Durgapur factory had started operating from last December. (A full text of the speech is printed on a later page in this issue of *Capital*.) The Bombay factory has gone into production. The acetylene plant in the Madras factory has been commissioned. The factory in Hyderabad is being constructed. The Company has started a scheme to train welders and welding supervisors.

Mr. Jalan emphasised that industrial growth would be promoted if official procedures concerning various matters were simplified. Since business men have to travel abroad, it is necessary to issue them travel permits without delay, particularly in *bona fide* cases. As for the last Budget, he thought that the treatment of bonus shares as capital gains and the levy of a tax on dividends would deter investors. The frequent changes in the Indian fiscal system had disturbed domestic and foreign investors. Unless the fiscal policy was stabilised, confidence would be difficult to revive. He also pointed out that the multiplicity of taxes had created considerable difficulties for trade and industry. He did not think that there was any need to set up a monopolies commission since there was no monopoly in this country, except in the field of public utilities.

Kamani Engineering Maintains

KAMANI Engineering Corporation Ltd reports a further improvement in its working results for the

year ended September 1963. Both sales and gross profit are higher, although the increase in the profit is smaller in relation to sales. As against an increase of nearly 10 percent in the turnover from Rs. 4.65 crores to Rs. 5.13 crores, the gross profit for 1962-63 is higher by about 7 percent from Rs. 39.11 lakhs to Rs. 41.84 lakhs. The dividend has been maintained at 12 percent. Appropriations include depreciation Rs. 6.65 lakhs (against Rs. 8.01 lakhs), development rebate Rs. 37,000 (against Rs. 35,000), general reserve Rs. 5.15 lakhs (against Rs. 1.15 lakhs), preference dividend Rs. 68,850 (the same) and equity dividend Rs. 5.40 lakhs (the same). After making certain adjustments, there remains a surplus of Rs. 4,511 to be carried forward, against Rs. 4,403 brought in. The directors state that the Company will benefit under the new tax proposals in the shape of a 10 percent relief in corporation tax and 20 percent in surtax as the transmission line industry has been included among the industries which are to be accorded preferential treatment.

The production of galvanised and painted steel structures fell from 20,363 tonnes to 18,940 tonnes, due mainly to difficulties in obtaining necessary steel and zinc. The order position for the domestic market continues to be satisfactory, and orders on hand for towers and structures at the end of the year totalled 46,156 tonnes, against 34,810 tonnes at the end of the previous year. The pending orders for erection of transmission lines were 2,000 kilometres, against 2,156 kilometres.

During the year, all the pending orders for export were successfully completed in spite of numerous difficulties. Order for the supply of 132 kV transmission line towers for the Nigerian Government is being executed. The Company has been successful in securing large orders totalling 3,460 tonnes from the National Power Corporation of the Philippines, bringing the total export effort to Rs. 88 lakhs. In order to cope with the growing demand, the Company is going ahead with the establishment of the new factory in Rajasthan. The Government has already given clearance to the Company's application for import of machinery worth Rs. 45 lakhs. The production capacity of the new factory will be considerably higher than that of the existing factory in Kurla.

New Machine Project of Mysore Kirloskar

MYSORE Kirloskar Ltd proposes to promote a new company to undertake the manufacture of drilling, milling and special purpose machines. The well-known James Archdale Company of the U.K. will collaborate in the new venture. Mysore Kirloskar is already engaged in the manufacture of a wide range of lathes and hacksaw machines. The new venture will enable Mysore

Grade-1

MADRAS

MACHINETOOL LATHES

Armstrong Smith Ltd.

P-17, MISSION ROAD, KEN, CALCUTTA-11

Kirloskar to utilise its existing capacity fully because the new Company will be erecting only such balancing equipment as is at present not available with Mysore Kirloskar. The new Company will have an authorised capital of Rs. 1 crore—all in equity shares of Rs. 100 each. The initial issued capital will be Rs. 30 lakhs, of which Rs. 12 lakhs will be subscribed by James Archdale which is collaborating in the venture. Mysore Kirloskar will take up another Rs. 9 lakhs and the remaining Rs. 9 lakhs will be raised through public subscription. An extraordinary general meeting of the shareholders of Mysore Kirloskar has been convened on 18th April to approve the various resolutions necessary for undertaking the new project.

A Good Year for Madura Mills

MADURA Mills Co. Ltd has done well in 1963. Its net profit has risen from Rs. 31.81 lakhs for 1962 to Rs. 42.79 lakhs for 1963, after increasing the depreciation and development rebate provisions. In his chairman's address at the annual general meeting held in Madurai, Madras, last week, Dr. Rajah Sir M. A. Muthiah Chettiar said that the

modernisation scheme and the rationalisation of workloads have begun to show beneficial results. (A fuller version of the speech is published on a later page in this week's issue of Capital.) The Company has a large capital base, so it will not be adversely affected by the surtax on profits. But the burden of the dividend tax should not be overlooked. Although there is a great disparity between the paid-up share capital and the working capital employed, the possibility of increasing the share capital by using reserves which are ample, has become difficult due to the penal tax provisions.

The Company's production programme has not been affected by the shortage of foreign yarn. Sales have been running at a satisfactory level in spite of power cuts. The Company's export performance has been satisfactory, although competition in foreign markets has increased. The chairman expects a further improvement in exports during the current year. The Company has implemented its 450-loom project, and its weaving section has made a good beginning. Its products have been received well in the domestic and foreign markets. Madura Mills intends to expand its looms up to 950, of which 850 will be installed in the near future. Orders for 500 looms have been placed with Picanols

Exide Batteries still keep going when the rest have stopped

Silver Exide are the strongest, most reliable batteries under the sun. They are quality tested at every stage of production.... that's why you're sure of a long and

trouble free life. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—and you'll still keep going when the rest have stopped.

SILVER
Exide

of Belgium. The directors have applied to the Government for its sanction to expand the bleaching, dyeing and finishing plants.

Indian Bank Earns More

THE net profit of the Indian Bank Ltd for the year ended December 1963 amounts to Rs. 17,00,155, against Rs. 15,25,151 for the previous year. With Rs. 1,43,787 brought forward from the previous year, the total available for appropriation comes to Rs. 18,43,942. Out of this, the directors have transferred Rs. 1,80,000 to the reserve fund under Section 17 of the Banking Companies Act, 1949. The interim dividend of 7 percent, including a 2-percent bonus, absorbed Rs. 6,22,000. The directors have now recommended a final dividend of 8 percent, including a bonus of 3 percent, and this will absorb Rs. 7,10,600. A further sum of Rs. 1,70,000 has been transferred to the reserve fund under Section 17 of the Banking Companies Act. The balance of Rs. 1,61,942 is carried forward. Deposits and other accounts stood at Rs. 49.88 crores, against Rs. 44.03 crores in the previous year. Advances stood at Rs. 34.79 crores, against Rs. 30.38 crores. The total dividend for the year is 15 percent (against 14 percent).

Kil Kotagiri Tea Pays Less

CONSIDERING that no provision has been made to meet the increased liabilities which may be expected shortly as a result of the publication of the reports of the Tea Wage Board and the Bonus Commission, the directors of the Kil Kotagiri Tea and Coffee Estates Co. Ltd have recommended a dividend of 20 percent (against 25 percent) for the year ended October 1963. Although the profit for the year is lower than that of the previous year, this is reasonably satisfactory in view of the fact that 1961-62 was an exceptionally good year for the Company.

The profit, before taxation, amounts to Rs. 7,80,209, against Rs. 10,45,004. After deducting Rs. 3,58,000 (against Rs. 4,85,000) for taxation, the net profit, after taxation, comes to Rs. 4,22,209 (against Rs. 5,60,004). With Rs. 73,949 brought forward from the previous year, the total surplus available for appropriation comes to Rs. 4,96,158. Out of this, provision for super profits tax for the year ended October 1962 amounts to Rs. 44,000. Development rebate reserve gets Rs. 2,426 (against Rs. 1,38) and general reserve Rs. 60,000 (against Rs. 50,000). The dividend at 7 percent on preference shares amounts to Rs. 17,500. The proposed dividend at 20 percent on ordinary shares will absorb Rs. 3,43,415. The balance of Rs. 28,817 is carried forward. The percentage of earnings on equity and preference capital has declined to 40 percent from the previous year's 53 percent.

The tea crop for the year amounted to 462,975 kilograms (against 515,350 kilograms). The coffee crop for the year amounted to 91.156 tonnes (against 121.819 tonnes). The estimated tea crop for 1964-65 is placed at 500,000 kilograms. The all-in-cost of production during the year was higher at Rs. 3.89 a kilogram, against Rs. 3.49 a kilogram. The average sale price amounted to Rs. 5.54 a kilogram, against Rs. 5.35 a kilogram.

Maiden from Elecon Engineering

ELECON Engineering Company has declared a maiden dividend of 6 percent for 1963, of which 4

CAPITAL, 2nd April, 1964.

percent is said to be free of income tax. The Company has done fairly well during the year. The sales have gone up from Rs. 27.63 lakhs to Rs. 1.03 crores and the Company has made a gross profit of Rs. 16.27 lakhs, against a loss of Rs. 2.37 lakhs in the previous year. The directors have provided Rs. 4.55 lakhs (against Rs. 2.45 lakhs) for depreciation, Rs. 4.59 lakhs (against Rs. 2.26 lakhs) for development rebate and Rs. 63,000 (against nil) for taxation. After writing off the previous debit balance of Rs. 2.27 lakhs, the Company has set aside Rs. 3.60 lakhs for the proposed equity dividend and carried forward the balance of Rs. 62,863. The Rs. 100-paid share of Elecon Engineering is available around Rs. 83.

Mahendra Mills Repeats

THE preliminary report on the working of Mahendra Mills Ltd (Kalo) for the year 1963 shows a fair improvement over the previous year's performance. Sales have risen from Rs. 2.70 crores to Rs. 3.06 crores and the gross profit has risen from Rs. 38.65 lakhs to Rs. 41.75 lakhs. The dividend has been maintained at 14 percent, subject to the approval of the Industrial Finance Corporation. After Rs. 18.07 lakhs (against Rs. 20.16 lakhs) for depreciation, Rs. 89,000 (against Rs. 69,000) for development rebate, Rs. 13.30 lakhs (against Rs. 11.02 lakhs) for taxation and Rs. 2 lakhs (against nil) for general reserve and deducting other prior charges, there remains a net profit of Rs. 5.32 lakhs, against Rs. 5.16 lakhs, in the preceding year. The Company has taken in hand the project for installing 25,000 spindles and 500 automatic looms with complete range of processing and finishing machinery which would be named as Mill No. 3. The work on this project is progressing. The Company will have the benefit of procuring most of the plants imported from the U.K. on ten years deferred payment terms under the S.T.C.-Pitts package deal.

Associated Bearing Shows Fair Progress

THE directors of the Associated Bearing Co. Ltd state in their third annual report for 1963 that the Company's factory in Chinchwad (Poona) is likely to go into production before the end of the current year. The factory building will be completed during the third quarter of the year. The water tower has been constructed and power has been available since February 1964. Nearly all the machinery required has been shipped. The machinery for the ball bearing and pendulum arm project is expected to arrive before May 1964. To complete the Chinchwad project, the Company will need additional finance to the tune of about Rs. 3.15 crores. It is proposed to borrow Rs. 1.65 crores from the I.C.I.C.I. against an issue of debentures secured by the mortgage of all immovable property and plant, and Rs. 1 crore from scheduled banks by an additional issue of debentures against hypothecation of stocks of raw materials and finished goods. In the meanwhile, the assembly of pendulum weight arms continues at the Company's factory in Worli in Bombay. Nearly 60 percent of the components are at present delivered by local manufacturers. The sale of the products of this factory amounted to Rs. 24.28 lakhs during 1963. The assembly of top rollers was commenced during 1963 at the rented

CAPITAL, 2nd April, 1964.

premises in Chinchwad. This factory has reached a monthly production of about 20,000 rollers within three months of its commencement. Sales of top rollers during the year amounted to Rs. 27,031. The Company's working during 1963 has resulted in a pre-tax profit of Rs. 77,930, against the loss of Rs. 1.52 lakhs in 1962. Sales have risen from Rs. 6.55 lakhs to Rs. 24.55 lakhs. After providing Rs. 60,253 (against Rs. 61,312) for depreciation, Rs. 39,000 (against Rs. 28,000) for development rebate and Rs. 35,000 (against Rs. 2,25 lakhs) for taxation, there is a profit of Rs. 3,930, against a loss of Rs. 4,05 lakhs. Adjusting this profit against the loss of Rs. 6.35 lakhs brought forward, the deficit of Rs. 6.31 lakhs is being carried forward. The Rs. 100-paid share of Associated Bearing which once fetched an unofficial premium of about Rs. 150, is currently available at Rs. 110.

India United Mills Pays More

THE India United Mills has raised the dividend for 1963 from Rs. 1.10 to Rs. 1.25 a share on ordinary shares and from 25.26p to 31.25p a share on deferred shares. The increase in the dividend seems fully justified by the Company's encouraging performance during the year. The gross profit, according to the preliminary report, has shot up by about 50 percent from Rs. 86.62 lakhs to Rs. 1.30 crores. After providing Rs. 17.10 lakhs (against Rs. 13.54 lakhs) for depreciation and Rs. 19 lakhs (against Rs. 15 lakhs) for taxation, the net profit amounts to Rs. 94.21 lakhs, against Rs. 58.08 lakhs in 1962.

After bringing in a surplus of Rs. 4 lakhs (against Rs. 4.20 lakhs) from the previous year and taking into account unclaimed credit balances amounting to Rs. 1.62 lakhs (against nil) and including Rs. 1,185 (against Rs. 12.90 lakhs), being refund of taxes for previous years, the disposable surplus amounts to Rs. 99.84 lakhs. Appropriations include Rs. 9.40 lakhs (against Rs. 3.26 lakhs) for development rebate, Rs. 3.96 lakhs (against Rs. 4.31 lakhs) for short provision of bonus for 1961, Rs. 23.05 lakhs for bonus for Rs. 1959, 1960 and 1962, Rs. 2.60 lakhs for dividend tax and Rs. 15 lakhs (nil) for general reserve. After providing Rs. 25 lakhs (against Rs. 22 lakhs) for ordinary dividend and Rs. 15.62 lakhs (against Rs. 12.62 lakhs) for deferred dividend, there remains a surplus of Rs. 5.21 lakhs to be carried forward.

Atul Products Pays the Same

DESPITE a modest improvement in the turnover from Rs. 4.73 crores to Rs. 4.83 crores, the gross profit of Atul Products for 1963 has fallen by about 25 percent from Rs. 124 crores to Rs. 92.83 lakhs. The decline in the profit margin is due both to the rise in production costs resulting from high prices of scarce raw materials and the none-too-favourable conditions in the dyes market. The dividend, however, has been maintained at 12 percent and the total distribution is larger at Rs. 36.74 lakhs, against Rs. 32.99 lakhs because of the increased capital following the one-for-three rights issue in July 1963—the new rights shares are entitled to a proportionate dividend. Appropriations include depreciation Rs. 34.26 lakhs (against Rs. 26.24 lakhs), development rebate reserve Rs. 6.90 lakhs (against Rs. 1.60 lakhs) and taxation Rs. 17 lakhs (against

Rs. 34 lakhs). No provision has been made for general reserve which received Rs. 30 lakhs in the preceding year.

After providing for the proposed dividend and making certain adjustments, there remains a surplus of Rs. 19,425 to be carried forward, against Rs. 61,183 brought in. The directors have taken credit for Rs. 3.54 lakhs, being the refund and excess provision for income tax. A sum of Rs. 3 lakhs has had to be withdrawn from general reserve to provide for dividend payment. The preliminary report states that the raw material position is likely to improve during the current year. The Company's bonn acid plant worked for a greater part of 1963. The caustic soda plant has gone into production and the plant for naphthalene intermediates is expected to start production in April 1964. Plant and equipment for expanding the sulphuric acid plant and for manufacturing chlorosulfonic acid are being erected. It is hoped that all the subsidiaries of the Company will be working to full capacity by early 1966, and supply the much-needed raw materials.

Anil Starch Earns More

ANIL Starch Products Ltd has reported encouraging results for 1963. The turnover has risen from Rs. 3.39 crores to Rs. 3.59 crores, and the gross profit has increased from Rs. 50.96 lakhs to Rs. 54.59 lakhs. The decision on the dividend has been deferred as the directors would like to await the Finance Minister's final decision on the various representations which have been made for modifying the tax proposals, particularly the dividend tax. However, from the appropriations which have been made, according to the preliminary report, all that the shareholders can hope for is the maintenance of the dividend and for that also, the directors will need to withdraw a small sum from the past reserves.

Allocations include depreciation Rs. 17.95 lakhs (against Rs. 13.15 lakhs), development rebate Rs. 1.70 lakhs (against Rs. 3.12 lakhs), taxation Rs. 22.14 lakhs, including Rs. 6.70 lakhs for the previous year (against Rs. 16.60 lakhs) and donation Rs. 55,200 (against Rs. 55,300). After making these appropriations, there remains a surplus of Rs. 8.63 lakhs (against Rs. 13.82 lakhs) which together with Rs. 5,399 brought forward from the previous year makes a total of Rs. 8.68 lakhs. This has been transferred to general reserve. The dividend, when declared, will be paid from reserves. The preference dividend absorbs Rs. 35,000 and dividend absorbs Rs. 35,000 and equity dividend at the previous year's Rs. 25 a share will require Rs. 9.96 lakhs. Apparently, even for maintaining the dividend, the directors will need to draw on the past reserves. The superphosphate and the sulphuric acid plants of the Company, located in Bhavnagar, have started trial runs and commercial production will start within a month or so. The Company's starch plant in Ahmedabad is being gradually renovated. The Rs. 100-paid share of Anil Starch is currently quoted around Rs. 590.

More from Premier Construction

THE Premier Construction Company has stepped up the dividend for 1963 from 9 percent to 14 percent, and this is fully justified by the Company's improved performance during the year. The gross profit has risen by as much as 45 percent

from Rs. 16.35 lakhs to Rs. 23.84 lakhs. Earnings by way of dividends have gone up from Rs. 18.98 lakhs to Rs. 25.12 lakhs and the share in agency commission is higher at Rs. 1.89 lakhs, against Rs. 1.20 lakhs. Works bill fetched Rs. 5.13 lakhs, against Rs. 3.81 lakhs in 1962. The amount set aside for depreciation is Rs. 63,000, against Rs. 66,000. No provision has been made for development rebate which received Rs. 11,000 in the previous year. The directors have transferred Rs. 23.66 lakhs to general reserve out of which will be paid the dividends for 1963. The preference dividend will absorb Rs. 4.09 lakhs, and equity dividend will take up Rs. 18.20 lakhs (against Rs. 11.70 lakhs). The Company has a paid-up capital of Rs. 1.2 crores which is supported by reserves amounting to Rs. 1.28 crores.

Shivrajpur Skips Dividend Again

THE Shivrajpur Syndicate Ltd has again skipped the dividend for the year ended November 1963. The shareholders have thus to go without a dividend for the third year in succession—it was in 1959-60 that the last dividend was paid—and the directors hold out little hope of the Company returning to the dividend list in the near future. The current performance is bad enough and the prospects seem even worse. The Company's output of manganese ore during 1962-63 amounted to 25,826 tonnes, against 46,186 tonnes in the preceding year and shipments fell from 36,267 tonnes to 25,806 tonnes. The heavy fall in output is attributed to the further reduction in the scale of mining operations in the open-cast workings. As a result of smaller shipments and deliveries, the Company's turnover registered a fall of

nearly 29 percent from Rs. 52.71 lakhs to Rs. 37.18 lakhs. The slight improvement in the average realisation price was due to the delivery of a larger quantity of high grade ore. The directors point out that in view of the poor demand for the Company's ore, steps have been taken to surrender two of the mining leases, namely, the Shivrajpur "North" lease and the Bamakua lease, with effect from 1st November, 1964.

The Company's working results for 1962-63 show a profit of Rs. 1.05 lakhs, against a loss of Rs. 7.87 lakhs in 1961-62. The directors have provided Rs. 4.45 lakhs (against Rs. 5.23 lakhs) for depreciation, leaving a net loss of Rs. 3.40 lakhs, against Rs. 13.10 lakhs in 1961-62. This loss, together with the deficit of Rs. 20.24 lakhs brought forward from the previous year, makes a total of Rs. 23.64 lakhs which is being carried forward.

The directors state that manganese ore is a surplus commodity at present, and as better grade ores are available at competitive prices in countries much closer to the important consuming centres, foreign buyers did not show any interest in buying Shivrajpur's ore during 1962-63. However, local demand for the Company's ore improved towards the latter part of the year, and sales involving fairly substantial quantities were effected, thereby enabling the Company to dispose of a large portion of the accumulated stock. Although the price factor was most disappointing, the stocks were reduced from Rs. 29.50 lakhs to Rs. 23.29 lakhs. Referring to future prospects, the directors add that although many barter deals involving the export of manganese ore have been concluded recently, the demand for the Company's ore for servicing such barter has so far been disappointing and there seems to be little hope of any appreciable improvement in the fore-

Madras

BUDGET ANXIETIES CHECK TURNOVER COFFEE AND TEA SHARES ATTRACT INTEREST

Tuesday Evening.

THE Madras stock market has been slightly steadier during the past week, but turnover has been small. Buyers and sellers have been inclined to proceed cautiously since the outlook for equities has suffered due to the Central Budget proposals. The

stock market has faced a growing shortage of funds due to the Reserve Bank's tighter credit policy. Since commercial banks are likely to reduce their advances, the shortage of funds, it is feared, will worsen. The prospect for an increase in lending rates has induced caution. In clearing shares, business has been confined only to selected scrip. In the cash section, attention has centred largely on good tea and coffee shares due to hopes of better exports.

Government securities have been dull and prices of most State Government loans have declined on balance. Small business in bank shares has been transacted, and Andhra have come to hand at Rs. 94.40 on declaring a taxable ordinary dividend of 8 percent. Indian Overseas have been done at Rs. 146.50. Good electric companies have been fully steady due to investment sup-

port. Negapatnam have met with demand up to Rs. 10.70 and Vellore have been taken at Rs. 15.62. Sugar shares have weakened on a predominance of sellers. Deccan have dropped to Rs. 11.90 and E.I.D. to Rs. 36.75. Jeypore have been sold at Rs. 14.68, but K.C.P. have been steady at Rs. 24. Mysore have been available at Rs. 44.65, but Travancore have weakened to Rs. 7.45.

Among planting shares, Blue Mountain have quoted lower at Rs. 2.38 and Cochin Malabar at Rs. 6.50. Support has been extended to Consolidated Coffee at Rs. 20.70 and to Ouchterlony at Rs. 4.40. Periakaramalai have changed hands at Rs. 3.44. T.R. and Tea have been steady at Rs. 10.20, Nelliampathy at Rs. 3.82 and Peermade at Rs. 20.62. Interest has been taken in Kil Kotagiri at Rs. 4.85, in Coorg at Rs. 4.85 and in Nilgiri at Rs. 9.12. In coffee shares, Amalga-

CAPITAL, 2nd April, 1964.

mated have been steady at Rs. 10.01, Kumergode at Rs. 4 and Ossoor at Rs. 2.50.

In the textile section, South India Viscose have declined to Rs. 131 and Travancore Rayon to Rs. 24.10. Lakshmi have been maintained at Rs. 134.50 and Madura at Rs. 35. Buckingham have been quiet at Rs. 291 as it has only repeated the ordinary dividend at 12 percent taxable. Coimbatore Cotton have changed hands at Rs. 167 due to the declaration of a taxable ordinary dividend of 15 percent. Balarama Varma have quoted Rs. 107.75 on declaring a taxable ordinary dividend of 10 percent. Kannappan have changed hands at Rs. 11.24 on paying a taxable ordinary dividend of 10 percent. Ranga Vilas have been sold at Rs. 43.50 on paying a taxable ordinary dividend of 6 percent. Ramakrishna have quoted Rs. 217.80 and Anglo-French Rs. 153.

THE CALCUTTA MONEY MARKET

CALL RATE REMAINS HIGH

Wednesday, 1st April.

THE general level of advances has increased a little in the Calcutta money market during the past week. Most of the increase is accounted for by the sugar mills, and the iron, steel and engineering industries. The credit given to the cotton and jute mills, and to the foodgrains and seeds trade is unchanged. In the interbank market, conditions have been tight and the call rate remains at 6½ per cent.

The exchange market has been active, with an excellent supply of gunny bills and a fair number of tea bills. The demand for remittances is moderate. In the London market, sterling shows a mixed tendency after narrow fluctuations.

SILVER WAS STEADY IN CALCUTTA during the past week. The price rose from the previous week's level of Rs. 254 to Rs. 258.25, quoted today. The London and New York prices stood at 11½d and 129.3 cents.

In spite of a rise in silver, gold was quiet due to the lack of support and the price of 14-carat declined from Rs. 66.25 to Rs. 65.25.

DURING THE WEEK ENDED 27TH MARCH, Government of India Treasury bills for Rs. 227.31 crores were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 31st March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 6th April.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 1st April to 4th April at Rs. 99.250 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 25th March to 28th March amounted to Rs. 10 lakhs.

THERE WAS A DECLINE OF Rs. 2.26 crores to Rs. 2,454.26 crores in active notes, according to the return of the Reserve Bank of India for the week ended 27th March, 1964, while the total note issue was up by Rs. 73 lakhs to Rs. 2,473.80 crores. The currency expansion was adjusted by reducing foreign securities by Rs. 5 crores to Rs. 112.46 crores and raising rupee securities by Rs. 4.79 crores to Rs. 2,134.47 crores in the paper currency reserve. Deposits of the Government of India dropped by Rs. 7.16 crores to Rs. 84.15 crores and those of State Governments by Rs. 10.27 crores to Rs. 15.98 crores. Balances of commercial banks at Rs. 76.66 crores showed a loss of Rs. 4.36 crores. Balances held abroad dropped by Rs. 3.36 crores to Rs. 13.82 crores in spite of a transfer of securities from the Issue Department to the Banking Department. Investments rose by Rs. 3.40 crores to Rs. 203.44 crores. Loans

to scheduled banks declined from Rs. 98.91 crores to Rs. 84.16 crores of which advances against usance bills amounted to Rs. 47.59 crores (Rs. 46.24 crores). Ways and means advances stood at Rs. 43.38 crores, against Rs. 44.49 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 20th March, 1964, shows a rise of Rs. 4.48 crores to Rs. 612.31 crores in total deposits. Investments in Government securities are up by Rs. 2.02 crores to Rs. 234.08 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 2.20 crores to Rs. 360.39 crores. Cash and balances are, in consequence, shown at Rs. 25.33 crores or Rs. 5.16 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 20th March, 1964, shows Demand and Time Liabilities at Rs. 1,205.07 crores (Rs. 28.52 crores on account of borrowings from banks) and Rs. 1,268.56 crores (Rs. 12.82 crores), compared with Rs. 1,192.08 crores (Rs. 26.04 crores) and Rs. 1,278.74 crores (Rs. 13.51 crores), respectively, in the previous week. Cash has declined by Rs. 10 lakhs to Rs. 59.48 crores, while balances with the Reserve Bank have increased by Rs. 3.56 crores to Rs. 80.32 crores. There is a drop of Rs. 1.32 crores to Rs. 636.74 crores in investments. Advances and bills discounted at Rs. 1,820.99 crores show a rise of Rs. 8.39 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 73.6 percent, against 5.5 percent and 73.4 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 3-4-64.

Issue Date	Maturity Date	Amount (00's of Rs.)	Average Acceptance Rate

ASIATIC OXYGEN LIMITED
CHAIRMAN, MR. B. L. JALAN'S PLEA
FOR STABLE FISCAL POLICY

Extracts from the Chairman's Address of Mr. B. L. Jalan at the Annual General Meeting of Asiatic Oxygen Limited held at Calcutta on Monday, the 30th March, 1964.

Gentlemen,

You would have noticed that the Directors have stated in their Report dated the 29th February that our Durgapur factory was commissioned to production in December last. They expected that the Bombay factory which was undergoing the test operations would commence production by the time the Report was in your hands. I am happy to say that the Bombay factory is now in production. The foundation stones of Madras and Hyderabad factories were laid by the then Chief Ministers of Madras, Shri Kamaraj, and of Andhra Pradesh, Shri Sanjiva Reddy, in August, 1963. The Directors reported to you in the Annual Report that the Madras factory was in an advanced stage of construction and is expected to be in production next month. I am very happy to say that the acetylene plant of the Madras factory has already gone into production.

Most of the technical and administrative personnel have been recruited. Some of the engineers who went abroad for training have returned and others are expected to return by the end of the next month after completing their training. Arrangements are being made for another batch of trainees to go abroad. To fulfil the long felt need of the welding industry, we have started a training scheme for welders and welding supervisors.

Tax Burden

While the taxes in the 1963 Budget of the Government of India brought higher burdens on the finances of our subsidiary company, it produced similar effects on the financial results of almost all companies which have after strenuous efforts put up a record of efficient and profitable operations. Some basic and important industries which had earlier suffered from the teething troubles and now begun to yield fair return have been hit hard. The super profits tax was, as it were, a tax on efficiency. Our present Finance Minister must be congratulated on the new look which he has sought to give to our fiscal policy. He has so clearly enunciated the basic criteria which should govern our economic philosophy. It is a matter of special significance that these criteria have received approbation from almost all quarters. This demonstrates once again that the economic interests of all the sections of the country are the same and that the economic policy has to be essentially an integrated national policy. It cannot be a sectorial policy.

Industrial Growth

The Finance Minister has very rightly pointed to the urgent need for speedier execution of, and higher return in, the public enterprises. It is very appropriate, in this context, however, to look at the performance of public undertakings. The Government of India have invested in operating public undertakings other than Railways about Rs. 1,038 crores. The total sales of these undertakings were Rs. 388 crores. The total gross profit of these concerns, excluding Hindustan Steel, was Rs. 24 crores and net profit Rs. 15.4 crores. The net profit, therefore, was about one and a half per cent. When adjustment is made for the loss of Hindustan Steel, there is an overall loss. This cannot, by any means, be termed as a creditable performance. This does not merely involve the

failure to achieve the targets of the Third Five Year Plan but indicates a sizable loss of national wealth. If the increase in national wealth and prosperity is the objective, these figures do point to a moral.

The problem of speedier implementation of industrial programmes is inextricably interwoven with governmental procedures and decision-making. It takes a long time from "dream to stream", that is from the day the project is conceived by the entrepreneur to the day the plant is put on production. The Government decision-making and licensing procedures contribute a lot to the delays involved. I am glad that this is now being realised by all concerned. And to go into the matter the Government appointed the Swaminathan Committee. The Committee made interim recommendations which are of far-reaching importance and which have been accepted by the Government. These will go a long way in expediting our industrial programmes. The problem, however, is not merely of industrial licensing under the Industries (Development and Regulation) Act. One is confronted with similar difficulties in acquisition and registration of landed properties, obtaining raw materials, fixation of transportation rates and commodity prices, securing approvals for foreign exchange expenditure, capital issues, concluding borrowing arrangements and the like. It needs an overhaul of governmental procedures and not merely a few changes in certain areas only. It may be safely suggested, for example, that issue of exchange permits for travel abroad has to be a lot more expeditious. I realise that some unscrupulous persons do travel abroad for not very legitimate reasons and there must be proper safeguards against this. But proper safeguards against this. But there must be no undue restrictions on travel facilities related to development programmes. If prompt and proper sanction for foreign travel is denied to negotiators and project planners, it does a lot of harm to our financial and foreign exchange interests. When the applications are submitted with documentary evidence, I see no reason why the issue of permits should take a long period. When we consider its effect to streamline procedures and effect economies, we in the field of private industries take assistance from special management consultants and experienced management consultants and experts. To borrow or hire specialised knowledge does not reflect on any body's dignity or efficiency and should be restored to with an open mind and frequently. Incentives, monetary and otherwise, should be provided where targets of efficient management are accomplished.

serves any purpose to shift responsibility. We all have the same mission.

The estimates of national income reveal a very interesting picture in this area only. The proportional share of mining, manufacturing and small enterprises was almost constant between 1948-49 and 1962-63 in spite of all the emphasis on industrial programmes. The share of commerce, transport and communications increased by just over one percent. The decline in the share of the agricultural sector by over 5 percent was set-off almost wholly by the share of "other services". Government administration constitutes a major part of "other services". The increased share of unproductive services within the industrial and commercial sectors is concealed in the respective shares. In other words, speaking comparatively, the services which do not directly contribute to our productive effort are the only sector which has made progress. These components of our national income demonstrate the need to divert our national effort in well-conceived alternative directions to achieve a higher input-output ratio which is the key to our real economic progress.

The other two worthy objectives of our economic policy which were defined by our Finance Minister and earlier by our Home Minister Shri Gulzari Lal Nanda related to incentives for industrial growth and inflow of foreign capital. While we have to thank the Finance Minister for several reliefs proposed for the industries including selective corporation tax relief, one wonders whether the budget proposals will, on the whole, achieve these objectives. Great doubts have been expressed, which are reinforced by the prevailing investment climate on the stock markets. The treatment of bonus shares as capital gains and the imposition of a fresh dividend tax are measures which are bound to deter investors while the gains to the national exchequer may be negligible.

Fiscal Policy

What, however, is really disturbing is the fact that our basic fiscal policy undergoes structural changes almost every year. The re-introduction of expenditure tax, the raising of Estate Duty rates to 85% and the uncertainty introduced about the development rebate, are matters which have obviously deterrent effects on the will to save and invest. While it was gratifying to learn that the Finance Minister had promised that he did not propose to make any basic changes in the coming years, there cannot be any doubt that the changes which have been already brought about in our fiscal structure from year to year have been so substantial that one's confidence in our stable fiscal policies is bound to be shaken. Important decisions for large investments cannot be properly made when projected results are completely upset even before the decisions are finally taken and implemented. How is the foreign investor who has opportunities for profitable investments throughout the world going to reconcile himself to this kind of insecure financial conditions? It is my firm belief that a stable fiscal policy will be a great contribution in inducing higher investments and attracting larger volume of foreign capital.

In the context of the basic principles of taxation, I hope the question of multiplicity of taxes will soon be examined more thoroughly. The mul-

ti-ple-tax system has a limit, and if it is stretched beyond that limit, decreasing returns are bound to operate. Actuated by the desire to simplify our tax system, the Income Tax Act was overhauled in 1961. And yet, our tax system today is more cumbersome than perhaps anywhere else in the world. In the context of our planned effort, there cannot be any valid argument against controls and taxation but we must ensure that such controls and taxation do not impinge upon or jeopardise our efforts for balanced and speedier growth. A lot of governmental effort as well as of the people in private industry is being wasted in conforming to a complex controlled system. A large army of very brilliant government officers and industrial planners and managers are engaged today in what might be called "unproductive project development work". We are not too plentifully supplied with such management skill and if we can put this national pool of managerial talent to productive works, the pace of planned effort would be accelerated and the process would become less expensive.

Monopolies Commission

To achieve our well-defined economic objectives, it is, indeed, very difficult to appreciate the proposal for the setting up of a Monopolies Commission. What is a monopoly? A monopoly is a state of market in which one or a couple of sellers control the market and dictate the price. Leaving alone public utilities which are inevitable monopolies and the operations of which are severely controlled, are there any monopolies in India in the correct sense of the term? The basic fact is that owing to limited markets and the extreme dearth of managerial skill, there was in many industries not enough scope for a very large number of competing units. When markets expanded more units came into existence. A careful and comprehensive survey of our industrial development would fully corroborate the fact that, depending on the raw material availabilities and dimensions of the market, the number of units in each industry has been growing. Such growth has taken place in spite of the size of units continuing to be uneconomic. There is no monopoly in India outside the field of public utilities unless we include public sector monopolies such as the monolithic Life Insurance Corporation, Fertiliser Corporation of India and the like. Now, if there are no monopolies, there is no scope for a monopolies commission. This proposal is understandable when one has to consider the necessity to satisfy the more vocal sections of the public which is concerned with very superficial consideration of ideological catchphrases. Nevertheless, such attempts do detract from the laudable objectives which our Finance Minister has defined in his budget speech.

UNITED BANK OF INDIA LTD.

CHAIRMAN, DR. N. N. LAW'S REVIEW

YEAR OF SIGNIFICANT PROGRESS: INCREASE IN DEPOSITS

The following are the extracts from the speech delivered by Dr. N. N. Law, Chairman, United Bank of India Limited, at the Annual General Meeting of the shareholders of the Bank held on March 30, 1964.

Bank's Progress

The past year has been a period of significant advance by your Bank. The Profit has increased by Rs. 5.19 lacs or 24.5%. The dividend has been raised to 7½%. This is the third rise in dividend since the amalgamation. Deposits have increased by Rs. 7.9 crores, i.e., 12.2% (as against 10.1% rise in the deposits of all scheduled banks). Seven new branches were opened during 1963 and so far this year 2 new branches have been opened. The emoluments of the employees have also been further improved.

Another important and significant event that has taken place during the year is the acquisition of a site measur-

ing 57 Cottahs—nearly an acre—on Old Court House Street. On this site is proposed to be constructed a new home for the Head Office of your Bank. The detailed plans for the building are being drawn up by the architects, and it is hoped that construction work will commence during the year.

I do not wish to give you the impression that the results achieved so far should lead to complacency. On the contrary, in view of the mounting operating costs, referred to later in this statement, a greater responsibility has devolved on all of us, the Directors as also the workers in various spheres and levels in this Bank. A number of steps have been initiated early this year to achieve a wider decentralisation of functions, and as the year progresses, efforts will be made to implement the programme in a phased manner. Our aim should be the attainment of a deposit level of Rs. 100 crores within the next two years, if we are to cater to the increasing credit requirements of the developing economy. I do hope that with the concerted efforts of the workers, shareholders and present and prospective customers, the target may be achieved even earlier than contemplated.

Interest Rate

The biggest task before the Bank today is, therefore, to accelerate the rate of growth, and to meet the growing burden of interest on deposits. We shall try to achieve this by intensifying our efforts, opening more branches and by diversifying our services.

As I speak to you, banks are considering whether a further rise in the rates of interest on deposits is necessary, their attention to this matter having been recently drawn by the Reserve Bank. It seems likely that a further rise will be effected, and such a step will add to the already high operating cost and will consequently tend to step up the lending rates. My view on the lending rates is well known to be against such rise.

To my mind, it should be the aim of the larger banks in the country to be able so to rationalise, at an early date, their lending rates as will bear a reasonable relation with the line and pattern of the largest bank in the country. It should, at the same time, be their aim to remain free from anxiety concerning liquidity. An important method for achieving these ends would be to make concentrated efforts to increase deposit resources through means other than that of raising the interest rates. At the same time, an expedient utilisation of resources has also to be ensured.

In this context, I would like also to refer to the conditions obtaining in the Stock Exchanges. Ultimate safety and liquidity of bank advances in a growing economy, incapable, due to various reasons, of planning for extinguishment of debts, depend considerably on the ability of borrowers to shift the credit facilities in due course by obtaining equity and long-term finance through the Stock Exchanges. Apart from the inhibiting taxation, high rate of interest on bank advances stands in the way of the development and expansion of Stock Exchange services. On this ground also it would be against the interest not only of the banks themselves, but also of industrial expansion, to encourage a rising structure of interest rates.

However, the present mood seems to be to ignore these implications and to

depend on an upward revision of the rates. In that case, since we cannot swim against the current, we shall also have to fall in line, much as I would have wished that the trend were checked.

If the rates have to go up, it would be better to confine the rise to that portion of bank deposits which could be marginally sensitive to interest rates, viz., term deposits for periods over twelve months, and not to cover the whole range of deposits. The incidence of the cost of term deposits can then be somewhat neutralised by reducing the cost of demand deposits, including Savings accounts which have virtually become Current accounts. One of the ways to do so would be to introduce two types of Savings accounts and to reduce the rate on those with very small balances, limiting the frequency of withdrawals, in such un-economic accounts. Adjustments of other service charges may also have to be undertaken.

Small Industries

I am happy to report that further headway has been made by the Bank in the matter of providing finance to the small scale industries. As you will recall, a separate Section was started about two years ago, with a view to processing with special care, such proposals from smaller industrial units as could not straightaway be considered, in the normal course, by our Advances Department. After the initial experimenting and probing, some tangible progress has now been made and a number of small scale industrial units have been financed and are being given special service. Steps are now being taken further to expand the activities of this Section in the matter of financing small scale industrial units.

It has been our experience that more than the question of bank finance, the small entrepreneurs are faced with other problems, these relating, for example, to risk capital, marketing, raw materials, power, land, technical know-how, etc. The difficulty that we mostly face in financing these units is the deficiency in financial management. There have been cases where after proper assessment and discussion it was discovered that a good portion of the required development finance could be found from resources within and that only a small advance from the Bank could satisfy their requirements. In some other cases it was also possible for the Bank to suggest ways and means by which the concerned units could raise finance from other more profitable sources. Our approach, therefore, has been to provide the best possible financial guidance and advice along with the required finance. This is much appreciated by the concerned borrowers.

Nationalisation of Banks

The most significant issue that developed in the past year relates to the nationalisation of banks. I do not understand the wisdom of this clamour for nationalisation. Take the case of this Bank. The ownership is widely distributed, the management is conducted by people who have risen from the bottom of the ladder, the employees are drawn from the middle class families and number around 4,000. It serves the common man with sincerity and warm friendliness. Could nationalisation make any difference for the better? The only difference it could make, to my mind, is that the profit would then

CAPITAL, 2nd April, 1964.

go to the State Exchequer instead of being paid to you as dividend.

The charges levelled by the protagonists of nationalisation are mainly those of concentration of power, of diversion of resources to big industries and of failure to spread in the rural areas. With the recent amendment of the Banking Companies Act, the already existing wide powers of the Reserve Bank of India have been further expanded. It can now remove any director, chief executive or any other employee of a bank and also appoint persons of its choice in place of those removed. It has also been provided that no shareholder can have a voting right in excess of 1% of the total voting rights of all the shareholders of the banking company. With these powers vested in the Central Banking Authority the talk of concentration of power is not tenable.

In the matter of making advances also, the Reserve Bank has extensive powers to issue directives to all the banks generally, and to an individual bank particularly, in various matters regarding advances, including the maximum amount of advance that may be made to an individual borrower.

If the banks are financing big industrial projects it is only in accordance with the industrial policy of the nation. In the situation of control in this regard, installation and expansion of big units can only be in accordance with the industrial policy and with the permission of the Government. If, therefore, such projects are vital to economic development, it is only proper that the commercial banks should assist these to the best of their ability. What is really to be regretted is that on account of inadequate growth of deposits, the banks are not always able fully to cater to the requirements of these projects.

As for the question of expansion to the rural areas, it must be remembered that this could not be undertaken indiscriminately. It is a well-known fact that branches in rural or semi-rural areas incur losses for a number of years. The rate of expansion in this sphere, therefore, must be determined by the ability to bear losses. For any economical unit, whether in the public sector or the private, a balance must be struck between that part of its operation which is already economic and that which is, or is for some time likely to remain, uneconomic. Yet, the banks have already been expanding in these areas and during the past few years the coverage that has been extended must, in the circumstances, be considered satisfactory.

While it augurs well that views advocating nationalisation are held by a very small group and that the government has not endorsed these views, it is imperative that a thorough reappraisal and self-analysis be made by the industry itself with a view to devising ways and means to alter the image of its services to the community. The bankers are conscious of this need. An important step in this regard would be, besides an enlightened collective public relations programme, to develop, with a positive purpose, a wide range of promotional activities with adequate "social content", particularly in assisting growth of self-employment through small scale industries.

These efforts would no doubt need a lot of pioneering in finance, but that need not deter nor delay any such programme. Further, such activities would attract much more resources to the banking system than what higher rates on deposits are likely to fetch. On the other hand, such dissipation of bank earnings through higher rewards to depositors, by charging more to the people who undertake productive economic activity, increases consumption and adds to the factors distorting the efforts to hold the price line. Bank earnings devoted to the promotion of

CAPITAL, 2nd April, 1964.

self-employment will accelerate economic development and go a long way in resisting inflationary pressures.

Development Banks

In this connection, the role that is being played by the development banks in the country comes to my mind. These institutions, while performing very useful services, are dependent, to a very high degree, on the Government for their resources. The resources made available to the Industrial Finance Corporation are interest bearing. While to State Financial Corporations such funds are not at all made available. Their own attempts to raise resources from the community in the form of increased equity or bonds have not been successful to the extent required. It is true that the conditions prevailing in the country are not yet conducive to the success of attempts by the development banks to raise their own resources. This is because in their case the prospects of profits are not only low, but long-term as well.

It would, therefore, be advisable that adequate funds be made available to these institutions in the form of junior capital. At the same time the commercial banks, which are not in a position to play an unrestricted direct role in providing development finance to industry on a substantial scale, though they are doing their best to provide medium term loans and working capital might orientate their operations and provide more resources to these specialised institutions. This would be a worthwhile contribution for the commercial banks to make and would help them as to liquidity. Similar contribution could be thought of in the field of agriculture also. It will still be necessary for the development banks, however, to create their own cells for initiating efforts to place their commitments in capital subscriptions and issue of bonds, direct with the public. This again makes the need for activating Stock Exchanges more urgent.

For assisting the small and medium scale industrial sector, a number of institutions are now functioning: the State Financial Corporations, the National Small Industries Corporation, the Small Industries Service Institute, the agencies functioning under State Aid to Industries Act, and the Guarantee Scheme operated by the Reserve Bank through the scheduled banks. Perhaps it may serve the purpose better if instead of multiplication of agencies dealing with small and medium scale industries, a separate single agency is set up for each region, with a combination of all the varieties of functions now performed by these multifarious agencies. Such an institution at the state level would be better equipped to render not only financial assistance, but also services in the form of marketing information, technical and managerial assistance, etc., which these industries so badly need. Through its provision, even if partially, of risk capital to the small entrepreneurs, such an institution would act as a catalytic agent in the capital market, on the lines of the functions performed by the Industrial Credit and Investment Corporation of India at the national level.

General Economy

Coming to the overall economic development in the country, it is being increasingly realised that in recent years the rate of growth has not been up to the desired level and that vigorous steps should be taken to accelerate the tempo of development. A number of steps in this regard have been taken recently in the form of relaxation of capital control, price control, streamlining of licensing procedures, increased resources of the development banks, establishment of the Unit Trust and the Industrial Development Bank. The Finance Minister has also repeatedly emphasised the need for achieving faster growth and for this purpose he is contemplating further measures, over and above the fiscal incentives which

in a limited way have been provided for certain industries in the budget.

At the same time it is equally necessary to establish a measure of continuity of these policies. An illustration of the lack of continuity in policies, which we have so often experienced, is provided by the recent budget proposals vided by the recent budget proposals concerning the Annuity deposit, the expenditure tax and the increases in the rates of wealth tax and estate duty. The essence of a sound fiscal policy in the context of the situation prevailing in the country, is its ability to stimulate investments. An essential ingredient of investment decisions is confidence by reasonable expectations regarding the future course of events. Lack of continuity of policies does not weaken such expectations, and set at naught all forecasts and planning so very vital in any industrial operation.

There is another facet of this aspect of expectation or forward projection, and that is psychological. But it plays a very significant part in any human activity. To my mind, what seems to be happening is that, while it is a declared objective to encourage investments and thereby to achieve a higher growth rate, there is not yet the full realisation of the significance of the psychological factor of expectations regarding the future. In the absence of reasonable optimism on this score, no amount of institutional props and persuasion will be adequate to generate the desired degree of economic growth.

What the country needs is an all-pervading atmosphere of development and a climate of self-employment through small and ancillary industries spread all over the country. While fiscal policy, in so far as it had been inhibitive, has undergone certain adjustments, this by itself will hardly be enough. Every region in the country should make a determined and positive move to generate a real movement for stimulating industrial growth at all levels. An essential step in this respect would be to provide against a degree of risk which is inherent in any pioneering effort. When it is ensured that the community will back up the venture, much will be achieved in orientating the common man to the idea of self-employment through industries. No movement can achieve results without the readiness to pay the price for it.

At the State levels adequate funds should be found to take care of the financial risks which may develop through such a movement. Bearing the risks at the State level, in this manner, would actually be an investment in the future and will prepare the basic background for self-employment through industrialisation. If, from this point of view, it becomes desirable—which possibly it is—to pool the resources of the development banks operating in a particular region, that also should be done. The budgets of the States should be carefully examined and the impact of each item of expenditure should be analysed to see what proportion of the budget is directly aimed at encouraging self-employment. Provision of adequate funds, as mentioned earlier, would constitute a very small percentage of the total State resources but would go a long way towards fulfilling the goals of economic development.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

MADURA MILLS COMPANY LIMITED

REGD. OFFICE: NEW JAIL ROAD, MADURAI

CHAIRMAN REVIEWS PROGRESS

The following is the speech of the Chairman, Dr. Rajah Sir M. A. Muthiah Chettiar at the Annual General Meeting of the Shareholders of the Company held at Pandyan Building Madurai, on 25th March, 1964.

Gentlemen,

The Report of the Directors and the Audited Accounts of the Company for the year ended 31st December, 1963 having been circulated in the prescribed manner, I propose with your permission to take them as read.

The country is still in the grip of the Chinese cold war and although there is at the moment no fighting at the border, the state of emergency cannot be said to have abated. Your Company and its associates continue to play their full part in meeting the defence requirements of the country.

The small carry-over of 13.90 lakh bales of cotton which the country had at the beginning of the season 1962-63, caused a certain amount of anxiety and Mills resorted to buying heavily as the crop started moving. Prices had a tendency to pierce the ceilings. But the system of quality surveys and the Supervisory Scheme introduced by the Textile Commissioner helped to bring down prices somewhat and I am pleased to be able to say that the purchases made by your Company were at reasonable levels.

Shortage of Foreign Cottons

Because of import restrictions due to the country's limited foreign exchange resources, there was acute shortage of foreign cottons during the year. However, our production programme of fine counts and of our industrial lines was not impaired to any great extent.

There was very good demand for our yarns in inland markets throughout the year. Sales were maintained at a steady level as in the previous year and the revision in the yarn prices which came into force from 7th February, 1963 enabled the Company to maintain a satisfactory turnover notwithstanding power cuts for a number of days on a voluntary basis and an enforced 100% cut for a fortnight during June/July. Market prices for all counts of yarn continued to show an upward trend and the Government continued with their scheme of compulsory allocation of a certain percentage of the production to handloom weavers.

The export performance during the year, although satisfactory, shows a slight fall over the previous year. This is mainly due to increasing competition in all overseas markets and the new licensing procedure which came into force during December 1962 for all yarn exports to U.K. However, there is an encouraging trend in recent months and it is expected that our per-

formance during 1964 will be better than in the year under review.

The Looms Project

You will have noticed from the Directors' Report that the 450 Looms Project has been implemented. The year 1963 has thus seen the establishment of the first phase of our Weaving Project, although only in temporary accommodation at present. Our target for the present is 850 looms of which 850 will eventually be erected at Ambasamudram where an up-to-date modern Weaving Shed is under construction. Once again we are placing order with Picanols, Belgium for the additional 500 looms, out of the Belgium credit negotiated by the Government of India.

So far as the production on the existing 450 looms is concerned I am pleased to report that in spite of many difficulties a most satisfactory start has been made, both in the export markets, where we have more than met our obligations and in the Inland Market together with considerable Defence orders and it is anticipated that this progress will be maintained during 1964.

The addition of Bleaching, Dyeing and Finishing Plants has also been taken up and our application having been recommended by the Textile Commissioner is under consideration by the Government of India. We are hopeful that we shall receive their approval before long.

The Net Profit

As for the accounts, you will have noted a change in the presentation of the figures in the Directors' Report showing a profit of Rs. 80,17,083. You will no doubt agree that the net profit of Rs. 42,79,031, is a marked improvement on last year's figure of Rs. 31,81,355 bearing in mind the increase in the depreciation charge and Development Reserve. The Modernisation Scheme and Rationalisation of workloads are beginning to show their beneficial results. The Company, with its large capital base, will not be adversely affected by the levy of Sur-tax which has been introduced in the place of Super Profits Tax but the imposition of the Dividend Tax is indeed an additional burden.

I should like to invite the attention of the shareholders to the net fixed assets position compared with the Paid-up Capital. In view of the very satisfactory Reserve position the disparity could no doubt be righted somewhat by bringing the Paid-up Capital position rather more into line with Capital actually employed, but the penal tax provisions contained in the recent budget act as a deterrent.

Before concluding, I wish to express my appreciation of the efforts of the staff and other employees who have contributed a great deal to these satisfactory results, and with their continued support we can look forward to increasing prosperity.

NOTE: This does not purport to be a report of the proceedings of the Meeting.

SEN-RALEIGH LIMITED

CHAIRMAN'S REVIEW

The Fourteenth Annual General Meeting of Sen-Raleigh Limited was held in Calcutta on the 31st March, 1964. Below is the statement of Mr. Abhijit Sen, Chairman of the Company:

As anticipated in my last statement to you, the year under review turned out to be one of our more difficult ones. In spite of a continuing demand for our products, sales were appreciably lower than in the preceding period as it was not possible to maintain production at desired levels owing to chronic shortages of raw materials, when sections of the factory had to be laid-off for periods extending up to 2/3 months at a time. As a consequence the financial results of the Company for the year have been extremely disappointing. For the first time in some years, your Directors have been unable to recommend pay-

ment of a dividend on the Ordinary Share Capital of the Company.

I am sure you would agree with me that in view of the heavy financial commitments ahead of the Company for implementing its expansion schemes about which reference was made in my last report to you, the wisest course for the Company to follow would be to conserve its resources to the fullest extent for the present.

Expansion Scheme

Towards the end of the year under review your Company was ready to put into effect this vital scheme for expansion of bicycle production but it was not till the end of 1963 that it was entirely satisfied that the material flow required for such expanded production would be forthcoming. The expansion of bicycle production which is now under way, is one of a number of steps that

the Company needs to take to bring back reasonable profits in its operation.

After three years of near stagnation, the demand in general for bicycles and some of its components has once again started looking up. Your Company intends to reap the full benefit of this rise in demand. In some components where the demand has grown to the degree that it is embarrassing for the Company to have to refuse orders even for supplies to other cycle manufacturers, the matter of expanding production is now actively engaging the attention of your Directors.

Progress in the House Service Meter Scheme of the Company has been limited to sending over the first batch of trainees to Associated Electrical Industries Ltd., Manchester and completing the import application for the plant. It is expected that with the first

CAPITAL, 2nd April, 1964.

batch of trainees now actively associated with the planning of the Indian production in the U.K., this scheme will gather necessary momentum.

The protection granted to the Bicycle Industry fell due for review in 1963 and a Tariff Enquiry was held on the subject in July of that year. After the enquiry, the Tariff Commission recommended that protection be withdrawn in the case of the Bicycle Industry and this recommendation was accepted by the Government of India. However, to protect the interests of the consumer, the Tariff Commission further recommended that the manufacturers' prices of bicycles be brought under a system of voluntary control, and as this recommendation was also accepted by Government, today bicycle manufacturers cannot increase their prices without reference to Government. A further recommendation sought to establish a ceiling on retail prices of the bicycle. Both these latter recommendations appear inconsistent with the conditions prevailing at the moment. Whilst it may be possible to effect a control on manufacturers' prices voluntarily, there is little possibility of maintaining a voluntary ceiling on dealers' prices in a market where demand far outstrips supply.

Export Performance

After many years of consistent effort on the part of manufacturers, the export performance of the Bicycle Industry as a whole is showing a satisfactory trend. In common with other manufacturers your Company's exports rose appreciably in the period under review. Orders are now flowing in steadily for the Balaka bicycle which was introduced to African and Middle Eastern markets during the year.

A disquieting feature of exports—particularly from the port of Calcutta is the pilferage that appears to take place at the docks here. Few of the consignments sent out over the last year from Calcutta seem to have escaped pilferage and importers in other countries are now chary of placing orders on Indian manufacturers as a result of this evil. No dealer in a competitive market can be expected to risk losses by ordering on India when he is assured of certain supplies by ordering on other countries. This matter deserves the serious attention of the Ministry of International Trade, as, a remedy to this problem is only possible at Government level and does not lie in the hands of the exporter.

A fresh Five Year Agreement in replacement of the expiring one has been negotiated with the Employees Union and is now in the final stage of drafting. It is hoped that the New Agreement would bring in improved operations on the part of the Company and even better relations with its workers.

It was with deep sadness and a sense of personal loss, that the news of the sudden demise of Mr. G. H. B. Wilson, in an unfortunate car accident was received in December. Many of you, who also knew him must have felt the loss acutely. Mr. Wilson was a man of rare vision whose interest in the cause of spreading cycling gained for him the soubriquet of "Mr. Bicycle" in his own country—and for India its thriving bicycle industry.

I would extend a welcome to Mr. D. P. Harris, the Works Director of Raleigh Industries Limited who now joins our Board. The experience Mr. Harris brings to this Board would be of great value to the Company in its efforts to tide over its present difficulties.

We were very pleased to receive a visit from Mr. R. D. Young, the Chairman of Raleigh Industries Ltd. Although fleeting, the visit was extremely helpful, and it is hoped it would be the precursor of many more in future.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 2nd April, 1964.

New Delhi

F.A.C.T. GETS LETTER OF INTENT FOR MAKING CHEMICAL EQUIPMENT

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India, it is learnt, has issued a letter of intent to Messrs Fertilisers and Chemicals, Travancore Ltd. in Alwaye, Kerala—a Company jointly owned by the Central Government, the Government of Kerala and a few other State Governments—for setting up a workshop for the manufacture of pressure vessels and other items of chemical equipment. Further steps are being taken for creating additional capacity for manufacturing various types of machinery in the light of the targets fixed for the third plan and the likely requirements during the fourth plan period.

In September 1963, the Government of India constituted a working group for fertiliser and chemical equipment to advise it on the manufacture of equipment for fertiliser, petroleum refining, petro-chemical and other heavy chemical industries during the fourth plan period. The following is a summary of the interim recommendations of the working group. The targets of increase in production during the fourth and fifth five year plans should be fixed as follows:

(a) Two nitrogen factories each with 100,000 tons' capacity a year should be established every year.

(b) P₂ O₅ capacity should be increased every year by 100,000 tons a year.

(c) The sulphuric acid capacity should be raised every year by 350,000 tons a year.

(d) Caustic soda and soda ash capacities should be raised every year by 70,000 tons each a year.

(e) The petroleum refining capacity should be raised every year by 2 million tons a year.

The working group says that a modest estimate of the requirements of medium pressure vessels and allied specialised mild steel and stainless steel equipment required for establishing the above capacities would be of the order of 40,000 tons to 60,000 tons a year. A preliminary study of the capacity available for this purpose has shown the following:

(a) there is as yet very little capacity established for the purpose;

(b) the expansion programme contemplated by the existing structural shops are far too inadequate to meet even a sizeable fraction of the total requirements;

(c) there is an urgent need for establishing capacity solely for the manufacture of such equipment; and

(d) the volume of equipment required will call for the establishment of at least two, if not three, units each capable of producing about 10,000 tons to 12,000 tons of such equipment a year on a single shift basis.

As reported earlier, the Government has approved the proposal of the Fertilisers and Chemicals, Travancore Ltd. to establish a fabrication shop in Alwaye for the manufacture of pressure vessels, stainless steel equipment and heat exchangers in collaboration with Messrs Davy-Ashmore of the U.K. The shop will have a capacity of 2,260 tons to start with.

The shop proposed should be able to take up the manufacture of medium pressure vessels, stainless

steel equipment and heat exchangers. These items are required in almost all chemical industries. The capacity aimed at in the first stage is as follows:

Item	On a single shift basis (In tons)
M.S. medium pressure vessels, heat exchangers, pipings ...	3,000
M.S. normal pressure vessels ...	1,000
Stainless steel vessel for normal and medium pressure service ...	1,000
Stainless steel foundry	200

The capacity of the shop can be raised gradually to 10,000 tons to 12,000 tons a year. An assessment of the growth prospects of such industrial groups, namely, fertilisers, petroleum refining and petro-chemicals for the next ten years is roughly as follows:

Item	New additional production capacity (tons a year)	Unit capacity (tons a year)	No. of units a year
Fertilisers			
Nitrogen	200,000	100,000	2
P.O. ₅	100,000	25-35,000	3-4
Sulphuric acid (for P.O. ₅ fertilisers and other miscellaneous uses)	350,000	60,000	6
Petroleum			
Petroleum refining	2 million	2 million	1
Petro-chemicals			
(a) Synthetic rubber			
(b) Polyethylene and P.V.C.			
(c) Synthetic fibres			
(d) Solvents			

The group has suggested the launching of a new project during the third plan itself. An analysis of the missing gaps and the pressing requirements in the immediate future is indicated as follows:

(a) Fabrication of the chemical plant and vessels and equipment for medium pressure services up to 30 kg/cm² operating pressure.

(b) Stainless steel vessels for normal and medium pressure services up to 8 atm. working pressure.

(c) Heat exchangers, both carbon steel and stainless steel for operating pressures up to 30 kg/cm².

Furthermore, it would be an advantage to have two ancillary shops, namely (i) pipes and pipe fittings; and (ii) highly specialised stainless steel castings. These are too small to sustain independent viable units, but are specialised and will require highly trained manpower, special inspection and testing facilities and a highly quality-conscious management.

The pipes and pipe fitting shop will largely concentrate on pre-fabricated pipes of medium pressure service (the straight pipe lengths being obtained from pipe manufacturing plants in Rourkela, Jamshedpur, Cuttack, etcetera) inclusive of elbows, bends, reducers and tees. At a later stage, the shop will also take up the production of standard flanges, and possibly cast steel valves.

The foundry for stainless steel castings is intended to meet an important gap in the production of stainless steel valves, stainless steel pumps and stainless steel flanges and other miscellaneous castings. At

present, all these important items are imported. There is also a growing demand for these items to meet the normal spares requirement of the existing factories. The foundry will also use the stainless steel scrap from the vessel and heat exchanger shop and will thus afford an opportunity for integrated and economic operation. The foundry for stainless steel castings will be able to carry out specialised types of castings required for the chemical industries. A capacity of 200 tons a year has been provided. The stainless steel foundry provided in the project should, it is expected, be able to meet the demand for highly specialised types of equipment as well as special stainless steel valves, fittings, etcetera, during the fourth plan period.

An initial capacity of 5,000 tons a year comprising dished pressed parts, heat exchangers, pressure pipes and pipe fittings, stainless steel fabrica-

Unit capacity (tons a year)	No. of units a year
100,000	2
25-35,000	3-4
60,000	6
2 million	1
Roughly one such industry during the fourth plan	

tion work as well as foundry for stainless steel castings, has been recommended. This has been done in order to obtain the maximum results within the shortest possible period. It will, however, be necessary to plan this shop for future expansion in the third year of its operation to 10,000 tons to 12,000 tons.

Foreign Collaboration

Foreign collaboration is required for specialised fabrication techniques. This can be secured on the basis of either payment of royalty or by persuading the foreign firm to participate in the equity capital of the new company. In case the foreign firm does not show an inclination to participate in the equity capital, the negotiations may be confined to the continuous supply of know-how on fabrication techniques on the basis of a royalty to be decided by mutual agreement.

It is estimated that the capital investment required is Rs. 3.07 crores. An amount of Rs. 1.18 crores has also to be provided for towards working capital. Thus the total investment required will be Rs. 4.25 crores. The project needs a provision of Rs. 1 crore as foreign exchange.

Out of the total investment of Rs. 4.25 crores, Rs. 2.25 crores may be raised as equity capital, and the rest in the form of loans. These loans could be availed of in the form of Rs. 1 crore as long-term loans and the balance of Rs. 1 crore in the form of cash-credit accommodation from commercial banks.

Out of the equity capital of Rs. 2.25 crores, if foreign participation is forthcoming, Rs. 1 crore may be re-

served for the foreign collaborator and the rest for the Government or public subscription depending on whether the project is taken up in the public or private sectors.

The total capacity of the shops and the approximate value of the fabricated equipment is as follows:

Shop	Tons a year	Value of annual production (Rs. 000,000)
Normal pressure vessels at Rs. 2,000 a tonne	1,000	2
Medium pressure vessels, inclusive of pressed parts, heat exchangers, pipes and pipe fittings (at Rs. 5,000 a tonne)	3,000	15
Stainless steel fabrication (at Rs. 22,000 a tonne)	1,000	22
Stainless steel castings (at Rs. 25,000 a tonne)	200	5
	5,200	44

The total annual turnover will thus be of the order of Rs. 4.4 crores from the ultimate capacity of the shop at 5,200 tons a year as shown above.

SHIPBUILDING

The Cochin Yard

An Indian delegation will visit Japan in April to sign an agreement on the construction of the second shipyard in Cochin, it is announced here.

EXPORTS

Diversion Reported

Reports have gained currency in India and abroad that in a few cases, some of this country's traditional products such as deoiled cakes, cashewnuts, jute goods, and black pepper have been sold by some of the importing countries at third country ports while in transit to destinations in eastern Europe. The Government is carefully examining these reports. Such complaints have also been brought to the notice of the Governments concerned with reference to the provisions in the trade agreements.

It is explained that in the absence of precise material on this point, it is difficult to give an assessment of the diversion of such exports. It was, however, claimed that against such exports, India was importing essential items from the countries concerned.

WORLD BANK

Time-limit for Loan Extended

The World Bank has agreed to extend the time-limit up to 30th September, 1965, of the disbursement of its loan to private collieries. Originally, a sum of Rs. 14.29 crores, out of the total loan of Rs. 16.67 crores, was to be used by 31st July, 1963. The delay in the use of the loan may not have any serious adverse effect on the production programme. But the modernisation of collieries has undoubtedly slowed down. If the entire loan is now utilised by the revised date, the benefits of modernisation will be felt only during the fourth plan.

N. C. D. C.

Pact with Poland

The National Coal Development Corporation has entered into three agreements with Messrs C.E.K.O.P. of Poland. The first one is for the supply of shaft sinking equipment at a cost of Rs. 56.18 lakhs. The second one relates to the supply of a project report and detailed designs and drawings, valued at Rs. 4.35 lakhs. The third one is for making available Polish specialists to supervise the shaft sinking work. Their salaries, etcetera, will be paid by the N.C.D.C.

Shaft sinking operations at the Moonidih mine commenced on 17th March, 1964. The mine will have an

	1,103.51

HEAVY ELECTRICALS

Making High-pressure Boilers

The Heavy Electricals (India) Ltd., Bhopal, is setting up a plant for the manufacture of high-pressure boilers for a capacity of 650,000 kilometres a year to suit 100 to 120-megawatt and larger-sized steam turbines in Tirunelveli, Tiruchirappalli district, Madras State. The plant is expected to commence production early in 1965.

The Government of India has approved the expansion of the Bhopal plant for the manufacture of steam turbines and turbo-alternators for a capacity of 600,000 kilometres a year with the present collaborators, Messrs Associated Electrical Industries Ltd., of the U.K.

SWEDEN

Delegation Expected

A delegation of co-operative societies from Norway and Denmark visited India in February-March this year to explore business prospects. A similar delegation from Sweden is expected later this year.

Indian coffee is finding an expanding market in Norway and tea in Sweden. Indian spices are being increasingly bought by Sweden and cotton textiles by Denmark.

JUTE

Delegation for Africa

A shippers' delegation will be visiting north and west African markets in April 1964 to study their requirements of jute goods. Quality control and preshipment inspection have also been introduced on a voluntary basis with a view to ensuring the requisite quality of goods exported to all destinations.

WHEAT

New Zones Formed

The Government of India announced its decision last week to form wheat zones in the country with immediate effect. The Government considers that the formation of such zones is necessary in order to conserve supplies of wheat in the important consuming areas and to concentrate on the areas of shortage in which the Government could distribute supplies of imported wheat from Central stocks. The following wheat zones have been formed:

(1) Punjab and the Union Territories of Delhi and Himachal Pradesh. Export of wheat and wheat products from this zone to Jammu and Kashmir will be permitted. (2) Uttar Pradesh; (3) Rajasthan; (4) Madhya Pradesh; (5) Bihar; (6) Maharashtra. Export of wheat and wheat products from this zone to Goa will be permitted; (7) Gujarat; (8) Southern States of Andhra Pradesh, Madras, Mysore, Kerala and Pondicherry; and (9) the residual zone of the States of West Bengal, Orissa, Assam, Nagaland and the Union Territories of Tripura and Manipur.

The export of wheat and wheat products from, and import into, each

of the zones will be prohibited except under permits to be issued by the State Governments with the concurrence of the Central Government. The intention is that such permits should not be normally granted on private trade account. In the circumstances, inter-zone movement of wheat would be restricted to Government or State-sponsored accounts.

The State Governments have been asked to take measures required to enforce the zonal system and to check smuggling between States. The Government hopes that the step will not only improve the price and supply position in important wheat consuming States but also enable it to meet the needs of other States for imported wheat. Supplies of imported wheat to roller mills in all States will continue, if it is necessary, at an accelerated pace.

The formation of the wheat zones announced last week was only the first step in the Government's effort to control the rise in prices. Another measure which it intends to take is the enforcement of the ceiling prices for wheat and rice as soon as the circumstances require.

Procurement Prices Revised

The Government has reviewed the procurement prices obtaining in different States and has revised those in force in Andhra Pradesh, Madras, Madhya Pradesh, Assam and Uttar Pradesh. The revised price a maund for the common variety of rice in these States is as follows (the price prevailing before this revision is given in brackets):

Andhra Pradesh—Akkullu—Rs. 19.50 (Rs. 17.50); Madras—Kattai Samba—Rs. 19.25 (Rs. 17.25); Madhya Pradesh—Gurmatia—Rs. 17 (Rs. 16); Assam—coarse—Rs. 19.39 to Rs. 20.59 (Rs. 18.39 to Rs. 19.59); and Uttar Pradesh—Gadri—(Grade IV)—Rs. 17 (Rs. 16).

Corresponding changes have also been made in the prices of other varieties of rice on the basis of the existing differentials.

India has signed an agreement for the purchase of 150,000 tonnes of Burmese rice. The quality of rice is Ngasein full-boiled variety. Shipments have to be completed by the end of September 1964, the price being payable in pound sterling.

An agreement was signed on 25th December, 1963, for the import of 35,000 metric tons of rice from the United Arab Republic. The shipments would be made at a monthly rate of 10,000 metric tons starting from February 1964.

CAPITAL ISSUES

Consents Granted

According to official information, the Controller of Capital Issues sanctioned 95 consents for raising capital amounting to Rs. 87.33 crores during the last quarter of 1963. One hundred and three consents for Rs. 82.88 crores were given during the corresponding quarter in 1962. During the quarter, 118 applications for a total of Rs. 86.30 crores were received, against 125 applications for Rs. 139.73 crores during the same period in 1962. In the third quarter of 1963, 146 applications were received involving a total amount of Rs. 125.43 crores.

Of the 95 consents granted in the fourth quarter of 1963, 14 were given to Government companies for a total amount of Rs. 36.08 crores and 81 to non-Government companies involving an amount of Rs. 51.25 crores. The distribution of consents given to non-Government companies ac-

cording to the type of security is as follows:

	(In Rs. crores)
Equity ...	28.69
Preference ...	2.97
Debenture ...	4.42
Bonus ...	3.82
Loans, etcetra ...	11.35
	51.25

During the entire calendar year 1963, 475 applications were received for issuing capital amounting to Rs. 624.88 crores, against 506 applications involving Rs. 429.08 crores during 1962. Four hundred and ten consents were issued by the Controller of Capital Issues in 1963 for Rs. 544.31 crores, against 447 consents for Rs. 381.49 crores in 1962.

Out of the 130 consents amounting to Rs. 126.90 crores granted to companies for the issue of capital for the first time during 1963, 54 consents for a total amount of Rs. 62.76 crores involved foreign participation to the extent of Rs. 21.15 crores. During 1962, 65 consents for Rs. 52.55 crores involved foreign participation of Rs. 15.59 crores in initial issues.

TRACTORS

Import from Russia

India proposes to import in all 1,403 tractors from Russia during 1964. The types of tractors to be so imported and the c.i.f. price a unit are as follows:

Model	c.i.f. unit price	Quantity
DT-14B	Rs. 3,500	700 Nos.
DT-28	Rs. 6,250	100 Nos.
MT Z5	Rs. 8,500	553 Nos.
Byelarus MT Z50	Rs. 10,620	50 Nos.

POWER

Schemes Approved

The Planning Commission has so far accepted in principle the following ten power schemes proposed for the fourth plan for advance action in the current plant:

Name of State and Project	Installed capacity	Estimated cost (Rs. lakhs)	Year of commissioning
Andhra Pradesh:			
1. Kothagundam extension (thermal) ...	120 MW	1077.86	1967-68

SOCIAL SECURITY

New Committee

The Government of India has constituted the committee on social security measures with the following:

Mr. V. T. Dehejia, Secretary to the Central Ministry of Finance, Depart-

CAPITAL, 2nd April, 1964.

ment of Revenue and Expenditure—chairman; Mr. P. M. Menon, Secretary to the Ministry of Labour and Employment; Mr. L. P. Singh, Special Secretary to the Ministry of Home Affairs; Mr. P. C. Mathew, Special Secretary to the Ministry of Finance; and Mr. G. C. Katoch, Joint Secretary to the Ministry of Finance—(member-secretary). In addition, Mr. S. Bhoothalingam, Secretary to the Department of Economic Co-ordination, and Mr. B. N. Datar, Chief of the Labour and Employment Division of the Planning Commission, are associated with the work of the committee.

The matters referred to the committee relate to the formulation of social security measures for Government servants (Central and State) and generally for all employed persons, in relation to: (a) pensions and allied benefits for the family; (b) educational facilities for children of Government employees; (c) medical facilities; (d) housing facilities; (e) financial security in terms of purchasing power; and (f) old age pensions, etcetera.

The committee considers each item from time to time after collecting relevant facts, and makes its recommendations to the Government.

NEW ZEALAND

World Trade Fair

The Government of India has decided to participate in the New Zealand second international trade fair to be held from 20th August to 5th September in Wellington, New Zealand. So far, India's exports to New Zealand have largely been on a traditional pattern with jute, cotton goods, tea and tanned leather accounting for nearly 90 percent of exports to that country. There are good prospects for the diversification of the trade by introducing new items. Imports into New Zealand from the Commonwealth countries enjoy the British preferential tariff and the "most favoured nation" treatment.

London

N.E.D.C. PRODUCES A PROGRESS REPORT ON U.K. ECONOMY

(FROM OUR LONDON CORRESPONDENT)

ident until it has seen the stop-go spell broken.

Higher Productivity

The progress report states that during this year, productivity may come close to hitting the 3.2 percent annual increase rate on which depends the achievement of the 4 percent annual growth target set by the National Economic Development Council. Sir Robert Shone reports: "During 1964 it is probable that demand will continue to increase at a high rate. There is likely to be a large increase in fixed investment, both public and private, a high level of stockbuilding and a substantial growth of public consumption and consumer expenditure; exports should be helped by a continued expansion of world trade, although they are likely to grow more slowly than imports. In the circumstances, there is likely to be a substantial increase in output and employment, and there are also grounds for believing that there will be a good rise in productivity which could bring it close to the trend line implicit in the growth programme."

Output, however, could not continue to increase indefinitely at the present high rate as this depended to a considerable extent on the bringing into use of under-employed resources and was more than the average rate required to achieve the growth programme during the rest of the period until 1966. Measures to adjust demand to a sustainable rate of increase would have to be taken in good time so that they were not too abrupt. There had been occasions in the past when a rapid economic recovery had been followed by years of more or less static production and productivity. Prospects were in certain respects more favourable on this occasion, but this would depend on the solution of eight difficult problems:

Investment in manufacturing: Several of the 17 major industries consulted by the N.E.D.C. office feared that steady and rapid growth would not be sustained. One of them, the report reveals later on, was the motor-car industry. Unless these industries could be convinced to the contrary, there might not be sufficient investment to maintain rapid growth after 1966. Therefore, it would be necessary to convince businesses that expansion would not be sharply checked and to consider as soon as practicable the rate of growth likely to prove feasible in the longer run.

Stocks: Heavy investment in stocks seemed likely in the years ahead as stockbuilding had been low during the last two years. This would place a considerable burden on the nation's resources and on the balance of payments. It was important that everything possible should be done to economise in stocks.

Savings: Consumer expenditure would need to be a smaller share of the growing national product in the next few years if there were to be sufficient savings to support the rapid increase in investment. Measures might be needed to stimulate private savings or to increase Government savings.

Construction: This was a sector of the economy in which demand in the years ahead now seemed like-

ly to be even higher than had been estimated a year ago. The construction industry faced an exacting task. It would be necessary to train more skilled workers, apply new building methods, and substantially increase productivity.

Manpower: Skilled manpower shortages had already appeared and many of the 17 industries consulted expected them to become more widespread and acute. It was essential that manpower should be used as efficiently as possible. The N.E.D.C. intended to review at an "early opportunity" the progress of work on the forward planning of labour requirements, training, mobility, preservation of pension rights and financial provisions for redundancy.

Unemployment Rates

Regional balance: The rate of unemployment in the less prosperous regions was still more than two and a half times the rate elsewhere. A more balanced demand for labour was necessary to make fuller use of the resources of the less prosperous regions, which contained an important part of the nation's remaining reserves of manpower, and it was important for the achievement of the growth programme that industry should seize the opportunity to expand in these regions.

Balance of payments: The outlook for world trade in manufactures in 1964 was promising and there had recently been encouraging increases in export orders. Nevertheless, the rise in exports was likely to be less than the rise in imports. "Since there was a surplus on current account in 1963, the worsening in the trade balance is unlikely to put the current account into substantial deficit in 1964. But allowing for long-term capital movements, there is likely to be a significant overall deficit. While such a deficit could be financed or contained for a time, it is essential for the continued expansion necessary to achieve the growth programme that any deficit should be seen likely to be, and in fact prove to be, temporary."

If exports failed to increase by 5 percent a year, there would be a serious danger that the expansion of demand would have to be held below the rate required by the economic growth programme. It was vital that further efforts should be made to expand exports. The Council intend-

ed to study the development of imports, particularly of manufactures, in the hope that goods which were now being substantially imported might be produced competitively at home.

Prices and incomes: Britain could not afford more than a very slight increase at most in the general level of costs. A policy of broad stability of prices needed in the first instance to be based on the successful achievement of higher efficiency and productivity. On this basis, real incomes could increase faster than in the past and prices could be kept stable if aggregate incomes, including profits, wages and salaries, did not increase faster than national output.

The Council, says the report, had fully discussed these questions and had recognised responsibilities on incomes—as well as prices—that had to be widely shared over the whole community. But there were difficult problems of expressing the varying responsibilities in detailed terms when they concerned so many different groups. An answer must continue to be sought as it was one of the "key elements" in sustained growth.

The Challenge of Growth

In a passage headed "The Challenge," Sir Robert states: "For the growth programme to succeed, the essential needs are a faster rise in productivity and in efficiency generally, a stable level of costs and prices, a more rapid growth in exports, and a lower growth in imports through more effective competition from home producers and economies in stockbuilding. ... The modernisation of industry must be speeded up and more savings will be required to finance the growing investment of all kinds."

"In the longer run, the rate of growth that can be achieved will depend on the extent to which new conditions can be created to secure a large and sustained rise in productivity. The next 12 to 18 months will, however, present a particular challenge. ... There are opportunities this time of avoiding the difficulties which have checked growth in the past, but this will not be easy. It will require constructive effort in many directions and the widespread acceptance of new responsibilities. If it proves possible to break through the stop-go cycle, the confidence engendered, and its effect on investment and on willingness to accept measures to raise efficiency, should substantially improve prospects for longer term growth."

In a more detailed section on the balance of payments, the report says that the estimate of the annual increase in imports over the growth period had had to be revised from 4 percent to 4.7 percent after a year's experience and if Britain's competitive position failed to further improve even this figure might be exceeded.

THE NEED TO MASS-PRODUCE MINI-TRACTORS IN INDIA

By Robert W. Brock

The trade policies of the developed economies are proving increasingly unhelpful to the developing nations. A country like India must, therefore, change her present pattern of development, and go in for products which could be at once useful for her progress and provide some export earnings. In Mr. Brock's view, the mini-tractor is one such item, which deserves to be mass produced in this country.

INDIA and other developing countries have little reason to take an optimistic view of the probable outcome of the current U. N. Trade and Development Conference, and of the discussions. The least probable of all the many possible results is any organised or substantial expansion of Western markets for Eastern manufactures. The whole trend of current discussions and programmes is towards fuller and freer trade, not between the developed and developing countries but among the developing countries—between the U.S.A. and European Six and in Europe, between the Six and the Seven. Even the Russian bloc is focussing, both for economic and political reasons, on programmes designed wholly to multiply own commercial and financial links with the Western countries. Meanwhile, because of differing interests, the developing countries have no joint programme whatsoever.

As no developing country is relying more heavily than India on the reduction of Western import restrictions on "cheap" manufactures, it may be worthwhile to indicate why this legitimate hope is unlikely to materialise. As emphasised by the eminent American economist, Sidney Dell, in his book, *Trade Blocks and Common Markets* there is a sharp contradiction in the fact that while the developed countries appear to be quite ready to free their imports of manufactures from one another in the interests of a competitive market, they seem determined to control corresponding imports from underdeveloped countries. As he comments: "Particularly striking in this connection is the provision in the United States Trade Expansion Act of 1962 whereby tariffs may be eliminated on items in which the United States and Common Market countries together supply 80 percent of the world's trade. The elimination of tariffs is thus not intended for those items in which over 20 percent of world trade is supplied by the underdeveloped countries. In the developed countries, the excuse offered for keeping out imports of manufactures from the underdeveloped countries is that the latter pay very low wages. But differences in costs are precisely what make international trade. But this is only another way of loading the dice once again in favour of the developed countries, as on so many other scores. Moreover, if countries refrained from trading with other countries where labour was cheaper, virtually all the world's trade would have to stop. For the United States would refuse to import from Sweden, Sweden from Britain, Britain from Italy, Italy from Japan—and so on down the scale of labour incomes until the bottom is reached."

This writer is not suggesting for one moment that these phoney pretexts for limiting Western purchases of Indian manufactures justify any cessation of effort by the Indian Government or by Indian exporters in any category. The fact remains that the old pre-independence, or prewar, channels of trade are gradually silted up, and that if any substantial overall expansion in Indian exports is to be achieved the manufacture of

new products for new markets offers incomparably the best chance of progress. Mass production of peasant tractors in India, for domestic and export purposes, offers one major line of development in pursuance of that dynamic objective. And that form of production, designed to give a powerful impetus both to agricultural output and to export earnings, can begin to take shape as soon as the Government of India guarantees the necessary manufacturing facilities.

As attested by every official and non-official analysis (including the authoritative contributions to *Capital's* 75th Anniversary Number) in its present anemic condition Indian agriculture requires, and urgently, not only a "shot in the arm" but in several other parts of its anatomy for good measure. And only the Government of India, in close collaboration with the Indian steel and engineering industries, can make these galvanising injections available for application. One may even go further and assert categorically that unless the steel and engineering industries, in which so much capital has been invested, now make it their first and foremost task to mechanise agricultural production, in terms of food and cash crops alike, they will be evading the earliest and most substantial contribution they could make to the creation of a self-sustaining, and self-propelled, national economy.

Over the greater part of the country the buried fertility of Indian soil will not yield its full potential until power-cultivation is fully applied. When co-operative cultivation gets into its full stride, every farmer's co-operative will become a productive *panchayat* in its own right and by its own effort. When that day dawns, Mother India will cease to be also Mother Hubbard, and, after centuries of privation, no food cupboard will be bare.

A Peasant Tractor

To come back to earth, literally as well as metaphorically, if India is prepared to mechanise agriculture by mass production of peasant-size tractors, there are to quote the *New Commonwealth* magazine, some revolutionary models on the way which may be undergoing overseas tests in the near future. For example: One such model was demonstrated to a group of experts in Bedfordshire on 25th April. It is a simplified job designed specifically for use in underdeveloped countries. Made by the Trojan firm of Croydon it is as nearly fool-proof as such a machine can be. A three-wheeler, powered by a 7 horsepower petrol or diesel engine, it has a front-mounted tool bar—a tremendous advantage in that the driver, perched between the three wheels, can see exactly where he is going, and what he is doing. Plough, inter-row cultivator, ridges spraying equipment and other implements can be fitted to the front tool bar or can, if necessary, be attached to a mid-rib of the construction below the driver's feet. Steering is by a tiller bar and it can safely be used for normal farm transport...and the price f.o.b. works out at under £200."

A tractor of this type, produced in the U.K., would probably cost £250 delivered to upcountry recipients in India. Mass-produced in India, it could be produced for a maximum of £150—probably less, allowing for the lower prices of Indian steel, and also for lower wage costs. It would be uneconomic, to say the least, to base mechanisation of Indian farming on imported equipment. In any event mass-production of Trojan tractors in India depends wholly on the outcome of negotiations already initiated. If Delhi applies the brake, production will be deferred. If Delhi steps on the accelerator, it can begin without any avoidable delay.

In Western countries, tractor manufacture is based on competitive production carried to fruition by competitive salesmanship. In India, minimum price levels will be achieved only by monopoly production of one standardised model (including standardised spares) rounded off by monopoly distribution. In other words, one Indo-British firm should be the sole manufacturer, and the Government of India should be the sole buyers and distributors, basing delivery prices on an agreed cost-plus basis.

In the U.K., the Government pays roughly £300 million a year to 300,000 farmers to produce 50 percent of the food requirements of 50 million people: each farmer producing, on average, enough to feed 30 fellow-citizens. With some knowledge of both countries, this writer is inclined to think that, over and above present allocations to farm development, the most profitable form of agricultural subsidy in India would be achieved by the Government of India bearing the capital cost of all peasant-tractors produced, leaving the farm co-operatives to carry operational and maintenance costs, employing drivers recruited and trained by the Central or Provincial Governments.

At £150 a tractor, the cost of making a tractor available in every one of India's 500,000 villages would represent a negligible addition to the country's overall development expenditure, but would produce a considerable and permanent impact, psychological as well as economic, on India's rural population and economy. When bullock-power is displaced by mechanised horse-power, and villagers become "mechanically-minded", the long march to modernisation of farm production will at least begin.

Multi-purpose Vehicles

Tractors in Indian villages would become multi-purpose vehicles. With their power take off attachments, they would embody portable power, operating as mechanised "men-of-all work" on tasks too varied, but also too familiar, to need enumeration. Furthermore, tractors-plus-trailers could operate as short-journey conveyors of "input" and "output" materials over tracks impassable to commercial vehicles—and most rural roads fall into that category. On major routes, the task is to adapt roads to the available vehicles. In and around the villages, there is the simpler and less expensive task of distributing vehicles adaptable to the available roads (or substitutes for roads). Peasant tractors come into the latter category. This writer has

CAPITAL, 2nd April, 1964.

a production target of 1 million tractors a year, as soon as practicable, to cover export as well as domestic requirements, based on the calculation that export demands would expand as the initial internal requirements were satisfied.

If co-operative cultivation proves practicable and profitable in India, there is no overt reason why the same pattern should not emerge in most more or less contiguous countries east and west. As a topical example, it may not be inappropriate to take east Africa, and to assume, for the sale of discussion that, instead of employing under-paid soldiers, it might promote both peace and prosperity to employ reasonably well-paid tractor drivers operating Indian-made peasant tractors on the co-operative cultivation of peasant farms. In that event, one would assume an inter-Governmental transaction, between the Government of India and the three Governments in east Africa; payment taking the form of payments into India's sterling balances by the U.K. Government as the cheapest and most productive form of "economic aid" to the three countries which have recently acquired political independence.

The French memorandum for the Geneva Tariff Conference is under favours the continuation and extension of existing preferential trade arrangements between particular groups of under-developed countries and industrialised ones. On that basis, the Six will give most of their "economic aid" loans and grants to their "Associated" African countries.

Analogously, the U.K. and Commonwealth countries which have recently found it necessary to develop closer collaboration in terms of defence, will find it even more essential to develop closer economic links, an to do so on a mutually profitable basis.

In a recent White Paper, the U.K. Government adopted an attitude of unctuous pride in the fact that whereas most American and Continental "aid" is "tied" only one quarter of U.K. "aid" is "tied". Indeed, it went further and almost sought "economic aid" for the U.K. by suggesting that if American and Continental aid was able to compete for the contracts thus financed. How unrealistic is it possible to become? If 80 percent of American aid was not "tied", thereby becoming an export subsidy, it would never secure Congress ratification. The same political factor governs Continental aid. Current U.K. investment in Commonwealth development will remain on its present powerfully low level until the same powerful impetus is applied. In a world in which three continents out of five remain undeveloped investment and exports are increasingly interdependent and it could not be otherwise.

Freedom from Hunger

Eastern countries will only achieve "freedom from hunger" when the richer countries achieve "freedom from humbug—political and economic". At the World Food Congress the great Swedish economist Gunnar Myrdal spoke with justifiable contempt of Western "aid", masquerading as political philanthropy, although in fact it represented highly profitable business for the donors. On another occasion he declared: "I cannot overcome the temptation to repeat my quotation from the Bible: 'For unto every one that hath shall be given, and he shall have abundance: but from him that hath not shall be taken away even that which he hath.' That there is a tendency inherent in the free play of market forces to create regional inequalities, and that the tendency becomes the more dominant the poorer a country is, are two of the most important laws of economic underdevelopment, and development under *laissez-faire*."

CAPITAL, 2nd April, 1964.

STRESS ON QUALITY NEEDED IN MAKING CARPET-BACKING CLOTH

THE production of carpet-backing cloth in India has been increasing faster than the demand for it from the U.S. tufted carpet industry, said Mr. William A. Nugent, the I.J.M.A. representative in North America and the vice-president of the U.S. Burlap Council, at a Press conference held on the eve of his departure from Calcutta last week. Mr. Nugent said that more stress should be laid on quality rather than on quantity in producing carpet-backing cloth. The importance of quality and competitive prices cannot be over-emphasised in a fastidious and sophisticated market where the threat from substitutes and of competition from other producing countries always exists. Mr. Nugent was optimistic that the voluntary quality control and inspection scheme introduced by the I.J.M.A. would create a favourable impression on U.S. consumers.

Speaking on the outlook for burlap in the U.S.A., Mr. Nugent said that the country recorded an increase of about 10 percent in the production of carpets alone. In view of the continuing boom conditions in the U.S. economy, there is reason for being optimistic about the burlap prospects in that country. The development work now being carried on in the U.S.A. by the I.J.M.A. is expected to stimulate the demand further.

The Major Grievance

The major grievance of the U.S. buyers, Mr. Nugent said, is the inordinate delay in settling arbitration proceedings in Calcutta. Many customers find it difficult to make representations to the arbitration committee. So they have been demanding the holding of such proceedings at the point of unloading, but the Calcutta Jute Fabrics Shippers Association did not agree to this proposal. Mr. Nugent said that as a result of his discussions with the C.J.F.S.A., it has now been agreed that the Association will recognise mutually acceptable surveyors. Their reports on quality, measurements and other relevant aspects of the cases in dispute will be considered by the arbitration committee at the time of hearing. The C.J.F.S.A. contract form will be amended accordingly. The contract form of the East India Jute and Hessian Exchange Ltd will also be modified suitably.

Raw Jute Exports

Addressing the Calcutta Hydraulic Press Association last week, Mr. J. R. Modi, chairman, said that exports of lower grade jute from India would help her earn foreign exchange with which she could pay for the import of good quality long jute and cuttings from Pakistan. Pleading that such exports should be encouraged, he urged the Government to announce further relaxation of controls, within the quality restrictions at present obtaining. Up to the end of February 1964, 291,090 bales were packed, against 243,667 bales in the corresponding period of 1963. The final figures for the last season reached the "impressive" total of 416,777 bales, which was almost equal to that for the record year of 1959-60 with a total turnover of 417,075 bales.

Of the baling done this season, exports absorbed 74,900 bales, against 115,000 bales registered so far. These figures are hardly satisfactory from the standpoint of the industry.

Nevertheless, the acceptance of raw jute exports as part of official policy is welcome. Other welcome measures, Mr. Modi said, are the abolition of a fixed overall quota for exports which are now licensed on an *ad hoc* basis after proper scrutiny of quality and prices; the withdrawal of the export duty of Rs. 15 a bale and the elimination of official intervention in the actual sale. But the chairman regretted that business was still confined to a few of the rupee-payment countries, and some among these were even refused supplies. There was almost no business with a large number of countries from which foreign exchange could be earned by direct trade. As a large number of countries were interested in importing raw jute from India, it was necessary to take proper steps to expand the volume of trade.

Decline in Fibre Arrivals

In February, there was a decline in the arrivals of raw jute in Calcutta and mill stations to 575,590 bales from 728,230 bales in January. Imports of Indian jute declined from 717,530 bales to 567,770 bales, while those of Pakistani jute fell from 10,700 bales to 7,820 bales. In February 1963, arrivals totalled 613,230 a year, consisting of 604,590 bales of Indian and 8,640 bales of Pakistani fibre. During the eight-month period ended February 1964, total arrivals were 5,133 million bales, against 5,235 million bales for the corresponding period of the previous year. Of the imports during the 1963-64 season, 5,046 million bales were from India and 86,810 bales from Pakistan. The corresponding figures for the same period in the 1962-63 season were 5,027 million bales from India and 207,570 bales from Pakistan.

THE JUTE MARKETS

Manufactured Goods: In spite of the absence of fresh overseas business on a substantial scale, the Calcutta gunny market was steadier during the past week. The shed berth, lighterage and draft conditions in the port continued to be unsatisfactory. But shippers said that fair progress was maintained in the clearance of February and March shipment cargo. A hardening trend in New York burlap prices from 11.45 cents to 11.50 cents a yard for heavy duty (duty-paid) spot and afloat hessian—combined with brisk enquiries for hessian and heavy goods from the U.S.A., Russia, the Continent, Argentina and Australia and short- and shipper-covering against due date transactions—helped prices to firm up appreciably. Mills became reserved due to the continuing firmness in the fibre market. Sentiment in the futures market was governed by the trend in the spot market. Heavy goods gained more than hessian. But the top gains were partially trimmed as the bulls booked profits at the bulges. The turnover was moderate in the spot market and fair in the futures section. The undertone was cautious, but firm at the close.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during February was 8.8 million yards less than during January and 16.3 million yards less than in February a year ago. But the total consumption for the first two months of this year is almost equal to that of the same period last year. Last month's bag cut-up was 58 million yards and piece-goods deliveries 15 million yards, compared with 66 million yards and 23.3 million yards, respectively, in 1963. U.S. spot stocks and afloats decreased from the end of January by 7.6 million yards. At 283.5 million yards, 154.4 million yards were spots (up 3.1 million yards) and 129.1 million yards were afloats (down 11.7

million yards). Stocks represent about 3.7 months' supply.

THE U.K. JUTE MARKETS

FIBRE REMAINS QUIET

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan remained quiet during the past week. Offers of the fibre are being freely made but little buying interest is shown by Dundee spinners. The demand from Continental countries remains steady, and this is expected to continue. Dundee spinners have secured a substantial quantity of jute this season and the quality of all grades has been satisfactory. Offers of jute ex warehouse are still being made, but prices asked are higher than spinners are prepared to pay. Offers of afloat parcels are also being made.

Reports on the progress of the new crop are satisfactory. But few speculative offers are being made here, the main reason being that buyers will expect the quality of the various grades to be equal to the standards set this season. Old crop prices are at £144 for Mill Firsts, at £110 10s for Mill Lightnings, at £97 for Mill Hearts and at £82 for Grade Hearts, c.i.f. U.K. for April-May shipment. Grade Tossa-2/3 is available at £125 and Grade Tossa-4 at £108. There are sellers of Output Tossa-2/3 at £95 10s and of Output Tossa-4 at £84 10s, April-May. A few more offers of cuttings are now being made with S.N.C. at £60 10s and N.C. at £52. Mesta is steady at £85 10s for A, at £75 for B, at £69 10s for C and at £51 for cuttings, c.i.f. U.K., April-May.

No interest is now shown in Siam jute, since prices asked are considered too high for the quality of the fibre. Grade A is at £78 10s, grade B at £69 and grade C at £65 10s, delivered mill Dundee for April-May shipment.

The Calcutta goods market is also quiet and not much buying interest has been shown here of late. Quotations are at 68s 11d for 40in. 10oz. and at 51s 9d for 7½oz. a 100 yards, f.o.b. Calcutta, for March shipment, at 69s 6d and 52s April-June and at 70s and 52s 1d, July-September. B Twills are at 170s, 172s and 173s 6d for the respective shipment periods. The prices of Dundee jute yarns are firm and slightly higher rates have been paid for small quantities of some descriptions. Supplies are only available for forward delivery. The carpet trade continues to take

regular deliveries, and there is every indication that this will continue.

The cloth end of the trade is quiet. The demand for wide cloth by the tufted carpet industry is good. But ordinary hessian is rather quiet in spite of the recent order for sugar pulp bags. There is some short-time working in the heavy end of the trade due to the lack of demand for narrow sackings.

THE PAKISTANI JUTE MARKETS

FIBRE RISES

(FROM OUR Dacca CORRESPONDENT)

LOOSE jute arrivals are still poor. White grades are very scarce, and whatever is available consists largely of S.M.R. and Export Hearts. Prices have risen, but fortunately, the condition, except for one or two areas, is not bad. The pucca bale prices have also risen and cuttings have now recovered to above the overseas parity.

There has been sporadic rain, and by and large preparation of the land and sowings in certain areas are proceeding. River levels so far are slightly below last year's.

The £2 below the E.P.C. minima privilege granted to small shippers has been of great help to them. Some have already shipped so much that they have now achieved the doubtful distinction of being rated as big shippers and as such have to sell at the full minimum. Many of the so-called big shippers have, of course, considerably reduced their exports, and eventually if this system is maintained, the small shippers will become big shippers and vice versa.

It is reported that Mr. I. A. Khan will take over as vice-chairman of the Jute Board from 1st April, and it is possible that with his appointment, the new jute policy for the coming season may be announced. The trade's interest lies mainly in declarations

concerning the quota system and the E.P.C. prices.

The overseas market continues weak and inactive. Nevertheless, in the first 15 days of March, E.P.C. registrations totalled 225,834 bales. The U.K. was once again the largest buyer with 52,000 bales. Although this is largely unsold to spinners, it at least implies that stocks in Dundee are being used up. It is also interesting to note the greatly increased quantity of Export Lightnings and Export Hearts which is being bought by Dundee. Belgium bought 34,895 bales and France 16,420 bales. Poland bought 15,400 and the U.S.A. 13,600 bales, mostly of cuttings. Egypt bought 13,100 and West Germany 9,305 bales. Portugal 8,972 bales and Japan 7,000 bales. India once again came into the market, after a long absence, with a purchase of 4,098 bales. The total E.P.C. registrations up to 15th March are 3,342,271 bales compared with 3,188,147 bales last year. Exports up to the end of February totalled 2,653,084 bales, compared with 3,088,434 bales during the previous year.

The last season's total mesta registrations up to 15th March were 94,048 bales and exports up to the end of February were 26,988 bales. This season's registrations are more than 50 percent up at 161,484 bales, and exports have totalled 69,464 bales. This increase is obviously at the expense of Siam.

As forecast two weeks ago, the position in Chalna is much better and it is now possible to get occasional barges for export of raw jute. In Chittagong conditions improved for a few days, but are gradually deteriorating again. Everybody, of course, blames everyone else but the fact remains that the port authorities have had to close railway bookings for nearly a month because 54,000 bales of raw jute are awaiting export in spite of the fact that vessels are coming in and that shippers want their goods shipped.

Commodity Markets

RAINS IMPROVE OUTLOOK FOR PLANTATION CROPS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE planting districts of south India had a few useful showers in the course of the past two weeks. These rains received after a fairly long spell of dry weather, will have a good effect on the plants and will improve crop prospects, particularly in the case of tea which suffered most due to drought conditions obtaining during the past three or four months. Planters were getting worried about the weather and they had serious doubts as to whether south India would be able to maintain her increase in tea production. Last year, south India produced 87 million kilograms of tea which was the largest on record.

PEPPER

Recovery in Prices

Indian pepper prices have recovered well. In the course of the past one month, the export grade spot delivery pepper has made a gain of about Rs. 50 a quintal at Rs. 346.50 which was the closing rate on 28th March on the Cochin market. In the futures market, May delivery has improved from Rs. 305 to Rs. 372 a quintal within the past one month.

Trade circles attribute this improvement in pepper prices to the following factors. The growers here are at present not in a mood to part with their crop for unattractive prices. It is said that the arrivals in the market this year are below normal. This is attributed to pledging of the new crop on a larger scale by the growers with the co-operative societies as the latter are now in a position to advance more money to the rural population. Distress selling on the part of the growers is less this year, according to reports from the growing centres in Kerala where 95 percent of India's pepper is produced.

As against this firmness on the part of the sellers, there were some buying enquiries from abroad. Russia and some other east European countries have lifted fairly large quantities of Indian pepper since the beginning of the season. Russia alone is reported to have bought about 4,000 tons. India's largest buyer, the United States, on the other hand, has been indifferent. She bought only about 1,000 tons, according to one report. This was really discouraging. But according to latest reports, she has started showing more interest in Indian pepper, and she is expected to enter the market in a big way soon. American buyers are said to have bought some parcels recently at prices around 35½ cents a lb. It is said that the American price ideas are still 1 cent lower than the Indian quotation so much so that there is some difficulty in doing business with that country. Indian shippers do not foresee any prospect of prices here adjusting to the American offers, particularly in view of India's present coveted position as the main source of supply.

On account of the strained relations between Indonesia and Malaysia, Singapore is not getting Indonesian pepper as it did in the past and its position as a major marketing centre for pepper has gone. Indonesia is now trying to establish new marketing outlets for its export commodities. Until the dislocation in the supply line from the Far East is removed, the U.S. and other major con-

sumers of pepper may have to depend on a larger scale on India.

In the meanwhile, the latest crop estimates place the world production of pepper in 1963 at 168.5 million lbs, 6.3 million lbs more than the 1962 output. Production in Asia from where 90 percent of the world's supply comes is put around the same level as that of 1962. The increase is credited to Africa and the United States. According to these estimates, Indian production was to the tune of 64 million lbs, against 71.6 million lbs in 1962. The decline was due to adverse weather conditions at the flowering time. Indonesia which comes next to India in the order of priority in the matter of production harvested about 46 million lbs which was substantially larger than the 1962 output of 35.3 million lbs. The Sarawak crop was lower than the 1962 output of 26 million lbs because of heavy rains and floods. Production in the Malagasy Republic and Brazil were 2.4 million lbs and 5 million lbs, respectively.

BONUS REPORT

Representation by Planters

The United Planters Association of Southern India has urged the Central Government through a recent memorandum to withhold approval to the recommendations of the Bonus Commission until careful consideration is given to the objections submitted on behalf of the plantation industry. The Association is of the view that the Bonus Commission's recommendations, if implemented without suitable and necessary revision, will have "serious repercussions" on the future of the plantation industry.

The plantation industry with its peculiar structure and economy has not received anything beyond the "briefest and most cursory attention" from the Government, the memorandum says, and adds that the recommendations devised mainly with the manufacturing industries in view have been applied to the plantation industry. It is appreciated that the Commission has thought it fit to suggest that the plantations in south India may continue industry-wide agreements in preference to the formula proposed by it. But this has been rendered meaningless by its own alternative of applying the general formula. "We cannot imagine labour opting for the existing arrangement unless it is more advantageous to it than the Commission's formula. We, therefore, fail to see the merit of this suggestion", it adds.

For the U.P.A.S.I. it appears curious that the Commission which has defined bonus as the sharing by the workers in the prosperity of the industry should recommend a minimum bonus of 4 percent even when there is no prosperity to share, but a loss. The Commission has tried to justify bonus as a payment intended to help bridge the gap between the actual wage and need-based wage of low-paid workers. In that case, employees earning up to Rs. 750 or even Rs. 1,600 could not have been considered entitled to any payment of bonus.

The Commission has overlooked the fact that the field assets in plantations are not allowed depreciation under the Income Tax Act and under

the Agricultural Income Tax Acts of the States except in the case of rubber in Kerala and Madras. To the extent that depreciation is not allowed, the profits tend to be exaggerated both for taxation and for the computation of the surplus under the bonus formula. For this reason, a planting company making the same gross profit as a manufacturing or trading company would have to pay a much higher tax and bonus than the latter and would be left with less surplus for the growth of its internal resources. "Although the Commission has noted our representations on this subject, the plea for special consideration has been perfunctorily dismissed without even feeling obliged to give a reason for the rejection", the U.P.A.S.I. complains.

The plantation industry came into being much earlier than the manufacturing industries and the need for the industry for larger resources to rehabilitate and modernise is greater than those industries established more recently. The gap between the original and the current replacement costs of the field assets is consequently very great and the rejection of the claims of rehabilitation will hit plantations more acutely than other industries. Continuing the memorandum says that the fixing of a minimum bonus at 4 percent or Rs. 40, whichever is higher, has been done without considering the practical application of it to the plantations. Relative to the wage rates prevailing in the industry, the minimum guaranteed bonus of Rs. 40 would involve a payment of 10 percent or more.

In this industry, the equity capital forms a much smaller proportion of the capital at work which earns the profit in question. Therefore, the discriminatory rates of return on equity and other capital in the form of reserves apply more harshly and unfairly against this industry and will thwart the generation of internal resources in future. The agricultural nature and the extra risks involved have not been taken into account when suggesting a uniform 7 percent return on equity capital for the plantation industry in common with trading and manufacture.

The U.P.A.S.I. considers that the allocation of 60 percent of the available surplus for distribution of bonus ignores the interest of the consumers, the need for capital conservation for development and takes into account only the partisan claim of labour for larger bonus. This is particularly wrong at a time when the Wage Boards are being set up in almost all industries for the fixing of fair wages. As a labour-intensive industry, plantations are capable of offering greater employment opportunities if resources are available for development. If available resources are frittered away by high bonus payments, capital cannot expand or provide new job opportunities. The Plantation Labour Act for the welfare of labour requires large capital investment and plantations should be able to retain a large share of the surplus for the purpose, the memorandum says.

The U.P.A.S.I. has made the following suggestions in this connection: (a) make depreciation on field assets an admissible item when applying the bonus to the plantation industry; (b) planting companies should be allowed a 10 percent return on capital, the term "capital" having the same meaning as "capital base" given under the Budget proposals of the Government of India for 1964-65; (c) in the interest of saving and reinvestment in the business, reduce the allocable surplus to bonus at 40 percent as against 60 percent; (d) the expenditure incurred on welfare assets under the Plantations Labour Act should be a deduc-

tible charge; (e) no minimum need be fixed as, in the case of a non-surplus year, there is no prosperity to share. If a minimum payment is made obligatory, it should not be above 2 percent and no minimum amount should be specified in any case. Fix the maximum at 12½ percent (f) fix a deductible remuneration for working partners and proprietors; (g) reconsider the impact of the higher allocable surplus in the case of non-resident companies so that discrimination is avoided, and (h) proceeds from the sale of timber should be excluded from the profits for computing surplus under the bonus formula.

TEA

The Problem of Export

(BY A SPECIAL CORRESPONDENT)

THERE is some official talk about a scheme to ensure that only quality teas are sold in overseas markets. Any attempt to increase the percentage of quality is sound. But to be effective, it will leave more "commons" available for internal consumption and to-date, the Tea Board still seems to ignore the importance of home consumption.

The statement that "the scheme is to ensure that only quality teas shall be sold in overseas markets" overlooks the fact that with the exception of Scandinavia and maybe Ireland, all foreign buyers are out to buy in the cheapest market. U.S. dealers have made this fact clear beyond all doubt and Calcutta tea brokers have also advised this correspondent that other producing countries can quote lower delivery prices for suitable grades.

A trade delegation from Scandinavia recently toured India to make direct contact with tea exporters. It proposed to introduce a national blend of tea into Denmark to be composed of 100 percent Indian tea. The object seems to aim at quality irrespective of price. This is about the most sensible proposition ever put forward by tea buyers, for tea of real quality, properly prepared, is among the very finest beverages. Only it is too expensive for the average housewife. But, of course, the Scandinavians are experts at good living. From the composition of the blend, it is assumed Norwegians delegation, it is assumed the Danish will co-operate with the Danish export about 35 to 36 million lbs of tea a year from all sources.

Excise Impost on Darjeeling Teas

The Darjeeling branch of the Indian Tea Association held its annual general meeting recently, with Mr. A. N. Banerjee in the chair. Mr. Banerjee said that the Central Budget did not provide the relief expected, particularly in excise. The present land acquisition policy of the State Government was also not conducive to the tea expansion programme.

The 1963 tea crop for the district declined. The average price for the Darjeeling leaf sale also declined from Rs. 7.44 a kilogram to Rs. 7.13 a kilogram. The price concertina continued, and the best quality tea suffered a price drop. This was a matter of concern in view of steeply rising costs, and it highlighted the pressing need for opening up new markets for Darjeeling teas, reducing its dependence on one main buyer.

The Budget had brought no reduction in the excise duty, which had to be borne in full by export teas and which, except in the case of four Darjeeling gardens, was the highest in India, Mr. Banerjee said. "This is a great disappointment to us," he stated, "as is the rejection by the

Excise Reorganisation Committee of the proposal for the payment of excise duty in arrears. It is hoped that the Finance Minister will yet give us some relief in this respect."

There were four strikes causing a loss of 19,000 kilograms of tea during the year under review. The report of the working group on plantation labour housing was due to be completed soon. Mr. Banerjee hoped that the burden which gardens have to bear in complying with the requirements of the Plantation Labour Act would be recognised, and the relief granted by way of a reduction in the annual percentage of houses to be built, and by way of subsidies and loans on reasonable terms and security.

In addition to the limiting factor of credit which has been more difficult to obtain, the other long-term obstacle to expansion plans is land. Even gardens having the financial resources to implement their expansion plans cannot do so if the Government continues its present policy of resuming land which is physically suitable for tea garden extension. Mr. Banerjee hoped that the State Government would review the whole policy of resuming tea areas in its own interests.

Referring to the recent Parliamentary criticism about the need for a planned programme to increase the acreage under tea, Mr. Fitzgerald, chairman, Indian Tea Association, who attended the meeting said that this was the aim of both the Tea Board and the Association as producers. "But under the conditions to which I have already referred, and about which we have written to the Union Government on several occasions, our ability to achieve expansion depends very greatly on the various forms of relief for which we have appealed".

He expressed the Association's appreciation of the general encouragement and assistance which it had been given by the Tea Board. He congratulated the Board's chairman and officers on the effective work they had done and were doing to promote Indian tea exports. He hoped that as a result of all these combined efforts, "the demand for your world-famous Darjeeling tea will further increase."

It has been recently noted that freight charges from India to the U.S.A. are too high, and it is cheaper to book tea to Rotterdam and then tranship to the U.S.A.

Consumption in U.K.

It appears that tea consumption in the U.K. has already reached saturation point at 510.4 million lbs in 1963. The previous year, it was 509.6 million lbs well below the 1961 figure of 529 million lbs. But there was record production that year and cheap supplies helped consumption to expand in the U.K. as well as in India. Official figures indicate that the world surplus production for 1962 was only 8 million lbs. The estimate for 1963 supplies is a surplus of 18 million lbs.

These figures suggest that the U.K. distributing trade continues to make useful profit on current business, but what about future expansion. It is true that consumption in many countries is going ahead, but not because of propaganda from U.K. blenders. The position clearly reveals that potential markets should be developed as quickly as possible and the sooner the Governments concerned wake up to the fact that India's internal market should be developed the better. It is puzzling that local planters have not been able to influence the Tea Board in this matter.

The president of the Indian Tea Association made it clear in his ad-

dress at the annual general meeting that the Association is fully aware of the danger of neglecting India's home markets.

At the end of 1963, stocks in Calcutta were also high at 120 million lbs, compared with 85 millions in the same period of 1962.

It has been estimated that for tea, coffee and rubber, the effective rate of income and super tax will work out at 45 percent in place of 50 percent and for surtax, the rate will be 32 percent in the place of 40 percent. Some 60 percent of the profits of tea companies, however, are deemed to be agricultural income, and these taxes are paid on only 40 percent. Therefore, the relief may work out to only 2 percent on income and super tax.

In view of the difficulty of new planting in India which is mainly because of costs, it may be noted that Ceylon has again taken the lead from India by successfully planting out about 6,000 acres last year and that the Government has increased its replanting subsidy. According to Dr. Gunn, Superintendent of the (Ceylon) Tea Research Institute, high-yielding tea strains have been developed capable of yielding 5,500 lbs an acre a year. This claim looks to be on a par with some of the Russian statements about yields in Georgia. No mention is made as to how long it will take for such bushes to mature.

In reply to the Estimates Committee's criticism, it is understood that the Tea Board has pointed out to the Central Government that the conditions for assistance prevent effective progress. As noted by this correspondent, the proposed loans are not sound economic propositions. The Tea Board contends that they actively pursued the question of increasing tea planting and expansion of factories, but the conditions attached to loans were so stringent that no liberal use of them was possible. The Indian Tea Association does not agree with the Estimates Committee's view that the tea industry should carry on expansions with its own resources, because many tea gardens have no such resources available.

Rotorvanes

GIVE YOU

A POWERFUL
MECHANIZED
GRIP ON

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanizing to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for. The Rotorvane will help you make good tea.

The Portable inter-mediate feed conveyor leads from one Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Acrating Machine.

by a corresponding rise in the interest rates on advances in due course; the move is, therefore, likely to accentuate inflation by raising the operating costs of trade and industry. Since the banks are keen to maintain the present margin between deposit rates and advance rates in order to protect their profitability, an increase in deposit rates is bound to be followed by a rise in lending rates. In the case of several important commodities whose prices are still controlled by the Government, a further rise in lending rates would embarrass the industries producing them. At the same time, it is difficult to see how bankers can resist a modest rise in the interest rates on deposits under present circumstances, since the rise in the interest rates on small savings and Government bonds has intensified the competition for deposits. It is, therefore, hoped that the banks will consider the question of paying more interest on deposits in a selective way.

The observations made by Mr. N. N. Law in his address from the chair at the annual general

CHECKING CORRUPTION

THE Santhanam Committee's report, presented to the Lok Sabha last week, is an indignant document which strikes the right moral note against corruption in high places. This will undoubtedly win the Committee great popular acclaim—not perhaps an entirely unintended result—but one wonders whether the report will also make sense when one reflects upon it in tranquility. In its narrow preoccupation with corruption as such, the Committee has piously proposed multiplying checks and balances to reduce what little discretionary authority the administrator now possesses. This may seem to reduce the opportunities for corruption at some points, but the end-result may be that decision-making will become even slower than it already is. A slowdown will do the economy no good at all, except to aggravate the urgency of those whose dire need leaves them no alternative but to resort to the payment of "speed money". A small factory-owner, seeking a licence or permit for something that he urgently needs but which no official is empowered to give without the concurrence of several others, can hardly be blamed if he resorts to bribery to speed up a decision. It is pathetically unrealistic to think that any system can be devised which plugs all loopholes, and it follows, therefore, that a slower administration will tend to be more, not less, corrupt. In this sense, the remedy which Mr. Santhanam and his colleagues propose may prove worse than the disease.

A scarcity-ridden economy cannot do away with controls altogether. However much one may dislike the "licence-permit raj" (to use a phrase made popular by the Swatantra leader, Mr. C. Rajagopalachari), it would amount to throwing the baby out with the bath water to suggest that all controls should be scrapped in order to eliminate opportunities for corruption. Only last week, Mr. Cecil Cargin, chairman of the Indian Engineering Association, made the perfectly valid point that essential units must be assured in advance of priority allotments of steel for the necessary investment in expansion to be made with some confidence. He asked for this assurance in spite of his general support for steel decontrol in principle, because the outlook ahead is one of growing shortages in several categories. The example points to the obvious conclusion that the transition from controls to freedom will have to be gradual, and that the speed of the change will be regulated largely by the rate of economic expansion. Thus, the surest corrective to corruption of the kind alleged against business and industry is quicker growth in all the directions where scarcities exist today. The close relationship between economic expansion and honesty is what the Santhanam Committee has failed to perceive because it was too busy finding righteous attitudes to adopt.

Its suggestion that trade organisations should be associated with the distribution of licences and the like is not particularly original. There is already provision for consultation in the administrative arrangements governing many such matters. A disappointed applicant for an industrial licence may, for instance, go up in appeal to a sub-com-

mittee of the United Bank of India Ltd recently are of special interest in this context. He says that some deposits are sensitive to interest rates, while others generally do not respond to a change. So if deposit rates are to be raised, albeit moderately, the rises should be confined only to interest-sensitive deposits, particularly those kept for periods of more than a year. The consequent increase in costs could be partially neutralised through other measures. The recent shift towards demand deposits would help. But the increases in deposit rates, however discriminating, will not by themselves solve the problem. They need to be backed by efforts to improve the services and facilities given to customers. It is time the banks tried to diversify their activities in order to attract new depositors. Considering the poor quality of the services most Indian banks give, to think of increasing service charges would be wrong. It would be equally wrong to check through an inter-bank agreement the provision of new facilities; quality cannot improve unless freer competition is allowed to prevail.

mittee of the Central Advisory Council of Industries. Doubtless, consultation can be widened and the machinery for it improved, but it can easily become too much of a good thing. If all the varying viewpoints have to be reconciled before a decision is taken by consulting everyone who may have a stake, one might as well forget about speeding up the procedures of the administration. In a democracy, the final check on executive misdeeds is provided by such powerful forums as the legislatures and the judiciary. Ways should indeed be found of making better use of these agencies (a special committee to keep an eye on public-sector undertakings is an example), but to try and run the administration through committees is quite absurd. It is almost like asking Parliament to take over executive functions itself instead of being the supervisory body it is.

A fundamental misjudgment of the rôle of the executive in a developing country lies at the root of the Committee's petty-minded nagging of the services. No one can possibly object to drawing up "informal codes" to regulate the conduct of civil servants in relation to the public, but the suggestion may have greater practical relevance if the reasons which oblige the former to accept favours are looked into. A senior official visiting Calcutta is allowed the princely sum of Rs. 18 (or is it now Rs. 26?) a day to meet all his expenses on board and lodging. Since Government guest houses can never keep pace with the increase in the number of users, many officials find themselves obliged to accept hospitality from dubious quarters. To rail against the practice may be righteous, but cannot be right, until allowances are made more realistic and a better example is set by the political masters. Within the last few days, a socialist gentleman close to the top in New Delhi's hierarchy was found to have preferred business hospitality to what a mere Raj Bhavan might have offered. There may well have been good and satisfactory personal reasons for the choice, but the public at large has no means of knowing.

WORLD COMMODITY PRICES

INTERNATIONAL commodity prices have been comparatively stable in the first quarter of 1964, after their steep rise since the third quarter of 1962. It is sensible to assess the financial trends of 1964 on the assumption that, despite some declines which have occurred already, this year's average of commodity prices will be above last year's, although last year's rise will not be repeated. The question arises whether an average—not of time but of a range of commodities—has much significance, in a category of goods where almost every item seems to be subject to some special influence. Can one say, for example, that the rise in the price of wheat represents a general trend in commodities when the main cause of it is bad harvests in the Soviet Union? Or that industrial consumption is properly reflected in the price of copper when there are two widely

On the question of setting the right example from the top, the Santhanam Committee has certainly carried the public debate several useful steps forward. Its recommendations for dealing with corruption at the political level may well prove to be its most valuable contribution. When it comes to reaching decisions on the implementation of the report, the ruling Party can hardly brush these aside as it did the previous moves along the same lines which lacked the authority the Committee enjoys as an agency of Parliament. The details of the arrangements proposed may well require second thoughts but the principle of making retribution sure and swift, regardless of a person's political position, is wholly sound. The Punjab affair, currently *sub judice*, is not open to comment, but the point may nevertheless be made that allegations of malpractices among politicians go unheeded for far too long. That the easy way out—of Kamraj all suspect ministers—was not chosen only goes to show how political necessity can usually overcome scruples until pressures to the contrary can no longer be contained. This said, one may yet find that the Santhanam Committee's stipulation of an obligatory enquiry every time ten members of the legislature decide to denounce an individual Minister will open the flood-gates of vituperation and witch-hunting in faction-ridden States. These, like U.P. and Kerala, also happen to be the very States where economic progress has been particularly disappointing, which emphasises the need to prevent the dissipation of political energy that the process may involve. A more rational solution will be necessary to reconcile the requirements of cleanliness in public life with the maintenance of some stability.

