RAILWAYS: "SOCIAL JUSTICE" THROUGH EXPLOITATION

THE Railway Budget for 1964-65, presented by the Railway Minister, Mr. H. C. Dasappa, to Parliament on Tuesday follows the dreary pattern of recent years. It shows that the gross traffic receipts of the Government's biggest quasi-monopoly are increasing rapidly—partly because the traffic itself is growing and partly because freight rates have been steadily raised. At the same time, ordinary revenue working expenses are increasing pretty rapidly too—partly because more traffic has to be handled, partly because the cost of the things the railways use is rising, but largely because railway staff are getting big new bounties each year. So freight rates for most users are going to be raised once again, while passenger fares are to remain untouched since the Railway Ministry cannot find the courage to increase them after the bad dreams it has been having about the political uproar the move might inspire. The extra money thus raised is to go almost entirely to the lucky souls the railways are good enough to employ. A little is to go to the Central Government, the sole and nearly-as-lucky shareholder which is now making another limited move towards squeezing bigger guaranteed dividends out of its semi-monopoly. Virtually none of the extra money from the freight increase is to be used for the only purpose for which it might have been justified—for the railways' expansion plans. The appropriation to depreciation reserve fund, for example, remains grossly inadequate for what is supposed to be a rapidly expanding enterprise with total assets now exceeding Rs. 2,100 crores.

The total increase in revenue from the freight increases and adjustments just proposed by Mr. Dasappa is expected to be Rs. 11 crores in 1964-65. Out of this, Rs. 7.5 crores will come by raising the present supplementary surcharge of 10 percent on freight rates to 12 percent. The 2-percent increase in the surcharge will not apply to ore due for export; nor will it apply to defence, postal, telegraphic and the railways' own traffic. The remaining Rs. 3.5 crores will come from an increase in the basic freight rates for coal moving over long distances—this being offset to some extent by the downward re-classification of certain commodities which at present bear the highest rates (such as nitric acid, safety matches, rectified spirit, furniture and confectionery).

The scheme of changes seems to be designed with three main purposes in mind. First, the downward re-classification of certain high-rated commodities suggests that the railways are trying to recapture some of the high-rated traffic they may have lost to road and other competitive forms of transport. The inclination may have been increased by the growth of spare railway capacity in certain sectors and by the railways' eagerness to buttress their revenues with an adequate proportion of high-rated traffic. Secondly, the changes in the basic freight rates for coal moving over long distances seem to be intended to make the rates less telescopic, thus reversing the trend of recent years. The railways apparently take the view that such traffic is often carried at a loss which they should not be expected to suffer, so there should be a move from the principle of "charging

what the traffic will bear" to the "cost of service" principle. The right principle to adopt in railway freight rate policies may be a matter of controversy; but, in general, the decision to reduce the "telescoping" in coal freight rates seems justified to the extent that it may promote the more economic location of coal-using industries. The upsets which such periodic shifts in railway rating policy are apt to cause cannot, however, be dismissed as negligible.

The third and most important change—the increase in the supplementary surcharge on most freight rates from 10 percent to 12 percent—is indefensible. To begin with, the idea of increasing freight rates through flat supplementary surcharges is, in principle, wrong. It is the indolent alternative to making selective adjustments in response to the traffic conditions governing the movement of different commodities. Such indolence was the fashion of the Railway Ministry before it brought its elephantine self to consider the report of the Railway Freight Structure Enquiry Committee some years ago. The Committee had recommended changes which would have raised the average level of freight rates by 13 percent. The Railway Ministry, on the pretence of wanting to be generous, made extensive mutilations in those recommendations and finally ordained an average increase of 4 percent. Over the years, the generosity has vanished while the indolence has returned. After the whole structure of freight rates had been revised in October 1958, a supplementary surcharge of 5 percent was imposed in April 1960. Freight rates were increased in July 1962; then the surcharge was raised to 10 percent in April 1963, and it is to go up to 12 percent now. The result is that the rationalisation of freight rates suggested by the Mudaliar Committee—to the extent that its recommendations were accepted—has by now been flung out of the window; the whole structure of rates cannot be much more rational today than it was eight years ago.

The strongest objection to the increase in the supplementary surcharge now proposed is that it is wasteful, expensive and unnecessary. Mr. Dasappa has followed the deplorable practice of earlier Railway Ministers by

cannot by any means be dismissed as "too insignificant".

The purpose for which the Rs. 7.5 crores is to be used, along with the Rs. 3.5 crores coming from the other adjustments in freight rates and classifications, does not justify the Railway Budget proposals either. Mr. Dasappa has explained that certain additional commitments during 1964-65 will cost the railways Rs. 22 crores. Out of this, Rs. 1.5 crores will be because the railways will be paying the general exchequer a higher dividend of 5.75 percent on the fresh capital they take during the next financial year (the dividend will remain at 4.5 percent on the capital taken already). The remaining Rs. 20.5 crores will be required for providing additional benefits to staff (including a pension fund which is to start off with an initial contribution of Rs. 19 crores from revenue, and to which as much as Rs. 30 crores may have to be paid subsequently each year). The extra revenue of Rs. 11 crores from freight rate increases and adjustments will cover only half the additional commitments of Rs. 22 crores; on this basis, Mr. Dasappa has ventured to suggest that the railways are being jolly nice to their customers by not milking them for much more. The unfortunate fact, however, is that not an iota of justification has been offered for giving railway employees such expensive new benefits. Sardar Swaran Singh made the confession last year that the *per capita* expenditure on employees had gone up by the astonishing proportion of over 30 percent since 1957. The question must, therefore, be asked: how long are the railways going to continue exploiting their semi-monopoly to squeeze customers, neglect development, and run instead as a *sevak sangh* for their staff?

The astonishing process by which this exploitation continues deserves closer examination. The sharp and steady increase in freight rates is one aspect of the process. The other and no less deplorable aspect is the shameless under-estimation of revenues which might make even the Finance Ministry turn green with envy. The under-estimation is seen from the fact that the Railway Budget last year expected gross traffic receipts to total Rs. 599.69 crores during 1963-64. The revised estimate for the year now is Rs. 622.22 crores. A Rs. 22-crore increase is not chicken-feed; it should be secured not by the deliberate under-estimation of revenue, but by the formal and open process of Parliamentary sanction. An increase of this order might have been understandable if the economy had suddenly started booming and the railways, in consequence, had found themselves rushing round carrying vastly larger quantities of traffic than they had expected. In fact, the growth of traffic has been slow—so slow that the railways are able to claim that they have surplus capacity on several sectors. As Mr. Dasappa himself admits, freight traffic has increased by only 15 million tonnes (to 194 million tonnes) in 1963-64, as against an increase of 17 million tonnes forecast in the Railway Budget last year. A large shortfall in the relatively low-rated traffic in coal, export ore and steel plant requirements, may have been partially compensated for by a substantial increase in higher-rated general goods traffic. But it is hard to believe that these changes alone have been so

DEVELOPING OIL CAPACITY

THERE are several indications that New Delhi may be making a new approach to the problems connected with the raising, refining and processing of petroleum. The Central Finance Minister, Mr. T. T. Krishnamachari's speech to the Indian Economic Association in Bombay at the end of December foreshadowed a wider welcome to private foreign capital in the "vital areas" in which the public sector had already established its "vigilant presence". Many observers think that the Finance Minister might have had the oil industry particularly in mind while making a plea for casting off past "inhibitions" about foreign capital. Whereas all oil refining was in the private sector until a few months ago, the refinery in Nummati now in operation and the two others being set up in Koyali in Gujarat and Barauni in north Bihar will together take State-owned capacity to 7.25 million tons in the early years of the fourth plan. When the 2.5 million tons expected from the Cochin refinery

sharp as to make nonsense of the earlier Budget estimates.

The statistics Mr. Dasappa has produced show that the railways do not want more money for development—certainly no more than they are raising already through the under-estimation of traffic receipts. Part of these receipts are being salted away in the form of welfare and social security schemes intended to make railway employees a privileged minority. The whole process is then sought to be nourished by substantial sums of extra revenue gained through increases in freight rates. The World Bank, no less than the Government of India, might well reconsider whether this is the right way to implement the much-advertised idea of putting Government enterprises on a "commercial footing". The railways need to be reminded that whatever surpluses of capacity may have developed for the time being, they are due purely to the stagnation of the economy. When the stagnation is ended, the shortage of rail transport is not likely to be much less than it has been in recent years. A more energetic effort to complete plans for expansion and modernisation is necessary. For that and that alone should money be honestly raised and carefully used.

RAILWAY BUDGET AT A GLANCE

	(Rupees in crores)			
	Actuals 1962-63	Budget 1963-64	Revised Estimate 1963-64	Budget 1964-65
Gross traffic receipts	566.79	599.69	622.22	638.07*
Ordinary revenue	—	—	—	—
Working expenses net, i.e., after taking credits or recoveries	362.52	379.18	393.48	414.82
Appropriation to depreciation reserve fund from revenue	67.00	80.00	80.00	83.00
Appropriation to pension fund	—	—	—	19.00 @
Net miscellaneous expenditure (including cost of works charged to revenue)	13.95	16.40	15.96	17.08
Total	443.47	475.58	489.44	533.90
Net railway revenue	123.32	124.11	132.78	134.10
Payments to general revenues:				
(a) Dividend on railway capital at 4.25 percent for 1962- 63, at 4.5 percent for 1963-64 and at 5.75 percent on fresh capital for 1964-65	68.76	80.61	82.53	90.73 *
(b) In lieu of passenger fare tax	12.50	12.50	12.50	12.50
Net surplus	42.06	31.00	37.75	30.87

@ Represents contribution from revenue to the railway pension fund to be created from 1st April, 1964.

* This includes the effect of the adjustments in freight rates including levy of a 2 percent supplementary charge on all basic freight rates, other than export ore, proposed in the Railway Budget for 1964-65. (Total estimated increase Rs. 11 crores in 1964-65).

* Includes about Rs. 1.5 crores due to increase in rate of dividend (interest) from 4.5 percent to 5.75 percent on the fresh capital outlay for 1964-65.

—which is 51 percent Government-owned—are added, the total capacity controlled by the State will be seen to have exceeded the private sector's 8 million tons by a comfortable margin. In other words, the State having established a lead—not merely a "vigilant" presence—there is little reason now for the fears which Mr. K. D. Malaviya, the former Central Minister for Mines and Fuel, so effectively played upon to persuade his Cabinet colleagues against any expansion in the private sector. His departure from the scene having presumably facilitated a reconsideration of the policy issues, it is hardly surprising that a more realistic assessment should now be made of where the country's true interests lie.

Apart from anything else that may be germane, there are two aspects which need to be borne in mind in judging the issues. In the first place, private capital is far more readily available for

investment in oil than in any other industry—a fact not unconnected with the present worldwide surplus of crude. This explains the feverish search by the oil companies for market outlets secured through captive refineries, and their readiness to offer the host country attractive terms tailored to its particular needs. The only point on which the companies cannot afford to be flexible is the freedom to import crude from sources of their own choice because any compromise on this would defeat their very purpose in seeking refinery outlets. Once this limitation is allowed for, countries like India, which offer a large and growing market for crude imports, are particularly well-placed to strike advantageous bargains fully consistent with their national interests. India cannot afford to miss the opportunity because her dependence on imported crude is likely to increase in the coming years. Secondly, any suggestion that she is cold towards attractive offers of private capital cannot but create an unfavourable impression among Western aid-givers, who will soon be meeting to consider Indian requests for the next fiscal year. The danger has already been brought to New Delhi's notice by the World Bank, which, while sympathising with India's desire to introduce greater competition in oil refining and supply, has been urging that both statesmanship and material advantages warrant a fresh bid to come to terms with the oil companies.

Another factor to take into account is India's growing demand, the latest estimate accepted by New Delhi's policy-makers being 30 million tons by 1970-71. This means that refinery capacity will have to be expanded over the five years of the fourth plan by over 12 million tons, requiring the setting up of one optimum-sized unit each year. These units may mostly have to be coast-based, unless they are to be linked by pipelines to ports where imported crude can be landed. The Oil Ministry's estimates indicate that the domestic crude output will rise from 7 million tons to 14 million tons a year over the fourth plan period, but this projection is obviously subject to many uncertainties at this early stage of oilfield development. The limited reserves so far proved make one wonder whether it will be possible to take extractions to the 14-million-ton level because such a high rate of withdrawal would lead to the rapid exhaustion of the proved wells. It seems imprudent, therefore, to plan additional refining capacity on any substantial scale on domestic crude unless of course, further discoveries alter the situation. The point to note is that the oil exploration programme, which had the benefit of unusual luck to begin with, has run into a stalemate. After Ankle shwar in 1966 and Rudrasagar in 1961, drilling operations in the west and the east have not tapped any new deposits. The Central Minister of State for Petroleum and Chemicals, Mr. O. V. Alagesan, has recently said that the discoveries made so far have touched only the "fringe", but his optimistic assessment of future possibilities is based on nothing more than the geological finding of oil-bearing rock structures in several areas. Some of these may yield oil, but no one can be sure until a well is sunk and oil gushes forth from it. None of this is intended to suggest that India should rule out hopes in this direction; she will, indeed have to go on looking for oil as extensively as her resources permit. Yet practical decisions for tomorrow cannot be based on hunches; hence the need to base further expansion largely on imported crude.

Given the context, the logic of choosing Madras and Haldia as the sites for the next two refineries is indisputable. Planned on the basis of imported crude, their siting is equally convenient should further discoveries be made either in Assam or in the Cauvery delta. The double-ended crude and product pipeline already sanctioned from Calcutta to Barauni (which in turn is connected with the Assam fields) will take care of the first eventuality, while new links will be needed in the latter case. Both sites, especially Haldia, have the advantage of being well-situated in relation to the market for petroleum products, a consideration which would need to be borne in mind even if the units were to be based on crude from inland sources. This view gains added weight if the refinery is considered, as it should be, the starting point of a complex of industries rather than an end in itself. The effective use of by-products is important not only to improve refinery economics but also to facilitate industrial diversification. The possibilities are

indicated by the scheme formulated by the Oil and Natural Gas Commission for a Rs. 70-crore petrochemical complex near the Koyali refinery, which is already committed to supplying waste gases for power generation.

Once this integrated view is taken of refinery development, a clearer picture should emerge of the total resources required for each complex. It will be seen that the outlay on the refinery itself is a comparatively small part of the total. If so,

EXPANSION OF SHIPPING

THE Fifth Shipping and Shipbuilding Conference held this week in Calcutta has provided a valuable opportunity for exchanging ideas concerning an important branch of transport. At the Conference a fair cross-section of shipping and shipbuilding interests, both in India and abroad, was represented; furthermore, both wings of shipping—naval and mercantile—have taken part. In his presidential speech on Monday, Sir A. Ramaswami Mudaliar suggested that the Government should encourage Indians to attend international conferences so that the country could get the benefit of the latest developments in shipbuilding. He also suggested the creation of research facilities in shipping, and favoured a research association on the British model for the purpose. Several major developments have taken place in shipbuilding in recent years, as the instances mentioned by Mr. Raj Bahadur, Central Minister for Transport, in his inaugural address, showed. He referred to the introduction of electric welding in place of rivetting, which had brought about revolutionary changes in the construction of the hull and a big saving in the use of steel. Similarly, the improvements in several other parts of a vessel have been revolutionising the shipbuilding industry.

Mr. Raj Bahadur took the opportunity to outline the progress India has made in expanding her mercantile fleet. Its growth during the third plan period has been more than thrice as fast as in the previous two plans. From 391,000 G.R.T. at the beginning of the first plan, Indian shipping expanded to 857,000 G.R.T. at the end of the second plan, and during the first three years of the third plan a further 542,800 G.R.T. has been added. The third plan target of 1.1 million G.R.T. has been exceeded already and the present tonnage is 1.3 million, even after scrapping about 114,000 G.R.T. Furthermore, firm orders have been placed for constructing 328,000 G.R.T. (83,000 G.R.T. in India and 245,100 G.R.T. in foreign shipyards). Mr. Raj Bahadur hoped that the operating tonnage at the end of the plan would be more than 1.5 million. He said that if the firm orders then outstanding were also taken into account, the total tonnage would be about 2 million, a target accepted by the Government as far back as 1947.

While the expansion of tonnage is encouraging in the context of the plan target, the capacity is still inadequate in relation to the country's needs. At present, barely 10 percent or 12 percent of India's seaborne trade is carried in Indian bottoms. In 1947 the Reconstruction Policy Sub-committee suggested a target of 2 million tons by 1954 in order to enable Indian vessels to carry 50 percent of the country's overseas trade and 100 percent of the coastal trade. Shipping needs have increased considerably since then and will continue to do so. But the tonnage will be only about 1.5 million by 1965-66. Inadequacy apart, the growth of the shipping fleet has been uneven. In tramp and tanker tonnage, development has been very slow, so the share of Indian vessels in overseas trade has been hardly 3 percent.

In the transport of bulk cargo too, the Indian share is very small, being about 3 percent or 4 percent. An official expert committee headed by Mr. C. P. Srivastava recently suggested the acquisition of 58 bulk carriers totalling 1.1 million G.R.T. The Committee based its recommendation on the prospect of carrying 40 percent of the bulk cargo by 1970-71, when India would be exporting 20 million tons of iron ore to Japan and Europe and importing 2 million tons of foodgrains from the U.S.A. Apart from giving liberal loan facilities to shipowners for acquiring ships, the Committee has suggested that the vessels be bought on a

deferred payment basis—15 percent down payment at the time of purchase and the balance to be paid out of the ship's earnings. In fact, as Mr. Raj Bahadur stated, the majority of ships have been acquired in recent years on a deferred payment basis. Several ships have been bought "even on seemingly impossible credit terms" such as payment of the price in an indefinite number of instalments, depending on the net foreign exchange earnings of the ships. But such liberal terms could be obtained largely because of the depression in the international ship markets. With the recent jump in freight rates, the prices of ships have now risen considerably, and it remains to be seen whether liberal terms can be arranged so long as the boom lasts.

There is some difficulty in expanding the coastal tonnage. As Mr. Raj Bahadur said, coastal vessels have been difficult to buy because they do not earn foreign exchange. The present coastal fleet

Current News and Comment

Stimulating the Economy

In his presidential address at the quarterly general meeting of the Indian Chamber of Commerce last Friday, Mr. K. K. Birla emphasised the need for readjusting the tax system so as to promote economic growth. The present fiscal policy has seriously hampered investment and industrial production. The Central tax effort, according to the mid-term appraisal of the plan, will yield as much as Rs. 1,900 crores, against a total target of only Rs. 1,100 crores. The bigger revenue is being raised at a time when the economy is stagnant, and when even the little progress it has made has been more than neutralised by the expansion of population. A tax system which takes away 87 percent or more of personal incomes and 60 percent to 75 percent of corporate earnings, according to Mr. Birla, is not consistent with the requirements of an economy which needs progressively larger investment for rapid economic growth. The Central Finance Minister, Mr. T. T. Krishnamachari, has recently taken some steps to stimulate economic activity, like liberalising bank credit, lifting price controls on some basic goods and raising the exemption limit for industrial licensing and capital issues. His arguments against nationalising banks and certain other radical measures indicate that he is on the side of moderation. But the forthcoming Budget alone will show to what extent he is able to recast the fiscal structure to promote growth.

The private sector has made substantial progress during the past decade in spite of various disincentives like heavy taxation, rigid controls, foreign exchange difficulties, and shortages of raw materials, transport and power. Mr. Birla stated that the private organised sector had almost doubled its output during the period, employment had risen by about 40 percent, and the field of manufacture had been extended to several heavy and light engineering items. On the other hand, the public sector, in spite of the prestige and authority carried by it, has made relatively poor progress, although it has acquired monopolistic positions in the economy. Mr. Birla sounded a note of warning that the use of the monopolistic power in the public sector in future would depend more on the complexion of the Party in power

comprises 119 ships of 433,000 G.R.T., after the addition of 212,000 G.R.T. But the major portion of this tonnage is more than 15 years old and will have to be replaced soon. Orders have been placed in Yugoslavia for four new coastal ships, which will be used for transporting coal, the major item in the country's coastal trade. Efforts are also being made to order some more ships for the purpose.

Among the other speakers on the opening day of the Conference, Sir Hugh Mackay Tallack dealt with the importance of inland water transport, particularly in the north-eastern region. About 50 percent of the total traffic in Assam, Cachar and Tripura, or a little less than a million tonnes a year, is carried by the waterways. Since large sums of money for improving waterways are simply not available, efforts have to be made to develop crafts suitable for the existing waterways. Sir Hugh referred to the building of new craft embodying techniques such as "push towing". In the feeder service of the Kusiara and Barak rivers, pusher tugs of 500 B.H.P. had been introduced to push four barges carrying 50 tons each. Mr. B. B. Ghosh, chairman of Calcutta Port Commissioners, referred to the improvements being made in the port of Calcutta, which handles about 50 percent of the country's sea-borne dry cargo traffic. The development of Haldia as a subsidiary port will greatly add to the facilities. He stressed the need for constructing a third shipyard and said that Geonkhali, near Haldia, would be an ideal site. It would have the advantages of being near a modern dock, an industrial city and a large steelworks, and thus enjoy all the facilities needed for a shipyard.

than on anything else. The common man is concerned with improving his lot, and this can be accomplished only when production and employment opportunities increase. This underlines the need to give the private sector full scope for maximising production.

Referring to the reports on the Bonus Commission's recommendations, Mr. Birla said that they would affect the capacity of industry to rehabilitate itself and go in for modernisation. The Bonus Commission, it is stated, has suggested that in calculating bonus no deduction should be made from profits to provide for rehabilitation of plant and machinery. It has also recommended that the return on capital should be taken as 7 percent. In the present state of the capital market, when the rate of interest on debentures is about 9 percent, it is difficult to see how a return of 7 percent on risk capital can be considered fair.

Fuller Use of Industrial Capacity

An important reason for the slow pace of industrial progress in India is the existence of idle capacity in many established and new industries. A recent study by the Central Statistical Organisation revealed that only in the case of 110 industries was the installed capacity used more than 75 percent. Among another 105 industries, the proportion of use ranged from 65 percent to 75 percent. In 35 industries it varied between 35 percent and 65 percent, and in the remaining industries it was below 35 percent. Much of the idle capacity at present is due to shortages of imported raw materials, spare parts and components, power and transport. Transport is said to be responsible for at least a fifth of the idle capacity. Frequent shortfalls in agriculture are responsible for the idle capacity in industries having agricultural products as raw materials. Time-lags and teething troubles are the other contributory factors. Procedural and administrative delays have also affected the working of industries.

The partial use of capacity leads to a setback in production and raises unit costs. Shortfall in one field often affects production elsewhere. The existence of idle capacity has, therefore, wide-

cannot by any means be dismissed as "too insignificant".

The purpose for which the Rs. 7.5 crores is to be used, along with the Rs. 3.5 crores coming from the other adjustments in freight rates and classifications, does not justify the Railway Budget proposals either. Mr. Dasappa has explained that certain additional commitments during 1964-65 will cost the railways Rs. 22 crores. Out of this, Rs. 1.5 crores will be because the railways will be paying the general exchequer a higher dividend of 5.75 percent on the fresh capital they take during the next financial year (the dividend will remain at 4.5 percent on the capital taken already). The remaining Rs. 20.5 crores will be required for providing additional benefits to staff (including a pension fund which is to start off with an initial contribution of Rs. 19 crores from revenue, and to which as much as Rs. 30 crores may have to be paid subsequently each year). The extra revenue of Rs. 11 crores from freight rate increases and adjustments will cover only half the additional commitments of Rs. 22 crores; on this basis, Mr. Dasappa has ventured to suggest that the railways are being jolly nice to their customers by not milking them for much more. The unfortunate fact, however, is that not an iota of justification has been offered for giving railway employees such expensive new benefits. Sardar Swaran Singh made the confession last year that the *per capita* expenditure on employees had gone up by the astonishing proportion of over 30 percent since 1957. The question must, therefore, be asked: how long are the railways going to continue exploiting their semi-monopoly to squeeze customers, neglect development, and run instead as a *sevak saugh* for their staff?

The astonishing process by which this exploitation continues deserves closer examination. The sharp and steady increase in freight rates is one aspect of the process. The other and no less deplorable aspect is the shameless under-estimation of revenues which might make even the Finance Ministry turn green with envy. The under-estimation is seen from the fact that the Railway Budget last year expected gross traffic receipts to total Rs. 599.69 crores during 1963-64. The revised estimate for the year now is Rs. 622.22 crores. A Rs. 22-crore increase is not chicken-feed; it should be secured not by the deliberate under-estimation of revenue, but by the formal and open process of Parliamentary sanction. An increase of this order might have been understandable if the economy had suddenly started booming and the railways, in consequence, had found themselves rushing round carrying vastly larger quantities of traffic than they had expected. In fact, the growth of traffic has been slow—so slow that the railways are able to claim that they have surplus capacity on several sectors. As Mr. Dasappa himself admits, freight traffic has increased by only 15 million tonnes (to 194 million tonnes) in 1963-64, as against an increase of 17 million tonnes forecast in the Railway Budget last year. A large shortfall in the relatively low-rated traffic in coal, export ore and steel plant requirements, may have been partially compensated for by a substantial increase in higher-rated general goods traffic. But it is hard to believe that these changes alone have been so

DEVELOPING OIL CAPACITY

THERE are several indications that New Delhi may be making a new approach to the problems connected with the raising, refining and processing of petroleum. The Central Finance Minister, Mr. T. T. Krishnamachari's speech to the Indian Economic Association in Bombay at the end of December foreshadowed a wider welcome to private foreign capital in the "vital areas" in which the public sector had already established its "vigilant presence". Many observers think that the Finance Minister might have had the oil industry particularly in mind while making a plea for casting off past "inhibitions" about foreign capital. Whereas all oil refining was in the private sector until a few months ago, the refinery in Nummati now in operation and the two others being set up in Koyali in Gujarat and Barauni in north Bihar will together take State-owned capacity to 7.25 million tons in the early years of the fourth plan. When the 2.5 million tons expected from the Cochin refinery

sharp as to make nonsense of the earlier Budget estimates.

The statistics Mr. Dasappa has produced show that the railways do not want more money for development—certainly no more than they are raising already through the under-estimation of traffic receipts. Part of these receipts are being salted away in the form of welfare and social security schemes intended to make railway employees a privileged minority. The whole process is then sought to be nourished by substantial sums of extra revenue gained through increases in freight rates. The World Bank, no less than the Government of India, might well reconsider whether this is the right way to implement the much-advertised idea of putting Government enterprises on a "commercial footing". The railways need to be reminded that whatever surpluses of capacity may have developed for the time being, they are due purely to the stagnation of the economy. When the stagnation is ended, the shortage of rail transport is not likely to be much less than it has been in recent years. A more energetic effort to complete plans for expansion and modernisation is necessary. For that and that alone should money be honestly raised and carefully used.

* This includes the effect of the adjustments in freight rates including levy of a 2 percent supplementary charge on all basic freight rates, other than export ore, proposed in the Railway Budget for 1964-65. (Total estimated increase Rs. 11 crores in 1964-65).

* Includes about Rs. 1.5 crores due to increase in rate of dividend (interest) from 4.5 percent to 5.75 percent on the fresh capital outlay for 1964-65.

—which is 51 percent Government-owned—are added, the total capacity controlled by the State will be seen to have exceeded the private sector's 8 million tons by a comfortable margin. In other words, the State having established a lead—not merely a "vigilant" presence—there is little reason now for the fears which Mr. K. D. Malaviya, the former Central Minister for Mines and Fuel, so effectively played upon to persuade his Cabinet colleagues against any expansion in the private sector. His departure from the scene having presumably facilitated a reconsideration of the policy issues, it is hardly surprising that a more realistic assessment should now be made of where the country's true interests lie.

Apart from anything else that may be germane, there are two aspects which need to be borne in mind in judging the issues. In the first place, private capital is far more readily available for

investment in oil than in any other industry—a fact not unconnected with the present worldwide surplus of crude. This explains the feverish search by the oil companies for market outlets secured through captive refineries, and their readiness to offer the host country attractive terms tailored to its particular needs. The only point on which the companies cannot afford to be flexible is the freedom to import crude from sources of their own choice because any compromise on this would defeat their very purpose in seeking refinery outlets. Once this limitation is allowed for, countries like India, which offer a large and growing market for crude imports, are particularly well-placed to strike advantageous bargains fully consistent with their national interests. India cannot afford to miss the opportunity because her dependence on imported crude is likely to increase in the coming years. Secondly, any suggestion that she is cold towards attractive offers of private capital cannot but create an unfavourable impression among Western aid-givers, who will soon be meeting to consider Indian requests for the next fiscal year. The danger has already been brought to New Delhi's notice by the World Bank, which, while sympathising with India's desire to introduce greater competition in oil refining and supply, has been urging that both statesmanship and material advantages warrant a fresh bid to come to terms with the oil companies.

Another factor to take into account is India's growing demand, the latest estimate accepted by New Delhi's policy-makers being 30 million tons by 1970-71. This means that refinery capacity will have to be expanded over the five years of the fourth plan by over 12 million tons, requiring the setting up of one optimum-sized unit each year. These units may mostly have to be coast-based, unless they are to be linked by pipelines to ports where imported crude can be landed. The Oil Ministry's estimates indicate that the domestic crude output will rise from 7 million tons to 14 million tons a year over the fourth plan period, but this projection is obviously subject to many uncertainties at this early stage of oilfield development. The limited reserves so far proved make one wonder whether it will be possible to take extractions to the 14-million-ton level because such a high rate of withdrawal would lead to the rapid exhaustion of the proved wells. It seems imprudent, therefore, to plan additional refining capacity on any substantial scale on domestic crude unless, of course, further discoveries alter the situation. The point to note is that the oil exploration programme, which had the benefit of unusual luck to begin with, has run into a stalemate. After Ankleshwar in 1966 and Rudrasagar in 1961, drilling operations in the west and the east have not tapped any new deposits. The Central Minister of State for Petroleum and Chemicals, Mr. O. V. Alagesan, has recently said that the discoveries made so far have touched only the "fringe", but his optimistic assessment of future possibilities is based on nothing more than the geological finding of oil-bearing rock structures in several areas. Some of these may yield oil, but no one can be sure until a well is sunk and oil gushes forth from it. None of this is intended to suggest that India should rule out hopes in this direction; she will, indeed, have to go on looking for oil as extensively as her resources permit. Yet practical decisions for tomorrow cannot be based on hunches; hence the need to base further expansion largely on imported crude.

Given the context, the logic of choosing Madras and Haldia as the sites for the next two refineries is indisputable. Planned on the basis of imported crude, their siting is equally convenient should further discoveries be made either in Assam or in the Cauvery delta. The double-ended crude and product pipeline already sanctioned from Calcutta to Barauni (which in turn is connected with the Assam fields) will take care of the first eventuality, while new links will be needed in the latter case. Both sites, especially Haldia, have the advantage of being well-situated in relation to the market for petroleum products, a consideration which would need to be borne in mind even if the units were to be based on crude from inland sources. This view gains added weight if the refinery is considered, as it should be, the starting point of a complex of industries rather than an end in itself. The effective use of by-products is important not only to improve refinery economics but also to facilitate industrial diversification. The possibilities are

indicated by the scheme formulated by the Oil and Natural Gas Commission for a Rs. 70-crore petrochemical complex near the Koyali refinery, which is already committed to supplying waste gases for power generation.

Once this integrated view is taken of refinery development, a clearer picture should emerge of the total resources required for each complex. It will be seen that the outlay on the refinery itself is a comparatively small part of the total. If so,

EXPANSION OF SHIPPING

THE Fifth Shipping and Shipbuilding Conference held this week in Calcutta has provided a valuable opportunity for exchanging ideas concerning an important branch of transport. At the Conference a fair cross-section of shipping and shipbuilding interests, both in India and abroad, was represented; furthermore, both wings of shipping—naval and mercantile—have taken part. In his presidential speech on Monday, Sir A. Ramaswami Mudaliar suggested that the Government should encourage Indians to attend international conferences so that the country could get the benefit of the latest developments in shipbuilding. He also suggested the creation of research facilities in shipping, and favoured a research association on the British model for the purpose. Several major developments have taken place in shipbuilding in recent years, as the instances mentioned by Mr. Raj Bahadur, Central Minister for Transport, in his inaugural address, showed. He referred to the introduction of electric welding in place of rivetting, which had brought about revolutionary changes in the construction of the hull and a big saving in the use of steel. Similarly, the improvements in several other parts of a vessel have been revolutionising the shipbuilding industry.

Mr. Raj Bahadur took the opportunity to outline the progress India has made in expanding her mercantile fleet. Its growth during the third plan period has been more than thrice as fast as in the previous two plans. From 391,000 G.R.T. at the beginning of the first plan, Indian shipping expanded to 857,000 G.R.T. at the end of the second plan, and during the first three years of the third plan a further 542,800 G.R.T. has been added. The third plan target of 1.1 million G.R.T. has been exceeded already and the present tonnage is 1.3 million, even after scrapping about 114,000 G.R.T. Furthermore, firm orders have been placed for constructing 328,000 G.R.T. (83,000 G.R.T. in India and 245,100 G.R.T. in foreign shipyards). Mr. Raj Bahadur hoped that the operating tonnage at the end of the plan would be more than 1.5 million. He said that if the firm orders then outstanding were also taken into account, the total tonnage would be about 2 million, a target accepted by the Government as far back as 1947.

While the expansion of tonnage is encouraging in the context of the plan target, the capacity is still inadequate in relation to the country's needs. At present, barely 10 percent or 12 percent of India's seaborne trade is carried in Indian bottoms. In 1947 the Reconstruction Policy Sub-committee suggested a target of 2 million tons by 1954 in order to enable Indian vessels to carry 50 percent of the country's overseas trade and 100 percent of the coastal trade. Shipping needs have increased considerably since then and will continue to do so. But the tonnage will be only about 1.5 million by 1965-66. Inadequacy apart, the growth of the shipping fleet has been uneven. In tramping and tanker tonnage, development has been very slow, so the share of Indian vessels in overseas trade has been hardly 3 percent.

In the transport of bulk cargo too, the Indian share is very small, being about 3 percent or 4 percent. An official expert committee headed by Mr. C. P. Srivastava recently suggested the acquisition of 58 bulk carriers totalling 1.1 million G.R.T. The Committee based its recommendation on the prospect of carrying 40 percent of the bulk cargo by 1970-71, when India would be exporting 20 million tons of iron ore to Japan and Europe and importing 2 million tons of foodgrains from the U.S.A. Apart from giving liberal loan facilities to shipowners for acquiring ships, the Committee has suggested that the vessels be bought on a

deferred payment basis—15 percent down payment at the time of purchase and the balance to be paid out of the ship's earnings. In fact, as Mr. Raj Bahadur stated, the majority of ships have been acquired in recent years on a deferred payment basis. Several ships have been bought "even on seemingly impossible credit terms" such as payment of the price in an indefinite number of instalments, depending on the net foreign exchange earnings of the ships. But such liberal terms could be obtained largely because of the depression in the international ship markets. With the recent jump in freight rates, the prices of ships have now risen considerably, and it remains to be seen whether liberal terms can be arranged so long as the boom lasts.

There is some difficulty in expanding the coastal tonnage. As Mr. Raj Bahadur said, coastal vessels have been difficult to buy because they do not earn foreign exchange. The present coastal fleet

comprises 119 ships of 433,000 G.R.T., after the addition of 212,000 G.R.T. But the major portion of this tonnage is more than 15 years old and will have to be replaced soon. Orders have been placed in Yugoslavia for four new coastal ships, which will be used for transporting coal, the major item in the country's coastal trade. Efforts are also being made to order some more ships for the purpose.

Among the other speakers on the opening day of the Conference, Sir Hugh Mackay Tallack dealt with the importance of inland water transport, particularly in the north-eastern region. About 50 percent of the total traffic in Assam, Cachar and Tripura, or a little less than a million tonnes a year, is carried by the waterways. Since large sums of money for improving waterways are simply not available, efforts have to be made to develop crafts suitable for the existing waterways. Sir Hugh referred to the building of new craft embodying techniques such as "push towing". In the feeder service of the Kusiara and Barak rivers, pusher tugs of 500 B.H.P. had been introduced to push four barges carrying 50 tons each. Mr. B. B. Ghosh, chairman of Calcutta Port Commissioners, referred to the improvements being made in the port of Calcutta, which handles about 50 percent of the country's sea-borne dry cargo traffic. The development of Haldia as a subsidiary port will greatly add to the facilities. He stressed the need for constructing a third shipyard and said that Geonkhali, near Haldia, would be an ideal site. It would have the advantages of being near a modern dock, an industrial city and a large steelworks, and thus enjoy all the facilities needed for a shipyard.

Current News and Comment

Stimulating the Economy

In his presidential address at the quarterly general meeting of the Indian Chamber of Commerce last Friday, Mr. K. K. Birla emphasised the need for readjusting the tax system so as to promote economic growth. The present fiscal policy has seriously hampered investment and industrial production. The Central tax effort, according to the mid-term appraisal of the plan, will yield as much as Rs. 1,900 crores, against a total target of only Rs. 1,100 crores. The bigger revenue is being raised at a time when the economy is stagnant, and when even the little progress it has made has been more than neutralised by the expansion of population. A tax system which takes away 87 percent or more of personal incomes and 60 percent to 75 percent of corporate earnings, according to Mr. Birla, is not consistent with the requirements of an economy which needs progressively larger investment for rapid economic growth. The Central Finance Minister, Mr. T. T. Krishnamachari, has recently taken some steps to stimulate economic activity, like liberalising bank credit, lifting price controls on some basic goods and raising the exemption limit for industrial licensing and capital issues. His arguments against nationalising banks and certain other radical measures indicate that he is on the side of moderation. But the forthcoming Budget alone will show to what extent he is able to recast the fiscal structure to promote growth.

The private sector has made substantial progress during the past decade in spite of various disincentives like heavy taxation, rigid controls, foreign exchange difficulties, and shortages of raw materials, transport and power. Mr. Birla stated that the private organised sector had almost doubled its output during the period, employment had risen by about 40 percent, and the field of manufacture had been extended to several heavy and light engineering items. On the other hand, the public sector, in spite of the prestige and authority carried by it, has made relatively poor progress, although it has acquired monopolistic positions in the economy. Mr. Birla sounded a note of warning that the use of the monopolistic power in the public sector in future would depend more on the complexion of the Party in power

than on anything else. The common man is concerned with improving his lot, and this can be accomplished only when production and employment opportunities increase. This underlines the need to give the private sector full scope for maximising production.

Referring to the reports on the Bonus Commission's recommendations, Mr. Birla said that they would affect the capacity of industry to rehabilitate itself and go in for modernisation. The Bonus Commission, it is stated, has suggested that in calculating bonus no deduction should be made from profits to provide for rehabilitation of plant and machinery. It has also recommended that the return on capital should be taken as 7 percent. In the present state of the capital market, when the rate of interest on debentures is about 9 percent, it is difficult to see how a return of 7 percent on risk capital can be considered fair.

Fuller Use of Industrial Capacity

An important reason for the slow pace of industrial progress in India is the existence of idle capacity in many established and new industries. A recent study by the Central Statistical Organisation revealed that only in the case of 110 industries was the installed capacity used more than 75 percent. Among another 105 industries, the proportion of use ranged from 65 percent to 75 percent. In 35 industries it varied between 35 percent and 65 percent, and in the remaining industries it was below 35 percent. Much of the idle capacity at present is due to shortages of imported raw materials, spare parts and components, power and transport. Transport is said to be responsible for at least a fifth of the idle capacity. Frequent shortfalls in agriculture are responsible for the idle capacity in industries having agricultural products as raw materials. Time-lags and teething troubles are the other contributory factors. Procedural and administrative delays have also affected the working of industries.

The partial use of capacity leads to a setback in production and raises unit costs. Shortfall in one field often affects production elsewhere. The existence of idle capacity has, therefore, wide-

spread repercussions on the economy and inflationary pressures are aggravated. Full utilisation of capacity is, therefore, of utmost importance. It is in this context that the plea made by Mr. G. L. Mehta, chairman of the Industrial Credit and Investment Corporation of India, in his inaugural address at the third quarterly meeting of the All-India Manufacturers Organisation, for launching a new *swadeshi* movement to secure preferential treatment for indigenous raw materials and components, gains significance. He urged industrialists to shed their prejudices against indigenous products and impressed upon them to maintain high production standards. Proper attention must also be paid to the price factor. Mr. Mehta said that in developing indigenous production, it was no use imitating techniques employed in foreign countries. What was good for them need not necessarily be good for India. He also emphasised the need for co-operative research in order to encourage the use of indigenous products. Mr. Mehta suggested that the A.I.M.O. and other organisations of industries should carry out surveys of idle capacity in different industries and suggest how the capacity could be more effectively used by taking to indigenous materials.

Stainless Steel Goods Exports Suffer

Although the Indian Government wishes to encourage the export of non-traditional items, and although raw material imports are freely allowed against export performance, the stainless steel industry is suffering even though it contributes something to the country's export earnings. The Government's inability to take an early decision in the industry's case is responsible for this. In November 1963, the granting of licences for importing stainless steel sheets against stainless steel product export was suspended. It was due to the Government's belief that exports were being over-invoiced while the prices of stainless steel products for export purposes had been artificially raised. As the All-India Stainless Steel Industries Association has pointed out, it does not make sense to penalise the entire industry for the fault of a few, who may have over-invoiced their exports. But the rise in the prices of stainless steel goods has been due partly to the scarcity of raw materials created by wrong Government policies and partly to an increase in production costs.

The Association some time ago submitted to the Government proposals setting down minimum and maximum prices for the complex variety of export products manufactured by the industry. The variety of demand from different countries including the U.S.A., the U.K., West Germany, Canada, Australia, Sweden and some in Asia and Africa is wide, and it is not always possible to standardise the product. If sufficient raw material is available locally, there would be no difficulty in increasing exports and in supplying the huge orders which the Indian industry has already received. The Metals and Mineral Trading Corporation of India, it is reported, is making some efforts to import stainless steel sheets, but that would take time. The ban on the imports of raw material which was imposed in November 1963, should, therefore, be lifted and the industry allowed to import it against the stainless steel goods exports.

It is true that the stainless steel industry is a small one, but it promises to develop and to earn more foreign exchange in the near future. But if things are allowed to drift, the industry's exports, which declined from Rs. 7.67 lakhs in November 1963 to Rs. 1.50 lakhs in December 1963, might fall further. In 1963, India's stainless steel exports totalled only Rs. 6½ lakhs, but the industry feels that a target of Rs. 1½ crores a year could be reached in the near future.

Need to Simplify Sales Tax Laws

Whatever may be the virtues of this country's system of indirect taxes, convenience and simplicity of collection are not among them. The States have added to the complexity by their sales tax laws. Not only do their policies and procedures concerning this tax differ sharply from one another, but the procedures themselves are too intricate and hamper trade. Dealing with this subject in his address to the regional conference of the Fed-

eration of the Indian Chambers of Commerce and Industry's constituents in Gujarat, Madhya Pradesh and Maharashtra, held in Bombay last week, the president, Mr. Bharat Ram, said that often the incidence of the sales tax laws of one State affected dealers in another. There was, therefore, a clear need for better co-ordination of the State's sales tax policies; some uniform principles of administration were also needed. Mr. Bharat Ram suggested that the Centre's policy of amalgamating sales tax with excise duty should be widened to include as many commodities as possible. This is important for two reasons. First, trade and commerce would be enabled to function better; secondly, the effect of the divergent sales tax laws on the export trade would be less adverse. The F.I.C.C.I. president pointed out that under the present rules, only the last export sale was free from sales tax. But sales to dealers or merchant-exporters, even though meant for subsequent export, are not exempt from the tax. Again, the incidence of the burden borne by the exported commodity falls on its inputs, that is, raw materials, intermediate goods, etcetera. Only two States—Gujarat and Maharashtra—have given some concessions for exported commodities, but the rest have refused even to consider the representations of the trade. Mr. Bharat Ram hoped that the Saraiya Committee, which has been appointed to go into all aspects of the problem, would suggest ways to make the task of the exporter easier.

A large part of Mr. Bharat Ram's address, in keeping with the occasion, described the economic features of the region, and spelt out the prospects before the three States. Maharashtra is industrially advanced, but highly developed industrial centres coexist with vast areas of agricultural backwardness. For example, regions such as Konkan, Marathwada and Vidarbha remain relatively undeveloped. In Mr. Bharat Ram's view, one of the main drawbacks is the lack of transport facilities. The road network in the State would have to be extended to these areas, and efficient marketing arrangements introduced to stimulate their economy. Simultaneously, irrigation facilities should be improved and larger quantities of fertilisers applied to step up farm productivity. Gujarat is fortunate in having a go-ahead entrepreneurial class, but the main obstacle is the shortage of power. The recent discovery of oil, and to a certain extent, of coal, would open a wide range of opportunities for developing petro-chemical industries in the State. (The Oil and Natural Gas Commission is already negotiating with foreign parties to start a petro-chemical complex in Gujarat.) This State, however, has sufficient power potential—the Narmada river alone can make a significant contribution. But differences between Gujarat and Madhya Pradesh have been holding up the progress of the latter's power project. Mr. Bharat Ram hoped that these differences would be resolved soon and the implementation of Gujarat's power projects would be expedited. Madhya Pradesh is economically the poorest of the three, but it has vast mineral resources. Iron ore, coal, manganese, bauxite, limestone and even diamonds are among the minerals found in the State. Yet except for the Bhilai steel plant and the Bhopal heavy electrical undertaking, there has been little new industrial development in recent years. Madhya Pradesh, Mr. Bharat Ram said, could provide important industrial commodities like steel, aluminium, calcium carbide, fertilisers, cement and refractories, but the State's industrial potentialities cannot be realised as long as there is no integrated administrative apparatus and the technical personnel are not available.

Time Bar to Sales Tax Reassessment

In an interesting case arising from the sales tax assessment of a Bareilly firm, namely, Messrs Banwari Lal Madan Mohan, a division bench of the Allahabad High Court consisting of Mr. Justice V. G. Oak and Mr. Justice Satish Chandra, has held two assessment orders issued four years after the assessment period invalid under the U.P. Sales Tax Act. The writ petition of the firm under Article 226 of the Constitution was allowed. The facts of the case are that the firm was assessed to sales tax for the year 1953-54 on a turnover of Rs. 73,000 by an order dated 11th January, 1954.

CAPITAL, 13th February, 1964.

But on 18th March, 1958, another order amending the previous one was passed under Section 21 of the U.P. Act assessing the firm on a turnover of Rs. 5,65,700 for 1953-54.

The firm filed an appeal against this order before the Judge (Revisions) on the plea that before making reassessment and issuing the order dated 18th March, 1958, no notice was issued to it. The Judge (Revisions) allowed the appeal by his order dated 5th August, 1958, setting aside the order of the sales tax officer (dated 18th March, 1958) making the reassessment without giving due notice to the appellant firm, but at the same time, ordered that the case should be remanded for fresh assessment after issuing proper notice. Consequently, the sales tax officer, Bareilly range, issued a notice to the petitioner on 10th January, 1960, under Section 21 of the U.P. Sales Tax Act. The petitioner raised an objection that the notice was invalid as no assessment for the year 1953-54 could be made after the expiry of four years. But the objection was rejected. The petitioner went on appeal to the Judge (Revisions) in Lucknow, who also rejected the appeal by his order dated 25th May, 1962. The petitioner then moved a writ application under Article 226 of the Constitution against the order of the sales tax officer dated 15th January, 1960, and the order of Judge (Revisions) dated 25th May, 1962. The division bench of the Allahabad High Court has quashed both these orders and allowed costs to the petitioner.

Both Section 34 of the Income Tax Act and Section 21 of the U.P. Sales Tax Act relate to reassessment. Under the income tax law, if an income tax officer believes that a person's income has escaped assessment to tax, he should first issue a notice to the assessee, and then proceed to make the assessment. The same is the position under Section 21 of the U.P. Sales Tax Act. Their lordships of the Allahabad High Court have pointed out that the Judge (Revisions) was hearing an appeal under Section 9 of the Act. Under clause (b) of sub-section (3) of Section 9, he could set aside the assessment and direct the assessing authority to pass a further order after such enquiry as he may direct. But the Judge (Revisions) had no power to order reassessment proceedings at a time when such proceedings were barred by limitation. There was good authority for holding that the order of assessment without notice was without jurisdiction. If no notice had been issued under Section 21 of the Act before 31st March, 1958, and the order of the sales tax officer dated 18th March, 1958 was without jurisdiction, the conclusion emerged that there was no valid proceeding under Section 21 of the U.P. Sales Tax Act before 31st March, 1958. Under the existing law, it is not permissible to make an order of reassessment after the expiry of four years from the end of an assessment year.

Growth of Private Limited Companies

A study of the financial results of 501 private limited companies in 1961, the results of which have been published in the January 1964 issue of the *Reserve Bank of India Bulletin*, shows the impact of a slackened rate of industrial expansion. Although the average rate of dividends issued by these companies for 1961 increased to 13.7 percent from 12 percent in the previous year, they made slower progress. The value of production and sales of these 501 companies in 1961 increased by less than 5 percent compared with an increase of over 18 percent in 1960 in the case of 333 companies which were studied for that year.

Since the expenditure in the case of the 501 companies in 1961 did not increase as much as income, the "margin of profit" as measured by the ratio of gross profits to sales, improved from 6.5 percent in 1960 to 7.3 percent in 1961. At the same time, the "profitability of capital" also improved with the ratio of gross profits to total capital employed having increased from 10.2 percent in 1960 to 11.2 percent in 1961. But in spite of this improvement in the financial condition the rate of industrial growth, particularly in the case of these companies, slowed down. Besides, the rate of gross assets formation in the case of these 501 companies at 7.6 percent for 1961 was lower than 11.1 percent for 333 companies during 1960. The rate of capital formation in the case of these companies at 11.12 percent was, however, somewhat

CAPITAL, 13th February, 1964.

higher than 10.11 percent for 333 companies in 1960.

Tax provision absorbed a larger share of pre-tax profits in 1961 at 52.7 percent in 1960 compared with 47.9 percent. As a result, the net profits of the 501 companies increased only moderately and the proportion of retained profits to after-tax profits declined to 29.1 percent from 35.8 percent in 1960. There are clear indications that the position for 1962 and 1963 will show further deterioration.

Inami Tenure, Octroi Duty Bills

Industry and trade circles in Bombay are very much agitated over the Maharashtra Government's decision to go ahead with the Bill to abolish Inami tenure and certain other special land tenures and the Bombay Municipal Corporation (Second Amendment) Bill for the levy of octroi duty. Both these bills are scheduled to be taken up at the current session of the State legislature. These Bills have been before the public for quite some time and the business community is known to have made several representations to the Government pointing out that, if implemented, they would seriously affect the economic structure of Bombay city. At a meeting convened by the Indian Merchants' Chamber on 5th February, all the industrial and trade associations affiliated to it unanimously adopted a resolution urging the Government to set up an expert committee of independent members to study the implications and repercussions of the Bill to abolish Inami and certain other special tenures and to stay the consideration of the Bill until such time as the findings of the expert committee are available. The resolution has also protested against the proposed levy of octroi.

While the aim of land tenure reforms can be appreciated, it is difficult to understand how the general policy underlying the land tenure reforms could have any application to lands in the city of Bombay where no agricultural operations are carried on. There is little doubt that the heavy assessments proposed under the Bill would adversely affect small industries, owners of small properties, charitable trusts and co-operative societies. The Bill is, in effect, a financial measure rather than a measure in pursuance of the land reform policy. The Bill, as it stands, will cover about 80 percent of the existing tenures in the city. The other Bill which seeks to authorise the Bombay Municipal Corporation to levy octroi duty on a large number of articles including items of daily consumption, raw materials, components, machinery required for industries as also items essential to building construction, is no less disturbing.

The harmful effects associated with the levy of octroi are bound to manifest themselves in an accentuated form in a city like Bombay, which is a great centre of trade, commerce and industry and is one of the most important distributing centres through which a considerable portion of the country's import and export trade is serviced. In the course of business and industrial activity, there are bound to be frequent movements of goods—both raw materials and finished goods—from and to Bombay and such goods are likely to attract the levy of octroi even more than once in some cases. It is to be hoped that the Government of Maharashtra would give dispassionate consideration to the views and suggestions made by industry and trade before pushing through the proposed Bills.

Consumer Price Index Revised

With the Maharashtra Government's acceptance of the Lakdawala Committee's recommendations for a readjustment of the consumer price index for Bombay, about 400,000 industrial workers in the city whose dearness allowance is linked to the price index will be getting an increase of about 7 percent in their dearness allowance from January 1964. The industry in Bombay will be saddled with an estimated annual expenditure of about Rs. 5 crores, of which the cotton textile industry alone will have to bear well over Rs. 2 crores. While accepting the Committee's recommendation concerning the readjustment of the current consumer price index, the Maharashtra Government has deferred the introduction of the new series linking it with the current series for the time

being, pending further clarification of certain points.

The revised index has touched off serious controversy because of the conflicting interests of workers and employers. Industrial employers and their organisations have strongly protested against the increase in the dearness allowance necessitated by the "readjusted" price index, while labour organisations have declared their determination to fight any move to upset the "corrected" index. Labour organisations, on the other hand, are sore that the enhanced dearness allowance has not been given retrospective effect. The inflated wage bill, contend employers, conflicts fundamentally with the Government's exhortation for holding the price line. The Government, it is said, has acted too hastily in accepting the Lakdawala Committee's recommendations because the Committee has still to report back on the points raised by the employers and the workers' organisations. The employers have also drawn attention to Mr. Gulzarilal Nanda's suggestion at the December meeting of the Standing Labour Committee that the question of dearness allowance should be settled through negotiation between employers and labour and if this could not be done amicably, it would be desirable to settle it by arbitration. The employers had made an offer to the State Minister that the issue of the index number and dearness allowance be referred to the arbitration of a High Court judge, but the State Government took no steps to bring the parties together for negotiation, nor did it accept the employers' suggestion for referring the issue to arbitration. The Millowners Association, Bombay, has announced that textile mills will apply to the Industrial Court for a modification of the award governing payment of dearness allowance.

PROTECTING INDUSTRIES

IN his admirable minute on our fiscal system, Sir Edward Law very truly observes that Russia has collapsed industrially and commercially under a system of protection, and that in his opinion that collapse is due to protection having been given in a most unreasonable manner to encourage the establishment of industries for which local conditions were absolutely unfavourable and to the exaggeration of protection to accelerate the growth of other industries which might in due time have prospered, but have been forced into an unhealthy hot-house growth, leading to premature decay. Now nothing can be more harmful than to encourage the establishment of industries, which are exotic in their nature, and which cannot be acclimatised with advantage. Nearly every manufacturing country has some speciality, which it can manufacture better and cheaper and its neighbours. Great Britain, according to Mr. Chamberlain, would like a monopoly of everything—to do the whole of the world's trade. The aspiration is grand; the realisation is the difficulty. So far as regards India, her manufactures, such as cotton, jute, wool and paper, have succeeded not only without protection, but in the face of competition. They are consequently on a more or less secure basis. The Government of India would be however doing no more than their duty if they admitted all raw material free, and under the head of raw material should be included, all furnishings, stores, spare parts of machinery for use in mills, all chemicals, etc., for the manufacture of paper and the like. This would be not a measure of protection but encouragement.

CORPORATE TAXES HAMPERING FOREIGN INVESTMENT

By K. C. Khanna

The flow of foreign investment to India is being retarded by an irrational structure of corporate taxation. The Congress of the International Fiscal Association held in Paris last September suggested some ways to promote foreign investment through tax adjustments and incentives.

THE International Fiscal Association, which is a non-official organisation, was founded in The Hague in February 1938, with the object of studying international and comparative law in the field of public finance and, more particularly, fiscal law, as well as connected financial and economic questions. Because of the interest raised by such studies, members coming from the most varied lines of activity have joined the Association. They include prominent people occupying high posts in the Ministry of Finance or in the Ministry of Economic Affairs of different countries, as well as other high officials, university professors, counsels, legal and fiscal experts, chartered accountants, and also important persons belonging to industrial and business circles which take a special interest in fiscal problems and in the impact of fiscal policy on the economy. The Association is represented at all meetings of the U.N. Economic and Social Council and regularly receives information concerning the Council. It has national branches in most countries (it is hoped to have a branch in India shortly). Annually, in one of the countries adhering to the Association, the I.F.A. holds a congress during which a number of subjects selected two years in advance are discussed.

Each subject is studied in national reports and in a general report and gives rise to the vote of a resolution. The last congress was held in September 1963 at the impressive U.N.E.S.C.O. buildings in Paris and was addressed by the Minister for Finance and Economic Affairs of the French Republic. The proceedings were conducted in three languages—English, French and German—with facilities for simultaneous translation. One of the subjects discussed at the Congress related to "fiscal measures to be taken by capital-exporting countries for encouraging investment in countries in process of development". (The author was one of the *General Rapporteurs* for the subject.) The discussion inevitably led to a consideration also of the fiscal measures taken by capital-importing countries, including India, to attract foreign investment. It is interesting and instructive to review briefly in this article the relevant Indian tax provisions relating to corporate taxation in the light of the comments made during the discussion which took place at the Congress in Paris.

Important Factors

It must be stated at the outset that although tax measures play an important part in attracting foreign investment, other circumstances like the political and economic stability of a country, facilities for the repatriation of capital, freedom of remittance of profits, guarantees against nationalisation, and payment of adequate compensation in the event of nationalisation also rank high in the list of factors influencing foreign investment. Apart from some irritating procedural delays, India has an excellent record as far as these factors are concerned. But unfortunately grave misapprehensions prevail in certain foreign quarters and it was distressing to hear ignorant foreign

investors equating India's industrial policy with the policies recently followed by countries like Indonesia, Burma and Ceylon leading to the expression of undue fears of confiscation and expropriation of foreign investment. It is imperative that effective steps be taken to remove such ill-formed impressions, and it is regrettable that adequate information is not readily available abroad to counter unwarranted criticism.

One of the much-publicised concessions in the Indian taxation laws is the tax holiday for a period of five years for profits of a company up to 6 percent of the capital employed. The immediate reaction to this tax concession was that it was of no practical value. "Five years is too short a period in the life of an industrial undertaking, and, in any case, who makes adequate profits in this short period to be able to get the full tax exemption?" remarked a foreign investor. The factual record of the concession proves that the benefit is mainly illusory. Few companies have been able to avail of this concession and it is common knowledge that, after deduction of depreciation and initial allowances, there remains hardly any taxable income in the early period of an industry to entitle it to the tax exemption. Since there is no provision for the carry-forward of the unavailed tax benefit, the concession fails to create a favourable impression. If it is really intended to attract foreign investment, the length of the tax holiday needs to be increased to at least a period of ten years without any restriction on quantitative relief. Several other countries have recently encouraged an absolute tax holiday for a specified period for industries in economically backward areas.

Inter-corporate Dividends

Another tax concession which is widely advertised is the exemption from Indian super tax of inter-corporate dividends granted to companies in scheduled industries. This concession too does not carry conviction because the unparalleled system of taxation of inter-corporate dividends prevailing in India appears to most foreign investors as "fantastic and frustrating". To them, the taxation of dividends received by a parent company from its subsidiary seems indefensible, particularly when the subsidiary company itself pays 50-percent tax on its profits. Most foreign investments are now made by companies and while many parent companies abroad do not object strongly to a tax of 50 percent being charged on the Indian subsidiary's profits, they find that the tax imposed on dividends raises the total burden well beyond their domestic rate. "The reduction of the rate of tax on dividends payable to foreign parent companies should have high priority in India's tax reform," observed a tax expert from the United Kingdom. He added that any tax on dividends should be deferred until the parent company passes on the income to its shareholders.

The grant of development rebate is a welcome concession, but the rate of 20 percent is considered wholly inadequate, particularly in view of the inflationary tendencies in a deve-

loping economy and the continuing rise in the costs of replacement of machinery and plant. A representative from Germany commented that even in developed countries, investment allowances were given at possibly a higher rate for encouraging industries in the backward areas of the country. The recent reduction of the development rebate in India from 25 percent to 20 percent was viewed as a most "unrealistic and retrograde" step.

The taxation of royalties at the rate of 50 percent was also considered excessive, and an investor remarked that "the high taxation on royalties in India only results in the royalties charged being increased in order to maintain the net returns!" He argued that the normal practice in double taxation avoidance agreements was to allocate taxation rights on royalties to the country of the recipient and that India would undoubtedly find patent-owners far more ready to license their rights at reasonable royalty rates if this rule were adopted unilaterally.

Avoiding Double Taxation

The necessity of a double taxation avoidance agreement between the capital-exporting country and the capital-importing country was stressed by several speakers. The great advantage of such an agreement lies in the removal of uncertainty as to the exact tax position of particular sources of income. This is most important to potential investors since an incorrect assumption on tax matters can have very serious consequences. While India has recently concluded a large number of double taxation avoidance agreements with different countries, it has not been possible so far to reach such an agreement with the United Kingdom. A suggestion was made that full double taxation avoidance agreement on the lines of the O.E.E.C. Fiscal Committee's model would do a great deal to improve India's chances of securing a reasonable share of the supplies of capital available for export from the U.K.

Linked with the question of double taxation avoidance agreements is the notorious provision, popularly called "the business connection assessment", which still finds place in the Indian tax laws. A representative from Italy expressed grave concern at the likely enforcement of this provision and his fears could not be allayed by reference to numerous executive instructions issued by the Central Board of Revenue in India. He argued that it would be a great improvement if the provision was scrapped altogether and internationally-accepted tests determining the source of income, such as the permanent establishment test, were adopted in its place. While it appears that the provision is administered reasonably, considerable apprehension remains that a particular transaction may be attacked at any time. This apprehension is increased in many cases by the knowledge that after the tax is paid in India on income which is deemed to arise there, no credit for foreign tax paid on the income will be allowed in India, and the other country concerned may not be prepared to grant credit for the Indian tax on the ground

that under its law the income is regarded as arising within its territory.

The provisions of Sections 104 to 109 of the Income Tax Act, 1963 (corresponding to Section 23A of the 1922 Act) still remain an enigma to many foreign investors and fiscal experts. An American representative, who is an authority on taxation in his own country, remarked: "It is incomprehensible that, on the one hand, India complains about the paucity of foreign exchange and, on the other, Indian taxation laws compel a company to distribute dividends which it is entitled to remit to its parent overseas". According to him, the normal trend among American investors was not to expect any distribution of profits during the first five or ten years of an industry's existence. "During this period, we look to growth prospects and would discourage distribution of profits. A dividend would be welcome after an initial period of development of the business during which period an investor would prefer bonus shares to cash dividends".

Taxation of Bonus Issues

The ploughing back of profits, he contended, was very necessary and, in this connection, the taxation of bonus issues in India and the provisions relating to the compulsory distribution of dividends contained in the Indian fiscal statutes seemed most unrealistic. In both the United Kingdom and the United States, capitalisation issues do not give rise to a tax charge. This position, he argued, should be accepted in India also because a mere transfer of reserves into the form of share capital creates nothing in the way of income in a shareholder's hands and does not increase his taxable capacity. The tax on bonus issues should, therefore, be repealed. As for the provisions relating to dividend distribution, it should meet the requirements of the Indian Government if the operation of the relevant provisions were restricted either by limiting their application to cases where the avoidance of tax is a real danger or by adopting the recommendation that the declaration of a dividend or a larger dividend should not be insisted upon if it would be unreasonable considering the current business requirements of the company.

Happily, the recently-imposed super profits tax had not yet been brought to the notice of most foreign investors to initiate a discussion on it but it goes without saying that a tax which is charged by reference to the ratio of profits to capital must cause hardship and inequity, since such ratios vary widely from one trade to another and from one company to another.

The general reaction to the tax concessions offered was candidly summed up in the following words of another representative: "Give me a uniformly reasonable rate of taxation spread over the entire period of the life of my business. A tax holiday for a period of five years or so is of no material consequence if that holiday is to be followed by confiscatory levels of taxation in the remaining years". The conclusion which emerged from a most useful discussion was that just as a customer is drawn more by a standard low price than by a possibly lower price based on a high catalogue price less conditional discounts, so is an investor attracted more by the charge of tax at a reasonable standard rate than by the promise of an uncertain lower rate calculated with reference to a high standard rate subject to reliefs and concessions contingent upon the fulfilment of numerous rules and regulations. In addition, stability and certainty of fiscal legislation and its compatibility with internationally accepted principles of taxation are as vital for a healthy investment climate in a country as a sound political and economic background.

A Ditcher's Diary

THERE HAS BEEN CRITICISM IN WEST BENGAL THAT while in his Address to Parliament the Vice-President spoke strongly against Pakistan, in Calcutta the Governor's Address on the same day was phrased rather tamely. I almost welcome the difference in tone. While restraint is what Calcutta needs, in New Delhi the need is of a greater emotional awareness of the crisis confronting Bengal. If the two Addresses reflected these two moods, there is reason to be happy. At the same time, I do not believe that Mr. Nanda quite realises the size of the problem on his hands. When the captain of a ship sights an iceberg on the surface of the sea, he knows that he is seeing less than what he is not. I present the metaphor to Mr. Nanda, for his task will not be completed with finding room and employment for thirty thousand or even a million refugees. The nine million Hindus still said to be in East Pakistan will periodically be subjected to all sorts of uncertainties (which is a very mild term for all that has happened, with more to follow) as it suits Pakistan's political purposes which, for Pakistan, are inextricably linked with the question of Kashmir which Pakistan will not allow to be closed. That the nine million Hindus are citizens of Pakistan is rarely remembered in Rawalpindi; and the same fact does not make the slightest difference to India's feelings and concern for them. Then there is the matter of India's past promises to these people. It is true that the promises were made on the assumption that, once Pakistan is conceded, the minorities will be secure in both countries, an assumption made utterly hollow by Pakistan in the last sixteen years. I suggest, therefore, that New Delhi re-think the question, for India, at the moment, seems capable only of reacting to happenings in Pakistan instead of acting on her own initiative. I can think of no solution which will be painless. Yet the amount of pain involved in any of the possible answers—if there is one—may be less than the instalments of agony and helplessness this country is presented with every few months or years. Quibbling over phrases like "easing"—not liberalising—migration procedures indicates too petty an approach.

WITH HIS ADMIRABLE DESPATCH FROM SRINAGAR in the *Sunday Statesman* of 9th February, the newspaper's Political Correspondent has done something that needed to be done. Bakshi Ghulam Mohammed has blackmailed New Delhi for ten years too long; and the country should know it. One point struck me as important. The Political Correspondent writes: "But there has been a strange mystique in Delhi that nothing unsavoury

about the internal affairs of Kashmir should be brought to light lest Pakistan should make unscrupulous use of the disclosure". Here is a real dilemma for all journalists working in India and most other countries which allow a more or less free Press. Before the war there was considerable pressure on Fleet Street not to say anything nasty about Adolf Hitler; at least one great newspaper suppressed most despatches from its correspondent in Berlin. I know two other instances which are mildly amusing. A popular crooner who used to sing for the Forces from All India Radio, Calcutta, was later heard from Radio Tokyo which recorded the songs for re-broadcast. How could anybody stop that sort of thing? My other story relates to this journal. The monitors in Delhi were really worried when they heard *Capital* quoted from Radio Moscow and Radio Berlin; this was before Hitler decided to scrap his non-aggression pact with Joe Stalin. How in heaven's name did *Capital* get there? An earlier Ditcher had to deal with anxious enquiries from Delhi—until the discovery was made that the Soviet Embassy in Kabul was buying an unusually large number of copies of *Capital*! We in India are right to remember that we should not write anything which may be used by unfriendly countries, especially in these abnormal times. Yet, where do you draw the line between not helping the enemy and not doing your duty by the Indian public? The question has agonised me for long; and I wish I could say I have found a complete answer. Every item or comment has, I am afraid, to be considered on its merits, the decision eventually depending on the discernment and wisdom of the writer concerned. It must never be forgotten that suppression of the truth, in the name of security or patriotism, can conceal a multitude of official sins, inefficiency and worse—as it did in Kashmir.

IT WAS WISE OF THE TRADES UNION CONGRESS to unload its interest in the *Daily Herald*. After the principle of selling out had been accepted, it was just not worth condemning the paper to eventual extinction for the sake of £25,000. Because that is probably what would have happened if the T.U.C. had stuck to its original demand for £100,000 instead of accepting the International Publishing Corporation's last-ditch offer. At least this way there is a chance of survival under the proposed new name of the *Sun*. But what has fascinated me about all this is that it should now be accepted in Britain that any newspaper known to be connected with the trades union movement is automatically doomed; the image it presents is the disastrous one of cloth caps, old-fashioned ideas

and constipated spending habits. All of which goes to show that the country is now well on the road to being completely "de-proletarianised". It is interesting, for example, that Mr. Harold Wilson is angling his election manifesto not at the so-called working man, but at the educated middle classes. No doubt this is based on the shrewd assumption that he can count on the working-class vote anyway; but it also shows that the "middle sorts" are now in such number in Britain that their political power is something to be reckoned with. If this is in fact so, the pattern of British life as we know it is in for some pretty drastic changes. Already there are signs that the trade unions no longer attract the public sympathy they used to as the self-styled guardians of the workers' legitimate interests. And this could have repercussions abroad because the British concept of the paternalistic union is much commoner in this world than, say, the American one of big-business unionism. Sentimentality has played too great a part in formulating public policy towards organised labour, often with unfortunate consequences, as in this country. It may be some time before the T.U.C. is squeezed out of politics altogether and reconciled to its rightful rôle of a straightforward industrial pressure group. But my guess is that quite a few of Britain's present economic problems will be solved when it is.

SOMETHING MUST REALLY BE DONE ABOUT PERMITTING resumption of free, public and informed discussion on the country's biggest and most dangerous problem of all: the Sino-Indian dispute. Even before the emergency and the Defence of India Rules, legislation went through Parliament making it an offence to discuss, or question, the frontiers of the country as defined by the not exactly infallible Indian bureaucracy. Mr. Rajagopalachari, I am glad, has already protested against the silly ban on George Patterson's *Peking versus Delhi*. This is only one of a bunch of books on the question reviewed at length in the *Times Literary Supplement* of 2nd January which has just reached my desk; another is *The Sino-Indian Dispute* by N. J. Nanporia, Editor of the *Times of India*, who received deserved praise for being "no blind apologist for Indian policy". I commend this issue of the *T.L.S.* to the Historical Division of the Ministry of External Affairs, which may be too busy reading Sanskrit texts of centuries ago to prove that everything India claims is, because of those *slokas*, India's. I am no expert on maps; but the assertion sometimes made that Indian claims in Ladakh are unreservedly accepted everywhere except in wicked Peking is not true. New Delhi should note, and if necessary and possible contradict, some very categorical statements made in the review. It refers to an 1899 Note, and indicates that the British Government was at one period far from definite in opposing China's claim to part of Aksai Chin. The anonymous reviewer

KOTHARI'S ECONOMIC GUIDE & INVESTORS' HAND BOOK OF INDIA

(Incorporating the Investors' Encyclopedia)

25 years of useful service to the investing public, financiers, economists, students and the layman—a Book with an international circulation among the people who count in economics and industry.

Financial and other particulars on more than 3,500 industrial establishments—taxation measures—incentives and relief factors for foreign collaborators—surveys of economic development—special articles by industry's leading men and persons in authority—information on licensing and collaboration, Gold Control, personal savings, etc., etc.

Classification of Sections with thumb index:

Banks	Public Sector
Engineering	Shipping
Insurance	Sugar
Investment Trusts	Taxation
Jute	Cotton Textiles
Mining & Chemical	Vegetable Oil
Miscellaneous Cos.	Govt. Securities
Paper	General Information
Plantings	and a Supplement

Illustrated with charts, maps and graphs covering industrial development.

An authoritative 3,000-page compendium circulated among leaders of industry and public life—fully revised, enlarged and re-edited every year—a publication unique in its kind and therefore a "must" on YOUR table.

Testimonials from all over the world fill a separate booklet which can be had free on request.

PRICE: Rs. 50/- (postage & packing Rs. 10/- exclusive) Overseas: £6 or \$17 (post free by surface-mail)

(Owing to high cost of publication only a few copies are available and it would assist our being of service if you mail your order today.)

may be utterly wrong and the Government of India entirely right; what I want is discussion, for I agree with the reviewer's conclusion which is: "The need for a solution is beyond question. One thing is sure: the Indian people have very little to gain from the present state of tension on their northern border". In *The Flying Troika*, Mr. K. P. S. Menon is in one place almost as outspoken. Shut up are only journalists in India. Or am I only inviting a ban on the T.L.S. and Mr. Menon's book?

LIKE MOST PEOPLE IN INDIA AND BRITAIN, I THINK cricket is a game which should be played for the fun of it, even where international contests such as Test matches are concerned. And, like most people, I am disappointed that after the unexciting performances in the first three of the current Test series between India and England, the fourth one now being played in New Delhi does not look like offering a change from the dreary pattern. Both teams, it appears, are too afraid to lose because they look at cricket in terms of personal or international prestige, regardless of the disservice they may be doing the game. One had hoped for better things after the first Test in Madras got off to a promising start, with Kunderan hitting almost a double century. There have been brilliant individual performances—Titmus's in Bombay, Jaisimha's fiery knock and Colin Cowdrey's confident innings in Calcutta, and now a splendid century by Hanuman Singh in his very first appearance in a Test match at Ferozeshah Kotla—but the overall impression remains that the current Tests have been an outstanding demonstration of how cricket should not be played. The two sides will have to be a little more enterprising if they are to make the series into something of a genuine Test. The M.C.C. may have suffered because of the absence of an outstanding cricketer like Ken Barrington, but Cowdrey has now filled the gap well. India has rightly dropped Manjrekar, who played the rôle of a "passenger" at the Calcutta match, doing practically nothing until the bowler got his wicket. His replacement by Hanuman Singh has indeed been a marked improvement, and I hope his spirit will prove infectious for other members of the two teams. Drawn matches have long been the bane of cricket; while personal and national honour is carefully protected, spectators are entitled to some interest and excitement too.

IT IS STILL A PUZZLE TO ME WHY THE FRENCH medical authorities should be so adamant about M. Naessens not using his anti-leukaemia serum while they are testing it. If the patients are going to die anyway, then surely anything is worth trying, even quackery. Nor do I find the argument that use of the serum only raises false hopes to be at all convincing. A little hope never did anybody any harm; and is not its presence even in apparently hopeless cases one of the medical profession's chief justifications for rejecting the doctrine of euthanasia? No, the whole business smacks of professional jealousy: the French medical authorities are simply unwilling to accept that just possibly a reliable treatment for leukaemia might have been discovered by an outsider. If this is correct, it is a very cruel trick indeed they are playing on M. Naessens' patients. I can understand the wish to test the serum thoroughly; although it only adds to one's suspicions when it is first stated that a verdict on the tests will take years and then a medical spokesman condemns the serum as useless after only a few days. The best way of testing anything is to try it out in practice, and that is precisely what M. Naessens appears to have been doing. His patients are all in a sense volunteers and I gather he is not seeking to make money out of them. So why not permit him to carry on, under appropriate medical supervision, and find out whether the serum really does work by observing its effects in use? That would seem to be the obvious way of handling the affair; or am I being too naive? Whether I am or not, I cannot help but feel the deepest sympathy for the parents of the unfortunate children M. Naessens will now no longer be treating. It is bad enough to know there is no hope. It is infinitely worse to be deprived of what small hope there might be for reasons which no layman can be expected to understand and which are highly suspect anyway.

THE DITCHER

Guide for Investors

KUMARDHUBI TO ISSUE BONUS AND RIGHTS

THE ordinary shares of Kumardhubi Engineering Works Ltd are quoted around Rs. 8.62 due to prospects of bonus and rights share issues. The directors have convened a general meeting of the Company to be held on 10th March, 1964, to consider increasing the authorised share capital and issuing bonus and rights ordinary shares, subject to the consent of the Controller of Capital Issues. It is proposed to issue ordinary bonus shares in the proportion of one bonus share for every five held. After the bonus shares have been issued it is proposed to issue rights ordinary shares in the proportion of two new shares for every three held, including the bonus shares, at a premium of 60p a share. The letter of rights will be issued to existing shareholders on 10th March, 1964. The register of members will be closed for the purpose from 20th February, 1964, until the conclusion of the general meeting on 10th March, 1964.

The existing subscribed and paid-up ordinary share capital of the Company amounts to Rs. 27.65 lakhs, divided into shares of Rs. 3 each. Bonus shares will raise the capital by Rs. 5.52 lakhs and rights shares by Rs. 22.11 lakhs. When the new shares are issued the total ordinary share capital of the Company will increase to Rs. 55.28 lakhs. The ex-bonus and ex-rights price of the shares works out to Rs. 6.05 a share. To judge the prospect it is necessary to return to the balance-sheet of the Company for the year ended November 1962, the latest available. For 1961-62, the taxable ordinary dividend of 15 percent absorbed a sum of Rs. 4.15 lakhs out of a total profit of Rs. 22 lakhs. There is no doubt that the adequate dividend cover is encouraging. But in view of heavier taxation on the corporate sector, the shareholders cannot be certain whether the dividend will be repeated unless the profit meanwhile improves. Since the funds which are to be raised will be largely used to finance modernisation and expansion, it is reasonable to hope that the profit should improve steadily in years ahead. Kumardhubi is engaged in producing engineering goods which have met with rising demand. In view of the provision of a large capital outlay for various industrial projects during the third five-year plan, it is expected that the engineering industry in general will do well in the future.

Voltas Goes Ahead with Expansion Plans

THE preliminary report on the working of Voltas Ltd for the year ended August 1963 showed that the Company had done extremely well with both sales and profit setting new records. Sales and service receipts including business handled on a consignment basis recorded an impressive increase from Rs. 28.66 crores to Rs. 35.98 crores and the gross profit rose from Rs. 146.56 lakhs to Rs. 189.25 lakhs. During 1962-63, the Company attained a growth rate of 25.5 percent, compared with only 7 percent in the preceding year. Unlike in 1961-62, the working in 1962-63 benefited from somewhat shorter delivery periods and, therefore, showed a substantially larger volume of business. The director's

report and the chairman, Mr. J. D. Choksi's statement to the shareholders held out the promise of brighter years ahead. The chairman says that the Company which is a pioneer in the field of air-conditioning proposes to carry forward its manufacturing plans in this field to a further stage of self-sufficiency. (Details are published on a later page in this issue of Capital). Once it is able to manufacture the compressors required by this industry, the Company will have gone a long way towards meeting the backlog of demand created by import restrictions and the additional requirements of the defence forces, of Government and industrial undertakings and offices, to say nothing of the growing requirements for "comfort cooling". After air conditioning, the Company's manufacturing activities will be largely concentrated on materials handling and mining equipment and in other joint venture projects in which the Company is interested and will participate as promoters, shareholders and selling agents.

In the context of growing restrictions on imports, it is encouraging to note from the director's report that the distribution of indigenous manufactured goods has reached Rs. 20.18 crores, which is 56 percent of the Company's total business and compares favourably with Rs. 12.40 crores in 1961-62 and Rs. 9.65 crores in 1960-61. Apart from various chemicals and consumer products, particularly noteworthy additions during 1962-63 were Tata P and H excavators manufactured by T.E.L.C.O. and Ruti automatic 100 m.s. manufactured by National Machinery Manufacturers.

The directors state that the construction of the new factory in Thana has already commenced and the apprentice school, given first priority, is expected to be completed in February. Construction of the main factory buildings has made satisfactory progress and erection of the manufacturing units 1 and 2 is about to begin. While the Thana factory is taking shape, further progress has been made in the manufacturing activities made in the Chinchpokli Works. In all sectors of production, except air conditioners of production units, which suffer from cuts in allocation of foreign exchange for imported components, the output increased steadily throughout the year. In the case of core drills and throw pumps, production was 50 percent more than last year and the indigenous content in both the cases rose to 88 percent. The component requirements for 1963-64 in these two items have been fully covered and the entire output scheduled for this period has already been sold. Production of electric motor starters increased by 60 percent and tooling for the manufacture of another model of motor starter is nearing completion. Satisfactory progress has been made in the manufacture of diamond drill bits and mining accessories.

In October 1962, the Carrier Corporation withdrew as collaborators from the joint air conditioning and refrigeration project. Subsequently, however, the Company was licensed by the Carrier Corporation to manufacture air conditioning equipment on the same conditions as the licence granted to the joint venture. The scheme has been approved by the Government. This will enable the Company to undertake on its own the manufacture of a complete range

of air conditioning equipment. Negotiations for a foreign exchange loan to cover the cost of imported plant and machinery for this project are expected to be concluded shortly and preparatory work for the manufacture of compressors and air conditioning equipment at the Thana Works is well in hand. The Company has made preparations for manufacturing small domestic refrigerators and production is expected to start soon. As for the power factor correction capacitor project, a foreign exchange loan has been obtained from the I.C.I.C.I. and capital equipment has been ordered. Certain other manufacturing schemes at present under negotiation are expected to mature in the near future. Much work is said to have been done during 1962-63 to bring various collaboration projects to fruition. The joint venture with Scottish Machine Tool Corporation has reached a stage where all formalities in connection with the formation and registration of the new Indian company are expected to be completed shortly. A manufacturing collaboration agreement has been arrived at with Merlin and Gerin, internationally known manufacturers of switchgears, whose sale franchise the Company has secured in part replacement of the Brown Boveri representation.

In the last four years, the Company's sales have increased by 100 percent whereas the capital of the Company has remained unchanged at Rs. 2.55 crores since 1956. With the beginning of construction of the Thana factory, the demand for more funds has become inevitable. The total cost of the project in Thana is estimated at Rs. 3.3 crores and the amounts required during 1963-64 and 1964-65 are to be raised by the January debenture issue of Rs. 1 crore, the proposed rights issue for Rs. 1.27 crores and the balance from internal resources and additional cash credit facilities from banks.

Bonus Issue by Century Mills

THE directors of the Century Spinning and Weaving Company have decided to skip the final dividend for 1963; instead, they propose to issue bonus shares in the ratio of one share for every five held. The bonus issue is, of course, subject to the sanction of the Controller of Capital Issues and the shareholders. The bonus issue will mean a capitalisation of Rs. 50.98 lakhs from the reserves,

which stood at Rs. 4.32 crores on 31st December, 1962. The final dividend, if maintained at Rs. 18 a share, would have involved a distribution of Rs. 45.88 lakhs. Apparently, the final dividend is being skipped in order to conserve the Company's resources for financing its various expansion plans. The bonus issue will help to rectify the imbalance between the capital structure and block account. As against its net block of Rs. 10.69 crores (as on 31st December, 1962), the Company's paid-up capital is Rs. 3.80 crores, of which equity capital accounts for Rs. 2.55 crores. The issue of bonus shares will mean a tax liability of Rs. 6.38 lakhs by way of bonus tax. Century Mill shares spurred from Rs. 690 to Rs. 710 on 7th February following the announcement of bonus issue, indicating that the market is pleased with the directors' decision, the skipping of final dividend notwithstanding. Reliable reports indicate that the Company has fared much better in 1963 than in the preceding year.

The Government of India, it is understood, has approved Century Mill's application for increasing the capacity of its tyre cord plant from 10 million lbs to 15 million lbs a year. The Company is already taking effective steps for expanding the capacity from 5 million lbs to 10 million lbs, which had been sanctioned earlier. Its yarn is known to be of very good quality though there have been complaints of high prices. The Company is reported to have indicated to the Government that subsequent to the expansion of capacity from 10 million to 15 million lbs, the cost of production is likely to go down by about 27nP a kilogram. It might be noted here that the licensed capacity of viscose tyre cord at present consists of 15 million lbs for National Rayon, 10 million lbs for Century Rayon and 8 million lbs for Delhi Cloth Mills. Out of this, National Rayon has already installed 4 million lbs capacity and Century Rayon 3 million lbs capacity. The Delhi Cloth Mills' 8 million lbs capacity is under installation. The requirements of viscose tyre cord are estimated to rise to about 43 million lbs by the end of the fourth plan. This is in addition to the capacity of 19 million lbs visualised for nylon tyre cord.

Working of McLeod Group Jute Mills

THE results of the McLeod group of jute mills for the year ended July 1963 have been published. The directors take a cautious view of their working during the current year because of the decline in the demand and price of jute goods. Meantime, the wages of workers have risen considerably. The Empire Jute Co. Ltd has increased the taxable ordinary dividend from 12.5 percent to 15 percent. The yield amounts to 8.5 percent at the present price of

HKE

MOTOR STARTERS & CONTROL PANELS

Armstrong Smith Ltd.

P-17, MISSION ROAD, E.T.N., CALCUTTA-11

Rs. 17.75 a share of Rs. 10 each. The profit has increased from Rs. 7.64 lakhs for 1961-62 to Rs. 15.14 lakhs for 1962-63, after providing Rs. 3.87 lakhs (against Rs. 3.55 lakhs) for depreciation. Taxation absorbs Rs. 9.40 lakhs, of which super profits tax amounts to Rs. 1.06 lakhs. The tax provision amounted to Rs. 4.40 lakhs for 1962-63. Sales rose from Rs. 1.61 crores to Rs. 1.78 crores. Modernisation of the mill machinery continued in full swing and one finisher drawing and five sacking weft sliver spinning frames were installed.

The Nellimarla Jute Mills Co. Ltd has made a profit of Rs. 4.40 lakhs, against Rs. 14.02 lakhs, after transferring Rs. 4.36 lakhs (against Rs. 4.20 lakhs) to depreciation. Taxation is allocated Rs. 2.37 lakhs (against Rs. 7.10 lakhs). Out of the tax provision, Rs. 70,000 has been set apart for arrears of S.P.T. for 1961-62. Sales declined from Rs. 1.96 crores to Rs. 1.53 crores. The taxable ordinary dividend has been reduced from 15 percent to 5 percent to absorb Rs. 1.31 lakhs. The yield works out to 4.3 percent at the present price of Rs. 11.62 a share of Rs. 10 each. Modernisation of the preparing and spinning departments has continued. The directors mention that production was hindered by power cuts and a short strike.

The profit of the Presidency Jute Mills Co. Ltd amounts to Rs. 7.60

lakhs, against Rs. 7.55 lakhs, after providing Rs. 2.73 lakhs (against Rs. 2.77 lakhs) for depreciation. A taxable ordinary dividend of 10 percent has been repeated to absorb Rs. 2.50 lakhs. The yield amounts to 9.4 percent at the present price of Rs. 5.31 a share of Rs. 5 each. Taxation is allocated Rs. 4.30 lakhs (against Rs. 3.55 lakhs). Reserves absorb Rs. 1.17 lakhs (against Rs. 1.37 lakhs). Modernisation of mill machinery has continued. Only one sacking weft sliver spinning machinery was installed in 1962-63. Orders for further three sacking weft drawing frames and five sacking weft spinning frames have been placed.

Alliance Jute Raises Dividend

WHILE commenting on the satisfactory results achieved by Alliance Jute Mills Co. Ltd for the year ended May 1963, the directors point out that there has been a substantial decline in overseas demand for jute goods and their prices have dropped during the current financial year. They, therefore, think that the profit for 1963-64 will not be as satisfactory as that for 1962-63. The implementation of the recommendations of the Wage Board may also hold the profit down. The profit of Alliance Jute has improved

from Rs. 11.44 lakhs for 1961-62 to Rs. 18.39 lakhs for 1962-63, after increasing depreciation from Rs. 4.48 lakhs to Rs. 5.97 lakhs. The taxable ordinary dividend has been raised from 10 percent to 12.5 percent to absorb Rs. 3.75 lakhs. The yield amounts to 9.3 percent at the present price of Rs. 135 a share of Rs. 100 each. Provision for taxation has been estimated at Rs. 9.50 lakhs, including a sum of Rs. 1.12 lakhs for taxation relating to previous years. Development rebate reserve is allocated Rs. 2 lakhs (against Rs. 1.93 lakhs) and contingency reserve Rs. 16 lakhs, leaving a carry-forward of Rs. 1.05 lakhs, against Rs. 58,837 brought in. The proposed dividends will be paid out of the contingency reserve. Gunny sales rose from Rs. 3.09 crores to Rs. 3.34 crores and stocks of jute goods went up from Rs. 15.60 lakhs to Rs. 19.18 lakhs. Further modernisation of the preparing and spinning departments has been carried out.

Reliance Jute Makes Profit

JARDINE Henderson Ltd has submitted its resignation from the office of managing agents of The Reliance Jute Mills Co. Ltd with effect from 31st October, 1963. The

accounts of the Company for the seven months ended October 1963 have just been published. The net profit amounts to Rs. 10.48 lakhs, against a profit of Rs. 17.65 lakhs for the year ended March 1963. Taxation absorbs Rs. 3.67 lakhs, leaving a carry-forward of Rs. 7.28 lakhs. The main sources of income during the period from 1st April to 31st October, 1963, were the sale of loom hours, the leasing of the mill godowns to the Regional Director (Food) and from the production of those looms, which it had been possible to bring into use having regard to the limited electric power supply. An additional 123 looms were put into use during the period covered by the accounts and as on 31st October, 1963, 317 hessian looms and 105 sacking looms were employed in manufacture. Although vigorous steps were taken to obtain additional supplies of electric power there was little success up to the date of the accounts.

South Karannura Resumes Dividend

THE profit of the South Karannura Coal Co. Ltd has improved to Rs. 1.89 lakhs for the year ended August 1963, compared with a profit of Rs. 1.77 lakhs for 1961-62, after providing Rs. 1.80 lakhs (against Rs. 1.87 lakhs) for depreciation and Rs. 1.33 lakhs (against Rs. 89,000) for statutory development rebate reserve. A taxable ordinary dividend of 2.5 percent has been declared, which absorbs Rs. 43,750. The yield amounts to 2.9 percent at the present price of Rs. 8.50 a share of Rs. 10 each. The dividend was passed for 1961-62. Taxation is allocated Rs. 1.05 lakhs (against Rs. 20,323) and general reserve Rs. 40,000. The carry-forward is Rs. 3,001, against Rs. 2,926 brought in. Raisings increased from 208,133 tons to 218,160 tons and despatches from 206,787 tons to 220,693 tons. The directors have stated that due to improvement in the transport situation, pithead stocks considerably declined. About 90 percent of the equipment ordered from foreign countries against the World Bank loan has been received. The remaining machinery is expected to arrive during the next two or three months. Sales improved from Rs. 42.54 lakhs to Rs. 48.27 lakhs.

Electric Construction Diversifies

THE satisfactory results of Electric Construction and Equipment Co. Ltd for the year ended October 1963, have largely been due to its expansion and diversification. During 1962-63 a sum of Rs. 40.33 lakhs was spent on expansion. During the current year more money is likely to be spent for the purpose. The production of transformers at the Cossipore and Vishakhapatnam factories has increased substantially. A programme for increasing the range and variety of electric motors is being vigorously pursued. It is proposed to manufacture a wide range of motors at a site near Calcutta. The unit in Budge Budge, near Calcutta, for producing switchgears and lifts has made considerable progress. The Government has approved the collaboration agreement with a reputable French firm for the manufacture of switchgears. The construction work of the factory in Hyderabad to produce house service meters has been completed and the output of single phase meters has started. It is intended to take up the manufacture of poly phase meters towards the close of 1964. The factory should produce 60,000 single phase meters and 18,000 poly phase meters a year. An industrial licence has been obtained to set up a factory

in Punjab for producing transformers and switchgears. The contract division has secured good orders from the Railway Electrification unit. The Company has been appointed the sole representative of reputed American and East German firms.

The profit has improved from Rs. 19.35 lakhs for 1961-62 to Rs. 29.36 lakhs for 1962-63, after transferring Rs. 8.97 lakhs (against Rs. 5.71 lakhs) to depreciation. The taxable ordinary dividend of 10 percent has been repeated to absorb Rs. 6.09 lakhs. The yield works out to 7.7 percent at the present price of Rs. 13.06 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 2.50 lakhs (against Rs. 2.25 lakhs), taxation Rs. 15.25 lakhs (against Rs. 8.80 lakhs), general reserve Rs. 5.50 lakhs (against Rs. 6.09 lakhs) and dividend reserve Rs. 6.25 lakhs. The proposed dividends will be paid out of the latter reserve. The carry-forward is Rs. 21,399, against Rs. 12,311 brought in. Sales rose from Rs. 2.1 crores to Rs. 2.9 crores. The directors mention that during the current year 15,500 new preference shares and 155,000 ordinary shares have been issued. Before the issue of these shares the subscribed preference capital amounted to Rs. 3 lakhs and the ordinary share capital Rs. 60.93 lakhs.

I.F.C. Loan to Fort Gloster Industries

THE International Finance Corporation, an affiliate of the World Bank, has agreed to provide loan and share capital amounting to approximately \$1.2 million (the equivalent of Rs. 57 lakhs) to Fort Gloster Industries Ltd to help finance a Rs. 4-crore programme for enlarging and diversifying the Company's electric cable manufacturing facilities. The Continental International Finance Corporation, a subsidiary of the Continental Illinois National Bank and Trust Company of Chicago, is participating with I.F.C. in this transaction. The Industrial Credit and Investment Corporation of India is also lending the Company about Rs. 60 lakhs. The Company will offer rights shares worth Rs. 60 lakhs to its existing shareholders.

Fort Gloster Industries was established in 1890, and is a leading jute manufacturer in Calcutta. The Company at present has a share capital of Rs. 84 lakhs. As part of its diversification programme, the Company began the manufacture of electric cables in 1960 under a technical assistance agreement with British Insulated Callender's Cables Ltd. Its cable factory in Calcutta is at present producing various types of high quality, vulcanised rubber-insulated cables. The Company now proposes to enlarge these facilities and extend its production to include the manufacture of paper-insulated, lead-covered power cables, railway signalling cables, mining cables and various types of cables insulated with plastic and vulcanised rubber.

The new manufacturing facilities are expected to be in operation by 1965. Concurrently, the Company is engaged in modernizing its jute manufacturing facilities and installing new equipment for the production of wide hessian to meet the rising demand for carpet-making cloth in the United States.

The I.F.C.'s investment will consist of a loan of \$812,000 repayable in 14 semi-annual instalments, beginning from April 1967, and the purchase of 10,000 equity shares of the Company at the rights offering price of Rs. 190 each, for a total subscription equivalent to approximately \$400,000. The shares subscribed to by I.F.C. will form part of the Company's new stock issue consisting of 41,500 equity

shares, the remainder of which is being offered to the Company's existing shareholders. The I.C.I.C.I.'s contribution to the Company is in the form of two long-term loans amounting to Rs. 59.5 lakhs. Of this total, \$788,000 (the equivalent of Rs. 37 lakhs) will be in foreign exchange from resources that have already been made available by the World Bank to the I.C.I.C.I.

Deoria Sugar Passes Dividend

DEORIA Sugar Mills Ltd has made a profit of Rs. 2.02 lakhs for the year ended August 1963, after providing Rs. 1.25 lakhs (against Rs. 1.34 lakhs) for depreciation. The loss amounted to Rs. 6.52 lakhs for 1961-62. Development rebate reserve is allocated Rs. 11,300 (against Rs. 8,282), and the previous debit balance has been set off against the profit earned. The dividend has again been passed.

The output of sugar declined from 108,922 quintals to 73,729 quintals, but recovery improved from 9.15 percent to 10.55 percent. There was an acute shortage of cane supply. The outlook for 1963-64 is not considered encouraging by the directors. Since the State Government concerned has taken no measure to restrict the production of gur, the diversion of cane from sugar factories has continued. The Company produced only raw sugar during 1962-63 and all of it has been exported. The Company has applied to the Government for expanding its capacity. It has also asked for financial help from the Government for rehabilitation, expansion and modernisation of the factory.

Indian Vegetable Products Sales, Profit Up

INDIAN Vegetable Products Ltd reports satisfactory results for the year ended September 1963 with sales up by about 6 percent from Rs. 3.67 crores to Rs. 3.90 crores and the gross profit recording a rise of about 9 percent from Rs. 14.13 lakhs to Rs. 15.39 lakhs. The dividend has been reduced from 17 percent to 15 percent, but it is payable on the increased capital following the one-for-seven bonus issue; so the total distribution is slightly higher at Rs. 3.63 lakhs, against Rs. 3.60 lakhs in the preceding year. The excise duty on the Company's products amounted to Rs. 40.89 lakhs, compared with Rs. 24.99 lakhs in the previous year. With effect from 1st March, 1963, the excise duty on *vanaspati* was increased from Rs. 200 a ton to Rs. 384 a ton. The excise duty of Rs. 110.25 was levied on refined oil. The Company started production of epoxy plasticisers on a commercial basis during the year and the quality is said to have been well-received by plastic manufacturers.

After providing Rs. 1.68 lakhs (against Rs. 1.44 lakhs) for managing agents' commission, Rs. 79,000 (against Rs. 71,000) for depreciation, Rs. 31,764 (against Rs. 8,204) for development rebate and Rs. 9.46 lakhs (against 6.90 lakhs) for taxation, the net profit amounts to Rs. 3.14 lakhs, against Rs. 5.10 lakhs in 1961-62. With Rs. 3.94 lakhs (being excess provisions and refund of sales tax) written back and Rs. 6,327 brought in, the disposable surplus amounts to Rs. 7.14 lakhs. The directors have set aside Rs. 1.74 lakhs (including Rs. 1.51 lakhs for super profits tax) for taxation for the previous year and a sum of Rs. 1.77 lakhs (against Rs. 1.78 lakhs) for general reserve. No provision has been made for staff gratuity reserve which received Rs. 50,000 in the previous year. A sum of Rs. 3.63 lakhs has been transferred to

the dividend equalisation fund out of which will be paid the proposed dividend. After making various appropriations, there remains a modest sum of Rs. 572 to be carried forward.

Ganesh Flour to Issue Rights Shares

GANESH Flour Mills Ltd may soon issue rights ordinary and preference shares to raise about Rs. 25 lakhs for expansion. In view of these issues, the Company is unlikely to issue the remaining debentures for Rs. 14 lakhs, for which the sanction of the Controller of Capital Issues has already been obtained.

Paper Products Earns Less

DESPITE a slight improvement in the sales from Rs. 1.56 crores to Rs. 1.58 crores, the gross profit of the Paper Products Ltd for the year ended July 1963 is substantially lower at Rs. 18.01 lakhs, against Rs. 21.84 lakhs in the preceding year. The profit margin is reported to have been squeezed by the increase in the cost of raw materials, delay in procuring imported as well as indigenous raw materials and the enhanced wage bill. After providing Rs. 4.32 (against Rs. 3.91 lakhs) for depreciation, Rs. 65,141 (against Rs. 89,713) for development rebate reserve and Rs. 8.17 lakhs (against Rs. 9 lakhs), including Rs. 1.27 lakhs for super profits tax for 1961-62, for taxation, the net profit amounts to Rs. 4.87 lakhs, against Rs. 8.03 lakhs in 1961-62. The heavy fall in the net profit has obliged the directors to reduce the dividend from 18 percent to 10 percent, which, however, is payable on the increased capital following the public issue of Rs. 16 lakhs in May 1962.

The new equity shares are entitled to a proportionate dividend (Rs. 9.38 a share) for 11 months. The Company issued 10,000 equity shares in August 1963 by way of rights, but these shares are not entitled to the dividend for 1962-63. No provision has been made for the reserve fund which had received Rs. 2.80 lakhs in the preceding year. A sum of Rs. 4.90 lakhs (against Rs. 5.21 lakhs) has been transferred to the dividend reserve. The proposed dividend which is to be paid out of the dividend reserve, will absorb Rs. 4.90 lakhs (against Rs. 5.21 lakhs), leaving Rs. 96 to be carried forward, against Rs. 2,951 brought in.

The Company's paper mill in Roha has gone into regular production and quality paper both from imported and indigenous pulp is being produced. Production has already reached a satisfactory level and the full rated capacity is likely to be reached shortly. The Company has received permission, in principle, for effecting a substantial expansion of the paper mill in Roha by including the manufacture of grease-proof and glassine papers. It has also received a licence for printing and conversion of cellulose and plastic films, waxed papers and laminates. Capital expenditure incurred during 1962-63 for the Thana plant amounted to Rs. 5.34 lakhs. The Company is trying to establish an export market for its products. The Rs. 100-paid share of Paper Products is currently quoted around Rs. 120, offering a gross return of about 8.9 percent.

Coromandel Fertilisers to Enter Market

COROMANDEL Fertilisers Ltd, which has been jointly promoted by E.I.D.-Parry Ltd, Madras, Inter-

national Mineral and Chemical Corporation, U.S.A., and California Chemicals Corporation, San Francisco, is likely to enter the market some time in March or April to raise Rs. 4.01 crores through public subscription. The American holding in the Company will be 47 percent. The Company has been licensed to manufacture annually 365,000 tonnes of ammonium sulphate and 16,500 tonnes of urea prills fertiliser materials. The factory is proposed to be located in Vishakhapatnam. Of the three main raw materials, phosphate rock and sulphur will be imported, while naphtha will be available indigenously from the Caltex Refinery in Vishakhapatnam.

The project is estimated to cost Rs. 33 crores and the foreign exchange component is estimated around Rs. 15.75 crores. This is proposed to be met by the share capital of the American firms which are collaborating in the venture and by a loan of \$27.5 million from the Export-Import Bank. The Agency for International Development will lend Rs. 7.5 crores. The balance of the cost will be met from contributions of the three promoters to the share capital, the public issue and bank borrowings. The Company has received Government sanction for the equity capital issue of Rs. 8.49 crores.

The vice-president of International Mineral Corporation, Mr. Charles S. Denison, told the Press in Bombay on 7th February that the construction work on the project would begin immediately after the financing arrangements were finalised and the public issue made and that the plant would go into production about 30 months later. When in full production, the Company will have an annual turnover of Rs. 15 crores to Rs. 20 crores. It will help save annually about Rs. 10 crores by way of foreign exchange by minimising the need for imports of fertilisers. The association of the two American firms with the project will make available to the country modern technology and most economic methods in the manufacture of chemical fertilisers. With a view to familiarising Indian cultivators with the type of fertilisers that the Company will manufacture, already 47,000 tons of similar fertilisers have been imported under an A.I.D. non-project loan and are being sold in Andhra Pradesh by Parry. These imports are likely to increase to 100,000 tons in the course of another year.

Bhaskar Textile to Raise Capital

BHASKAR Textile Mills Ltd has begun to construct a cotton spinning mill with 15,000 spindles in Jharsuguda, Orissa State. The necessary import licences have been obtained and orders for foreign and domestic equipment have been placed. The total cost of the project may amount to Rs. 1.09 crores. Production is expected to begin before the end of 1964.

The Company will soon issue ordinary shares for Rs. 14 lakhs and preference shares for Rs. 7 lakhs for public subscription at par. The preference shares will carry a fixed dividend of 9.5 percent and will be redeemed after 12 years. The entire issue has been underwritten. The directors and their friends have already subscribed for Rs. 10 lakhs out of the issue.

English Electric Company of India

IT is regretted that the value of the ordinary share of the English Electric Company of India Ltd was

IN STEP WITH TOMORROW

New processed foods, new pharmaceuticals, and many more new products are coming on the Indian market every day. They create new packaging problems. At Poysha, one of the leading tin container makers in the country, they are always geared to meet the requirements of their customers. In 1963 they pioneered the manufacture of 5½ oz. juice cans. Soon these will be lithographed too. Next on the agenda is a much wider expansion of the range of packaging material. What is more, plans are ready for the setting up of subsidiary factories in the heart of the fruit and vegetable growing areas to help the canners with quick and economical canning facilities. Poysha are indeed always in step with tomorrow.

given as Rs. 70 in our issue of 6th February, 1963, due to oversight. The value of each share is actually Rs. 10.