Again, the Committee's concern over connections between members of the legislature and private interests seems misconceived. An M.P. from, say, a cotton-growing region may have an identity of interest with the aims of the growers' federation of the area. If this federation provides him with some assistance to cover secretarial expenses or the like (which the poorly-paid M.P. often sorely needs), is this necessarily immoral? Doubters might be well advised to look into the practice in the U.K. where M.P.s are legally and openly retained by such bodies; or in India, where no one will frown upon a trade union going to the assistance of a Member. A link, even if it is financial, need not always be suspect provided it is open and above board. The Santhanam Committee allows for this but in a very narrow sense, and thus comes in the way of the healthy development of pressure groups. Democracy in the complex present-day world cannot function in a groupless vacuum. Wisdom lies in recognising the fact and allowing for orderly growth instead of brushing groups under the carpet. The licensing of "business" agents and the elaborate recording of interviews granted to them lends a nice, dramatic touch to the report. But if the Committee had only stopped to think, this will not for one moment prevent the dubious, undercover operations which it wishes to check. Politically powerful gentlemen will still take on business commissions on the quiet whenever they wish to, for the simple reason that the peddling of influence can never be tracked down. This makes licensing as futile as decreeing that burglars must register themselves in advance.

different prices of copper, that of the London Metal Exchange and that of the big producers?

These examples represent another difficulty of comparison, that the products of farms and plantations are governed partly by factors such as weather and disease, which the producers cannot effectively control, whereas the products of mines can be regulated, more or less, according to a pre-conceived plan. Again, increasing the supply of a particular mineral may involve opening (or reopening) high-cost mines, whereas the supply of a manufactured product can be increased by building new factories that can produce as cheaply as the factories already operating. Official policy is another complication. The price of wool is governed partly by the buying policy of the communist countries. The prices of some metals

are governed partly by the selling policy of these countries. In both cases these policies raised prices last year. The policy of the U.S. authorities in releasing supplies from the stockpile has dominated the tin market in the last few years. Speculation in commodity markets is another erratic factor, often related to operators' expectation of changes in official policy.

The composite indices of commodity prices are certainly not easy to interpret. Yet it is undeniable that the rise in these indices since 1962 reflects, however approximately, the growth of consumption of commodities, particularly in the industrial countries. And the rise in shipping freight rates (reversed, to some extent, recently) reflects the increase in trade in commodities rather than in manufactured goods. Freight rates, indeed, have become an important element in the prices of commodities in the main area of consumption. These external influences have raised the prime costs of industrial countries, and the terms of trade, very adverse to the primary-producing countries for some years previously, have been restored to a more normal relationship. An example of the effect of the rise in primary prices is in the recent statement by the U.K. Board of Trade that prices of materials and fuels purchased by manufacturing industry in Britain were 6 per cent higher in the fourth quarter of 1963 than in the same quarter of 1962. Other costs, particularly wages, had not risen nearly as much between the periods. The sudden increase in the value of British industry's stocks in the fourth quarter of 1963 is attributable partly to the rise in prices.

However, the reversal of the terms of trade, in favour of the primary-producers, is no more than a correction of a situation that must be assumed to have been abnormal. And there is a long-term trend operating against the primary-producers, which is accelerated by a rise in primary prices: natural materials such as metals and fibres are being replaced—at least, supplemented—by factory-made materials, particularly the products of the chemical industry. The huge expan-

IMPORT CURBS STAY

THE import policy announced by the Government of India last week has, by and large, maintained the status quo for both actual users and established importers. The changes introduced are of a marginal nature, and hardly amount to liberalisation. The policy has allowed larger imports of some 17 items by axing 12 items of relatively low priority. Besides, 14 new items can be imported by actual users, but without any corresponding increase in their foreign exchange allocations. Although the bigger export earnings in 1963 have reduced the pressure on the balance of payments, the strain still continues. The Reserve Bank's foreign exchange balances now stand at around Rs. 126 crores, and the Government has to meet substantial repayment obligations, including those against the drawal of \$250 million from the International Monetary Fund. These may explain why the import policy continues to be restrictive for another year, but they do not justify the absence of any worthwhile liberalisation of maintenance imports.

Considering that India's export earnings during 1963 have increased by as much as Rs. 104 crores, it was only reasonable to expect a larger allocation of foreign exchange for maintenance requirements. The country's biggest need today is greater production, both for export and for internal consumption. The major reason for the existence of a large volume of idle capacity in industries is the shortage of imported raw materials and components. The gross under-utilisation of capacity has perpetuated the shortage of manufactured goods and pushed up production costs. As a result, inflationary pressures have been accentuated and the competitive position of Indian products in foreign markets has weakened.

The prime need, therefore, is to allow as large a volume of maintenance imports as is possible to enable fuller use of installed capacity. While this depends to a considerable extent on the amount of non-project aid that is available, an immediate liberalisation of industrial imports should have

sion of the chemical industry in the Soviet Union will certainly restrict the growth of that country's consumption of primary products. The efforts of the big copper-mining companies to hold down the price of their metal are resented on the London Metal Exchange, for the companies have established their own price and left the market to perform only a marginal function (though the higher L.M.E. price may be the more realistic). But the companies have perceived, some of them more clearly than others, the danger of substitution of high-priced copper by cheaper metals or plastics; and, significantly, the prices of the substitutes are generally stable. The policy of these companies is not, of course, applicable to all commodities, but it deserves consideration in any policy that may be devised for commodities in general, for it recognises the importance not only of the level but also of the stability of prices.

The general principle of regulating commodities to maintain more or less steady prices at levels that would be acceptable to both producers and consumers has been under discussion for years, and some specific schemes have been worked out; but only one of them, the scheme for wheat, is operating really well. The present situation is an unsatisfactory compromise between a system of free markets and a system of regulated production and trade. It should be possible to retain most of the advantages of free markets—where they are operative at all—while extending the advantages of regulation. The present time, when some observers feel that the trend of prices may already be turning downward again, is opportune for considering new policies more urgently. For effective stabilisation of prices large buffer stocks are indispensable, and they require finance on a corresponding scale. Most of the major nations have been able to co-operate financially to stabilise currencies, but they have allowed wide variations in commodity prices to strain the international system of stabilisation and development. It seems logical to extend this system to include commodities, which, in a different economic field, are not less important than currencies.

been possible with the bigger foreign exchange earnings for 1963. The official assurance that there will be a substantial rise in the maintenance imports of actual users as a result of the likely increase in non-project aid this year has evoked optimism among industrial consumers. But it re-

High Taxes Hamper Growth

Many underdeveloped countries in the world tend to impose high taxation to finance their development expenditure. But they overlook the basic fact that high personal and corporate taxation inevitably discourages the inflow of overseas capital which is needed to accelerate their economic growth. The effect of high corporate taxes on industrial expansion has been lucidly discussed recently by Sir Duncan Oppenheim, chairman of British-American Tobacco Co. Ltd and Mr. V. A. Grantham, chairman of the Chartered Bank, at the annual general meetings. (A fuller version of the former was printed in *Capital* of 26th March and of the latter a week earlier). The growing practice of imposing additional taxes on dividends, either upon the shareholder or the company itself, is to be deprecated, particularly when—as in some recent instances—these taxes have been imposed at specially high rates on dividends paid to non-resident shareholders. This form of discrimination, Sir Duncan rightly says, discourages the flow of risk capital and "the consequences of such a policy do not take long to show themselves." Although Sir Duncan has not specifically discussed the incentives given to foreign investors by Mr. T. T. Krishnamachari in his latest Central Budget, it has been noted in India and abroad that many of the concessions have been

mainly to be seen how much additional foreign exchange allocation they will get.

The new import policy, it has been stated, is guided by the twin needs of defence and export promotion. Small-scale industries have come in for special favour, since they will get a larger foreign exchange allocation. Small industries are supposed to depend on indigenous sources for raw materials, and it is rather difficult to appreciate the new concessions to them. It is to be hoped that any increase in foreign exchange allocations will benefit only those small industries which produce items for defence or other priority requirements.

A noteworthy aspect of the import policy is that for the first time export incentive schemes have been brought within its scope. Although import entitlement will still be proportionate to the f.o.b. value of exports, the imports allowed under the incentive scheme will be governed by the overall import policy. This, it is officially explained, is merely a step taken to rationalise procedures. Although compared with Pakistan and some other countries, the export incentives offered in India are small, they seem to have given rise to misgivings in some foreign markets. But, as Mr. Manubhai Shah stated at the last meeting of the Export-Import Advisory Council, incentives help hardly 20 percent of the exports and the remaining 80 percent are marketed without any kind of assistance. In fact, there is a strong case for offering incentives to certain major foreign exchange earners like jute goods and tea, which are facing keen competition abroad.

It appears that established importers have to remain content with a peripheral rôle. With the big increase in actual-user licensing and in the volume of imports handled by the State Trading Corporation, and its sister organisation, the Minerals and Metals Trading Corporation, established importers have virtually been pushed off the scene. State trading now accounts for about Rs. 160 crores of the total import and export trade. A larger proportion of the business will be gradually passing to State trading organisations. Mr. Manubhai Shah, in fact, feels that the import of the remaining items—particularly the profitable ones—by established importers should not be permitted and that these items should be handled by the S.T.C. It is a pity that the long experience and wide contacts of the established importers should not be put to profitable use. The future for them seems to lie in promoting exports, in the distributive trades within the country, and in functioning as indenting houses to handle the imports of actual users.

Current News and Comment

offset by other aspects of the taxation proposals. Mr. Krishnamachari, for example, has proposed an unjustified increase from 63 percent to 65 percent in the tax on Indian branches of foreign companies. Foreign capital will flow only to those countries where it gets an adequate return, and where the commercial, fiscal, monetary and administrative policies are not uncongenial or adverse. Sir Duncan has rightly cautioned the developing countries that the availability of concessions to new investors will not in itself be effective in attracting overseas capital if there is a prospect that taxation will be too onerous when the pioneering period expires. It is not so much political risks, Sir Duncan says, as excessive taxation, whether in the form of excise duties or profits taxation, which poses a real threat to his group's expansion in the developing countries.

While Mr. Grantham has congratulated the Finance Minister for his recent effort to stimulate economic expansion, he too, like Sir Duncan, has complained of high personal and corporate taxation which constitutes a "severe disincentive" to savings and investment. While it is appreciated that the Government requires revenue to finance its development expenditure, it is a pity that it has made no worthwhile effort to reverse the present policy of high taxation through a reduction in expenditure. Meanwhile, as Mr. Grantham

said, there has been a steady incursion of bureaucracy into the private sector "at much cost and little gain" due to the increasing clamour to establish a socialistic State in India.

Raw Materials for Paints

In his address at the annual general meeting of the Indian Paint Association in Calcutta last week, Mr. R. G. Goel, president, referred to the industry's difficulties during the past year. Some of the adverse factors which affected the industry were import restrictions, the shortage of essential indigenous raw materials and the increase in costs due to higher excise and Customs duties. In spite of these adverse factors, the industry has been able to maintain its production. Mr. Goel urged the Government to show a more "responsive approach" to the problem of raw material shortage and allow more liberal imports of essential items required by the industry. But the quantity and range of indigenous production of various raw materials and ancillaries should be increased progressively so that the industry might be in a position to use them more and more. The Government has introduced certain changes in the concessional slab for the levy of excise duty on "B" class factories producing oil and enamel paints. The concessional slab, for example, has been reduced from 1,000 tonnes to 750 tonnes and has been made applicable to factories whose annual production does not exceed 3,000 tonnes. Furthermore, a new conversion formula has been prepared for calculating the concessional slab which is highly unrealistic and has no relation to the actual system of conversion followed by factories. "The conversion formula," Mr. Goel said, "would have the effect of actually reducing the quantum of concessional slab and thus deprive manufacturers of the full benefits of the concession."

In spite of the import entitlement benefits which have been substantially raised last year, exports have not increased to the extent desired. But the industry is much more export-conscious today than it was a few years ago.

Silk Production and Exports

India has a unique record of producing all the four varieties of silk—mulberry, *tassar*, *eri* and *muga*—and Indian silk goods have been famous all the world over. But in spite of this advantage,

the Indian silk industry has not been doing well. Addressing the annual general meeting of the Central Silk Board in Bombay last week, Mr. R. Doraiswamy, chairman, said that although the foreign exchange earnings from silk exports in 1963 touched Rs. 2.16 crores, against the original target of Rs. 1.64 crores and the revised target of Rs. 2.1 crores, the industry was suffering from high production costs. Unless India is able to reduce her production costs and improve the quality of goods, she may lose some of her traditional markets and may not be able to develop new ones. The machinery and equipment in almost all the spinning and weaving units is obsolete and worn-out and use is made of outdated techniques and devices. The industry needs large amounts of money to install up-to-date machinery and equipment. But the expense is unavoidable if the production of silk goods is to be increased and internal and export markets have to be developed.

Another serious handicap is the inadequate supply of raw material. Although the production of *tassar* silk slightly declined in 1963, compared with the previous year, the production of mulberry, *eri* and *muga* silk somewhat increased. The output of mulberry silk increased from 1,052,000 kilograms in 1962 to 1,096,000 kilograms in 1963. But even this increased raw silk output, along with imports, was not sufficient for the industry's needs. There has been some improvement in the quality of raw silk produced in the country, but a substantial part of the raw material supply is of sub-standard quality. A number of research and development schemes were started in the first and second plan periods and have been continued in the current plan, but they do not appear to have produced any marked effect on the quality of raw material. Although the State Governments concerned are keen on developing the industry, they do not appear to have made much progress.

Disposal of Income Tax Cases

Inaugurating the conference of members of the Income Tax Appellate Tribunal in Bombay last week, the Chief Justice of India, Mr. Justice P. B. Gajendragadkar, pleaded for transferring the work of the Tribunal to the High Courts. This is necessary because the administration of income tax laws has assumed gigantic proportions and it poses a delicate and complex problem. The magnitude, complexity and importance of the laws have greatly increased. Since the High Courts

command public confidence, there will be some advantage in taking away the work of administration from a quasi-judicial body like the Tribunal and entrusting it to the former. But as the Central Law Minister, Mr. A. K. Sen, pointed out, such a transfer would involve the translation of accounts from different regional languages into English which would be a very costly and difficult process. Besides, there would be the problem of absorbing accountant-members on the Bench of the High Courts. But the most important aspect of the problem probably is that the High Courts are already overworked. Delay in the disposal of income tax cases will not only cause undue hardship to the assessee, but might also affect State revenues.

It was pointed out at the conference that the disposal of cases by the Tribunal had been quick and that it enjoyed the confidence of the litigant public. Mr. G. S. Gaitonde, president of the Tribunal, said that the number of appeals instituted before the Tribunal's 12 branches in the eleven months of 1963-64 was 20,110, against 18,255 in 1962-63 and 15,075 in 1961-62. The rate of disposal of cases has been continuously high. Taking the period of the past five years, the number of references to the High Courts under Section 66 (1) and 66 (2) of the Indian Income Tax Act, 1922, was only 2,668, which worked out to 4 per cent of the total cases disposed of by the Tribunal during the period. The High Courts have so far disposed of 1,179 of these cases, upholding the Tribunal's verdict in 702 cases and partly upholding the verdict in 105 cases. It was only in 335 cases that the Tribunal's verdict was upset. Of the 101 cases disposed of by the Supreme Court during the period, the verdict of the Tribunal was upheld in 67 cases. This shows that the Tribunal has been doing the work quite satisfactorily and there is a strong case for continuing it. The disposal of cases will not only be quicker but less costly to both assessee and the Government if the Tribunal continues to handle income tax cases.

TEA TRADE IN RUSSIA

IN dealing with almost any aspect of a subject so vast as that of the Russian Empire, it is easy, and hence very common, to fall into exaggeration. Thus it is imposing to read of a territory covering nearly 9,000,000 square miles occupied by more than 135 millions of people; of a national revenue approaching £200,000,000 and a debt of £700,000,000; of an Army variably put at from 34 to 5 millions of men. And then, enlarging upon these data, it may be readily shown that the Great Empire occupies more than one-sixth of the land-surface of the globe, and is in fact both as to area and population, far larger than, for instance, the United States and Canada put together. But to citizens of the British Empire, at any rate, such figures should not be so very tremendous. The dominions of the Tsar are, after all less in extent by fully 24 million square miles than those of our own King-Emperor, whom subjects, moreover, are at least thrice as numerous. Least of all in India, with a territory practically equal to that of European Russia and more than twice as densely peopled, can much impression be created by the largest of Russian statistics. In the matter which more immediately concerns us here—the tea trade of Russia—the tendency towards general exaggeration has been specially noticeable. In Continental Europe one finds Russia invariably regarded and spoken of as the great tea consumer of the world, and even in England, such antiquated notions are still sometimes expressed. Everywhere much vagueness seems to exist as to Russia's true relative position among the tea drinking countries of the world. What this really is it may thus be useful to enquire. There are two ways in which a country may be ranked as a "tea-drinker"—either by the total weight of tea imported annually for consumption, or by the rate per capita of the population. The latter is usually the fairest test, and applying it to the whole Russian Empire, Asiatic as well as European, it is found to allot well under 1 lb. of tea annually to each inhabitant, which thus places Russia, statistically, seventh on the list of tea consuming countries. In this list China and Japan cannot unfortunately be included, owing to the absence of reliable figures as to their home consumption of tea. It would be interesting to know what this actually is, as it must be considerable and its inclusion might still further modify the comparison.

A Ditcher's Diary

AS THE INDO-PAKISTANI HOME MINISTERS' TALKS began in New Delhi on Tuesday, I was reminded of the photographer who, struggling to compose a romantic masterpiece from a sullen model, begged of her: "Please look pleasant, lady, and in a few moments you may resume your natural expression". Pleasant the delegates certainly looked as they assembled for what could prove, for millions in both countries, a fateful conference. And of romanticism, too, there was not a little, with shared memories of old days together, in prison and outside; of political battles fought at common barricades; and of a measure of personal friendship that had survived sixteen years of national animosity. But many, like myself, might have wondered whether, the pleasanties and the romanticism over, and the camera-men from the Press gone, the natural expressions on both sides were thereafter not speedily and smoothly resumed. The expressions, as we know, could not in all cases have been those of old friends at their fond best; the conference, after all, began after a phase of recrimination and bitterness during which Indo-Pakistani relations had touched a new low rarely known since the last days of the Kashmir war. The persecution, seemingly organised, of the Hindu and Christian minorities of East Pakistan; the backwash of it all, in West Bengal, as well as in Bihar and Orissa; and, in between, the fruitless acrimony of the United Nations debate on Kashmir—all these remained as testimony to a poison which, distilled first in the minds of Governments, had been percolating into the hearts of men.

WHETHER FIVE DAYS OF DISCUSSIONS, OR FOUR OR three, can provide an answer to what has become so deep-rooted a problem, I would not claim to know. Perhaps the main virtue of the talks, then, may lie in their facilitating a hard-headed and down-to-earth assessment of the consequences, for each country, of communal troubles which, by their very nature, cannot be confined to one alone. Dry statistics will no doubt be exchanged of the hundreds raped or murdered on either side; and of the thousands of others driven forever from their hearths and homes. But, with due apologies to Messrs Gallup and Kinsey, statistics are no measure of joy or suffering, of the warp and woof of human experience. The tragedy of the past four months is known in its cruel nakedness only to those who have suffered it. For them, *communiqué*s composed of old resolutions in new words, such as the New Delhi conference will assuredly produce, may be no consolation at all. To talk of the wholesale exchange of minorities is glib, if not

downright foolish. The answer, if there is one, waits to be found by the leaders of the two countries in their own hearts: in Pakistan, by a Government driven to communalist adventurism through its own effeteism and incapacity; and, in India, by a Government whose commitment to secularism is compromised sometimes by lassitude, sometimes by the imperatives of regional or Party necessity. Conferences have their value; but resolutions without results stand in danger of being productive only of cynicism and despair.

TO GET A FEUDAL SOCIETY MOVING ALONG THE ROAD to modernity is apt, at the best of times, to prove a formidable challenge; Jigme Dorji will be remembered most for the fact that he accepted it with courage and wisdom of a calibre that is altogether rare among the leaders of the Shangri-las of the present-day world. The probable motives underlying his assassination will not be known for some time; and with certainty perhaps never. What is certain is that the consequences of his death will not be felt in Bhutan alone, a country he led through critical times with shrewdness and dedication; India's loss may prove greater, for Jigme Dorji was a powerful but kindly man, sensitive to true friendship of the sort which, among Bhutan's neighbours, only this country was in a position to offer. The picture in many memories of Jigme Dorji at one of his favourite haunts, the Royal Calcutta Turf Club—a lean and austere-looking individual, moving excitedly among a nondescript fraternity of punters, tipsters and horse-lovers—was, to my mind, never a true reflection of the man himself. Men are not judged only by the rationality or otherwise of their personal pleasures and pastimes; more important than all these are qualities, as in Jigme Dorji's case, of statesmanship, patriotism and discipline which nations, and not his friends alone, will miss. To the many who knew him, Jigme Dorji was in some ways a paradox: a stern disciplinarian at work, he had the softest of hearts at home; an aristocrat by birth, he revelled in the uniquely democratic informality of his ways. Those who partook of the generous hospitality at what, metaphorically speaking, seemed his doorless home did not all drop neatly packed in stuffed shirts from the upper crust of politics or society; in the motley gatherings of the Dorji household were often to be found soldiers and sailors, tinkers and tailors, all present in testimony to the deep humility and immutable friendliness of the man himself. Jigme Dorji loved life and lived well; so much more beyond understanding, then, is the tragedy that one who in his heart had no room for enemies should have died of an

assassin's bullet. Youthful, vigorous and selfless, as not all Prime Ministers these days are, Jigme Dorji was a beacon of wisdom in leadership such as Bhutan may not easily know again. India, no less than his own country, has lost in him a wise mentor and a true friend. As after the assassination there falls an uneasy darkness over the dimly-lit hills and valleys of the mountain kingdom, there remains in the background a red glow of danger; may it not return to memory one day as a portent of the dusk before what could be, politically, a long night.

THE UTTER IMPOSSIBILITY OF EXPLAINING INDIA in general terms is something of which we are all aware. This is a country which politically, economically, ethnically and climatically has always stubbornly refused to fit into accepted theories. Now, apparently, we have extended our obduracy into the field of geology as well; India looks like being the last piece of the jigsaw of proof that the ancient continent of Gondwanaland really did exist. Ever since the theory of continental drift was propounded, its proof has been sought in the ability to fit together the various world land masses. In the case of Gondwanaland, this has now been done by computer, all except the last step of fitting India on to Africa. Meanwhile, according to a report given at a recent meeting of the Royal Society, the theory of continental drift has been proved in another way, by investigating the "frozen-in" magnetism of rocks. This fascinating process consists of deciding from the magnetic records of ancient strata which way they were lying in relation to the magnetic poles several million years ago. From the results it has been definitely decided that drift must have taken place; the question now is how it did so. But even the answer to this riddle is within sight because the previous problems which arose through trying to fit coastlines into one another have recently been avoided by concentrating on the 500 fathom offshore line. By this means Africa and South America have been brought together within half a degree, and other results have been little less spectacular. It now remains to bring India into line. I am wondering what impact a full-scale vindication of the continental drift theory will have on currently accepted beliefs in anthropology. Will it, for instance, be possible definitely to prove a close family relationship between the black Africans and the Dravidians, or between the aborigines of India and those of Australia? Probably not, because the continents began to drift perhaps 250 million years ago, long before man as an identifiable animal existed on this earth. Still, man had ancestors, and if Gondwanaland was a reality, they must surely have had the run of it.

IT IS A DISMAL COMMENT ON AN AFFLUENT SOCIETY that crimes of violence should increase to an extent where compensation for its victims can

be justified from public funds. Britain is not alone in this experience; and her police are perhaps no more dedicated to persecuting the motorist when they ought to be chasing criminals than are those of any other western country. It is something which seems to have developed because the communal wealth which has brought so much personal freedom has not also increased the individual sense of responsibility. At least not to the same extent; and now one of the features of affluence in any nation is a high proportion of people, usually young ones, and not sharing in the traditional attitudes of the professional criminal, who prefer to risk killing or maiming in the pursuit of easy money rather than resort to honest work. So much for the old socialist theories that the elimination of poverty would bring a speedy end to crime. Personally I can suggest no answer to all this, except perhaps to point out that a closely-organised modern society offers too few of the opportunities for adventure which used to absorb so much high-spiritedness in the past. I cannot imagine the British Government's decision will increase crimes of violence in the country: those responsible are unlikely to be influenced one way or another. Would the same thing be true, I wonder, if the Indian Government were to follow the example and compensate all those who have recently suffered here as a result of the violence of rioting and looting? It would not be the same thing, of course. But the principle—that nobody should be permitted to suffer unnecessarily as a result of the anti-social actions of others, the avoidance of which is the community's responsibility anyway—is no different, and in India the victims are on the whole even less able to sustain the personal consequences. I should like to recommend the proposition for official attention. Some commitment on the part of the Government to compensate the victims of violence in this subcontinent might also help encourage a more conscientious attitude towards the steps necessary to avoid such happenings in the first place.

MEETING, QUITE ACCIDENTALLY, A FORMER ACQUAINTANCE of mine from Burrabazar the other day, I asked as discreetly as I could what he thought of the report of the Santhanam Committee. "Corruption", he declared with uncharacteristic brevity, "is merely the difference between the controlled price and the market price". Outrageously complacent though the view did sound, there seemed to be a hard core of truth in it, although I do not for a moment believe that it is the complete explanation in the sense that, *pace* the Swatantrists, controls are not the only, nor always even the main, source of corruption. Indeed, one might well, in one's more analytical moments, go so far as to say that bribery, favouritism and nepotism are not ailments in themselves; they are as temperature is to malaria, or spots to the measles—in other words, mere symptoms of diseases which draw their sustenance from the wider social environment. As a search for cures, much of the Santhanam Committee's report struck my acquaintance as the diagnosis of a witch-doctor: it seemed to suggest that more incantations, exhortations and homilies were necessary in order to propitiate the gods into purifying Indian society. Much of it struck him as the prescription of quackery: you could perhaps submerge the patient in ice-cold water and rid him of his temperature, but you could not submerge robber-bureaucrats (or robber-politicians) among other robber-bureaucrats (or other robber-politicians) sitting on vigilance committees, commissions and teams—and thereby rid them of their sins. Embarrassed by so frank a treatment of so delicate a subject, I hastened to try and conclude the discussion. But, blushing, I fumbled, and at this stage, for no reason at all, the conversation turned to the Bhubaneswar session of the Congress Party, where rich men and poor foregathered to pass resolutions urging the Government to make the rich poor and the poor rich; my acquaintance, quite irrelevantly I thought, enquired casually if I knew where the not inconsiderable sums of money spent on such worthy endeavours in aid of socialism and purity came from. I urged him to be patient and wait for the no doubt flattering details of the complete, but as yet unpublished, accounts. They might even, he added cryptically, appear one day as an illustration in the report of the second Santhanam Committee.

THE DITCHER

Guide for Investors

HIGH COSTS AFFECT RESULTS OF BENGAL COAL

GREAT interest attaches to the statement issued to shareholders by Mr. A. D. Ogilvie, chairman of the Bengal Coal Co. Ltd. for the year ended October 1963. The Company's statement and accounts for 1962 could not be issued due to the Defence of India Rules. Referring to the recent increase in the prices of good coals, the chairman said that it had not been adequate to neutralise the rising production costs. Meanwhile, the prices of essential raw materials have increased and freight rates and import duty have soared. The emergency insurance scheme, combined with the rise in workmen's compensation insurance premium, has placed an extra financial burden on the Company. The production of high-grade coals through deep mining has been found to be unremunerative. Under the circumstances, it is high time the Government raised the selling prices to a more realistic level. (A fuller version of the statement is printed on a later page in this week's issue of *Capital*.)

Bengal Coal has nevertheless taken steps to increase productivity and efficiency. The Company has taken full advantage of the World Bank loan to import equipment, stores and spare parts. Out of the capital expenditure of more than Rs. 80 lakhs for 1962-63, a substantial part has been financed by the World Bank loan. The Company's collieries are being fitted with modern equipment. There has been a satisfactory increase in raisings from the Chanch and Dishgarh groups of collieries producing high coking and blendable coals. Their output has increased by 10 per cent. But there has been a fall in production from the Ponati group of collieries because of a further decline in the output at Banksimula pits. Due to the decline in demand for low-grade coal, raisings at some collieries, producing these coals, have been restricted.

The installation of plant and machinery at the Kunustoria colliery is progressing and this new unit will raise substantial quantities of coal as soon as the railway completes its siding. Sinking has been completed at Murulidih but it may take at least 18 months before this colliery comes into production. In spite of a substantial improvement in the supply of wagons, the Company faces difficulty in getting regular allotments. It has not been possible to use regularly mechanical equipment for loading because proper types of wagons have not been supplied in time. Although the Company has made great progress in sand-stowing, it has incurred a net loss on this account because the entire cost has not been reimbursed by the Government. There has been a deadlock in the payment of royalties since the West Bengal Government is not agreeable to accepting them through an intermediary. In the interest of smooth working of collieries, the matter should be resolved without delay.

Raising of the Company at 3.35 million tons show a small increase over that for 1961-62, but despatches have dropped from 3.6 million tons to 3.4 million tons. In spite of an ample supply of power and transport, raisings have had to be restricted due to the decline in the demand for low-grade coals. Mr. Ogilvie said that the surplus has arisen on account of the phased demand for coal lagging behind the third plan targets. But the production of high-grade coal has not been affected. Sales of coal

rose from Rs. 8.08 crores to Rs. 8.12 crores. But the profit has dropped from Rs. 83.31 lakhs to Rs. 62.75 lakhs, after increasing depreciation from Rs. 31.14 lakhs to Rs. 35.34 lakhs. The smaller profit is disappointing, and the rising production costs have not been neutralised by the latest increase in coal prices.

Depreciation has been higher following the installation of new equipment. Interest charges have mounted because finance has been obtained by borrowings for development schemes. The taxable ordinary dividend has been reduced from Rs. 19 to Rs. 16 a share, including an interim dividend of Rs. 6 a share. This represents a small gross return of only 4.66 per cent a year on the total capital employed. At the present price of Rs. 250 a share, the dividend yield works out to 6.4 per cent. Taxation is allocated Rs. 26.73 lakhs (against Rs. 38 lakhs). The debenture stock sinking fund absorbs Rs. 4 lakhs (against the same), capital reserve Rs. 14.688 (against Rs. 54.796), general reserve Rs. 10 lakhs (against Rs. 2 lakhs) and development rebate reserve Rs. 15.48 lakhs (against Rs. 14 lakhs). The carry-forward is Rs. 1.03 lakhs, against Rs. 8.57 lakhs brought in.

Indian Aluminium Expanding

THE main point of interest in the latest report of the Indian Aluminium Co. Ltd. for the year ended December 1963 centres on further expansion of the Company. The expansion of the capacity of the Alupuram smelter from 5,000 tons to 10,850 tons a year and the construction of an aluminium foil plant near Bombay, have made satisfactory progress. Arrangements have been made with the Kerala Government for the supply of power to the new smelter. Considering the rising requirements of the electrical conductor industry, the Company has undertaken to expand further the capacity of the Alupuram smelter to 15,850 tons a year. The extra 5,000 tons of metal will be available for use by the electrical conductor industry under Government allocation. The construction of the extra capacity has already been undertaken. Indian Aluminium has also been licensed to install E.C. rod production facilities for 5,000 tons a year for supplying metal to the electric cable manufacturers. The cost of the project has been estimated at Rs. 1.4 crores which will be partly financed by the internal resources of the Company and partly by the use of the Canadian dollar and Japanese yen credits.

The profit has improved from Rs. 1.8 crores to Rs. 3.7 crores, after providing Rs. 1.2 crores (against Rs. 1 crore) for depreciation and Rs. 7.50 lakhs (against Rs. 61.50 lakhs) for development rebate reserve. The taxable ordinary dividend of 17.5 per cent has been repeated. This offers a yield of 5.4 per cent at the present price of Rs. 32.25 a share of Rs. 10 each. The Company has issued ordinary rights and bonus shares. The latter have been issued by capitalising the share premium account in the ratio of one bonus share for every four held. The increased share capital has been brought into closer relationship with the total capital employed by the Company. Taxation is allocated

Rs. 2.1 crores (against Rs. 52.50 lakhs) and general reserve Rs. 1.2 crores (against Rs. 80 lakhs). Sums of Rs. 1.69 lakhs and Rs. 3.70 lakhs have been brought in from excess tax provision and wealth tax refund, respectively.

Sales rose from Rs. 10.5 crores to Rs. 13.9 crores. The increased output has resulted from the expansion schemes which have already been completed. At Hirakud, the output rose from 17,072 tons to 19,984 tons, although the working has improved due to an agreement with workers. At Alupuram, production declined from 5,840 tons to 5,551 tons following power cuts. The production of alumina in Muri improved from 44,600 tons to 59,300 tons. Production at the Belur factory has been stabilised and has amounted to 14,737 tons, against 9,326 tons. The operating difficulties experienced at the second extrusion press in Alupuram have been overcome. The output of aluminium paste has risen from 419 tons to 512 tons at Kalwa.

Jessop Raises Dividend

JESSOP and Co. Ltd. has produced satisfactory results for the year ended October 1963. In view of the bigger profit, the taxable ordinary dividend has been raised from 8.53 per cent to 10 per cent, but the directors pointed to the need for conserving resources in order to meet the growing financial requirements of the Company following modernisation, expansion and diversification of activities. The yield amounts to 4.3 per cent at the present price of Rs. 23.08 a share of Rs. 10 each. The profit has improved from Rs. 52.08 lakhs for 1961-62 to Rs. 62.11 lakhs for 1962-63, after increasing depreciation from Rs. 29.91 lakhs to Rs. 36.25 lakhs, providing Rs. 75.40 lakhs (against Rs. 76.19 lakhs) for taxation, Rs. 10 lakhs (against Rs. 15 lakhs) for surtax and super profits tax and Rs. 8.82 lakhs (against Rs. 9.52 lakhs) for development rebate reserve. It has been pointed out that the surtax on profits has imposed a further tax burden of Rs. 10 lakhs on the Company. General reserve is allocated Rs. 46.17 lakhs (against Rs. 37.50 lakhs). The carry-forward is Rs. 64.915, against Rs. 51,000 brought in. Sales improved from Rs. 12.82 crores to Rs. 14.72 crores.

The output has been interrupted by two factors. Electric power supply has been inadequate. Secondly, matching steel has been short. It is, however, expected that during the current year, there will be an im-

provement on both the counts. Since steps have been taken to increase the supply of electric power from the Calcutta Electric Supply Corporation and from Durgapur, an improvement in the situation is expected. During the past few months, the supply of imported and domestic steel has improved, but it is not certain whether it can be maintained in view of the difficult foreign exchange position. It is difficult to be assured of balanced supplies of steel until the output of the domestic steel producers increases substantially. As for fabricated steel-works for the various plants in the public and private sectors, it is necessary to phase these projects according to priority. Otherwise, the difficulty in arranging steel supplies to suit the fabrication programmes of various projects will continue to persist.

The output of the new road roller works has improved. Against an expected production of 350 units, the actual output has amounted to 320 units due to the shortage of power and steel. It is expected to produce 450 units during the current year. About 97 per cent of the contents consisted of domestic supplies. The production of electric multiple unit coaches and fully furnished metre-gauge coaches has been maintained at a satisfactory level. Plans to re-equip the works for all-welded coaches have been finalised, but the programme cannot be completed until April 1966 due to the delay in receiving the specialised plant and equipment from abroad. Attention has centred on producing box wagons in the re-built wagon works. The move has helped to free capacity for the structural works to carry on other activities. Steps have been taken to increase the production of electric over-head travelling cranes, wharf cranes and sluice gates. The fabrication and erection of wheel gates for the Kosi barrage have been undertaken. A start has been made to produce high-speed cold sawing machine in the mechanical works.

The Company has an excellent order-book and it looks as though demand for its products will continue to be ahead of output. The modernisation and expansion of various works have been continuing. The wagon works is being re-built and a greater capacity has been created. The directors have been considering further expansion schemes. Necessary land has been acquired to expand the capacity of various works. Although the expansion programme has been initiated, caution is likely to mark its implementation in view of the heavy incidence of tax, combined with the difficulty in procuring foreign technical and financial collaboration.

Hindustan Lever Earns Less, but Pays More

ALTHOUGH the dividend for 1963 has been raised from Rs. 1.20 to

FORBESFLEX FLEXIBLE SHAFT EQUIPMENT

MANUFACTURED IN COLLABORATION
WITH B.O. MORRIS, COVENTRY

Armstrong Smith Ltd.

P. 12, MISSION ROAD, CALCUTTA - I

THE AUTOMOBILE INDUSTRY . . .

presents some facts and figures

Among the owners and prospective purchasers of motor cars in India, there exist an imperfect knowledge and certain misconceptions about the Automobile Industry.

The opinion is often expressed that cars are not readily available and that their prices are too high. Remarks are often made that manufacturers' and dealers' profits are excessive, and that the quality is not up to foreign standard.

Delay in deliveries

The volume of production of the automobile industry is limited by the availability of foreign exchange for the import of materials and components that are not yet manufactured in India. Consequently, the supply of cars cannot keep pace with the demand.

Price structure

The biggest item in the price structure of a car is made up of direct and indirect taxes and this represents at least one third of the "on-the-road" price of a car.

ISSUED BY HINDUSTAN MOTORS LTD., CALCUTTA.

The smallest item is the manufacturer's profit, which is controlled by the Government and yields only a minimum return on the manufacturer's investment.

Components

The automobile industry is not a self-contained industry. It depends, for a large number of the indigenous components of a car, on ancillary industries—some of them recently created—whose productivity and quality have not yet reached the desired standard and whose production costs are high.

Quality

The Indian Automobile Industry, and particularly the ancillary industries, are still young and cannot be expected to have reached, in the short time of their development, the high standards attained by their foreign counterparts which have been in existence for 60 years. The responsibility for improving the quality falls both on the vehicle manufacturers and on the ancillary suppliers.

Rs. 140 a share (Rs. 10-paid), the working results of Hindustan Lever show that the Company has suffered a setback in its profit in spite of increased turnover. The profit before tax is down from Rs. 4.77 crores to Rs. 4.31 crores, whereas the turnover has gone up from Rs. 53.85 crores to Rs. 59.55 crores. But the various development schemes which the Company has on hand hold out the promise of better prospects ahead. Of the total turnover of Rs. 59.55 crores (against Rs. 53.85 crores), soaps, detergents and toilet preparations accounted for Rs. 28.31 crores (against Rs. 24.85 crores), vanaspati, margarine and other foods fetched Rs. 25.87 crores (against Rs. 24.69 crores) and the balance Rs. 5.37 crores (against Rs. 4.31 crores) came from the sale of glycerine and other by-products, animal feeding stuffs and oils.

The directors state in their report that soaps sales showed a satisfactory increase and the non-soapy detergent "Surf" continued to make good progress. The Company has received an industrial licence to expand the non-soapy detergent capacity. The price control over washing soap was removed in December in response to various representations made by the soap industry to the Government. The toilet preparations division was reorganised at the end of 1962 and the sales have since been gratifying. New Pepsodent toothpaste has shown encouraging results.

Vanaspati had a rather difficult time in 1963. Price control, restrictions on production of "Dalda" in certain packings adversely affected profits on vanaspati. Test marketing of new lines of dehydrated vegetables continues and the Company has been co-operating fully to meet the increasing defence requirements. Cattle and poultry feeds sales have been extended to other areas of Maharashtra and Gujarat and in November 1963, poultry concentrates were also introduced on a test-scale in Delhi and Punjab. Poultry feeds and concentrates have shown a promising progress.

The Company's export performance has been excellent. Sales in 1963 rose to Rs. 5.12 crores—two-and-a-half times the 1962 figure of Rs. 2.01 crores and more than seven times the 1961 figure of Rs. 74 lakhs. This significant increase helped the Company to earn the necessary incentive licences to import essential raw materials, without which it could not have been possible to maintain production and quality. The Company hopes to be able to consolidate its large export gains. It has now formed a wholly-owned subsidiary Company—Export Ltd.—which has been recognised by the Government as an export house. This Company will concentrate its energies on a worldwide export of the products manufactured by the Company.

The Company's Etah Dairy, with its associated milk collecting centres spread over the neighbouring countryside, will come into operation by the middle of 1964. By about the middle of the current year, a commercial scale dehydrated vegetable plant with a much bigger capacity than the present pilot plant will have been installed at the Ghaziabad factory. This new modern plant is suitable for dehydrating a wide range of vegetables and other foodstuffs. A new unit is proposed to be installed in Ghaziabad for the manufacture of cattle-feeds and poultry feeds. Extensions to the Sharnagar factory consequent on the purchase of a plant, are under way. A part of the additional capacity for hardening oils will be commissioned in the next few months. A plant for the manufacture of nickel catalyst will be installed in the Bombay factory as soon as the Government's permission is available. This is expected to be a valuable saver of foreign exchange. The Com-

pany has received a licence for a non-soapy detergent plant in the Garden Reach factory. The modernisation of the Bombay and Garden Reach soaperies is under way, and it is expected to be completed in 1965.

Largely due to the financing of exports at the year end, the Company had at the close of the year a net overdraft of Rs. 1.18 crores, against the opening overdraft of Rs. 36 lakhs. The foreign exchange loan of Rs. 25 lakhs by the I.C.I.C.I. for the Etah Dairy is likely to be drawn fully by the end of 1964. The Company has already started drawing against the Unilever foreign exchange loans. The directors state that the new surtax, coupled with the new dividends tax, is hardly an improvement for Hindustan Lever over the old super profits tax. The net saving to the Company is estimated at under Rs. 10 lakhs.

Bombay Dyeing Earns More, Maintains

ALTHOUGH the dividend has only been maintained at Rs. 3.50 a share (Rs. 25 paid), the working results of the Bombay Dyeing and Manufacturing Company for the year 1963 show a substantial improvement over the previous year's performance. As against an 11-percent increase in the sales from Rs. 14.25 crores to Rs. 15.82 crores, the gross profit has risen by as much as 22 percent from Rs. 1.48 crores to Rs. 1.79 crores. The ratio of gross profit to sales works out to 11.4 percent, against 10.4 percent in the preceding year. Apparently, the Company's modernisation programme is now bearing fruit. Appropriation of the year's profit include depreciation Rs. 81.61 lakhs (against Rs. 80.43 lakhs), development rebate Rs. 16.80 lakhs (against Rs. 9.75 lakhs), taxation Rs. 38.40 lakhs (against Rs. 23.80 lakhs) and dividends, interim and final, Rs. 35.14 lakhs (the same). The final dividend of Rs. 25.10 lakhs is to be paid after absorbing Rs. 25.10 lakhs to be paid out of the dividend equalisation reserve, for which the directors have set aside Rs. 25.25 lakhs (against Rs. 19 lakhs). In the previous year, Rs. 6 lakhs from reserve for dividend payables from Rs. 23.80 lakhs (against Rs. 23.80 lakhs) for taxation includes Rs. 3.75 lakhs for tax liabilities for previous years and Rs. 2.64 lakhs for the proposed 7½ percent dividends tax. After making various appropriations, there remains a surplus of Rs. 48,236 to be carried forward, against Rs. 67,586 brought in.

The directors state that the Company has continued to maintain its position as the country's largest exporter, accounting for 12.1 percent of the total value of cloth exports in 1963. Export markets showed some revival of demand, particularly during the second half of the year, although competition from Japan, China, Hongkong, Portugal and Spain continued to be felt. The position in the home market, it is stated, was difficult and off-take was restricted. Even so, the Company was able to do well, presumably because of the growing popularity of its designs; the turnover in the Company's retail shops rose by about 40 percent in 1963.

In his annual statement to shareholders, the chairman, Mr. Neville N. Wadia, says that the current year is bound to be one of stress and strain for the cotton mill industry because of mounting costs. The Company is said to be spending about Rs. 100 a candy more on cotton than in 1963. But in view of the latest machinery with which the Company has equipped itself, the chairman has held out the assurance that is fully prepared "to face whatever is in store." The Company installed new machinery worth Rs. 1.05 crores as part of its

renovation programme in 1963. The main loomshed at the Company's Spring Mills is now complete with 2,048 automatic looms under one roof. A new stentering range and the dye cooling plant required for imparting the "Hecowa" finish have been added to the new bleach works. A 5-bowl water calendar has also been installed. A precision camera for reproducing complicated design to be engraved for printing is also in operation. The screen printing plant is now in full production as a result of which the Company is marketing a large variety of attractive prints on all types of materials. The Company continues to concentrate more on the production of bleached, dyed, printed and finished goods with a view to improving its earning capacity.

To achieve this end, the Company has introduced special processes which have considerably improved its competitive position. On the export front, even though linear yards dropped by about 5 million, the bulk exported was in wide width sheetings and consequently earnings were slightly better, being an average of Rs. 1.32 a yard, against Rs. 1.12 a yard in 1962. The chairman says that the 1964-65 Budget has brought no relief to the Company. It will save only Rs. 5,700 in inter-company super tax whereas it will have to pay Rs. 2.60 lakhs by way of the dividend tax.

Century Dividend and Rights Disappoint

THE preliminary report on the working of the Century Spinning and Manufacturing Company for the year 1963 shows that the Company has done exceedingly well with both sales and gross profit recording an increase of about 30 percent over the previous year. But this has failed to cheer the market and Century Mills shares continue to be quoted around the lowest level for some months, having come down from Rs. 707 to Rs. 610 since the Central Budget. The pronounced weakness in the Company's shares reflects the market's misgivings about the outlook for rayon shares following the exorbitant increase in excise duty on rayon yarn. In the case of Century, however, sentiment has been unsettled by the proposed capital gains tax on bonus shares which has forced the Company to defer the bonus issue, indefinitely perhaps. The directors have reversed their earlier decision to skip the final dividend and issue bonus shares in the ratio of one share for every five held. Instead, the directors have now recommended a final dividend of 18 percent, the same as paid in 1962. They have also decided, subject to the approval of the shareholders, to issue at par redeemable cumulative preference shares of the value of Rs. 25 lakhs to be offered to existing shareholders in the ratio of one share for every five shares held. The preference shares will carry a dividend of 8.57 percent and will be redeemed at par on 1st December, 1973, along with the existing preference shares.

The gross sales of Century Mills for 1963 are placed at Rs. 22.25 crores, against Rs. 17.10 crores, in the previous year. And the gross profit, after providing Rs. 8.63 lakhs (against Rs. 11.06 lakhs) for donations, amounts to Rs. 477.61 lakhs, against Rs. 366.87 lakhs. The provision for depreciation has been raised from Rs. 110.61 lakhs to Rs. 177.24 lakhs, for development rebate from Rs. 41.28 lakhs to Rs. 57.85 lakhs, and for taxation from Rs. 87 lakhs to Rs. 112 crores. The liability for bonus for previous years amounts to Rs. 23.88 lakhs, against Rs. 37 lakhs (after drawing Rs. 40 lakhs from contingency reserve). The interim dividend of 12 percent on equity shares

absorbed Rs. 30.59 lakhs, leaving a balance of Rs. 57.18 lakhs which includes Rs. 30,735, being surplus provisions in previous years and Rs. 28,868 brought forward from the preceding year. This sum has been transferred to the dividend equalisation reserve from which are being paid the preference dividend amounting to Rs. 10.71 lakhs and final equity dividend amounting to Rs. 45.88 lakhs. The gross block of the Company has risen from Rs. 16.13 crores to Rs. 19.19 crores and the net block has gone up from Rs. 9.54 crores to Rs. 10.83 crores.

Killick Industries Raises Dividend

THE working results of Killick Industries Ltd for the year ended November 1963, show a substantial fall in the gross profit from Rs. 27.07 lakhs to Rs. 19.67 lakhs. Income by way of commission and office allowance from managed companies is down from Rs. 19.77 lakhs to Rs. 17.98 lakhs, and that from trade investments from Rs. 14.52 lakhs to Rs. 11.48 lakhs. Total receipts from John Baker and Sons amounted to Rs. 85.47 lakhs, against Rs. 69.36 lakhs, while total expenditure amounted to Rs. 79.76 lakhs, against Rs. 65.40 lakhs. The directors have provided Rs. 2.59 lakhs (against Rs. 2.73 lakhs) for depreciation, Rs. 14,711 (against Rs. 14,810) for development rebate and Rs. 6.92 lakhs (against Rs. 10.60 lakhs) for taxation. The net profit amounts to Rs. 10.01 lakhs, against Rs. 13.59 lakhs in 1961-62. The dividend has been raised from 5 percent to 7.5 percent which absorbs Rs. 9.37 lakhs, against Rs. 6.25 lakhs. After providing Rs. 75,000 (against Rs. 7.50 lakhs) for general reserve, there is a surplus of Rs. 5,959 to be carried forward, against Rs. 17,584 brought in.

The working of the subsidiary companies is reported to be satisfactory. The improvement in Killick Nixon and Company continued and considerable progress was made in its trading activities as well as in the development of its engineering works. The working of A. R. Haseler was encouraging and the entire carry-forward loss has been wiped out. In the year, Killick Nixon is also expected to wipe out the entire loss brought forward. Progress achieved in A. R. Haseler is expected to be continued. The production and sale of Killick Slotted Angles which started towards the middle of 1963, are improving and they hold out good promise. The working of Killick Caribonum has been unsatisfactory in spite of strenuous efforts at improvement. Among the Killick-managed companies, the outlook for Shivrajpur remains bleak, while Kohinoor is doing well.

Central Bank Deposits Rise

THE working of the Central Bank of India during 1963 shows all-round satisfactory progress. Deposits, advances, investments and profit—all show a rise; the increase in profit is, however, small. The deposits have gone up by Rs. 14.72 crores from Rs. 236.06 crores to a record Rs. 250.78 crores. Fixed deposits and cash certificates have gone up from Rs. 122 crores to Rs. 127 crores, savings bank deposits from Rs. 43.78 crores to Rs. 51.87 crores and current account and other deposits from Rs. 70.25 crores to Rs. 71.87 crores. Advances, including bills discounted and purchased, have risen from Rs. 175.44 crores to Rs. 187.71 crores. Investments are higher at Rs. 66.17 crores, against Rs. 65.86 crores and cash balances increased from Rs. 20.37 crores to Rs.

24.90 crores. The advance-deposit ratio stood at 74.32 percent, against 74.85 percent a year ago, the investment deposit ratio was 26.3 percent, against 27.9 percent, and the cash balances-deposit ratio at 9.9 percent, against 8.6 percent.

The bank's income from interest and discount rose from Rs. 11.34 crores to Rs. 12.48 crores, while commission, exchange and brokerage increased from Rs. 2.30 crores to Rs. 2.53 crores, the total income thus showed an increase of about 9 percent over the previous year. On the expenditure side, interest paid on deposits, borrowings, etcetera, showed an increase of about 11 percent from Rs. 5.99 crores to Rs. 6.66 crores. Salaries, allowances and contributions to provident fund were up by about 13 percent from Rs. 4.59 crores to Rs. 5.18 crores. The net profit of the bank in 1963 amounted to Rs. 189.26 lakhs, against Rs. 179.96 lakhs in 1962. The bank opened during the year one branch, 8 sub-branches and three pay offices while two branches and three pay offices were closed down. The Central Bank's capital funds at the end of the year stood at Rs. 8.70 crores, against Rs. 8.26 crores and its reserves totalled Rs. 5.53 crores, against Rs. 5.10 crores. The ratio of capital funds to deposits stood at 3.47 per-

cent, against 3.50 percent a year earlier.

New Beerbhoom Coal Cuts Dividend

THE New Beerbhoom Coal Co. Ltd. has earned a lower profit of Rs. 17.87 lakhs for the year ended October 1963, compared with Rs. 21.99 lakhs for 1961-62, after increasing depreciation from Rs. 5.45 lakhs to Rs. 8.25 lakhs. The taxable ordinary dividend has been reduced from 12 percent to 10 percent to absorb Rs. 3.20 lakhs. The yield works out to 6.2 percent at the present price of Rs. 16.06 a share of Rs. 10 each. Taxation, including Rs. 25,000 for surtax, is allocated Rs. 8.20 lakhs (against Rs. 11 lakhs) and development rebate reserve Rs. 7.12 lakhs (against Rs. 1.77 lakhs). The carry-forward is Rs. 15,709, against Rs. 28,793 brought in.

Raisings declined from 968,334 tons to 934,675 tons and despatches from 958,746 tons to 901,091 tons. The fall has been due to the closing of quarries at Victoria and New Kenda collieries early in 1963 because of the reduced demand for low-grade coals. These quarries were profitable ventures formerly. Raisings from other pits continue to be satisfactory, and

there has been a good demand for coking and blendable coals. The heavy earth-moving machines for the open cast operations at New Kenda have been received and have been used to remove the over-burden in the Kenda seam. Raisings of coal have begun since the close of 1962-63. The siding has been handling complete block rakes and arrangements have been made to extend the capacity further.

More from Budge Budge Jute

THE directors of Budge Budge Jute Mills Co. Ltd. state in their report for the year ended October 1963 that the outlook for the current year is not as favourable as it was for 1962-63. Although there has been an abundant supply of raw jute, the prices of jute goods, particularly of sacking, have declined. The impact of the wage board award, the increased charges for power, fuel, stores, spare parts, etcetera, are likely to inflate production costs. The working time agreement has been abolished, but there is unlikely to be any change in the existing level of production since all mills are operating at the maximum capacity.

CAPITAL, 9th April, 1964.

Orders have been placed for machinery to extend modernisation of the fine side drawing, spinning and war-winding machinery up to 100 percent of the mill's registered loomage. Pre-beaming machines are being installed to cover hessian looms. The cost of the modernisation project may amount to Rs. 10 lakhs.

The profit has improved from Rs. 37.69 lakhs for 1961-62 to Rs. 43.23 lakhs for 1962-63, after reducing depreciation from Rs. 6.09 lakhs to Rs. 5.70 lakhs. The taxable ordinary dividend has been increased from 12 percent to 20 percent, including an interim of 6 percent. The yield amounts to 14.3 percent at the present price of Rs. 140 a share of Rs. 100 each. Taxation, including Rs. 6.50 lakhs for surtax, is allocated Rs. 29 lakhs (against Rs. 19.40 lakhs), development rebate reserve Rs. 16,300 (against Rs. 2.37 lakhs) and general reserve Rs. 6 lakhs (against Rs. 1.46 lakhs). The carry-forward is Rs. 35,907, against Rs. 30,613 brought in. Sales rose from Rs. 2.82 crores to Rs. 3.03 crores and stocks of jute goods amounted to Rs. 20.52 lakhs, against Rs. 14.30 lakhs. The satisfactory results of the Company have been due to the rising world demand for jute goods, combined with reasonable raw jute prices.

Philips India Earns More

PHILIPS India Ltd. has increased the taxable ordinary dividend from 13 percent for 1962 to 15 percent for 1963. This is the second year in succession that the dividend has been raised. At the present price of Rs. 26.87 a share of Rs. 10 each, the yield amounts to 5.6 percent. The profit has improved from Rs. 1.20 crores to Rs. 1.66 crores. Taxation absorbs Rs. 1.17 crores (against Rs. 85.50 lakhs), development rebate reserve Rs. 5.50 lakhs (against Rs. 6.15 lakhs) and general reserve Rs. 11.04 lakhs (against nil). Sales have risen from Rs. 8.85 crores to Rs. 10.63 crores.

Hongkong and Shanghai Banking Corporation

THE Indian branches of the Hongkong and Shanghai Banking Corporation have earned a profit of Rs. 9.63 lakhs for the year ended December 1963, which is about the same as for 1962. Interest paid on deposits and borrowings rose from Rs. 39.99 lakhs to Rs. 35.28 lakhs, while interest and discount earned rose from Rs. 72.96 lakhs to Rs. 74.04 lakhs. Deposits declined from Rs. 9.06 crores to Rs. 8.90 crores. Investments stood at Rs. 1.39 crores (against Rs. 1.52 crores) and advances rose from Rs. 11.32 crores to 11.98 crores. (Details appear on a later page in this week's issue of Capital.)

Sterling General Insurance Pays More

THE Sterling General Insurance Co. Ltd. has shown an all-round improvement for the year ended December 1963. The gross and net premium incomes have shown a marginal increase, but there has been a sharp reduction in commission and management expenses. The under-writing profit has amounted to Rs. 2.65 lakhs, against Rs. 1.81 lakhs for 1962. In addition to the customary under-writing reserve of 40 percent, an additional reserve of 10 percent has been maintained in the fire and miscellaneous departments and one of 60 percent in the marine department. Hence total reserves have been brought up to 50 percent in the fire and miscellaneous departments and to 100 percent in the marine department. Total under-writing re-

CAPITAL, 9th April, 1964.

serves have been increased by Rs. 77,132 to Rs. 17.99 lakhs. A sum of Rs. 53,000 has been provided for depreciation on investments. General reserve is allocated Rs. 1.50 lakhs. So the proportion of capital and reserves to net premiums has improved.

The profit has amounted to Rs. 4.13 lakhs, against Rs. 4.05 lakhs, after meeting all charges, and providing for under-writing reserves. Taxation absorbs Rs. 1.52 lakhs (against Rs. 1.54 lakhs). The gratuity fund is allocated Rs. 17,022 (against Rs. 17,500). The ordinary dividend has been increased to 7.5 percent to absorb Rs. 1.12 lakhs, leaving a carry-forward of Rs. 3,604 brought in.

Good Results from Kohinoor Mills

THE increase in Kohinoor Mills' dividend from Rs. 18 to Rs. 21 a share (Rs. 100-paid) for the year 1963, seems fully justified by the Company's improved performance. Sales have risen by 12.3 percent from Rs. 7.61 crores to Rs. 8.55 crores, and the gross profit has gone up by about 18 percent from Rs. 83.86 lakhs to Rs. 98.94 lakhs. Improved results are attributed to the generally satisfactory trading conditions in the cotton piece-goods market throughout the year. The directors state that "the cloth and yarn off-take as far as your mills are concerned was good throughout the year and the stocks held by the Company at the close of the year were reasonably low." The indigenous supply position of cotton during 1962-63 was also satisfactory and prices remained well within the ceilings.

After providing Rs. 21.57 lakhs (against Rs. 18.51 lakhs) for depreciation, Rs. 6.11 lakhs (against Rs. 4.99 lakhs) for development rebate and Rs. 23.20 lakhs (against Rs. 12.62 lakhs) for taxation, the net profit amounts to Rs. 42.72 lakhs, against Rs. 44.99 lakhs in the preceding year. With Rs. 29,116 brought forward, Rs. 73,045 being refund of sales tax, Rs. 13,113, being the refund of income tax and Rs. 24,349 being provisions for interest for previous years not required, the disposable surplus amounts to Rs. 44.11 lakhs. The directors have set aside Rs. 23.02 lakhs (against Rs. 36.71 lakhs) for bonus for earlier years and transferred Rs. 14 lakhs (against nil) to general reserve which will be used for the payment of the final dividend absorbing Rs. 14 lakhs. The interim dividend absorbed Rs. 7 lakhs. After making these provisions, there remains a small surplus of Rs. 9.095 to be carried forward. The mills have made fair progress in the renovation and modernisation programme. New machinery of the value of Rs. 41.12 lakhs was received during 1963 and machinery erected totalled Rs. 43.26 lakhs. The Kohinoor Mills has a paid-up capital of Rs. 1 crore, which is supported by reserves and surplus amounting to Rs. 1.36 crores. The gross block of Rs. 5.26 crores has been written down to Rs. 1.73 crores.

Bangalore Woollen Pays More

A SUBSTANTIAL improvement in the profit of the Bangalore Woollen, Cotton and Silk Mills Co. Ltd. for the year ended December 1963, has enabled the directors to recommend a higher final dividend of 18 percent (a total of 24 percent for the year, against 18 percent in the previous year). The increase in the bonus to workmen and a larger transfer of Rs. 21.75 lakhs (against Rs. 9 lakhs) to general reserve are some of the notable features. Production in all departments continued at a high

level, and sales reached a record figure partly due to increased Government orders.

The profit for the year, before taxation, amounts to Rs. 133,49,220, against Rs. 68,01,756. Out of the profit, the directors have provided Rs. 81.10 lakhs (against Rs. 32 lakhs) for taxation. This leaves a net profit of Rs. 52,39,220 (against Rs. 36,01,756). With Rs. 2,53,358 brought forward from the previous year, the total available for appropriation comes to Rs. 54,92,578. Out of this, a sum of Rs. 3,46,000 (against Rs. 4,40,000) has been transferred to development rebate reserve and Rs. 21,75,000 (against Rs. 9 lakhs) to general reserve. The preference dividend of Rs. 7.80 a share amounts to Rs. 46,800. The interim ordinary dividend of 6 percent absorbed Rs. 7,29,000 (against Rs. 7,29,000). The proposed final dividend of 18 percent will absorb Rs. 21,87,000 (against Rs. 14,58,000). The balance of Rs. 8,778 is carried forward.

Sales amounted to Rs. 851.09 lakhs (against Rs. 615.58 lakhs). The directors' report says that the rise in production costs have been checked, wherever possible. The additional taxes and other burdens imposed under the emergency have increased operating costs. The directors add that the improved trading results during the year are due to the economies effected by the bulk production of Angola shirting.

Buckingham and Carnatic Earns Less

THE working of the Buckingham and Carnatic Co. Ltd. for the year ended December 1963, shows a profit, before taxation, of Rs. 1,00,04,894 (against Rs. 1,02,53,184). Out of the profit, the directors have provided Rs. 55 lakhs for taxation which includes Rs. 7.30 lakhs as additional provision for previous years. This leaves a net profit of Rs. 45,04,894 (against Rs. 52,10,163). With the balance of Rs. 2,05,182 brought forward from the previous year, the total available surplus comes to Rs. 47,10,076. Out of this, a sum of Rs. 5 lakhs (against the same) is transferred to the debenture redemption fund and Rs. 5,05,000 (against Rs. 500,000) to development rebate reserve. General reserve gets Rs. 2,50,000 (against Rs. 800,000). The preference dividend of Rs. 9.75 a share amounts to Rs. 2,07,695 (against Rs. 2,07,695). The interim ordinary dividend of 6 percent absorbed Rs. 10,70,868 (against Rs. 10,70,868). The proposed final dividend of 12 percent on ordinary shares will absorb Rs. 21,41,736 (against Rs. 21,41,736). The balance of Rs. 34,777 is carried forward. Sales at Rs. 13.31 crores (against Rs. 13.23 crores) have again reached a record level.

The Company's production was maintained at a satisfactory level throughout the year. The directors say that the additional taxes and other burdens imposed under the emergency have increased operating costs. Provision for taxation on the year's profit includes dividend tax as introduced in the Finance Bill for 1964.

South India Viscose Does Well

THE South India Viscose reports satisfactory results for the year 1963 and if the progress is maintained, the shareholders will not perhaps have to wait long before their investment begins to bear fruit. The Company produced 3,588 tonnes (against 3,739 tonnes) of staple fibre which fetched Rs. 1.288 crores, against

Rs. 1.365 crores. The output of rayon yarn was 2,847 tonnes (against 2,769 tonnes) which brought Rs. 2.50 crores, against Rs. 1.818 crores. Total sales amounted to Rs. 3.79 crores, against Rs. 3.182 crores. On this, the Company made a gross profit of Rs. 1,328 crores, against Rs. 1,282 crores. In 1962, the Company had to provide Rs. 2,123 crores for depreciation with the result that the year's working showed a net loss of Rs. 84.09 lakhs. In 1963, the directors have provided Rs. 54.14 lakhs for depreciation which leaves a net profit of Rs. 78.68 lakhs. After adjusting the previous year's carry-forward loss of Rs. 84.09 lakhs, there remains a deficit of Rs. 5.19 lakhs, which is being carried forward.

The procedure for charging depreciation has been changed this year from the reducing balance method to the straight-line method resulting in a decrease of the depreciation from Rs. 1,17 crores to Rs. 54 lakhs. By this change, the directors propose to spread over depreciation to longer periods, thereby making the available surplus sizable with the prospect of the Company declaring an early dividend. The total depreciation provided so far up to the end of 1963 amounts to Rs. 2.84 crores. Against the paid-up capital of Rs. 4.9 crores, the fixed assets of the Company at the end of 1963 were valued at Rs. 9.22 crores. It has a liability of Rs. 68.34 lakhs to pay before the end of 1964, towards imported machinery. The Company has borrowed from its bankers Rs. 2.40 crores by way of cash credit and demand loans to meet the working expenses and deferred payments. The directors expect to discharge fully the entire deferred payment and the demand loan of Rs. 1.20 crores, out of their earnings before the end of 1964. The Company's plant worked to full capacity during 1963 except for bi-annual maintenance and power failure. The sulphuric acid and carbon-sulphide plants were in normal production. The chairman says that the Company's products are in good demand and they compare favourably with the products abroad.

Mahindra and Mahindra Earns More

THE preliminary report on the working of Mahindra and Mahindra for the year ended October 1963 showed that the Company has fared much better than in the preceding year, with its sales rising from Rs. 13.88 crores to Rs. 15.92 crores, and the gross profit up from Rs. 98.28 lakhs to Rs. 1.19 crores. The dividend has been maintained at 12.5 percent, but the total distribution is larger at Rs. 22.36 lakhs, against Rs. 18.22 lakhs. The directors' full report holds out the promise of better results for the current year. Sales during the first four months are said to be higher than in the corresponding period of the previous year and steel bookings also continue to show satisfactory progress. At the beginning of 1962-63, the Company was asked to accelerate its expansion programme which was to have a capacity to produce 10,000 jeeps by the end of the third plan.

In addition, the Company was directed to gear its production for defence purposes and produce units with special specifications. Within the span of one year, the Company has been able to increase production to the extent that it is today producing 50 percent more than a year ago. Moreover, the indigenous content of the vehicle has been increased to 80 percent and it is hoped to achieve the target of 90 percent in the near future. The Company has now a capacity to produce 10,000 jeeps by the end of 1964, provided adequate foreign exchange is made available to it. The production of utility vans

and lorries was curtailed during the year because of limited availability of foreign exchange.

The entire production of jeeps, station wagons and lorries was frozen during 1962-63 and the major portion of production was earmarked for urgent defence requirements. Sales, which were under Government control, showed a slight increase from 8,053 units to 8,150 units. The pattern of sales, however, changed significantly and the sale of jeeps increased from 6,549 units to 7,488 units whereas there was a considerable drop in the sales of station wagons and lorries. The machine tool sale division showed an increased volume of sales during 1962-63. A large order was placed by the Diesel Locomotive Works in Varanasi on several of the Company's principals in the U.S.A., the result of which will be reflected in the current year. The performance of the steel division has on the whole been satisfactory. It has booked orders amounting to 201,700 tonnes during 1962-63. Mahindra's associated companies have been making steady progress. Among them, the Mahindra Ugine Steel will be in production by the end of 1966. The International Tractor Co. of India is likely to be commissioned by the end of 1964.

W. H. Brady Steps Up Dividend

W. H. BRADY and Co. has raised the dividend for 1963, although only slightly from 25½ percent to 26½ percent. But the Company's performance is far from encouraging. The gross profit is down from Rs. 20.83 lakhs to Rs. 16.37 lakhs. And after providing Rs. 60,933 (against Rs. 53,147) for depreciation and Rs. 18.48 lakhs (against Rs. 11.14 lakhs) for taxation, the year's working shows a net loss of Rs. 2.60 lakhs. The Company has, however, made a profit of Rs. 26.43 lakhs on the sale of investments in one of the managed companies. This has enabled the directors not only to wipe out the year's loss of Rs. 2.60 lakhs, but also to transfer Rs. 12.10 lakhs to the dividend reserve and Rs. 11.50 lakhs to the general reserve. A sum of Rs. 2.67 lakhs has been transferred from taxation reserve and a sum of Rs. 1.99 lakhs has been written back, being excess provisions made earlier. The directors have provided Rs. 2.25 lakhs for the payment of an additional dividend of 5 percent for 1962 and Rs. 2.39 lakhs for payment of additional bonus and dearness allowance for earlier years. The proposed 26½ percent dividend, absorbing Rs. 12 lakhs, is to be paid from the dividend reserve.

The Company's turnover in 1963 at Rs. 1,876 crores showed a decline of Rs. 8.4 lakhs over the previous year's figure. Earnings from selling agency commission and the insurance department held from Rs. 12.96 lakhs to Rs. 10.45 lakhs. The dividend income from the Company's investments was lower at Rs. 3.05 lakhs, against Rs. 4.41 lakhs in the previous year. The directors attributed the fall in the Company's turnover to the curtailment in the import quotas allotted to established importers. The indenting side of the business also suffered due to the ban on imports of certain textile machinery items.

The Company's investments at book value amounted to Rs. 67.66 lakhs at the end of 1963. Of these, quoted investments accounted for Rs. 45.18 lakhs, and their market value at the end of the year was placed at Rs. 67.69 lakhs. Quoted investments with a book value of Rs. 50.43 lakhs at the end of 1962 had a market value of Rs. 93.91 lakhs. The Company has agreed to act as the secretaries and

VISADEX
THE DASHBOARD OF BUSINESS

Work the VISADEX way to get the best out of your men, machines and materials.

VISADEX can tell you what you need to know at a glance. VISADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or

decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much... VISADEX, in short, affords greater control at less cost, besides keeping records secure.

Our VISADEX Representative will be happy to show you, without obligation, how simple VISADEX is to operate—either with Card Pockets or Brass Card-holders—and how easily it can meet your specific requirements.

treasurers for United Motors (India) Ltd.

Brady Engineering Repeats

BRADY Engineering Company reports encouraging results for the year 1963. Sales have gone up by about 30 percent from Rs. 29.92 lakhs to Rs. 38.95 lakhs, and the gross profit has risen by 15 percent from Rs. 9.80 lakhs to Rs. 11.26 lakhs. The dividend has been maintained at 11.25 percent—Rs. 9 a share of Rs. 80. Appropriations include depreciation Rs. 1.29 lakhs (against Rs. 1.31 lakhs), development rebate Rs. 3,918 (against Rs. 16,306), taxation Rs. 6.37 lakhs (against Rs. 3.90 lakhs) and general reserve Rs. 55,000 (against nil). After transferring Rs. 1.28 lakhs from reserve for taxation created last year, the directors have set aside Rs. 85,882 for taxation for the previous year and allocated Rs. 2.27 lakhs to the dividend reserve from which proposed dividend amounting to Rs. 2.25 lakhs will be paid.

After making minor adjustments, there is a nominal surplus of Rs. 641 to be carried forward, against Rs. 16,853 brought in. The directors state that due to the heavy cut in the import licences of load chains, pulley block production had to be curtailed. The second automatic bread plant was completed during the year and the Company is now in a position to undertake the fabrication of a complete biscuit oven. Negotiations are in progress for purchase of land for the expansion programme.

Usha Martin Black Pays Maiden

USHA Martin Black (Wire Ropes) Ltd has declared a maiden taxable ordinary dividend of 7½ percent for the year ended December 1963, to absorb Rs. 3 lakhs. The yield amounts to 4.7 percent at the present price of Rs. 15.87 a share of Rs. 10 each. The plant has reached the full production capacity. Sales rose from Rs. 22.34 lakhs to Rs. 1.03 crores. The working of the Company has been interrupted by the shortage of imported raw materials, particularly of high-carbon wire rods. The directors have begun to implement the second phase of the project to double the production capacity to 7,200 tons of wire and wire ropes a year. The Commonwealth Development Finance Company of the U.K. has agreed to give financial facilities in foreign exchange for £195,000, equivalent to Rs. 26 lakhs. It will give a loan of Rs. 20 lakhs repayable in 1974 and will subscribe for 50,000 ordinary shares of Rs. 10 each at a premium of Rs. 2 a share in Usha Martin Black. Orders for the necessary equipment are being issued. The project is likely to be completed by the middle of 1965. Other schemes to diversify the activities of the Company are being considered.

The profit has amounted to Rs. 23.87 lakhs, against a loss of Rs. 1.42 lakhs for 1962. Development rebate reserve is allocated Rs. 8.46 lakhs, capital reserve Rs. 1,625 and general reserve Rs. 6 lakhs. The carry-forward is Rs. 4,693, against a debit balance of Rs. 2.88 lakhs brought in.

Henley Cables Disappoints

HENLEY Cables India Ltd reports disappointing results for the year ended 31st October, 1963. The Company has suffered a loss of Rs. 3.46 lakhs without making any provision for depreciation in spite of the

fact that sales have risen from Rs. 2.16 lakhs to Rs. 62.34 lakhs. In the preceding year, the Company had incurred a loss of Rs. 7.87 lakhs, after providing Rs. 2.49 lakhs for depreciation. The total loss of Rs. 11.07 lakhs is being carried forward. With consumption falling far short of expectations, the value of stocks at the end of the year increased considerably from Rs. 33.94 lakhs to Rs. 58.89 lakhs. Profitability during the year was affected by the Government's arrangement concerning the changeover from copper to aluminium conductors and by the necessity to use indigenous instead of imported P.V.C. compound.

The Company has received an import licence for additional plant of the value of Rs. 7 lakhs. This plant which has been shipped will enable the Company to increase the range of its cables. It is now awaiting an import licence of the value of Rs. 23.7 lakhs for the manufacture of winding wires and covered copper strips. Construction of the factory building for this expansion scheme started towards the end of 1963. The directors are considering a one-for-four rights issue to meet the rupee requirements for the expansion project. The Company has applied to the Controller of Capital Issues for the proposed rights issue. The directors are considering the question of provision of the balance of sterling funds for this expansion project.

G. Claridge Sales Up, Profit Down

DESPITE an increase of about 10 percent in the sales from Rs. 51.31 lakhs to Rs. 56.73 lakhs, the gross profit of G. Claridge and Co. for the year 1963 is slightly lower at Rs. 9.13 lakhs, against Rs. 9.34 lakhs in the preceding year. The dividend has been maintained at 15 percent and since the new shares issued in 1962 are entitled to the full year's dividend, the total distribution is larger at Rs. 2.40 lakhs, against Rs. 1.53 lakhs in 1962. Allocations include depreciation Rs. 2.22 lakhs (against Rs. 1.46 lakhs), development rebate Rs. 44,147 (against Rs. 63,031), taxation Rs. 3.84 lakhs (against Rs. 3.20 lakhs) and general reserve Rs. 3.47 lakhs (against Rs. 3.60 lakhs). After taking into account Rs. 840 brought in, Rs. 1.10 lakhs transferred from taxation reserve, Rs. 90,716 being sales tax adjustments and Rs. 10,000 transferred from the reserve for bad and doubtful debts, the directors have set aside Rs. 42,000 for taxation for the previous year, leaving a balance of Rs. 365 to be carried forward, against Rs. 840 brought in. The dividend for 1963 is to be paid from the general reserve.

Chemo-Pharma Raises Dividend

CHEMO-PHARMA Laboratories Ltd reports highly encouraging results for the year 1963 and the directors have raised the dividend from 12 percent to 14 percent which is payable on the increased capital of Rs. 15 lakhs. The sales have risen by about 34 percent from Rs. 57 lakhs to Rs. 74 lakhs, and the gross profit has nearly been doubled from Rs. 9.58 lakhs to Rs. 18.62 lakhs. The provision for taxation has been raised from Rs. 6.67 lakhs to Rs. 13.31 lakhs, and allocation to the general reserve has been stepped up from Rs. 1.50 lakhs to Rs. 3.75 lakhs. The proposed 14 percent dividend absorbs Rs. 1.75 lakhs, against Rs. 1.30 lakhs in the preceding year. The production of fine chemicals like niacin and nicotinamide showed a satisfactory increase. The Company proposes to take up the manufacture of new

items of fine chemicals and the expansion programme undertaken last year is expected to be completed by the end of this year.

Hukumchand Mills Pays More

HUKUMCHAND Mills of Indore has raised the dividend for 1963 from 9 percent to 10 percent. But this provides little indication of the Company's impressive performance during the year. As against a 17.5 percent increase in the realisations from sales of cloth, yarn and waste and processing charges from Rs. 3.25 crores to Rs. 3.82 crores, the gross profit made by the Company has shot up by 90 percent from Rs. 25.42 lakhs to Rs. 47.49 lakhs. The provision for depreciation has been raised from Rs. 13.43 lakhs to Rs. 15.44 lakhs, and that for development rebate from Rs. 2.85 lakhs to Rs. 5.07 lakhs. Taxation absorbs as much as Rs. 18.94 lakhs, against Rs. 5.05 lakhs. After providing for the proposed dividend which absorbs Rs. 6.05 lakhs, against Rs. 5.44 lakhs and making minor adjustments, there remains a surplus of Rs. 5.36 lakhs which is being carried forward against Rs. 7.97 lakhs brought in. The directors state that a sum of Rs. 25 lakhs was spent during the year on machinery for various departments. The Company received during 1963 Rs. 20.75 lakhs, against the loans granted by the M.I.D.C. The balance loan outstanding at the end of the year was Rs. 38 lakhs. The directors add that the current year will witness the full effect of the additional burden of the increase in the contribution to employees' provident fund from 6.25 percent to 8 percent with effect from December last.

Sutna Stone Profit Up

THE Sutna Stone and Lime Co. Ltd has produced satisfactory results for the year ended December 1962. Sales rose from Rs. 44.29 lakhs for 1961 to Rs. 62.11 lakhs for 1962. The profit has risen from Rs. 10.17 lakhs to Rs. 15.23 lakhs, after raising depreciation from Rs. 1.62 lakhs to Rs. 2.17 lakhs. The Company has declared a taxable ordinary dividend of 35 percent to absorb Rs. 3.38 lakhs. At the present price of Rs. 28.31 a share of Rs. 10 each, the yield amounts to 12.4 percent. Taxation is allocated Rs. 9.80 lakhs, out of which super profits tax absorbs Rs. 2.64 lakhs.

The tax provision amounted to Rs. 4.78 lakhs for 1961. Development rebate reserve is allocated Rs. 85,000 (against Rs. 1 lakh) and taxation reserve Rs. 1.44 lakhs. The carry-forward is Rs. 21,096, against Rs. 23,403 brought in. The directors have mentioned that sales during the first four months of the current year have been considerably smaller than those for the corresponding period of 1962, due to the increased competition and lack of a proper sales organisation.

Malhati Tea to Diversify Activity

THE Malhati Tea Syndicate Ltd (a Doora's garden) has made a profit of Rs. 4.60 lakhs for the year ended December 1963, compared with one of Rs. 5.23 lakhs for 1962, after transferring Rs. 1.01 lakhs (against Rs. 1.15 lakhs) to depreciation. A taxable ordinary dividend of 18 percent has been declared to absorb Rs. 1.62 lakhs. Taxation is allocated Rs. 2.10 lakhs (against Rs. 2.50 lakhs), general reserve Rs. 1 lakh (the same) and em-

CAPITAL, 9th April, 1964.

ployees' benefit reserve Rs. 1,006 (against Rs. 1,500). The carry-forward is Rs. 15,270, against Rs. 10,407 brought in.

Sales rose from Rs. 24.05 lakhs to Rs. 25.29 lakhs. Tea output declined from 526,113 kilograms to 525,333 kilograms, but the average sale price rose from Rs. 4.84 to 4.96 a kilogram. The crop for 1964 has been estimated at 460,000 kilograms at a cost of Rs. 20.99 lakhs. In order to diversify the activities of the Company, a plot of land in an industrial suburb of Calcutta has been bought, in order to start new industries.

New Capital Issues

SEVEN companies have been authorised to raise fresh capital exceeding Rs. 1.06 crores. Of these, three are issuing bonus shares, two equities, and two are floating debentures and preference shares. Two companies involve foreign collaboration. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Hyderabad Asbestos Products Ltd. Hyderabad, is to issue capital of Rs. 2,95,163 divided into 118,065 equity shares of Rs. 2.50 each to be issued as bonus shares by the capitalisation of the Company's general reserves.

Khardah Company Ltd. Calcutta, is to issue bonus shares of Rs. 9 lakhs divided into 90,000 equity shares of Rs. 10 each on capitalisation of its reserves to a like extent. The bonus issue will be made in the ratio of one bonus share for every six equity shares held.

The Eastern Manufacturing Company Ltd. Calcutta, dealing in jute goods, is to issue bonus shares of the value of Rs. 17 lakhs on capitalisation of reserves. The bonus shares will be issued in the ratio of two shares for each one held.

Kersons Manufacturing Company of India Private Ltd. Bombay, will be issuing additional capital of Rs. 12.50 lakhs in equity shares of Rs. 1,000 each, to be issued for cash at par. Of this capital, 600 equity shares will be subscribed to by Midland Manufacturing Company Ltd. U.K. and the balance 650 shares will be subscribed to by Indian directors or shareholders. The capital will be used in the manufacture of brass and bakelite electrical accessories, such as switches, coiling roses, sockets, etcetera.

India Paper Pulp Company Ltd. Calcutta, an existing company, will be issuing capital of Rs. 40,00,000 divided into 4,000 7 percent debenture stock of Rs. 1,000 each. The debentures will be offered to the public by prospectus. The money will be used for financing of jute sticks pulp plant and paper plant.

The Saraswati Industrial Syndicate Ltd. Yamunanagar, district Ambala (Punjab), having a paid-up capital of Rs. 50,71,500 is to issue further capital of Rs. 4,700 divided into 47 equity shares of Rs. 100 each for cash at a premium of Rs. 140 a share to John Thompson Ltd, Ettingshall, Wolverhampton, England. This is in accordance with the terms of the scheme of arrangement of amalgamation of Indian Sugar and General Engineering Corporation Ltd with the Company which has already been approved by Punjab High Court.

Graphite India Ltd. Calcutta, is to issue further capital of Rs. 25 lakhs in 99.3 percent redeemable cumulative preference shares of Rs. 100 each for cash at par. Out of this such number of shares as would qualify the scrip to be listed on the recognised stock exchanges shall be offered to the public by prospectus. The capital will be used to meet the revised capital requirements of the Company.

CAPITAL, 9th April, 1964.

The Stock Markets

TURNOVER DECLINES IN SPITE OF GOOD CORPORATE NEWS

Wednesday Evening.

THERE has been an appreciable decline in turnover in the Calcutta stock market during the past week. The clearing on Wednesday was uneventful. The carry-forward charges are slightly smaller than at the previous settlement. Bulls have suffered big losses since the last Budget, so they have generally held off. Any small offer has, therefore, tended to reduce share prices. There has, nevertheless, been some good corporate news. Jessop, Indian Aluminium and Phillips India have increased their ordinary dividends, but investors have not been impressed because they think that higher dividends are warranted by soaring interest rates. Unless the Finance Minister, Mr. T. T. Krishnamachari, modifies his Budget proposals, particularly those relating to bonus shares and the dividend tax, the outlook for equities is unlikely to improve.

The stock market has felt the growing shortage of funds. Banks have been chary of supplying credit to buy shares in view of the credit squeeze recently enforced by the Reserve Bank. Besides, since annuity deposits will mop up almost all savings from the high-income groups, the prospect of a bigger flow of funds into the stock market is considered poor. The political situation is far from encouraging. Although attention is now centred on the Indo-Pakistani Home Ministers' Conference in New Delhi, nobody expects any spectacular results out of it. Indo-Pakistani relations have deteriorated considerably during recent months.

Indian Iron have fluctuated narrowly. The bigger production of the Company during March has been overlooked. The output of pig iron has risen from 103,421 tons in February to 113,069 tons in March and that of steel ingots from 80,243 tons to 89,766 tons. The production of salable steel has improved from 68,435 tons to 78,624 tons. Despatches of salable steel have risen from 59,881 tons to 93,935 tons. Engineering shares have on the whole declined. Binani Metals have, nevertheless, been maintained due to influential buying. Jessop have not responded to the increase in the dividend.

In the miscellaneous section, attention has centred on clearing scrip, but their prices have been lower in the absence of fresh support. Good year India, Union Carbide, Indian Oxygen and Alkali Chemical have been freed from lower prices without attracting support. Among managing agency shares, Jardine Henderson have lost. Imperial Tobacco have dropped on pressure. Despite the prospect of expansion, Hindustan Aluminium have declined on balance. Calcutta Tramways have not responded to the prospect of an increase in fare.

Electric companies have been subdued and stray business in Calcutta Electric has passed. In the paper section, Orient have been active, but the scrip have retreated on profit-taking. Titagur, Seshasayee and Bengal have been weaker. Bank shares have lacked interest. Small business has been transacted in United Bank and United Commercial. Sugar shares have been difficult to deal in due to the absence of

buyers. Reports of poor production during the current season have discouraged investors.

Turnover in jute shares has dropped appreciably. Investors have taken a cautious view since the price of fibre has risen in the face of a decline in the value of jute of a decline in the value of goods. Birla, New Central, Ganges, Barnagore, Champdany and Kinnison have quoted lower. Coal shares have lacked interest and prices have declined on the whole. Bengal have been barely steady since the Company has reduced the ordinary dividend. Amalgamated, Pench Valley, Western Bengal and Central India have weakened.

Except for Bharat Commerce and Jay Shree Textiles, which have been maintained on producing good reamains, cotton mill shares have generally lost. J. K. Cotton have reacted due to profit-taking. The outlook for the current year has been cautiously assessed since there has been no rise in the price of cloth. Limited business has passed in tea shares and fluctuations have been narrow. Investors have held off since they think that dividends for 1963 are not likely to be better than those for 1962, in view of the decline in the average price of teas sold during the current season.

Government securities have been slightly steadier presumably due to official support in view of the issue of conversion loans. Institutional support has been negligible. Scattered business in selected State Government loans has been transacted. The 3 percent Conversion loan 1966 has quoted Rs. 63.40.

Bombay

BULLS STAY OUT OF THE MARKET

GOOD CORPORATE NEWS IGNORED

Wednesday Evening.

THE Bombay stock market has closed the past week in a tame fashion. Buyers have been conspicuous by their absence since they are awaiting the reply of the Central Finance Minister, Mr. T. T. Krishnamachari, to the various representations made to modify the Budget proposals. Although carry-forward charges at the past settlement have been lower than in the previous one, there has been virtually no support in the new account. The technical position of the market has nevertheless improved due to a fair amount of selling since the last Budget. Considering that bulls have had to suffer considerable losses, they have shown considerable reluctance to extend their commitments. This is probably the reason why good corporate news, such as a higher dividend by Chemo-Pharma and a maiden dividend by Wandelside, has failed to impress. The excellent results of Kohinoor, Century and Bombay Dyeing have also been ignored.

Tata Steel ordinary have moved narrowly and closed around Rs. 147. Among engineering scrip, Tata Engineering, Premier Construction and Mukand Iron have declined. S.L.M.

Maneklal have lost considerably on pressure. In motor-vehicle shares, Hindustan Motors and Premier Automobiles have reacted.

Century have fluctuated erratically in the cotton mill section. The shareholders have been disappointed by the decision of the Company not to proceed with the bonus issue in view of the last Budget proposals. The Company has instead decided to issue preference shares for Rs. 25 lakhs to the existing preference shareholders in the ratio of one new share for every five shares held. The new shares will carry a fixed dividend of 8.57 percent and will be redeemed at par on 1st December, 1973. Although the Company has made a bigger profit, the final taxable ordinary dividend has been maintained at 18 percent. Kohinoor have lost, although the Company is confident that the working during the current year will produce satisfactory results if trading conditions do not worsen. Bombay Dyeing, Simplex, Svadeshi, Morarjee, India United ordinary and Standard have quoted lower.

Turnover in miscellaneous shares has declined appreciably. Scattered business has been transacted in Associated Cement. Sugar shares have been quiet, and Belapur have been barely steady. Among steamship company shares, Scindia have lost on profit-taking. Mining shares have been subdued, and Shivrampur Syndicate have been offered freely without attracting support. The Company has again passed the dividend since it has incurred a loss. Rayon shares have been quiet, and National Rayon have declined.

In chemical shares, Tata Chemical have quoted lower. Despite the increase in the taxable ordinary dividend from 25½ percent to 26½ percent, the shares of W. H. Brady and Company have attracted little notice. Vol-tas have been barely steady despite the prospect of further diversification of activity. It has promoted a new Company called the Scottish Indian Machine Tools Ltd in collaboration with the Scottish Machine Tool Corporation Ltd of Glasgow. The new Company will soon make a public issue of shares.

Turnover in cash shares has declined to almost a trickle. Stray business has been done in Bank of Baroda and Central Bank. In electric companies, Ahmedabad and Tata Hydro have changed hands.

Madras

SELECTIVE SUPPORT FOR PLANTINGS

OPERATORS AWAIT BUDGET CHANGES

Tuesday Evening.

THE Madras stock market has shown mixed trends during the past week. Because of absence of support from local operators and outside sources, clearing scrip have on the whole declined. Investment support has been small and has largely been confined to selected planting shares. Operators have preferred to sit on the sidelines, awaiting the final shape of the Finance Bill. Selected

preference shares and debentures have been wanted, but their supplies are short.

Turnover in Government securities has been small and only high-yielding State Government securities have been bought. Scattered business has been done in Indian Bank at Rs. 157 and in Indian Overseas at Rs. 146.50. Among electric companies, South Madras has been steady at Rs. 11.12 and Negapatam at Rs. 10.70. Sugar shares have been easier, and Deccan have declined to Rs. 11.85. E.I.D. have been available at Rs. 35.65 and Andhra at Rs. 14.75. Mysore have been barely steady at Rs. 44.65 and K.C.P. have changed hands around Rs. 24.

In the planting section, Blue Mountain have quoted Rs. 2.43 and Cochín Malabar Rs. 6.45. Consolidated Coffee have been done at Rs. 21.25 and Oucherlony at Rs. 4. Business has passed in Periakaramalai at Rs. 3.44 and in Lucky Valley at Rs. 12.50.

Interest has been shown in Nenmeny at Rs. 22.55, in Midland at Rs. 11.25, in Haileyburia at Rs. 12.90 and in Nilgiri at Rs. 9.12. Parkside have changed hands at Rs. 26.33 on declaring an interim taxable ordinary dividend of 7½ percent. Peermade have been transacted at Rs. 20.62 on declaring a final taxable ordinary dividend of 12½ percent. Coffee Lands have been taken at Rs. 16.62 and Ossoor at Rs. 2.60.

Except for Bangalore Woollen, which have met with support up to Rs. 273 on a good report, textile shares have slipped back. South India Viscose have declined to Rs. 125 on pressure and Travancore at Rs. 23. Lakshmi have quoted Rs. 134.50 and Madura Rs. 35.56. Jawahar have been sold at Rs. 9.59 on declaring a taxable ordinary dividend of 12 percent. Kannapiran have been available at Rs. 11.24 despite the payment of a taxable ordinary dividend of 10 percent. Ramnarayan have quoted Rs.

93 on payment of a taxable ordinary dividend of 10 percent. Business has passed in Sivanandha at Rs. 25 on declaring a taxable ordinary dividend of 26 percent. Vijayalakshmi have been done at Rs. 111.50 on paying a taxable ordinary dividend of 10 percent.

Among miscellaneous shares, Aluminium Industries have been steady at Rs. 21.25, but Ashok Leyland have been subdued at Rs. 6.97. Dalmia Cement have dropped to Rs. 13 and India Cement to Rs. 5.68. 'BEHAR' the dependable name in

FIRECLAY & SILICA Refractories

For nearly half a century BIHAR REFRATORIES are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other industries in the country.

Our manufacturing range includes

SILICA BRICKS • FIRE BRICKS • HIGH ALUMINA BRICKS • INSULATING BRICKS • FIRECLAY • FIRE CEMENT • STOPPERS • SLEEVES • NOZZLES • TUBES, ETC.

Money

THE CALCUTTA MONEY MARKET

BIG INCREASE IN ADVANCES

Wednesday, 8th April.

THE general level of advances has shown a large increase in the Calcutta money market during the past week, mainly because the requirements of the iron, steel and engineering industries have risen sharply. The credit given to the sugar mills and the cotton mills is slightly more than it was a week ago. But the requirements of the jute industry, and of the foodgrains and seeds trade, are unchanged. In the interbank market, conditions were tight at the beginning, when the call rate was quoted at 6½ percent. But they eased a little later and the rate dropped to 6¼ percent.

The exchange market has been moderately active, with a fair supply of both tea and gunny bills. The demand for remittances is moderate. In the London market, sterling has fluctuated narrowly, and shows marginal gains in relation to a number of the major currencies.

SILVER WAS STEADY IN CALCUTTA during the past week but turnover was limited. The price closed at Rs. 259. The price quoted 11½d. in London and 129.3 cents in New York. Gold was quiet in the absence of demand and the price of 14-carat stood at Rs. 66.

DURING THE WEEK ENDED 3RD APRIL, Government of India Treasury bills for Rs. 174,63,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 7th April. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 11th April.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 8th April to 11th April at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 1st April to 4th April amounted to Rs. 75,000 only.

RISES OF RS. 47.55 CRORES TO RS. 2,521.35 crores in the total note issue and of Rs. 48.95 crores to Rs. 2,502.95 crores in active notes, were notable features of the return of the Reserve Bank of India for the week ended 3rd April, 1964. The currency expansion was covered by raising rupee securities by Rs. 49.90 crores to Rs. 2,184.37 crores in the paper currency reserve. Deposits of the Government of India dropped by Rs. 31.97 crores to Rs. 52.18 crores but those of State Governments at Rs. 15.96 crores showed little change. Balances of scheduled banks at Rs. 76.88 crores disclosed a rise of Rs. 22 lakhs. Balances held abroad declined by Rs. 65 lakhs to Rs. 13.17 crores while investments were up by Rs. 41.46 crores to Rs. 247.50 crores. Loans to

CAPITAL, 9th April, 1964.

scheduled banks declined from Rs. 84.16 crores to Rs. 74.94 crores, of which advances against usance bills amounted to Rs. 42.77 crores (Rs. 47.59 crores). Ways and means advances stood at Rs. 64.47 crores, against Rs. 43.38 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 27th March, 1964, shows a rise of Rs. 7.62 crores to Rs. 619.93 crores in total deposits. Investments in Government securities are up by Rs. 7.09 crores to Rs. 241.17 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 4.12 crores to Rs. 364.50 crores. Cash and balances are, in consequence, shown at Rs. 17.65 crores or Rs. 7.68 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 27th March, 1964, shows Demand and Time liabilities at Rs. 1,226.30 crores (Rs. 31.00 crores on account of borrowings from banks) and Rs. 1,260.71 crores (Rs. 12.26 crores), compared with Rs. 1,205.07 crores (Rs. 28.52 crores) and Rs. 1,268.56 crores (Rs. 12.82 crores), respectively, in the previous week. Cash has declined by Rs. 1.25 crores to Rs. 58.23 crores, while the balances of the Reserve Bank have risen by Rs. 8.99 crores to Rs. 89.31 crores. There is a rise of Rs. 3.02 crores to Rs. 639.76 crores in investments. Advances and bills discounted at Rs. 1,831.80 crores show a rise of Rs. 10.81 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.9 percent and 73.7 percent, against 5.7 percent and 73.6 percent.

CAPITAL, 9th April, 1964.

THE BENGAL COAL COMPANY, LIMITED

CHAIRMAN, MR. A. D. OGILVIE'S STATEMENT

The following is a statement issued by Mr. A. D. Ogilvie, chairman of the Bengal Coal Company, Limited, to all Shareholders on April 4, 1964:

Owing to the limitations imposed by Rule 52 of the Defence of India Rules 1962, I was not able to issue a statement to shareholders last year in respect of the year ended 31st October, 1962. In fact, these limitations prevented us from circulating the printed Accounts for that year. With the removal of the restrictions some three months ago, those accounts were immediately made available to members of the Company. I now have pleasure in reporting on the operations of the Company during the year ended 31st October, 1963.

The Year's Results

Sales of coal increased by over Rs. 4 lacs to a total of Rs. 8.12 crores, but I regret that there has been a serious decline of over Rs. 20 lacs in the profits of the Company before taxation to a figure of Rs. 62,75,000. This is most disappointing after all the efforts devoted to development work during the Third Five-Year Plan.

The main cause of this depressing result has been the failure to obtain neutralisation of very substantial increases in costs of a statutory nature and over which we have no control. Apart from that main factor, you will notice from the Accounts that the Company made a contribution of Rs. 3,50,000 to the National Defence Fund, which none of us can grudge. Depreciation charges have increased by over Rs. 4 lacs, in view of the installation of substantial new plant and machinery, and interest charges have increased by Rs. 4.78 lacs as a result of the very large increase in borrowings to which we have had to resort in order to finance our development schemes.

Considering this overall position, the Board have had no alternative but to recommend a reduction in the final dividend to Rs. 10 per share less tax on the Ordinary Shares, making Rs. 16 per share less tax for the year. This represents a gross return of only 4.66% per annum on the capital employed in the Company, and compares with a total distribution on the Ordinary Shares of Rs. 19 per share for the previous year.

Production

Raisings during the year increased only marginally to a figure of 3,354,686 tonnes of coal. We have had no shortage of power and there has generally been sufficient rail transport available; the only factor limiting our raisings has been the marked decline in the demand for coal within the country which became evident early in 1963. In recent weeks you will have read a great deal, particularly in the speeches delivered by the Chairmen of the Associations of coal producers, on the subject of the surplus production of medium and low grades of coal. Very briefly, this surplus has arisen on account of the phased demand for coal lagging behind the targets of the Third Five-Year Plan. This position has not in any way affected our high grade collieries; our mines producing coking and blendable coal have in fact increased production by 10% to 1,181,000 tonnes. We have, however, had to curtail substantially the production at our collieries mining the lower grades of coal, and in spite of this our stocks of Grade II coal have reached a level of 42,000 tonnes, or the equivalent of two months' output of that grade.

Transport

I must acknowledge the substantial improvement in wagon availability

for coal movement. During the year we have had adequate allotments to meet our orders, and it is only the lack of demand for the lower grades of coal which has resulted in the substantial increase in our stocks. With-in the overall supply of wagons, however, we have not been able to obtain allotments regularly and as required, nor have we seen any improvement in the supply of open wagons to our mines operating mechanical screening and loading plants. It increases the costs of a colliery very considerably when no wagons are allotted for two or three days, and the raisings of those days have to be put into stock and then loaded by hand into the large number of wagons supplied on a subsequent day; and screening plants cannot be effectively utilised when covered wagons are delivered.

We are still awaiting the installation of the siding at our new Kunustoria Colliery where we have almost 10,000 tonnes of coal in stock, and we cannot initiate substantial output until this siding is ready. It is hoped that the Eastern Railway will complete this siding without delay.

Sandstowing

The quantum of sand stowed at our 8 collieries equipped with stowing plants increased still further during the year to a total of 1.9 million tonnes, which is almost three times the tonnage stowed 4 years ago. Improvements have been made in the arrangements at Parbelia and Seetapur collieries, and stowing has commenced through the newly completed plant at Chinakuri Inclines.

It must be stressed that the Company has incurred a net loss of over Rs. 17 lacs on these stowing operations, in spite of Government's assurances that the costs of such operations, conducted in the national interest, should be reimbursed in full. It is the experience of not only this Company but of many other collieries that most unreasonable deductions are being made in respect of actual costs incurred in stowing, and this matter is being actively pursued by the Industry.

Prices

As stated earlier, the disappointing results in respect of the year under review are due in large measure to the fact that increased costs have not been neutralised by way of compensatory price increases. Quite apart from the substantial increase in the prices of essential materials required by the Company, in freight rates and in import duties, further burdens had to be borne as from the early part of the year by the introduction of Emergency Risk Insurance and by a considerable rise in the rates of premia for Workmen's Compensation Insurance. To these were added the cost of implementing further directives in respect of mines legislation. The operating costs of the Company's collieries, therefore, increased substantially, and the production of high grade coals at depth and under adverse mining conditions continue to be unremunerative; this applies even after taking into account the limited increase in prices announced last month. It is of the utmost importance that Government should grant a reasonable level of selling prices to encourage the raising of quality coals which are so vitally required by the country.

Collieries

A substantial quantity of new plant and machinery has been installed at our existing mines as part of our general policy to increase productivity

and efficiency. Generally speaking, therefore, our collieries as a whole are now very much better equipped than they were 12 months ago, and this is largely on account of our having taken full advantage of the facilities for import under the World Bank Loan granted to the Government of India.

The coal Shearer introduced at Chinakuri Colliery has proved its worth, and a second machine is now being obtained. As a result of the wide experience gained in the working of long wall faces, we are extending this type of mining, particularly in our deep Dishergarh collieries.

Banksimula 11% & 12 Pits Colliery which has made a valued contribution to the raisings and profits of the Company over the past 25 years has now completed the extraction of all available reserves of high grade coals, and it is being closed down with the exception of very limited workings through an incline mining a lower grade seam.

New Developments

The progress which has been made at Kunustoria Colliery is most impressive. A Continuous Miner and shuttle cars are being installed underground and this unit is in a position to produce substantial quantities of coal as soon as the Railway completes the installation of the siding. The surface installations are well planned, and we are now completing a large coal storage bunker capable of handling over 6,000 tonnes of coal, from which wagons can be loaded mechanically at the rate of a block rake within 3 hours. This mine is one of which we can all be proud.

At the other new development, Murulidih 20 & 21 Pits, sinking has just been completed to the Mohuda Bottom Seam. A great deal remains to be done by way of equipping this colliery and installing a long surface haulage from the pit to a new siding, before it can come into production and play its part in producing high grade metallurgical coal.

Royalties

During the course of the year a number of discussions have been held between the Industry and the West Bengal Government, at which senior representatives of the Company have been present, in an effort to resolve the deadlock with regard to payment of royalties in respect of collieries in West Bengal. It has been proposed that the rights of intermediaries should be voluntarily relinquished in order that working collieries may come in direct relationship with the State Government, to whom they would pay royalties direct. In the absence of this and pending the settlement of outstanding law suits, the State Government are not accepting royalties through intermediaries. It is of great importance that this matter should be finalised without delay.

Labour and Welfare

Relations with our labour have continued to be satisfactory. As members will be aware, a Wage Board for the Coal Industry has been constituted and is at present engaged in enquiring into the overall wage structure of the Industry.

The Company has now completed the construction of 3,440 new quarters over the past 3 years under the housing scheme of the Coal Mines Welfare Fund, and it is only the shortage of controlled material such as asbestos sheets, which has delayed the completion of 686 further houses. Four large

water supply schemes serving groups of collieries have been built, and work is in progress on three additional water plants. It is as well that the Company has pursued this policy of providing large quantities of potable water for our labour, since the Central schemes for the Raniganj coalfield as a whole have still not reached the blue-print stage.

During my recent visit to the coalfields, I had much pleasure in presiding over the function held to inaugurate the large extension to our Sanctoria Hospital, which will provide increased facilities of a very high standard. We have constructed a spacious Out-patients Department, a Gymnasium for physiotherapy, and rehabilitation, X-ray Rooms, Laboratories, etc. It may interest members to know that, in addition to the extensive arrangements for medical treatment which we make available to our labour, we subsidise either in whole or to a very large extent 18 Schoois ranging from Primary to Higher Secondary. We also subsidise 14 Clubs for the benefit of staff and labour at our collieries.

Staff

For some time consideration has been given to the need for changes in our coalfields organisation, consequent upon the increase in the volume and complexities of our mining activities. The aim has been to relieve as much as possible our senior technical men of the burden of general administrative work, in order that they may be able to concentrate their efforts on problems directly connected with mining. Towards this end, our Chief Mining Engineer, Mr. F. G. Massmann, has been appointed General Manager of the collieries from the beginning of this year, and in his place Mr. L. D. Hughes has taken up the duties of Chief Mining Engineer. As Chief Administrative Officer we have appointed Mr. T. M. E. Bryant, who will co-ordinate the activities of all the organisation has already proved itself, and we have a very fine team controlling the affairs of our collieries. We face the future with confidence.

Note: The above does not purport to be a record of the proceedings of the Annual General Meeting of the Company which will be held in Calcutta on 29th April, 1964.

PLANNING: THE DEFECTS ANALYSED

Poverty and Planning. By C. N. Vakil. (Published by the Allied Publishers Private Ltd, 15 Graham Road, Ballard Estate, Bombay 1. Price Rs. 22.50, pages 357).

Professor Vakil is well known as one of India's senior economists. The present volume is a selection of his writings—spread over three decades—including also some papers on planning and development prepared jointly with Dr. Brahmananda—one of the professor's outstanding students. In the general introduction, he has stated that because of the rapid and fundamental changes in India in the last generation, the future historian will have an exciting and challenging task to follow the trend of events in its proper perspective. As he feels that the contemporary thinking of experts in different fields will provide an important source for the historian, "from this point of view, it will be interesting to follow the thinking of a contemporary economist devoted to research and research training". The book contains a five-page bibliography, listing (1) the author's own publications (including joint ventures), (2) publications based on research done under his guidance, often edited by him, (3) unpublished research thesis done under his guidance and approved for the Ph.D. and M.A. degrees and (4) other publications edited by him.

The essays range over a wide field and are often somewhat superficial,

as the presidential addresses and papers submitted at international seminars, which are not the outcome of specific research, tend to be. The half-a-dozen papers on planning, jointly with Dr. Brahmananda, are perhaps an exception to this. One of the papers in this section, namely, "Institutional Implications of a Bolder Plan" makes interesting reading. Although in the earlier part, the authors seem to reject the approach to the plan "which emphasises heavy industry, a greater extent of regulation and regimentation, etcetera," in discussing specific issues they recommend fairly extensive regulatory devices.

Thus, for the problem of increasing the rate of procurement of the marketable surplus of agriculture, they suggest monopoly purchase of foodgrains at prices below what producers would otherwise have got. The logic of planning must lead to such conclusion, however tempered they may be by recommendations like the proposal to harness the idle and unused labour power of the country for productive purposes on a voluntary basis. The longish paper "Capital Supp' and Growth—Sources of Savings" attempts to present certain estimates of savings, and focusses attention on the fact that since both the Government and the corporate sector tend to depend largely on personal savings and their growth for their development programmes, the

generally accepted savings models, emphasising the need for a rise in the share of corporate profits to national income as well as the need for a positive rôle for inflation in economic development may not hold true, and the problem of savings would perhaps require an approach based more on the traditional motives of thrift and productivity.

INVESTMENT GUIDE

Kothari's Economic Guide and Investors' Handbook of India. Edited by P. H. Parekh. (Published by Kothari and Sons, Oriental Buildings, Armenian Street, Madras 1. Price Rs. 50+Rs. 10 for packing and postage, pages 2,591.)

The 1963 edition of this well-known investors' guide covers about 4,000 companies all over India. It contains useful information on licensing, foreign collaboration, external assistance, expansion of the public sector, taxation and incentives and the general economic trends. The usual features of the book have been retained, and statistical tables, graphs, etcetera, have been varied, added to or substituted in order to include the latest available data. The book, as usual, will prove useful to investors.

PLAN FINANCE

Financing under Planned Economy. By M. A. Master. (Published by the Forum of Free Enterprise, Sohrab House, 235 Dr. D. N. Road, Bombay 1. Pages 18.)

In this pamphlet Mr. M. A. Master, who is an authority on budgetary matters, points out that the tax efforts of the Central Government

during the first three years of the plan have already been so big as to exceed the five year target. He has pleaded that the policy of underestimating revenues, pursued by the Government for several years, should be stopped. Quoting Sir A. Ramaswami Mudaliar, the author says that as a result of high taxes and high prices of essential goods, there is very little money left with the investor. Mr. Master emphasises that the Finance Minister will not be able to stimulate economic growth unless he makes appropriate changes in the fiscal, credit and other economic policies in order to enable the private sector to play its rôle.

BANKING NUMBER

Southern Economist Banking Number. Edited by Mrs. Susheela Subrahmanya. (Published by the Editor from 45-88, S. J. Park Road, Bangalore 2. Price Re. 1, pages 52.)

The *Southern Economist* is relatively a newcomer to economic journalism, but it is well on the way to establishing itself. The banking number carries several articles on various aspects of banking, such as branch expansion, credit transfers and cost reduction. Special mention may be made of the article on "Rôle of Banks in the British Economy" by Paul Bareau. The publication also contains a review of the progress of Indian commercial banks in recent years, banking developments since the emergency, hire-purchase finance in India and foreign private investment in the country. It will be useful both to people in the banking profession and to students of economics.

SANTHANAM BODY EMPHASISES NEED TO CHECK CORRUPTION

(FROM OUR NEW DELHI CORRESPONDENT)

THE Santhanam Committee's report on the prevention of corruption was published here last week. The Central Home Minister, Mr. Gulzarilal Nanda, recently claimed that he would completely eradicate corruption in India within two years. The institution of official and non-official Vigilance Commissions has now been followed by the publication of the Santhanam Committee's report, which shows what a formidable task they face.

In a lecture in Madras about five years ago, Sir C. D. Deshmukh hinted at the existence of corruption in high places. This was flatly denied at the time by the Prime Minister, Mr. Nehru, who declared that the Opposition, having failed to win the elections, was indulging in mudslinging against the Congress Party. However, Mr. Nanda has publicly admitted that there is corruption in the administration. The Santhanam Committee has gone much beyond Mr. Nanda's admissions. The committee, among other things, says: "The tendency to subvert integrity in the public services, instead of being isolated and aberrative, is growing into an organised, well-planned racket."

"It was represented to us that corruption has increased to such an extent that people have started losing faith in the integrity of public administration. We heard from all sides that corruption has in recent years spread even to those levels of administration from which it was conspicuously absent in the past. We wish we could confidently and without reservation assert that at the political level, Ministers, legislators and Party officials were free from this malady. The general impressions are unfair and exaggerated. But the very fact that such impressions are there causes damage to the social fabric."

"That such impressions should have come into existence in so short a time after the people of this country had given themselves a Constitution of their own is all the more distressing if it is remembered that the struggle for freedom in India was fought on a particularly high moral plane and was led by Mahatma Gandhi who personified integrity. The people of India rightly expected that, when the governance of the country passed into the hands of the disciples of the Father of the Nation who were in their own individual capacities known for high character and ability, the Governments in India, at the Centre and in the States, would set up and achieve a standard of integrity, second to none in the world, both in the political and administrative aspects."

"It has to be frankly admitted that this hope has not been realised in full measure. But it has to be noted that a good percentage of our public servants, even those who have opportunities, maintain and function in accordance with strict standards of integrity."

"There is a widespread impression that failure of integrity is not uncommon among Ministers and that some Ministers who have held office during the last 16 years have enriched themselves illegitimately, obtained good jobs for their sons and relations through nepotism, and have reaped other advantages inconsistent with any notion of purity in public life. The general belief about failure of

integrity among Ministers is as damaging as actual failure. That these Ministers have held office in the name of the Indian National Congress which had evolved the highest notions of personal integrity and service under the inspiration of Mahatma Gandhi has given rise to an exaggerated view of their failure to maintain high standards of integrity."

Suitable Machinery

"It is a pity that neither the Congress authorities nor the great leaders who took over the Government of India realised the importance of evolving suitable machinery and procedure for preventing and dealing with such corruption. We are convinced that the ensuring of absolute integrity on the part of Ministers at the Centre and the States is an indispensable condition for the establishment of a tradition of purity in the public services. Therefore, in the interest of the future of public life we consider that the following steps should be taken:

"(1) A code of conduct for Ministers, including the provisions suggested by us for public servants relating to the acquisition of property, acceptance of gifts and disclosure of assets and liabilities, should be drawn up. This code of conduct should be placed before Parliament and State legislatures. The Prime Minister and Chief Ministers should consider themselves responsible for enforcing the code of conduct."

"(2) Specific allegation of corruption on the part of a Minister at the Centre or a State should be promptly investigated by an agency whose findings will command respect. We recognise that irresponsible allegations cannot be taken serious note of. We, therefore, suggest that if a formal allegation is made by any ten members of Parliament or a legislator in writing, addressed to the Prime Minister or the Chief Minister, through the Speaker and the chairman, the Prime Minister or the Chief Minister should consider himself obliged, by convention, to refer the allegations for immediate investigation by a committee as has been suggested later in this section."

"(3) This would be in addition to the responsibilities of the Prime Minister and the Chief Ministers of States to take note of allegations made in the Press or which otherwise come to their notice. For such allegations also, the Prime Minister and the Chief Ministers should be free to refer the matter to the proposed committee. In all other cases, the Ministers against whom the allegations are made should, as a rule, institute legal proceedings by filing a complaint for criminal defamation, and the Ministers concerned should be given legitimate assistance by the Government of which they are Ministers."

"In cases where the Ministers are unwilling to take legal action, the Prime Minister or the Chief Ministers of States, as the case may be, should consider themselves obliged by convention—unless there is irrefutable proof of the integrity of the Minister concerned—to advise the President or the Governor, as the case may be, to withdraw his pleasure, which would mean the Minister will have to go out of office, unless he himself resigns."

Allegations against Ministers

"We considered carefully the suggestion that the Central Vigilance

Commission should deal with allegations against Ministers. We are unable to accept the suggestion. It will be fatal to the usefulness of the commission to be involved in matters likely to engender political passion and prejudice which an enquiry against a Minister is bound to give rise to. For the same reason, we do not think that any permanent tribunal should be established for this purpose."

"We consider that the appropriate course would be for the President to constitute a national panel on the advice of the Prime Minister. Whenever allegations against a Minister require to be enquired into, an *ad hoc* committee should be selected out of this national panel by the President. The committee may consist of three persons, one of whom at least should have held or should be holding a high judicial office. It should be the duty of the committee to ascertain whether there is a *prima facie* case."

Central Bureau of Investigation

"The committee should have the power to direct the Central Bureau of Investigation, in suitable cases, to investigate and report. If the committee wishes to make any enquiries otherwise than through the Central Bureau of Investigation, it should be given all the necessary facilities and assistance including free access to all documents, files, etcetera, without being hampered by any claim of privilege. On the completion of the enquiries either through the Central Bureau of Investigation or otherwise, the committee should consider the available material and advise as to further action, if any, that may be necessary. It may advise that a regular case be registered for investigation with a view to prosecuting the Minister concerned or a commission of enquiry under the Commissions of Enquiry Act, 1952, be appointed."

"If the committee makes such a recommendation, the Minister should resign as a matter of convention and should remain out of office till the completion of the proceedings. If the Minister is found guilty of the allegations or is found to have been corrupt, he should be dismissed and should also become ineligible for becoming a Minister or for holding any elective office. The necessary legal instruments for giving effect to this provision should be brought into existence. Until such time as the necessary legislation is made, there should be a convention which would give effect to this provision."

"As publicity would be an effective instrument, there should be a convention that the findings of the committee would be placed before Parliament or the State legislatures. We are aware that certain difficulties may arise out of the existing law of defamation. Suitable legal provisions should be made to afford protection from proceedings for defamation in relation to the proceedings and the findings of the committee."

"Next to the Ministers, the integrity of the members of Parliament and of legislatures in the States will be a greater factor in creating a corruption. We are aware that the favourable social climate against vast majority of members maintain the high standards of integrity expected of them. Still, it has been

talked about that some members use their good offices to obtain permits, licences, and easier access to Ministers and officials for industrialists and business men. It may be that some legislators are in the employment of private undertakings for legitimate work. In such cases it is desirable that such employment should be open and well known and should be declared by the legislators concerned."

"It should be a positive rule of conduct that such legislators should not approach Ministers or officials in connection with the work of their employers, and they should refrain from participating in the discussion or voting on demands or proposals in which their firms or undertakings are interested. Other legislators, who are not such *bona fide* employees, should on no account undertake, for any valuable consideration or other personal advantage, to promote the interests of or obtain favours for any private party either in the legislature or with the Government."

"It is desirable that a code of conduct for legislators embodying these and other principles should be framed by a special committee of representatives of Parliament and the legislatures nominated by the Speakers and the chairmen. This code should be formally approved by resolutions of Parliament and the legislatures and any infringement of the code should be treated as a breach of privilege to be enquired into by the Committee of Privileges, and if a breach is established, action including the termination of membership may be taken. Necessary sanctions for enforcing the code of conduct should also be brought into existence."

"The public belief in the prevalence of corruption at high political levels has been strengthened by the manner in which funds are collected by political Parties, especially at the time of elections. Such suspicious attach not only to the ruling Party but to all Parties, as often the opposition can also support private vested interests as well as members of the Government Party. It is, therefore, essential that the conduct of political Parties should be regulated in this matter by strict principles in relation to collection of funds and electioneering. It has to be frankly recognised that political Parties cannot be run and elections cannot be fought without large funds. But these funds should come openly from the supporters or sympathisers of the Parties concerned."

"We consider that, in Indian conditions, companies should not be allowed to participate in politics through their donations. It is true that this matter was debated at length during the discussion on the Companies (Amendment) Act, 1960, and it was decided to permit such donations, subject to restrictions of amount and condition of publication. We do not think that this is sufficient and feel that nothing but a total ban on all donations by incorporated bodies to political Parties and purposes will clear the atmosphere."

Keeping Accounts

"One other step which we feel is essential in this connection is that proper account of their receipts and expenditure and should publish annually an audited statement of such accounts giving details of all individual receipts. We do not see why any political Party should object to this provision, and as it may not be easy to ensure compliance through voluntary agreement, simple legislation obliging the keeping of such accounts and its publication may be necessary. We do not suggest that there should be any restriction whatsoever on the formation and functioning of political Parties other than this sole requirement."

"Failure to conform to such obligation should debar a political Party from recognition by the Election

THE HONGKONG AND SHANGHAI BANKING CORPORATION—Cont'd.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF THE HONGKONG AND SHANGHAI BANKING CORPORATION UNDER SECTION 20 OF THE BANKING COMPANIES ACT 1949.

We have audited the above Balance Sheet and the annexed Profit and Loss Account of the Indian Branches of The Hongkong and Shanghai Banking Corporation with the books and accounts of the Calcutta Branch and with certified Returns from Bombay Branch.

In accordance with the provisions of Section 20 of the Banking Companies Act 1949, read with the provisions of Section 211(1), (2) and (5) and 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956, but are in conformity with Forms A and B of the third Schedule of the Banking Companies Act 1949.

We report that:—

- We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit.
- In our opinion proper books of account as required by law have been kept by the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for our audit have been received from Bombay which was not visited by us.
- The abovementioned Balance Sheet and Profit and Loss Account are in agreement with the books of account and certified returns.
- In our opinion and to the best of our information and according to the explanations given to us such Balance Sheet and Profit and Loss Account give the information required by the Companies Act 1956, in the manner required for Banking Companies and, on such basis and subject to the same remarks, give respectively a true and fair view of the state of affairs of the Indian Branches as at 31st December 1963, and their results for the year ended on that date.

Calcutta, 26th March, 1964.

R. E. H. NELSON,
Manager, Calcutta Office.

Commission, the postal authorities and banks. Those who receive donations for unauthorised political Parties or for themselves for political purposes should have to account for them in their own private accounts, and include them in their total income for purposes of income tax. Regular maintenance of accounts and publication will by itself enforce a minimum degree of good behaviour on the part of all political Parties.