New Capital Issues

SEVEN companies have been authorised to raise capital totalling Rs. 3.17 crores. One of them, which is a new company, is offering part of its capital to its foreign collaborator. Two are State Government undertakings. One is offering bonus shares, three preference shares and the rest equities. The consent of the Controller of Capital Issues is valid for 12 months. The following are the details:

Kumardhubi Engineering Works Ltd., Calcutta, is to issue (1) 737,280 equity shares of Rs. 3 each to be

issued at a premium of 20 percent to the existing shareholders, (2) 184,320 bonus shares of Rs. 3 each on capitalisation of share premium and (3) Rs. 40 lakhs in 7 percent debentures. The capital is required for the modernisation and expansion of the Company's works in Kumardhubi which is estimated to cost Rs. 1.5 crores.

Special Steel Ltd., Bombay, is to issue capital of Rs. 46 lakhs. Of this, Rs. 26 lakhs will be in equity shares of Rs. 100 each and Rs. 20 lakhs in 20,000 9.30 percent cumulative redeemable preference shares of Rs. 100 each for cash at par. The money will be used for the manufacture of prestressed concrete wire, card clothing wires, ball bearing wire and other spring steel wire.

Universal Road Service (Private) Ltd., incorporated in Maharashtra State, is issuing further capital of Rs. 40,34,500 divided into 40,345 equity

shares of Rs. 100 each for cash at par. The money is required for acquiring trucks and buses for the business of goods transport and for functioning as clearing and forwarding agents in respect of goods and luggage freight parcels.

Southern Switchgear Ltd., a new company incorporated in Madras State, has been given consent to issue capital of Rs. 30 lakhs. The total is divided into 300,000 equity shares of Rs. 10 each privately, for cash at par. Of the issue, shares of the value of Rs. 10 lakhs will be offered, at par, to the Company's U.K. collaborators, Brush Electrical Engineering Company Ltd. The new industrial undertaking will manufacture low voltage switchgear.

Assam Cement Ltd., Shillong, a State Government undertaking, will issue capital of Rs. 65,74,900 divided

into 157,490 equity shares of Rs. 10 each and 50,000 6 percent cumulative redeemable preference shares of Rs. 100 each to be issued for cash at par. The money will be used for meeting a part of the capital cost of a cement factory to be set up in Cherrapunji.

Assam Gas Company Ltd., Shillong, a State Government undertaking, will issue further capital of Rs. 27 lakhs divided into 27,000 equity shares of Rs. 100 each to be issued privately for cash at par. The proceeds will be used in financing the Nahorkatiya-Kamrup gas pipeline and for meeting other expenditure.

Nestler Boilers Private Ltd., Bombay, is raising fresh capital of Rs. 40 lakhs divided into equity shares of the value of Rs. 30 lakhs and preference shares of the value of Rs. 10 lakhs. The capital is required for the manufacture of industrial boilers.

CAPITAL, 13th February, 1964.

The Stock Markets

BUDGET DOUBTS RESTRAIN TRADING

Wednesday Evening.

THE Calcutta stock market is slightly steadier towards the close of the week. The improvement in the technical position has largely contributed to the steadiness. Weak holders have sold their shares during the past fortnight or so, but all offerings have been absorbed without much difficulty. Business has centred on clearing shares, which have improved due to replacement buying, combined with short-covering. The clearing on Wednesday passed off smoothly and the carry-forward charges were slightly higher than the previous settlement.

Turnover has declined appreciably, since operators are reluctant to extend their commitments either way due to the uncertainties of the Budget, which will be presented on the last day of this month. Although the Central Finance Minister is keen to stimulate economic activity, it is doubtful whether he will give any substantial relief in taxation. The best that can be expected under the circumstances is that he will modify the fiscal system in such a way that the tax burden on the corporate sector is made lighter. There is no doubt that expansion and modernisation have been hindered by the growing shortage of funds. Unless companies are permitted to plough back adequate funds out of profits, they are not likely to go in for expansion plans vigorously.

Interest in cash shares has been negligible, although selling pressure has been conspicuous by its absence. Investors have for the time being concentrated their attention on new issues, which have mopped up considerable funds during recent weeks. This apart, investors have been discouraged by the present pricing policy of the Government. Prices of commodities like steel, cement, paper and coal have been fixed at unrealistic levels. Companies engaged in manufacturing these commodities have found it difficult to pay good dividends and conserve enough funds for expansion and modernisation.

Indian Iron have improved slightly towards the close due to replacement buying. Among engineering shares, attention has centred on Guest, Keen, Williams, Texmaco, Burn and Indian Standard Wagon. The prospect of getting bonus and rights ordinary shares has caused a mild flutter in Kumardhubi Engineering. Dalmia Iron and J. K. Steel have improved on good working reports. Jay Engineering have recovered on the prospect that the strike may end soon.

In the miscellaneous section, attention has been concentrated on clearing scrip. Hindustan Motors, Dunlop Rubber, Indian Cable, Rohtas, Kesoram Industries and Indian Copper have been active. Alkali and Chemical have been steady at a lower level. Union Carbide, Good-year India and Associated Battery have reacted on profit-taking. National Insulated Cable, National Pipes and Tubes, Hindustan Aluminium, India Carbon and Angelo Brothers have gained.

Electric company shares have been sluggish and small business in Calcutta Electric has passed. Managing agency shares like Martin Burn and Jardine Henderson have been neglected. In banks, United Bank have been steady. Prospects of a bonus issue have evoked interest in United

Commercial. Paper shares have been sluggish. Stray business has been done in Orient, Titaghar, Sirpur, Bengal, and Seshasayee. S.K.G. have improved among sugar shares, which have been freely offered without attracting support.

Turnover in jute shares has dropped due to uncertainties caused by the abolition of the working time agreement. Birla, Anglo-India, Champdany, Union, Ganges and Megna have been about steady. Coal shares are dull. Small business has passed in Burrakur, Bengal and Equitable. Cotton mill shares have generally been easier, although scattered support has been extended to Bharat Commerce, Jay Shree Textiles, Elgin and J. K. Cotton. Stray business has been done in tea shares. Only selected Assam and Dooars gardens have been dealt in.

Government securities have been dull and quiet. The 3 percent Conversion loan 1986 has dropped to Rs. 63.30. Prices of short- and medium-dated stocks have nevertheless been maintained, although sellers have been fewer. Selected State Government loans have met with scattered support.

Tata Steel Output

Messrs Tata Industries Private Limited, managing agents for the Tata Iron and Steel Company Limited, report that the approximate production of iron and steel at the

steel works in Jamshedpur during January 1964 was: Iron 164,400 metric tons; steel ingots 171,300 metric tons and salable steel 133,100 metric tons.

Bombay

MARKET REMAINS DULL BUT STEADY

SELECTED CLEARING SHARES HARDEN

Wednesday Evening.

THE Bombay stock market has been dull but steady during the past week. Share prices have been maintained around previous week's levels in limited turnover, since bulls and bears have been inclined to keep their commitments light until the Budget is presented. Selected clearing shares have hardened towards the close due to replacement purchases following good corporate news. Turnover in cash shares has declined considerably, although selected scrip like Colour-Chem and S.L.M.-Maneklal have met with scattered support. Except for Century which have improved on prospects of an issue of bonus shares in the proportion of one for every five shares held, cotton mill shares have been dealt in cautiously due to the uncertain outlook for cloth prices.

Tata Steel ordinary have closed at Rs. 146.50 since the production figures

FINANCE FOR SMALL SCALE INDUSTRY? NOT A DIFFICULT PROBLEM

Are you having financial difficulties in running your plant? Or is it that you want additional raw materials to manufacture more—or some money to keep your plant running till you get enough from your sales? Or it might be that you want a machine or two, to increase your production or to raise your status as a small scale industrialist. Why not take your problem to the State Bank Agent who will be glad to assist you in all matters connected with your industry? Your security for finance is not the main consideration—what the State Bank seeks is your sincerity and capacity to produce more. With over 1500 offices throughout the country THE STATE BANK OF INDIA AND ITS SUBSIDIARIES are at the nation's service.

of the Company for January have not been particularly impressive. Among engineering shares, Tata Locomotive have been steady on hopes of expansion. Mukand Iron and Premier Construction have met with influential support. Motor-vehicle shares have been sluggish. Premier Automobiles have not responded to the prospect of an increase in production. Hindustan Motors have been maintained.

Among cotton mills, Century have been a bright feature, although they have reacted towards the close on profit-taking. Scattered interest has been shown in Bombay Dyeing, Kohinoor, Morarjee, Gokak, Svadeshi and India United ordinary. Standard have dropped on profit-taking. Simplex have been offered freely.

Business in miscellaneous shares has declined considerably. Cement shares have shown little variation, and business has largely been confined to Associated Cement. Scindia Steam have been a smart feature among steamship company shares due to reports of improved working. Mining shares have been subdued, and Shivrajpur Syndicate have been sold freely. Sugar shares have been quietly steady, and interest has largely been confined to Belapur, Phalton and Walchandnagar Industries. Among rayon shares, National Rayon have been active due to hopes of expansion and diversification. Chemical shares have been quiet. Tata Chemical and Indian Dyestuff have been sold at lower prices. Voltas

have been a steady feature due to prospects of expansion and diversification of activities.

Bank shares have been sluggish, and stray business has been transacted in Central Bank and Bank of India. In electric company shares, Ahmedabad and Tata Hydro have changed hands.

Madras

BOMBAY ADVICES HELP SENTIMENT

SMALL TURNOVER IN CASH SHARES

Tuesday Evening.

THE undertone of the Madras stock market has improved during the past week due mainly to firmer advices from Dalal Street. Selected clearing shares have hardened slightly on scattered support from outside sources. Turnover in cash shares has been small and investors have been unwilling to extend commitments until the Budget is presented. Government securities have been quietly steady, and small business has been transacted in selected State Government loans.

Bank shares have lacked interest. Andhra have been transacted at

Rs. 94.40 since the scheme for amalgamation of Bharata Lakshmi Bank Ltd with Andhra Bank will be considered at an extraordinary general meeting of the latter due to be held on 9th March, 1964. Among electric companies, Negapatnam and Ellore have met with support around previous rates. Sugar shares have been weaker. E.I.D. have been sold at Rs. 37.60 and Deccan at Rs. 11.90. Mysore have been available at Rs. 44.65 and India at Rs. 10.00. K.C.P. have reacted to Rs. 22.35 and Cauvery to Rs. 105.

Interest in planting shares has declined considerably, and only scattered support has been extended to selected tea and coffee shares following good corporate reports. Blue Mountain have been available at Rs. 2.35 and Cochin Malabar at Rs. 6.37. Consolidated Coffee have changed hands at Rs. 19.45 and Ouchterlony at Rs. 4.20. Business has passed in Periakaramalai at Rs. 3.43 and in Thamarapally at Rs. 16.40. Peermade have been steady at Rs. 20.50 and United Nilgiri at Rs. 23.75. Amalgamated have been taken at Rs. 10.01 and Mysore Coffee at Rs. 5.20.

In textile shares, South India Viscose have recovered to Rs. 141.50 and Travancore Rayon to Rs. 24.50. Madura have been a smart feature and have risen to Rs. 35.50 on paying a higher dividend. Lakshmi have been steady at Rs. 132. Interest has been taken in Bangalore Woollen at Rs. 236 and in Buckingham at Rs. 292. Anglo-French have been active up to Rs. 150 and Cambodia have changed hands at Rs. 9.85. Mettur have been bought up to Rs. 286 and Ramakrishna have been dealt in at Rs. 217.80. Premier have been sold at Rs. 280 and Ramnarayan at Rs. 93.

Among miscellaneous shares, Aluminium Industries have been steady at Rs. 18.87 and Ashok Leyland at Rs. 7.15. In cement shares, Dalmia have been taken at Rs. 12.62 and India Cement at Rs. 5.53. Mettur Chemical have been maintained at Rs. 12.80 on declaring a taxable interim ordinary dividend of 6.25 percent on old shares. South India Steel have been sold down to Rs. 8.85, but Seshasayee Paper have been taken at Rs. 7.70. Standard Motors have been steady at Rs. 10.33 and Tube Investment at Rs. 215. Business in Andhra Scientific has passed at Rs. 14.20, while Madras Rubber have been offered freely at Rs. 13.90. Parry's Confectionery have come to hand at Rs. 3.03 and Spencer have been bought up to Rs. 21.50. Textool have quoted Rs. 144 and Mysore Lamp Rs. 30.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

New DeLuxe Champion Tyre

London
SELECTIVE RISE IN
INDUSTRIALS
POLITICAL PROSPECTS
RESTRICT BUSINESS

London, 12th February.

SOMEWHAT steadier conditions developed in the stock market during the past week, and for the first time since the early days of the year, industrialists managed to show gains on balance. The improvement reflected a fall in selling orders and a certain amount of selective buying. The overall volume of business contracted, however, and the market as a whole was very much quieter than it had been since the turn of the year. Politics and early general election fears, coupled with Mr. Wilson's views on taxation, continued as the dominant factor.

SILVER WAS QUIET IN CALCUTTA DUE to the drop in seasonal demand. The price fell from the previous week's level of Rs. 264.50 to Rs. 264.25 a kilogram. The London and New York prices amounted to 111½d and 129.3 cents.

Gold was also quiet in sympathy with the white metal. The price of 14-carat gold dropped from Rs. 70 to Rs. 69.25.

DURING THE WEEK ENDED 7TH FEBRU-
ary, Government of India Treasury
bills for Rs. 37,73,75,000 were sold in
favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY
Government of India Treasury bills
were opened on 11th February. The
total amount offered was Rs. 2 crores.
Tenders at Rs. 99.415 percent were
accepted in full. The total amount
accepted was Rs. 2 crores, the average
rate of acceptance being Rs. 2,340 per
cent a year. Tenders for Rs. 2 crores
of 91-day Government of India Treas-
ury bills will be received at all cen-
tres up to the close of business on
17th February.

It is stated that 91-day intermediate Treasury bills will be sold from 12th February to 14th February at Rs. 99.431 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 5th February to 8th February amounted to Rs. 71 lakhs.

Rises of Rs. 50.19 crores to Rs. 2,441.90 crores in active notes and of Rs. 40.76 crores to Rs. 2,455.00 crores in the total note issue, were notable features of the return of the Reserve Bank of India for the week ended 7th February, 1964. The currency expansion was covered by raising rupee securities by Rs. 44.9 crores to Rs. 2,124.69 crores in the paper currency reserve. This was done by transferring securities from the Banking Department in which investments dropped by Rs. 45.1 crores to Rs. 199.20 crores. Deposits of the Government of India fell by Rs. 5.68 crores to Rs. 54.52 crores and those of State Governments by Rs. 6.02 crores to Rs. 9.81 crores. Balances of commercial banks at Rs. 83.5 crores showed a rise of Rs. 3.65 crores and balances held abroad gained by Rs.

VOLTAS LIMITED

CHAIRMAN'S STATEMENT

The following is the Statement by Mr. J. D. Choksi, Chairman, Voltas Limited, circulated to the Members of the Company, with the Annual Report for the year 1962-63.

"It gives me great pleasure to report excellent results for this ninth year of our operations. We have now reached, I think, a stage from which there is no going back. Our problems have increased, but so have our achievements. The shareholders can claim a fair share of our success for they have given us,

through the years, much encouragement and support. We shall need both these at the present moment.

As you know a proposal for a rights issue will be placed before the annual general meeting for approval. The capital structure has remained unchanged since 1956 when it was increased to Rs. 255 lacs. This latter sum, along with profits retained in the business have supplemented our cash credit facilities from banks and have sufficed so far to provide the company with the funds needed for its expanding volume of trade. Our sales have increased by 100% in the last four years, and as the expansion in our manufacturing activities has taken concrete shape with the start of construction of our new factory at Thana, the demand for fresh funds has become inevitable. Pioneers, as we are, in the field of air conditioning, we propose to carry forward our manufacturing plans in this field to a further stage of self-sufficiency. Once we are able to manufacture the compressors required by this industry, the company will have gone a long way towards meeting the backlog of demand created by import restrictions and the additional requirements of the defence forces, of Government and industrial undertakings and offices, to say nothing of growing requirements for 'comfort cooling'. After air conditioning, our manufacturing activities will be largely concentrated on materials handling and mining equipment and in other joint venture projects in which your company is interested and will participate as promoters, shareholders and selling agents.

Rights Issue

Finance has, accordingly, to be provided for the manufacturing unit, and for shares in the joint ventures and finally for working funds. The Directors' Report indicates steps taken for procurement of the additional funds which include a rights issue to shareholders. I think shareholders will agree with me that the terms of issue (which require the approval of the Controller of Capital Issues) are reasonably attractive.

The tax demand on last year's profits, in spite of the additional reserves provided to meet it in the company's accounts, proved to be substantially higher than anticipated. On the same scales this year's taxes work out to approximately 65% of the profits. A tax system, so devised as to leave to the shareholders of a company, rich and poor alike, 35% of the profits for dividends (on which again taxes will be payable at rates applicable to individuals rising to 87%), rehabilitation and expansion plus contingencies can only lead ultimately to a negation of democracy in which private enterprise can play a worthwhile role. The only justification for such measures would be when the nation is in a state of dire peril. We can only hope, that notwithstanding the heavy burdens on the national exchequer, the impact of these self-defeating tax measures will be substantially curtailed in the Finance Bill of 1964, bringing some relief to trade and industry and placing them in a better position to develop and ex-

pand and so meet the challenge of the Plans.

After-sales Service

Let me now carry a stage further the main theme of my statement last year. In any marketing activity, the customer is king, and customer satisfaction is the axis on which the sphere of marketing revolves. Voltas, in conforming to the criteria of dynamic marketing has, therefore, assigned as important a role to its service, as it has to its sales.

Essentially, Voltas' trading operations are in themselves an economic service to the community, since they ensure the equitable distribution of goods at fair prices on a nationwide basis. Yet over and above Voltas' actual selling activities are the services it renders before and after sales. It is this complementary aspect of our marketing functions that I would like to describe.

While it is our practice to offer such pre-sales information and advice of a technical nature as enables a customer to choose equipment or materials that are profitable to his venture, the greater part of the company's services comes after sales; Voltas' after-sales service is now a by-word in the country. This reputation has been achieved over years of careful planning and execution. It is our strong conviction that after-sales service is an important phase of the whole plan of marketing. After-sales services, if adequate, create continuous customer goodwill and confidence and stimulate repeat orders and establish brand loyalties.

After-sales service, in the widest sense, is any service rendered to a customer after the transaction of sale is made. It is any service performed after an order is booked or after a formal agreement to sell and buy has been reached. Basic after-sales services include good packing, quick deliveries at the customer's convenience, timely presentation of invoices that are easy to read and understand, courteous methods of collecting outstandings and a helpful attitude in settling claims which may arise.

The company's technical after-sales services mainly cover quality guarantees to keep machinery or equipment sold in workable condition for a pre-determined time at the total or partial cost of the supplier, manufacturer or distributor. The cost of these obligations is substantial. But the Company tries to render that type of service as is close to the requirements of the customer.

Many of you are familiar with the Voltas Crystal room air conditioners and, as you know, air conditioning for comfort-cooling enters into the personal life of people. To ensure that our clients enjoy the comforts of air conditioning without interruption, our services are so organised as to enable a telephone call requesting service to be attended to without appreciable delay in most centres of the country. You will realise what this means in a city like Bombay, where there are 15,000 air conditioners that require service by the company and in which Voltas' air conditioning and refrigeration division receives about 200 calls a day. As much thought and planning must go into the devising of an after-sales service system as is accorded to a production plan. Consequently, the company has to provide for an adequate number of trained servicemen, for suitable equipment and facilities and sufficient working capital as would be provided in any large scale activity in an industrial or business organisation.

To provide for this and, at the same time, to maintain a high standard of

CAPITAL, 13th February, 1964.

service, the company has its own training schemes to feed its service force. Every six months, about 40 trainees receive basic training at our Chinchpokli Works and are then absorbed by the various divisions for more specialised and on-the-job training.

Supplies for Projects

On a wider scale, where the company's clients are project authorities, Voltas' after-sales service assumes even greater significance. As many of you are aware, your company supplies giant machines like bulldozers, excavators and cranes that are used for the larger projects of the nation. The standing charges and operating cost of any one of these machines vary from Rs. 50 to Rs. 250 per hour. One can fairly visualise the extent of the loss to the nation in the event of a breakdown of such machinery. In most cases, the company's service staff not only erect these machines at project sites, but also train the customer's own works forces to take over their maintenance and working with a minimum loss of time and efficiency.

Another aspect of after-sales service is the assistance a customer receives in obtaining spare parts. Severe import licence restrictions make it impossible for us to maintain our own stocks of spare parts at levels which we consider fully adequate for customer requirements. However, in many ways, we assist customers, including Government projects, in obtaining import licences for essential parts and in storing and distributing them. The company's own inventory of spare parts contains 80,000 items, representing an investment of over Rs. 2 crores with an organisation of close on 175 persons. The company goes a step further in ensuring customer satisfaction by assisting its dealers in establishing their own service schemes and service stations and by training their personnel.

The costs of after-sales have to be controlled if these are not to run away with profits. But judicious expenditure in after-sales service is in the best interests of good business. After-sales service acts as a market builder. When the services prove satisfactory, the company's reputation and that of its products are enhanced and a wider market created through customer satisfaction and goodwill. Moreover, after-sales service helps the company to watch continuously the performance of a product and to gauge market reactions. It provides a feedback service on which to base the development of better products.

23 percent of the company's staff are directly or indirectly assigned to various forms of service. This alone will give a measure of the importance we attach to this aspect of marketing. In the present phase of national development, in which most items of equipment are in short supply, the importance of keeping installed equipment in working order can easily be assessed. We hear much these days about the necessity of nationalising the import and distribution trades of this country. Few of the radical 'nationalisers' may be aware of the obligations and services that are involved in importing and distributing technical equipment and machinery such as I have tried to outline in this statement. The oft-maligned 'middleman' may appear in a different light if the service aspects of distribution and marketing are properly understood.

I should like to close this statement by expressing the appreciation of the Board and all of you for the excellent services performed by the organisation as a whole during the year."

Note: "The above statement is not a report of the proceedings of the Annual General Meeting which will be held on the 27th February, 1964."

CAPITAL, 13th February, 1964.

New Delhi

BONUS COMMISSION REPORT MAY UPSET BUDGET CALCULATIONS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Bonus Commission's recommendations may have serious repercussions on India's economy in general, and the taxation structure in particular. The Commission has laid down a formula under which gross profits would be determined after providing for depreciation, income tax, super tax, a 7-percent return on capital and 4 percent for reserves. Some 60 percent of the available surplus (after meeting these prior charges) would be earmarked for bonus and the rest would be used for gratuity, for other necessary reserves, including rehabilitation, and for payment of super profits tax, etcetera. The maximum limit for the payment of bonus has been fixed at 20 percent of the earnings comprising the basic wage and dearness allowance, and the minimum at 4 percent.

Under the "set off" and "set on" formula, where the allocable amount for bonus exceeds 20 percent of the earnings, an excess up to a limit of a further 20 percent has to be "set on" in the succeeding years up to a maximum period of four years. Where there is no available surplus or the amount of available surplus allocable as bonus is less than 4 percent of annual earnings, then the whole amount of 4 percent or the amount necessary to make up 4 percent, as the case may be, should be carried forward and "set off" in succeeding years up to a maximum period of four years. The bonus scheme applies to industries in the private sector, and to those industries in the public sector whose products compete with the private sector to extent of at least 20 percent of the aggregate sales turnover. The Commission has recommended that its formula should take effect from the accounting year "ending on any day in the calendar year 1962" except in those cases in which settlements have been reached or decisions have been given.

The scheme, it is seen, would apply to the jute, coal and other mining industries, banks (including the State Bank of India), sugar and electricity undertakings. The formula would not apply to general insurance nor to new undertakings up to a period of six years. One considered view here is that the scheme would accentuate inflation. The Finance Minister has been evolving measures to secure a respite for the Indian economy. Defence expenditure, largely unproductive, is likely to remain undiminished during 1964-65, while the Government's pay bill will go up due to annual increments, enhanced dearness allowance and the limited social security scheme. The plan expenditure has been rising from 14.8 percent in 1961-62 to 19.7 percent in 1962-63 and 22 percent in 1963-64; it might go up to at least 25 percent in 1964-65. Account has to be taken of the amine in Rajasthan and the rehabilitation of East Pakistan refugees following the recent disturbances.

Given these increases in total outlays, the problem of resource mobilisation has become extremely difficult. It may be explained that the yield from each year's measures of additional taxation, including that from enhanced railway fares and freights and postal rates, amounted to Rs. 85 crores in 1961-62, Rs. 100 crores in 1962-63 and Rs. 280 crores in 1963-64. Over the entire plan period, the total yield from additional taxation under-

taken by the Centre during first three years would amount to Rs. 1,900 crores. It is hoped that such items of fresh taxation which impinge on production will be modified in the coming Budget. This would be in conformity with the other measures which the Finance Minister has taken to revive the investment market and end the economic stagnation.

Deficit financing could be one alternative to the limited scope for fresh taxation. Money supply with the public, however, increased by 18 percent in 1963-64, as against 10.3 percent during 1962-63 and 7.6 percent in 1961-62. Due to a large amount of "unaccounted money", the velocity of circulation of money is much higher than it normally should be, leading to a sharp rise in prices. Pumping in more money for consumption on the excuse of sharing prosperity, as it is called by the

Bonus Commission, would make inflation uncontrollable, it is feared here. With the pressure from left-wing politicians attempting to capture power, it would be difficult to ignore the Bonus Commission's report. The alternative to financial chaos might be to step up the rates of direct taxation. In short, the report has created fresh problems for the Finance Minister which he will have to solve by 29th February when he presents the Central Budget in Parliament.

STEEL

Target for Fourth Plan

Some important decisions were reached by the Steering Group on the Iron and Steel Industry, which held a meeting here last week. First, the Group accepted and recommended to

the Government a production target of 17.5 million tons of ingots (or 13 million tons of finished steel) for the fourth plan. Secondly, it asked the Government to accord top priority to the Bokaro project so that it might reach a production level of 2.5 million tons of ingots (or 2 million tons of finished steel) by the end of the fourth plan. This is in modification of the recommendation by the U.S. steel mission which had suggested a production of 4 million tons in two stages—1.5 million tons in the first, and 4 million tons finally. Some in the Planning Commission would like to build the full 4 million-ton capacity in a single stage.

The demand for alloy and special steels in 1970-71 is estimated at 750,000 tons, as against the current production plans for 350,000 tons, and that of pig iron at 4 million tons, as against the current production and projected capacity of 1.75 million tons. The Study Group's third recommendation is in favour of one unit of 1.5 million tons capacity either on the east or on the west coast of India.

The break-up of the steel production, unit-wise by 1971-72, would be as follows:

Bhilai	3 million tons
Rourkela	2.5 million tons
Durgapur	3 million tons

WHICH HOLDS THE GREATER LOAD?

Modern construction projects, require scaffolding of far greater strength and safety than bamboo tied with coir.

Unaffected by rot, fungus and termites, Mills tubular scaffolding has a versatile use—storage racks, temporary buildings, open-air auditoriums or bridges—apart from its normal use as a construction aid.

The special spring-steel fittings quickly secure the tubes—with a 3/4" spanner as the only tool needed. The greater the load the firmer the grip of the fittings, since they are designed on the 'shackle grip' principle.

All fittings are made by Guest, Keen, Williams, Ltd. and the tubes by The Indian Tube Co. (1953) Ltd.

THERE'S NO LIMIT TO THE SUPPORT YOU CAN GET FROM MILLS

Total	3.368	2.737	2.939	5.646	4.523	5.297
Other products	0.843	0.672	0.479	1.429	1.163	0.908
Grand total	8.581	6.916	6.984	14.214	11.235	12.271

The Perspective Planning Division of the Planning Commission had placed the 1966-71 demand for finished steel at 20.57 million tons at an estimated cost (at 1961 prices) of Rs. 17,000 crores. Of the pig iron target of 4 million tons, 1 million tons is expected from Bhilai, Durgapur, and Burnpur, while small projects would yield 750,000 tons. To fill the gap of 2.25 million tons, the Steering Group has suggested the setting up of six new blast furnaces, each with a capacity of 400,000 tons.

Notice, it is stated, has been taken of the failure of the private sector to use the licences so far given for the production of pig iron. The group has suggested that most of the additional capacity would have to be created in the public sector. It has not said anything about the location of the new plants.

The present position concerning the various plants is as follows:

(1) In Bhilai, the detailed project report for the sixth blast furnace is expected to be ready by March 1964 and for the entire expansion by December 1964. The intention is to place the orders for the blast furnace in the second or third quarter of 1964. This will partially alleviate the pig iron shortage.

(2) In Durgapur, the detailed report for the fifth furnace is ready and is being discussed with the plant authorities. This, as in Bhilai, is a blast furnace ahead of steelmaking. It will be possible to place the orders for the blast furnace in the third or fourth quarter of 1964. The detailed project report for the steel expansion, however, will be ready only by December 1964.

(3) In Rourkela, the detailed project report is expected to be ready in the third quarter of 1964.

(4) In Indian Iron, the 300,000 ton expansion scheme has been approved.

CAPITAL, 13th February, 1964.

It is understood that engineering studies are being made for the second phase of expansion by 700,000 tons.

(5) Tatas are now engaged in studying the economics of a 3 million ton programme.

(6) In Bokaro, the detailed project report is already available. The technical committee which is examining the detailed project report is expected to report by the middle of February 1964. It is hoped that it will be possible to invite tenders for Bokaro between June and October 1964.

As for alloy and special steels, it has been pointed out that an additional capacity of 400,000 tons would have to be created over and above the capacity which it has been planned to set up. This, it is recommended, should be done through the expansion of the Durgapur plant and by setting up additional production capacity wherever possible. It is also suggested that the possibility of the Salem project making special steels should be considered. Licences might also be given to the private sector. The fourth plan programme for ferro alloys will be discussed by the group at its next meeting three months hence.

The Steering Group's estimate of 17.5 million tons of ingot steel production by 1972, is based on an assumed rate of 7 percent growth in the national product. The demand for steel, for example, takes into account the number of wagons the railways would require to transport goods, including raw materials for ingots and the finished products of the steel mills for the production target of 17.5 million tons. The Group has left it to the Ministry of Steel to determine the cost of the extra steel to be produced in India.

The steel target should set the pace for fixing other targets, including that for panchyati raj. What the total fourth plan outlay will be can easily be visualised. Only Russia has so far indicated its interest in the financing of projects under the fourth plan.

ALUMINIUM

Commissioning New Plants

A determined effort is being made to commission three aluminium plants by 1968, at least two of which, it is expected, will be in the public sector. The formula evolved by the Ministry of Oil that a unit in which State participation in the equity capital is not less than 51 percent can be regarded as a public sector project is likely to be adopted for the aluminium projects.

Early in the third plan period, two large-sized aluminium units were licensed in the private sector: one 20,000-ton unit linked to the Koyana power project in Maharashtra and the other, a 30,000-ton unit based on power from the Sharavathy project in Mysore. The original licensee of the Maharashtra project was Mr. Tendulkar with the West German firm of V.A.W. as collaborators, while that of the Mysore project was Mr. Murarji Vaidya with the U.S. firm of Reynolds, as his foreign collaborators. Since then, the licence granted to Mr. Vaidya has been revoked. The Government has also been planning a public sector project in Madhya Pradesh with Hungarian credit. The location of the project has still to be determined.

During his visit to Bombay and Mysore last week Mr. C. Subramaniam Minister for Heavy Engineering, discussed the steps for the implementation of these two projects. Indications are that the implementation of the Koyana scheme in the private sector would be speeded up, while the Government will take over the Mysore project to be worked in

CAPITAL, 13th February, 1964.

collaboration with a foreign company. That one company will look after both the projects in Mysore and Madhya Pradesh or in Kerala, is not ruled out.

TEXTILE MACHINERY

Contract for U.K. Firm

Platt Brothers (Sales) Ltd, Oldham, England, a member of the Stone-Platt Group, has secured a £7.5 million (Rs. 10 crores) contract from the State Trading Corporation of India Ltd to supply the most modern textile machinery for 17 textile mills in India which will enable the country to increase the export of yarn and cotton cloth.

Platt Brothers have specialised in this form of "package deal" for the textile industry and in recent years, similar projects have been contracted for in the Philippines, Indonesia, the Sudan, Egypt and Guinea. They will themselves be supplying to India cardroom spinning and doubling machinery valued at approximately £5 million. This includes their latest high-speed machinery such as high production cards, century combers, Globe draw frames and super spinner ring frames which were shown for the first time at the recent textile machinery exhibition in Hanover. A new range of blowroom machinery will form part of each mill's equipment. Deliveries of the machines for this major Indian enterprise will start this year. Many of the mills to be equipped have been allocated to co-operatives of cotton growers in India.

Among the major contributing firms associated with Platts, are British Northrop Sales Ltd (weaving machinery), Lessona Holt Ltd (wind-up machinery), Mather and Platt (Exports) Ltd (finishing machinery), Joseph Hibbert and Co. Ltd (sizing machinery), and the Longlose Engineering Co. Ltd (dyeing machinery), both members of the Stone-Platt group, and William Ayrtons and Co. Ltd (specialised finishing machinery).

Most of the machinery under this contract will be made in Lancashire, and the towns which share the work are Accrington, Blackburn, Bolton, Darwin, Heywood, Manchester and Oldham. The credit has been arranged outside the British official credit, and a separate agreement with Midland Bank will be signed shortly for this.

COMMERCIAL VEHICLES

Fourth Plan Output Target

The Working Group on Transport Equipment in its interim report has placed the production target for commercial vehicles at 125,000 a year for the fourth plan. The following pattern of production is suggested:

Payload design capacity	Annual production 1970-71 (nos.)
Over 1 ton—up to 3 tons	15,000
Over 3 tons—up to 6 tons	80,000
Over 6 tons—up to 9 tons	15,000
Over 9 tons and above	5,000
	125,000

The Group has suggested that a large-sized plant should be established for manufacturing axle-wheel assembly with rolling-contact bearings suitable for bullock carts, and that all possible facilities should be provided for the conversion of traditional bullock carts to this type of assembly. The Group is of the opinion that it might be advisable to have a plant for the manufacture of axle, brake system, etcetera for the truck-trailer assembly. The production target for diesel locomotive (B.G.) is suggested at 250 a year and for wagons (in terms of four wheelers)

at 55,000 a year for the fourth five year plan.

INDIAN INVESTMENT CENTRE

Praise from T.T.K.

The Central Finance Minister, Mr. T. T. Krishnamachari, said here during last week that the rôle of the Indian Investment Centre was very important. It should go on adding more and more links so that the wheel was always on the move. He was speaking at a meeting of the chairman, senior officers and advisers of the Centre. Discussing foreign aid prospects, the Finance Minister said that private foreign investments should supplement the present form of foreign aid. The process of the induction of such foreign investment had to be done carefully and scientifically. He expressed satisfaction at the impressive work that was being done by the Centre in attracting private foreign capital. He said that this showed that people abroad were more and more outward looking than before. But the Centre had still a long way to go. It had touched only the fringe of the problem. He added that, in the context of the work which the Centre was doing, there was room for setting up a branch of the Centre in Europe in addition to the one already functioning in New York.

Mr. G. L. Mehta, chairman, welcoming the Finance Minister to the

Centre, said that Mr. Krishnamachari favoured a policy for economic growth which made economic and social sense. He thanked the Finance Minister for the continued interest he had been taking in the work of the Centre and, particularly, mentioned the survey undertaken by the Centre at his instance concerning the gaps in the industrial structure relating to raw materials for the chemical industries and machinery and machinery parts.

KIPPING LOAN

Applications for Imports

The Government of India, through a public notice, recently invited applications for the import of parts and equipment as specified in the British loan of £4.5 million, which is also known as the "Kipping loan". Applications wanting credit of over Rs. 20 crores had been received of which applications covering credit of about Rs. 9 crores were regarded as eligible. The Government is now engaged in further screening of the applications and in the allotment of credit on a certain pro rata basis.

The loan was specified to be used for the benefit of British-based industrial units in India. Although the Government is reluctant to introduce a new category of imports, the credit, by and large, will be used for the purpose already agreed upon between

the two Indian and U.K. Governments.

COAL

Problems of Raising Output

The Joint Working Committee of the Coal Industry last week met Mr. C. Subramaniam, Minister of Steel, Mines and Heavy Engineering, to discuss various problems relating to production, demand, prices and incentives to the coal industry. During the discussion, the Minister, it is learnt, emphasised the need to evolve a suitable formula to ensure that the consumer pays for the quality of the coal which he actually receives. The industry, it is understood, was also informed that the Government has been examining the recommendations of the expert committee about a new system of classification of coals on the basis of the calorific value. In view of the practical difficulties, the recommendations may be implemented in stages. The coal industry, it is reported, has expressed concern about the recent slackness in the demand for coal. It was indicated by the Minister that the Government is going into the question of balancing production in relation to demand, taking into consideration the quality as also the regional pattern of production and demand. Representatives of the coal industry asked for certain incentives in the nature of depletion allowance and further liberalisation

WORLD TRADE

Need to Reorganise G.A.T.T.

The Minister for International Trade, Mr. Manubhai Shah, in an interview to the Czech News Agency has urged that the instruments to enforce policies, programmes and code of conduct in international trade should be forged through a strong and healthy international organisation. G.A.T.T., therefore, needed to be reorganised to a considerable extent to suit the new and emerging situation in the field of trade and economic development. It was, therefore, most essential that either the present organisation was completely modernised or a new organisation of international trade was set up in which all the basic principles could be worked out, implemented and sustained. Mr. Shah was talking on the rôle of the forthcoming U.N. Conference on trade to meet in Geneva next month. He made out a case for the restoration of the balance of trade in favour of less developed countries by the removal of all quantitative restrictions and internal duties, which, he said, had impeded a free and full flow of manufactured and semi-processed goods and other commodities into the expanding markets

of the richer countries. He added that tariff walls built by the industrialised countries in the last two decades had retarded the growth of international trade. The plea of protecting infant industries was no more valid. India, therefore, welcomed the Kennedy round of talks for the dismantling of tariffs by 50 percent and more. The Minister will lead the Indian delegation to the U.N. conference next month.

IMPORTS AND EXPORTS

Merger of Councils

For better co-ordination and administration of import and export policies, the Import Advisory Council and the Export Promotion Advisory Council have now been combined into one, and named Export-Import Advisory Council. The functions of the reconstituted Council have been enlarged in the context of the development of world trade and the need to conserve foreign exchange. The Council will, among others, (i) advise the Government on policies and programmes of foreign trade, (ii) make suggestions on the import-export policy and procedure, export promotion, import rationalisation and substitution and (iii) discuss the difficulties of the trade, manufacturers and consumers as a result of the operation of the Import and Export Control.

The Minister of International Trade will be the chairman of the Council

and its members will include representatives of established importers, actual users, export promotion councils, commodity boards and the other organisations of importers and exporters. The first meeting of Export-Import Advisory Council will be held in New Delhi on 2nd and 3rd March, 1964.

BALL AND ROLLER BEARINGS

U.S. Loan for Indian Firm

India's capacity to produce ball and roller bearings will be increased substantially by a U.S. Government loan of Rs. 2 crores. The U.S. Agency for International Development has authorised this credit in favour of the National Engineering Industries Ltd. of Jaipur. The credit will meet the foreign exchange costs of erecting a new tapered roller bearing plant with an annual capacity of 1.1 million bearings, and of expanding the capacity of the existing ball bearing and straight roller bearing plants by 2.4 million bearings a year. This will result in a net saving to India of Rs. 1 crore in foreign exchange annually. Federal Mogul Bower Bearings Inc., a major U.S. manufacturer in the field, will provide technical assistance for the establishment of the new tapered roller bearing plant and also will train several Indian technicians in the United States.

India's machine building industries have undergone substantial expansion

and diversification in recent years, increasing their output and ability to produce complex products. Bearings are an essential component of almost all types of industrial machines. The loan will bear an interest rate of 5 1/2 percent and will be repayable by the firm in ten years, including a grace period of two years. In order to reduce the impact on India's balance of payments, the loan agreement will provide for the National Engineering Industries Ltd to make repayment in rupees, on the above schedule, to the Government of India. The Indian Government in turn will repay the principal to the U.S. Government in dollars in instalments spread over 40 years, including a ten-year grace period.

WHEAT

India Imports from Australia

In terms of a contract signed here, India has agreed to buy 171,000 tons of Australian wheat for shipment by that country's Wheat Board before the end of June next. The contract was concluded by Mr. J. V. Moroney, chairman of the Australian Wheat Board and Mr. L. H. Dorman, the Board's general manager, who are now in India at the invitation of the Government. Australian wheat, it is explained, has been traditionally popular in India. India is regarded by the Australian Wheat Board as a traditional and valuable customer for its wheat.

London

POLICY OF INCOMES RESTRAINT SUFFERS SETBACK

(FROM OUR LONDON CORRESPONDENT)

MR. MAUDLING'S attempt to persuade the two sides of industry to sign on the dotted line in support of wage, profit and price restraint this year has failed once again. At a meeting of the National Economic Development Council on 5th February, the Chancellor pressed again for a public declaration stating in general terms the responsibility of each party—trade unions, employers and the Government—for preventing inflation from undermining the present boom. But the T.U.C. representatives on the Council found fault with each of the four draft declarations submitted—always on the ground that the trade union movement was being invited to underwrite the principle of wage restraint in return for no positive guarantees about prices and profits.

The Chancellor's chances of promoting a pre-election agreement on short-term incomes policy were never good: now they must be regarded as extremely remote. Deprived of the collective co-operation of the N.E.D.C. in preventing the boom from going bust, the Chancellor may have to approach his Budget (if there is to be one) in a different light. He may also come under some pressure from within his party to make some political capital out of the T.U.C.'s attitude, although this would damage the prospects of arriving more gradually at agreement on the subject of incomes and might deal the N.E.D.C. itself—which does much other useful work—a mortal blow.

Mr. George Woodcock and his colleagues were not alone in doubting the wisdom or usefulness of publicly expressing generalities on the subject of incomes; some of the employers and independent members took the view there had already been enough exhortation about profits, price and wages for people's responsibilities in these matters to be clear enough. But it was the T.U.C. representatives who chiefly blocked acceptance of the four, but similar, draft declarations. The Chancellor had a try with one himself; the N.E.D.C. director, Sir Robert Shone, put one forward; Lord Robens of the Coal Board also had a go, and finally, the employers' representatives produced yet another.

T.U.C. Opposition

The four Trades Union Congress members present rejected each in turn, and studiously avoided offering any alternative proposals. Mr. George Woodcock, T.U.C. general secretary, was said afterwards to have "played everything back with a straight bat." The unions' stated objection to the Chancellor's demand was that they were being invited to make an unequal sacrifice. A declaration on incomes and prices, they argued, would have an immediate and inescapable effect on wage negotiations, but would have no inevitable influence on the cost of living. But there are at least three other important factors underlying their attitude. They are:

(1) The T.U.C. representatives, especially Mr. Woodcock, are less concerned to extract precise commitments from the employers and the Government on prices and profits than to find convincing evidence of their willingness to match restraint by the unions with self-restraint. Some commitments will be neces-

sary, but their value is regarded as marginal.

(2) They fear that even if the employer members of "Neddy" succeed in establishing their good faith, the behaviour of their counterparts outside may repudiate the bargain. A major consideration in the discussions is the fact that the employers' organisations have even less authority over their members than the T.U.C. over its affiliated unions.

(3) They are acutely conscious of the continuing absence of Mr. Frank Cousins, transport workers' leader, still on a recuperative holiday in the West Indies. Mr. Cousins, the T.U.C.'s chief opponent of wage restraint, might reject any agreement to which he was not a party.

Another factor is the approaching General Election, and the reluctance of many union leaders to give the Conservatives the advantage of any

agreement, however rudimentary, on the incomes question. This argument counts for nothing with Mr. Woodcock, but it certainly influences some of his colleagues.

The employers have expressed willingness to study schemes for a price review council and for additionally taxing profits if they rise over a period of time as a proportion of total income. But the T.U.C. wanted to know what was going to be done about prices and profits in the meanwhile when trade unions could expect their commitment to the wages side of the deal to be quoted back at them across the bargaining tables, it thereby having a practical effect. The abolition of resale price maintenance was quoted back at Mr. Woodcock as an example of the sort of "positive steps" he was talking about, but this did not satisfy the T.U.C. representatives.

Joint Attack on Inflation

As a result of this failure to agree, there could be some backtracking by the employers' organisations. The Federation of British Industries, when agreeing last month to "study" the introduction of "some form of prices discipline," emphasised that this would be the employers' contribution to a "joint attack" on inflation. Similarly, the idea of an excess profits tax was acceptable to many employers only if part of a package deal involving the unions.

Not all of the Council meeting was concerned with the tiresome subject of incomes: there were long discussions about the progress report on economic growth and a report on the building and construction industry—both prepared by Sir Robert's office and both to be published, it is hoped, shortly after next month's Council meeting.

Some concern was expressed that the present rate of economic growth was too fast, that there was a danger in excessive "go's" as well as in excessive "stops". The N.E.D.C. target is for an annual 4 percent growth. To achieve this some leeway had to be made up, but during most of the last year and continuing into this year, the growth rate has been between 5 percent and 6 percent.

Whichever way you look at it...

... if it's a question of ball or roller bearings, the answer is SKF

thousands of different types and sizes...with outside diameters of up to 2180 millimetres...for speeds of up to 4000000 revolutions a minute...for carrying loads of up to 2000 tons...are manufactured by SKF to meet the needs of every industry and all forms of transport.

TWIN CHAMBER "UB" TYPE MAINS FREQUENCY ELECTRIC INDUCTION FURNACES

for melting and holding of
BRASS, BRONZE, COPPER, ALUMINIUM AND LEAD ALLOYS

Salient features — Continuous melting. Raw metal is added in one chamber and hot molten metal scooped out from the other. ■ Very useful for continuous type gravity and die casting industries. ■ Eliminates the necessity of having a hot metal receiver for die castings. ■ Easy access and simple in operation and maintenance. ■ Maximum purity of poured metal.

WORKERS FEDERATION MAKES NEW DEMANDS

AT a meeting in Calcutta last week, presided over by the West Bengal Labour Minister, Mr. B. S. Nahar, the Jute Workers Federation passed a resolution seeking an assurance from the Indian Jute Mills Association that the variable dearness allowance being paid by the industry in terms of the Wage Board award will not be reduced below the present level of Rs. 32.50. It further sought a guaranteed minimum wage for piece-rate workers, because "they often suffered for short supply of raw materials and for other causes beyond their control." The resolution warned there would be a big industry-wide movement if employers "forced" workers to retire at the "stipulated age without retrenchment or retirement benefits." The Federation reiterated its resolve to "resist any curtailment of the existing facilities." The president promised to look into the demands and appealed to workers to inform him before they went on strike.

Circles close to the industry express surprise over the circumstances which have prompted the Federation to adopt such an intransigent attitude, which virtually undermines the Wage Board award within six months of its implementation. It is also difficult to understand how the State Labour Minister could have presided over a meeting which passed such resolutions. The Wage Board was a tripartite body, representing employers, employees and the Government. Its recommendations were drawn up after detailed discussions and mutual agreement among the members. The terms were binding on the parties for a period of four and a half years from July 1963.

Despite the heavy impact on the cost of production, the industry implemented the Award in the interests of better labour relations. The cost of the revised pay structure, dearness allowance and bonus adds up to Rs. 35 crores, raising the production cost of gunnies by about Rs. 30 a ton. Although the industry is export-orientated and faces strong competition from Pakistan, it accepted the extra burden in the hope that it would foster peace and amity.

Concessions under the Award

Under the award, the dearness allowance was fixed at Rs. 32.50 on the basis of a price index number of 425 (base year 1939 equals 100). It was to rise or fall by 20nP for every point of increase or decrease in the cost of living index. It was to be revised twice a year, once in February and once in August. The Wage Board not only raised the dearness allowance, but also recommended an increase in the emoluments of all categories of workers and clerks, offering a minimum wage of Rs. 81 a month for workers in West Bengal. It suggested the abolition of contract labour for manual work and the introduction of a standardised bonus scheme. The Central Government accepted the recommendations in toto. The eight basic wage groups were reduced to three and their wage scales were revised upwards. As for superannuation, the Wage Board suggested that male workers should retire at the age of 58 and women at 55, although employers were offered the option of retaining their employees in service beyond these ages without prejudice to their right to claim gratuity.

Industry circles are worried about the threat of agitation held out by the Federation if the mills superannuate the over-aged workers. It is difficult to see how the Federation could describe superannuation in terms of the award as "retrenchment or forced retirement" and claim retrenchment and retirement benefits beyond the gratuity provided by the award. The Federation's statement that piece-rate workers often suffer for want of raw materials is not quite correct, because during the last two seasons the industry has never faced any shortage of jute and has worked the entire installed capacity. The dislocation caused by power-shedding has affected only the industry and not the workers. It is to be hoped that the State Government will prevail upon the workers to develop a constructive attitude and discourage irresponsible demands.

Final Jute Crop Estimate

The all-India final estimate of jute for 1963-64, published by the Directorate of Economics and Statistics, Central Ministry of Agriculture,

shows an increase of 1.3 percent in acreage from 2.1 million to 2.13 million, and a rise of 9.3 percent in output from 5.40 million bales to 5.91 million bales, compared with the "partially revised estimates" for the previous season. The yield too has increased from 1,028 lbs to 1,100 lbs an acre. Favourable weather conditions at the time of sowing helped West Bengal and Orissa to increase the acreage. Assam, West Bengal and Orissa reported an increase in output due to favourable conditions during the period of plant growth. The large increase in Assam is explained by the heavy loss of production during the previous season due to floods. Deficiency in rainfall during June and widespread flooding of riverine regions during July caused a decline of 10 percent in Bihar's output.

Sharp Rise in Gunny Stocks

Mills reporting to the I.J.M.A. show a sharp increase of 8,600 tonnes in jute goods stocks during January, compared with the December figure. Closing stocks in January have touch-

ed a peak of 120,900 tonnes. Stocks of hessian have risen by 4,100 tonnes to 43,500 tonnes, of miscellaneous goods by 2,500 tonnes to 12,200 tonnes; of sacking by 1,500 tonnes to 48,100 tonnes, and of carpet-backing cloth by 500 tonnes to 17,100 tonnes. In January 1963, the stocks were only 90,400 tonnes—25,200 tonnes of hessian, 50,000 tonnes of sacking, 3,600 tonnes of carpet-backing cloth and 11,600 tonnes of other goods.

The increase in stocks is attributed to the inability of the mills to clear January-shipment cargo due to the shortage of lighters and the slowing down of loading activities in the docks during the communal disturbances. The subsequent resignation of Pakistani ratings also affected activities at the port for quite some time. Shipper circles estimate that the mills could clear hardly 80 percent of their January-shipment cargo. Temporary dislocation of railway booking also delayed the movement of sacking to sugar, cement and cereals packing establishments in up-country areas. Trade circles do not appear to be worried over the large closing stocks. Provided the backlog of shipment is covered, they hope that stocks during February will be smaller.

Bonus Commission Recommendations

The recommendations of the Bonus Commission, now being examined by the Central Labour Ministry, include a formula for a minimum and maximum bonus payment based on pro-

I.J.M.A. STOCK FIGURES FOR JANUARY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of January as follows:

Description	31st January, 1964		31st December, 1963		Increase over (+) or decrease from (-) last month		31st January, 1963	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Hessian cloth and bag	14,14.43 (15.47)	43.5 (42.8)	12,74.96 (13.94)	39.4 (38.8)	+ 1,39.47 (+ 1.53)	+ 4.1 (+ 4.0)	5,46.15 (9.19)	27.2 (24.8)
Sacking cloth and bag	10,95.83 (11.98)	48.1 (47.4)	10,47.81 (11.46)	46.6 (45.9)	+ 48.02 (+ 5.2)	+ 1.5 (+ 1.5)	11,14.65 (12.19)	39.6 (38.3)
Carpet backing	1,37.19 (1.50)	17.1 (16.8)	1,32.66 (1.43)	16.6 (16.3)	+ 4.53 (+ 5)	+ 0.5 (+ 0.5)	27.39 (39)	3.8 (2.7)
Others		12.2 (12.0)		9.7 (9.5)		+ 2.5 (+ 2.5)		11.6 (11.1)
Grand Total (000 Tonnes/Tons)		1,20.9 (119.0)		1,12.3 (110.5)		+ 8.6 (+ 8.5)		89.4 (89.0)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhat with estimates for two non-member mills. The figures in brackets are in British measures.

fits. In the case of the jute industry, the Commission has said that the formula suggested by it should be applicable unless employers and workers agree to another arrangement.

The jute industry has already implemented the award of the Wage Board with retrospective effect from July 1963. A fortnight's wage was paid as bonus in October-November 1963, which cost the industry about Rs. 3 crores. The award will be in force until December 1967. As the award was given by a tripartite board representing employers, employees and the Government, and as it has already been implemented by the industry, the Bonus Commission's suggestion to include the jute industry within the purview of its recommendations seems hardly relevant.

THE JUTE MARKETS

Manufactured Goods: Dull conditions prevailed in the Calcutta gunny market during the past week. Opening on an optimistic note on reports of a fair amount of overseas enquiries with shippers and substantial business in 9-porter and 11-porter hessian for deliveries right up to December, prices receded to new lows after wide movements. There was panicky selling by weak holders in both spot and futures markets on Saturday. Sentiment was affected by reports of a sharp increase in the stocks of mills from 112,300 tonnes to 120,900 tonnes during January. But mills became reserved and showed little inclination to extend commit-

ments at the lower levels. Both they and the shippers seemed to be aware of the sound statistical position. Sentiment was more subdued in sacking due to poor enquiries and offtake by the Government of India during the last two months. From Monday, scattered short-covering tended to harden prices somewhat, but turnover declined appreciably. In the futures market, hessian and sacking for February delivery suffered a setback in sympathy with the trend in the spot market and in view of the approaching due date. May contracts also eased although there was a great deal of conversion into May contracts on the payment of slightly smaller contango charges. Turnover was moderate and the undertone easy at the close.

	Feb.	Mar.	Apr.- June	July- Sept.
40in. 7joz.	35.35	35.15	34.75	34.60
40in. 8oz.	38.00	—	—	—

Liverpools	127.00	127.00	127.00	127.00

Raw Jute: Dull conditions prevailed in the raw jute market during the past week. Mills showed little interest in purchasing more fibre, both in the Calcutta market and in the agencies. Towards mid-week, there was an increase in daily arrivals, mainly of low-grade fibre, in the upcountry markets. Holders were keen on disposing of the stocks at slightly lower levels and small business was reported. From Saturday, reports of an easier trend in the gunny market de-

pressed sentiment and prices declined by about 50nP a maund for all grades from the previous week's levels. In the futures market, Upper Assam White Bottoms for March suffered a sharp setback after wide fluctuations on panicky unloading by weak holders. There was also some bear-selling. The drift was accentuated by the approach of the end-of-account. Turnover was small and the undertone hesitant at the close.

THE PAKISTANI JUTE MARKETS

FIBRE ARRIVALS FALL

(FROM OUR DACCAL CORRESPONDENT)

ARRIVALS of jute in the baling centres continued to be small last week and reports persist to the effect that this is not entirely due to a shortage of jute, but also due to the fact that most traders belonging to the minority community are not at present operating. This shortage of arrivals should have resulted in higher prices locally which has not been the case. It is rather a question of a steadier undertone mainly in white without actually increased price. The reason probably is that heavy stocks lie with balers, which it is reported, amount to as much as 1.2 million bales. The steadier local undertone should have had some effect at least on offering prices, but this has been offset by the keenness of the Indian balers to dispose of their stocks.

THE U.K. JUTE MARKETS

FIBRE DULL

(FROM OUR DUNDEE CORRESPONDENT)

THE recent trouble in Pakistan made no difference to the raw jute markets last week. Prices remained at the previous levels and although arrivals of loose jute from up-country into baling centres were held up with consequent late shipment to overseas countries, this made no difference to spot prices being asked in Dundee. Dundee spinners are holding fair stocks of raw material, and they are in a position to remain out of the market until they think prices are at the lowest levels. It is estimated that the U.K. still has to buy about 200,000 bales of jute from the present crop and this will be spread over the next few months.

CAPITAL, 13th February, 1964.

Commodity Markets

MARKED RISE IN INDIAN RUBBER OUTPUT

(FROM OUR SOUTH INDIAN CORRESPONDENT)

IN view of the substantial increase in the indigenous production of natural rubber, its import will be reduced in future. The Indian output of natural rubber which is estimated at 40,000 tons during 1963-64, is expected to reach the 46,000-ton mark next year. If the synthetic factory in U.P. can produce its full-rated capacity of 30,000 tons, the need for imports next year would not be more than 3,000 tons, compared with the 22,000 tons imported during the current year.

In the opinion of the Rubber Board chairman, Dr. Rama Varma, the domestic demand for rubber would hereafter be largely met by internal production of natural and synthetic rubber. He told the 46th meeting of the Rubber Board held in Kottayam on 7th February that during the current year up to the end of November, there had been a 20-per cent increase in the production of natural rubber in this country over that of the corresponding period last year. At present only a little over 200,000 acres were under tapping out of the total planted area of 3,161,142 acres. In the coming years, new areas would come into tapping, which would continue to maintain the rising trend in production.

The chairman said that in the last year of the third plan, production would reach 50,000 tons more than the plan target. By better cultural practices, the yield from existing areas could be increased by 25 to 35 per cent, he said and added that it might not be difficult to produce 70,000 tons by 1970.

Commenting on future prospects for the natural rubber industry, Dr. Varma said that the cost of production of synthetic rubber produced for the first time in India was higher than that of natural rubber. As long as the synthetic rubber price ruled higher, the impact of imports would first be felt by synthetic rubber, and there was no reason why the natural rubber produced should not get higher prices. The Central Government's recent decision to decontrol the price of natural rubber as part of its general policy to remove irksome controls and to stimulate production had been a very significant event. The subsequent decision to continue the minimum price had given the necessary assurance to the producer that the Government was prepared to protect his interests. At the same time, the decision to remove the statutory maximum should be welcome to the producer, he said.

Another development that should be welcome to the natural rubber producer was that with the production of synthetic rubber in the country, direct impact of slight excesses in imports on the price of natural rubber would be reduced. When the domestic demand was fully met by the domestic production of natural rubber and imports, any excessive imports led to a reduction in offtake and downgrading of quality by the buyer. The chairman asked the Board to ensure that the full benefit of the changed circumstances was used for the development of the industry in a larger sense—the estates, small holdings and labour.

Dr. Varma said that research was being carried on to find out a better method of presenting the product to the consumer. The Indian Standards Institution had formed a sub-committee on rubber to evolve suitable

Indian standards and its programme of activities had been drawn up. The various sub-committees of the International Standards Organisation would also be meeting in Delhi towards the end of this year and a task force had been constituted for raw rubber.

COFFEE

Export Prospects Better

India is expected to produce 62,000 tons of coffee during the current season. This would be 10,000 tons more than the previous season's crop. The export sales of the new crop have

just started, and reports are that buyers are active and they are paying fairly good prices. Almost 50 per cent of the crop was exported last year and the foreign exchange earned is placed officially at about Rs. 8 crores. In spite of stiff competition from Latin American producers, Indian coffee could stand its own in Europe and America because of its high quality. India's Arabica Cherry is valued in the Scandinavian countries for its aroma, while Indian Robusta enjoys a high reputation in foreign markets.

CASHEW

U.S.A. Imports More

The U.S. offtake of Indian cashew kernel during 1963 is placed at 29,287 tons, compared with 26,095 tons in 1962. This represented 57 per cent of the total Indian export. America has been the largest market for Indian cashew kernel. There was a time when this country was absorbing as much as 80 per cent of India's exports. The volume of India's export has

increased substantially in recent years. Last year, the total amounted to 53,400 tons valued at about Rs. 22 crores. Russia has emerged as the second largest buyer of Indian cashew kernel. She bought 16 per cent of India's export last year. In the order of priority, other important buyers were East Germany, Britain, Canada, Australia, Czechoslovakia and West Germany. The E.C.M. countries have agreed to reduce the tariff on cashew by half to 2.5 per cent. The E.C.M. Council which decided first to give complete exemption to Indian cashew revised its decision and put it at the above figure at the request of certain cashew producing countries of Africa. Efforts are being made to get the tariff reduced further.

TEA

South Indian Output Rises

South India is estimated to have produced 188.5 million lbs of tea during 1963, representing a 7.4 million lb increase over the previous year's

NATIONAL AND GRINDLAYS BANK LIMITED

(Amalgamating National Bank of India Ltd., Grindlays Bank Ltd., and the Eastern Branches of Lloyds Bank Ltd.)

output. This would partly offset the fall in north Indian output reckoned at 14 million lbs.

Difficulties of Cachar Planters

(BY A SPECIAL CORRESPONDENT)

SOME of the difficulties of the tea growers were described by Mr. A. M. Shaw, chairman of the Surma Valley branch of the Indian Tea Association, who said that while producers in general had a difficult year, planters in Cachar experienced special difficulties because of the border troubles with East Pakistan, at the annual meeting held recently in Silchar.

In recent years, the biggest curse on the industry had been the burden of multifarious taxes, he said. No rebate in excise duty was allowed even on exported tea, although every other export industry was granted such a concession. The bulk of Cachar teas did not go to the export market, he said. Therefore, the abolition of export duty and the corresponding increase in the excise duty, had, for Cachar, actually increased the burden of taxation.

The State Government's decision to increase substantially the specifications for labour quarters, increasing the cost per unit by more than 50 percent and, by implication, making all the houses hitherto built sub-

standard, came as a surprise to the industry, especially when the Working Group, set up by the Government, had yet to finalise its work. Even a greater shock was awaiting planters in Cachar. In August, most tea garden managers received show cause notices from the authorities asking why they should not be prosecuted for not having built an adequate number of labour quarters.

The Government of Assam has arranged for a Committee to go into the difficulties of tea producers. Some of the complaints of the industry concern the grant of loans by the Tea Board to gardens. The Central Government advanced Rs. 9 crores to the Tea Board for providing tea gardens. Out of this money, Rs. 5 crores was to be spent on replantation, Rs. 2 crores on the replacement of machines and Rs. 2 crores on providing irrigation facilities. Only a small portion of this sum has been spent during the last three years mainly because the Tea Board has insisted on evidence of creditworthiness before giving loans to tea gardens. The industry's view is that the credit-worthy estates are able to undertake replantation, replacement of machines and provision of irrigation facilities on their own. It is the poorer gardens who are unable to undertake any rehabilitation programmes out of their own finances and, therefore, need assistance. Lack of credit is most actually felt in the Cachar district.

COMPANY AND PUBLIC NOTICES

EASTERN INVESTMENTS LIMITED

NOTICE is hereby given to the members of the above named Company that an Annual General Meeting of the Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 4-00 P.M., on Wednesday, the 11th March, 1964, for the following purposes:—

1. To adopt the Profit and Loss Account of the Company for the year ended 31st December, 1963, and the Balance Sheet as at that date together with the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in the place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution:

"That Article 159 of the Articles of Association of the Company be amended by deleting the word

'three' in line 4 and substituting therefor the word 'six'."

The Share Transfer Registers of the Company will be closed from 26th February, 1964 to 11th March, 1964, both days inclusive.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LIMITED,
Secretaries.

Registered Office:

Chartered Bank Buildings,
Calcutta, 29th January, 1964.

Notes:

- (a) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

- (b) The Dividends if declared, will be paid on or after 23rd March, 1964, to those shareholders so entitled whose names appear in the Company's books on the 11th March, 1964, or to their mandatories. No application for dividend warrants will be necessary.

- (c) The Relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of Special Business set out above is being sent to the Shareholders.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

Registered Office: 34, Chowringhee Road, Calcutta-16.

ANNOUNCEMENT

THE Annual General Meeting of the Members of the Company will be held on Wednesday the 4th March 1964 at 2-30 p.m. at its Registered Office, 34, Chowringhee Road, Calcutta-16.

Notice of the Meeting together with the Annual Report and Accounts have already been posted to the Shareholders direct.

The Ordinary Share Registers of the Company will remain closed from the 20th February 1964 to 4th March 1964, both days inclusive.

By Order of the Board,
IMPERIAL CHEMICAL INDUSTRIES (INDIA) PRIVATE LIMITED,
Secretaries.

Calcutta,

PROSPECTS FOR TARIFF CUTS AT G.A.T.T. MEETING

THE end-1963 agreement on farm policy revealed an urge for survival on the part of the European Economic Community which was as impressive as it was unexpected. Outside opinion was prepared for a break-up of the Common Market rather than any dramatic evidence of unity, and there is no doubt that this was the probable development to which all the available facts pointed. That is why it would be unwise to take too seriously this year's predictions of disaster. Certainly all is not well among the Six: but this could equally be said of other international organisations which nevertheless continue to exist. And it is possible that the approach of the "Kennedy round" (if that is still the appropriate title) of tariff discussions within G.A.T.T. will place an even heavier strain on European unity. Yet to argue from this that the Common Market will inevitably break up this year, that the Kennedy round will be an unmitigated failure, is surely going too far. It would be better to wait and see what happens. Just now the indications are not cheering. The Six remain divided on their attitude towards the Kennedy round, and what small basis of agreement has emerged among them suggests their general approach will be less compromising than had been hoped for. If this should slow down progress on tariff-cutting to any significant extent, the consequences for world trade could be serious.

The chief opportunity for discord is the French insistence on action against tariff "disparities." These are the differences between the higher British and U.S. tariffs and the lower Common Market ones, and their existence for some commodities means that straightforward percentage reductions—"across the board" cuts—will yield more benefit to one side than the other. The French have suggested a system of *écêtement*, or the lopping off of the "peaks" of the U.S. and British tariffs, which appears on the face of it both practical and reasonable. Unfortunately, the mass of lengthy detailed work which the implementation of such a scheme would require—for example, on the question to what extent particular adjustments affect any given country—serves to strengthen the suspicion that the object of the French in proposing it is to defeat the spirit of the Kennedy round altogether. Thus, the enthusiasm of the other members of the Six for the French plan varies from lukewarm to rock-bottom zero in the case of the Dutch, while the attitude of the U.S.A. is one of exasperation. Already the "across-the-board" policy for tariff cuts, on which the Kennedy round was originally based, has had to be abandoned. Now the whole exercise threatens to become bogged down in an endless quibble over formulas and procedures. It is no wonder that the forecasts are at the moment almost uniformly pessimistic.

The attitude to all this of Britain, the powerless bystander who nevertheless stands to lose a great deal if the Kennedy round falls through, is one of almost helpless resignation. London has been able to play a useful part by suggesting a compromise between the differing stands of the E.E.C. and the U.S.A. as to the definition of a tariff rate which qualifies for *écritement*, and this may eventually be accepted. But the anxiety which Britain felt a year ago after her exclusion from the Common

Market, and the hopes for the Kennedy round to which this development gave rise, have both been strongly influenced by the fact that not only have her exports to the Six continued to grow, but her share of the Community's import trade has increased as well. This is an impressive achievement. It is to be attributed to a number of factors, of which inflation among the Six, the lowering of French and Italian tariffs to approach the "common external tariff", and the continued growth of the European economy, are perhaps the most important. Whatever the reason, the immediate edge has been taken off the problem for Britain, who indeed has been doing better with her exports to the Common Market than she has with those to her own partners in the E.F.T.A.

The attitude of the United States is still one of deep suspicion concerning Europe's motives and intentions, with an equal determination to be conciliatory when such an approach promises results and retaliatory when it does not. In other words, the spirit of the Kennedy round on the one hand, and the "chicken war" on the other. This latter incident did not help the U.S. cause in Europe, and indeed for a country which has traditionally regarded with indifference the inconvenience caused to others by her own high tariffs, it seemed both inappropriate and uncalled for. Only as a warning of what might happen if the Kennedy round fails does it seem to have served any useful purpose at all. The U.S. negotiators have accepted the justice of the French claim for special action against disparities, although their views on an appropriate definition differ considerably from the European, and there is something to be said for their claim that despite the differences the average impact of U.S. tariffs is little greater than those of the Six. The powers originally granted to the President to cut tariffs revealed a willingness for freer trade on the part of the United States, and an opportunity for the rest of the world which it would be criminal to miss. There is a danger that if the Kennedy round fails, the chances of reducing the formidable barrier of protection which the United States has traditionally preserved around its internal market will be lost for ever. This would be a tragedy of considerable magnitude for the free world, and one which is worth a great deal of time and effort to avoid.

Despite the agreement on agricultural policy, there is no indication that President de Gaulle is any more enthusiastic about the Common Market than he appeared to be three months ago, and indeed the attitude of this one man remains the largest single question-mark for the future. To him the political aspect of the Community has always been the most important. Now that Dr. Adenauer has retired, and his successor is making no secret of his interest in the political and economic advantages of wider Atlantic association, there is no guarantee that the President will decide that the Common Market is worth preserving. If that were simply to result in France's withdrawal from membership, the situation might not be without certain advantages. At least it would be possible to retain some semblance of economic unity, perhaps with the addition of the British. But it seems more likely that France would stay in the union

and make further progress or regrouping impossible. Many observers consider that this is in fact what President de Gaulle intends to do.

Apart from the President's attitude, a whole range of new problems will make themselves felt during the next few months. The easing of the cold war, for instance, is bound to weaken the willingness of west European countries to relinquish their national sovereignty. It might remove altogether the chief driving force behind the Community. Also, it could affect the resolve of the United States to press for closer ties with Europe, especially now that the personal dynamism of President Kennedy has been removed from the scene. West Germany may find herself tempted to exchange her links with the Six for the prospect of national reunion, despite the supra-national convictions of her new Chancellor. In fact the future is anything but clear, and it may become even less so as the time for the opening of the Kennedy round approaches. Any one of a score of problems—the most recent is that of steel tariffs—could complicate relations within the Community, or between it and the United States, and either slow progress to a crawl or even reverse altogether the current trend towards greater liberalisation. There is some evidence that the vexed question of disparities might do this in the fairly near future if the French push the question too hard.

It is no use pretending that a halt in the present trend towards more liberal trading policies, or worse still a general increase in protectionism, would not have serious consequences for the under-developed countries. There has been some progress in recent trade negotiations towards a more ready acceptance of their point of view. If this were lost it would be little short of a major disaster, especially at a time when the popularity of foreign aid is also on the wane, at least among the givers. If the Kennedy round is sidetracked, primary-producing countries will be deprived of a major opportunity for furthering their interests in a general atmosphere of growing trade liberalism. This

When Taxes Exceed Income

A major injustice implicit in the laws relating to personal taxation in India is that in some cases the total taxes an assessee has to pay exceed his total income. The existence of this injustice is vaguely recognised, but no move has yet been made to impose an overall ceiling on the total tax liability of such assessees. One reason may be that the precise way in which the various taxes soak up more than the assessee's total income is not known widely enough. A genuine case—based on an actual tax assessment—is reviewed below to indicate the gross iniquity of the rates of personal taxation. In this case, the assessee is a foreigner with major investments in India. The extraordinary situation has been reached where his tax liabilities not only eat up his entire income; they eat up part of the capital investment too.

THE case shows that the combined impact of income tax and wealth tax on certain assessee is such that the total tax exceeds the total income—very substantially in some circumstances. The shortfall has to be made good by eating into the capital; on the top of this, further erosion of capital is inevitable in order to meet the living expenses of the assessee. The following is an illustration of a specific case, in which the gross income for a year was Rs. 11.9 lakhs. But after payment of income tax and super tax of Rs. 10.24 lakhs, and wealth tax of Rs. 2.19 lakhs, it was converted to a deficit of Rs. 53,000 for the year. This was by no means an exceptional year; a larger or smaller deficit has been the experience of this assessee for the past few years. The questions which have to be asked are: (a) is this fair and equitable? and (b) is this in the interests of the economic progress of the country?

The assessee's only source of income is from investments, in the companies and the disposal of this form of dividends on stocks in Indian

income for the year ended 31st March, 1963, was as follows:

Gross income from dividends ...	Rs. 11,90,403
Less tax deducted at source ...	3,65,380
Income received	8,25,023
Deduct estimated income tax and super tax payable	6,59,160
	1,65,863
Deduct wealth tax payable ...	2,19,391
Resultant deficit	Rs. 53,528

To this deficit has to be added his personal living expenses, and as he has no sources of income outside India, remittances to the U.K. to meet essential family obligations.

The assessee points out that this has been the pattern of his personal income and expenditure for the last

could put back by several years the modest progress recently made in understanding their claim for special treatment. It is only against a background of success over the Kennedy round that there is any real chance of the slogan "trade, not aid" becoming more generally accepted. At present there is a genuine danger, especially in the Common Market, of the case for the under-developed countries being ignored altogether.

The world's stake in the Kennedy round is, therefore, a large one, and there is some evidence that this fact will weigh heavily with those interests who might otherwise, for reasons of their own, be prepared to see the coming negotiations amount to nothing. It has even been suggested that France may be prepared to put the case for the under-developed countries before that of relaxing Atlantic protectionism. It is not clear how this could be done, because if the discussions on the Kennedy round become bogged down it is unlikely that concentration could immediately be diverted to other topics, however important. That is why it is imperative that nothing should go seriously wrong in Geneva in May, and that neither side should stand too firmly on what it might consider, perhaps with justice, to be its rights. At present Britain is working hard to bridge the gap between the two sides, but surprisingly enough seems least optimistic about the outcome. Possibly the main responsibility for finding a suitable compromise will eventually fall on West Germany by virtue of the fact that her close connections with the two sides could prove the deciding factor. At all events, it is impossible to predict what will be the outcome of the Kennedy round, just as it is difficult to over-emphasise its importance. So far the Common Market, in its internal negotiations, has shown a remarkable gift for reaching agreement at the eleventh hour. The main hope at this stage is that such talent will project itself into the wider negotiations due to open in Geneva on 4th May. On present showing, it will need to.

few years with the levy of wealth tax and with the mounting rates of income tax and super tax. The position of income and expenditure is one of recurring annual deficits and recourse to substantial overdraft facilities is inherent in it—the extent of the actual overdraft utilised in any year depending on the sequence in which tax payments fall due in relation to the accrual of dividends. The overdrafts have in the past been reduced and/or liquidated by the sale of investments as and when market conditions were propitious.

Although the assessee is a foreigner who has been working in India continuously for over half a century, his entire capital, including surpluses of income over expenditure in the years when such a surplus was available, has been invested in shares in Indian companies and are held in India. No assets have been created by him outside India over the years when it was possible to create such assets in the absence of any exchange control restrictions. This devotion to the cause of Indian industry has now brought about a situation in which the assessee finds that his net income from investments is financially a negative quantity. Admittedly, such a situation can arise only when the assessee, as in the case under discussion, discloses his assets and his income frankly and in full for taxation purposes. The laws of a country should be based on this assumption, and if the assumption is correct, the effect of the tax laws must be regarded as deleterious.

Leaving aside theories and assumptions concerning the basis of taxation laws, in reality it is found that in the year 1958-59, about 70 individuals in the whole of India paid income tax on a gross income of over Rs. 5 lakhs. Many feel that there should be in the city of Calcutta (if not in the Dalhousie Square and Burra

S.F.C.s MAKE POOR PROGRESS

THE report of the working group on State Financial Corporations, which was set up by the Reserve Bank of India in June 1962, is a largely historical document reviewing the working of the Corporations during the past decade or so. The performance of the Corporations has so far been disappointing as they have barely touched the fringe of the problem of financing medium and small industrial units. Set up with the primary object of promoting the growth of these industries, the poor working of the Corporations is due partly to their internal deficiencies and partly to factors beyond their control. The remedies prescribed by the group to improve their working are pointless considering that most of them are difficult to implement under the present circumstances. Although the Corporations are empowered to assist industrial concerns by giving loans, subscribing to debentures, underwriting share and debenture issues and guaranteeing loans from other sources, they have so far largely confined themselves to giving loans. Even the advances given by them are far too meagre in relation to the requirements. This apart, loans have mostly gone to traditional units like the food processing, cold storage, and textile industries. There has been little effort to extend the scope of assistance to new industries.

The shortage of funds has been a major handicap for the Corporations, which depend for their resources mainly on share capital and debentures. Support for their shares has come largely from the Government, the Reserve Bank and State-sponsored institutions. Private financial institutions have been chary of buying the shares since the dividend outlook has been far from encourag-

Bazar areas alone) at least 70 persons with a gross income of over Rs. 5 lakhs. There is, therefore, evasion on a widespread scale not only in the higher income brackets, but all around.

"Unaccounted money" and tax evasion are now by-words with every section of the community, but has a dispassionate attempt been made to ascertain the basic reason for the widespread practice of tax evasion?

It may be interesting to study the psychology of the taxpayer, particularly one who has an annual gross income of over Rs. 1 lakh. At current rates, he has to pay income tax (including super tax, surcharge, etcetera) at the rate of 88.3 percent of every rupee he earns over the first Rs. 1 lakh. His normal problem is: "Shall I be content with retaining only Rs. 11.7 out of Rs. 100 which I have earned by taking a certain risk of losing perhaps an equal amount, or shall I retain the whole hundred rupees and hold it as unaccounted money?" His odds are 11.7 against 100, long odds against morality by any standard. With a reasonable tax ceiling, the odds would be more even and, with far fewer evasions, the total collections should go up considerably.

Common sense and sound economic principles dictate that the tax structure, particularly at the higher slabs, should be revised downwards, so that collections increase and the problem of "unaccounted money" is consequently tackled. The impact of increased collections, and the channeling of funds previously held as unaccounted and also the additional funds in the hands of the assessee as a result of reduced tax deductions, could buttress the economy of the country and the well-being of the people.

ing. The S.F.C.s have paid dividends varying between 3 percent and 4 percent, which are far too low by present market standards. Public support for the shares in the foreseeable future is unlikely, considering that the profitability of the Corporations has been reduced by the small turnover and by the expenditure on a top-heavy administration. The fact that the Government has guaranteed the principal and dividends on the shares has not served as an attraction. The liability of the Corporations on account of subventions drawn from the Government to pay dividends has proved financially embarrassing. So the working group's recommendation that they should enjoy tax exemption, and that the dividends due to the Government and the Reserve Bank should be transferred to reserves, is welcome.

The Corporations' debentures have so far been subscribed mostly by the State Bank of India and the Life Insurance Corporation. Commercial banks have shown little interest since the debentures have been issued for longer periods than the banks deem suitable. It is a good idea, therefore, to make the debenture bonds more broad-based. If debentures with shorter maturities are issued, there may be greater support from private financial institutions. But it would be unsound to compel the Life Insurance Corporation to earmark a certain part of its investible funds for these bonds, as suggested by the working group. Life insurance funds are trust money, which should be used only to serve the interests of policy-holders. If provident funds are allowed to invest in these bonds, a wider market could be found for them. Except in the case of two Corporations, no serious effort has been made to attract deposits from the public. However, the group has exaggerated the possibility of raising funds through deposits. There is now keen competition for deposits and it is doubtful whether the Corporation will have much success in attracting funds. Furthermore, since their lending rates have to be kept low to promote industries, they cannot afford to quote competitive interest rates on deposits except in marginal cases.

In sum, the scope for reinforcing the Corporations' resources from private sources is very limited. So the State Governments have to be more generous in providing financial facilities. The recommendations that States should borrow for the Corporations along with their own borrowings is pointless. The Central Government has already begun to borrow on behalf of State Governments. Since the States themselves have to rely greatly on the Centre for funds, financial facilities to the Corporations should be given by the Central Government. It is important that while providing finance to the Corporations, a part should be given in the form of foreign exchange. Experience shows that the Corporations have had to turn down many deserving loan applications because they are not in a position to provide foreign exchange. The working group is right in recommending that the Reserve Bank should create a special "national industrial credit (long-term operations) fund" on the lines of the "national agricultural credit (long-term operations) fund" to serve as a standby for supplementing the Corporations' resources. If adequate funds are supplied by the Government, the working of the Corporations will not only be expanded and diversified but they will also be able to keep their lending rates down.

The importance of lending money to industrial units at low rates of interest cannot be exaggerated. A major factor which has restrained the growth of small industries is that their production costs are too high. It is essential to take steps to reduce their production costs, and the provision of cheap credit is a step in this direction. The average lending rate of the Corporations at present amounts to 7 percent net, with an additional 1 percent for late payment, which is considered fairly high under present circumstances. An upward revision of this rate, as recommended by the working group, will not help the healthy development of small industries. The recommendation that the Corporations should try to introduce multiple lending rates "tailored to the risk-rating of the loan propositions, their size, period, etcetera" is more theoretical than practical. Not only is the implementation of a multiple rate far too complicated: it is also likely to lead to wrong

decisions and favouritism. The working group has pointed out that the Corporations have generally been very fussy in considering loan applications. They have been worried about the security a loanee can offer instead of the earning potential of his industry. Hence a change in the criteria for assessing loan applications has been suggested.

Considering that small industries generally cannot offer adequate security to back their loan applications, there is need for adopting a bold lending policy. But its successful implementation will depend on the extent to which the Corporations can succeed in organising the requisite expertise. The working group has, therefore, rightly stressed that the Corporations should have proper technical staff to provide guidance and assistance in examining and fostering industrial projects and in steering various schemes until they mature into viable units. The Corporations should also equip themselves fully to undertake post-credit services. Commenting that the provision of finance is only a part of the job of State Financial Corporations, the working group has recommended that they should have a team of trained and experienced persons from each of the three fields—engineering, industrial economics and accounting—at a fairly senior level. Until this is done they should consider drawing up a

SUCCESS OF INVESTMENT CENTRE

FEW institutions have done more in their own quiet, unobtrusive and yet highly expert way to promote foreign investors' interest in this country than the Indian Investment Centre, which celebrated its third birthday last week. The chairman, Mr. G. L. Mehta, said in Bombay last Friday that the Government has so far approved 57 projects assisted by the Centre for setting up industrial enterprises in India in collaboration with foreign firms. Of these, 35 involve technical collaboration and financial participation, while the remaining 22 relate to technical collaboration only. The approximate total capital outlay in these ventures is of the order of Rs. 50 crores and foreign equity participation is around Rs. 5.5 crores. The projects cover a wide range of industries, including wood-working machinery, heavy earthmoving machinery, printing machinery, plastic injection moulding machines, sheet metal working machinery, textile machinery, wire ropes, steel forgings, electrodes, steel tubes, alloy steels, machine tools, ball bearings, motor-vehicle tyres and tubes, borax and boric acid, naphthols and bases, milk and milk products, H. T. and L. T. insulators, prestressed concrete pipes, sanitary ware and poultry equipment. Of the 57 collaboration arrangements approved so far, 31 are from the U.S.A., eight from the U.K., five from Japan, four from West Germany, three from France, two from Canada, two from Belgium and one from Switzerland. In addition, a joint venture for setting up a consultancy firm with a partner from Poland has also been approved. In another 15 cases, collaboration agreements between Indian and foreign entrepreneurs have either been submitted to the Government for approval or are likely to be submitted shortly. In addition, 85 proposals are in varying stages of negotiation between Indian and foreign parties.

The collaboration arrangements—matured or being negotiated—provide only a rough indication of the work done by the Investment Centre. The Centre has been rendering extremely useful service by promoting among foreign investors a better appreciation of India's needs and opportunities. A favourable climate of opinion is no less important than the actual opportunities for investment, and it is here that the Indian Investment Centre has done some of its best work. The Centre is fully aware of the need for good publicity in order to educate opinion and promote better understanding between Indian and foreign entrepreneurs for setting up joint ventures. It has already issued four informative publications and the brochure on company law is likely to be ready by the end of February. It has also prepared six industrial fact-sheets on high priority industries and more fact-sheets are being written. The monthly newsletter issued to about 2,500 foreign and 1,500 Indian firms is stated to be meeting with a good response. In the United States, the Centre has been organising seminars which provide an effective forum for exchanging

list of engineers and accountants serving in different industries within their jurisdiction and willing to advise on technical problems on suitable payment. The possibility of setting up an independent technical and economic evaluation institution with branches in important centres to serve the evaluation needs of State Financial Corporations and other financing institutions like the Industrial Finance Corporation, Industrial Credit and Investment Corporation of India and commercial banks, deserves close attention. If the S.F.C.s make greater use of the Reserve Bank's credit guarantee scheme, their lending risks may be reduced considerably.

Meantime, some useful recommendations have been made to improve the working of the Corporations. The heavy tax burden, combined with guaranteed dividends, has been financially embarrassing. The subvention liability on account of dividends has risen to more than Rs. 1.6 crores. As a result, the Corporations have not been able to plough back sufficient funds into their business. It is necessary to provide tax reliefs. State Governments and the Reserve Bank should surrender their dividends on the Corporations' shares, which may be credited to the reserve funds. The outstanding subvention liability should be written off.

ideas and holding discussions on concrete investment opportunities. The Centre has now decided to set up an office in western Europe. The proposal is to establish an office in Brussels or, alternatively, offices in Frankfurt and Paris. The Centre has already submitted these ideas to the Government.

The inflow of foreign capital depends essentially on the investment climate in the country concerned. Conditions in India have not been favourable for some time. The Chinese aggression, the Government's policy of increasing State control over economic activity, loose talk about the nationalisation of banks, procedural and administrative delays, the super profits tax and political developments in neighbouring countries—all these have tended to discourage foreign investors. But, as Mr. Mehta pointed out, there was a welcome revival in investment enquiries from abroad, especially from the U.S.A., over the past four or five months. For this, the Finance Minister, Mr. T. T. Krishnamachari, can rightly take some credit. He has already outlined a series of measures designed to accelerate the tempo of economic and industrial activity. There are indications that the Government is determined to achieve better co-ordination between different Ministries and reduce administrative delays. A great deal will, however, depend on how Mr. Krishnamachari shapes his fiscal policy in order to stimulate production, saving and investment. It is interesting to learn from Mr. Mehta that new and small entrepreneurs often show greater care in framing and implementing collaboration agreements, and that many of them are technically qualified and receptive to new ideas. The Investment Centre, as he said, is always ready to help Indian entrepreneurs, who have got letters of intent, to prepare project reports. Mr. Mehta stated that official studies made in the U.S.A. and the U.K. showed that the profitability of industries was higher in India than in several other countries, but foreign investors, especially British, showed considerable concern over the rates of personal taxation for non-technical personnel in India.

PRICE CONTROLS HIT CEMENT

THE experience of recent years has shown how planning objectives can be frustrated by ignoring vital economic factors such as the pricing of basic commodities. The planners have piously resolved to pursue a policy of development with stability, but price and distribution controls have often inhibited the rate of development. Attempts are still being made to control inflation by checking the symptoms of the disease—by direct regulation of prices—rather than by going to the root of the trouble as represented by an irrational fiscal

policy. How such superficial treatment has led to the wrong allocation of resources and to the distortion of the development pattern is well illustrated in a research study entitled *Financial Trends and Productivity in the Cement Industry* published by the Association of Indian Trade and Industry. The Government has carried to excess its zeal to hold the price line in the case of high priority commodities like steel, cement, coal and electricity. The policy has reduced the profitability of these industries and discouraged investment. Meanwhile, industries of secondary importance are allowed higher incentives through free pricing.

The inevitable result can be well imagined. The Association's study of 18 companies covering 90 percent of the country's cement production shows that while productivity trebled between 1951 and 1961, the original target of cement production set at 13 million tons a year by the end of the second plan (1961-62) had to be lowered, and the actual achievement was only 8.1 million tons in 1962. This was mainly because the low prices fixed by the Government reduced the return on capital and caused investors to lose interest. The prices of cement shares stagnated, the capital market failed to respond to new issues of cement companies, and promoters had to abandon some industrial licences for cement projects while facing serious delays in implementing others.

The Association's carefully documented study proves the need for a radical revision of the pricing policy for basic industries. Since the Government is the principal buyer of cement, its interest in keeping cement prices low is understandable. But the Central Government is levying an excise duty of Rs. 24 a ton on cement, an exorbitant levy by any standard; the State Governments levy sales tax on the commodity; and the State Trading Corporation makes a substantial profit by monopolising its distribution. Paradoxically, while the industry has to be content with poor returns, the

consumer has to pay more as the selling price is loaded with the various levies. Furthermore, the commodity is in short supply and the consumer often has to pay exorbitant black market prices. If the Government wants to allow better returns to the industry without increasing the load on the consumer, it can easily do so by reducing the excise duty, the sales tax and the S.T.C.'s profit margin.

Between 1950 and 1961, the margin of profit—percentage of profit after tax to sales—fluctuated from year to year between 11.7 percent and 6.2 percent. The corresponding margin in the U.S. cement industry was between 11.8 percent and 18.3 percent. Profits after depreciation and tax as percentage of net worth (capital plus reserves) fluctuated from year to year during the period 1947 to 1961 from 3.1 percent to 10.7 percent in India, 12.2 percent to 20.6 percent in the U.S.A., 8.4 percent to 21.5 percent in Japan and 7.6 percent to 9.8 percent in the U.K. The true extent of the difference in returns on capital reflected in these figures can be judged only after taking into consideration the huge reserve accumulations in the U.K. and the U.S.A., which go to inflate the "capital employed" and, consequently, make the figures of profits appear lower in percentage terms.

The dividends in the cement industry have been steady but low, compared with other Indian industries, or with the cement industry abroad. While leading cement companies in the U.K., and the U.S.A. gave dividends of up to 100 percent or more, in addition to giving bonus shares from time to time, cement companies in India paid only moderate dividends, varying from year to year between 3.34 percent and 9.87 percent of the paid-up capital of the companies covered by this study; the average for the period 1937 to 1961 was 7.05 percent. Dividends paid by cement companies in recent years have been lower than the average for a number of industries reviewed in the *Reserve Bank of India Bulletin*.

level which the railways have supposedly equipped themselves to handle.

On their own admission, the overall efficiency index shows a rise of only four points since the beginning of the third plan. Instead of facing up to the fact that improvement has been slow in coming in spite of the investment of Rs. 900 crores on modernisation and expansion of facilities, the railways make the untenable claim that operating efficiency has improved by 17.5 percent since 1950-51. Incidentally, 1950-51 is a bad base year to choose because efficiency was then lower than in 1938-39, but that apart, a comparison with the situation obtaining in the pre-plan days is now of only academic and historical interest. What really concerns the taxpayer is the fact that efficiency is now rising more slowly than during the second plan. Engine kilometres an engine day on line was 137 in the first eight months of 1963-64, the same as it was in 1960-61 and only two kilometres above the figure for 1955-56. The tonne kilometres hauled a goods engine a day has indeed improved by about one-seventh in the past three years, but how much of this is due to better working is difficult to judge since the haulage capacity of engines has also risen during the period with the change-over to diesels and electric. The two now move over one-fifth of the total traffic, as Mr. H. C. Dasappa, Central Minister for Railways, said in his Budget speech, and should therefore make quite an impact on the total result.

On the broad gauge, wagon utilisation is not getting any better either. Wagon kilometres a wagon day—an important yardstick for judging the work performed—was 76.2 in 1963-64, a figure lower than that for 1960-61. Net tonne kilometres a wagon day show a rise during the three-year period, but of only 3 percent. Wagon turn-round shows no improvement at all on the broad gauge, over which four-fifths of the railways' total traffic moves. In sum, there has been no change in the level of operating efficiency, striking or otherwise. One is at a loss, therefore, to understand what Mr. Dasappa may have had in mind when making

sweeping claims for the railways. Was he trying to persuade the Lok Sabha to give its approval to further exactions from railway users?

There is good reason for apprehending that the large increases in freights and fares voted by Parliament in past years have only whetted the railways' appetite. While the railways as the largest public-sector undertaking in India should contribute more to the general exchequer, this need not require mulcting the consumer if productivity were to improve in step with the investment on modernisation.

As an American report pointed out last year, modern management practices are virtually unknown; there is a strong tendency to avoid changes in operating practices which may involve experimentation, and this can only lead to technical stagnation. Personnel practices are unsatisfactory—rules are strict, perhaps unnecessarily so, but the end result is quite different. Work standards have yet to be developed because techniques of industrial engineering have rarely been employed outside of the larger workshops to which the recently-introduced system of incentive payments remains confined. As a consequence, available facilities are not being utilised to anything like the extent possible. Referring to train staff, the report pointed out that crews started late, took too long to change and there were long periods of inactivity in between. Although a comparison with conditions in American railways with their much higher level of mechanisation is not wholly relevant, the fact remains that the Indian railways need 1.2 million men to operate 56,000 kilometres of lines, against 700,000 men working 340,000 kilometres in the U.S.A. There is nothing wrong with the quality of men heading Indian railways—they are, in the judgment of the American expert team, as qualified and competent as railwaymen anywhere. But they suffer from the handicaps peculiar to Indian administration which discourages initiative and innovation and robs men of their responsibility for the results. They tend, therefore, to tackle problems by applying past solutions instead of trying new approaches, which may help the railways to break through to high levels of efficiency that modern equipment has brought within their reach.

Promoting Economic Activity

The third plan visualises an increase of 30 percent in agricultural production, 70 percent in industrial output and 30 percent in national income. Although large investments have been made to achieve these targets, there have been big shortfalls. The average annual rate of increase in national income during the first two years of the plan has been around 2.35 percent, compared with the target of 6 percent. The slow rate of growth is due mainly to the stagnation in agriculture. Industry has fared better, but the annual rate of increase in industrial production in the first two years of the plan has been no more than 7 percent, against a target of 14 percent. Several industries have idle capacity. While the increase in the aggregate national product has been slow investments have been at a high level. Not only has investment in strategic areas been large, but it has also been increasing at an appreciable rate. The capital market, however, continues to be in bad shape with investors' confidence at a low ebb.

All these points are well brought out in the *Pre-Budget Economic Survey and Review of Budgetary Trends*, a 26-page booklet prepared by the Indian Merchants Chamber. The facts of the economic situation are, of course, well known and the Planning Commission's mid-term appraisal of the third plan focussed attention on the lacunae and on those aspects of implementation which require special attention. In his chairman's address at the third quarterly meeting of the All-India Manufacturers Organisation recently in Bombay, Mr. Prabhu V. Mehta rightly emphasised the need for concentrating on getting the most out of the investments already made. Mr. Mehta reiterated the Organisation's plea for a thorough overhaul of the present planning techniques which emphasise the rôle of the public sector and accept taxation as the key source of larger funds. Recent evidence shows that New Delhi appreciates the situation. The Finance Minister, Mr. T. T. Krishnamachari, has announced a number of measures over the past few months for stimulating the economy, like

liberalisation of bank credit, lifting of price controls on basic commodities and raising the exemption limit for industrial licensing and capital issues. But these measures are not adequate. The Finance Minister has promised further measures to accelerate the tempo of development. In various statements Mr. Krishnamachari has indicated that he favours putting greater reliance on the profits of public sector enterprises than on taxation for raising resources. It remains to be seen whether he will take appropriate fiscal measures to restore investors' confidence and stimulate saving, investment and production.

Budgetary policy plays a vital rôle in mobilising resources and in conditioning the pattern and rate of economic growth. The task before the Finance Minister is by no means easy in view of the continuing need for larger resources for defence and development. The need will continue as long as emergency lasts. Some say that despite the build-up, defence expenditure during 1963-64 is not likely to rise to the expected level, whereas revenue receipts are likely to be large. The main emphasis in the forthcoming Budget, therefore, will have to be on such changes in the tax system as are necessary to improve the working of the economy.

Apart from urging the abolition or modification of the super profits tax, the A.I.M.O. has pleaded for a uniform rate of tax on royalty and technical know-how; treatment of foreign partnership concerns of long standing as companies for the purpose of Indian Income Tax Act; and extension of the benefit at present available for dividend income in relation to super tax so as to cover income tax also; suspension of the compulsory distribution of profits in certain companies for a period of five years; incentives and rebates on income tax on foreign exchange earned by Indian Companies through royalties, and facility of lump-sum payment to foreign collaborators for royalty and technical know-how, either (i) as consolidated revenue expenditure spread over the life of the collaboration agreement or for a maximum period of 14 years, or (ii) to be capitalised on which depreciation could be claimed. Appropriate fiscal measures alone can restore investment confidence, encourage capital formation and attract foreign capital. Economic growth in the coming years will greatly depend on foreign exchange. As the possibilities of obtaining foreign aid on a large scale are limited, the Government will need to encourage foreign equity investment.

Making Petro-chemicals in India

After waiting for a long time, the Government of India appears to have made up its mind about establishing a petro-chemical complex in the country. The chairman of the Oil and Natural Gas Commission, Mr. P. R. Nayak, held discussions in Ahmedabad recently with the Gujarat Chief Minister as well as with some industrialists whom he invited to take a minority interest in the Rs. 72-crore petrochemical complex to be set up around the Koyali refinery in Gujarat. The Kane Committee and the French expert, Dr. Henny, emphasised some time ago the great importance of developing a petro-chemical industry in India. Dr. Henny has estimated that if the industry is not indigenously developed, petro-chemical imports by 1966 would total Rs. 51 crores a year, and by 1971, Rs. 140 crores. But it is possible to manufacture, in increasing quantities, most of these petro-chemicals in India not only from coal-tar gas and fermentation of molasses, as in the past, but also from naphtha fractions from the oil refineries. It is estimated that at present, the oil refineries are producing 500,000 tons of naphtha fractions a year, and soon they will begin producing as much as 1 million tons. On the basis that it needs a minimum supply of 150,000 tons of naphtha every year to sustain a large-scale petro-chemical complex, Dr. Henny came to the conclusion that Bombay and Gujarat regions would be able to have their own petrochemical complexes by 1966, the southern region by 1968 and the eastern region by 1970. The Central Government has just taken a decision about the Gujarat petro-chemical complex and others will be set up in the future.

The production of petro-chemicals in India from naphtha—which is converted into "building stocks" by steam cracking to provide the basic raw mate-

rial for the industry—will benefit the industries producing plastics, synthetic fibres, detergents, fertilisers, industrial solvents, carbon black, synthetic rubber and many other such products. But the important thing is that there has to be a big integrated industrial complex under the "umbrella" of the main unit producing the basic raw material, which would be converted into the end-products by a number of subsidiary concerns. These units have to be located together and properly integrated so that wastage of material is avoided. The costs of production should not be increased by the heavy incidence of sales taxes and the prices charged to consuming industries should be kept low. An important aspect concerns the terms and conditions on which foreign collaboration is accepted. Various intermediate products, machinery, and technical knowledge for producing petrochemicals in the country will of course have to be imported. But it is necessary to ensure that while making use of foreign collaboration, the greatest possible use is made of locally available raw materials, and machinery and components (whose quantity will increase as the country is industrialised), and a properly integrated approach is developed for producing petro-chemicals of the right quality from different sources, namely, coal tar gas, molasses and naphtha fractions.

Budget Deficit in U.P.

The first State Government to present its 1964-65 Budget to the legislature this year is Uttar Pradesh. With revenue receipts at Rs. 223.64 crores and the revenue expenditure at Rs. 235.43

crores, the Budget shows a sizable deficit of Rs. 11.59 crores. The State Finance Minister, Mr. Kamalapati Tripathi, has indicated that the Government will come forward with some taxation measures later on to fill this gap; he probably has not proposed any additional taxation at this stage, partly because he fears that further taxation measures would provoke popular agitation and partly because he may be wanting to see what the other State Governments do before he does something himself. The other States are also not going to find it easy to impose much additional taxation. The overall level of taxation, both by the Centre and the States has already reached a high level and the people's capacity to pay more has been reduced by the inflationary rise in prices.

U.P.'s record in the past has not been bad. Although 1962-63 was expected to close with a revenue deficit of Rs. 13.35 crores, it actually closed with a revenue surplus of Rs. 1.33 crores. That was because the revenue receipts were higher, while the revenue expenditure was somewhat less than estimated. Additional taxation for that year was expected to yield a revenue of Rs. 4.57 crores, it actually yielded an additional revenue of Rs. 4.44 crores, but this would not be considered bad by any standards.

Similarly, while 1963-64 was expected to close with a revenue deficit of Rs. 8½ crores it might now close, according to the revised estimates, with a revenue deficit of only Rs. 1½ crores. But as against a revenue of Rs. 1.99 crores from additional taxation the State Government is now expected to raise only Rs. 1.06 crores as the Government could not implement the entire scheme of additional

Current News and Comment

Railway Claim to Efficiency

The railways are laying claim to a "very striking" improvement in operating efficiency, particularly in the utilisation of rolling stock. If few are bothering to dispute the claim, it is because there is for the time being no shortage of carrying capacity on most routes—a welcome change from the difficult days of 1961-62. But the change owes less to the railways than to the slowing down of economic activity which has held back the demand for transport. During 1963-64, for instance, originating tonnage is now expected to rise by only 15 million tonnes, against the increase of 17 million tonnes budgeted for. Again, the shortfalls in traffic have taken place in precisely the areas where the railways were hard-pressed—in the coal, steel and ore belts. In these three bulk commodities, traffic during the current year is expected to be 7.5 million tonnes less than the railways thought they might be called upon to carry. Although some railway equipment like box wagons may be inflexible (in the sense that this type of rolling stock cannot readily be transferred to uses other than bulk movements), the fact remains that the decline in demand for these commodities has enabled the railways to move more of general goods. An increase of 9.3 million tonnes is now expected under the latter head, against the earlier anticipation of 4.8 million tonnes. As a result, outstanding registrations have fallen sharply on both broad and metre gauges.

What has this, however, to do with efficiency? In the past five years, the railways have added greatly to their equipment, including 280 electric and 150 diesel locomotives. Tens of thousands of wagons have been acquired to strengthen the rolling stock; the addition is currently proceeding at about 3,000 wagons a month. Several hundred kilometres of track have been electrified and very large investments otherwise made on improving line capacity in other sectors. The ability to move more traffic follows as a corollary and does not by itself connote any improvement in efficiency, especially when demand continues well below the

My boy won't face facts

Kids live in a magic world of their own. Toys, bats, tricycles, picnics—and they always want more. But how far will the money go? Taxes, bills, deductions at source and life insurance premiums. So I've often to say 'no' to the boy's pleas.

He doesn't know it of course, but he is the one who's going to benefit from those premiums—not his saint of a father. There is no knowing what may happen. One may pop off like a pesky balloon or stagger around with a stick at 80!

Either way, the boy will get the education he needs to give him a fighting chance when the time comes.

It's hard to say 'no'!—Wish I was a kid again.

taxation, and the surcharge on land revenue had to be withdrawn. Thanks to the realisation of tax arrears and a bigger share in the divisible income tax pool, the U.P. Government's revenue increased and the drain on the revenue reserve fund to meet the Budget deficit was reduced.

For 1964-65, the Government is trying hard to increase the realisations from tax arrears and to economise on expenditure. But since the scope for that has been reduced, there will be some difficulty in covering the revenue deficit of the Government unless some drastic taxation measures are adopted. An interesting feature of the U.P. Budget for 1964-65 is that in spite of a huge revenue deficit, the Government has found it possible to increase old-age pensions, the dearness allowance of its servants and teachers and to provide for certain amenities to Government servants and the teachers of primary and secondary schools. In view of the huge revenue deficit, however, the wisdom of increasing non-plan and purely welfare expenditure to such an extent is doubtful.

As far as the capital outlay of Rs. 97.48 crores in 1964-65 is concerned, the major share—Rs. 75.82 crores—goes to the plan schemes. The U.P. Government would in fact be spending a sum of Rs. 122.22 crores on the third plan in the fourth year, but since part of it will be provided by the State Electricity Board from its own resources, the Budget provision is for Rs. 120.22 crores. The Central Government has given Uttar Pradesh assistance of Rs. 78.30 crores for the fourth year of the third plan, and the U.P.'s Finance Minister hopes that the Centre will give an additional Rs. 2 crores.

Prefabricated Buildings

Over the past six months the skyline of Ranchi has undergone a big change as a result of several new blocks of flats going up in record time. This has been made possible by adopting the technique of prefabricated construction. Under a Rs. 42-crore contract, Shalimar Tar Products (1935) Ltd is using this method to build 4,092 blocks of flats for the personnel of the State-owned Heavy Engineering Corporation. The buildings are to be completed within a period of 21 months, but because of the time saved through prefabricated construction, they are likely to be ready in about 18 months, thus reducing the normal building time by 50 percent.