"Although we did not make any direct enquiries, we were informed by responsible persons, including Vigilance and Special Police Establishment Officers, that corruption exists in the lower ranks of the judiciary all over India and in some places it has spread to the higher ranks also. We were deeply distressed at this information. We, therefore, suggest that the Chief Justice of India, in consultation with the Chief Justices of the High Courts, should arrange for a thorough enquiry into the incidence of corruption among the judiciary, and evolve, in consultation with the Central and State Governments, proper measures to prevent and eliminate it. Perhaps the setting up of vigilance organisations under the direct control of the Chief Justice of every High Court, co-ordinated by a Central Vigilance Officer under the Chief Justice of India, may prove to be an appropriate method.

"Universities are the main sources of supply of officers for our public

services, especially at the higher levels. It is, therefore, of supreme importance that they should set standards of integrity which will become an integral element of the intellectual and psychological outfit of every graduate. It is a matter of great regret that in some universities, conditions are far from satisfactory for the admission of students, recruitment of lecturers and professors, and the general management of university funds. We suggest that the University Grants Commission and the Inter-University Board take immediate steps to institute an enquiry into the malpractices that may be prevailing in the universities, and evolve measures to fight them."

The committee has made some significant comments on the Federation of Indian Chambers of Commerce and Industry. It says: "We have to point out, with regret, that while a number of trade associations and State chambers of commerce readily accepted our invitation to help us with their views and advice, the Federation of Indian Chambers of Commerce and Industry, which could have given powerful support to the fight against corruption, would not even accept our invitation to meet us."

SMALL CAR PROJECT

No Decision Yet

The small car project is still in a speculative stage. Enquiries show

that the reactions of Standard Motors of Madras to the Government's proposal for majority participation are not favourable. The Government is, therefore, back to the old position of starting a project of its own for which, apparently, there is no provision as far as the third plan is concerned. The possibility of the Central Ministry of Industry sounding, possible collaborators in France, Britain, the U.S.A. and West Germany is not ruled out. One thing, however, is certain—that the Government is unhappy over the prices and the shortage of motor-cars. So it is earnestly considering putting a small car on the market, which should be within the reach of at least the upper middle class people in the country. A beginning in this direction even during the third plan period cannot be ruled out.

PATENT LAW

New Ministerial Body

The Government of India has set up a small Ministerial Committee to examine the patent law *vis-à-vis* its earlier decision against the granting of fresh patents for the drug, pharmaceutical and food industries. The committee consists of four Cabinet Ministers, Messrs C. Subramaniam, M. C. Chagla, A. K. Sen and Humayun Kabir and three Ministers of State, Messrs Manubhai Shah,

CAPITAL, 9th April, 1964.

Nityanand Kanungo and Dr. Sushila Nayyar.

The original decision, leading to the drafting of a Bill, was taken at the instance of the Central Health Minister, Dr. Sushila Nayyar. This was followed by protests both from foreign Governments whose citizens would have been adversely affected by the proposed legislation and from the Indian drug and pharmaceutical industry. The case for reopening the issue was made when it was shown that the banning of new patents was likely to affect not only research but also new investment adversely.

Although a new Patent Bill is a certainty, it is almost definite that it will not be on the old lines. Meanwhile, Italy, whose example was cited in favour of banning patents for the drug, pharmaceutical and food industries, is now having second thoughts on the Blue. There is also a proposal for a common patent law for all the European Common Market countries, including Italy.

U.S.A.

Programme for Trade Team

A detailed programme has been worked out for the meetings of the U.S. business executives which commence here on 13th April. Apart from the discussions scheduled to take place through panels, the Central Ministries of Finance, Heavy Engineering, Steel, Oil, International Trade and Industries and the Planning Commission have worked out plans to hold discussions with the visitors. Blueprints, indicating the industries offering scope for fresh investments, are being prepared for the conference.

KUWAIT

Trade with India

In a joint communiqué on commercial and industrial co-operation between India and Kuwait signed recently in Kuwait, the Central Minister of International Trade, Mr. Manubhai Shah, recalled the discussions held in India with the Kuwait oil delegation in January this year. India then had expressed the view that she could become a regular customer for the sulphur to be produced in the proposed Kuwait refinery. The Minister said that he was also aware of the talks that were being held with the Indian authorities for the sale of kerosene and other petroleum products by Kuwait. These, he felt, must open up new possibilities for similar exchange of goods between India and Kuwait. Since trade between them was transacted in free convertible currency, Kuwait and India could look forward to an increase in the volume of trade in diverse fields.

It was felt that certain fields of industrial activities should be examined by competent technical experts and business men from India and Kuwait whose visits should be encouraged by the two Governments. The industries so selected are the following: caustic soda, salt, soda ash, a modest plant for pig iron and castings (all grades of iron ore could be imported from India), structural works, synthetic rubber plant based on local gas and petroleum by-products, plastic and plastic products, steel and wooden furniture, dry dock facilities, electrical goods industry, like heaters, air-conditioners, air coolers, water coolers, and geysers, telephone equipment (assembly), lorries (assembly), aluminium rolling mill (including the making of utensils), rolling mill for non-ferrous

CAPITAL, 9th April, 1964.

metals, textile industry (based on the import of cotton and yarn), rayon and art silk fabrics processing industry (based on imported rayon silk fabrics), blending of tea, and shipping.

The two Ministers discussed the possibilities of Kuwait's private financial participation in Indian industrial development. It was also felt that there was scope for investment by Kuwait investment institutions and business men to the extent of \$100 million initially in industries under the following groups: food products, including (a) fish canning, (b) instant food, (c) fruit and vegetable canning, and (d) food processing industries; readymade garments, caustic soda and soda ash, hardened oil for industrial uses, starch from tapioca, synthetic fibres, including acetate, acrylic and other fibres, pesticides, sanitary-ware, footwear (machine-made), grinding wheels, linoleum, aluminium (a smelter of 100,000 tons may be set up), pig iron and cast iron spun pipes, iron castings, jigs, tools and fixtures, twist drills, steel tubes and pipes, heavy electrical equipment, transport equipment, printing machinery, machine tools, electronic components, storage batteries, dry batteries, sugar machinery, cement machinery, railway equipment, transmission lines for electric power, hand tools, hotel industry, and fertiliser projects.

S.T.C.

Trade Team Signs Contracts

It was agreed that the two Governments concerned should encourage financiers and industrialists and investment institutions of the two countries to examine closely the possibility of industrial and financial co-operation for mutual benefit. The investment can be in both share capital and credits.

A trade delegation of the State Trading Corporation, headed by its chairman, visited East Germany, Czechoslovakia and Russia last month. In East Germany, it negotiated prices and the supply of fertilisers and the co-ordination of the activities of the representatives of the State Trading Corporation and private firms who participated in the Leipzig Fair.

In Czechoslovakia, the delegation sought to promote trade in chemicals, and in Russia, it negotiated the supply of fertilisers and the settlement of contracts for other items of exports and imports. Following this visit, contracts have been concluded by the S.T.C. with Messrs Bergbau Handel, Berlin (East Germany) for the supply to India during 1964, of 44,000 tonnes of ammonium sulphate and 63,000 tonnes of muriate of potash.

EMERGENCY INSURANCE

Schemes Modified

The Emergency Risks (Goods) Insurance Scheme and the Emergency Risks (Factories) Insurance Scheme have been modified so as to provide for the automatic extension of the policies already issued under these two schemes, by a further period of three months with effect from 1st April, 1964. No premiums will be charged and no fresh applications will also be necessary for the renewal of the policies.

As for property which becomes insurable for the first time on or after 1st April, 1964, applications should be made to the Oriental Fire and General Insurance Company, in the prescribed manner, but without Treasury chancery, for the issue of policies as provided for under the schemes. The question whether any premium should be levied in these cases at any later date will be decided at an appropriate stage, but for the time

being, no premiums will be due, and no payments should, therefore, be made.

AUSTRALIA

Trade Talks Held

The recent Indo-Australian talks held in New Delhi constituted the second round of consultations on matters of trade and economic co-operation between India and that country. As a result of the series of talks, the areas of economic co-operation have been identified and the possibilities of diversification and expansion of trade are being pursued. The third round of consultations is scheduled to take place in or around September 1964.

PYRITES

Project to Make Sulphur

The Pyrites and Chemicals Development Co. Ltd is examining a project for the production of elemental sulphur from pyrites ore. A process has been invented in Finland which is at present being studied.

The Company is also examining the global tenders for setting up a sulphuric acid plant in Sindri. The production of sulphuric acid from Amjhore pyrites ore is a separate project, and the proposed 400-ton plant will

meet the partial requirements of the Sindri fertiliser factory and the Bihar State superphosphate factory.

According to the present estimates, the plant is likely to be commissioned in early 1966. A project report on the mining scheme for the annual production of 240,000 tons of pyrites ore from Amjhore mines has been prepared by the Indian Bureau of Mines and is being considered by a

RAILWAYS

Progress of Electrification

On the Howrah-Delhi line, electrification from Howrah up to Kanpur has been approved and its extension up to Delhi is being investigated. The Howrah-Bandel-Burdwan sections on D.C. 3,000 volts and Waria (Durgapur) Gaya-Moghalsarai on A.C. 25,000 volts have already been electrified. On the remaining portions, namely, Burdwan to Waria

(Durgapur) and Moghalsarai to Kanpur and also on Saktigarh-Dum Dum (via chord)-Chitpur Yard, work of providing overhead equipment for the A.C. system is progressing. The following tables will show the probable date of completion of the various sections:

Orders for the freight type of locomotives have also been placed. But

through electric trains from Howrah to Kanpur can only be run at the end of the third plan. The names of the other sections which have been electrified since 1957 up to the end of February 1964 or expected to be electrified during third plan or early fourth plan, where work is in progress, are indicated below: (1) sections electrified up to February 1964

In Factories, Hospitals, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In factories sudden darkness can cause injury and damage to machinery. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actu-

al mains failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for factories, hospitals, schools, banks and public places.

Look what you get with
HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date

maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay. You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

CZECHOSLOVAKIA

Trade with India

Speaking at a Press conference last week, Mr. F. Ruzicka, vice-minister of the Czechoslovakia's internal trade said that India was now occupying third place in that country's foreign trade with the non-socialist States and that his country held the sixth place in the foreign trade of India. While in India his mission was able to select some consumer goods, suitable for the Czech market. Two members of his delegation would stay on for some time and finalise the negotiations about prices and sign contracts for the purchase of consumer goods worth several lakhs of rupees.

It was anticipated that contracts would be signed for the delivery of: all types of socks (nylon, cotton, etcetera), fully processed sueded, knitted ready-made woollen wear, woollen and cotton underwears, ladies' shoes, woollen knitting yarns, handkerchiefs, handicrafts and razor blades.

In the near future, the possibilities may be considered in such goods as poplins (shirtings), cotton mixed various artificial fibres, flannels, other kinds of knitted underwears, and socks, silk, juices and squashes, sardines, crab meat, spices, sport goods, like leather balls, hockey, etcetera, shoes, refrigerators, portable transistors and razor blades.

The Minister, however, added that Czechoslovakia was buying consumer goods from a number of countries. He found that the prices of some of the Indian consumer goods were above the world average. It might, therefore, be difficult to encourage their imports to Czechoslovakia. In accordance with India's policy of promoting exports, the authorities concerned should reconsider the export price value of this type of goods. In order to popularise Indian goods in the Czech market, the Czech Government has requested the Government of India to organise an extensive exhibition of Indian engineering and consumer goods in Czechoslovakia in 1965.

London

NO VALUE-ADDED TAX FOR BRITAIN

(FROM OUR LONDON CORRESPONDENT)

BRITAIN will not follow the Common Market in adopting a turnover tax or value-added tax on the French model. But there is a strong possibility that purchase tax may be extended to cover a wider range of consumer expenditure. This seems to be the most likely outcome of the report of the Richardson Committee on turnover taxation, which has just been published. The committee, appointed by the Chancellor of the Exchequer last year to look into the practical effects of introducing a turnover tax in place of either purchase tax or profits tax, comes down firmly against any change.

A value-added tax in place of purchase tax would not, it says, assist exports or economic growth. But it would involve a far greater administrative burden for both business and the tax authorities than the purchase tax either with its present or with an extended coverage. The committee also considers that "the balance falls positively against the substitution of a value-added tax for the profits tax." The substitution would be more likely to harm than to benefit the balance of payments and a worsening of this position would impede growth.

The advantages of changing to a value-added tax were discussed by the National Economic Development Council in its report "Conditions Favourable to Economic Growth," published last year. Supporters of such a tax have argued that it would provide a built-in incentive in exports and would strengthen the economy. In rejecting these claims, the Richardson Committee says it is satisfied that substitution of a value-added tax for profits tax would cause prices to rise. Business men would seek to recover a value-added tax in prices, but they do not regard the profits tax as entering directly into prices and would not expect its abolition to reduce prices. Higher prices would in turn lead to pressure for wage increases; the combined effect of wage and price increases would be likely to harm the balance of payments. The adverse effects, therefore, would be likely to outweigh any favourable effects of growth and economic efficiency. The committee discusses the claim that a value-added tax could be remitted on exports where profits tax may not. It concludes that, in the form the tax would be likely to take in this country, remission would count as an export subsidy and would run foul of our obligations to G.A.T.T. and E.F.T.A.

The committee also finds that companies are not more heavily taxed in the U.K. than in other countries. Although the nominal rates of tax have risen over the last decade, the effective burden on company profits has generally been reduced. This is because of the generous tax treatment of capital expenditure on new plant and machinery. The committee obtained evidence from leading firms, including Boots, B.M.C., Shell, I.C.I. and Unilever, about the way in which the tax substitution would affect their pricing policies, exports and imports, and investment decisions. Its conclusion is that a change would have no important effect on exports or investment and would not in practice

give any special incentive to business efficiency.

Comparing value-added tax and purchase tax, the committee says the arrangements by which French exporters are relieved of the tax are in practice very similar to the arrangements by which exports are relieved of purchase tax in Britain. Although there are differences in method and scope between a value-added tax and purchase tax, it says, they have the same basic purpose and both aim to tax consumer expenditure. The question is, therefore: which of the two methods is most suitable for use in this country? The committee's firm conclusion is that "purchase tax provides the more logical, efficient, and economical method."

The Richardson Committee has disposed of the idea that exports could be boosted, and economic growth encouraged, by a simple change in the tax system. A switch from purchase tax to a value-added tax was never a very promising idea. The committee shows conclusively that it would do nothing to help exports; against this it would be much more costly and troublesome to administer. (In France 277,000 businesses pay T.V.A. against 65,000 businesses registered for purchase tax in the U.K.)

In theory, there is more to be said for a T.V.A. as a substitute for profits tax. As long as prices did not rise by the full amount of the T.V.A., the change might benefit the balance of payments and stimulate economic growth and efficiency. But everything depends on how business would respond, and unfortunately, the committee was left in no doubt that the reaction of most firms would be to put prices up. Most of the business men who gave evidence said that they would regard a T.V.A. as a charge or cost to be recovered in higher prices. On the other hand, they did not regard profits tax as entering directly into prices and would not expect its abolition to reduce prices. This may not be wholly true; there is evidence that over the years companies have passed on increases in profits tax in higher prices, and that a permanently higher level of company taxation has come to be regarded as part of the cost structure. But there is not much doubt that a T.V.A. would be passed on far more speedily, in which case most of the advantages claimed would go by the board.

This is not the only place where the report suggests that business behaviour is less rational than one likes to think. The committee was told that export sales in general were made at prices which showed low margins on profits, and in some cases, losses. Moreover, witnesses said that export policy would not be affected by changes in the availability of after-tax profits on exports. The granting of money to promote exports would depend "on the merits of the case" not on increases in after-tax profits on sales.

Again, only three witnesses, when asked how they judged investment projects, said they looked principally at the return after payment of tax. The rest said they looked mainly at the pre-tax return. Although some of these said they had also begun to look at the return after tax. They regarded this as largely in the nature of a "second look." Witnesses justifi-

CAPITAL, 9th April, 1964.

fied this approach on two grounds: they felt it was the profitability of a project before tax which provided the financial motive to proceed with it, and if it proved successful, the profits provided the funds out of which to pay the tax. So much for "discounted tax flow" and other new-fangled methods!

Company Taxes Compared

A valuable by-product of the Richardson Committee's studies is to disprove the widely held notion that companies are taxed more heavily in Britain than in other countries. The point here is the way in which tax allowances on capital investment have eased the real tax burden. Thus, although the nominal rates of tax have increased from 50 percent on profits earned in 1954 to 53½ percent on profits earned in 1962, the committee is able to show that the effective burden of direct taxation on companies has fallen. Using estimates of "commercial depreciation made by the Inland Revenue", the committee calculates that the percentage of net company income taken in taxes has fallen from 49 percent in 1954 to 45 percent in 1962 for manufacturing industry; for the distributive trades, the percentage has fallen from 48½ percent to 47 percent.

This has come about largely because of improvements in the capital allowances and particularly the introduction of the investment allowance in 1954. The additional capital allowances provided in the last Budget will reduce the effective tax burden still further. On the percentage rate of tax, before allowances, Britain compares favourably with other leading industrial countries. The committee works out that the marginal rates of tax are: in West Germany about 57 percent, in both the United States and Canada about 52 percent; in France 50 percent. The rate in the U.K. is 53½ percent.

In addition, however, the cost of new plant and machinery is written off more quickly in the U.K. than in any of these other countries, except in Canada in the case of certain new machinery acquired within the next two years. The treatment of new industrial building compares favourably. There is also the point that in most of these countries dividends are taxed again in the hands of shareholders after company taxes have been paid. The committee produces striking figures to show how, if advantage is taken of the full allowances, little tax need normally be paid on profits earned by British firms on new plant and machinery in the early years of its life. A minimum of 91 percent of the cost is now written off for tax purposes in five years. How many business men have failed to realise this?

TAXATION AS A PERCENTAGE OF GROSS NATIONAL PRODUCT IN 1962

	Total Taxation percent	Direct Taxes percent	Social Security Contributions percent	Indirect Taxes percent
France	41.1	6.9	14.6	19.6
West Germany	41.0	15.6	11.6	13.8

Jute

THREAT TO CARPET-BACKING FROM SYNTHETIC GOODS

A SHARP and sustained increase in the demand for tufted carpets, especially in the U.S.A. and on the Continent, has led to an intensive drive for evolving a cheaper, lighter and regionally available material as a substitute for jute backing. World consumption of tufted carpeting in 1963 was around 235 million square yards, out of which the U.S.A. alone absorbed 192 million square yards. While the demand in other advanced countries is rising annually by 7.5 percent, North America's need for tufted carpeting may go up by about 70 percent by 1970. The sharper rise in the latter will be due to the steady increase in population and the present building boom in the U.S.A. New houses are springing up in that country at the rate of 100,000 a year.

The U.S. Jute Carpet-backing Council has stated that the tufted carpet-making industry considers jute backing to be most suitable. The Council feels assured that the jute industry has built up adequate wide-loom capacity to back up the expansion plans of the carpet-making industry. The jute industry has now only to convince the carpet makers that price stability and quality will be maintained. These two factors have helped carpet-backing cloth to become very popular in the U.S.A. during the last two years. The Council has urged Indian suppliers to be more particular about quality and price stability than anything else.

A well-known chemicals manufacturer in the U.S.A., Monsanto Chemicals Corporation, has already produced a 100 percent man-made carpet-backing material from nylon-reinforced foam, which may soon compete with jute as double-back. The material is likely to be marketed shortly under the trade name "Chemback". The competition from paper, as backing material, also continues, especially where the tufted carpets produced are of cheap quality. A backing material knit from kraft paper yarn is not only cheap but is also of lesser weight, with consequent saving in the cost of transporting the finished product.

Price Incentive to Growers

The hardening trend in the fibre market—both spot and forward—since February is a seasonal phenomenon arising from the gradual depletion of stocks with growers and stockists in the upcountry areas. The firm undertone is likely to continue during the remaining few months of the season. The marketable surplus, mainly of mesta and lower-grade jute, which will be available to mills until the arrival of the new crop, has been notationally estimated at around half a million bales.

The Jute Bulletin, published by the Indian Central Jute Committee, welcomes the modest rise in prices at sowing time since it offers an incentive to growers. From the industry's point of view, says the Bulletin, there is not much to worry about for quite some time. At the end of February 1964, I.J.M.A. mills had 2,505 million bales of fibre in their godowns, while those outside the I.J.M.A. had 150,000 bales. To these are to be added upcountry stocks and the undelivered balances in transit, together estimated at around 12 million bales. Thus, besides the J.B.S.A. stocks of 775,000 bales, mills have enough raw

material to maintain maximum production for at least five months more.

Discounting the belief that the present high prices of paddy and rice have made the cultivators unhappy about the return fetched by jute during the season, the journal does not expect any large drop in the acreage under jute and mesta during the coming season. Claiming that the 1963-64 crop was the first to have enjoyed a sustained and steady demand, it says that the compulsory monthly purchase quotas issued by the Jute Commissioner and the support extended by the State Trading Corporation in collaboration with jute co-operatives have enabled the bulk of the season's fibre to be marketed at or above the parity of the Calcutta floor price of Rs. 30 a maund, basis Assam Bottoms. The extensive price-support operations during the past two years have convinced cultivators that their produce will fetch them a fair and reasonable return. They are also aware that a high premium is available on fibre of good quality.

Preliminary reports say that with a few good showers in March, lowland sowing has been completed in Assam and Tripura. Sowing is also progressing in the northern districts of West Bengal and in parts of Bihar.

Specifications for Sugar Bags

The Indian Standards Institution has drawn up draft specifications prescribing the constructional details and other particulars of 112cm. x 67cm. (44in. x 26.5in.) A Twill jute bags for packing sugar. The details will soon be circulated for eliciting technical comments. Copies of the draft are available from the I.S.I. offices in New Delhi, Calcutta, Bombay, Kanpur and Madras.

Hessian for Wall Decoration

The ubiquitous jute fibre is now used to produce a fashion fabric for decorative wall covering in place of paper. The material is being increasingly used by the home furnishing

trade all over western Europe, including Britain. Furnishing firms in the U.K. are being supplied with a large variety of weaves and widths of hessian in a wide range of colours. Claimed to be non-fraying and easily washable, wall hessians are specially treated for fade-cum-rot resistance. The common width is 36in. But demand is growing for a still wider fabric, measuring up to 72 inches or more.

THE JUTE MARKETS

Manufactured Goods: Dull conditions prevailed in the Calcutta gunny market during the past week. The earlier enquiries from abroad failed to materialise into orders. The week's slender quota of completed business included Indian Government tenders for about 6,000 bales of B Twills for ready and April positions, scattered covering against the recent Argentine and American hessian deals, some due-date purchases and short- and shipper-covering of a routine nature. These could not maintain sentiment since quite a large number of mills emerged as keen sellers for all positions. Towards the close, they became reserved when prices dipped to uneconomic levels. The continuing deterioration in Calcutta port called for caution. The hesitant note in the recently published directors' reports of jute mill companies on the prospects for the current season was bearishly interpreted. Tired long liquidation and some bear-hammering in the futures market worsened sentiment. Fluctuations were narrow in the spot market and wide in the futures section. Turnover was moderate in the former and fair in the latter. The closing undertone was easier in both.

Wednesday's quotations were as follows:

	April	May	June	July-Sept.	Oct.-Dec.
40in. 7½oz.	34.10	34.20	34.25	34.40	34.25
40in. 8oz.	36.75	—	—	—	—

40in. 10oz.	46.80	46.25	45.30	46.45	46.29
B Twills	112.70	113.55	113.80	114.40	114.70
Cornsacks	115.75	116.00	116.25	116.50	116.75
Heavy Cees (Plain)	113.00	113.00	113.25	113.75	114.00
A Twills	134.00	134.25	134.25	135.50	137.00
Liverpools	128.25	128.00	128.00	128.00	128.00

Raw Jute: Easy conditions prevailed in the raw jute market during the past week. Despite a gradual decline in arrivals in the agencies to around 40,000 maunds a day, holders seemed to be worried over the indifference of the mills. The left-over fibre consisted mainly of lower-grade jute and mesta, in which mills were not interested. For the first time in many months small business was reported in Pakistani cuttings. Reports of well distributed rainfall in the northern districts of West Bengal, Tripura, lower Assam valley and in parts of Bihar combined with the delay in the issue of a fresh purchase quota by the Jute Commissioner caused a bearish reaction. A glut of offgrade stocks induced holders to sell at slightly lower prices. As a result, prices tended to soften for the better grades as well in the Calcutta and the upcountry markets. In the futures market, Upper Assam White Bottoms for June suffered a sharp setback in sympathy with the trend in the spot market and following tired long liquidation, combined with some amount of short-selling. Opening on a soft note, the price fell after wide fluctuations on alternate bouts of realising and bear-covering. Turnover was small in the spot market and moderate in the hedge market. The closing undertone was hesitant in both.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)	Current Prices	T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.

THE U.K. JUTE MARKETS FIBRE RATES REDUCED

(FROM OUR DUNDEE CORRESPONDENT)

ALTHOUGH the raw jute market was reported to be steady in Pakistan, some sellers here have reduced their prices. However, this made little difference to the lowest quoted rates, but there were now more sellers willing to accept bottom prices. Demand from Dundee spinners was small and of a very selective nature. During the first half of

March, the registered sales of raw jute to the U.K. were approximately 52,000 bales which was much larger than expected. This could mean that a portion of these registrations was still unsold to spinners in Dundee.

Reports concerning the new crop continue to be satisfactory with sowings normal for the time of year. As more rain has fallen in the jute growing areas, this could weaken prices for old crop fibre. Offers being made here was still irregular with the lowest rates at £143 for Mill Firsts, at £110 10s for Mill Lightnings, at

£97 for Mill Hearts and at £82 for Grade Hearts, c.i.f. U.K., for April-May shipment. Grade Tossa-2/3 was available at £125 and Grade Tossa-4 at £106 10s. Outport Tossa-2/3 was at £95 10s and Outport Tossa-4 at £84 10s, April-May.

Cuttings were steady at £60 for S.N.C. and at £52 10s for N.C. and offers are still rather scarce. Mesta was quiet and unchanged at £85 10s for A, at £75 for B, at £69 10s for C and at £50 for cuttings, c.i.f. U.K. for April-May shipment. There was no buying interest shown in Siam jute at present. Offers were being made

CAPITAL, 9th April, 1964.

at £79 10s for grade A, at £69 for grade B and at £65 10s for grade C. delivered mill Dundee for April-May shipment.

The Calcutta goods market was steady during the past week, and there was little buying interest shown by the Dundee Jute Control. Quotations are at 70s for 40in. 10oz. and at 51s 10d for 74oz. a 100 yards f.o.b. Calcutta for April-June shipment, at 70s 6d and 52s 4d July-September and at 70s 3d and 52s October-December. B Twills were at 173s 2d, 175s and 175s 7d for the respective shipment periods.

Jute spinners in Dundee were busy, but a large portion of the demand was coming from the carpet industry. Supplies of many descriptions can now be obtained for reasonably early delivery and spinners are not sold so far forward as previously. There is no change in prices.

The cloth position was rather quiet generally. Manufacturers of hessians would welcome more orders, although they are still running to full capacity. Supplies of wide cloth for carpet backing is only available for forward delivery; likewise cloth woven from stainless yarn. The heavy end of the trade is quiet and production of sackings has been reduced. The main lack of demand is for narrow sackings and so far, there are no indications of any improvement in the position.

IMPROVING THE EFFICIENCY OF THE U.K. JUTE INDUSTRY

A total of £13.8 million has been spent in the post-war modernisation of the Dundee jute industry, it was announced by Mr. William Low, retiring chairman, at the recent annual meeting of the British Jute Trade Federal Council. Of this sum, £11.2 million has been spent on machinery and equipment and some £2.6 million on buildings. Last year, the capital expenditure by jute firms in Dundee and district was £414,000, and a further £517,000 is due to be spent this year. A slackening of the pace of capital investment during the past two or three years, Mr. Low said, was a result of uncertainty over official policy. The level of expenditure for the future would be largely influenced by forthcoming Board of Trade decisions. The figures, he said, showed that in spite of restraints on expenditure, the industry was maintaining itself in good technical trim.

Mr. Low said that the jute trade had been passing through a period of adjustment to new trading conditions and to new patterns of production. The transition had been eased by the fact that they had been experiencing a time of high activity in most markets. They had not had for some years such a long and sustained level of demand and the reasons for this could be the replenishment of buyers' stocks after the scarcity of raw jute in 1961; the continued high level of activity among world buyers of many types of jute goods; the remarkable stability of the price of raw jute; and the determination of the jute trade to achieve a higher level of operational efficiency in order to exploit the favourable market conditions.

The British jute industry, Mr. Low said, had now been virtually forced out of the making of standard hessians by economic circumstances and Board of Trade action. It was now almost wholly geared to the production of high quality specialised products. Its competitive position, however, was affected by the extra cost of purchasing jute fibre at prices which were artificially raised by the discriminatory policies of the main jute-growing countries. This discrimination accounted for a large proportion of the level of protection given by the Board of Trade system to safeguard employment in the Dundee area.

CAPITAL, 9th April, 1964.

Commodity Markets

STEADY RISE IN INDIAN PEPPER PRICES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIAN pepper prices continued their upward spiral last week, with the week-end quotation from Cochin touching Rs. 385 a quintal for garbled ready and Rs. 416 for May and Rs. 377 for July deliveries. Trade circles were attributing this to encouraging advices from abroad, and also to active buying by Indian shippers. Sellers, it was said, were scarce. An element of speculation was also at play.

It is said that the market is now in the grip of bulls who are encouraged by the fact that the major share of the Indian crop has already been sold, and the holders of the balance are not in a mood to part with their stocks for unattractive prices. The absence of a competitor for India at present in the supply line is another encouraging factor. Singapore is not in a position to offer any substantial quantity at cheaper rates, and attract the foreign buyers. The position of Indonesia which is now handling its crop independently, is not clear. She is not, however, a problem for India at present.

In the meanwhile, there are reports that the stock position in the United States which is the largest buyer of Indian pepper, is not very comfortable, and America will have to buy from India to meet her requirements. The bulls in the market hold the view that the U.S. buyers will be forced to adjust their price ideas to Indian rates. Price movements in New York justify this feeling to a certain extent. New York quotation for black pepper (spot delivery) has gone up from 37 to 41 cents a lb within the course of the past two weeks. The week-end report from New York was that pepper market was ruling firm with a fair demand from grinders. However, one cannot be sure as to how long the American buyers will follow the upward movement in Indian rates. The possibilities for buyer resistance asserting itself after a certain stage cannot be ruled out. East European countries which together took over 50 percent of the total Indian exports so far this season are at present keeping away from the market, probably on account of the fact that Indian prices are going up and the present prices are above their ideas.

CASHEW

Active U.S. Buying

If the present trends are maintained, cashew exports from India are likely to make further improvement this year. Exports last year were a record at 53,400 tons, valued at Rs. 22 crores. Export figures for the first two months of 1964 are encouraging. Over 300,000 cases of processed kernels had been shipped from India during January-February 1964. The U.S.A. had taken 177,600 cases of 50 lbs each, Russia 34,900 cases, the U.K. 27,300 cases, East Germany 16,000 cases, West Germany 11,300 cases and Australia 6,400 cases among the importers of cashew kernel from India.

The U.S.A. was an active buyer in the cashew market recently. She is reported to have bought quantities at 56 cents a lb. Indian shippers are now demanding 57 cents, as against the American offer of 56 cents. Thus there is a disparity between Indian and American price ideas as in the case of pepper. There is said to be a lull in the demand from east European countries due to the disparity

in Indian demand and their price ideas.

Raw nut supply position is considered satisfactory at present. Imported nut from Africa is at present available at around Rs. 800 a ton. Indian nut which is moving into the market in larger quantities now is selling around Rs. 80 a quintal. The peak supply period of indigenous nuts begins this month. The Indian crop is officially estimated at about 90,000 tons, but the processors are of the view that this is very much on the high side. They are not prepared to place it at any figure beyond 70,000 tons.

With a view to making the country self-sufficient in cashew, the Kerala Government has been taking some measures, prominent among them being extension of cashew cultivation on Government lands. Under its cashew afforestation scheme, the Forest Department of the Kerala Government has cultivated cashew trees on 10,572 acres at a cost of Rs. 8.65

lakhs. Another measure is research. The research station which has been functioning in Kottarakara has been shifted to Anakkayam in Malabar. The research station is mainly concerned with methods for increasing production of cashew nuts. Besides advices on modern techniques of cashew cultivation, farmers can obtain better seeds and seedlings from this institute. Kerala is the premier cashew producing State in India.

COFFEE

Certificates for Exports

A system of issue of certificates of origin for all coffee exports from India will be introduced soon by the Central Government on a provisional basis. This is a sequel to the decision of the International Coffee Organisation taken in March requiring exports of coffee from 1st April, 1964, to be accompanied by certificates of origin. Fourteen chambers of commerce in Bombay, Madras, Cochin, Calicut, Mangalore and Tellicherry are authorised to issue the certificates. The International Coffee Organisation has laid down that importing countries will refuse to accept consignments after 1st June, if they are not accompanied by certificates of origin. This is one of the devices visualised under the International Coffee Agreement to ensure that the price of

coffee does not fall to uneconomic levels for the producer. India is a producer member of the agreement which was formed some time ago at the instance of the U.N.

India will be in a position to export more coffee this year than she did last year on account of a larger crop which is at present estimated at 62,000 tonnes, compared with 56,000 tonnes of the previous season. India exported 22,400 tonnes in 1963. She has been granted an export quota of 21,600 tonnes under the International Coffee Agreement. This quantity can be exported to the member countries of the agreement. India is at liberty to export anything in excess of this quantity to countries outside the agreement. India is one among the countries which have been asking for an enhancement of the quantity allowed. There were reports that the Coffee Council at its recent meeting had allowed a 5 percent increase over the original quota for some producer members including India.

The present position of the world market is such that export coffee will get a fairly attractive price. A larger earning on export will be beneficial to the growers. They can expect a larger return from the Coffee Board over the crop they have surrendered to its pool. Producers of coffee have been generally discontented at the gradual dwindling returns they have been receiving since 1957,

INT-6N2175

while the cost of production has been spiralling. The climax was reached in 1960-61 when the return to the grower had to be pegged at Rs. 2 a point which was substantially below the cost of production, according to the growers. Although the return was a bit higher in 1961-62 and 1962-63, it could not by any means be said to be adequate or appreciably above the increasing cost of production, the growers argue. The worst sufferers have been the very large number of small growers whose cost of production is invariably higher.

Pricing Policy

The robusta growers were having a complaint that they were being discriminated against. While Arabica plantation and cherry got ten and six bonus points, respectively, over and above the final return at Rs. 2.26 a point paid to growers of all types for the 1961-62 season's coffee, the robusta growers felt very much annoyed and believed that the Coffee Board had

let them down. The Board after taking their complaint into consideration had raised the points to robusta growers by three for peaberry, two for flats and three for whole crop cherry in the revised P.D.S. for 1963-64. Rates at which robusta has been selling both in the internal and foreign markets during the latter half of 1963 were comparatively high, the internal price ranging from Rs. 190 to 210 and the export price from Rs. 120 to 143. The increase has been proportionately more striking in the case of robusta, compared with other types. The carry-over of 1962-63 crop to 1964 was very small. The Board is expected to pay to the growers something more than what it did for the previous crop. This will be a relief to growers, more so for the robusta growers. The damage caused by frost and fire to the Brazilian crop and the poor African robusta crop during last season is said to be the reason for the upward trend in prices. If this were so, the situation is likely

to revert to the old once these producers get over the present difficulties. In the meanwhile, the Government of India has permitted the Coffee Board to increase the minimum release price of coffee, which has been maintained at Rs. 2.20 a point for a pretty long period, to Rs. 2.39 a point, with a view to allowing the grower an economic return.

TEA

Demand for Quality Grades

(BY A SPECIAL CORRESPONDENT)

IT is generally reasoned that good teas will always fetch remunerative prices and it is interesting to read some comments made by A. D. Neale of Messrs Forbes and Walker, an old established tea broking firm in Colombo, on price trends in Colombo.

To generalise on recent prices is indeed a difficult task, as although many producers can look back on 1963 as a financially successful year because of increased crop and a fair price level, many others are left in the position where, if a loss was not actually incurred, a small profit was made at the expense of maintaining or improving a property by way of replanting, manuring, replacing old and worn out machinery and similar items. How do some estates make a profit and others a loss? One has only to look at the net averages for the year to see that in the main, it is the midcountry and low grown estates which have had a difficult year, while the demand for high-grown tea has been generally good with a reasonably satisfactory price level maintained. The actual net average price for high grown for the year was Rs. 1.90 while medium and low grown were Rs. 1.54 and Rs. 1.53, respectively. The total for all teas sold in Colombo was Rs. 1.68.

Much has been said and written recently about over-production, and the steady decline in average prices for medium and low-grown teas over the past few years would seem to agree with the view that greater crops have definitely resulted in lower prices. Mr. Neale, however, makes it clear that there is no over-production of good tea in Ceylon irrespective of the elevation at which the estate is situated. One of the industry's great problems today is the producer who is content to harvest and market large quantities of plain tea at a very small margin of profit. In the production of many other kind of goods, this is considered to be "good business," but unfortunately, in the manufacture of tea it results in poorly made, inferior liquoring grades being offered for sale. Now the remedy would appear to lie with buyers, but it is an unfortunate fact that many parts of the world have now come to accept poorer grades to meet their market requirements.

As many other countries are also "churning" out this type of tea, Mr. Neale merely considers it a question of time before Ceylon with its high duties and costs finds itself outpriced and much of the tea may prove to be unsalable—or can be sold only at a discount. In addition, of course, the good name of Ceylon tea is also being harmed by the poor grades being distributed throughout the world. However, those estates that take care to produce well-made teas—undoubtedly at a slightly higher cost—will continue to meet with a worldwide demand at satisfactory prices.

NON-FERROUS METALS

Sharp Price Variations

OVER the last few weeks, there have been some surprising variations in the price of both tin and copper on the London metal market, with inevitable repercussions on base metals as a whole. World consumption of copper has been increasing, and demand has remained good in spite of the recent lifting of restrictions on supplies by producers. It now remains to be seen how long the producers will be able and willing to hold their selling price to long-term customers at £236 a ton.

As Commander H. F. Grenfell, Chairman of M.T.D. (Mangula) said in his annual statement the other day, any assessment of the future must allow for possible interruptions in production due to labour troubles and the effect of inflationary pressures on operating costs. Much will depend on the rate at which consumption continues to expand and the rate at which production capacity can be increased. But at present, the outlook for copper seems more promising than for some time.

The Bank of Baroda has been handling foreign business for many years. Today, the Bank has branches in London, East Africa, Fiji Islands, Mauritius and East Pakistan.

The Bank of Baroda through any of its foreign branches or its correspondents is fully equipped to offer all the services needed in foreign trade and to handle every type of foreign exchange business—including opening Letters of credit, the negotiation/collection of export bills, clean bills and cheques, foreign remittances, credit information, etc., and is always willing and prepared to assist you in solving your problems concerning imports, exports and foreign travel with prompt and efficient service.

COMPANY AND PUBLIC NOTICES

THE BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

THE Eighty-fifth Annual General Meeting of The Bombay Dyeing & Manufacturing Co. Ltd. will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay-1 on Wednesday, the 29th April, 1964, at 4-30 p.m. to transact the following business:—

1. To adopt the Directors' Report and the audited Balance Sheet and Profit & Loss Account for the year ended 31st December, 1963.

2. To sanction the declaration of a Dividend.

3. To appoint a Director in the place of Mr. Maneklal Premchand who retires by rotation, and being eligible, offers himself for re-appointment; and to consider and, if thought fit, to pass the following Resolution, of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company from some Members, and is hereby given to the Members:—

"RESOLVED that, pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Maneklal Premchand, who has attained the age of 74 years and who retires by rotation and is eligible for re-appointment, be and he is hereby re-elected a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."

[The relative Explanatory Statement under Section 173 of the Companies Act, 1956, is annexed to this Notice.]

4. To appoint a Director in the place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation, and being eligible, offers himself for re-appointment; and to consider and, if thought fit, to pass the following Resolution as a Special Resolution in respect of which Special Notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company from some Members, and is hereby given to the Members:—

"RESOLVED that, pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and is eligible for re-appointment, and who is an Executive and Officer of Messrs. Nowrojee Wadia & Sons (Private) Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

[The reasons which make the above Resolution necessary have been set out in the Explanatory Statement under Section 173 of the Companies Act,

1956, annexed to this Notice.]

5. To appoint a Director in the place of Mr. N. K. Petigara who retires by rotation, and being eligible, offers himself for re-appointment.

6. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

7. AND for the purpose of considering, and if thought fit, to pass (with or without amendment) as may be permissible, the following Resolutions as Special Resolutions and/or Ordinary Resolutions as specified below:—

(a) ORDINARY RESOLUTION

"RESOLVED that, pursuant to the provisions of Section 310 of the Companies Act, 1956, and subject to the approval of the Government of India being obtained, the remuneration payable to a Director of the Company be and is hereby increased from Rs. 100/- to Rs. 250/- for each meeting of the Board or of a Committee of the Board attended by him."

(b) SPECIAL RESOLUTION NO. I

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Bombay Ring Travellers Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company)—subject to any amendments as may be suggested by the Government of India and accepted by the Board of Directors of the Company and by Messrs. Bombay Ring Travellers Co. Ltd.—to be operative for a period of five years as from the date of this Meeting, unless determined previously by three months' notice given by either side to the other, in respect of the supply or rendering to the Company by Messrs. Bombay Ring Travellers Co. Ltd., of services by way of undertaking repair work and precision jobs of grinding, milling, etc. of castings and machinery parts in their Tool Room, and services of an ancillary or auxiliary nature as also in respect of services to be rendered to them by the Company such as hiring to them trucks belonging to the Company: subject to the conditions that the prices or rates to be paid by the Company shall be

reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. Bombay Ring Travellers Co. Ltd. shall be made within one month from the date of the supply or rendering of any service by the Company to Messrs. Bombay Ring Travellers Co. Ltd."

(c) SPECIAL RESOLUTION NO. II

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. Bombay Ring Travellers Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company) to be operative for a period of five years as from the date of this Meeting unless determined previously by three months' notice given by either side to the other, in respect of the purchases from Messrs. Bombay Ring Travellers Co. Ltd. of wire heads, rings and ring travellers, and other machinery, articles and things required by or useful for the textile industry which are manufactured and/or dealt in by them, and in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company; subject to the conditions that the prices of such products shall be reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. Bombay Ring Travellers Co. Ltd. shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. Bombay Ring Travellers Co. Ltd."

(d) SPECIAL RESOLUTION NO. III

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Government of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. N. S. Guzder & Co. Private Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company), to be operative for a period of five years as from the date of this Meeting unless determined previously by three months' notice given by either side to the other, in respect of purchases from Messrs. N. S. Guzder & Co. Private Ltd., of kapas, cotton and cotton seeds, and such other goods required for the textile industry in which they trade or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company; subject to the conditions that the prices of such kapas, cotton and cotton seeds, and such other goods as aforesaid shall be such as are reasonable and/or approved of by the Directors of the Company and that all payments to be made to the Company by Messrs. N. S. Guzder & Co. Private Ltd. shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. N. S. Guzder & Co. Private Ltd."

(e) SPECIAL RESOLUTION NO. IV

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company and Messrs. N. S. Guzder & Co. Private Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company)—subject to any amendments as may be suggested by the Government of India and accepted by the Board of Directors of the Company and by Messrs. N. S. Guzder & Co. Private Ltd.—to be operative for

(f) SPECIAL RESOLUTION NO. V

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Gov-

a period of five years as from the date of this Meeting unless determined previously by three months' notice given by either side to the other, in respect of the supply or rendering to the Company by Messrs. N. S. Guzder & Co. Private Ltd. of service as shipping, clearing, forwarding and transport agents, and other services ancillary or auxiliary thereto as also in respect of services to be rendered to them by the Company, such as hiring to them trucks belonging to the Company; subject to the conditions that the prices or rates to be paid by the Company shall be reasonable and/or approved of by the Directors of the Company, and that all payments to be made to the Company by Messrs. N. S. Guzder & Co. Private Ltd. shall be made within one month from the date of the supply or rendering of any services by the Company to Messrs. N. S. Guzder & Co. Private Ltd."

ernment of India being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initiated by the Chairman, purporting to be between the Company and Messrs. G. Claridge & Co. Ltd., Bombay, (who are or may be deemed to be 'associates' of the Managing Agents of the Company)—subject to any amendments as may be suggested by the Government of India and accepted by the Board of Directors of the Company and by Messrs. G. Claridge & Co. Ltd.—to be operative for a period of five years as from the date of this Meeting unless determined previously by three months' notice given by either side to the other, in respect of Messrs. G. Claridge & Co. Ltd. rendering services by way of any work of or in relation to printing, embossing, engraving, etc., of, and supplying, stationery, labels, forms, certificates, coupons, folders, books, cartons, calendars, and other ancillary jobs, subject to the conditions that the prices or rates to be paid by the Company shall be reasonable and/or approved of by the Directors of the Company."

(g) SPECIAL RESOLUTION NO. VI

"RESOLVED that the Articles of Association of the Company be and are hereby altered in the manner following:—

(a) In Articles 15, for the words "or (upon paying Re. 1/- in respect of each certificate) to several certificates", the words "or to several certificates either without payment of fees if the Directors so decide, or on payment of such fees (not exceeding Re. 1/- for each certificate) as the Directors shall prescribe", shall be substituted.

(b) The existing Article 54 shall be substituted by the following Article:—

54
Fee on
Transfer or
Transmission.

(1) The Directors shall have discretion (which they may exercise from time to time and for any period of time) not to charge any fee in respect of the transfer or transmission of a share.

(2) Subject as above, a fee not exceeding 25 naye paise per share may be charged in respect of the transfer or transmission to the same party of any number of shares of any

class, subject to such maximum on any one transfer or transmission as may from time to time be fixed by the Directors. Such maximum may be a single fee payable on any one transfer or one transmission of any number of shares of one class, or may be on a graduated scale varying with the number of shares comprised in one transfer or may be fixed in any other manner as the Directors in their discretion may determine, generally or in any individual case."

The Explanatory Statement under Section 173 is annexed in respect of the above Resolutions.

The drafts of the contracts referred to in Special Resolutions Nos. I, II, III, IV and V are open for inspection by any Member at the Registered Office of the Company on all working days from 10.30 a.m. to 1.00 p.m.

STOCK MARKET REFORM: SOME PERFUME FOR THE CORPSE

SHARE prices in the stock markets have dropped sharply since the Central Budget for 1964-65 was presented by the Finance Minister, Mr. T. T. Krishnamachari, on the last day of February. The first reaction to the Budget was a mixture of anxiety and hope. But, subsequently, investors have found that many of the tax proposals are likely to be highly damaging for companies in general, and for the stock markets in particular. The first proposal which has worried investors is the one for levying a tax of 7½ percent on the amounts distributed as ordinary dividends; it is feared that, with this levy, it will be difficult to maintain, let alone increase, the returns on equity capital. Secondly, the idea of imposing a capital gains tax on shareholders who receive bonus shares, is considered extremely unjust—especially since the tax is to be imposed regardless of whether or not the capital gains are actually realised. The move, it is feared, will compel shareholders to reject any proposals for bonus issues which their companies might wish to make: in that way, the growth prospects for equities will suffer. Thirdly, it appears that the tax burden on many companies, described as those in which "the public are not substantially interested", has been greatly increased: in this group, it is said, fall many highly efficient and well managed concerns whose shares have long been considered as blue chips in the markets. Fourthly, among the worst features of the taxation proposals is the fact that many of them take effect retrospectively. It is extremely unjust to penalise shareholders or taxpayers for decisions which they took during the past year and which they now find are going to increase their tax liabilities sharply.

Perhaps the best index to the state of the stock markets is to be found in the fact that not only have the older shares dropped substantially, but the fall in the newer ones has been even sharper. A large proportion of the shares issued by new companies in recent years are now quoted below par. Most of the new issues floated since the Budget was presented have proved far from successful: even after the use of special "persuasion" to secure subscriptions, a substantial proportion of such issues have been left in the hands of the underwriters. While investors and speculators have stayed out of the markets, some support has been forthcoming from the Life Insurance Corporation and the Unit Trust of India. Nevertheless, the downward trend has continued because, with the lack of buyers, even small offers tend to reduce prices disproportionately. Not for a long time has the turnover been as poor as in recent weeks. The business has centred mainly on clearing shares, and in that section too operators have been inclined to take their profits at the first opportunity.

Although the stock markets are nearly dead, it is some consolation perhaps to find that ways are meanwhile being devised to perfume the corpse by improving their mechanism and their basic structure. Of particular interest in this context are the directions issued to the stock exchanges

by the Stock Exchange Division of the Department of Economic Affairs in the Central Finance Ministry. The purpose of the proposals

holders well in time, their transit to the company concerned may be delayed by factors beyond the control of the shareholders. Although most of listed companies generally exercise their discretion and take steps to transfer shares provided the transferees co-operate and complete all formalities, it has been recommended that listed companies should take as sympathetic a view as possible in this matter in order to ensure that bona fide investors do not suffer.

In recent years, the ownership of companies has tended to broaden, and shareholders are often widely dispersed all over the country. But some companies issue dividend warrants which are payable only in particular centres, so collection commission has to be paid by shareholders who do not live in such centres. This tends to discriminate between investors residing in different parts of the country. Listed companies have, therefore, rightly been asked to make their dividend warrants encashable at as many centres as practicable. It has also been recommended that listed companies should announce their dividends before the actual closure of their transfer books. There is at present generally a time-lag between the commencement of the closure of books and the announcement of the dividends. The delay gives rise to unnecessary difficulties and complications when shares are delivered in the market after the closure of the transfer books; they have to be settled on an ex-dividend basis since the cum-dividend buyers cannot register the shares in their names in time to get the dividend direct from the company.

Under the by-laws of the stock exchanges, a provisional deduction is made from the purchase price on the basis of the last dividend declared by the company in case the new dividend is not known before the closure of books. When the dividend is actually announced, and if it is different from the last dividend, the difference is adjusted between buyers and sellers. Apart from the unnecessary clerical work involved, the differences have to be recovered, and there is a risk that the buyer or the seller may refuse or become unable to pay the difference he owes. If the dividends are announced before the closure of the transfer books, the difficulties can be surmounted. Furthermore, listed companies are required to give the stock exchanges information concerning dividends, bonus and rights shares, etcetera, immediately after any decision has been taken by the directors. The idea is to prevent anybody from taking undue advantage of prior information. Companies, therefore, need to bear in mind that such information should be communicated to the stock markets during business hours.

Last, but not least, is the recommendation of the Stock Exchange Division that listed companies should issue periodical progress reports to keep their shareholders informed of the latest developments. If information concerning production, output, sales, labour relations, expansion programmes and similar matters is released to shareholders from time to time, it will help them to make sound investment decisions. It will also help promote a closer relationship between shareholders and their companies. One important reason why shareholders do not take much interest in their companies is that they are often not told about significant developments. A common practice in this country is to give shareholders flimsy information once a year through the medium of a directors' report submitted along with the annual accounts of the company. The two private steel companies issue monthly figures for production and despatches, and many plantation companies issue periodic reports. Other companies cannot have any special difficulty in communicating similar information through frequent reports. It is a poor defence to say that the disclosure of information will help trade rivals. The publication of periodic and detailed reports is obligatory for listed companies in the U.S.A. In other progressive countries too, managements consider it a duty to keep their shareholders informed about the latest developments in their companies.

Presiding at the annual general meeting of the Calcutta Stock Exchange Association recently, Mr. C. L. Jhunjhunwala mentioned the various measures which have been adopted to educate the members of the Calcutta Stock Exchange in in-

vestment matters through the medium of publications and study circles. In spite of these welcome efforts, it is generally felt that the investing public does not receive advice and service of the quality expected of the members of the stock market. It is time greater attention were paid to improving the public image of the members. The authorities could evolve a regular educational course which members of the exchanges would have to undergo. The need for education and training has become greater since investment problems became more and more complicated.

HEAVY ENGINEERING BUNGLE

TO build a heavy engineering industry may seem a sound idea in a country which hopes one day to become "the workshop of the East". But leaving export ambitions apart, India's own internal requirements are growing so rapidly that indigenous manufacture is both necessary and economically feasible in several directions. Machinery and equipment already account for a third of the import bill. As industrial growth gathers momentum, the demand for capital goods will inevitably increase; this will throw a heavy burden on the balance of payments unless some part of the rising demand can be met from within the country. The logic of India's import-saving strategy of development thus is broadly accepted. No country, least of all one that has barely started on the long road to industrial maturity, can aim at self-sufficiency in technology and, by inference, in capital equipment. To do so would deny it one of the major advantages of a late start by cutting it off from the progress being made in the world outside.

In this light, the decision made at the start of the second plan to set up a chain of heavy engineering units was essentially sound. The Government invited two missions—one from Russia and the other from Britain—to help formulate a broad plan. The British mission, guided admittedly by the traditions of the U.K. engineering industries, proposed four units to do the job that the Russians wanted done in one plant. Both missions proposed separate units for coalmining machinery, with Russia suggesting a considerably larger unit than the British had in view. A technical committee of eminent Indian engineers, headed by Sir Jehangir Ghandy, came out strongly in favour of accepting the British proposal, but New Delhi thought it knew better. It rejected the recommendation and decided to accept the Russian scheme. The reasons were never explained, but presumably the Russian emphasis on forcing the pace of industrial development appealed to the Indian policy-makers. They forgot, however, to take into account the entirely different circumstances of India in the mid-fifties from those of Russia in the mid-thirties.

But worse was still to come. India decided to go one better than her mentor. The Russian mission specifically recommended that the heavy machine-building plant should confine itself to an initial capacity of 45,000 tons and go beyond it only when production had been fully and firmly established. The original contract was signed in August 1959 on this basis, but a year-and-a-half later the Indian Government decided to telescope the second stage with the first and proceed from the start on the basis of 80,000 tons. Simultaneously, it was decided to enlarge the captive foundry-forge next door to the machine-building plant in Ranchi, to keep it in step. The coal-mining machinery scheme was also revised about the same time to raise its initial capacity from 30,000 tons to 45,000 tons, against the advice once again of the Russian mission.

The delays that resulted from the precipitate change in the design concepts of the plants were already well known, but an official, fully documented record is now available for all to see in the report that the Estimates Committee of the Lok Sabha has just published. The Heavy Engineering Corporation, the public-sector agency handling these projects, and the responsible Ministry, claimed most unconvincedly that the change had not resulted in either delay or infructuous expenditure, but the plea is discussed by the Committee on the strength of the evidence it collected. In the case of the machine-building plant, working drawings for the shops and equipment foundations were to be received between July 1961 and July 1962. Be-

cause of the change in scale, modifications were necessary to the drawings which started to come in June 1961 and "have not yet been completed". There was a similar delay of two years in the coal-mining machinery project and also in the foundry-forge, the net effect of which is seen in the dates now being quoted for bringing these units fully into operation.

HEAVY ENGINEERING BUNGLE

The coal-mining machinery project is expected to be in full production in 1968-69 and the Ranchi units by 1970-71. In other words, it will have taken 13 years or 14 years from the time the first contracts were signed to get to this stage, during which the investment made in the plants will go unrewarded. The inexcusably long lag imposes other penalties also, as the Corporation's unfortunate history makes clear. Machinery shipped out according to the original programme has been lying idle since 1961, with obvious danger of damage during storage, as was underlined by the fire last January, which affected 100 packages of equipment costing Rs. 45 lakhs. What is worse, performance guarantees given by the suppliers are invalidated if actual trials are postponed beyond the period stipulated in the contract—18 months from the date of shipment in the case of Russian equipment for the machine-building project. The Corporation has tried to overcome this difficulty by re-negotiating the terms of guarantee, but even with the best will in the world, no supplier will indemnify a customer against the deterioration of equipment in storage.

The lessons to be drawn are fairly obvious. The decision to go the Russian way was bad enough, but it was made worse by the Chinese-style economic adventurism of attempting to run before learning to walk. One hopes that the lesson has been learnt in New Delhi, but one cannot be too sure because of the reports now circulating in the Press that some Planning Commission luminaries have been thinking of further expansion in Ranchi to increase the supply of metallurgical equipment to meet an estimated annual requirement of 300,000 tons a year by 1970-71. Others favour starting another plant, but mercifully as a separate entity in another location. Both lines of thinking show that the fallacy of equating heavy industry with mammoth plants persists, despite the evidence to the contrary from such countries as Britain, West Germany and France. Economies of scale are undoubtedly important, but in units intended to do general jobbing work, like the machine-building unit in Ranchi, the optimum level of operation is fairly elastic. Tailor-made equipment, built to individual specifications, does not lend itself to assembly-line methods, although an endeavour may be made to get enough repeat orders to spread the cost of jigs, fixtures and tooling. The maximum size and weight of pieces machined or processed in the shop will tend to determine the capacity and number of machine tools and equipment installed. This in turn will decide the scale of operation at which the plants can hope to break even. But there is nothing at all to prevent a unit from adding to its range as it goes along. In India's situation, where the need and pace of expansion are fairly determinate, this will involve making arrangements in advance for additions to capacity by providing space in the layout and by gearing utilities to the long-range targets.

The usual practice, where the discipline of profit-making sets inexorable limits to plant designers' ambitions, is to start at the lighter end with small capacity and work one's way up to the heavier ranges. This offers the added advantage of allowing time to train skilled cadres—a consideration which should be extremely important in India's case—and for establishing healthy traditions with-

Investment decisions nowadays call for a fairly high degree of specialised knowledge. Unless a broker has the talent and the training to understand investment problems, he cannot give his clients the correct advice. The stock markets should also consider starting compensation funds to reimburse investors in case any member of a stock exchange defaults. Such a fund would stimulate investment; the London Stock Exchange has found it to be an important factor contributing to the great esteem in which that institution is held by the investing public.

in the unit. One can indeed force the pace as the Russians did during the 'thirties, but one should then prepare oneself in advance for the bungling and failures, and the high costs which had to be paid. In the Russian case, the conditions of isolation made a forced march a necessity, which in turn gave the effort a certain discipline. Since India's circumstances are different, it is not surprising that the country should find it impossible to emulate that discipline even if one presumed that it wished to do so.

Gentlemen who forgot to plan for roller and ball bearings and electric motors needed by the heavy machine-building project—to name only two of the countless completing items required for the

LOOSENING TRADE BONDS

THE opening of the U.N. Conference on Trade and Development in Geneva coincided with the publication of figures that showed significant changes in the direction of Britain's trade. The U.K. Board of Trade summarised thus the changes in the pattern of Britain's exports during the three months from December to February, compared with the preceding three-month period. Exports to the sterling area increased by 2 percent, the increase being particularly prominent in the case of Australia. Exports to the European Common Market decreased by 2 percent, and the decrease was particularly noticeable in the cases of West Germany, France and Italy. Exports to the European Free Trade Association increased by 13 percent, and the increase was prominent in the case of Scandinavia. Elsewhere, including the dollar area, no appreciable changes were recorded. The significant figures, obviously, are those for European trade. Only the reductions in internal tariffs in the two west European blocks can explain the sharp divergence of trends. Until recently, British exporters were very successful in the Common Market and comparatively neglectful of the Free Trade Association. But as a consequence of the tariff reductions, the products of Common Market countries (particularly West Germany) have been substituted for British goods in the Common Market and British goods have been substituted for products of Common Market countries (particularly West Germany) in the E.F.T.A. Trade has been diverted not only by the actual changes, but also by the expectation of future changes, in relative prices.

The E.C.M. is, of course, a much bigger economic group than the E.F.T.A., and the trend of its import policy, as revealed at the Geneva conference, will be watched rather anxiously. The idea that the lowering of tariffs within the E.C.M. was necessarily a move towards free trade, in a general sense, has already been revised. Although outside suppliers are certainly not excluded, the E.C.M. has naturally tended to conduct more of its total trade within itself and its associated territories. The U.K. figures provide new evidence of this tendency. However, regional groupings can promote trade if their policies are outward-looking. The U.K. policy in Geneva is not concerned particularly with the Free Trade Association of the sterling area. Both Britain and the U.S.A. are trying to persuade the Common Market countries to accept more imports from the underdeveloped countries generally, and both—in principle at least—are willing to do likewise. In the opening phase of the conference Mr. George Ball, U.S. Under-Secretary of State, said that the industrial countries as a group should reduce import duties on, and other impediments to, the products—primary, processed, and manufactured—of the developing countries as a group, and that they should not ask for reciprocal benefits. Enlarging the outlets for these countries' developing export industries is an essential element in the Anglo-American policy for assisting their development in general; whereas French policy seems more inclined to provide compensation for maintaining restrictions on trade.

It was, of course, known in advance that the Geneva conference would be concerned more with relations between the developed and the developing countries than with relations between groups of developed countries, but it is not in practice feasible to keep the two concepts entirely separate. The principle of regional grouping is involved in

plant to function at all—may suffer the ignominy of transfer, made the less unbearable usually by a promotion, as in one recent case. Others whose neglect contributed to a highly damaging fire may have their conduct looked into, but it is a safe guess that no one will have to face the Indian equivalent of Siberia. But then these lapses fade into insignificance when one considers the much larger loss the country has sustained because of the wrong-headed adventurism which underlies the whole approach to these important engineering units. Since the blame for this must be laid, according to knowledgeable sources, at New Delhi's tallest door, the search for culprits is likely to be totally unrewarding. *Quis custodiet ipsos custodes?*

the discussions; and it may be considered necessary to promote this principle in the developing countries, because some of them are not economically viable alone. One idea that has already emerged from the conference is that positive assistance must be related to a country's potential. The Americans, particularly, are now emphasising that development involves not only beneficence on the one side and national pride on the other, but also practical economics. They wish to promote in development areas a political and economic "climate" congenial to private capital. Bigger groupings, in which duplication of capital projects is avoided and the market for products is wide, are

MARKETING BOARD FOR SUGAR

THE Central Government's move to establish an all-India sugar marketing board has given rise to understandable resentment in the sugar industry. Although the final shape and functions of the Board are not yet known, it appears that it will take over the distribution of the commodity with a view to exercising centralised control over its price and distribution. The existing channels of distribution—the State Governments, licensed wholesalers and retailers—may, however, continue. It is obvious that a marketing board thus conceived may be a procedural innovation, even an improvement, but its usefulness in improving supplies to consumers is dubious. The main problem facing the country today is the shortage of sugar, and the Marketing Board can do precious little to alleviate the shortage. Indeed, its operations can be a positive deterrent to larger production.

The industry's basic argument against the Sugar Marketing Board is that it will perpetuate controls. During its chequered history, the industry has seen that controls have invariably stifled consumption and production. At the same time, the *gur* and *khandsari* producers, who are not subject to controls, have flourished at the cost of the sugar mills. Decontrol and incentives, in happy contrast, have always stimulated production and facilitated the lowering of prices. At present, hardly 25 percent of the total cane output is processed into sugar, while as much as 60 percent is converted into *gur*. The perpetuation of price and distribution controls on sugar, without at the same time imposing such restrictions on the *gur* and *khandsari*, will permanently impair the ability of factories to attract cane supplies and also arrest the industry's development. In fact, the country has already lost a considerable amount of sugar this year because of the diversion of cane, the likely output for the season being just about 2.6 million tonnes, against the target of 3.3 million tonnes. The Government ignored the industry's request for selective controls, which might have enabled the factories to attract more cane, at least towards the end of the crushing season. Under this scheme, the mills would have been free to sell their production in excess of last year's output in the open market, and thus could have taken the normal business risk of paying more for their cane.

The second, and perhaps more important, danger in perpetuating controls is that the industry's expansion will be retarded. The Government, in fact, belatedly recognised that because

an important element in this concept. Such ideas are controversial, and it is no secret that Mr. Ball's preliminary statement caused disappointment, even consternation, among some developing countries' representatives in Geneva. But many of the smaller developing countries have already shown themselves willing to merge their interests with their neighbours'.

To ignore the interests of private capital is, indeed, unrealistic, for the developing countries' need of imported capital is much too big to be satisfied by international institutions. But encouragement to private capital must come from countries that provide it as well as from those that receive it. The principle whereby development capital is insured by the Government of the country that provides it is already widely accepted, and this principle could be more widely applied. And, of course, the active participation of the developed countries is essential for commodity stabilisation schemes, which are now widely favoured as a means of assisting the primary-producing countries. What has often been lacking in such discussions is a central theme. Some observers feel that Mr. Manubhai Shah, Indian Minister of International Trade, introduced it in Geneva when he proposed that the General Agreement on Tariffs and Trade should be enlarged to become completely global, and that all regional preferential tariffs should be merged in a non-discriminatory preferential scheme. The intrusion of national, regional and ideological discrimination into affairs of trade may be helpful in promoting either trade or development.

of controls, the development of many vital industries had been arrested, and so decontrolled the prices of several commodities towards the close of last year. In the case of key industries like coal and cement, controls have discouraged investment and diverted funds to less important fields. It is surprising that in spite of these lessons, efforts are being made to clamp controls on a permanent basis on sugar. As things stand, the industry has no influence over as much as 80 percent of the total production cost, since the price of cane accounts for about 45 percent and taxes for 35 percent. Of the remaining 20 percent, 18 percent has to be allocated for wages and salaries (which have been fixed by the Sugar Wage Board), repairs, renewals and interest. This serves to show to what extent the profitability of the industry has been restricted and how difficult it is for it to attract capital. The Indian Sugar Mills Association has in a representation to the Government of India pointed out that the operations of the Marketing Board will affect the future expansion of the industry. This is particularly significant in the context of the production target of 3.5 million tonnes for 1965-66 and 4.5 million tonnes for the fourth plan.

From the consumer's point of view, it is doubtful whether the Marketing Board will be useful. It is unlikely to improve the mechanism of distribution and ensure the availability of sugar at fair prices to consumers. The present scheme of controlling ex-factory prices and the distribution of sugar through the State agencies is likely to continue. If the scheme has been found to be unsatisfactory, it is difficult to see how by the interpolation of a new agency it is going to improve, particularly when the weaknesses of the existing system remain intact. An enduring solution of the sugar problem lies in stepping up the output of the commodity. This cannot be achieved merely by increasing the output of cane or by improving its quality. An equally important measure is to prevent the diversion of cane to *gur* and *khandsari* production.

WEST BENGAL POWER SHORTAGE

THE power shortage in West Bengal has been so acute in recent years that it is difficult to visualise a time when supply will equal demand. Yet the Central Minister for Power and Irrigation, Dr. K. L. Rao, assured Parliament recently that

with the measures already being taken, the State will be self-sufficient in power by the end of 1965. The Minister's statement was brief and the factual basis for it was left unexplained. Consequently, it has failed to carry much conviction. On the other hand, West Bengal's Finance Minister, Mr. S. K. Mukherjee, clearly indicated in the course of his recent Budget speech that in spite of the measures which have been taken, the power shortage in the State is unlikely to disappear by the end of the current plan, although the present wide gap between supply and demand will be narrowed.

It may be useful to take a look at the facts. Realising that the demand for power was rising rapidly because of industrial development in the State—a fact confirmed by the Sachdev Committee which investigated the power needs of the eastern industrial region—the State Government raised its third plan provision for electricity from Rs. 48.00 crores to Rs. 79.50 crores. In terms of a quantitative assessment, the Sachdev Committee had indicated that West Bengal's power requirements by 1965-66 would be about 1,184 MW. Since the Committee's report, fresh developments led to a reassessment of the estimated demand at 1,219 MW a year by 1965-66. This means a deficit of 596 MW, taking all possible sources of supply existing a couple of years ago. To meet this obviously large deficit, the West Bengal Government took measures to create extra capacity of 788 MW within the State, capable of supplying 545 MW of firm salable power by the end of the third plan. Even so, a gap of 51 MW was left uncovered.

But the situation might actually turn out to be much worse than the State Government had expected. The State Electricity Board's Bandel project, it is rumoured, might not be able to go on stream as scheduled. This project is designed to produce 330 MW of electricity a year, and if the original schedule is kept, the first unit is due to be commissioned by the end of this year. Thereafter, the remaining three will be brought into production at intervals of one month. This is the most important of the power projects under the State's third plan, and it would be a pity if work is hampered by factors such as the recent labour trouble there. But even if it goes through as scheduled, Bandel power alone will not bridge the whole gap. The West Bengal Government's other major project for a 150 MW plant in Durgapur has little chance of materialising by 1965-66. The Planning Commission has already cleared the project, but the Central Finance Ministry, for some curious reason, is yet to sanction the foreign exchange expenditure. It is sad to think that Mr. Krishnamachari's Ministry is being so parsimonious about a vital project in a highly industrialised State. As the West Bengal's Finance Minister observed in his Budget speech, "delay in releasing foreign exchange for this unit will lead to a shortfall in the projected power generation and a corresponding shortfall in power supply by the end of 1965-66." It is not clear from what other source Dr. Rao will be able to produce this amount of energy if the Central Finance Ministry takes longer to sanction the foreign exchange required or does not release foreign exchange at all.

The Central Ministry's attitude has even more serious implications for the State's power plan for the next quinquennium. The Power Survey Committee appointed by the Centre has estimated that the load demand for power in West Bengal at the end of the fourth five year plan would be 2,200 MW. Accordingly, the State Government must provide for production facilities for an additional capacity of 1,100 MW, assuming that all the third plan schemes materialise. (In view of the delay over the 150 MW unit in Durgapur, a larger additional generating capacity will have to be provided for.) West Bengal is, of course, ready with the schemes which would raise the production potential to 2,200 MW by the end of the next plan, and these include a super thermal power station in Santhaldih of 1,050 MW capacity, a further extension of the Durgapur plant by 300 MW and extension of the Bandel plant by 150 MW. This would call for an investment of Rs. 200 crores, a large proportion of which will have to be spent in foreign exchange, although the heavy electrical plant in Bhopal might be able to supply an appreciable part of the equipment needed. The State Government will obviously have to fall back on the assistance of the Centre.

It is, however, unlikely that the Central Government will then be able to distribute its aid

more freely than it does now, even assuming that the desire to help is not hampered by such bureaucratic delays as now hold up the progress of the Durgapur power project. Dr. Rao is right in thinking that the planning of electricity production and distribution should hereafter be done in terms of regions (and eventually of the country as a whole when the regional power grids are interlinked through a national super-grid) rather than for States separately. Curiously enough, West Bengal was hostile to this idea. It based its opposition to the establishment of an electricity board for the eastern region on the spacious ground that the autonomy of State electricity boards might thereby be compromised. The attitude was in strange contrast to its free call on the Centre for financial aid. However, now that a power grid will be constructed for the States of Bihar, Orissa and West Bengal under the auspices of the newly established electricity board for the region, West Bengal should plan for power

in co-operation with the other two States. Orissa, for example, has a vast electricity potential waiting to be tapped. The Talcher thermal power station and the projected hydro-electric scheme in Tikkerpara in that State will be capable of producing energy much in excess what Orissa can consume in the foreseeable future. Dr. Khosla, the present Governor of Orissa and an eminent engineer himself, has calculated that hydro-electricity from the projected Tikkerpara station will be much cheaper than thermal power even from the Talcher plant. Although that may not be so relevant from West Bengal's point of view, this State should certainly consider the proposition seriously that electricity carried through high voltage transmission lines is likely to be a better economic proposition than setting up expensive new plants. Perhaps the Energy Resources Committee, which is now making an assessment of the power problem for the country as a whole, is already seized of the matter, and will in course advise the States what the best course of action is.

Current News and Comment

Reorganising the Planning Commission

Reports from New Delhi suggest that the reorganisation of the Planning Commission is once again on the agenda. This should cause little surprise because some of the disappointment with the poor execution of the plan is bound to rub off on to its author, which is the Commission. Opening the Indian Science Congress a few months ago, Mr. Nehru felt obliged to give the body, his brain-child more than anyone else's, a severe reprimand. He alleged that the Commission had strayed from its original purpose to become another soulless, bureaucratic machine duplicating the hierarchical structure of the Secretariat. But this particular failing, one should imagine, is capable of correction without altering the character of the Commission—a view which inclines one to think that the immediate motive for reorganisation is altogether different. Many wonder whether it has something to do with the fact that the head of the Commission is no longer a ranking leader of the ruling Party, but an outsider—the erstwhile leader of an opposition Party in fact—who got the job not because of his political standing but as a "technocrat." It is no secret that Mr. Asoka Mehta, in his rôle as technocrat, has views which are closely in accord—perhaps to a surprising degree—with those of another technocrat who heads the Finance Ministry. Both have seemed to act together and, what is more, spoken in concord on such tricky issues as the rôle of private foreign investment. One assumes that the identity between the two has been mutually helpful *vis-à-vis* the unconverted, all of them mere politicians. Yet the assault on the Commission's prerogative has come strangely enough from the Finance Ministry. Is it that Mr. T. T. Krishnamachari finds presiding over the Finance portfolio not sufficient to absorb his undoubted talents and is looking, therefore, for new areas to annex?

Mr. Krishnamachari's ambitions may indeed be one factor behind the assault (which his *alter ego*, Mr. Asoka Mehta, is in no mood to take lying down). But more decisive perhaps is the larger political necessity. The Planning Commission was, as one must in fairness to Mr. Krishnamachari admit, never intended to have executive authority. A Joint Secretary of the Commission, a noted economist in his own right, in an authoritative paper published three years ago described the body as a "staff agency". It had, he bluntly said, "neither constitutional nor even statutory authority", being "essentially an advisory body". But by usage it came to acquire executive functions, chiefly through its responsibility for co-ordinating policies and programmes originating from different agencies of the Government. If it is now to be stripped of this overgrowth of executive functions, it only means that someone else will have to do the co-ordination, presumably the Department set up for the purpose in the wake of the emergency over which Mr. Krishnamachari presided until his translation to Finance. At the time when this Department was created, the then Finance Minister considered its existence separate from his Ministry as

a personal affront to his position as the principal architect of economic policies. Some very specious reasoning was then employed to justify co-ordination being an independent entity, and amusingly the Kamaraj axe made it necessary soon enough to reverse the arguments when Mr. Krishnamachari moved on to Finance, taking co-ordination with him.

The intention seems to be that the Finance Ministry's co-ordination function should be enlarged by taking over the responsibilities in this sphere which the Planning Commission carries. This may well be a good thing because the need for co-ordination grows daily more desperate as the economic disarray arising from past failures comes to light. Co-ordination, in the sense of making people give up their particular predilections to plod along in more useful directions, is a political task requiring great authority. Without this, an ebullient Chief Minister determined to go ahead with his favourite dam, or with a port for which no supply lines exist, cannot be restrained. As long as the head of the Planning Commission or the Ministry of Planning was a senior Congress leader of the stature of Mr. Gulzarilal Nanda, Central Home Minister, there was at least a slender chance of success in the difficult rôle of disciplining the errant; the failure to do so in the two examples just cited provide evidence of how demanding the job was. With Mr. Nanda yielding place to an outsider, it follows that this burden could now devolve on other shoulders. This logic of reorganisation may be reinforced by the other equally valid point that the difficult choices in the end are often political rather than economic in a democratic society. It is appropriate, therefore, that the making of these choices should manifestly be a political responsibility, as is now intended under the reforms.

Cloth Exports Pick Up

Exports of mill-made cotton piecegoods in March from Bombay port, which accounted for 90 percent of the country's total textile exports in 1963, are provisionally placed at 50.14 million yards valued at Rs. 4.278 crores, compared with 32.11 million yards worth Rs. 2.773 crores in the previous month and 42.25 million yards valued at Rs. 3.196 crores in March 1963. The important destinations during March were, as usual, the U.K. with an offtake of 18.13 million yards (valued at Rs. 1.589 crores), Ceylon 8.69 million yards (valued Rs. 82.7 lakhs), the Sudan 2.47 million yards (valued Rs. 13.4 lakhs) and East Africa 2.39 million yards (valued Rs. 15.9 lakhs). The March figure raises the total for the first quarter of the year to 128.42 million yards valued at Rs. 10.738 crores, compared with 120.43 million yards valued at Rs. 8.823 crores in the same period of last year. Shipments of cotton textiles from Bombay in 1963 totalled 470.55 million yards valued at Rs. 35.916 crores.

A particularly welcome feature of cloth exports in the first quarter of the current year is the rise

in price realisation. The average price realised for January-March 1964 works out to 83.6nP a yard, against 73.2nP a yard in the corresponding period of 1963. The all-India average for 1963 was 77nP a yard. The increase in cloth exports during the first quarter has given rise to optimism, not unqualified though, in textile industry circles that the export performance this year will be better than in 1963. The optimism has to be tempered with caution for the simple reason that while the world market in textiles has been shrinking, new competitors have been emerging, the latest among them being Mexico. The latter is reported to have plans to become one of the world's leading exporters in the course of next five years. The fact that the export market has been shrinking is best exemplified by the decline in Japan's exports which has been the largest exporter of cotton textiles in the past several years. Between 1960 and 1962, Japanese cloth exports fluctuated between 1,412 million and 1,448 million square yards. But in 1963, exports declined sharply to 1,205 million square yards. Exports this year, according to current expectations, are likely to be maintained around the previous year's level. One of the principal reasons adduced for the fall in Japan's cloth exports is the expansion of the textile industry in the "emerging" nations and the entry of some of them into the export field.

As for the Indian textile industry, it is still being compelled to carry on with outmoded machinery. The progress of modernisation and rehabilitation continues to be slow. The total amount of money that the industry will be required to spend on plant and machinery during the third plan period for modernisation, rehabilitation and expansion is estimated around Rs. 350 crores. The production of indigenous textile machinery during the third plan period is estimated around Rs. 156 crores, which includes machinery worth Rs. 18 crores for the silk and woollen industries. The machinery which requires to be imported during the current plan period is of the value of Rs. 212 crores. Imports during the first three years of the plan add up to Rs. 62 crores. Assuming the same level of import for the remaining two years, total textile machinery imports will be of the order of Rs. 104 crores, leaving a gap of Rs. 108 crores. Recently, Platt Brothers of U.K. offered the facility to import textile machinery worth Rs. 10 crores under deferred payment arrangements. It is also very likely that the Government of Japan will extend a suppliers' credit of Rs. 8 crores to India for the purchase of machinery from Japan. These facilities are greatly welcome, but these will still leave a gap of Rs. 90 crores in the textile industry foreign exchange requirements of machinery imports. Modernisation and rehabilitation is the cotton textile industry's most pressing problem.

Foreign-controlled Rupee Companies

A study entitled "Finances of Branches of Foreign Companies and Foreign Controlled Rupee Companies—1961" published in the March 1964 issue of the *Reserve Bank of India Bulletin*, shows that in spite of the slackened pace of growth which characterised the operation of public and private limited companies in India in 1961, the foreign-controlled rupee companies did quite well. The latter maintained the good result of the previous years. The article gives comparative figures for 251 branches of foreign companies, 160 foreign-controlled rupee companies, and 1,674 "other" public and private limited companies. It shows that gross profits as percentage of sales for 160 foreign-controlled rupee companies, 251 branches of foreign companies and 1,674 "other" public and private limited companies in 1961, amounted to 11.1 percent, 5.8 percent and 9.2 percent, respectively, compared with the corresponding figures of 10.8 percent, 6.6 percent and 9.2 percent in 1960.

The figures of gross profits as a percentage of total capital employed for these three categories of companies at 13.3 percent, 7.2 percent and 9.4 percent, respectively, in 1961 (against the corresponding figures of 13.1 percent, 7.6 percent and 9.4 percent in 1960) also show that the foreign-controlled rupee companies did better. Furthermore, they showed better results in the matter of total gross assets formation and dividends as a percentage of net worth.

It was not by mere chance that the foreign-controlled rupee companies did better than the

others. In their case, productivity, sales and costs of production showed superior results because of better utilisation of talent and proper co-ordination among different departments. It is quite significant that in the case of these companies, the value of production (i.e., value of sales adjusted for stocks) increased by 10.9 percent in 1961, compared with the previous year, whereas on the expenditure side, the constituent items recorded a more or less uniform rise of around 10 percent. This was better than in the case of companies belonging to the other categories. It is also significant that country-wise, the largest proportionate increase in gross profits (29 percent) and profits before tax (31.6 percent) took place in the case of the U.S.-controlled companies. The companies controlled by "other countries" came next in order with increases of 26.8 percent and 25.9 percent in gross profits and profits before tax, respectively. The U.K.-controlled companies came last with increases of 7.3 percent and 8 percent in the two indicators. Industry-wise, the trading companies showed a better performance in 1961 than in the previous year. All the three profitability ratios declined for the U.K.-controlled companies in 1961, compared with 1960. The companies controlled by the U.S.A. and "other" countries showed all round improvement.

S. T. C.: The Expanding Leviathan

The strictures of the Estimates Committee of the Lok Sabha against the State Trading Corporation have not caused much surprise; they are more or less similar to those made by private trade and industry for years. The S.T.C. was created as a Government monopoly and is still expanding under official patronage. Set up in 1956 to promote trade with socialist countries, the turnover of the S.T.C. has steadily increased from Rs. 9 crores in that year to as much as Rs. 141.219 crores in 1962-63. But when the Corporation was ushered into existence, the Government repeatedly said that it would not encroach on the legitimate activities of private traders, although subsequent developments have belied this assurance. Neither the consumer nor the private trader would have grudged an expanding rôle for the S.T.C. had it been efficient in organising and promoting trade. The Estimates Committee has judged the

S.T.C. by this basic test of efficiency and found it wanting. It has pointed out in its report that the Corporation has not benefited either actual users or general consumers so far as prices are concerned. The Committee has, therefore, rightly suggested that the rôle and functions of the Corporation should be laid down more specifically in order to remove the prevailing uncertainty and avoid criticism.

There is no reason to believe that the Committee has taken a partisan view of the activities of the S.T.C. It is sad to recall how the S.T.C. monopolised one commodity after another, which private traders were handling efficiently. But now that the actual working of the S.T.C. has shown serious deficiencies, the Committee has strongly urged that there should be a clearer indication of the commodities which would be handled by the Corporation in future and the principles governing their selection. The Government seems to have responded to this suggestion by making the odd announcement that it has taken a firm decision to put the S.T.C. in charge of the sugar export trade. New Delhi has not, however, cared to explain why the Indian Sugar Mills Association, which was hitherto handling exports, should be dislodged to make room for the S.T.C., especially when there is no guarantee that the latter will promote exports better than the former. But in heralding the S.T.C.'s entry into the sugar export trade, the Government has declared that the Corporation will build permanent and bigger export markets which, by implication, the I.S.M.A. has been unable to do.

This decision has been taken in the face of the fact that the S.T.C. has made either exorbitant profits in certain commodities or has shown a loss in others. The trade in such commodities as camphor, mercury, coconut oil, betelnuts, cloves, etcetera, has enabled the S.T.C. to make profits varying from 100 percent to 200 percent, which would have been dubbed as an anti-social activity had it been done by private traders. The S.T.C. has defended its policy with the plea that the making of exorbitant profits is necessary to curb "speculative trading and unhealthy practices". But in offering this excuse, it has not bothered to consider whether it will sound convincing to either traders or consumers. It is, therefore, with a sense of dismay that the Committee has said: "It has to be realised that State trading, which is not uni-

- Interest on Savings Bank Accounts **3%** p.a.

versally supported, has to create a good image of its working in the public mind. The benefit it brings to the consumer is the measure of its success."

Improving Banking Techniques

The Reserve Bank has recently published a report on the seminars of chief executives of small and medium-sized banks organised by it last year. Since 1954 the Reserve Bank has been running a Bankers Training College for the supervisory staff of commercial banks to promote sound banking techniques and procedures. The College has not, however, been able to meet fully the demands of banks for training their supervisory staff, and it was observed that small banks in particular were not in a position to take full advantage of the facilities. The problem of affording training facilities to officials of small banks had to be tackled expeditiously since small banks play a significant rôle in the economic development of the country. So three seminars were held in Madras by the Reserve Bank to provide chief executives of small banks a forum for exchanging views among themselves and with officials of the Reserve Bank and some of the bigger commercial banks on subjects of common interest.

The Reserve Bank's report gives a succinct account of the proceedings of the seminars. The proceedings covered all important aspects of the working of a commercial bank, such as the steps to be taken for mobilising savings of the people and the policies to be followed in investment and lending operations, allocation of profits and recruitment and training of staff. The theme of the discussions was that, in order to discharge its obligations to shareholders, depositors and borrowers, it is necessary for a commercial bank to follow such policies in the employment of its funds as would secure a balance of the three conflicting aims of safety, liquidity and profitability. Discussions were held on the policies followed by well-managed banks in investing funds in Government and other trustee securities, the procedures, techniques and safeguards adopted by banks in making advances against different kinds of securities, methods of credit investigation and reporting and modern techniques of analysis of balance sheets of joint stock companies.

The report gives a summary of the discussions on certain other subjects such as advances to directors, advances against shares of joint stock companies, rôle of the chief executive, relationship of the Reserve Bank with commercial banks, control and supervision of branches, *kuri* and chit business and training facilities for staff. The annexures to the report contain specimen forms for use in commercial banks, such as forms of credit report, analysis of balance sheet, audit report, and statements obtained from branch offices. The forms will be useful particularly to the smaller banks in improving their systems of assessment of credit risks, branch control and supervision.

Black Pepper Export Prospects

India exported about 19,400 tonnes of black pepper during the year ended October 1963, as against 23,600 tonnes in the previous year. The outlook for the current season, however, is considered to be more promising, exports during the first five months—November to March—being placed around 10,000 tonnes, thanks to the continuous buying interest on the Continent, particularly the East European countries. In his presidential address at the annual general meeting of the Pepper and Ginger Merchants Association in Bombay, Mr. V. V. Mariwala attributed the decline in exports during 1962-63 to cheaper offerings by Indonesia and Singapore—the main competitors—due to improved supply there. The uncertain political situation in the Far East, however, is thought to have improved the outlook for Indian pepper. During the current year, the U.S.A. has not made sufficient purchases from India because of heavy shipments from Singapore during the past few months, but with the Singapore stocks greatly depleted it is felt that U.S. buyers will now turn to India. The U.S. buyers did evince considerable interest in Indian pepper at around 40 cents some time back and this imparted considerable strength to the

Indian market. But prices have again suffered a setback over the past week as no large business has materialised with the U.S.A.

In his inaugural speech, the chairman of the Forward Markets Commission, Mr. A. S. Naik, pointed out that very often speculators depressed the prices of exportable commodities, thereby causing loss of foreign exchange to the country. It is rarely that the export effort is known to have suffered due to lower domestic prices. The complaint usually is that the country is unable to compete abroad because of higher domestic prices. The Forward Markets Commission has been emphasising the importance of forward trading in stepping up exports and has warned speculators—bulls as well as bears—against doing anything that is likely to harm the cause of exports. The value of forward trading in promoting exports seems to be exaggerated, and where exports have been unsatisfactory it has been due to factors quite unrelated to the volume of speculative activity. While speculators have more often been accused of hampering the export effort by rigging up prices, in the case of black pepper Mr. Naik has suggested that speculators have been artificially depressing prices.

The president of the Pepper and Ginger Merchants Association did well to point out that black pepper prices depend primarily on the supply and demand conditions in the world market. Internal consumption, being more or less steady, does not have any appreciable influence on the level of pepper prices. Pepper prices ruled easy last year mainly because of improved world supply. Mr. Mariwala did not favour the idea of having minimum prices for black pepper. However attractive this idea may appear, artificial price maintenance will not help the country as long as there are other countries producing the same commodity and competing in world markets. Mr. Mariwala added that unless the major producing countries co-operated or co-ordinated their efforts with India's through E.C.A.F.E. or any other international organisation, artificial maintenance of prices might hamper the free flow of trade. Mr. Mariwala suggested that a bonus incentive scheme should be introduced to boost the export of black pepper. A scheme to benefit shippers exporting more than a fixed minimum quantity might be evolved jointly by the export trade and the Export Promotion Council.

Industrial Engineering Lags

Inaugurating the annual convention of the Institute of Industrial Engineers (India) in Bombay recently, Mr. G. L. Mehta, chairman of the Industrial Credit and Investment Corporation of India, pointed out that proper use had not been made in India of industrial engineering techniques for increasing productivity and reducing production costs. The high costs of production have weakened the competitive position of many Indian goods including cotton textiles, gunnies, and engineering and chemical items.

The fault does not in all cases lie with engineers as industries, both in the public and private sectors, have been started in recent years because of political and regional pressures irrespective of economic considerations. The consequence has been that factories have not always been of the correct size, have not been located in proper places, and have not used modern techniques and processes. Even in spite of these handicaps industrial engineers should be able to help in reducing production costs by carrying out method studies, improving the lay-out of plants and the handling of raw materials and by introducing suitable wage incentives. An important point is that foreign techniques and processes may not always be useful in Indian conditions. So there is need to adapt the processes to local conditions. As the chairman of the Institute, Mr. H. N. Thadani, observed it is also necessary to increase the training facilities for industrial engineers. It will be useful if the courses of training include methods and processes suitable for application in Indian conditions.

Mr. Mehta stated that entrepreneurs in India have, to some extent, been lulled into complacency by the protection of a controlled economy and the scarcity of manufactured goods, which has enabled most industries to sell their goods in spite of the

high costs of production. But this advantage will be a short-lived phenomenon. The domestic market will become competitive in the not-too-distant future. In some cases in which the Government has licensed capacity in excess of demand, entrepreneurs have already felt the impact of competition.

CORRESPONDENCE

PAYING METROPOLITAN BANK DEPOSITORS

(To The Editor of "CAPITAL")

Sir,

The comments appearing under the heading "Current News and Comment—Paying Metropolitan Bank Depositors" in the issue of *Capital* dated 2nd April, 1964, are based on a misunderstanding of the position. Firstly, it is the Deposit Insurance Corporation, which is a statutory body, and not the Reserve Bank of India, which has to pay to the depositors for the insured amount of deposits. Secondly, the Corporation can pay the depositors only after the claims have been received and verified in accordance with the provisions of the Deposit Insurance Corporation Act. Under Section 18 of that Act, the transferee bank (the United Industrial Bank Ltd in the instant case) has to file a list of depositors showing the amount due from the Corporation to each depositor within a period of three months from the date of amalgamation and the Corporation has to pay the depositors or the transferee bank within a period of two months from the receipt of the lists. While every effort will be made to pay the claims as early as possible, it will be appreciated that payment cannot obviously be made during the period of moratorium or immediately on amalgamation.

Yours etcetera,

M. S. NADKARNI
Manager,

Deposit Insurance Corporation

Bombay, 9th April.

WORLD GOLD PRODUCTION

THE Commercial and Financial Chronicle of New York has published another very interesting article on this subject. The following are the figures for the whole world for the last twenty-three years:

	Ounces	Sterling £
1881-85	24,567,749	104,358,885
1886-90	26,604,172	113,108,820
1891-95	39,310,518	166,983,317
1896-1900	63,225,382	268,568,705
1901	12,894,856	54,774,769
1902	14,437,669	61,328,330
1903 (Est)	15,894,541	67,516,831
	196,934,887	836,639,657

The United States heads the list of contributors with 52 million ounces, but Australia is a good second with 49 million ounces. Africa has only recently made her influence felt, the total yield for the last seventeen years having been 27½ million ounces. Russia has produced 26 million ounces, Canada 7½ million, and Mexico 4½ million ounces. At the present moment, Australia is the largest producer, followed closely by the United States and Africa, the estimated figures for 1903 being—

Australia	...	4,299,234
Africa	...	3,317,662
United States	...	3,600,331
Canada	...	943,314
Russia	...	1,134,000
Mexico	...	500,000
Other Producers	...	2,100,000

Total ounces ... 15,894,541

The total yield of the Witwatersrand Mines for the last seventeen years was 23.7 million ounces valued at £100 millions. We have spent £200 millions to acquire this country, but the mines belong to private capitalists. Looked at from every point of view, it can hardly be called good business for any but the capitalists' aforesaid.

21st April, 1904

A Ditcher's Diary

IF SHEIKH ABDULLAH'S RELEASE FROM PRISON WAS "a calculated risk", as Mr. Nehru was reported to have said the other day, it is already beginning dangerously to look as if the calculation behind the move was rather less certain than the risk. I have for some time had the uneasy feeling that the decision may have been slightly premature, and, in saying this, I am not unmindful of the dilemma which New Delhi faced: the Sheikh's incarceration for eleven years had done little to enhance the Government's reputation, at home or abroad; the prosecution case at the trial seemed over the years to have moved no nearer a successful conclusion than it was on the day it began; and Sheikh Abdullah was, meantime, acquiring a martyr's halo of glory, to which his claim was, to say the least, doubtful. How great the Sheikh's following in Kashmir is, I would not claim to know for certain; my own suspicion is that many popular Indian estimates of it may be somewhat exaggerated. And the danger in the statements he has made so far lies less in their categorical assessment of the past than in their ambivalence about the future, an ambivalence which suggests that the mirage of independence for Kashmir has not wholly departed from the Sheikh's mind. If that be so, to have to return the Sheikh to the abode from which he has just emerged would do India's reputation no good at all; and it is in this sense that I feel the decision to release him could reasonably have been delayed a little. The unpalatable truth is that New Delhi has yet to live down the sins of the Bakshi régime, and of its subsequent Shamsuddin reincarnation; the process will take time. Thanks to continuing weakness and vacillation, the Bakshi's influence in the Valley has by no means been wholly eliminated; as long as the influence survives, it remains a threat to honesty in Kashmir's political life, and so much the greater, then, would be the attraction of the alternative Sheikh Abdullah may ultimately choose to present. The delinquencies and lapses of years are not forgotten in a day; therein may lie the lesson India will have to learn before the Kashmir problem moves quietly to a satisfactory settlement.

THE POORER COUNTRIES, wrote an economist the other day in commenting on the U.N. Conference on Trade and Development in Geneva, have little in common but their poverty. The Afro-Asian countries, it begins to seem, have little in common but the geographical accident of their Afro-Asianness (if I may be permitted to use so horrid a term). The concept of Afro-Asia as a political or spiritual entity has never, to me, carried much conviction: it is a myth conceived in the womb of anti-im-

perialism, and as white imperialism recedes before the rising glory of the yellow, it is being exposed for the illegitimate and inconsequential concoction it is. The earnest and involved debate which has been going on in Djakarta about whether the Afro-Asian conference should be held this year or next, before or after the non-aligned nations' conference, would be laughable were it not so expensive in terms of energy, money and time. I am aware that behind the rigmarole of the public utterances at the preparatory talks there lies a deep political conflict: China, Indonesia and Pakistan, self-appointed pillars of Afro-Asia, seek priority for one conference, whereas Egypt and India, self-appointed pillars of non-alignment, prefer importance for the other—each for its own excellent and perfectly selfish reasons. In this conflict itself, if I may venture to say so, lie the seeds of futility of both conferences: as lush fountains of interminable oratory, their impressiveness cannot be underestimated, but in framing joint programmes of action, there need be no doubt that both will settle for the lowest common denominator of old shibboleths and new platitudes. The old faithfuls of Afro-Asia, as well as of non-alignment, know that in practical, everyday terms the true fruits of diplomacy are won at the quietly humble level of bilateral negotiations; only when the fruits are sure and sweet might they deserve to be commemorated through the ceremonial of an international conference of noisy but supposedly like-minded folk. A conference full of sound and fury, signifying nothing, is apt to degenerate into a circus; and a circus is what a second Bandung or a second Belgrade, at the moment, stands in danger of ending in.

THE BEST CONTRIBUTION PROFESSOR GALBRAITH made to Indian economic thinking while he was U.S. Ambassador here was, in my opinion, to point out the importance of "investing" in human beings. He was talking about education, of course, and although I do not remember his saying so at the time, he seemed to be referring mainly to technical instruction. Nevertheless, I am surprised to find his ideas being mentioned in support of those recently expressed by Sir Sydney Caine. The latter, who is Director of the London School of Economics, has written in the latest issue of *Lloyds Bank Review* that although education in Britain is an "industry" comparable in size with motor-cars or electrical engineering, its results are not on the same level. The first point that strikes me is how can Sir Sydney possibly know? I can agree with him that education in Britain, and in India too for that matter, fits "very ill" the task

of raising national productivity, and that, alone among industries, "the nature of the product is decided solely by the producers". But I am reluctant to concede the inference that the values of specific types of education—classics, natural science, economics—are subject to exactly the same process of economic assessment as all other production resources. If they were, there would be no point in educating women at all, unless they were destined for full-time careers in industry. I know there is a modern trend towards regarding a man as being a particular kind of calculating machine which must necessarily react in such-and-such a predictable fashion when fed with a certain "programme" of information. But I have never entirely subscribed to this view myself, and I would be surprised to find that Sir Sydney has, wholeheartedly. Progress is undoubtedly an attitude of mind; but the knowledge of exactly how to move forward at any particular time is something I have always regarded as of secondary importance to the will and inspiration to do so. If the desire is present, then the knowledge can soon be obtained. But all the knowledge in the world is useless without the urge to expand into a new and different life. To instil this faith in the future, in new and better things, by broadening the mind and introducing it to the opportunities which derive from more specialised knowledge, is what I consider to be the main purpose of education. And I suspect this primary need to broaden human horizons in the Indian context was what Professor Galbraith had in mind rather than the mere accumulation of technical skills, although these are, of course, extremely important. It will be a sorry day when all types of education are treated by cost accountants as just another factor of production; and I fancy the exercise will eventually prove to be a failure.

IT WAS SAID OF GENERAL DOUGLAS MACARTHUR that he joined the wrong army during the wrong century. There is much truth in this. It was his misfortune to be fitted by temperament more for the rôle of an imperial nineteenth century British general than a twentieth century American one. His resentment of interference from home, backed as it was by a patrician faith in the infallibility of his own judgment, was simply not suited to this age of rapid communication and close Government supervision. Nor was his capacity for making mistakes on the grand scale fitted to a period in history when such things could not simply be put right with ever more massive applications of military force. Such personal brilliance as he undoubtedly possessed would have adorned an empire-building pro-consul. But in a man whose allegiance was to a democratically elected President and not a monarch of the blood, and whose responsibilities as a statesman in a politically-minded era were at least as great as his duties as a soldier, his qualities inevitably

proved the kind of liability which resulted in his dismissal by President Truman in 1951 and his elimination from the subsequent Presidential stakes by another general, ten years his junior, who was once a mere member of his staff. The American people were wise not to call MacArthur to the White House. His view of world affairs was too heroic, too simple-minded for this complicated era. He was certainly a military genius, at least at the tactical level. Where he was lacking was in overall strategic insight and political acumen. That would not always be disastrous in a general, if he is kept firmly in his place. But when circumstances have located him far from the levelling influence of his home country, and placed in his hands powers of political decision which he is not fitted by training to exercise, then incidents such as the defeat of the United States' army in North Korea are only to be expected. Indeed, the U.S.A. and the rest of us can thank our stars that in the pursuit of his, MacArthur did not land us all in another world war.

AS MESSRS KHRUSHCHEV AND SUSLOV EXCHANGE verbal missiles with their Chinese detractors, the pro-Peking elements in the Indian Communist Party have taken to a variety of head-hunting that each passing day becomes more salutary and interesting. If their chief target at the moment is the Party chairman, Mr. S. A. Dange, the choice is understandable: he committed the original sin of siding with Mr. Khrushchev against Mr. Mao; and later, perhaps worse, the bourgeois offence of condemning the Chinese openly for their imperialist adventures. Mr. Dange's comrades on the extreme left could hardly be expected to be satisfied with anything so gentlemanly as reprimanding their leader for his un-marxist deviations; such sins are heinous, and atonement could come only with the scalp of the man himself. On the genuineness or otherwise of the "Dange letters"—allegedly showing the gentleman in question as having offered to act as an agent of the old British raj while in custody during the Meerut conspiracy case—I shall not comment; since long before the days of another gentleman, Zinoviev by name, forgeries, confessed or denied, have been the substance of communist history. Nor am I interested in the truth or falsity of the allegation that Mr. Dange acquired *benami*, as shrewder investors among capitalist hyenas do, certain shares in a New Delhi newspaper; his investments, if any, are his own business, as mine would be mine. More important than the supposed discoveries themselves, to my mind, may be their timing: it is no secret that the C.P.I. left, freshly out of jail, has for some months been husbanding its strength for a showdown which it hopes will mark the rout of the right. Mr. Dange, conscientious as ever, has inspected the letters and, not unexpectedly, denounced them as forged. Messrs Sundarayya and Basavapunniah, no less conscientious, have inspected the letters too and, not unexpectedly again, proclaimed them as genuine. Where the enquiry now proposed by the Party's central executive will lead to, it is not for me to say, except that I have a quiet suspicion the authenticity of the documents may be less important to the final outcome than the power of the factions they have agitated so greatly. The spectacle of a C.P.I. openly split down the middle is not only fascinating, but reassuring. It is a long time since Indian political life offered so pleasant a prospect; the sulking and the ingratitude apart, there are some things for which, in all sincerity, we may still have to thank the Chinese.

A PIECE OF SPORTING EQUIPMENT WE MIGHT IMPORT from Japan has been brought to my notice by the *Gazette* of the John Lewis Partnership. The partners, well known for their outspoken criticisms of their management, report with approval a new management device thought up by the Matsushita Electrical Company. A stuffed effigy of the firm's head has been set up at headquarters, and any angry subordinate is welcome to work off his frustrations by beating it up. A bamboo pole has thoughtfully been provided for those who cannot express their full feelings with feet and fists. The figure has a special chamber set aside—the Human Control Room.

THE DITCHER

Guide for Investors

STEEL SHARES DEPRESSED DESPITE HIGHER PRODUCTION

(BY A SPECIAL CORRESPONDENT)

THE ordinary shares of the Tata Iron and Steel Company and the Indian Iron and Steel Company have been depressed since the Budget for 1963-64 was presented. The levy of the dividend tax and the inclusion of bonus shares as capital gains have discouraged investors. Although the production of the two steel companies for the year ended March 1964 has been satisfactory, confidence has not revived due to the generally poor outlook for equities. The output of salable steel by the Tata Iron and Steel Company has risen from 1.4 million tons in 1962-63 to 1.5 million tons in 1963-64, and that of steel ingot from 1.6 million tons to 1.9 million tons. The production of pig iron has improved from 1.76 million tons to 1.81 million tons. The output of salable steel by the Indian Iron and Steel Company has improved from 795,000 tons to 810,000 tons, and that of steel ingot from 1 million tons to 1.03 million tons, but the output of pig iron has fallen from 1.3 million tons to 1.2 million tons.

In view of the higher output, the profits of the two Companies for the year ended March 1964, are likely to be better than those for 1962-63. A redeeming feature is that the last Budget is unlikely to place any extra financial burden on the two Companies. In fact, they may enjoy a small relief, but it may not influence the dividends for 1963-64.

Investors have for the time being preferred to stay out since they have not yet been able to assess the likely effects of the partial decontrol of steel. Although the retention prices of controlled items have recently been raised, the increase is not expected to compensate the producers fully for the rise in production costs. As for the prices of decontrolled items, they have been generally raised by the Joint Plant Committee. In fact, the prices of several items of decontrolled steel, tested as well as untested, have been raised twice since the partial decontrol. The principle of adjusting these prices has been largely based on the pattern of demand. However, until the full effects of these moves are known, investors are unlikely to extend their commitments.

Guest, Keen, Williams Profit Rises

THE ordinary shares of Guest, Keen, Williams have declined to Rs. 24.50 due to the cut in the ordinary dividend in spite of a bigger profit for 1963. The directors have recommended a final taxable ordinary dividend of 6 percent, making a total of 12 percent for 1963, against 14 percent for 1962, but the dividend for 1963 has been declared on an increased share capital. The latter has been raised by the issue of bonus shares in the ratio of one share for two held. At the present price, the yield amounts to 4.9 percent. The profit has risen from Rs. 1.30 crores for 1962 to Rs. 2.15 crores for 1963. Taxation absorbs Rs. 1.4 crores, including Rs. 26.34 for tax on bonus shares, against Rs. 55.60 lakhs. A sum of Rs. 6.77 lakhs (against 10.58 lakhs) has been transferred to taxation equalisation re-

serve. Development rebate reserve is allocated Rs. 6.93 lakhs (against Rs. 5.55 lakhs), debenture sinking fund Rs. 5.05 lakhs (against Rs. 5 lakhs), capital reserve 7.5 lakhs and general reserve Rs. 3.64 lakhs (against Rs. 6.15 lakhs).

Sankey Wheels Shows Fair Progress

AT a time when the investment market is extremely depressed and several first-class shares are quoted at a discount, the Rs. 10-paid Sankey Wheels are commanding a premium of about Rs. 1.40 a share, indicating investors' confidence in the future of the Company. This confidence does not seem misplaced. The Company's first annual report for the period ended 21st November, 1962, to 28th December, 1963, states that the construction of the factory buildings in Durgapur has been substantially completed and most of the plant and machinery for the lorry wheel plant, both imported and indigenous, has been received at the site and is being installed. Power and water facilities have been secured and all the financial arrangements for the project, in terms of both foreign exchange and rupees, have been finalised.

The initial production is likely to commence shortly. The Company has applied for an industrial licence for the manufacture of tractor and tank wheels. It is felt that the production of these wheels can be economically combined with the existing manufacturing programme. Its accounts for the period under report reflect the capital expenditure incurred by the Company for the lorry wheels project. After providing depreciation amounting to Rs. 2.62 lakhs on the car wheel plant and writing off of Rs. 4.09 lakhs as preliminary expenses and public issue expenses, the Company has incurred a loss of Rs. 4.69 lakhs which is being carried forward.

Hindustan Aluminium Making Steady Progress

WHILE the shareholders of Hindustan Aluminium will perhaps need to wait for another year or two before their investment begins to bear fruit, they can certainly take comfort from the Company's performance during 1963. And the directors expect it to do much better this year. In spite of initial teething troubles, the working results for 1963 show a gross profit of Rs. 1.998 crores, against a loss of Rs. 1.99 crores in the previous year. After providing Rs. 1.952 crores (against Rs. 1.564 crores) for depreciation and Rs. 1.27 lakhs for taxation for 1960 (against Rs. 2.848 for 1959), there remains a credit balance of Rs. 3.38 lakhs. This is being adjusted against the loss of Rs. 194.06 lakhs brought forward from the previous year, leaving a net debit balance of Rs. 190.68 lakhs to be carried forward. Dividend has naturally been skipped. Whereas full depreciation as prescribed under the Act has been provided, no reserve for development rebate has been created due to the inadequacy of profits. However, since development

rebate is allowed to be carried forward, it is likely to be provided out of the assessable income of 1964 and subsequent years. The company has no liability for taxation for 1963.

Against the rated capacity of 20,000, the total production of the primary metal was 22,138 tonnes, but due to teething troubles, the production of alumina was 39,040 tonnes, against the rated capacity of 42,000 tonnes. Initial difficulties were experienced in the sale of ingots, but there was a good demand for fabricated metal and a total of 19,800 tonnes of aluminium products could be sold. With a view to increasing sales, the Company has been permitted to export ingots and import the same in a fabricated form due to inadequate fabrication facilities within the country. The outlook for the current year is considered to be encouraging. A plant for continuous casting and rolling of redraw rods has been set up and put into commission, and although some of the ancillary equipment is yet to arrive, the quality and production of E.C. rods is said to be satisfactory. Due to delay in the sanction of Export-Import Bank loan, other major fabrication equipment has not yet arrived and similarly the arrival of rolling mills, extrusion press and other related equipment is awaited. Most of these are expected to be in operation before the end of the current year. The Government has agreed to the Company's proposal to increase the capacity to 60,000 tonnes and the Company has approached the Export-Import Bank for a loan to finance the foreign exchange requirements of the first phase of the expansion programme. Provisional orders have been placed for two generating units for setting up a thermal plant to meet the additional requirements of power for the expansion programme.

Bigger Profit for National Rubber

NATIONAL Rubber Manufacturers Ltd has shown good progress for the year ended December 1963. Output and sales have risen, and the profit is bigger than that for 1962. The taxable ordinary dividend has been raised from 8 percent to 10 percent. In his chairman's statement at the annual general meeting of the Company held in Calcutta last Saturday, Mr. K. N. Mookherjee dealt with the expansion programmes. (A full text of the speech is published on a later page in this issue of

Capital.) It is proposed to increase the output of bicycle tyres, industrial V-belts and fan belts. Steps are being taken to manufacture P. V. C. conveyor belting. The production of 1,200 tons of reclaimed rubber is being undertaken. He hopes that the profitability of the Company will improve when the expansion schemes are completed.

The Company proposes to issue 500,000 ordinary shares of Rs. 10 each at par in the proportion of one new share for each one held. An application has been made to the Industrial Finance Corporation of India for a fresh loan of Rs. 30 lakhs for meeting part of the capital cost of expansion. Commenting on the raw materials position, Mr. Mookherjee pointed out that linking the grant of import licences for natural rubber with the use of domestic synthetic rubber, combined with the abolition of the maximum controlled prices of Indian natural rubber, will boost the costs of both natural and synthetic rubber. The move is considered rather premature, considering that many units of the industry are not yet equipped to use synthetic rubber due to their product lines or because of the absence of technical facilities and standardisation. The production and sales of the managed Company, General Tyres Ltd, have steadily increased. The Industrial Finance Corporation has agreed in principle to sanction an additional loan of Rs. 40 lakhs for the rationalisation and expansion of manufacturing capacity.

Hindustan-Pilkington Glass Passes Dividend

THE ordinary shares of Hindustan-Pilkington Glass Works Ltd have been sluggish around Rs. 14 a share of Rs. 10 each on passing the dividend for the year ended October 1963. The profit has amounted to Rs. 11.59 lakhs, after providing Rs. 18.63 lakhs (against 18.75 lakhs) for depreciation. Sales rose from Rs. 63.90 lakhs to Rs. 1.81 crores. After providing Rs. 1.28 lakhs for income tax for the earlier year, the loss brought in has been reduced to Rs. 12.90 lakhs which is being carried forward. The total output of sheet glass amounted to 5.2 million square metres. In spite of the increased sales, the profit has not shown a corresponding improvement due to higher production costs. The directors mention that total sales have not been commensurate with the capacity of the factory. With the depression in building construction following the Chinese aggression, the demand for glass has declined. The market trend has, however, shown an improvement recently, so the directors hope to achieve normal results during the current year. The construction of the rolled plate factory was completed and production began in October 1963. The factory is now producing quality wired and figured glass. Industrial licences to manu-

they're glad they thought about air conditioning...

with CARRIER and VOLTAS of course!

When their factories, conference halls, booking offices, hotels, theatres, hospitals, laboratories and storage plants are up...when they're discovering for themselves what a world of cool, comfortable difference Carrier and Voltas make! Throughout the country, climate control of important projects ranging from atomic reactors, medical institutes and research laboratories to dams, fertiliser factories, machine tool plants and countless offices, embassies and public utility buildings has been entrusted to Voltas. Their equipment is first rate. And they bring the maximum engineering experience and skill to every job. No wonder their morale is as fine as their service. Clients are constantly saying: "Carrier and Voltas are the people who know air conditioning and refrigeration best!"

VOLTAS

VOLTAS LIMITED, Head Office: Ballard Estate, Bombay 1

Calcutta • Madras • New Delhi • Bangalore • Cochin
Ahmedabad • Lucknow • Kanpur • Secunderabad

factory wired and figured glass have been issued to some other companies and about four factories have begun production.

Scottish Indian Machine Tools: A New Venture

VOLTAS Ltd and Scottish Machine Tool Corporation Ltd of Glasgow have jointly promoted a new Company called Scottish Indian Machine Tools Ltd to undertake the manufacture of certain types of machine tools—guillotine shears, punches, plate blending rolls and other items of plate and bar working machinery. The project is estimated to cost Rs. 64 lakhs. The plant which, it is proposed, will be located in Thana (Bombay), will manufacture machinery worth Rs. 60 to Rs. 70 lakhs a year in the first stage. The factory building is likely to be completed by about the middle of this year, and it will be ready for production early in 1965. The Company will have an authorised capital of Rs. 1 crore—all in equity shares of Rs. 100 each. The issued capital will be Rs. 64 lakhs, of which Rs. 25.60 lakhs will be subscribed by the British collaborators and this amount will be used for the import of plant and machinery needed for the project. Voltas and its associates will take up shares worth Rs. 19.20 lakhs and the balance of Rs. 19.20 lakhs will be offered for public subscription in the near future. The machine tool industry is a basic industry with a great future in India, which is going ahead with rapid industrialisation. The Scottish Machine Tool Corporation, which is collaborating in the project, is a combine of five Scottish firms of high standing amalgamated in 1937. Voltas has been the sole distributor for the products of S.M.T. since May 1959, and it will also act as the sole distributor for the products to be manufactured by the new Company.

Hindustan Polymers Will Enter Market Soon

HINDUSTAN Polymers Ltd which has been licensed to manufacture annually 10,000 tons of styrene monomer, 7,500 tons of polystyrene and its copolymers and 1.5 million gallons of power alcohol will soon be in the market to raise Rs. 1.274 crores through public subscription. The Universal Oil Products Co. Inc., Illinois, U.S.A. and B. X. Plastics Ltd, England, a wholly-owned subsidiary of the Bakelite Xylonite Ltd, London, are collaborating in the venture. The factory will be located in Visakhapatnam. The project is estimated to cost Rs. 6.35 crores which will be met by the issued capital of Rs. 3 crores, foreign exchange loans of Rs. 2.16 crores and bank borrowings amounting to Rs. 1.19 crores. The Company has an authorised capital of Rs. 5 crores, of which Rs. 3 crores—all in equity shares of Rs. 100 each—is being issued for the present.

The promoters, directors and their associates have subscribed Rs. 1.126 crores, the I.C.I.C.I. Rs. 20 lakhs and the Bakelite Xylonite, the technical collaborators, Rs. 20 lakhs. All these add up to Rs. 1.526 crores. Equity shares worth Rs. 20 lakhs have been reserved for subscription by the Commonwealth Development Finance Co. Ltd, London. The balance of Rs. 1.274 crores is to be offered for public subscription. The entire public issue has been underwritten. The C.D.F.C., London, has agreed in principle to grant the Company a loan of Rs. 66.67 lakhs in sterling, the I.C.I.C.I. a loan of Rs. 75 lakhs in U.S. dollars, the I.F.C. a loan of Rs. 54.33 lakhs in French francs and the Mercantile Bank a loan of Rs. 20 lakhs in sterling. These loans totalling Rs. 916

crores will help meet the Company's foreign exchange requirements for the purchase of plant and equipment for the project. The board of directors consists of Mr. Kasturbhai Lal-bhai, Mr. Pratap Bhogilal, Mr. Bhogilal Leherchand, Mr. R. G. Saraiya, Mr. R. V. G. K. Ranga Rao, Mr. Jehangir P. Patel, Mr. N. K. Petigara and Mr. R. K. Parikh.

Modi Industries Shows Impressive Results

ALTHOUGH the dividend has just been maintained at 12 percent (Rs. 1.20 a share of Rs. 10), the working results of Modi Industries Ltd for the year ended October 1963 show an impressive improvement over the previous year's performance. While sales are up by hardly 8 percent from Rs. 7.33 crores to Rs. 7.90 crores, the gross profit has gone up by as much as 60 percent from Rs. 36.11 lakhs to Rs. 57.27 lakhs. After providing Rs. 9.55 lakhs (against Rs. 8.66 lakhs) for depreciation, Rs. 2.50 lakhs (against Rs. 55,000) for development rebate and Rs. 24 lakhs (against Rs. 15.60 lakhs) for taxation, the net profit for 1962-63 amounts to Rs. 17.06 lakhs, against Rs. 8.75 lakhs in the preceding year. With Rs. 50,239 (against Rs. 4.56 lakhs) brought forward from the previous year, the disposable surplus amounts to Rs. 17.56 lakhs (against Rs. 13.31 lakhs). The directors have set aside Rs. 3.44 lakhs (against nil) for gene-

ral reserve, Rs. 3 lakhs (against nil) for price fluctuation reserve and transferred Rs. 11 lakhs (against Rs. 4 lakhs) to dividend equalisation reserve. The proposed dividend absorbing Rs. 8.81 lakhs is to be paid from dividend equalisation reserve. After making various appropriations, there remains a small balance of Rs. 11,802 to be carried forward.

The sugar factory worked for 103 days, against 125 days in the previous year. Cane crushed was 1,055 million quintals (against 1,364 million quintals) with a recovery percentage of 9.01, against 9.49 in the previous year. The sugar factory could work for only 103 days due to the shortage of sugarcane. The sugarcane crop suffered due to premature dry weather. The directors state that because of the lower excise duty on khandasari, the producers of gur and khandasari are in a position to offer much higher prices for sugarcane, particularly when the prices of gur and khandasari are high. The working results of other factories such as vanaspathi, soap, paints, lanterns, distillery, torches and gases were satisfactory. The arc-welding electrodes factory went into production during the year, and it is said to be working satisfactorily. Some machinery pertaining to the steel project has already been received and the construction of the factory is progressing well. The factory, it is expected, will go into production before March 1965. Modi Industries has a paid-up capital of Rs. 73.39

lakhs, which is supported by reserves and surplus amounting to Rs. 64.96 lakhs. The gross fixed assets valued at Rs. 1.895 crores have been written down to Rs. 98.58 lakhs.

Partial Redemption of Esso Debentures

THE chairman of the Industrial Credit and Investment Corporation of India, Mr. G. L. Mehta, carried out lots for the partial redemption of the ten-year old Esso Refinery debentures amounting to Rs. 4 crores. One-fifth of these is being redeemed. The draw was made in accordance with the provisions contained in the Trust Deed entered into between the Esso Standard Refining Company of India Ltd and the State Bank of India in July 1953, for securing Rs. 4 crores 5½ percent debentures. This redemption represents the first return to Indian investors of long-term funds lent for the construction of a modern oil refinery in India. The bonds are being redeemed at par after having paid full and prompt interest over the last ten years. The Esso debentures are currently yielding 7 percent a year.

A feature of Esso redemption is record speed with which cash refunds are being made to investors. Esso has made arrangements for the re-

outstanding performance

turn of funds to redeeming bondholders on the very same day on which the bonds are due. If redeemable bonds and the necessary receipts are delivered in proper form to the State Bank of India, Bombay, by 30th April, the funds will be despatched to the bondholder that day. Where necessary, because of splitting of certificates, new debentures will also be issued at the time when the refund is made.

Central Bank Earns More

THE Central Bank of India Ltd has produced satisfactory results for the year ended December 1963. The profit has risen from Rs. 1.80 crores for 1962 to Rs. 1.89 crores for 1963. Interest paid on deposits and borrowings amounted to Rs. 6.67 crores, against Rs. 5.99 crores, while interest and discount earned rose from Rs. 11.35 crores to 12.48 crores. A taxable final dividend of Rs. 2.60 a share has been declared, making a total dividend of 20 percent, taxable, for the year. Reserve fund is allocated Rs. 40 lakhs, special reserve Rs. 34 lakhs, staff gratuity fund Rs. 10 lakhs and bonus to staff Rs. 75 lakhs. The carry-forward is Rs. 91,510, against Rs. 93,249 brought in. Deposits rose from Rs. 236.06 crores to Rs. 250.79 crores. Investments stood at Rs. 57.06 crores, against Rs. 55.96 crores and advances rose from Rs. 175.45 crores to 187.72 crores.

Binny Maintains Dividend

THE directors of Binny and Co. Ltd have maintained a dividend of 21 percent for the year ended December 1963, against 21 percent. In spite of an increase in the turnover, the net profit on trading is lower than that of the previous year, the shortfall being accounted for by increased costs and a reduction in the agency commission received. The profit before taxation for the year amounts to Rs. 33,34,211, after providing Rs. 24,609 for depreciation and Rs. 2,40,000 for bonus to staff. This compares with the previous year's profit of Rs. 37,93,428, after providing Rs. 22,552 for depreciation and Rs. 2,40,000 for bonus to staff. The provision for taxation for the year amounts to Rs. 13,30,000 (against Rs. 16,00,000). This leaves a net profit of Rs. 20,04,211. Adding to this net profit a sum of Rs. 1,19,850 brought forward, Rs. 13,523 being past provision no longer required and Rs. 200,000 transferred from general reserve, the total available for appropriation comes to Rs. 23,37,584. Out of this, a sum of Rs. 200,000 is transferred to debenture redemption fund. Additional dividend of 25p a share for the year ended December 1958, has absorbed Rs. 25,000. The interim dividend of 8 percent for the year has absorbed Rs. 800,000, against Rs. 800,000. The proposed final dividend of 13 percent will absorb Rs. 13,00,000 (against Rs. 13,00,000). The balance of Rs. 12,584 is carried forward. The total sales for the year amounted to Rs. 179,38,603 (against Rs. 170,19,783).

The directors' report says that the substantial increase in turnover was maintained during the year, particularly in the handloom textiles department. There was an improvement over the previous year in the investment income, but this was more than offset by increased interest charges on the high level of borrowings throughout the year. The Company's engineering subsidiary, Giovanna-Binny Ltd, started manufacturing minor items during the year, and is expected shortly to begin producing penstocks. With the object of reducing the existing level of short-

term bank indebtedness and replacing part of such indebtedness with medium-term secured loan capital, the directors offered during the year for public subscription 7 percent debenture stock at par, to the value of Rs. 30,00,000, redeemable not earlier than 31st December, 1972.

S. F. Products Expanding

S.F. PRODUCTS India Ltd, a Swedish subsidiary Company, has taken steps to expand the workshops situated in Mahestala, near Calcutta. Although production began in April 1963, it is coming close to the licensed target of 1,500 units a year. Necessary action has been taken to double the capacity. On 30th December, 1963, the Company issued 12,000 new shares of Rs. 100 each at par, so the total paid-up share capital has amounted to Rs. 14 lakhs. The funds from the new issue will be used to finance the expansion. The Company has produced satisfactory results for the year ended December 1963.

The sales and contracts executed and invoiced have amounted to Rs. 54.11 lakhs, which show an increase of 13 percent over that for 1962. The net profit has amounted to Rs. 1.18 lakhs, against Rs. 4.18 lakhs, after providing Rs. 4.74 lakhs (against Rs. 2.81 lakhs) for taxation, Rs. 65,867 for

development rebate reserve and Rs. 1.14 lakhs (against Rs. 15,942) for depreciation. The taxable ordinary dividend of 16 percent has been declared to absorb Rs. 1.28 lakhs. General reserve is allocated Rs. 1.70 lakhs, leaving a carry-forward of Rs. 12,507, against Rs. 1.12 lakhs brought in. The Company has received a letter of intent from the Government of India to manufacture electrostatic precipitators. Further details with the Government of India are being discussed.

Soorah Jute Mills Earns Less

THE profit of the Soorah Jute Mills Co. Ltd for the year ended December 1963, has been smaller than that for 1962, due to the rise in the price of raw jute while there was a decline in the prices of jute goods. The mill has worked at full capacity, but there has been a large accumulation of jute goods stocks due to keen competition in foreign markets. Stocks of gunnies rose from 82,800 tons to 112,300 tons. The Indian Jute Mills Association has scrapped the working time agreement, so there is likely to be a further rise in the production of jute goods during the current year. The directors think that the prospect for 1964 may not be as good as that for 1963. They stress the importance of producing a large

jute crop during the 1964-65 season to meet the rising requirements of the industry. They hope that a crop of about 8 million bales may be produced. Meanwhile, the production costs have risen due to the implementation of the wage board award.

The trading profit has amounted to Rs. 11.18 lakhs. Depreciation absorbs Rs. 2.24 lakhs, development rebate reserve Rs. 25,000 and taxation Rs. 4.66 lakhs. The taxable ordinary dividend has been reduced from 25 percent to 20 percent to absorb Rs. 2.80 lakhs. The yield amounts to 13.3 percent at the present price of Rs. 22.50 a share of Rs. 10 each.

Tide Water Oil Pays the Same

TIDE Water Oil Co. India Ltd has maintained the taxable ordinary dividend at 35 percent, including an interim of 7 percent, for the year ended October 1963. The yield amounts to 10.5 percent at the present price of Rs. 33.19 a share of Rs. 10 each. The profit has risen from Rs. 4.47 lakhs for 1961-62 to Rs. 5.47 lakhs for 1962-63, after providing Rs. 23,590 (against Rs. 24,078) for depreciation. Taxation is allocated Rs. 3.50 lakhs (against Rs. 3.17 lakhs) and development rebate reserve Rs. 1,000 (against Rs. 6,000). The carry-forward is Rs. 25,403, against Rs.

Modern construction projects require scaffolding of far greater strength and safety than bamboo tied with coil.

Unaffected by rot, fungus and termites, MILLS tubular scaffolding has a versatile use: storage racks; temporary buildings; open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the

WHICH FOOT RESTS SURE?

tubes with only a 1/4" spanner as the tool. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle-grip' principle.

All fittings are made by Guest, Keen, Williams Ltd., and the tubes by The Indian Tube Co. (1953) Ltd.

JMT/MS-2025-0

12,113 brought in. Sales rose from Rs. 93.90 lakhs to Rs. 1.06 crores. Although the import licence for the six months ended March 1963, had been cut by 50 percent, licences for the two half-years ending March 1964 have been restored to the level prevailing previously.

Bengal Assam Steamship Repeats

BENGAL Assam Steamship Co. Ltd has made a smaller profit of Rs. 5.76 lakhs for the year ended October 1963, compared with one of Rs. 10.24 lakhs for 1961-62, after increasing depreciation from Rs. 3.74 lakhs to Rs. 4.34 lakhs. The taxable ordinary dividend of 10 percent has been repeated to absorb Rs. 2 lakhs. The yield works out to 7.8 percent at the present price of Rs. 128 a share of Rs. 100 each. Taxation is allocated Rs. 3.58 lakhs (against Rs. 2.85 lakhs), development rebate reserve Rs. 2.02 lakhs (against Rs. 1.57 lakhs). The carry-forward is Rs. 54,558, against Rs. 23,886 brought in.

Freight earnings declined from Rs. 59.48 lakhs to Rs. 55.20 lakhs due to the shortage of lighters and because of the slow start of the jute and tea seasons. Greater competition from the railways has had to be met since bigger quantities of Assam jute and tea have been carried by the railways than before. The competition from the railways and road is likely to increase. But the directors hope that the increase in industrialisation in Assam will provide enough goods traffic for carriage by all forms of transport.

Mim Tea Passes Dividend

THE Mim Tea Co. Ltd has incurred a loss of Rs. 49,706 for the year ended December 1963, after providing Rs. 24,439 (against Rs. 20,885) for depreciation. The dividend has been passed. Bringing in Rs. 17,193, and making other adjustments, a debit balance of Rs. 25,513 has been carried forward. The crop dropped by 32 quintals to 1,056 quintals, compared with that of 1962. The average selling price fell from Rs. 8.99 to Rs. 6.94 a kilogram. The directors mention that trading conditions for Darjeeling teas have not been favourable. The 1964 crop has been estimated at 1,100 quintals.

Ouchterlony Valley Pays More

A SUBSTANTIAL rise in coffee crop and a better price realisation for tea are the encouraging features of the working results of Ouchterlony Valley Estates Ltd for the year ended October 1963. But against the profit earned, the brought-forward loss has to be adjusted. This has made it necessary for the Company to draw on reserves for declaring a dividend of 12½ percent for the year (against 6 percent).

The profit for the year before taxation amounts to Rs. 4,78,581, against a loss of Rs. 5,06,184 in the previous year. After deducting the tax provision of Rs. 88,000 (against Rs. 96,500), there is a net profit of Rs. 3,90,581. After adjusting the brought forward loss of Rs. 3,58,491 against the net profit, there is a balance of Rs. 32,090. With the amount of Rs. 1,75,033 transferred from general reserve and with Rs. 43,241 transferred from dividend equalisation reserve, the total available for appropriation comes to Rs. 2,50,364. Out of this, the directors have transferred Rs. 4,500 to development rebate reserve. The propos-

ed dividend of 12½ percent will absorb Rs. 2,43,248. The balance of Rs. 2,616 is carried forward.

The tea crop for the year amounted to 6,95,418 kilograms, against 655,342 kilograms. The yield from each acre of tea has improved to 472 kilograms, against 445 kilograms. The all-in-cost amounted to Rs. 4.10 a kilogram, against Rs. 3.96 a kilogram. The average price realised amounted to Rs. 4.63 a kilogram, against Rs. 4.48 a kilogram. The coffee crop amounted to 646,146 kilograms, against 211,742 kilograms, and this has resulted in a substantial rise in yield at 219 kilograms, against 72 kilograms an acre. The coffee crop is valued at Rs. 2.25 a point. The tea crop for 1963-64 is estimated at 685,000 kilograms, and the expectations are that it may well exceed the 700,000-kilogram mark. The coffee crop for 1963-64 was originally estimated at 355 tonnes. But according to present indications, the crop will be only about 300 tonnes. The chairman says that it is, therefore, certain that the current year's working will result in a loss.

Bijohnagar Tea Earns More

BIJOYNAGAR Tea Co. Ltd (A Doorga garden) has declared a taxable ordinary dividend of Rs. 5 a share of Rs. 25 each to absorb Rs. 1.74 lakhs for the year ended December 1963. The profit has amounted to Rs. 7.02 lakhs, against Rs. 7.24 lakhs for 1962, after reducing depreciation from Rs. 1.78 lakhs to Rs. 1.49 lakhs. Taxation absorbs Rs. 3.25 lakhs (against Rs. 3.45 lakhs), general reserve Rs. 2.25 lakhs (the same) and employees' benefit reserve Rs. 2,500 (the same). The carry-forward is Rs. 72,737, against Rs. 99,954 brought in. Sales amounted to Rs. 35.59 lakhs. Tea production fell from 847,062 kilograms to 813,704 kilograms, but the average sale price showed an improvement. The 1964 crop has been estimated at 776,700 kilograms.

National Jute Pays the Same

NATIONAL Co. Ltd has made a profit of Rs. 28.37 lakhs for the year ended October 1963, compared with one of Rs. 33.25 lakhs for 1961-62. The taxable ordinary dividend of 10 percent has been maintained to absorb Rs. 3.50 lakhs. At the present price of Rs. 22 a share of Rs. 10 each, the yield amounts to 4.5 percent. Development rebate reserve is allocated Rs. 20 lakhs, taxation Rs. 26,250 (against Rs. 5.30 lakhs) and general reserve Rs. 4.20 lakhs (against Rs. 11.75 lakhs). The carry-forward amounts to Rs. 4,576, against Rs. 9,507 brought in. Sales amounted to Rs. 6.52 crores, against Rs. 6.74 crores. Stocks of jute goods increased from Rs. 22.12 lakhs to Rs. 56.94 lakhs.

Referring to the abolition of the working time agreement by the Indian Jute Mills Association, the directors point out that the Company will be able to increase its production and run more looms. Two hundred and fifty-five broad-looms have been installed in 1962-63 but all of them have not been fully used during the current year in view of the unfavourable trading conditions. A capital expenditure for Rs. 1.59 crores has been incurred, so the financial requirements of the Company have increased.

Shreenivas Cotton Earns Record Profit

SHREENIWAS Cotton Mills has raised the dividend for 1963 from 14 percent to 16 percent. While this

restores only partially the drastic cut from 20 percent made in the previous year, the preliminary report on the Company's working results shows that it has done exceedingly well, with both sales and gross profit setting new records. Whereas the turnover has risen by about 9 percent from Rs. 4.72 crores to Rs. 5.14 crores, the gross profit has shot up by 38 percent from Rs. 63.30 lakhs to Rs. 87.35 lakhs. The ratio of gross profit to turnover has risen impressively from 13.4 percent to 17 percent. This is attributed to increased efficiency brought about by the planned programme of modernisation and renovation over the past few years. In 1963 itself, the Company installed machinery worth Rs. 37 lakhs which includes 11,760 spindles, one hot-air stentering machine and one blow-room line. The sanforising machine on order last year has also been put into operation. Out of the 20,000 additional spindles sanctioned, 15,000 spindles have started working and the remaining 5,000 spindles will be installed before the end of this year. A further 6,700 spindles are on order and will be installed in 1965.

Plans are also being considered for installing more automatic looms. The working of the subsidiaries—Shree Madhusudan Mills and Shree Gopal Industries—has shown further improvement. In the case of Shree Madhusudan Mills, all arrears of preference dividend have been cleared, while Shree Gopal Industries has added Rs. 4 lakhs to reserves out of the current year's profit, after providing full depreciation. Both these subsidiaries are increasing their installed spinning capacity. Appropriations of Shreenivas Cotton's gross profit of Rs. 87.35 lakhs include depreciation Rs. 26.72 lakhs (against Rs. 23.78 lakhs), development rebate Rs. 5.50 lakhs (against Rs. 3.75 lakhs), taxation Rs. 24.34 lakhs (against Rs. 14.26 lakhs), bonus liability for previous years Rs. 6.23 lakhs (against Rs. 7.62 lakhs), general reserve Rs. 3 lakhs (against nil), preference dividend Rs. 25,000 (the same) and equity dividend Rs. 16 lakhs (against Rs. 14 lakhs). In the previous year, the Company had to withdraw Rs. 5.38 lakhs from reserves to meet the shortfall in the dividend distribution amount, while the higher dividend for 1963 is being paid entirely out of the year's profit. The Rs. 100-paid share of Shreenivas Cotton is currently quoted around Rs. 255, offering a gross return of about 6.6 percent.

Swastik Rubber Steps Up Dividend

SWASTIK Rubber Products Ltd has raised the dividend for 1963 from 6 percent to 9 percent, which seems more than justified by the Company's impressive results for the year. Sales have gone up by about 80 percent from Rs. 1.12 crores to Rs. 2.02 crores, and the gross profit has risen by nearly 50 percent from Rs. 15.50 lakhs to Rs. 22.80 lakhs. Appropriations include depreciation Rs. 7.13 lakhs (against Rs. 6.44 lakhs), development rebate Rs. 3.08 lakhs (against Rs. 1.14 lakhs), taxation Rs. 5.92 lakhs (against Rs. 6.44 lakhs) and capital redemption reserve Rs. 1 lakh (against nil). The proposed equity dividend will absorb Rs. 3.15 lakhs (against Rs. 2.13 lakhs) and preference dividend takes up Rs. 37,000 (the same).

The Company made an issue of 9 percent redeemable cumulative preference shares of the total value of Rs. 9.5 lakhs, of which shares worth Rs. 8.46 lakhs were subscribed in 1963 and the balance of Rs. 1.04 lakhs in early 1964. Out of the proceeds, the Company redeemed the 5 percent preference shares worth Rs. 5 lakhs and the balance was used for financing the expansion scheme. The Company has received permission to un-

dertake the manufacture of 3 million pairs of footwears, the production of which is expected to start by about the middle of 1965. The Company has now entered the export market, and it hopes to do a substantial business in this field also.

Coimbatore Cotton Raises Dividend

DESPITE an increase in sales, the net profit of Coimbatore Cotton Mills Ltd for the year ended December 1963, is lower than that of the previous year, as the margin of profit was considerably reduced. But the dividend is stepped up to 15 percent from the previous year's level of 9 percent. The pre-tax profit of the year amounts to Rs. 12,02,784, after providing Rs. 9,04,103 for depreciation, compared with the previous year's profit of Rs. 13,73,210, after providing Rs. 9,64,492 for depreciation. With the amount of Rs. 8,845 being the refund of interest paid in prior years, the total available for appropriation comes to Rs. 12,11,629. Out of this, bonus amounted to Rs. 1,68,922 (against Rs. 1,73,132). Donations amounted to Rs. 3,974 (against Rs. 56,923). A sum of Rs. 76,446 is transferred to development rebate reserve (against Rs. 29,767). A sum of Rs. 25,167 is transferred to gratuity reserve (against Rs. nil). The provision for taxation amounts to Rs. 3,47,000 (against Rs. 7,54,424). The proposed dividend of 15 percent will absorb Rs. 5,39,940 (against Rs. 3,23,964). The balance of Rs. 180 is carried forward.

Sivanandha Mills Sales Up, but Profits down

IN spite of a small increase in the sales from Rs. 96.25 lakhs to Rs. 1.01 crores, the gross profit of Sivanandha Mills of Coimbatore for 1963 is substantially down from Rs. 24.43 lakhs to Rs. 16.83 lakhs. The dividend, however, has been maintained at 26 percent. The Company's working results were adversely affected by the reduction in ceiling prices of cotton yarn of 60s and above from 6th February, 1963. Besides, the Company had to purchase entitlements from exporter mills at high premiums, because of the drastic cut in the quota of foreign cotton. The cost of production also increased as a result of higher electricity charges, power cut and increased insurance liability. Appropriations of the year's profit include depreciation Rs. 4.59 lakhs (against Rs. 4.68 lakhs), development rebate Rs. 35,830 (against Rs. 1.44 lakhs), taxation Rs. 6 lakhs (against Rs. 12.6 lakhs) and dividend Rs. 2.60 lakhs (the same). After making these appropriations, there remains a balance of Rs. 5,805 to be carried forward, against Rs. 22,937 brought in.

Asian Cables Fares Well

ASIAN Cables Corporation Ltd reports fairly satisfactory results for the year ended September 1963—the second year since the Company went into production. Sales during the year amounted to Rs. 64.62 lakhs, against Rs. 9.40 lakhs in 1961-62. After transferring Rs. 1.89 lakhs (against Rs. 1.21 lakhs) to "expenditure during the period of construction" and charging full depreciation amounting to Rs. 6 lakhs (against Rs. 6.61 lakhs), the Company has incurred a small net loss of Rs. 58,962, against Rs. 11.52 lakhs in the preceding year. No provision is made for taxation or development rebate. After making an adjustment of Rs. 28,769 (against nil) being excess value of opening stock and bringing

in the loss of Rs. 11.89 lakhs, the total deficit of Rs. 12.77 lakhs is being carried forward.

The directors state in their report that although production during the year was steady and satisfactory, sales could not catch up to expectations due to various reasons such as panicky conditions consequent on the Chinese aggression, shrinking of demand due to the retardation of power generation progress in the third plan, scarcity of cement for building new houses and difficult monetary conditions restricting purchasers' inventory to the minimum and severe competition.

In view of all these adverse factors, the company's sales during 1962-63 are considered to be quite encouraging, and the directors are hopeful of pushing sales in the current year. The Company is working

at present only one shift. Production would be more economical on a two-shift basis. But so far two important factors have been preventing the directors from starting the second shift. Firstly, there is no certainty of continuous steady supply of imported raw materials so vital for production, and secondly, depressed condition in the market and restricted off-take require careful thinking before increasing the output. The situation is said to be gradually improving and the management is, therefore, considering the starting of the second shift in the current year. The P.V.C. cable plant was commissioned towards the close of the last financial year. The P.V.C. insulated cables have been well received in the market. The Company's foreign collaborators subscribed last year their full share of the new equity shares capital in (U.S.

\$1,130,000 (equivalent to Rs. 53.64 lakhs). This amount is being used for the import of machinery for Project 11. The buildings of Project 11 for H.T. power cables are under progress and the machinery has started arriving. The Company has been issued the necessary import licence for machinery worth Rs. 1.05 crores for Project 11. The erection is expected to be completed before the end of this year and the plant is expected to be commissioned early in 1965. The Rs. 100 paid share of Asian Cables is available around Rs. 79.

Singareni Collieries Earns More

THE Singareni Collieries Co. Ltd. has done well for the 15 months

ended March 1963. The accounts cover a period of 15 months because the Company's accounting year has been changed to the Government financial year. The profit has amounted to Rs. 1.11 crores, against one of Rs. 82.62 lakhs for the year ended December 1961, after transferring Rs. 90.25 lakhs (against Rs. 58 lakhs) to depreciation. A taxable ordinary dividend of 7½ percent has been declared, absorbing Rs. 22.50 lakhs. Development rebate is allocated Rs. 19.73 lakhs (against Rs. 26.26 lakhs), taxation Rs. 50.50 lakhs (against Rs. 32.50 lakhs) and general reserve Rs. 19 lakhs (against nil). The carry-forward is Rs. 18,633, against Rs. 47,033 brought in.

The output for 1962-63 amounted to 3.2 million tons, so the production target has been exceeded. Sales amounted to Rs. 10.50 crores, against Rs. 7.44 crores. The directors say that the wagon supply position has on the whole been satisfactory. It has been decided to increase the output in 1963-64. The Controller of Capital authorised capital to Rs. 9 crores during 1963-64. The Company has permitted the Company to issue equity capital for Rs. 1 crore. The expansion programme has made good progress. The Company is expected to reach the output target of 6.10 million tons by the end of 1966, provided adequate foreign exchange is allowed for importing equipment. Some mines have been equipped with the latest machinery and more is being obtained to mechanise the mines further.

New Capital Issues

FOUR companies have been authorised to raise capital totalling Rs. 5.37 crores. Of these, one is offering bonus shares to existing shareholders, another is floating equities and two are issuing equities plus preference shares. One company is offering part of its equities and preference shares to the public. Foreign collaboration is involved in one of the issues. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Associated Cement Companies Ltd, Bombay, will be issuing further capital of Rs. 119,21,800 in 119,218 equity shares of Rs. 100 each, to be issued as bonus shares to existing equity shareholders of the Company on capitalisation of the share premium account to a like extent.

The Indian Tube Company (1953) Ltd, Calcutta, an existing Company, is to issue capital of Rs. 1,05,00,000 divided into 87,500 equity shares of Rs. 100 each for cash at a premium of Rs. 20 a share to be subscribed as to 40 percent by Stewarts and Lloyds Ltd, U.K. and 60 percent by the Tata Iron and Steel Company Ltd and their nominees. The capital will be used for financing the expansion of the seamless tube plant.

Bist Industrial Corporation Ltd is to issue capital of Rs. 68,64,500 divided into 486,450 equity shares of Rs. 10 each and 20,000 cumulative redeemable preference shares of Rs. 100 each, carrying dividend at 9.27 percent free of company's tax, but subject to deduction of taxes at source at the prescribed rates. This supersedes an earlier consent granted in 1960 for the issue of preference shares of Rs. 40 lakhs. The capital is required for the establishment of a sugar mill in Nainital at an estimated cost of Rs. 2.60 crores. The Company has already raised a capital of Rs. 51,35,500.

Central Pulp Mills Ltd, Poona, is to issue Rs. 2.45 crores capital—Rs. 1.70 crores equity and Rs. 75 lakhs preference—to be issued for cash at par. The money will be used in establishing a pulp mill.

The Stock Markets

TURNOVER FALLS DESPITE GOOD CORPORATE NEWS

Wednesday Evening.

POLITICAL developments have dominated events in the stock market during the past week. The inconclusive talks in New Delhi between the Indian and Pakistani Home Ministers, combined with the growing uncertainties relating to Kashmir, have called for caution. The earlier steadiness following good corporate news has not been maintained towards the close. The payment of higher dividends by Indian Aluminium, Union Carbide and Philips India has had virtually no effect. The excellent profit made by Guest, Keen, Williams has been overlooked since the Company has paid a smaller dividend on the increased capital.

Turnover has declined appreciably and is largely confined to clearing scrip. In view of the poor outlook for equities, investors have held off. But selling pressure has also been light since holders seem to think that almost all the adverse factors have been discounted. Considering that bulls have incurred substantial losses since the last Budget, they have little courage to extend their commitments. Bears have also become cautious in the belief that Mr. T. T. Krishnamachari, Central Finance Minister, may modify some of his harsh Budget proposals. It is generally thought that the dividend tax and the inclusion of bonus shares in capital gains may be modified. The situation will become clear only when the Finance Bill, 1964, is passed.

Indian Iron have drifted downwards after an earlier rise. Although the Joint Plant Committee has raised the prices of some decontrolled items of steel for the second time in about two months, investors have not been impressed. Among engineering shares, Texmaco have fluctuated both ways on influential buying. Guest, Keen, Williams, Burn and Jessop have been quiet towards the close. Binani Metals have been steady on interested support.

Business has largely been confined to clearing shares in the miscellaneous section, and their prices have reacted towards the close. Indian Copper have not responded to the rise in the international price of copper due to the general depression. India Steamship and National Insulated Cable have dropped on pressure. Hindustan Aluminium have declined in spite of the prospect for expansion. Isaac Holdens have been about steady on paying a maiden taxable ordinary dividend of 5 percent. Among managing agency shares, Jardine Henderson and Balmer Lawrie have weakened. Calcutta Trams have not responded to the prospect of an increase in fares.

Electric company shares have been dull and small business has passed in Calcutta Electric. Scattered business in United Commercial and United Bank has been transacted in the banking section. Paper shares have been quiet and Orient have declined. Seshasayee and Titagur have lost on balance. Sugar shares have been difficult to transact due to the absence of buyers. Investors have been disturbed by the decision of the Government to set up a Sugar Marketing Board. It is thought that the setting up of this body implies that controls on sugar will be perpetuated.

Turnover in jute shares has been small. Investors have been discour-

aged by the growing competition in jute goods. So the sound statistical position of the industry has been overlooked. Birla, Champdany, Kinnison, Ganges and Barnagore have lost. Coal shares have been sluggish and buyers have been difficult to attract even by discounting prices. Bengal have been neglected on reducing the dividend. Pench Valley, Amalgamated and Central India have declined on a predominance of sellers. The growing accumulation of pithead stocks of coal due to the decline in demand for inferior grades has caused a great deal of concern.

Although cotton mills have done pretty well for 1963, the outlook for 1964 has been assessed cautiously. Although the export of cloth has improved during the first quarter of 1964, competition in foreign markets has been intensified. Production costs of Indian mills have, meanwhile, risen considerably. Bharat Commerce and Jay Shree Textiles have been steady due to good reports, but J. K. Cotton has reacted on profit-taking. Scattered business has been done in tea shares. Interest in these shares has been at a low ebb following the decline in the average price of teas sold during the 1963-64 season. Attention has largely centred on selected Assam and Doars gardens.

Government securities have been steady in spite of small turnover. It looks as though official support has been forthcoming since subscriptions to the new conversion loans have already begun. Scattered business in

selected State Government loans has been transacted.

Bombay

ANOTHER DULL WEEK IN DALAL STREET

GOOD COMPANY NEWS IGNORED

Wednesday Evening.

THE Bombay stock market has been dull during the past week. Turnover in clearing and cash shares has been small. Although selling pressure has not been pronounced, any small offer has tended to reduce prices disproportionately since there have been few buyers. Operators have been inclined to await the passing of the Finance Bill. There was an earlier recovery in the belief that the Central Finance Minister, Mr. T. T. Krishnamachari, might modify his Budget proposals.

Prices of cash scrip have declined, and some of them have been difficult to transact due to the absence of support. So the payment of higher dividends by some leading companies has failed to stimulate interest. Although reports of cotton mills for 1963 have shown satisfactory results, investors have preferred to wait. The export of cloth during the first quarter of 1964 has been higher than in the corresponding period of 1963, but investors have been discouraged by

FINANCE FOR SMALL SCALE INDUSTRY? NOT A DIFFICULT PROBLEM

Are you having financial difficulties in running your plant? Or is it that you want additional raw materials to manufacture more—or some money to keep your plant running till you get enough from your sales? Or it might be that you want a machine or two, to increase your production or to raise your status as a small scale industrialist. Why not take your problem to the State Bank Agent who will be glad to assist you in all matters connected with your industry? Your security for finance is not the main consideration—what the State Bank seeks is your sincerity and capacity to produce more. With over 1500 offices throughout the country THE STATE BANK OF INDIA AND ITS SUBSIDIARIES are at the nation's service.

the absence of a rise in the internal prices of cloth. Share prices have lost on balance due to small selling. The closing undertone has been quiet.

Tata Steel ordinary have closed at Rs. 147. Holders have refrained from selling due to the higher output of the Company for the year ended March 1964. Scattered business in selected engineering shares has been transacted, but their prices have declined. Tata Engineering, Premier Construction, Alcock Ashdown and Mukund Iron have been sold at lower

prices. In motor-vehicle shares, Hindustan Motors and Premier Automobiles have reacted on pressure.

Century have fluctuated both ways in the cotton mill section. Bombay Dyeing, Kohinoor, Svadeshi and Simplex have declined. Standard have, nevertheless, been slightly steady due to short-covering. Shree Niwas have not responded to the increase in the dividend. India United ordinary and Gokak have been quiet.

Turnover in miscellaneous shares has been small. In the sugar section, Belapur and Walchandnagar In-

dustries have been barely steady. Among cement shares, Associated Cement have been maintained on the prospect of a bonus issue. Among steamship company shares, Scindia Steam have declined on profit-taking. Mining shares have been subdued. Shivrajpur Syndicate have been offered freely without attracting interest.

Chemical shares have been quiet. Tata Chemical and Indian Dyestuff have been sold at lower prices. Rayon shares have dropped in sympathy with the general trend. National

CAPITAL, 16th April, 1964.

Rayon have quoted lower. Voltas have been about steady on investment buying. Among new shares, Synthetics and Chemicals, Permanent Magnets and S.L.M.-Maneklal have declined.

Madras

TURNOVER SHRINKS APPRECIABLY BUSINESS CENTRES ON PLANTINGS

Tuesday Evening.
THE Madras stock market has been fairly steady during the past week, although turnover has shrunk considerably. Enquiries from outside centres have been negligible. Selected clearing shares have recovered slightly due to short-covering. Interest in cash shares has been at a low ebb due to fears of power cuts in the coming dry months. Business has largely centred on selected planting shares. Good tea and coffee shares have been fancied on satisfactory crop reports. Interest has been shown in high-yielding preference shares and debentures, but they have been in short supply.

Government securities have been quiet, and prices of State loans have tended to decline. In the banking section, Canara Banking Syndicate have been steady at Rs. 68.80 and Indian Overseas have changed hands at Rs. 135.30. Syndicate Bank have been taken at Rs. 143.50 on paying a taxable dividend of 20 percent. Electric company shares have generally been neglected since their yields have become unattractive due to the rise in interest rates. Negapatam have been sold at Rs. 11 and West Coast at Rs. 13.50. Sugar shares have been quiet, and Deccan have been available at Rs. 11.85. Business in E.I.D. has passed around Rs. 35.65, but K.C.P. have been steady at Rs. 24. Travancore have weakened to Rs. 7.45 and Andhra to Rs. 14.75.

Among planting shares, Blue Mountain have been transacted at Rs. 2.41 and Cochin Malabar at Rs. 5.45. Consolidated Coffee have been steady at Rs. 21.50 and Ouchterlony at Rs. 4. Periakaramalai have changed hands at Rs. 3.44, Teekoy at Rs. 6.60. Rajagiri at Rs. 21.25 and Midland at Rs. 11.20. Norwuch have been bought at Rs. 23. Parkside at Rs. 26.33 and Peermade at Rs. 20.62. Interest has been taken in Nilgiri at Rs. 9.12 and in Chemba at Rs. 4.65. Coffee Lands have been steady at Rs. 16.62 and Osoor at Rs. 2.60.

In textile mills, South India Viscose have recovered to Rs. 135.50, but Travancore Rayon have weakened to Rs. 22.87. Lakshmi have been done at Rs. 134.50 and Madura at Rs. 34.45. Bangalore Woollen have quoted Rs. 273 and Buckingham Rs. 285. Vasantha have changed hands at Rs. 255 on repeating the taxable ordinary dividend of 20 percent. Vijayakumar have weakened to Rs. 115 since the decision of the Company to issue new preference shares and redeem the existing ones has disturbed some shareholders. The Company proposes to redeem 8,000 redeemable cumulative participating preference shares of Rs. 100 each. It also proposes to issue 8,000 9 percent tax-free redeemable cumulative preference shares of Rs. 100 each to the existing ordinary shareholders in the ratio of two new shares for every three held. Vijayalakshmi have been taken at Rs. 111.50 on declaring a taxable ordinary dividend of 10 percent.

Among miscellaneous shares, Aluminium Industries have been maintained at Rs. 21.37 and Ashok Leyland have recovered to Rs. 6.97. In cement shares, Dalmia Cement have been

CAPITAL, 26th March, 1964.

weak at Rs. 13 and India Cement at Rs. 5.68. Metturr Chemical have been bought up to Rs. 13.35. Seshasayee Paper have improved to Rs. 7.70 and Tube Investment to Rs. 210. Standard Motors have been transacted at Rs. 10.12 and Parry's Confectionery at Rs. 3.14. Spencer have met with support up to Rs. 22.37 and Textool have been wanted at Rs. 142.50. Kirloskar Electric have quoted Rs. 18.40. The Company proposes to increase the authorised capital from Rs. 1 crore to Rs. 2.50 crores by creating 1 million ordinary shares of Rs. 10 each and 50,000 preference shares of Rs. 100 each. Tubes and Malleables have changed hands at Rs. 9.48 on declaring an interim taxable ordinary dividend of 10 percent.

London

ELECTION DECISION BOOSTS SHARES INSTITUTIONAL BUYING RESUMED

London, 15th April.

ELECTION uncertainties were a major influence on sentiment in the stock market during the early part of the past week, but when it became apparent that there would be no spring election there was a general upward surge in prices. With another six months to improve their image and secure voters' confidence, it was felt that the Government might win an autumn election and on this assumption, buyers returned to the market in force. The institutions and unit trusts who were waiting for more favourable conditions were active and with stock none-too-plentiful, prices moved up fairly sharply. Company news was again a sustaining influence, and leading companies like Dunlops, G.E.C., Bowaters and Rank Organisation responded well. Stores were favoured with Marks and Spencer wanted in front of the results which are due next month. Textiles found support and even tobaccos were bought. Dollar stocks moved in sympathy with Wall Street.

TO PUBLIC LIMITED COMPANIES

HOMES FOR YOUR EMPLOYEES

LIC'S INTERESTING OFFER

Here's a way your employees can have their own homes. Two simple LIC Schemes help you help them solve the housing problem. These schemes readily fit into the welfare plans of your company. The conditions are simple, interest rates are low with rebates for punctual payment

EMPLOYEES CO-OPERATIVE HOUSING SOCIETIES get loans of Rs 2,50,000 to Rs 15,00,000. Loans repayable in 15 years.

PUBLIC LIMITED COMPANIES get direct loans of Rs 5,00,000 to Rs 15,00,000. Loans repayable in 20 years.

I. B. A. CHAIRMAN SURVEYS BANKING PROGRESS

(BY A SPECIAL CORRESPONDENT)

Whether banks should raise their deposit rates in order to attract more savings has been a matter of controversy for some time. As the Reserve Bank is said to disfavour any increase in advance rates, the deposit rate issue remains undecided. The chairman of the Indian Banks Association supports the case for increasing interest rates on deposits, but he does so on condition that banks are allowed to step up their advance rates correspondingly.

THE Indian Banks Association, at its annual general meeting held recently, re-elected Mr. Tulsidas Kilachand as the chairman. Mr. B. K. Dutt of the United Bank of India was elected vice-chairman. The general managers of the Bank of Maharashtra and Rajasthan too find a place on the committee, which shows that small banks are being given proper recognition.

As is customary, Mr. Kilachand surveyed the major issues facing the Indian banking system. This year, they included the nationalisation threat, the impact of the Budget, and a review of banking and monetary conditions. He welcomed the repeated declarations by Central Ministers that the Government was not con-

templating the nationalisation of banks. The Reserve Bank, he said, should use its newly acquired powers without causing unnecessary hardship to financially sound and efficiently managed companies. The Indian Banks Association has launched a campaign to inform the public about the working of the banking system. A series of publications have been brought out by the Association and arrangements are being made to publish advertisements in newspapers showing the rôle and achievements of banks in India.

Interlocking Directorships

The interlocking of directorships between banks and joint-stock enter-

prises was defended by Mr. Kilachand on the ground that they represented a mutually beneficial relationship. Interlocking of directorships was not uncommon in the public sector, particularly in such institutions as the Life Insurance Corporation and the State Bank this is just the case. Mr. Kilachand was of the view that the Government possesses adequate powers to prevent the misuse of the trust reposed by the public in bank directors.

The net result of the imposts in the 1964-65 Budget would be an additional burden of Rs. 11 crores on the corporate sector. Since the capital base of the banks was narrow and the long-term borrowings were mainly

CAPITAL, 16th April, 1964.

from the Refinance Corporation, they would not be able to take advantage of the exemption limit prescribed under the surtax.

The major cause of the increase in money supply during the past year was a big rise in the net bank credit to the Government. The net credit given to the Government went up by Rs. 304 crores in 1963, compared with Rs. 292 crores in 1962. In contrast, credit given to the private sector went up by a much smaller amount—Rs. 145 crores in 1963, compared with Rs. 64 crores in 1962. The inflationary impact of the increase in credit was offset by the net reduction of Rs. 19 crores in 1963 and of Rs. 76 crores in 1962 in the foreign exchange assets.

The rate of growth of deposits in 1963 at 14 percent was about the same as in 1962. It was 11 percent in 1961. The share of demand deposits in the increase was much greater in 1963 than in the two preceding years—Rs. 174 crores in 1963, Rs. 84 crores in 1962 and Rs. 47 crores in 1961. Such a shift in resources worked to the advantage of the banking system because it saved on interest charges paid on deposits.

Larger Profits

The profits of the banking system turned out to be larger in 1963 than in 1962. The total net profits, after taxation, of the 15 largest Indian banks, excluding the State Bank, were Rs. 7.49 crores (9 percent higher) in 1963, compared with Rs. 6.9 crores in each of the two preceding years. The percentage rise in dividends was much smaller than the rise in bonus. Dividend payments absorbed Rs. 3.12 crores in 1963, whereas in 1962 and 1961, they were Rs. 2.85 crores and Rs. 2.54 crores, respectively. The rise in dividends was of the order of 12 percent in 1962 and a further 9 percent in 1963. The increase in dividends was mostly due to a sizable rise in the paid-up capital of several banks, undertaken at the instance of the Reserve Bank, to strengthen the capital base rather than to any increase in the rate of dividend itself.

On the other hand, payment on account of bonus to employees rose from Rs. 1.82 crores in 1961 to Rs. 2.16 crores in 1962, and further to Rs. 2.40 crores in 1963. The increase in bonus in the last two years was 19 percent and 11 percent. Transfer to reserves suffered as a result. They amounted to Rs. 1.89 crores in 1963, compared with Rs. 2.13 crores in 1961. The banks would not be able to step up their dividends in the immediate future.

Deposit Rates

Although the interest rate controversy has been going on for some time, nothing definite has emerged so far. It is known that a powerful section of bankers are against a rise in deposit rates in spite of a hint from the Reserve Bank that commercial banks should raise the interest rate on deposits. Mr. Kilachand favours a higher rate of interest on deposits even if such a rise leads to a corresponding increase in the rate on advances. The Reserve Bank, however, does not seem to favour any further rise in the latter rate. That means that commercial banks have to absorb the increase in costs which will result from higher interest rates on deposits.

The banking system seems to have been paying greater attention to small industries. The outstanding amount for these concerns between June 1960 and December 1962 went up by 85 percent. The finance extended by banks for the movement and marketing of agricultural produce doubled during the decade ended

CAPITAL, 16th April, 1964.

1962. The banking system would willingly finance agriculture but for the fact that farming in India is largely of a subsistence nature, the chairman pointed out.

THE CALCUTTA MONEY MARKET

MODERATE INCREASE IN ADVANCES

Wednesday, 15th April.

THERE has been a moderate increase in the general level of advances in the Calcutta money market during the past week. The requirements of the cotton and jute mills are unchanged. Those of the sugar mills, and of the iron, steel and engineering industries, are slightly higher. But miscellaneous advances show a fair increase. In the inter-bank market, conditions have been easier and the call rate has come down to 5½ percent.

The exchange market has been moderately active, with an irregular supply of both tea and gunny bills. The demand for remittances is keen. In the London market, sterling has fluctuated narrowly.

SILVER WAS STEADY IN CALCUTTA during the past week due to the increased seasonal demand. The price advanced from the previous week's level of Rs. 259 to Rs. 259.75, quoted today. The London and New York prices stood at 111½d and 129.3 cents.

In sympathy with the rise in silver, gold ruled steady and the price of 14-carat rose from Rs. 66 to Rs. 67.25.

DURING THE WEEK ENDED 10TH APRIL, Government of India Treasury bills for Rs. 1,70,66,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 13th April. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at Bangalore, Bombay, Calcutta, Madras and Nagpur up to the close of business on 20th April, and at Kanpur and New Delhi up to 11 a.m. on 21st April.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 14th April to the 18th April at Rs. 99.266 percent subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. There were no sales of these bills during the period 8th April to 11th April.

RISES OF RS. 44.10 CRORES TO RS. 2,547.05 crores in active notes and of Rs. 43.01 crores to Rs. 2,564.36 crores in the total note issue were notable features of the return of the Reserve Bank of India during the week ended 10th April, 1964. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 44.72 crores to Rs. 2,229.09 crores. Deposits of the Government of India rose by Rs. 22.09 crores to Rs. 74.25 crores while those of State Governments dropped by Rs. 3.28 crores to Rs. 12.68

crores. Balances of scheduled banks at Rs. 83.42 crores showed a rise of Rs. 6.54 crores. Their loans from the Bank declined from Rs. 74.94 crores to Rs. 68.92 crores of which advances against usance bills amounted to Rs. 29.10 crores (Rs. 42.77 crores). Balances held abroad dropped by Rs. 92 lakhs to Rs. 12.25 crores and investments by Rs. 144.31 crores to Rs. 103.69 crores. Ways and means advances stood at Rs. 84.35 crores, against Rs. 64.47 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 3rd April, 1964, shows a rise of Rs. 9.83 crores to Rs. 629.76 crores in total deposits. Investments in Government securities are down by Rs. 2.95 crores to Rs. 238.22 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have risen by Rs. 9.78 crores to Rs. 374.28 crores. Cash and balances are, in consequence, shown at Rs. 19.34 crores or Rs. 1.69 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 3rd April, 1964, shows Demand and Time liabilities at Rs. 1,238.55 crores (Rs. 30.86 crores on account of borrowings from banks) and Rs. 1,269.36 crores (Rs. 12.81 crores), compared with Rs. 1,226.30 crores (Rs. 31.00 crores) and Rs. 1,260.71 crores (Rs. 12.26 crores), respectively, in the previous week. Cash has improved by Rs. 2.93 crores to Rs. 61.16 crores, while balances with the Reserve Bank have declined by Rs. 4.05 crores to Rs. 85.26 crores. There is a drop of Rs. 7.23 crores to Rs. 632.53 crores in investments. Advances and bills discounted at Rs. 1,857.82 crores show a rise of Rs. 26.02 crores. The ratios to total liabilities of cash and balances, of advances and discounts are in consequence shown at 5.8 percent and 74.1 percent, against 5.9 percent and 73.7 percent.

CRANKSHAFT GRINDING WHEEL

A crankshaft grinding wheel must be dimensionally perfect, correctly balanced and uniform in hardness. These essential qualifications also make it one of the most difficult abrasive products to manufacture!

Carborundum Universal have the technical skill and equipment to meet the challenge—successfully! Their top quality crankshaft grinding wheels are in operation in India's leading automotive factories.

Grains and Super Refractories.

NATIONAL RUBBER MANUFACTURERS LIMITED

COMMENDABLE WORKING RESULTS: MR. K. N. MOOKHERJEE OUTLINES EXPANSION PROGRAMMES AND ANNOUNCES NEW RIGHTS ISSUE

Presiding over the 18th Annual General Meeting of the Company held in Calcutta on the 11th April, 1964, Mr. K. N. Mookherjee, the Chairman, said:

Gentlemen,

It gives me much pleasure in extending to you all a hearty welcome to the Eighteenth Annual General Meeting of your Company. The Directors' Report and audited Accounts for the year ended 31st December, 1963 have been in your hands for some time now and with your permission I shall take them as read.

Increased Dividend

You will have noticed from the Directors' Report that your Company's working during the year under review was indeed satisfactory. There was

continued increase in the production of all important items. The turnover of Rs. 457 lakhs achieved in 1963 was the highest in the history of the Company being 30% more than that of the previous year. Against this substantial increase in sales the value of stock and borrowings were maintained almost at the same levels as in the previous year. The net profit for the year 1963 registered an increase of 97% over 1962. Evidently your Company was able to record an all round improvement in its operational efficiency during the year under review. Consequently upon the better working results it was possible for your Directors to raise the quantum of dividend distribution on Ordinary Shares for the second year in succession being 10% for 1963 as against 8% for 1962. Your

Directors were also able to appropriate larger sums to reserve funds.

Record of Progress

The sales figure of Rs. 457 lakhs attained in 1963 was more than 50% higher than the target of Rs. 300 lakhs envisaged by the expansion schemes taken in hand by the Company in 1957. In fact the progress in sales recorded by the Company during the successive plan periods has been commendable having registered a rise of almost ten times since 1951. The performance of the Company over the past three years has been particularly significant. Since 1960, the Company's net earnings increased about ten times and the margin of net profit on sales as well as the rate of dividend on Ordinary Shares maintained a steadily increasing trend.

Technical Agreement

The agreement with Goodyear India Ltd. expired in December, 1963 and a new agreement has been concluded with them. Another agreement with Messrs. Goodyear Tire & Rubber Company, U.S.A. under which they will extend to your Company technical assistance has also been executed and it will be submitted to the Government for their approval.

Managed Company

Both production and sales of the managed company, General Tyres Limited, have been gradually and steadily increasing. The Industrial Finance Corporation of India has agreed in principle to sanction an additional loan of Rs. 40 lakhs for the purpose of rationalisation and expansion of production.

Expansion Programmes

You will have noticed from the Directors' Report details of schemes taken in hand by your Company for expansion of production of major items like cycle tyres, industrial V-belts and fan belts and also for manufacture of PVC conveyor belting. These schemes would constitute the second series of substantial expansion to be implemented by your Company since 1957, with a view to enable the Company to take its due

share in the progressively rising demand for the products. Production of 1200 tons of reclaimed rubber by the Company itself will substantially reduce the cost of this essential raw material required for the manufacture of a variety of finished articles. With the completion of these schemes the profitability of the Company is expected to rise substantially above the present level.

Rights Issue

You will have noted from the Directors' Report outlines of the proposed rights issue of 5,00,000 Ordinary Shares of Rs. 10/- each at par to be made to the existing shareholders in the ratio of one new share for every existing Ordinary Share held in the Company. Arrangements for making this issue have since been finalised and the Letters of Right containing detailed terms and conditions of the issue will be posted by the end of this month to

those Ordinary Shareholders whose names would stand in the Registers of the Company on 13th April, 1964. The right of acceptance and/or renunciation of the new shares as well as the opportunity to apply for additional shares will remain open upto 30th May, 1964. Your Directors are confident of the full support of the shareholders of the Company as in the past.

An application has been made to the Industrial Finance Corporation of India for a fresh loan of Rs. 30 lakhs to provide funds for meeting part of the capital cost of the expansion schemes to be implemented by the Company and the application is now at an advanced stage of consideration by the Corporation.

Raw Materials

I am glad to be able to tell you that the Central Government's budget proposals for 1964-65 have not imposed any substantial burden so as to increase

the cost of raw materials appreciably barring a few items consumed by your Company, i.e. high carbon steel wire, cotton and rayon cord, steel sheets and plates, etc. But the rubber manufacturing industry is seriously perturbed at the recent decision of the Government of India linking the grant of import licences for natural rubber with the use of indigenous synthetic rubber which, coupled with the abolition of the maximum controlled prices of Indian natural rubber (while the minimum prices are retained) is sure to raise largely the cost of the basic raw materials for the industry i.e. natural and synthetic rubber. Besides, such a decision has been enforced at a stage when the units of the industry by and large are not equipped to make full use of synthetic rubber due to varied nature of their product lines or due to lack of technical facilities and standardisation. I do hope the Government of India will

give due consideration to this important matter and evolve a method by which the mutual interests of both the producers and consumers of natural and synthetic rubber in India may be safeguarded.

Appreciation

Before concluding, I should like to offer our sincere thanks to all dealers, customers and suppliers of the Company for their ready co-operation and valuable support during the year under review. On behalf of the Board of Directors and on my own I also express my warm appreciation of the happy relations maintained between the Management and labour and the loyalty and devotion of the officers and staff of the Company throughout the year 1963.

NOTE: This does not purport to be a record of proceedings of the Annual General Meeting.

THE CENTRAL BANK OF INDIA LIMITED—Cont'd.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of The Central Bank of India, Ltd., as at 31st December, 1963, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of the 171 branches audited by us, 47 branches audited by other auditors and the unaudited returns from 148 other branches not visited by us. In respect of which the Central Government has made an order granting exemption from audit pursuant to section 228 of the Companies Act, 1956.

We report that—

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- The transactions of the Bank which have come to our notice, have been within the powers of the Bank;
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank not visited by us;
- The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- The reports on the accounts of the branches audited by other auditors have been forwarded to us and the same have been considered in preparing our report;
- In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts read along with the notes appearing thereon give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963 and the Profit and Loss Account gives a true and fair view of the Profit, for the year ended upon that date.

as implemented been such as would subvert the end of increasing production? The year 1963 started off with a rise in the Bank Rate to 4½ per cent—a necessary adjustment in order that the primary lending rate might be brought into alignment with other interest rates ruling at the time. It can hardly be maintained that the unusually large credit contraction during the 1963 slack season as due to the Reserve Bank's raising of Bank Rate early in the year; a more tenable explanation would be that the slackness in production reduced the rate of growth of bank credit to industry. Nevertheless, at the end of the year, it seemed as if, for the financing of the 1963-64 busy season, banks would stand in need of considerable assistance from the Reserve Bank;

and the Central Banking Institution did act promptly, in sanctioning liberal credit limits, by modifying somewhat the multiple-tier Bank Rate system and reducing the penal rate of interest on borrowing from 6½ to 6 per cent. Banks were encouraged to feel, through the fact of such relaxation, that they could, in counting upon assistance from the Reserve Bank, extend themselves fully in the provision of credit for productive endeavours.

Disillusionment was in store for the banks. Precisely during the week when the Reserve Bank's advances to Scheduled Banks touched their peak, a communique was issued tightening credit once again. Whereas banks had, on the eve of the busy season, been allowed to borrow upto 75 per cent of their Statutory Reserves at 4½ per cent

and another 75 per cent of such reserves at 6 per cent, the penal rate of interest on borrowing in excess of these limits with the special sanction of the Reserve Bank of India having been lowered to 6 per cent, the directive issued early in March was to the effect that the two tranches were each cut to 50 per cent and that, besides, any borrowings beyond that limit (permitted only under special circumstances) would bear a penal interest rate of 6½ per cent. One implication is that banks which had planned ahead to provide finance to industry on the basis of securing assistance from the Reserve Bank as and when necessary may now be compelled to cancel limits. Industry would not be unduly worried as much by dear money as by tight money, i.e., scarcity of credit. For its smooth

CAPITAL, 16th April, 1964.

working and increasing tempo of production industry must be assured of availability of money at all times.

The other, more basic implication, concerns the impact of a multiple-tier Bank Rate upon the whole structure of interest rates. It would be pertinent to quote here from my statement last year: "Orderly interest rates obviously require that the anomaly of the three-tier Bank Rate be set right. I am afraid that all the devices we have woven in and around the Bank Rate, possibly with a view to avoiding straight increase in it, have served merely to add to the complexity of our interest rates".

If banks, even though for short periods, are required to pay 6½ per cent for their borrowings, at what minimum rate are they to fix their own lending rates? Furthermore, would the rates of interest on Deposits as they exist to-day be found a sufficient inducement for mobilisation of resources? Yet again, can banks at all be expected to invest in Government Securities that could at best yield 3½ to 4 per cent, when on borrowings against the same securities they might have to pay interest at 6½ per cent? I once again plead for rationalisation of the interest rate structure and a prerequisite in this respect certainly is that we have just one, single Bank Rate. What is important for banks is the minimum spread between the lending rate and the "borrowing" rate, that is, the interest payable on Deposits. It would follow, then, that the various banking interest rates would need to be linked with Bank Rate itself; but this cannot be done, I repeat, unless the multiple-tier Bank Rate goes.

In the face of uncertainty about the Reserve Bank's lendings it obviously becomes essential for banks to plan on lending only on the strength of their deposit resources. Thus, the mobilisation of deposits assumes more importance than ever before. I should like to quote again from the "Economic Survey" which, in its paragraphs on monetary trends, asserts that "the accent of monetary policy will also necessarily have to be on realistic interest rates which reflect adequately the real cost of capital to the economy". One aspect of mopping up of funds in areas now unbanked is of course a branch expansion programme; another is the inducement that can or should be held out to the owner of money, to make a deposit with banks. If, consequently, there are no emerging signs of interest rate rationalisation, I feel apprehensive that the banks will be compelled to revise upward the rates of interest they pay on Deposits and those charged on advances.

I have not sought to be critical, but I have this year striven to emphasise that while every official pronouncement has unequivocally acknowledged both the need for production and the incentives that have to be provided for that purpose, we are still far away from the existence of such favourable economic conditions for an automatic and sustained effort for industrial growth. If, as is possible, the effect of the last Budget is to make the capital market shy, I am sure that the banking system, to the best of its ability and to the full extent of its capacity will provide every kind of financial assistance for the furtherance of production, though a limiting factor in this regard will be the higher liquidity requirements that become effective from next autumn under the Banking Companies Act as amended in September, 1962. In conclusion, may I be permitted to express my hope that the Government will increasingly create a climate of incentives, so that we can go ahead speedily with the industrialisation of our country?

NOTE: This does not purport to be a record of proceedings of the Annual General Meeting.

CAPITAL, 16th April, 1964.

THE NEED TO LIMIT THE NUMBER OF HOLIDAYS IN INDIA

By M. S. Bala

The number of holidays granted to workmen annually in India is excessive. Moreover, it varies from State to State. If output is to be raised, especially in factories which are governed by rules prescribing minimum leave for workmen, it is necessary that holidays should not only be reduced but also be made uniform throughout the country.

THE Republic Day in 1964 fell on a Sunday. So the Government of West Bengal and of other States decided to grant 27th January as a holiday for Government offices. Subsequently, the Government declared 27th January as a holiday under the Negotiable Instruments Act. This practice of making up for a holiday that falls on a Sunday is unknown in advanced countries of the world.

A few weeks earlier the Government of West Bengal had declared a holiday on the occasion of the birth centenary celebration of Swami Vivekananda, but this privilege was open only to Government employees. The words "leave" and "holidays", although used at times as if they are interchangeable, have two distinct meanings. Holidays mean a total closure of work whereas leave is absence with permission from work.

Immediately after the Chinese invasion, there was a sudden outburst of enthusiasm to produce more, and workmen offered to work overtime and contribute their overtime earnings to the National Defence Fund. The Government closed its eyes to the

rules which prescribe the number of hours for overtime work. In fact, it went to such absurd lengths that in a particular factory, the workmen said the management was anti-national because it did not call upon them to do overtime work so that they could contribute to the National Defence Fund. While no one can deny that the first and foremost need in this country is both hard work and improving the quality of work, nothing has been done either to have a uniform policy of leave and holidays for the whole nation or to ensure that during working hours, every one does an honest day's work.

Leave is intended for a number of purposes: (1) rest, recuperation of health, fulfilling social obligations, (2) sickness and convalescence, (3) unforeseen circumstances and (4) maternity. A holiday is either for a festival or a day of national importance on which absence from work, excepting essential services, is permitted for large sections of the people. It is not usually recognised that there are and there will be some who will have to work on what is a holiday for the more fortunate ones.

A holiday for the whole nation is an impossible proposition, unless some section of the population pay for it.

Lack of Uniformity

Even though the question of leave in India was considered as early as 1929 by the Royal Commission on Labour, and has been further considered by other committees appointed from time to time, in some cases by the Central Government and in others by State Governments, a lack of uniformity is the only common factor. It is true in some countries the annual leave is fixed by law, and in others, it is fixed by collective agreements, but holidays are uniform. In the statement on this page, appears the number of working days granted as paid annual leave in different countries.

It is not possible to state in India what is the annual leave so granted. The annual leave in this country is governed principally by the Factories Act, 1948, the Mines Act, 1952, the Shops and Establishments Act (which varies from State to State). The Factories Act has laid down that every worker who has worked at least

a period of 240 days during a calendar year will be allowed during the subsequent year, leave with wages at the rate of one day for every 20 days of work performed if an adult and one day for every 15 days of work performed if a child. This leave is exclusive of all holidays whether occurring during or at either end of the period of leave and can be availed of in not more than three instalments in a year. The Mines Act, 1952, has laid down that every person employed in a mine who has completed a period of 12 months' continuous service will be allowed during the subsequent period of 12 months, leave with full pay or wages at the rate of 14 days for a period of 12 months if he is a monthly paid employee and seven days if he is paid by the week. There is a difference

Country	Duration of annual holidays with pay (general minimum)
Belgium, Mexico, Portugal, Switzerland	six days
The United Kingdom	six days or two weeks
The United States	one week
Chile, Ireland, Turkey, Venezuela	seven days
Egypt	seven to 15 days
Greece, Luxembourg	eight days
Argentina, Guatemala, Italy	ten days
Australia, Austria, Czechoslovakia, West Germany, the Netherlands, Poland, the U.S.S.R., Uruguay, Yugoslavia	12 days
Canada, Costa Rica, Indonesia, New Zealand, South Africa	two weeks
Brazil, Colombia, Peru	15 days
Denmark, Finland, France, Norway, Sweden	three weeks
Cuba, Nicaragua	30 days

MARTIN BURN LOOK BACK TO OVER 180 YEARS OF SERVICE TO INDIA

...to be able to compute this service by decades, not by years alone...to recall that our creed has consistently been the development of our country's resources through engineering and allied enterprises...to take pride in planning that makes the many units in our organization fall into a rational and complementary group and each one a leader in its particular field, a position which some of them, early pioneers in India, held even in the last century. For us looking back is a worthwhile proposition—an incentive to move forward.

AMONG THE COMPANIES IN THE MARTIN BURN GROUP ARE:

THE INDIAN IRON & STEEL CO. LTD.: With a million ton integrated steel plant at Burnpur, the largest foundry in the Commonwealth at Kulti and its own collieries and iron ore mines, IISCO has an enviable record in production efficiency.

BURN & CO. LTD., HOWRAH WORKS: Pioneers in foundry practice in India, in structural steelwork fabrication and the manufacture of rolling stock—the origins of the Company go back to the year 1781.

BURN & CO. LTD., REFRACTORY & CERAMIC GROUP: Apart from stoneware pipes and chemical stoneware, the works of this group—eight in number and located in four states—manufacture nearly all types of refractories to meet the requirements of India's steel industry, power undertakings, railways, ordnance factories—in fact, any industry requiring refractory material for the maintenance of furnaces.

THE INDIAN STANDARD WAGON CO. LTD., SANTA: The oldest Indian unit started for the specific purpose of manufacturing railway rolling stock—has been mainly responsible for building up the wagon building industry. Also manufactures springs, forgings, pressings and stampings for heavy industry as well as automotive components.

THE HOOGHLY DOCKING & ENGINEERING CO. LTD.: Established in 1819, the Company has a shipbuilding yard, a dry dock and extensive workshops at Salkia.

ROBERT HUDSON (INDIA) LTD.: A premier concern in its own field, the Company devotes itself to all types of light railway engineering—has important connections with the mining industries.

RAILWAY COMPANIES: Some of the first feeder railways in India, with six systems in four states.

ELECTRIC SUPPLY COMPANIES: Pioneers again in the generation and distribution of domestic power in India—serve 45 towns in Uttar Pradesh and Madhya Pradesh.

THE VAUGHAN BURN CRANE COMPANY LTD.: A collaboration with The Vaughan Crane Company Ltd. of Manchester... Hand operated and electric overhead travelling cranes and chain pulley blocks.

between an underground worker and one working on the surface.

There are 13 different Shops and Commercial Establishments Acts in different States and the amount of leave which they have prescribed, called the privilege leave, is given in the statement on this page.

Most laws have laid down that what is mentioned in that statute is the minimum that should be granted and would not affect adversely a workman who had been enjoying greater privileges before this Act came into force. The Supreme Court has gone further and said that what the law gives is only the minimum and it is open to the labour tribunals to grant more if they consider fit. In the case of Rai Bahadur Diwan Badri Das vs. Industrial Tribunal, reported in *L.L.J.* 1962, Vol. II, page 373, it is stated as follows: "Earned leave provided by Section 79 of the Factories Act is the minimum statutory leave." Unless a study is made of all the awards of labour tribunals, it will not be possible to give the different periods of leave that have been given by different tribunals in different cases.

The Omnibus Mercantile Tribunal Award disposed of privilege leave with the following sentence: "All holidays under the Negotiable Instruments Act shall be observed as holidays." The one and only reference in the Negotiable Instruments Act, 1881, is in Section 25, and states as follows: "When the day on which a Promissory Note or Bill of Exchange is at maturity is a public holiday, the Instrument shall be deemed to be due on the next preceding business day. Explanation: The expression 'public holiday' includes Sundays and any other day declared by notification in the official Gazette to be a public holiday."

The Hon'ble Mr. Justice Gajendra-gadkar (now Chief Justice of India) observed in the case of Pfizer Ltd vs. its workman reported in *L.L.J.* 1963 Vol. I, page 554, as follows: "In dealing with the question of paid

State

Privilege leave

(1) Andhra (Hyderabad area)	12 days (can be accumulated up to 24 days)
(2) Assam	16 days (cannot be accumulated).
(3) Bihar	one day for every 20 days' work if an adult and one day for every 15 days' work if a child. The maximum number of days of leave which can be carried forward are 20 an adult and 15 for children.
(4) Bombay	14 days (can be accumulated up to 28 days).
(5) Madhya Pradesh	14 days (the maximum of 14 days can be carried forward).
(6) Madhya Bharat	one month (can be accumulated up to three months).
(7) Madras	12 days (can be accumulated up to 24 days).
(8) Mysore	ten days (can be accumulated up to 20 days) for adults. 12 days (can be accumulated up to 24 days) for young persons.
(9) Orissa	one day for every 20 days' work (can be accumulated up to 30 days).
(10) Punjab	14 days after one year's continuous service, seven days after six months' continuous service.
(11) Uttar Pradesh	15 days (watchmen and caretakers 30 days).
(12) West Bengal	14 days (can be accumulated up to 28 days).
(13) Delhi	15 days (can be accumulated up to 30 days).

holidays it may be relevant to remember that the holidays declared under the Negotiable Instruments Act are usually applicable to Government institutions only and they have certain official and statutory implications envisaged by the Act itself. The commercial establishments and factories do not usually adopt these holidays and so it would not be reasonable to insist that the appellant is bound to grant holidays as sanctioned by the Negotiable Instruments Act. Besides, it is not generally accepted that there are too many public holidays in India and that when the need for industrial produc-

tion is urgent and paramount it may be advisable to reduce the number of such holidays in industrial concerns. It is true that the Maharashtra Government seems to have adopted a very liberal policy in the matter of public holidays. In 1961 the Maharashtra Government had declared 28 public holidays out of which three happened to fall on Sundays. It may be noticed that other State Governments have shown a tendency to reduce these holidays. U.P. had 18, Andhra Pradesh had 17, Mysore had 15 and Madras had 14 in 1961.

"According to the Government of India, the number of public holidays

CAPITAL, 16th April, 1964.

is generally limited to 16. Having considered all the relevant facts in the present case, we are disposed to think that the number of public holidays which are granted by the appellant to the respondents should be reduced from those sanctioned under the Negotiable Instruments Act to 16 every year."

It is not clear what his Lordship had in mind when he referred to "certain official and statutory implications."

Besides the privilege or earned or annual leave referred to above, the other forms of leave which are usually granted are casual leave and sick leave. Casual leave which is intended to meet unforeseen circumstances is essentially derived from the Government. It has now spread to commercial offices in principal cities and varies from State to State. Seven days is common in Bombay, while ten days is accepted in West Bengal. In Government services, casual leave lapses at the end of the year. As a result, in the last month of the financial year, grandmothers died more than once and business which had otherwise remained unattended to became urgent. In Bombay such casual leave as had not been availed of during the year was allowed to be encashed.

Sick Leave

Sick leave is perhaps the subject of the greatest controversy. None of the three Acts referred to, which make provision for other leave, has provided for sick leave. The Employees State Insurance Scheme, which has been introduced in some parts of India, provides for payment of sick benefits during the period of the insured person's sickness. There is a period of waiting before a person becomes eligible for this benefit. In view of this, particularly in the State of Bombay, seven days' sick leave is common in establishments which are governed by the Employees State Insurance Scheme. It may be mentioned that this Act requires that an employer and employee should contribute some amount to the Employees State Insurance Corporation which pays sick benefit and arranges for treatment both indoor and outdoor to insured persons.

While the Industrial Disputes Act has laid down that a workman's services may be terminated for prolonged illness without payment of compensation, it is nowhere laid down as to what is the maximum amount of sick leave to which a workman is entitled. In Government service where sick leave can be accumulated, this is done to the point of absurdity. A person can go on a period of sick leave and return to duty and work for a day and again proceed on a further period of sick leave, because according to the rules, he cannot get all sick leave at a stretch.

From what is said above, the conclusion is inescapable that it is necessary to codify the number of holidays and the leave to which a workman, whether in Government service or in private employment, will be entitled. This country is not only a leader in population but also a leader in unemployment and underemployment, namely, the number of days a person works in a year. If the output a man is to increase, if national income is to rise, the remedy lies not in working overtime, but stopping this farce of working for 54 days in office, and, in theory, eight hours a day in a factory. One such law will take away at least 10 percent of the industrial disputes which are before the industrial tribunals in different parts of the country. This question came up before the Indian Labour Conference, but was not taken up. Is this not urgent?

CAPITAL, 16th April, 1964.

New Delhi

EXPERT BODY FORECASTS RISING DEMAND FOR TRACTORS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India recently appointed a sub-committee to compile the demand estimates for tractors, earth-moving equipment and road rollers for the fourth five year plan, and to suggest methods to meet the gap between the demand and indigenous production. The sub-committee's study on agricultural tractors has just been finalised. In 1956, an expert committee estimated the demand for tractors at 5,000 a year broken into the following categories:

	Numbers
12-18 D.B.H.P.	1,500
20-30 D.B.H.P.	3,000
35-45 D.B.H.P.	500

The study group, which reported in March 1958, assessed the demand for tractors at about 8,000 by 1960-61. It classified the demand as follows:

	Numbers
12-18 D.B.H.P.	2,500
20-30 D.B.H.P.	4,500
35 and above	500

The Perspective Planning Division of the Planning Commission has estimated the demand for tractors at about 12,000 a year by 1965-66. It also estimated that by the end of the fourth plan, the figure would increase to 30,000 tractors a year.

The sub-committee has explained in its report that "the demand for tractors will depend on the emphasis placed by the Government on the importance of mechanisation, in addition to using other techniques like irrigation, improved seeds, fertilisers, pricing systems and support prices, etcetera."

Pattern of Land Holdings

"The pattern of land holdings directly affects mechanisation. On a rough analysis, the present tractive power installed on the farms is estimated at only 0.1 horse-power a cultivated acre. From the experience of other countries, there is room to step this up at least 20 times. The National Sample Survey indicated that there were more than 2.5 million holdings in 25 acres and above. Such holdings cultivate a little over 35 per cent of the total cultivated area.

"While there is no doubt that for acreages of 25 and above, power farming lends to higher and economic cultivation, there are many methods through which tractors can be made available to smaller acreages. The estimated number of tractors in 1956 was about 21,000, while in 1964 it is estimated to be 40,000. This is an indication of the ample measure of faith in the utility of a tractor, and the rise in the population of tractors has taken place in spite of foreign exchange difficulties which have severely curbed the availability of tractors to the farmers.

"If the revised targets of the Planning Commission of 90 million tons of foodgrains are to be achieved by the end of the third plan and thereafter, production is to be raised to 115 million to 120 million tons of foodgrains by the end of the fourth plan. So it will be necessary to see to it that every method employed can achieve this rate of growth.

"Mechanised power can effectively overcome the problem of 'under-employment' of labour on the farms and provide 'labour' at the fields at the peak periods. Contrary to popular

belief, it was estimated as early 1951 that 'draft-power' was barely sufficient for farming on those scales.

"In an economy where bovines compete with human population for food, increase in 'workstock' force needs to be prevented and gradually replaced by mechanical power. The simplification of *taccavi* loan procedures, adequate funds and easy credit facilities need to be provided to enable an agriculturist to invest in capital equipment. In making a passing reference to these issues, the sub-committee is aware of over-simplification, but any demand figures estimated depend a great deal on the policies adopted by the Government and its views on mechanisation."

Taking the above factors into consideration, the sub-committee has drawn up an estimate of requirements of agricultural tractors which is reproduced below:

Equipment : Agricultural tractors	1966-67	1967-68	1968-69	1969-70	1970-71	Installed capacity	Gap in capacity
10-18 D.B.H.P.	4,000	5,000	7,000	9,000	10,000	1,000	9,000
20-35 D.B.H.P.	9,000	10,000	12,000	13,500	15,000	12,000	3,000
35-50 D.B.H.P.	1,200	1,500	1,700	1,900	2,000	1,500	500
Total	14,200	16,500	20,700	24,400	27,000	14,500	12,500

The sub-committee has analysed the estimates of investment requirements as indicated by the Perspective Planning Division. The committee is of the opinion that in order that the demand targets may be met by indigenous production, the foreign exchange expenditure on capital plant and tooling will be in the neighbourhood of Rs. 5 crores.

Anticipated Demand

The anticipated demand for tractors during the fourth plan is 102,800. It is the estimate of the sub-committee that about Rs. 31 crores needs to be earmarked during the fourth plan period as the foreign exchange requirement. In addition to the import of components required, additional foreign exchange to the extent of Rs. 5 crores needs to be provided for the import of spare parts. The above figure does not include foreign exchange requirements for the import of steel and other basic raw materials, the details of which have been presented above.

The sub-committee has not taken into account the demand for power tillers, but has pointed out that any steps towards the extensive use of power tillers should be taken with caution. It is not yet clear, it says, how successful these power tillers have been in agricultural economies abroad.

TRADE UNIONS

Views of Mr. Subramaniam

The Central Minister for Steel, Mines and Heavy Engineering, Mr. C. Subramaniam, delivered a hard-hitting speech during the recent debate in the Lok Sabha on the demand for grants for his Ministry. Claiming that he grew up as a labour leader, the Minister propounded the theme that the trade union movement should be free of politics and politicians. In other words, he seemed to claim that the trade union movement was mature enough to manage its own

affairs without aid and interference from outsiders.

While agreeing that there should be a human and civilised approach to labour, Mr. Subramaniam said that "it should be a two-way traffic. If you go out and lock up your managers or assault your supervisors, or boo the managers as they go round the project, will it be a humane and civilised treatment on the part of labour? After all, managers also are human beings, and they also react in a human way. Is it considered that this will be permitted particularly in a country for which my honourable friend opposite have so much of admiration?"

"Any such indiscipline there would not have merely ended with putting the men inside the lock-up, but they would have been completely liquidated. Therefore, while I have all the sympathies for labour, at the same

time we have got to see that labour also behaves properly. If labour does not behave properly, I may say that I am not blaming labour also for that. We have created conditions in such a way that there is bound to be conflict.

"The 'original sin', if I may say so, was the starting of these trade unions based on political Parties. Of course, immediately, my honourable friends from the Communist Party will say 'No, no, the A.I.T.U.C. has nothing to do with the Communist Party'. Even though the same person is the chairman of the Communist Party and the General Secretary of the A.I.T.U.C., yet he works in compartments, and he is such a detached yogi that once he goes into the A.I.T.U.C., he functions purely as a trade unionist and once he goes into the Communist Party, he becomes a Party member or a Party chairman! Sir, that is impossible.

The Socialist Party

"In the same way, the Socialist Party has got the H.M.S. As far as the Congress Party is concerned, even though we also say that we have nothing to do with the I.N.T.U.C. still it is under the influence of the Indian National Congress. I may tell the House that is where the trouble is. Now, the D.M.K. is coming into politics in the south, and so they may also have a trade union under their wing, so much so that now a trade union instead of being a mere trade union, is becoming a power and status symbol of political Parties.

"Now what is to happen tomorrow? Suppose there are two communist Parties, one of the Peking variety and the other of the non-Peking variety. Suppose tomorrow the P.S.P. and the Socialist Party of Dr. Lohia merge. There may be two wings of the H.M.S., one with the Congress and another with the new Party.

"In the same way, the I.N.T.U.C. Whenever there is no strong leadership in the I.N.T.U.C. and whenever there is a faction within the Con-

gress Party, that gets itself reflected in the I.N.T.U.C. also; there are two factions in the I.N.T.U.C. We see it everywhere.

"Therefore, what I say is unless we take away this political attachment of trade unions, it will not be possible for us to make any progress whatsoever because this trade union activity is political activity in the guise of trade unionism. It is going on now. When it is in the interest of various political Parties to bring down the Government, one way of doing it is to see to it that on the economic front we become a failure.

"Even though they might protest that they are interested in building up the public-sector projects, unconsciously the working of their mind is to see to it that they should not be a success; otherwise, the prestige and power of the Congress goes up.

"Unfortunately, I find another thing. An individual is entitled to start any labour union, so much so that it is not one labour union or two labour unions but a multiplicity of labour unions that we see today. No doubt, we have got codes of conduct at the highest level. I am sure when the labour leaders enter into them, they do so sincerely and genuinely and they also try to implement them. But what about the lower level? They are not interested in the national leadership entering into these codes of conduct. They want to be the dominating factor in each individual plant. Therefore, there is a continuous tussle going on.

Multiplicity of Labour Unions

"Therefore, in the present structure of trade unionism, in the present structure of our labour policy, for which I take the blame as a Congress man and as a Congress Minister, in the present structure of labour policy where we allow a multiplicity of labour unions based on and attached to political Parties, there is a built-in position of conflict.

"Unless industries grow, unless production improves, there is no question of improving the lot of the common people. From that viewpoint, we have to evolve a labour policy which will take away these political influences and political conflicts. After all, we are all human beings. We want to succeed for ourselves. Therefore, we have to evolve a policy which will not have built-in conditions of conflict and, if I may say so, confusion. This is one aspect which will have to be kept in mind.

"The industrial programme cannot succeed unless we have the co-operation of the entire labour, unless labour becomes more efficient, unless we create conditions in which labour and management can co-operate fully."

IRON ORE

Bulk Shipments to Japan

In terms of the agreement concluded with Japan, the supply of iron ore from the Kiriburu mines was to commence in 1964. Full facilities for handling and mechanical loading of the ore are, however, yet to be established at the Visakhapatnam port, and the railway line, which has suffered damage during the rains, will be restored for carrying traffic only by about November 1963. The possibility of finding a market for the ore so that the plant could be operated at least on a single shift basis from the date the railway is restored until the Visakhapatnam port is ready for bulk shipments is being explored.

The day we share with you...

Esso's second anniversary in India is a day which gains added meaning because we share its significance with you.

Two years ago, the Esso Oval came to India, bringing with it the experience of the world's largest oil company and...a promise.

The promise has been fulfilled...in India's industries, transport, agriculture, in millions of homes, in the dynamic new uses of petroleum products.

Experiments in Rajasthan and Rameshwaram have proved that Esso's Sand Dune Stabilisation programme can well hope to reclaim large parts of India's desert. Esso's 'Magic Mulch' has already showed a vast improvement in agricultural output and crop values. One of our Indian chemists has developed a petroleum-based fungicide which is able to control a fungus disease that has baffled agricultural chemists for over half a century!

Esso is a world-wide association with affiliates in 135 countries. It operates with a firm conviction that the development of human skills is vital to a developing economy...and that potential for learning there exists in every area of industrial activity.

India today is aspiring to a new standard of living. Esso, India, take pride in rededicating themselves, on this occasion, to help make that aspiration come true.

ESSO STANDARD EASTERN, INC., (Incorporated in U.S.A. with Limited Liability)

with the consultant for the project, namely, Messrs John Taylor and Sons, the consultants deputed Dr. Grantham, consulting geologist, to make a general study of the geology of the diamondiferous deposits in the Panna area and make recommendations on the further prospecting work to be done in the area. The report of Dr. Grantham has been received recently and is being studied. Meanwhile, as recommended by him, a detailed survey is being made to locate alluvial deposits in the Panna area.

BAILADILA PROJECT

Report of Expert Body

A Japanese survey mission for the Bailadila project, sent out by the Japanese steel mills, visited India in May-June 1963. Simultaneously, a Japanese iron mine survey team also visited Bailadila. In the light of the discussions held by the survey mission and the iron mine survey team, two technical officers were sent to Japan towards the end of June 1963, for a period of two weeks to study some of the mining methods advocated by the survey team for the development of the Bailadila project. The intention was that before the project report for the exploitation of iron ore from Bailadila was finalised, the feasibility as well as economies of the alternative methods advocated by Japan for the development of the mine should be fully studied.

A project report for the establishment of an iron ore mine designed to produce 4 million tons of sized iron ore, conforming to the specifications stipulated in the agreement with Japan, has been prepared and is being submitted to the Government for consideration.

MOTOR-CARS

Demand Estimated

The Development Council for the motor-car industry recently set up a committee with Mr. T. S. Krishna as its chairman to make an assessment of the demand for the products of the motor-car industry during the fourth plan. The committee has generally accepted the estimates made by the transport working group of the Planning Commission as far as commercial vehicles and jeeps are concerned. They are as follows:

	Numbers
Commercial vehicles with payloads from 3 to 7 tons	90,000
Commercial vehicles with payloads exceeding 7 tons	20,000
Commercial vehicles with payloads less than 3 tons	45,000
	155,000

The committee considered that the demand for cars would reach a figure of 75,000 a year; and motor-cycles and three wheelers, etcetera, 150,000 a year. In calculating the foreign exchange requirements, the committee assumed that new capital representing 40 percent of the increased turnover would be required by motor-car manufacturers in addition to 12 percent by ancillary manufacturers. Of the total capital, it is assumed that 70 percent would be required for plant and equipment.

FARMING

Agro-economic Survey

The Planning Forum of the National College of Tiruchirappalli conducted an agro-economic survey spread over several villages in the district in 1963-64. This was carried out on a sample survey model. About 45

students took part in the survey under the guidance of a professor. The object was to find out the salient features of rural life in the villages in Tiruchirappalli district.

The observations made in the report bring out that (i) ownership of land is generally dispersed; (ii) cultivators do not get any special help from the Government; (iii) irrigation facilities are far short of requirements; (iv) fertilisers of good quality are difficult to obtain; (v) agricultural incomes are meagre; (vi) the burden of indebtedness is universal and heavy; (vii) prices realised by agriculturists at harvest times are very low and unremunerative; (viii) land reforms have not been beneficial in their effects; (ix) information about the plan is meagre; (x) little investment is taking place in land improvement measures, presumably because of the prevailing uncertainty about the Government's land policy, and (xi) co-operative credit is very difficult to obtain.

U.S.A.

Loans for Indian Firms

The U.S. Government has authorised credits totalling Rs. 6.5 crores to 13 Indian firms. The loan recipients are Everest Refrigerants Ltd (Rs. 60 lakhs), Elpro International Ltd (Rs. 40 lakhs), Frick India Ltd and Bharat Steel Tubes Ltd (Rs. 25 lakhs each), The Cochin Co. Private Ltd (Rs. 23.7 lakhs), I.A. and I.C. Private Ltd (Rs. 5 lakhs), Synbiotics Ltd (Rs. 1.3 crores), Hindustan Aluminium Corporation Ltd (Rs. 1 crore), Borosil Glass Works Ltd (Rs. 71 lakhs), Graphite India Ltd (Rs. 69 lakhs), Madras Rubber Factory Ltd (Rs. 50 lakhs), Chemicals and Plastics India Ltd (Rs. 33 lakhs), and Gabriel India Ltd (Rs. 14 lakhs). These rupee loans are being extended to the firms under the Cooley amendment to the U.S. Public Law 480.

Elpro International is owned equally by General Electric (G.E.) of the U.S.A. and by the Indian shareholders, who include Indian employees of the International General Electric India Ltd, G.E.'s wholly-owned distributor in India. The loan to Elpro will help finance the establishment of a plant in Poona, Maharashtra, to manufacture lightning rods, X-ray equipment, alnico magnets, and calrod heating units. Alnico magnets are made of an alloy of aluminium, nickel, and cobalt which Elpro will manufacture for application in loudspeakers and telephones. Calrod heating units are used in electric stoves, hot-water heaters, hotplates, and electric irons.

Frick India Ltd is constructing a plant in Gurgaon district, Punjab, to manufacture refrigerating, ice-making, and air-conditioning equipment. It is partly owned by the Frick Company of Waynesboro, Pennsylvania, U.S.A., an established manufacturer of such equipment which will provide the technical know-how to the Indian Company.

Everest Refrigerants is setting up a plant in Bombay to manufacture refrigerant gases and aerosol ("push button") dispensers. The plant will be designed to produce 1,200 tons of fluorochloride methane (F.C.M.) gases, which are used in refrigeration and air-conditioning units as well as in aerosol dispensers. The plant will be equipped to manufacture 4 million aerosol dispensers a year, and also designed to produce carbon tetrachloride, hydrofluoric acid, and aluminium fluoride. Carbon tetrachloride and hydrofluoric acid are used in the production of F.C.M.

Hydrofluoric acid is also used in the production of aluminium fluoride, which, in turn, is used in the production of aluminium. The plant will provide India with its first domestic

source of F.C.M. aerosol dispensers, and aluminium fluoride. Everest Refrigerants is jointly owned by the engineering firm of Technical Enterprises Inc., New York, and by Indian shareholders.

Making Steel Tubes

Bharat Steel Tubes is constructing a plant in Ganaur, Punjab, to manufacture welded black and galvanised iron and steel tubes and pipes for the flow of gas, water, steam, and petroleum. The plant is expected to use its full annual capacity of 36,000 tons on a single-shift basis within the first six months of operation and will reach the two-shift capacity in 1965 and the three-shift capacity in 1966. Abbey Etna Machine Company, of Perrysburg, Ohio, U.S.A., the Punjab Government, and several Indian shareholders have invested in Bharat Steel Tubes.

The Cochin Company, of Ernakulam, Kerala has been engaged in catching, quick-freezing, and exporting shrimp since 1953. Atalanta Trading Corporation, a New York importer and distributor of food products, has been providing technical and financial assistance and acting as its sole U.S. distributor. The two firms have established a joint venture called Cochin Co. Private Ltd to process, largely for export, shrimp, rock lobsters, and other fish, as well as frog legs. The loan will finance the expansion of the Company's fish-processing facilities. It is estimated that these exports will ultimately earn \$800,000 in foreign exchange a year.

I.A. and I.C. Private Ltd is establishing a sulphur-grinding plant near Bombay, to process raw sulphur for industrial and agricultural uses in India. The plant will be the first of its kind in the country. I.A. and I.C. is jointly owned by the U.S. firm of Lapi Inc. and by two Indian business men.

These rupee loans are being extended under the Cooley amendment to the U.S. Public Law 480. India is the largest beneficiary of P.L. 480 under which a great number of developing nations receive U.S. agricultural products, and pay for them in their own currencies.

Production of Antibiotics

Synbiotics Ltd is a joint venture of Olin Mathieson Chemical Corporation, New York, and the Indian firm of Karamchand Premchand Private Ltd. The credit will help expand Synbiotics' manufacture of antibiotics (such as tetracycline and streptomycin) and fine chemicals. Indian technologists have undergone comprehensive training in a number of Olin's Pharmaceutical installations in the United States, Argentina, and Brazil. Olin is also providing a four-man engineering "task force" for an extended stay in Baroda, Gujarat, where a new factory for the manufacture of streptomycin is being constructed.

Hindustan Aluminium Corporation will use the loan for constructing an aluminium fabrication plant in Renukoot, Uttar Pradesh (near the Rihand dam). The new plant will be integrated with the Company's existing aluminium reduction plant. This is the second Cooley loan to the Company, which is jointly owned by Indian shareholders and by Kaiser Aluminium and Chemical Corporation of the U.S.A. The fabrication plant will produce annually, 15,000 metric tons of aluminium re-draw rods, extrusions, and flat and coiled products. The Company plans to operate the plant at full capacity by the end of this year.

Borosil Glass Works Ltd was incorporated in December 1962 to succeed Industrial and Engineering Apparatus Co. Private Ltd, an Indian Company which had been manufacturing scientific apparatus and labora-

tory glassware since 1940. Corning Glass Works, a major U.S. manufacturer of such products, is a partner in Borosil and is also providing technical assistance. Borosil is expanding the capacity of its plant in Andheri, Maharashtra (near Bombay), to manufacture glassware for medical laboratories, hospitals, and pharmaceutical companies.

Graphite India Ltd is setting up a completely integrated plant in Durgapur, West Bengal, to manufacture various types and sizes of graphite electrodes, anodes, and carbon products. At present, the country's entire need for these materials is met by imports. The indigenous production of commercial graphite and carbon products will contribute to India's economic development by supplying all her present requirements of such products and substantially relieving her future dependence on imports. Bangur Bros. Ltd, a leading Calcutta firm and Great Lakes Carbon Corporation, New York, one of the world's foremost firms in the manufacture of commercial graphite, are the principal owners of Graphite India Ltd.

Making Motor-car Tyres and Tubes

Madras Rubber Factory Ltd, which is owned jointly by the Mansfield Tire and Rubber Company of Ohio, U.S.A., and Indian shareholders, is expanding the capacity of its Madras city plant to manufacture motor-car tyres and tubes. The Indian market for tyres and tubes is expected to grow substantially over the next few years. Some 10 percent of production is expected to be exported. The loan now announced is the second to be extended to Madras Rubber from the Cooley fund.

The loan to Chemicals and Plastics India Ltd will help the Company to manufacture polyvinyl chloride (P.V.C.), plastics, resins, and compounds in its factory in Mettur (Madras State). It is expected that indigenous production will eliminate the need for importing P.V.C. resins. The firm is owned by India Cements Ltd and by B. F. Goodrich Chemical Company, of Cleveland, Ohio, U.S.A. Chemicals and Plastics India has also entered into an agreement with B. F. Goodrich for extensive technical services.

Gabriel India Ltd, owned equally by the Gabriel Company also of Cleveland, Ohio—and by Indian shareholders, is expanding the capacity of its Bombay plant to manufacture telescopic, hydraulic-type shock absorbers for motor-cars, lorries, and other vehicles. Gabriel India plans to step up the capacity from 120,000 to 600,000 units a year. The firm received an earlier loan from the Cooley fund.

Team of Investors Arrives

Thirty top U.S. business executives headed by the U.S. Under-Secretary for Commerce, Mr. Franklin D. Roosevelt, and representing a cross-section of U.S. industries—in particular, petrochemicals, fertilisers, cement, agricultural equipment, heavy machine tools, mining machinery and steel mill equipment—commenced their six-day meetings with the Government of India. The party includes the representatives of Koppers, Kaiser Industries Corporation, International General Electric Corporation, Bechtel Corporation, Beloit Corporation, Dow Chemicals, Firestone Tyre, Goodrich Gulf Chemicals, Mobil Chemicals, Standard Oil of California, Standard Oil of New Jersey, Union Carbide and Westinghouse. The party met the Central Finance Minister, Mr. T. T. Krishnamachari, and was briefed by his Secretary, Mr. S. Bhoothalingam. It will hold general discussions with the Planning Commission and thereafter will split into five working groups for fertiliser, petrochemical processing industries, electrical and electronic industries, steel, heavy

engineering and machine tool industries.

It held discussions with the Central Ministries of Steel and Heavy Engineering on 15th April and will have talks with the Ministry of Petroleum and Chemicals in the forenoon of 16th April. It will meet the Governor of the Reserve Bank, the chairmen of the State Bank, of the Industrial Credit and Investment Corporation of India and of the Industrial Finance Corporation in the afternoon of 16th April. The party will meet the Central Minister of Commerce and Industry on 17th April and will hold a closing session on 18th April when reports of the various panels will be discussed. The main purpose of the visit is to assess the climate for investment in India. Planning objectives, industrial policies vis-à-vis heavy engineering, petroleum and chemicals, sources of capital, financial policies, taxation, import and export policies and production facilities are some of the topics put down for discussion. The main purpose of the visit is to explore jointly the steps which should be taken to facilitate the flow of U.S. investment to India.

TEXTILES

Price Control Scheme

The working of the voluntary price control scheme in the textile industry is at present being reviewed by a committee set up with the Textile

Commissioner as chairman and including representatives of the industry, trade, labour and consumers and economists. Its report is expected shortly.

It is claimed that the overall supply and price position of various counts of yarn and different categories of fabrics since the introduction of the voluntary price control scheme has been fairly satisfactory. "By and large, cloth is generally available to the consumers at the marked prices and the prices for yarn are also fairly in keeping with the schedule of ex-mill prices prescribed under the scheme. With a view to holding the price line for cotton textiles under the emergency, direct supplies of cloth at ex-mill prices to consumer co-operatives and fair price shops have been arranged and a number of State Governments have already availed themselves of this assistance."

One complaint, however, is that millowners, by making minor changes in either the composition of yarn or in design have often succeeded in getting their prices revised to the detriment of consumers. The enquiry committee, among other things, is enquiring into this complaint.

CEMENT

Licences Granted

The cement factory schemes for which licences have been granted during 1961, 1962 or 1963 and which

are likely to be completed during the next two years are as follows:

Name of licensee	Location
Birla Jute Manufacturing Co. Ltd	Chitorgarh (Rajasthan)
A. K. Cements Ltd, Hyderabad	Bhongir (Andhra Pradesh)
Associated Cement Companies Ltd	Jamul (Madhya Pradesh)
Industrial Development Corporation of Orissa Ltd	Bargarh (Orissa)
Saurashtra Cement and Chemical Industries Ltd (substantial expansion)	Ranavav (Gujarat)
Chettinad Cement Corporation Ltd	Karur (Madras)
Kalyanpur Lime and Cement Works Ltd (substantial expansion)	Banjari (Bihar)
India Cements Ltd (substantial expansion)	Sankaridrug (Madras)

The cement factory schemes for which licences were granted during the past three years and which have been completed are as follows:

Name of licensee	Location
Associated Cement Companies Ltd	Shahabad (Mysore)
India Cements Ltd	Sankaridrug (Madras)

N.C.D.C.

Team to Visit Poland

A high-powered delegation of the National Coal Development Corporation consisting of the Director of Planning, the Chief Engineer (Civil) and the Chief Engineer (Electrical and Mechanical) will visit Poland in connection with the development of deep shaft mines in India with Polish collaboration. The delegation is expected to leave India either this month or early in May.

CAPITAL, 16th April, 1964.

next two years are as follows:

Name of licensee	Location
Associated Cement Companies Ltd	Shahabad (Mysore)
India Cements Ltd	Sankaridrug (Madras)

pected to leave India either this month or early in May.

The Government of Poland, it will be recalled, has agreed to assist India in the development of nine deep coal mines, establishment of a washery and the setting up of a plant for the manufacture of coal mining machinery. The National Coal Development Corporation has already entered into agreements with the Polish organisation, and work is in progress for the development of two deep coal mines in Gudamdih and Monidih in central Jharia and the erection of a washery in Gidi. The Polish Government has also agreed to extend assistance for scientific and technical co-operation between the two countries, grant of scholarships for higher studies, creation of a chair in mining in the Indian School of Mines, Dhanbad, exchange of professors to deliver lectures on scientific research in selected fields, and the training of Indian instructors in mining techniques in Poland.

NEYVELI PROJECT

Equipment from Russia

The terms for the supply of machinery and equipment by Russia for the expansion of the Neyveli thermal project from 250 MW to 400 MW have been approved. Equipment for the first unit (50 MW) is expected by the third quarter of 1964. Based on this schedule of delivery, the unit is likely to be commissioned by March 1965.

Equipment for the second unit (100 MW) is expected to be delivered by the last quarter of 1965. Based on this schedule of delivery, the unit is likely to be commissioned by March 1966. The installed capacity of the project is to be raised further from 400 MW to 600 MW.

CHIT FUNDS

No Modification of Law

Chit funds are popular only in certain States or Union Territories, like Madras, Kerala and Delhi. As the existing enactments in Madras and Kerala are considered adequate and satisfactory, it is not necessary to introduce Central legislation or to provide for any modification of the existing laws in the interests of uniformity.

The Madras Chit Funds Act, 1961, when it is brought into force in the Union Territory of Delhi, will provide for the registration of chit funds, the definition of the duties and obligations of the foremen in charge of such funds, the maintenance of proper accounts and the timely and orderly disbursement of the amounts due to subscribers.

CAPITAL, 16th April, 1964.

London

BACKGROUND TO U.K. BUDGET: THE NEED FOR STABILITY

(FROM OUR LONDON CORRESPONDENT)

THERE was little scope for vote-winning concessions in the Budget which Mr. Maudling presented to Parliament on 14th April. At least, that was the unmistakable message of the background papers put out by the Treasury in the previous week. The point that emerged most strongly was that the present rate of expansion in the economy is a good deal faster than can be sustained in the long run without endangering the stability of costs and prices and of the balance of payments.

The *Economic Report 1963* summed up the position at the end of the year in this way: "In terms of real income, production and employment, the economy was showing the beneficial effects of the strong expansion of demand that had taken place since the end of 1962. On the other side must be set the limited progress towards securing acceptance of an incomes policy, and the determination in the balance of payments. Prosperity was at present a fact; but the need for collective action to avoid inflation and strengthen our competitive position had emerged more clearly than ever before as the essential condition for the continued achievement of satisfactory economic growth."

On incomes and prices, the Treasury said the underlying trend of prices of goods and services in 1963 was upwards at the rate of about 2 percent a year. Settlements of wage and salary rates were on a scale equivalent to 4½ percent a year, against the 3 to 3½ percent which the Chancellor had indicated a year ago was the maximum consistent with price stability. The balance of payments White Paper showed that in 1963 as a whole, there was a current account surplus of £121 million, a slight improvement over 1962. But the balance became less favourable during the year as the economy expanded and imports rose rapidly and in the fourth quarter, the surplus (seasonally adjusted) was only £6 million, against £71 million in the first quarter.

Long-term Capital Outflow

After the middle of the year, the surplus on current account was no longer sufficient to cover the average rate of long-term capital outflow over the year. As a result of the fiscal and monetary measures taken early last year, the economy expanded very rapidly in 1963. Industrial production in the fourth quarter was 5½ percent above the level of the second quarter, and, during the year, personal incomes rose by about 5 percent. But the Treasury says it is clear this growth was achieved to a considerable extent by calling into use previously unemployed or underemployed resources. Over the period, the total amount of overtime worked in manufacturing industry rose by over 10 percent and short-time working fell. By December 1963, registered job vacancies were nearly 600,000 more than a year earlier: The number wholly unemployed (excluding school leavers) was 70,000 lower; and both were still rising rapidly.

Much of the rise in output was thus due to taking up slack, the Treasury states. The growth of productive potential—the increase in the

quantity and efficiency of the productive resources of labour and capital—must have been very considerably less than the 5 percent rate of growth of actual output. The Treasury says that analysis of the long-term rate of growth over the years 1952 to 1962, suggests that productive capacity grew at a rate between 2½ and 3 percent a year and may have reached a little over 3 percent by the beginning of 1963.

Although no similar calculations are possible for 1963, yet it seems unlikely that the underlying rate of growth can have reached the 4 percent target set by the N.E.D.C. Productivity in manufacturing industry rose by about 7 percent between the last quarter of 1962 and the last quarter of 1963, but this is no greater than the rise in the similar period of recovery in 1959.

A more direct pointer to the shape of the Budget was provided by the White Paper on Government expenditure "below the line." This showed that the "below the line" deficit in 1964-65 is estimated at £858 million, £307 million more than in the current year. The Government's new policy under which local authorities will have resort to the Exchequer rather than the market for part of their borrowing accounts for some of the rise.

The estimated £130 million the Government will have to find for this purpose has important implications for the gilt-edged market, but should not otherwise add to the burden on the economy. However, an extra £141 million will be needed for the nationalised industries. The bulk of this steep increase (about 33 percent over 1963-64) will go to meet a very much higher rate of investment in the electricity industry, and also a substantial increase by the Post Office. A sharp increase in loans to private industry (mainly for the shipbuilding credit scheme) is also forecast for the coming year. At a time when the economic signals are calling for restraint, these burdens added formidably to the Chancellor's Budget task.

A more detailed picture of the economy in 1963 emerges from the national income White Paper. The gross national product for the year is put at £26,358 million—£1,306 million or over 5 percent higher than in 1962. Measured by constant prices, the gross national product rose by 3½ percent between 1962 and 1963, compared with the increase of just under 1 percent in the previous year.

Consumer's expenditure rose by just over 5 percent and reached £19,400 million. The largest percentage increases, at current prices, were in housing, fuel and light, and durable goods—notably, cars and motor-cycles where, after the tax-reduction in November 1962, spending rose by nearly 14 percent.

At current prices		At 1958 prices	
Total increase in consumers' expenditure of which:	Percentage increase	Percentage increase	Percentage increase
Food	5	4	4
Drink and tobacco	2½	1	1
Housing	4½	3	3
Fuel and light	7	2	2
Durable goods	11	8	8
Clothing	8	14	14
	5	4	4

Public authorities' current expenditure rose by 6 percent, but expenditure on investment (including stockbuilding) rose rather less, by just over 4 percent, partly because of the effect on building of the bad weather in the early part of the year. Exports and income from abroad increased by 6 percent, but this was largely offset by the rise in imports and income paid abroad.

Income from employment and profit incomes (including rent) both increased by about 5 percent. Company profits, which had fallen in 1961 and remained at about the same level in 1962, rose by nearly 7 percent last year. But the Treasury points out that company profits are subject to large cyclical swings and since 1954, as also since 1960, they have risen much more slowly than income from employment. Savings recovered last year, after being depressed in 1962, but the Treasury says the proportion of income saved appears to have remained lower than it had been in 1961.

Commonwealth Meeting

It is now virtually certain that the next Commonwealth Prime Ministers conference will take place in London in July, with Southern Rhodesia and "trade not aid" as the two main points on the agenda. There is no confirmation available from 10 Downing Street, nor was Sir Alec Douglas-Home very illuminating in his written reply to a question from the Labour Party spokesman on Commonwealth affairs. But from what might tactfully be described as Commonwealth diplomatic sources in London, it was clear that the first informal round of consultations as to timing and agenda has been concluded and the way cleared for the formal letters of invitation to be sent out.

In particular, it seems that Canada, Nigeria, Pakistan, India, Australia, Malaysia, New Zealand, and Trinidad are all agreeable to a date in July, as being practical as well as convenient. There is a strong possibility that Mr. Nehru's health may prevent him coming himself, but if he chose to be represented by Mr. Lal Bahadur Shastri, then there would be no doubt as to the authority of India's spokesman at the conference table. What are the motives of the British Prime Minister in calling a conference at this time? There are at least three:

Southern Rhodesia: There is a strong possibility of a unilateral declaration of independence by the white settlers in the next few months. The knowledge that this conference had been firmly fixed on 18 prime ministerial diaries might just possibly act as an effective brake on those settlers who are urging a "Boston Tea Party."

The British election: Because of school and industrial holidays July is virtually ruled out as a time for holding the general election. If it had come in June and the Tories

were victorious, Sir Alec would have had the splendour of a London summer conference—not forgetting the Queen's reception at Buckingham Palace—to give the new regime a magnificent send-off. More importantly, now that it is decided that an autumn election date is more prudent, then Sir Alec's rôle as chairman of the global gathering at Marlborough House would help establish the "statesman image," and would not exactly harm Tory chances at the polls.

The "Diefenbaker Rule": The Douglas-Home administration can honestly plead that there is a real obligation on Britain to initiate another Commonwealth conference now; it is, in fact, overdue. At the 1960 conference the then Canadian Prime Minister, Mr. Diefenbaker, suggested that the Commonwealth leaders ought to adopt a "rule of thumb" whereby these gatherings should be held at intervals of approximately 18 months. The last one was in September 1962.

The crisis of leadership in the Tory Party meant that Mr. Macmillan had been unwilling or unable during 1963 to take the necessary soundings about the next Commonwealth meeting. This was one of the major unresolved decisions inherited by Sir Alec when he arrived at No. 10. Informal soundings were begun in January, and followed up in person with Mr. Pearson when Sir Alec was in Ottawa.

By the time Sir Alec arrived in Lagos recently, it was apparent that two topics would dominate the next Commonwealth gathering. The Nigerian Prime Minister, Sir Abubakar Tafawa Balewa, made it clear that the African and Asian members of the Commonwealth, in particular, were anxious about the unresolved problem of a (white) minority government in Rhodesia. Equally, the tropical countries of the Commonwealth, as well as New Zealand, are obsessed by the continuing inaction of the industrial nations of the world against the worsening terms of trade for primary producers.

Although there are now only 18 full members of the club—from Australia to Zanzibar—it is predictable that a nineteenth Prime Minister may also receive one of Sir Alec's formal letters of invitation. He is Dr. Hastings Banda, whose little territory of Nyasaland is scheduled to rename itself and emerge as the sovereign State of Malawi on 6th July this year. It would be felicitous if he were to come to London on a date chosen to fall soon after the independence ceremonies, so that he could be welcomed personally into the full club when Malawi's application for full membership would be formally approved.

HUNGARIAN TESTING INSTRUMENT EXHIBITION

The exhibition, organised by Kay-bee and Company, of Hungarian testing instruments, exported by Metrimex, Hungary, at Spences Hotel, Calcutta, opened last week. In his inaugural address Mr. L. Regos, Hungarian Trade Commissioner in Calcutta, said that the trade relations between India and Hungary have been placed on a firm foundation through the Indo-Hungarian trade and payment agreement in 1957. An important feature of this agreement is that payment will be made in non-convertible Indian rupees. Mr. Regos also said that according to the new long-term trade and payments agreement of 22nd November, 1963, the turnover of trade would be doubled. The major items imported are testing instruments of high precision.

enjoy unique JAL service on your next flight to LONDON and other gay cities of Europe

Leave Calcutta Sunday or Thursday evening (2220 hours) aboard a luxurious JAL DC-8 Jet. (Also by connection at Karachi.) Arrive in Rome for breakfast; London for lunch. Visit Cairo and Frankfurt along the way. Or, fly JAL's morning service east through Bangkok and Hong Kong to Tokyo,

where JAL's trans-Pacific jets leave daily for the U.S.A. Either way, JAL's wonderful hospitality will make your flight truly enjoyable.

For reservations see your travel agent or JAL at

JAPAN AIR LINES

MLC-11A

Acropolis, Athens

Here's how on your next trip to Europe or North America, you can avail of reliable KLM's jet services and see Athens on your way, at no extra fare!

Athens, one of the 44 key cities covered by KLM's network of air routes in Europe, is now served direct by both the KLM's flights from India. A nice opportunity to visit this increasingly popular city for a while, before continuing your journey. Read on for more interesting KLM facts...

1. A KLM DC-8 jet leaves for Europe on Saturdays from Calcutta, on Tuesdays from Delhi and on Mondays, Tuesdays, Thursdays, Fridays, and Saturdays from Karachi.

2. KLM's flight from Calcutta leaves on Saturday at 20.30 hrs., arriving Athens on Sunday 05.30 hrs.

3. From Athens, this flight goes to Zurich on its way to Amsterdam, providing you with yet another attractive possibility! Arrival: Zurich Sunday at 08.00 hrs. Arrival: Amsterdam Sunday 09.55 hrs.

4. KLM's flight from Delhi to Amsterdam leaves on Tuesday at 21.55 hrs., arriving Athens on Wednesday at 05.55 hrs. Arrival: Amsterdam (via Frankfurt) Wednesday at 10.05 hrs.

5. Both these KLM flights from India can easily be connected at Karachi by passengers from Bombay and also from Delhi and Calcutta.

6. In Amsterdam, these services link up with daily non-stop KLM flights to New York and with frequent flights to Houston, Montreal and Mexico City.

7. On the Amsterdam-New York route, KLM will have 24 DC-8 jet flights a week during the peak season—17 non-stop, 5 via Glasgow and 2 via Shannon.

Attractive KLM facilities

8. KLM has its own air-conditioned resthouse at Karachi airport, called "Midway House". It has spacious, comfortable rooms with shower baths and provides many facilities such as a supervised nursery, a barber shop, a souvenir and carpet shop and a floodlit tennis court. The service there matches the standards of a good European hotel.

9. KLM offers many interesting side-trip possibilities. For example, on the normal round-trip fare from Calcutta, Delhi or Bombay to London, you can enjoy a side-trip to Copenhagen or Paris.

10. KLM's multi-stopover plan lets you make more than one stop en route your final destination at no extra fare. For instance, if you are flying from Delhi to New York, you can visit Rome, Frankfurt, Dusseldorf, Brussels,

ATHENS—KLM's new gateway to Europe

Things to do in Athens: See the Acropolis by moonlight (a thrilling experience!); the Benaki Museum by daylight; go to a "taverna" (small typically Greek restaurant); try "Cocoretsi" (Greek speciality) or crisp "Kalamarakia" (fried squid); drink 'ouzo' (aniseed flavoured Greek aperitif); take a stroll during a cool summer evening throughout the picturesque winding streets of the old Plaka quarter and if you happen to be there during August/September, in time for the Festival of Athens, attend the remarkable performances of ancient drama, concerts and ballets.

Paris, London, Amsterdam—all for the price of your ticket to New York. Ask KLM for details of other stopover possibilities.

11. Make your choice of a number of attractive organised tours, planned to provide visitors to

Greece with comfortable and easy means of access to every point of interest in the country. Contact KLM for full particulars regarding the number of days involved and the routing.

12. From Athens, many important cities in Europe and North America are served direct. For example, London, Madrid, Paris, Rome, Vienna, Zurich, Frankfurt, Brussels, Geneva, Copenhagen, Milan, Munich, Amsterdam, New York, Detroit, Chicago etc.

13. When flying via Amsterdam, you can do a lot of interesting things at the airport. Shop for luxury bargains at the Tax-Free Shopping Centre. Buy a tax-free car at ShipSide Showroom. Take a Mini-tour of Amsterdam. Visit the airport's fascinating aeronautical museum.

14. All KLM flights to Europe from Calcutta, Delhi and Karachi arrive in Amsterdam next morning, offering immediate connections to London, Paris, Brussels, Geneva, Hamburg, and many other cities in Europe and also to New York.

15. Your Travel Agent will tell you more about the advantages of flying KLM. Get in touch with him or contact the nearest KLM Office. Calcutta—7, Chowringhee Road; Delhi—9A, Connaught Place; Bombay—Taj Mahal Hotel.

Jute

FIBRE PURCHASE QUOTA REDUCED FURTHER

THE Jute Commissioner has issued a purchase quota of 200,000 bales for the four-week period ending 9th May, against 430,000 bales for the previous six weeks ended 11th April. The I.J.M.A. mills will have to lift 180,000 bales, against 400,000 bales, and the rest 20,000 bales, against 30,000 bales. With this allocation, the total purchase quotas issued so far amount to 6.89 million bales—6,225 million bales for I.J.M.A. members, 515,000 bales for the rest and 150,000 bales for the J.B.A.—absorbing 91.86 percent of the officially estimated raw jute and mesta output of 7.5 million bales for the season.

Announcing the quota at a Press conference last Monday, Mr. G. C. L. Joneja, Jute Commissioner, said that the price-support operations achieved a much larger measure of success during the current season than in the previous one. Prices were satisfactory almost throughout the year, ensuring the grower a fair return for his produce. Only for a short spell during the year did the market price fall to Rs. 29. But the drift was halted soon. The minimum prices were well-maintained and prices tended to be firm in the secondary markets, indirectly helping the trend in Calcutta. The present quota is considered adequate to mop up the smaller arrivals in the upcountry markets.

With the completion of this quota, there may remain a small surplus of about 500,000 bales. The Jute Commissioner proposes to review the position after a month and issue a fresh quota, if necessary. Asked about the stocks which are likely to remain with mills at the end of the season in June 1964, he thought they would be around 3.1 million bales, against 2.9 million bales at the end of the previous season. This figure does not include the J.B.S.A. stocks of 775,000 bales. So at the opening of the new jute year the industry may have an inventory of about 3.88 million bales, which will help it to work at the maximum level for more than six months.

Bigger Crop Expected

Weather conditions proving favourable, Mr. Joneja hoped that the next season's crop would be bigger at around 8 million bales. The increase would be achieved not by extending the acreage, but by using better farming techniques—improved seeds, more fertilisers, scientific interculture and advanced retting practices. If the present tempo of progress was maintained, he was sure that India could achieve the target of 10 million bales by the end of the fourth plan period. Mr. Joneja said that the farmer seemed to have gradually regained confidence in the fibre because of his higher earnings during the past two years. The high prices of better-grade jute and official assistance in improving farming techniques offered good inducements to the farmer. The Government's farm aid machinery has been improved. The package programme has been introduced in a number of districts helping growers to get more liberal assistance. These, Mr. Joneja hoped, would be helpful in inducing the farmer to devote more care and attention to jute. During the 1964-65 season, there was likely to be no shrinkage in the area under jute since foodgrains offered smaller returns.

Mr. Joneja said that the Government was aware of the advantages

enjoyed by the Pakistani industry. It not only gets better fibre at a cheaper price, it is also not required to spend much on transport since the mills are located in jute-growing districts. In India, mills have to pay for transporting the fibre from various parts of the country to Calcutta over long road-cum-rail-cum-steamer routes. As Indian goods have to compete with Pakistani gunnies, the Government of India would not raise the floor price of the fibre any further. He admitted that on the basis of Rs. 30 a maund, f.o.r. Calcutta, ready, for Assam Bottoms, Calcutta mills were incurring some losses on the sacking side and were just avoiding losses in hessian.

Competition in Carpet-backing

Asked about the slackness in the offtake of carpet-backing cloth, Mr. Joneja said that with the expansion of world wide-loom capacity and the emergence of Pakistan as a supplier in recent months, consumers in the U.S.A. and on the Continent had become more and more selective. For all practical purposes there is now a buyers' market in this fabric.

Answering another question, the Jute Commissioner said that he was not very worried about the large gunny stocks with mills, which represented about five weeks' output at the current maximum level of operation. The lean offtake during the first two months of 1964 was due to shipping difficulties in the port. The authorities were alive to these difficulties and were removing them to the best of their ability. Despite the continuance of draft restrictions in the Hooghly and the lighterage problem during the summer months, the clearance of jute goods would improve due to the slackness in tea shipments. Overseas consumers are aware that they will get an adequate supply of gunnies since the maximum has been operating at the maximum level. So they may wait and see before entering the market. As for sales to Russia, Mr. Joneja said that she had already entered into firm commitments for lifting 75 percent of her quota.

Gunny Output and Stocks Rise

Mills reporting to the I.J.M.A. have shown a sharp increase in gunny production and stocks during March, as deduced from the corresponding figures for February. A longer working month and the abolition of the I.J.M.A. Working Time Agreement may be among the factors responsible for the bigger output in March.

Working at the maximum level for 208 hours in March, against 184 hours in the previous month, the I.J.M.A. mills produced 112,600 tonnes (against 99,200 tonnes) of jute goods. The output of hessian rose by 5,900 tonnes to 47,800 tonnes, of sacking by 4,000 tonnes to 42,400 tonnes, of miscellaneous goods by 3,100 tonnes to 14,400 tonnes and of carpet-backing cloth by 400 tonnes to 8,000 tonnes. In March 1963, the mills worked for the same 208 hours at the maximum level, producing 104,500 tonnes—44,400 tonnes of hessian, 42,700 tonnes of sacking, 11,100 tonnes of other goods and 6,300 tonnes of carpet-backing cloth.

The smaller increase in stocks during March from 120,800 tonnes to 125,200 tonnes show that offtake also rose despite the shipping difficulties in Calcutta port. It was reported that shippers were successful in clearing the previous two months' held-over cargo. But still, at the end of

March, there remained considerable lots of March-shipment cargo for clearance. It is reported that the position may not improve much in spite of a slackness in tea shipments during the summer months.

Although the output during March increased by 13,400 tonnes, stocks rose by only 4,400 tonnes, indicating that at least 9,000 tonnes of the extra production during the month was absorbed in March. Stocks of hessian rose by 1,100 tonnes to 43,300 tonnes, of sacking by 800 tonnes to 47,200 tonnes, of carpet-backing cloth by 200 tonnes to 18,500 tonnes and of other goods by 2,300 tonnes to 16,200 tonnes. At the end of March 1963, the closing stocks were 91,000 tonnes—29,700 tonnes of hessian, 44,800 tonnes of sacking, 4,100 tonnes of carpet-backing cloth and 12,400 tonnes of other goods.

Export of Raw Jute

Since India is not self-sufficient in raw jute, experts in the Central Ministry of International Trade have advised the Government of India that no long-term commitment should be made for the export of the fibre. After studying various agricultural commodities, they have said that there is no need to export raw jute. They have, however, suggested that commitments made under various bilateral trade agreements with Russia, Czechoslovakia, Poland, Yugoslavia, and West Germany for the export of raw jute should be honoured. A small percentage of the annual output may be allocated for shipment to these countries. Exports of the fibre started from the 1962-63 season when 66,000 bales were shipped out of the total production of 5.367 mil-

lion bales. Exports so far during 1963-64 total 115,000 bales.

The experts have suggested that the fourth plan production target for jute, including mesta, should be fixed at 10 million bales—an increase of 2.5 million bales from the third plan target. They have suggested that the Central Food and Agriculture Ministry should be persuaded to intensify the programme for stepping up production of cash crops like jute. Growers' difficulties in procuring improved seeds and fertilisers should be removed and the present procedures suitably streamlined.

As for fibre exports, they have suggested an ad hoc procedure from year to year. The situation should be kept under close watch, and depending on the surplus available, small quantities should be allowed to be exported. Priority should be given to completing the commitments already made to the East European countries against barter agreements. Instead of fixing any specific export target, the Government has been asked to peg such offtake around the 1962-63 level of 66,000 bales, valued at about Rs. 1.27 crores.

THE JUTE MARKETS

Manufactured Goods: Dull conditions prevailed in the Calcutta gunny market during the past week. Trading was interrupted by holidays. Barring small covering against forthcoming shipments, some Indian Government tenders for about 5,000 bales of B Twills for April delivery and an Egyptian contract for 3,000 bales of heavy goods for April-May positions, there was no report of any substantial business. Earlier in the week, sentiment was depressed on the publication of the I.J.M.A. gunny stock figures for March, which showed an increase of 4,400 tonnes to an all-time peak of 125,200 tonnes. Mills emerged as keen sellers for all positions, but the fall in prices made them reserved. Hessian suffered more than sacking due to the higher

stocks. But reports of the Indian Government tenders and the Egyptian business, combined with indications of a bigger offtake during March, helped a gradual recovery. The hedge market also moved in sympathy with the general trend after wider price movements. Sacking closed with a smaller loss than hessian after a moderate turnover. The undertone was cautious but steady at the close.

Wednesday's quotations were as follows:

	April	May	June	July-Sept.	Oct.-Dec.
40in. 7/oz.	33.70	33.85	33.95	34.25	34.15
40in. 8oz.	35.30	—	—	—	—
40in. 10oz.	45.50	45.95	46.05	46.15	46.05
B Twills	112.75	113.55	113.80	114.35	114.75
Cornsacks	115.25	115.75	116.00	116.50	116.75

Raw Jute: Sluggish conditions prevailed in the raw jute market during the past week. The hardening price trend during the previous week was revised when the Jute Commissioner extended the period of the previous purchase quota by a week to 11th April. In view of the comfortable stock position, mills showed lack of interest. The offers of off-grade jute and mesta also worsened sentiment. Arrivals in the agencies declined appreciably. On Monday, the Jute Commissioner issued a fresh purchase quota of 200,000 bales for the four-week period ending 8th May. Towards the close, holders became reserved and prices firmed up somewhat recouping a portion of the earlier losses. In the futures market, Upper Assam White Bottoms for June moved in line with the spot market after wide fluctuations. Earlier in the week, tired long liquidation and some amount of short-selling had depressed prices. The lower levels, however, attracted moderate bear support, helping the price to close with a minor loss compared with the previous week's level. Turnover was small in the spot market and moderate in the futures section. At the close, the undertone was steadier in both.

Wednesday's quotations were as follows:

	Landed at Mills (Basic Bottoms)		T.S.D. Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.

I.J.M.A. PRODUCTION FIGURES FOR MARCH

The Indian Jute Mills Association reports the total production of jute goods for March as follows:

Description	Quantity
1. Gunny bags	
(a) Hessian	7,226 tonnes (7,112 tons)
1,82,40 thousand metres (1,99.5 lakh yds.)	
1,37.9 lakh nos.	
(b) Sacking	41,156 tonnes (40,506 tons)
9,10.13 thousand metres (9,95.3 lakh yds.)	
4,49.5 lakh nos.	
2. Gunny cloth	
(a) Hessian	40,554 tonnes (39,913 tons)
13,89.45 thousand metres (15,19.5 lakh yds.)	
(b) Sacking	1,281 tonnes (1,261 tons)
24.52 thousand metres (26.8 lakh yds.)	
3. Carpet-backing	
8,009 tonnes (7,883 tons)	
62.35 thousand metres (68.2 lakh yds.)	
4. Other manufactures	
14,431 tonnes (14,203 tons)	
5. Total production	
(all kinds)	1,12,657 tonnes (1,10,878 tons)

	Summary		
	(000 metres and 00,000 yds.)	March '64	Feb. '64
Hessian	15,71.85	13,91.05	14,97.46
(17.19)	(15.21)	(16.27)	
Sacking	9,34.65	8,51.55	9,32.39
(10.22)	(9.31)	(10.29)	
Carpet	62.35	58.91	49.64
Backing	(68)	(64)	(54)
Hessian	47.8	41.9	44.4
(47.0)	(41.2)	(43.7)	
Sacking	42.4	38.4	42.7
(41.8)	(37.8)	(42.1)	
Carpet	8.0	7.6	6.3
Backing	(7.9)	(7.5)	(6.2)
Others	14.4	11.3	11.1
(14.2)	(11.1)	(10.9)	
Grand Total	1,12.6	99.2	1,04.5
(1,10.9)	(97.6)	(1,02.9)	
Hours worked	208.0	184.0	208.0

THE U.K. JUTE MARKETS

FIBRE WEAKER

(FROM OUR DUNDEE CORRESPONDENT)
THE raw jute market was quiet in Pakistan, and there were instances here where some sellers were prepared to accept less than previously for the lower grades of both white and Tossa jute. Demand from most consuming countries has fallen away and at the same time, the new crop in Pakistan is making satisfactory progress. This was having a weakening tendency here, especially where spot parcels were concerned. Registered sales of raw jute to the U.K. during March were approximately 62,000 bales, which is greatly in excess of the quantity which ap-

peared to have been purchased. This could mean that a substantial portion of the above amount is still unsold to spinners. Spinners will welcome unsold jute in Dundee as they can inspect the quality of the fibre before buying.

Reports concerning the new crop in Pakistan are satisfactory. A few offers are now being made here for groups of Mill Hearts at £95 15s and at £82 15s for Grade Hearts, c.i.f. U.K. The quantities available are not large, but at the same time, buyers are difficult to interest at the above prices.

Old crop offers are lowest at £143 for Mill Firsts, at £110 10s for Mill Lightnings, at £96 10s for Mill Hearts and at £81 10s for Grade Hearts, c.i.f. U.K. for April-May shipment. Grade Tossa-4 is named at £125 and Grade Tossa-4 at £106. There are now sellers of Output Tossa-4 at £94 5s and of Output Tossa-4 at £84, April-May.

Cuttings are also quieter at £60 for S.N.C. and at £51 10s for N.C. Mesta is quiet and unchanged at £85 10s for A, at £75 for B, at £69 10s for C and at £50 for cuttings, c.i.f. U.K., April-May.

Prices of Siam jute were steady, and little buying interest was shown by European countries. Burma was in the market for supplies and further business was expected to take place. Offers were being made in Dundee at £75 for grade A, at £69 for grade B and at £65 for grade C, delivered mill Dundee for April-May shipment.