The special feature of this type of construction is that precast components are used for the main framework of the building, walls, door and window frames, etcetera. The foundation consists of continuous R.C.C. rafts with pockets for placing the precast columns. Since thin hollow walls take the place of thick brick walls, 18 percent more living space is available from the same plinth area, with-

out sacrificing strength but at the same time providing better thermal insulation. The hollow walls help to keep houses cool in summer and warm in winter, while the concrete outer panels make the walls impervious to moisture. The contractors have also economised on the use of essential materials like mild steel rods and cement, the former by using prestressed concrete beams and the latter by using fly ash. A waste product in thermal power stations, fly ash is a bonding material which has enabled a 25-percent saving in cement. The construction cost of a prefabricated building works out to Rs. 16 a square foot, slightly less than the cost of a traditional type of house. Shalimar Tar is also constructing prefabricated houses for the Tata Engineering and Locomotive Company in Jamshedpur under a Rs. 1-crore contract.

Hindrances to Road Transport Growth

According to Press reports, the demand for commercial vehicles has fallen to such an extent that the premium which road transport operators once had to pay for a new lorry is no longer demanded (except in a few States like Uttar Pradesh and Punjab); the waiting period too has come down to about three to five months from nearly 18 months last year. That this should happen in spite of increased defence demands, is significant and shows that all is not well with the road transport industry. There has been no fall in the volume of traffic offered to the operators. Part of the bulk traffic has of late been diverted to the railways, but the loss has been made up by consumer goods producers. Therefore, the decline in the demand for commercial vehicles has to be attributed to the increasing competition among operators, to a paucity of intra-State and inter-State permits, bad roads and heavy taxes. (It is claimed that as much as 30 percent of the cost of a lorry operator is on account of taxes alone). Under these conditions, small operators particularly have suffered.

A redeeming feature of the situation, however, is that the Government appears to be keenly aware of the road operators' difficulties. At least, the speech of the Central Minister for Shipping and Transport, Mr. Raj Bahadur, at the recent conference of State Transport Secretaries and Commissioners in Calcutta, showed this. The Minister invited the participants not only to consider the question of setting up road boards for co-ordinated development, but also to offer their suggestions on the organisation of the road transport industry into viable units, on finding finance for the operators, and on taxation as it has been affecting the industry's growth. (The State Financial Corporations Act has been amended so as to make the road transport industry eligible for loans from the corporations, and this may have

eased the difficulties of operators in financing vehicle purchases, but heavy taxation, especially on services plying on inter-State routes, still remains a major impediment.) Mr. Raj Bahadur told the conference that a Study Group appointed by his Ministry was already enquiring into the taxation procedures obtaining in different States concerning vehicles plying on inter-State routes. On the basis of the Group's findings, steps would be taken to rationalise and co-ordinate the taxation procedures and to ensure that the operators were not subjected to avoidable hardship. But the Study Group could reach its conclusions within the stipulated time only if the State Governments co-operated and replied to the questionnaire quickly. Mr. Raj Bahadur suggested that the States should furnish their answers by the end of this month if the Group is to submit its report in time to be considered at the next meeting of the Road and Inland Water Transport Advisory Committee.

Discussing the specific problems of road transport development, Mr. Raj Bahadur said that the taxable capacity of the industry needed to be fairly and scientifically assessed. The operators had been complaining that Central and State taxes amounted to about 30 percent of their cost. This might be an exaggeration but the complaint needed to be investigated thoroughly. The Minister said that another point to consider was the fact that in spite of a rise in the volume of traffic and a shortfall in transport capacity, vehicles of all makes were not being readily bought. Lowering of prices could be one answer; and a suitable diversification of the manufacturing programme could be another, or a combination of the two might be necessary. He asked the State Governments to consider all these matters in detail, before they drew up their next plan for road transport development. The Central Government had formulated some "guide lines" for the States to follow in formulating their plan for the next quinquennium; the guide lines broadly were that the objectives should be defined in precise terms, targets should be firmly linked to the needs and resources available and the financial implications should be worked out carefully.

TOWN POPULATION IN INDIA

IN England the concentration of the population in the towns is a sociological problem, which, as we know, tends, year by year, to exercise the attention and excite the apprehension of reformers. In India we possess conditions which, if not precisely the reverse—for our town population is growing too—need, save in one or two instances, cause us no anxiety on the score of urban congestion. It may be taken for granted that as India's industrial and manufacturing activities develop, so, too, will the number and size and population of her cities. The Census Report shows very clearly, if indeed the fact should require demonstration, that India is, to coin a word, one of the most "cityless" countries in the world. That is big cities. The total urban population of India is returned at 29,244,221, of which total the Provinces account for 22,142,257 and the States for 7,101,964. This population is contained in 2,144 towns, a large proportion of which have populations of 10,000 to 20,000 or under. The precise classification is as follows:—

Class	No.	Population.
100,000 and over	29	6,605,837
50,000 to 100,000	52	2,414,188
20,000 to 50,000	165	4,940,251
10,000 to 20,000	471	6,457,339
5,000 to 10,000	857	5,945,905
5,000 and under	570	1,880,701

Taking 82 urban units we find that the variation in population since 1891 reveals the fact that 56 of these units have increased while 26 new a decrease. The Census Commissioner very justly observes, in noticing urban development in Europe, that the concentration in big towns which has taken place is due entirely to the development of trade and large industries for which the nineteenth century was remarkable; and it is possible that the industrial and commercial awakening of India, of which the first signs are already apparent may result in a marked increase in its city population at no distant date. The following has been the growth of city population since 1872:—

1872-1881	...	+ 9.7
1881-1891	...	+10.9
1891-1901	...	+ 6.7
Total 1872-1901	...	+27.3

A Ditcher's Diary

NEITHER SIR PATRICK DEAN NOR THE BRITISH Information Services in India can be totally surprised that the former's speech on Kashmir in the Security Council has had a poor Press in this country. The British attitude remains unhelpful, as I said at the time Mr. Duncan Sandys was unusually active in New Delhi and Rawalpindi. It needs to be pointed out still that a great deal of the Indian resentment is directly attributable to the manner in which the Press Trust of India has handled the story from New York. It seems to have been forgotten in most quarters that the job of a reporter is to report; comment is the business of the anonymous gentlemen back home who are unexcited by local moods and pressures. P.T.I. was downright incorrect in suggesting that Mr. Chagla had received any kind of assurance from Sir Alec Douglas-Home when the former met him in London before proceeding to New York. Almost every phrase of P.T.I. reports from the United Nations was loaded with comment; and a good deal of harm has been done by the agency's stupid stimulation of hope which was inevitably followed by exaggerated disappointment. I am not surprised that there has been some talk of leaving the Commonwealth. If Pakistan can periodically indulge in such talk, there is no reason why India mustn't. But what good does it do to anybody? There is much to be said against the amorphous Commonwealth; when Britain has to take a stand on an issue involving two members of the Commonwealth, unpopularity is unavoidable. Could Britain have stayed neutral on Kashmir? Even that would have been misunderstood here or in Rawalpindi, for those who swear by non-alignment are the first to refuse the right of uncommitment to others. What surprises me not a little is that Conservative Britain, preferring the status quo in most areas, such as Southern Rhodesia, should see no virtue at all in not introducing violent change in Kashmir. Britain, familiar with affairs in this subcontinent, must know that a plebiscite in Kashmir is capable of bringing into play incalculable forces affecting not only Kashmir but the whole of India and Pakistan. A better administration in Kashmir, yes. Political change, however seemingly democratic, is fraught with grave danger.

ALTHOUGH AN ANONYMOUS OPTIMIST QUIPPED SOME time ago that all the "isms" have in our time been turned into "wasms", I am not so sure. On top of communism and all that, Radio Peking has in recent months been speaking of something called "splittism", referring presumably to Titoism in Yugoslavia and rightist deviationism in Moscow. The Swatantra Party in India has found in

"statism" a convenient name for all the ills of a controlled or planned economy. Out of Africa there is always something new; and that's where my latest collection comes from. In Ghana apparently some university students did not entirely agree with Dr. Nkrumah that the one-party State and a subservient judiciary were the best props of a democracy; the faculties were soon purged of such subversive elements. But not before a contribution had been made to the world's armoury of slogans. Demonstrators outside the university, I read, shouted, "Down with bookism!" What better war cry could there be before a university? I have heard of various new gadgets in education which, I am told, can dispense with books and reading with no harm done to the quality of education. I don't believe that the students in Ghana were agitating for audio-visual education, or whatever it is called. The revolt, I suspect, is against books as such, books of any kind. And why not? I have not the time to check it with a book of quotations; but I think it was Bacon who, as long ago as that, recorded his protest against the writing of too many books. There was also something about the soul being weary of excessive reading. The philosophy is now resoundingly repeated in distant Ghana; and let the world listen. Before we exhaust our laughter, however, on the Ghana students, a local look around may be instructive. If I am not mistaken, the reading of text-books is no longer very highly regarded in Calcutta. Note-books are considered an adequate substitute. I know many people who have not read anything in hard covers in recent years; and I am not talking of the paperback boom either. Intellectual journalism has made intellectual cheating an easy discipline.

THERE ARE TWO REASONS I HAVE HEARD WHY THE British Government was so patently anxious to discourage all hope that private capital might have a significant rôle to play in the financing of the "Chunnel". One was the need to damp down speculation in the Channel Tunnel Company's shares on the London Stock Exchange, although there had already been enough of it to suggest that the news had leaked before an official announcement was made. The other reason was security, and that strikes me as being very odd indeed. I know that Britain's main objection to a tunnel since the idea was first seriously put forward at the beginning of the nineteenth century has been that it would provide too great an opportunity for a Continental invader. I have never been able to understand this line of reasoning myself. A submarine tunnel must be one of the most vulner-

able things in the world to a comparatively small charge of high explosives. As an attacking general, one would not care to order one's troops into a narrow tube which could be flooded with water at the throw of a switch. This was the case over 100 years ago; the risks would be infinitely greater in the nuclear age. So I have been wondering whether indeed the real reason why the British Government remains so fearful does not go rather deeper—an old distrust of anything to do with the Continent of Europe. I noted, for example, that the reasons Mr. Marples gave for approving the project were all economic; there was no suggestion that Britain might benefit socially or in any other way from the closer contact. And there was a marked difference between the enthusiastic tone of the congratulatory message sent by President de Gaulle to Queen Elizabeth and the coolness of the Queen's reply. It was as if the President had to be deliberately rapped over the knuckles for being so optimistic as to consider that there might now be some room to relent his previous opinion of Britain as insufficiently European in outlook. Besides being one of the most ambitious technical projects of this century, the Chunnel promises a new era in European relations. It would be a pity to spoil it so soon by evidence of lingering doubts and outdated ideas about the military and social advantages of remaining an island.

IN A DEMOCRACY, THERE'S NOTHING LIKE A LIVELY Opposition. To describe the Opposition in West Bengal as lively is to understate its explosiveness. Yet it may have done itself little good by bringing into question the change in the stewardship of Lal Bazar. The former Commissioner of Police went on leave because, as the Chief Minister put it, he was tired. In came Mr. P. K. Sen, who can justly claim a deep knowledge of the law and order problems of Calcutta. The city has been quiet since strong action was taken against the communalists and the gangsters they hired. There is reason to suppose that the peace will last; but the broader question remains whether it is right to put special emphasis on seniority in key appointments. Not as though the Government does not ignore claims of seniority when such deviations suit it; there are any number of instances of this in West Bengal and elsewhere. Whatever the rights and wrongs of particular appointments in the police force, the matter is something that falls fully within the purview of the executive; the legislature's right to criticise is not in question, but legislators must remember the effects of the debate on the morale of the police. If the legislature has misgivings on the possible effects of transfers and appointments, the subject could surely be discussed in camera. The sort of insulation the army and the police knew in the British days is no longer possible; it may not even be desirable. The fact remains that a police force, to be effective, needs a kind of discipline quite unnecessary in the civil

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in
 - consumer market surveys
 - industrial prospecting
 - readership analysis
 - economic indices
 - business research.

HOW SHALIMAR WORKS ? ...No. 7 Ship Repairers

This is an industry that has grown from the early days of nailing a tingle* on a wooden bottom (ships) to the modern practice of completely rebuilding a 10,000 ton steamer in 36 hours. The knowledge and skills required to do this are a closed book to all but ship repairers.

service; and this is not enhanced by public debate on police appointments. As it is, communal feelings are no longer unknown in the ranks of the police; provincialism is a factor not to be ignored. On top of all this, controversy in the legislature may give some policemen the idea that support from Writers' Building is not enough; lobbying may be necessary for self-advancement. I can see the police force disintegrating in the process of canvassing. No improvement is the police force wooing the Press, which I have at times noticed with regret.

IF ANYBODY ASKS ME WHAT I PREDICT FOR THE future of Cyprus, I give my answer in one word: partition. The Turks are demanding it, both those on the mainland and the ones in Cyprus. The Greek Government would not, I suspect, continue to oppose it if there was obviously no alternative short of a war with Turkey; after all, there is the safety of the much more numerous Greek minority in Istanbul to worry about. In spite of the official denials this week from Britain and the United States, they, along with other N.A.T.O. Powers, might well accept it gratefully before long too. Even the Russians, once they had swallowed their disappointment at no longer being able to fish in troubled waters, would probably be happy enough with a solution which would rescue them from the dangers inherent in moves undertaken purely for the sake of national prestige. A colleague tells me that he has recently been studying British Press reactions to the idea, and without exception they are favourable. Which seems a little puzzling to him, because all the papers he has seen continue to show, often in leading articles published on the same day and page, an inflexible opposition to another form of partition: *apartheid*. The question he asks is: if partition, or "geographical separation" as the current euphemism goes, is acceptable as a solution for nationalistic differences, as in Cyprus, or religious ones, as in India, or ideological ones, as in Vietnam, Korea and Germany, then why is it not for racial ones in South Africa? I suppose the opposition in the last case is to partition on grounds of colour, added to the fact that under *apartheid* the separation can hardly be geographical. My colleague says it is still not easy to see why colour should be any more regrettable an excuse for dividing communities than others, especially when the racial factors are easily as strong as they are in Cyprus, and when the consequences of any other solution being enforced might be equally dangerous for the peace of the world. Perhaps such analogies should not be pushed too far. But I do concede that before people become too enthusiastic about another act of territorial surgery, they might reflect that the physical separation of mutually antagonistic communities does not always offer an ideal solution to problems of this sort, even when it is both acceptable and unavoidable, as it might soon be in Cyprus.

A PREVIOUS DITCHER USED TO MAINTAIN THAT the average Briton working in India made a fetish of physical exercise to the ultimate detriment of his health. What he required was not early morning racquets but an extra ration of sleep in what was, for him, an enervating climate, and he would recount the instances of promising young Englishmen who had grown haggard with planned fitness and had to be invalided home prematurely—or maybe worse still. He used to argue the matter with great plausibility, but I was never sure whether he was serious or pulling my leg. I am put in mind of those earlier days by a recent contribution of Ian Wooldridge to his paper, the *Daily Mail*. Wooldridge has been covering the M.C.C. tour of India and he points out that whereas ten of the 15 highly trained and athletic cricketers have been stricken with illness for anything from two days to a week, only two of the nine journalists have suffered to any extent. This, he claims, supports the theory of the "survival of the unfittest". Also it may be accounted for grace to the authorities that the touring journalists were allowed to have flown out to them twelve cases of Scotch. If there is any left by the time the tour ends, I will gladly take it over at cost to save them the trouble of shipping it home.

THE DITCHER

Guide for Investors

INDIAN ALUMINIUM SHARES RISE ON GROWTH PROSPECTS

THE ordinary shares of Indian Aluminium Co. Ltd have risen to Rs. 31.37 due to the excellent results achieved for 1963, combined with growth prospects. The Company is at present engaged in expanding the smelting capacity to 10,850 tons of aluminium ingots a year in Alupuram. It has also undertaken to set up a foil rolling mill in Kalwa, Maharashtra State, with a capacity of 2,500 tons a year. Both the projects are proceeding according to schedule and it is expected that the new facilities will be commissioned by next year. The Company has been granted an industrial licence for further expansion of the Alupuram smelter to 15,850 tons a year and for installing a rod mill for the conversion of this additional smelter output of 5,000 ingot tons into electric conductor rods. Preliminary steps have already been taken to implement these plans.

The profit has improved from Rs. 1.3 crores for 1962 to Rs. 1.6 crores for 1963, after providing Rs. 1.2 crores (against Rs. 1.1 crores) for depreciation, Rs. 7.5 lakhs (against Rs. 61.5 lakhs) for development rebate reserve and Rs. 2.1 crores (against Rs. 52.5 lakhs) for taxation. Sales rose from Rs. 10.5 crores to Rs. 13.9 crores. The increase in sales and profit has largely been due to the additional output obtained from the production facilities commissioned during 1961 and 1962. The taxable ordinary dividend of 17.5 percent, including a final of 10 percent, has been repeated but it is on an increased share capital. The yield amounts to 5.6 percent at the present price.

Elgin Mills to Issue Centenary Bonus

THE ordinary Rs. 10 shares of Elgin Mills Co. Ltd have been hesitant around Rs. 21.75 due to the decline in the profit earned for the year ended September 1963. It has dropped from Rs. 67.79 lakhs for 1961-62 to Rs. 41.89 lakhs for 1962-63, after transferring Rs. 14.05 lakhs (against Rs. 11.27 lakhs) to depreciation and Rs. 6.59 lakhs (against Rs. 2.19 lakhs) to development rebate reserve. The taxable ordinary dividend of 17.50 percent has been repeated to absorb Rs. 11.03 lakhs. The yield works out to 8 percent at the present price. Taxation is allocated Rs. 23 lakhs (against Rs. 35.50 lakhs), rehabilitation reserve Rs. 9.50 lakhs (against Rs. 19.50 lakhs), capital reserve Rs. 34,654 (against Rs. 13,17 lakhs) and dividend reserve Rs. 12.44 lakhs. The proposed dividends will be paid out of the latter reserve. Super profits tax relating to the previous year absorbs Rs. 8 lakhs and there will be no liability for this tax for 1962-63 due to the large capital expenditure incurred. The Company will be entitled to substantial depreciation and development rebate for the capital expenditure incurred.

Sales rose from Rs. 6.31 crores to Rs. 7.23 crores. The smaller profit has largely been due to rising prices of cotton, labour and various stores. The prices of cloth cannot in the meantime be raised due to official control. The Company has also sold considerable quantities of goods to the Government at marginal profits to meet defence requirements. Export sales dropped because of keen competition in foreign markets but

the demand for cotton textiles from abroad has improved since. So the directors hope for an improvement in exports during the current year. The modernisation scheme has made progress. The installation of further 12,000 spindles should be completed soon and they may begin production by the end of the current year. It is also proposed to set up additional 6,500 spindles in the near future. The Company will complete 100 years of its existence in 1964. To celebrate the occasion, the directors propose to issue bonus shares by capitalising reserves of Rs. 31.50 lakhs in the proportion of one bonus share for every two ordinary or vendors' shares held. An application has been made to the Controller of Capital Issues for the necessary sanction.

Shareholders to Examine Premier Auto Affairs

THE adjourned annual general meeting of the shareholders of the Premier Automobiles Ltd, which lasted five-and-a-half hours, was quite a stormy affair. The shareholders were indignant over the Company's disappointing performance during the year ended June 1963, when sales declined from Rs. 21.48 crores to Rs. 20.12 crores, the gross profit dropped from Rs. 163.67 lakhs to Rs. 118.81 lakhs and the dividend had to be skipped. The management's explanation that the decline in profit was due to the drop in the production of Fiat cars as a result of the cut in foreign exchange allocations and rise in the cost of raw materials and components, especially indigenous items, overheads and interest charges, failed to carry conviction with the shareholders. They insisted that a committee of shareholders be appointed to look into the Company's affairs and discuss with the management every month the financial position. The shareholders also pleaded for a representation on the board of directors and suggested the payment of an interim dividend. A prominent shareholder charged that the Company's expansion was being implemented at the cost of the shareholders' blood and that such expansion would not be permitted.

Unable to convince the shareholders that the Company's disappointing performance during 1962-63 was due to reasons beyond the management's control, the chairman, Mr. Lalchand Hirachand, agreed to appoint a committee of shareholders to look into the Company's affairs in order to improve its working. While making no commitment, the chairman assured the shareholders that he would be willing to discuss with the shareholders' committee the question of declaring an interim dividend. Mr. Lalchand Hirachand struck a note of cautious optimism about the current year's working and future prospects. Although production during the first seven months of the current year at 6,171 vehicles was less than the previous year's corresponding figure of 6,193, he assured the shareholders that production would improve in the remaining five months.

Mr. Hirachand indicated that with the sheet metal plant going into production by June, the monthly output of cars would rise to 600 immediately and to 700 vehicles in a few months thereafter. He informed the

shareholders that the indigenous content of Fiat cars was now 62 percent to 63 percent and of lorries 80 percent to 82 percent. He disclosed that the L.I.C. held 97,207 shares in the Company on 27th January, 1964, against 93,780 shares a year ago. The Company expected a bonus liability of Rs. 10 lakhs for the previous years, and, under the Lakdawala Committee's recommendations, it might have to pay an additional Rs. 7 lakhs to Rs. 8 lakhs by way of increased dearness allowance.

Maharashtra Sugar Fares Well

THE preliminary report on the working of the Maharashtra Sugar Mills for the year ended September 1963 shows an appreciable improvement over the previous year's performance. The gross profit has gone up by about 37 percent from Rs. 65.59 lakhs to Rs. 89.91 lakhs. Although the dividend has just been maintained at 14 percent, the amount to be distributed among the equity shareholders is substantially larger at Rs. 26.46 lakhs (against Rs. 18.90 lakhs for 1963) because it is on the increased capital as a result of the two-for-five bonus issue. After providing Rs. 4.51 lakhs (against Rs. 4.79 lakhs) for depreciation, Rs. 77,000 (against Rs. 12,000) for development rebate and Rs. 48.60 lakhs (against Rs. 36.50 lakhs) for taxation and deducting other prior charges, the net profit amounts to Rs. 27.66 lakhs, against Rs. 18.58 lakhs for the preceding year. With Rs. 7.68 lakhs brought forward from the previous year and transferring Rs. 3 lakhs from the reserve for depreciation on investments, the disposable surplus amounts to Rs. 38.34 lakhs. The directors have provided Rs. 6 lakhs (against nil) for dividend equalisation reserve, Rs. 5 lakhs (against nil) for general reserve and taken Rs. 27 lakhs to the dividend reserve. The proposed equity dividend will absorb Rs. 26.46 lakhs (against Rs. 18.90 lakhs) and preference dividend will take up Rs. 50,000 (the same). These dividends are to be paid out of the dividend reserve.

The Company's improved working during 1962-63 is attributed to the increase in the production of sugar and in the sugarcane yield. The working of the Company's distillery, it is reported, has also been better than in the preceding year. The sales of sugar were brisk throughout the year and stocks were low. The Company exported 33,363 bags of sugar on which it suffered a loss of Rs. 5.16 lakhs. It is proceeding with the expansion of the sugar factory though there has been a delay in the supply of machinery. It is, however, expected that the machinery will be delivered shortly and the increased crushing capacity will be achieved during the current year. The Rs. 50 fully paid share of Maharashtra Sugar is currently quoted around Rs. 134, offering a gross return of a little over 11 percent.

Eastern Investments Earns More, Pays Less

EASTERN Investments Ltd has made a profit of Rs. 13.77 lakhs for the year ended December 1963, compared with one of Rs. 11.15

lakhs in the previous year. The taxable ordinary dividend has been reduced from 12 percent to 10 percent to absorb Rs. 7.69 lakhs. Taxation is allocated Rs. 4.85 lakhs (against Rs. 3.96 lakhs) and general reserve Rs. 1.15 lakhs (against Rs. 18.504). The carry-forward amounts to Rs. 1.51 lakhs, against Rs. 1.33 lakhs brought in. The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of some shares costing Rs. 1.01 lakhs for which no quotations are available. The total market value of all investments, together with unquoted investments, exceeds the book value by Rs. 51.73 lakhs as on 31st December, 1963. A sum of Rs. 1.15 lakhs representing the net profit made on the sale of investments has been added to the accounts.

Dalmia Iron and Steel Does Better, Pays the Same

DALMIA Iron and Steel Ltd has produced satisfactory results for the year ended September 1963. Sales rose from Rs. 1.82 crores for 1961-62 to Rs. 2.17 crores for 1962-63. The net profit has improved from Rs. 22.94 lakhs to Rs. 26.73 lakhs, after increasing depreciation from Rs. 10.71 lakhs to Rs. 13.36 lakhs. Bringing in Rs. 1.09 lakhs, the total available balance amounts to Rs. 27.82 lakhs. The taxable ordinary dividend of 10 percent has been repeated to absorb Rs. 8 lakhs, which will be paid out of the dividend equalisation reserve. Development rebate reserve is allocated Rs. 4.50 lakhs (against Rs. 3 lakhs), taxation Rs. 8.75 lakhs (against Rs. 7.50 lakhs), general reserve Rs. 4.50 lakhs (against Rs. 5 lakhs) and dividend equalisation reserve Rs. 10 lakhs. The carry-forward is Rs. 6,868.

There has been an all-round improvement in output. The production of grinding media has risen from 3,560 tons to 4,481 tons, and that of steel castings from 1,006 tons to 1,760 tons. The production of spun iron pipe has, however, declined from 14,473 tons to 14,349 tons due to the fact that there has been a shortage of pig iron. The quota of pig iron for the Company has been reduced from 20,000 tons to 16,000 tons a year. But the directors hope that the cut will be restored soon, since the Government has decided to increase the supply of pig iron. It may also be partly imported in the near future.

The production capacity for spun iron pipe amounts to 45,000 tons a year. The production of all departments has generally been hindered by the shortage of electric power, but the supply has improved since February 1963. As for the steel foundry, the rated capacity could not be achieved as the necessary equipment from France under the French credit arrangement could not be had. The Company is now trying to import equipment from the U.S.A. under D.L.F. aid. The directors hope to implement the project in the near future. As soon as the imported equipment arrives, the rated capacity will be reached. Steps have in the meantime been taken to increase the production by installing indigenous equipment. It is expected to put a new furnace into operation by July 1964, and the Government of West Bengal has sanctioned the additional power supply. The Company has entered into an annual rate contract with the Director-General of Supplies and Disposals, Government of India, for the supply of spun iron pipe and it is hoped that the bulk of the production will be absorbed by this order. The Company has, therefore, terminated

the selling agencies of all agents for span iron pipe.

I.C.I.C.I. Does Well, Pays More

THE Industrial Credit and Investment Corporation of India Ltd has raised the dividend for the year 1963 from 6.5 percent to 7 percent and this is fully justified by the Company's improved performance during the year. According to the preliminary report, the net profit after depreciation and taxation amounts to Rs. 57.88 lakhs, compared with Rs. 46.38 lakhs for 1962. A sum of Rs. 14.50 lakhs (against Rs. 11.60 lakhs) has been set aside for the special reserve in terms of Article 163 of the Articles of Association and a sum of Rs. 11 lakhs (against nil) has been transferred to general reserve. Out of the balance, together with the amount brought forward from the previous year, the proposed dividend will absorb Rs. 35 lakhs (against Rs. 32.50 lakhs). The directors have decided that hereafter no transfer and splitting fees be charged to the shareholders. The Rs. 100-paid share of the I.C.I.C.I. is currently quoted around Rs. 95, offering a gross return of about 7.8 percent.

Sirsilik Results Disappoint

THE Sirsilik Ltd has reported very disappointing results for the year ended September 1963. Although the sales have been well maintained at Rs. 2.76 crores, the gross profit is heavily down from Rs. 55.8 lakhs to Rs. 29.22 lakhs. This is partly due to the labour strike which continued for about a month during the year. The profit margin was also affected by the increased cost of production as a result of the higher cost of coal, dyes and chemicals, salaries and wages and emergency insurance. In view of the inadequacy of the profit, the directors have not provided full depreciation which works out at Rs. 40.14 lakhs. The provision of depreciation amounts to Rs. 22.26 lakhs, against Rs. 46.58 lakhs. The total arrears of depreciation, calculated on the "straight line" basis, from the inception of the Company add up to a staggering sum of Rs. 240 crores.

After providing Rs. 1 lakh (against Rs. 8 lakh) for contingencies and Rs. 5 lakhs (against nil) for reserve for contingencies, there remains a balance of Rs. 84.714 to be carried forward, against Rs. 85,759 brought in. The preference dividend has again been skipped and arrears of preference dividend add up to Rs. 1.08 crores, against the preference capital of Rs. 2 crores.

With the successful conclusion of a five-year agreement with labour, the directors look forward to better working results for the current year. The Company is going ahead with its expansion and modernisation programme. It has entered into a collaboration agreement with Celanese Corporation of America and necessary steps are being taken to implement the expansion programme.

Ravalgaon Sugar Farm Results Impress

THE 2 percent increase in the dividend from 10 to 12 percent by the Ravalgaon Sugar Farm Ltd for the year ended September 1963 provides little indication of the Company's impressive performance during the year. As against an increase of about 23 percent in the

sales from Rs. 1.90 crores to Rs. 2.34 crores, the gross profit has shot up by 50 percent from Rs. 17.65 lakhs to Rs. 26.46 lakhs. After providing Rs. 6.12 lakhs (against Rs. 7.79 lakhs) for depreciation, Rs. 30,000 (against Rs. 43,000 for development rebate reserve and Rs. 9 lakhs (against Rs. 4.25 lakhs) for taxation, the net profit amounts to Rs. 9.19 lakhs, against Rs. 4.12 lakhs in 1961-62. The directors have set aside Rs. 1.81 lakhs for debenture issue expenses and the balance of Rs. 7.65 lakhs has been transferred to general reserve. The preference dividend of Rs. 1.10 lakhs (the same), deferred dividend of Rs. 28,000 (the same) and equity dividend of Rs. 3.60 lakhs (against Rs. 3 lakhs) are to be paid out of the general reserve.

The Company's factory crushed 109,527 tonnes of sugarcane during the season producing 134,495 bags of sugar at an average recovery of 11.37 percent. The previous season's figures were 120,962 tonnes of sugarcane, 142,690 bags of sugar and 11.63 percent recovery. The confectionary plant produced 1,742 tonnes (against 1,737 tonnes) of confectionary and 973 tonnes (against 910 tonnes) of sugar candy. The output of wax from cane-mud increased from 8,893 kilograms to 13,328 kilograms. Exports of sugar amounted to 29,334 bags.

Burma Corporation Results

THE results of the Burma Corporation (1951) Ltd, which is jointly owned by Burma Mines Ltd and the Union Government of Burma, for the quarter ended 30th September and the 15 months up to that date, have been published. The mining operations for the quarter showed rises in ore extraction, milling and in the output of all marketable products with the exception of silver, compared with the previous quarter. The substantial increase in gross revenue arises from the general increase in the market prices of the products and, there were larger stocks of metals on hand. The gross revenue amounted to £2,855,220 for the 15 months ended September 1963. Expenditure has been shown at £2,493,578 and depreciation at £2,599,958. The operating profit has, therefore, amounted to £255,262, out of which a sum of £38,403 has been deducted for contributions to U.N. Special Fund project investigations. It has been stated that from the commencement of the United Nations Special Fund project investigations in February 1962, until 30th September, 1963, the Corporation has contributed a total sum of £70,024 towards the cost of the project, against its total commitment of £103,305. The Corporation showed a debit balance of £351,951 for the year ended June 1962, which will have to be eliminated by subsequent profits.

Nil from Gwalior Sugar

IN their report for the year ended June 1963, the directors of the Gwalior Sugar Co. Ltd take a gloomy view of the prospects for 1963-64. The cane crop has suffered greatly due to the failure of rains. So an acute shortage of cane is likely. The factory may have to close much earlier than expected and it is doubtful whether it will succeed in crushing even the minimum quantity of cane.

The profit amounts to Rs. 2.42 lakhs (compared with Rs. 33,608 for 1961-62) after providing Rs. 1.47 lakhs (against Rs. 1.38 lakhs) for depreciation. The

dividend has been passed and taxation absorbs Rs. 58,000. Development rebate reserve is allocated Rs. 39,261, leaving a carry-forward of Rs. 4,837, against Rs. 10,342 brought in. The cane crush declined from 1 million quintals to 814,734 quintals, but recovery rose from 8.88 percent to 9.62 percent. The Company has incurred a loss of Rs. 2.80 lakhs on exports. Its expansion scheme has made some progress.

Madura Sugars Earns Less

SALES and profits of the Madura Sugars and Allied Products Ltd for the year ended July 1963, have recorded a decline, compared with those for the previous year. Due to the substantial drop in profit, the dividend has been reduced to 8 percent from the previous year's 11 percent. The profit, before taxation, amounts to Rs. 5.35 lakhs, after providing Rs. 78,464 for depreciation. This compares with the previous year's net profit of Rs. 10,44,077, after providing Rs. 82,111 for depreciation. With Rs. 5,057 brought forward, the total surplus available for appropriation comes to Rs. 5.40 lakhs. Out of this, provision for taxation amounts to Rs. 3.04 lakhs (against Rs. 5.34 lakhs). Income tax for previous years amounts to Rs. 18,004. Rehabilitation reserve gets Rs. 55,000 (against Rs. 3 lakhs). The dividend at 8 percent accounts for Rs. 1.60 lakhs (against Rs. 2.20 lakhs). The balance of Rs. 3,126 is carried forward.

The quantity of sugarcane crushed during the year was less than in the previous year due to a reduction in the supply of cane caused partly by the diversion for manufacture of jaggery and partly by unfavourable weather conditions. So the factory worked only for 222 days in the year, against 262 days, with a consequent fall in production. Sales amounted to Rs. 68,07,037 (against Rs. 73,78,174). For the 1962-63 season, the price of sugarcane for the Company's factory was Rs. 43 a tonne, while the rate for 1963-64 season is Rs. 47 a tonne. The quantity of sugar exported during the year was higher by about 2,000 bags, causing a fall in revenue. The Company has made an application to the Government for permitting it to increase the present capacity to 1,000 tons a day.

Cochin Refineries Share Offer

COCHIN Refineries Ltd is offering 58,000 equity shares of Rs. 100 each for public subscription to raise part of the funds required for its huge project, which is estimated to cost Rs. 22.7 crores. The subscription list will open on 21st February and close on 27th February. The refinery, which will be located near Cochin (Kerala State), will make use of advanced design to produce various petroleum products. The refinery will have an initial capacity of 2.5 million tons, but it is designed for expanding up to about 3 million tons. The products will be about 20 percent kerosene, 20 percent diesel, 20 percent to 25 percent fuel oil and 19 percent petrol. The foreign exchange cost of the project will be met by the export of surplus gasoline which is estimated at over 100,000 tons a year when the refinery will be in full production. The refinery is expected to yield a net foreign exchange saving of \$18 million a year.

Phillips Petroleum Company of the U.S.A., which is collaborating in the venture, has completed the basic design and engineering specification of the refinery. It will be responsible

for the construction, commissioning and technical operation of the refinery. The construction work is about to begin shortly. The refinery will go on stream by about the middle of 1965 and may reach full capacity by the end of the year.

The issued capital of the Company will be Rs. 7 crores—all in equity shares of Rs. 100 each. Of this, the Government of India will subscribe Rs. 3.57 crores (51 percent), the Government of Kerala Rs. 50 lakhs, Phillips Petroleum Company Rs. 1.75 crores, Duncan Brothers and Co. Ltd Rs. 14 lakhs and the Life Insurance Corporation Rs. 46 lakhs. The balance of Rs. 58 lakhs is being offered for public subscription. The public issue has not been underwritten, but Phillips Petroleum has offered to take up without charging any commission any shares which are not subscribed by the public.

Nil from Sri Palamalai Ranganathar Mills

DUE to the loss incurred for the year ended March 1963, the directors of Sri Palamalai Ranganathar Mills Ltd have passed the dividend. Sales of finished products amounted to Rs. 37.46 lakhs, against Rs. 39.53 lakhs for the previous year. There is a net loss of Rs. 2.37 lakhs after providing Rs. 1.59 lakhs for depreciation. This compares with the previous year's net loss of Rs. 23,750 after providing Rs. 1.63 lakhs for depreciation. Adding to the year's loss of Rs. 2.37 lakhs, the brought forward loss of Rs. 2.19 lakhs (Rs. 60,700 being bonus for the previous year and Rs. 3,040 being donations) there is a total loss of Rs. 5.20 lakhs which is carried forward to the next year.

The directors say that the main reason for the loss is the decline in the price of staple fibre yarn. Further, the price of yarn was not in tune with the high price of cotton. It is also reported that the machinery is old and so productivity has declined.

New Capital Issues

THREE companies have been authorised to raise capital totalling Rs. 10.90 crores. They include Indian Refineries, a Central Government undertaking, which is issuing equities worth Rs. 9.15 crores. Another company, proposed to be incorporated as a Central Government undertaking, is also issuing equities. The third, a private company, will issue 7 percent 15-year debenture stocks. The consent of the Controller of Capital Issues is valid for 12 months in all the cases.

The Indian Refineries issue will consist of 91,500 equity shares of Rs. 1,000 each to be issued at par. Of this shares to the value of Rs. 90 lakhs will be issued for consideration other than cash and the balance for cash. The capital will be utilised to finance the Barauni and Gauhati refineries and the pipe-lines project.

The Central Road Transport Corporation Ltd., New Delhi, the second firm, will issue 50,000 equity shares of Rs. 100 each, 50 percent of which will be issued for consideration other than cash and the balance in cash. The money will be utilised to maintain the movement of supplies in the States of Assam, Bihar, etc.

The debenture issue of Indian Oxygen Ltd., Calcutta, is valued at Rs. 1.25 crores and is intended for the Company's scheme of expansion in Bombay, Calcutta, Madras and Vishakhapatnam, estimated to cost Rs. 6.10 crores.

The Stock Markets

BUDGET HOPES KEEP SHARES QUIETLY STEADY

Wednesday Evening.

THERE has been a slight improvement in the Calcutta stock market during the past week. The turnover has nevertheless been small, and is largely confined to clearing shares. Operators are unwilling to extend their commitments before the Budget, which will be presented to Parliament ten days hence. Lyons Range is hopeful, considering that Mr. T. T. Krishnamachari, Central Finance Minister, is keen to stimulate economic activity. Although support has been cautious, the selling pressure has lessened. The technical position of the market has improved due to the earlier shake-out.

Investors are disturbed by the recommendations of the Bonus Commission. Since it has recommended that a large part of the profits should be paid as bonus to workers, it is feared that companies will have very little money to plough back into the business. If the recommendations were implemented fully, the dividend outlook would deteriorate. Companies would find it extremely hard even to maintain their present dividends.

The turnover in cash scrip has been negligible and fluctuations have been narrow. The attention of investors has for the time being been diverted to new issues, which have absorbed large funds in recent weeks. The inauguration of the Unit Trust of India has attracted attention. Although Press reports indicate that the Unit Trust has already bought some shares, it looks as though the trust will buy and sell shares on the basis of tenders and offers rather than through open-market operations. It is expected to concentrate its attention on good shares which pay attractive dividends, so it is wondered whether the shortage of such scrip will grow. In fact, the shortage has already been felt due to the substantial purchases made by the Life Insurance Corporation.

Indian Iron have been steady due to rumours about the decontrol of steel although the advantages of decontrol are not certain. Whether the producers will benefit or not depends on the extent of decontrol. Among engineering shares, attention has been concentrated on Texmaco, Guest, Keen, Williams, Indian Standard, Wagon and Burn. Kumardhubi have gained on the prospect of bonus and rights share issue. Dalmia Iron has met with scattered support due to a good report.

Clearing shares in the miscellaneous section have gained on replacement purchases. Hindustan Motors, Indian Copper, Indian Cable, Kesoram Industries, Dunlop Rubber, Indian Aluminium and Rohtas have been active. Alkali Chemical, Union Carbide, Anglo Brothers, Indian Oxygen and Associated Battery are steady. Electric company shares have been sluggish and small business has been transacted in Calcutta Electric. Paper shares are quietly steady. Orient, Sripur, Shree Gopal and Titagarh have changed hands. Sugar shares have been neglected as the production outlook for the current season is poor.

Turnover in jute shares has been confined to selected scrip like Birla, New Central, Howrah, Anglo-India, Union, Ganges and Megna. The decline in the prices of jute goods, combined with the steadiness of fibre, has made investors cautious. Stray

business has been done in coal shares, Burrakur, Central India and Bengal have been taken. In cotton mills, Jay Shree Textiles, Bharat Commerce and J. K. Cotton have gained on replacement purchases. Elgin have been sluggish since the Company has made a smaller profit. Few transactions have been recorded in the tea section. Investors are hesitant due to the decline in the north Indian crop and in the average price of the commodity, particularly at the Calcutta auctions. Support has been confined to selected Assam and Doora scrip.

Government securities are quiet and dull. Institutional support is poor as the busy season is in full swing. Prices of short- and medium-dated stocks have been maintained and scattered support has been extended to selected State Government loans. The 3 percent Conversion loan 1968 is quoted at Rs. 63.50.

Bombay

MARKET REMAINS STEADY BUDGET DOUBTS LIMIT TURNOVER

Wednesday Evening.

THE Bombay stock market has been steady during the past week, but turnover has been restrained in view of the approaching Budget. Fears about further taxation on the corporate sector have receded into the background for the time being in the belief that Mr. T. T. Krishnamachari, Central Finance Minister, is likely to give incentives to promote production. The new account has started well, although support has largely been confined to selected scrip. Scindia Steam, in particular, have been active due to an improvement in the international freight market. Century have met with knowledgeable support on prospects of expansion. Investors are nevertheless inclined to wait until the Finance Minister presents his financial proposal, on the last day of February.

Tata Steel ordinary have closed at Rs. 146 and pressure has declined due to rumours of decontrol of steel. Among engineering shares, attention has largely been confined to Tata Locomotive on hopes of an increase in production. Mukand Iron and Premier Construction have met with scattered buying. Larsen and Toubro and Alcock Ashdown have been sluggish. Motor-vehicle shares have fluctuated within a narrow groove. Hindustan Motors and Premier Automobiles have been transacted.

Century have been prominent in cotton mills, although this scrip has reacted slightly towards the close due to profit-taking. Bombay Dyeing, Kohinoor, Morarjee, Svadeshi and Kokak have been steady. India United ordinary, Simplex and Standard have reacted due to profit-taking.

Turnover in miscellaneous shares has declined considerably, although selling pressure has been conspicuous by its absence. Among steamship companies, Scindia Steam have gained on prospects of improved working. Sugar shares have been

quietly steady. Belapur and Walchandnagar Industries have changed hands. Mining shares have been subdued, and Shivrampur Syndicate have been easier on a predominance of sellers. In cement shares, Associated Cement have attracted support. Rayon shares have been fancied. National Rayon have forged ahead on replacement purchases. Chemical shares have shown mixed trends. Tata Chemical have been steady, while Indian Dyestuff have reacted on pressure. Voltas have gained on prospects of expansion.

Bank shares have been sluggish, but fluctuations have been narrow. Bank of India and Bank of Baroda have changed hands. Among electric company shares, Ahmedabad, Bombay Suburban and Tata Hydro have been fairly active.

Madras

PLANTINGS GAIN SLIGHTLY CAUTIOUS ATTITUDE AT THE CLOSE

Tuesday Evening.

FOR the Madras stock market the past week has closed on a steady note. Although support has been selective, prices of good planting and miscellaneous shares have

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

gained slightly. Scattered support for clearing shares has been forthcoming from outside sources. Towards the close, investors have turned cautious in view of the Budget. The trend is not expected to take a decisive turn until the Budget is presented.

Selected State Government loans have been steady due to scattered institutional support. Bank shares have been sluggish, and stray business in Canara has passed around Rs. 81.50. In electric companies, South Madras have been transacted at Rs. 11.10 and Cochin at Rs. 12.25. Selected sugar shares have improved slightly towards the close. Decan have recovered to Rs. 11.90 and Andhra to Rs. 17.36. E.I.D. have, nevertheless, reacted to Rs. 36.75 on profit-taking. Interest has been shown in Mysore at Rs. 44.65 and K.C.P. have been available at Rs. 22.85.

In the planting section, Blue Mountain have changed hands at Rs. 2.40 and Cochin Malabar at Rs. 6.40. Consolidated Coffee have been transacted at Rs. 20 and Ouchterlony at Rs. 4.20. Periakaramalai have been quoted at Rs. 3.50. Thirumbadi have been steady at Rs. 1.95 due to the payment of a taxable ordinary dividend of 10 percent. Devashola have been bought up to Rs. 24.60 on declaring an interim taxable ordinary dividend of 7.5 percent. Nelliampathy have been steady at Rs. 3.72. Parkside at Rs. 26.33 and Kil Kotagiri at Rs. 4.90. Among coffee shares, interest has been taken in Amalgamated at Rs. 10.01 and in Lingapur at Rs. 5.10.

In textiles, South India Viscose have been steady at Rs. 140.50 and Travancore Rayon at Rs. 25.65. Madura have been firm at Rs. 35.85, but Lakshmi at Rs. 1.32 show little change. Bangalore Woollen have re-

acted to Rs. 236 and Buckingham to Rs. 292. Coimbatore Pioneer have been sold down to Rs. 258.50, but Metur have been steady at Rs. 286. Radhakrishna have been bought up to Rs. 30 and Ramakrishna have been transacted at Rs. 217.80.

In the miscellaneous section, Aluminium Industries have hardened to Rs. 18.87, but Ashok Leyland have lost at Rs. 7. Among cement shares, Dalmia have been steady at Rs. 12.50 and India Cement at Rs. 5.75. Southern Structural have quoted Rs. 11 in the engineering section. F.A.C.T. have been freely offered down to Rs. 5.70, but Seshasayee Paper have attracted support around Rs. 7.70. Enfield have been steady at Rs. 10.35 and Standard Motors have been wanted up to Rs. 10.33. Parry's Confectionery have been taken at Rs. 3.50, but Macras Rubber have been freely sold at Rs. 13.90. Spencer have quoted Rs. 21.50 and Textool

Rs. 144. Andhra Scientific have met with support up to Rs. 14.20 and Binny have been taken at Rs. 282.

Textiles are major earners of Foreign Exchange— the label 'Sanforized' can help increase Cotton Exports!

Over 3500 years ago, textiles headed India's list of exports; Arab dhows carried them to Persian Gulf ports and they were sold in the markets of Greece and Rome. Everywhere, Indian fabrics were richly prized and highly priced. Today, they are still major earners of foreign exchange—and will earn more in the future as Indian mills produce increasing quantities of better quality, finished cloths and new foreign markets are tapped. The label 'Sanforized' can be

of tremendous help in the sale of Indian cottons abroad. Recognised the world over, this trademark is known and trusted by millions of consumers in 49 countries as denoting a uniform standard of shrinkage control. In India, the label 'Sanforized' has helped to improve the quality and enlarge the variety of cotton fabrics. In the markets of the world, the label 'Sanforized' can be of inestimable benefit by helping to build bigger, more profitable textile exports.

London

PAYMENTS POSITION AFFECTS TRADING

GILT-EDGED LOWER ON INTEREST RATE FEAR

London, 19th February.

A SUSTAINED rally was recorded in the stock market prior to the week-end, but much of the improvement was lost subsequently. On balance, therefore, prices of industrial equities were only a little higher. Gilt-edged by contrast remained out of favour and recorded small losses on the week. The early improvement in industrials followed the return of buyers after their long absence. The subsequent reaction followed week-end comment on the payments position and talk of a rise in interest rates. Meanwhile, of course, political uncertainties continued as the most potent factor in the market. Business throughout was at a low level and the market remained very sensitive. Gains in leading industrials were reduced substantially in subsequent reaction, but prices then steadied to show small rises on the week. Banking and insurance shares moved similarly, but property shares had a quiet week. The strength of tin shares, which moved up sharply, was the outstanding feature of mines. De Beers made further headway, but lost most of the fresh rise following the unchanged dividend. Golds were somewhat better on balance, but coppers fluctuated narrowly. Early gains in leading oils were halved later. Rubbers were in better form, but tea shares drifted lower. Dollar stocks moved up in response to Wall Street, but the gains were reduced later.

ANNUAL GENERAL MEETING OF BENGAL CHAMBER

The annual general meeting of the Bengal Chamber of Commerce and Industry will be held at 3 p.m. on Friday, 21st February, in the Royal Exchange, Calcutta. Mr. A. R. Foster, president of the Chamber, will preside.

BANK CREDIT EXPANDS: HIGHER DEPOSIT RATES NEEDED

(BY A SPECIAL CORRESPONDENT)

There has been a big expansion in bank credit during the current busy season although deposits have fallen. Scheduled banks should try to attract more deposits by offering higher interest rates in order to strengthen their resources.

ACCORDING to the scheduled bank returns for the week ended 7th February, bank credit has increased by Rs. 23.7 crores to Rs. 1,712.5 crores. The sharp expansion in credit has taken place in spite of a fall of Rs. 12.6 crores in aggregate deposits to Rs. 2,265.7 crores. Time deposits have declined by Rs. 7.6 crores due mainly to the transfer of U.S. counterpart funds (Rs. 6 crores) from the State Bank of India to the Reserve Bank of India. The banks have had to

reduce their investments and borrow from the Reserve Bank to meet the shortfall in their resources. So investments are down by Rs. 27.4 crores and borrowings from the Reserve Bank have risen by Rs. 11.3 crores during the week. Since the commencement of the busy season in November 1963, bank credit has expanded by Rs. 243 crores, as against Rs. 126 crores in the corresponding period of the 1962-63 busy season. Thus credit expansion during the

current busy season is nearly twice that of a year ago.

The busy season usually attains its peak during April. April is still some six weeks away. The credit-deposit ratio is now hovering around 75 percent, as against 73 percent at this time last year. The current rate of credit expansion has taken the bankers by surprise. This is because credit expanded during the entire 1962-63 busy season by Rs. 204 crores,

whereas the credit expansion during only the first three months of this season has exceeded that figure. The accelerated credit expansion during the current busy season is not entirely unexpected. Industrial production has been running 7 percent to 8 percent higher than last year. Naturally, this has increased the demand for bank credit. It is also possible that some new projects have come to fruition during the busy season. Again, exports have been considerably higher than in the corresponding period a year ago. Above all, there has been an appreciable increase in the price level—the wholesale price index has gone up by more than 10 points since the last Budget. If the present rate of expansion continues, it is possible that bank credit will touch a new high of Rs. 350 crores during this busy season.

An explanation for the bigger credit expansion lies in the liberal policy pursued by the Reserve Bank on the eve of the 1963-64 busy season. The Reserve Bank has not only made credit easier by substituting a two-tier interest rate instead of the previous tiers but has also announced a policy of liberal credit for productive purposes. The Reserve Bank probably did not expect that credit would swell so much when it relaxed its policies. This is evident from the fact that it has had to impose restrictions on bank advances against paddy and rice. Unless the Reserve Bank reorients its policy to restrain credit in specific directions to check the rise in prices, it is likely that the credit-deposit ratio will rise rapidly. The higher liquidity ratio prescribed for the banking system by the Reserve Bank from September 1964 may then have to be postponed.

It is in this context that the Governor of the Reserve Bank has asked bankers to make an all-out effort to mobilise deposits. Unfortunately, some bankers seem to be complacent because they think they can blame the Reserve Bank if it does not help them with resources in time of need. It is clear that bank deposits are sensitive to interest rate changes. The experience of the State Bank and other banks with savings deposits illustrates the point. Savings bank deposits rose by Rs. 28 crores to Rs. 282 crores in 1960-61—the year when banks offered 2.5 percent interest in savings deposits. The rate was raised to 3 percent in March 1961. Savings bank deposits went up by Rs. 52 crores in 1961-62, by Rs. 59 crores in 1962-63, and by Rs. 65 crores in the first nine months of 1963.

In spite of the evidence, banking circles seem to be reluctant to step up the interest rates on bank deposits. Interest rates have remained practically stagnant since March 1961. But Bank rate was raised from 4 percent to 4.5 percent from 3rd January, 1963, and this was followed by an increase in the minimum lending rates from 6 percent to 6.5 percent. Several banks took advantage of this by raising their advance rates by an average of $\frac{1}{2}$ percent or 1 percent. In view of the keen demand for credit, banks experienced no resistance. They were able to lend larger amounts at higher rates of interest, and depended upon the interbank market, the investments portfolio and the Reserve Bank to make up the shortage of resources.

Bankers forget that they cannot attract resources from the public unless they offer a reasonable rate—a rate which bears some relation to the level of interest rates in the economy. It is necessary also to review the special treatment given to medium and small banks in allowing them to offer higher interest rates on deposits. With the institution of deposit insurance, a small bank

should be as good as a big bank. The experience of 1963 shows that medium and small banks enjoyed a higher rate of accretion in deposits than big banks. The medium and small banks, for instance, recorded an increase of 30 percent to 40 percent in deposits last year, compared with a rise of 10 percent to 15 percent in the case of big banks. The inter-bank agreement requires to be suitably revised without delay.

THE CALCUTTA MONEY MARKET

CONDITIONS TIGHT IN INTERBANK SECTION

Wednesday, 19th February.

THERE has been a fair increase in the general level of advances in the Calcutta money market during the past week. The credit given to the cotton and sugar mills, and to the iron, steel and engineering industries, is slightly higher. But the requirements of the foodgrains and seeds trade are unchanged, while those of the jute mills show a fair increase. In the interbank market, conditions have remained tight. The call rate has been steady at 6 percent, with stray transactions reported at 6½ percent.

The exchange market has been active, with a good supply of tea and gunny bills. The demand for remittances is fair. In the London market, sterling shows small losses in relation to most of the major currencies except the Belgian, Swiss and Danish.

SILVER WAS STEADY IN CALCUTTA during the past week. The price rose from the previous week's level of Rs. 264.25 to Rs. 265.50 a kilogram, quoted today. The London and New York prices stood at 111½d and 129.3 cents.

Gold was quiet and the price of 14-carat declined from Rs. 69.25 to Rs. 68.75.

DURING THE WEEK ENDED 14th FEBRUARY, Government of India Treasury bills for Rs. 96,75,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 18th February. The total amount offered was Rs. 2,02,00,000. Tenders at Rs. 99.415 percent were allotted 99 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.340 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 24th February.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 19th February to 22nd February at Rs. 99.431 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 12th February to 14th February amounted to Rs. 99.75 lakhs only.

RISES OF Rs. 9.29 CRORES TO Rs. 2,451.19 crores in active notes and of Rs. 9.24 crores to Rs. 2,464.31 crores in the total note issue, were notable features of the return of the Reserve Bank of India for the week ended 14th February, 1964. The currency expansion was covered by raising rupee securities of the paper currency reserve by Rs. 10 crores to Rs. 2,134.69 crores. Deposits of the Central Government dropped by Rs. 5.12 crores to Rs. 49.40 crores, while those of State Governments rose by Rs. 5.50 crores to Rs. 15.36 crores. Balances of scheduled banks at Rs. 83.31 crores showed a decline of Rs. 23 lakhs. Investments at Rs. 199.18 crores showed little change. Balances

held abroad rose by Rs. 1.62 crores to Rs. 20.89 crores. Loans to scheduled banks increased from Rs. 49.13 crores to Rs. 62.22 crores of which advances against usance bills amounted to Rs. 23.93 crores (Rs. 19.59 crores). Ways and means advances stood at Rs. 36.58 crores, against Rs. 38.62 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 7th February, 1964, shows a drop of Rs. 10.39 crores to Rs. 600.09 crores in total deposits. Investments in Government securities are down by Rs. 26.31 crores to Rs. 244.86 crores, while other authorised investments remain unchanged at Rs. 8.94 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 9.42 crores to Rs. 324 crores. Cash and balances are, in consequence, shown at Rs. 22.59 crores or Rs. 2.44 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 7th February, 1964, shows Demand and Time liabilities at Rs. 1,189.24 and Rs. 33.09 crores on account of borrowings from banks and Rs. 1,286.15 crores (Rs. 14.15 crores), compared with Rs. 1,196.43 crores (Rs. 35.44 crores) and Rs. 1,295.70 crores (Rs. 15.45 crores), respectively, in the previous week. Cash has declined Rs. 1.04 crores to Rs. 57.14 crores, while balances with the Reserve Bank have increased by Rs. 5.06 crores to Rs. 84.40 crores. There is a drop of Rs. 27.44 crores to Rs. 656.11 crores in Rs. 27.44 crores to Rs. 656.11 crores in investments. Advances and bills discounted at Rs. 1,724.26 crores show a rise of Rs. 26.49 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 69.7 percent, against 5.5 percent and 68.1 percent.

The following is a statement of the cash balances of the Central Government on the last day of October 1963:

(1) At the Reserve Bank of India	Rs. 19,85,78,68,000
(2) At Treasuries in India (A)	(—) 60,34,000
(3) In England (Sterling converted at 18d the rupee)	94,25,000
Total	19,86,12,59,000
(A) Represents net of cash in Treasuries and remittances in transit.	

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 21-2-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
21-2-64	24-5-64	2,00,00	Rs. 2.340%
14-2-64	17-5-64	2,00,00	Rs. 2.340%
7-2-64	10-5-64	2,00,00	Rs. 2.325%
31-1-64	3-5-64	2,00,00	Rs. 2.325%
24-1-64	27-4-64	2,00,00	Rs. 2.315%
17-1-64	20-4-64	2,00,00	Rs. 2.315%
10-1-64	13-4-64	2,00,00	Rs. 2.310%
27-12-63	30-3-64	2,00,00	Rs. 2.315%
20-12-63	23-3-64	2,00,00	Rs. 2.315%
13-12-63	16-3-64	2,00,00	Rs. 2.315%
6-12-63	9-3-64	2,00,00	Rs. 2.320%
29-11-63	3-3-64	2,00,00	Rs. 2.320%
22-11-63	25-2-64	2,00,00	Rs. 2.318%

HARVEY FABRICS ARE THE FIRST CHOICE OF LEADING CYCLE TYRE MANUFACTURERS

Tough, durable Harvey cotton tyre fabrics provide the sinews for the finest cycle-rickshaw and cycle tyres. That's why they are the first choice of leading tyre producers such as Dunlop, National Rubber Manufacturers, Oriental Rubber Industries and Cosmos India Rubber Works. Harveys' Cotton Cycle Tyre Cord Warp Sheet, Cotton Cycle-Rickshaw Warp Sheet and Cotton Cycle Bead Wrapping Sheet are extensively used by the industry.

Harveys' Madura Mills are today India's largest producers of industrial fabrics. Through the years they have built up a world-wide reputation for consistently high quality. They have the men, machines and knowhow to produce a wide range of industrial fabrics like Tyre Cords, Belting Ducks, Light and Heavy Canvases and Filter Cloths.

What's more, Harveys can weave industrial fabrics to your specifications—however rigid. Recent expansion at Madura Mills, with the installation of up-to-date high speed looms and precision machinery, have further increased Harveys' weaving capacity. They can now meet all your requirements in industrial fabrics...to your complete satisfaction.

DEVELOPING SMALL ANCILLARY INDUSTRIES IN INDIA

(FROM OUR NEW DELHI CORRESPONDENT)

AT its recent session in Bangkok, the E.C.A.F.E. heard an interesting paper on "measures to develop small ancillary industries in India". The author, Dr. B. L. Sharma, claimed that ancillaries in India had developed to feed the replacement market rather than the main assembler. These industries, according to Dr. Sharma, lack experience in manufacturing, and the quality of their technical know-how is low; nor can they remedy the situation by hiring experts, as the latter are often not available. The maturity which comes with experience is also lacking, so the growth of small ancillary firms does not get as much support from large industry as in advanced countries. An obvious answer to this situation is to find a means to enable small firms to gain the confidence, experience, maturity and technical competence "which allow ancillary relationships to forge ahead." All this will require time, so efforts should be directed towards reducing the period of apprenticeship for the small firms so that they may graduate into efficient sub-contracting units. It is in this direction that government policies and measures concerning ancillary growth become important.

The measures which might be initiated by Governments fall into various categories: (1) import restrictions to compel large-scale firms to buy parts and components from sub-contractors; (2) emphasis by the Government on large firms phasing out their dependence on foreign imports of specific items and finding alternative indigenous sources; (3) provision of catalytic agents such as cheaper credit facilities to import capital equipment and special raw materials to enable ancillary firms to become competent producers; and (4) provision of physical facilities for the efficient functioning of ancillary small units by establishing industrial estates in close proximity to the premises of large establishments, thereby creating a "natural pull" towards mutual relationship.

Dr. Sharma goes on to say: "In India, all the above measures have been applied in combination, and sometimes independently, to bring about the growth of ancillary firms. A functional definition has been adopted to make ancillary firms eligible for Government assistance. An ancillary unit in India is one which produces parts, components, sub-assemblies and tooling for supply against known or anticipated demand of one or more large units manufacturing or assembling complete products and which is not subsidiary to or controlled by any large unit in the negotiation of contracts for the supply of its goods to that unit. (This shall not, however, preclude an ancillary unit from entering into an agreement with a large unit giving it the first option to take the former's output.) In addition to the units manufacturing parts of a product for assembly or for the replacement market, this definition also covers establishments manufacturing castings and forgings for the parent unit. It is only the servicing units—repair shops and firms manufacturing general stock items—which are excluded.

"With the emphasis on industrialisation programmes during the successive five year plans, the small-scale sector has developed rather rapidly.

India provides a very large market for replacement and consumes large amounts of foreign exchange for the maintenance of machinery. The policy of ancillary development, therefore, is:

"(a) to classify the types of product and component which are required by newly established large plants for which capacity in the small sector already exists or can be developed.

"(b) to identify components and parts which are currently imported for maintenance and repair for machinery already functioning and further classify such of them as can be manufactured within the country, preferably by small firms.

"(c) to estimate the volume of products needed by the replacement markets."

By the end of 1961-62, contracts had been established with 20 undertakings in the public sector and 26 large units in the private sector for the promotion and establishment of more ancillary units, Dr. Sharma's paper says.

Public Sector

(1) **Hindustan Machine Tools, Bangalore**—This firm has made considerable progress in creating ancillary units. Twenty-five ancillary units have been established in addition to five already in existence, bringing the total number to 30. The firm's programme of expansion includes the establishment of another 20 units. Sixteen units are already in production and, in the case of 17 others, action has been taken to process the hire-purchase application with the National Small Industries Corporation and orders for the necessary machinery are being placed. Sufficient orders have been placed with the functioning units to procure as many finished and semi-finished parts as possible.

(2) **Heavy Electricals Ltd, Bhopal**—This undertaking has decided to create 50 ancillary units in the functional industrial estate being built up in an adjoining area of 132 acres. Sixteen units have already been chosen to act as feeder units; construction work on six sheds has been completed and four sheds have been allotted.

(3) **Praga Tools Ltd, Hyderabad**—This undertaking has sponsored five ancillary units to begin with. The entrepreneurs selected for this purpose have applied for machinery on a hire-purchase basis to the National Small Industries Corporation.

(4) **The Integral Coach Factory, Madras**—The director of Small Industries Service Institute, Madras, who is a member of the Regional Railway Equipment Advisory Committee, has been trying to procure as many items as possible for the small-scale sector. In consultation with the Small Industries Service Institute, Madras, 12 units have been selected to act as ancillary units for the supply of components and parts. Substantial orders have been farmed out to these firms by the factory.

(5) **The National Instrument Factory, Calcutta**—Fourteen ancillary units have been established as a result of the efforts made by the Small Industries Service Institute, Calcutta. The firm has agreed to farm out some of its items to the production-cum-training centre which is being

organised by the University of Jadavpur.

(6) **The Fertiliser Corporation Ltd, Sindri**—Two small-scale units are now working as feeder units supplying parts and components to the Corporation for its Sindri unit. One unit is being sponsored as an ancillary for the manufacture of chemicals required by the Corporation for its Nangal unit.

(7) **Hindusthan Antibiotics Ltd, Pimpri**—Five ancillary units are functioning on its ancillary industrial estate to feed it with parts and components. Two more units are being sponsored for the supply of additional components and parts.

(8) **Hindusthan Aircraft Ltd**—In consultation with the Rail Coach Division of Hindusthan Aircraft Ltd, a number of items which can be manufactured by the ancillary units were selected. For this purpose, ten units are to be established, namely, a tool room, forging shop, a unit to manufacture hardware, three units for precision machining work, one unit for the fabrication of aluminium windows, a sheet metal shop, a furniture shop and a sawmill. Hindusthan Aircraft Ltd will provide the proposed units with technical assistance so as to enable them to manufacture their items according to its standards and specifications.

(9) **Indian Telephone Industries, Bangalore**—As a result of the negotiations carried out with Indian Telephone Industries, a list of parts and components which it wants to procure from ancillary industries has been prepared. These items are being grouped suitably by the Small Industries Service Institute, Bangalore, for the purpose of sponsoring feeder units for them.

(10) **The Heavy Engineering Corporation, Ranchi**—Contacts have been established with this Corporation for the purpose of obtaining a list of items which it would like to farm out to small-scale ancillary units. The list will be furnished as soon as the production programme of the undertaking is finalised.

(11) **Indian Drugs and Pharmaceuticals Ltd, New Delhi**—The project authorities of the antibiotics plant in Rishikesh have been contacted. It is estimated that at least ten small-scale ancillary units may be established to manufacture various items which they would like the feeder units to supply. The details of the various items are being worked out.

(12) **Indian Oil Company, Bombay**—Originally, the undertaking contemplated establishing its own plants to manufacture drums and barrels for its requirements. As a result of the Company's efforts, it has agreed to get its supply of drums and barrels from small-scale units for its refineries in Barauni and Gujarat.

(13) **The Ministry of Defence: defence factories**—The small Industries Service Institute, Calcutta, is actively pursuing the selection of components and parts which can be manufactured in the small-scale sector required by the ordnance factory for the manufacture of tractors. It is expected that a large number of parts and components will be fabricated in the small scale ancillary units which can supply such parts not only to the ordnance factories,

but also to other tractor manufacturers in the private sector.

(14) **The Machine Tool Prototype Factory, Ambarnath**—Two ancillary units, a tool room and a machine shop, are being established to meet the requirements of components and parts for the factory in Ambarnath.

(15) and (16) **The Ministry of Railways: the Diesel Engine Plant, Varanasi, and the Chittaranjan Locomotive Works, Chittaranjan**—The Railway Board has been contacted to find out the requirements for various ancillary parts and components which can be developed in the small-scale sector for the production programme of the diesel engine factory in Varanasi and the Chittaranjan Locomotive Works, Chittaranjan. The Board has promised to furnish the details of such parts and components which can be manufactured by the small-scale units. The matter is being actively pursued.

(17) **Development of ejectors and steam brake valves**—Efforts have been made to develop these items in the small-scale sector for supply to the Indian railways; designs have been obtained from the Research Design and Standardisation Organisation, Ministry of Railways, Simla.

(18) **The Rehabilitation Industries Corporation Ltd, Calcutta**—The Corporation has helped to establish eight units on the industrial estate in Kalyani for the manufacture of ancillary parts to the following industrial establishments:

- (1) Jay Engineering Works Ltd;
- (2) Bata Shoe Company Ltd;
- (3) Dunlop Rubber Co. Ltd;
- (4) Sen-Raleigh Industries Ltd;
- (5) India Cycle Manufacturing Company;
- (6) Hindustan Motors Limited; and
- (7) National Instruments Ltd.

(19) **Hindustan Insecticides India Ltd**—As a result of the efforts made, this Company has agreed to purchase its requirements of packing cases from small-scale units.

(20) **Hindustan Cables Ltd, Burdwan**—The undertaking has agreed to establish a number of ancillary units to work as feeders of components and parts. To start with, a unit is being created as an ancillary for the supply of cable drums to this firm.

Private Sector

Greater attention has been paid by the Government to the development of ancillary industries in the private sector. In States where there is scope for development, special officers have been appointed exclusively for this work. The large units which will be served by ancillary units are: (1) Kirloskar Oil Engines, Poona; (2) Kirloskar, Harihar; (3) Ashok Leyland Ltd, Madras; and (4) Standard Motor Products Ltd, Madras.

The National Small Industries Corporation has been able to help in concluding arrangements whereby:

(1) a large sewing machine manufacturer of Calcutta is being supplied by several small units with components and parts;

(2) large-scale motor-vehicle manufacturers or assemblers are being served by several small firms with components and parts;

(3) manufacturers of machine tools are getting their castings from small foundries; and

(4) an oil refinery is being encouraged to get its supply of drums and containers from small manufacturers.

Problems and Remedies

"On the basis of India's experience", Dr. Sharma concludes, "some problems may now be highlighted. The most important among them is the lack of trust on the part of the large-

scale firms in the capacity of the small manufacturers to produce quality components and parts and to adhere to predetermined delivery schedules. Such confidence can only be built over time; what the Government can do in such cases is to bring highly efficient small firms closer to the large firms and enable the former through various means to fulfil their contracts. Such means will include supplying the right type of raw materials, technical counselling and testing facilities and a limited dose of finance. It will also be necessary to keep a watch on large firms so that they do not unnecessarily reject supplies made by the smaller units.

"Large-scale firms as a rule do not like to spare technical know-how, designs and inspection facilities to enable small firms to develop manufacturing to the desired standards. Although there are no satisfactory reasons for this, there is an element of resistance on their part which needs to be broken by persuasion and other indirect measures.

"The development of an ancillary relationship is also defeated by the presence of middlemen and merchants who act as financiers to the small firms and in turn take the entire production to be sold to the large assemblers. Apart from historical reasons, these relationships between the merchant-middlemen and the small manufacturers are sustained by the absence of industrial banking or by the unwillingness of commercial banks to lend to small manufacturers. The presence of the middlemen is felt much more in areas where industrial banking has still to develop. The dependence of small manufacturers on private financiers leads to unhealthy competition, price-cutting and consequent lowering of quality.

"The system of sub-contracting to be truly beneficial to small ancillary firms requires that there be: (a) a direct relationship between the ancillary and parent units; (b) a set flow of demand; (c) a period of sub-

contract sufficiently long to enable sub-contractors to invest in better machinery, tools, etcetera; and (d) arrangements for sub-contractors to get the required amount of inputs and technical assistance from the parent unit. It is only through such arrangements that ancillary relationships can develop on a lasting and firm basis.

"The measures taken by the Government of India towards the institutionalisation of credit and expansion of technical training facilities, the establishment of highly efficient machine tools industry, etcetera, are also expected to contribute to the growing ancillary relationships. To eliminate competition between large parent firms and the small producers in parts and components meant for the replacement market, a number of items for several industries are being demarcated for manufacture exclusively in the small-scale sector. Such measures together with others discussed earlier are expected to accelerate the pace of ancillary development.

"If the small-scale sector, which already suffers from various weaknesses, can be saved from the waste of undue internal competition through the establishment of ancillary relationships with main producers and assemblers. This will increase their stability. When small firms multiply in various fields, as has been the case in India, a natural tendency is for the large and small firms to get closer together. The distrust and lack of confidence which are noticeable in the early evolutionary history of the small sector, will fade away and a new era of co-operation and healthy growth will ensue.

"The advantages of sub-contracting to small firms, instead of establishing the needed capacity by the large firm itself, must be tested on the hard rock of costing; once savings can be expected on the basis of an ancillary relationship, no large firm will be further interested in carrying the load of expensive partially utilised equipment for the sake of the final

assembly. Similarly, no small firm likes to remain uncertain about the acceptability of its products in a market; certainty will enable it to plan its production on a more firm basis. The fact that cost consciousness requires time to develop in a developing country is yet another factor. Although there is some resistance in disclosing cost data among small-scale industries in India, it is felt that government counselling and assistance in working out a cost system for such firms will help to melt prejudices and to create steadier bonds of ancillary relationship."

COAL TRANSPORT

World Bank Study Team

Meetings of the Coal Transport Study Team sponsored by the World Bank will commence from 10th March, in New York to finalise its report. Members of the team have been in India to study the problems assigned to them. The study, it will be recalled, was undertaken at the instance of the World Bank, which has been a major financier for the development of the Indian railways, in addition to which it has provided funds for the modernisation of certain coalfields in India.

In addition to the Steering Committee consisting of Professor Edward Mason representing the World Bank and Mr. G. L. Bansil representing the Government of India, the Study Team consists of three economists including Mr. W. Malenbaum, one waterways expert, Mr. J. A. Jansen, one road transport expert, Mr. N. E. Carlson, and eight other specialists in various branches of transport including the railways. Mr. John Slater belonging to the well-known U.S. firm of consultants, Coverdale and Colpitts, is the leader of the group.

As provided in the contract, an interim report has already been submitted and is being examined by the Government of India. According to present indications, the Team will submit a draft report to the Government for its comments, in the light of which the final report will be submitted to the Government by the middle of this year. The interim report has already made some valuable suggestions, a summary of which was published in these columns. The final report is awaited with interest and should provide a good guide for the formulation of transport policy for the fourth five year plan.

SANDVIK ASIA

Expansion in Capacity

Sandvik Asia is planning to expand its capacity from 24 tons to 84 tons a year for the manufacture of hard metals in India. Its plan includes the expansion of manufacture of hard metal tips and tools.

FERTILISERS

Purchase through Interore

The Government is planning to buy a substantial quantity of fertilisers through Interore Ltd. The firm will be paid in foreign currency earned by the sale of sugar by this Company, it is learned.

SAURASHTRA

Cement Units to Expand

Cement factories in Saurashtra are planning to expand their capacity.

There is good calcareous sand in Saurashtra, but the major difficulty is fresh water. In fact, the inadequate water supply is the major handicap of both agriculture and industry in this part of India. The dry process may prove to be the best method of cement-making in Saurashtra.

INDUSTRIAL LICENSING

Swaminathan Report

The Swaminathan Committee, whose interim report on industrial licensing procedures has already been implemented, held another meeting last week. It will meet again on 24th February and on 10th and 24th March to finalise its report.

BOMBAY PORT

Finance from I.D.A.

The foreign exchange requirements of the development of Bombay port under the third plan are being financed by a loan from the International Development Association. One of the conditions of the loan agreement is that all contracts for the major construction works and for major items of imported materials and equipment required for the project will be awarded on the basis of international competitive bidding, having regard to sound engineering and financial practices.

In August 1963, the Bombay Port Trust invited applications by advertisement from firms of contractors in leading Indian and foreign newspapers and technical journals for particulars of firms interested in undertaking the following major development works at Bombay Port:

- (1) Extension of Alexandra dock.
- (2) Construction of a piled reinforced concrete jetty for the Konkan ferry traffic.
- (3) Extension of Ballard Pier to provide a deep water quay in block work placed under water.
- (4) Construction of a new passenger terminal-cum-transit shed and car park on a piled foundation.

Applications were received from 31 firms, of which six were Indian. On a scrutiny of the marine experience and financial resources of each of the applicants, the Trustees finalised a list of 16 firms on a global basis for being furnished with tender papers. One of the six Indian firms, namely, Messrs Hindustan Construction Company, has already informed the Port Trust that they will jointly tender for the work with Messrs Christiani and Neilsen of Denmark. Another firm, Steelcrete Ltd, has decided to tender jointly with Foundations Overseas Ltd of Canada.

The Port Trust is of the view that the other four Indian firms do not have adequate marine experience for independently undertaking a contract of the size involved in the project. Such of the marine works, which some of them have attempted, have been executed in collaboration with foreign firms. The type and scope of work carried out by them independently is not similar or comparable to that involved in the Port Trust's scheme.

The Port Trust, in the present case, had addressed the I.D.A. as to whether it could be stipulated that, if the principal contractors were a non-Indian firm, they should have as an associate an Indian firm of civil engineering contractors of repute. The I.D.A. did not agree to the condition but they added that if, in their own interest, a non-Indian firm wishes to associate with an Indian firm, there would be no objection, but they

should not be forced into such an association against their wishes. In these circumstances, the Port Trust could not stipulate collaboration with Indian firms as a condition. The Port Trust recently considered the matter further and has decided that tender documents should be furnished to the remaining firms if they want them for purposes of arranging collaboration with any of the selected firms.

MOTOR-VEHICLES

Expansion of Capacity

Expansion of capacity for the production of lorries and jeeps has been sanctioned. In the case of passenger cars, it has not been possible to sanction expansion of capacity so far due to foreign exchange and other difficulties. It is explained that the output of motor-cars during 1963 was less than that of 1962. This was due to the reduction in the allocation of foreign exchange, required for the import of essential components and raw materials.

Due to inadequate foreign exchange, no significant increase in output is possible until the indigenous content of the vehicles is substantially increased, say, to 90 percent. Necessary facilities have, therefore, been afforded to the manufacturers to step up the indigenous content.

The production of motor-vehicles in India in 1964 is likely to be as follows:

Name of manufacturer	Model of vehicles manufactured	Production capacity licensed (Nos./a year)	Likely production in 1964 Nos.
Hindustan Motors Ltd	Hindustan Ambassador car	10,000	10,000
Tata Engineering and Locomotive Co. Ltd	Tata-Mercedes-Benz commercial vehicles	24,000	16,000
Hindustan Motors Ltd	Bedford commercial vehicles	15,000	7,000
Mahindra and Mahindra Ltd.	Willys jeep vehicles including jeeps, utility vans (station wagons) and one-ton lorries	10,000	10,000
Ashok Leyland Ltd	Leyland "Comet" commercial vehicles	5,400	4,000
	"Beaver" heavy duty vehicles	2,000	—
Premier Ltd	Fiat cars	7,200	6,000
	Dodge and Fargo commercial vehicles	15,000	7,000
Simpson and Co. Ltd	Commercial vehicles (model not yet decided)	12,000	—

The estimate of demand for motor-vehicles by the end of the third plan period is as follows:

Commercial vehicles	60,000 a year
Cars	30,000 a year
Jeeps	10,000 a year

The percentage of the imported content of motor-cars manufactured in the country is as follows:

Standard car	39.82 percent
Ambassador car	23.09 percent
Fiat car	35.90 percent

The c.i.f. price of the imported pack (excluding Customs duty of each model) is as follows:

Standard car	Rs. 2,723
Ambassador car	Rs. 1,730
Fiat car	Rs. 2,000

MAHINDRA UGINE

Alloy Steel Plant

The International Finance Corporation, Washington, is providing assistance to the extent of Rs. 1.5 crores to Mahindra Ugine Steel Co. Ltd for setting up an alloy and

special steels plant in Maharashtra State. Of this, Rs. 40 lakhs is in the form of equity capital and Rs. 1.1 crore is a loan. The Government has approved of this arrangement. The clearances required by this project have been given. The plant is expected to go into production in the second half of 1966.

RAW WOOL

Import Reduced

The requirements of the country, on the basis of a target of 13 million kilograms for worsted yarn a year, are of the order of 20 million kilograms in terms of greasy wool. The annual consumption, however, was very much less because until December 1962, the woollen goods industry was working only 1.5 shifts, due to a reduced allocation of foreign exchange for the import of raw wool and wool tops. During the period 1962-63, total imports of wool tops were of the order of 5.3 million kilograms equal to 8 million kilograms of greasy wool. In addition, 6.3 million kilograms of raw wool were imported. In 1963-64 (April to October), the imports of wool tops were of the order of 5.9 million kilograms. A substantial quantity of the 6.3 million kilograms of raw wool has been used for worsted spinning. It is estimated that about 2.3 million kilograms of Indian wool blended with nylon has been used for the manufacture of worsted hosiery yarn. The Defence authorities are not satisfied

from India engineering goods, including tropicalised motors, diesel engines, pumps and sewing machines, drugs and pharmaceuticals, chemical products, cotton textiles, leather sandals (chappals) rolled steel products, tyres and de-oiled cakes apart from traditional items like tea, coffee, jute manufactures and shellac. India will continue to import from Bulgaria electric hoists, cranes, power cables, transformers, steel products, machine tools, ball bearings, mining locomotives, automatic looms, battery-operated trucks, pig iron, zinc, chemicals and capital goods.

CEMENT

Licences for New Plants

During the years 1961, 1962 and 1963, 17 licences were granted for setting up new cement factories or for effecting substantial expansion of existing units. Of these, two schemes relating, respectively, to a new unit and a case of substantial expansion, have been completed. Three licences have been revoked as effective steps were not taken by the parties. Eight schemes are likely to be completed in the next two years. The progress of the remaining schemes is being watched and licences will be revoked, should the parties show insufficient interest in executing the schemes.

RUBBER

Expanding Cultivation

In order to find additional areas of rubber cultivation, the Rubber Board, Kottayam, conducted surveys jointly with the State Governments of Kerala, Madras, Mysore, Maharashtra, Tripura and the authorities in the Andaman and Nicobar Islands, where conditions suitable for rubber cultivation are reported to exist. The surveys have shown that it may be possible to extend rubber cultivation to an additional area of about 300,000 acres in Kerala, Madras, Mysore, Tripura and the Andaman and Nicobar Islands.

TRACTORS

Imports to be Increased

The indigenous production of tractors in 1964 is estimated at 4,500. Arrangements have been made for import of 1,000 s.k.d. packs from Poland and 1,400 tractors for Russia during 1964 through the State Trading Corporation. It has also been decided to import an additional 1,000 packs from Poland. The question of importing more tractors from other east European countries is being considered.

ALLOY STEEL

Progress of Plan Schemes

The third plan target of production by 1965-66 for alloy, tool and special steels excluding electrical steel sheets, spring steels and free-cutting steels is 200,000 tonnes. The total demand including electrical steel sheets, spring steels and free-cutting steels has been estimated by the National Council of Applied Economic Research at 500,100 tonnes in the fourth plan period. At present, only about 29,000 tonnes of spring steel and 34,000 tonnes of electrical steel are produced. Including the public sector alloy steels plant in Durgapur, a capacity of about 600,000 tonnes has been licensed. It is expected that only a part of the licensed capacity

will have been created by the end of 1965-66.

FOUNDRIES

New Private Units

Some 21 foundries using pig iron have been established during 1963 in the organised private sector. No foundry has been established in the public sector during 1963.

IRON ORE PELLETS

Selling to Japan

A formal contract with the Japanese steel mills for the sale of iron ore pellets is being negotiated by a Goan firm which is also setting up a pelletisation plant for the purpose.

KEEPING BRITISH SCIENTISTS AT HOME

(FROM OUR LONDON CORRESPONDENT)

LAST week saw the appearance of a regular spate of announcements of leading British scientists, working on valuable research projects, who are to leave Britain for better paid posts in other countries—mainly the U.S.A. In one case, a whole research team is to emigrate. Not surprisingly, this development has given rise to concern in many quarters which has been crystallised in the debate in the House of Commons on the functions of Mr. Quintin Hogg, Minister of Education and Science, and just how civil scientific research is to be organised. At the same time, it has served to revive interest in the Trend Report dealing with this vexed question.

Of immediate importance is the question as to whether anything can be done to stop what is referred to as the "brain drain". According to the prospective emigrants themselves, more money is not the attraction—more important, they say, is the better facilities afforded to research workers by American institutions. The Government's position is rather difficult, for it would seem that it has yet to finalise its policy on scientific manpower and organisation, although it is believed that most Ministers are broadly in favour of implementing the recommendations of the Trend Committee. It has been found that science cannot be separated from higher education—hence Mr. Hogg's overlord appointment for both departments with Sir Edward Boyle relieving him of the regular routine connected with education alone.

Ministers deplore as much as anyone the loss of trained scientists. They feel compelled to conclude that the attraction of American salaries and conditions is an economic fact of life which Britain must accept. It is difficult to see how Britain can match the terms which lure scientists from many European countries. In her spending on science per head of population, Britain equals France and West Germany put together, but she is particularly vulnerable to American counter-attractions because British scientists need not be deterred by language difficulties. In the Government's opinion, the true basis of the comparison is the proportion of the gross national product which a country spends on research and development. In Britain it is about 2.5 per cent, against 2.7 in the United States. This suggests that Britain is not doing too badly.

Student Population Doubles

It is pointed out that in the last decade, Britain's student population has doubled. Under the Robbins plan it will rise by another 50 per cent in the next four years. Short of doub-

ling scientists' salaries and granting them unlimited finance for their departments, it would appear that the only way to be sure of keeping them in Britain would be to withdraw their passports. The Government has no intention of restricting their movements, however acute the problem.

If the scientists' contention that better facilities, not higher salaries, are the main attraction that America has to offer is true, it is interesting to examine the Trend Report to see what it is proposed Britain should do in this matter. The report has been written with the assumption that there is going to be a continued growth of scientific research in Britain. In the concluding paragraphs the Committee says that it has supposed the "Government's intention to reinforce the growth of the economy by an intensification of the effort devoted to scientific research and development in the civil sector and, therefore, to put at the disposal of the agencies involved resources on a sufficiently generous scale to ensure that they do not lack the means to realise their full potentials."

Among the more striking recommendations in the report are the following:

The Department of Scientific and Industrial Research should be broken up into three new research agencies.

There should be a new autonomous Industrial Research and Development Authority to be responsible for most of the Government's present responsibility for industrial research, including the work of the National Research and Development Corporation.

The Minister for Science should be given more power, especially in allocating money to the various agencies concerned.

The chairmen of the research councils should be full-time appointees, professionally qualified.

The Ministry of Science should have a stronger staff.

The report starts from a review of the present arrangements for supporting civil research with public money, and the Committee has evidently been impressed with the speed at which this has grown. In the financial year 1945-46, the report says, total public spending on civil research and development was £6.58 million, but by the year 1962-63, this had grown to an estimated £151.6 million.

A review of existing arrangements for supporting civil research leads the Committee to the conclusion that the pattern of organisation is not

"coherent and articulated," and that the arrangements for co-ordinating the Government's scientific effort and for apportioning resources rationally are "insufficiently clear and precise." For one thing, the report says, the growth of scientific activity has blurred the old distinction between the universities and the research councils, with the result that the universities have tended to become less self-sufficient in promoting research.

The Committee considers that the Agricultural and Medical Research Councils have "stood the test of time," but there is a lack of co-ordination in the support of newer developments such as nuclear physics and space research. It draws attention to the way in which the Nature Conservancy supports ecology but not fisheries research, oceanography and hydrology, and says that the most striking example of divided and obscured responsibility is the fact that the Admiralty retains responsibility for the Royal Observatory even though the D.S.I.R. is responsible for all other forms of astronomical research.

Industrial Research

In its criticism of the arrangements for supporting industrial research, the Committee doubts whether the D.S.I.R. can continue to be responsible for the general support of scientific research (as at the universities) as well as for promoting and stimulating research by industry itself. It says that the efforts of the D.S.I.R. are not properly co-ordinated with those of other bodies, and it goes on to say there "is a clear need for greater concentration of effort and for some means of ensuring that research is enlisted in support of those activities which are the most important for the economy as a whole."

Generally, the administration of Government support for civil research is said to lack both concentration and flexibility.

The Committee has some polite things to say about the Advisory Council on Scientific Policy, whose function is to advise the Minister for Science, but then goes on to complain that the Council is prevented from doing its job "by several organisational defects," including the way it is not concerned with finance, its mixed membership of official and unofficial representatives, and the small size of its secretarial staff.

Accordingly, the Committee says that the time has come to redefine the relationship between the Minister for Science and the agencies for which he is responsible, and it also calls for arrangements to provide him with advice "which will be not merely authoritative but also effective." The report goes on to consider in turn the detailed arrangements that should be made in various fields:

The Committee considers that university research should be supported, as at present, out of more than one purse, largely because "centralised provision carries with it the serious risk that potentially fruitful ideas may be nipped in the cold winds of chance or of academic prejudice."

granted with the teaching programme of a university should be supported out of money provided by the University Grants Committee, and by which additional work is supported by earmarked grants from one or other of the research councils.

The suggestion that the U.G.C. should support all research, or that the councils should do so, are specifically rejected, although the Committee does draw attention to the need of criteria (on the lines worked out for the current university quinquennium) for deciding when the U.G.C. should assume responsibility for work begun with subventions by the research councils.

The Committee's criticism of the research councils are concerned not so much with the principle that these bodies should be responsible for most Government support of civil research, but with the deficiencies of the existing arrangements for seeing that these tasks are done. The D.S.I.R. is most affected by what the report has to recommend. The essence of the case against the present arrangement is, according to the Committee, that the responsibility for supporting research in the physical sciences and for encouraging industrial research is too great to be handled by one body.

As far as the support of scientific research is concerned, the Committee recommends the creation of two new research councils (to have the same constitutional status as the Agricultural and Medical Research Councils): one of these would be the Science Research Council, and the other the Natural Resources Council. According to the Committee, the Science Research Council should be responsible for applied as well as pure research at the universities, for the National Institute for Research in Nuclear Science as well as for the British commitment to the European Centre for Nuclear Research (C.E.R.N.) at Geneva; for space research and for the Royal Observatories, Meteorological research should stay with the Air Ministry, the report decides.

The Natural Resources Research Council should include the functions of the present Nature Conservancy as well as for research into hydrology, fisheries and "related aspects of aquatic biology"; the Geological Survey and the Soil Surveys; long-term forestry research and research into oceanography (although the Admiralty would remain financially and administratively responsible for the National Institute of Oceanographic Research).

Public Support

The main proposal for increasing the effectiveness of public support for industrial research is that there should be created an Industrial Research and Development Authority, standing in the same relationship to the Minister for Science as the research councils, and equipped with something resembling commercial independence. In particular, the Authority should take over most of the research stations now run by the D.S.I.R. The Authority would also support applied research at universities and other such institutions; would be responsible for the co-operative research associations now run by the D.S.I.R. and would be expected to decide how (and whether) these should continue; and would make "techno-economic surveys" of industries.

The work of the Authority will impinge most directly in industry through the proposal that it should be responsible for research and development contracts with industry, and the mechanism suggested is tantamount to a fusion of the present grant-giving functions of the D.S.I.R. with the work of the National Research and Development Corporation.

PAKISTAN BANS CULTIVATION IN BORDER AREAS

THE East Pakistani Government has reimposed the ban on cultivating jute in the five-mile border belt with India, except in certain areas where quality fibre is grown and where the cultivation of an alternative crop is not feasible. The decision has a two-fold objective. First, to stop the smuggling of fibre to India which, according to Pakistani sources, has resulted in a sharp decline in that country's jute exports to India. Secondly, the abundant supply of low-grade fibre, generally grown in the border areas, has caused "some difficulty" in disposing of jute in Pakistani markets.

Unions bordering the Indian State of Tripura, where very good quality jute is grown, will be exempted from the ban. But anti-smuggling measures will be tightened there, and arrangements will be made to mop up the entire produce. River banks on the border will also be allowed to grow jute as it is not possible to cultivate other crops there. The Government proposes to encourage the cultivation of *aus* paddy and sugarcane in the prohibited areas by providing substantial agricultural loans to farmers. However, for domestic consumption, they will be allowed to grow jute on 3.125 per cent of their basic acreage, subject to a maximum of 0.16 acres.

Although a similar ban was imposed for the current season, it could not be effectively implemented and substantial lots of contraband jute reportedly entered the Indian markets across the long frontier. The smuggled fibre passed off as high-grade Daissee jute, and was exchanged for rice and paddy, which were available at lower rates on this side of the border. Jute circles in Calcutta feel that any unilateral action is not likely to produce the desired effect. Since both Governments are anxious to prevent smuggling, they should be able to evolve satisfactory measures after mutual consultations.

I.J.M.A. Annual Meeting

The annual general meeting of the Indian Jute Mills Association will be held at the Royal Exchange, Calcutta, on 20th March at 12 noon.

Gunny Production Falls

Working at the maximum level for 216 hours in January, against 208 hours in the preceding month, mills reporting to the I.J.M.A. produced 101,600 tonnes of gunnies last month, compared with 107,300 tonnes in December. Hessian output shrank by 3,900 tonnes to 42,600 tonnes, sacking by 2,300 tonnes to 41,400 tonnes and carpet-backing cloth by 700 tonnes to 8,200 tonnes, while miscellaneous goods registered a small increase of 1,200 tonnes to 9,400 tonnes. The decline in production was due to the dislocation in working caused by the communal disturbances in Calcutta. The fall in hessian production is attributed to the comparatively small export demand for the fabric, and the diversion of hessian looms to sacking due to the seasonal rise in the internal demand for heavy goods. In January 1963, the mills worked at the same level for 208 hours, producing a total of 103,100 tonnes of jute goods, of which 45,100 tonnes were hessian, 44,700 tonnes sacking, 5,400 tonnes carpet-backing and 7,900 tonnes other goods.

Fibre Market Quiet

Sluggish conditions have persisted in the raw jute market for some time

now. There was a shortlived firmness early this month, induced by the brisk purchases made by mill agents in upcountry markets in selected grades for all positions against the February quota of 540,000 bales. Subsequently, mills have shown little interest. The slackness is a seasonal phenomenon at this time of year. With their warehouses in Calcutta and in the agencies overflowing with fibre stocks, mills are now hardly in a position to buy any appreciable quantity of jute.

Moreover, with the disposal of practically the entire output of better-grade fibre, there is a glut of lower-grade stocks with holders. The small quantity of better-grade jute still left over is with strong holders. Due to the small interest shown by mills in off-grade stuff, some selling pressure has developed in the market and prices have tended to soften a shade below the official floor level. Early in the month, when prices had hardened somewhat, lower-grade fibre too looked up since it was felt that the mills would have to buy poor quality jute to complete their quota. But instead of accepting high prices, the mills slowed down their offtake since the quota was a small one.

Opening the season with a carry-over of 1.96 million bales, the mills purchased 5.57 million bales by the end of January, making a total of 7.53 million bales. Out of this, consumption up to the end of that month was 4.21 million bales, leaving a closing stock—in Calcutta, uncountry areas, and in transit—of about 3.32 million bales. Together with the J.B.S.A. stock of 775,000 bales, the opening stock for February was roughly around 4 million bales, which will last for more than six months at the present rate of consumption of around 625,000 bales a month. Besides, the stocks now require to be turned over. So the mills would like to go slow with their new purchases. Market circles fear that it will be difficult to clear the heavy glut of lower-grade fibre.

THE JUTE MARKETS

Manufactured Goods: Dull conditions prevailed in the Calcutta gunny market during the past week. Holders became nervous due to the lack of overseas interest. Mills also seemed to be worried over the accumulation of stocks. Some of them emerged as keen sellers for all positions even at current levels, thereby depressing Indian Government tenders for about 4,000 bales of B Twills for ready and near delivery, routine transactions were reported. Reports of congestion caused by about 18 vessels at Sandheads due to the shortage of shed berths in the Calcutta docks slackened the offtake of ready goods by ship. Mills were experiencing difficulty in guaranteeing alongside delivery because of the shortage of lighters. The sluggishness in the spot market affected as well. Tired long futures market induced by end-of-account liquidation and some bear-selling considerations and some bear-selling caused a severe setback to sentiment and prices fell to new lows. Small and business was reported at lower levels in May contracts. The contango in spot market and moderate in the futures market. The undertone was hesitant at the close.

Wednesday's quotations were as follows:

Raw Jute: Trading was dull in the raw jute market during the past week due to the holidays and the slackness in mill offtake. Weak holders of lower-grade fibre were keen on disposing of their stocks, and prices softened in Assam Bottoms and Northern Bottoms in the spot section both in Calcutta and in the agencies. Small transactions of a routine nature were done around the lower levels. Holders of Daissee jute were not inclined to offer discounts and so its price was well maintained. In the futures market, interest slackened in Upper Assam White Bottoms for March due to the approach of the due date, and the price reacted to the official floor level of Rs. 30 a maund. Turnover was small and the undertone easy at the close.

Wednesday's quotations were as follows:

Landed at Mills (Basis Bottoms)	Current Prices		T.S.D. Minimum Prices	
	Rs. A Qu.	Rs. A Md.	Rs. A Qu.	Rs. A Md.
Assam-Agartala	20.38	20.60	20.38	20.60

THE U.K. JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT)

Very little change took place in the raw jute markets in Pakistan during the past week. Prices in Dundee were all more or less at the previous levels. Prices of loose white jute were tending to rise, but this was not reflected in offers being made. Shippers were anxious for business and the lower grades were available at well under minimum export rates.

Dundee spinners were not showing much interest, but there was always some movement taking place in the fibre. During the first seven months of the season, registered sales to the U.K. were approximately 532,000 bales, and it is estimated that during the remainder of the season, buying will have to average 10,000 bales weekly. The fire in No. 2 hold of the *City of Dundee* which was discharging jute at Dundee has not been so bad as expected. Most of the bales appear to be in near sound condition, although some of them may be damaged by water. There were 7,000 bales in No. 2 hold.

Offers made were very irregular with the lowest rates at £141 for Mill Firsts, at £111 for Mill Light-

nings, at £95 10s for Mill Hearts and at £81 for Grade Hearts, c.i.f. U.K., for February-March. Grade Tossa-2/3 was available at £125 and Grade Tossa-4 at £107. Output Tossa-2/3 was at £94 5s and Output Tossa-4 at £94, February-March. Cuttings were firm at £57 for S.N.C. and at £49 for N.C. Offers of mesta became rather scarce at £84 5s for A, at £73 10s for B, at £66 for C and at £48 15s for cuttings, c.i.f. U.K., February-March.

The Siam jute market was firm but irregular. There were sellers of grade A at £78, of grade B at £69 10s and of grade C at £64 5s, delivered mill Dundee for February-March shipment. Cuttings were not being offered.

The Calcutta goods market fluctuated within narrow limits. A fair amount of buying took place for early shipment. Quotations were at 71s for 40in. 10oz. and at 53s 7d for 71oz. a 100 yards l.o.b. Calcutta for February shipment, at 71s and 53s 4d March and at 71s and 52s 8d April-June. B Twills were at 172s 7d, 173s and 174s 3d for the respective shipment periods.

Dundee spinners and manufacturers were busy and further orders were being received for forward delivery. Yarns in particular were very difficult to obtain and many spinners have been running late with deliveries. This is slowing down cloth production in some instances. The carpet trade continued to take regular deliveries of both yarns and cloth and there was every indication that this would continue. The heavy end of the trade is also well supplied with orders and narrow sacking is only available in the forward position.

THE PAKISTANI JUTE MARKETS

LITTLE ACTIVITY IN FIBRE

(FROM OUR Dacca CORRESPONDENT)

THERE was absolutely no change in any sector of the jute market last week, and this week few are expected. On account of the Idd holidays and others, all offices and business premises will remain closed for five days.

While the market remained unmoved due to heavy stocks here and overseas and purchases were limited, transport problems continued to grow. Rail bookings to port were stopped spasmodically. The port is so congested that there are 35 vessels waiting outside to enter. Yet it is frequently impossible to find a vessel which will lift the specific Continental destinations. Fortunately from now on, the traffic in jute to ports begins to fall off, which may help to relieve the congestion. There has been no improvement in the port and certainly by the increase in traffic, it begins to look as if the time is not so far away when the port will come to a standstill and the jute trade will be very seriously affected both in shipping manufactures and raw materials.

Commodity Markets

STEADY DEMAND FOR TEA AT LOWER RATES

(BY A SPECIAL CORRESPONDENT)

THE Calcutta auctions continue to dispose of about 100,000 packages of tea including dust a week. Tippy teas sell well and so do dusts, but the price range is somewhat disappointing in view of the mounting costs. Up to sale No. 33 in early February, 79½ million kilograms were sold at Rs. 5.31 a kilogram. The comparable figures for last year were 81.4/5 million kilograms at Rs. 5.40 a kilogram. So with lower prices, less production, higher costs and taxation, dividends may be lower. The comparison of dust sales shows the same downward tendency in price, but the amount actually disposed of is slightly higher this year.

The total world crop has not been as big as was expected. The production figures for the past three years are:

(In million lbs)		
1963	1962	1961
1,419	1,408	1,418

The weather report for January was published on 14th February. The I.T.A. reports favourable weather in Upper Assam, and except in Doom Dooma, the prospects for an early opening look good. In the central area conditions are fair, but rain is wanted in Lower Assam. The weather is abnormally cold in Cachar, a comment which applies to the entire Dooms. Darjeeling reports normal conditions. It is somewhat early to guess how the 1964 crop will be, but the above report does not suggest a very early surplus.

Some interesting comments on selling Indian tea come from Brussels, the headquarters of the European Common Market. It is stated that a sustained and systematic effort will be necessary if any worthwhile trading is to be done. The Continent remains a coffee drinking area and habits are difficult to change. Even in Britain tea is losing ground to coffee. Furthermore, Indian tea is not yet available everywhere in Europe. In West Germany and Austria, Ceylon has already established connections. European drinkers are guided by cost and the inferior qualities available are spreading further the generally poor impression about tea.

While the British take tea mixed with milk and sugar, the Europeans prefer it with lemon. The Indian Tea Board has been offering free tea with a dash of orange. There is no doubt that the Tea Board is going all out to popularise Indian tea by serving it freshly brewed or cold at fairs, parties and social occasions. But there does not appear to be any strong move by the trade to get new markets. The business is already said to be firmly in the hands of established distributors, but no mention is made of the steps being taken by the U.K. blenders to secure markets in western and eastern Europe.

Another important point is preparing tea. New users do not take kindly to the long time for preparation when instant coffee is freely available. According to news from Brussels, a powdered tea with carbohydrate additions and instant infusion has not so far produced encouraging results.

Finance for Development

Frequent references have been made to the high cost of Government

finance for the development of tea gardens. The Assam Government has constituted a committee to look into this question. The main issue is development finance for tea estates and the security on which loans should be granted. Companies depend for their working capital on advances from local banks which are given against hypothecation of crops together with first charge on the fixed assets of the debtor garden. To obtain development loans borrowers will have to be simultaneously indebted to the Tea Board. The industry has worked on the present *pari passu* credit arrangement for some time and it has proved satisfactory.

The new development loans relate to irrigation schemes, replacement of machinery and housing of plantation labour. The Tea Board administers the irrigation, replantation and machine replacement loans and holds that some banks had agreed to *pari passu* arrangements. The industry stressed the point that all the scheduled banks providing credit for working capital of the tea industry had not agreed to such an arrangement.

The point again came up when the State Government's Town and Country Planning Department reported that the grant of loans under the plantation labour housing scheme had not made much progress because of the question of the security to be furnished by the tea estates for loans had not been finalised. A mortgage on the land on which housing schemes are carried out or on the houses built under such schemes has not been found practicable, as the first charge on the fixed assets of the gardens is held by the scheduled banks which advance the working capital. There is no legal provision for a continuing second charge on the same assets and companies or *pari passu* often have to enter into other arrangements with banks or other financing institutions other than the Government. The Assam Government, therefore, thinks that the only practical solution is to route its own housing loans through the Tea Board, which already holds a second charge through the *pari passu* arrangement.

The Assam Co-operative Apex Bank made a demand at the recent committee meeting that it should be put on the same footing as the scheduled banks for the purpose of *pari passu* arrangements under the Tea Board's loan schemes.

As for irrigation of tea gardens, little progress was reported. There had been no survey to assess the water needs of the gardens or to locate the sources from which the needs could be met. The Government of Assam pleaded that it had neither the technical personnel to survey irrigation possibilities nor the funds to undertake any irrigation project for the gardens. The Committee, therefore, came to the conclusion that tea interests should themselves carry out the survey for the irrigation projects. The Tea Board informed the Committee that the Central Government had agreed to a crore of rupees being earmarked for loans for sinking deep tubewells for irrigation. Rs. 1 lakh would be the ceiling on loans to any individual tea garden for tubewell projects.

COTTON TEXTILES

U.K.-Hongkong Agreement on Imports

THE representatives of the British and Hongkong cotton industries have negotiated a new agreement on the categorisation of imports. To a highly complex problem, a solution has been found which is probably as simple as could reasonably be expected, and it is apparent that those con-

cerned contemplated and provided for most of the contingencies that are likely to arise when the arrangements are in operation.

The effect of the arrangements is that all exports of cotton products from Hongkong from 1st January, 1964, shall be classified into 34 separate categories including three for yarn, 15 for piecegoods and 16 for made-ups and garments. So far as piecegoods and made-up goods are concerned, 18 of the 31 categories are immediately affected. In six of these,

Telex contact with countries all over the world

the new controlled level will be 115 percent of the 1963 performance, while in a further eight categories, the permitted level will be 130 percent of 1963 shipments. Special arrangements have been agreed for four further sensitive categories.