The Calcutta goods market became easier at the beginning of the week. Quotations were at 69s 4d for 40in. 10oz. and at 51s 8d for 74oz. a 100 yards f.o.b. Calcutta for April shipment, at 70s and 51s 10d May and at 70s 2d and 52s June. B Twills were at 172s, 173s 2d and 173s 6d for the respective shipment periods.

Dundee jute spinners were busy and orders continued to be received. It is not easy to obtain supplies of certain descriptions of yarns for reasonably early delivery. More sellers were now asking higher rates for J.C.H. and C.H.W. qualities, but there were still spinners willing to accept unchanged rates.

Cloth was rather quiet as far as new business is concerned, but manufacturers have orders in hand for forward delivery. There is still some short-time working in the heavy end of the trade, but there has been a little more buying interest shown in sackings of late.

THE PAKISTANI JUTE MARKETS MORE OVERSEAS BUYING

(FROM OUR Dacca CORRESPONDENT)
THE position of loose jute arrivals has remained unchanged during the past week. Buying interest was

CAPITAL, 16th April, 1964.

slightly less due to the fall in quality. In pucca bales both long jute and cuttings remained unchanged, but overseas buyers concluded the purchase of 212,189 bales during the second half of March. This makes the total E.P.C. registrations more than 300,000 bales above those of the last season.

Overseas newspapers report that since Dundee buyers have not bought seriously for over a month, the large registrations over the last six weeks can only mean that afloat and spot stocks are once again building up. This may be true, but it is also likely that buyers are trying to buy as quietly as possible and are accumulating stocks. It seems foolish in the extreme for shippers to build up unsold goods after the lesson learnt during the last two seasons, when buyers took advantage of the heavy stocks in warehouses in Europe to offer very low prices, which shippers were obliged to accept.

The largest buyer in the second half of March was Poland with 30,793 bales. Belgium bought 24,625 bales, France 19,210 bales and Spain 16,996 bales. Burma and the U.S.A., buying mainly cuttings, bought 16,800 bales and 15,240 bales, respectively. Portugal bought 10,104 bales and Dundee, after several weeks of heavy purchases, bought only 9,615 bales, which indicates that for earlier purchases there were buyers, and not simply registrations for unsold goods. Egypt bought 8,400 bales and Yugoslavia 7,960 bales. India, once again in the market, bought 3,925 bales.

There was no change in E.P.C. minimum prices except that mesta C was reduced by £1. This reflects lack of stocks in Pakistan rather than a weaker market and in fact, it was reported that mesta buyers were finding it difficult to get offers either from Pakistan or Siam.

The new vice-chairman of the Jute Board has taken up his post, but has not discussed the new policy as yet. In fact, the authorities have approached the Pakistan Jute Association members for their comments and suggestions, before the jute policy is finalised, and published on 1st July. There are indications that there will be some reorganisation of the Export Minimum Price, but this is by no means certain.

Reports about crop are very poor at present, as is normal at this time of the year. The general undertone appears to be that sowings will be slightly less than last year, or at least that there is no indication that the growers are interested in increasing the acreage under white jute. What little progress there has been so far in the way of preparation of the land and sowings, is somewhat behind the position of last year. Assuming the weather is no worse than last year, the size of the crop should be about the same, or if anything, slightly less.

Commodity Markets

WORLD COFFEE BOOM LIKELY TO CONTINUE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

REPORTS from abroad say that the recent revolt in Brazil has given a further fillip to the world coffee market, which has been on an upward trend for some time now. Brazil is the largest coffee producer of the world. It has already been hit by natural calamities like fire and frost which have produced lasting adverse effects on the coffee plants. The country's next two crops are not expected to be more than half the normal on account of this.

It is said that the International Coffee Council's recent decision to raise the export quota from 99 percent to 102.5 percent has produced no effect on the market. The reason given is that South America commanding 60 percent of the quotas, had very little coffee to offer. The Brazilian Santos and Columbian milds having heavily contracted up to 1965, the futures marketing seasons are foreshadowed by a tight supply position in spite of the fact that U.S. stocks are at their peak since the war. Coffee thus continues to enjoy a boom in the world market and the long-term outlook is considered highly favourable.

Although on a smaller scale, coffee price is going up in the Indian market too. The Central Government has sanctioned a Coffee Board proposal to enhance the minimum release price of coffee from Rs. 2.20 to Rs. 2.39 a point. According to the coffee dealers, the price has been going up at pool sales conducted by the Board, and consequently, they are no more in a position to supply the consumer his requirements at the old prices. The coffee dealers of central Kerala have recently decided to raise the minimum price of coffee powder to Rs. 6.50 a kilogram. It is said that the wholesale price of robusta coffee seeds which was around Rs. 125 a 50 kilogram has gone up to Rs. 195 to 210 and this is the powder dealers' explanation for raising the retail price.

India Losing Market

It appears that Indian coffee is losing its traditional hold on central Europe. India was a prominent supplier to these countries until about five years ago. Export figures for last year show that India is being muscled out by other producers like Brazil, Columbia and Costa Rica. While total coffee imports of central European countries have been increasing steadily, their imports from India have been falling. This is attributed to the powerful sales campaign of the other suppliers and the comparative neglect of these markets by India.

SYNTHETIC RUBBER

Demand Over-estimated

Official estimate places the demand for synthetic rubber in this country at 50,000 tonnes by 1965-66. This appears to be very much on the high side.

Consumption of synthetic by the rubber goods manufacturers in India was only 10,395 tonnes in 1962 and 11,538 tonnes in 1963, and this included even special purposes synthetics. The Indian Rubber Industries Association estimates the 1964 consumption at not more than 19,000 tonnes. The Synthetics and Chemicals Ltd which firm is the only producer of synthetic rubber in India at present, says that 30,000 tons could be absorbed by the rubber goods

manufacturing industry. The installed capacity of its plant is 30,000 tons a year. It started production only last year. It could sell only 2,500 tonnes, out of the 8,500 tonnes produced in 1963. The rubber goods manufacturers have a very strong complaint that the synthetic rubber produced here is very costly. High cost is acting as an impediment in the consumption of indigenous synthetic. The producers who made a cut in the price some time ago say that it can't be sold cheaper due to the fact that the raw materials are costlier here than elsewhere in the world. This may be true, but the consumers do not appear to be in a mood to pay a high price. The rubber goods manufacturers have reacted strongly to the proposal of the Government to link the import of natural rubber with the import of the consumption of indigenous synthetic. No final decision seems to have been taken on this question. The Government faces a dilemma as to how to make the best use of the huge capital invested in the synthetic rubber project.

Statistics relating to world consumption of rubber disclose that last year, the consumption of synthetic rubber exceeded that of natural rubber and this was for the first time in history. Synthetic consumption is put at 2.3 million tonnes, as against 2.2 million tonnes of natural. While the consumption of natural rubber has been only by one-third in the past decade, that of synthetic has increased by no less than 165 percent. Estimates for the current year place the consumption of synthetic rubber at 2.45 million tonnes and that of natural rubber at an unchanged 2.2 million tonnes. The U.S.A., which is the largest producer of synthetic rubber is the largest consumer also. Synthetic is used on a larger scale in the manufacture of rubber goods than the total consumption of rubber in that country, has already reached 75 percent.

Natural rubber growers are viewing this increasing popularity of synthetic with alarm. They are taking active measures to counteract the challenge. Their attempt is to defeat synthetic in the matter of price. Trees with a potential yield of 3,000 lbs an acre have been planted experimentally, and it is estimated that by the end of the present decade, the average annual yield an acre in Malaya will be 1,000 lbs an acre. With such a yield, production costs would be very substantially reduced. Growers hope to increase productivity to the point where it will be possible to produce natural rubber for only half the present cost of synthetic. This is a development which could radically alter the competitive position of the two rubbers, as there appears to be only a limited scope for producers of synthetic to lower their prices and still to make a profit.

Natural rubber production in India is making good progress. In 1963, the Indian production came to 37,000 tonnes, nearly 6,000 tonnes more than the previous year's crop. She imported 24,989 tonnes of natural rubber last year to bridge the gap between indigenous production and the manufacturers' requirements. The manufacturers consumed 60,209 tonnes of natural rubber in 1963, compared with 51,776 tonnes in the previous year. Besides, they con-

sumed 11,624 tonnes of synthetic rubber and 7,577 tonnes of reclaimed rubber. The latest available figures disclose that the new year has started with a comfortable stock position. The natural rubber in stock at the end of January 1964 was 18,381 tonnes, as against 15,940 tonnes at the same date last year. Indigenous production of natural rubber during January was 3,735 tonnes, compared with 3,142 tonnes in January 1963.

PEPPER

Rising Spiral Halts

The upward spiral in pepper prices seems to have stopped, at least for the time being. In the course of last week, spot delivery garbled stuff has fallen from its peak of Rs. 389 to Rs. 369, May delivery from Rs. 409 to Rs. 387 and July delivery from Rs. 423 to Rs. 401 a quintal. These rates are still higher than the rates obtaining a couple of weeks ago. The recession noticed towards the end of last week might have been in the nature of a technical correction. There were also reports that New York was refusing to follow the advances in Indian rates and there was selling pressure from the stockists in India.

Mr. Vallabhdas Mariwala, president of the Pepper and Ginger Merchants Association of Bombay, said in Bombay on Friday that India could export only 19,400 tonnes of pepper during 1963 against the highest recorded export of 23,600 tonnes of the previous year, due to serve competition from Indonesia and Singapore. But he was hopeful of better exports this year. The U.S. which had stayed away so far from the Indian market was now showing interest at around 40 cents a lb and in response to this, there has been a spurt in the Indian market.

During the past five months of the current season, India exported about 10,000 tonnes, mainly as a result of buying interest shown by east European countries. Mr. Mariwala did not favour the idea of having a minimum price fixed for pepper because internal consumption was not exerting much pressure on its price. The fixation of a floor price might weaken India's position in the highly competitive world market. If at all such a step was taken it should be with the co-operation of other major producers of this commodity.

TEA

Fall in Exports

(BY A SPECIAL CORRESPONDENT)

THE Calcutta tea auctions have been completed for the season 1963-64. Total sales compare as follows: in 1963-64 2,025,191 packages containing 95,503,976 kilograms at Rs. 5.16 a kilogram; and in 1962-63, 2,082,719 packages containing 98,957,476 kilograms at Rs. 5.26 a kilogram. Dust teas have sold at an average price of Rs. 4.81 a kilogram in 1963-64, compared with Rs. 4.91 a kilogram for 1962-63.

Details of district sales and averages are approximately as follows:

	1963-64		1962-63	
	Kilo-grams	Price Rs.	Kilo-grams	Price Rs.
Assam	48,000,000	5.29	47,800,000	5.57
Cachar	9,500,000	4.53	9,500,000	4.32
Darjeeling	7,800,000	7.12	7,934,000	7.44
Dooars	24,195,000	4.67	26,730,000	4.62
Teral	4,850,000	4.73	5,451,000	4.58
Tripura	1,372,000	4.34	1,432,000	4.64

The season's exports are given as 331,039,704 lbs, against 341,511,378 lbs in 1962-63. The U.K. was the best customer taking 204,983,567 lbs, compared with 218,015,048 lbs in the last

season. Good gains were recorded to the U.A.R. and eastern Europe.

The price difference between the north and the south is narrowing. It has been noted this year that whereas prices at Calcutta auctions have shown a fairly steady downtrend for some months, offerings from south India have actually recorded a small improvement in price. Travancore is said to have sold its product at nearly 5d a lb higher than a year ago. This must surely indicate general improvement in efficiency following the introduction of new manufacturing methods. With prices up and production higher, Travancore gardens should show useful results.

Of the major producing countries, Indonesia was reported well down and Africa (fortunately) marked no increase. It is not known what China will produce, but recent reference to the Argentine suggest these new areas have financial difficulties. News from China remains something of a mystery, but weather was unfavourable for general agriculture, and there is no expectation of a sudden surplus from that area.

Increased freight charges have already hit India's tea exports. Present costs make it cheaper to book to Rotterdam, tranship there and forward to U.S. ports. It is reckoned that shipment direct to the U.S.A. costs \$40.49, but via Rotterdam \$38.62; while Coochin-U.S.A. via Rotterdam is only \$34.80. East African exports also save about \$2.50 by transhipments.

RAW COTTON

Record World Supplies

IN the current season the world's supply of cotton—new production plus carry-overs from last season—is estimated at 73 million bales. This is 4.5 million bales more than in 1962-63, and establishes a new high record. In reporting this increase in its latest monthly review the International Cotton Advisory Committee points out that the main contributor is the United States where both crop and carryover are larger than last season's.

Total stocks at the beginning of the season are estimated at 22.8 million bales, against 19.6 million bales a year previously, and new production is put at 50 million bales, against 48.8 million bales. Of this increase of 1.2 million bales in the world's total stocks, the United States accounts for one-half. The total for the other non-communist countries is estimated as slightly less than last season's, but for Russia, eastern Europe, and communist China together an increase of 1 million bales is shown. Russia's crop is estimated at 7.5 million bales, against 6.85 million bales, and China's at 5.5 million bales, against 5.2 million bales.

In recent seasons, a great many calculations and forecasts of the world statistical position have been upset by crop failures of varying degrees of severity in Russia and China. The question now arises whether, with substantial recoveries in production, emergency imports will be necessary on the same scale as in the previous few seasons. In particular, there is some uncertainty in trade quarters whether the communist countries will continue to take the lion's share of the Egyptian crop or whether Western countries will have opportunities of buying larger quantities of Menoufi and similar types. On this point the I.C.A.C. review records that Egypt had exported 869,000 bales of cotton by mid-December this season, or 58 percent more than in the corresponding period of 1962-63. Of the total for the period about 58 percent went to the communist countries this season, compared with 66 percent last season.

COMPANY AND PUBLIC NOTICES

THE BENGAL FLOUR MILLS CO. LTD.

THE Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 15 per cent for the year ended 31st December, 1963.

It is interesting to note that the Finance Minister, Mr. T. T. Krishnamachari, encouraged

COMPANY SURTAX CHANGES

AS in the case of the Finance Bill, the changes in the Companies (Profits) Surtax Bill announced in the Lok Sabha last week by the Finance Minister, Mr. T. T. Krishnamachari, are minor and inadequate too. One of the main amendments reduces the minimum period for repayment of loans includible in the capital base from ten years to seven years. The other important change provides for the inclusion of money borrowed directly from the Government also in the capital base. Thus, in addition to borrowings from the Industrial Finance Corporation or the Industrial Credit and Investment Corporation of India or any other financial institution which the Central Government may notify, any loans taken directly from the Government will qualify for inclusion in the capital base for purposes of surtax assessment, subject to prescribed conditions. The first condition is that the loans should be repayable in not less than seven years. If the last instalment for repayment is on or after the expiry of the period of seven years, the condition will be fulfilled. Under the original Bill, this stipulation was confined to certain specified loans; it will now apply uniformly to all loans, whether obtained from the Government or otherwise. Secondly, the purpose of the loan should be the creation of a capital asset in India. Like the first condition, the second condition will apply to all loans and not only to loans obtained from persons resident outside India, as proposed originally.

This liberalisation is no doubt welcome, as it will enable medium-term borrowings to be included in the capital base and will help younger industrial units which depend on loan capital. Unfortunately, the disallowance of the interest paid on such loans in the computation of chargeable profits will reduce the usefulness of the change. Another amendment relates to the list of industries entitled to the special rebate of 20 percent of surtax. In conformity with the changes made in the Finance Bill, the new list includes electronic equipment and petro-chemicals, deletes coffee and rubber, modifies the entry relating to electrical equipment, and adds some new items, such as manganese ore, dolomite and mineral oil in the entry pertaining to minerals. The surtax list, as amended, is identical with the list in the Finance Bill as approved by Parliament.

The Finance Minister's refusal to allow for the carry-forward and set-off of deficiency is regrettable. His only reason for denying this right is that "as the surtax will be attracted only at comparatively high levels of profits, it is not considered necessary to make a provision for carry-forward and set-off of any deficiency of profits against the chargeable profits of subsequent years". Mr. Krishnamachari again errs in upholding an inequitable principle on doubtful grounds. Merely because the monetary burden of an impost is small, the rules of equity and fair play are thrown to the winds. The fortunes of a large number of industries often depend on factors beyond their control—long gestation periods, vagaries of the weather and other changes caused

by the good response during the past year to small savings schemes, has fixed a high collection target of Rs. 125 crores for 1964-65. Some favourable developments have so far contributed to the bigger collections. The public has bought National Defence Certificates and Defence Deposit Certificates for patriotic reasons. The upward revision of interest rates on almost all savings schemes has helped attract funds. The increase in post office savings bank deposits has been encouraged by the offer of a higher interest rate combined with the introduction of cheque facilities. The outlook has nevertheless been obscured by inflationary tendencies. People cannot save because prices are rising, and the annuity deposit scheme introduced by the last Budget will mop up the voluntary savings of the middle and high-income groups. The third plan target of Rs. 600 crores for small savings is in any case unlikely to be achieved, unless the Government takes steps to increase savings by checking inflation and reducing taxes.

by unforeseen circumstances. There can be no justification for penalising such companies when, after having waited for a number of years of sub-standard profits, they are able to reap a good harvest, or having had a good year, are faced

ATTRACTING FOREIGN INVESTMENT

A SPECIAL effort has to be made to attract more private foreign investment to India for two good reasons: her need for additional foreign resources and her equally pressing need for technical know-how. It looks as if Government-to-Government aid will decline because of the growing weariness with which the burden is viewed by voters not only in the traditionally isolationist mid-western areas of the United States, but also in West Germany, France and Britain. Even if the total assistance offered by donor countries remains more or less unchanged, the portion that they can spare for India will inevitably suffer because of the lengthening queue of aid-seeking nations. New Delhi's backroom boys have totted up figures to show that such aid as India has received in the past decade is far less in *per capita* terms than what rival claimants are getting. But this argument overlooks the political realities which bring funds pouring into tiny pockets like South Vietnam or South Korea. Regardless of such statistical contests, the Indian pleas for help will still have to be fitted within whatever total the Western nations can raise from year to year.

It follows that India will have to reverse the trend which has brought external resources as a proportion of total investment up from 6 percent in the first plan to 12 percent in the second and 25 percent in the current five-year period. This will require serious rethinking about the strategy of planning, as Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, indicated in an address this week. And it is as part of this rethinking that India will need to redefine her attitude to foreign capital. Private investment will be far more costly than the "soft" aid India gets from the U.S. Agency for International Development or the International Development Association, even if the burden is made more bearable by the fact that servicing will be proportional to the income generated by the investment. But regardless of the cost, investment may well have to be wooed because there is no other way open for the country to secure the foreign exchange resources required for growth.

In some ways, this rethinking has already begun. Last December, only a few months after he returned to the Central Finance Ministry, Mr. T. T. Krishnamachari made public his view that the door should be opened wider to the foreign investor. Past hesitations about admitting foreign capital into vital sectors of the economy had, he flatly declared, no longer any justification, a remark which was widely interpreted as applying particularly to petroleum refining. Mr. Krishnamachari enlarged on the same theme in his Budget

with losses. The fact that the surtax may not fall heavily on some companies affords no valid ground for denying a relief which is due to all companies both in equity and in law.

Mr. Krishnamachari obviously has such strong feelings against the distribution of dividends that he has not accepted the very modest and reasonable demand for deduction of the dividend tax of $7\frac{1}{2}$ percent in the computation of chargeable profits. According to him, "as the objective of the levy on dividends is to place a restraint on the distribution of profits, this objective has to be reflected in the surtax as well". Consequently, the burden of dividend tax will be far greater than the $2\frac{1}{2}$ percent or 3 percent referred to by him in his speech on 17th April; in fact, the figures quoted by Mr. Krishnamachari are even otherwise incorrect. If an Indian company makes a profit of 100, and pays tax at 50 percent, it will be liable to dividend tax of 3.49 on the assumption that the entire available surplus is distributed which ultimately must be the case. The surtax at 40 percent on dividend tax of 3.49 will amount to 1.40 and will raise the aggregate burden of dividend tax to almost 5 percent. Even on the basis of a 60-percent distribution the burden of dividend tax, inclusive of surtax, will amount to 3.5 percent, which is heavy. The reliefs allowed in relation to surtax are thus too meagre to eliminate the anomalies inherent in a basically unjust impost, and will fail to achieve the objectives underlined by the Finance Minister.

speech, in which he said that India would need to make the fullest use of private sources to augment official aid. This line of thinking has been echoed from the Planning Commission end by Mr. Asoka Mehta, who seems equally convinced that reliance on foreign capital will have to be much greater in the coming years.

The shift in thinking has found some reflection, albeit inadequate, in budgetary and economic policies. The attempts to improve India's image abroad have not gone unnoticed, as is evident from the comments made by the delegation of U.S. business men which was in India earlier this month. But whether the visitors found the message of the Budget as attractive as they claimed remains to be seen. Some politeness is customary on such occasions; the U.S. visitors could not but have made some gesture towards the intentions claimed for the Budget. In a less publicised comment, their leader, Mr. J. Roy Galloway, wanted, however, to know how far the internal capital market would be able to mobilise the resources for the new ventures which might come up as a result of increased U.S. investment. Whether he was convinced by the official explanation that the present depressed state of the stock exchanges is only a temporary phase is not known, but this is obviously a point on which the visitors will have formed their own ideas. They will have noted that the revival of interest in new issues since the end of 1963 has been checked; most underwriters are left carrying large blocks of unsold shares, an important factor contributing to the decline in the market quotations of newly-listed scrip.

It is premature, therefore, to judge the future prospects for U.S. private investment by what has been said for public consumption during the visitors' encounters with the Indian Press. This is not to suggest that they found investment opportunities lacking in this vast market of 450 million people. For all its faults, planning has indeed given the economy a dynamism and enormously increased its capacity to absorb investment. Even if the airy targets now being discussed for the fourth plan need drastic pruning after a realistic assessment of resources, there is certainly going to be a sizeable expansion in many directions—some of them, like oil, petro-chemicals and engineering, of special interest to the investor. But market prospects alone are not decisive—the final decision whether to bring money into India or take it to another market will depend on at least four other factors.

Mr. A. D. Ogilvie, president of the Associated Chambers of Commerce, listed these others succinctly in his remarks at the meeting organised

between U.S. and Indian business men for an interchange of ideas. As he put it, the general attitude to foreign capital is something which the investor will weigh in his mind before making his commitment. If he finds the climate hostile, he may well have doubts about the long-term prospects for fair treatment even if immediate need obliges a country to accept investment on whatever terms it is available. In India, there was certainly deep distrust of foreign capital before independence, and a hangover of this attitude was much in evidence for some years after 1947. There was subsequently a remarkable change when both political and business opinion came to recognise that a free country with its own strongly entrenched domestic institutions had nothing to fear from the foreign investor. The latter's rôle in accelerating growth had gradually come to be accepted at all levels, with the result that xenophobic slogans raised by certain political Parties evoke today nothing like the response which one would have taken for granted even ten years ago.

In this sense, India is indeed a better bet than it was. But uneasiness still persists because of the confusion created abroad by pointless affirmations of socialist zeal such as those made earlier this year at Bhubaneswar. The cry for bank nationalisation raised from the annual Congress session caused disquiet in many Western capitals, not because the demand was made by the extremist left fringe but because the responsible Party leadership resorted to unfortunate equivocation in turning it

BLEAK PROSPECTS FOR SUGAR

SUGAR shares have been depressed for some time now, the index for the equities having declined from 138.7 last November to 127.9 for the week ended 11th April. (1952-53 equals 100). Although the depression may have been influenced by the general mood in the stock markets, it is largely a reflection of the low profitability of the industry. A recent Reserve Bank study on the finances of Indian joint-stock companies showed that the returns offered by the sugar industry were the lowest among the 14 industries covered. For sugar companies, the gross profit as a percentage of capital employed was 8.8 in 1960 and 7.4 in 1961, compared with an average return of 10.1 and 10, respectively, for all the industries covered. Although these figures relate to a period two years ago, the financial position of sugar companies has not changed much. The Tariff Commission itself recommended a return of 12 percent on the capital employed—a percentage which did not leave any cover for rehabilitation or reserves for meeting other capital needs. The recent rise in interest rates, actively encouraged by the Government, has made the returns from sugar shares extremely unattractive.

At the same time, the Government is advertising ambitious plans for raising sugar output. The inconsistency between the Government's objectives and policies has been forcefully brought out in Mr. G. M. Modi's presidential speech at the annual general meeting of the Indian Sugar Mills Association in New Delhi last Monday (fuller details of the speech appear on a later page in this issue of *Capital*). The Government is fondly hoping to expand sugar output without creating the conditions for expansion. During the current season, the production may amount to about 2.6 million tonnes, against a target of 3.3 million tonnes. Although this may represent a rise over the previous season's output of 2.16 million tonnes, the carryover was very small being barely 150,000 tonnes: as a result, total supplies in 1963-64 may amount to only 2.75 million tonnes. In 1962-63, the big carryover of 1 million tonnes helped ease the situation considerably. If, as reported, the Government sticks to its decision to export 300,000 tonnes of sugar this year, the shortage will be aggravated.

Mr. Modi referred to the rising domestic demand and said that, as against a rate of increase of 100,000 tonnes a year during the third plan period, demand might rise annually by 200,000 tonnes during the fourth plan. The Development Council has put the fourth plan production target at 4.5 million tonnes (of which 500,000 tonnes

down, leaving those not well acquainted with the local idiom guessing about their real intention. To some extent, the Finance Minister later made amends by dismissing the crusaders for nationalisation as of no consequence in the Party's counsels, but this was less satisfactory than if he had made the Government's position clear at Rbubaneswar itself.

India is also a fair bet for the foreign investor in terms of the profits she offers, a point which Mr. Krishnamachari has often made to dismiss domestic capital's plea for more considerate treatment. But he has still to show how he expects the entrepreneur to raise money for new enterprises or for the expansion of existing ones when successive Budgets divert a larger and larger proportion of savings to the Exchequer. Without the individual's savings to supplement corporate resources, entrepreneurs will have to throw themselves at the mercy of the State agencies. These may provide him with funds, but it looks as if they will also want the sponsors to agree beforehand to their veto in all major matters. This is certainly not conducive to healthy growth of domestic entrepreneurship. And without the domestic counterpart, how can the foreign investor begin to participate in India's growth? He may, of course, join hands with the State, a course to which the U.S. business men declared that they were not averse. While some such joint ventures may indeed come about in fields like refining, heavy electricals and fertilisers, the great bulk of the investment will necessarily have to be in the private sector.

will be for export) and, according to present indications, the target may be raised to 5 million tonnes. The investment needed for building the projected additional capacity of 1 million tonnes has been estimated at Rs. 70 crores, but if 50 per cent of the increase is achieved by expanding the existing units, the capital requirement may be only Rs. 42 crores. It is doubtful whether such a large volume of resources can be raised from the public, if the returns offered by the industry continue to be so low.

The need for conserving scarce resources and for placing the existing uneconomic factories on a sound footing implies that the additional capacity should, as far as possible, be achieved by expanding the existing units. Many of the factories were set up during 1932-33 and their daily crushing capacity is small, being between 600 tons and 800 tons. Consequently their unit costs are high. Furthermore, as Mr. Modi pointed out, their working season is short because of the scarcity of cane and the recovery too is low due to the poor quality of cane. The Government's measures to improve the yield and quality of cane do not seem to have borne fruit so far. Mr. Modi stated that cane yields continued to stagnate at around 13 tons to 14 tons an acre, which used to be the yield about

32 years ago, when the small units were put up. The sucrose content too has not gone up much. The uneconomic units can be placed on a sound basis only if they are enabled to expand their capacity and if they are assured of good quality cane in adequate quantities. Since cane accounts for as much as 70 percent of the cost of production, there is some substance in the I.S.M.A. president's plea for taking into account the disparities in the availability and quality of cane while fixing the control rates for this season on the basis of the actual working results of factories. The response of the Central Minister for Food and Agriculture, Mr. Swaran Singh, to the plea to assist uneconomic units was blunt. In his speech at the I.S.M.A. meeting, the Minister felt that the units were in difficulties because of their own neglect and improvidence in the past. Since the weak units could not raise their resources in the normal manner, he wondered if they should not be nationalised "in the public interest". The idea may be to modernise these factories after taking them over. But given the difficulties mentioned by Mr. Modi, it is hard to see how a take-over will improve the working unless simultaneously arrangements are made to improve the quality of cane and prolong the crushing period.

The major headache of the industry relates to the supply of cane. Since *gur* and *khandsari* producers are not subject to the restrictions imposed on sugar factories, they are able to attract cane by paying more for it. In a year of cane shortage, this diversion of supplies accentuates the scarcity. According to Mr. Modi, the quantity diverted during the current season may run to about 50 million or 60 million maunds. The Government, no doubt, took some steps to prevent diversion such as raising the cane price to Rs. 1.75 a maund (in areas where there was competition from *gur*, factories could pay Rs. 2 a maund); granting rebate in excise duty on output in excess of the production in 1961-62; restricting the inter-State movement of *gur* and *khandsari*; and assuming powers to regulate cane supplies, chiefly to factories. To begin with these measures proved effective, but when the crop in certain areas in northern India was damaged by frost and the failure of winter rains, the diversion of cane for *gur* and *khandsari* production started. Towards the end of February, when the situation became very bad, factories in U.P., which were most affected, were permitted to raise the cane price by 37pP a maund. This enabled them to prolong their crushing season and, in Mr. Modi's assessment, has led to an additional output of 50,000 tonnes to 60,000 tonnes. As he rightly emphasised, a lasting solution to the problem of diversion could be found only if sugar producers are given the "freedom and flexibility" enjoyed by the other users of cane. In his reply, Mr. Swaran Singh stated that he would soon announce measures to ensure that *gur* and *khandsari* did not enjoy an unfair advantage. It remains to be seen whether the new measures will prove effective, particularly when the cane crop turns out to be poor and the temptation for diversion is strong.

Current News and Comment

Ceiling on Seeds Futures Criticised

In his presidential address at the recent annual meeting of the Bombay Oilseeds and Oils Exchange, Mr. Chandulal Kasturchand made a strong plea for doing away with the arbitrary price ceiling set by the Forward Markets Commission for futures trading in oilseeds and oil. He said that there was no need for margins or ceiling on prices when there was a limit on the weekly price rise and on the net open position of members. Mr. Chandulal Kasturchand's view will be widely endorsed that there is little justification for fixing maximum prices for hedge contracts when there exist no similar curbs on spot prices. It is obvious—not to the Forward Markets Commission perhaps—that when spot prices are rising and forward prices are artificially pegged, the correlation between the spot and forward prices cannot be main-

tained. It is common knowledge that as against the ceiling of Rs. 241 a 250 kilograms for the hedge contract, in ready, even the inferior quality groundnut, Kanpur Bold, is quoted around Rs. 250. It is the spot material which really matters.

Artificial control over futures simply encourages operators to divert their attention to spot trading, thereby pushing up spot prices still higher. There is little that the Commission can do to check the rising trend in prices when it reflects a continuing unbalance between demand and supply. The recent improvement in oilseeds prices is due mainly to a setback in the production of five major oilseeds and larger exports of groundnut oil. Production of oilseeds has failed to catch up with the country's growing requirements. The target of 7.1 million tons set for the second plan has not been achieved even during the third year of the third plan. It

represents about 75 percent of the total amount of the maturing loans. During 1963, conversions amounted to 80 percent of the total amount of the then maturing securities. The two loans offered for conversion include the 4 percent Loan 1970 and the 4½ percent Loan 1989. A sum of Rs. 71.78 crores has been offered for the 4 percent Loan 1970 and of Rs. 69.74 crores for the 4½ percent Loan 1989. So cash repayments for the maturing securities will amount to nearly Rs. 47 crores. The good response to the long-dated loan is obviously because the interest rate offered is higher than in 1963. Since the borrowing programme of the Central Government during the current year has been more or less fixed around Rs. 295 crores it looks as if a second tranche of loans will be floated to collect cash subscriptions for about Rs. 153 crores. This instalment may be announced towards the end of June or early in July, considering that at that time money conditions are expected to be very easy.

It is interesting to note that the Finance Minister, Mr. T. T. Krishnamachari, encouraged

COMPANY SURTAX CHANGES

AS in the case of the Finance Bill, the changes in the Companies (Profits) Surtax Bill announced in the Lok Sabha last week by the Finance Minister, Mr. T. T. Krishnamachari, are minor and inadequate too. One of the main amendments reduces the minimum period for repayment of loans includible in the capital base from ten years to seven years. The other important change provides for the inclusion of money borrowed directly from the Government also in the capital base. Thus, in addition to borrowings from the Industrial Finance Corporation or the Industrial Credit and Investment Corporation of India or any other financial institution which the Central Government may notify, any loans taken directly from the Government will qualify for inclusion in the capital base for purposes of surtax assessment, subject to prescribed conditions. The first condition is that the loans should be repayable in not less than seven years. If the last instalment for repayment is on or after the expiry of the period of seven years, the condition will be fulfilled. Under the original Bill, this stipulation was confined to certain specified loans; it will now apply uniformly to all loans, whether obtained from the Government or otherwise. Secondly, the purpose of the loan should be the creation of a capital asset in India. Like the first condition, the second condition will apply to all loans and not only to loans obtained from persons resident outside India, as proposed originally.

This liberalisation is no doubt welcome, as it will enable medium-term borrowings to be included in the capital base and will help younger industrial units which depend on loan capital. Unfortunately, the disallowance of the interest paid on such loans in the computation of chargeable profits will reduce the usefulness of the change. Another amendment relates to the list of industries entitled to the special rebate of 20 percent of surtax. In conformity with the changes made in the Finance Bill, the new list includes electronic equipment and petrochemicals, deletes coffee and rubber, modifies the entry relating to electrical equipment, and adds some new items, such as manganese ore, dolomite and mineral oil in the entry pertaining to minerals. The surtax list, as amended, is identical with the list in the Finance Bill as approved by Parliament.

The Finance Minister's refusal to allow for the carry-forward and set-off of deficiency is regrettable. His only reason for denying this right is that "as the surtax will be attracted only at comparatively high levels of profits, it is not considered necessary to make a provision for carry-forward and set-off of any deficiency of profits against the chargeable profits of subsequent years". Mr. Krishnamachari again errs in upholding an inequitable principle on doubtful grounds. Merely because the monetary burden of an impost is small, the rules of equity and fair play are thrown to the winds. The fortunes of a large number of industries often depend on factors beyond their control—long gestation periods, vagaries of the weather and other changes caused

by the good response during the past year to small savings schemes, has fixed a high collection target of Rs. 125 crores for 1964-65. Some favourable developments have so far contributed to the bigger collections. The public has bought National Defence Certificates and Defence Deposit Certificates for patriotic reasons. The upward revision of interest rates on almost all savings schemes has helped attract funds. The increase in post office savings bank deposits has been encouraged by the offer of a higher interest rate combined with the introduction of cheque facilities. The outlook has nevertheless been obscured by inflationary tendencies. People cannot save because prices are rising, and the annuity deposit scheme introduced by the last Budget will mop up the voluntary savings of the middle and high-income groups. The third plan target of Rs. 600 crores for small savings is in any case unlikely to be achieved, unless the Government takes steps to increase savings by checking inflation and reducing taxes.

by unforeseen circumstances. There can be no justification for penalising such companies when, after having waited for a number of years of sub-standard profits, they are able to reap a good harvest, or having had a good year, are faced

ATTRACTING FOREIGN INVESTMENT

A SPECIAL effort has to be made to attract more private foreign investment to India for two good reasons: her need for additional foreign resources and her equally pressing need for technical know-how. It looks as if Government-to-Government aid will decline because of the growing weariness with which the burden is viewed by voters not only in the traditionally isolationist mid-western areas of the United States, but also in West Germany, France and Britain. Even if the total assistance offered by donor countries remains more or less unchanged, the portion that they can spare for India will inevitably suffer because of the lengthening queue of aid-seeking nations. New Delhi's backroom boys have totted up figures to show that such aid as India has received in the past decade is far less in per capita terms than what rival claimants are getting. But this argument overlooks the political realities which bring funds pouring into tiny pockets like South Vietnam or South Korea. Regardless of such statistical contests, the Indian pleas for help will still have to be fitted within whatever total the Western nations can raise from year to year.

It follows that India will have to reverse the trend which has brought external resources as a proportion of total investment up from 6 percent in the first plan to 12 percent in the second and 25 percent in the current five-year period. This will require serious rethinking about the strategy of planning, as Mr. Asoka Mehta, Deputy Chairman of the Planning Commission, indicated in an address this week. And it is as part of this rethinking that India will need to redefine her attitude to foreign capital. Private investment will be far more costly than the "soft" aid India gets from the U.S. Agency for International Development or the International Development Association, even if the burden is made more bearable by the fact that servicing will be proportional to the income generated by the investment. But regardless of the cost, investment may well have to be wooed because there is no other way open for the country to secure the foreign exchange resources required for growth.

In some ways, this rethinking has already begun. Last December, only a few months after he returned to the Central Finance Ministry, Mr. T. T. Krishnamachari made public his view that the door should be opened wider to the foreign investor. Past hesitations about admitting foreign capital into vital sectors of the economy had, he flatly declared, no longer any justification, a remark which was widely interpreted as applying particularly to petroleum refining. Mr. Krishnamachari enlarged on the same theme in his Budget

with losses. The fact that the surtax may not fall heavily on some companies affords no valid ground for denying a relief which is due to all companies both in equity and in law.

Mr. Krishnamachari obviously has such strong feelings against the distribution of dividends that he has not accepted the very modest and reasonable demand for deduction of the dividend tax of 7½ percent in the computation of chargeable profits. According to him, "as the objective of the levy on dividends is to place a restraint on the distribution of profits, this objective has to be reflected in the surtax as well". Consequently, the burden of dividend tax will be far greater than the 2½ percent or 3 percent referred to by him in his speech on 17th April; in fact, the figures quoted by Mr. Krishnamachari are even otherwise incorrect. If an Indian company makes a profit of 100, and pays tax at 50 percent, it will be liable to dividend tax of 3.49 on the assumption that the entire available surplus is distributed which ultimately must be the case. The surtax at 40 percent on dividend tax of 3.49 will amount to 1.40 and will raise the aggregate burden of dividend tax to almost 5 percent. Even on the basis of a 60-percent distribution the burden of dividend tax, inclusive of surtax, will amount to 3.5 percent, which is heavy. The reliefs allowed in relation to surtax are thus too meagre to eliminate the anomalies inherent in a basically unjust impost, and will fail to achieve the objectives underlined by the Finance Minister.

speech, in which he said that India would need to make the fullest use of private sources to augment official aid. This line of thinking has been echoed from the Planning Commission end by Mr. Asoka Mehta, who seems equally convinced that reliance on foreign capital will have to be much greater in the coming years.

The shift in thinking has found some reflection, albeit inadequate, in budgetary and economic policies. The attempts to improve India's image abroad have not gone unnoticed, as is evident from the comments made by the delegation of U.S. business men which was in India earlier this month. But whether the visitors found the message of the Budget as attractive as they claimed remains to be seen. Some politeness is customary on such occasions; the U.S. visitors could not but have made some gesture towards the intentions claimed for the Budget. In a less publicised comment, their leader, Mr. J. Roy Galloway, wanted, however, to know how far the internal capital market would be able to mobilise the resources for the new ventures which might come up as a result of increased U.S. investment. Whether he was convinced by the official explanation that the present depressed state of the stock exchanges is only a temporary phase is not known, but this is obviously a point on which the visitors will have formed their own ideas. They will have noted that the revival of interest in new issues since the end of 1963 has been checked; most underwriters are left carrying large blocks of unsold shares, an important factor contributing to the decline in the market quotations of newly-listed scrip.

It is premature, therefore, to judge the future prospects for U.S. private investment by what has been said for public consumption during the visitors' encounters with the Indian Press. This is not to suggest that they found investment opportunities lacking in this vast market of 450 million people. For all its faults, planning has indeed given the economy a dynamism and enormously increased its capacity to absorb investment. Even if the airy targets now being discussed for the fourth plan need drastic pruning after a realistic assessment of resources, there is certainly going to be a sizeable expansion in many directions—some of them, like oil, petrochemicals and engineering, of special interest to the investor. But market prospects alone are not decisive—the final decision whether to bring money into India or take it to another market will depend on at least four other factors.

Mr. A. D. Ogilvie, president of the Associated Chambers of Commerce, listed these others succinctly in his remarks at the meeting organised

between U.S. and Indian business men for an interchange of ideas. As he put it, the general attitude to foreign capital is something which the investor will weigh in his mind before making his commitment. If he finds the climate hostile, he may well have doubts about the long-term prospects for fair treatment even if immediate need obliges a country to accept investment on whatever terms it is available. In India, there was certainly deep distrust of foreign capital before independence, and a hangover of this attitude was much in evidence for some years after 1947. There was subsequently a remarkable change when both political and business opinion came to recognise that a free country with its own strongly entrenched domestic institutions had nothing to fear from the foreign investor. The latter's rôle in accelerating growth has gradually come to be accepted at all levels, with the result that xenophobic slogans raised by certain political Parties evoke today nothing like the response which one would have taken for granted even ten years ago.

In this sense, India is indeed a better bet than it was. But uneasiness still persists because of the confusion created abroad by pointless affirmations of socialist zeal such as those made earlier this year at Bhubaneswar. The cry for bank nationalisation raised from the annual Congress session caused disquiet in many Western capitals, not because the demand was made by the extremist left fringe but because the responsible Party leadership resorted to unfortunate equivocation in turning it

BLEAK PROSPECTS FOR SUGAR

SUGAR shares have been depressed for some time now, the index for the equities having declined from 138.7 last November to 127.9 for the week ended 11th April. (1952-53 equals 100). Although the depression may have been influenced by the general mood in the stock markets, it is largely a reflection of the low profitability of the industry. A recent Reserve Bank study on the finances of Indian joint-stock companies showed that the returns offered by the sugar industry were the lowest among the 14 industries covered. For sugar companies, the gross profit as a percentage of capital employed was 8.8 in 1960 and 7.4 in 1961, compared with an average return of 10.1 and 10, respectively, for all the industries covered. Although these figures relate to a period two years ago, the financial position of sugar companies has not changed much. The Tariff Commission itself recommended a return of 12 percent on the capital employed—a percentage which did not leave any cover for rehabilitation or reserves for meeting other capital needs. The recent rise in interest rates, actively encouraged by the Government, has made the returns from sugar shares extremely unattractive.

At the same time, the Government is advertising ambitious plans for raising sugar output. The inconsistency between the Government's objectives and policies has been forcefully brought out in Mr. G. M. Modi's presidential speech at the annual general meeting of the Indian Sugar Mills Association in New Delhi last Monday (fuller details of the speech appear on a later page in this issue of Capital). The Government is fondly hoping to expand sugar output without creating the conditions for expansion. During the current season, the production may amount to about 2.6 million tonnes, against a target of 3.3 million tonnes. Although this may represent a rise over the previous season's output of 2.16 million tonnes, the carryover was very small being barely 150,000 tonnes: as a result, total supplies in 1963-64 may amount to only 2.75 million tonnes. In 1962-63, the big carryover of 1 million tonnes helped ease the situation considerably. If, as reported, the Government sticks to its decision to export 300,000 tonnes of sugar this year, the shortage will be aggravated.

Mr. Modi referred to the rising domestic demand and said that, as against a rate of increase of 100,000 tonnes a year during the third plan period, demand might rise annually by 200,000 tonnes during the fourth plan. The Development Council has put the fourth plan production target at 4.5 million tonnes (of which 500,000 tonnes

will be for export) and, according to present indications, the target may be raised to 5 million tonnes. The investment needed for building the projected additional capacity of 1 million tonnes has been estimated at Rs. 70 crores, but if 50 percent of the increase is achieved by expanding the existing units, the capital requirement may be only Rs. 42 crores. It is doubtful whether such a large volume of resources can be raised from the public, if the returns offered by the industry continue to be so low.

The need for conserving scarce resources and for placing the existing uneconomic factories on a sound footing implies that the additional capacity should, as far as possible, be achieved by expanding the existing units. Many of the factories were set up during 1932-33 and their daily crushing capacity is small, being between 600 tons and 800 tons. Consequently their unit costs are high. Furthermore, as Mr. Modi pointed out, their working season is short because of the scarcity of cane and the recovery too is low due to the poor quality of cane. The Government's measures to improve the yield and quality of cane do not seem to have borne fruit so far. Mr. Modi stated that cane yields continued to stagnate at around 13 tons to 14 tons an acre, which used to be the yield about

down, leaving those not well acquainted with the local idiom guessing about their real intention. To some extent, the Finance Minister later made amends by dismissing the crusaders for nationalisation as of no consequence in the Party's counsels, but this was less satisfactory than if he had made the Government's position clear at Bhubaneswar itself.

India is also a fair bet for the foreign investor in terms of the profits she offers, a point which Mr. Krishnamachari has often made to dismiss domestic capital's plea for more considerate treatment. But he has still to show how he expects the entrepreneur to raise money for new enterprises or for the expansion of existing ones when successive Budgets divert a larger and larger proportion of savings to the Exchequer. Without the individual's savings to supplement corporate resources, entrepreneurs will have to throw themselves at the mercy of the State agencies. These may provide him with funds, but it looks as if they will also want the sponsors to agree beforehand to their veto in all major matters. This is certainly not conducive to healthy growth of domestic entrepreneurship. And without the domestic counterpart, how can the foreign investor begin to participate in India's growth? He may, of course, join hands with the State, a course to which the U.S. business men declared that they were not averse. While some such joint ventures may indeed come about in fields like refining, heavy electricals and fertilisers, the great bulk of the investment will necessarily have to be in the private sector.

32 years ago, when the small units were put up. The sucrose content too has not gone up much. The uneconomic units can be placed on a sound basis only if they are enabled to expand their capacity and if they are assured of good quality cane in adequate quantities. Since cane accounts for as much as 70 percent of the cost of production, there is some substance in the I.S.M.A. president's plea for taking into account the disparities in the availability and quality of cane while fixing the control rates for this season on the basis of the actual working results of factories. The response of the Central Minister for Food and Agriculture, Mr. Swaran Singh, to the plea to assist uneconomic units was blunt. In his speech at the I.S.M.A. meeting, the Minister felt that the units were in difficulties because of their own neglect and improvidence in the past. Since the weak units could not raise their resources in the normal manner, he wondered if they should not be nationalised "in the public interest". The idea may be to modernise these factories after taking them over. But given the difficulties mentioned by Mr. Modi, it is hard to see how a take-over will improve the working unless simultaneously arrangements are made to improve the quality of cane and prolong the crushing period.

The major headache of the industry relates to the supply of cane. Since *gur* and *khandasari* producers are not subject to the restrictions imposed on sugar factories, they are able to attract cane by paying more for it. In a year of cane shortage, this diversion of supplies accentuates the scarcity. According to Mr. Modi, the quantity diverted during the current season may run to about 50 million or 60 million maunds. The Government, no doubt, took some steps to prevent diversion such as raising the cane price to Rs. 1.75 a maund (in areas where there was competition from *gur*, factories could pay Rs. 2 a maund); granting rebate in excise duty on output in excess of the production in 1961-62; restricting the inter-State movement of *gur* and *khandasari*; and assuming powers to regulate cane supplies, chiefly to factories. To begin with these measures proved effective, but when the crop in certain areas in northern India was damaged by frost and the failure of winter rains, the diversion of cane for *gur* and *khandasari* production started. Towards the end of February, when the situation became very bad, factories in U.P., which were most affected, were permitted to raise the cane price by 37p a maund. This enabled them to prolong their crushing season and, in Mr. Modi's assessment, has led to an additional output of 50,000 tonnes to 60,000 tonnes. As he rightly emphasised, a lasting solution to the problem of diversion could be found only if sugar producers are given the "freedom and flexibility" enjoyed by the other users of cane. In his reply, Mr. Swaran Singh stated that he would soon announce measures to ensure that *gur* and *khandasari* did not enjoy an unfair advantage. It remains to be seen whether the new measures will prove effective, particularly when the cane crop turns out to be poor and the temptation for diversion is strong.

Current News and Comment

Ceiling on Seeds Futures Criticised

In his presidential address at the recent annual meeting of the Bombay Oilseeds and Oils Exchange, Mr. Chandulal Kasturchand made a strong plea for doing away with the arbitrary price ceiling set by the Forward Markets Commission for futures trading in oilseeds and oil. He said that there was no need for margins or ceiling on prices when there was a limit on the weekly price rise and on the net open position of members. Mr. Chandulal Kasturchand's view will be widely endorsed that there is little justification for fixing maximum prices for hedge contracts when there exist no similar curbs on spot prices. It is obvious—not to the Forward Markets Commission perhaps—that when spot prices are rising and forward prices are artificially pegged, the correlation between the spot and forward prices cannot be main-

tained. It is common knowledge that as against the ceiling of Rs. 241 a 250 kilograms for the hedge contract, in ready, even the inferior quality groundnut, Kanpur Bold, is quoted around Rs. 250. It is the spot material which really matters.

Artificial control over futures simply encourages operators to divert their attention to spot trading, thereby pushing up spot prices still higher. There is little that the Commission can do to check the rising trend in prices when it reflects a continuing imbalance between demand and supply. The recent improvement in oilseeds prices is due mainly to a setback in the production of five major oilseeds and larger exports of groundnut oil. Production of oilseeds has failed to catch up with the country's growing requirements. The target of 7.1 million tons set for the second plan has not been achieved even during the third year of the third plan. It

is extremely unlikely that the third plan target of 9.8 million tons will be achieved even if a determined effort is made to step up production. In an economy characterised by chronic shortages, the utility of forward trading cannot be seriously questioned, but if forward trading is to be permitted, it is only proper that congenial climate is created so that the forward market can operate smoothly on the basis of demand and supply and perform its useful purpose. Mr. Chandulal Kasturchand appealed to the members to avoid option business and kerb transactions. Options may have great utility—they are a regular feature of futures trading in several markets abroad—but they are illegal in India and the law must be respected.

Importers Help Development

The case of the established importers was put forward forcefully by Mr. J. H. Forman in his speech from the chair at the annual general meeting of the Calcutta Import Trade Association last Friday. Established importers, particularly agents of overseas suppliers who meet the specialised requirements of industries, make a positive contribution to economic development. Their importance lies in the fact that they are experts in their lines, have an intimate knowledge of the needs of industry and are able to provide after-sales service. Because of their close contact with consumers they are able to assess correctly the overall requirements of spare parts and obviate the need for any particular industry to carry large stocks of these items. The Estimates Committee of the Lok Sabha acknowledged the importance of agents when it said that "they can continue to play a useful part in the import trade, particularly for items for which after-sales service is required and where goods are required to be imported in small quantities by diverse consumers". A similar view was also expressed by the Import and Export Policy Committee headed by Sir Ramaswami Mudaliar. The Tea Board has suggested that when an actual user gets a licence for machines or spare parts, the established importer should meet the requirement and replace the items by imports. The present system has led to an uneconomic accumulation and duplication of spare parts with consumers.

Referring to the activities of the State Trading Corporation, M. Forman said that the bulk purchase of commodities without a true appreciation of their end-uses would be wasteful. The S.T.C. does not have experts in specialised lines of trade, nor does it know the individual requirements of industrial consumers. If the S.T.C. acts merely as a middleman and collects its commission without providing any after-sales service, "it is merely contributing towards inflation". The speaker conceded that the S.T.C. was well suited to negotiate international barter deals, but its activities should not extend to the import of specialised items.

Prospects for Food Preservers

The food preservation industry has steadily raised its output by 30 percent over the past three years, from 40,000 tons to 52,000 tons, but there is little prospect of its reaching the third plan target of 100,000 tons as sugar supplies have been short. In fact, all major factories are now having to curtail their production. Mr. K. U. Patel, president of the All India Food Preservers Association, speaking at the latest annual meeting in New Delhi recently, said that the industry required around 11,000 tons of sugar a year, as against which allocations by State Governments totalled 7,000 tons. The difference of 4,000 tons was by no means large, and could be easily found from the country's present production. Another factor hampering the progress of the industry is the high cost of raw materials, compared with that in countries such as Australia, Denmark and the United States; freight rates too are high. The industry has been having to pay more for tinplate since the subsidy of Rs. 500 a ton was withdrawn about a year ago, and its stocks of tinplate are now so limited that they will last for only a few months. This essential packing material cannot be had as readily as the industry requires.

In common with all other industries, food preservers have been feeling the dearth of suitably-trained technical personnel for their plants. Mr. Patel drew attention to the fact that there is a great shortage of qualified technicians and food technologists in the country. Very few of the universities offer a diploma or degree course in food technology. He, therefore, suggested that the Government should take steps to remove this basic deficiency. Mr. Patel also urged the Government to enforce the Fruit Products Control Order more strictly as "hygienic conditions in a majority of factories in the unorganised sector are far from satisfactory."

Power Cut Hampers Flour Mills

In his speech from the chair at the annual general meeting of the Calcutta Flour Mills Association last Friday, Mr. N. N. Atal drew attention to the problems of the flour milling industry. The power shortage is the biggest worry. Last year, the industry's output reached an all-time high of 300,000 tonnes of wheat products in spite of a 20 percent loss of production due to the forced suspension of milling. Although the industry has been declared a public utility service, its requests for relaxing power restrictions have been turned down by the State Government, and a substantial percentage of its milling capacity has had to remain idle. The chairman also referred to the shrinking market for the products of Calcutta mills in view of the rapid growth of milling capacity in Assam and the southern States, whose requirements were formerly met from Calcutta. The outlet for the products of Calcutta mills is now limited to the markets in West Bengal, Orissa and certain regions of Bihar. It was regrettable that in spite of the existence of surplus capacity in the industry, the West Bengal Government had been liberally issuing permits for installing power-driven *chakkis* to produce wholemeal atta.

Wrong Policies on Growth

The rate of economic growth in India in the first two years of the third plan was slow, and the tempo does not appear to have been any the quicker in the third year. Referring to this fact in his address at the latest annual meeting of the All India Manufacturers Organisation in Bombay last week, Mr. Prabhu V. Mehta said that while the Central Finance Minister and Deputy Chairman of the Planning Commission had been stressing the need for accelerating the rate of growth, a good deal of time and energy was being wasted in a barren controversy about the relative roles of the public and private sectors. The need clearly was to maximise production, and all concerned should co-operate in this single most important national task. Unfortunately, Mr. Mehta said, the Government's wage and fiscal policies had been the least helpful in this matter. In this connection, he referred to the recommendation of the Bonus Commission and said that when the paramount need was to plough back profits, it was odd that "a committee appointed by a Ministry of the Central Government should recommend that 60 percent of the net profits should be distributed as bonus to workers, without even providing for such essential requirements as replacement cost of plant and machinery at current prices." He also failed to understand why the Government was not encouraging the idea that labour should augment its earning capacity through rationalisation and higher productivity, while its immediate needs to cope with the rising cost of living was being readily met by industry. The A.I.M.O. chairman was also at a loss to understand the types of criterion followed by the Finance Ministry and the Industries Development Procedures Committee in selecting key industries for the purpose of special assistance. For instance, the list contained in the Finance Bill varies strikingly with that prepared by the Committee. The object of both was the same, namely, rapid growth of the industries which occupy a very key position in the country's economic development plans, and Mr. Mehta felt that the Committee's list being the more comprehensive of the two should be used by the Finance Ministry also for the purpose of the tax rebate. Referring to the latest Central Budget, Mr. Mehta said that

the excellent analysis by the Finance Minister of the country's economic problems in part A of his speech was unfortunately not followed to its logical conclusion in part B. The question of incentives, in particular, appeared to have been altogether overlooked in framing the various Budget proposals.

Finding Raw Materials for Paper

The deliberations of the first session of the Indian Pulp and Paper Technical Association, which was held in New Delhi last week, showed the need for developing new raw materials—such as bagasse, timber, hard woods and agricultural residues—for the Indian paper industry. Paper production in the country by the end of the third plan is not likely to exceed 575,000 tonnes, as against the plan target of 675,000 tonnes, mostly because of the shortage of traditional raw materials. In his presidential address at the international seminar on "raw materials for more paper", Mr. V. Poddar pointed out that added to the inadequacy of bamboo supplies, there have been gregarious flowerings in certain States causing an artificial shortage of the raw material. The State Governments have failed to encourage the planting of mixed wood forests at selected spots and to ensure their exploitation on scientific lines. It is, therefore, necessary to plant fast-growing species and also different varieties of bamboo so that they might flower at different intervals. At the same time, it is necessary to select small compact areas in different regions for this purpose so that there may be a saving in transport costs. Incidentally, this policy would result in large-scale afforestation of those areas which would otherwise remain bare, and unused.

In order to meet the full raw material requirements of the expanding paper and board industry, it is necessary to plan for new raw materials and to make use of the progress in technology in advanced countries. The demand for newsprint, writing and packing paper and boards is expected to increase even faster than in the past as literacy in the country spreads and as economic development gathers momentum. It is, therefore, necessary to plan for a greater output of paper and paper boards in the fourth plan period.

TEA AND TAXATION

THE public meeting held in the Bengal Chamber of Commerce on the 23rd ultimo to protest against the extra 2d. duty on tea imported into Great Britain, was fertile as much public protests often are, in much reasoning which was quite beside the mark. The various speakers, as was, perhaps, only natural, regarded the welfare of their own industry as being altogether of the much importance, and the views of the British Treasury, with too little importance. The British Treasury, in plain language, does not care a "tuppenny-ha-penny dam" (or a brass farthing if you want a milder phrase) about the British planter in India. This, it seems to me, is one thing the speakers forgot. A great deal of the justice and the equity and the high-minded patriotism, which by some intellectuals is supposed to be a peculiar attribute of the British Parliamentary mind, is pure rubbish. The Party in Power at Home and the leaders of that party are, as a rule, so fearful of offending the electorate, that they are ready to resort to any device to avoid doing so. Imagine Mr. Austen Chamberlain coming out with a tax on Beer!—an increased tax that is; yet beer, judging by the amount of money spent on it, could far better stand a tax than tea can. But Mr. Austen Chamberlain isn't such a fool. He doesn't want to go out of office yet. He'll hang on in the true Barnacle fashion to the end. A thousand or so expatriated planters in Assam, Bengal, Ceylon and elsewhere, who are not British voters, and only go home to the land of their birth for an occasional holiday, are hardly worth thinking about—except as tax yielders. This is a thoroughly logical, cynical, selfish doctrine, only don't forget it, and think because a man is a British Minister and a shining light in British politics that he is above the contemptible weaknesses of human nature.

A Ditcher's Diary

NO ONE, WROTE HERBERT SPENCER ALMOST A CENTURY ago, can be perfectly free till all are free; no one can be perfectly moral till all are moral; no one can be perfectly happy till all are happy. I am no perfectionist; nor do I believe that freedom, morality or happiness, however defined, could ever be universal. It does nevertheless seem to me that the warning against "moral smugness" issued by the Sarvodaya leader, Mr. Jaya Prakash Narayan, and his compatriots the other day has in it a solid core of truth, which it would be unwise for the people of this country to ignore. All nations are victims of narcissism, and it was hardly to be expected that India would be an exception. It is also true that in a democratic society, unlike Pakistan's, claims to righteousness are balanced with constant questioning of the sort Mr. Narayan often indulges in. The truth, however, remains that, since the earliest days of independence, there has been in this country a powerful tendency to disguise self-interest in the wrappers of moral justification; and, when that is not possible, to excuse sins and lapses on the ground that they are an inevitable consequence of satanic deeds elsewhere. During the recent communal rioting in India and Pakistan, the tendency was indeed very noticeable, and Mr. Narayan is right to point to it. But, that said, it by no means follows that the prescription he has implicitly recommended—greater consciousness of the horrors of the rioting in India, through greater publicity for the murder, rape and loot they entailed—is necessarily the right one. Experience offers the salutary reminder that there are no surer generators of communal disturbances in one country than detailed accounts of comparable horrors in the other; in the circumstances, it would be plain folly to publicise the unfortunate events in West Bengal, Bihar and Orissa more widely in the hope of arousing the Indian conscience, when the publicity cannot be confined to within the country's borders, and might well have serious repercussions across. The responsibility of the leadership, as well as of newspapers, is to add perspective to particular events, so as to restore a certain balance to the common thinking. It is by no means certain that intense and vigorous self-criticism in public, such as Mr. Narayan appears to have in mind, would bring peace to India—or to Pakistan.

LET ME SAY RIGHT AWAY THAT I SHALL BE VERY surprised indeed if we hear anything more about the "elixir" which Dr. Tiberius Reiter claims to have developed for turning old men into young ones. There are numerous rejuvenating processes available now, and I cannot think that this one is going to be notably better than the rest. I rather hope

it will not be, although I know many elderly men who could benefit from it and might not thereby add to the world's problems. Others I could name most certainly would, and anything which helps them to cheat The Reaper a little longer could not possibly be in anybody's interests, perhaps not even their own. I have been decidedly sceptical about the virtues of elixirs ever since I read Aldous Huxley's *After Many A Summer*. But that dealt with the personal consequences of prolonging life; what concerns me at the moment are the social ones. If there were some method of ensuring that only the best and most useful among the ageing received the treatment, then there might be something to be said for it. But in a world which is already overcrowded, and where the frustrations of youth are a growing source of instability, the indiscriminate extension of the life span might only create more problems than it solves. Not that this kind of cynical logic is going to make any difference. The tenacity with which some people cling to life, even when it is scarcely worth the living, is something which has always puzzled me. I myself would certainly appreciate being able to retain my health and vigour into my advanced years; but anything which promised to hold me to this troubled planet longer than absolutely necessary would be regarded with the greatest suspicion. It has always seemed to me that the one great consolation in life is that we do not have to go on living it indefinitely. There is much truth in the saying that western medicine has been the curse of Asia; Dr. Reiter's could be the curse of the world.

IT QUITE TOOK MY BREATH AWAY TO READ WHAT HAD been handed out to Britain's great mail train robbers. Thirty years—the second largest sentences in recent British penal history—which with full remissions means a minimum of 20 behind bars, does seem rather a lot, even for the greatest cash robbery of all time. One can comfortably assume that the judge just did not see the joke. I was myself rather intrigued by the whole business. Naturally, one cannot even mildly condone such crimes, and I am not to be numbered among those who are now wasting their sympathy on the unhappy perpetrators. But there was an audacity about the affair, and a startling degree of success, which did place it in a class on its own, and make it difficult not to feel a certain sneaking admiration. Of course, this is pure sentimental nonsense, the kind which makes folklore legend out of the doings of such rascals as Robin Hood and Dick Turpin. Crime is crime, and is not made any the less reprehensible because the scale is large and

the circumstances sensational. The only reservation I have to make about the judge's decision is that it is difficult to appreciate why he should regard the commission of mere armed robbery as warranting a 30-year sentence when, in Britain, the most which is generally awarded the worst cold-blooded and calculated murder, provided it is not accompanied by robbery, is 14 years, or ten with full remissions. It is interesting to note that the reason given for treating murder in this way is that it is normally impossible for anybody to serve an uninterrupted stretch of more than ten years or so in prison without serious and permanent damage to psychological health. Such considerations do not appear to have weighed in deciding the sentences on the robbers. To an outsider, all this adds up to a change in standards of judgment where crimes are concerned. Murder, as such, and for reasons with which I am not prepared to quarrel, is nowadays seen in a much less austere light than that depressingly prevalent phenomenon of the affluent society, the armed robbery. In other words, the safeguarding of human life would now appear to be regarded as of secondary importance to the protection of property. It is little wonder in view of this apparently confused state of affairs that it has been decided to institute an official investigation into all forms of legal punishment as they exist in Britain today. A society has to stop every so often and take stock of the direction in which its thinking on certain problems is developing.

IN THEIR OWN QUIET, UNASSUMING WAY, FEW MEN have done more for the victims of war and poverty in our time than Father Dominique Pire, who stopped briefly in Calcutta on Tuesday evening on his way home to Belgium. The Dominican priest was chaplain to the Resistance movement during the war, and a secret agent; he later played a major rôle in the rehabilitation of European refugees, and won worldwide fame and acknowledgment when he was awarded the Nobel Prize for Peace in 1958. His involvement in Asia dates back to a few years ago, when the Pakistan Government invited him to visit that country; the result of the visit today is that Father Pire is spending \$1 million on a five-year project to bring self-sufficiency in "bread and peace" to the 25,000 cyclone-stricken inhabitants of a Chittagong village which he has just been visiting. A strong, medium-built and sprightly 54, Father Pire has an engaging sense of humour to complement his exceptional agility of body and mind. In recent years, his interest has shifted towards Asia (and Africa), a shift facilitated by seeing the grim horrors of poverty and war in the continent, the first in Pakistan and the second in Hiroshima. Father Pire is no fiercely proselytising missionary. On the contrary, he exudes a warm and humane liberalism which, in its support for the freedom of the individual, often transcends the limits of political or religious dogma. On the question of

ATTENTION INDUSTRIALISTS!

HERE'S ELECTRIC POWER

FOR YOUR NEW INDUSTRIES

AND EVERYTHING ELSE YOU CAN ASK FOR

Your new industry needs a lot of electric power. The U.P. State Electricity Board is proud of its ability to keep pace with industry's growing demand.

The following are some of the major power projects in U.P.'s Third Five Year plan:

Rihand Hydro-electric Project	2,50,000 KW	Completed 1962
Harduaganj, Stage I	60,000 KW	Completed May '62
Harduaganj, Stage II	30,000 KW	Completed Mar. '64
Mataulia Hydro-electric Scheme	30,000 KW	Scheduled Dec. '64
Yamuna Hydro-electric Scheme, Stage I	84,000 KW	Scheduled June '65
Kanpur Thermal Expansion	64,000 KW	Scheduled Aug. '65
Obra Thermal	2,50,000 KW	Starting Oct. '65
Yamuna Hydro-electric Scheme, Stage II	2,00,000 KW	Scheduled Dec. '69

A trunk grid of 2,20,000 volts is being constructed to interconnect all the power stations and lines of 1,32,000 and 66,000 volts will branch off from this trunk grid for taking constant electric power to the following important industrial centres:-

Chazabadi-Modinagar-Meerut - Connected by rail and road with the whole of India. Home of the well-known Modi Group of Industries - can also be the home of your industry. Industrial sites are offered by the U.P. Industrial Corporation, Kanpur.

Aligarh - Only 16 miles from the Harduaganj Thermal Power Station - assured of ample and constant supply of electric power. 84 miles from Delhi.

This advertisement is issued for the information of industrialists throughout the country by the

U.P. STATE ELECTRICITY BOARD

COUNCIL HOUSE, LUCKNOW

who will be happy to answer enquiries and furnish any further information which may be required.

birth control as an answer to Asian poverty, for example, he told me firmly that "the final decision must rest with the conscience of the couple"; the State had no right to interfere, nor perhaps did the Church, although they could broadly indicate the guideposts to morality. If on the mercy-killing of thalidomide babies he was less forthcoming, it was perhaps because he considered the question irrelevant, if not embarrassing—despite the fiery controversy the subject had aroused in his own country. Disappointing though the equivocation was, Father Pire gently returned me to his main theme: that human understanding could come only through joining diverse people in a common programme of practical endeavour aimed at teaching them to help themselves. Of this, Father Pire's "European villages" were one example, and the Chittagong project is another. Both remain as monuments to a man in whom spiritual dedication and earthy pragmatism have achieved a distinctive and stimulating blend.

AS PREDICTED A FEW WEEKS AGO, THE CELEBRATIONS connected with the Shakespeare quatercentenary have begun in Calcutta on the scale one would expect of a city which prides itself on being India's cultural capital. The Corporation's decision to rename the theatreless Theatre Road as Shakespeare Sarani may or may not be acknowledged by future historians as the greatest conceivable tribute to the poet's memory; the value of the gesture, if I may say so, would have been appreciated the better if one had been sure that the city fathers were literate enough to know the difference between the Bard and a *gharry-wallah*. But the Little Theatre Group has been active; and the Amateurs will be on the stage next week, with the Dramatic Club following suit later. I cannot say that I was particularly impressed by the function organised by the Calcutta Art Society at the Mahajati Sadan last Thursday, Shakespeare's supposed birthday. Some interesting details of information emerged, such as that *The Tempest* had been translated into Bengali as early as 1803, and that *Hamlet* was staged in Calcutta more than two hundred years ago. But the dozen or so speeches made on the occasion seemed to me rather more than were strictly necessary to accommodate such pearls of wisdom. And their value may have been depreciated by the subsequent discovery that one or two of the speakers (including, it appears, a junior employee from the West German Consulate) tried to pass off as the products of ultra-modern research some inconsequential tidbits gleaned from old and dusty histories of Shakespearean literature. In any case, it is my humble conviction that, in the case of Shakespeare more than any one else, long and flowery speeches from amateur-orators are a poor way of paying tribute to his memory; perhaps no personality in history has been discussed or written about at greater length, by the greatest of scholars, all of which gives rise to the suspicion that the more verbose of the local literary fraternity cannot have much that is new or worth while left to say. The Little Theatre Group may have been nearer the mark in giving stage performances, even if the psychotic urge towards communism persuaded it at times to interpret the themes in ideological terms. To it credit is due for the emphasis, however minor, on the point that Shakespeare's works need to be staged and seen—or read—a little more often than they are talked about. "My words fly up, my thoughts remain below: Words without thoughts never to heaven go".

"Now, children," said the art mistress, "today we are all going to draw pictures of what we're going to do when we grow up. Right? Off you go!"

At the end of the lesson she called in the work and was annoyed to find that little Edward had handed in a blank piece of paper.

"When I grow up, I'm going to get married," said little Edward by way of explanation.

"But that doesn't excuse you. Even when you marry, you will be doing something. Why haven't you drawn it?"

"Really, Miss Jenkins," said the boy. "I am surprised at you!"

THE DITCHER

Guide for Investors

INDIAN ALUMINIUM TO EXPAND CAPACITY

THE growth prospects for the Indian Aluminium Co. Ltd. have been highlighted by Mr. H. V. R. Iengar in his address from the chair at the annual general meeting of the Company in Calcutta last Monday. (A fuller version of the speech is printed on a later page in this issue of *Capital*). He thought that the demand for aluminium by the end of the fourth plan will be much bigger than has been planned so far. The Company has decided to extend its operations in order to keep pace with growing requirements. It is proposed to locate the new schemes on the west coast. The Government has asked the Company to submit an application for an industrial licence to put up a new smelter with a capacity of 3,000 tons a year. This unit will form the nucleus of a much larger scheme of integrated aluminium production in western India.

Commenting on the latest Central Budget, Mr. Iengar pointed out that the Company might enjoy a tax reduction of about Rs. 20 lakhs for 1963. It will also benefit from the rebate in income tax and surtax on profits allowed to certain important industries. The move to continue the development rebate for key industries beyond April 1967 has been welcomed. He mentioned the harmful effects of the dividend tax and the capital gains tax on bonus shares. He referred to the substantial improvement in output, sales and profits achieved by the Company for 1963. Sales rose by 32 percent over those for 1962. The net profit has improved from Rs. 1.3 crores to Rs. 1.6 crores. The taxable ordinary dividend of 17½ percent on the increased share capital has been repeated. The good results have been due to the completion of the expansion schemes. The benefits from the expansion of the Alupuram smelter and the installation of the foil mill in Kalwa are not expected to flow until 1965. To raise funds 801,276 rights ordinary shares of Rs. 10 each have been issued at a premium of Rs. 15.50 a share. The debenture stock for Rs. 1 crore has been subscribed. Foreign exchange has been obtained from the Commonwealth Development Finance Company. Bonus shares in the proportion of one share for every four held have been issued to bring the working capital more in line with the share capital.

Emphasising the need to reduce production costs, Mr. Iengar said they were not always within the control of the Company. The shortage of electric power in the Alupuram smelter has interrupted production and as a result, production costs have been high. During the current year, a 25-percent cut in power was enforced in February. It was increased to 40 percent in March. The Kerala State Government has taken steps to increase the generating capacity, and by the end of 1965, the shortage of power may be relieved to a great extent. The tendency of State Governments to levy duty on electricity consumption has raised the cost of power. Considering the generally low productivity of Indian industries, it is necessary to take vigorous measures to improve labour-management relations for stimulat-

ing productivity. Mr. Iengar thought that a tradition of healthy negotiations between management and labour should be encouraged in the interests of workers and industry.

Jessop Increases Dividend

SPEAKING at the annual general meeting of Jessop and Co. Ltd. held in Calcutta last Wednesday, Mr. A. K. Chanda, chairman, took a (a full text of the speech is printed on a later page in this issue of *Capital*) fairly optimistic view of the outlook. The demand for the Company's products has been growing and it has been difficult to satisfy all orders. The order-book has been well-filled for many years to come. To meet the growing demand, the Company has undertaken ambitious modernisation and expansion schemes. The rebuilding of the wagon works is in the final stage, and attention has been centred on the manufacture of "Box" wagons. The structural works have been modernised and expanded. The facilities for fabricating steel work have been increased. With a larger supply of matching steel, it should be possible to use the capacity more fully. The new road roller works produced 320 rollers for 1963, but it is hoped to produce about 450 rollers during the current year.

The indigenous content of the rollers has, meanwhile, reached a percentage of 97. The output of electric multiple unit coaches and full-furnished metre gauge coaches has begun. Steps have been taken to increase the production of electric overhead travelling cranes, wharf cranes and sluice gates. The fabrication and erection of wheel gates for the Kosi barrage has been completed. The mechanical works has begun to produce high-speed cord sawing machines and saw sharpeners.

Commenting on further expansion, he mentioned the negotiations for the purchase of a suitable site. But the phasing of the expansion programme depends on the financial position of the Company, the impact of taxation and the possibility of securing financial and technical foreign collaboration. He pointed to the continuing shortage of matching steel, although its supply has recently improved. Balanced supplies are unlikely until the production of the domestic steel plants increases substantially. He suggested that heavy structural units should be built according to priority in order to ensure the smooth working of fabrication programmes. An assured supply of electric power is expected in view of the development programmes undertaken by power-producing units.

The Company has earned a profit of Rs. 76.83 lakhs for 1963, against Rs. 64.42 lakhs for 1962. The taxable ordinary dividend has been increased from 8.58 percent to 10 percent. The yield amounts to 4.4 percent at the present price of Rs. 22.56 a share of Rs. 10 each. He mentioned the need to conserve resources in view of the modernisation and expansion projects.

Jessop and Co. Ltd. has completed 175 years of engineering activity and has decided to hold a simple function

at the Dum Dum works to celebrate the occasion.

Results of Martin Burn Power Companies

THE reports of the electric companies under the managing agency of Martin Burn Ltd. for the year ended March 1963 have been published recently. The directors of Benares Electric Light and Power Co. Ltd. mention that arrangements have been made with the U.P. State Electricity Board for providing the main bulk supply point from the Rihand grid at a site near the Banaras power station. Energy has already been available from this point. In spite of restrictions, the staggering of loads and other measures, the plant at the Company's generating station has been operating to full capacity. Additional power is being supplied from the Rihand grid in the Moghalsarai area and more power will be available in the Banaras area too. As soon as arrangements are completed for the new supply point it is proposed to undertake an expansion programme to increase the transmission and distribution systems in Banaras in order to facilitate the distribution of the additional power received from Rihand. The cost of the scheme may amount to about Rs. 1 crore and the State Electricity Board has agreed to provide a loan of an equivalent amount for this purpose.

Units sold increased from 50.1 million kW to 52.9 million kW while revenue rose from Rs. 61.99 lakhs to Rs. 65.22 lakhs. Since the clear profit falls short of the "reasonable return" under the law, a sum of Rs. 11,300 has been transferred from tariffs and dividends control reserve. The profit has amounted to Rs. 3.04 lakhs, against Rs. 3.59 lakhs for 1961-62, after providing Rs. 45,000 (against Rs. 75,000) for taxation and Rs. 4.77 lakhs (against Rs. 4.48 lakhs) for depreciation. Statutory contingencies reserve is allocated Rs. 49,612. Bringing in Rs. 47,298, the distributable balance amounts to Rs. 4.33 lakhs. General reserve is allocated Rs. 2.40 lakhs. The taxable ordinary dividend of 11 percent has been repeated to absorb Rs. 1.87 lakhs. The yield amounts to 9.3 percent at the present price of Rs. 11.81 a share of Rs. 10 each. The carry-forward is Rs. 5,522.

Upper Jumna Valley Electricity Supply Co. Ltd. has earned a revenue of Rs. 40.76 lakhs, against Rs. 28.07 lakhs. The number of units sold rose from 27.9 million

kW to 28.07 million kW. The profit has amounted to Rs. 48,760 against Rs. 88,048, after transferring Rs. 1.71 lakhs (against Rs. 1.67 lakhs) to depreciation and Rs. 15,514 (against Rs. 32,249) to statutory contingencies reserve. A sum of Rs. 12,000 has been transferred from deferred taxation reserve. General reserve is allocated Rs. 25,000 (against Rs. 20,000). A taxable ordinary dividend of 13½ percent has been maintained to absorb Rs. 67,500. The yield works out to 6.4 percent at the present price of Rs. 21.19 a share of Rs. 10 each. The carry-forward is Rs. 1,934, against Rs. 33,674 brought in. The results have been affected by the enhancement in bulk supply tariff imposed by the U.P. State Electricity Board with effect from 1st July, 1962. The Company has, however, been allowed to increase its rates to consumers from 1st January, 1963, to meet the increased operating costs. The reasonable return amounts to Rs. 67,221, so the excess of expenditure over income has been made good by transferring Rs. 2.02 lakhs from tariffs and dividends control reserve.

The directors have pointed out that the Delhi-Shahdara undertaking was handed over to the Delhi Electric Supply Undertaking on 21st December, 1962, and negotiations about the purchase price are in progress. A sum of Rs. 5 lakhs has been received on account of payment. Notice has been received from the U.P. Electricity Board that it proposes to exercise its option to buy the Upper Jumna undertaking on the expiry of the initial period specified in the licence. The undertaking will, therefore, be handed over to the Electricity Board in June 1964.

The directors of Bareilly Electric Supply Co. Ltd. have mentioned that negotiations with the State Electricity Board are in progress for a permanent bulk supply from the Ganga-Sarda grid in addition to the standby arrangements which are already in force. Despite restrictions and the staggering of loads and other control measures, the plant at the power station has been operating at full capacity. The scope for further development is very limited. The revenue has improved from Rs. 25.81 lakhs to Rs. 27.52 lakhs and units sold have increased from 14.8 million kW to 15.8 million kW. Arrangements with the State Electricity Board for a loan of Rs. 10 lakhs are being finalised to finance the expansion programme. It is planned to increase the transmission and distribution systems at Bareilly in order to distribute the additional power when it is received from the Ganga-Sarda grid. The profit amounts to Rs. 1.27 lakhs (against Rs. 79,368 after transferring Rs. 2.14 lakhs (against Rs. 2.06 lakhs) to depreciation, Rs. 18,800 (against Rs. 26,901) to statutory contingencies reserve, Rs. 13,500 (against Rs. 93,000) to taxation and Rs. 3,203 (against Rs. 2,989) to tax on interest on investments. Bringing in Rs. 25,623, the distributable amount totals Rs. 1.49 lakhs. Reserve

MOTOR STARTERS & CONTROL PANELS

Armstrong Smith Ltd.

MANCHESTER LONDON CALCUTTA

HARVEY BELTING DUCKS

KEEP VITAL PRODUCTS ON THE MOVE!

In any industry you can think of, Harvey Belting Ducks can (and do) play a vital role. They are widely used in the manufacture of Conveyor Belts—which keep essential products on the move in mines, quarries and factories—and Transmission Belts for a variety of power drives.

Today Harveys' Madura Mills are India's largest producers of industrial fabrics. Through the years they have built up a reputation for unbeatable quality that has made Harvey Belting Ducks the first choice of leading manufacturers.

Harveys can weave industrial fabrics to a variety of specifications... however rigid. They have the men, machines and knowhow to produce a range of quality Belting Ducks, and other fabrics like Canvases and Tyre Cords. Recently Harveys expanded their industrial weaving capacity. They can now meet all your requirements in this field... to your complete satisfaction.

MADURA MILLS CO. LTD., Madurai.
Managing Agents: **A. & F. HARVEY LTD.**

HARVEYS OF MADURAI

for redemption of debentures is allocated Rs. 34,332 and general Rs. 25,000. A dividend of 11 percent has been repeated to absorb Rs. 88,000. The yield amounts to 9.3 percent at the present price of Rs. 11.87 a share of Rs. 10 each.

Burmah Oil Claim for War Losses

AFTER 20 years of argument, a House of Lords decision has established that Burmah Oil has a claim against the British Government concerning its former Burmese assets. These assets were destroyed on orders from the War Cabinet as the Japanese advanced through Burma. Burmah Oil values them at £31 million. The next step is the presentation of a completely detailed claim in the Scottish courts. The case is, in effect, ready to go on almost at once, since the Company has had every relevant document collected and available for a long time. Should the full £31 million be received, and in the unlikely event of its full distribution to equity holders, there would be about 6s 6d payable on each £1 share of Burmah Oil.

Murphulani Tea Cuts Dividend

THE Murphulani (Assam) Tea Co. Ltd has reduced the taxable ordinary dividend from 25 percent for 1962 to 17½ percent for the year ended December 1963. The yield amounts to 6.6 percent at the present price of Rs. 26.50 a share of Rs. 10 each. The profit has dropped from Rs. 5 lakhs to Rs. 1.90 lakhs, after providing Rs. 84,500 (against Rs. 89,936) for depreciation. Taxation is allocated Rs. 1.02 lakhs (against Rs. 3.06 lakhs), general reserve Rs. 35,000 (against Rs. 80,000) and development rebate reserve Rs. 1,000 (against Rs. 2,000). The carry-forward is Rs. 34,957, against Rs. 35,314 brought in. The crop declined from 1,714 quintals to 1,695 quintals and the average sale price amounted to Rs. 6.82 (against Rs. 8.14) a kilogram. Capital expenditure amounted to Rs. 2.04 lakhs, including expenditure on the expansion of the tea area. Planting conditions became more favourable towards the close of 1963. Estimates for 1964 have been framed for a crop of 1,800 quintals. The directors mention that given reasonable climatic conditions, the crop might be exceeded.

Bengal Flour Pays More

THE Bengal Flour Mills Co. Ltd has increased the taxable ordinary dividend from 20 percent for 1962 to 30 percent for the year ended December 1963. At the present price of Rs. 34.12 a share of Rs. 10 each, the yield amounts to 8.8 percent. The profit has improved from Rs. 10.88 lakhs for 1962 to Rs. 13.80 lakhs for 1963, after transferring Rs. 1.02 lakhs (against Rs. 1.06 lakhs) to depreciation. Taxation is allocated Rs. 8.23 lakhs (against Rs. 6.83 lakhs), development rebate reserve Rs. 17,066 (against Rs. 2,337) and general reserve Rs. 1.79 lakhs (against Rs. 2.91 lakhs). Sales rose from Rs. 2.63 crores to Rs. 2.72 crores. In spite of the restriction on the use of electric power, the output was higher than in 1962. Controls on extractions continue to be in force, and a modified permit system of distribution for products has been reintroduced.

Savamalai Estates Raises Dividend

SATISFACTORY working results for the year ended November 1963, and the prospects for a bumper crop

in the current year, have enabled the directors of the Savamalai Estates Ltd to recommend a higher dividend of 17½ percent, against 15 percent paid for the previous year. The profit for the year, before taxation, amounts to Rs. 1,93,314, against Rs. 1,23,651 for the previous year. After deducting Rs. 90,800 being provision for taxation (against Rs. 62,000), the net profit amounts to Rs. 1,02,514. With the amount of Rs. 699 brought forward, the total surplus available comes to Rs. 1,03,213. The proposed dividend of 17½ percent (against 15 percent) will absorb Rs. 96,280 (against Rs. 82,526). The balance of Rs. 6,933 is carried forward. The earnings on equity capital have increased to 35 percent from the previous year's level of 22 percent.

The coffee crop for the year amounted to 243,314 kilograms, against 206,926 kilograms. The yield from each acre has improved to 495 kilograms, against 421 kilograms in the previous year. The coffee crop for the year has been valued at Rs. 2.25 a point of which Rs. 2.20 has so far been paid. As for future prospects, the chairman says that the coffee crop for 1963-64 was originally estimated at 245 tonnes. But according to present indications, the revised estimate is put at over 300 tonnes, made up of about 86 tonnes Arabica and about 214 tonnes of Robusta. The directors have decided to embark on a scheme for the production of Robusta Parchment.

Jawahar Mills Pays the Same

THE working of the Jawahar Mills Ltd for the year ended December 1963, has resulted in a profit of Rs. 770,411 after providing Rs. 399,086 for depreciation, compared with the previous year's profit of Rs. 10,69,144, after providing Rs. 3,65,567 for depreciation. With the amount of Rs. 23,599 brought forward, the total surplus available for appropriation comes to Rs. 8,03,010. Out of this, the bonus paid for prior years amounts to Rs. 1,47,265, tax paid for prior years amounted to Rs. 63,574, and the provision for development rebate reserve amounts to Rs. 78,750 (against Rs. 10,789). Provision for taxation is Rs. 300,000 (against Rs. 5,47,000). The proposed dividend of 12 percent (the same) will absorb Rs. 203,032 (against Rs. 203,032). The balance of Rs. 3,846 is carried forward.

Sarangpur Cotton Fares Well

SARANGPUR Cotton Manufacturing Co. Ltd of Ahmedabad reports encouraging results for 1963. While sales are up by only about 5 percent from Rs. 4.60 crores to Rs. 4.83 crores, the gross profit has risen by nearly 23 percent from Rs. 72 lakhs to Rs. 88.40 lakhs. The impressive increase in the profit is attributed to the modernisation of the mills. In 1963 alone, the Company spent as much as Rs. 60 lakhs on new machinery and it intends to spend a further sum of Rs. 50 lakhs during 1964 on modernisation and renovation of the mills. Changes in the pattern and quality of production have contributed to the improved profit margin. The decision on dividend has been deferred presumably because the directors would like to await the Finance Minister's final verdict on the new taxation proposals particularly the tax on dividends. Appropriations of the profit include depreciation Rs. 32.03 lakhs (against Rs. 29.20 lakhs), development rebate reserve Rs. 9.41 lakhs (against Rs. 5.61 lakhs), development and rehabilitation reserve Rs. 3.13 lakhs (against

Rs. 1.93 lakhs), taxation Rs. 22.50 lakhs (against Rs. 22.20 lakhs) and donation Rs. 2.80 lakhs (against Rs. 1.07 lakhs). A sum of Rs. 14.89 lakhs has been transferred to general reserve, out of which the dividend for 1963 will be paid.

Ajit Mills Profit Down

IN spite of an increase of about 14 percent in the sales from Rs. 1.57 crores to Rs. 1.79 crores, the gross profit of Ajit Mills of Ahmedabad has suffered a small setback from Rs. 16.06 lakhs to Rs. 15.30 lakhs. The decision on dividend has been deferred for the time being, but the directors have set aside a sum of Rs. 3 lakhs for general reserve which will be used for the payment of dividend when declared. Allocations include Rs. 6.24 lakhs (against Rs. 6 lakhs) for depreciation, Rs. 61,212 (against Rs. 1.74 lakhs) for statutory development rebate, Rs. 20,404 (against Rs. 58,045) for development and rehabilitation reserve, Rs. 1.34 lakhs (against Rs. 88,108) for bonus, Rs. 3 lakhs (against Rs. 5.13 lakhs) for taxation, Rs. 18,500 (against Rs. 39,359) for donation and Rs. 3 lakhs (against nil) for general reserve.

Vasanta Mills Pays the Same

VASANTA Mills Ltd has fared badly during 1963, although the dividend has been maintained at 20 percent. In spite of an increase of nearly 15 percent in the sales from Rs. 1.91 crores to Rs. 2.19 crores, the gross profit has fallen by about 20 percent from Rs. 20.34 lakhs to Rs. 16.27 lakhs. The profit margin has been badly squeezed by the sharp increase in production costs. The Company was also obliged to stop production for 15 days due to the power cut. Appropriations of the year's profit include depreciation Rs. 6.50 lakhs (against Rs. 6.62 lakhs), development rebate Rs. 53,000 (against Rs. 1 lakh) and taxation Rs. 4.35 lakhs (against Rs. 6.60 lakhs). No provision has been made for general reserve which had received Rs. 87,742 in the previous year. Instead, the directors have had to withdraw Rs. 63,971 from the dividend equalisation reserve to meet the shortfall in the amount required for dividend distribution. Preference dividend takes up Rs. 33,303 and equity dividend absorbs Rs. 4.20 lakhs. The Company has taken steps to increase the spinning capacity of the mills by the addition of high-speed drawing frames. One such drawing frame has already been commissioned and orders for two more have been placed.

Kumergode Estates Earns More

ARISE in coffee crops and improved profits feature the working results of Kumergode Estate Ltd for the year ended October 1963. The directors have recommended a dividend of 14 percent on the increased capital (against 15 percent on the old capital). The net pre-tax profit for the year amounts to Rs. 2,60,185, against Rs. 1,15,533 for the previous year. Out of this, the provision for taxation comes to Rs. 1,23,000 (against Rs. 39,000). This leaves a net profit of Rs. 1,37,185 (against Rs. 76,533). With the amount of Rs. 12,870 brought forward, the total available for appropriation comes to Rs. 1,50,055. Out of this, a sum of Rs. 46,000 is transferred to general reserve (against Rs.

10,000). The proposed dividend of 14 percent will absorb Rs. 84,000 (against Rs. 60,000). The balance of Rs. 26,055 is carried forward.

The coffee crop for the year amounted to 198,168 tonnes, against 129,778 tonnes in the previous year. The all-in-cost amounted to Rs. 1,756, against Rs. 1,510 a hectare. The coffee crop has been valued at Rs. 2.25 a point. The 1961-62 season's crop has been revalued at Rs. 2.26 a point being the final figure declared by the Coffee Board for that season. The estimated crop for 1963-64 is put at 140 tonnes. During the year, a sum of Rs. 200,000 was capitalised from the general reserve for the issue of bonus shares. The general reserve now stands at Rs. 2,40,000, including Rs. 40,000 transferred from this year's account. The paid-up capital is Rs. 600,000 (against Rs. 400,000).

Indian Link Chain Pays Maiden Dividend

INDIAN Link Chain Manufacturers Ltd has declared a maiden dividend of 6 percent for 1963. A part of the dividend is said to be tax-free. The preliminary report on the working of the Company shows a fair improvement over the previous year's performance. Sales have gone up by about 24 percent from Rs. 9.25 lakhs to Rs. 11.48 lakhs, and the gross profit has risen by as much as 80 percent from Rs. 1.41 lakhs to Rs. 2.60 lakhs. After providing Rs. 78,299 (against Rs. 56,028) for depreciation, the net profit amounts to Rs. 1.82 lakhs, against Rs. 84,837.

The Company has adopted the straight line method for calculating depreciation which leaves a credit of Rs. 7.07 lakhs to be added to the net profit and the disposable surplus amounts to Rs. 2.88 lakhs. After setting aside a sum of Rs. 27,934 for writing off capital issue expenses and offsetting the loss of Rs. 42,050 brought forward, there remains a balance of Rs. 2.18 lakhs. From this, the directors have provided Rs. 1.02 lakhs for statutory development rebate and Rs. 60,000 for general reserve. The proposed dividend absorbs Rs. 51,000, leaving a surplus of Rs. 6,332 to be carried forward. The directors expect better working results during the current year. The Rs. 100-paid share of the Company is currently quoted around Rs. 98.

Union Bank Earns More

THE preliminary report on the working of the Union Bank of India Ltd for 1963 showed that the bank had fared much better than in the previous year, with its gross revenue up by 20 percent from Rs. 2.24 crores to Rs. 2.71 crores, and the disclosed net profit rose by 25 percent from Rs. 14.41 lakhs to Rs. 18.08 lakhs. Although the dividend has only been maintained at 5½p a share, it involves the distribution of a substantially larger sum of Rs. 11.40 lakhs, against Rs. 7.96 lakhs as the new shares were entitled to a full year's dividend. According to the directors' full report, the deposits recorded an impressive rise of about 21 percent from Rs. 42.62 crores to Rs. 52.04 crores. Advances rose by as much as 34 percent from Rs. 23.23 crores to Rs. 31.12 crores. Of the Rs. 9.42-crore rise in deposits, fixed deposits and cash certificates alone accounted for Rs. 4.22 crores. Current accounts, contingency account, etcetera, increased by Rs. 4 crores to Rs. 23.60 crores.

The bank's investments rose from Rs. 10.51 crores to Rs. 13.54 crores. The ratio of advances to deposits improved from 54.5 percent to 59.8 per-

cent. The investment-deposit ratio moved up from 24.7 percent to 28 percent. Income from interest and discount increased from Rs. 1.64 crores to Rs. 2.04 crores and that from commission, exchange and brokerage from Rs. 48.9 lakhs to Rs. 56.64 lakhs. On the expenditure side, interest paid on deposits and borrowings registered a substantial rise from Rs. 76.15 lakhs to Rs. 37.09 lakhs.

Growth of Mahindra and Mahindra

MAHINDRA and Mahindra is a big name today. How from a humble beginning, 18 years ago, the Company has come to achieve its present giant stature is the theme of its new chairman, Mr. Keshub Mahindra's speech at the 18th annual meeting of the Company, held last week in Bombay. (A full version of the chairman's speech appears on a later page of this week's Capital.) The growth has indeed been remarkable. In collaboration with several reputed firms in the U.S.A., the U.K., France and Germany, Mahindra is producing a wide range of products—carding engines, jeeps, trailers, sintered products, air-cooled diesel engines, water meters and instruments. It continues to extend its activities to new lines of manufacture, and recently it has undertaken the manufacture of synthetic resins, enamels and varnishes, elevators, tractors and alloy steel.

The Company did well during the year ended October 1963, with its turnover up by about 15 percent at Rs. 15.92 crores and gross profit higher by about 20 percent at Rs. 1.19 crores. The prospects for the current year seem even more promising. The chairman says that the Company's operations in all divisions have been satisfactory during the first five months of the current year. Production of jeep vehicles averaged 900 vehicles a month and deliveries have kept pace with this output. The steel division has maintained its rate of booking and the machine tool division anticipates a considerable volume of business. The chairman says that practically every unit in the group is in the process of expansion and the management has set its sights on more ambitious targets in the future.

Good Outlook For Kamani Engineering

KAMANI Engineering Corporation showed encouraging results for the year ended September 1963, with both sales and gross profit setting new records at Rs. 5.13 crores and Rs. 41.84 lakhs, respectively. The chairman, Mr. R. H. Kamani's speech at the shareholders' annual meeting holds out the promise of still better results during the current year and in the years ahead. (A text of the chairman's address appears on a later page of this week's Capital.) The Company is going ahead with its various expansion plans and it is making satisfactory progress on the export front. The current year's progress so far is said to be better than in the previous year. The new tax proposals are considered to be favourable for the Company which falls in the key industries list. The Company would benefit from the 10 percent relief in income and super taxes, 20 percent relief in surtax and 50 percent additional depreciation on plant and equipment working third shift.

Mr. Kamani expected the demand for transmission line towers to record a tremendous increase following the anticipated rapid increase in generating capacity of electric power. The Company has already completed five

major transmission lines totalling about 600 miles in five States—Gujarat, Orissa, West Bengal, Andhra Pradesh and Mysore. Construction of transmission lines continues to be in full swing all over the country. Orders for about 2,000 kilometres are on hand. In order to meet the increasing demand for transmission line towers as also to retain the foothold in export market, the Company has undertaken expansion of its manufacturing capacity by 30,000 tons more than the existing capacity. The Government has already cleared the Company's application for the import of necessary machinery and plant of the value of Rs. 45 lakhs. Mr. Kamani assured the shareholders that the expansion programme will involve no reduction in the amount to be distributed as dividend and that it will be to the best advantage of the Company.

Once production starts, the profits would proportionately increase. The Company has undertaken a programme of increased production of the improved model of "Tractamount" road rollers and it is proposed to add some new items of implements to this line of manufacture. The chairman added that having completed the first contract for railway electrification in eastern zone, the Company has participated in tenders for similar work in other zones and it is hopeful of securing substantial business. The Company is making steady progress in its export business. The order from the Nigerian Government for 132 kV transmission line towers is under execution. Two large orders valued at Rs. 28 lakhs have been secured from the National Power Corporation, Manila, in face of keen competition. These orders are likely to be completed this year and the Company would then have earned about Rs. 88 from exports.

Referring to the various difficulties experienced by the Company in the execution of export orders, the chairman pointed out that it was a difficult and unattractive proposition as timely delivery of matching sections, shipping space at reasonable rates, pre-financing facilities, etcetera, were not available. In order that quick delivery and longer credits demanded by foreign indentors be met, Mr. Kamani suggested that higher priority be given to steel for export orders and concessional prices should be charged, as was being done all over the world. He urged the Government to consider these suggestions seriously with a view to promoting exports. The chairman added that the Company has, in collaboration with a German firm, secured a contract from the Indian Iron and Steel Company for the installation of a ropeway with a haulage capacity of 450 tonnes an hour. The project is expected to be completed by the end of 1966.

Dismal Outlook For Shivrajpur

SHAREHOLDERS of Shivrajpur Syndicate have gone without a dividend for three years, and there seems no hope of the Company being able to pay a dividend in the near future. The Company's performance during the year ended November 1963 was bad enough and prospects for the current year are worse. The chairman, Mr. A. N. Haksar, told the shareholders' annual meeting in Bombay recently, that the current production at the Company's mines is almost entirely from opencast working, which will have to be discontinued during the monsoon. Any substantial production in future will have to be from underground operations, costs of which are found to be considerably higher than the prevailing market prices. There seems little chance of obtaining higher prices for

CAPITAL, 30th April, 1964.

Shivrajpur ores, because of their comparatively high phosphorous impurity.

Mr. Haksar said that the recent revival of overseas interest in Indian ores and the small improvement in overseas prices were likely to prove a temporary phase. Exports of Indian manganese ore have over the years, been showing a steady decline both in terms of tonnage and prices. Shivrajpur, therefore, has been obliged to take up a phased programme of reducing the Company's mining operations. The management is exploring the possibility of alternative activities for the Company and it has offered to collaborate with Gujarat Mineral Development Corporation in the exploitation of the newly discovered deposits of fluorite mineral.

The Company has curtailed mining operations in recent years and has disposed of surplus plant, machinery and stores, etcetera. It sold such surplus assets to the tune of Rs. 7.7 lakhs in 1963. The Company has been able to reduce the accumulated stock of 87,500 tons of ore to 41,000 tons and even this quantity is expected to be disposed of during the current year as it is already covered by sale contracts. Referring to a plea made by some shareholders for declaring an interim dividend, Mr. Haksar said that it would be inadvisable to pay a dividend when the Company was incurring losses. The total loss carried forward to the current year's balance-sheet is of the order of Rs. 23.64 lakhs.

New Capital Issues

FOUR companies have been authorised to raise fresh capital of Rs. 6.50 crores. Of these, three are issuing equities and the fourth is floating debentures. One is offering part of its equity capital for public subscription. The new issues include a Central Government undertaking. The consent of the Controller of Capital Issues is valid for 12 months. The following are the details:

Birla Jute Manufacturing Company Ltd. Calcutta, is to issue debentures of Rs. 2 crores in denominations of Rs. 1,000 each carrying interest not exceeding 7½ percent a year. The capital will be utilised for part financing in setting up a cement plant in Chitragarh and oxygen and acetylene plants in Birlapur, West Bengal.

Insulator Manufacturers Ltd. Calcutta, will be issuing Rs. 1 crore in 1,000,000 equity shares of Rs. 10 each for cash at par; 51 percent of the capital will be subscribed privately and 49 percent will be offered to the public. The money will be used in the manufacture of H.T. and L.T. insulators.

Heavy Electricals (India) Ltd. Bhopal, a Central Government undertaking, is to issue further capital of Rs. 3 crores, divided into 30,000 equity shares of Rs. 1,000 each for cash at par. The capital will be utilised for civil engineering works including transport vehicles, purchase of plant and machinery, training of engineers, etcetera.

Nirlon Synthetic Fibres and Chemicals Ltd. Bombay, is to issue Rs. 50 lakhs capital in equity shares of Rs. 100 each and to be subscribed entirely privately for cash at par. This consent is in supersession of previous consent dated 26th September, 1962, for issue of Rs. 1.06 crores equity capital. The capital will be used partly for reimbursing the outlay on existing nylon plant and the balance for purchase of land and initial expenditure for the expansion project.

CAPITAL, 30th April, 1964.

The Stock Markets

SMART RECOVERY IN CLEARING SHARES

Wednesday Evening.

THERE has been a smart recovery in clearing shares in the Calcutta stock market during the past week. The earlier nervousness following the disappointment over the Budget changes has waned. The technical position of the market has improved as a result of the shake-out. The steadiness towards the close is inspired by two factors. First, there has been a great deal of short-covering since buyers think that the adverse effects of the Budget have been almost discounted. There has also been a fair amount of replacement buying at the lower levels, but bulls have on the whole preferred to proceed warily. Because of the substantial losses they have incurred since the Budget, they have taken a cautious view of the outlook.

Turnover has centred on clearing shares. Interest in cash scrip has been poor, although their prices have improved towards the close in sympathy. There has, nevertheless, been little selling in cash shares since most investors do not think it worth their while to cut their losses now. It is also thought that blue chips may be in short supply in the near future, considering that the Life Insurance Corporation and the Unit Trust continue to pick them up.

Anyway, the near-term outlook needs to be assessed cautiously. Maybe, share prices are unlikely to fall much further. At the same time, the outlook for equities has suffered greatly due to the last Budget proposals. It is true that most of the leading companies have shown an improvement in sales, but their profits have not risen in proportion due to rising production costs and heavier taxation. This apart, companies will henceforth be restrained from increasing their distribution due to the levy of a tax of 7½ percent on all dividends declared on ordinary shares. In the circumstances, investors may be well-advised not to sell their shares in a hurry; they should also be discriminating in their purchases.

Indian Iron have recovered in response to short-covering, combined with replacement buying. In view of the prospect of a higher profit for 1963-64, investors have been chary of selling their holdings at the current low levels. Selected engineering shares like Guest, Keen, Williams, Burn, Jessop, Texmaco and Braithwaite have gained. In the miscellaneous section, activity has been confined to clearing shares. Hindustan Motors, Indian Aluminium, Dunlop Rubber, Rohtas and Kesoram Industries have improved towards the close. Scattered support has been forthcoming for Alkali Chemical, British Paints, Associated Battery, Philips India and Goodyear at present levels. Hindustan Aluminium have improved on short-covering. India Steamship have been weak on a predominance of sellers.

Managing agency shares have weakened due to the decision of the Government not to allow these companies to issue bonus shares. Jardine Henderson and Martin Burn have lost. Small business in Calcutta Electric has been done among electric companies. In the paper section, Orient have been active and have improved on short-covering. India Paper Pulp, Seshasayee and Titagur have gained fractionally.

Sugar shares have been subdued due to the predominance of sellers.

The investors have been disturbed by the decision of the Government to set up a Sugar Marketing Board. The implication is that the Government is determined to continue controls on sugar indefinitely. It is, therefore, feared that the price of the commodity will continue to be pegged down to a level which may not prove remunerative enough for many factories. Mills with outdated plant and equipment are likely to suffer the most.

In jute shares, Kamarhaty and Kankarnarrah have met with support due to the payment of good dividends. Birla, Champdany, Kinnison, Anglo-India and Barnagore have also gained fractionally. Coal shares have been subdued and their prices have declined on balance. There are few buyers because the outlook for the industry has suffered greatly due to the Government's move to restrict the production of coking coal. The move has unnerved many coal companies since they have already borrowed considerable funds to invest in expansion in the belief that the Government will encourage bigger raisings. Burrakur, Bengal and Central India have been quiet.

In cotton mills, Jay Shree Textiles and Bharat Commerce have been steady on good reports. J. K. Rayon have recovered on short-covering. Scattered business in selected Assam and Dooars tea gardens has been transacted, but prices have fluctuated narrowly. Government securities have been steady and the prices of short-dated securities have risen appreciably due to strong support, especially from banks. Small business has been done in medium-dated loans, but long-dated stock have been neglected. The 3 percent Conversion Loan 1986 has been quoted at about Rs. 63.60.

Bombay

GOOD RISE IN STEEL SHARES CORPORATE NEWS HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market has improved during the past week. Prices of selected clearing shares like Century, National Rayon, Tata Steel and Tata Engineering have recovered appreciably towards the close due to brisk short-covering. There has also been sustained bull support at lower levels. Operators seem to have overcome the earlier disappointment over the Budget modifications. Dalal Street is inclined to think that the worst is over and a further decline in prices is unlikely.

The modifications made by the Central Finance Minister, Mr. T. T. Krishnamachari, in the surtax on profits, albeit small, have helped to bring about steadiness. Good corporate news has, meanwhile, contributed to an optimistic assessment of the future outlook. Smaller carry-forward charges at the past settlement have been bullishly interpreted since they indicate an improved technical position. Bears have rushed in to cover their open positions lest prices should rise further. Purchases of ordinary shares by the Life Insurance Corpo-

ration and the Unit Trust have helped to relieve the burden of floating stocks.

Tata Steel ordinary have smartly recovered to Rs. 149. Indian Iron have been marked up in sympathy with Tata Steel. Operators have been impressed by the higher output of the two Companies during 1963-64. Tata Engineering and Premier Construction have been bought in the engineering section. Short-covering has helped to improve Hindustan Motors in motor-vehicle shares. Premier Automobiles have, nevertheless, been sluggish.

Selected cotton mill shares have gained due to short-covering, combined with replacement purchases. The move by the industry to persuade the Government to decontrol the prices of cloth, except those of standard grades, has helped to improve sentiment. Century have enjoyed considerable support. Bombay Dyeing, Kohinoor, Svadeshi, Gokak and Standard have gained. India United ordinary, Morarjee and Simplex have been marked higher.

Although turnover in miscellaneous shares has been restrained, prices have, on the whole, risen in sympathy with the general trend. Among cement shares, Associated Cement have been taken. Selected sugar shares like Belapur, Walchandnagar Industries and Phalton have improved. In steamship companies, Scindia Steam have been a smart feature and have gained considerably due to brisk short-covering. Mining

shares have nevertheless been sub-
duded, and Shivrajpur Syndicate have
been offered freely without attract-
ing buyers. Chemical shares have
been steady, and support has been
extended to Tata Chemical and
Polychem.

National Rayon have been a strong
feature in rayon shares and the scrip
has attracted a margin on purchases
because the price has risen by 10 per-
cent since the last clearing. The
chairman of the Company has taken
an optimistic view of the future out-
look. The rayon cord and caustic
soda plants of the Company are ex-
pected to do much better during the
current year. Investors will be re-
warded by the gift of an ordinary
rights issue at par, in the proportion
of one new share for every 10 held.
Volitas and Tata Oil have been quoted
at higher levels. Scattered business
has been done in Central Bank and
Bank of Baroda. Among electric
companies, Ahmedabad Tata Hydro
have changed hands.

Madras

CALCUTTA ADVICES HELP MARKET SELECTIVE SUPPORT FOR PLANTINGS

Tuesday Evening.

THE Madras stock market has im-
proved towards the close of the
past week due to higher advices from
Calcutta and Bombay. Although
turnover has been limited, sentiment
has improved since the earlier
nervousness has almost vanished.
Business has largely been confined to
selected clearing and planting shares.
Investors have, nevertheless, prefer-
red to proceed cautiously in view of

the possibility of power cuts. Interest
has been shown in high-yielding pre-
ference shares, but business has been
restricted by the shortage of sellers.

Small business has been transacted
in selected State Government loans.
In banks, Indian Overseas have
changed hands at Rs. 137.50 and Syn-
dicate Bank have been taken up at
Rs. 140.50. In electric companies,
scattered support has been extended
to West Coast at Rs. 13.50 and to
Salem-Erode at Rs. 14.37. Sugar
shares have lacked interest. Deccan
have been quoted at Rs. 11.75 and
E.I.D. at Rs. 35.35. Kothari have
been weak at Rs. 6.90 and Madura
at Rs. 9.44. K.C.P. have nevertheless
been maintained at Rs. 24 and
Andhra at Rs. 14.75.

Among planting shares, Blue Moun-
tain have met with support at Rs. 2.43
and Madura at Rs. 6.40. Consoli-
dated Coffee have been steady at
Rs. 21.65 and Ouchterlony at Rs. 4.08.
Business has been done in Perika-
ramalai up to Rs. 3.43. Highlands
have been transacted at Rs. 15.60 due
to the payment of a taxable ordinary
dividend of 15 percent. Lucky Valley
have changed hands at Rs. 12.50 on
declaring a taxable ordinary dividend
of 10 percent. Nonsuch have met
with support up to Rs. 23 on paying
an interim taxable ordinary divi-
dend of 10 percent. T.R. and Tea
have come to hand at Rs. 9.90 on de-
claring a taxable ordinary dividend
of 8 percent. In coffee shares,
Anapalai have been steady at Rs. 3.
Mysore at Rs. 4.35 and Ossoor at
Rs. 2.58. Among rubber companies,
Athimattam have been quoted at
Rs. 1.20 since the Company intends to
sell the remaining portion of the
Little Flower Estate.

In textile shares, South India Vis-
cose have recovered to Rs. 123.50 and
Travancore Rayon to Rs. 22.75.
Lakshmi have been taken at Rs. 133.50
and Madura at Rs. 33.40. Rajalakshmi

have changed hands at Rs. 91 on de-
claring a taxable ordinary dividend
of 15 percent. Ramnarayan have
been quoted at Rs. 93 on the decision
to issue rights ordinary shares for
Rs. 10 lakhs. Virudhunagar have
been taken at Rs. 50.90 on paying a
taxable ordinary dividend of 6 per-
cent. Business has been done in
Buckingham at Rs. 285 and in
Bangalore Woollen at Rs. 258.

In miscellaneous shares, Aluminium
Industries have improved to Rs. 20.90
and Ashok Leyland to Rs. 7. In
cement shares, Dalmia have been
quoted up to Rs. 13.10 and India
Cement at Rs. 5.68. Mettur Chemical
have been steady at Rs. 13.30. South-
ern Structural have been bought at
Rs. 11 on declaring a taxable ordi-
nary dividend of 9 percent. Seshas-
ayee Paper have met with support up
to Rs. 7.55 and Standard Motors have
been taken at Rs. 10.12. A. V. Thomas
(Alleppey) have been done at Rs.
10.47 on declaring a taxable ordinary
dividend of 12½ percent. Parry's
Confectionery have changed hands at
Rs. 3.14 and Spencer at Rs. 23.77.
Kirkoskar Electric have been sluggish
at Rs. 18.40 and Madras Rubber have
been quiet at Rs. 13.25.

London

GOOD CORPORATE NEWS BOOSTS SENTIMENT RISE IN COURTAULDS AND I.C.I. SHARES

London, 29th April.

ACTIVE conditions continued in
the stock market over the past
week, and business was on a good
scale, although of a two-way charac-
ter. Once again sentiment was
largely influenced by company news
and the flood of statements, many of
which were highly encouraging. The
chief item of interest was the joint
statement from I.C.I. and Courtaulds
which confirmed that the jointly-
owned British Nylon Spinners would
pass to I.C.I. and the Courtaulds
shares held by I.C.I. would be ex-
changed. Courtaulds, which had
been moving up in recent weeks
moved rapidly ahead after the an-
nouncement, but after touching 90s
there was a reaction on profit-taking.
The advance in I.C.I. was less pro-
nounced. Rank organisation were a
good market, although the best level
was not held. Bowaters, Rolls Royce
and many other leaders made good
headway. E.M.I. advanced sharply
following the surprise free scrip issue,
and dividend and profit forecast.
Fixed interest stocks were out of the
picture, and prices were little
changed. Canadian dollar stocks re-
flected the boom in the Canadian
market, but as conditions became
more sober there, and with Wall
Street turning downwards, prices re-
acted somewhat. Gold shares were
uninteresting and Coppers moved
erratically. Platinums lost much of
their recent glamour.

CAPITAL

Founded in 1888, is India's oldest and most widely read
financial newspaper. It gives its readers in all parts of the world
the most up-to-date service in Indian economic intelligence and
information of any newspaper in the daily or weekly field, and
includes a complete list of all shares and securities dealt in on
the Calcutta Stock Exchange together with full details of latest
balance sheets.

Published every Thursday.

Advertising rates on application.

Orders and enquiries may be sent to:

DOING PUBLIC RELATIONS FOR BANKS

(BY A SPECIAL CORRESPONDENT)

Banks are essentially trading institutions, which must establish good relations with the public while conducting their activities. The traditional aloofness of Indian banks has created wrong notions about the nature of their business. The author explains why public relations work has become urgent now, and spells out the duties of a public relations officer in a bank.

IN the public mind, banking was long thought of as some mysterious operation conducted in secrecy. People who work in banks, however, know that this impression is not correct. But banks have some responsibility for this. Only in the last two or three years have some banks been trying to correct wrong impressions through advertisements. Another important step taken by several banks, including the State Bank, is to appoint public relations officers at their head offices. It is, however, surprising that the Reserve Bank has not yet thought it necessary to ap-

point a professional public relations officer. The image of the Bank, consequently, is distorted, in the public mind. It is difficult to obtain even intelligent factual briefing—except from the Governor who is often too busy—about any matter pertaining to the Reserve Bank's activities. It is high time this deficiency was removed.

Unfortunately, wrong ideas seem to prevail as to what should constitute the activities of a public relations officer in a bank. In some banks, a public relations officer is reduced to

the position of a "ringmaster" for official entertainment, and a glorified caretaker—he is asked to book rail and air tickets and look after the motor-cars of the institution.

Before an attempt is made to define the proper duties of a public relations officer, it may be useful to discuss what public relations in general is.

Trading Institutions

Banks, like any other servicing institution, are essentially trading institutions. They "trade" in money,

CAPITAL, 30th April, 1964.

while other trading bodies deal in goods and services. Nothing can be sold in any trade if the owner has not established some sort of relations with the public. It is not enough merely to have something to sell. One must make it known that it is for sale and let the public be conscious of it. Advertising is one of the forms that public relations can take. A public relations officer should be able to provide information on his institution's activities and help develop a sense of "togetherness" in the customer's mind.

A customer expects personalised service from a bank; banking consists of giving advice as well as transacting business. The business transacted is often of such a personal nature that its success depends on the human relations between the officers of the bank and its customers. Such relations are established at the point of "purchase and sale" which in the case of banks mean deposits, advances and other services. This aspect of the work is so important that it may be said to be the important feature which distinguishes one bank from another. The physical products of banks are indistinguishable from one another. It is in the manner in which the services are offered that they attain individuality.

Public relations in a bank may be considered under two broad heads: premises and people. It has been realised that banks should create an atmosphere of welcome and friendliness, and not necessarily one of safety and gloominess. This change in the attitude is reflected in the exterior and interior design of many bank premises in the private sector. Even the State Bank seems to be embarking on an extensive face-lifting programme.

Every Official a P.R.O.

More important than the premises are persons. The first reaction of an average depositor, on being asked about his impression of his bank, is to think of the person with whom he usually deals. Every bank official who comes into contact with the public is a P.R.O. for his bank. While this is a general statement, a particularly important point is what the job of a public relations officer at the head office should be. He is the link between the bank "as a whole" and the public "as a whole." He should be well-informed on subjects of mutual interest to the bank and the customers. It is the business of the P.R.O. to discover the policy of the bank and to interpret it in terms of public relations. He should be able to assess public reactions to any project and to recommend what steps should be taken to modify those reactions.

It may be useful to give a brief outline of what the public relations officer has to do. His first task is to answer enquiries from the Press and the public. He should be as informative as he can without being evasive. A part of the P.R.O.'s day is spent in meeting people. He sees in his own office the seller of advertising space or new publicity developments. Much of his work is deliberately created. This includes advertising and Press relations. All the banks employ one or several advertising agents. In India, it is the media agencies which guide public relations departments in the specialised tasks of lay-out, sale of advertisement space, art-work and preparation of brochures to highlight banks' activities. A proper public relations officer should have the final say in matters concerning the public.

Special Urgency

Public relations has assumed special urgency in view of the misconception prevailing in public mind about the banks in the private sector. No attempt has been made so far to educate

CAPITAL, 30th April, 1964.

public opinion about the useful service they have been rendering. It is only recently that the Indian Banks Association woke up to this need in view of the nationalisation threat. If the services of professional public relations men in banks are used in the right direction, it may not be so difficult to change the public image of banks.

THE CALCUTTA MONEY MARKET

SMALL DECREASE IN ADVANCES

Wednesday, 29th April.

THERE has been a small decrease in the aggregate level of advances in the Calcutta money market during the past week. The requirements of the jute industry are down, and so are those of the sugar mills and the iron, steel and engineering units. The credit given to the cotton mills, and to the foodgrains and seeds trade, is unchanged. In the interbank market, conditions were easier at the start, and the call rate dropped to 5 percent, but it has firmed up again to 5½ percent towards the close.

The exchange market has been fairly active, with a moderate supply of gunny and tea bills. The demand for remittances is fair. In the London market, sterling is firmer in relation to most of the major currencies, except the Swiss and the Swedish.

SILVER WAS STEADY IN CALCUTTA during the past week. The price rose from the previous week's level of Rs. 260.25 to Rs. 263.75, quoted today. The London and New York prices stood at 113½d and 129.3 cents.

In sympathy with the rise in silver gold was also steady and the price of 14-carat improved from Rs. 67.50 to Rs. 68.50.

DURING THE WEEK ENDED 24TH APRIL, Government of India Treasury bills for Rs. 48,92,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 28th April. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 4th May.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 29th April to 2nd May at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 22nd April to 25th April amounted to Rs. 40 lakhs.

DECLINES OF RS. 9.78 CRORES TO Rs. 2,554.54 crores in the total note issue and of Rs. 9.07 crores to Rs. 2,536.27 crores in active notes were important features of the return of the Reserve Bank of India for the week ended 24th April, 1964. The currency contraction was adjusted by reducing rupee securities of the paper currency reserve by Rs. 9.73 crores to Rs. 2,222.47 crores. In the Banking Department deposits of the Government of India rose by Rs. 55

lakhs to Rs. 52.72 crores and those of State Governments by Rs. 3.77 crores to Rs. 13.53 crores. Balances of scheduled banks at Rs. 83.43 crores showed a rise of Rs. 1.29 crores. Balances held abroad dropped by Rs. 4.22 crores to Rs. 7.97 crores. Investments at Rs. 154.12 crores showed an increase of Rs. 49.42 crores. Loans to scheduled banks declined from Rs. 66.16 crores to Rs. 45.02 crores of which advances against usance bills amounted to Rs. 20.39 crores (Rs. 25.82 crores). Ways and means advances stood at Rs. 83.08 crores, against Rs. 84.85 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 17th April, 1964, shows a drop of Rs. 6.29 crores to Rs. 620.03 crores in total deposits. Investments in Government securities are up by Rs. 2.01 crores to Rs. 232.60 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 2.10 crores to Rs. 380.44 crores. Cash and balances are, in consequence, shown at Rs. 23.90 crores or Rs. 2.78 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 17th April, 1964, shows Demand and Time liabilities at Rs. 1,242.41 crores (Rs. 33.11 crores on account of borrowings from banks) and Rs. 1,284.11 crores (Rs. 12.81 crores), compared with Rs. 1,243.98 crores (Rs. 31.57 crores) and Rs. 1,277.87 crores (Rs. 12.38 crores) in the previous week. Cash has risen by Rs. 56 lakhs to Rs. 60.16 crores, while balances with the Reserve Bank have declined by Rs. 2.71 crores to Rs. 82.13 crores. There is a rise of Rs. 1.10 crores in Rs. 624.75 crores in investments. Advances and bills discounted at Rs. 1,860.09 crores show an increase of Rs. 3.19 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.6 percent and 73.4 percent, against 5.7 percent and 73.6 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 1-5-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
1-5-64	4-8-64	2,00.00	Rs. 3.000%

HINDUSTAN LEVER LIMITED

CHAIRMAN, MR. P. L. TANDON

REVIEWS PROGRESS

The following is the speech delivered by Mr. P. L. Tandon, Chairman, at the Annual General Meeting of Hindustan Lever Limited, held at Bombay on Tuesday, 28th April 1964.