As far as the remaining 16 categories are concerned, no restrictions are to be brought into force at the present time, but the new arrangements provide that similar restrictions may be imposed for 1965 on any one category in which exports reach the equivalent of 3 million square yards or more during 1964. As for cotton yarns, on which there is already an overall limitation of 6.3 million lbs a year, it has been agreed that not more than 81.5 percent of this total quantity may be shipped annually as folded yarn and that not more than 5 percent may be exported as processed yarn.

For the purpose of bringing the new arrangements into force, 1964 is to be regarded as a transitional year and only 50 percent of the total 1964 cotton quota will be affected by the categorisation scheme. For 1965, the new arrangements will apply to the whole of the annual quota. The Cotton Board considers that the present arrangement, which in effect is a modification of the cotton undertaking between the Hongkong and the U.K. Governments, represents, together with similar arrangements being negotiated with other exporting countries, a practical and constructive step towards greater stability in the British domestic market. It should inspire greater confidence and provide a firmer basis for the future. The Cotton Board, accordingly, feels it right to place on record its appreciation of the realistic and co-operative attitude displayed throughout the negotiations by Hongkong.

One especially satisfactory aspect of the new arrangement is that it sets a precedent and should thus facilitate the drafting and adoption of similar schemes for regulating imports of cotton goods from India and Pakistan. If this can be done, the danger of especially severe hardship in particular sections of the Lancashire industry should be greatly reduced—there should be no sudden large influx of cheap imports of one class of goods which threaten the existence of the domestic producers of those goods.

ZINC

More Liberal Imports Urged

In his presidential address at the annual general meeting of the Indian Zinc Oxide Manufacturers Association, held in Calcutta last week, Mr. D. P. Kajaria pleaded for a more liberal policy concerning zinc imports. The metal is the principal raw material for the zinc oxide industry, the existing capacity of which is not being fully utilised. Referring to imports of zinc being allowed mostly from the D.L.F. sources, Mr. Kajaria observed that U.S. sources were not able to offer timely supply of this raw material. Even where they were prepared to supply, the price was considerably higher than that prevailing in the general licensing area. He suggested that larger imports of the metal from the general licensing area would not only enable the manufacturers to import a comparatively large quantity of zinc for the same value of licence, but at the same time, would help increase production and effect necessary economies to keep the price at a reasonable level. Mr. Kajaria also urged the Government to consider and introduce annual licensing for the zinc oxide industry. This would help the manufacturers to plan the shipments in such a way that their production programmes were not affected.

COMPANY AND PUBLIC NOTICES

DALMIA IRON & STEEL LIMITED

NOTICE is hereby given that the Eighth Annual General Meeting of the Company will be held at the Registered Office of the Company at Rajgangpur (Dist: Sundergarh, Orissa State) on Wednesday the 25th March, 1964 at 3 p.m. to transact the following business:—

1. To receive and consider the Directors' Report, the Auditors' Report and the Audited Statement of Accounts for the year ended 30th September, 1963.
2. To declare dividend.
3. To elect a Director in place of Shri Mohanlal Goenka who retires by rotation and is eligible for re-election.
4. To elect a Director in place of Shri N. C. Roy who retires by rotation and is eligible for re-election.
5. To elect a Director in place of Shri J. P. Kejriwal who was appointed as an Additional Director on 29th April, 1963 and who holds office as such upto the date of the Eighth Annual General Meeting. Notice has been received from a shareholder under Section 257 of the Companies Act, 1956 proposing his candidature for the office of Director.
6. To appoint Auditors and to fix their remuneration.

By Order of the Board of Directors.

For DALMIA IRON & STEEL LIMITED,
K. NATH & CO.
Secretaries.

30th January, 1964.

NOTES:—

(a) Every shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the meeting.

(b) The Register of Members & Share Transfers of the Company will remain closed for accepting Share Transfer Applications from 10th March to 25th March, 1964, both days inclusive.

(c) The dividend when sanctioned will be paid to those shareholders whose names would appear in the Register of Members on 25th March, 1964. Dividend Warrants are expected to be posted by 20th April, 1964.

(d) Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 for item No. 5 of the Agenda is being forwarded to the members of the Company.

BUDGET PRIORITIES AS SEEN FROM THE ECONOMIC SURVEY

THE *Economic Survey, 1963-64*, presented by the Central Finance Minister, Mr. T. T. Krishnamachari, to Parliament last Friday makes a faintly encouraging assessment of the outlook for the economy. If newspaper reports are to be believed, business men are pleased, and the pleasure is reflected in the fact that the stock markets have risen. A closer reading of the *Economic Survey*, however, indicates that the qualifying adverb "faintly" may be more important than the adjective "encouraging" in relation to the assessment which is presented. This is because not only is almost the entire narrative historical in nature; it gives only the vaguest possible idea of what the Government thinks is likely to be the progress of the economy during the coming financial year. Mr. Krishnamachari is to be complimented on his decision to publish the *Economic Survey* eight days earlier than usual, instead of letting it be drowned in a flood of papers issued on Budget day itself. But the main advantage of the change—that a wider public should have the time to understand the economic background against which the Budget is presented, and to gain an insight into the Government's thinking—can be realised only if the document is a lot more forthright and unequivocal than it is. There is no reason to suppose that something more specific and detailed than the Finance Ministry has presented would amount in a vague, undefined way to "a Budget leakage". The Finance Minister is entitled to take Parliament and the country into confidence on the specific aims of policy, without necessarily disclosing until Budget day itself the precise measures through which the aims are to be achieved.

The remark in the *Economic Survey* which has attracted the most attention is that "the overall picture is one of promise of rising growth rates in the basic fields of industry, though these rates at present are somewhat below the expectations in the (third) plan. It will be necessary in the months and years to come to strengthen the forces which contribute to higher levels of growth not only in industry but also, and more fundamentally, in agriculture". From this conclusion, which appears at the end of Part I, the deduction has been drawn that the Finance Minister is determined to accelerate the expansion of the economy; and so the Budget due on Saturday this week will be bursting with incentives for all and sundry. Since *Capital* has to its regret not been sent an advance copy of the Budget papers, it would be rash to decide straightaway whether the optimists are right or wrong. But three minor qualifications perhaps need to be borne in mind. One, this is not the first time Mr. Krishnamachari has highlighted the need to accelerate economic growth; on the contrary, that has been the basic theme of his speeches since he took over as Finance Minister five months ago, although the emphasis has not been accompanied by corresponding action. Two, the theoretical devotion to quicker growth is now common enough to be almost an epidemic among politicians the world over; it does not mean that while lip-service is paid to one set of aims, political pressures will not

another and entirely contrary set of aims. Three, on the evidence offered in the *Economic Survey* alone, there is no reason to suppose that Indian economic growth in the coming year will automatically be much faster than it has been in the last three; the optimism reflected in the document, in other words, can largely be written off unless the Budget on Saturday is as bold and imaginative as many hope it will be.

How disappointing the progress so far has been is evident from a few simple statistics. According to the *Economic Survey*, India's population has been rising by about 2.3 percent a year. During the first two years of the third plan, the annual increase in national income is estimated to have been a minute fraction above that figure; the increase in average *per capita* income has thus been negligible. The *Economic Survey* claims "there are indications that the rise in national income in real terms will be higher in 1963-64 than in the first two years of the current plan." One hopes the prophets in the New Delhi Secretariat are right, although one notices that they are cautious enough not to say how much bigger the rise is likely to be. Their optimism seems to be based primarily on a recovery in agricultural production. It does not, however, appear to take account of the fact that while the *kharif* crops may have been fairly satisfactory, latest reports indicate that the same cannot be said of the *rabi* harvests this year. In any case, the Government's agricultural statistics and forecasts are achieving new heights of unreliability. As the 1963 experience showed, not until several months after the agricultural year has ended does the Government itself have the foggiest idea what the production during that year has been. The statistics relating to industrial production are more reliable; but they indicate that the rate of increase during 1963-64 is likely to be around 8.5 percent, or only fractionally higher than the average annual increase in the first two years of the third plan. The evidence thus suggests that if the increase in national income during the current financial year is going to be bigger, it is unlikely to be much bigger than in the previous two.

A major defect of the *Economic Survey* is that it seeks to gloss over this fact, and it does so in a way that is not only familiar but disingenuous. Rarely are achievements compared with the targets for the year. Instead, a long list of soporifics is offered, to the effect that the production of A rose, the installed capacity for B increased, or the investment in C expanded. On this basis, the impression is sought to be created that everything in the garden has been lovely, even though in overall terms the poppies the Government has picked for special mention are small and rather unimportant ones. Odd though it may seem, some thinly-disguised pleasure is expressed over the fact that the shortages of coal, transport and power have been greatly eased. The point is barely mentioned that in almost all three cases the easing is due to the economy having expanded far less rapidly than it was expected to.

or could be, taken to stimulate agricultural and industrial production. Unfortunately, most of the measures mentioned are old and familiar ones which have failed to yield the expected results in recent years. In the case of agriculture, it is stated that a greater irrigation potential will be created, and more of it will be used. The supply of fertilisers, better seeds, pesticides, bulk storage facilities and credit will also be expanded. To the extent that there is any new emphasis, it is on increasing the production of commercial crops like cotton, oilseeds and jute, and on extending the network of price-support schemes to give farmers more incentives. But, in practical terms, none of this amounts to very much. The Government is in the convenient position of being able to talk freely about price-support schemes at a time when they cost it very little—since prices in many cases are already well above the support level because of the inflationary policies it has followed. It remains to be seen whether the glib talk will have any meaning if those prices ever fall. Only then will the organisational deficiencies and the fabulous cost of implementing price-support schemes show up.

As far as industry is concerned, the authors of the *Economic Survey* appear to imply that the progress of the agriculture-based industries will be promoted by an increase in farm output. The easier supply of coal, transport and power will help. Finally, it is suggested that the production of capital goods and import substitutes is going to increase rapidly. Unfortunately, it does not look as if the substantial increase in exports during the past year will permit any major liberalisation of imports of raw materials, spare parts and components. Most of the extra export earnings will apparently be used instead to meet the rising obligations relating to the servicing of foreign debts. The policy of depressing domestic consumption in order to create exportable surpluses will, therefore, be continued.

The *Economic Survey* does, however, reflect certain noteworthy shifts in emphasis in the Government's policy on industrial expansion. The first and most important is that price and distribution controls are being reviewed so as to ensure that they do not discriminate against basic industries and thus divert investment to less essential ones. The second is that controls over industrial licensing and capital issues are being relaxed so that an overburdened bureaucracy can cope with them. The third is that the Government now seems slightly more aware of the decline in the inflow of private foreign capital, and also of the difficulties in raising domestic capital for launching new projects. The preference in the latter case nevertheless seems to be for increasing the flow of institutional finance rather than reviving the capital market as such. But it remains to be seen whether, after the recent changes in company law, the foreign collaborators Mr. Krishnamachari might wish to attract will invest substantially in enterprises which otherwise have to depend heavily on Government-owned institutions for rupee finance.

Whatever one might think of the *Economic Survey's* assessment of agricultural and industrial prospects, one of its major shortcomings is that it does not highlight adequately the acute inflation from which the economy has been suffering. The causes of the past year's inflation are mainly three. The first is that agricultural production, particularly the output of foodgrains, has been extremely disappointing. The second is that, however proud the authors of the *Economic Survey* may be of the Budget which Mr. Morarji Desai presented a year ago, it has played havoc with the economy by leading to a sharp increase in costs. The third is that industrial expansion has been sluggish, and the proportion of idle capacity has not been appreciably reduced. It is realistic of the Government to concede that the main way in which the rise in prices can be checked is by increasing production and productivity. There is a large element of self-delusion, however, in implying that last year's Budget was not inflationary since (1) it avoided large increases in indirect taxation on items of mass consumption; and (2) it helped to mop up "excess" purchasing power in the economy. The Government must by now know as well as anybody else that the large and indiscriminate

dose of indirect taxation last year, on top of a heavy dose of direct taxation, could not be anything but highly inflationary.

Whatever it may or may not have done to suppress demand, the last Budget raised costs sharply and thus created a strong disincentive for raising production. To pretend that inflation can now be checked by reducing middlemen's profits, and opening consumer co-operatives along with fair-price shops, is eye-wash. The first steps towards bringing prices down will necessarily have to be Budgetary ones, and only on Saturday will it be known whether Mr. Krishnamachari has the courage to take them. To say that there is little scope for reducing taxes since deficit financing has to be restricted is no answer to the problem. Whatever the political pressures may be, the re-

PROBLEMS OF THE EAST

THE essential identity of interests among business, industry and the people in dealing with the problems facing eastern India was highlighted by Mr. A. R. Foster's presidential address to the Bengal Chamber of Commerce and Industry last Friday. The 8-percent decline in rice output in the 1962-63 agricultural year, which has raised prices to a level one-third above that of a year ago, is indeed a matter of vital concern, not only to the man in the street but also to industry operating in the region. Ugly eruptions of violence—whatever the immediate cause—can often be traced back to the distress and frustration which acquire an explosive character in a period of high prices. Occasional food shortages can perhaps be met by arranging for supplies from other parts of the country but there is no reason why eastern India as a whole should so frequently be in deficit. Mr. Foster made the valid point that the region has in Orissa, Assam and parts of West Bengal some of the best rice-producing areas of the country. In some tracts, water supplies may occasionally fall short, while in others drainage may be inadequate. But the region on the whole has adequate rainfall and a productive potential in its rich, deltaic soils that should make it possible to raise yields to something like the level of Japan.

Too much has been made by academic economists of the disadvantages of a high man-land ratio, and the consequent smallness of individual holdings. That this situation does not automatically preclude high productivity is evident if one looks at the record of the best farms, the yields from which are several times the regional average. The fact suggests that effort needs to be concentrated on bringing to the farmer the knowledge and the means of better agriculture through adequately organised extension services. Simultaneously, a programme of rural works to build or renovate community assets like bunds, tanks and feeder roads could help both to relieve distress by providing gainful employment and to create a greater productive potential. All this is, or should be, well understood in State Secretariats but the problem, as has been suggested, is not amenable to solution at the administrative level alone. The work of the block development officers and the extension agents needs to be backed up by a community consensus, which is largely lacking in the absence of initiative at the political level. The situation is not peculiar to eastern India; in spite of the steps taken already to create *panchayat raj* institutions in most States, organisational deficiencies persist because political activity remains largely an urban phenomenon. One hopes, however, that the tremendous challenge facing eastern India will elicit the requisite response and a new dynamism will be found to change life in the villages.

Apart from its wider interest in political stability and social cohesion, industry in eastern India has a direct stake in agricultural progress. Take raw jute, for instance, as the starting point for West Bengal's largest industry. Although supplies have been plentiful since 1961, this comfortable situation has come about largely through the extension of acreage at the cost of paddy, rather

covery of the economy calls for cuts in both taxation and deficit financing, which in turn implies the need for a drastic reduction in Government expenditure. Any remaining deficit thereafter will need to be covered at least partially through a more ambitious programme of public borrowing. If New Delhi thinks that interest rates should rise to "reflect adequately the real cost of capital to the economy", the implication presumably is that the interest rates paid by the Government on its loans ought to rise too. That should make a rather more vigorous and ambitious borrowing programme possible than has been the case so far. Mr. Krishnamachari's dilemma may thus be less acute than it seems at first sight, assuming that his seriousness about accelerating economic growth is as great as the *Economic Survey* claims it to be.

than through any significant increase in yields. The farmer, as anxious as anyone else to improve his lot, understandably wants a better return for his labours than in the past. If this is not to undermine the industry's competitive position in world markets, he has to be shown how he can help himself by getting a higher output or better quality from his fields. The Indian Jute Mills Association is already working to this end through its demonstration plots, but State initiative is obviously required both to carry the message further and to ensure that the physical inputs, chief among them being fertilisers and improved seeds, reach the farms in time.

Assistance from the State, judiciously and discriminatingly applied, could be of great benefit to industry in the eastern region. The social costs of further development in the greater Calcutta area are now so prohibitive that the creation of subsidiary centres of industry is, as Mr. Foster put it, a pressing need. The rapid growth of Durgapur illustrates what the State could do by way of developing land and providing certain basic facilities like power, water and an economic fuel supply. Although the new township is still a long way from attaining its full potential, there is no reason why a start in the same direction should not be made elsewhere also. Asansol provides a case in point because its growth has perhaps gone as far as it can within the existing framework of facilities. The same may be said of Dhanbad and even of Jamshedpur, although the latter is incomparably better off in many ways than other industrial centres. Rourkela too offers immense scope but it seems surprising that no effort has yet been made to attract ancillary industries to this new town. The only unit—a major engineering workshop—is located some 16 miles away, almost deliberately sacrificing the external economies that may have been gained by moving it closer to the steelworks. It is not clear whether this is attributable to the personal preference of the workshop's sponsors or to the absence of an overall plan for wider development of Rourkela? These are matters which could be looked into by a regional planning agency, an embryo of which exists in the Calcutta Metropolitan Planning Organisation. The agency has been examining not only the sanitation, sewerage and civic amenities but also the larger problems of industrial dispersal over the entire five-State area which Calcutta port has as its hinterland.

No matter how successful the future dispersal is, the immediate need is to redevelop and restore Calcutta itself. As Mr. Foster appropriately pointed out, the fate of Calcutta and of industry in the eastern region is so closely linked that neither can be discussed in isolation from the other. Calcutta's problems and their significance for the rest of the country are beginning to be recognised in New Delhi, as is evident from the recent assurances offered by Mr. Gulzarilal Nanda, Central Home Minister. But while Central support is undoubtedly needed—the problem is too large to be solved otherwise—one is entitled to ask whether enough is being done nearer home. Calcutta Corporation continues on its wayward career and the temporary expedient of reinforce-

ing its administration by the loan of State Government personnel has almost failed. The legislative reforms which have to precede purposive planning for the entire metropolitan complex have yet to be initiated. In part, the delay may be the result of the other pressing tasks foisted

WEST BENGAL SHOWS DEFICIT

THE most disturbing feature of the West Bengal Budget for 1964-65, presented in the Legislative Assembly last week by Mr. S. K. Mukherjee, State Finance Minister, is the decision of the Government to dissipate its limited resources by increasing the emoluments and other benefits of Government employees. Since inflationary pressures in the economy have caused a great deal of suffering to all, the wisdom of granting relief only to Government employees, who constitute a small part of the total population, is open to question. The efficiency of Government departments, in spite of their being over-staffed, has declined to distressingly low levels in recent years. It is improper to fritter away resources at a time when the finances of this problem-ridden State are severely strained by the influx of refugees from East Pakistan.

Although the present inflation is largely due to the failure of the Central Government to create conditions for raising production, the West Bengal Government cannot escape blame. The sharp rise in food prices has been principally due to the shortfall in agricultural production in this State. Farm output has declined steadily since 1961-62. Although more than 25 percent of the total budgeted expenditure has been allocated for agriculture and the development of rural areas, there are no signs of farm production improving to any worth while extent. Since there is practically no cultivable waste land in the State, agricultural production can be stepped up only by more intensive cultivation. The size of the harvests is now mostly determined by weather conditions, and no great improvement can be expected unless the reliance on rainfall and weather is reduced by introducing scientific methods of cultivation. Although money is being spent on developing scientific methods, benefits of research have not reached farmers due to the absence of a good agricultural extension service.

West Bengal has already incurred about 64.7 percent of the third plan expenditure which is claimed to be the highest proportion among all States. But progress cannot be measured only in terms of outlays. Besides, like other States, West Bengal has not been bold enough to raise sufficient resources from the rural sector, although this sector has benefited much from the plan outlays. The State Finance Minister has introduced changes in land revenue to raise more funds, but the effort is far too small in relation to the revenue potential of the agricultural sector. Along with changes in land revenue, he has levied a higher stamp duty on transfers of immovable property and similar transactions and has increased registration fees in order to cover the Budget deficit of Rs. 2.47 crores. But he has given no indication as to how he will meet the additional recurring expenditure of Rs. 4 crores a year as a result of the benefits granted to Government employees.

As for plan outlays, West Bengal, in common with other States, relies greatly on financial assistance from the Centre. The State's outlay during the third plan was formerly fixed at Rs. 250 crores, but has now been raised to Rs. 327 crores in view of some new projects and the rising prices of equipment and raw materials. It is not yet known whether the Central Government will give more money to West Bengal for financing a bigger plan. Although financial assistance from the Centre may be necessary, there is no reason why State Governments should not be asked to raise more money from the rural sector. As far as the implementation of plan projects is concerned, the West Bengal Government has rightly laid emphasis on developing electric power resources to sustain industrial development. The shortage of power is a major obstacle to rapid industrialisation. If the various power projects are completed in time, it is expected that the shortage will be overcome to a

on the State by events outside its control, but opposition from vested interests has been a not inconsiderable factor too. An enlightened public opinion could greatly strengthen the Government's hands at this juncture, a task to which those in a position to help should apply themselves.

large extent by the end of 1966. It is to be hoped that the Central Government will grant foreign exchange expeditiously to import the equipment needed for power projects.

The effort of the West Bengal Government to develop the industrial complex of the State is understandable since the basic resources in terms of raw materials and labour are abundant. The rationalisation and expansion of the facilities at Calcutta Port, combined with the building of a new port in Haldia, should stimulate industrial development. But attention has to be paid to the fact that industrial enterprises can be attracted only if vigorous efforts are made to maintain law and order. West Bengal's claim for special financial facilities from the Central Government cannot be overlooked. The influx of refugees from East Pakistan has placed a great strain on the State Government. As a result of the big expansion of industries in Calcutta and the growing population, the civic services in the city have almost reached breaking point. The density of population in Calcutta is 145 an acre, compared with 45.1 in London and 33.7 in New York. The Calcutta Metropolitan Planning Organisation has been

working on surveys and investigations to tackle the staggering problems of health, sanitation, drainage, water supply and transport. The maintenance of law and order has also posed a big problem.

The financial results of important commercial or semi-commercial enterprises belonging to the West Bengal Government have been disappointing. They have incurred losses for 1962-63 and their working will, it is feared, show a further deterioration in 1963-64. These undertakings are run inefficiently, and there is as yet no serious attempt to make them profitable. If the Government exercises greater vigilance, there is no reason why they should not be well managed and yield fair profits. The slow growth of small industries in this State has largely been due to the unsympathetic attitude of the Government. The working of the State Aid to Industries Act has been unsatisfactory since many deserving applicants have not obtained financial assistance on reasonable terms. The policy which the State Government and the Rehabilitation Industries Corporation have been following in relation to industrial estates, is far from satisfactory too. The terms and conditions on which space is allotted in these estates are haphazard and do not take into account the paying capacity of small-scale units. Besides the Government has not encouraged such industries, particularly those producing engineering goods, by buying their products for its own use. There has also been no serious effort to develop ancillary units in the small-scale sector. The heavy incidence of excise duties and sales tax has hit small industries. Many of them have had to close down because of their inability to pay taxes or to comply with the regulations concerning sales tax.

WEST BENGAL BUDGET

Current News and Comment

State Budgets of Bihar and Andhra

Bihar and Andhra are among the State Governments which have presented their Budgets for 1964-65 during the past week. Both would have managed to produce revenue surpluses for the year. But since they have decided to incur additional expenditure on "social security" schemes or on increased emoluments and other benefits for their employees, the surpluses will disappear. Therefore, the Chief Minister of Bihar, Mr. K. B. Sahay, who also holds the Finance portfolio, has warned that although the Budget does not contain any taxation proposals for the time being, the State will have to raise fresh resources through

taxation and loans and "through more economical operation of commercial and semi-commercial schemes of the Government". The Finance Minister of Andhra, Mr. Brahmananda Reddy (who is now Chief Minister), has however, declared that he will not resort to additional taxation later; all the extra funds which may be required for introducing social security measures for Government employees, and for implementing the plan schemes, will be raised through market borrowings, better collection of taxes and economies in expenditure.

The Bihar Budget for 1964-65 estimates revenue receipts at Rs. 197.27 crores and total revenue

expenditure at Rs. 196.76 crores, thus leaving a small revenue surplus of Rs. 51 lakhs. But on the capital side of the Budget a gap of Rs. 3.75 crores has been left uncovered. The provision for plan schemes is Rs. 75.17 crores, as against an outlay of Rs. 78.92 crores. The Chief Minister has pointed out that even this provision of Rs. 75.17 crores may have to be scaled down as the State will have to implement the recommendations of the Pay Revision Committee concerning its employees. Additional resources will, therefore, have to be found. Looking ahead, Mr. Sahay has said that for the next year as well as the year after, which is the final year of the third plan, the Government will have to consider augmenting its resources, not only for development projects but also for meeting the increase in non-plan expenditure. But he has not indicated when exactly the Government will announce fresh taxation or other measures to raise

additional resources. Perhaps it will wait until the financial implications of the recommendations of the Pay Revision Committee have been worked out fully.

A major part of Bihar's revenue will be spent on education, medical and public health, industries, irrigation, compensation to landholders and public works; the main emphasis, however, will be on education and rural development, including agriculture. The allocation for industries has actually been reduced. Co-operation also gets a smaller sum, compared with the provision in the previous Budget. A sum of Rs. 1.14 crores has been allocated for employees' pensions and retirement benefits, but this will have to be increased later when the decision on the recommendations of the Pay Revision Committee is taken. A more liberal family pension scheme will be introduced for Government employees from the next financial

year. (Under the new scheme, the widow of a Government servant who has put in at least one year's service at the time of death will get a pension for life at varying rates subject to a minimum of Rs. 25, depending on the salary of the deceased.) The Government also proposes to raise the pension of all categories of employees whose pension is not more than Rs. 100 a month, and who retire before a certain date, by amounts varying from Rs. 8 to Rs. 10 a month.

In the Andhra Budget, Government servants get an increase in dearness allowance, with perhaps more to follow later. This will cost the exchequer an additional Rs. 1.94 crores, and will more than eat up the nominal surplus of Rs. 15 lakhs in the Budget, which would have emerged after estimating the revenue for the next financial year at Rs. 136 crores and providing for an expenditure of Rs. 135.85 crores. When transactions outside the revenue account are considered, there will be an overall deficit of Rs. 5.29 crores. The State's actual expenditure on third plan schemes during 1963-64 stood at Rs. 63.78 crores, as against the original provision of Rs. 49.87 crores. For the next financial year, the outlay has been fixed at Rs. 72.54 crores as against which the anticipated Central assistance is Rs. 43.05 crores. The balance of Rs. 29.49 crores will have to be found by the State from its own resources. Mr. Reddy has indicated that this will have to be raised through the usual methods of open market borrowings, better collection of taxes and economies in expenditure. As a matter of fact, Andhra, it is claimed, has been able to raise Rs. 11.53 crores more of revenue during 1963-64 than the estimated Rs. 118.35 crores through improved collection of excise duty, sales tax, stamp duty and from bigger Central grants-in-aid. It hopes to collect Rs. 6.95 crores more during 1964-65 from the same sources.

Discussing the State's economic conditions, the Finance Minister has said that it is on the whole satisfactory, but Andhra must raise food production further. Some 70 percent of the area under rice in the State has already been covered with improved varieties, against an average of 15 percent for the entire country. It is hoped that the whole paddy cropping area in the State will be covered with better seeds by the end of the third plan period. Package programmes and intensive dry farming schemes are being vigorously implemented. Mr. Reddy expresses some disappointment at the delay in the execution of the two fertiliser projects—in Kothagudem and in Visakhapatnam—and says that the State Government has already agreed to guarantee up to Rs. 75 lakhs to the Industrial Development Corporation for underwriting the capital issue of Coromandel Fertilisers. The co-operative sugar factories in the State are not working satisfactorily as cane supply is short. The Government is trying to remove this difficulty. It has also asked the Centre to sanction six more co-operative sugar factories and six more co-operative spinning mills in Andhra. The State will subscribe to their share capital when licensed by the Central Government. Industrial production in the State has been maintained at satisfactory levels, but the main obstacle to further progress is the high cost of power. The Government has, therefore, offered concessional power rates to new industries being established in the State. Emphasising the importance of the Nagarjunsagar project to Andhra's economy, Mr. Reddy says that since the capital cost of this scheme is heavy—Rs. 90 crores will have to be spent by the end of the third plan and another Rs. 50 crores in the early years of the fourth plan to complete only the first phase—the Central Government should take over the entire financial responsibility.

Surplus for Maharashtra

Maharashtra's Budget for 1964-65 presented by the Finance Minister, Mr. S. K. Wankhede, shows a small surplus of Rs. 51 lakhs, the revenue receipts being estimated at Rs. 138.45 crores and revenue expenditure at Rs. 137.94 crores. The Budget contains no new taxes; instead, the Finance Minister has announced measures for providing some relief to the common man. If past experience is any guide, the budgeted surplus of Rs. 51 lakhs is likely to turn out to be a gross underestimate. The accounts for 1962-63 reveal a surplus of Rs. 3.22

crores, against the revised estimate of Rs. 40 lakhs, and the revised estimate for 1963-64 indicates a surplus of Rs. 5.43 crores, against the originally estimated figure of a mere Rs. 4 lakhs. The large revised surplus for 1963-64 is attributed by the Finance Minister principally to an improvement in the growth rate of the taxation obtaining in 1960-61, to the doubling of the 1-percent rate of Central sales tax by the Government of India and to better yields from the taxation introduced during the first three years of the current plan.

A development programme of Rs. 98.01 crores has been approved for 1964-65, comprising Rs. 30.86 crores of revenue outlay and Rs. 67.15 crores capital. The financial picture presented by Mr. Wankhede points unmistakably to the strengthening of the State's economy. He thinks that the buoyancy reflected in the State's revenues would enable the Government to assess the progress of the current plan schemes and to reshape them where necessary, imparting wider dimensions or an increased pace of implementation. During the first three years of the current plan, the outlays on agriculture, community development, irrigation and power, industries and mining, social services including education and scientific industrial research have already exceeded Rs. 198 crores, as against just over Rs. 225 crores for the whole of the second plan. The State, says Mr. Wankhede, is likely to exceed the original third plan investment target of Rs. 390 crores by 7 percent, which indeed, is a creditable performance.

Reviewing the economic growth in the last few years, Mr. Wankhede said that the State's income (at 1955-56 prices) had risen from Rs. 1,004 crores in 1955-56 to Rs. 1,400 crores in 1962-63—an increase of 39.5 percent. The per capita income during the same period rose by 17.5 percent, from Rs. 292 to Rs. 343. The triennial average of foodgrain production for 1961-62 was about 30 percent higher than that for 1952-53. A significant indication of the growth of the rural economy is the increase in the number of irrigation pumps worked on electricity from 1,750 in 1961-62 to 2,145 in 1962-63 and the figure is expected to rise to 2,500 by the end of the current year. The number of working factories has risen from 6,979 in 1956 to 8,762 in 1962, and the number of workers employed has increased from 687,000 to 810,000. The road length will have increased from 33,800 kilometers in 1956 to 43,000 kilometers in March 1964. The student population has gone up from 3.64 million in 1955-56 to 5.87 million in 1962-63, and the number of hospital beds has risen from 16,000 in 1957 to 24,000 in 1962. This is not a poor showing, although the State has yet to go a long way towards bringing to a reasonable level the standard of living. This will undoubtedly continue to cause a severe strain on the State's resources. So the Finance Minister has found it difficult to give any big concessions in his Budget for 1964-65. The relief measures include raising the sales tax exemption limits for meals in hotels, ready-made garments and certain medicinal preparations, increase in dearness allowance to low-paid Government employees and certain benefits to pensioners. The limit of exemption from sales tax on meals served in hotels and canteen has been raised from Re. 1 to Rs. 1.50 and that for ready-made garments from Rs. 5 to Rs. 10 a piece. Sales tax on alcoholic medicines has been reduced from 30 percent to 15 percent and that on non-alcoholic drinks from 5 percent to 3 percent. These concessions will cost the exchequer Rs. 25 lakhs. The additional temporary increase in the basic pension of 37,000 pensioners drawing less than Rs. 60 a month will cost another Rs. 11 lakhs. Government employees drawing Rs. 250 or less a month will get an increase of 5 percent in their dearness allowance. All these relief measures will cost Rs. 2.5 crores. The Finance Minister has also proposed conditional rebate equal to the sales tax on diesel oil consumed in agricultural operations as also grants-in-aid for increasing the dearness allowance payable to secondary teachers of non-Government schools and municipal employees.

While one must thank the Government these days even for small mercies, it would be idle to pretend that the relief measures proposed by the Finance Minister will make the lives of ordinary citizens more easy, particularly when the value of money is being eroded rapidly by the rising trend in prices. Some of the measures announced by Mr. Wankhede are aimed at boosting agricul-

tural production, which holds the key to price stability, and at strengthening the co-operative structure. With a view to encouraging cultivators to make fuller use of the water potential available from Government irrigation works, the Finance Minister has proposed a two-thirds reduction in the irrigation rates for a selected range of crops. The proposal for setting up a price stabilisation fund in order to indemnify co-operatives dealing in *jowar*, rice and wheat against losses through price fluctuations, is sound and its progress will be watched with interest. A new scheme for distributing consumer articles in rural areas through 230 marketing societies is proposed to be undertaken during 1964-65. Rural works schemes now covering 68 blocks are to be extended to another 100 blocks and organisation of co-operative processing of agricultural produce is to be given greater attention.

Problems of Collective Bargaining

In a paper presented at the annual conference of the Indian Institute of Personnel Management in Jamshedpur last week, Mr. P. N. Krishna Pillai, Personnel Manager of Indian Aluminium Company, drew attention to the problems of collective bargaining in this country. He pointed out that although the prevention and settlement of disputes through voluntary negotiations had been emphasised in the Government's labour policy, collective bargaining had not worked well in practice. Barring a few exceptions, it has not even developed in many industrial units. The terms and conditions of employees are frequently determined by court decisions, statutes and Wage Board awards. A study of some 114 collective agreements by the Employers Federation of India over a year ago revealed that as a factor in determining wages and working conditions of industrial workers, "the influence of collective bargaining is only marginal".

Mr. Pillai said that the reason for the failure of collective bargaining in this country was State intervention in the form of conciliation and compulsory adjudication, legislation and decisions of tripartite bodies. He suggested that conciliation services should not come into play in industrial disputes unless voluntary negotiation was first tried out. It should be the duty of conciliation officers to set up machinery needed for collective bargaining both at industry and plant levels. Disputes should go for compulsory adjudication only in rare cases, since outside agencies without intimate knowledge of the disputes could not suggest satisfactory methods for ironing out employer-employee differences. The speaker also stated that when recourse is had to adjudication, the tribunal should decide issues purely on merit and not take judicial notice of the concessions made by the parties to the dispute during prior negotiations or conciliation. This is necessary to encourage parties to be frank and yielding during negotiations. Mr. Pillai deprecated the spate of labour legislation in recent years. In many of the spheres usually covered by joint negotiations, legislative enactments stipulate the terms and conditions rigidly. As a result, the minimum wages fixed by statutory bodies in certain industries frequently become the maximum wages.

Mr. Pillai felt that tripartite bodies should mainly confine themselves to laying down broad, national policies. He mentioned that in the case of a few companies, which had adopted collective bargaining with some success, the decisions of tripartite bodies disturbed the entire arrangements evolved by employers and employees. The Bonus Commission's recommendations, for instance, would upset mutually-agreed arrangements under which bonus is linked to productivity over which workers have control and not to profit over which they have no control. Similarly, a company which wanted to introduce a pension scheme for its workers would now hesitate to do so due to present retirement benefits laid down by legislation and the talk of future enactments on the subject.

Import Licences for Natural Rubber

The Indian Rubber Industries Association is fully justified in protesting against the Government of India's arbitrary decision to link the

grant of import licences for natural rubber with the producer's purchase of indigenous synthetic rubber. While there is every need to encourage the use of indigenous raw materials, it is equally necessary to keep in mind the general interests of the rubber products manufacturers. Synthetics and Chemicals Ltd, Bareilly, produces only three grades of styrene butadiene rubber, whereas the Indian industry uses several grades of S.B.R. not manufactured in India. Moreover, as against the total requirements of natural rubber and S.B.R. estimated for 1964 at 83,000 tonnes, the supply of S.B.R. of the types which Indian industry is able to use would be nearly 15,000 tonnes. This combined with the estimated production of 42,000 tonnes of natural rubber in the country gives a total supply of nearly 57,000 tonnes, thus leaving a gap of 26,000 tonnes in supply.

The result of linking the imports of natural rubber with the use of S.B.R. produced in India would be to force the Indian rubber goods producers to work below capacity. To cover the gap in raw material supplies the Association has suggested that licences for importing 26,000 tonnes of natural rubber should be granted to different producers in proportion to their estimated requirements. A conference of rubber goods producers in India could then be called to ascertain the maximum proportion of S.B.R. which could be used in various products and the total amount of S.B.R. produced by the Bareilly firm, which the Indian rubber goods producers could use without lowering the quality of their goods and without increasing their production costs. It is feared that if rubber goods manufacturers are deprived of their import quota, they will try to buy as much indigenously produced natural rubber as they can, and this will push up the prices of natural rubber, to the detriment of the consumer.

While imposing restrictions on imports of natural rubber, it is also necessary for the Government to take vigorous measures to increase internal production. It has been estimated that by the end of the third plan period, as against an annual demand of 171,000 tonnes for all kinds of rubber, domestic production would not exceed 75,000 tonnes if the output of natural rubber in the country is assumed at 45,000 tonnes. This would leave a big gap in supplies. If efforts are made to increase the yield of natural rubber an acre and if planters in the main rubber-producing areas in the country—Kerala, some districts of Madras State, Andamans and Nicobar Islands—are encouraged to replant high yielding clones it should be possible to increase the indigenous supply of natural rubber. According to one estimate the production of natural rubber in India could be increased to 65,000 tonnes by the end of the fourth plan and 100,000 tonnes by the end of the fifth plan, if proper efforts are made.

Fuel Efficiency Service

The National Productivity Council inaugurated a fuel efficiency service on 15th February in Bombay, which is the first zone chosen for this purpose. There can be no two opinions on the importance of economising the use of fuel in India. This leads to cutting of industrial costs, lessens the strain on the country's transport system and helps in the conservation of scarce coal and other fuel resources. A team of two members of the National Fuel Efficiency Service of the U.K., Messrs C. A. T. Plummer and B. R. Addicott, submitted a report on fuel efficiency to the Indian Government more than one year ago. But the Government is implementing the recommendation only now.

After visiting some 60 establishments in various parts of India, the team found that there was no single unit which did not offer scope for at least 15 percent economy in fuel, while some units offered as high a scope as 50 percent economy, provided suitable measures were taken. Even such elementary "first-aid" measures as lagging and thermal insulation, prevention of steam leakage and the use of steam at low pressure could offer substantial economies. In the case of Lancashire boilers used in this country, a saving of at least 15 percent in coal consumption could be made by fitting mechanical stoker and economiser. The introduction of mechanical handling of coal would result in an economy of its utilisation. In some units, proper measuring instruments were altogether lacking and even those establishments

INDIAN INSTITUTE OF MANAGEMENT, CALCUTTA

Established by
The Government of India
in Co-operation with
The Government of West Bengal

as a National Institute for undertaking management
education and research

Collaborators :
THE SCHOOL OF INDUSTRIAL MANAGEMENT
MASSACHUSETTS INSTITUTE OF TECHNOLOGY, U.S.A.

THE INSTITUTE PROVIDES

- A 2-years' Post-Graduate course for students leading to an equivalent of a Master's degree in Business Administration.
- An eight-month course for Junior Executives.
- Short term programmes for middle level and senior executives.
- Opportunities for representatives of universities to work in collaboration with industry and Government in the study of management problems.
- Research on problems relevant to management.

THE INSTITUTE INVITES APPLICATIONS, for the post of faculty members in the following fields :

FIELD	BACKGROUND
1. Marketing	Business Administration, Economics
2. Production	Engineering and Business Administration
3. Accounting and Finance	Accountancy, Economics, Business Administration
4. Information Systems	Electrical Engineering, Accountancy

QUALIFICATIONS REQUIRED :
Significant experience in management positions and high academic qualifications are required. Participation as faculty in internal or external training programmes and research experience will be additional qualifications.

Selected candidates may be considered for further training in India or abroad as considered necessary.

The designation, salary grades and other allowances are mentioned below :

A. Professors (Senior Scale)	— Rs. 1600-100-1800
B. Professors (ordinary scale)	— Rs. 1100-50-1300-60-1600
C. Associate Professors	— Rs. 1100-50-1300
D. Assistant Professors and Research Associates	— Rs. 700-50-1250

In case of Professors in Senior Scale, a special pay to Rs. 500/- per month may be given, in suitable cases. The Institute employees are eligible for benefits of contributory provident fund and house rent and other allowances as admissible to Central Government employees stationed at Calcutta.

Please apply to the Administrator, Indian Institute of Management, "Emerald Bower", 56-A, Barrackpore Trunk Road, Calcutta-50, before 15th April, 1964, on the prescribed Application Form which may be obtained from him by sending a self-addressed stamped 8 nP envelope, 9" x 4" size.

which at first installed such instruments had since neglected to keep them in good repair.

Inaugurating a seminar on the occasion organised under the combined auspices of the National Productivity Council, the All-India Manufacturers Organisation, the Millowners Association, Bombay, and the South India Steam Users Association, Mr. H. V. R. Iengar, chairman of the N.P.C., pointed out that in India proper efforts had not been made at fuel economy, such as has been the case in the U.K. and other countries, because the Indian producers enjoyed a sheltered internal market. If measures for fuel economy were adopted in this country, they would not only reduce industry's production costs, but would also reduce the strain on the country's transport system. Mr. N. K. Bhojwani, executive director of the N.P.C., explained that the fuel efficiency service would offer three types of service—plant survey, advisory service, training and information service. The work in the first instance would be confined to coal, but later on, other types of fuel would be taken up. He expressed the view that since 72 million tonnes of coal is being used in the country annually, a 10-per cent economy in coal utilisation would easily mean a national saving of Rs. 38 crores a year.

It cannot be denied that, by and large, the Indian producers are indifferent to fuel economy, but it must be mentioned that all the fault is not theirs. As the team of British experts pointed out, since the Indian producers valued coal only by what they paid for it rather than by its intrinsic worth, the faulty price structure of coal as fixed by the Government is partly responsible for the reckless use of coal, especially metallurgical coal by Indian producers. It would of course be wrong to argue that coal should be made more costly to Indian industry in order that coal prices might reflect its true value in the national economy, but it is necessary to change the price structure suitably in order to encourage Indian producers to use inferior quality coal where they can do without the metallurgical grades and to economise the use of all grades. Moreover, it would be all right in so far as fuel economy is possible by proper maintenance of boilers and other fuel consuming plants and by preventing steam leakage, but in order to make effective economies in fuel utilisation, some machinery, spare parts and components will

have to be imported and new mechanical devices installed in most units.

Quickening the Pace of Growth

That the rate of economic growth and the pace of social change have been slow in India is now widely known. The first three years of the third plan have, no doubt, helped to diversify and deepen the economy further but the potentials created remain to be realised. It is obvious that the country will need to achieve a much higher rate of growth in order to improve the living standards of the people. As pointed out by Mr. Asoka Mehta, deputy chairman of the Planning Commission, in his inaugural address at the annual meeting of the Indian Merchants Chamber, even to aim at the modest target of a family income of Rs 100 a month by 1975 it will be necessary to have an annual growth rate of 7 per cent; that is, twice the rate achieved during the past decade. A 7 per cent growth rate would require, among other things, a progressive increase in the rate of savings and investments by over 1 per cent of national income every year for the next decade. The decade of development will have to be "a decade of dedication." If adequate surpluses, can be produced, the difficulties of the underprivileged can be lessened by redistribution of incomes. But in India, these possibilities are limited because of the smallness of the surplus available and the vastness of the numbers needing amelioration. India, says Mr. Mehta, has, therefore, to concentrate mainly on a faster rate of growth, certain alterations in the process of income generation itself and only marginally rely on benefits through income re-distribution.

"The perspective before us" he says, "is of accelerated development, that is, of providing our economy and social structure with, as it were, built-in spurs, which would demand increasing investments and imparting of employment orientation to the development measures. The perspective also requires curb on the growth of income and consumption at the higher levels of living and considerable boost to the living standard of the poorer segments of the society". Few people will, in principle, disagree with Mr. Asoka Mehta's views, but the question is how to reconcile the two

conflicting goals of economic growth and social justice. It is, however, gratifying to hear the deputy chairman of the Planning Commission emphasise that the country needs both a high rate of investments and a high enough rate of profit on the investments made. The question of return on investment has not so far received the attention it deserves from the authorities. Basic industries have been starved of funds because of the inadequate returns allowed on investments. Mr. Asoka Mehta has done well to stress that adequate margins of profits will make possible larger doses of investment and will also make for efficient use of inputs. He points out that in the modern sectors of the economy, including those public-owned and operated, a 10 per cent rate of return has to be insisted upon. And if a particular service or a commodity has to be provided at lower than the full economic rate, it has to be through the provision of a subsidy. But such a subsidy will be an exception, not the rule. The rate of investment will be significant only if the marginal rate of saving is high. The impact of a policy which aims at an increasing rate of investment must necessarily fall more on the higher income groups. It follows that the country must learn to live with increasing burdens, because then alone will rising incomes be channelled to development to ensure continuing increases in income.

The deputy chairman of the Planning Commission, however, did not answer certain crucial questions raised by Mr. G. D. Somani in his presidential speech. Mr. Somani had asked whether in drafting the fourth plan and looking into the perspectives, the old long-term projections concerning investment and resources are to be continued, or whether the techniques of planning should not be examined afresh and perspectives reassessed. Do the scales of priorities correctly reflect the objectives for the future? Are best efforts being made to streamline the administration, on the institutional side? Has sufficient effort been made to generate mass enthusiasm for participating in this great experiment and whether an environment has been created for the resources—human, physical and economic—to be mobilised at higher and higher levels? Is the country moving towards a new momentum in economic effort, an expanding environment for production, or is it moving into a situation of excessive control and complicated institutionalisation? If Mr. Mehta did not answer them, the Government should. It should at least seriously ponder over the questions.

CALCUTTA MUNICIPAL BUDGET

THE Budget of the Calcutta Municipality for 1904-05 estimates the Revenue and Expenditure as under:

	Revenue	Expenditure
	Rs.	Rs.
General Fund ...	37,57,137	36,33,930
Water Supply Fund ...	16,60,795	17,69,909
Lighting ...	4,93,145	5,81,192
Sewage ...	5,58,745	6,31,223
Cart Registration ...	92,650	92,650
Hackney Carriage ...	24,200	24,900
Jute Warehouse ...	33,400	33,300
Total ...	66,20,672	68,17,104

This means an excess expenditure over revenue of Rs. 1,97,032, which can hardly be called healthy. The actual receipts in 1902-03 were Rs. 59,91,590 and the expenditure Rs. 62,75,992, leaving a deficit of Rs. 2,84,402; while the estimated revenue in 1903-04 was Rs. 63,45,198, and the expenditure Rs. 66,75,462, or a deficit of Rs. 3,30,264. The deficits for the three years are thus Rs. 8,11,698! We notice that a debenture loan of 30 lakhs has been budgeted for Drainage Works, and 5 lakhs for Water-supply, while Land Sales are put down at 2 lakhs, making the receipts on account of capital at Rs. 37,00,000. The expenditure against the first loan is put down at Rs. 34,34,607 and against the second loan at Rs. 6,95,179, while Plague Expenditure is put at Rs. 20,445 or in all Rs. 41,50,231. Here again there is a large excess of expenditure, but as this is on capital account it is not so important. We cannot say that this continued excess of expenditure over revenue favourably impresses us.

CAPITAL
3rd March, 1904

A Ditcher's Diary

YES, YOU COULD CALL VERRIER ELWIN AN ECCENTRIC in the great British tradition—provided you remembered the inherent discipline in his life without which none could have combined a full administrative career with creative authorship, plenty of journalism and an abundant social life. Organised religion and Verrier Elwin fell apart early on; conflict with the Establishment could not be far behind. The spell of Gandhi was real enough; but he was not unobservant of the less solemn aspects of life in Sabarmati; none could tell stories of the period more tellingly. His estrangement with the British Government left not a trace of rancour, for he was ever capable of laughing tolerantly at the prude and the pompous. It is, however, his complete identification with the tribals of India that will be remembered the longest; as I read of Elwin's death, I was wondering whether most of the people who would miss him most had heard the sad news, for they read no newspapers and heard no A.I.R. news bulletins. For these simple folk Elwin's love had a certain Christian quality, although I am not sure that he would have fully approved of the phrase. His subject for the Patel lectures was the aptest, "The Philosophy of Love"; love is what he gave to anyone who was fortunate enough to know him. If there is a more precious gift to give, I do not know of it. Not many men in history have blended in their lives high intelligence with transparent goodness; Verrier Elwin was one of those few. I have seldom known anyone carry his learning so lightly as Elwin; and a delightful conversationalist he was. Those who think of Elwin only as a great anthropologist, which he of course was, know but little of the immense range of his intellectual interests; I remember the letter on Wodehouse he wrote to the *Times Literary Supplement* goodness knows how many years ago; the address, if I am right, was some obscure place in what used to be the Central Provinces. I shall never forget Elwin's account of a conversation with Mr. Nehru. Subject? Nabokov's *Invitation*. There you have two great men of our time, in two different fields of endeavour, with one thing in common: humanity.

I THOUGHT IT A RATHER SURPRISING ASIDE WHEN Mr. Chagla told the Security Council that the recent disturbances in Srinagar were ascribable to the unpopularity of the State Government; the point he was obviously trying to make was that confidence in New Delhi was complete. It is altogether too early to say that Mr. Lal Bahadur Shastri has sorted out the mess; and a mess there has been in Srinagar for the past ten years of Bakshi Ghulam Mohammed & Frère. I cannot help feeling that the National Conference

itself is not all that popular; and Bakshi Ghulam Mohammed still presides over the Party. Coming changes in the Government of Kashmir have not been announced as I write; but I saw it suggested somewhere that it is Bakshi Ghulam Mohammed again who is going to propose the changes. Well, that doesn't look like the sort of change the situation apparently demands, does it? New Delhi is terribly sensitive on the subject of Sheikh Abdullah; perhaps there are very good reasons for it. But a foreign correspondent told me on his return from Kashmir that the Sheikh might one day conceivably change his mind and choose to play a constructive rôle in the politics of the State. Meanwhile, an effort to explore the mind of the prisoner under trial might, quite possibly, offer useful clues. On a problem like Kashmir's, official face is surely not the ultimate factor. Although Mr. Lal Bahadur Shastri apparently laboured hard lately in Jammu and Srinagar, I am not sure that the Kashmir question too has not got bogged down somewhere in the immobility that has in recent months been unmistakable in New Delhi. I do not mind confessing that I have no easy and simple answer to the problem of Kashmir; my failure is no greater than the United Nations'; what is distressing is that certain parties involved do not seem even to try for an answer.

THERE IS MUCH TO BE SAID FOR THE RECENT proposal that stockbrokers in Britain should in future serve a three-year "apprenticeship" and pass a written examination. It may possibly add to the profession's exclusiveness, and perhaps to its fees as well. But clients should benefit from being able to count on truly professional attention from a body of advisers who are notorious, in London if not in Calcutta, for having been recruited chiefly from the "public-school proletariat" on the basis of wealth and family connections rather than for either their talent or their appetite for the job. I have been wondering whether the same sort of thing ought to be adopted here. Perhaps not yet; the stockbroker in Britain is now far more of a specialist than he has yet become in India. In a profession where the functions of judgment have largely been taken over by the investment analyst, and where specialisation is fast becoming the rule, there is no room now either for the one-man firm or the unqualified amateur. Investment in the West today is mainly in the hands of large institutions whose judgment of the market is based on their own statistical and economic research; little scope is left for the peddling of personal hunches or the useful application of "inside information". Accordingly, the main functions of the stockbroker are tending to become the purely mechanical ones

of running an office. This does not mean that the personal element will be eliminated altogether; that can rarely be done in any business. But in future it is liable to be restricted to such matters as handling jobbers and dealing with the general public on the basis of information supplied by specialists. Things have not gone that far in India yet, although no doubt the trend is discernible. I am rather less convinced by the argument that jobbers in Britain too should have to pass examinations. It has always seemed to me that the profession of jobbing must remain a highly personal one if it is to continue to function properly. Anything which tends to make the jobber less individually accountable for his judgment and actions weakens his usefulness to the market. There is some evidence this is already happening in Britain. To try to make jobbing into an occupation dependent on professional qualifications, and the objective and impersonal standards these imply, might only accelerate the trend.