Even more than capital and raw materials has a rapidly developing economy to think of its resources of management. For ultimately how well the economy grows will depend upon the calibre of its managers and their attitudes. We, in India, have been fortunate in this respect. Growth of trained management has been rapid and much attention has been paid to this need, and how big is the problem may well be judged from a simple calculation. Out of two million jobs estimated to be created in each year of the Third Plan, even at a ratio of 2 per cent of them being managers we shall need to train 40,000 new managers every year. This is indeed no small task, more so when it is considered that a manager not only must possess a basic discipline such as engineering, accountancy or marketing but to be really effective also receive training in how to be a manager: we have to develop in him besides his function the skills and attitudes of management.

We have always been conscious of this task, and how we view it and what we do about it is the subject of my speech today, as I feel you may be interested in knowing something about this most important aspect of our Company.

Although founded by the genius of one man, our parent company has always been professionally managed. This has been a strong tradition with us and one we have valued in Hindustan Lever. We have always bestowed a lot of care on the proper selection, training, development and promotion of men and women; we have looked ahead at our needs, foreseeable and unforeseeable, and tried to provide for them before they arise. Nearly twenty years ago, as an instance, we appreciated the need for Indianising our management, and the process was handled with care but with boldness till it ceased to need any further impetus some years ago. Over twenty years ago we began our Management Trainee selection scheme, which over the years has with attention and assimilation of new techniques improved until today it stands high by international standards. Opportunity for men from the general staff to rise to management has been another of our conscious efforts.

We have today 341 managers, of whom 178 or 52 per cent have risen from the ranks; a total of 11 or 3.2 per cent are expatriates; our selection and training department in 1963 recruited 26 managers and put through training courses 25 managers as well as 17 non-management staff; 5 from the staff were promoted to management. Our management strength forms 5.2 per cent of our total employees. Although essentially a manufacturing and marketing company, we have 27 women managers, who interestingly possess a diversity of specialised skills like psychology, operational statistics, scientific research, accountancy and home economics.

Management development with us is a complex of activities whose purpose, simply stated, is to ensure three things. First, to anticipate our requirements over the next five to ten years; second, to select, recruit and train men and women to fill those requirements; third, to develop attitudes and values in individuals that prepare them to meet their responsibilities at the standards we

consider desirable. All this, ultimately, like capital expenditure, budgeting, annual estimates and operational plans, is the responsibility of the Board, assisted by the active participation of all our managers and operated by the Personnel Department, which has a member on the Board.

Management Forecasting

It takes time to make managers, especially to befit them for higher responsibilities; but we do not believe in age as a determining or even a particularly important factor, in fact it seldom enters our calculations. It is our experience that it takes about ten years to prepare a young manager to take over senior responsibility. If he has the ability and responds to development, with the opportunities that are constantly opening up in a growing and decentralised concern like ours, we would in fact be disappointed were he not able to receive his first shot of a senior independent charge in his early thirties. For all this much forward planning is necessary, especially where the future winners are concerned, for they have to be picked, groomed and trained for twenty years or more. And we may lose some in the process.

The instrument of forecasting is the Management Review which is prepared every year for the next five years. It is much like the Cash Forecast. It evaluates in terms of managers the needs of our business which will arise out of expansion, new projects, new products and organisational changes. This need is then equated with our internal resources, what will be generated by way of promotions from the staff to management, the losses that are likely to occur through retirements and losses through anticipated and unexpected separations. The exercise ultimately throws up our net requirement, which in a growing country and an expanding business must happily be always on the plus side.

The advantages of this exercise are three. In analysing our needs we make sure that they are genuine and not Parkinsonian; and in quantifying them we know when they are likely to arise and how we will meet them. Otherwise it can easily become a case of people retiring or new vacancies arising without their having been provided for well in advance. We begin thinking of the replacement of retiring men some years ahead of the event. Men are nominated and tried, more so for senior positions. Planned transfers and cross-postings are also a part of development, often into functions different from their original skill or training. The third and important advantage is that the promotion potential within the firm gets carefully looked at. As it is the first priority to promote from within, each department in stating its needs will carefully consider how it can meet them from its own resources.

The Management Review is normally brought up to date every year, but sometimes circumstances may need an ad hoc study. Its preparation and follow-up, like the Cash Flow, keep our management resources under constant study.

Selection and Recruitment

The five-year plan is reduced to an annual operating plan of recruitment and the Board is kept in touch with its progress. Every quarter a statement of the total strength of the Company is prepared showing staff in each category, retirements, separations, promotions and recruitment, and this is examined by each department, its director and finally by the Board.

From where do we get our managers? First, always, we look within. Who is ready to be made a manager and who is ready to move up? The process of following initial selection of staff with a good original record, observation, training and grooming should ensure a regular flow from within and a ladder for the men and women with the right qualities to climb to the higher levels.

Secondly, we recruit young trainees, fresh from the Universities with good degrees in humanities or sciences for the general side, in engineering and technology for production, qualified accountants for finance and audit. Experience may help, but we primarily look for a good mind and a likely ability to possess and develop the set of attitudes that we consider important for our business. These may be called "management-like qualities"; not easy to define but meaningful when they are three, and the cause of management failure when they are missing.

We resort to direct recruitment when it is necessary. In actual practice this is mostly confined to specialists as in our agricultural operations, animal feeding-stuffs, research, economics, statistics, engineering, medical and legal fields where we do not have specialist resources within the Company. But sometimes even in non-specialist jobs if we have not got a suitable qualified person, rather than lower the standard we will go outside.

Despite all the care we take in selecting, 20 per cent of our trainees do not make the grade. This may sound a high proportion and is costly, but one we would not like to see reduced through a sacrifice in our standards or through over-caution. These are young men who are basically able and well qualified but have either not taken to business or have not developed the attitudes we need. The answer perhaps lies in a keener follow-up on our part; to carefully isolate these attitudes; to try and build them into our training and of course to ensure that those training the trainees are themselves conscious of them. This is a task that we are now attending to. Were I to attempt defining them I would say that they are, positively and negatively, a dedication to our business, keenness for achievement without a desire for power for its own sake, a deep social sense, and ability to get on with the job without wasting time on the frills. In short, we prefer solid ability to just virtuosity. I am of course taking for granted the usual qualities of intelligence, industry, integrity, self-confidence, etc. We like poise and ease but put no premium on background as a veneer. We have also managed to be respected by those who recommend candidates to us, for we will carefully look at everyone who knocks on our door because we are anxious to take in talent, but we make no concessions to influence.

Some interesting features of our selection procedures may be worth mentioning. All applications—and we receive nearly 1,000 for every person selected—are screened for conforming to basic requirements of age and qualifications. Those who meet the requirements are sent a printed application form which, apart from details of the school and university career and any jobs held, asks for some data that would throw up academic and extra-curricular interests and hobbies, ideas about his career and any leadership experience at school and college. These are again screened by experienced persons, and the promising candidates are

invited for a preliminary interview at the Head Office or one of our branches. Those who show promise are then invited to our Head Office at Bombay for final selections, which are held in two parts.

In the first part of final selections, a group of six to eight candidates is brought together to a conference table and given a choice of subjects and a case study which they discuss in the presence of four senior managers, who however only act as observers. The group is "leaderless" and has to organise its own discussion and provide opportunity to each member to display his qualities of mind as well as leadership and being led. Our consulting psychologist, who knows us and our requirements well, is also present at these group discussions, which he follows up with an interview at which each candidate is put through some psychological tests.

In the second part of final selections, the most promising candidates are put up before a senior board of at least two directors, the Personnel Director and some senior managers. From this group we finally select and offer appointments to as many as reach our standards, though we are always willing to take some risk with otherwise promising material. This must account for some of our losses. I should like to add that we try to make our selection procedure as objective and impartial as possible, particularly so that it leaves those who are not selected with a feeling that the process was fair. Secondly, the psychologist has not a decision making function; his role is confined to the use of technical methods of assessing such aspects of personality requirements as are relevant to the job. The information that is gained through his tests is considered along with other impressions formed of the candidate. The psychologist's opinions are helpful to the selection Board but not decisive. All opinions of the psychologist are treated as confidential.

We find from experience that the group method of selection has several advantages. It provides for greater scope for studying the different aspects of a candidate's personality. A group can be given certain tasks which cannot be given to an individual. The men are seen together and are therefore easier to compare. Rejection is also less painful in a group method, and although the unsuccessful may not always agree with the decisions of the selectors, group inter-action will usually make it abundantly clear as to who stands out. In fact the candidates, when questioned individually, will usually pick the right ones themselves. Lastly, the procedure is economical.

Training

Whatever the methods and technique followed in the selection procedure—personal interviews, group discussions, psychological tests, etc., selection is

RESEARCH!

Come now, everyone uses that word nowadays. Yes, but at HOECHST research is a tradition. A tradition which includes Nobel Prize winners Koch, Ehrlich and von Behring. What's more, we spend a lot of money on research—Rs. 13 crores in 1962.

Good gracious! But money's not everything.

True. But research also means work and skill. Hundreds of highly qualified HOECHST scientists synthesise, study and test... thousands of compounds.

Hmm, it's beginning to form a picture.

And research is only one part. There are others:

modern automatic equipment, stern quality control, fierce testing and... (stop fiddling with your collar!) experience.

But what does it all mean to me?

It means that the HOECHST medicines you buy in India have behind them worldwide research and experience—distilled from a century's pioneering work by HOECHST.

And this is what makes HOECHST medicines...

PRICELESS, exactly! That's why doctors prescribe them with confidence. Now, if you'll just roll up your sleeve....

only the first stage in the total process of acquiring and developing managers. After selection begins our real task.

Training is given individually and on the job. We have found from experience that young intelligent trainees do not like to spend months in circulating around the various departments of the Company watching how others do their jobs; instead they like to get down to a job themselves and so our training programme is now job-oriented. Also, this is the best way of judging their performance and potential at an early stage. After a very quick familiarisation programme lasting only about four weeks in a Division, they are put to work in it. Let us take the marketing side, which absorbs the largest number of trainees. The young man will go into the field and work under a salesman for a month, after which he will work independently as a salesman for three to four months. He then works under a sales supervisor for a month and then independently as a supervisor for another three months or so. By now he has been "blooded" and can hold his own in the field. The men who work under him later should recognise that behind what he expects them to do lies experience and ability to do it himself, and well. After this spell of about nine months in the field he works in a junior management capacity in branch administration where he learns to deal with the field

work from the office end. After some months of this he is seconded to a sales manager and helps him run an area. At the end of one and half years of all this training he is given his first managerial responsibility and appointed an Area Sales Manager. From then on he will go as far as he deserves.

All through the training his seniors devote a good deal of their time and attention to his progress, and the Board constantly receives reports on his progress. His Director will meet him regularly, and the Chairman occasionally. The progress reports are discussed in detail in a committee of the Vice-Chairman, his own Director and the Personnel Director. His training finished, a recommendation will be put up for confirming him in the covenanted grade of management; and the Chairman will usually personally hand him the covenant. He is from now on the Company's most valued investment, and we are deeply disappointed at our occasional failures, though they have to be faced in the interests of the Company as much as for his own sake.

Training never really stops. We have designed our own courses, principally to give the managers a broader picture of our operations and its environments, and to sharpen their managerial skills. These courses are always residential and there they meet men and women from other sides of

our business. The courses can be general or functional, as in marketing, finance, O. & M. To many of them we invite as participants men from our associate Unilever companies in Africa and Asia. We also send our managers to courses, seminars and conferences held outside the Company to provide the stimulus of meeting people from other organisations and particularly from Government and its undertakings. We send them to the Administrative Staff College at Hyderabad, the new Institutes of Management of Calcutta and Ahmedabad, the regional and the All India Management Associations, the National Productivity Council and to other more strictly functional courses.

Unilever's training facilities in the United Kingdom and its specialist courses in Australia and America are also open to us. We have also sent men to Henley and Harvard. Lastly, we send a few men every year to the United Kingdom for specialised training with Unilever companies in that country and on the Continent.

We find all this training, carefully planned for both its content and timing, and integral part of the growth of a manager. It has to be judiciously controlled though, to stop it from becoming a fad. Each name for outside training is examined carefully by the Board and each manager is made to realise that he can get out of a course

only in proportion to what he himself puts in.

A very useful aspects of training is the encouragement we give to our managers to accept various extra-mural responsibilities. In a developing economy, it is natural that demands should be made on our managers by Government and other organisations and it is only right that we should make our contributions in the fields in which we have special knowledge or experience. We are, therefore, always prepared to help as long as the demands made on us are consistent with the priorities and requirements of our own business. We believe that this kind of assistance is to mutual advantage and, in the ultimate analysis, we gain as much from such efforts as we give because it adds to the knowledge and experience of our managers.

Promotion

Promotion is always and invariably on merit, irrespective of age or length of service. We frankly believe in the logic of the best man for the job because only then will the job be done best. But evaluating merit is not an easy task. We therefore do not leave such evaluation entirely to the time when the need for promotion arises but make it a continual process so that when the time comes it is quite obvious who the man is; in fact normally he has already been groomed for it. Evaluation with us is a constant process, consisting of progress reports, thorough training, personal contacts by the seniors and by annual personnel reports, discussions at the monthly Board meetings, job evaluations, short lists of promising men: all this helps to ensure unbiased and objective judgment.

How do our managers respond to this system which takes away the crutch of "automatic" promotion? They accept it implicitly when they join us and, in fact, they often tell us that they regard this as one of the best reasons for joining us. The system, which they themselves will have the responsibility to operate, assures a fair assessment, and cases of unfair promotions are almost unknown. There may be two views on a quick or unexpected promotion but nearly always the sense behind the decision soon becomes obvious. The capable rise rapidly, so that they don't lose the fine cutting edge: some are inevitably left behind—arithmetic must work inexorably, for after all the shape of a management structure must be pyramidal. Those left are well looked after and have a very useful function in which their interest is kept alive through training and sometimes a change of job. In fact it is not that many are left behind but that some must get further and faster. To use an American phrase: There cannot be all "Chiefs and no Indians" (the American kind).

You may have noticed that I have frequently mentioned the Board in connection with selection, training and promotions of managers. This indicates not the control the Board exercises over these processes but the interest it takes in what I have already referred to as our most valuable asset. Management Development, as I have tried to describe it, is an integrated operation which has a quality of wholeness like marketing or manufacturing; and not merely the application of a series of isolated techniques. How well we grow, how successfully we meet the challenges will depend in the end on how well we select and prepare each man for his job and inculcate the right attitudes. I have tried to present to you the thinking and practice on this subject, but let me be clear. We are, of course, aware that what we are trying to do can be improved upon. To effect such an improvement is our constant endeavour.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

INDIAN ALUMINIUM COMPANY, LIMITED

CHAIRMAN, MR. H. V. R. IENGAR'S REVIEW

Address to members of the Company by the Chairman, Mr. H. V. R. Iengar, at the Twenty-sixth Annual General Meeting held in Calcutta on 27th April, 1964.

I have pleasure in welcoming you to the twenty-sixth Annual General Meeting of the Company.

I think it will be in accordance with both the pattern set by tradition for Chairman's speeches and with my own conception of what such speeches should contain if I adopted as a general theme today the responsibility of an organization such as Indalco in the developing economy of our country. But I would like first to deal with our performance in 1963.

As industrialization of the country proceeds, the market for our products continues to grow, and large areas of demand remain unsatisfied or undeveloped. In these continually favourable conditions, and benefitting from the completion of increases in capacity undertaken in previous years, the Company achieved new levels of sales and earnings in 1963. The total value of sales at Rs. 138.9 million was 32% higher than in 1962; gross profit improved to Rs. 38.2 million from Rs. 24.0 million, and net profits were also markedly higher at Rs. 16.0 million compared with Rs. 12.6 million for 1962. The latter increase was achieved despite the higher tax charges in 1963 which reflected a reduction in Development Rebate, the impact of Super Profits Tax, and the company tax incurred in respect of the bonus issue. Taken together, all these figures are evidence of our sustained growth and amply justify our past investments in new productive units.

Whilst primary aluminium production rose by 10% to over 25,000 tonnes, despite a prolonged power cut in Alupuram which reduced this smelter's output, and to which I will refer again later, there was a sharper increase in production of semi-fabricated products which rose to over 19,000 tonnes, from under 13,000 tonnes in the previous year. This increase in semi-fabricated output was made possible by the expansion at Belur completed in 1962 and by overcoming teething trouble encountered when the new equipment was first put into production. Output from our other plants continues to be very satisfactory.

To meet part of the capital requirements for the current expansion of the Alupuram smelter, and for the foil mill under construction at Kalwa, the first benefits of which are not expected until 1965, a number of security issues were made during the year. The authorized capital of the Company was increased to Rs. 100 million by the creation of an additional 4 million ordinary shares, and the issued capital of the Company increased by rights issue of 804,278 new ordinary shares of Rs. 10 each at a premium of Rs. 15.50 per share, part of which is still to be called.

Public Issue

Additionally, a public issue of 7% Debenture Stock for Rs. 10 million was made on January 11th, 1963, and the Commonwealth Development Finance Company Limited were issued £100,000 Sterling Debenture Stock on March 30th, completing an issue of £500,000 Sterling Debenture Stock agreed to in 1962.

Finally, on December 30th, there was a bonus issue of 1,200,000 fully-paid ordinary shares of Rs. 10 each in the proportion of one for four. Whilst this

issue did not increase the amount of shareholders' funds employed in the Company, it brought the issued capital more into line with the true shareholders' investment.

On the basis of the results for 1963, and in view of the satisfactory level of activity experienced at the beginning of this year, your Directors felt justified in recommending a total dividend for 1963 of 17½% on the augmented ordinary share capital. Simultaneously, the allocation to general reserve has raised it from Rs. 19.5 million to Rs. 31.5 million.

You will wish to know the immediate effect of the Budget proposals on the Company. Allowing for uncertainty of interpretation, the estimated net effect of the proposed changes will reduce the provision for Company taxation in respect of 1963 by about Rs. 2 million, which will appear as a credit in the 1964 accounts.

The Company will benefit from the rebates to be allowed against income and super-tax and also against the new sur-tax. The Finance Minister's general policy of encouraging the development of particular industries includes the aluminium industry, and will facilitate future expansions.

We welcome the Finance Minister's intention to continue the Development Rebate for key industries beyond April 1st, 1967. It is important to an industry such as ours in which new productive units require large amounts of capital and relatively long construction periods, to be assured of some stability in the fiscal climate. The Minister's assurance in regard to continuation of Development Rebate will be helpful from this point of view. Nevertheless, the proposed tax on bonus share issues and the 7½% tax on distributed profits both seem certain to have an adverse effect on the capital market and to make the task of those who find it necessary to raise fresh capital considerably more difficult.

Future Plans

Looking into the future, our Company will continue to make progressive efforts towards supplying metal and fabricated products at reasonable prices, permitting us to pay good wages to our workers and to earn and distribute satisfactory profits. Beyond the pursuit of these interests, however, we feel a further responsibility to make such contribution as we can towards the expansion of aluminium production so badly required in India.

When the Emergency arose as a result of the Chinese invasion, Indalco offered immediately (a) to step up the production of aluminium in Alupuram by an extra 5,000 tonnes although, from certain points of view, this was not an ideal location for increased smelter capacity; (b) to make special alloys required by the Defence Services; and (c) to loan to Government, without any obligation, some highly qualified technical members of the staff, to enable Government to decide on the planning of the industry in the light of the rapidly changed Defence situation. All this was intended to be a measure of short-term assistance. On the long-term, the Company assessed what its place in the economy should be against the background of the requirements of metal in the country in future.

On the best assessment we can make the country will require by the end of the Fourth Plan, very much larger quantities of metal than have been

planned for at present. Your Directors realized that, if the Company should take its appropriate place in the context of metal required in the future, it should make an earnest effort to expand its operations. Naturally, they hoped that while the siting of new operations would be based, primarily, on the sources of power and of bauxite, it could be so adjusted as to lead to rationalization of the Company's own transport structure which at present, due to historical reasons, is not entirely rational. All the arguments suggested that the Company should concentrate on getting permission from Government to expand on the West Coast.

I am glad to inform shareholders that we have had satisfactory discussions with the Ministry concerned, viz. the Ministry of Steel, Mines & Heavy Engineering, who have now asked us to submit an application for an Industrial Licence. We are submitting an application shortly. The intention is that, initially, we should put up a smelter with a capacity of 30,000 tonnes, but this will form a nucleus of a much larger scheme of integrated aluminium production on the West Coast.

Despite the strong demand we foresee, it is obviously desirable that production costs should be brought down, and it is the policy of Indalco to make every endeavour in this direction. I wish to draw your attention to two elements of cost over one of which the Company has no control and over the other only limited control. The former is a matter of power supply and power costs; the latter of the productivity of labour.

Power Cuts

Throughout the first half of 1963, we suffered long spells of power cuts at our Alupuram smelter, which resulted in a loss of 950 tonnes of metal production. In 1961 and 1962, similar power cuts had resulted in a loss of 150 and 400 tonnes respectively. There had been intermittent power cuts at Alupuram even before this period but we had reasons to believe that with the augmentation of power-generating facilities in the State there would be no recurrence of such power cuts. But the situation appears to be worsening. The extent of the 1963 power cut was more severe than any in the previous years and in the current year also a 25% power cut has been enforced from February which has further been increased to over 40% from March. These interruptions in power supply not only seriously affect production but cause technical dislocations which take considerable time and expense to remedy. Consequently, costs go up. However, we have an assurance from the Kerala Government that every effort is being made to increase generating capacity further and it is expected that by the end of 1966 the necessity to impose power cuts will be obviated to a great extent.

There is also the tendency on the part of State Governments to levy duty on electricity consumption, which has the effect of increasing the contracted price for power. As electricity is a major raw material for the aluminium industry, aluminium producers seek to enter into long-term contracts with suppliers of electricity (State Governments, in our case) to ensure continued supply of power at rates which may sustain the industry on a long-term basis. It is, therefore, obvious that the sanctity of such contracts should be preserved not only as an act of faith but for sound economic reasons. Without belittling the omnipotence of the legislature, it seems necessary to

point out that legislative powers, where they seek to vary or abrogate contractual relations, should be used, if at all, with great discretion and in the real interest of the community at large; never as an expedient to raise some additional financial resource.

Apart from power cuts, an important factor which is preventing a reduction in costs is low productivity in India. A study which I had made some time ago showed very unfavourable comparisons between our own plants and similar sized plants overseas. I am not suggesting that the comparisons necessarily reflect adversely on the efforts of workers. Production per employee is influenced by a large number of factors other than the efforts of workers. Such other factors would include mechanization, size of the productivity unit, adequacy of raw material supplies and transport, production planning, management and scientific knowledge and so on. My submission is that each of these aspects should receive close attention and scrutiny, for thus only can we achieve internationally competitive standards of productivity and maximum economies of production.

Better Relations with Labour

An important influence on productivity is the human factor involved in management/labour relations. Last year, in my address to you, I had mentioned that it was imperative that we secure the co-operation of trade unions and industrial workers in order to achieve a standard of productivity which is comparable to those outside India. Your management has been unswerving in its efforts to develop such standards of productivity. I have pleasure in informing you that following the understanding we have reached with the Union in Hirakud there has been significant improvement in production and efficiency. I am also happy to inform you that our Alupuram Union has recognized the necessity for further increasing productivity and rationalizing work standards and has agreed with the management to make every effort to man the new smelter with the existing personnel, as far as possible. I consider this a significant step demonstrating an enlightened trade union attitude.

In a democratic society, industrial disputes are bound to occur and it is common knowledge that such disputes are invariably resolved in course of time. It is also obvious that the most enduring way of resolving these disputes is through collective bargaining and mutual consent. And yet I find these processes becoming increasingly ineffective and slow. Sometimes a great deal of damage is done both to the industry and the workers by such procrastination. In the majority of cases, the delay hardly improves the bargaining position of either of the

SMALL SCALE INDUSTRIES

...We shall be happy to consider requests from Small Scale Industries for financial assistance.

parties and only contributes to a national wastage of effort. It seems that both sides must train themselves to negotiate in "good faith". Exaggerated demands in the hope that an understanding would be reached somewhere at the "half-way point" should be eschewed. There should be sufficient appreciation of the fact that a co-relationship exists between wages, production, and costs. Collective agreements are, no doubt, the results of give-and-take but the methods which the parties pursue should be based on goodwill, a scientific approach, and must demonstrate a regard for the public interest. I feel that if these considerations are kept in view, a tradition of healthy, mutual negotiations will be established in the country and will prove beneficial both to industry and the workmen.

On this problem of human relations as affecting productivity in industry views appear to have become stratified. The different parties concerned, viz. the Governments, both the State and the Union Governments, the Trade Unions of different persuasions, and different employer organizations have taken up positions involving some rigidity of posture. It may be that a solution has to be many-sided; it may involve re-thinking on the part of all three parties. It seems necessary that a fresh look should be given to see where a break-through is possible. A solution may arise out of a fresh study of the problem by a body such as the National Productivity Council which, happily, has a tradition of a joint approach to problems of productivity by Trade Unions, employers and Government, with the assistance perhaps of outside experts. Your management has discussed the problem—not as a problem affecting Indalco but as affecting Indian industry generally—with the National Productivity Council and has also offered to finance a research project up to a lakh of rupees. I hope something useful will emerge out of our discussions with the N.P.C.

Self-generating Growth

Before I conclude, I have to make reference to a sad fact, of which I am sure all of you are aware. Mr. K. C. Mahindra, who was at the helm of the Company's affairs for over twelve years, died on October 31st, 1963. As an industrialist, a philanthropist, and an elder statesman, Mr. Mahindra was well known throughout India and many obituaries have been written mentioning these traits. Your Company's relations with him were, however, more intimate. He guided the policies of your Company and set the pace for its continued growth and for its high standards of efficiency. In many of his addresses before you, he pledged the Company's resources to the development of the aluminium industry in India. In his last address to you, he made a prophetic observation. Referring to the expectation that India would reach the stage of a self-sustaining economy by the end of the Fourth Plan, i.e. 1971, he said: "In our own sphere of industrial operations, I make bold to state that the Indian Aluminium Company would reach this stage five years ahead; I mean that expectations are that your Company would be 1966-67 achieve sufficient strength to stand on its own and generate enough technique, enough management, and enough resources to follow through further expansions." Probably, his hopes have already been realized, but let us, in mourning his loss, resolve to fulfil all his expectations through dedicated service to the Company, the industry, and the country.

Finally, I wish to thank on your behalf the management and all the employees of the Company—the staff and the workers—for their efforts and co-operation which contributed to the satisfactory results of 1963.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

MAHINDRA & MAHINDRA LIMITED

CHAIRMAN, MR. MAHINDRA REVIEWS RESULTS

The following is the speech delivered by the Chairman, Mr. Keshub Mahindra, at the 18th Annual General Meeting of the shareholders of Mahindra & Mahindra Ltd., held in Bombay on 23rd April, 1964.

Ladies and Gentlemen,

It is a proud privilege for me to be addressing you for the first time and to be able to extend to you a warm welcome to the Eighteenth Annual Meeting. In their report to you, your Directors have expressed their deep feelings at the sad and sudden death of our Founder Chairman, the late Mr. K. C. Mahindra. Many of you in this room who knew him intimately over the years, will agree with me, that his greatness lay in his sensitivity towards people—which produced in all of us a deep sense of affection for him. He looked forward to meetings such as these, for they provided him an opportunity to share his thoughts with you on many issues. His speeches were the products of a mind which had an unique appreciation of knowledge and a remarkable gift of language and judgement. His appraisals invariably germinated food for thought.

Today I can think of no better way of paying adequate tribute to his memory of the late Mr. J. C. Mahindra, than to narrate to you the story of the growth of your Company. It was in 1945—that our late Chairman together with his brother, laid the foundations of your Company. The first ten years were spent in formulating long term objectives, procuring talent, laying down sound management controls and training technical and managerial personnel. This was the time spent in exploring and choosing. Financial resources were being harnessed for the period of growth. These were the foundations laid for establishing manufacturing industries basic to the country's economic development. The record of the last eighteen years bear testimony to their zeal, devotion and tireless efforts.

Machinery Manufacturers Corporation was the first venture with public participation. This Company was formed with the object of manufacturing carding engines for the textile industry. The history of this Company may be known to many of you. In the years that followed serious setbacks had to be faced and met. The lack of a well defined protective policy, as well as initial resistance to an indigenously manufactured produce aggravated the situation. It is, therefore, of considerable satisfaction, that after years of struggle for survival, today the Company continues to be the largest producer of carding engines in the country. After fifteen years of operation, the maiden dividend was declared two years ago. It was perhaps this experience which made the Founders hesitate initially in inviting public participation in our new ventures.

Diversified Production

Over the years a wide range of products were chosen for manufacture. The Automobile Division which forms the principal activity of the Company, now has an installed capacity to manufacture 10,000 Jeeps per year. This has been possible through an association with a large group in the U.S.A. and we have the privilege of having their President on our Board of Directors. The dependence on imports for components is fast diminishing and with continuing progress in the field of ancillary production, it is anticipated that an indigenous content of 90% will soon be achieved. The Division is fully staffed with skilled technicians, and through its intensive training pro-

grammes for operators and engineers, it is to a great extent self-generating in its requirements of personnel. New factories are under construction at Kandivili, and it is envisaged that well integrated units will be ready for occupation by early next year.

Recognising the advantages of linking substantial investment with the procurement of technical "know-how" from abroad, your Company promoted a number of other units, which today serve our economy. In partnership with organisations in the U.K., various companies were formed to manufacture a range of products such as trailers, sintered products, air-cooled diesel engines, water meters and instruments. In collaboration with a German firm, a company was formed to produce synthetic resins, enamels and varnishes, while in association with an American company a unit has been set up to produce elevators.

Steel has always played an important role in the affairs of your Company, and while the import of steel sustained the Company during its formative years, a need was felt to establish a manufacturing unit in the country. To this end in collaboration with a leading French firm a Company has been floated for the manufacture of alloy steels. This as you are all aware, is a large project involving considerable capital outlay. A second large project is the manufacture of tractors in collaboration with one of the largest corporations in U.S.A. This Company has been formed and shares will be offered to the public in the course of this year.

Looking back, it was in 1955 that shares were offered to the public for subscription. At that time the Company was privately owned by the family. Before the public issue, an offer was made to all employees of the Company who had five years service or more, to participate in the share capital. It is gratifying to remember that nearly all employees took advantage of the offer.

The First Public Issue was made with an offer of about 47 lacs of capital. The response from the investing public was overwhelming. Over the years, there have been two further rights issues, incidentally both were over-subscribed, bringing the capital of the Company to the present level of Rs. 253 lacs and the number of shareholders has increased from 1860 to over 5500 today.

While the role of capital is not to be underestimated, it is labour which gives it a meaning in industry. I think of labour in its integrated sense, embracing all members of an industrial enterprise, whatever their functions. Without the effort of labour to plan and to execute, capital remains stagnant. Corresponding with the increase of capital, our own labour strength in the parent Company has increased from 1200 in 1955 to nearly 5000 today. Labour in the Company looks to the future for increased earnings, for opportunities to better their way of living and for chances of promotion. Over the last four years, over 800 vacancies have been filled through promotions from within—sufficient assurance that ample opportunities exist in your Company for advancement. Better pay, good service conditions and a share in the prosperity of the Company have been the benefits accrued to labour. In response, the Company has their assured loyalty and a desire and enthusiasm to meet the ever growing need for better skill and more productivity.

Quality Control

In all our varied manufacturing activities we have always laid empha-

sis on quality control and I can say, that the quality of our products has ensured consumer satisfaction. Nor does our responsibility and with the sale of the product—the importance we have given to after sales service has instilled a sense of confidence in the consumers, which must reap rich dividends in the future.

It is your faith and confidence that has made possible this growth. Great care has been exercised by your directors to ensure fair and reasonable dividends. Keeping in mind the need for liquid funds for expansion and diversification, your Directors have favoured a stable policy of dividends. The operations of the Company over the years have fully justified expectations, reflected by the profits earned from year to year. The shareholders enjoy an added sense of security that the reserves of the Company have increased to 80 lacs while the investment portfolio stands at 63 lacs. In conformity with the views expressed by many of you, a modest beginning was made in offering you shares in the new steel company. I hope that with continuing growth, there will be further opportunities for you to invest in new companies or in the expansion of the existing units—so that you may share in the prosperity of your Company—a share which rightly belongs to you.

Progress of the Plan

The economy has reached a difficult stage in its development. The country through the Five-Year Plans is in the process of reappraising the methods by which desired social objectives can be achieved. You may well ask whether this transitional period will have any effect on our industrial philosophy. I can only answer you by affirming that practically every unit in the group is in the process of expansion and that we have our sights fixed on more ambitious targets in the future. We would be failing in our duty if we did not continue to contribute to the growth of the community to which we belong. In these endeavours we do not doubt that there will be vast difficulties. The large commitments we have already undertaken are a measure of the confidence we have in the future.

In reminiscing over the past, I may have taxed your patience. The encouraging and the guiding hand of the late Chairman is no longer with us. I am, however, fortunate in having the wise counsel of my colleagues on the Board which will make my task less burdensome. I have the loyalty of our employees and I hope your confidence. I am sure that you would like to join me in welcoming our two new Directors, Mr. Iengar and Mr. Hydari—they need no introduction from me.

You will be glad to know that for the five months of the current financial year that is to the end of March 1964, our operations in all divisions of our Company have been satisfactory. Production of Jeep vehicles averaged 900 vehicles per month and deliveries have kept pace with this production. The Steel Division has maintained its rate of booking and the Machine Tool Division anticipates a considerable volume of business during the year. I would not like to conclude before thanking all the staff for their loyalty and devotion to work during the year.

I thank you.

Note: This does not purport to be a record of the proceedings of the Eighteenth Annual General Meeting of the Company.

JESSOP & CO. LIMITED

CHAIRMAN, MR. A. K. CHANDA'S STATEMENT

The following is the speech delivered by Mr. A. K. Chanda, Chairman, at the Thirty-Second Annual General Meeting of the members of Jessop & Co. Ltd., was held in the Committee Room No. 2 of the Bengal Chamber of Commerce & Industry at 6, Netaji Subhas Road, Calcutta 1 on Wednesday, 29th April, 1964.

The Board of Management's Report and Accounts for the year ended 31st October, 1963 are being circulated with this statement. Your Board feels that the practice introduced last year of incorporating the Chairman's statement in the Report should be continued, as it gives the shareholders a comprehensive up to date picture of the Company's affairs.

The conditions in which an emergency had to be declared have not improved greatly and the need for strengthening our defence and developing our defence production remains as insistent as ever. The resources of your company have been mobilised to increase its output generally with an accent on production of defence stores.

Your company has had this year the unique distinction of having completed 175 years of engineering activity conducted from its premises at 63, Netaji Subhas Road, which now houses the Head Office. To mark the occasion, it is proposed to hold a simple function at the Dum Dum Works, on a suitable date, in the near future.

Sales

Sales reached, in the year under review, a new record of Rs. 1,472.00 lakhs against Rs. 1,282.00 lakhs in the previous year, an increase of 14.82%. This was reached in spite of yet another crisis in the supply of electric power which restricted output for over two months. Credit for this achievement goes to the Staff and Workmen. I am sure you would join me in expressing our appreciation to them and our continued faith in them for maintaining the pace of progress.

Profit, Taxation and Dividend

The detailed working results and provisions for taxation are given in the Report of the Board of Management. It will be seen that after providing for all taxation and depreciation the profit will be Rs. 76.83 lakhs as compared with Rs. 65.42 lakhs for the previous year.

Despite increased earnings and larger profits, the ways and means position of the company continues to be difficult. We had to ask the State Bank for additional accommodation to the extent of Rs. 1 crore only thus increasing our Cash Credit Account No. 1 to Rs. 3.75 crores. In this situation, it would be imprudent to make a large distribution of profits. Nevertheless, your Board considers that some improvement in the rate of dividend should be made, and accordingly recommends that the rate of dividend should be increased to ten per cent. We expect to maintain this return in the coming years.

Production

With the commissioning of the new Road Roller Works at the end of February 1963, a determined effort was made to increase production from the previous years' output of 250 to 350. We succeeded in reaching a production of 320. Had not powercut, shortage of steel, etc., impeded our effort, we would have undoubtedly succeeded in reaching the target. Conditions remaining reasonably normal, we expect to reach a figure of 450 in the current

year. It is gratifying to note that the indigenous content of our rollers has now reached the percentage of 97.

Production of electric multiple unit coaches for Bombay and fully furnished metre gauge coaches were maintained at the levels programmed. Plans for re-equipping the Works for all-welded production of coaches have also been finalized but we do not expect that, due to the difficulties in obtaining delivery of specialized plant and equipment, we will be able to effect the changeover until April 1966. Additional orders for the riveted types of coaches have, however, been assured to us for the interim period.

The output of 'BOX', 'TPR', 'O' and 'CR' type wagons has improved and it is planned to concentrate the production of 'BOX' wagons in the rebuilt Wagon Works from May 1964. This will free capacity in the Structural Works which is badly needed for our other activities.

Steps are in hand further to raise the output of electric overhead travelling cranes, wharf cranes and sluice gates.

The fabrication and erection of the vertical wheel gates for the Kosi Barrage has been largely completed, except for the wiring of the gates for remote control. This work cannot be taken in hand until the special building to house the equipment has been completed by the Project authorities.

The output of fabricated structural steelwork showed little improvement due to the continued shortage of matching steel; but I am happy to tell you that there has been a marked improvement in the supply position over the last four months. If this improvement is maintained, there will be a corresponding increase in production from April 1964.

A start has been made in the present Mechanical Works to produce high speed cold sawing machines, and saw sharpeners, and we expect to market these by June 1964. We also hope to have a 6'-0" arm structural radial drilling machine in production by October 1964. These machines, I am proud to say, have been completely designed by us.

Future Demand

With the rising tempo of industrial activity, there is a growing demand for the manufactures of your company which we cannot meet fully within our existing production facilities. This reassures us, however, of continuing demands which will fill our order books for many years to come. We do not, however, contemplate this situation with satisfaction. We have to gear ourselves to greater effort and larger production to play our role in the national economic growth. With this purpose in view, we have already undertaken the modernization and expansion of our existing works.

Modernization and Expansion of Dum Dum Works

The rebuilding of the Wagon Works is now in its final phase, and as I mentioned earlier, we should be able to concentrate manufacture of 'BOX' wagons in this Works with effect from May 1964. I should add that this rebuilding programme has been planned and executed without interruption to current production for which credit is due to the co-operative spirit of our workers at Dum Dum.

One of the two 80'-0" assembly bays in the Structural Works has been com-

pleted and commissioned while the second bay is expected to be completed by April 1964. These bays will greatly add to the existing facilities for fabricating steelwork. The larger availability of matching steel should make it possible to utilize fully the capacity created.

Further Expansion

I regret to say that negotiations for the purchase of a suitable site for the expansion of our production, both in range and volume, have not progressed as we expected. But we are hopeful that we would be able to get possession within the current year and also complete other arrangements for initiating the expansion programme. I should, however, sound a note of warning. Our financial position, the impact of taxation on our earnings, the possibility of securing foreign collaboration, both financially and technically, are factors which require careful study and analysis and would naturally determine the phasing of our planned programme.

Labour Relations

I regret to say that we experienced continuous labour trouble throughout 1963. We were obliged to take action on illegal strikes in the Mechanical, Coach and Road Roller Works, when the Managers and Staff were detained. The situation was handled with firmness and determination. As a result, there has been an improvement in production since December 1963.

Labour unrest has unfortunately been widespread throughout the engineering industry in West Bengal and we have not remained unaffected by this disaffection. It is disturbing that in spite of generous production and profit sharing bonus schemes which this company has introduced and which enable the lowest paid employee of the Company, the Mazdoor, to earn Rs. 120.00 a month, there is agitation, engineered no doubt by a small number of militant workers, which affects both production and their earnings by intermittent stoppage of work.

We continue to pursue a progressive employment policy and we trust our labour will realise and appreciate that increased productivity means increased earnings and amenities for them. We hope that the change of wind noticeable in December will hold to bring prosperity to us all.

Absenteeism

The high rate of absenteeism continues to be a major problem. The average at Dum Dum is 16% ; but after the Pujā holidays, this reaches 30% for a period of six weeks seriously disrupting all production programmes. This malady of absenteeism, together with the generous leave and holidays granted, compels the Management to increase the labour force unnecessarily, adding to the cost of manufacture, reducing the profitability of the Company and therefore the earnings of workers themselves.

Electric Power Shortage

The general power shortage prevalent in the Calcutta area developed into a serious crisis in the beginning of May 1963, when one of the 50 MW generators at the C. E. S. C. Cossipore Power Station broke down. This crisis lasted till end-May 1963, during which period extensive load-shedding and occasional total interruption of supply were enforced. The supply position once again deteriorated in early August 1963, when the C. E. S. C. had to reintroduce

load-shedding, this time on account of shortage of water in the Rihand Dam.

This sustained spell of acute scarcity of power has affected our production in no small extent.

It was not until the commissioning of the new 50 MW generator at New Cossipore in November 1963, that some improvement in the supply position became noticeable. Arising from this, and also from the prospect of a 75 MW generator at Durgapur being commissioned in the first quarter of 1964, we may perhaps now look forward to a period of assured and uninterrupted power supply.

The maximum demand recently sanctioned to us is just sufficient for our present needs, but we will undoubtedly require further increase to cope with the expansions in hand.

Matching Steel

The shortage of matching steel continues to be the greatest single obstacle to increased production, and a disproportionate amount of time is spent by senior staff in progressing supplies, and arranging substitutions. There has been a welcome change in the last few months as a large tonnage of steel has been received, both indigenous and imported, to match the accumulations of the last two years. It is difficult to say whether this pattern of improved supplies can be maintained in view of our foreign exchange difficulties. It is only when the output of our steel mills overtakes the demand that we would be assured of balanced supplies and the harassing problem of scarcity which impedes production will disappear.

Priorities for Fabricated Structural Steel Work

The demands for fabricated steelwork for the expansion of the existing Steel Plants in both the public and private sectors, the building of the Bokaro Steel Plant, railway bridges, heavy electrical and hydro-electrical projects are so great that unless these projects are properly phased, it will not be possible for the existing medium and heavy structural units to design, prepare working drawings and fabricate in accordance with their programmes of requirements. It is, in my opinion, most essential that an order of priority should now be established and steel supplies arranged to suit the fabrication programme of projects with higher priority to avoid all round confusion.

Decontrol of Steel

As you are aware, except for flat products, which will continue to be in short supply for some years to come, steel has been decontrolled with effect from March 1964, both with regard to price and distribution. This has immediately resulted in an increase in prices of decontrolled sections but we hope that the prices will gradually stabilise at lower levels without affecting the economics of our production.

Board of Management

The Government has been pleased to appoint Mr. E. W. Isaacs as Member of the Board of Management, with effect from the 16th December, 1963. Mr. Isaacs was previously Member, Engineering, Railway Board, and we are very fortunate to have obtained his services. I know you will all join me in welcoming him to the Board.

Apprentice Training School

The Apprentice Training School is functioning satisfactorily. Encouraged by this, we have embarked on an expansion of the basic training workshop already established.

I trust you will find this recountal of our plans, programmes and prospects encouraging and agree with the management that we should look to the future with faith and confidence.

(NOTE:—This does not purport to be a record of the proceedings of the annual general meeting.)

KAMANI ENGINEERING CORPORATION LIMITED

THE CHAIRMAN, MR. R. H. KAMANI'S STATEMENT

The following is the summary of the speech of Mr. R. H. Kamani, Chairman of Kamani Engineering Corporation Ltd., delivered at the 18th Annual General Meeting of the Shareholders on the 23rd April, 1964 at the Office of the Company at Bombay.

Welcoming the Shareholders, Mr. R. H. Kamani, Chairman of Kamani Engineering Corporation Ltd. presented the Directors' Report, Audited Profit & Loss Account and the Balance Sheet and proposed them to be adopted.

It was a matter of great satisfaction for Mr. Kamani and the Directors that the company had attained a state of sustaining growth and it could look forward to continuing enjoyment of the fruits of the investment and faith of the Shareholders in the Company. He found that the new tax proposals were to a certain extent favourable to the basic industry as in case of this company to whom a tax relief of 10% in Income Tax and Super Tax and of 20% in Sur Tax was available under these proposals. The latest concessions granted by the Finance Minister allowed an additional depreciation of 50% on the major portion of the plant and equipment which were normally working on three shifts.

Company's Working

Mr. Kamani deviating from the usual practice of specifically pointing out details of the Accounts already included in the Director's Report, the Balance Sheet and the Profit & Loss Account, highlighted all round improvement in matters of profits and sales which were the highest in the company's history. The profits before providing for the depreciation and the Managing Agents' remuneration had increased from Rs. 36.38 lakhs to Rs. 41.84 lakhs which recorded a rise of nearly 14%. The profits had risen in previous two years from Rs. 24.80 lakhs by more than 68%, which has enabled the directors not only to increase the dividend from 9% to 12% in 1962-63 and to maintain 12% but also to add to the reserve fund a further amount of Rs. 9 lakhs, in spite of their considerably increased

burden of taxation during the same period.

Raw Materials

Referring to the raw materials position, the Chairman stated that as a result of emergency a very large portion of indigenous steel was being diverted towards high priority defence requirements; which made the supply position more difficult than ever. Certain categories of steel had been de-controlled recently on the recommendation of the Raj Committee in the hope that it would help ease the supply position. It had, however, inevitably resulted into some confusion and difficulties in supply as also into steep rise in prices. The Joint Plant Committee appointed on the Raj Committee's recommendation had twice increased the prices and at present the Indian Steel prices were the highest in the world. Mr. Kamani could not over emphasise the need for stabilising these prices at a reasonable level, as they had a very great effect on the economy of the country.

Mr. Kamani further pointed out the difficulties regarding timely delivery of matching sections which were being felt for last two decades and he earnestly hoped that the Joint Plant Committee and the main producers would adjust the production programme to the demands of the industry. He also hoped that the export oriented industry like this would get steel at concessional prices as was the case in every exporting country in the world.

Further, the Raj Committee had recommended import of certain quality of steel particularly some special sections, to ensure timely availability of matching sections keeping the prices at a reasonable level. Mr. Kamani hoped that this recommendation will be implemented. He further suggested that the industry should be given regular quotas to import such matching sections on the basis of individual fabricating capacity and that the Government should permit exchange of controlled categories of steel amongst factories in order to ease, to a certain extent the difficulties of getting time-

ly supply of urgently needed steel sections.

Mr. Kamani also felt that the ultimate effect of the implementation of the Raj Committee Report will be in the interest of the country and of advantage to this company.

Transmission Line Towers and Structures

Mr. Kamani expected the demand for transmission line towers and structures to increase in direct proportion to the rapid increase in generating capacity of electric power, which was expected to be raised from 5.7 million KW in 1961 to 23 million KW in 1971. He, however, cautioned that the installed capacity, including the newly licensed capacity was more than the prospective demand in 1971, and any addition to the existing capacity will be detrimental to the economy of the industry.

'Tractamount' Road Roller

In view of the increased demand, the factory had undertaken a programme of increased production of the improved model of these rollers and it was proposed to add some new items of implements to this line of manufacture.

Erection

The Chairman was happy to report to the Shareholders that the company had completed five major transmission lines totalling to about 600 miles in five states, viz. Gujarat, Orissa, West Bengal, Andhra Pradesh and Mysore, and that it was a matter of considerable achievement that 240 miles of 132 kV trunk lines for Dhuvaram power station in Gujarat and 100 miles of 132 kV lines in Orissa passing through extremely difficult terrain were completed in record time. Construction works were going on in full swing all over the country—in Andhra, Assam, Bihar, Gujarat, Maharashtra, West Bengal, etc.

Mr. Kamani informed that three power generating sets for Trisuli Hydro Electric Project in Nepal were supplied and a transmission line was being constructed for the project. This was a gift to the Government of Nepal from the Government of India.

Yet another notable achievement, as mentioned by Mr. Kamani was the contract for the installation of a Rope-way with a big haulage capacity of 450 tons per hour, secured from Indian Iron & Steel Co. Ltd., in collaboration with the leading German firm of Pohlitz. It would be one of the largest rope-ways in the world and would be operating over a distance of 40 miles. The civil engineering work on this project had already started and the project was expected to be completed by end 1966. The orders on hand for supply of towers and erection were, at present, about 30% more than during the previous year.

Expansion

In order to meet the increasing demand of towers as also to retain the foothold in export market our expansion scheme had been launched in Rajasthan which is expected to be completed within coming two years, when the capacity would increase by 30,000 tons per annum, and would greatly assist in meeting the demands of the northern regions like Rajasthan the Punjab, Uttar Pradesh, Madhya Pradesh and adjoining territories, besides helping increase exports. The Government had already given clearance to the company's application for

CAPITAL, 30th April, 1964.

Import of necessary machinery and plants of the value of Rs. 45 lakhs.

It was rather early to indicate the profitability of the scheme but Mr. Kamani assured the Shareholders that the expansion programme will involve no reduction in the amount to be distributed as dividend and will be to the best advantage of the company. Once the production starts, the profits would proportionately increase.

Railway Electrification

The first contract for Railway Electrification in Eastern Zone having been completed, the company had participated in tenders for similar work in other zones and there were good hopes for securing further substantial business, Mr. Kamani reported.

Exports

In the country today, Kamani were the only exporters of transmission line towers and other structures, and in spite of numerous difficulties all the pending orders were successfully completed. The order from the Nigerian Government for 132 kV transmission line towers was under execution. Mr. Kamani was sure that the Shareholders would be happy to learn that two large orders valued at over Rs. 28 lakhs had been secured from National Power Corporation, Manila (Philippines) in spite of keen competition from well known international firms including the Italian and the Japanese. These orders when completed during the current year would bring the total export efforts of the company to approximately Rs. 88 lakhs.

Referring to the various difficulties felt by the Company in execution of export orders, the Chairman commented that it was a difficult and unattractive proposition as timely delivery of matching section, shipping space at reasonable rates, facilities of prefinancing, etc. were not available. In order that quick delivery and longer credits demand by foreign indentors be met, he suggested that higher priority should be given to steel for export orders and concessional prices should be charged, as was being done all over the world. He earnestly hoped that Government would seriously consider these suggestions in order that not only the export level is maintained but also be substantially raised during the coming years.

Research

Various types of structural designs to effect economy in weights had been evolved, as a result of which Kamani's were the first in India to design, supply and erect 450 ft. high masts for all India Radio.

Agency Business

The Agency business has shown good results with an increase of about 25% over last year's mainly due to very large orders for insulators.

Recently the company was awarded an order for three power generating sets for Hydro Electric Power Station for Kuttidi Project in Kerala.

Lahore Assets

Mr. Kamani referred to the Directors' Report and stated that necessary legal proceedings had been instituted for the recovery of the company's property in Lahore, as the same had been released from the Custodian of Evacuee Property, Pakistan, and he was hopeful of getting it back.

He attributed the progress achieved by the company to the sincere efforts and willing cooperation of the workers and the members of the staff as also encouragement received from time to time from the Central and State Governments and the backing of the Shareholders and thanked them for the same.

NOTE: This does not purport to be a report of the proceedings of the Annual General Meeting.

CAPITAL, 30th April, 1964.

THE CENTRAL BANK OF INDIA LTD.

CHAIRMAN, SIR HOMI MODY'S STATEMENT

The Summary of the Speech delivered by Sir Homi Mody, Chairman, Central Bank of India Ltd., at the Annual General Meeting of the Shareholders on Tuesday April 28, 1964.

"On the whole, it would be correct to describe the year under review as one of economic stagnation", observed Sir Homi Mody, Chairman of the Central Bank of India Limited, at the Annual General Meeting of the Bank on Tuesday, the 28th April. There was a decline of a little over 3% in the total agricultural production, the set-back in the main cereals like rice and wheat being as much as 7.5%, which viewed against the background of a relentless growth in the population, was a matter for much concern. Sir Homi said that this cannot be allowed to be explained away by casual references to natural phenomena. The fault really lay in the doctrinaire land policies forced on the country, mainly for ideological reasons. Some hundreds of crores of rupees had been spent in the last ten years on Community Development and Extension Projects. That they should have yielded next to no results indicated the failure of both planning and execution.

Although industrial production had recorded an improvement of about 8.5%, it was less than the rate of increase envisaged in the Third Plan. The growth of national income was feeble and halting and there was an upward pressure on the general price level. The mid-term appraisal of the Third Plan had come as a rude reminder of the basic defects of Government's planning policies. Undue concentration on heavy industry, Sir Homi remarked had become an obsession with the architects of our Plans and had imposed on the common man a heavy burden of privations, which he was required to put up with in the present, in the fond hope that some day, his progeny would enjoy the fruits of his sacrifices.

Turning to the Budget of the Government, Sir Homi recalled how at the last Annual General Meeting he had emphasised that any scheme of fresh taxation based on the grossly inaccurate estimates which were being presented annually to Parliament could not but be unfair and oppressive. Last year's figures, he said, told the same old tale, an estimated deficit of Rs. 16 crores having been converted into a surplus of Rs. 88 crores! Yet, every Budget ignored this trend and proceeded to levy fresh burdens on the helpless taxpayers. Meanwhile, Government's administrative expenditure, not all of which could be considered productive, mounted, and inflation and the resultant fall in the real value of the rupee continued to inflict greater and greater hardships on the common man.

When the present Finance Minister assumed office, much was expected of him and it was believed that he would make a realistic approach to the whole scheme of taxation and give substantial reliefs. Instead, the present Budget proposals merely rectified some anomalies, but the income-tax rate structure on a somewhat more scientific basis, leaving the totality of the burden alone and actually increasing it by Rs. 40 crores, of which the share of the Corporate Sector was estimated to be Rs. 11 crores. It is impossible to understand how the economy of the country could recover and how the capital market which had dried up could ever come to life in these conditions. "When one comes to the specific proposals of taxation," observed Sir Homi, "one does not need to be an economist to appreciate the dire consequences of some of the burdens the Finance Minister is seeking to impose. The grand design is becoming clear—the further crippling of the Private Sector, and the

elimination, by rapid stages, of whatever remains of the much-abused Capitalist class, to which India owes so much of her economic development. He would indeed be a very foolish person who will not see in these drastic social moves a grave threat to the stability and progress of the country."

Increased Money Supply

Dealing with the monetary and banking spheres, Sir Homi referred to the impressive increase of Rs. 430 crores in the volume of money supply with the public. Scheduled Banks' deposits had also increased by Rs. 210 crores to touch Rs. 2,252 crores at the end of the year, the major portion of such increase being accounted for by Demand Deposits. Similarly, scheduled Bank credit which stood at Rs. 1,422 crores in December 1962 expanded by as much as Rs. 158 crores during the year under review. To enable the banking system to meet the ever-increasing demand for credit from all sectors of the economy, the Reserve Bank found it necessary, at the commencement of the current busy season, to liberalise the borrowing quotas allowed to Scheduled Banks. Unfortunately, this facility turned out to be short-lived. The pace at which Scheduled Banks' advances have moved upwards has been so rapid that the Reserve Bank has now thought it necessary to apply the axe somewhat ruthlessly. Not only have the basic borrowing quotas been reduced, but the rate of interest has been stepped up on each successive slab, that the effective cost of the total borrowings from the Reserve Bank has risen substantially. Coming as it has done, when the busy season has reached the highest peak, this action has placed the Banks in a difficult position.

The suggestion made by the Reserve Bank that, in their efforts to mobilise deposits, Banks should re-examine the pattern of interest rates had created a controversy in banking circles. The Inter-Bank Agreement on maximum rates of interest on deposits had helped working satisfactorily and had helped to keep down the general cost of deposits for the banking industry as a whole and in preventing unhealthy competition. In such a context, the present suggestion of the Reserve Bank, though well-meant, had already given rise to a move on the part of some Banks to opt out of the Agreement, observed Sir Homi, and it was necessary that every effort should be made to check it. The Indian Banks' Association would shortly be meeting at the highest level to thresh out the differences of opinion that had arisen.

The Cry for Nationalisation

Sir Homi then referred to the cry raised in ill-informed quarters in this country for the nationalisation of Banks. It was satisfactory to note, Sir Homi said, that the spokesmen of Government have expressed their opposition to this move for nationalisation which had found little public support, and he hoped that the ghost would soon be laid at rest. He recalled how a similar threat of nationalisation which Banks in Great Britain faced in 1934 was successfully met by the united opposition of the Chairmen of all the major Joint Stock Banks. Sir Homi warned that if any move was initiated in this country to nationalise banks, it would have, among other things, a profoundly distributing effect upon foreign aid and foreign participation in our various industrial projects, whether in the public or the private sector. Indian banking was already under the rigid control of the Reserve Bank, and the recent amendment of the Banking Companies Act had only added to its many fetters. Incidentally, it seemed to be extraordinary that

legislation of such a far-reaching character should have been rushed through Parliament by Government with the help of its cast-iron majority, without any worthwhile consultation with the interests primarily concerned.

Referring to a Note published recently on the inter-locking of directorships of Banks and other companies, Sir Homi felt that no right-thinking person could agree with the inference drawn by the author that it had the effect of consolidating corporate power as against the State and Society. The safeguards that existed at present against concentration of economic power in the hands of a few were more than adequate, and there was no justification for forging fresh weapons so far as Banks were concerned. If there was anything that the Note had brought out, it was the unpalatable fact that we had in this country only a limited number of persons possessing all-round business experience and financial standing. It would be foolish to prevent Banks from utilising this available talent. There was also no substance in the contention that Bank shares were concentrated in the hands of only a few persons, giving them undue power. So far as the Central Bank was concerned, out of a total of 24,828 shareholders, the individual holding of as many as 23,030, that is, nearly 93%, ranged from one share to one hundred shares only.

Sir Homi denied the sweeping charge levelled against commercial banks that they were not responsive to the financial requirements of small-scale industries and pointed out how the Central Bank, for instance, had been increasingly engaged in financing small-scale industries and had every intention of supporting this sector of the economy.

Term-credit for Agriculture

Referring to the complaint that commercial banks had neglected to provide direct term-credit to agriculturists, Sir Homi explained that this allegation failed to take account of the basic facts concerning the role of commercial banking and the inherent deficiencies in the general set-up of our rural economy. In India, agriculture had been looked upon more as a means of subsistence than as an economic or commercial proposition. Some of the factors which stood in the way of Indian commercial banks venturing into the field of farm credit were the diversity of inheritance laws and land tenures in various regions, the fragmentation and uneconomic size of individual holdings, the incapacity or unwillingness of the vast majority of agriculturists to keep regular and separate accounts and the absence of a scheme of crop insurance. Where agricultural activities like plantations had been organised on business lines, the larger Indian Banks did not hesitate to finance them. He also pointed out that commercial banks had been providing finance on a substantial scale to agriculturists for marketing their produce, which was quite an important economic function. Commercial Banks were likely to evince greater interest in medium-term agricultural credit, now that the Agricultural Refinance Corporation had been formed, if they had the backing of crop insurance and provided the State Governments helped them actively in the follow-up and recovery of such advances, as in the case of co-operative institutions.

Referring to the Balance Sheet and the Audited Statement of Accounts of the Bank, Sir Homi pointed out that although the total Deposits had crossed the Rs. 250-crore mark, the rate of increase was lower than in the previous year, due partly, to the closure of the Bank's Rangoon branch following

nationalisation of banking in Burma. The Central Bank's share in relation to the total deposits of all Scheduled Banks, however, continued to remain at over 11%.

The closing figure of the Bank's Advances at Rs. 187 crores represented an increase of over Rs. 12 crores, compared to the previous year. The Bank's share in the total volume of Scheduled Bank credit was nearly 12%. The demand for Bank finance remained relatively subdued till almost the end of December, but thereafter, it came with a rush, placing the banking system under a heavy strain.

Sir Homi invited the attention of the shareholders to the fact that the previous year's gap of Rs. 27 lakhs between the market and book value of the Bank's holdings of Government Securities which had operated against the Bank had now been converted into a difference of Rs. 75 lakhs in the Bank's favour at the end of the year.

Higher Earnings

The improvement of Rs. 1.36 crores in the Bank's gross earnings over the previous year had been more or less neutralised by the increase of Rs. 68 lakhs in payment of interest and of Rs. 59 lakhs in staff emoluments, exclusive of bonus. Sir Homi observed that the rate of increase in salaries and allowances of the staff had been disturbingly high, and expenditure under these heads continued to absorb a large share of the Bank's total earnings, the proportion being as high as 34% in 1963.

Sir Homi also voiced his concern at the rate at which overtime allowances paid to the Bank's staff were going up in spite of additions to the staff. In Western countries, Banks had achieved a considerable measure of advance by modern methods and machinery. In India, apart from the difficulty of importing accounting machines and their components in sufficient quantities, there was a stiff resistance on the part of large sections of Bank employees to any attempts at mechanisation. The fear that machines would displace men and result in the retrenchment of staff arose from a short-sighted view. Banking business in India is constantly expanding and acquiring new dimensions, and even if mechanisation was introduced on a substantial scale, there would still be a growing demand for more and more men. Sir Homi hoped that the staff would give dispassionate consideration to this aspect of the matter and co-operate with the Management in introducing new methods so essential for the streamlining of the Bank's manifold operations.

Besides the interim dividend of Rs. 2.40 per share already paid out, it was recommended that a final dividend of Rs. 2.60 per share, subject to tax, be paid out of the Special Reserve, as was done last year.

Sir Homi paid a glowing tribute to the services rendered by Mr. N. K. Karanjia who had retired after a long and distinguished career of 45 years. He welcomed Mr. F. C. Cooper who was appointed General Manager on Mr. Karanjia's retirement and wished him a successful term of office. Sir Homi also expressed his warm appreciation of the very valuable services rendered by the Vice-Chairman, Mr. C. H. Bhabha, in looking after the affairs of the Bank and in developing its business. Sir Homi ended by observing that "the contribution which a Bank of our size and status can make to the economic growth of the country is immense, and if we continue to enjoy the confidence of the business community and if all of us give of our best to the service of the institution, we have every hope that the Central Bank will long continue to occupy the proud position it holds in the banking system of the country."

INDIAN SUGAR MILLS ASSOCIATION

THE CHAIRMAN'S REVIEW

NEED FOR A FLEXIBLE SUGAR POLICY TO STEP UP

SUGAR OUTPUT: SUGAR MARKETING BOARD WILL INHIBIT PRODUCTION AND RETARD DEVELOPMENT

In his Presidential Address delivered at the 31st Annual General Meeting of the Indian Sugar Mills Association held at New Delhi on the 27th April, 1964, Rai Bahadur Seth G. M. Modi said:—

Importance of Food and Agriculture

The food and agricultural sector of which sugar is an integral part embodies efforts and aspirations of a vast majority of our people. In the matter of Plan priorities also which reflect the country's basic approach towards planned economic development, this sector has been accorded highest priority. The problem of food and agriculture is really complex. Land which has been neglected for years together without replenishing its fertility has to be exploited. Our agricultural operations at present are mainly dependent on the vagaries of nature. Only 16% of the land is irrigated and production mainly depends on the bounty or fury of nature. In these days of scientific development, we should not merely be exposed to the mercy of nature but should take positive steps to provide adequate supply of water, fertilisers, drainage, etc. The funds earmarked for the development of agriculture and irrigation over the First, Second and Third Plans have not been fully utilised. This is not desirable because, for development of agriculture and irrigation foreign exchange hardly presents any problem and all requirements in this behalf can be met from internal resources.

Cane Development

Cane Development has also suffered, especially in the North due to dependence on whether conditions. There is urgent need for provision of adequate water supply in sugarcane areas through tubewells. The rate of supply of water from the tubewells at present works out to nearly Rs. 70 per acre in U.P. against Rs. 32/- for supply of water through canals. This high rate has prevented the growers from taking full advantage of the tubewells already installed by the State Government. Cost of chemical manure being about Rs. 46/- per bag, its utilisation is beyond the reach of cultivators. The price should be reduced through an appropriate subsidy by the Government. Adequate drainage facilities should also be provided.

The basic problems of cane development have been with us for all these years but have remained unsolved. Without effective participation of the Central Government this problem may not be satisfactorily solved. Since sugar is a Central subject, it is most appropriate that larger and direct responsibility is assumed by the Government of India in the matter of cane development also to ensure quick results. The Central Government's participation in the intensive cane development schemes initiated in U.P., Bihar and the Punjab is welcome.

Smaller Units

Most of the existing factories were put up during 1932-33 with a daily cane crushing capacity of 600 to 800 tonnes and their subsequent progress has been entirely dependent on the availability of quality cane. Since cane cost accounts for 70% of the cost of sugar production, such of the factories as were fortunately placed in the matter of cane supplies expanded their plants while others located in areas of cane shortage have been marking time and have not been able to keep pace

with the general development. They continue to be small size units with higher cost of production and are sometimes classified as uneconomic. Cane yields per acre and sucrose content continue to stagnate around the level obtaining when the factories were put up. Functioning under such handicaps if some factories have not been able to expand, it is hardly desirable to call them uneconomic or obsolete. While revising the price for the current season on the basis of actual working results of factories, Government should take into account the uneconomical working of the small units and compensate them adequately. The taking over of such units by the Government will not solve the problem. Provision for rehabilitation of such units in the price structure itself, as allowed in the case of cement factories, should solve their problems.

Sugar Output

It is estimated that sugar output in the current season 1963-64 will be around 26 lakh tonnes which is less than what we need and had hoped for. Last year though sugar production was only 21.6 lakh tonnes, due to a very large carry over of 10 lakh tonnes from the preceding season, it was possible to export about 5 lakh tonnes and also distribute internally about 26 lakh tonnes; but the carry-forward stocks at the end of last year were very nominal being barely 1.5 lakh tonnes.

Government, therefore, rightly decided upon various measures to maximise sugar production during the current season. Cane price was generally raised to Rs. 1.75 per Md. and factories in gur competition areas were authorised to pay a minimum cane price of Rs. 2/- per maund. Rebate in excise duty was granted to factories to enable them to start early and this concession also applied for the remaining part of the season. Simultaneously, Government also imposed restriction on interstate movement of gur and khandasari and assumed powers to regulate cane supplies principally to the factories. This integrated policy embracing the three sweetening agents was indeed boldly conceived.

Initially the aforesaid measures had their desired effect on gur and khandasari prices which tended to decline. By November 1963 as many as 129 factories had started against 86 during the corresponding period last year and production was higher by 70,000 tonnes. But as the season progressed, gur and khandasari prices again resumed their upward trends and the failure of winter rains and draught in certain areas of the North caused damage to the standing cane. There was large scale diversion of cane from factory areas to gur and khandasari and it is estimated that the industry lost about 5 to 6 crore maunds of cane as a result of such diversions. It is appreciated that the Food Ministry has been vigilant and has taken prompt measures from time to time to enable the factories to counteract competition from gur and khandasari. In March 1964, factories in U.P. were authorised to raise cane price by another -/8/- per maund. This helped the factories, particularly those in certain districts of West U.P., to prolong their crushing operations for some time and produce an additional output of about 50 to 60 thousand tonnes of sugar.

The measures taken by the Government have a limited impact and are

not broad-based. They do not provide a lasting solution to the problem of securing equitable distribution of available cane supplies among the three users. For this, it is essential that the factories should be ensured freedom and flexibility in their working comparable to that enjoyed by gur and khandasari. Since the factories have no resources of their own, this freedom and flexibility to factories is possible only through an appropriate sugar policy by Government.

Sugar Marketing Board

The setting up of a Marketing Board in Sugar will perpetuate controls on the sugar industry and will upset the parity between the alternative users of cane which would inevitably affect sugar output adversely. The conditions under which a Sugar Marketing Board operates in Australia are basically different to Indian conditions. In Australia sugar factories consume all the available cane and there are no alternative users. Moreover, here we have wide disparities in the operating conditions of factories and consequently evaluation of their costs will not be simple. Its creation would result in a shaded market for the industry and will destroy all initiative to improve efficiency and the quality of sugar. With its restrictive effects on production, interests of the consumers will also suffer and they will be required to pay higher prices. It will also sap initiative in the industry for expansion and extension which will again go to hamper production in the long run. The Indian Sugar Delegation, which visited Australia and Indonesia in 1955 recommended that the question of setting up a Central Body for sugar should be postponed until economic conditions reached a certain degree of stability. Conditions prevalent today are far from stable and do not justify the introduction of the Marketing Board.

Cost Increases

An economic price structure is equally important for maintaining production and ensuring development of the industry. The Government are adopting the regional Tariff Commission Cost Schedules for computing control rates. Costs have gone up in diverse ways since the preparation of the schedules on the basis of the cost data for the season 1957-58. Unless all such cost increases are taken into account and provided for fully in the cost structure, the industry cannot be assured of a fair price. The Indian Sugar Mills Association has submitted a detailed memorandum to the Government with necessary data in support of each item of cost where increases have taken place. Government should examine the data expeditiously to be able to provide for the same in the price finally fixed for the current season 1963-64. This is of vital importance to the industry.

Low Profitability

The uneconomic price structure generally allowed to the industry has undermined its financial stability. The level of profits presently accruing is far from satisfactory. The Reserve Bank Study published in its monthly Bulletin of June 1963, the Analysis of 1962-63 Financial Results of a large number of sugar companies in the North and the Financial Express Index Number of Equities reveal that the

CAPITAL, 30th April, 1964.

sugar industry is making extremely meagre profits by any standards. It is beyond the means of factories to set apart adequate funds for rehabilitation, expansion, etc. Were it no so, we would not be confronted with the acute problem of small units. Adequate profits must be assured to the industry.

Sugar Exports

The emergence of India as a sizeable exporter of sugar in the World Market has been a most welcome feature of the sugar economy in recent year. Sugar exports are no more conducted to merely balance demand and supply within the country. They form an important part of our export drive to earn foreign exchange. In 1963 about 5 lakh tonnes were exported and the foreign exchange earnings are estimated to be over Rs. 32 crores. Raw sugar was produced in the country only last year. The immediate success that we achieved in producing raw sugar is indeed heartening. About 40 factories produced nearly 2.60 lakh tonnes in the last season and most of it was shipped to Japan, U.S.A. and Canada. We are now recognised as important suppliers of raw as well as white sugar.

In the current year, however, there is likely to be a setback in the export performance. This is entirely due to lower production in the country. It is likely that our total exports this year may be less than 3 lakh tonnes although the World Sugar Market has been quite firm for sometime past and this was the best opportunity for us to earn the maximum amount of foreign exchange. This slight set back is, however, a temporary phenomenon and with production increasing appreciably in the years to come, exports would be stepped up to at least 5 lakh tonnes per year if not more.

Future Prospects

Bright prospects lie ahead of the sugar industry. Demand for sugar in the country is continuously rising. During the Third Plan period the rate of increase in demand has been placed at 1 lakh tonnes per annum while during the Fourth Plan it is expected to go up to 2 lakh tonnes. In keeping with this increasing demand, the Development Council has placed the 4th Plan production target at 45 lakh tonnes and there are indications that this may further be stepped up to 50 lakh tonnes. We have a vast export market to absorb surplus output and the industries dependent on sugar for raw materials such as alcohol based industries, are steadily progressing.

In the above context, it is regretted that while the Finance Minister has allowed certain important industries a rebate in corporate tax, sugar has not been included in the list of industry in whose case this concession would be applicable. This concession must be allowed as the development in this industry has a direct impact on the agricultural economy and sugar is a sizeable foreign exchange earner.

Next Season's Sugar Policy

Government should announce the next season's sugar policy as early as possible. Cane price for the next season has already been announced and it is hoped that the Government would give favourable consideration to the request for authorising the factories in the Northern and Central regions to pay a minimum price of Rs. 2/- per maund as in the current season. Equally necessary is the announcement of Government's Policy with regard to other connected matters like early start, etc. This would facilitate prior planning which is necessary to achieve the best results.

NOTE:—This does not purport to be a record of the proceedings of the annual general meeting.

CAPITAL, 30th April, 1964.

New Delhi

CEMENT OUTPUT WILL REMAIN SHORT OF DEMAND

(FROM OUR NEW DELHI CORRESPONDENT)

CEMENT production in 1965-66 is expected to be not more than 12.5 million tonnes. First the whole of the additional capacity of 3 million tonnes which is planned to be set up during 1965-66 is unlikely to be available for production throughout the year. Secondly, the production of new factories is not likely to go beyond 80 percent of the capacity in the very first year. There may, therefore, be a gap of nearly 1 million tonnes between demand and supply during 1965-66.

The demand for cement by 1970-71 is expected to increase to 23 million or 24 million tonnes, necessitating a capacity of 26 million or 27 million tonnes a year in the industry. Accepting a 12.5 percent annual increase during the fourth plan period, the demand, it is expected, will rise as follows:

1966-67	15.75
1967-68	17.72
1968-69	19.94
1969-70	22.41
1970-71	24.21 or 24.00

The following capacity, it is expected, will be available for producing cement-making machinery during the fourth plan:

Name of the party	Annual capacity in terms of standard plants of 500 tonnes a day	Total Number of plants expected to be delivered during the fourth plan
A.C.C.-A.V.B.	4	20
K.C.P.	3	15
Utkal Machinery	3	15
Walchandnagar Industries	1½	7
Adian Sugar and General Engineering Corporation	2	10
McNally and Bird	2	10
	15½	77

On the basis of this installed capacity, it may safely be assumed that the machinery industry will be able to deliver at least 50 plants corresponding to a capacity of 10 million tonnes during the fourth plan period (1966-71).

PLANNING

Projections and Targets

The Perspective Planning Division of the Planning Commission has put out a certain-raiser for the fourth plan. The main idea is the target of growth, which it has modestly placed at 7 percent. Considering the vast and growing needs of this country this growth target of 7 percent cannot be regarded as too ambitious. Once this target of 7 percent is accepted, the strategy to reach the goal has also to be accepted. Figures are carefully worked out, supported by imitated steps which would be necessary to usher in "the classless society." Regardless of the base, projections have been made, particularly for steel, heavy engineering and food production, the total cost of which, at the 1964 level of prices, is placed at Rs. 20,000 crores, as against the

outlay, based on 1960 prices, of Rs. 11,800 crores fixed for the third five year plan.

The fourth plan, according to the Division, should seek to establish a social order which "ensures equality of opportunities, prevents disparities in income and increases the employment potential to a considerable extent." Some comments are called for. Firstly, the Planning Commission, which was largely guided by some of the progressive members of this Division in drawing up the third five year plan, once claimed that India would reach the take-off stage by 1966. The Chinese aggression two years ago did not affect the resources for the plan, because of the heavy additional taxation to find funds for defence. The first question, therefore, is whether the implementation of the third plan, which has not been materially affected at least as far as the finances are concerned, will take India to the promised take-off stage in 1966. The second question asked here is about the rate of growth: what has been achieved annually and what it will be in 1966? If, for example, the rate of growth by 1966 is 2 percent over that of 1961, will there be any leap-forward technique to reach a 7 percent growth rate by 1971?

It may be added here that the full balance-sheet of the second five year plan has not yet been made available to the country. The mid-term appraisal of the third plan was complimentary neither to the Government nor to the Planning Commission. Since then, the principal actors have changed their rôles. The deputy chairman of the Planning Commission has become the Minister for Home Affairs and the Minister for Food and Agriculture has been compulsorily retired. The country's attention is now being focussed on the millennium to be reached in 1971, when there will be perfect equality of opportunity and no disparity in incomes.

As far as the Rs. 20,000 crores or so of resources are concerned the Finance Minister does not expect larger aid than India has been getting from friendly countries and has been pleading for encouragement to foreign private capital to finance the fourth plan. Some leading U.S. business men visited New Delhi last week. The communists and the Congress "progressives" are basically opposed to foreign capital, unless it comes from the communist bloc, and the Minister for Heavy Engineering has deprecated the "craze for foreign collaboration."

The Mahalanobis Committee Report, which was extensively quoted by the communist leader, Mrs. Renu Chakravarty, who told the Lok Sabha that she had a copy of the report, has enumerated the various factors which have led to the concentration of wealth. The Committee has blamed the policies of the Government for this development. The Monopolies Commission will hold a further enquiry in this field. Planning for a mixed economy, it should be conceded, is directly responsible for this development. Planning has created a protected seller's market which remains unsatisfied. Such a development is bound to create disparities in incomes, concentration of wealth in the hands of a few and un-

accounted money. The Division has suggested no measures how this development might be arrested.

COAL

Transport Study

A coal transport study team which made its first report in 1963, is now on the capital discussing its draft for the final report with the Government of India. The final report is expected by July this year.

SURTAX BILL

Measure Explained

The Finance Minister, T. T. Krishnamachari, told the Lok Sabha last week that he proposed to amend the Companies (Profits) Surtax Bill so as to provide for "the inclusion of moneys borrowed directly from the Government also in the capital base." Another change suggested is to provide that borrowed moneys will be allowed to be included in the capital base subject to the condition that the minimum term of their repayment should in all cases be seven years and the purpose of the borrowing should be the creation of capital assets in India.

Mr. Krishnamachari, who was moving for consideration of the Bill, explained that as a corollary to this amendment, the interest payable on such amounts would have to be added back to the chargeable profits in order to avoid double taxation. Giving reasons for the proposed changes, he said under the existing provisions the moneys borrowed from a banking institution be included in the capital base only if they were repayable in not less than ten years, and moneys borrowed from abroad were allowed to be included only if they were borrowed for the creation of any capital assets in India. None of these conditions are, however, applicable for moneys borrowed from the Industrial Finance Corporation or the Industrial Credit and Investment Corporation of India or from any financial institution approved by the Government.

Mr. Krishnamachari pointed out that in line with the general scheme of corporate taxation in the Finance Bill, a specific incentive had been provided in the Surtax Bill to encourage investments in priority industries. This is in the nature of a special rebate of 20 percent of the normal amount of surtax payable by a company on any profits derived by it from the generation or distribution of electricity or manufacture or production of articles specified in the third schedule to the Bill. Mr. Krishnamachari said the basic objective of the Bill was to generate greater savings in the corporate sector, to provide adequate investment for higher-priority industries and to attract foreign private investment.

When all these projects were implemented, an export potential of over 25 to 30 million tons was likely to be developed. This capacity would represent an increase of 14 million tons over the third plan export target of 16 million tons, including the current level of exports from Goa of about 6 million tons. A total outlay of Rs. 250 to Rs. 300 crores was needed for this additional target. Over and above the cost of the schemes already approved for execution in the third plan, the foreign exchange component of this outlay

Parliamentarians last week, by Mr. Manubhai Shah. He said that in 1962-63, iron ore exports were of the order of 9 million tons from the whole of India. During 1963-64, with the development of an additional 500,000 ton railway capacity on the Hospet-Hubli line and other measures in hand or under contemplation, it was estimated to increase these exports to about 11 million tons.

IRON ORE

Steps to Raise Exports

Various measures proposed to step up iron ore exports from the current figure of 12 million tons a year to the targeted figure of 25 to 30 million tons by 1972, were explained to a meeting of

was estimated at about Rs. 60 crores to Rs. 70 crores.

The Minister emphasised the necessity for a detailed survey of the iron ore deposits. Some work had already been done in the case of some of these deposits. Areas would be investigated according to a dovetailed programme, first, by the Geological Survey of India and later by the Indian Bureau of Mines.

Referring to manganese ore, the Minister stated that the decline in India's share in the manganese ore trade was due to several factors, the chief among them being the emergence of new sources of supply and lesser dependence on manganese ore in steel production due to technological advances. Also overseas buyers were obtaining their requirements from their own captive sources. This year, the Government had successfully carried out the export of manganese ore under barter and link arrangements. A number of barter deals had been negotiated. Excepting for the sudden world spurt in the manganese ore market in 1957 when India sold 1.7 million tons, this country's present sales of 1.1 to 1.2 million tons of manganese ore this year were the peak of manganese ore exports. He added that efforts were being continued to maintain and develop this further by helping to reduce the cost of mining and increasing efficiency.

Replying to a question, the Minister admitted that it was a fact that there had been a continuing fall in the price of iron ore in the international market. The reduction varied from 4.92 percent to 10.80 percent depending on the grade of ore.

As for railway freight, iron ore was subjected to a reduced railway supplementary charge of 5 percent on total freight, compared with 12 percent levied on general merchandise. Rebate was also allowed on low-grade iron ore moved for export from Rajasthan to Kandla. The possibility of further relief was being examined.

BANK LABOUR

Advice from Mr. Sanjivayya

Replying to a representation of bank employees, the Central Labour Minister, Mr. D. Sanjivayya, said that he did not favour the demand for setting up a wage board and asked trade union leaders to give up the tendency of fighting today's battles with the weapons of yesterday. The traditional attitudes and methods for advancing workers' interests had become somewhat out of date, he said. The working class should realise that a change of strategy was necessary and that trade unions had a respon-

sibility to help achieve the economic progress of the country.

Disputes and differences would arise, whether an industry was managed by private employers or by a State agency, but these must not be allowed to lead to stoppages of work. Mr. Sanjivayya said that the health of the whole economy depended on the efficient functioning of the banking system. Bank employees had a duty to the nation to ensure that nothing holds up the running of the economic machine.

The Government had been conscious of the need for stabilising industrial relations in banks. A number of bodies had gone into the question of settling bank disputes. Now that the position in banks had been stabilised through awards, "I think we have a right to expect that nothing will be done to disturb it by pursuing a path of unconstitutional agitation." Constitutional procedures were available for the redress of grievances.

Mr. Sanjivayya said: "Everybody in India must remember that we are now under a double stress: we have to build up our defences and also carry on our development activities. Any disturbance in the banking sector might result in a serious setback to all that we hold dear."

How far the Labour Minister's advice has been accepted is not yet known. What is known is that go-slow tactics by the bank employees still continue. In doing so, neither the bank employees, nor the communists, who are behind them, have realised that they are antagonising some of their best friends, namely, the bank customers. A newspaper correspondent who has done useful research to write on labour problems for his paper says: "The situation is aggravated by the intrusion of policies into the labour movement which has encouraged the growth of a multiplicity of unions with different party affiliations. The result has been built-in conflict, inter-union rivalry and competitive demands on plant managements often in extension of party-political platforms and quite unrelated to the particular unit or even industry concerned."

The central labour organisations all have distinct political attachments: I.N.T.U.C. and the Congress, A.I.T.U.C. and the communists; H.M.S. and the P.S.P., U.T.U.C. and the Forward Bloc, the R.S.P. and certain other leftist groups. More recently, the Socialist Party and the Jan Sangh have formed their own central labour organisations while regional parties such as the D.M.K. have also begun to extend their activities into the field of trade unionism. Many unions describe themselves as

independent, but not all of these are genuinely so.

"Thus there are five unions in the Rourkela steel plant (I.N.T.U.C. H.M.S., A.I.T.U.C., an A.I.T.U.C. splinter group allegedly sympathetic to the pro-Peking wing of the C.P.I., and the North Orissa Workers Union). None of these is recognised. H.E.L., Bhopal, has an I.N.T.U.C. union and at least two others with reportedly communist and Jan Sangh affiliations. The Heavy Engineering Corporation, Ranchi, has three registered unions, I.N.T.U.C., U.T.U.C. and independent and a fourth, A.I.T.U.C. affiliated union, in the making. There are I.N.T.U.C., A.I.T.U.C., D.M.K. and independent unions in Neyveli. The Mysore Iron and Steel Works, Bhadravati, has an H.M.S. and I.N.T.U.C. union. The contractors' labour at the Barauni oil refinery is organised in rival A.I.T.U.C. and I.N.T.U.C. unions. There are I.N.T.U.C. and A.I.T.U.C. unions at the N.C.D.C.'s deep shaft mine in Sudamdih. At the Nangal fertiliser factory, too, there are I.N.T.U.C. and A.I.T.U.C. unions and, as elsewhere in Bihar and Madhya Pradesh, the I.N.T.U.C. is split.

"The existence of inter-union rivalries is almost inevitable in these circumstances. According to one estimate, about 30 percent, of the stoppages in the N.C.D.C. mines has been on this account. What is involved is not so much trade unionism or genuine workers' rights, but inter-party struggles to capture the labour movement by the promise of more radical action to wrest larger benefits from the management. Extraneous political demands adopted by the parent political party are also often voiced at plant level. Thus A.I.T.U.C.-affiliated unions have propagated the Communist Party's 12-point charter adopted in January 1964, demanding the nationalisation of banks, oil companies and foreign trade, price support for agriculture, a 25 percent reduction in prices and a reduction in taxation.

"Inner party struggles are also reflected in the affiliated unions. The C.P.I. split has divided the A.I.T.U.C. into two wings and the Rourkela fertiliser plant, for instance, has a Socialist Unity Centre union with allegedly pro-Peking sympathies. Likewise the I.N.T.U.C. the Kamaraj plan, which led to a change in the Bihar Ministry, accentuated the schisms within the party. The fight has been carried into the I.N.T.U.C. and some of the stoppages in Bihar during the past few months, can be traced to this power struggle. Similarly, in Madhya Pradesh, the I.N.T.U.C. split created serious labour tensions in Indore and elsewhere earlier this year." This is what was courageous-

ly assailed by the Minister of Heavy Engineering in Parliament two weeks ago.

FERTILISERS

U.S. Loan to India

Agreements were signed providing two U.S. development loans totalling Rs. 23.6 crores for one of India's largest fertiliser plants to be built in Visakhapatnam, Andhra Pradesh. The loans are being extended to Coromandel Fertilizers Ltd., a new company organised by an Indo-American consortium. The new plant, expected to be in operation late in 1967, will produce 365,000 tons of ammonium phosphate and 16,500 pounds of prilled urea annually. When in full production, the factory will supply more than one-third of the estimated fertiliser consumption of Andhra Pradesh and also meet some of the requirements of Mysore, Madras, Orissa and Madhya Pradesh.

Coromandel Fertilizers Ltd. has been organised by the Parry Company of Madras, the California Chemical Company, a wholly-owned subsidiary of the Standard Oil Company of California, and International Minerals and Chemicals Corporation of Illinois. The two American companies will invest \$6.08 million in foreign exchange (Rs. 2.8 crores) in the shares of Coromandel. The remainder of the finance, Rs. 9.29 crores, will come from the Parry Company and the Indian public which will own a majority of shares in the new company.

U.S.A.

Gift for Rajasthan

The Government of India and the United States have concluded an agreement covering of 25,000 tons of milo to be given by the people of the United States for use as supplementary feed for livestock in the scarcity-affected area of west Rajasthan. The State Government, through the Central Government, will be responsible for feed distribution to work-bullocks and camels, selected breeding stock and such other economic priority types of livestock as may be agreed upon.

HEAVY ELECTRICALS

One More Managing Company

The Heavy Electrical (India) Ltd is at present managing the existing heavy electrical factory in Bhopal and the new units, namely, the heavy electrical equipment project, Hardwar, the heavy power equipment project, Hyderabad and the high-pressure boiler plant, Tiruchi. Its responsibilities are growing and the problems of administration, labour, construction and production are diverse. A single management may not prove equal to the task of administering all these big units. It has, therefore, been decided to entrust the implementation of the new heavy electrical projects in Hardwar, Hyderabad and Tiruchi to a new company to be formed. The board of directors of this company has not been finalised yet. The Minister for Heavy Engineering told the Lok Sabha last week that the recent labour trouble in the Bhopal factory had been engineered by the pro-Peking-wing of the Communist Party.

ORISSA

Ferro-chrome Plant

A letter of intent has been issued to the Industrial Development Corporation of Orissa for the setting up of a plant in Orissa for the production of low-grade carbon ferro-chrome with a capacity of 10,000 tons a year.

London

U.K. EXPORTS TO COMMONWEALTH NEED TO BE RAISED

(FROM OUR LONDON CORRESPONDENT)

AN examination of British exports during 1963 shows that, although they were satisfactory in some respects, they showed no clear sign that the decline in Britain's share in the imports of Commonwealth countries had been halted. The decline has persisted for over a decade and has, of course, not escaped attention. It has only recently, however, caused widespread concern since for a long time it was argued that it was inevitable. The exceptionally favourable position of the immediate postwar years could not be expected to continue, and Britain has had to face increased competition in the Commonwealth from other countries.

It will be unfortunate if the "inevitable" nature of this decline is to be taken as implying that the trend is something to be passively accepted. Competition should be a spur to action, and trends are things of the past, not "inevitable" guides to the future. The important question is what can be done to halt or reverse the trend? Barclays Bank D.C.O. is one of the parties actively campaigning in the search for ways means. In the latest issue of its *Overseas Review* it deals with the question editorially.

The simple and indeed obvious answer is that British exports to the Commonwealth must be rendered more competitive in the broadest sense. Competition extends to many factors besides the obvious ones of price and quality of goods. There were signs in 1963 that, for the first time in many years, British goods in world markets were becoming more competitive in relation to those of many other countries. This is a continuous struggle, however, not a pitched battle, and victory is never assured. The troops in the field are provided by private enterprise and it is doubtful whether they are much assisted by harangues from their generals or staff officers, still less from non-combatants. They do, require proper support, and the Government's economic and fiscal policies play a vital part in their task.

Turning to the narrower question of increasing exports to the Commonwealth, the Bank thinks one step may be taken forthwith. The establishment of a Commonwealth Exports Council could be undertaken without the preliminaries of consultations with the other Commonwealth countries. Similar Councils exist for the Western Hemisphere and for Europe and have done valuable work. The suggestion appears to have been rejected by the Government on the ground that the countries of the Commonwealth are so dissimilar in their requirements; it was thought better that the Government should assist the various Chambers of Commerce to mount special campaigns. A joint campaign by Government and industry is being undertaken in Australia at present and others are planned in Nigeria and in Canada. There is much to be said for this specialised type of approach, but it does not seem to provide any reason why there should not be a Council to co-ordinate efforts and perhaps enable more campaigns to be mounted simultaneously, so that the smaller markets are not neglected.

There remains another argument in favour of the creation of a Commonwealth Exports Council. It has to be generally recognised that exports

to the Commonwealth are at least of the same importance as those to foreign countries. The idea that exports which earn foreign currency are more valuable to the nation than those to the sterling area lingers from the immediate postwar years. At that time many of the sterling area countries had surplus balances in London, which were used to pay for imports from Britain: but even then these "unrequited" exports were serving the not unworthy cause of paying off British debts to countries which had assisted the war effort. Furthermore, the world shortage of dollars made exports, which earned dollars, of more immediate value than others. Since the restoration of the convertibility of currencies over five years ago, there has been no truth in the idea that the value of exports to the nation depended on the currency earned. If Britain loses a market within the sterling area it is as certain, and probably as immediate, a loss to the reserves as the loss of any other market.

The sterling area is not the same thing as the Commonwealth, but their resemblance is sufficiently great to have caused this misconception. It is possible to establish certain criteria by which to judge which exports are most valuable: which have lowest import content, which provide maximum invisible earnings and which maintain or secure markets in developing countries. It is extremely difficult, however, to apply these criteria to practical policy except to make a vague generalisation that Britain should concentrate her efforts on exporting goods containing the highest degree of skilled processing and to countries providing the most promising markets for the future. This suggests that the most valuable exports for Britain are those of machinery and capital equipment to

developing countries, many of which are in the Commonwealth.

Other suggestions of how to stimulate exports to the Commonwealth boil down to asking member-countries to grant some kind of preferential treatment to Britain. As the largest Commonwealth countries are independent nations and as many of them are much poorer than herself, Britain has neither the legal nor the moral right to ask for unilateral concessions and must be able to offer something acceptable in return. Most of the developing Commonwealth countries have made it clear that they are not in favour of increasing trade discrimination, except in favour of developing countries as a whole group and that the industrialised countries cannot expect reciprocal advantages in return. It is difficult to see what Britain has to offer except on this basis; she may fairly claim that she has already gone farther than other industrialised countries in opening her market to the products of low-cost manufactures, particularly textiles from India, Pakistan and Hong Kong, and that the other industrialised countries should take the next step, but she cannot expect fresh arrangements of direct benefit to herself from these or any other Commonwealth countries for doing what is regarded as her duty. The United Nations conference now in progress in Geneva is largely concerned with this subject and it would be a particularly bad time at present for Britain to seek for anything in the way of trade preferences.

Commonwealth Export Body

This does not rule out other steps for greater Commonwealth co-operation in many spheres not directly concerned with trade, though they form the background to trade. Above

all there is scope for real Commonwealth co-operation in economic development. Possibly due to leaning over backwards to avoid charges of neo-colonialism, Britain has made no attempt to give a lead in this direction. Co-operation in drawing up national development plans and a standard code of incentives and safeguards for investors would benefit all concerned; Britain should at least discover how fair, non-discriminatory proposals of this nature are acceptable to the Commonwealth.

The House of Commons discussed exports the other day and how Government services can best help the people who are cultivating overseas markets. The verdict of a somewhat depleted House was apparently "British exporters are doing a fine job, but..." While paying all tribute where tribute was due, the debate splashed a certain amount of cold water on the Government's tendency to bask in the latest trade figures.

Mr. Gordon Matthews (Tory) provided a list of what he called the "seven deadly excuses", only one of which he was willing to accept as reasonable. The six snags about which he considered too much fuss was being made were inadequacy of information, financial risk, burden of taxation, too much complicated form-filling, translation difficulties, and the "I'm too small" complex. The seventh and strongest excuse was about the imperative demand of the home market, and it seemed to Mr. Matthews that more needed to be done to persuade manufacturers that it is in their own long-term interests to export.

Inevitably one heard more about those "league tables" which people invariably bring up in any debate involving trade. A strong protest against this sport was registered by Mr. Peter Emery, but it soon emerged that league tables are wrong only if they support the opponent's case and all right if they support one's own. For no sooner had Mr. Emery damned the Opposition's favourite tables, protesting that they are constructed out of hypocrisy for political purposes, than he added that he could himself construct a persuasive league table showing how well British steel companies have done in the competitive export field.

ESTATE DUTY SIMPLIFIED

by S. A. L. NARAYANA ROW

Here is a book out of ordinary that will prove useful to assesses and officers who have to deal with Estate Duty Assessment.

With the reduction of the exemption limit to Rs. 50,000 more and more estates will be liable to Estate Duty. This book will be useful to probable assesses to know their rights and obligations. The provisions of the Act are explained in a simple and lucid manner and all relevant Rules and Notifications have been printed as Appendices. A Supplement containing the amendments in Estate Duty Rates and the Estate Duty Amendment Rules (1964) will be supplied free to purchasers of this Edition.

Price Rs. 12-50 Postage Extra.

Madras Law Journal Office, Madras.

POST BOX 604, MYLAPORE, MADRAS 4.

RATIONALISING THE SMALL SAVINGS CAMPAIGN

By D. S. Kushwaha
(Allahabad University)

The small savings drive has not achieved the desired results as the rates of interest are not realistic and many of the schemes compete with one another. The author suggests a plan to rationalise the system according to which different forms of small savings can be made to attract people without imposing needless hardship as the compulsory deposits scheme did in the past year and the annuity deposit scheme does now.

WITH the launching of India's five year plans, small savings have assumed great importance. The Government has created a National Savings Organisation to encourage small savings and make people thrift-minded. Occasionally, one sees news in the Press that the savings drive in certain parts of the country has achieved a miraculous success, but unfortunately, these successes are sporadic, and the drive as a whole has failed to achieve the desired result.

No precise definition has been made of the persons who can be grouped under the category of small income earners. The Direct Taxes Administration Enquiry Committee, however, defined persons with small income as those falling in the income group of Rs. 3,600 to Rs. 7,500 annually. For purposes of small savings, one may, however, say that the class consists of persons with an annual income of Rs. 7,500 and less.

Rural Savings Survey
Recently, the Reserve Bank conducted a survey of rural savings and debts. The main findings have been published in the issue of the December 1963 *Reserve Bank of India Bulletin*. The survey covered 2,057 villages of the sample, spread over all the States, and collected data for the period July 1961-June 1962. According to the findings, nearly 62 percent of the rural households reported outstanding loans in cash at the end of June 1962. The proportion varied in different States, and in some, namely Rajasthan, it was as high as 70 percent. The average debt a household was Rs. 654. The average debt a cultivator-household was Rs. 719 and for as non-cultivator household Rs. 429. Lest it may be thought that the figures relate to past debts and that the rural sector is now in a position to save more, the findings of the survey provide information to clear all misunderstandings on that score. The average borrowing of the rural household for the period July 1961-June 1962 was about Rs. 180. The respective figures for cultivator and non-cultivator households were Rs. 205 and Rs. 111. Repayments all over India were about 50 percent of the borrowings. In the light of the above findings of the survey, does any one hope that the rural sector has an income which leaves a surplus to be put into small savings after meeting all essential requirements? The rural sector is in debt

and is continually borrowing. It would be wrong to assume that it will be able to pay back its borrowings from a source other than current income. And out of the current income, can a villager really manage to contribute to small savings when after meeting his bare requirements he can pay off just 50 percent of his annual debts?

Turning to the urban sector which consists mainly of labour and professional classes belonging to the same income group, one finds that the position is far from satisfactory. The Government has already given up its scheme of compulsory deposits for the non-income tax paying group, which indicates its implicit acceptance of the proposition that people in the lower income brackets have no margin for savings. As for the income tax paying group falling between Rs. 3,600 and Rs. 7,500 a year, the rates of income tax, surcharge, additional surcharge are still so heavy that they take away a good part of their income. Apart from deductions on account of provident fund, premiums for insurance policy also take away a certain part, say 20 percent. The result is that people in this income group are left with approximately 70 percent of their income to meet their requirements of consumption after payment of taxes, compulsory deposits, provident fund and insurance premiums. The percentage figure has been worked out with reference to earners with an annual income of Rs. 7,500 keeping in mind cases of mere salary earners and persons with other and unearned incomes. In view of rising prices, it is too much to expect that this income group of people is left with any balance to contribute to small savings.

Percentage of Savers

It may be contended that although the majority of the households in the rural sector—the percentage being as high as 70 in certain States—are indebted, the remainder can contribute towards small savings. Similarly in the urban sector, there may be a small percentage, although it may be a microscopic one, of small-income earners (as defined in this article) who may be in a position to save, and the small savings movement could justifiably tap them. All this may be true, but does it serve the purpose? The current rate of saving is in the neighbourhood of 8 percent, which will have to be raised to 12 percent in keeping with the targets under the third plan. The rise in savings will come about partly by increases in incomes due to economic development and partly it has to be forced in a poor country where the people are likely to spend on consumer's goods all increases in their incomes. The latter consideration in pushing up the rate of savings assumes importance in view of the fact that the manner of distribution of the increase in the national income is not definitely known, and, therefore, an attempt must be made to cover even the persons with small incomes.

The Government requires funds for financing the plan. Everyone

must play his or her part. Persons in the small income group will not fail to do so provided they are fitted into a rationalised scheme of savings. Piecemeal efforts will not produce the desired result. One has to recognise that saving is made out of the balance available from current income after consumption. The capacity to save, other things remaining the same, can be expected to increase with an increase in income. Therefore, a scheme, which prescribes a graduated rate of savings for different small income groups, has to be devised and enforced savings being permissible in any form, insurance policy, savings certificates, deposits in savings bank, contributions to provident fund, etcetera, and a person who has saved the prescribed percentage of income in any one or more forms should be considered to have done his duty and given relief in income tax, if he happens to fall in the income tax paying group. The rates of saving may vary from 1 percent to 25 percent of income to bring about an average of 12 percent of saving of the national income. It would be unrealistic to expect more than 25 percent of saving from current incomes from any group.

A Rational Plan

A rational plan for savings, such as outlined above, would collect a sizable amount in the form of savings and become a regular source of funds for the plans. It will be a source upon which the Government can rely and be sure that the funds will be available. As things stand today, various savings schemes of the Government compete with one another. A person who has to make a compulsory deposit forgoes an insurance policy which he would have very much liked to have. And persons who would like to invest in industrial scrip may do so in the units of the proposed Unit Trust of India which promises a return of 8 to 10 percent, instead of buying National Savings certificates. The net result is, and would continue to be that the Government is not in a position to raise a definite percentage of national income as savings,—which should be the idea underlying all small savings schemes. The opportunities which the Government has been offering to the public will only alter the existing pattern of holding the savings, but they are unlikely to influence any increase in the total amount.

It is, of course, not suggested that the saving capacity should be fixed for ever in terms of definite percentages. Suitable modifications should be made according to changes in the price level. If the Government fails to prevent price rises from outstripping increases in income, then it would be impossible for the people to save at old rates, as it is obvious that savings would have to be related to the income of a person and the prevailing price level. The rate of interest would have to be linked with the price level also. The rate of interest offered to small savers should be attractive. Ultimately, a savings campaign means "buying the savings" from the people, and an attractive price, namely, an

attractive rate of interest, can certainly improve matters. Like a graduated rate of saving for various groups of income earners, there should be a plan providing for a graduated rate of interest at various price levels, primarily to offset the adverse effect of a rise in prices.

Raising Average Savings Rate

It is high time that the Government gave serious thought to the rationalisation of its savings drive, and to the formulation of a comprehensive savings plan to step up the average rate of savings. It may contemplate compulsory insurance (a subject which is being discussed these days), it may ask for compulsory deposits or investment in savings certificates or units of the Unit Trust keeping in mind that the obligation on a person is to save a fixed percentage of his income in any of these forms of savings, or in as many of them as he considers proper. As it is, the compulsory deposit scheme has caused hardship to those small income earners who have got themselves adequately insured. If the Government follows a plan on the lines suggested, much of the hardship of the compulsory deposit scheme would disappear and at the same time, it would succeed in raising a fixed percentage of savings. If a person, however, voluntarily saves more than the percentage prescribed for his income group, so much the better. The Government would get the credit of having inculcated the habit of thrift, without imposing needless hardship. It would sustain the people's enthusiastic interest in small savings and the plans.

NEW U.K. BUSINESS DEGREE SUGGESTED

A new nationally recognised qualification in business studies at honours-degree level is recommended in a report just published by the British Ministry of Education. The report, *A Higher Award in Business Studies*, (Stationery Office, 1s 9d) follows a study of existing awards by a sub-committee of the National Advisory Council for Education in Industry and Commerce. The committee, set up in 1961, visualises an advanced qualification equivalent in standard to the present diploma in technology. It recommends the establishment of sandwich training courses combining academic work in college with practical experience "as soon as is practicable." A minimum standard of entry, the report says, should be five passes in the G.C.E., including at least two at A level, or a good Ordinary National Certificate or diploma.

The committee searches in vain for a crisp, accurate and comprehensive definition of "business," but concludes that the basic disciplines must be economics, sociology and mathematics. Existing awards are reviewed and the gap to be filled by the advanced qualification is revealed. "Without them the business of the country will, in our view, fail to attract its fair share of able and well-equipped school-leavers." The report adds that, although difficult to assess, the demand for such a qualification from industry and commerce, "both actual and potential" is sufficient to justify its early establishment.

Jute

BRIGHT PROSPECTS FOR A BUMPER CROP

THE jute crop is thriving due to the alternate sunshine and rain in the early-sown, low-lying areas in northern Bengal, lower Assam valley, south-eastern Bihar and Tripura. Following regular afternoon and night showers all over Gangetic West Bengal, brisk soil-preparation work is in progress in the Burdwan, Midnapur, Howrah, Hooghly, Nadia, Murshidabad and 24 Parganas districts. Due to the drought in these areas up to the middle of March, almost the entire tillage is available for sowing jute. Reports from upcountry centres indicate that the acreage under the fibre during the 1964-65 season will be as large as in the past two seasons. The fact that farmers have been receiving a fair return for their crop since the introduction of the price-support scheme should encourage them to maintain the acreage.

Reports from East Pakistan indicate excellent progress of sowing in that country. The early-April showers have helped complete all sowing so far. As in the previous two seasons, the Government's efforts to restrict the acreage are not likely to be very effective. Hence jute circles foresee a bumper crop in both India and East Pakistan.

Role of Co-operatives

An official review of the rôle played by jute co-operatives in supporting fibre prices during the current season states that the societies purchased a total of 160,700 maunds from markets in the interior up to the first week of April 1964. They bought from the primary and secondary markets only when prices tended to sag below the operational minimum levels. The biggest purchase of 50,000 maunds was made in Andhra Pradesh, followed by 30,000 maunds in Orissa, 25,500 maunds in West Bengal, 24,000 maunds in Assam, 20,000 maunds in Bihar, 6,200 maunds in Uttar Pradesh and 5,000 maunds in Tripura.

Under the scheme, the State Trading Corporation is required to purchase raw jute through the rural co-operatives. There were 96 primary marketing societies. Arrangements were made for their operation in 89 secondary markets and in about 300 feeder centres in the important jute-growing States. As fibre prices in upcountry markets remained stable around the official floor levels and their derivatives the societies were not required to buy on an extensive scale. No specific purchase quota was issued to them. It is stated that the arrangements made by them to enter the markets, if prices softened below the operational minimum levels, helped arrest any drift in prices. The heavy purchases by mills against their monthly quotas helped too. In a few centres where prices tended to sag, the co-operatives promptly commenced buying and checked the fall.

THE JUTE MARKETS

Manufactured Goods: Divergent trends prevailed in the Calcutta gunny market during the past week. Sentiment suffered a setback in heavy goods due to mills emerging as keen sellers for all positions. Reports of a Burmese Government tender for 12,000 bales of heavy Cees and an Indian Government tender for 2,500 bales of B Twills for mid-May delivery combined with scattered cover-

ing against ready and near positions, failed to arrest the drift. There was little change in the pattern of overseas buying and offtake. The industry and the trade seemed to have reconciled themselves to this type of hand-to-mouth trading; the former continued to run its installed capacities at the maximum level. Conditions were better in the shed berth position, there was hardly any detention of vessels at Sandheads. The threatened lighterage workers' strike, which was to have commenced at the end of April, was also deferred for a month, pending investigation of the grievances by the Government. This induced some spot purchases and covering by shippers. They were keen on completing their ready and near-term commitments. So circles close to them believed that end-April bookings for River Plate destinations were satisfactory. Continuing interest from the U.S.A., the Argentine, Russia and Australia—though only for small lots of hessian generally for the ready and near positions—helped maintain the price trend. Fluctuations were wide in the week, the hedge market looked up on scattered bear support, though cautious bulls took their profits at the bulges. After Monday, there was a reversal of the trend on reports of a drift in spot sacking when tired bulls began selling. Bears too took advantage of the situation and started hammering prices down. Towards

the close, sacking for May and August was marked down after wide fluctuations. Hessian escaped a setback in view of the firm trend in the spot market. Price movements were narrow. Turnover was fair in sacking and small in hessian. The closing undertone was easy in the former, and cautious but steady in the latter.

Wednesday's quotations were as follows:

	April	May	June	July-Sept.	Oct.-Dec.
40in. 7½oz.	33.50	33.75	33.90	34.20	34.10
40in. 8oz.	36.50	—	—	—	—
40in. 10oz.	45.40	45.85	45.90	46.25	46.15
B Twills	113.50	114.10	114.40	115.05	115.50
Cornacks	115.00	115.90	116.25	116.75	117.25
Heavy Cees (Plat)	113.75	113.85	114.00	114.50	115.00
A Twills	134.00	135.00	135.50	136.50	137.75
Liverpools	127.50	128.00	128.00	128.25	128.25

Raw Jute: Trading was interrupted by holidays during the past week. With daily arrivals in the upcountry markets shrinking to around 25,000 maunds, there was a shortage of selected grade fibre. The floating stocks of such grades were negligible, and holders were inclined to squeeze a higher price since mills were selective in completing their current quota of 200,000 bales. So prices tended to harden somewhat in narrow fluctuations. Turnover was small, generally confined to better-grade jute for longer positions in the mofussil markets. Good crop prospects induced nervousness among holders of lower-grade jute and mesta. They were inclined to discount prices below the official minima. But mills showed little interest even at

such levels. As a result, the selling pressure continued throughout the week. In the futures market, Upper Assam White Bottoms for June enjoyed brisk bear-support earlier in the week, which helped prices after a see-saw battle between bear and bulls. But after Monday bulls started unloading in an effort to lighten their month-end commitments. Bears took advantage of this and resorted to aggressive short-selling, pushing the price to the lowest level for the month. The lower levels attracted fresh bear-covering against their short positions. Towards the close, prices hardened somewhat from the week's lows. Turnover was fair, and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)		T.S.D Minimum Prices	
	Rs. A Qtl.	Rs. A Md.	Rs. A Qtl.	Rs. A Md.

changed as they have been at minimum levels all season. The official prices of cuttings and mesta have also been reduced. With the easier trend in prices, Dundee spinners kept out of the market except for small quantities on spot and some very low prices were accepted by sellers. Demand from Continental countries was of small size and this lack of business was weakening the market.

The new crop in Pakistan is making satisfactory progress, and the position appears to be normal for the time of year. However, practically no offers of new crop are being made here, possibly because old crop prices are so low and spinners are refusing to pay a premium for forward shipment.

Old crop prices are lowest at £142 for Mill Firsts, at £109 10s for Mill Lightnings, at £94 10s for Mill Hearts and at £78 for Grade Hearts, c.i.f. U.K., for April-May shipment. Grade Tossa-2/3 was available at £123 10s and Grade Tossa-4 at £105. There were sellers of Output Tossa-2/3 at £91 10s and of Output Tossa-4 at £81, April-May. Cuttings were also quieter at £59 for S.N.C. and at £51 for N.C. Mesta prices were irregular with offers at £84 for A, at £74 for B, at £67 for C and at £49 for cuttings, c.i.f. U.K., for April-May shipment.

The Siam jute market became easier for top qualities, but unchanged for others. This was due to a certain amount of buying interest shown by Japan in grades B and C. Offers were at £77 for grade A, at £69 for grade B and at £66 for grade C, delivered mill Dundee for April-May shipment.

The Calcutta goods market was quiet in hessians but steady for sackings. Some buying interest was shown here during the past week. Prices were at 69s for 40in. 10oz. and at 51s for 7½oz. a 100 yards f.o.b. Calcutta for April shipment, at 69s 7d and 51s 5d May and at 69s 8d and 51s 6d June. B Twills were at 172s 4d, 173s 5d and 173s 11d for the respective shipment periods.

Commodity Markets

SOUTH INDIAN TEA OUTPUT AND EXPORTS RISE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

IN 1963, south India produced 87.7 million kilograms of tea, according to the latest estimate of the United Planters Association of Southern India. The production shows a smart gain over the previous year's crop. This was inclusive of the estimated production of factories without estates. Their contribution was to the tune of 7.9 million kilograms. Estates in Madras State produced 36 million kilograms, Kerala 41 million kilograms and Mysore 2 million kilograms during 1963. Over a period of seven years, tea production in south India increased by 19.5 million kilograms from 68.2 million kilograms to 87.7 million kilograms. But the prolonged drought since the beginning of this year has been threatening to cause permanent damage to the crop. A few showers received recently have eased the situation but the rains are not considered enough by the planters. The crop to the end of March is estimated by the trade at 14 million kilograms, against 16 million kilograms of the first quarter of 1963, and 16.8 million kilograms of the same period of 1962.

The sale average for the first quarter of 1964 does not show that the fall in crop has been made good by the price realised. Leaf grades actually realised 2nP a kilo less than the price of Rs. 5.15 realised during the first quarter of last year in the Cochin auctions. Dust grades which account for a much smaller volume, realised Rs. 4.55 a kilogram, representing a gain of 20nP over that of the same period in 1963. South Indian teas offered through London were markedly smaller in volume than

those in the first quarter of 1963 and also fetched a lower price.

South Indian tea exports touched a new peak in 1963, according to the official figures which are available now. Some 108 million lbs. representing roughly 60 percent of the year's crop, were exported as against 103 million lbs in 1962 and 89 million lbs in 1961. Russia which took 15.3 million lbs of tea from Cochin during 1963, as against 8.4 million lbs in 1962, was by and large responsible for the gain. There was a marginal increase of about 1 million lbs in the shipment to Britain which took as much as 46.4 million lbs. Exports to the U.S.A. had fallen from 7 million lbs in 1962 to 5.6 million lbs in 1963. Australia and Canada also reduced their purchases of south Indian teas from Cochin in 1963. The present buying pattern in Cochin discloses a preference for low mediums and mediums. Demand is generally satisfactory and where quality is maintained, prices are firm to dearer.

COFFEE

Drought Worries Growers

According to reports from certain planting areas, coffee growers there are worried about the impact of the drought earlier this year on the new coffee crop. Crop prospects have been rendered dull by the drought, according to these reports. However, any firm conclusion is difficult in the absence of reports from all districts. There are people who think that the crop prospects cannot be bad because

CAPITAL, 30th April, 1964.

several places have had fairly satisfactory blossom showers.

In the meanwhile, pool receipts of the 1963-64 crop have well exceeded the previous level. According to the latest report from the Coffee Board, receipts into its pool to the end of March 1964, were to the tune of 65,643 tonnes, compared with 45,230 tonnes of the previous season. This 65,643 tonnes consisted of 28,267 tonnes of Plantation, 9,325 tonnes of Arabica Cherry and 28,051 tonnes of Robusta. There was 100 percent increase in robusta harvest, when compared with the 1962-63 season. Robusta has been enjoying good demand for sometime now in the foreign market, so much so this increase in the production of this inferior grade is not a thing to be regretted. In the last export sale robusta had buyers at prices varying between Rs. 195 and Rs. 200, a 50 kilograms. The price range for the best grade Plantation "A" was Rs. 231 to 256 a 50 kilograms.

Brazilian coffee crop for 1964-65 is currently estimated at 6 million bags, against the export quota of 18 million bags allowed to that premier world producer by the International Coffee Agreement. The deficit is to be made good by drawing from the carry-over stocks from the previous crops. With clear indications of increased world consumption and decreased production, the U.S.A., along with some other major consumers, is pressing for an increase in the export quotas under the I.C.A. The two leading producing countries currently suffering from crop failures are opposed to this demand. A possible collusion between these two opposing views within the International Coffee Organisation might bring to a crucial head the question of success of the regulatory mechanism by August this year. It is said that the reluctance of the U.S. Senate to pass the relevant laws to implement the Agreement has been increasing with the rising price of coffee within the country.

While the import of tea into Britain has fallen from 529 million lbs in 1961

CAPITAL, 30th April, 1964.

to 510 million lbs last year, coffee import by this confirmed tea-drinking nation has increased by 32,773 tons from 42,045 tons in 1958 to 74,818 tons in 1963. It is said that tea consumption seemed to have reached its saturation point in the U.K., and the Britishers are fast developing a liking for coffee.

SPICES

More Earning from Exports

India's export earning on spices during the period April 1963 to January 1964, rose by Rs. 91 lakhs, when compared with that of the previous corresponding period. The items that contributed to this increase were chillies, cardamom, turmeric, etcetera. On the other hand, earnings on pepper, coriander seed and garlic registered a fall. According to the Spices Export Promotion Council, which gives this information through the latest issue of its bulletin, there was a decline to the tune of Rs. 1 crore in the export earnings on black pepper during the period under review. The fall in quantity was to the extent of 2,590 tonnes. The decline was principally in the export to the U.S.A. Exports to Russia, on the other hand, registered an increase during this period. Cardamom export fell by 148 tonnes, but export earning was higher to the tune of Rs. 22 lakhs. Chillies registered increases both in quantity and value. Export earning on this item has increased from Rs. 81 lakhs to Rs. 2.28 crores. In ginger there has been a decline quantitatively, but due to higher prices, export earning was higher to the tune of Rs. 1 lakhs. There was an increase both in quantity and value in the case of turmeric. While the quantity has increased by 421 tonnes, value has gone up by Rs. 2 lakhs. Curry powder and paste have continued to keep up the rate of increase as in the previous years. They made a gain of Rs. 2 lakhs during the period under review.

recommended that the planters should be allowed the grant of subsidy and loans under the Industrial Housing Scheme available to industrial employers, but from which the planters were so far excluded. If the entire plantation labour were to be rehoused in a 12-year period according to standards of construction laid down under the Plantation Labour Act, it would involve an investment of Rs. 240 crores in fixed assets which will earn no income for the investors. The industry had a total capital investment of around Rs. 116 crores as estimated by the Plantation Inquiry Commission in 1955. The housing group, however, concedes that the needs of the industry for development may be considered on par with the needs of the labour housing according to standards laid down.

TEA

Prospects for Tea Crop Good

(BY A SPECIAL CORRESPONDENT)

SOME Calcutta tea experts consider that crop forecasts from northern India indicate an early opening this season. An average over the past few years would also suggest that more favourable climatic conditions are due this year. Fairly large areas have been planted or replanted in the past ten years and these new or renovated plots should show the benefit from scientific application of irrigation and fertiliser. So by and large, there is the possibility of another reaped production, or, at any rate a crop to equal 1961's when 273.4 million kilograms of tea was manufactured.

Coming back to the prospects for 1964, a recent tour of Darjeeling shows that although there has been very little rain this year, the first flush has burst out with rather more than normal force. Unfortunately, the stronger growth has not helped quality and samples to hand in Calcutta are considered rather disappointing. The anomaly of a strong flush without rain is explained by the fact of last year's autumnal rains. These came later than usual, and it is reasoned that the very deep tap roots which grow on bushes planted on hilly sections allowed the tea to tap the moisture left in the soil by the late rains throughout the cold spell. Anyway, Darjeeling has made an early start in quantity. Second flush samples have not yet come to hand Assam and the Dooars are expected to open early this year, and

the new railway bridges will probably expedite despatches. There is already more activity reported in forward freight bookings from Calcutta.

News from Cachar is more encouraging, as it is learnt that changes in ownership have almost always resulted in more economical working of estates in that district. Moreover, the produce from many gardens has been fully up to standard.

Australia Encourages Imports

Australia and New Zealand have exempted tea from import licensing and the latter has decided to renew Customs duty on bulk tea. Switzerland also proposes to abolish all Customs duties on tea. A campaign to promote consumption of Indian tea in Switzerland is being started.

Although tea continues to be the cheapest beverage, it is noteworthy that more expansive refreshment are on offer in increasing quantities. Instant coffee has helped to stage a considerable advance in consumption, particularly in the U.K. A study shows that in recent years, expenditure on coffee drinking has risen by about 50 percent, while tea, cocoa and chocolate have all lost ground. The peak of tea consumption was 10.1 lbs a head some years ago. Coffee is already consumed at 2.7 lbs a head.

Another interesting comparison is expenditure on food in the U.K., which rose by one-fifth between 1955-61 whereas on coffee it advanced by two-fifths, but expenditure on tea was slightly less. In the U.S.A., propaganda is concentrated on young people, but in England, that section of the population is moving away from tea.

There is much talk of a bumper crop from north India this year, but there is still time for hail, cyclones, floods, pests and diseases to work havoc. However, an early and favourable start seems assured, and on average, it is expected that north India should hit the 1961 crop output. South India may reasonably expect to produce at least the same as in 1963, but will probably make more. Added to the supply from Russia, there is another new producer in Turkey. An experimental invoice has already been sold in London—at a profit, of around 2s 7d a lb. In places, the Turkish border runs contiguous with Russian Georgia, and conditions are reported favourable for tea cultivation there, particularly with reference to soil.

COTTON TEXTILES

World Output Declines

IN 1963, cotton textile production in the non-communist part of the world fell for the second year in succession. In those countries for which regular statistics are available, according to the Cotton Board's latest *Quarterly Statistical Review*, cotton yarn output was about 1 percent less than in 1962 and about 24 percent less than in 1961. Production in the U.S.A., continental Western Europe and Japan was less than in 1962, while production in India increased; there was little change in the U.K.'s output. World production turned upward in the course of the year, however. Whereas output in the first half of 1963 was about 4 percent less than in the same period of 1962, output in the second half of 1963 was about 2 percent greater than a year earlier. In the fourth quarter of 1963, cotton yarn output in the U.K., the U.S.A., Japan and India was greater than a year earlier, and the same may be true of output in continental western Europe.

World trade in cotton piecegoods has been declining since 1960, and the 1963 total of exports from the main non-communist exporting countries is estimated to have been about 4 percent below the 1962 level. Much the heaviest fall was suffered by Japan, while shipments from the U.K. and the U.S.A. were also less than in the preceding year. On the other hand, exports from the continental west European countries, India, Pakistan and Hongkong seem to have been rather greater than in 1962. In the fourth quarter of 1963 total exports from the main non-communist exporting countries still seem to have been about 4 percent less than in the corresponding period of 1962, with the U.K. and Japan showing decreases compared with a year earlier and the U.S.A., India, Hongkong and the continental west European countries as a whole probably showing increases.

Exports of man-made fibre fabrics from the principal non-communist exporting countries in 1963 were about 2 percent below the comparatively high 1962 level. The fall was more than accounted for by the sharp drop in Japanese shipments, whereas exports from the U.K., the U.S.A., and the continental west European countries as a whole were greater than in 1962. In the final quarter of 1963, total world trade in these fabrics seems to have been about 3 percent less than in the corresponding period of 1962, with Japan still accounting for much more than the whole of this decrease.

Cotton yarn production in India expanded strongly in the course of 1963, so that by the final quarter it was running at nearly 5 percent above the level of the corresponding period of 1962. Most of the increased production went to the handloom and independent power-loom sectors of the cotton industry, while mill production of cotton cloth did not exceed the previous year's level until the last quarter of the year, and then by less than 2 percent. The plans to increase the number of spindles and looms in the mill-sector of the industry seem to have been making slow progress. The industry blames the Government for failure to issue the necessary import licences.

Indian exports of cotton piecegoods expanded strongly, probably seasonally, in the last quarter of 1963. They probably exceeded the level reached in the final quarter of the previous year, with increased shipments to the U.K. and Ceylon partly offset by a smaller trade with the U.S.A. and the Sudan. In the year as a whole, exports were slightly greater than in 1962, but were barely back to the unsatisfactory 1961 level.

ALUCOID aluminium ...

is at your service by offering various new Sales Service products:—

PLANTATION LABOUR

Housing Target

The working group on plantation housing appointed by the Government of India has recommended that the construction of houses should be maintained at 8 percent a year and no relaxation of this rate was possible unless there was shortage of building materials. No allowance has been made for loss suffered by the employer. The group has also

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to March 1964. As compared with February, the March index for Food reveals a rise of 7

points. The indices for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 609, and 321 points respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 4 points during March 1964.

COMPANY AND PUBLIC NOTICES

KUMARDHUBI ENGINEERING WORKS LTD.

NOTICE is hereby given that an Annual General Meeting of KUMARDHUBI ENGINEERING WORKS, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday, the 29th May, 1964, at 3-40 P.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 30th November, 1963, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and, if thought fit, to pass the following resolution which will be proposed as an Ordinary Resolution:—

"WHEREAS by a Debiture Trust Deed (hereinafter called "the Principal Deed") dated the 30th July, 1946 and made between the Company of the one part and the Trustees of the other part named of the other part several properties of the Company as therein fully described were mortgaged and/or charged in favour of the said Trustees (including their successors in office) to secure the issue of 2,000 4% Redeemable Bearer Debentures of Rs. 500 each

(hereinafter called "the First Debentures") which were thereupon issued and remain outstanding;

AND WHEREAS the Company has embarked on an expansion programme increasing the production capacity of its Foundry and Structural Shops;

AND WHEREAS a part of the finance required to implement the said expansion programme is proposed to be obtained by long term borrowing upto the extent of Rupees forty lakhs;

AND WHEREAS it is *inter alia* provided in clause 4 of the Principal Deed that the Company is at liberty to issue a second series of Trust Mortgage Debentures upto Rupees five lakhs but such provision is neither considered suitable nor sufficient for meeting the purposes aforesaid;

AND WHEREAS the required long term borrowing upto Rupees forty lakhs as aforesaid is proposed to be effected by the creation and issue for cash at par of upto 8,000 Registered Debentures of Rs. 500 each carrying interest at the rate of seven per cent per annum of an aggregate nominal amount of Rupees forty lakhs redeemable at par by the 30th November, 1979 (hereinafter called "the Further Debentures") to be constituted by a separate Trust Deed or otherwise and secured by a mortgage and charge of the same properties as are

comprised in the Principal Deed and ranking *pari passu* in point of security with the First Debentures for which necessary consent of the Controller of Capital Issues has been obtained;

AND WHEREAS it is proposed to increase the rate of interest on the First Debentures from 4% per annum to 7% per annum with effect from the date when the Further Debentures or any part thereof are created and issued;

RESOLVED that subject to such approval of the holders of First Debentures as may be necessary or required in the premises approval be and is hereby accorded to the matters and things aforesaid, and in particular, pursuant to the provisions of Section 293 (1) (a) of the Companies Act, 1956, so far as and to the extent that the said provisions may be or be deemed to be attracted, to the creation of a mortgage or charge over the whole of the immovable property and other fixed assets of the Company both present and future (including uncalculated capital) to secure the creation and issue of the Further Debentures at par for cash and that the Board of Directors of the Company be and is hereby authorised to do or cause to be done all such matters and things as may be necessary or required in the premises;

6. To consider and, if thought fit, to pass the following resolution which will be proposed as an Ordinary Resolution:—

"RESOLVED that pursuant to the provisions of Section 293 (1) (d) of the Companies Act, 1956, the Board of Directors of the Company be and is hereby authorised to borrow from time to time such sums of money in excess of the aggregate of its paid up Capital and free reserves in addition to temporary loans obtained from the Company's bankers in the ordinary course of business as may be necessary, subject to a maximum limit of Rs. 150,00,000/-"

The Share Transfer Registers of the Company will be closed from the 15th to the 29th May, 1964, both days inclusive.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately time of payment of dividends. T means that dividend tax is deducted at source.

THE SHORTCOMINGS OF THE MAHALANOBIS REPORT

THE most charitable comment one can make about the Mahalanobis Committee's report is that it is a research document, and not a prescription for policy. Like any research tome, its study of income distribution and concentration of economic power has taken time to compile—some 40 months. And, also like research studies that pour out of certain universities, it is less concerned with making sense than with the sheer "weight" of its observations. Those who take the trouble to read this massive report—not many will, because the prose is not exactly inviting—can draw whatever conclusions they wish.

Take, for instance, the issue of the concentration of economic power, which has been given a lively political interest by the emotion worked up by the "Kamarajed" Ministers at the last session of the ruling Party in Bhubaneswar. The Committee says that there has been no appreciable reduction in concentration and this is held to prove the inadequacy of the "current strategy of economic development in one of its important aspects". The "aspect" is undoubtedly important—witness the intense interest in trust-busting even in the U.S. citadel of private enterprise—but can concentration be divorced from the logic of technology? In industry after industry, the minimum economic size of a viable unit has doubled or trebled since the war. A one-million-ton steelworks was a fairly large unit 20 years ago, but today 2 million tons is regarded as the optimum for plants producing sections, while the capacity of a flat products plant has to be nearer 4 million tons. This is the result of the shift from batch to continuous production on which hopes of improved productivity and lower costs rest. The trend, which must obviously aggravate concentration, holds good as much in socialist as in capitalist countries, which only goes to show that it is not amenable to ideological correctives.

In a developing country just starting on the long road to industrial maturity, the search for economies of scale leads inevitably to situations where the immediate size of the market does not warrant more than a single unit. It is, of course, open to the policymaker to throw economic caution to the winds and authorise the starting of several units at once, a decision which may not necessarily be disadvantageous to those who make it, however much it penalises the economy. Having made this "bold" bid to checkmate would-be monopolists, the decision-makers will often have to proceed at once to countervailing measures to prop up the uneconomic units against the chilly winds of competition. In India, with her chronic foreign exchange deficits, imports are hardly a threat but even so the life of such units will be insecure without continuous sustenance, taking the shape of cheap official credits in its least objectionable form. Consumer complaints will, of course, go by the board, notwithstanding the creation of so-called competitive units within the same industry.

In fairness to Professor P. C. Mahalanobis and his colleagues, one must acknowledge that they

are not insensitive to technology. After having discovered that the biggest 20 groups in the corporate sector have increased their share of the total paid-up capital from 29.2 percent in 1951 to 32.4 percent in 1958, they thoughtfully add the rider that the growth of big business does not necessarily mean the adoption of anti-social policies. Unfortunately, the enquiry does not proceed beyond judging concentration by this general yardstick to a study of the uses to which new capital has been applied. Had this been attempted, the point would have emerged that the relatively greater share of big groups within the corporate sector reflected only their increasing participation in such capital-intensive branches of manufacture as heavy chemicals and machine-building. Nor has the Committee studied whether the control of big groups has not itself undergone significant changes because of the lumpy investments required in new industries. In many cases, ownership within the groups has been diluted in response to the need to mobilise sufficient resources for large new projects. The fact of the Life Insurance Corporation's holdings in some of the largest units provides a ready illustration of this trend.

As even ardent socialists concede in private, reducing concentration and striving for rapid growth are quite incompatible. There is no alternative to large and economically viable units because the country simply cannot afford the higher cost of creating the same capacity in smaller plants. And since much of the equipment must still come from abroad, the higher cost will largely have to be found in foreign exchange, with effects which are obvious in the present situation. Again, in industries which have either a direct export potential or contribute to exports indirectly by providing starting materials, economies of scale can be ignored only at the cost of making the odds against India even heavier than they already are. It was in recognition of these several factors militating against the dispersal of capacity that New Delhi's leading lights lately began to speak up against the fragmentation inevitable when the issue of regional balance is approached in arithmetical terms. There was, for instance, the note on industrial policy submitted to the Congress Working Committee in the summer of 1962 by none other than Mr. C. Subramaniam who now presides over the Ministry of Steel, Mines and Heavy Engineering.

None of this is intended to suggest that the policy-maker should turn a blind eye where the power derived from industrial concentration is abused. The answer to abuse is not to fly in the face of technological imperatives but to sharpen the right weapons to combat it. These weapons could legitimately include a monopolies commission (as it does in the U.K.) provided it really tried to frame the traffic rules for growth, the function attributed to it in a felicitous phrase by Mr. Asoka Mehta, Deputy Chairman of the Planning Commission. Apart from the general supervision such an agency may provide, the Government already has an armoury at its command in the various regulatory laws. Any alarm at industrial

concentration is in the circumstances unjustified, unless one discounts in advance the Government's capacity to make use of the powers it already has.

In India's present situation, the need clearly is for more concentrated industrial development rather than less. A case in point is provided by the motor-vehicle industry where serious thought has to be given to developing common production facilities to undo the damage done by starting more units than is justified at the present level of output. The merit of the plea for economic common sense is acknowledged in the Committee's report when it says that the need is for a policy of regulation and continuous scrutiny to guard against anti-social consequences rather than an indiscriminate assault on concentration. Since there is no indication in the report itself of the criteria to be used in determining the economically justified size, one can hardly be sure what the Committee really means. It is to be hoped that matters like this will be left for decision, not by politicians and perspective planners, but by competent agencies familiar with the specific requirements of each industry.

Having accepted the rationale of bigness on economic grounds, it is amazing that the Commit-

POOR OUTLOOK FOR PAPER

THE trend in paper shares over the past year has been disappointing. The index for the ordinary shares has dropped from 197.7 to 193.1 (base year 1952-53 equals 100), although the general index for all industrial equities has risen from 163 to 165.8. The unrealistic prices the Government has fixed for paper have largely contributed to the decline. When the prices were last increased in June 1962, they did not fully compensate the industry for the increases in production costs. There has been a further substantial rise in costs since. In his address from the chair at the annual general meeting of the Indian Paper Makers Association in Calcutta last week, Mr. M. L. Zutshi discussed the rises in various items of cost to explain why paper prices in India are higher than the international rates. (A fuller version of the speech is printed on a later page in this week's issue of *Capital*.) The cost of indigenous raw materials and chemicals is at least 50 percent higher than it is abroad. Foreign factories enjoy the benefit of lower overhead costs because their size is bigger. They produce their own basic chemicals, generate their own electricity and have extensive plantations for raw materials. All these lead to economies in production.

Because of the poor profitability, paper mills in India have not been able to plough back enough money for rehabilitation, expansion and diversification. As Mr. Zutshi pointed out, the industry did well some years ago largely because the existing factories were able to finance their expansion schemes from retained profits. But their reserves have now been badly depleted. It is, therefore, not surprising that expansion has slowed down. Not only have the retained profits declined; it has also become difficult for the industry to attract fresh funds from the capital market. The fact that most of the new paper company shares are quoted below par indicates the poor confidence which the investor has in the outlook for the industry.

Judging from the present situation, it is unlikely that the output target of 700,000 tons will be achieved by the end of 1966. The production of paper and boards has risen from 298,000 tons in 1959 to 465,000 tons in 1963; the installed capacity is more than 549,000 tons. With the completion of some expansion schemes and the new projects now being implemented, an additional capacity of about 145,000 tons is expected to materialise during 1964-65. A further capacity of 70,000 tons may be available by 1965-66. The Government has also approved the expansion of some of the existing mills by the installation of balancing equipment, which may provide a further capacity of 120,000 tons. It is thus possible that the third plan capacity target may be achieved by the end of 1966, provided all the schemes are completed on schedule. But even if the projected additional capacity materialises, it is doubtful whether the

tee should seem to turn on the Government for its part in encouraging industrial growth. Expansion—especially in highly capital-intensive fields—has indeed been encouraged by institutional assistance from State-sponsored agencies, but was this wrong? The Committee's note on the assistance provided by them suggests that it has misgivings on this score. But this amounts to facing both ways at once—if economic considerations dictate large units, is not financial aid all the more necessary to facilitate a start on the right scale? The need for help is obvious in a situation where the entrepreneur's ability to mobilise resources has been limited both by the Government's pricing policies and the pre-emption of savings by the Exchequer.

The same illogicality is seen in the lament over the direction of bank credit. Small-scale industries should indeed receive greater support from lending institutions, but any move in this direction will be self-defeating unless the banks can simultaneously balance the risks by substantial investments in the large well-established industries. This is evident from the way the L.I.C. has distributed its investments—not out of special affection for big business but in discharge of its responsibility to policy-holders.

actual production will amount to 700,000 tons in view of the difficulties concerning the supply of pulp, chemicals, stores and spare parts which the industry continues to face.

The Government has been keen to sanction new units, but it appears to overlook the fact that it is more economical to add extra capacity to the existing units than to set up altogether new mills. It is roughly estimated that a capital outlay of about Rs. 3,800 is required to install new capacity for every ton of annual production, while it costs only Rs. 2,000 to install similar capacity in an existing unit. It is, therefore, necessary to encourage existing units to undertake expansion by raising paper prices to a more realistic level. A reasonable return has to be allowed on the employed capital, and also an element for rehabilitation. Since manufacturing costs, as well as Central and State Government levies, keep on rising, a flexible price

REMEDIES FOR INFLATION

THE major countries of western Europe are now demonstrating methods of economic restraint. Italy and France are grappling with internal inflation; West Germany and Switzerland are trying to restrict an inflow of funds; Britain is adjusting a growth-rate that is deemed excessive. Not until late in the year will it be possible to judge whether Britain's April Budget has regulated the economy appropriately, but it is known that last year's Budget provided a stronger economic stimulant than the Chancellor of the Exchequer intended; and it appears that the restraints imposed more recently in Italy may have been too violent. The techniques of fiscal control are evidently far from perfect. However, it is fiscal rather than monetary control that is regarded as appropriate in the present circumstances. The Bank of England expressed a belief that the City of London approved when it said in its latest quarterly bulletin that any further moderating policy "should aim to avoid abruptness and to cause as little disturbance as possible to two activities now essential to the economy—exports and the continuous modernisation of industrial capacity". To promote exports and industrial investment it may be necessary to restrain consumption; and for that purpose fiscal means are more effective than monetary means.

The authorities' task would be easier than it is if policy could be decided by such simple rules. It may be accepted that monetary restraint, operated through Bank rate and bank credit, tends to restrict investment, but it cannot be so readily accepted that fiscal restraints on consumption do not affect investment. Industrialists may invest for efficiency, but they are reluctant to invest for expansion, when demand for their products is

policy is necessary to cope quickly with changes in production costs.

Mr. Zutshi took an optimistic view of the industry's growth prospects. The per capita consumption of paper in this country is low, but the demand may rise to nearly 40 million tons a year "in the not too distant future". The growth of indigenous newsprint production has also been far from encouraging. The present output, which is far below requirements, amounts to only 30,000 tons a year, against the target capacity of 150,000 tons fixed under the third plan. Of the three schemes licensed in the private sector, two are based on bagasse and one on Himalayan fir and spruce. One of the bagasse schemes, it is believed, has been abandoned. Since Himalayan woods provide the right type of raw materials for newsprint, the Government should help the licensed schemes to take shape quickly.

The growth potential of the industry is great, but several problems may come in the way. For example, the shortage of pulp has been growing, and there is an obvious need for encouraging the installation of more pulp mills. Bamboo is in short supply, so it is essential to encourage the production of pulp from fibres and forest products. State Governments adopt irrational policies for leasing forests in their areas. Not only have they discriminated against factories situated outside their jurisdiction, but they have also steadily raised the royalty rates. Some State Governments have given forest leases on the basis of public auctions, with the result that contractors rather than the mills get the leases. Since the former are not interested in the scientific development of forests, they have exploited the resources wastefully. To ensure scientific development, it is necessary to give long-term leases to mills on reasonable royalty terms. Vigorous efforts also have to be made to locate new fibrous raw materials for the production of pulp. To sustain the present output of mills, a liberal supply of foreign exchange is necessary; otherwise it will be difficult to stock the spare parts which are required to ensure uninterrupted working. If adequate foreign exchange is released for the import of balancing equipment, the existing capacity can be increased. As Mr. Zutshi pointed out, paper has been included in the list of industries which qualify for tax rebates under the 1964-65 Finance Act, but the dividend tax and the capital gains tax on bonus shares will almost neutralise the benefit.

restricted. Inflation promotes investment for expansion, thus increasing a nation's real capital; but it is inequitable and distorting and hazardous. The problem is how to promote investment without inflation. But not, indiscriminately, investment for expansion. It is important to distinguish between expansion of assets and expansion of output. Better, because more economical, than building more factories is increasing the output of existing factories. It was modernisation, not expansion, of industry that the Bank of England particularly mentioned. British policy will be observed with special interest because the problem in Britain is not (as, most conspicuously, in Italy) how to deal with inflation but how to prevent it, while maintaining continuous expansion. The risk of inflation, economists warn, is in the tightening of the labour market. Demands for substantial wage increases are difficult to resist when competition for scarce labour is keen; and labour unions have refused to restrict their demands because employers will not accept control of profits.

The solution of this problem was implicit in a recent remark by Sir Norman Kipping, director-general of the Federation of British Industries: "It is productivity that can curb inflation." Productivity can reduce costs and increase the supply of goods to satisfy the demand for them, so that restriction of demand is unnecessary. But, although much existing equipment could be used more efficiently, a big improvement in productivity involves substantial spending on new equipment; and such capital investment is inflationary until it becomes productive. To cure inflation, in countries where labour costs are high, it is necessary to spend a lot of money. To avoid causing inflation by such

CAPITAL, 7th May, 1964.

spending it is necessary to divert resources—unless the financial gap can be filled by external borrowing, which is impracticable on the scale required by a developed country. Social services must be extended rather than curtailed. Restraints on consumption may be unavoidable, but they discourage industrialists in the countries applying them and they inhibit international trade. The communist countries enjoy an advantage in this respect: they allocate scarce resources between investment and consumption, usually in favour of investment. But they have not avoided all the problems of inflation; and they have become aware that consumption, too, is important. Russia, particularly, has acknowledged that the burden of military spending is too heavy.

The West could benefit even more from a big reduction in military spending; for the Western economies are not so tightly controlled and their defences against inflation are, therefore, weaker.

THE SHORTAGE OF COTTON

COTTON production in India has been falling short of the textile industry's growing requirements. This has pushed up prices to well above world parity, and thus seriously undermined the industry's competitive position in export markets. Besides, in order to make good the domestic shortfall, the country has been importing huge quantities of cotton in recent years, causing a serious drain on scarce foreign exchange resources. With production in the third year of the current plan estimated at 5.7 million to 5.8 million bales, it is extremely unlikely that the output can be stepped up to 7.1 million bales by 1965-66. The deficit is likely to increase further when all the licensed spindles are installed. Since self-sufficiency in cotton appears to be out of the question for quite some time to come, the question of blending a suitable staple fibre with cotton has been engaging the attention of the Government as well as of the industry.

At the recent annual meeting of the Southern India Millowners Association, the Textile Commissioner, Mr. R. Doraiswamy, hinted that the Government might have to judge the question of cotton allotment to mills in future on the basis of their staple fibre consumption. He expressed the hope that with assistance of the three textile research associations, the industry would be able to use staple fibre up to 10 percent of its total fibre consumption. While ordinary viscose staple fibre is generally believed to be unsuited for blending with cotton, and in any case, it admits of no more than 15 percent blend, the high tenacity polynosic fibre is said to be admirably suited for blending with cotton even up to 50 percent. The Planning Commission's Staple Fibre Group has recommended the use of polynosic fibre and the Government is considering the question of licensing units for producing it. These schemes will naturally take time to fructify.

Referring to the Government's proposal that some 5 percent of the raw material required by mills should consist of staple fibre, the chairman of the Bombay Millowners Association, Mr. Radhakrishna R. Ruia, has urged that the scheme should be given earnest consideration and should be adopted only after a full trial. The cloth so produced should be acceptable to the consumer from the point of view of durability and quality. Another pertinent question posed by Mr. Ruia in his speech is whether staple fibre can be produced in the country in sufficient quantities to meet the combined needs of the silk and cotton mill industries. Nagda and southern India, the main staple fibre producing areas in the country, turn out nearly 33.5 million kilograms annually, the bulk of which is taken up by the silk industry. It is, therefore, difficult to understand how cotton mills can secure staple fibre if they are to consume it on a scale equivalent to 5 percent of their total raw material requirements. Mr. Ruia has suggested that after carefully examining the scope for using polynosic fibre, the producers of staple fibre should be requested to manufacture it on a commercial scale to suit Indian conditions.

But the search for a suitable blending fibre should in no way divert attention from measures to step up cotton output. Efforts to attain self-

Very significant is the recent statement by Mr. Roswell Gilpatric, former U.S. Under-Secretary of Defence, that the U.S. defence budget may be reduced about 25 percent by 1970 if the improvement in relations with Russia is maintained. A proportionally similar reduction in Britain (equivalent to some £500 million a year) would benefit Britain even more, as Britain's resources are more strained. In the West, a big "reserve" of resources for modernisation and development at home, and for aid to developing countries abroad, exists in the defence budgets. If it is impossible to release any part of this "reserve" it will probably be necessary to transfer resources from consumption to investment. Imprecise monetary instruments such as Bank rate are not appropriate for that purpose. High long-term interest-rates would operate against investment. So, while the politicians work for secure and inexpensive peace, the Treasury experts should work to make fiscal techniques more reliable.

sufficiency in cotton cannot be relaxed. Self-sufficiency is not a Utopian goal, especially when other cotton growing countries have greatly increased their output through higher productivity. The yield in India is the lowest in the world, barely 110 lbs an acre. Even in neighbouring Pakistan, the yield is much higher, around 250 lbs. It should be possible to bring about an appreciable increase in the yield in India provided more systematic and extensive use is made of fertilisers and irrigation facilities, and there is a liberal supply of rural credit. Excellent results are known to have been secured on demonstration plots in Punjab and Madras, the yield in Sirsa (Punjab) and Coimbatore being as high as 670 lbs and 588 lbs, respectively. The industry has suggested that a sub-

stantial improvement in productivity can be achieved if joint-stock companies are encouraged to take up farming activity. At its March meeting, the Indian Central Cotton Committee had touched on the question of the textile industry participating actively in the implementation of schemes for growing more. The Indian Cotton Mills Federation is at present examining the financial implications of such a move.

Cotton is no doubt a major problem. But apart from an adequate supply and a realistic approach to the problem of substitutes, it will be necessary to ensure a regular inflow of foreign cotton and machinery if the sanctioned expansion of the industry (through the installation of additional spindles and looms) is to be effectively implemented. With the indigenous production of textile machinery remaining far short of the industry's requirements, it will be necessary to draw up a regular programme of machinery imports, which should also include items for renovating and modernising the existing machinery. This is a costly step, but there can be no escape from it if the country is to attain efficiency and economy in production, so indispensable for promoting exports. The stagnation in cloth output in the mill sector in spite of a satisfactory supply of raw materials has intrigued many observers. Several factors have contributed, in varying degrees, to the stagnation in production. These include (1) the tendency on the part of some of the composite mills to sell looms because of relative profitability, (2) some under-utilisation of spindle capacity in the third shift and substantially bigger under-utilisation of loomage in the third shift, (3) slow progress in utilising spindles already licensed because of difficulties in raising capital, (4) delay in the supply of card engines and ring frames by indigenous manufacturers and (5) the shortage of foreign exchange for the import of textile machinery.

Current News and Comment

Russian Aid for Bokaro

The Russian decision to underwrite the first stage of the Bokaro steelworks has left Senator Broomfield, author of the Congressional veto which barred U.S. aid, in something of a fix. He has had, therefore, to resurrect the dubious argument that the Bokaro plant does not have a secure raw material base nor dependable transport links. If the Russians wanted to waste their money on a harum-scarum scheme they were welcome to do so, the worthy senator told a news agency interlocutor.

Even when the doubts were first advanced by Mr. Broomfield, it was obvious that he was using these to put a technical veneer over the real political objections against giving aid to a "State-owned" industry spelt out in the clearest possible terms by the Clay Committee. In fact, Bokaro is a project for which far more spade-work has been done than for any of the three steelworks which came up during the second plan. The ore mine which will supply Bokaro is ready, the coal washeries are either under construction or very near that stage, and the major transport links have been built. There is, of course, a great deal more to be done but the task is by no means unmanageable. To ask, therefore, for a better state of preparedness is to miss the central fact of the Indian situation—an underdeveloped economy in which the building up of the infra-structure must proceed simultaneously with the creation of new bases of industry.

What part politics played in the Russian decision to step in where the U.S.A. feared to tread is not easy to determine. Unlike the Aswan dam where the Russians were obviously trying to make political capital by coming in when the U.S.A. withdrew, Bokaro does not seem to have a competitive edge. This is largely because with the present thaw in the cold war, both the U.S.A. and Russia have found better things to do than to score points off each other. In India's case, both the American and Russian commitment to help in

development is already so large that a Bokaro, despite its dramatic overtones, makes no great difference. As the Chinese see it, both are equally "guilty" of aiding and abetting India in her "intransigence".

The polemics apart, there is not all that difference between offering foodgrains assistance and helping to build a steel mill. Both contribute equally to bridging the wide gap between resources and needs. Food may disappear in immediate consumption while the steel mill, a shining monument to its donor, will yield benefits for ever afterwards. This difference notwithstanding, the fact must be recognised that steel mills and other heavy industry now being built to give planning its present orientation will be ruled out altogether if the food deficit was not covered by P.L. 480. In that event, there will be little left of political stability to pursue these ambitious programmes of development. In sum, India needs both surplus food and steel mill equipment; any tendency, therefore, to depreciate U.S. aid must be firmly discouraged.

Russian technology, as one hardly needs to point out after the *Sputniks*, is on a par with the best anywhere. But like any of its competitors there are within the larger picture of achievement several dark spots, as for instance in petrochemicals in Russia's case. This explains why her emissaries are rushing to London and Bonn in search of chemical plants for which the total value of orders may run into hundreds of million pounds. In steel, Russians are very good indeed in blast furnaces, but their accomplishment in L.D. steel-making is limited as is evidenced by the arrangements recently made to purchase Austrian know-how against handsome royalties. Even if they can scrape through in this branch, the Russians are hardly in the same class as the Americans where a strip mill—the main rolling facility proposed for Bokaro—is concerned. Was this the reason why Mr. C. Subramaniam, Central Minister for Steel, Mines and Heavy Engineering, was initially seek-

ing Soviet assistance for parts of Bokaro rather than a blanket overall commitment?

Even though the strip mill poses something of a difficulty, India is indeed wise in accepting the Russian offer instead of piecing together the Bokaro plant with suppliers' credits. By definition, these credits would have been for short periods, raising the problem of repayment even before Bokaro could really begin to save imports. Considering the size of liabilities falling due in the next few years, it makes no sense at all to increase the burden. If the urgent need for Bokaro had pushed India into accepting short-term credits, her decision would have caused serious anxiety to existing debtors who keep worrying, mostly *sotto voce*, about the possibility of defaults. It would also have weakened India's case for better aid terms—longer maturities, lower interest rates—if a project like Bokaro were to be financed out of suppliers' credits. Steel is typically an industry with a long gestation period where returns cannot possibly come quickly enough to justify taking short-term loans.

Pig Iron Shortage Affects Foundries

In common with other engineering units, the foundry industry is suffering from an acute scarcity of raw material. Supplies of pig iron amount to about 1.1 million tons, as against an estimated demand of 2.5 million tons. Since a major portion of these supplies is reserved for specific purposes like steel works maintenance, spun pipe manufacture and export promotion, the tonnage available to commercial foundries is only about 200,000. Thus their pig iron receipts amount to hardly 12 percent or 15 percent of their installed capacity, with a consequent rise in unit costs. The annual demand for pig iron is likely to rise to 2.64 million tons in 1965 and to 4 million tons in 1971. Referring to these difficulties in his speech from the chair at the Conference of the Foundry Industry held in New Delhi last Thursday, Mr. K. Prosad pointed out that the grade of pig iron supplied to foundries did not conform to their requirements since the metal is produced in the big integrated steel plants. As a short-term measure to relieve the shortage, he endorsed the suggestion of the Engineering Association of India to import 1 million tons immediately. He also suggested the setting up of low-shaft furnaces to expand indigenous capacity.

The foundry industry is a basic one since its products feed several other industrial consumers. Unlike many other engineering concerns, it does not require any foreign exchange for its working. Most of its 20,000 units are now working on single-shift because of the shortage of pig iron. Its products have gone to the export markets, the shipments having increased sharply from Rs. 12.29 lakhs in 1959 to Rs. 37.60 lakhs in 1963. Mr. Prosad said that foundries in Punjab had contracted to export Rs. 2 crores worth of their products to a firm in the U.S.A. He regretted that the recent modifications in the price structure of pig iron had withdrawn certain facilities allowed to foundries engaged in the export trade.

The Rise in Prices

The wholesale price index for the week ended 11th April (base year 1953 equals 100) stood at 139.4, compared with 139 for the previous week and 129 a year ago. It has thus risen by 7.7 percent in a year's time. The more significant fact, however, is that during the second half of the past fiscal year, the price level, instead of moving downwards, has kept on its upward course. The phenomenon is disturbing, because it indicates that the economy has reached a serious phase of inflation. In his Budget speech last February, the Finance Minister, Mr. T. T. Krishnamachari, confessed that prices were causing the Government a good deal of worry, and fiscal and monetary measures would have to be taken to check the rise. The *Economic Survey*, which preceded the 1964-65 Budget, was more explicit about the dangers of inflation. Since then, the Government has taken a number of measures, particularly to control the distribution and prices of foodgrains. Wholesale dealers in foodgrains are now subject to a licensing

order which seeks to control their profit margin, but its provisions are so stringent that at one time they threatened to suspend their operations. A zonal system has been introduced to control the movement of wheat and the Reserve Bank has taken measures to restrict bank advances against the commodity. More recently, the Government has announced its decision to form a sugar marketing board to handle the internal as well as the export trade in sugar. The prices of these commodities (excluding rice) have risen steadily since October 1963. The index for wheat in that month was only 92; it rose to 115 last February. The wholesale price index for sugar has risen from 136 to 143. The rice index apparently moved down from 132 to 121 within these five months, but the retail price is usually much higher than the wholesale rates.

Many wonder what good the official measures will do. It is perhaps a little too early to pass definite judgment, but one can visualise the difficulties in their implementation. In spite of the drastic provisions, it is not easy to work the food-grain wholesale licensing order, although Sardar Swaran Singh, Central Food Minister, has confidently asserted at the sixth All-India Food Dealers Convention in New Delhi that because of this law, it will be impossible for dealers to manipulate food prices two or three months hence. There are millions of grain dealers scattered all over the country, and the Government simply has not the administrative machinery to check the authenticity of the returns which will be filed by them. On the other hand, there is every possibility that the Central regulatory measure may go the way of the West Bengal Government's order which pretends to fix prices for rice in the State. The zonal restriction on wheat may have brought prices crashing in Punjab, where the State Government has now had to extend the price support scheme; but it also has sent prices soaring in Maharashtra, which is linked with the wheat-producing States of Uttar Pradesh, Madhya Pradesh and Bihar. As for the sugar marketing board, it offers no great hope of improvement. Sugar distribution and prices are closely controlled even now, and it is difficult to see how 100 percent State trading can improve matters. On the contrary, such controls tend to defeat their purpose—first, by depriving industries of the incentive to produce more and thus perpetuating shortages; and secondly, by introducing corruption and malpractices in the trade.

The answer to inflation ultimately lies in greater production. But this is a long-term goal, especially in an economy like India's which is bedevilled by rigidities and shortages. In the short-term, controls and curbs on consumption commend themselves as effective remedies, but they are not easy to enforce. The administrative shortcomings of the Government rob such measures of any justification they may have. The immediate answer to the problem then lies in the more fundamental direction of controlling public expenditure, which has been the root cause of the inflation in India. As industrial growth and agricultural output have stagnated, the accelerated rate of public expenditure on account of defence and development has had a particularly adverse effect on prices. If the Government is serious about holding the price line, it has to reduce its own expenditure, by economising on its routine administration and by a more careful selection of plan projects.

Policy for Motor-vehicle Radiators

Reliable reports indicate that the Central Government has decided to revise its policy of reserving further licensing for the manufacture of radiators for the small-scale sector. This would make it possible for the large-scale units to implement their expansion schemes. This follows the recommendations of the Directorate-General of Technical Development that the existing units should be encouraged to expand so as to cut down their costs and that the decision to reserve further licensing of radiators to the small-scale sector should apply to purely new undertakings, and not to schemes of substantial expansion. There are some 14 firms engaged in the manufacture of radiators of which eight are in the small-scale sector. Two more small units are expected to go into production shortly. The Development Council has assessed the total demand for radiators by 1965-66

at 368,500 units. Against this, the total capacity which now exists in the large-scale sector is only 58,200 units. Teksons Private Ltd, Bombay, has asked the Government's permission to expand its production from 6,000 units to 24,000 units; Universal Radiators of Coimbatore proposes to raise its capacity from 6,000 units to 18,000 units, Bharat Radiators of Bombay from 15,000 units to 30,000 units and India Radiators of Madras from 12,000 units to 13,800 units. Assuming that the expansion of these four firms is approved, which is now very likely, the total capacity in the large-scale sector would be 105,000 units. The total capacity in the small-scale sector is placed around 56,500 units, which brings the total capacity in both the sectors after the proposed expansion, to 161,500 units. This is substantially lower than the target set for the third plan. There is thus sufficient scope for permitting expansion of the existing units. The Directorate-General of Technical Development is of the view that it would not be advisable to depend on the small-scale manufacturers entirely for this purpose. The expansion of units in the large-scale sector would enable them to reduce their production costs. It will also encourage quality production which can be achieved only through specialisation and this is possible if the volume of production is sizable and economical and the proper type of machinery is installed. What is more, expansion of these units is not likely to involve any strain on foreign exchange resources as the machinery will be available from indigenous sources.

Sales Tax Relief for Exporters

The Saraiya Committee, which was set up by the Government of India to examine the effect of sales tax on export commodities, has made far-reaching recommendations. The Committee has amply recognised that sales tax is "a built-in handicap to export development", and has suggested that exports should be freed of this burden. Exporters will warmly welcome the proposal that "the relief should be from the entire burden of the tax". Sales tax figures in Indian production costs in more than one way. The impost not only falls on the finished product but also enters into industrial costs through the various raw materials and components used. It thus has a cumulative impact on the cost structure, and renders Indian goods less competitive in overseas markets.

The Committee has done a good job of sorting out the sales tax levies in various States—a task which is by no means easy, considering the bewildering diversity in the range and rates of the tax. Because of the difficulty in calculating the exact burden of sales tax on exports, the body has recommended that in the case of local sales tax "two sales prior to the sale in the course of export should be exempted" from the levy. In the case of non-maritime States, which may experience administrative difficulties in adopting this suggestion, the Committee has advised that they should introduce a scheme of set-offs or rebates on commodities actually exported.

As for Central sales tax, which is levied on inter-State transactions, the Committee has suggested that vendors in the State of origin should get from their Government a rebate of sales tax on transactions which result in exports. The sellers should be permitted to make the adjustments in their returns without being asked to pay the tax initially. To offset the snowball effect of sales tax levied on raw materials and components, the Committee has favoured allowing a rebate or refund of the local sales tax "in the same proportion as the value or quantity of goods produced bears to the goods exported". In the case of inter-State transactions, an *ad hoc* relief of 1 percent of the f.o.b. value from Central sales tax levied on raw materials and components used in export goods has been suggested. For incalculable or unexpected elements entering into the price of other goods, the Committee has proposed an *ad hoc* relief of $\frac{1}{2}$ percent of the f.o.b. value.

Exemptions or rebates will be available only on sales made to registered exporters. The Central Government has been asked to prepare a list of exporters with a minimum yearly turnover of Rs. 1 lakh for this purpose. In the case of unregistered exporters, refund of tax actually paid may be made on producing proof of exports. Since foreign trade falls under the purview of the Centre,

the Government of India has been asked to give adequate compensation to the States which suffer a substantial loss of revenue as a result of the proposed reliefs.

Handicaps of Glass Manufacturers

Speaking from the chair at the annual general meeting of the All-India Glass Manufacturers Association in Bombay recently, Dr. S. R. Lee said that the future of the glass industry in India was very bright and "full of exciting possibilities". The industry has achieved conditions of near self-sufficiency in glass containers, table and lampware, sheet glass, wired and figured glass and optical glass. But the requirements of the electrical lighting and incandescent industries, for example, were not yet being met to any appreciable extent. Apart from increasing the output of glass manufactures, the main problem which faced the industry was that of reducing production costs and of improving quality. It was unfortunate that the soda ash prices in India were high compared with those in competing countries. Since soda ash accounts for nearly 36 percent of production costs, this makes a material difference.

Another difficulty is that the Indian glass industry is not able to import a sufficient quantity of spare parts, components and equipment for its requirements and production is frequently held up for want of these. Mr. S. S. Kumar, Director-General of Technical Development, in his address to the meeting pointed out that it was not possible to give each glass factory in India a blanket licence of Rs. 5,000 a year for importing spare parts and other requirements as the country is faced with foreign exchange difficulties. There might be some reasonable difference of opinion about the limit of the blanket licence, but there is no doubt that glass factories deserve to get some quota of foreign exchange for importing parts and spares without having to go through the time and money-consuming formalities of getting licences as and when the need for importing the requirements arises. Moreover, there is a strong case for an improvement in the system of distributing soda ash supplies to the glass factories. The prices which they have to pay for it also need to be reduced. The Indian glass industry still depends on foreign technicians and the quality of goods produced would not improve unless efforts are made to train local talent and to organise research in the industry on more rational lines.

It is rather disquieting that exports of Indian glassware have not increased appreciably and were only Rs. 27½ lakhs in 1963, compared with Rs. 26 lakhs in 1956. The two Indian delegations which visited the west Asian and the Far Eastern countries, respectively, came to the depressing conclusion that it might be difficult to capture these export markets. The main reason for this is the poor quality and high production costs of Indian glassware in comparison with the goods produced in rival countries.

The Industrial Development Bank

The Lok Sabha passed the Industrial Development Bank Bill last week with little opposition from members. The welcome accorded to the measure has to be traced to its liberal provisions to help bridge the gap between the demand for and the supply of industrial finance. The Central Banking Enquiry Committee recommended the establishment of an industrial development bank as far back as 1931. The Government has obviously profited from experience abroad: the Industrial Development Bank of Japan finances key industries in that country and there are similar institutions in West Germany, Canada and Ceylon, although their activities differ in detail. The Government of India has some special purposes in view in deciding to set up the new Industrial Development Bank. There is no dearth of industrial financing agencies in this country. The Industrial Finance Corporation, the National Industrial Development Corporation, the State Financial Corporations and the Refinance Corporation for Industry were all created for meeting the credit needs of industry.

The new institution is being brought into being on three specific considerations. Firstly, its

resources will be larger than those of the existing agencies. As the Finance Minister, Mr. T. T. Krishnamachari, said in the Lok Sabha, the I.D.B. will have an authorised capital of Rs. 50 crores to start with, which may be increased to Rs. 100 crores later. The Government proposes to set up an industrial credit fund and a development assistance fund to provide long- and medium-term finance for industrial expansion. Secondly, the new institution will be subservient to the Reserve Bank and will co-ordinate the activities of the existing credit agencies, with the possibility of absorbing some of them in the future. Thirdly, the I.D.B. will undertake the financing of such important industries as fertilisers, petro-chemicals, power, and alloy steel which cannot be financed on strictly commercial considerations but which nevertheless should be promoted to accelerate the growth of the economy. These aims are welcome in principle. Mr. Krishnamachari has said that the I.D.B. will have much greater freedom in conducting its activities than the existing institutions. Furthermore, it will be in a position to supplement the capital and other resources of the existing agencies, refinance their loans, grant direct loans for specific projects and finance the export of capital goods by the engineering industries.

But the I.D.B. stands in danger of becoming yet another monolith. A giant organisation is usually slow and inefficient in discharging its functions, as is evident from the activities of the State Trading Corporation or the L.I.C. Moreover, the fact that the I.D.B. will not always provide finance on strictly commercial considerations is not a happy principle. This is because political pressure may be used to secure loans for industries which may not be economically sound. Mr. Krishnamachari did not say what the Government proposed to do if the working of the I.D.B. proved unprofitable due to the relatively low returns on such loans.

Rayon Fabric Exports Rise

Exports of rayon and synthetic fabrics from Bombay, Calcutta and Madras (these ports normally account for over 90 percent of the country's total exports during March amounted to 5.92 million metres, valued at 60.10 lakhs, compared with 4.35 million metres (Rs. 48.25 lakhs) in the previous month and 6.39 million metres (Rs. 62.03 lakhs) in March 1963. Of the 5.92 million metres exported in March the Asian zone took 2.66 million metres (Rs. 27.02 lakhs) to be followed by Africa with 2.24 million metres (Rs. 20.43 lakhs), Europe 530,000 metres (Rs. 8.25 lakhs), American zone 285,000 metres (Rs. 2.60 lakhs) and Oceania 202,000 metres (valued at Rs. 1.80 lakhs). Exports during the first quarter of this year at 21.607 million metres valued at Rs. 2,234 crores show an impressive improvement over the performance during the corresponding period of last year when exports totalled 13.52 million metres, valued at Rs. 1.29 crores.

Exports to the Asian zone rose from Rs. 83.43 lakhs (January-March 1963) to Rs. 1.19 crores (January-March 1964) and African zone's off-take more than doubled from Rs. 27.22 lakhs to Rs. 56.72 lakhs. The increases were more marked in the case of other zones—from Rs. 7.76 lakhs to Rs. 24 lakhs for European zone, from Rs. 7.93 lakhs to Rs. 17.45 lakhs for the American zone and from Rs. 2.75 lakhs to Rs. 6.13 lakhs in the case of Oceania. The variety-wise break-up of exports during January-March 1964 is 1.414 million metres (Rs. 1.365 crores) of filament rayon fabrics, 4.3 million metres (Rs. 50.15 lakhs) of spun rayon, 2.99 million metres (Rs. 50.39 lakhs) of synthetic fabrics and 158,000 metres (valued Rs. 4.30 lakhs) of mixed fabrics.

Overstaffing in State Concerns

The Estimates Committee of the Lok Sabha, in a report on the personnel policies of public undertakings, has drawn attention to overstaffing in most of them, and has suggested some methods to avoid employing more people than are necessary. Overstaffing of public-sector enterprises reduces their efficiency and unduly increases the unit cost

of production, as establishment expenditure accounts for a major portion of the total costs. Some idea of overstaffing can be had from the fact that Hindustan Steel has a surplus of over 22,000 men, compared with its requirements for full-rated capacity. Rourkela employs 19,000 persons, in a one million-ton plant, as against 6,000 men employed in the U.S.A. Even after full account is taken of the superior machinery and methods used in America, the personnel employed in India is excessive. There are many causes for this unsatisfactory state of affairs. One of them is that in the initial stages, staff is recruited on a scale required for full-rated production with the result that later on the undertakings find it difficult to increase the workload of employees or to lay off some of them. In most cases, more men have sometimes to be recruited to cope with the increased work, and sometimes to please high-ups backing particular candidates. But the most important cause of overstaffing in public-sector undertakings seems to be that norms to determine the strength of various departments in different industries are either lacking or are not enforced with any degree of strictness.

The Estimates Committee has suggested that realistic estimates of staff requirements should be made for all undertakings, and the staff strength of a unit should be kept at a level slightly lower than the limit recommended by the consultants for a particular stage of production. It is very important that no extra staff, over and above the estimates of consultants, should be employed without the Government's approval, and the latter should keep a close watch on the strength of the staff employed in the public sector. But this would not suffice. The Committee has, therefore, also recommended that a central man-power consultancy bureau should be set up periodically to examine the organisational set-up and man-power requirements of different public enterprises from an objective and detached point of view. Although such a bureau will involve additional expenditure, it would be worthwhile as a means to check excessive recruitment.

It is not only in the matter of the staff recruitment that the public-sector undertakings have gone wrong. The Committee found that the chairmen and the managing directors of these concerns have been changed very frequently resulting in waste, as the experience and knowledge gained by these officers could not be used properly. The Estimate Committee's suggestion that top executives in public-sector enterprises should be kept in one place at least for a period of five years, is basically sound. It is also essential that the Government should lay down broad principles for determining the strength of a board of directors on the basis of "essential representation" which includes management, ownership, business experience and "workability" of an enterprise. It is necessary to get at least some top executives from within the project personnel. This underlines the need for a planned programme to ensure a regular supply of suitable personnel to public enterprises. The Estimates Committee also expressed its disapproval of the present practice of depending on the central services for manning the posts of financial advisers and accountants in these undertakings, and has suggested that a financial and accounts service should be separately organised for State concerns.

Developing Managerial Resources

Even more than capital and raw materials, a rapidly developing economy has to think of

THE BANK OF BANKURA LTD.

amalgamated with

THE UNITED INDUSTRIAL BANK LTD.

Registered Office:

7, Wellesley Place, Calcutta-1.

From 6th May, 1964.

its managerial resources. For ultimately how well the economy grows will depend upon the calibre of its managers and their attitudes. A manager must not only possess a basic discipline such as engineering, accountancy or marketing, but to be really effective, he has also to develop the skills and attitudes of management. How Hindustan Lever views the problem of management development and how exactly it goes about the job is the subject of Mr. P. L. Tandon's chairman's speech, which he delivered at the Company's annual meeting in Bombay recently. (A text of Mr. Tandon's speech appeared in last week's issue of *Capital*.) Mr. Tandon, it will be readily conceded, is best qualified to speak on the subject. Hindustan Lever's management trainee scheme, started over 20 years ago, has, with attention and assimilation of new techniques, improved over the years to a high position by international standards. Hindustan Lever is one of the few companies in India where men from the lower cadres have the opportunity to rise to management.

Mr. Tandon says that with Hindustan Lever, management development is a complex of activities whose main purpose is (a) to anticipate the Company's requirements over the next five to ten years, (b) to select, recruit and train men and women to fill those requirements and (c) to develop attitudes and values in individuals that prepare them to meet their responsibilities at the set standards. All this, ultimately, like capital expenditure, budgeting, annual estimates and operational plans, is the responsibility of the Board assisted by the active participation of all the managers and operated by the Personnel Department, which has a member on the Board.

It takes time—about ten years—to make managers, especially to befit them for higher responsibilities. The instrument of forecasting is the management review which is prepared every year for the next five years. It evaluates in terms of managers the needs of the Company's business which will arise out of expansion, new projects, new products and organisational changes. This need is then equated with the Company's internal resources. In analysing its needs, the Company makes sure that they are genuine and not Parkinsonian; and in quantifying them it knows when they are likely to arise and how to meet them. Planned transfers and cross-postings are a part of development, and people are entrusted with functions different from their original skill or training. Another important advantage of this process is that the promotion potential within the firm gets carefully looked into. The five-year plan is reduced to an annual operating plan of recruitment and the Board is kept in touch with its progress.

From where does Hindustan Lever get its managers? The Company always first looks within to find out who is ready to be made a manager and who is ready to move up. Secondly, it recruits young trainees, fresh from the universities with a good degree. Here it primarily looks for a good mind and a likely ability to possess and develop the set of attitudes which the Company considers important for its business. Hindustan Lever resorts to direct recruitment when it is necessary but in actual practice, this is mostly confined to specialists. The utmost care is taken in recruiting young trainees. No concession is made to influence, and solid ability is preferred to just virtuosity. Applications are screened for conforming to basic requirements of age and quali-

fications; promising candidates are invited for a preliminary interview; a group of six to eight candidates is brought together to a conference table and given a choice of subjects and a case study which they discuss in the presence of four senior managers, who, however, act only as observers. The group is leaderless and has to organise its own discussion and provide opportunity to each member to display his qualities of mind as well as of leadership. The Company tries to make its selection procedure as objective and impartial as possible so that it leaves those not selected with a feeling that the process was fair. But whatever the methods and techniques followed in the selection procedure, personal interviews, group discussions, psychological tests, etcetera, selection is only the first stage in the total process of acquiring and developing managers.

After selection, begins the real task. Training is given individually on the job. Training programme is job-oriented which is about the best way of judging their performance and potential at an early stage. All through the training, the seniors devote a good deal of their time and attention to the trainee's progress. Training never really stops. The Company has designed its own courses, principally to give the managers a broader picture of its operations and its environments and to sharpen their managerial skills. Facilities are provided for specialised training abroad. Promotion is always and invariably on merit, irrespective of age or length of service. The Company believes in the logic of the best man for the job because only then will the job be done best. Evaluating merit is, of course, not an easy task. Evaluation is a constant process, involving progress reports, thorough training, personal contacts by seniors, annual personnel reports, discussions at the monthly Board meetings, job evaluations and short lists of promising men. All these help to ensure unbiased and objective judgment. The capable men rise rapidly, so that they do not lose the fine cutting edge; some are inevitably left behind—arithmetic must work inexorably, for after all the shape of a management structure must be pyramidal. But those left are also carefully looked after. Management development is thus an integrated operation which has a quality of wholeness like marketing or manufacturing, and not merely the application of a series of isolated techniques.

CORRESPONDENCE MAKING MINI-TRACTORS IN INDIA

(TO THE EDITOR OF "CAPITAL")

Sir,

I was very interested in the observations made by Mr. Robert W. Brock under the heading "The Need to Mass-produce Mini-tractors in India", and how right he is. I enjoyed his observations immensely, first, concerning the difficulties which are being experienced by developing countries to get a foothold into more developed countries for not only raw materials, but non-traditional products. I feel that Mr. Brock went on very well with his arguments until he got to the stage which, I assume, from what he has written, he is not an expert. Namely, if a tractor in England or the U.K. costs £250, it is certainly going to cost £350 in this country, not £150. Secondly, he has referred to the tractor designed by the National Institute of Agricultural Engineering which was tested in the beautiful soil conditions of West Part Bedfordshire by gentlemen whose job is to test the products of the commercial enterprise; in theory it appears excellent, but in practice, I am doubtful whether it is suitable or whether it would be acceptable.

This three-wheel tractor, or mono-track as they call it, I am afraid, will not be acceptable for under-developed countries for several reasons:

- (1) It is not orthodox in appearance.
- (2) It is not designed for the job in under-developed countries.
- (3) David Brown and Lanz produced a tool bar tractor of this type several years ago, although of higher horse-power, which they have had great difficulty in selling. In

fact, in India, there are a number still in show-rooms and nobody wants them.

Before one embarks on an enterprise of this sort, one should always take the advice of the people within the country and find out whether or not such a design will be suitable. Mr. Brock's statement that a unit selling at £250 in England will sell for £150 in this country, is quite incorrect. Be it an engine, tyres, wheel, transportation or whatever it is, the costs are practically double those that one would pay in more sophisticated countries. Also it is absolutely useless supplying an unorthodox piece of equipment to the Indian farmer without the necessary tools to go with it including (this is vital) a trailer if he does not have a trailer. He will not get rid of his bullocks and in turn, he will derive no advantage from his approach to mechanisation.

It is perfectly true what Mr. Brock says that there is a need for mass production of a small tractor of about 8 horse-power, but this must be an orthodox tractor, one in which in using it, the man or the family does not lose caste and it looks like an orthodox tractor. There is a market of at least 30 million waiting for the organisation that produces and designs this tractor.

A unit, which may or may not see the light of the day, has been on test in India for the last 12 months. If it finally passes test successfully, it should sell with a tiller, disc harrow, single furrow M.B. plough and a small trailer for about Rs. 6,500. This is the answer to India's problem or a unit like it.

RESERVES AGAINST CURRENCY

THE Chamber of Commerce had received a letter from the Government at Simla upon the proposal of the latter to add Rs. 2 crores of securities in the place of coin as reserve against the currency note circulation. The opinion of the Chamber of Commerce is invited on this proposal and also on a suggestion which is said to have been made to the Government that the securities purchased might preferentially be Consols or East Indian Government sterling loan. It has to be remarked that this proposal of the Government was made public property in Simla and Calcutta before the Chamber of Commerce received the letter addressed to them, and that in consequence the price of 3½ percent Government Paper sprang 8 annas to the advantage of certain dealers who by the usual means had obtained private intelligence from the gentry, who make a business of acquiring and promulgating it in an unauthorised manner. There is no likelihood, we think, of the members of the Chamber of Commerce expressing any opinion but that of approval of the proposal to release Rs. 2 more crores of the coin reserve against the note circulation and to substitute securities therefore, as the reserve of securities will only then amount to Rs. 12 crores or less than one-third of the total note circulation. It is also probable that the note circulation will continue to increase steadily. It would increase rapidly if the Government would employ the simple means of securing more general and prompt encashment of notes at outlying treasuries. As to the suggestion of some person or persons unnamed to substitute sterling for rupee loan securities, we do not anticipate that the Government will have any hesitation in giving preference to the latter. If they recognise, as we know they do, that sound fiscal policy demands borrowing within the country, it must be obvious that an opportunity of this sort is one by which they can stimulate the local lending power, and it is not clear what greater advantage, if any, would be derived from the purchase of sterling securities. It seems to us not improbable, that if the Government take Rs. 2 crores of 3½ percent paper off the market, or issue to the public only Rs. 1 crore of fresh issue this year, they will be able, if necessary, to place a loan of more than Rs. 3 crores on the market in 1965.

A Ditcher's Diary

MOST OF US, I IMAGINE, HAVE BY NOW WORKED OUT our own private "solutions" to the Kashmir problem. If Sheikh Abdullah and Mr. Rajagopalachari have worked out theirs, and the two happen to coincide, it does not necessarily follow that therein may lie cause for dismay or astonishment. The thinking of both has for some time been noticeably running on parallel lines—lines which appear to start from the assumption that Kashmir's accession to India is by no means final; that self-determination for Kashmir is a moral right which both India and Pakistan must concede; and that if the people of the State vote for independence, their will must prevail in the broader interests of the subcontinent's peace. It would be churlish to deny that the proposition, thus stated, has its attractions, the chief being that it seems in consonance with the principles of democracy, to which not India alone but Pakistan too occasionally pays lip-service. The main fault in it, however, is that it takes little account of present-day realities. I shall not go into the question whether an independent Kashmir could ever be viable. The more important point, to my mind, is that assumptions about Indo-Pakistani amity flowering from an agreed withdrawal of both from Kashmir are, to some extent, a myth; history offers no evidence for the belief that two nations can secure friendship by jointly carving out territory to create a third. Strategically, it is clear, the consequences of withdrawal would be extremely serious, against the background of Chinese expansionist ambitions; and it is by no means certain that a scheme for joint defence, of the sort Washington and London appear to have in mind, would prove the workable proposition it is sometimes assumed to be. Pakistan's flirtation with China, it is true, is based on opportunism, and is closely related to her annoyance with India over Kashmir. But it was not in anger alone that Pakistan signed away thousands of square miles of Kashmiri territory in favour of the Chinese. Pakistan's designs for what remains of Kashmir are aimed at capture, not independence. Sheikh Abdullah's and Rajaji's dreams notwithstanding, the fact is one which India can hardly afford to ignore.

THERE CAN, I THINK, BE FEW Surer SIGNS OF THE disarray in the ranks of the West Bengal Communist Party than the fact that only feeble protests have greeted the increase in bus and tram fares this past week. The demonstrations organised by a sundry collection of nonentities, some under the banner of the Forward Bloc, have been unimpressive, if not ridiculous; and Calcutta stands in danger of losing the almost worldwide fame it once ac-

quired for the arson and rioting that invariably preceded any move to increase fares—fame which provided the inspiration for arrogant hilarity in the Lok Sabha on Monday, among members who have not yet succeeded in bringing their knowledge of this city up-to-date. If things are quieter now, I would not hasten to assume that the perennial urge to violence is slowly seeping away; on the contrary, as the January riots showed, the urge remains latent, but powerful. The more important explanation may be that greater issues have overtaken bus and tram fares as the focal-point of general discontent; and, with the communists split, the truly effective organisation of hooliganism has become more difficult and infrequent. In any event, I find it hard to persuade myself that the opposition to increases in fares, to the extent that it was violent, had much popular support. That such increases hit the budget of the common man, and were therefore distasteful, is not in doubt; the distaste was, however, tempered by a reluctant, but nevertheless genuine, awareness that with a steady, sharp and widespread rise in prices, the cost of metropolitan travel could not remain unchanged. From that awareness, I suspect, is arising, albeit slowly, a deeper appreciation of the fact that if Calcutta is to have better public transport facilities in the future, they have to be paid for from now. Some of the investment could perhaps be found by folding up the Calcutta Metropolitan Planning Organisation, and despatching its dignitaries home before more money is spent on importing more experts to write more reports to fill more waste-paper baskets. Most of the remainder, however, will inevitably have to come from the pockets of the people, through bus and tram fare increases of the sort just ordained.

WHITHER THE COMMONWEALTH? I HAVE BEEN asking myself that question since it was announced that Sir Alec Douglas-Home had taken the plunge and called the next Prime Ministers' conference for July. Now, whatever virtues Sir Alec may lack, courage is certainly not one of them. I should not myself have cared to face such risks so close to a general election. It may be that he hopes for a success with which to impress the British voters; he has not been above claiming a share of the credit for the recent test-ban treaty, although in my opinion the man we should really thank for that is Mr. Chou En-lai. But what he is more likely to get if he is not careful is a thundering row about the status and future of Southern Rhodesia, which could divide his own Party and perhaps wreck the conference as well. Sir Alec

is right when he says that the greatest danger in the world today is racialism, and perhaps equally so in his statement that "if we cannot maintain our Commonwealth bridge between the races and colours, then the outlook for the rest of the world is grim". But if Southern Rhodesia decides to dig in her toes when faced with the combined moral forces of the Commonwealth, then what he is in effect asking of the British people is that they should join with nations who in some cases have little in common with Britain except their Commonwealth membership, and may even habitually attack British policies and interests in international councils, in opposing people who are of their own blood and sometimes of their own families, on policies which may be wrong, but about which they nevertheless feel so strongly they may be prepared to face civil war rather than see them defeated. Such a prospect is as fraught with complications for the conscience of the electorate as that last sentence is for my readers. With due respect to Sir Alec's courageous intentions, I think he would have been wiser to have avoided risking a Commonwealth crisis so close to an election. He might, indeed, have been better advised to have dodged the issue altogether, because if Southern Rhodesia is now pushed into following South Africa, either through fear or plain cussedness, not only will the black Southern Rhodesians suffer, but the British people might lose faith in the Commonwealth altogether. And without their support, dissolution would be both rapid and certain. It was a particularly unfortunate omen for the future, I thought, that the first voice to be raised against the new Premier of Southern Rhodesia being invited to London was the wholly suspect one of Dr. Nkrumah.

AMONG THE SWATANTRA PARTY'S MAJOR HANDICAPS in Indian political life is that it has not been able, perhaps has not even tried, to rid itself of its upper-class "image". Mr. Rajagopalachari is not the standard-bearer of aristocracy, nor perhaps is Mr. Minoo Masani; but the top layers of the Party hierarchy are studded with maharajahs and maharanis whose liberal ideas are considered by many to be not wholly in accord with their feudal reputations. Perhaps this is one reason why, in West Bengal particularly, the Party has been weak; yet it may just conceivably be a sign of the changing times that on a hot Saturday afternoon in Calcutta last week more than five hundred people, rich and poor, should have filled to overflowing a hall where Mr. Masani was due to speak. (In bygone days, many Swatantra leaders would have been grateful for an audience of fifty.) Much of what Mr. Masani had to say was not, indeed was not expected to be, new—not, anyway, for those who have had the opportunity to follow his speeches in Parliament at some length. But he gave an effective performance aimed at an educated audience, for

instead of indulging in the meaningless flourishes of demagoguery, he carefully marshalled facts and arguments in denunciation of the Government's economic policies. Two points, however, puzzle me. First, why on earth did Mr. Masani decline to explain his views on the Kashmir issue, and thereby provoke the incipient disorder which brought the meeting to an abrupt conclusion? Skin may have been saved, but face was lost, in dealing with questions which could have been easily anticipated and tactfully answered. Secondly, can the Swatantra Party really be serious about its hopes of reaching an electoral understanding with Opposition groups with which it has little in common, merely for the limited purpose of defeating the Congress? In purely arithmetical terms, the proposition may seem both logical and promising, with the Congress having got only 45 percent of the votes cast at the last general elections. But, the opportunism apart, I have a certain cynicism about the long-term value and the practicability of such arrangements, especially if they involve heroes of eccentricity of the calibre of the Lohia socialists and the Jan Sangh. To be looked upon as the Party of the rich is stigma enough; to compound the reputation with the opportunism and eccentricity of strange electoral alliances may do the Swatantrists more harm than they are inclined to think.

SINCE THE ANNOUNCEMENT THAT ZANZIBAR IS to be united with Tanganyika, I have been waiting for the customary reaction from Moscow. So far it has not been forthcoming. There has been no denunciation of this as being just another imperialist plot, and no loud assertions that the Russian people will stand by their freedom-loving comrades. I can only think it is no coincidence. In fact, it is probably the first real indication we have yet had that Moscow has finally lost its revolutionary self-confidence: that because Russia is no longer the inevitable beneficiary of upset and disorder, there is no longer the eagerness for the things there used to be. If my view is correct, then it is the dawn of wisdom among Russia's leaders and the world can put yet another phase of uncertainty behind it. What it cannot do, of course, is ignore the growing vested interest which the Chinese now have in revolution, and I think it is chiefly because they would ultimately have been the gainers from an avowedly communist Zanzibar that the Russian reaction has been so mild. If this is an indication that in future we are to see a strengthening of Soviet support for the United Nations' peace-keeping missions, and generally for stability and the maintenance of the status quo throughout the world, I cannot think we shall be the losers. More specifically, I do not foresee any particularly undesirable consequences in Zanzibar's accession to Tanganyika. The island could not have been economically self-supporting in political isolation, and in the absence of an African sponsor it would inevitably have had to seek one elsewhere. The opportunity this would have given the Chinese would not, in the long run, have been conducive to stability in Africa, or, for that matter, to peace of mind in India. Better things as they are. And Zanzibar is not the first example of the Russians losing interest in the nuisance value of an off-shore island. I see that the last Soviet troops are now leaving Cuba. I cannot believe that this is in order to provide the Chinese with an opening. But I can conceive that it is being done so as to foster relations with the United States, which, one sincerely hopes, will not now let this sudden change in circumstances go to its head.

THE CLUB BORE, A RETIRED ADMIRAL, WAS RECOUNTING yet another of his interminable war experiences—much to the discomfort of another naval type, a young signals officer.

"So there I was on the bridge," said the old buffer, "just about to give the order to attack, when suddenly I saw this torpedo heading straight towards us amidstships..."

"My word, sir, really?" said his youthful listener, stifling a gigantic yawn. "I sincerely trust it was one of ours..."

THE DITCHER.

Guide for Investors

PHILIPS INDIA RAISES
DIVIDEND

THE ordinary shares of Philips India Ltd have met with support up to Rs. 26.94 due to the excellent results achieved by the Company for the year ended December 1963. Sales rose from Rs. 8.85 crores for 1962 to Rs. 10.63 crores in 1963. The directors have mentioned that but for the shortage of raw materials, foreign exchange and power, the manufacturing activities and sales would have been appreciably greater. The high level of production of radio sets, components and light articles, combined with efficient sales services, has contributed to the satisfactory performance. The profit has improved from Rs. 1.20 crores to Rs. 1.65 crores, after transferring Rs. 25 lakhs (against Rs. 21 lakhs) to depreciation. The taxable ordinary dividend has been increased from 13 percent to 15 percent, which gives a yield of 5.6 percent at the present price. Taxation, including Rs. 15 lakhs for surtax on profits, is allocated Rs. 1.17 crores (against Rs. 85.5 lakhs). The super profits tax amounted to Rs. 20 lakhs for 1962. Development rebate reserve absorbs Rs. 5.5 lakhs (against Rs. 6.2 lakhs) and general reserve Rs. 11 lakhs.

There has been a rise of Rs. 56 lakhs in net fixed assets due to the expansion in manufacturing activities. The Company has acquired a plot of land in Kaliwa, near Bombay, to install manufacturing plants for producing lamps, components and other industrial products. The expansion programme should be of help in improving the profitability of the Company. It should be mentioned that the profit for 1963 has amounted to 20.2 percent of the total capital employed, against 18.4 percent for 1962. Preparations for the production of filaments for lamps reached an advanced stage in 1963. Tungsten coils should be available in the course of this year.

A new unit for the production of electronic measuring instruments and other industrial and scientific apparatus has begun to operate in Bombay. An industrial licence has been obtained from the Government to manufacture wireless communication apparatus. Substantial progress has been made to increase the indigenous content of all products. The production of light articles in Bombay and Calcutta factories has been increased. The installation of a capping mill in Bombay should help improve the output and quality of lamps. The range of components has been extended. The move to equip the Calcutta factory with an outfit for tool room to produce mechanical parts and mouldings has begun to produce good results. Steps have been taken to promote the development of ancillary industries.

Kumardhubi Engineering
Pays More

THE directors of Kumardhubi Engineering Works Ltd, in their report for the year ended November 1963, take a fairly optimistic view of the working during the current year. The products of the Company have met with a rising demand and the order-book for steel castings and structural steel-work has been well filled. The modernisation and expansion schemes are likely to be completed by 1966. Foundry production rose by about 6 percent over that for 1961-62. Production costs have,

nevertheless, risen due to higher charges for power, fuel, scrap and labour. The Government has sanctioned the Company to increase the output of steel castings to 1,000 tons a month. The output of the structural shop rose by 4.5 percent over that of 1961-62. The working has, however, suffered due to the shortage of electrodes and matching steel. But there has been an improvement in the supply of these materials since. The proposal to increase the capacity of this shop to 950 tons a month has been approved by the Government, and tonnage fabricated will steadily rise in the current year. Although the effects of decontrol of a number of steel sections remain to be assessed fully, the results of the fabrication division may be affected to some extent.

The profit has risen from Rs. 22 lakhs to Rs. 35.20 lakhs, after transferring Rs. 6.26 lakhs (against Rs. 5.98 lakhs) to depreciation. The taxable ordinary dividend has been raised from 45p to 50p a share of Rs. 3 each. The yield amounts to 9 percent at the present price of Rs. 5.56 a share. Development rebate reserve is allocated Rs. 71,400 (against Rs. 77,100), taxation Rs. 17.82 lakhs, including Rs. 2.49 lakhs for surtax on profits. The tax provision amounted to Rs. 13.16 lakhs for 1961-62. General reserve absorbs Rs. 10.04 lakhs (against Rs. 3.25 lakhs) and debenture redemption reserve Rs. 1.25 lakhs. The carry-forward is Rs. 3,146, against Rs. 3,088 brought in. In March 1964, the Company issued bonus shares in the ratio of one bonus share for every five shares held by capitalising reserves. Rights ordinary shares were also issued in the proportion of two new shares for every three shares held at a premium of 20 percent. It is proposed to make a debenture issue for Rs. 40 lakhs. Negotiations with the Commonwealth Development Finance Company of London and the Life Insurance Corporation of India are proceeding concerning the proposed debenture issue.

Results of Martin Burn
Power Companies

THE reports of power companies in the managing agency of Martin Burn Ltd for the year ended March 1963 show an increase in production and revenue. Dividends have, nevertheless, been maintained. The plant of Jubbulpore Electric Supply Co. Ltd has worked at full capacity and in view of the acute shortage of power, the State Electricity Board has installed a diesel generating plant of 2,200 kW capacity in Jabalpur. It is unlikely that the Company will obtain any further relief from the pressure to supply power until the State Electricity Board's Amarkantak power-station is commissioned. Units sold rose from 39.1 million to 43.8 million. Revenue has improved from Rs. 48 lakhs to Rs. 53.82 lakhs.

The profit has amounted to Rs. 2.13 lakhs, against Rs. 2.70 lakhs for 1961-62, after providing Rs. 2.95 lakhs (against Rs. 2.74 lakhs) for depreciation, Rs. 31,453 (against Rs. 58,650) for statutory contingency reserve, Rs. 85,000 (against Rs. 2.40 lakhs) for taxation and Rs. 21,478 (against Rs. 42,133) for development reserve. The taxable ordinary dividend of 10 has been maintained, which works out to a yield of 8.3 percent at the present price of Rs. 12 a share of

on account of taxation for the 1962-63 profit.

The profit of the United Provinces Electric Supply Co. Ltd has declined from Rs. 7.11 lakhs to Rs. 3.40 lakhs, after providing Rs. 10.80 lakhs (against Rs. 9.83 lakhs) for depreciation, Rs. 1.15 lakhs (against Rs. 2.22 lakhs) for statutory contingency reserve and Rs. 95,000 (against Rs. 1.75 lakhs) for taxation. The taxable ordinary dividend of 11 percent has been maintained. It amounts to a yield of 7.2 percent at the present price of Rs. 152 a share of Rs. 100 each. Units sold rose from 117.1 million to 127.5 million and the revenue from Rs. 1.4 crores to Rs. 1.5 crores.

Same from Finlay Textile
Group

WHILE all the three textile mills belonging to the Finlay group—Finlay, Swan and Gold Mohur—have maintained their dividends for 1963 at the previous year's level, their working results show a mixed pattern. Gold Mohur has done the best—sales are up by about 22 percent and the gross profit has risen by nearly 13.5 percent. Swan Mills' turnover shows some 5 percent increase while the gross profit is lower by about 7 percent. In the case of Finlay Mills, both sales and profit are down, sales by about 2 percent and the gross profit by nearly 13 percent. The profit margin, that is, the ratio of gross profit to turnover, has been squeezed in the case of all the three mills because of the mounting costs of production without any increase in the selling prices of cloth. The profit margin of Gold Mohur has declined from 13 percent to 12 percent, of Swan Mills from 22.7 percent to 20.1 percent and that of Finlay from 19.4 percent to 17.2 percent.

In his annual statement to shareholders, which has been circulated with the directors' reports, the chairman, Mr. C. H. Campbell, has expressed the fear that the profit margins for the current year are likely to show a further fall unless the Government is prepared to grant a realistic increase in cloth prices to offset the higher production costs. In all, production costs of the Finlay group of mills have risen by no less than 20 percent since 1960 when the voluntary price control scheme was introduced without any corresponding increase in cloth prices. Mr. Campbell says that the industry cannot absorb all the additional costs and that an increase in cloth and yarn prices is necessary. Referring to the prospects for the current year, the chairman says that although trading conditions for superfine cloth are satisfactory and there is good demand for the products of Finlay group, the cotton supply position is far from satisfactory and does not look like improving in the near future. Also, prices of Sudan and Egyptian cotton have increased considerably over the past year as a re-

PRECISE

Armstrong Smith Ltd.

P-17, MISSION ROW (LATN), CALCUTTA-13

sult of world shortage of long-staple cotton. However, stocks of finished goods of both cloth and yarn with the mills are at present at a satisfactory level. There has been some falling off in demand for yarn as a result of the increase in excise duty in the last Budget.

In view of the increasing demand for the companies' products, both cloth and yarn, and the imperative need to increase exports as also to meet defence requirements from time to time, the directors have decided to take advantage of the recent Government concession to expand the installed spindleage and loomage by 7.5 percent and 10 percent, respectively. Mr. Campbell says that it will be possible to increase the spindleage with almost immediate effect by retaining certain old ring frames which are at present under replacement, and

provided the additional requirements of cotton are forthcoming, the benefit of these additional spindles should be felt during the current year.

As far as the expansion of the weaving capacity is concerned, the management has at present orders in hand for a certain number of automatic looms and the intention is that when these looms are received, then a certain number of the old plain looms will be retained, at least in the meantime. It is hoped that by re-laying the machinery to some extent, the extension to both the spinning and weaving units can be carried out without additional buildings. The chairman says that every effort is being made to increase exports with a view to earning as much foreign exchange as possible to meet the companies' requirements of long-staple cotton. Although the total value of

exports is still relatively small, compared with that of some of the other mills, it does show an increase of over 100 percent over the previous year's export performance.

Sales of Gold Mohur Mills have risen from Rs. 2,585 crores to Rs. 3,164 crores and income from yarn processing charges is slightly higher at Rs. 97,000, against Rs. 82,000. The gross profit has gone up from Rs. 33.63 lakhs to Rs. 38.28 lakhs. Allocations include depreciation Rs. 9.55 lakhs (against Rs. 6.76 lakhs), development rebate Rs. 1.94 lakhs (against Rs. 4.51 lakhs), taxation Rs. 11.16 lakhs (against Rs. 8.60 lakhs) and general reserve Rs. 2 lakhs (against nil). In the previous year, the directors had to withdraw Rs. 1.50 lakhs from general reserve for the payment of dividend. The proposed dividend of Rs. 19.50 a share (the same) absorbs Rs. 9.75

lakhs. After making certain adjustments, there remains a balance of Rs. 22,627 to be carried forward, against Rs. 29,942 brought in. During the year, 48 automatic looms were installed and orders have been placed for a further 48 automatic looms as well as for one sizing machine. Delivery of 23 new ring frames is expected to commence during the second half of this year. The Company has a paid-up capital of Rs. 50 lakhs, which is supported by reserves and surplus amounting to Rs. 59.74 lakhs. Its gross block valued at Rs. 1.59 crores, has been written down to Rs. 66.12 lakhs.

Sales of Swan Mills have gone up from Rs. 2.24 crores to Rs. 2.35 crores and its income from bleaching, dyeing, printing and other charges has risen from Rs. 14.56 lakhs to Rs. 21.61 lakhs. The gross profit, however, is down from Rs. 50.79 lakhs to Rs. 47.19 lakhs. Allocations include depreciation Rs. 13.52 lakhs (against Rs. 11.51 lakhs), development rebate Rs. 2.67 lakhs (against Rs. 1.92 lakhs), taxation Rs. 14.57 lakhs (against Rs. 19.69 lakhs) and adjustments for previous year Rs. 91,000 (against Rs. 4.84 lakhs). After withdrawing a sum of Rs. 50,000 (against Rs. 4 lakhs) from general reserve and providing for the proposed dividend of Rs. 21.60 a share which absorbs Rs. 12.96 lakhs (the same), there remains a balance of Rs. 14,843 to be carried forward, against Rs. 38,803 brought in. The directors state that the Company installed 15 new ring spinning frames during the year and further ten frames have since been received, and are under erection. Orders have been placed for 96 automatic looms, one sizing machine and one yarn dyeing plant. The Company's paid-up capital of Rs. 60 lakhs is supported by reserves and surplus amounting to Rs. 42.80 lakhs. Its gross block of Rs. 2,559 crores has been written down to Rs. 99.48 lakhs.

Finlay Mills' sales fell from Rs. 3.03 crores to Rs. 2.98 crores, while its income from bleaching, dyeing, printing and other charges was higher at Rs. 52.13 lakhs, against Rs. 45.52 lakhs. The gross profit fell from Rs. 58.74 lakhs to Rs. 51.17 lakhs. Appropriations include depreciation Rs. 13.26 lakhs (against Rs. 10.02 lakhs), development rebate reserve Rs. 3.93 lakhs (against Rs. 73,000), adjustments for the previous year Rs. 45,925 (against Rs. 10.17 lakhs) and general reserve Rs. 3 lakhs (against nil). The proposed dividend of Rs. 23 a share absorbs Rs. 11.50 lakhs, leaving a sum of Rs. 68,492 to be carried forward, against Rs. 31,000 brought in. The Company installed ten new ring frames during the year, and delivery of a further 36 ring frames is expected to start in January 1965. Orders have been placed for 48 automatic looms, one friction and finishing calender and one complete roller printing plant. A new mercerising machine has been received and is being installed. The Company has a paid-up capital of Rs. 50 lakhs, which is supported by reserves and surplus amounting to Rs. 75.98 lakhs. Its gross block of Rs. 2.68 crores has been written down to Rs. 1.15 crores.

Bombay Dyeing Dividend Policy Criticised

THE chairman of the Bombay Dyeing and Manufacturing Company, Mr. Neville N. Wadia, informed shareholders' annual meeting on 29th April how exactly the Company's accounts had been modified following the amendments recently made in the Finance Bill, 1964. It is the amended accounts which the shareholders had been asked to approve. The total provision for depreciation has been increased from Rs. 81.61 lakhs to Rs. 1,051 crores, because of the extra depreciation on machinery allowed

for third-shift working. Consequently, the managing agents' remuneration is reduced from Rs. 7.57 lakhs to Rs. 5.64 lakhs. The provision for taxation has been reduced from Rs. 35.76 lakhs to Rs. 24.36 lakhs. Allocation to the development rebate is unchanged at Rs. 16.80 lakhs, and the tax on dividend stands at Rs. 2.63 lakhs. After making these modifications, the net profit available for appropriations amounts to Rs. 24.27 lakhs, against Rs. 35.10 lakhs previously. In view of this decline, the transfer to the dividend equalisation reserve has been reduced from Rs. 25.25 lakhs to Rs. 14.50 lakhs. As the amount standing to the credit of dividend equalisation reserve at Rs. 23.45 lakhs is inadequate to meet the final dividend liability of Rs. 25.10 lakhs, the directors have transferred a sum of Rs. 2 lakhs to this reserve from general reserve No. 1.

As usual, the management's dividend policy again came in for strong criticism at the annual meeting. Shareholders argued that the enormous sums spent on the modernisation of the mills had brought them hardly any benefit, either by way of higher dividend or capital appreciation in the value of their shares. The two are, in fact, closely linked. The shares cannot be expected to register any big appreciation when the management continues to adopt a very conservative dividend policy. It was interesting to hear the chairman say that it was not prudent to pay a higher dividend when the textile industry is fighting for the abolition of price control. One should have imagined that the industry's case will rest on its earnings and not on dividend distribution, and Bombay Dyeing's gross profit has recorded a considerable increase from Rs. 1,478 crores in 1962 to Rs. 1,795 crores in 1963.

The chairman, however, held out the hope of a higher dividend if the Government adopts a more realistic price policy for cloth. Some of the shareholders urged the chairman to offer rights shares on favourable terms, but this suggestion did not find favour with him. Mr. Wadia revealed that the Company's surplus land at its old dye works had been sold for Rs. 2.16 crores, and that the Company will have to pay about Rs. 55 lakhs by way of capital gains tax. The chairman pointed out that the Company had nothing to gain by retaining this land. In case the Company did need land for further expansion, which looks very unlikely at present, it would do better to move to the suburbs where land can be had at cheaper rates. The expenditure on expansion during 1964 will be around Rs. 64 lakhs, against Rs. 1.05 crores last year.

Kohinoor Mills Modernises

THE Kohinoor Mills Company did exceedingly well in 1963. Its turnover increased by over 12 percent from Rs. 7.70 crores to Rs. 8.63 crores; the gross profit rose by 19.3 percent from Rs. 84 lakhs to Rs. 1 crore, and the dividend was stepped up from Rs. 18 to Rs. 21 a share. Improved results were achieved through modernisation in all spheres which helped to secure a rationalised workload, changes in the pattern of production to suit consumer demand and various other economies. The chairman, Mr. A. N. Haksar, has assured the shareholders that given normal trading conditions, the Company will fare equally well, if not better, in the current year. The management will spare no efforts in its endeavour to increase the intrinsic strength of the Company's resources by going all out in its efforts at further modernisation, increased efficiency and providing for the neutralisation of as

much as possible of the inevitable additional expenditure which the process of inflation or incidence of taxation might generate in the future.

The Company has been allowed a 7½ percent increase in its installed spindleage and 10 percent increase in its installed loomage. This would increase the spindle capacity from 120,504 to 129,542 spindles and the loom capacity from 1,846 looms to 2,001 looms. Necessary arrangements are being made to implement these increased capacities. Mr. Haksar disclosed at the shareholders' annual meeting that the Company had decided to participate in the establishment of a new cotton textile spinning unit in Margao (Goa) by Goa Textiles Ltd by contributing Rs. 3 lakhs towards the equity share capital and above providing the technical know-how and acquiring some interest in the selling agency. The Company will receive Rs. 45,000 in three instalments as technical fees. The necessary agreements are being finalised. The chairman pointed out that the Company's wage bill will go up by Rs. 3.5 lakhs on account of the increase in the rate of employers' contribution to the employees' provident fund and by another Rs. 10 lakhs due to the implementation of the Lakdawala Committee's recommendations. The additional leave allowed to textile workers following the decision of the Industrial Court will add to the Company's working costs by about Rs. 8 lakhs a year. Replying to shareholders' questions, the chairman stated that the Company would benefit to the extent of about Rs. 6 lakhs on account of the additional depreciation allowed for the third shift working in 1963. The tax saving will amount to around Rs. 2.7 lakhs and the managing agents' remuneration will be reduced by about Rs. 60,000. The Company is negotiating for a licence to import 500 automatic looms. Its exports last year increased from Rs. 28 lakhs to Rs. 42.25 lakhs and the management is hopeful about a still better performance this year, in spite of its heavy commitments towards defence requirements.

Mafatlal Textile Mills Group Fares Well

THE Mafatlal group of textile mills reports fairly satisfactory results for the year 1963. Of the four mills—Mafatlal Fine, Standard Mills, Sassoon Spinning and New Shorrock—the performance of Sassoon Spinning and Weaving Company is about the best and it has stepped up the dividend from 10 percent to 20 percent and that, too, is on a higher capital following the bonus issue. New Shorrock's working is the poorest and the Company has been obliged to reduce the dividend from 36 percent to 32 percent, although the distribution is slightly larger because of the increased capital. Mafatlal Fine and Standard Mills have made larger profits, but the dividends have been maintained at 30 percent and 20 percent, respectively. All the four mills have reported larger sales and, excepting New Shorrock, gross profits are also higher.

Sales of Sassoon Spinning and Weaving Company, after excise duty, have gone up by nearly 11 percent from Rs. 6.87 crores to Rs. 1.63 crores, and the gross profit has risen by as much as 38.5 percent from Rs. 67.87 lakhs to Rs. 94.06 lakhs. Appropriations include depreciation Rs. 37.92 lakhs (against Rs. 27.36 lakhs), development rebate Rs. 10.61 lakhs (against Rs. 8.39 lakhs), taxation Rs. 24.80 lakhs (against Rs. 15.97 lakhs), general reserve Rs. 14 lakhs (against Rs. 3.75 lakhs) and additional tax provision for previous years Rs. 2.37 lakhs (against Rs. 1.75

lakhs). A sum of Rs. 16 lakhs has been transferred from development reserve for the payment of the proposed dividend of 20 percent (against 10 percent) which absorbs Rs. 16.12 lakhs (against Rs. 7.54 lakhs), leaving a nominal surplus of Rs. 673 to be carried forward, against Rs. 3,192 brought in.

Net sales of Standard Mills Company are higher by about 5 percent at Rs. 9.27 crores, against Rs. 8.81 crores, while the gross profit has increased by about 15 percent from Rs. 1.176 crores to Rs. 1.355 crores. After providing Rs. 52.10 lakhs (against Rs. 38.49 lakhs) for depreciation, Rs. 10.03 lakhs (against Rs. 13.73 lakhs) for development rebate and Rs. 42.22 lakhs (against Rs. 36.15 lakhs) for taxation and deducting other prior charges, the net profit amounts to Rs. 25.48 lakhs (against Rs. 23.72 lakhs). The directors have provided Rs. 94,000 (against Rs. 6.48 lakhs) for additional tax provision for previous years and transferred Rs. 21.70 lakhs (nil) to general reserve. A sum of Rs. 28.60 lakhs (against Rs. 12.50 lakhs) is being transferred from development rebate reserve to provide for the payment of dividends. Preference dividend will take up Rs. 68,000 (the same) and equity dividend will absorb Rs. 30.73 lakhs (the same), leaving Rs. 9,965 to be carried forward, against Rs. 7,338 brought in.

Mafatlal Fine's net sales increased by 9 percent from Rs. 3.09 crores to Rs. 3.36 crores, and its gross profit, increased by a little over 14 percent from Rs. 67.30 lakhs to Rs. 76.73 lakhs. Allocations include depreciation Rs. 21.75 lakhs (against Rs. 17.58 lakhs), development rebate Rs. 3.18 lakhs (against Rs. 5.73 lakhs), taxation Rs. 24.95 lakhs (against Rs. 18.65 lakhs), additional provision for taxation for previous years Rs. 1.60 lakhs (against Rs. 86,000), general reserve Rs. 17.75 lakhs (against nil) and dividend equalisation fund nil (Rs. 75,000). After transferring Rs. 17.35 lakhs (against nil) from development rebate reserve fund and providing Rs. 1.86 lakhs (the same) for preference dividend and Rs. 17.40 lakhs (the same) for equity dividend, there remains a surplus of Rs. 16,774 to be carried forward, against Rs. 18,095 brought in.

Net sales of New Shorrock Spinning and Manufacturing Company have also risen by 4.7 percent from Rs. 5.96 crores to Rs. 6.24 crores, but the gross profit is slightly down from Rs. 1,373 crores to Rs. 1,346 crores. After providing Rs. 28.14 lakhs (against Rs. 23.84 lakhs) for depreciation, Rs. 4.17 lakhs (against Rs. 4.88 lakhs) for development rebate and Rs. 54.66 lakhs (against Rs. 52.98 lakhs) for taxation, the net profit amounts to Rs. 40.71 lakhs (against Rs. 48.41 lakhs). The directors have withdrawn Rs. 19.88 lakhs (against nil) from development rebate reserve and set apart Rs. 24.69 lakhs (against Rs. 5.50 lakhs) for general reserve. The proposed equity dividend of 32 percent (against 36 percent) will absorb Rs. 36 lakhs (against Rs. 35.42 lakhs). After making various appropriations, there remains a balance of Rs. 7,764 to be carried forward, against Rs. 17,249 brought in.

National Rayon Repeats

SHAREHOLDERS of National Rayon Corporation who have been hit hard by the heavy fall in the quotation for their shares from Rs. 450 on 29th February to Rs. 335 on 22nd April (Rs. 25 out of this fall of Rs. 115 are, however, due to the rights issue) seemed full of hope when they returned from the annual meeting on 23rd April. If the chairman, Mr. Kasturbhai Lalbhai, had included in his annual statement at-

tached to the directors' report all the information he disclosed at the annual meeting, National Rayon's shares would not perhaps have registered such a steep decline as they did over the past few weeks. The chairman stated that the Company had suffered as much as Rs. 50 lakhs in 1963 on account of strike, but the labour relations had improved with the conclusion of a five-year agreement.

The Company produced 8.73 million kilograms of rayon yarn last year and the output for the current year was likely to be around 10 million kilograms—28 tons a day. The monthly production of tyre cord was 95 tons in 1963; it had risen to 164 tons during the first quarter of the current year and the figure is expected to rise to 225 tons after the end of July. The output of caustic soda is expected to reach 20,000 tons this year, against 11,802 tons in 1963. Internal consumption of caustic soda by the Company would be higher around 11,000 tons, against 8,185 tons last year. Referring to the 50 percent increase in excise duty on rayon yarn, the chairman expressed the view that the Company hoped to be able to pass over this burden to the weavers. He also revealed that the cost of production of the Company's rayon yarn is the lowest at Rs. 8.81 a kilogram, compared with the other units where the cost varied from Rs. 9.29 to Rs. 11.51 a kilogram. The Company, said Mr. Lalbhai, had no liability for surtax and that it would get Rs. 27.81 lakhs by way of additional depreciation on account of third shift working.

Since the Company had made a larger profit in 1963 and its prospects for the current year looked fairly promising, the shareholders criticised the management's decision for maintaining the dividend for 1963 at the reduced level of Rs. 16 a share as this had led to a sharp decline in the price of the Company's shares. The chairman defended the dividend policy on the ground that there was no surplus profit for larger dividend distribution, and that in order to give the shareholders some benefits, the management had proposed the rights issue at par which put an extra Rs. 25 a share in the hands of the shareholders—the rights issue has been made at par on the basis of one share for every ten shares held. Replying to shareholders' questions, the chairman stated that sales of rayon yarn during 1963 amounted to Rs. 95.6 million, tyre cord sales aggregated 768,000 kilograms valued at Rs. 8,547,000 and caustic soda sales amounted to 2,764 tonnes, valued at Rs. 1,828,000. The market has responded quickly to the chairman's favourable assessment of the Company's prospects and the quotation for its shares has advanced from Rs. 335 cum dividend to Rs. 360 ex-dividend.

Progress of Century Mill Expansion Projects

THE directors of the Century Spinning and Manufacturing Company state in their report that the working efficiency and the general level of production in the textile and rayon units were well maintained during 1963, and that in spite of the all-round increase in the cost of production, the Company was able to show satisfactory results—the turnover of the Company increased from Rs. 17.10 crores to Rs. 22.25 crores and its gross profit rose from Rs. 3.78 crores to Rs. 4.86 crores. But the directors do not appear to be very optimistic concerning the outlook for the current year, especially for the textile section. They say that the increase in the cost of imported raw materials like cotton and caustic soda, enhanced wage bill of the tex-

SAY GOODBYE TO YOUR FRIENDS BUT NOT TO YOUR MONEY!

TODAY experienced travellers do not carry cash; it can be lost or stolen. Wherever you go in India, carry Bank of Baroda Travellers' Cheques—they're absolutely safe. No one but you can cash them. And so easily too...just sign your Travellers' Cheques in the presence of the bank official on duty. □ Your Bank of Baroda Travellers' Cheques can be cashed almost anywhere in India—at any branch of the Bank of Baroda, or the State Bank of India and also through the offices of many accredited agencies throughout India. Next time you travel, carry safe, convenient Bank of Baroda Travellers' Cheques—available in denominations of Rs 25, Rs 50 and Rs 100 from your local Bank of Baroda Branch.

NATIONAL PROGRESS...

On the eve of Independence, NATIONAL RUBBER MANUFACTURERS LIMITED was incorporated. Today, after only 18 years NRM represents the Largest single unit in India, manufacturing industrial and mechanical rubber products.

The wide range of NRM quality products includes:

- Cycle Tyres and Tubes
- Rickshaw Tyres
- Railway Rubber Fittings
- All types of Hoses
- Industrial V-Belts and Fan Belts
- Transmission and Conveyor Belting

SALES PROGRESS

1951—Rs. 46.68 lacs
1963—Rs. 47.09 lacs
Increase 97.9%

EXPANSION PROGRAMME

NRM will substantially increase the capacity for:

- Cycle Tyres and Tubes
- Industrial V-Belts

NRM's new projects will include:

- PVC Conveyor Belting
- Reclaimed Rubber

NEW ENTERPRISE

NRM has sponsored the first wholly Indian-owned automobile tyre company. Widespread consumer acceptance has proved the quality of its products.

NATIONAL RUBBER MANUFACTURERS LTD.

LESLIE HOUSE
19, Chowringhee Road, Calcutta-13.

tile workers due to additional paid holidays and revised basis for payment of D.F.A. and the increase in employer's contribution to provident fund will add considerably to the manufacturing cost. This apart, the excise duty on rayon yarn, higher medium, fine and superfine cloth and yarn as also on chemicals has been considerably increased leading to a heavy burden both on textile and rayon industries. The replacement of super profits tax by surtax will provide some relief, but the new dividend tax will impose an additional burden. It is difficult to estimate the net result of all these factors at this stage, but the directors have assured that the management is doing its best to meet the problems as they arise.

The directors add that the Company has received the import licence for further 18 spinning machines and orders have been placed for the necessary machinery and equipment. It is expected that these will go into production during the first quarter of 1965. The tyre cord plant went into production in May 1963, and soon thereafter, it achieved full production. The quality of the yarn is highly satisfactory and has been considered equal to the quality of super tyre cord manufactured by the Company's collaborators—Algemene Kunstzijde Unie, Holland, and Vereinigte Glanzstoff-Fabriken of West Germany. Practically all the leading tyre manufacturers in India are purchasing the Company's product. The buildings for the caustic soda plant have been constructed and the erection of machinery is in full swing. The plant is expected to go into production by about the middle of this year. The directors have decided that on account of various factors it will not be practicable to implement the nylon project by the Century Mills. It is, therefore, proposed to form a new company for which a provisional agreement has been entered into with the Company's foreign collaborators. The agreement provides that a certain portion of the capital of the new company will, in the first instance, be offered to the shareholders of Century Mills and this will be done at the appropriate time.

Burmah Oil Dividend Up

INITIAL disappointment in City circles in London with Burmah Oil's preliminary results for 1963 was marked by a fall of 3s 3d to 68s 3d in the price of the shares. Later, some people were inclined to take a more favourable view of the figures, although the full accounts are awaited before a final judgment will be made. There has been criticism of the board for not providing more information. Only the "bulls" should be dissatisfied with the dividend. The board is paying a final of 1s 10d tax free a share, making 2s 10d, or 14-1/6 percent. This compared with the forecast of 13 1/2 percent tax free, made last July at the time of the unsuccessful take-over bid by Shell and British Petroleum. The actual payment in 1962 was 11 1/2 percent. A one-for-four scrip issue is also proposed, although the directors state that stockholders should not expect the present rate of distribution to be maintained on the increased capital. The feature of Burmah's results which occasioned most comment was the group's own trading profits. These were only £10,000 higher last year at £9.23 million. Depreciation took £1.14 million more at £3.26 million, leaving pre-tax trading profits £1.13 million lower at £5.97 million.

The main explanation for the fall is thought to be that recent acquisitions, notably, Great Plains and Anglo-Ecuadorian Oilfields, have so

far contributed little to earnings. In addition, there was no income last year from the assets in Burma, which have been sold. Dividends from trade investments have increased from £4.83 million to £5.13 million, while other dividends and interest (mainly the income on the B. P. and Shell holdings) were £12.97 million, against £13.1 million in 1962. The figures do not include the £1.07 million received from B.P.'s capital distribution. The decline in pre-tax trading profits has been offset by a drop of £1.48 million to £9.63 million in the total tax charge, though this includes a credit from previous years of £340,000.

Williamson Magor Tea Group Earns Less

THE results of Williamson Magor group of tea companies for the year ended December 1963 have been published. The profit of the Dufflaghur Tea Co. Ltd (an Assam garden) has declined from Rs. 5.15 lakhs for 1962 to Rs. 2.38 lakhs for 1963, after transferring Rs. 90,667 (against Rs. 91,444) to depreciation. The taxable ordinary dividend has been reduced from 30 percent to 20 percent. The yield amounts to 7.7 percent at the present price of Rs. 26.12 a share of Rs. 10 each. Taxation is allocated Rs. 1.24 lakhs (against Rs. 3.08 lakhs). The development rebate reserve Rs. 11,000 (against Rs. 14,000) and general reserve Rs. 25,000 (against Rs. 2 lakhs). The carry-forward is Rs. 3,768, against Rs. 92,668, brought in. The crop amounted to 402,568 kilograms, against 403,594 kilograms and the average price has dropped from Rs. 6.70 to Rs. 6.34 a kilogram. The 1964 crop has been estimated at 436,000 kilograms at a cost of Rs. 5.47 a kilogram.

The Soom Tea Co. Ltd (a Darjeeling estate) has made a profit of Rs. 2.18 lakhs, against Rs. 3.47 lakhs, after providing Rs. 24,976 (against Rs. 23,736) for depreciation. The taxable ordinary dividend has been cut from 40 percent to 30 percent. The yield works out to 7.5 percent at the present price of Rs. 40 a share of Rs. 10 each. Taxation absorbs Rs. 1.05 lakhs (against Rs. 1.59 lakhs). The development rebate reserve Rs. 4,300 (against Rs. 800) and general reserve Rs. 25,000 (against Rs. 1.49 lakhs). The carry-forward is Rs. 4,774, against Rs. 52,632 brought in. The crop fell from 160,068 kilograms to 158,073 kilograms. The average sale price dropped from Rs. 8.53 to Rs. 7.82 a kilogram. The crop for 1964 has been estimated at 157,800 kilograms at a cost of Rs. 6.84 a kilogram.

The profit of the Lingia Tea Co. Ltd (a Darjeeling garden) has fallen from Rs. 3.48 lakhs to Rs. 2.54 lakhs, after transferring Rs. 44,195 (against Rs. 50,577) to depreciation. The taxable ordinary dividend has been reduced from 17 1/2 percent to 15 percent. The yield amounts to 7.1 percent at the present price of Rs. 14 a share of Rs. 10 each. Taxation is allocated Rs. 1.31 lakhs (against Rs. 1.75 lakhs) and general reserve Rs. 50,000 (against the same). The crop fell from 311,895 kilograms to 307,000 kilograms and the average sale price from Rs. 7.70 to Rs. 7.37 a kilogram. The 1964 crop has been estimated at 322,000 kilograms at a cost of Rs. 6.49 a kilogram.

Jay Shree Tea Pays the Same

THE directors of Jay Shree Tea and Industries Ltd take a fairly optimistic view of the outlook for the current year in view of the improved working of the various units and the addition of new projects. Sales rose from Rs. 4.19 crores for 1962 to

Rs. 8.13 crores for the year ended December 1963. The profit has amounted to Rs. 15.45 lakhs, against Rs. 15.82 lakhs, after providing Rs. 23.22 lakhs (against Rs. 17.28 lakhs) for depreciation. Rs. 1.55 lakhs (against Rs. 3.25 lakhs) for development rebate reserve and Rs. 21.50 lakhs (against Rs. 22.50 lakhs) for taxation. The taxable ordinary dividend of 12.5 percent has been repeated which gives a yield of 8.4 percent at the present price of Rs. 14.87 a share of Rs. 10 each. General reserve is allocated Rs. 5.87 lakhs (against Rs. 5 lakhs), leaving a carry-forward of Rs. 41,622, against Rs. 42,303 brought in.

The output of tea increased by 70,411 kilograms, due to a substantial rise in the crop of the estates situated in Madras. The Government of India approved the purchase of three tea estates situated in Cachar. The Company has also acquired another tea estate in Kerala with 270 hectares under tea. Out of the loan of Rs. 14.97 lakhs sanctioned to the Company, borrowing has amounted to only Rs. 3.29 lakhs up to the end of 1963. Woodcrafts Assam has made progress and has expanded. The working of Jayashree Plywood in Khardah, near Calcutta, has been interrupted by the shortage of timber and skilled workers. Due to the increased competition the factory has not worked up to its full capacity, but better results for 1964 are expected. Jayashree Chemicals and Fertilizers in Khardah has done well, and its progress is likely to be maintained during the current year. The profit of the Colombo branch has declined due to severe competition in tea exports from Ceylon. The Company has received the industrial licence for two plywood units—one at the Andaman and Nicobar islands and the other in Bastar, Madhya Pradesh. The Andaman unit may start production by the beginning of 1965. The hard board project in Madhya Pradesh has been dropped since the State Government has not granted the necessary forest lease. An industrial licence has been obtained to produce 8,250 tons of alum a year at the Company's chemical plant Khardah. Steps have been taken to implement the scheme.

The ordinary share capital has been increased by issuing 218,666 bonus shares and the preference capital has been raised by Rs. 24.80 lakhs. The Company has been sanctioned to issue 291,558 rights ordinary shares at the reduced premium of Re. 1 a share. But the directors have not yet taken any decision concerning the rights issue. They suggest that the Government of India should refund excise duty on tea at the point of export to promote tea exports.

W. I. M. C. O. Sales Up, but Profit Down

IN spite of an increase of some 5 percent in its sales from Rs. 18.76 crores to Rs. 19.75 crores, the gross profit of the Western India Match Co. Ltd for 1963 is down by nearly 11 percent from Rs. 1.82 crores to Rs. 1.62 crores. The dividend has been maintained at Rs. 16 a share. The factories worked satisfactorily during the year and sales were good but the profit was adversely affected by the increased production costs. The Company could not make up for higher costs by increased production as the installed capacity is restricted by the Government to what it is today and the Company has reached peak production possible with the present equipment. The directors say that the Government does not seem to be willing to reconsider its policy of not allowing the mechanised sector of the industry to expand its

capacity even when the subsidised cottage industry has not been able to make good the shortage of supplies.

The directors state that the Company's paper mill worked satisfactorily, but it has still to depend on imported pulp. Negotiations continue with possible indigenous pulp suppliers. As the sources of match timber are fast dwindling, the Company proposes to set up a plant for the manufacture of wax sticks, the raw materials for which, paper and paraffin, are both available in India. The special machinery for the manufacture of wax sticks is not available in India but the managing agents—fully aware of the foreign exchange shortage—have agreed to help the Company by furnishing it, free of charge, with drawings for some of the machinery and equipment which can be manufactured in India.

Certain other machines which are necessary for the manufacture of wax sticks cannot be manufactured in India and it is proposed to obtain these machines from the Swedish Match Company under special arrangements. The machinery will be rented or hired to the Company by the Swedish Match Company for a period of five years at an annual rent of Rs. 17,973. After the expiry of the stipulated period of five years, if the Company desires to continue the manufacture of wax matches, it will pay to Swedish Match a sum of Rs. 1.80 lakhs after the deduction of the rent, if any, which may already have been paid to them. If it decides wax matches prior to the expiry of the period, the Company will have to return the machinery at its cost to the Swedish Match Company. The directors add that the Madras Government has leased to the Company necessary land in Vedaraniyam and the salt project has been started on a pilot basis.

Appropriations of the gross profit of Rs. 1.62 crores include the managing agents' commission Rs. 16.39 lakhs (against Rs. 13.22 lakhs), depreciation Rs. 22.51 lakhs (against Rs. 21.87 lakhs), development rebate Rs. 1.99 lakhs (against Rs. 1.35 lakhs), taxation Rs. 65.75 lakhs (against Rs. 68.60 lakhs), gratuity Rs. 4.19 lakhs (against Rs. 5.96 lakhs) and general reserve Rs. 7.12 lakhs (against Rs. 3 lakhs). After providing for the proposed dividend which absorbs Rs. 44 lakhs (the same), there remains a balance of Rs. 44,408 to be carried forward, against Rs. 82,645 brought in. The excise duty paid by the Company during 1963 amounted to Rs. 11.37 crores, against Rs. 10.65 crores in 1962. The Company has a paid-up capital of Rs. 2.75 crores which is supported by reserves and surplus amounting to Rs. 2.99 crores. Its gross block valued at Rs. 5.40 crores has been written down to Rs. 2.72 crores.

Outlook for Isaac Holdens (India)

THE ordinary shares of Isaac Holdens (India) Ltd have been quoted at Rs. 13.06 due to the payment of a taxable maiden ordinary dividend of 5 percent. At the current price, the yield amounts to 3.8 percent a share of Rs. 10 each. The directors have mentioned that the Company was engaged fully on defence production, but defence orders were completed towards the end of 1963. So normal working has now been restored. In producing for defence, a greater weight of production was achieved. This has helped to contribute to the improved results of the Company. Since normal production has been restored, the margin of profit during the current year is likely to fall. Efforts are being made to export tops which

should lead to an increase in production.

The rights issue has been fully subscribed, but the machinery for which the rights issue was made will not be shipped until the middle of 1964. It may not begin production during the current year. The Company is now combing merino fine quality wool for the civilian market. With reversion to merino, the operation of the grease plant should show an improvement. The working of the dye plant has been interrupted by the shortage of dyestuffs. The machinery brought with French credit should be installed by the end of 1964. Further machinery is also expected to arrive from abroad. With the installation of the new equipment the licensed capacity of 13 million lbs should be reached. Steps have been taken to extend the dye plant and the necessary import licence has been applied for. Indian Fibres Ltd, a subsidiary, has virtually stopped working due to the lack of demand for Indian wool.

The profit has amounted to Rs. 21.27 lakhs, against Rs. 19.70 lakhs for 1962, after transferring Rs. 11.45 lakhs (against Rs. 8.63 lakhs) to depreciation. Development rebate reserve is allocated Rs. 14.54 lakhs (against Rs. 31,500), general reserve Rs. 1.75 lakhs (against Rs. 5 lakhs), and contingency reserve Rs. 1.25 lakhs. The carry-forward amounts to Rs. 17,347, against Rs. 19,207 brought in. The Company has decided to change its name to Wool Combers of India Ltd, and the Government has been approached for the necessary approval.

Henley Cables to Diversify

THE performance of Henley Cables India Ltd during the year ended October was extremely disappointing. In spite of a substantial increase in the sales from Rs. 2.16 lakhs to Rs. 62.34 lakhs, the Company suffered a loss of Rs. 3.46 lakhs without making any provision for depreciation; in 1961-62, the Company had incurred a loss of Rs. 7.87 lakhs after setting aside Rs. 2.49 lakhs for depreciation. From what the chairman, Mr. A. D. Shroff, stated at the shareholders' annual meeting on 29th April, the Company is likely to fare better this year, although there seems little prospect of a dividend for another year or two. Sales of the Company's products are said to have shown a considerable improvement over the past three months and the average sales during the current year are likely to be of the order of Rs. 7 lakhs a month, compared with Rs. 62.34 lakhs for the whole of the previous year.

Mr. Shroff described the future outlook as hopeful, but he was unable to give any definite indication of the current year's prospects because of the erratic and highly fluctuating market for P.V.C. and rubber insulated cables manufactured by the Company. The quality of the Company's products is, however, considered to be very satisfactory. The chairman attributed the poor results in 1962-63 to the high cost of indigenous P.V.C. compounds which was almost double the landed cost of imported material. The Company had also to put up with the increased burden of excise duties on raw materials. Production costs were also inflated last year by the higher cost of power. The supply of electricity from the public power supply was not sufficient and the Company had to meet nearly two-thirds of its requirements from its own generators which pushed up costs.

Mr. Shroff informed the shareholders that the management proposes to diversify production. The

requisite plant has been ordered and it is expected to be ready for work by October. Licence for importing plant worth Rs. 23.70 lakhs for winding wire and covered copper strips is still awaited. The Company's foreign collaborators have assured that the required foreign exchange will be made available on a loan basis. The construction of the factory building is in progress. No decision has yet been taken on the time for making the one-for-four rights issue for raising the rupee funds for the expansion schemes.

Ahmedabad Jupiter Disappoints

ALTHOUGH the dividend has been maintained at Rs. 33 a share (Rs. 125 paid) and that again is on the increased capital, the working results of the Ahmedabad Jupiter Spinning, Weaving and Manufacturing Company for 1963 make a very poor showing. In spite of an increase of 66 percent in the sales from Rs. 3.90 crores to Rs. 6.47 crores, the gross profit is down by about 7 percent from Rs. 50.43 lakhs to Rs. 46.76 lakhs. The figures for the previous year represent the combined results of 12 months' working of Ahmedabad Jupiter and six months' working of Hind Mills while those for 1963 represent the results of a full year's working for both the mills. The Hind Mills was taken over by Ahmedabad Jupiter in July 1962 and the scrip issued to the shareholders of Hind Mills rank fully for the 1963 dividend.

After providing Rs. 1.51 lakhs (against Rs. 2.52 lakhs) for the managing agents' commission, Rs. 24.34 lakhs (against Rs. 21.14 lakhs) for depreciation, Rs. 5.19 lakhs (against Rs. 3.37 lakhs) for development rebate reserve, Rs. 86.294 (against Rs. 1.37 lakhs) for donation and Rs. 6.65 lakhs (against Rs. 11.25 lakhs) for taxation, the net profit amounts to Rs. 8.21 lakhs, against Rs. 10.79 lakhs in 1962. The directors have withdrawn Rs. 7 lakhs to provide for the payment of dividend. Preference dividends absorb Rs. 2.58 lakhs (against Rs. 1.65 lakhs) and the equity dividend Rs. 12.91 lakhs (against Rs. 8.58 lakhs), leaving a surplus of Rs. 52,498 to be carried forward, against Rs. 26,843 brought in. The number of equity shares has risen from 26,000 to 39,126. The machinery added during the year amounted to Rs. 41.32 lakhs, raising the gross block to Rs. 3.16 crores. The Rs. 125-paid share of Ahmedabad Jupiter is quoted around Rs. 670, offering a gross return of a little over 5 percent.

Coromandel Fertilisers Share Offer

THE offer of 3.95 million ordinary shares of Rs. 10 each (of which Rs. 2.50 a share will be payable on application) for public subscription at par by Coromandel Fertilisers Ltd, is expected to meet with good response. The products which will be manufactured by the Company are likely to find a ready market. The present issue consists of 8.48 million ordinary shares, out of which California Chemical Company will be allotted 581,770 shares, International Minerals and Chemical Corporation 515,910 shares and E.I.D.-Parry Ltd 63,540 shares. The two U.S. companies have also agreed to subscribe for further 1.5 million and 1.4 million ordinary shares, respectively. E.I.D.-Parry will also take up further 487,310 shares. Originally started as a private company, Coromandel Fertilisers has now become a public company. California Chemical Company, International Minerals and Chemical Corporation (both are U.S.

companies) and E.I.D.-Parry Ltd are the promoters of the new company. It is proposed to build a fertiliser plant in Vishakhapatnam area, Andhra Pradesh. The factory will produce complex fertilisers and urea with a capacity to produce ammonium phosphate of various grades. The articles of association of the Company have complied with all the requirements of Bombay Stock Exchange. Mr. Luther Leo Powell is the managing director of the Company. The list opens on 11th May, 1964. Reputed firms have underwritten the issue (the details of which appear on a later page in this week's issue of Capital).

United Flour Raises Dividend

THE United Flour Mills Co. Ltd has increased the taxable ordinary dividend from 7.5 percent to 20 percent, including an interim of 10 percent, for the year ended November 1963. The yield works out to 7.2 percent at the present price of Rs. 27.81 a share of Rs. 10 each. The profit has amounted to Rs. 3.16 lakhs, against Rs. 2.26 lakhs, after providing Rs. 28,590 (against Rs. 30,201) for depreciation. Taxation is allocated Rs. 1.65 lakhs (against Rs. 1.92 lakhs), general reserve Rs. 1.75 lakhs and development rebate reserve Rs. 4,957. The carry-forward is Rs. 8,262, against Rs. 6,571 brought in. Sales rose from Rs. 1.10 crores to Rs. 1.20 crores.

The directors state that demand for the products of the Company has been good. The output increased from 252,082 quintals to 270,731 quintals.

Marshall and Sons Skips Again

MARSHALL, Sons and Co. (India) Ltd has again passed the dividend for the year ended June 1963. The profit has amounted to Rs. 1.18 lakhs, after transferring Rs. 1.16 lakhs (against Rs. 1.05 lakhs) to depreciation, and Rs. 51,464 (against Rs. 14,500) to taxation relating to previous years. The loss amounted to Rs. 12.45 lakhs for 1961-62. The debit balance has, therefore, been reduced to Rs. 16.90 lakhs which is being carried forward.

Steps have been taken to reduce expenditure and expand the range of the Company's activities, especially in the field of indigenous engineering products. The Company has entered into an arrangement with Britannia Engineering Co. Ltd under which the latter Company has undertaken all responsibility for making bills to customers and processing payments for the supply of road rollers and tea machinery sold by Marshall, Sons and Co. The new Company, Marshall, Sons and Co. (Manufacturing) Private Ltd, in Madras, has made good progress. Marshall, Sons and Co. (India) has been appointed the sole selling agents for the manufacturing activities of the new company. Messrs Marshall's (Direction) Private Ltd has resigned from the managing agency of Marshall, Sons and Co. (India). So considerable expenditure has been saved. The workshops in Bombay and Calcutta have worked satisfactorily, and the total output has amounted to Rs. 23.36 lakhs. The manufacturing activities of Marshall, Sons and Co (India) are being expanded.

New India Assurance Profit Down

THE directors of New India Assurance Co. Ltd have recommended a dividend of Rs. 4.50 a share (of

Rs. 15 each) plus a bonus of Rs. 1.20 a share for 1963. The total distribution of Rs. 5.70 a share is the same as last year but it is on the increased capital as raised by the one-for-five bonus issue made last year. The distribution is being made in spite of the setback in the Company's working results. According to the brief preliminary figures which are subject to audit, the premium income has declined from Rs. 13.7 crores to Rs. 13.2 crores and the net profit, after taxation, is mentioned around Rs. 60 lakhs, against Rs. 73 lakhs in 1962. The dividend distribution will absorb Rs. 64.94 lakhs and will be made out of the profit for the year and the balance from Rs. 8.2 lakhs left in capital reserve built from the compensation received for the Company's life business taken over by the L.I.C.

Asian Cables to Expand

THE Asian Cables Corporation's working results for the year ended September 1963 show considerable improvement over the previous year. After providing Rs. 5.99 lakhs for depreciation, the Company incurred a loss of nearly Rs. 59,000, against one of Rs. 11.52 lakhs in the previous year. Now that the Company has got over most of the difficulties which had been hindering its sales promotion, the chairman, Mr. G. B. Kotak, assured the shareholders at the Company's annual meeting on 30th April that they could look forward to much better results for the current year. (Details appear on later page in this issue of Capital.) The chairman expressed the hope that the Company would be able to make a decent profit during the current year, but he was quick to caution the shareholders against expecting a maiden dividend for 1963-64 as large sums needed to be provided for depreciation and development rebate and it was also necessary to build up reserves for future expansion.

The Company's products have been registered with the Government and the D.G.S. and D has put its cables on the rate contract at par with the leading manufacturers who have long been in this field. In spite of many handicaps, the Company has made a beginning in exporting its cables and efforts are being made to push up export business. The Government has granted the Company a licence to expand the magnet wire capacity from 360 tons to 1,200 tons a year. The Company has also received a licence to manufacture 500 tons of paper and cotton covered winding wires and strips a year.

New Capital Issues

TWO companies have been authorised to raise fresh capital amounting to Rs. 1.20 crores.

Lamp Caps and Filaments Ltd, Bombay, will be issuing Rs. 50 lakhs capital—Rs. 37.50 lakhs equity and Rs. 12.50 lakhs preference—to be issued for cash at par. The money will be used in the manufacture of caps for lamps.

Warner-Hindustan Ltd, Bombay, a new company, is to issue capital of Rs. 70 lakhs—Rs. 50 lakhs in equity and Rs. 20 lakhs in preference. Out of this, equity capital of Rs. 25 lakhs and the entire preference capital of Rs. 20 lakhs will be offered for subscription to Warner-Lambert Pharmaceutical Company, U.S.A., and equity capital of Rs. 12.25 lakhs to the public through prospectus. The capital will be used for the manufacture of intermediate chemicals (pyridine and its derivatives), pharmaceuticals (drugs and medicines), cosmetics and toiletries.

The Stock Markets

DULL CONDITIONS PREVAIL: GOOD CORPORATE NEWS IGNORED

Wednesday Evening.

DULL conditions have prevailed in the Calcutta stock market during the past week. Turnover has centred largely on clearing shares and prices have moved within a narrow groove. Despite fairly good corporate news in the form of bigger dividends declared by some leading companies, operators have been reluctant to extend their commitments following political uncertainties. The Kashmir situation is being watched closely. Attention has for the time being been diverted to the Security Council debate on Kashmir.

Turnover has on the whole shrunk considerably. Business in cash shares has been negligible, although the selling pressure is less. Holders have been reluctant to sell since at current prices their investment portfolios show considerable depreciation. They seem to think that the supply of good scrip may shrink in the near future because the Unit Trust is expected to buy a large number of shares when it begins to sell units to the public within the next few weeks. It is, nevertheless, difficult to take a definite view about the trend of prices since purchases by institutions like the Life Insurance Corporation and the Unit Trust will not, by themselves, help to restore confidence. Investors are not likely to buy equities until the effects of the Budget proposals are fully assessed. The dividend tax and the capital gains tax on bonus shares have been major restraining factors.

The clearing passed off uneventfully on Wednesday. Operators have not been impressed by the slightly smaller carry-forward charges. In view of the improvement in the technical position, it is thought that a further big fall is unlikely. Indian Iron have been sluggish due to disappointing production and despatch figures for April. The Company has produced 111,269 tons of pig iron in April, against 113,069 tons in March. The output of steel ingots has declined from 89,766 tons to 82,319 tons and that of salable steel from 78,624 tons to 62,656 tons. Despatches have dropped from 93,935 tons to 51,565 tons.

Texmaco have been steady among engineering shares due to the payment of a higher dividend. Guest, Keen, Williams, Burn and Braithwaite have met with scattered support. Jessop have been easier while Binani Metals have enjoyed influential support. Kumardhubi Engineering have been taken on expansion prospects. Turnover in jute shares has shrunk considerably, although prices have shown little change. Attention has centred on Birla, Kinnison, Anglo India, Champdany, Barnagore and India. Investors have been worried about the sluggish enquiries for jute goods from abroad. Coal shares have been subdued due to the decision of the Government to cut the production of coking coal. Burrakur, Bengal, Pench Valley and Central India have lost. Among cotton mills, Jay Shree Textiles and Bharat Commerce have been steady on good reports, while Elgin have been offered freely without attracting support. J. K. Rayon have fluctuated both ways. Dunbar have been steady on dividend prospects.

In the miscellaneous section, clearing scrip have been prominent but their prices have moved narrowly. Towards the close they have dropped slightly due to profit-taking. Hindustan Motors, Indian Aluminium, Dun-

lop Rubber, Indian Copper, Kesoram Industries and Indian Cable have been largely transacted. Union Carbide have gained fractionally due to a good report. Alkali and Chemical, British Paints, Philips India and Metal Box have attracted scattered support. British India Corporation have been steady on declaring a higher dividend, but India Steamship have been offered freely without attracting interest.

Hindustan Aluminium and Isaac Holdens have been about steady on expansion prospects. Electric company shares have been neglected and small business in Calcutta Electric has passed. Managing agency shares like Balmer Lawrie, Martin Burn and Jardine Henderson have been quiet. Sugar shares have been offered at lower prices, but there are no buyers. Orient have been prominent among paper shares. Seshasayee, Titagur and Bengal have been slightly steady. Limited business has been transacted in tea shares. Selected Assam and Doorga gardens have met with scattered buying.

The prices of short-dated securities, in particular, have hardened due to the shortage of sellers. Support has flowed largely from banks, which have been keen to invest funds in securities. Medium-dated loans have been about steady. The Reserve Bank of India has resumed open market operations. The 3 percent Conversion Loan 1966 has been offered around Rs. 63.50.

Bombay

TURNOVER DECLINES APPRECIABLY

INVESTORS DETERRED BY NEW TAXES

Wednesday Evening.

THE Bombay stock market has been dull and quiet during the past week. Turnover has declined appreciably and prices of clearing scrip in particular have fallen due to tired bull liquidation. There has also been some short-selling following various uncertainties. Although some leading companies have declared bigger dividends, investors have remained unimpressed. They think that the outlook for equities has deteriorated due to the levy of the dividend tax and the capital gains tax on bonus shares. The political developments concerning Kashmir have called for caution. Share prices have generally moved narrowly, and bulls have been inclined to take their profits at every bulge.

Tata Steel ordinary have closed lower at Rs. 149. Indian Iron have weakened on selling pressure from Lyons Range. Among engineering shares, Tata Engineering, Premier Construction and Larsen and Toubro have been about steady on prospects of expansion. In motor-vehicle shares, Hindustan Motors have dropped on profit-taking. Premier Automobiles have been sluggish.

Cotton mill shares have declined after an earlier rise. Investors have been disturbed by the prospect that the Government is unlikely to sanc-

ATTENTION INDUSTRIALISTS!

HERE'S ELECTRIC POWER FOR YOUR NEW INDUSTRIES

AND EVERYTHING ELSE YOU CAN ASK FOR

Your new industry needs a lot of electric power. The U.P. State Electricity Board is proud of its ability to keep pace with industry's growing demand.

The following are some of the major power projects in U.P.'s Third Five Year plan:

Rihand Hydro-electric Project	2,50,000 KW	Completed 1962
Harduaganj, Stage I	60,000 KW	Completed May '62
'Harduaganj, Stage II	30,000 KW	Completed Mar. '64
Matatila Hydro-electric Scheme	30,000 KW	Scheduled Dec. '64
Yamuna Hydro-electric Scheme, Stage I	86,000 KW	Scheduled June '65
Kanpur Thermal Expansion	44,000 KW	Scheduled Aug. '65
Obra Thermal	2,50,000 KW	Starting Oct. '65
Yamuna Hydro-electric Scheme, Stage II	2,00,000 KW	Scheduled Dec. '69

A trunk grid of 2,20,000 volts is being constructed to interconnect all the power stations and lines of 1,32,000 and 66,000 volts will branch off from this trunk grid for taking constant electric power to the following important industrial centres:-

Ghaziabad-Modinagar-Meerut - Connected by rail and road with the whole of India. Home of the well known Modi Group of Industries - can also be the home of your industry. Industrial sites are offered by the U.P. Industrial Corporation, Kanpur.

Aligarh - Only 16 miles from the Harduaganj Thermal Power Station - assured of ample and constant supply of electric power. 84 miles from Delhi.

Dehra Dun - Home of the Yamuna Hydro-electric Schemes, Stages I, II, III and IV. Unlimited forest produce and limestone of high purity at hand.

Saharanpur-Roorkee-Hardwar-Nishikesh - offer big scope for industries, particularly those ancillary to the Antibiotics Factory at Rishikesh and the Heavy Electricals Factory at Hardwar. Close to rich extensive forests.

Bareilly - Home of the Synthetic Rubber Industry, Camphor Industry, Turpentine and Rosin Industry and the Match Industry and developing rapidly as a major industrial centre.

Agra - Main tourist attraction in India and growing industrial centre - conveniently connected with the whole country by rail (both broad gauge and metre gauge), road and air.

Kanpur - Already the most important industrial centre in Northern India. Seat of many technical training institutions. Connected with the whole country by rail, road and air.

Lucknow - Seat of the U.P. Government and a growing industrial centre. Industrial area developed by the U.P. Industrial Corporation, Kanpur. Served by rail, road and air.

Allahabad and Naini - Quick movement of goods between Calcutta and Allahabad assured by electric traction. Land, water and power available in plenty.

Varanasi-Mughalsarai Area - Another industrial area which is growing rapidly. Conveniently connected by rail, road and air with the rest of the country.

Mirzapur District - Home of three major power stations - Rihand, Obra Thermal and Obra Hydel. Rich in limestone deposits and producing large quantities of aluminium and caustic soda. Coal available from nearby Singrauli Coalfields.

Gorakhpur - A large Fertiliser Factory being set up here by the Government of India - also seat of the Madan Mohan Malviya Engineering College and the Government Technical Institute. Important centre of sugar production.

This advertisement is issued for the information of industrialists throughout the country by the

U.P. STATE ELECTRICITY BOARD

COUNCIL HOUSE, LUCKNOW

who will be happy to answer enquiries and furnish any further information which may be required.

shares have been dull, and limited business has passed in Belapur.

Rayon Shares have been quiet, and National Rayon have been quoted lower. Gwalior Rayon have, nevertheless, been steady on influential support. Chemical shares have been softer, and Tata Chemical have declined. Indian Dyestuff and Polychem have been quoted at lower prices. Voltas have been weaker on profit-taking. Scattered business has been done in bank shares. Central Bank and Bank of India have changed hands. Electric company shares have been about steady. Ahmedabad, Tata Hydro and Bombay Suburban have changed hands.

Madras

BUSINESS CENTRES ON PLANTINGS FEARS OF POWER CUTS WORRY INVESTORS

Tuesday Evening.

THE Madras stock market has been quietly steady during the past week. Turnover has declined and has largely centred on selected planting and textile shares. Uninspiring advices from Calcutta and Bombay have contributed to the dullness. Investors have been worried about the growing shortage of funds and the possibility of further power cuts in the near future. Business in clearing shares has also been restrained.

Government securities have been dull, but interest has been taken in good preference shares. In banks, Pandyan have been quoted at Rs. 37 since it has been decided to distribute Rs. 32 a share as compensation to the existing shareholders. Indian Overseas have been quoted at Rs. 139 and Syndicate Bank at Rs. 143.50. Sugar shares have been quiet, and Deccan have been available at Rs. 11.75. E.I.D. have been weaker at Rs. 35.35 and Andhra at Rs. 13.79. Kothari have been offered freely down to Rs. 6.90, but Mysore have been about steady at Rs. 28.33.

Among planting shares, Blue Mountain have been dull at Rs. 2.43 and Cochin Malabar at Rs. 6.48. Consolidated Coffee have been available at Rs. 21.81 and Ouchterlony have weakened to Rs. 4.08 on reducing the taxable ordinary dividend from 12½ percent to 6 percent. Periakaramalai have changed hands at Rs. 3.48. Teekoy have been done at Rs. 6.60. Thamarapally at Rs. 16.40, Midland at Rs. 11.20, Coonoor at Rs. 17.57. Lucky Valley have changed hands at Rs. 12.50 on declaring a taxable ordinary dividend of 10 percent. Business has passed in Peermade at Rs. 21.12 on paying a taxable final ordinary dividend of 12½ percent. Among coffee shares, Coffee Lands have been weaker at Rs. 17.50, Cowcoody at Rs. 4.66 and Rajendra at Rs. 10.42.

In the textile section, South India Viscose have been quoted at Rs. 123.50 and Travancore Rayon at Rs. 23. Lakshmi have been done at Rs. 133.50 and Madura at Rs. 33.30. Radhakrishna have been bought up to Rs. 28.75 on declaring a taxable ordinary dividend of 10 percent. Ramnarayan have been taken at Rs. 93 on the decision to issue rights shares for Rs. 10 lakhs. Rayalaseema have come to hand at Rs. 138.50 on paying a taxable ordinary dividend of 10 percent. Vasanta have been taken at Rs. 255 on declaring a taxable ordinary dividend of 8 percent. Adoni Spinning have come to hand at Rs. 9.60 on declaring a taxable ordinary dividend of 9 percent. Bangalore Woollen have

CAPITAL, 7th May, 1964.

been done at Rs. 257 and Buckingham at Rs. 274.

Among miscellaneous shares, Aluminium industries have declined to Rs. 20.75 and Ashok Leyland to Rs. 7. In cement shares, Dalmia have been steady at Rs. 13.10 and India Cement at Rs. 5.66 on prospects of expansion. Metturr Chemical have been taken at Rs. 13.24, but F.A.C.T. have weakened to Rs. 5.25 on the prospect that the Company will produce disappointing results for the year ended March 1964. Although the Company has increased its capacity and a new oil gasification plant has been installed, the working has been seriously interrupted by drastic power cuts. The latter continue to affect the working during the current year.

Southern Structurals have been steady at Rs. 11 and Seshasayee Paper have improved to Rs. 7.60. Standard Motors have been taken at Rs. 10.12 and Tube Investment at Rs. 203. Jaipur Metals have been quoted at Rs. 100 on declaring a taxable ordinary dividend of 6 percent. Jeewanlal have been quoted at Rs. 10 due to the payment of a taxable ordinary dividend of 10½ percent. Parry's Confectionery have been steady at Rs. 3.14 and Spencer at Rs. 22.37. Madras Aluminium have been easier at Rs. 73 and Madras Rubber at Rs. 13.03.

REVISING THE INTER-BANK PACT ON DEPOSIT RATES

(BY A SPECIAL CORRESPONDENT)

The Indian Banks Association recently considered the controversial question of raising the interest rates on deposits. The banks, it is argued, will not be able to bear the burden of higher deposit rates without a corresponding rise in lending rates. But since this will be inflationary, the monetary authorities should decide whether it should be permitted at present.

ON 30th April, another meeting of the Indian Banks Association was held to settle the controversial question of interest rates on deposits. According to reliable sources, the majority of bankers felt the need for raising interest rates on deposits held for periods of more than six months. The interest rates on deposits for more than one year, are to be raised, say,

by 0.50 percent or 0.75 percent. There will be a proportionate rise in the rate on deposits for a shorter period, namely, less than six months. The actual schedule of rates will, however, be worked out by a committee headed by Mr. C. H. Bhabha, vice-chairman of the Central Bank of India and a former chairman of the Indian Banks Association. The schedule of

rates will be submitted to bankers for their approval by the end of this month.

It was decided that the proposed increase in interest rates on deposits should not be followed by a rise in the minimum lending rate. The latter was fixed last year by an agreement among banks, which included the

State Bank of India, after Bank rate was raised to 4½ percent. But a section of bankers opposed the upward revision of interest rates on deposits at the recent meeting of the Association. An attempt will be made to persuade the dissenting bankers to accept the revised interest-rate agreement. The chairman of the Association, Mr. Tulsidas Kilachand, who was unanimously elected for a third consecutive term, was entrusted with the delicate task of persuading the opponents to accept the majority viewpoint.

The present agreement on interest rates on bank deposits was concluded in 1958 when the banks were facing no difficulty in attracting deposits and the demand for bank credit was not as acute as now. The circumstances later changed since the mobilisation of deposits became the most important issue and there was a sellers' market for credit. There was also a switch-over to a dearer money policy. Banks took advantage of the trend of higher interest rates and raised the minimum lending rate to 6½ percent, and the average lending rates still higher. Although the agreement was revised in 1962, no attempt was made to raise the rates on deposits. The issue assumed sudden importance when the Governor of the Reserve Bank in March suggested that banks should raise the rates on deposits without raising lending rates.

Some Anomalies

There are certain anomalies in the present agreement. While the State Bank of India is not a signatory to the agreement, its subsidiaries are members of the agreement because they are allowed the advantage of quoting higher interest rates along with other medium and small banks. So the State Bank has an effective voice in the matter of interest rates on deposits. It is necessary to rectify this anomaly by either asking the State Bank subsidiaries to go out of the agreement or persuading the State Bank to join the agreement on behalf of itself and its subsidiaries. In that event, the State Bank can always quote a rate which is lower than other scheduled banks through a prior arrangement. As a natural corollary, the State Bank subsidiaries will not enjoy the benefit of being able to offer higher interest rates.

It is necessary to abolish altogether the rate of interest on deposits repayable on three days' notice. It is on such deposits that banks lose heavily because a customer can deposit funds during the week-end to take advantage of holidays when the money lies idle in the "till" of the bank. The rates paid on deposits of a longer duration, say, more than three months, should, however, be raised. In other words, the existing rate structure requires thorough overhaul on a realistic basis.

Some bankers plead for an end to the "free" services rendered by banks. These services are provided by certain banks to attract customers without, however, violating the inter-bank agreement on deposit rates. Such concessions actually amount to an underhand "premium" paid to depositors. Some think that a code of conduct should be established so that banks cannot introduce "free" services without prior consultation and agreement with other members of the Association.

Diversion of Deposits

Another aspect also deserves attention. It is well known that the interest paid on public deposits by the corporate sector and co-operative banks is much higher than what banks are prepared to pay under the revised agreement. It is, therefore, doubtful whether banks will be able to reverse the flow of deposits away from the banking system by raising the rates

paid on deposits by ½ percent or ¾ percent. The rise must bear some relationship to make such rates competitive with those prevailing elsewhere in the organised sector if not within the unorganised sector of the money market.

Banks will not be able to absorb the deposit rate burden without a corresponding rise in lending rates. Alternatively, they may raise the service charges which are not subject to any agreement. There is a strong possibility that banks will ultimately pass on the higher costs to their constituents, so further inflationary pressures cannot be avoided. Whether this will be desirable under present conditions is a question for the monetary authorities to decide.

THE CALCUTTA MONEY MARKET

MODERATE INCREASE IN ADVANCES

Wednesday, 6th May.

A MODERATE increase in the credit given to miscellaneous borrowers has raised the general level of advances in the Calcutta money market during the past week. The accommodation given to the jute mills, and to the iron, steel and engineering industries, is also slightly higher. But the requirements of the other major categories—the textile and sugar mills, and the foodgrains and seeds trade—are unchanged. In the interbank market, conditions are tight, and the call rate has risen to 6 percent.

The exchange market has been fairly quiet, with a sharp drop in the supply of tea bills. The flow of gunny bills remains moderate. There is a fair demand for remittances. After a brief recovery early in the past week, sterling has again weakened in relation to most of the major currencies, with the exception of the Danish and Swedish kroners.

SILVER WAS QUIET IN CALCUTTA in the past week. The price dropped from the previous week's level of Rs. 263.75 to Rs. 262.25, quoted today. The London and New York prices stood at 113½d and 129.3 cents.

In spite of a fall in silver, gold ruled rather steady and the price of 14-carat advanced from Rs. 68.50 to Rs. 69.

DURING THE WEEK ENDED 1ST MAY, Government of India Treasury bills for Rs. 92,55,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 5th May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.250 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 3,000 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 11th May.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 6th May to 9th May at Rs. 99.266 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 29th April to 2nd May amounted to Rs. 80 lakhs only.

DECLINES OF RS. 2.84 CRORES TO Rs. 2,533.43 crores in active notes and of Rs. 1.57 crores to Rs. 2,553.87 crores in the total note issue were notable features of the return of the Reserve Bank of India during the week ended 1st May, 1964. The decline of Rs. 5

crores to Rs. 103.46 crores in foreign securities of the paper currency reserve was nearly offset by a rise of Rs. 4.92 crores to Rs. 2,227.39 crores in Rupee securities. Deposits of the Government of India dropped by Rs. 3.38 crores to Rs. 49.34 crores while those of State Governments rose by Rs. 69 lakhs to Rs. 14.22 crores. Balances of scheduled banks at Rs. 91.21 crores showed a rise of Rs. 7.78 crores. Balances held abroad rose by Rs. 1.39 crores to Rs. 9.36 crores. Investments increased by Rs. 25.59 crores to Rs. 179.71 crores. Loans to scheduled banks rose from Rs. 45.02 crores to Rs. 65.53 crores, of which advances against usance bills amounted to Rs. 22.58 crores (Rs. 20.39 crores). Ways and means advances stood at Rs. 74.48 crores, against Rs. 83.08 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 24th April, 1964, shows a rise of Rs. 6.29 crores to Rs. 626.32 crores in total deposits. Investments in Government securities are down by Rs. 2.01 crores to Rs. 230.59 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 3.19 crores to Rs. 377.25 crores. Cash and balances are, in consequence, shown at Rs. 22.06 crores or Rs. 1.84 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 24th April, 1964, shows Demand and Time liabilities at Rs. 1,254.57 crores (Rs. 41.44 crores on account of borrowings from banks) and Rs. 1,293.21 crores (Rs. 12.48 crores), compared with Rs. 1,242.41 crores (Rs. 33.11 crores) and Rs. 1,284.11 crores (Rs. 12.82 crores), respectively, in the previous week. Cash has risen by Rs. 2.48 crores to Rs. 62.64 crores, while balances with the Reserve Bank have declined by Rs. 3.21 crores to Rs. 78.92 crores. There is a drop of Rs. 9.66 crores to Rs. 615.09 crores in investments. Advances and bills discounted at Rs. 1,548.55 crores show a fall of Rs. 1.54 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.6 percent and 72.9 percent, against 5.6 percent and 73.4 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 5-5-64.			
Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

THE BIG HURRY IN THE WORLD OF ASTRONOMY

Suddenly, a star exploded ■ Turning within its spiderwork of iron and steel, the 200 ft. wide saucer-shaped 'eye' of the radio telescope at Jodrell Bank looked deep into black space and recorded the star had exploded FIVE MILLION YEARS AGO! ■ Peering so deep into space as to question time itself such radio telescopes are revealing to us the breathtaking, even frightening, dimensions of space and time, gathering astronomical data that are making space travel a fast nearing reality. ■ Into the fashioning of the 2000-ton Jodrell giant went the most advanced technique and knowledge of welding and gas cutting. ■ It is this precise knowledge of industrial gas and its diverse applications that Indian Oxygen affords Indian industry.

INDIAN OXYGEN LIMITED

IOC-47A

This announcement is not a Prospectus. Persons interested in full details are requested to obtain copies of the Prospectus, which are available from the Company's Registered Office and from the offices of the Company's Bankers, Brokers, Underwriters and Registrars and Transfer Agents hereinafter mentioned.

COROMANDEL FERTILISERS LIMITED

(Incorporated in India under the Companies Act, 1956, on 16th October 1961 as a company limited by shares).
Registered Office: 66, Rashtrapathi Road, Secunderabad, Andhra Pradesh.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company was incorporated with the objects set out in its Memorandum of Association, the main objects being the manufacture, refinement and preparation at or in the vicinity of Vishakhapatnam, Andhra Pradesh, of all classes and kinds of fertilisers and of chemicals and industrial and other preparations arising from, or required in the manufacture of, any kind of fertiliser and the purchase, sale and distribution throughout India and elsewhere of all such classes and kinds of fertilisers, chemicals, industrial and other preparations.

The Company was incorporated as a private company on 16th October, 1961 and by virtue of the provisions of Section 43A of the Companies Act, 1956, it became a public company on 10th April, 1964. Thereafter the Articles of Association of the Company have been so revised as to comply with all requirements of a public company and those of The Stock Exchange, Bombay.

The promoters of the Company are

- (1) California Chemical Company of 200 Bush Street, San Francisco, California, U.S.A.;
- (2) International Minerals & Chemical Corporation of 5401 Old Orchard Road, Skokie, Illinois, U.S.A.; and
- (3) E.I.D.-Parry Limited of Airwork House, Piccadilly, London, W.1, England. Head Office: Dare House, Madras.

BOARD OF DIRECTORS

1. Haravu Varada Raj Iengar
(Chairman),
Industrialist,
Bens Garden,
Adyar, Madras 28, India.
Chairman and Managing Director of:
E.I.D.-Parry Ltd.
(Incorporated in England).

Chairman of:
Indian Aluminium Co. Ltd.

SHARE CAPITAL

AUTHORISED Rs. 85,00,000 Equity Shares of Rs. 10 each **8,50,00,000**

A. ISSUED, SUBSCRIBED AND PAID-UP 10,000 Equity Shares of Rs. 10 each **1,00,000**

PRESENT ISSUE 84,84,690 Equity Shares of Rs. 10 each **8,48,46,900**

OUT OF THE PRESENT ISSUE

(a) California Chemical Company will be allotted 5,81,770 Equity Shares of Rs. 10 each credited as fully paid-up for consideration other than cash **58,17,700**

(b) International Minerals & Chemical Corporation will be allotted 5,15,910 Equity Shares of Rs. 10 each credited as fully paid-up for consideration other than cash **51,59,100**

(c) E.I.D.-Parry Limited will be allotted 63,540 Equity Shares of Rs. 10 each credited as fully paid-up for consideration other than cash **6,35,400**

(d) California Chemical Company has agreed to subscribe for 15,29,640 Equity Shares of Rs. 10 each for cash at par **1,52,96,400**

(e) International Minerals & Chemical Corporation has agreed to subscribe for 13,56,480 Equity Shares of Rs. 10 each for cash at par **1,35,64,800**

(f) E.I.D.-Parry Limited has agreed to subscribe for 4,87,310 Equity Shares of Rs. 10 each for cash at par **48,73,100**

B. PROPOSED ISSUE TO THE PUBLIC AT PAR 39,50,040 Equity Shares of Rs. 10 each (on which Rs. 2.50 per share will be payable on application) **3,95,00,400**

An Industrial Licence No. L/18(14/61) Ferts. dated 6th March, 1961 as amended by letters dated 12th June, 1961 and 23rd March, 1964 has been issued to the Company by the Central Government for the establishment at Vishakhapatnam of a new industrial undertaking for the production of complex fertilisers and urea with a capacity of producing ammonium phosphate of various grades equivalent to 365,000 metric tonnes per year in terms of 20-20-0 and 16,500 metric tonnes per year of prilled urea.

LOCATION OF THE INDUSTRY

The Company's fertiliser plant will be located in the Vishakhapatnam Port Area, Andhra Pradesh.

A Lease of a suitable area of land in the Vishakhapatnam Port Area for the Company's plant admeasuring approximately 500 acres (including the strip from the existing harbour) has been negotiated with the Vishakhapatnam Port Trust for a period of 50 years commencing on 1st July, 1964, renewable by mutual consent for a further period of 49 years.

An Agreement with the Vishakhapatnam Port Trust has also been negotiated regarding a wharf to be constructed in the Vishakhapatnam Harbour for use by the Company.

DATE OF THE OPENING AND CLOSING OF THE SUBSCRIPTION LIST

The subscription list will open at the commencement of banking hours on 11th May, 1964 and will close at the close of banking hours on 22nd May, 1964 or earlier at the discretion of the Directors, but not before the close of banking hours on 14th May, 1964.

COPIES OF THE APPLICATION FORMS AND PROSPECTUS CAN BE OBTAINED FROM THE COMPANY'S REGISTERED OFFICE AND FROM THE OFFICES OF ANY OF THE UNDERMENTIONED BANKERS, BROKERS, UNDERWRITERS AND REGISTRARS AND TRANSFER AGENTS.

BANKERS

State Bank of India, Apollo Street, Bombay. The Punjab National Bank Limited, Parliament Street, New Delhi-1. First National City Bank, 293, Dadabhai Naoroji Road, Bombay-1 or any of their branches, or where there is more than one branch, with the main branch in the cities mentioned below:

INDIAN PAPER MAKERS' ASSOCIATION

CHAIRMAN, MR. M. L. ZUTSHI'S ADDRESS

The following is the speech delivered by Mr. M. L. Zutshi, Chairman, at the Annual General Meeting of the Indian Paper Makers Association held in Calcutta on the 30th April, 1964.

Gentlemen:

It gives me great pleasure to welcome you to this Annual General Meeting of the Indian Paper Makers Association. With your permission I will take the notice convening this meeting as read.

At the outset I would like to welcome Government's decision last December abolishing price control on paper boards. I also equally welcome recent budget proposals granting concessions in the matter of excise duty to new units and mills engaged in expanding their productive capacities. I convey to the Finance Minister the Industry's appreciation and gratitude for these concessions.

Four years ago, when I had the privilege of addressing from this Chair, I referred to the problems then facing the Paper Industry. Whilst it goes to the credit of the Industry that production of paper and paper boards during these four years increased from approximately 2,98,000 tonnes in 1959 to 4,65,000 tonnes in 1963, an increase of nearly 56%, it is with regret that I have once again to refer to the same problems. If the Paper Industry has to expand at a more rapid rate, as it must, and make its contribution to the economic prosperity of the country, it is of the utmost importance that all impediments retarding its growth are eliminated as soon as possible. Much as I should have liked in this address to refer mainly to the future of the Industry, its hopes and aspirations and the vital role it has to play in raising the standard of living of the masses, the problems facing the Industry are of such magnitude that I must refer to them, if only briefly.

The Installed Capacity

We have just completed the third year of the Third Five-Year Plan. At the beginning of the third plan the production of paper and paper boards was just over 3,50,000 tonnes with an installed capacity of 4,10,000 tonnes, as against the target of 3,50,000 tonnes for production and 4,50,000 tonnes for capacity. At the end of 1963 the production of paper and paper boards amounted to 4,65,000 tonnes with an installed capacity of over 5,49,000 tonnes. With the completion of some expansion schemes and new projects which are under implementation, an additional capacity of nearly 1,45,000 tonnes is expected to materialise during the year 1964-65. A further capacity of 70,000 tonnes is expected to become available during 1965-66. Government have also in principle approved the expansion of the capacities of some of the existing Mills by the installation of balancing equipment and this expansion is likely to bring into being a further capacity of about 1,20,000 tonnes. If this additional capacity of 1,20,000 tonnes materialise by 1966 the Industry will have achieved the third plan target capacity. As for production, a part of the installed capacity will not become productive by the end of the third plan and the target of 7,00,000 tonnes may not be achieved in 1966.

Indigenous production of newsprint has increased to 30,000 tonnes and there are likely to be further nominal increases only by the end of the third plan period. The target production of 1,20,000 tonnes with a capacity of

1,50,000 tonnes will not, therefore, be achieved and for few years more India will continue to depend largely on imports of newsprint. Out of the three licensed schemes in the private sector two are based on bagasse and one on Himalayan Fir and Spruce. One of the bagasse schemes is reported to have been abandoned. Fir and Spruce are conventional raw materials for newsprint and it is expected that from out of Himalayan woods a quality of paper, matching imported newsprint, will be produced. To meet the existing demand of newsprint and to save at least a part of the foreign exchange now being utilised for the import of newsprint, it is of great importance that the licensed schemes are given practical shape as soon as possible. I have no doubt Government will continue to make available all facilities and assistance to the entrepreneurs.

Out of the increased production of 3 to 3½ lac tonnes during the period only 20 to 25% will be accounted for by new units, the major contribution, therefore, will come from existing units and their expansion programmes. The earlier expectation that the increase in production would be mainly accounted for by new units has proved unrealistic. During the last fifteen months numerous licences for new small and big mills have been revoked. The Paper Industry is a capital intensive industry. According to the latest estimates, for every ton of annual production in a new mill to be built up from scratch, an investment of approximately Rs. 3,800/- is required. A new Mill of 100 tons per day capacity would thus need a capital outlay of approximately Rs. 11 crores. On the other hand, the capital outlay on the expansion of existing units can be as low as Rs. 2,000/- per ton of annual production and this leads to the obvious conclusion that it is in the national interest to create facilities making it possible for existing units to expand, if possible, continuously.

Commendable Progress

During the 1st and 2nd plan periods the Paper Industry made commendable progress and fulfilled its targets for capacity and production. This satisfactory performance of the Industry during these two plan periods became possible because of the ability of the Industry to plough back for rapid expansion a major portion of the reasonable profits it earned during the period. This trend, however, was reversed during the third plan period owing to the policy of the Government in the matter of fixation of selling prices.

The last enquiry into the selling prices of paper and paper boards was held during 1958-59 and the prices recommended by the Tariff Commission came into operation on 1st January, 1960. Apart from the fact that the prices recommended by the Tariff Commission denied the Industry its financial requirements for rehabilitating its obsolete and worn out plant, machinery and equipment, even the return allowed on employed capital was far from adequate. Subsequent events conclusively showed that the new price structure also did not provide a reasonable cushion for absorbing cost increases. With the spiral rise in the costs of raw materials, chemicals, stores and increases in wages, the prices fixed by the Tariff Commission became absolutely unrealistic and it was clear that unless prices were increased the Industry would find it difficult to plough back a part of its

dwindling profits into business and attract fresh capital. It was in June, 1962, after nearly 2½ years after the acceptance by the Government of the Tariff Commission's recommendations, that a price increase of Rs. 60/- per tonne was sanctioned. This increase was very inadequate as it did not even cover the rise in costs over the previous 2½ years. In practice, this increase averaged to a lower figure because of the 7½% rebate paid by the Industry to its distributors and the fact that substantial supplies had to be made to Government consumers at the old rates.

Since the last price increase in June, 1962, there have been further rises in the cost of production. The Industry has submitted detailed representations to the Government for an upward revision of the existing prices. I do not propose to refer in detail to Industry's case for a price increase. While I hope that these representations are receiving the sympathetic consideration of the Government I would like to point out that delays in announcing price increases place a heavy strain on the Industry. The Industry has placed facts and figures before the Government showing the adverse effects of the present price policy, particularly on the Industry's profitability and retained earnings. It is, therefore, of the utmost importance that a substantial increase in the prices of paper is sanctioned without any further delay.

Steep Rise in Costs

So long as Central and State Governments levies and the prices of raw materials, chemicals, stores and maintenance items continue to fluctuate it will often be necessary to revise the prices of the finished product. During the last four years there have been steep increases in the costs of all these variable factors and, if the present is an indication of the future, it would appear that these increases will continue to take place in the years to come. Any price increase now sanctioned by the Government cannot, therefore, hold good for any length of time and the Industry sooner or later will have to ask for further price increases. As matters stand, the representations now pending before the Government for price increase have already become out of date because there have been substantial further increases since the submission of the said representations.

It is not a happy feature that an increase in the selling prices of end products should become possible only after a long drawn process. I am of the view that price increases should be automatic and it should not be difficult to evolve a formula in terms of which paper prices could be revised as soon as costs of production tend to vary beyond agreed limits.

Why are the selling prices of indigenous papers considerably higher than the international prices? The reasons are not far to seek. Central and State levies on paper represent approximately 15% of the ultimate cost to the consumer. Costs of raw materials and major chemicals which account for 40-50% of the cost of production are higher in this country by at least 50%. It is the practice in foreign countries for paper mills to produce their basic chemicals and generate their own electricity. It is not unusual for paper mills to have their own extensive plantations and above all the normal size of the productive units is very much larger thereby bringing down the

overhead costs. On the other hand, in this country paper units suffer because they are comparatively very small in size, have to depend upon the State Governments for the supply of their main raw materials for which they pay excessive royalties and in many cases they purchase their essential chemicals at a price almost twice what it would cost if the chemicals were manufactured in their own chemical plants. While I shall later refer to the raw material problem of the Paper Industry, I would like to point out that it is of extreme importance that paper mills are not called upon to pay high royalties for forest produce. It is also equally important that paper mills are encouraged to install their own chemical and power generating plants. Future planning should also provide that the size of the paper units is sufficiently large making it possible to achieve a considerable reduction in overheads.

After thirteen years of planned development, while the indigenous production has more than quadrupled itself the per capita consumption of papers has just exceeded 1 kg. or nearly 2½ lbs. This is indeed a very low per capita consumption. As the standard of living improves, the use of paper and paper boards for packaging will multiply. If ignorance has to be dispelled and India taken on the road to industrial and economic advance, production of paper must increase in geometrical progression in the years to come making it possible for the vast majority of the people in this country to get educated and used to hygienic packaging of all the necessities of day to day life.

Assuming the Industry achieves the target production of 7,00,000 tonnes by the end of the third five-year plan the per capita consumption during 1966 will increase to nearly 1.66 kg. So, after fifteen years of planned development India will continue to remain dismally far behind not only the advanced countries of the West but also some of the less industrially developed countries of Asia. As the standard of living increases and all round economic and industrial development under our Five-Year Plans picks up momentum a take off stage will be reached whereafter expansion of paper Industry in geometrical progression will become a practical reality. The goal today, therefore, for the not too distant future should be to achieve a per capita consumption comparable with that presently prevailing in European countries, which translated in terms of production would amount to nearly 40,000,000 tonnes. By today's standards, this is a frightening figure but this is the challenge facing the Industry and I have no doubt that given the necessary facilities and assistance, the Industry will meet it successfully.

Expansion Programme

The future programme of expansion of the Paper Industry, therefore, has to be ambitious. The Industry will have to depend more and more on indigenous sources for its requirements of raw materials and machinery. It is, therefore, of paramount importance that the scope of manufacture of pulp and paper mill machinery in this country is enlarged and manufacturers are given all the facilities to expand their capacities to be able to meet India's needs over the decades to come.

A pulp mill, based on bamboos, for the manufacture of rayon grade pulp has already come into production at Kozhikode. Another scheme for setting up a paper grade pulp mill at Dangs is in the course of being implemented. There are six schemes licensed for the manufacture of dissolving pulp from bamboo and hard-woods. It would appear that bamboo is not an ideal raw material for the manufacture of dissolving pulp. I would, therefore, strongly urge that resources of bamboo should be reserved for the manufacture of paper grade pulp only.

It is well known that there is an imbalance between the existing pulp and machinery capacities. If more pulp

were available, the production of paper on the existing machines could be somewhat increased. Quite a few paper schemes mainly based on bagasse have already been licensed. It is quite likely that more schemes mainly based on short fibres will be licensed in future. These schemes when implemented would need long fibred pulp as would mills based on long fibres need short fibred pulp to boost up production. It is, therefore, of the utmost importance that a few large size of pulp mills are built up based on raw materials still available in the country. A suitable place in Assam, where large resources of bamboo exist, could be a site for one such mill. Similarly, in Jammu and Kashmir, large resources of long fibred woods are available and a pulp mill based thereon could provide wood pulp needed all over the country.

Shortage of Raw Materials

There has been no improvement in the difficult situation faced by the Industry in respect of its requirements of raw materials. I would like particularly to refer to the following:

Some of the State Governments are continuing to refuse leases of forests to mills not situated within their geographical boundaries. This has resulted in many mills finding it difficult to obtain raw materials from their traditional sources. There are recent instances of some State Governments having refused leases to mills which were previously situated within their boundaries but which, as a result of States re-organisation, became parts of the neighbouring States. There are also instances of renewal of leases of areas worked by mills for a number of years having been refused to them because the mills did not happen to be situated in the State concerned.

There is reluctance on the part of some of the State Governments to grant long term leases of forest areas to paper mills. Both the Planning and Tariff Commission

have recommended that the leases of forest areas should be granted to paper mills on a long term basis. Apart from the fact that a long term lease ensures adequate supplies of raw materials to the Paper Industry, such an arrangement also results in the paper mills taking sustained interest in the future growth and preservation of the forests. It is known that wherever a policy on these lines has been adopted the yield has steadily increased on account of the scientific working of the forests by the paper mills. In fact, areas worked by paper mills provide a striking contrast to those worked by contractors who motivated by their immediate gains work them ruthlessly, often in contravention of silvicultural rules.

There is no uniform basis for charging royalty. Royalties vary from Rs. 1/25 nP. to Rs. 30/- per ton of bamboo. Paper prices are fixed by the Government and considering the fact that on an average three tons of raw material are required for one ton of paper, the wide variation in royalty puts at a disadvantage mills who unfortunately have to pay high royalties. Quite often State Governments prefer to put their forests to public auction and insist on the paper mills acquiring the same in competition with sundry contractors. There is no appreciation on the part of the State Governments that, for every ton of paper produced the National Exchequer earns by way of excise duty nearly Rs. 300/- and this works out to nearly Rs. 100/- per ton of raw material.

Thus, however small the royalty paid by the paper mills may be, for every ton of forest produce acquired by them the Government gets nearly Rs. 100/- in the form of excise duty. There can, therefore, be no comparison between the royalty paid by the paper mills

and the royalty paid by a contractor for however high the royalty paid by the contractor may be it can only be a small part of what the paper mills ultimately pay to the Government.

Some time ago, at the instance of the Development Council for Paper, Pulp and Allied Industries, it was recommended to the State Governments to grant long term leases of forests to paper mills and a basis for the determination of royalty was suggested. I am not aware of any State having adopted this basis. So long as forests continue to be State controlled it seems difficult that a uniform approach can be enforced in the matter of long term leases and fixation of reasonable royalties. From the point of view of Industry it is a matter of importance that a Central Authority with power to lay down principle and basis of supply of forest produce to industrial consumers is brought into existence. Perhaps placing forests on the concurrent list would be the immediate answer.

Unfortunately, information about the exact availability of forest produce suitable for being used as raw material for paper making is not available. There has been no scientific survey of Indian forests and for many areas even working plans do not exist. However, from the information now available it would appear that raw material resources conventional now i.e. bamboo and grasses, are hardly enough to meet the present and the immediate future requirements of the Paper Industry. The known existing resources of bamboo in the country are expected to provide at the most two million tons per annum to the Paper Industry. Out of the total availability of about three million tons of bagasse in the sugar factories about 1½ million tons can reasonably become available for paper manufacture, that is, if the problem of providing alternate fuel for sugar factories is solved satisfactorily. Another one million tons of other fibrous raw materials i.e. grass, straws, jute stalks, waste paper and rags, are likely to become available if measures for their organised collection are intensified. Even if industrial and economic progress during the next twenty years up to the end of the sixth plan were to be slow, and as has been estimated by the Development Council, per capita consumption in 1980-81 would increase to 7 kg. only, the Industry would need by the end of the third plan 2½ million tons of fibrous raw material and by the end of 4th, 5th and 6th plans 4.2, 7.2 & 10 million tons, respectively. On the other hand, if the pace of industrial and economic development is accelerated beyond the present expectations and in the course of the next twenty years per capita consumption increases to 20/21 kg. the Industry would be needing by 1980-81 roughly 30 million tons of fibrous raw material. It is, therefore, obvious that for the expansion of the paper Industry beyond the 4th plan the known existing raw material resources will not be sufficient and fresh resources will have to be either located or created.

Raw materials for the expansion of the Paper Industry beyond the fourth plan have in the main to be forest produce and to some extent agricultural residues. As you know, bamboo is generally a four yearly crop. Some of the hard-woods planted in some of the Southern States attain maturity within 10-12 years. Fir and Spruce need a rotation of 180 years though, by adopting scientific means of regeneration, it is possible to reduce the cycle to 90/100 years. The future production of paper in India will be of varied types and qualities suitable for being used for writing, printing, packaging and industrial purposes. More and more emphasis will have to be laid on quality and a stage will be reached when long fibred pulp will be needed not merely as a prop to short fibred pulp but for the production of papers with special characteristics and strength properties. Considering the fact that it will take 100 years for some of the trees planted to be ready for being pulped it is of

the utmost importance that steps are taken now to ensure that in the decades to come sufficient quantities of short and long fibred raw materials become available for the manufacture of the then varied pulp requirements.

Survey of Forest Produce

It is of vital importance that as a first step a survey to establish the exact quantitative availability of forest produce capable of being used as raw material for paper-making is undertaken. Recent experience in the Punjab would indicate that photogrammetric methods of survey give quick and accurate results. I, therefore, welcome the decision of the Government to have a pre-investment survey of the forest resources of some of the States conducted under the aegis of the United Nations Special Fund. I hope that the photographs of the selected areas will be flown this year making it possible for the results of the survey to be available by the end of 1965. I hope that, in the immediate future, similar surveys on all India basis will be undertaken so that exact information about forest produce becomes available before the end of the current plan.

I submit that now is the time to draw out long term programmes for the plantation of bamboo and short and long fibred trees. I would earnestly request the Government to make specific financial provisions for the drawing out and execution of such programmes. So long as forests continue to be Government owned it seems to me doubtful that paper mills can take up plantation on very large scale. Plantations of bamboo and wood species have to form a part of the overall programme of afforestation. Particular species of wood suitable for paper-making may be most advantageously grown as an under-storey, for instance, to teak. The development of forest resources vis-à-vis the requirements of the Paper Industry, therefore, has to be taken up as a whole.

Paper Mills are generally having an anxious time so far as their requirements of consumable stores are concerned. For a production of 7,00,000 tonnes to be achieved at the end of the third Plan, at the modest level of present allotment of Rs. 40/- per tonne, the Industry will need foreign exchange to the extent of Rs. 280 lakhs. I need not repeat that the present allotment hardly makes it possible for the Mills to have in stock any wires, felts and spares to meet emergencies and quite often Mills have had to resort to air-freighting. There is also the problem of new units whose initial requirements of furnishings and stores are generally higher. If the Paper Industry has to produce to the maximum extent of its installed capacity, it is of utmost importance that mills are allowed to have some buffer stock of wires, felts and consumable stores. I would, therefore, urge that a generous policy is followed in the matter of allotting foreign exchange to the mills for the import of their consumable stores and machine furnishings.

Before I close I would like to briefly refer to some of the important events of the year:

Government Supplies

I am happy to report that the performance of the Industry during the year was on the whole satisfactory. The Industry succeeded to a large extent in clearing its back-logs and in making substantial supplies against the year's allocation. Government of India constituted a Panel for reviewing supplies against the Rate Contract. Two meetings of this Panel were held in Calcutta under the Chairmanship of the Minister for Supply. The Panel has proved a very useful forum for exchange of views with the Government.

Advisory Board of Research for the Forest Research Institute

The Central Advisory Board on Forest Utilisation was renamed the Advisory Board of Research for the Forest Research Institute. The composition of the new Advisory Board of Research was announced in February

this year. The Board had its 1st meeting in Dehra Dun on the 10th March, 1964 when interesting matters connected with the future raw material requirements of the Paper Industry and the Institute's five year research programme for paper and pulp were considered.

Development Council for Paper, Pulp & Allied Industries

It is with pleasure that I refer to the work done by the Development Council in the matter of finalising proposals for the installation of balancing equipment in some of the mills to make it possible to increase production from the existing equipment to the extent of 1,20,000 tonnes.

Indian Pulp and Paper Technical Association

Early this month the Indian Pulp and Paper Technical Association was inaugurated in Delhi followed by a Seminar on raw materials. With the expected rapid future expansion of the Paper Industry it was only proper that Technologists and Technicians and others connected with the Industry had a forum for getting together and exchanging ideas and knowledge gained. I, therefore, welcome the formation of the Indian Pulp and Paper Technical Association and convey to it my best wishes.

New Mills

I am glad to report that during the year various small units and the Seshasayee Paper Mills and the Paper Plant of Straw Products went into production.

Export Delegations

Two delegations for exploring the possibility of exporting paper to countries of South East Asia, Far East and Middle East were sponsored by the Industry and the Trade. The delegations have since returned to India after completing their market survey and their reports are awaited.

Bonus Commission

I wholeheartedly agree with the note of dissent submitted by the Employees' representative and would urge the Government to favourably consider the Industry's suggestion that bonus should be linked up with productivity.

Taxation

While I welcome the concessions allowed to the Paper Industry in the field of direct taxation by its inclusion in the list of specified industries entitled to rebate on Super-Tax as also Sur-Tax, I would like to point out that Super Profit Tax would continue to be applicable under the changed name of Sur-Tax. This and the retrospective levy of 7½% tax on all declarations of dividends and the capital gains tax on issues of bonus shares coupled with various changes in the gift tax, wealth tax and estate duty will further retard the formation of capital. The Finance Minister's assertion that the taxes on dividends would add to the extent of 3% more only to the corporate taxes does not justify penalising the distribution of dividends by the imposition of this tax. In the past, taxes have been levied on the declaration of dividends, but such levies were for excess dividends declared over a certain fixed limit, which was 6%. In the existing monetary conditions a return of 10% is the minimum yield expected by the investors. This has been recognised in the Budget itself in case of new companies. The growth of capital formation is as much necessary for old companies as new ones and the differential treatment does not seem to be justified.

Notwithstanding the fact that the Income Tax Act was repealed and replaced by a new enactment in 1961, it continues to be a complex piece of legislation because of the numerous amendments carried out during the past three years.

While I welcome the withdrawal of the limitation placed last year on the remuneration of Indian executives, I would like to point out that the ceiling of 20% now placed on perquisites is not justified. Paper manufacture involves

chemical processes of a highly technical nature and administrators and technologists employed by the Industry are highly paid executives whose perquisites are likely to exceed 20% in many cases. I would, therefore, submit that the limitation for perquisites be relaxed in case of Paper Industry.

School of Paper Technology

A School of Paper Technology is being established at Saharanpur with the assistance of the Swedish Government. This school is expected to train Technicians for middle level supervisory positions. Operatives for pulp,

paper & recovery units and Specialist Mechanics for instrumentation, electrical work, welding and machine shops. While I welcome the setting up of this school I do hope its management will be under an independent Board on which Paper Industry will have adequate representation.

I would like to place on record the gratitude of the Industry for the assistance and advice rendered to it by the Development Officer (Paper) and his Office. Without this assistance it would not have been possible for the Industry to reach the present level of production.

I would also like to convey Industry's appreciation and thanks to the Paper & Cellulose Branch of the Forest Research Institute for all the work they are doing and which is so vital for the Industry's future well being.

In conclusion I would like to express on behalf of my Committee and myself our appreciation of the work put in by Mr. MacDonald who acted as Secretary of the Association throughout 1963.

NOTE: This does not purport to be a report of the proceedings of the Annual General Meeting.

BICC

SIR WILLIAM McFADZEAN'S STATEMENT

The following are extracts from the circulated Statement of the Chairman, Sir William McFadzean, C.A., Companion I.E.E., on the 1963 Accounts.

THE YEAR IN BRIEF

1963 was a year of exciting challenge and satisfying achievement with sales and earnings reaching record figures.

SALES

Sales at £184 million were £31 million or 20% higher than in 1962. Of this improvement some £23 million arose from the inclusion of our new interests (mainly Australian) and the remaining £8 million from our well-established activities.

Of our Sales some £76.5 million or 41.5% represented direct exports and sales effected abroad. This does not include the value of our products sold to other British manufacturers and incorporated in the goods they send overseas—a further substantial contribution to exports which unfortunately cannot be easily assessed but, as a rough estimate, might amount to some £6 million.

TRADING RESULTS

Group Trading Profit and Investment Income, subject only to Taxation and Exceptional Items, comes out at £12,826,000, an improvement of £4,246,000 over 1962.

TELECOMMUNICATIONS

In addition to maintaining our share of the home market we continued to fight hard for export orders which account for some 30% of our turnover. Competition, particularly from Japanese sources has been fierce, but we have had our successes including an order for the extension and modernization of the telecommunications network in Ghana valued at £1½ million, the installation of which will be carried out by our Subsidiary Company in Ghana.

Our Associated Company, Submarine Cables Ltd., which is jointly owned with A.E.I., had also a very successful year during which it completed the manufacture of over 1,800 nautical miles of cable and 38 submersible repeaters forming part of the Commonwealth Pacific Telephone Cable to Australia and New Zealand, now operating so effectively.

CAPACITORS

Our Capacitor Division at Helsby, which is mainly concerned with the larger and highly technical types, had another satisfactory year and we believe that, as in several other of our activities, we now lead the World in these spheres. Proof of this proud claim is given in the striking successes we have achieved in overseas markets such as the large order from English Electric for high voltage capacitors for the d.c. transmission power link between Sardinia and the Italian mainland and the most valuable order we won in Germany involving technical requirements which that country, or for that matter any other, could not meet.

CONSTRUCTION

In the field of power cables underground and the erection of overhead lines the Construction Company has been exceptionally busy. Of special interest to us have been the substantial orders for super-tension cables of a higher voltage than ever before and for the new 400 kV overhead transmission system.

We have also been very busy in the Railway Electrification field particularly on the Euston-Crewe Scheme and in India.

Since the inception of the Indian Railways' 25 kV a.c. Electrification Programme in 1958 we have been awarded, against all international competition, ten successive contracts valued at many millions of pounds—a sign of continued confidence which we deeply value and do our best to justify. We have never yet failed to complete a contract ahead of schedule.

OVERSEAS AFFAIRS

Our export orders and sales effected abroad showed an increase of some £29.5 million over the previous year.

A very substantial contribution to this increase was of course made by our new subsidiaries in Australia. During 1963 real progress has been made towards the achievement of the structure and organization we finally envisage and it is my particular pleasure to pay full tribute to the magnificent co-operation we are receiving from our Australian colleagues in what is proving to be a real Australian/British partnership.

I believe Australia has a great future and that our large stake

will share fully in it and, I hope, make its full contribution to the development of that country.

We likewise retain a firm faith in Canada and Stockholders will be glad to know that after some difficult years our important Canadian company has not only achieved improved results but has also resumed dividends on its Common Stock.

Indeed a similar picture can be painted of practically all our concerns overseas growing in strength and importance with each succeeding year. Our manufacturing interests in India, Malaya, New Zealand, Pakistan, Portugal, Rhodesia, South Africa and Venezuela have all done well in spite of political and other difficulties which arise from time to time.

Competition has further intensified in most areas but through our techniques and service, we often win through. For example, following a serious fire in a Power Station in Trinidad we delivered 23 tons of urgently required cable there six days after receiving the request in this country.

We broke new ground in Europe in 1963 when we formed a European Marketing Division with headquarters in Brussels as a result of which our business is increasing at a satisfactory rate.

OUR PEOPLE

To recall the trading results for 1963 is perhaps the highest tribute that can be paid to our People and I am sure Stockholders would wish to join with their Board in expressing our warmest thanks to them all wherever and in whichever capacities they may be serving.

THE FUTURE

We have made a very good start to 1964 and, although there are uncertainties about, such as the General Election, I have no doubt that in the absence of any very exceptional circumstances we shall have another satisfactory year.

Looking further ahead we shall certainly have our problems and our ups and downs, but with its great inherent strength and, I believe, its sound progressive policy, I look forward with confidence to the continued growth of the BICC Group and to the service it will continue to render to all the peoples we are so proud to serve.

BRITISH INSULATED CALLENDER'S CABLES LIMITED

BRITISH INSULATED CALLENDER'S CABLES LTD., BOMBAY.

Representative—The Indian Cable Co., Ltd., CALCUTTA, with branches at Ahmedabad, Bangalore, Bombay, Coimbatore, Kanpur, Madras, Nagpur, New Delhi, Secunderabad.

ALL UNDER ONE ROOF

All sorts of C.I. Sanitary Components including R. W. & Soil Pipes and Specials; Surface Boxes; Manohole Covers; Commode bases; Flushing Cisterns; Gratings and Ventilators etc.

All sorts of Signalling & Interlocking Components Counter weights; Signal bases, Distance blocks, Heel blocks, Straining Screws, Lightning Spikes etc.

All sorts of C.I. Posts & Telegraphs Components including—Sockets; Sole Plates; Saddles; Brackets; Anchors etc.

All sorts of C.I. Track supply & P.W. Materials including: Sleeper Plates; Bearing Plates; Chairs; etc.

Heavy Castings like—Mill housings, Bases, Bottom Plates and Ingot-Moulds, etc.

ASIAN CABLES CORPORATION LIMITED

CHAIRMAN, MR. G. B. KOTAK'S

REVIEW

The following is the extract of the Address delivered by Mr. Girdharlal B. Kotak, Chairman, Asian Cables Corporation Ltd., at the 4th Annual General Meeting of the Shareholders of the Company, on the 30th April, 1964.

Friends,

Last year, I spoke to you that the Company was expected to show better results in the year under report. That expectation has been largely fulfilled. Though we have not been able to show the plus side in the Profit & Loss A/c., we have been able to progress very much farther than last year. With the receding threats of aggression on our country's Northern Borders, conditions in the market which were so depressing last year, have been reviving.

You must have noticed that the Company has made a small loss of Rupees Fifty-nine thousand (actual Rs. 58,962), during the year under report after providing for depreciation amounting to Rupees Six lakhs (actual Rs. 5,99,702), as against the loss of Rs. 11,52,448 last year. Your Directors are aware that the Company could have shown better results. But as they have briefly mentioned in their Report a number of factors combined together and had a cumulative effect on the working of the Company. I would like to refer to this not as an excuse, but with sincere intention to keep the shareholders informed of difficulties which a nascent industry has to face.

The large scale Chinese invasion in October 1962 on our Motherland created panicky conditions in the market and the demand suddenly slumped. The impact of this continued to be felt throughout the major part of the year under report when the economy of the country was under heavy strain.

The retardation of progress in the generation of power during the first three years of the Third Five Year Plan restricted the creation of demand. But the Plan is now gathering momentum and it is expected that it will catch up with the target in the fifth year of the Plan.

Prices of Cables

While the prices of cables remained unchanged, the rise in the manufacturing costs due to increases in prices of raw materials used in manufacturing also restricted the margin of profit.

The substitution of aluminium for copper in majority of cable lines, has to an extent slowed down the sales. There is a natural resistance from the customer to the new metal. This switch-over has naturally affected the flow of sales.

During the year the Company's products had been registered with the Government, and D.G.S. & D have now put our cables on the Rate Contract at par with the leading manufacturers who have been in this field for a long time. This is indeed very encouraging. During such short existence of our Company, we are fortunate to serve almost all types of clients in all parts of the country.

An interesting feature of the Company is the entry into Export Field. In spite of many handicaps, the Company has made a beginning in exporting our cables. Efforts are being made

CAPITAL, 7th May, 1964.

to increase the export. For this purpose, the Company exhibited the goods manufactured, in foreign exhibitions at Moscow, Kuwait and Leipzig. One of your Directors, Shri S. H. Kotak has represented our Company in these Exhibitions and he has been able to get results by securing substantial orders.

I am very happy to declare that the Collaborators have since made full payments towards their contribution, much earlier than the first call notice was issued. My special thanks are due to them on this account, as this amount has proved to be very useful towards foreign payments to machinery suppliers, pending receipt of actual import licence and sanction of loan by the Industrial Credit and Investment Corporation of India Ltd. But for this timely assistance by our Collaborators, we would not have been able to book the orders for machinery at a price which is about 15% to 20% lower than the prevailing price today; this has also enabled us to get priority in delivery of the machinery.

Expansion of Capacity

You will be happy to know that the Government has been pleased to grant to your Company during the year under review, licence for expanding the capacity of magnet wire manufacture from 360 to 1,200 tons per annum. The Company has also received a new licence for the manufacture of 500 tons per annum of paper and cotton covered winding wires and strips. We have already applied to the Government for the licence to import the equipment required for the expansion, and the import licence is expected soon. Such increased capacity is expected to improve profitability of your Company.

The building construction programme of factories for Power Cable and Magnet Wire is in full swing, and is expected to be completed by middle of July this year. No time lag is expected between the receipt of equipment and completion of the factory buildings. We expect the trial runs by the end of this year.

The Industries Commissioner, Government of Maharashtra, has already accorded his sanction for granting us additional supply of one lakh gallons of water per day. All preliminary arrangements for getting the supply are now complete and it is expected that this additional supply will be made available to us just when we go into production. The Tata Hydro-Electric Power Supply Co. Ltd., from whom we get our supply, have also, on recommendation from the Government, agreed to supply us necessary additional power.

I am really thankful to the assistance rendered by the financial institutions like the Industrial Credit and Investment Corporation of India Ltd., the Industrial Finance Corporation, and our Bankers, for their timely assistance and help whenever required. I must thank the Managing Directors and other Directors also for standing as guarantors to these institutions for the loans advanced by the financial institutions; this in itself is a considerable contribution besides the able management of the Company.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 7th May, 1964.

New Delhi

MAHALANOBIS BODY REPORTS ON ECONOMIC CONCENTRATION

(FROM OUR NEW DELHI CORRESPONDENT)

THE first part of the report of the Mahalanobis Committee on the concentration of wealth and economic power was officially released for publication last week. It was presented to the Planning Commission on 25th February, 1964. The Committee has stated that the report should be considered as a whole, after the second part is submitted to the Planning Commission. It says:

"The conclusion seems justified that even after ten years of planning and in spite of fairly heavy schemes of taxation on the upper incomes, there is a considerable measure of concentration in urban incomes. This would also hold for rural incomes, as in their case, even the burden of taxation is not heavy on the higher ranges of incomes. It must be added that to a large extent, the phenomenon of economic concentration in the Indian economy is the result, at one end, of unemployment and under-employment and consequent low productivity a unit of labour, that is to say, of inadequate economic development rather than merely structural inequalities of a distributional character, and at the other end, mainly of deficiencies in tax compliance or of tax evasion and avoidance rather than of an insufficiently progressive tax system. If this analysis is correct, it would seem to call for rethinking of the overall strategy of development adopted during this period in relation to the social goals.

Distribution of Wealth

"The data available on the distribution of wealth indicate that there is an even more marked degree of concentration than we have found in the case of income and expenditure. Thus, the distribution by size of holdings of agricultural land is extremely unequal.

"In 1953-54, the top 1 percent of the household owned 17 percent, the top percent owned 41 percent and the top 10 percent of households owned 88 percent of all lands belonging to households; in 1959-60, these proportions were 16 percent, 40 percent and 86 percent, respectively. The bottom 6 percent of households did not own any land in either of these two years.

"A study of joint-stock companies in India shows that while the number of companies is large, a small number of companies accounts for a large portion of their paid-up capital. Thus in 1960-61, the total number of companies having a paid-up capital of less than Rs. 5 lakhs each constituted 86 percent of the total number of companies at work during that year but the share of total paid-up capital was only 14.6 percent; as against this, the companies having a paid-up capital of Rs. 50 lakhs and above constituted only 1.6 percent of the total number of companies but claimed 53 percent of the total paid-up capital. Although the increasing size of companies is by itself not necessarily an index of the growing concentration in the ownership of companies—and there is some evidence of an increasing dispersal of ownership as such—the phenomenon is conducive to greater concentration of control and economic power and we shall presently see, it has facilitated the process.

"It is also evident that the working of the planned economy has contributed to this growth of big companies

in Indian industry. The growth of the private sector in industry and especially of the big companies has been facilitated by the financial assistance rendered by public institutions like the Industrial Finance Corporation, the National Industrial Development Corporation, etcetera. Thus, as on 30th June, 1963, loans had been approved by the I.F.C. for a total of Rs. 127.7 crores.

"The number of concerns to which loans had been sanctioned was 244; 143 of these concerns were given loans of less than Rs. 50 lakhs each, the total amounting to Rs. 32.7 crores, while 101 concerns were given loans exceeding Rs. 50 lakhs, the total being Rs. 94.9 crores. Loans exceeding Rs. 1 crore each were given to 22 concerns and accounted for Rs. 34.8 crores, while loans below Rs. 10 lakhs were given to 32 concerns, the total amounting to Rs. 1.8 crores. Lending by the N.I.D.C. which totalled Rs. 3 crores up to March 1963 would also generally be to bigger companies.

"Similar details are not available for the loans sanctioned by the State Financial Corporations, which totalled Rs. 49.8 crores up to 31st March, 1962. However, loans given by these Corporations all fell in the category below Rs. 10 lakhs and would have generally assisted medium and small industry. The amount of loans which could be classified as having been made to small industry in terms of a unit with fixed assets (including capitalised value of rental premises) of equal to or less than Rs. 5 lakhs was somewhat over a quarter of the total loans, the rest being given presumably to small and medium-sized enterprises.

A Noteworthy Feature

"One noteworthy feature of some of these loans has been pointed out by the third annual report on the working and administration of the Companies Act of 1956, which we quote below in view of its relevance to the subject of concentration of economic power:

"Cases have come to notice where companies with large reserves have invested heavy amounts in shares of other companies in the same group while borrowing heavily from the Government and quasi-Government institutions. While these companies appeared to be financially sound and could have apparently met their needs for expansion or modernisation of their plant and machinery by converting their investments into cash, they have preferred to borrow from outside bodies.

"Presumably, companies have, on balance, decided to keep their voting power intact in the companies in which shares were held by them or possibly, in some marginal cases, the realisation of the investments might have resulted in losses. In some cases, however, the investments in industrial holdings have been found to be of the order of Rs. 50 lakhs matched by an overdraft from the State Bank of India for a like amount.

"The Government's policy during the plan period has been responsible in other ways as well for the growth of the private sector and in the process specially of big companies. In addition to afford-

ing a protected market and the necessary overhead facilities and maintaining a Budget policy with a mildly inflationary situation favourable to industry, the Government has been promoting the growth of private industry by extensive tax incentives. Under Section 150 of the Income Tax Act, new ventures are given a tax holiday for five years and profits up to 6 percent of the capital employed are exempted from both income tax and super tax.

"Under Section 10(2) (vi) of the Act, new companies set up after 31st March, 1954, are allowed to deduct 25 percent of the actual investment towards depreciation of plant and machinery. Under Section 56A of the Income tax Act, dividends received from companies engaged in certain specified industries are exempted from super tax; for inter-corporate investments in these industries, this concession together with the provision for income tax credit which already existed, meant that such dividends were totally exempted from taxes. There is no indication of the total tax rebate given to industries in this manner but the amount should be quite considerable. While these tax concessions and rebate promoted a climate favourable to investment by both small and big enterprises, it is evident that the latter were in a better position to take advantage of the same.

"In commenting upon the growth of capital formation in the corporate sector, it is important to indicate the extent to which this has been financed by funds other than those obtained from shareholders either by way of new issues or bonus issues or by ploughed-back profits. The overall pattern of sources of finance of capital raised by non-Government companies is indicated by the records of the Controller of Capital Issues where the distribution of consents and details of subscribed and paid up capital by types of issues (namely, initial, further, bonus, debenture and loan) are available for each of the industries.

Long-term Capital

"Such data over the period 1955-60 have been collected and analysed separately for Government and non-Government companies. The total long-term capital raised during 1955-60 by non-Government companies amounted to Rs. 468 crores. The share of capital raised through debentures was Rs. 44.7 crores (9.5 percent) while that through loans (from the World Bank, Government, L.I.C., I.F.C. and S.F.Cs) was Rs. 160.7 crores (34.4 percent). The total increase in debt thus formed about 44 percent of the total long-term capital raised, while capital obtained through the issue of shares formed 56 percent.

"Bank credit has also played an impressive rôle in financing the growth of industry during the last seven or eight years. The Reserve Bank's studies of company balance-sheets have shown that the proportion of bank borrowings to total sources of funds for all public limited companies was 14 percent during 1959-60. For small companies, this was 20 percent, while for medium and large companies it was only 13 percent. The

absolute figures for the latter were, of course, very much larger.

"The dependence of private industry on banks for financing its expansion is confirmed by a purpose-wise analysis of advances by scheduled banks. Thus, industry, which accounted for 36 percent of scheduled bank advances at the end of 1951, increased its share to 52 percent by the end of 1961 and this from a total that was nearly double that in 1951. Of the total increase in bank loans of Rs. 722 crores between 1951 and 1961, Rs. 477 crores or 66 percent was accounted for by industry, over half of the increase being shared by cotton textiles, sugar, engineering, iron and steel, and cement.

"The Reserve Bank of India has recently conducted a survey for ascertaining the extent of finance provided by banks in the form of 'term credit' to industries as at the end of April 1962. The results of the survey revealed that the total 'term credit' outstanding amounted to Rs. 103.6 crores and formed 7.7 percent of the total credit of these banks and 15.8 percent of their industrial advances. Approximately, one-half of the 'term credit' granted was in the form of medium-term loans with a maturity of over one year; the other half represented rolled-over credit consisting mainly of overdrafts and cash credits with a specific understanding that the credit would be renewed.

Main Beneficiaries

"An analysis of the bank credit thus made increasingly available for the financing of industrial expansion during the last few years shows that the main beneficiaries have been the big and medium enterprises. Financial assistance provided by commercial banks to small-scale industries (with assets less than Rs. 5 lakhs) was insignificant, amounting to only Rs. 28 crores or barely 5 percent of their total advances to industries in 1960. The meagre absolute amount of credit extended to small industry is, however, to be considered against the very smallness of this sector; the paid-up capital of small public limited companies, below Rs. 5 lakhs each, formed barely 3 percent of that of all companies.

"At the same time, there is no doubt that part of the explanation for the practically insignificant share of small industries in bank advances is the lacuna in the structure of industrial financing in terms of which the credit requirements of small industry in the unorganised sector were left to be met by non-institutional sources. It is only in the last few years that some attention has been given to this problem and the share of small industry in bank advances has increased, fairly rapidly, from Rs. 20.7 crores in the first half of 1960 to Rs. 39.4 crores by the end of 1962.

"This has been partly stimulated by the guarantee scheme for small loans operated since July 1960 by the Reserve Bank as an agent of the Government: the total amount of guarantees issued under the scheme amounted to Rs. 18.8 crores in relation to 5,098 applications by 30th June, 1963. We have still to go a long way, however, before reaching the stage when bank advances to small industry can be regarded as satisfactory either in terms of their absolute requirements (including their large non-corporate sector) or in comparison with the position of the big and medium enterprises.

"Moreover, commercial banks also increased their own holdings of shares in joint-stock companies, as the size of the companies increases. The L.I.C. which is a nationalised concern, also supports big business in private industry by its holdings of Stock Exchange securities, its total investments in this sector amounting to Rs. 92 crores as on 31st December,

1962. The large companies and bigger enterprises have an easier access to the capital market as banks, life insurance companies and trusts besides individuals have a preference for investing in shares of large companies. Thus, the operation of the economic system, with its criteria of creditworthiness and security for lending and investment, tends to support the large and established enterprise against the small and struggling entrepreneur.

"There is, however, a compensatory element to the extent that the procedure followed in supporting the larger enterprises enables a more continuous scrutiny on their operations by the lending interests. In any case, if the pattern of growth in a mixed economy has to be a simultaneous development of both large-scale and small-scale enterprises, the regulatory measures should not take the form of withholding finance to the larger units. It is necessary, however, to eliminate unhealthy competition between large and small enterprises, and ensure an easy flow of finance to the latter.

Social Significance

"There can be no denying the social significance of the concentration of economic power that exists and has grown during the plan periods in the hands of a comparatively few individuals; and it has become possible because the ownership and investment of personal funds is not required for acquiring operational control over large segments of the non-Governmental corporate sector.

"How far this concentration can claim economic justification in terms of optimum use of scarce entrepreneurial talent, to what extent the manner in which the concentration is obtained leads to anti-social consequences, what precisely its implications are in the operation of our democracy, the implementation of the constitutional directives on economic policy and on economic development, and what remedial measures are required, are all important problems that need answering.

"Control need not be exercised only through the controlling interest's relative share in the assets of the companies through either ownership or inter-corporate investment. It can also be exercised through managing agents, common directors, and similar other forms which enable the controlling group or authority to participate actively in the day-to-day business of such undertakings.

"While the reform of company law has reduced the rôle of the managing agent in corporate affairs, within the reduced number of managing agents, the tendency is clearly visible of a strengthening of the influence of the bigger managing agents and consequently of the concentration of economic power through the exercise of managing agency functions.

"Besides managing agencies, common directors or interlocking directorates constitute another method for bringing about the concentration of economic power. Some light on the presence of this phenomenon in India is thrown by a special study of directorships in 331 companies with paid-up capital exceeding Rs. 50 lakhs each that has been made by the Department of Company Law Administration. In terms of paid-up capital, these companies account for 60 percent of the total paid-up capital of all companies at work in the country in 1956-57. The total number of directorships in the 331 companies selected for the study comes to 2,419 held by 1,502 persons acting as directors.

"However, these 1,502 persons have been found to be holding 7,366 other directorships besides the 2,419 directorships in 331 companies studied. The average number of directorships

held by a person thus came to 6.5. Of the 1,502 persons, 26.6 percent held single directorships, 53.2 percent held two to ten directorships, 14.4 percent 11 to 20 directorships and 5.8 percent more than 20 directorships. In other words, 73.4 percent of the persons acting as directors held multiple directorships and the total number of the directorships held by the directors holding single directorships accounted for about 4 percent of the total of 9,785 directorships held by the 1,502 persons.

Inter-locking of Directorships

"Thus, without even a significant share of ownership, inter-locking of directors may lead to operational control of a number of big-sized industrial undertakings by one industrial house. In this context, it is of interest to study the inter-locking between directorships of banks and non-Government industrial undertakings within the economy. For this purpose, an analysis has been undertaken in the Central Statistical Organisation of the existing inter-locking between directors and managing directors of 14 selected leading banks and the 296 large-sized non-Government public companies with a paid-up capital of Rs. 50 lakhs or more in 1959-60.

"The total number of directors of the 14 banks was found to be 148. Out of these, 73 were not associated with any major industrial undertaking, 24 were directors of one industrial house each, 37 were directors of two to four undertakings each and the rest, namely, 14 were directors of more than six industrial houses each.

"Bank advances to concerns in which the directors of the banks concerned are interested, accounted for Rs. 184 crores in 1962. This constituted 12.4 percent of the advances given by all scheduled banks. For the top 15 banks, the proportion was 14.1 percent. It is significant that this proportion is the highest for the State Bank of India.

"The banking sector itself presents a picture of a high degree of concentration. The aggregate share of the 15 top banks having deposits of Rs. 25 crores and over in total deposits of 363 Indian joint-stock banks during 1959 was 78 percent. If the Government-owned State Bank is excluded—and looking to the composition of its board of directors there is really no adequate reason for doing so—the percentage comes to 60. In stating this, we do not wish to suggest the continuance of unsound banking units merely because they are small in size. The present situation of a highly concentrated system, however, points to the need of effective steps to direct the resources of the system especially into the service of small and medium industries and business.

"Last but not least in importance in the study of operational control is the inter-linking of directorships between private corporate undertakings and Government companies. This acquires special significance in view of rapid expansion of the public sector in the form of active participation in production and distribution activities.

"There were in all 428 directorships in these 49 Central Government companies and they were held by 311 persons of whom 86 were 'non-official'. Of the 49 companies, 13 have no 'non-official' directors on their boards. In eight companies, the non-official directors held no directorships in non-Government companies. In the case of one company, a representative of foreign collaborator is on its board. Forty-two of the 86 non-official directors did not hold directorships in any non-Government company. The remaining non-official directors held 50 directorships in 27 Government companies and 334

directorships in 308 non-Government companies.

Economic Power

"Economic power is exercised not only through control over production, investment, employment, purchases, sales, and prices but also through control over mass media of communication. Of these newspapers are the most important and constitute a powerful ancillary to sectoral and group interests. It is not, therefore, a matter for surprise that there is so much inter-linking between newspapers and big business in this country, with newspapers controlled to a substantial extent by selected industrial houses directly through ownership as well as indirectly through membership of their boards of directors.

"In addition, of course, there is the indirect control exercised through expenditure on advertisements which has been growing apace during the plan periods. In a study of concentration of economic power in India, one must take into account this link between industry and newspapers which exists in our country to a much larger extent than is found in any of the other democratic countries in the world.

"In spite of all the countervailing measures which have been recounted above, the concentration of economic power in the private sector is more than what could be justified as necessary on functional grounds. It is not within our terms of reference to suggest what should be done to remedy the situation and combine economic development with a steady diminution of the concentration of economic power. Undoubtedly, an extension of the scope and intensity of countervailing measures to alleviate the incidence and offset the effect of economic concentration indicates the general direction of attack on the problem. At the same time, for devising adequate corrective measures in consonance with the economic growth objectives, more comprehensive and detailed information on the many aspects and ramifications of economic power and controls in the private sector is required than has been available to us. Such information could be collected only by a full-time agency."

BOKARO

The Russian Offer

The Central Minister for Steel, Mines, and Heavy Engineering, Mr. C. Subramaniam, made the following statement in the Lok Sabha last week on the Bokaro steel plant project: "The House has been showing great concern which I share, about the financing of the Bokaro steel plant, particularly with reference to assistance from foreign countries towards the cost of equipment to be imported. As the House is aware, after we had withdrawn the request for assistance for the project from the United States, we had planned to float global tenders on the basis of specifications drawn up by our consultants. Our intention was that on the basis of the successful tenders, we should negotiate credit from various countries. Steel plant manufacturers in various countries had shown considerable interest to participate in the tenders. We were also exploring the possibility of securing collaboration from Russia, who have extended large-scale assistance to us in a number of heavy engineering, electrical and steel projects.

"I have great pleasure in announcing for the information of this House and the country that the Russian Government has now expressed its willingness to assist India in the building of the integrated Bokaro steel plant. The first stage of the project is intended to produce 1.5 million tonnes of ingots and will have a built-in provision for expansion for

producing 4 million tonnes ultimately. The assistance which Russia has now offered will be for building the first stage of Bokaro up to 1.5 million tonnes of ingots. Credit will be provided on the same terms as for building the Bhilai steel plant.

"Further technical details have to be worked out and a contract entered into. For this purpose, a team of Russian experts will be coming over here soon. I take this occasion to express our thanks to the Russian Government for having so readily come forward to assist us in building this national project which is of such vital importance to the growth of the Indian economy. Russia has been of great assistance to India in the planning and building up of basic industries. I am confident that in many more such projects to come, we can count on their friendly assistance.

"I take this opportunity also of expressing my thanks to the various other countries who have shown keen interest in assisting Bokaro. As a matter of fact, as I mentioned earlier, some tentative proposals have been put forward for our consideration by private steel building interests in the U.S.A., the U.K., Japan, France, West Germany and Italy. I want to inform these friends abroad that Bokaro is not the only steel project which we propose to build in the immediate future. It is our intention to explore the possibilities of using these friendly offers to build other steel plants which are under study at present."

Assistance for Two Projects

A protocol was recently signed here under which the Russian Government has agreed to provide economic and technical assistance for the establishment of the following two projects: (i) compressors and pumps plant with a capacity of 16,000 tons of manufactured items a year; (ii) steel casting works of a capacity of 10,000 tons of castings a year.

The foreign exchange requirements of the projects will be met out of the Russian credit of Rs. 59.53 crores, for which an agreement was signed on 21st February, 1961.

EXPORTS

New Record

In 1963-64, there has been a further rise in total exports from Rs. 714 crores in 1962-63 to Rs. 795 crores, thus registering an increase of Rs. 81 crores in a single year. Exports are thus the highest on record. The major items showing increases between the two periods were sugar, jute manufactures and "new manufactures" accounting for an increase of about Rs. 9 crores in each case. Exports of vegetable oils (non-essential) were higher by over Rs. 7 crores followed by tobacco (Rs. 4 crores) and tanned and dressed leather (Rs. 3.5 crores). Exports were also higher amounting to nearly Rs. 3 crores each for oil-cakes, woollen and art silk manufactures. Exports of spices, cashew kernel, fish and iron ore showed almost an increase of nearly Rs. 2 crores in each case. Exports of gums and resins, fruits and vegetables other than cashew kernel and cotton textiles recorded an increase of about Rs. 1 crore in each case.

Exports were lower by nearly Rs. 4 crores for tea and about Rs. 1 crore each for essential oils, bones, raw hides and skins, mica, and coal and coke. Exports of lac, raw wool and coir manufactures were practically the same as in the previous year.

Of the total increase of nearly Rs. 9 crores of new manufactures, engineering goods accounted for Rs. 4 crores, metals for Rs. 2.9 crores, ferromanganese and footwear by about Rs. 1 crore each. Exports were also higher for cement, chemicals and allied products and plastic goods. Japan's increased purchase of iron

and steel scrap resulted in a rise in exports. Exports of sewing machines and electrical fans have, however, shown moderate declines.

COMMERCIAL ARBITRATION

Report of Expert Body

The need for inclusion of a clause for arbitration in all foreign trade contracts between Indians and nationals of other countries has been stressed by the Committee on Commercial Arbitration. Such a clause will help ensure smooth business relations and afford opportunities to expand India's trade. The Committee has, however, said that it would not be advisable to provide for the compulsory inclusion of an arbitration clause in foreign trade contracts by statute. Continuous efforts should be made to publicise the benefits of and facilities for arbitration so that the provision for arbitration is universally adopted in all foreign trade contracts.

The Committee was appointed by the Government of India in April last year on the recommendation of the Board of Trade with Mr. B. T. Merchant, Government solicitor, as its chairman, to review the existing arrangements for arbitration in commercial disputes arising in the course of foreign trade and to recommend appropriate measures for their improvement so as to facilitate the development of India's export trade on a sustained and enduring basis. The Committee has now submitted its report to the Government.

To minimise the scope for disputes, the Committee has suggested that a model contract form containing provisions which are usually found in most foreign trade contracts and a provision for arbitration for the settlement of disputes should be evolved. A draft of a model contract form has been given which may be adopted with necessary modifications to suit the different trades. The Committee has recommended that, pending international agreement on the criteria for the determination of the venue of arbitration in international trade disputes, the country of the defendant will provide a fair and reasonable basis as the venue of arbitration.

The formation of a central organisation, which may be named "The Indian Council of Arbitration" and which should be mainly representative of all the organisations in India offering facilities for arbitration in foreign trade disputes has been suggested. In the initial stages, it should concentrate more on developmental and promotional aspects of arbitration in international trade with a view to making arbitration universal. It should also be vested with authority to establish arbitration facilities under its own auspices. The question as to when and in relation to which commodities it should arbitrate should be left to the discretion of the Council. The Committee suggests the calling of a joint meeting of all the existing "arbitral" organisations in India in consultation with the Federation of Indian Chambers of Commerce and Industry, to determine the constitution and functions of the Council.

As disputes in foreign trade generally arise on grounds of non-delivery, delayed delivery, short delivery, non-payment of bills and commission, defective quality and non-compliance with specifications, it has recommended that efforts be made towards elimination of such disputes by providing a code of conduct for exporters, registration of exporters in relation to products for which some export promotion schemes is in existence and by the implementation of pre-shipment inspection and quality control measures.

The Committee has also suggested the establishment of testing laboratories in important trade centres, which could issue certificates that the goods satisfy the specifications of the contract. The Government, the report says, should try and provide a clause in all trade agreements with foreign countries that such a certificate should be accepted by arbitration bodies.

The report suggests that the Government might consider authorising their commercial representatives abroad to investigate small claims made by the foreign parties in international trade disputes for amounts not exceeding Rs. 5,000 when an amicable settlement is not possible within a reasonable period. The commercial representatives should also suggest to the foreign "arbitral" organisations, in countries with which India has a substantial foreign trade, that their panels of arbitrators should include the names of qualified and competent Indians resident in those countries.

The Committee has proposed that since India has now adequate arbitration facilities, efforts should be made for the transfer to India of the venue of arbitration from foreign countries where it now exists on account of historical reasons. A thorough study of the arbitration laws of different countries and the rules of different arbitral organisations should be undertaken by the proposed Indian Council of Arbitration and it should, in consultation with foreign arbitral organisations, attempt to evolve model rules and procedures which would be generally acceptable.

To avoid chain arbitration, the Committee has suggested that "efforts should be made to persuade the trade organisations to provide in the contracts between the manufacturers and their purchasers who purchase goods for export that the manufacturers would abide by the award or decision that may be given in a dispute between the exporter and the foreign importer concerning quality or other matters where the dispute has arisen on account of the fault of manufacturers."

The Committee has recommended that the Government should grant adequate foreign exchange in time to enable Indian parties to conduct arbitration and litigation abroad. Where firm contracts have been entered into before any increase in export duty, the Government, the report says, may consider the question of giving adequate relief to the Indian exporter to avoid a dispute.

The Committee has also recommended that Section 3 of both the Arbitration (Protocol and Convention) Act, 1937, and the Foreign Awards (Regulation and Enforcement) Act, 1961, should be suitably amended to obviate the necessity of having a further submission before the provisions of the said section can be invoked. The report was considered by the Board of Trade at its meeting on 5th May, 1964.

MACHINE TOOLS

The Working Group Report

The working group for machine tools manufacture during the fourth plan has, in an interim report, estimated that the demand for machine tools during the entire fourth plan period will be of the order of Rs. 372 crores. The demand for other metal working machinery and accessories is estimated at Rs. 74 crores. This is understood to have been disclosed at a meeting of the Development Council for the Machine Tools Industry held here last week. The annual estimates of demand for machine tools have been placed at Rs. 53 crores for 1966; Rs. 62 crores for 1967; Rs. 72 crores for 1968; Rs. 85 crores

for 1969 and Rs. 100 crores for 1970. The corresponding annual estimates for other metal working machinery and accessories are Rs. 11 crores, Rs. 12 crores, Rs. 14 crores, Rs. 17 crores and Rs. 20 crores, respectively.

The group has said that this is only "a broad indication" of the requirements of machine tools during the fourth plan period, based on the data made available. The estimates are based on certain assumptions and they can vary considerably, depending on various factors that influence industrial development as a whole, such as the availability of raw materials and the limitations of foreign exchange. It will, therefore, be necessary to review the requirements periodically—at least once a year.

In order to plan the development for individual items of machine tools, it will be necessary to work out the requirements of machine tools, at least groupwise. This question is now being studied, and the working group proposes to submit specific recommendations and groupwise requirements in its final report.

The working group has recommended that at least 75 percent of the requirements of machine tools should be met indigenously by the end of the fourth plan period. It has pointed out that the present level of imports of machine tools is still as high as 60 percent of the total consumption. The import level, it is suggested, should be brought down to about 25 percent of the total consumption.

Indigenous Manufacture

Accordingly, the target for indigenous manufacture of machine tools by 1970 has been put at Rs. 75 crores, against the total estimated demand of Rs. 100 crores. For the programme of indigenous manufacture, the group has recommended a capacity target of Rs. 50 crores for the public sector (made up of Rs. 40 crores for the H.M.T. and Rs. 10 crores for the Heavy Machine Tools plant, Ranchi and Praga Tools, Andhra Pradesh), and Rs. 45 crores for the private sector by the end of the fourth plan. The group has stated that this high target for the manufacturing capacity has been recommended as experience has shown that capacity has to be planned far in advance for achieving the production targets. The higher manufacturing potential will also be able to make good any shortfall in manufacture and to meet any additional demand that may arise. It will also provide capacity for reasonable exports by firms better equipped to do so.

Referring to the current level of production of machine tools, the working group has noted that the annual increase in output in the first three years of the third plan has been about 29 percent, 37 percent and 23 percent, respectively. The output in the final year of the third plan will be Rs. 33 crores, against the target of Rs. 30 crores, provided adequate foreign exchange is released immediately for essential capital equipment; otherwise, there is likely to be a shortfall in production. The group has made certain specific recommendations on the immediate action the Government should take for both attaining the target of production during the third plan and for initiating action on further development of the industry during the fourth plan.

KOREA

Trade Pact Signed

A trade agreement between the Republic of Korea and India was signed here recently. The arrangement contemplates the expansion of trade, provides for the exchange of commodities consisting mainly of

such non-ferrous metals as zinc and lead and tungsten ores and concentrates from the Republic of Korea and engineering goods, machinery, ferromanganese, chemicals, pharmaceuticals, etcetera, from India.

TELEGRAMS

Rates Revised

With effect from 1st May, 1964, the rates of telegrams to the Commonwealth countries have been revised. The revised rates are 80nP a word in the case of ordinary telegrams, whether Government or private. For letter telegrams, the revised rate is 40nP a word. Urgent Press telegrams are also to be charged at 40nP for every word. The rates for other categories of telegrams will be revised on a pro rata basis. In the case of ordinary Press telegrams, however, the rates will remain unchanged, namely, 6nP a word.

FAMILY PLANNING

New Ford Foundation Grant

A grant of \$594,800 for India's family planning programme has been announced by the Ford Foundation. The award, covering a five-year period, has been offered to the Central Ministry of Home Affairs to aid in financing research, demonstration, and training work in the population statistics field. The Foundation's aid to India's family planning programme thus far totals over \$4.2 million. This is in addition to related health programme assistance of over \$1 million since 1956.

The grant will help the Registrar-General of India to improve population statistics methodology, carry forward training and demonstration aspects of vital statistics, and develop a sample registration pilot programme. In addition, the grant provides partial support for pilot population research units and sample vital statistics registration projects in seven States. Under the programme, improved methods for collection, tabulation, and analysis of population data will be developed and demonstrated, with a view to aiding the estimate of population in various parts of the country.

REFORMING THE U.K. FISCAL SYSTEM BY DEGREES

(FROM OUR LONDON CORRESPONDENT)

IT was hardly to be expected, in view of the political situation and the uncertainty of the outlook, that the Chancellor of the Exchequer would risk causing more disorganisation than was absolutely necessary in presenting a pre-election Budget. In the event, Mr. Maudling decided to play safe. He courted a certain measure of unpopularity with his minor tax proposals, but on the whole, the Budget aimed at doing little more than holding the limited progress made in the last few years and taking the necessary precautions against a setback. Indeed, in some quarters, it is felt that the Chancellor has been overcautious and that he might well regret this before the year is out.

The Finance Bill, just published, lends support to this reading of the situation in one sense at least. For in it the Chancellor seeks powers to use the 10 percent tax regulator in a more flexible form—so that he has more room for manoeuvre according to the way in which the balance of payments situation develops and as a safeguard against inflationary tendencies making their appearance.

As it stands, the "regulator" must apply to Customs and excise duties and purchase tax as a whole. Mr. Maudling wants to be able to apply it selectively. The four major blocks of indirect taxation are tobacco, alcohol, petrol and purchase tax. Under the Bill, the Chancellor will have power to vary the tax on any one or more of the four without affecting the others. For instance, he could raise petrol and purchase tax in the autumn while leaving the drink and tobacco taxes at Budget level. By the same token he could, of course, take 10 percent off.

With possible pre-election tax changes in view, M.P.s will take special

note of the timing clause in the Bill. The Bill provides that in reckoning the period of 21 days in which an order must be approved, no account will be taken of any time during which Parliament is dissolved or prorogued. Tax changes made during the summer or autumn could remain effective even though there was no opportunity for the Commons to approve them until the General Election had come and gone.

Charity Pools

Pools run in aid of charity or sports clubs are to be exempt, according to the Bill, from the 25 percent duty on coupon betting which comes into effect on 3rd August. This relief will be strictly administered. It is confined to "the amount of any benefit accruing from the betting to a society established and conducted for charitable purposes only, or to a society established and conducted wholly or mainly for the support of athletic sports or athletic games and not established or conducted for purposes of private gain." The exemption of invalid vehicles from licence duty is to come into effect on 1st September. It will apply to vehicles with special controls eligible for Ministry of Health grants.

The sections of the Bill which will be most closely studied are the highly technical ones dealing with tax avoidance. Surpluses derived by companies from mutual trading are to be taxed. The use of what the Chancellor has described as "leasing devices" is to be checked. There would appear to be plenty of room for argument in the complicated definitions by which the Bill seeks to safeguard the revenue against these practices.

There will be complaints that the Chancellor, with legislative time to

spare in the two months ahead, could have amplified the Bill with some "tidy-up" proposals in the tax field. This is a valid criticism, except for the fact already indicated that wholesale reforms at this juncture might not prove particularly popular, and in some respects might be quite difficult to get through the legislative process. In any event, politicians of all parties will no doubt welcome a respite from activities in the House so as to leave them freer to establish a closer relationship with their constituents.

So far as tax avoidance and its prevention are concerned, the Chancellor has been at pains to take action on two fronts: legislation to tax surpluses "derived by companies from mutual trading," and action to prevent loss of revenue as a result of leases being arranged at "artificial rents." This second offence has been considered by the authorities as a serious form of tax avoidance. Two principal devices were outlined by Mr. Maudling. One is for a trader who owns business premises to lease them for a long period to a dealing concern, in consideration of a premium which is not taxable, and to take a lease back from the dealer.

The first few years' rent would be "sufficiently excessive" for the dealer to recoup the premium, but the rent was then deductible by the trader for tax purposes and he was able to set against it the "countervailing diminution" in value of the lease, so that little tax is payable. The revenue suffered a loss and, in addition, the lease could be determined prematurely and the device repeated with the same property. The other device described by the Chancellor concerned new plant leased to a trader with rent loaded into the early years sufficient

to cover the capital cost of the plant. The rent for the later years was trifling, so that when the high rents had been paid and allowed for tax purposes, the trader had the right to use the plant for the rest of the lease at little cost. This right could also be sold for a non-taxable sum. Mr. Maudling made it clear that his proposals in the Finance Bill would be designed to stop a profit being made by avoidance schemes, and not to penalise normal leasing arrangements.

The other piece of legislation on tax avoidance outlined by the Chancellor was the taxing of profits made by companies for mutual trading. This had been the intention of the 1963 Finance Act, but the Radcliffe Commission had pointed out that a court decision had opened up the possibility, which was being exploited, of abusing the present position for tax avoidance. The authorities estimate that the annual yield from this new tax will be about £5 million in the full year, but clearly more importance is put on it as a method of preventing loss of tax revenue. The position of the ordinary co-operative society will not be affected.

Company Trading Profits

Another matter referred to by Mr. Maudling in his Budget speech has been taken a step further by the publication of a White Paper giving details of a plan for taxing company trading profits which would get rid of some anomalies in the present system. It has been devised by the Inland Revenue. Publication has been arranged to enable business men and their advisers to form an opinion about the plan's merits. Public reaction will be gauged before a decision is taken by the Government on whether the scheme should be adopted. The scheme's essence is that income tax assessments on the trading profits of a company would be made for the period to which the company made up its accounts and would be on the profits for that period. Assessments would no longer be made for "years of assessment."

Complications which now arise at the start of trading, the same profits being assessed for more than one year of assessment, and at the end, some profits being left out of assessment, would disappear. The tax would be charged at the standard rate for the next income tax year. If an accounting period fell wholly in a year of assessment, 6th April to 15th April, the profits of the whole period would be charged at the rate for the next year. And if an accounting period straddled a year of assessment, the profits of the parts falling into each year of assessment would be charged in one assessment at the respective rates imposed for the next.

The tax would be due nine months after the end of each accounting period in the case of new companies. For existing companies whose accounts have been and continue to be made up for 12-monthly periods, the due date of payment, 1st January in the year of assessment after that in which the accounts year ends, would be unchanged. If a shorter account is made up, the due date would be advanced accordingly. On a longer account, the first 12 months would be treated as one accounting period, tax payable on 1st January. The balance, if not longer than 12 months, would be treated as a separate accounting period with the tax payable correspondingly later. Introduction of such a scheme would mean for existing companies that they would not get the benefits of the provisions under which at present, when a trade ceases, the profits of some period fall out of assessment. Accordingly, the scheme provides a compensating "cessation allowance" to be given when an existing trade comes to an end.

PAKISTANI INDUSTRY EXPANDING CAPACITY RAPIDLY

THE Pakistani jute industry has been expanding its capacity rapidly. The average number of looms operating rose from 8,120 in 1961-62 to 8,837 in 1962-63, while the output increased from 271,081 tons to 298,161 tons. During the eight-month period ended February 1964, 9,781 looms were in operation producing 214,767 tons of gunnies. This represents an impressive rise compared with 8,728 looms and 195,126 tons for the corresponding period a year ago. At the February level of operation with 10,660 looms—the capacity is scheduled to expand further, and at a faster rate—the annual output will be over 308,500 tons, which is about 23.7 percent of the third plan target for the Indian jute industry, with its installed capacity of about 70,000 looms in January 1962.

At first, Pakistan concentrated on producing heavy goods. But gradually she has been installing hessian and carpet-backing looms. With the acquisition of skill, she seems to be devoting equal attention to the production of finer goods as well. In 1961-62, she produced 72,607 tons of hessian and 186,372 tons of sacking. The corresponding figures for 1962-63 were 84,540 tons and 203,873 tons, respectively. For the eight-month period ended February 1964, the comparable figures are 60,815 tons and 146,162 tons, against 55,138 tons and 133,744 tons for the eight months ended February 1963. In India, I.J.M.A. statements show that the output of mills reporting to the Association rose fractionally from 790,250 tons for the eight-month period ended February 1963 to 811,210 tons for the corresponding period of 1963-64. The production of hessian rose from 336,040 tons to 348,240 tons, and of other goods, including carpet-backing cloth, from 96,530 tons to 134,220 tons. But the output of sacking declined from 357,680 tons to 328,750 tons. Thus despite large-scale modernisation and diversification, the pace of growth has been slow in India, compared with that in Pakistan. It is time proper measures were taken to place the Indian industry on a secure and competitive footing.

Mill for West Pakistan

Because of the high cost of transporting gunnies from Chittagong and Chalna ports in East Pakistan and long delays and uncertainties, big fluctuations take place in gunny prices in Karachi and other industrial centres of West Pakistan. So steps have been taken to produce gunnies in West Pakistan. Recently an agreement was concluded between the West Pakistan Industrial Development Corporation and a leading house of gunny manufacturers for setting up a 500-loom jute mill in Jaranwala in the Lyallpur district of West Punjab at a cost of Rs. 3.14 crores. The entire output of the mill will be consumed internally. Initially, raw jute supplies will be procured from East Pakistan. But later jute will be grown in the area.

Already, it is claimed, the experimental production of jute has yielded satisfactory results in certain irrigated tracts of Sind in the Ghulam Mohamed Dam region. Little difficulty is expected in getting labourers—skilled and semi-skilled. The cotton textile mills in West Pakistan have an efficient labour force.

In spite of the slack offtake in recent months, total forward purchases of hessian by the U.S.A. at the end of March 1964 stood at 97.06 million yards, which was equivalent to 1.31 month's consumption at the level of offtake for that month. Of this, 56.42 million yards were for April-May and 40.63 million yards for June and later months. Of the total purchases, 78 percent (75.66 million yards) were from India and 21.7 percent (21.06 million yards) from Pakistan. India's share in April-May contracts was 83.3 percent (47 million yards) and Pakistan's 16.2 percent (9.12 million yards). For June and later deliveries, the Indian share declined to 70.5 percent (28.66 million yards), while the Pakistani share rose to 29.4 percent (11.94 million yards).

Argentine Demand for Hessian

Excellent crop prospects in Argentina and bigger gunny offtake this year have led trade circles to feel that the consumption of jute bags will appreciably increase in that country. Argentine gunny inventories, both with the Government buying agency and bag-makers, were not adequate early this year. The country's projects for building silos at strategic railheads and inland river ports for the bulk storage of grains suffered a severe setback due to the recent political disturbances. So Argentina has been stepping up her hessian purchases since the beginning of 1964. Out of the 96.4 million yards of hessian shipped from Calcutta to South American destinations during the first quarter of 1964, an overwhelmingly large percentage is reported to have been absorbed by that country. Despatches to these destinations during the comparable period of 1963 were only about 45.7 million yards. As against 174.6 million yards shipped to River Plate ports in 1963, local shipper

circles believe that over 350 million yards may be exported this year.

Survey of Labour Disputes

The Socio-Economic Research Institute of Calcutta has completed a survey of industrial relations in the West Bengal jute industry during the second plan period. The survey was sponsored by the Planning Commission and assisted by the Government of India with a grant of Rs. 35,000. The report will, it is expected, be submitted to the Planning Commission in July. It has tried to analyse the incidence, nature, causes and effects of industrial disputes in the jute industry and the rôle of the Government conciliation machinery in handling them. The administration of the Industrial Disputes Act has also been studied. About 25 jute mills were selected and the enquiry was conducted at various levels, including management, labour officers, individual workers, the trade unions in the mills, central labour organisations and the Indian Jute Mills Association.

THE JUTE MARKETS

Manufactured Goods: Hectic covering by shorts against their open positions because of due-date considerations, the reluctance of bulls to yield ground in the hedge market and scattered local buying in the spot section for end-month shipments helped a smart rally in the Calcutta market during the past week. Although the lead was provided by heavy goods, hessian also improved in sympathy. All due-date transactions were completed smoothly. Barring scattered business of a routine nature with the U.S.A. and the Argentine, generally for ready and near positions for comparatively small lots, and an enquiry for two million metres of hessian from Turkey, there was no report of any over-

seas business. Although shipping instructions were reported to be poor, all end-April vessels carried sizable consignments of jute goods. The improvement in the port situation was well maintained. Sufficient bottoms were declared for mid-May and end-May sailings to Australia, River Plate destinations, East and West Africa and Mauritius. Sacking closed with a comfortable gain after wide fluctuations, while hessian finished with a marginal improvement on balance. Turnover in heavy goods was fair in the futures market and moderate in the spot market. In hessian, transactions were moderate in the former and small in the latter. The undertone was buoyant in sacking and steady in hessian.

Wednesday's quotations were as follows:

	May	June	July-Sept.	Oct.-Dec.
40in. 7joz.	33.70	33.85	34.25	34.20
40in. 8oz.	36.30	—	—	—

Liverpools	129.00	129.00	129.50	129.50

Raw Jute: Divergent trends prevailed in the raw jute market during the past week. A sharp decline in the availability of selected grade jute caused it to firm up as holders were inclined to squeeze higher prices for their limited stocks. Reports of good crop conditions in the early-sown low-lying areas of the jute-growing districts and brisk soil-operation work following the April and early-May showers caused nervousness among holders of lower-grade jute and mesta. These went abegging even at a discount from the operational minimum levels. Mills were inclined to complete their quota for the four weeks ending 9th May by lifting better-grade fibre. Arrivals in the agencies and in the Cossipore market declined appreciably. In the hedge market, Upper Assam White Bottoms for June enjoyed brisk bear support at the lower levels, and the price firmed up after wide fluctuations. Bulls booked profits at the bulges and bears had to yield further ground to cover their open positions. Turnover was fair in the hedge market and small in the spot market. Undertone was steady in quality grades—spot

VITADEX
THE DASHBOARD
OF BUSINESS

Work the VITADEX way to get the best out of your men, machines and materials.

VITADEX can tell you what you need to know at a glance. VITADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much...VITADEX, in short, affords greater control at less cost, besides keeping records secure.

Our VITADEX Representative will be happy to show you, without obligation, how simple VITADEX is to operate—either with Card Pockets or Brass Card-holders—and how easily it can meet your specific requirements.

THE U.K. JUTE MARKETS

FIBRE INACTIVE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan was very quiet and a further reduction in the E.P.C. values of the higher grades of white jute took place last week. This made no difference to the position in Dundee as no offers of the top qualities were made. Dundee spinners showed no interest in shipment parcels, but a small movement continued to take place in jute ex warehouse. The prices paid covered a wide range depending on the quality of the fibre and not on the grade it is supposed to represent.

Although the new crop in Pakistan continues to make good progress, very few offers were made. Mill Hearts were named at £93, c.i.f. U.K. but the quantity available was very small. However, spinners were in no hurry to place contracts for forward shipment because the market remained weak.

Old crop offers were at £139 for Mill Firsts, at £109 for Mill Lightnings, at £94 10s for Mill Hearts and at £79 for Grade Hearts, c.i.f. U.K. for May-June shipment. Grade Tossa-3 was available at £123 10s and Grade Tossa-4 at £105. Dacca Tossa-6 was at £107 10s. Prices of Output Tossa-3 were very irregular with the lowest rates at £91 10s and at £81 for Output Tossa-4 May-June. Cuttings were also tending easier with offers at £59 for S.N.C. and at £50 15s for N.C. Mesta was named at £85 for A, at £75 for B, at £67 for C and at £49 for cuttings, c.i.f. U.K. for May-June shipment. Offers of Siam jute continued to be made in Dundee, but spinners were showing no interest.

Mesta was at a more attractive price and quality better. Prices are at £77 for grade A, at £69 for grade B and at £66 grade C, delivered mill Dundee for May-June shipment.

Very little change took in the Calcutta goods market of late. Some buying interest was shown here and a small business took place. Quotations were at 69s 6d for 40in. 10oz. and at 51s 3d for 74oz. a 100 yards f.o.b. Calcutta for May shipment, at 69s 8d and 51s 6d June and at 70s 2d and 51s 11d July-September. B Twills were at 174s 3d, 17s 6d and 17s 8d for the respective shipment periods.

Prices of Dundee jute yarns were raised two weeks ago, and very little buying has taken place since then. However, spinners are very busy with previous orders and so far, they are refusing to accept less than their quoted rates. Buyers are remaining out of the market because of the weakness in the raw material position in the hope that yarn prices will be reduced to their former levels.

Commodity Markets

OPEN AUCTIONS FOR COFFEE WELCOMED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE reintroduction of open auctions for export coffee by the Coffee Board has been enthusiastically welcomed by planting circles. According to them, the industry can reasonably hope for a general improvement in coffee prices and a better return to the producer as a result of this change in the sale policy. Open auctions were reintroduced by the Board last month. The results of the two sales held since then are considered encouraging. The system in vogue previously was closed bid tenders. Internal sales are through closed bids still, but the Board has raised slightly the minimum release price in the internal market with a view to helping the growers who think that they are not getting a reasonable price for their coffee.

The coffee industry in India is in need of rehabilitation. Much of the present stand goes back in age well into the last century and, like tea, these wasting assets call for vigorous overhaul in order to reestablish their economic value and ensure an increase in production. Mr. W. S. Massey, chairman, Nilgiri-Wynaad Planters Association, has drawn attention to this pressing need of the industry in the course of his address at the recent annual general meeting of the Association. The coffee plant is a delicate shrub and the lessons of the old days must not be forgotten or ignored. Ceylon lost all her coffee in the last century to the leaf disease, *Hemileia Vastatrix*, within five years of the advent of the disease in the island as did Wynaad and some other districts of south India. In the Nilgiri-Wynaad district, coffee went out almost completely when the planters of those days turned to gold mining, cinchona and at last tea growing. The chairman appealed to all those concerned with pest control to keep a constant watch on the old as well as new pests and diseases and take effective measures to bring them under rigid control.

Another prominent figure in the coffee planting industry, Mr. J. N. A. Hobbs, chairman of the Ouchterlony Valley Estate, said the other day while addressing the annual general meeting of his Company that an insistent export maximisation policy was admittedly inescapable, but mere exhortation might achieve little unless the coffee industry's overall rehabilitation needs were properly assessed and an energetic working plan introduced. According to a recent estimate, the industry would require about Rs. 30 crores over a 15-year period to rehabilitate and modernise its field assets and the processing and handling facilities. World prices were rising. The ability to take advantage of the increasing export quota and to meet the rising domestic demand would depend on how quickly the industry could be rehabilitated. Drought earlier this year seemed to have weakened the crop prospects in certain planting districts. The incidence of Borer has also increased in some areas, in spite of wider application of insecticides.

Mr. W. S. Massey counselled moderation when planning the future yield potential of coffee because factors like the "providential rains" played a very important rôle in determining the size of the crop. "In planning for future crops and increases expected from better use of

fungicides and pesticides, their increased availability for their respective purposes, the further and intensive cultivation and extension in the traditional areas, non-hindrance by forest laws in shade regulation and judicial uses of the manure bag and this ever dependent factor of the rainfall pattern must be taken into consideration", he added.

TEA

Rise in Output

Referring to tea, Mr. Massey said that it was anticipated the Indian output of tea would rise to 1,000 million lbs by 1970. It was also felt that south Indian production would exceed 200 million lbs by the end of 1965, representing an 11-per cent increase over the 1962 figure. "In other competitive countries like Africa, the production capacity is designed or geared to methods, organisation and machinery, compared with which the plantation industry in India might be an old model. The lessons learnt and production techniques evolved over a hundred years of planting in India and Ceylon, is finding fruition in other producing countries today," he said. Most of the estates in India who still have large areas of uneconomic tea with low yields have to be more than doubled up to be made worth while.

Referring to complex labour legislation, he said that "the planters were not getting sufficient time to discharge their duties in this field because the trammels of bureaucratic procedure chained them to their office desk for hours during the day and often at night. Given the planter, manager and his assistants more time without hindrance or obstruction in the field and the factory of his estate in order that he may directly come to grips during most of his working day with the field requirements in the raising of his crops in this all out drive for increased production on which our prosperity and our very survival in the future depends", he added.

Good Prices for Quality Grades

A Special Correspondent writes: While larger crops are expected from north India this year, some members of the trade hold the opinion that quality teas will continue to receive good support. Last week's tea sales in Mincing Lane, London, lend support to this view, for, with only 11,594 packages of Indian tea on offer, strong general demand continued on the lines of last Monday's sale, with prices for bright liquoring tea moving in sellers' favour.

On the other hand, the results of the Murphalani Tea Company were published on 28th April. This is a sound Assam Company manufacturing tea above average, yet the accounts for the year ended 31st December, 1963 disclosed that the profit was down from Rs. 5 lakhs in 1962 to Rs. 1.90 lakhs. The dividend marks a like fall from 25 percent to 17½ percent. The crop, in common with the district, as a whole, was lower, but the main feature was that the price realised was only Rs. 6.82 a kilogram, against Rs. 8.41 a kilogram in the previous year. The actual crop was only 1,695 quintals,

CAPITAL, 7th May, 1964.

and the estimated output this year was 1,800 quintals.

The cost-price spiral continues to be a serious problem, particularly in the tea districts where the prices of raw materials continue to rise and add to production costs. Larger crops should mean lower costs, but at the moment, this is largely neutralised by low commodity prices.

Crop figures available to date show that north India had made 20.2 million lbs, compared with 21.3 million lbs at the same date a year ago, but Ceylon continues to advance and registered 73.8 million lbs against 66.1 million lbs last year. East Africa also marks an advance at 25.6 million lbs, compared with 20.2 million lbs.

The drinking habits in the U.S.A. and Britain provide some contrast. Whereas the youth in Britain are moving away from tea to beverages with a kick, the youth in the U.S.A. is reported to be taking to more tea—to iced tea, although hot tea is not doing well. The tea distribution trade in the U.S.A. finds the promotion of hot tea propaganda an unsolved problem, but it is still trying. During 1963 the sale of instant tea increased by 37 percent from 1962, but the figure in absolute terms has not been disclosed.

The tea drinking appeal to the youth in the U.S.A. is said to be producing good results and might be followed in the U.K. with advantage. India's tea exports to the U.S.A. last year totalling 14,502,000 lbs compared with 15,678,000 lbs in 1962 and 15,912,000 lbs for the 1961-62 season.

COTTON TEXTILES

Prospects for Extra Long Staple

World production of extra long staple cotton may rise to about 3 million bales in 1970, compared with an average of 2.4 million bales in 1960-62. But if consumption is to be stimulated sufficiently to match this 17 percent rise in output, prices may have to fall by around 22 percent. These forecasts are made in a report prepared for the International Cotton Advisory Committee which has recently been published. The authors admit that their projections of both prices and production are based on assumptions that may not all prove to be correct. But in view of the present trends, they believe the returns to cotton producers must be expected to decline sharply. For this reason, they suggest the producing countries may wish to reconsider their plans for future production of extra long staples.

The price forecast assumes that exports of extra long staples to eastern countries will continue to increase at the same rate as they did from 1950 to 1962, reaching a level of 1½ million bales in 1970. If, instead, exports to the Eastern block fell to 1 million bales the quantity of extra long staples available to western countries other than India would be about 1½ million bales—an increase of roughly 75 percent over the quantity consumed in 1962-63. Such a large increase probably would not be used by mills in western countries unless prices dropped very sharply, the report says.

The world crop of extra long staples had more than doubled in two decades since the early 1940s. But since the mid-1950s, the increased production has been absorbed in the world market only at steadily declining prices in relation to prices for other growths of cotton, and exports to the Western countries "have virtually stagnated" in the past 20 years at an average of about 1 million bales annually.

CAPITAL, 7th May, 1964.

Books

BEFORE THE INDUSTRIAL REVOLUTION

England on the Eve of the Industrial Revolution. By Louis W. Moffit. (Published by Frank Cass, Indian agents: Rupa and Co., 15, Bankim Chatterjee Street, Calcutta 12. Price 45s.)

Louis Moffit covers a panorama of economic conditions in the gestation period of the Industrial Revolution in England between the years 1740 and 1760, with special reference to Lancashire in a forthright manner. The book is divided into two parts, and is eminently readable. The first deals with agriculture, and the second with industry and commerce. Although termed a revolution, the industrial changes that swept through England did not take place at any one point of time, but was spread over a few decades that resulted in a change in the social and economic structure of the country so vast that it justifies the term "Revolution". The first half of the eighteenth century was a period of gestation and not of stagnation. New ideas fostered by a spirit of enquiry and new needs were being constantly fed into the boilers of time and the pressures generated by England's growing importance in Continental and overseas trade and the demand for English manufactures could not be contained within the limits imposed by the existing social and economic framework. The latter half of the eighteenth century saw the adaptation of this framework to new requirements. Louis Moffit presents the reader with a study of conditions that existed in this transitional period of adaptation.

The Industrial Revolution in England is by way of being a classic among the industrial revolutions of the world, and it is interesting to compare its genesis with the beginnings of industrialisation in India. The latter half of the seventeenth and the first half of the eighteenth centuries were the age of Addison, Steele, Swift and Defoe who expressed their intellectual dissatisfaction with the society of their times. Commerce was expanding and new methods of manufacture and better and speedier methods of communication were becoming necessary. The profits that were available in trade and commerce promoted further research and investment and flowed back into industry. Increasing production led to a wider appreciation of the problem of marketing and resulted in the growth of middle men. The expanding needs of commerce and trade coincided with the improvement in roads and inland navigation and the foundation of the modern system of credit for financing trade was laid. In agriculture there was a weaving away from the vestiges of feudalism and a movement towards consolidation of holdings and the philosophy of mercantilism gave way to laissez-faire ideas. This pattern is discernible in the early phases of industrialisation in India—albeit with certain differences because of the country's subservient political status. Lokamanya Tilak, Deshbandhu Gupta and others led the intellectual revolt in India and the seeds of industrialisation were sown in Ahmedabad and Jamshedpur.

But whereas the revolution in agriculture presaged the Industrial Revolution in England, in India even though it has for a long time been clear that the success of the latter is inextricably tied up with that of the former, the stagnation in agriculture has been the bane of the five year plans. The other significant differences are that the industrial and agri-

cultural revolution in England were characterised by the growth of the spirit of individualism, the withering away of Governmental control and the consolidation of land holdings. In India today, an industrial and agricultural revolution is being attempted in an environment where individual enterprise is curbed in the name of socialisation where nationalisation and increasing Governmental supervision is hailed as the panacea for all evils and where there are ceilings on land holdings, and fragmentation of land is encouraged in the name of redistribution.

DUTIES OF DIRECTORS

Company Directors. By V. P. Arya. (Published by Oxford Book Company, 17 Park Street, Calcutta 16. Price Rs. 16, pages 164.)

Mr. Arya's book contains in a narrative form the principles of the company form of organisation and the place of directors in it. Many company directors and subordinate officials will find this book to be a useful guide for complying with the requirements and formalities of the law. The book contains a recital and short exposition of the powers and duties of company directors under the Indian Companies Act.

Mr. D. L. Mazumdar, I.C.S., has pointed out in the foreword to the book: "The trend of recent company legislation in this country during the last few years has been steadily to strengthen the legal position of directors in the economy of joint-stock companies. The Company Law Committees of 1952, popularly known as the Bhabha Committee, referred to the pivotal position which the directors occupy in the structure of joint-stock companies and made several recommendations relating to their responsibilities which were intended to restore to them their position and responsibility vis-à-vis the managing agents. The Companies Act of 1956 embodied most of these recommendations of the committee while the Companies (Amendment) Act, 1960, further added to the powers and responsibilities of directors, and extended the scope of their accountability to the shareholders. The net effect of these changes in law was not only to clothe the directors of a company with additional powers and responsibilities, but also to make them more definitely answerable to the shareholders of a company in the exercise of many of their managerial powers, and, in relation to certain specified matters, to subject them additionally to the control and regulation of the State."

INCOME TAX LAW

The Income Tax Act, 1961. By B. L. Jhunjhunwala. (Published by Oxford Book and Stationary Company, Calcutta 16. Price Rs. 20, pages 390.)

Elements of Indian Income Tax. By R. N. Lakhotia. (Published by Asha Publishing House, 74/6A, Baghbazar Street, Calcutta 3. Price Rs. 6, pages 332.)

Practical Problems on Income Tax. By R. N. Lakhotia. (Published by Asha Publishing House, 74/6A, Baghbazar Street, Calcutta 3. Price Rs. 9, pages 380.)

Income Tax Law and Practice. By Om Prakash Chopra and S. Chopra. (Published by S. S. Sarkar

and Sons (Private) Ltd, Calcutta 12. Price Rs. 65, pages 1,428.)

Lectures on Income Tax. (Published by the Chartered Institute of Secretaries India Association, Calcutta. Price Rs. 4, pages 69.)

The law relating to income tax is highly complex. The perpetual race between income and expenditure, between revenue and capital is endlessly backed up by a perennial search for new sources of revenue.

Mr. Jhunjhunwala's book is a balanced, thorough and sound treatment of the law. But as he himself points out, amendments of the income tax law are an yearly affair, and the pace of the legislation is faster than that with which tax payers can arrange their own affairs.

Mr. Lakhotia's *Elements of Indian Income Tax* has reached the sixth edition and has dealt with this question in the form of problems and solutions. It will be of use to all interested in income tax. The author's *Practical Problems on Income Tax*, which is in its third edition, is intended to be a kind of textbook for students appearing at various examinations in which income tax is a subject.

Mr. Chopra's *Income Tax Law and Practice* is intended to be a treatise for reference to tax gatherers and appellate bodies as well as for taxpayers and legal practitioners. Its style is simple and vigorous.

The Chartered Institute of Secretaries India Association arranged a series of lectures from time to time. Lectures on income tax were delivered under the auspices of the Institute by an advocate of the Supreme Court, a former Commissioner of Income Tax, a present Commissioner of Income Tax, a director and a secretary of a company—men most qualified to speak on the subject. The substance of these lectures has been printed and published in a book which will be of interest to those dealing with the subject.

HANDBOOK OF STATISTICS

Handbook of Commercial Information, Volume I. (Published by the Director-General of Commercial Intelligence and Statistics, 1 Council House Street, Calcutta. Price Rs. 11, pages 469.)

The weekly commodity notes published in the *Indian Trade Journal* are presented in a co-ordinated form under 103 specific heads on engineering, chemical and allied industries in this volume. Information on each individual product has generally been summarised in a separate chapter and an attempt has been made in the commodity sections to trace the origin of indigenous production, the growth of the industry and its progress during the two plan periods, the availability of raw materials, centres of production, current

wholesale prices and foreign trade in the commodity. Production figures have been given up to 1961 and data on foreign trade up to March 1962.

METALS REVIEW

The Eastern Metals Review, 1964 Annual Number. Edited by M. Vinayak. (Published by Binani Printers Private Ltd, 38, Strand Road, Calcutta 1. Price Rs. 5, pages 196.)

The latest annual number of the *Eastern Metals Review* contains many interesting articles on the metal industry and trade. Dr. B. R. Nijhawan, Director of the National Metallurgical Laboratory, Jamshedpur, discusses in an article the application of modern technical practices in the iron and steel industry in developing countries. There are also informative reviews and statistics relating to such important metals as copper, lead, zinc, aluminium, tin and nickel.

MANUFACTURING INDUSTRY

Income and Structure of Manufacturing Industry, 1960-61. (Compiled by the National Council of Applied Economic Research, New Delhi. Price Rs. 8, pages 92.)

In the present study, estimates of contribution of manufacturing industry to national and State incomes for 1960-61 are given. Estimates of net output and employment for different types of manufacturing establishments (such as household and non-household establishments, factory, establishments, and small enterprises) are presented here for 18 States of the Indian Union. A review of the currently available statistics in relation to manufacturing industry and the methods of estimate of income are also given in the book.

The total contribution of all manufacturing industries of the States covered in this study has been estimated at Rs. 1,885 crores for 1960-61. Out of this, Maharashtra's share is the highest, more than 20 percent or Rs. 383 crores and next is West Bengal's, 17 percent or Rs. 324 crores. There are 49 statistical tables.

BUSINESS MANAGEMENT

Case problems in Business Management. By V. S. R. Murty. (Published by the Asia Publishing House, Calcutta. Price Rs. 15, pages 30.)

This book has been written to introduce the teaching techniques of management like the case method in the field of Indian management. In about 60 cases carefully selected and classified, the author gives a picture of the organisational, human, quantitative and social aspects of management. The book is not meant for casual reading but is specially designed for group discussion and thinking. It will serve a useful purpose in introducing the case method in the management training programmes.

Fourth Plan: Despatching the Starving to Heaven...	741

sector. Finally, carried away by the windiness of their own verbosity, they even begin to visualise a stage, eleven years hence, when the rapid growth of the economy. . . . should start making labour scarce". The conclusion is inescapable that

ANOTHER REPORT ON SOCIALISM

IT is hard to understand what the Dhebar Committee's report is about. Appointed by the Congress President, Mr. K. Kamaraj, to give concrete shape to the resolution on democracy and socialism adopted by the Party at the Bhubaneswar session last January, a Committee of five has produced a long document which is singularly unoriginal. In most matters, it rests content with repeating the arguments which the perspective planners have already made familiar in their advocacy of a "big push" over the decade 1966-75 to get the economy over the hump. This is surely not enough. A group of people with considerable political and administrative experience—the Committee includes two Central Ministers currently in office—could justifiably be expected to make an effort to wed theory to practice. As Mr. Kamaraj's chosen advisers, they should have been able to pinpoint for him the political risks inherent in the "big push"—the privations and sacrifices implicit in this "jam tomorrow" approach. Drawing from their own knowledge and experience, they should have come out, one way or another, with an answer to the basic question whether the degree of discipline (which some might describe as regimentation) can at all be achieved in a society already subject to strong centrifugal pressures.

The Committee has plainly shirked this task. And to cover up the failure, it has added to the existing confusion by peddling a nostrum or two to check the ills of economic concentration. If the problems involved were so easily amenable to cure, there would hardly be any need for the high-powered Monopolies Commission just set on its long and arduous task by the Finance Minister. Nor would India, or many other similarly placed countries, have had any difficulty at all in correcting concentration by simple legislative expedients. It is misleading, therefore, to give the impression that a simple executive decision denying further licences to big business groups is all that needs to be done. In any case, the propriety of the suggestion is questionable because it comes at a time when the whole question has still to be properly investigated.

The Central Finance Minister, Mr. T. T. Krishnamachari, acting presumably on the basis of the Mahalanobis report, has remitted the problem to the Monopolies Commission—a move which must have been made after consultations within the Government and with the Party. Therefore, to ask the Government rightaway "not to issue any licences for new projects to existing large industrial concentrations" ill accords with the line already adopted. The discrepancy need not have worried anyone but for the fact of the Committee's composition. Is one to conclude that Committee members like Mr. C. Subramaniam, Central Minister for Steel, Mines and Heavy Engineering, and Mr. B. R. Bhagat, who happens to be Mr. Krishnamachari's deputy, are wholly out of sympathy with Mr. Krishnamachari's approach and are trying, via the Party, to make him change his line? If this is indeed the case, their functioning within the framework of collective Cabinet responsibility is hard to imagine.

Yet there has been no suggestion that either of these gentlemen are contemplating packing their bags to depart for their home towns. This facet of Indian political life—the yoking together of incompatible individuals—is perhaps at the heart of the problem the country is faced with today as economic performance falls more and more behind promise. The defaults in implementation, which the Dhebar Committee bemoans, stem directly from the delays inevitable in a situation where decision-makers pull in various directions at once. A notorious example is provided by the Durgapur alloy steel project—the Steel Ministry under Mr. Subramaniam wanted to go ahead with it, while the Finance Ministry just refused to be persuaded that the scheme as evolved was sound. The result was that although included in the third plan and technically approved

if, instead of the planners alone, more people could make money from private dreams and empty promises, there would be no need to wait for eleven years; there would have been a labour shortage in India already.

by experts before March 1961, the financial sanction from the Cabinet was secured only in February 1963—a two-year period during which construction activity was confined to the building of compound walls.

Yet the Committee has nothing to say on this central problem of inchoate decision-making, although it quite rightly (but again unoriginally) blames the shortfalls of the past years on failures in implementation. The recommendation that Ministers should be periodically hauled up before the Congress Parliamentary Board to account for their performance may be intended as a corrective but is quite worthless. The Board itself cannot be any more clear-cut and decisive in its judgments than the Cabinet or collective bodies at other levels because of the same lack of single-mindedness. That such a suggestion should be made at all by responsible Party men is an index more of their desperation than of a determination to get to the roots of the problem.

On the purely economic level, the Dhebar Committee's ideas do not warrant serious discussion. It is not that the ideas are of no consequence, but that they are already being discussed—more properly perhaps—in the context of the fourth plan. It is interesting to note, however, that, via this report, the All-India Congress Committee, meeting in Bombay later this week, will be expected to endorse the perspective planners' idea that the fourth plan must aim at a 7 percent or 7½ percent rate of growth. Should this happen, it would amount to dictating to the executive a course of policy which has yet to be given serious consideration at the administrative levels. Only the first of a series of three meetings which the Planning Commission is holding to thrash out this issue has so far taken place. Reports from New Delhi suggest that serious differences were revealed last Sunday when Mr. Krishnamachari voiced grave doubts about the foreign exchange budgeting adopted by perspective planners in their projections. Whereupon, so the reports say, the plan-