THE WEST BENGAL GOVERNMENT IS SAID, AT TIMES, to be extraordinarily sensitive to pinpricks of criticism; insults delivered with the force of a sledge-hammer are nevertheless accepted with a calmness that pachyderms might envy. By virtually compelling Mr. S. B. Ray to ask to be relieved of his duties at Calcutta Corporation, the city fathers have, not for the first time, succeeded in showing up the pusillanimity of Writers' Building at its worst. The surprise is that Mr. Ray should have suffered the stupidity and intransigence of the Corporation Councillors for so long; if his admirable efforts to perform a thankless task have been frustrated, the State Government is no less to blame than the Councillors themselves. Calcutta is prone, often and justly, to complain of neglect by the Centre; but I wonder whether the city realises the harm it suffers by maintaining a reputation for organisational chaos, of which the Corporation is the supreme example. In New Delhi, there is a deep suspicion that even if all the money required for improving civic amenities were provided, no great improvement would follow, for the political leadership and the administrative strength is lacking. I do not imply that New Delhi can, therefore, be absolved of blame for Calcutta's condition; the Congress Party, after all, rules at the Centre as it does in the State and in the Corporation, and it is the selfishness of the Party together with the cowardice of its leadership which is responsible for nothing being done. Had another group been in control of the Corporation, supersession would have come years ago. As things are, a Congress rump is allowed to run the organisation and line its pockets because supersession might be bad for the Party image and the Party treasury. Mr. Kamaraj has spoken against the factionalism which forces the Congress to contemptible compromises; Mr. Nanda has in turn spoken volubly against corruption. But will they ever find the courage to demonstrate their sincerity

Relief in a sip..!

An ideal drink for stomach disorders. This delicious and sparkling ginger beverage gives you the appetite to eat heartily and aids digestion. It helps you feel fine and fit.

by cleaning, for a start, even a minor organisation like Calcutta Corporation, where both are seen at their flagrant worst?

WHEN I WAS TOLD BY A FRIEND THE OTHER DAY THAT the modern dachshund is peculiarly susceptible to slipped discs, I thought he was pulling my leg. When he went on to say that treatment included a small four-wheel trolley to carry the weight of the dog's middle region, I was convinced that was what he was trying to do. Now I am beginning to wonder, because I am told that pedigree dogs these days are developing numerous serious and painful hereditary abnormalities due to indiscriminate in-breeding aimed at achieving the "fine points". I have seen reports that almost all the breeds with high entries at this year's annual Crufts Show in London have one or more of these defects. The Show favourite, the alsatian, has several, and indeed British alsatians are now no longer considered suitable for training as police dogs in their own country. The main complaint with this breed is hip dysplasia, from which Labradors and boxers are also frequent sufferers. The most common all-round defect is described as "excessively abnormal temperament", and this affects several top breeds. Other conditions include "prolonged soft palate" where a dog's skull has been shortened by selective breeding without any corresponding shrinkage in the palate, which tends to block the throat. Pekinese, pugs and bulldogs are common sufferers from this. Then there are ingrowing eyelids (chows, spaniels and golden retrievers), slipping kneecaps (miniature and toy poodles, Yorkshire terriers and griffons), and progressive retinal atrophy, or growing blindness (miniature poodles and Labradors). The British Small Animals Veterinary Association recently concluded research into 120 breeds of dog, only 17 of which were found to be without hereditary defects, with a further 20 showing "relatively insignificant" abnormalities. The rest were seriously affected. None of the breeds given a clean bill of health, I am told, were popular ones in that country.

TO DESCRIBE A PLAY AS A MODERATE SUCCESS IS sometimes interpreted as being a polite way of damning it with faint praise; that, however, is not what I intend to do when I describe the Amateurs' production of *The Glass Menagerie* last week as enjoyable, interesting and fairly imaginative. For a non-professional group, the play offers certain advantages, the chief being that the cast is small and so can be thoroughly rehearsed. But to portray, with finesse and delicacy, the tremendous emotional conflicts of Tennessee Williams' drama is not given to all amateur actors, or producers; and from this point of view Pritam Mayadas's production had its weaknesses. The story concerns the tribulations of a lower middle-class family in the American South which has fallen on bad days. Deserted by the father, it is left with a son as the sole breadwinner who, through the humdrum existence of a warehouse worker, remains a dreamer with a poetic soul seeking escape from the realities of life. The contrast to this somewhat insipid character, played by Xerxes Mehta, is provided by Pamela Perks as the dominating and ambitious mother; her preoccupation in life is to nag her son into finding "a gentleman with a good position" as spouse for her daughter, a forlorn cripple who has sought refuge from a cruel world among the collection in her glass menagerie. The clash of personalities inherent in so impossible a situation leads inevitably to the appointed climax when the son feels compelled to desert the family too. The paths of the story and the tenseness of the atmosphere were faithfully conveyed in the Amateurs' presentation, for which credit is due primarily to Pamela Perks; Meera Bhagat gave admirable expression to the moods of a crippled spinster alternating constantly between escapism and despair. The variety of accents may not have contributed to the success of the play, but Ernani Giambuzzi's management of the stage was imaginative in a way amateur efforts not often are. The Amateurs are to be complimented on having striven hard and offered theatre-goers a pleasant evening in a city where intelligent drama is altogether too rare.

THE DITCHER

Guide for Investors

ABOLISHING REGISTRATION FEE FOR SHARE TRANSFERS

(BY A SPECIAL CORRESPONDENT)

THE presidents of Indian stock exchanges, at a meeting held nearly a couple of years ago, decided to persuade joint stock companies to abolish the fees charged for registering share transfers. At present there is no uniformity in these fees. Some companies do not charge any fee, while others have prescribed varying rates. The move to abolish the fee has become strong since it is argued that if many companies could dispense with it, there is no reason why others should not do so. Anyway the registration fee is far too small an amount to bother about. The Calcutta Stock Exchange has succeeded in persuading 189 of its listed companies to abolish the fee. The authorities hope that many more companies will follow suit in the near future. In the case of new companies, the waiving of the registration fee is being insisted upon as a condition of enlistment.

Considering that the annual general meeting of the Calcutta Stock Exchange Association Ltd to pass the annual accounts is drawing near, it is relevant to focus attention on a reform which is long overdue. It may be recalled that at the last annual general meeting the accounts could not be finally adopted because member-shareholders did not make up their mind about whether the Association should or should not pay a dividend. Since the stock exchange is a public institution, which is expected to promote primarily the interests of the investing public, it should be run as a non-profit-making body. It is, therefore, rightly urged that any profit which the Association makes should not be dissipated in the form of dividends, which will benefit only member-shareholders. The profit should be used for promotional activities which will benefit the investing public. The absence of information relating to companies has been a major handicap to investors. So they will be greatly benefited if the Stock Exchange organises statistical information on corporate matters and maintains an informative library. In many industrially-advanced countries, the stock exchanges have earmarked funds to compensate investors in case they suffer losses due to the default of any member or broker. It will be a good idea for the Calcutta Stock Exchange Association to use its profit for such purposes.

E.I.D.-Parry Cuts Dividend

THE directors of E. I. D-Parry Ltd have recommended a final dividend of 10 6/7 percent on ordinary shares for the year ended September 1963, making a total of 18 percent (against 21 3/7 percent). According to the preliminary statement for the year, the net profit before taxation amounts to £564,181 (against £648,473). Out of this, the provision for U.K. taxation amounts to £862 (against £299). Provision for Indian income tax and super tax amounts to £97,897 (against £364,318). Transfer to taxation equalisation reserve amounts to £78,500 (against a transfer of £20,250 from the reserve in the previous year.) Taxation adjustment relating to the previous year amounts to £11,250 (against £37,194). Thus the total provision for taxation amounts to £189,509 (against £381,561). The

net profit after taxation, therefore, amounts to £374,672 (against £266,912).

After deducting from the net profit, a sum of £14,625 (against £14,625) being interest of outside shareholders of the holding company, there is a balance of £360,047. Adding to this net profit, a sum of £125,999, unappropriated profits of the previous year of £21,999 and the transfer (1963 only) from dividend equalisation reserve of £104,000, the total surplus available for appropriation comes to £486,046. Out of this surplus, £165,300 is transferred to development rebate reserve. £229,672 in the previous year at 21 3/7 percent. A balance of £21,999 is carried forward, against £21,999 brought in. The free reserves of the group as at 30th September, 1963, amounted to £2,236,842, of which £743,332 were capital reserve and £1,493,510 were revenue reserves.

Chitavalsah Results Disappoint

COMMENTING on the disappointing results of Chitavalsah Jute Mills Co. Ltd for the year ended July 1963, the directors mention unfavourable trading conditions as the main cause. With the loss of certain foreign sacking markets to Pakistani jute mills, the Calcutta mills have had to enter the south Indian market and sell their goods at Calcutta quotations. Thus Chitavalsah has been forced to sell sacking, which constitutes the bulk of its output, at rates much lower than those offered previously. Because of increased wages paid to workers in terms of the Wage Board's award, the Company has been compelled to sell its manufactures below production costs to meet competition. A similar situation has arisen in the twine market following the establishment of two new mills in the same area which are manufacturing this product. Formerly, Chitavalsah used to enjoy a virtual monopoly in the south Indian sacking market. Also labour relations have not been satisfactory and the working has been interrupted by strikes. If these circumstances persist, the directors think that prospects for the current year may not improve much. Modernisation of the mill machinery has been proceeding, but power supply is still far from adequate. The finances of the Company have been strained because it has been forced to buy and stock substantial quantities of fibre.

The Company has incurred a loss of Rs. 4.81 lakhs, compared with a profit of Rs. 11.09 lakhs for 1961-62, after increasing depreciation from Rs. 6.77 lakhs to Rs. 7.25 lakhs, providing Rs. 1.63 lakhs on account of loss on forward gunny contracts and Rs. 80,000 (against Rs. 1.40 lakhs) for

taxation concerning previous years. The dividend has been passed. Bringing in Rs. 61,455, a debit balance of Rs. 4.11 lakhs has been carried forward. Sales declined from Rs. 2.25 crores to Rs. 1.88 crores, while stocks of jute goods increased from Rs. 13.81 lakhs to Rs. 14.01 lakhs.

Thirumbadi Rubber Repeats

THE directors of Thirumbadi Rubber Co. Ltd have maintained the dividend of 10 percent, the same as in the previous year, for the year ended 30th September, 1963. Both the crops and profit have risen. The percentage of after-tax profit on equity capital has improved to 22 percent from the previous year's 11 percent. The net profit for the year amounts to Rs. 1,99,689 (against Rs. 1,03,481), after providing Rs. 78,000 for taxation (against Rs. 94,600).

Adding to the above profit, a sum of Rs. 17,131 brought forward from the previous year, and with Rs. 1,000 being excess provision for taxation, the total available for appropriation comes to Rs. 2,17,820. Out of this, a sum of Rs. 50,000 is transferred to development account (against nil), and Rs. 840 is transferred to development rebate reserve (against nil). A sum of Rs. 20,000 is transferred to general reserve (against Rs. 75,000), and Rs. 47,461 is transferred to rehabilitation and development reserve (against Rs. 25,000).

The proposed dividend of 10 percent will absorb Rs. 91,530. The balance of Rs. 7,989 is carried forward. The total crop for the year amounted to 235,780 kilograms at an all-in-cost of Rs. 3.05 a kilogram, compared with 202,316 kilograms at a cost of Rs. 3.13 a kilogram in the previous year. The average sale price was Rs. 3.20 a kilogram (against Rs. 3.38 a kilogram). The estimated crop for 1963-64 is put at 235,000 kilograms at an all-in-cost of Rs. 2.98 a kilogram.

National and Grindlays Repeats Dividend

IN his chairman's statement circulated along with the report and accounts of National and Grindlays Bank Ltd for 1963, Lord Aldington drew attention to the satisfactory results of the institution. (Details

are printed on a later page in this issue of *Capital*.) Although the profit at £679,318 is not as high as that of 1962, profits from overseas branches have been higher than in 1962. Out of the profit a sum of £150,000 has been transferred to reserve fund, which is now more than the issued capital. The half-yearly dividend of 7 percent has been repeated to make a total of 14 percent for the year. Two subsidiaries—National and Grindlays Finance and Development Corporation Ltd and Exporters' Refinance Corporation Ltd—have done well. The term loans granted by the former have been of great benefit to its customers in the public and private sectors. The latter subsidiary has helped its clients by providing better services and new facilities to help exports.

Commenting on the Indian economy, the chairman pointed to the slower growth during the first two years of the third plan and observed that the trend had improved from the second half of 1963. The most encouraging factor is the steady rise in India's export earnings. The bank has played a useful rôle in financing exports. The establishment of the Export Credit and Guarantee Corporation in India has been welcomed. In view of the rapid industrial growth, he thinks that the proposed industrial development bank should be of great help in providing financial facilities to industries. National and Grindlays Bank has increased its deposits by establishing new branches and by making vigorous efforts to increase savings accounts.

India Sugars and Refineries Pays More

THE directors of the India Sugars and Refineries Ltd have repeated a dividend of 8 percent on the equity shares for the year ended September 1963. Profit and sales registered an improvement. The net profit for the year amounted to Rs. 12,55,437 after providing Rs. 432,340 for depreciation and deducting other prior charges. The net profit for the previous year amounted to Rs. 7,51,541 after providing Rs. 4,79,179 for depreciation and Rs. 87,353 for another prior charge. With the amount of Rs. 68,747 brought forward, the total available for appropriation comes to Rs. 13,24,164.

Out of this amount, the provision for taxation comes to Rs. 6,50,000 (against Rs. 4,10,000). A sum of Rs. 17,000 is transferred to the reserve for development rebate (against Rs. 2,500). The provision for doubtful debts amounts to Rs. 2,611 (against Rs. 2,569). The preference dividend at 7½ percent (less income tax) amounts to Rs. 73,260. The proposed dividend at 8 percent on equity shares, subject to deduction of tax, will absorb Rs. 5,11,812 (against

PRECISE TAPPING MACHINES

Armstrong Smith Ltd.

P-17, MISSION ROAD EXTN. CALCUTTA-1

Rs. 5,11,812). The balance of Rs. 69,501 is carried forward.

The total sales for the year amounted to Rs. 2,22,00,917 (against Rs. 2,14,44,119). The quantity of sugarcane crushed was 160,479 tonnes (against 186,340 tonnes in the previous year), and production of sugar amounted to 16,661 tonnes, with an average recovery of 10.31 percent (against 19.186 tonnes). During the year, sugar sales were regulated under Sugar Control Order and the Company realised steady prices for its sugar. With sugar control continuing, the directors apprehend that the return on capital invested would depend on the price of sugar fixed from time to time.

In the matter of implementing the expansion programme, the directors' report says that active steps have been taken for implementing the scheme, providing for a crushing capacity of 1,250 tonnes a day, instead of the present capacity of 1,000 tonnes. The directors are hopeful that expansion can be put into effect with the beginning of the next season. The directors add that the loss due to the export of sugar allotted to the Company during the year amounts to Rs. 2,39,865, and this has been reflected in the accounts as a reduction in the gross sales.

The distillery unit produced 789,616 litres of spirit, compared with 512,500 litres during the previous year. The expansion scheme for enhancing production is progressing, and during the current year, the directors expect the scheme to be completed, when the distillery will produce the full capacity of 3,000 gallons a day. As for the subsidiary company, the Salar Jung Sugar Mills Ltd., it has made a profit of Rs. 3,94,557 during the year. This Company's expansion scheme is also reaching an advanced stage and in the next season, it is hoped the Company will be able to crush 1,000 tonnes of cane a day, thus ensuring better working and economical running of the mill company. As for the other subsidiary, namely, Manjula Confectionery Ltd., the Company made efforts to increase the sales of confectionery with some success. But judged from the economic stand-point, the directors felt that a further investment of capital and enlargement of the sales organisation were imperative to be able to make any profits, and at the present juncture, the directors, however, did not think that further capital could be put in. In the circumstances, the Company sold the entire machinery, plant and machinery spares, stores and raw materials, to Parry's Confectionery Ltd.

Birds Investments Earns More

THE profit of Birds Investments Ltd has improved from Rs. 1,93 lakhs for 1961-62 to Rs. 2,43 lakhs for the year ended September 1963, after transferring Rs. 1,88 lakhs (against Rs. 94,060) to taxation. The taxable ordinary dividend has been reduced from 10 percent to 8 percent to absorb Rs. 1,60 lakhs. The yield works out to 7.7 percent at the present price of Rs. 10.44 a share of Rs. 10 each.

Capital reserve is allocated Rs. 60,149 (against Rs. 635), leaving a carry-forward of Rs. 1,064, against Rs. 2,634 brought in. The portfolio is representative of investments which are quoted on the Calcutta and Colombo stock exchanges, with the exception of some shares costing Rs. 7.01 lakhs. The total of the market value of the investments for which quotations are available, together with the unquoted investments, as valued by the directors, exceeds

the book value as on 30th September, 1963, by Rs. 11.03 lakhs.

Out of the total investments of the Company, equity shares constitute 86.88 percent and are distributed over jute mills, electricity undertakings, iron, steel and engineering industries, collieries, paper mills, investment companies, tea companies, mining industry other than collieries, miscellaneous companies and Ceylon tea companies. Debentures form 0.39 percent of the total investments and preference shares 12.73 percent.

English Electric Profit Up, Skips Dividend

THE ordinary shares of English Electric have risen from Rs. 12.62 to Rs. 14.06 during the past fortnight or so, partly because of its excellent results for the year ended September 1963 and partly because of growth prospects. The profit has risen from Rs. 9.16 lakhs for 1961-62 to Rs. 20.12 lakhs for 1962-63. The entire profit has, nevertheless, been transferred to general reserve and the dividend has been passed since large resources are required to finance the expansion scheme.

In a statement circulated along with the report and accounts of the Company, the chairman says that the Government has sanctioned the expansion programme and considerable progress has already been made in its implementation. He takes a fairly optimistic view of the future prospects. When the expansion programme is implemented, the Company should be in a position to offer a reasonable return on investments. The electrical industry will have to expand substantially to meet the requirements of industrialisation. The Company should have no difficulty in attracting bigger funds from the public provided the level of taxation gives scope to earn a reasonable return on investments. He pointed to the need for conserving funds in order to enable the Company to embark on its expansion programme which seeks to increase the output of fusegears and relays.

Punjab Minerals Incurs Loss

PUNJAB Minerals Co. Ltd has incurred a loss of Rs. 9,705 for the year ended September 1963, after providing Rs. 34 for depreciation. Bringing in the previous deficit, a debit balance of Rs. 1.57 lakhs has been carried forward. The dividend has again been passed.

Shaw Wallace Group Tea Companies

THE New Samanbagh Tea Co. Ltd produced a tea crop of 14,257 maunds up to 31st December, 1963, compared with 14,351 maunds for the corresponding period of 1962. Sales rose from 11,695 maunds to 12,516 maunds, but the average sale price declined from Rs. 3.38 a lb to Rs. 2.77 a lb.

The Tezpor Tea Co. Ltd produced a crop of 31,374 maunds, against 28,763 maunds and sales rose from 13,455 maunds to 19,974 maunds. The average sale price amounted to Rs. 5.64 a kilogram, against Rs. 5.74 a kilogram.

Rights from Hindusthan Gas Industries

HINDUSTHAN Gas Industries Ltd has decided to issue rights ordinary shares of Rs. 7 each at a premium of Rs. 3 a share in the proportion of one new share for every two held. The new shares will rank *pari passu* with the existing ordinary shares in all respects except that they

will not participate in the dividend, if any, declared by the Company for the year ended March 1964. The funds will be used to finance the expansion of the existing factory. A new factory will also be set up to diversify activities.

Phalton Sugar Raises Dividend

THE increase in the dividend from 14 percent to 20 percent by Phalton Sugar Works Ltd for the year ended September 1963 is fully justified by the Company's impressive performance during the year. The increase, it might be noted here, restores only partially the cut in the preceding years—from 27 percent in 1958-59 to 14 per cent in 1961-62. The dividend for 1962-63 is being paid entirely out of the year's profit whereas in 1961-62, the Company has had to withdraw Rs. 6.50 lakhs from the reserves. According to the preliminary figures released by the Company along with the dividend announcement, sales have been just maintained at Rs. 1.73 cores, while the gross profit has shot up by about 167 per cent from Rs. 12.70 lakhs to Rs. 33.65 lakhs.

Sugarcane crushed during the year was 123,307 metric tonnes, against 125,378 metric tonnes, but with recovery improving from 11.94 percent to 12.96 percent, sugar output was larger at 160,949 bags, against 150,225 bags in the previous year. Appropriations of the year's profit include depreciation Rs. 3.45 lakhs (against Rs. 4.09 lakhs), development rebate Rs. 81,000 (against Rs. 35,000), taxation Rs. 16.28 lakhs (against Rs. 4.87 lakhs) and dividend Rs. 10 lakhs (against Rs. 7 lakhs). During the year 1962-63, the Company made a profit of Rs. 9.38 lakhs on the sale of fixed assets and suffered a loss of Rs. 1.94 lakhs on account of acquisition of land. The resulting net profit of Rs. 7.44 lakhs is being transferred to capital reserve. The Rs. 50-paise share of Phalton Sugar which had been quoted around Rs. 101 at the end of January, has recovered to around Rs. 115, offering a gross return of about 9.5 percent.

Fit Tight Nuts Pays Maiden

THE directors of Fit Tight Nuts and Bolts Ltd have declared a maiden dividend of 9 percent, subject to tax, if any, for the year ended September 1963. The preliminary report on the working of the Company shows that it has done extremely well during the year and the expansion programme that the Company has on hand holds out the promise of better results in coming years. The sales during 1962-63 have risen from Rs. 6.03 lakhs to Rs. 31.82 lakhs and the pre-tax profit is up from Rs. 1.78 lakhs to Rs. 7.96 lakhs. With Rs. 97,277 brought in, the disposable surplus amounts to Rs. 8.93 lakhs. The provision for development rebate has been stepped up from Rs. 81,000 to Rs. 5.38 lakhs and a sum of Rs. 75,000 (against nil) has been set aside for taxation reserve. The directors have created a dividend reserve of Rs. 2.75 lakhs, out of which is to be paid the proposed dividend which will absorb Rs. 2.70 lakhs. After making some minor adjustments, there remains a modest surplus of Rs. 4,343 to be carried forward.

Production of the full range of nuts, bolts and certain sizes of socket head cap screws commenced during the year as planned, and the progress is expected to gain further momentum during the current year. The expansion programme taken on hand under the manufacturing licence received in December 1960, has been completed. The Company has, therefore, decided to develop the manufac-

turing lines of specialised fastenings and some other lines of manufacture for which additional machines will be needed. It has made an application to the Government for the import of balancing equipment worth Rs. 8 lakhs. The Government's consent has been received subject to the Company's arranging foreign exchange loan for the purpose. The Company is approaching the I.C.I.C.I. for an additional loan. Additions made to fixed assets during 1962-63 amounted to Rs. 40.86 lakhs raising to total value of such assets to Rs. 51.18 lakhs. The Rs. 100-paise share of Fit Tight is currently quoted around Rs. 182.50 *cum*-dividend.

New Capital Issues

THREE companies have been authorised to raise fresh capital of Rs. 3.45 cores. Of these, one is a State Government undertaking issuing equities worth Rs. 2 cores. The other two companies are issuing equities and preference shares. One of them involves foreign collaboration. It will offer such number of shares for public subscription as would enable the company's scrip to be listed on recognised stock exchanges. The consent of the Controller of Capital Issues is valid for 12 months. The following are the details:

Andhra Pradesh Industrial Development Corporation Ltd., a State Government undertaking, is to issue capital of Rs. 2 cores divided into 20,000 equity shares of Rs. 1,000 each to be issued privately for cash at par. The money will be used for giving financial assistance to industry in Andhra Pradesh and for the promotion of industrial projects taken up by the Corporation.

Podar Mills Ltd., Bombay, is to issue Rs. 95 lakhs capital divided into Rs. 55 lakhs equity in shares of Rs. 10 each, and Rs. 40 lakhs preference shares of Rs. 100 each and carrying not exceeding 9.5 percent rate of interest. All the shares will be issued for cash at par and will be offered to existing shareholders of the Company. The capital will be used for installing a new cotton mill of 25,000 spindles in Jaipur and for modernisation and rehabilitation of existing subsidiaries at Bombay and Jaipur, etc.

Shama Pistons and Rings Ltd., a new company incorporated in the State of Delhi, is to issue capital of Rs. 50 lakhs, divided into 350,000 equity shares of Rs. 10 each and 15,000 preference shares of Rs. 100 each. Out of the issue, shares of a total value of Rs. 2,52,700 will be issued to Karl Schmidt of West Germany and SIM S.A. of Switzerland, at par, partly for cash and partly for consideration other than cash. Out of the remaining shares (to be issued for cash at par) such number of shares, in each class, as would enable the Company's scrip to be listed on recognised stock exchanges, will be offered for public subscription.

NEW OFFICE-BEARERS OF BENGAL CHAMBER

The President of the Bengal Chamber of Commerce and Industry for 1964-65 is Mr. A. D. Ogilvie of Andrew Yule and Co. Ltd. The Vice-President is Mr. H. K. S. Lindsay of the Metal Box Co. of India Ltd. Other members are Mr. C. M. A. Bathurst (Shaw Wallace and Co. Ltd.), Mr. F. A. Collett (the Imperial Tobacco Co. of India Ltd.), Mr. J. V. Jardine Pateron (Jardine Henderson Ltd.), Sir Hugh Mackay Tallack (Macneill and Barry Ltd.), Mr. C. G. Montgomery (Balmer Lawrie and Co. Ltd.), Mr. A. I. Murison (James Finlay and Co. Ltd.), Mr. D. C. B. Pilkington (Bird and Co. (Private) Ltd.), Mr. C. A. Pitts (Imperial Chemical Industries (India) Private Ltd.) and Mr. J. Russell (The Chartered Bank).

The Stock Markets

RUMOURS OF STEEL AND CEMENT DECONTROL HELP SENTIMENT

Tuesday Evening.

THE Calcutta stock market reacted towards the close after a firm spell early in the past week. The earlier rise was due to hectic bull support, combined with nervous short-covering. A number of favourable developments have helped share prices to harden. Rumours of decontrol of steel and cement have cheered Lyons Range. The absence of fresh taxes in some of the State budgets has been interpreted bullishly. Reports of purchases of ordinary shares by the Unit Trust of India have made sellers reserved, particularly in the case of selected cash scrip.

The Economic Survey presented by the Central Finance Minister, Mr. T. T. Krishnamachari, to the Lok Sabha on Friday gave the market a shot in the arm. Considering that the survey has largely chronicled the economic developments of the past year, the optimism appears to be exaggerated. It is not the first time that the Finance Minister has indicated his keenness to stimulate economic development. He has been doing it since he took over the Finance portfolio. Whether he will back his words with concrete measures in the forthcoming Budget is anybody's guess.

Operators have become more sober towards the close on second thoughts about the Budget prospects. There is no doubt that it has become urgent to give tax reliefs to the corporate sector in order to encourage expansion and diversification. Mr. Krishnamachari will, nevertheless, face a difficult task in concealing much. The rising burden of plan and defence expenditures cannot be overlooked. Even if the tax burden is reduced, it is doubtful whether shareholders will be benefited in the form of bigger dividends. Steps are likely to be taken to ensure that companies plough back more money into the business instead of paying larger dividends.

Anyway, the trend is not expected to change until the Budget. Although the clearing on Tuesday passed off smoothly, turnover has declined since operators have been busy celebrating the Holi festival. Wednesday and Thursday have been declared holidays by the stock market authorities. Carry-forward charges have been slightly higher than at the previous settlement.

Indian Iron have reacted after an earlier rise. Among engineering shares, Guest, Keen, Williams, Indian Standard Wagon, Burn, Kumardhubi Engineering, Jessop and Texmaco have been prominent. Dalmia Iron have met with scattered support on producing good results. J. K. Steel and Britannia Engineering have been steady. Clearing miscellaneous shares have scored substantial gains, which have been slightly eroded towards the close due to profit-taking. Indian Copper have been a smart feature due to the sharp rise in the international price of copper. Hindustan Motors, Dunlop Rubber, Indian Aluminium Indian Cable, Kesoram Industries and Rohtas have been active. Indian Oxygen have enjoyed considerable support. Interest has been shown in Alkali Chemical, Union Carbide, Associated Battery and Metal Box.

Among new scrip, Hindustan Aluminium, India Carbon and Phillips Carbon have hardened. Electric company shares have lacked interest and

stray business has been done in Calcutta Electric. Among bank shares, United Commercial and United Bank have met with scattered buying. Managing agency shares, like Martin Burn and Jardine Henderson, have been sluggish. Paper shares have on the whole been steady. Support has been extended to Orient, Seshasayee, Shree Gopal, Bengal and Sirpur.

Sugar shares have been freely offered without attracting buyers. Selected cotton mill shares have improved. J. K. Cotton, Bharat Commerce, Jay Shree Textiles and Dunbar have gained. Coal shares have been sluggish. Press reports about an increase in the price of good grades of coal have had virtually no effect. Stray business has been transacted in Burrakur, Bengal and Central India.

Selected jute shares have attracted attention at rising prices, although investors have generally been cautious due to the decline in prices of jute goods. Birla, New Central, Union, Lawrence, Ganges, India and Gourea have been active. Turnover in tea shares has been limited. Prices of selected Assam and Doars gardens have been maintained.

Government securities have been quietly steady. The 3 percent Conquilted loan 1986 has quoted Rs. 63.40. Prices of short- and medium dated stocks have been maintained, but sellers have been fewer. There has been scattered institutional support for selected State Government loans.

Bombay

ECONOMIC SURVEY CHEERS BULLS PRICES REACT AT THE CLOSE

Wednesday Evening.

THERE has been a substantial improvement in the Bombay stock market during the past week, although share prices have reacted towards the close due to profit-taking. The earlier rise was due to several factors. Dalal Street has been cheered by prospects of decontrol of steel and cement. The recent statement made by Mr. Asoka Mehta, deputy chairman of the Planning Commission, in Bombay that the return on capital employed in public and private sector enterprises should be at least 10 percent, has caused cheerfulness.

The corporate news has, meanwhile, been fairly encouraging. Bulls have been inspired by the economic survey presented to the Lok Sabha by Mr. T. T. Krishnamachari, Central Finance Minister. Since the survey points to the need for encouraging the development of basic industries in particular, it is believed that the Finance Minister will give some incentives in his forthcoming Budget. Towards the close, investors have turned cautious and holders have hurried to lighten their commitments before the Budget is presented in the belief that the Government might pursue a dearer money policy more vigorously.

Tata Steel ordinary have closed at Rs. 150.25. Among engineering shares, attention has centred on Tata Locomotive, Premier Construction and Mukand Iron. Among motor-vehicle shares, Hindustan Motors have been

active, but Premier Automobiles have been sluggish. Selected cotton mill shares have scaled new peaks, although the new levels have not been maintained towards the close due to profit-taking. Century have attracted attention due to expansion prospects. Bombay Dyeing, Kohinoor, Svadeshi, Gokak and Standard have been active. India United ordinary have nevertheless been sold freely. Support has been extended to Morarjee and Simplex.

In the miscellaneous section, sugar shares have been prominent. Phalton have improved on paying a higher taxable ordinary dividend. Walchandnagar Industries have been steady despite the repetition of the taxable ordinary dividend since the Company has plans to diversify its activities in the fields of cement and paper-making equipment manufacture. Belapur have attracted support. In cement shares, Associated Cement and Digvijay have gained.

The earlier rise in Scindia in steamship company shares has not been maintained towards the close due to profit-taking. Great Eastern Shipping have also gained. Interest in mining shares has been lacking, and Shivrampur Syndicate have been offered freely. Chemical shares have been firm, and Indian Dyestuff have attracted a margin on bulls since the price of the scrip has been more than 10 percent above the last clearing price. Tata Chemical have been steady, and interest has been taken in Colour-Chem. Voltas and Tata Oil have improved on balance. A small turnover in bank shares has been transacted. Bank of India and Bank of Baroda have changed hands. Electric company shares have been sluggish and fluctuations have been narrow. Ahmedabad Electric, Bombay Suburban and Tata Power have been done.

Madras

CLEARING SHARES IMPROVE OPERATORS CHEERED BY T.T.K. STATEMENT

Tuesday Evening.

THE Madras stock market has been very steady during the past week. Prices, especially of clearing shares, have improved substantially due to support from outside sources. Cheerfulness has stemmed from optimism about the economic survey presented to the Lok Sabha by the Central Finance Minister, Mr. T. T. Krishnamachari. Although prices of selected cash scrip have hardened, investors have been cautious due to uncertainties concerning the Budget which will be presented on Saturday.

Prices of selected State Government loans have been maintained. Among banks, Syndicate have been taken at Rs. 157.50 due to the payment of a taxable ordinary dividend of 20 percent. Indian Overseas have been bought up to Rs. 147. Among electric company shares, interest has been taken in Ellore and South Madras. Selected sugar shares have improved due to the absence of sellers. Deccan have hardened to Rs. 121.0 and E.I.D. to Rs. 37.50. Andhra have changed hands at Rs. 17.36 on paying a taxable ordinary dividend of 12 percent. Mysore have

been steady at Rs. 44.65 and Cauvery at Rs. 103.50.

In the planting section, good tea and coffee shares have attracted attention due to prospects of bigger production and exports. Blue Mountain have been done at Rs. 2.40 and Cochin Malabar at Rs. 6.40. Consolidated Coffee have changed hands at Rs. 20.30 and Ouchterlony at Rs. 4.28. Business has passed in Periakaramalai at Rs. 3.50. Thamarapally have been done at Rs. 16.40. T.R. and Tea at Rs. 9.90 and Coorg at Rs. 4.85. Non-such have come to hand at Rs. 22.57, Chembra at Rs. 4.65 and Neelamalai at Rs. 5.02. Coffee Lands have attracted attention at Rs. 16.12, Mysore Coffee at Rs. 4.75 and Osoor at Rs. 2.65.

Except for clearing scrip, textile shares have been sluggish. South India Viscose have improved to

Rs. 143.50 and Travancore Rayon to Rs. 26.25. Mardura have been firm at Rs. 36.75 and Lakshmi have been done at Rs. 135. Anglo-French have quoted Rs. 153 and Adoni Rs. 9.40. Bangalore Woollen have been done at Rs. 236 and Buckingham at Rs. 293. Ramnarayan have changed hands at Rs. 93 and Mettur at Rs. 286. Vijaya-lakshmi have come to hand at Rs. 11.50 and Rayalaseema have been transacted at Rs. 138.50.

In the miscellaneous section, Aluminium Industries have hardened to Rs. 19 and Ashok Leyland to Rs. 7.20 ex-dividend. Among cement shares, India have been steady at Rs. 5.88 and Dalmia at Rs. 13.12. Mettur Chemical have gained at Rs. 13.60 and Seshasayee Paper at Rs. 8.12. F.A.C.T. have risen to Rs. 5.80 and Tube Investment to Rs. 2.15. Spencer have quoted higher at Rs. 22 and Parry's Confectionery at Rs. 3.25. Madras Rubber

have gained slightly at Rs. 13.90, while Andhra Scientific have been bought at a higher price of Rs. 14.20.

London

TRADING THIN ON RESTRAINT TALK

GILT-EDGED FALL

London, 26th February.

IT was a week of unsettled conditions in the stock market, but thanks to an improvement after the week-end, prices of industrials showed little change on balance. By contrast, gilt-edged securities recorded widespread and substantial losses. Mines, particularly base metal shares, were in favour, but prices were below their best levels. There was a significant cut in the level of business and the market was thin and sensitive throughout. Sentiment in domestic sections was upset by evidence that the economy is expanding too fast and by the substantial deterioration in the overseas trading position in January. Fears that measures might be taken to restrain the economy and that one of these measures may be a rise in Bank rate, coupled with the uncertainty of sterling in the foreign exchange market, brought in sellers of gilt-edged, which recorded losses ranging to a point or more. Short-dated stocks were particularly hard hit. Banking, finance houses and insurance shares were dull, but properties held up fairly well. Industrials generally fluctuated within narrow limits. The leaders showed little change on balance, most of the bigger movements following company announcements. Jaguar tumbled on disappointment with their results. Tins and coppers forged strongly ahead following the sustained rise in metal prices, but were below their best levels. Golds, platinum and diamonds attracted a small demand. Rubbers came into favour, but tea remained dull. Oils fluctuated narrowly. Dollar stocks made a mixed showing.

MARTIN BURN LOOK BACK TO OVER 180 YEARS OF SERVICE TO INDIA

...to be able to compute this service by decades, not by years alone...to recall that our creed has consistently been the development of our country's resources through engineering and allied enterprises...to take pride in planning that makes the many units in our organization fall into a rational and complementary group and each one a leader in its particular field, a position which some of them, early pioneers in India, held even in the last century. For us looking back is a worthwhile proposition—an incentive to move forward.

AMONG THE COMPANIES IN THE MARTIN BURN GROUP ARE:

THE INDIAN IRON & STEEL CO. LTD.: With a million ton integrated steel plant at Burnpur, the largest foundry in the Commonwealth at Kulti and its own collieries and iron ore mines, IISCO has an enviable record in production efficiency.

BURN & CO. LTD., HOWRAH WORKS: Pioneers in foundry practice in India, in structural steel-work fabrication and the manufacture of rolling stock—the origins of the Company go back to the year 1781.

BURN & CO. LTD., CERAMIC GROUP: Apart from stoneware pipes and chemical stoneware, the works of this group—eight in number and located in four states—manufacture nearly all types of refractories to meet the requirements of India's steel industry, power undertakings, railways, ordnance factories—in fact, any industry requiring refractory material for the maintenance of furnaces.

THE INDIAN STANDARD WAGON CO. LTD., SANTA: The oldest Indian unit started for the specific purpose of manufacturing railway rolling stock—has been mainly responsible for building up the wagon building industry. Also manufactures springs, forgings, pressings and stampings for heavy industry as well as automotive components.

THE HOOGHLY DOCKING & ENGINEERING CO. LTD.: Established in 1819, the Company has a shipbuilding yard, a dry dock and extensive workshops at Salkia.

ROBERT HUDSON (INDIA) LTD.: A premier concern in its own field, the Company devotes itself to all types of light railway engineering—has important connections with the mining industries.

RAILWAY COMPANIES: Some of the first feeder railways in India, with six systems in four states.

ELECTRIC SUPPLY COMPANIES: Pioneers again in the generation and distribution of domestic power in India—serve 45 towns in Uttar Pradesh and Madhya Pradesh.

THE VAUGHANBURN CRANE COMPANY LTD.: A collaboration with The Vaughan Crane Company Ltd. of Manchester...Hand operated and electric overhead travelling cranes and chain pulley blocks.

COMMODITY PRICES SOAR IN SPITE OF GOVERNMENT EFFORTS

(BY A SPECIAL CORRESPONDENT)

In spite of the Government's efforts, commodity prices have been rising sharply. The increase has been particularly steep in certain food articles like gur and cereals.

It has been evident for some time that the price situation has been getting out of hand. The general rise in prices in the country seems to be somewhat larger than what has been indicated officially, since the pre-Budget spurt has yet to be fully reflected in the official quotations. According to one estimate, the average rise in prices of all commodities worked out to 13.6 percent last year, compared with 10 percent shown by official quotations. The average increase in the quotations for food articles works out to 25.4 percent,

while some of the individual items in the food group have recorded exceptionally high rises. These are khandasari sugar (54.2 percent), gur (48 percent) and cereals (32.7 percent). The rise in the prices of industrial raw materials (11.9 percent) is smaller than that for the food group. The biggest rise has taken place in the case of oilseeds (13.3 percent) and cotton yarn (11.9 percent). The average level for "others" has risen by 31.5 percent. Thus the rise in prices evident during the past year is reflected in almost every individual

commodity falling under the food group and industrial raw materials.

The rupee was worth only 25 percent of what it was in the prewar period before the galloping price increase of last year. Last year alone, the purchasing power of the rupee has been eroded by more than 10 percent.

It is interesting to compare the price trend in 1963-64 with the experience in the first two years of the third plan. There was a decline of 3.5 percent in wholesale prices in the

CAPITAL, 27th February, 1964.

first year of the third plan; in the second year, this was offset by a corresponding increase.

Trend in Third Plan Period

At the beginning of the third year, prices were no higher than at the commencement of the third plan. During the year the price rise has been particularly sharp in the lean months and in the eastern region, Madhya Pradesh and Maharashtra. The increase in the prices of food articles, according to the official survey, has accounted for more than four-fifths of the total rise during the first half of 1963-64. Rice alone has caused a quarter of the increase in the general price level and gur more than a third.

The decline in agricultural production, coupled with rising demand, has caused the spurt in prices. Foodgrains production as a whole was 2.3 million tonnes lower in 1962-63 than in 1961-62. Rice output fell by 2.8 million tonnes from the record level of 34.8 million tonnes in 1961-62. Production of wheat also declined by 900,000 tonnes due to adverse weather in Uttar Pradesh. Sugarcane production fell from 10.1 million tonnes to 9.4 million tonnes during the period. Imports of foodgrains totalled 4.6 million tonnes in 1963, compared with 3.6 million tonnes in 1962. The total availability of foodgrains appears to have been maintained at about the same level as in the previous year.

In the case of raw cotton, in spite of an increase in production, there has been a rise in prices. Part of the rise is, no doubt, attributable to the higher demand for cotton yarn and cloth, but the Government cannot escape the blame for faulty distribution.

Steps to Control Prices

The steps taken by the Government to hold the price line may be grouped under two heads: (i) those designed to increase the availability of supplies or production; and (ii) strengthening of the distributive machinery.

The Government took steps to strengthen the procurement machinery and tighten the regulatory mechanism. The farmer was assured of reasonable minimum prices for several foodgrains. Sugarcane prices were raised so that factories could pay more and attract larger supplies. Fiscal incentives were given to induce factories to prolong the crushing season. Furthermore, the capacity of the sugar industry is being increased.

As for distribution, the Government's policy is to encourage the establishment of consumer co-operative societies to facilitate the distribution of foodgrains and other articles at fair prices. Under a Centrally-sponsored scheme, 143 wholesale stores and 2,341 primary stores have been set up in 1963. The number of fair price shops too has been increased by 10,000 to 60,000. In West Bengal, the number of fair price shops has gone up from 11,074 to 12,274. The issue of rice from Central stocks to the State Governments has been increased. West Bengal has got an additional allocation of 100,000 tonnes of rice and 400,000 tonnes of wheat over and above what it received in 1962.

But these steps have fallen short of what is demanded by the situation. Food and clothing occupy a crucial position in a developing economy. If the Government is unable to control their prices, it will be spreading discontent among the people. The discontent is already evident from the numerous strikes all over the country. The Government of India and some State Governments have given token salary reliefs to Government servants. But this does not constitute the right approach to the problem. The main

CAPITAL, 27th February, 1964.

aim of planning is to raise the standard of living. What is happening is that the living standards of many people are going down. An average Indian exists on less than 50p a day and if a big erosion in the purchasing power takes place, his plight can be imagined. Something seems to be wrong with planning in this country. The wrong should be rectified before it is too late in the interests of a stable democracy.

THE CALCUTTA MONEY MARKET MODERATE RISE IN ADVANCES

Wednesday, 26th February.

THERE has been a moderate increase in the general level of advances in the Calcutta money market during the past week. This is entirely because the requirements of the sugar mills have risen. The credit given to the cotton and jute mills, and to the foodgrains and seeds trade, is unchanged. But advances to the iron, steel and engineering industries are slightly down. In the interbank market, conditions have remained tight and the call rate is quoted at 6 percent.

In the exchange market, there has been a moderate supply of tea and gunny bills, while the demand for remittances has been fairly good. In London, sterling has weakened in relation to most of the major currencies following the publication of the U.K. foreign trade figures for January.

SILVER WAS QUIET IN CALCUTTA DURING the past week. The price declined from the previous week's level of Rs. 265.50 to Rs. 260.50 a kilogram quoted today. The London and New York prices stood at 111½d and 129.3 cents.

GOLD WAS ALSO QUIET AND THE PRICE of 14 carat fell from Rs. 68.75 to Rs. 68.25.

DURING THE WEEK ENDED 21ST February, Government of India Treasury bills for Rs. 14,17,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 25th February. The total amount offered was Rs. 2,03,00,000. Tenders at Rs. 99.415 percent were accepted in full, and those at Rs. 99.410 percent were allotted 97 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.350 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 2nd March.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 26th February to 29th February at Rs. 99.431 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 19th February to 22nd February amounted to Rs. 20 lakhs.

THERE WERE DECLINES OF Rs. 16.88 crores to Rs. 2,451.19 crores in active notes and of Rs. 13.81 crores to Rs. 2,450.10 crores in the total note issue, according to the statement of the Reserve Bank of India for the week ended 21st February, 1964. The currency contraction was covered by reducing rupee securities of the paper currency reserve by Rs. 15 crores to Rs. 2,119.69 crores. Deposits of the Government of India rose by Rs. 7.10 crores to Rs. 56.50 crores while those of State Governments dropped by

Rs. 1.43 crores to Rs. 13.93 crores. Balances of commercial banks at Rs. 83.31 crores showed a decline of Rs. 3.04 crores. Balances held abroad fell by Rs. 2.54 crores to Rs. 18.35 crores. Investments at Rs. 213.56 crores showed a rise of Rs. 14.38 crores partly due to the transfer of securities from the Issue Department. Loans to scheduled banks declined from Rs. 62.22 crores to Rs. 52.61 crores of which advances against usance bills amounted to Rs. 23.24 crores (Rs. 23.93 crores). Ways and means advances stood at Rs. 38.31 crores, against Rs. 36.58 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 14th February, 1964, shows a drop of Rs. 3.59 crores to Rs. 596.50 crores in total deposits. Investments in Government securities are down by Rs. 6.86 crores to Rs. 238 crores, while other authorised investments are up by Rs. 50 lakhs to Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 7.62 crores to Rs. 331.62 crores. Cash and balances are, in consequence, shown at Rs. 21.24 crores or Rs. 1.35 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 14th February, 1964, shows Demand and Time liabilities at Rs. 1,178.16 crores (Rs. 31.64 crores on account of borrowings from banks and Rs. 1,209.78 crores (Rs. 12.85 crores), compared with Rs. 1,189.24 crores (Rs. 33.09 crores) and Rs. 1,286.15 crores (Rs. 14.15 crores), respectively, in the previous week. Cash has increased by Rs. 8 lakhs to Rs. 57.22 crores, while balances with the Reserve Bank have declined by Rs. 6.79 lakhs to Rs. 77.61 crores. There is a drop of Rs. 6.29 crores to Rs. 649.82 crores in investments. Advances and bills discounted at Rs. 1,743.91 crores show a rise of Rs. 19.65 crores. The ratios to total liabilities of cash and balances, of advances and discounts are, in consequence, shown at 5.5 percent and 70.6 percent, against 5.7 percent and 69.7 percent.

THE DIRECTORS OF NATIONAL AND Grindlays Bank Ltd have recommended a final dividend for the year ended 31st December, 1963, of 7 percent less income tax at 7s 9d in the £ payable on 3rd April.

TREASURY BILL MATURITIES

NATIONAL AND GRINDLAYS BANK LIMITED

EXPANSION IN CENTENARY YEAR

The Annual General Meeting of National and Grindlays Bank Limited will be held on April 2 in London.

The following are extracts from the statement of the Chairman, The Right Hon. Lord Aldington, F.C., K.C.M.G., C.B.E., D.S.O., circulated with the report and accounts for the year 1963:—

It is my privilege to report to you upon the Bank's Centenary Year. I want to place on record the thanks of your Directors to Mr. J. K. Michie, for the purposeful leadership with which he guided the Bank's affairs so successfully as Chairman for close on 18 years, until he retired from the chair on 31st December, 1963.

Some idea of the size of the task that this Bank accomplished under his leadership—and some indication of his wide understanding, foresight and courage—can be gained from these few figures. In 1946 when he became Chairman our deposits were £62 million, they are now £283 million; our advances were £13 million; they are now £160 million; we had 29 branches in 1946, we now have 163. And during these 18 years most of the territories in which we operate have experienced a rate of political, social and economic development that would have surprised our founders. We cannot expect that the challenge to us in these important overseas countries will grow less formidable in the future, and the Bank

will always be grateful to Mr. J. K. Michie for the example he has set.

The Accounts

The consolidated balance sheet continues to show a general expansion in our business. Total assets at 31st December last were £356,915,796. It will be noted that we have changed our practice this year to accord with that of leading banks in the world and have included for the first time an amount of £59,874,545 for Confirmed Credits, Guarantees and Endorsements. Without that figure our assets are about £20,000,000 higher than they were in December 1962.

Profits at £679,318 are not as high as in 1962, but the increase that year, as my predecessor stated, did not arise from our overseas operations. I am glad to be able to report that our profits from our widely spread banking overseas were higher this year than last.

Out of the year's profits the sum of £150,000 has been placed to Reserve Fund which, when taken with the consolidated carry forward, is now a little more than our issued capital.

The half-yearly dividend proposed is unchanged at 7%, making 14% for the year.

National and Grindlays Finance and Development Corporation Limited

As last year the profit £29,301 has been retained in the subsidiary company and is included in the Consolidated Profit and Loss Account.

During the year the Finance and Development Corporation's capital was increased by the issue of 500,000 new shares of £1 each fully paid. In addition the Finance and Development Corporation's resources were increased by borrowing outside the Bank. The fixed term loans granted in these last fifteen years have been of benefit to our overseas customers in the public and private sector and we believe also a lasting advantage to the economies of their countries.

Exporters' Refinance Corporation Limited

In its second year the Exporters' Refinance Corporation made a small profit. Its turnover is increasing at a healthy rate as new exporting customers make use of its services and

new facilities are developed to help export.

India

The action by the Government and the country to marshal the resources necessary to meet the challenge from China included an unprecedented budget and strict control over credit. The rate of growth in the economy has been slower in the past two years than in the years of the first two Plans. But there were clear signs in the latter half of 1963 of more expansionist policies.

Money conditions have varied more than normally. In the first quarter of 1963 money was exceedingly short and the inter-bank calls rate reached 6½%. By the middle of the year that rate had fallen to under 1% for a short period and it remained at a fairly easy level until December when taxation payments pushed it up to about 5%.

It is not my intention to try to analyse India's economic problems or her progress in solving them. But it would be a mistake to let the period of slower growth, perhaps better called a period of consolidation, blind us to encouraging factors of great importance not least the steady rise in export earnings which will be one of the principal keys to India's prosperity.

This Bank will always wish to play its part in financing India's exports new and old as we have in financing the export of her main crops for these last hundred years. We welcome the creation by the Government of India of the new Export Credit and Guarantee Corporation Limited.

A high level of industrial investment although financed partly by foreign loans inevitably puts a further strain on the banks when money conditions are tight. The Industrial Development Bank which is to be created shortly following legislation will greatly help in this respect.

In 1963 if we had not been able to increase our deposits through the new branches and by our drive for an increase in savings accounts, we should not have been able to go so far to meet the demands made upon us for industrial development.

I have full confidence in the Bank's ability to help in India's future development, and in the wish of our friends in India that we should do so.

Pakistan

I have these same feelings about our ability to help in Pakistan's future and about our position there. The rate of industrial expansion and the volume of exports generally are important factors for us to watch. Both were satisfactory in 1963. And it is encouraging to know of the increase in last year's wheat and sugar crops and of the expected increase in the 1963/64 rice crop.

Foreign private investment will continue to be welcomed in industries where large capital and high technical skill is involved.

Ceylon

We and the other British banks play an important part in financing both Ceylon's overseas trade and her industrial development as well as her tea, rubber and coconuts. We were able during the year to correct misleading reports that we confined our facilities to British owned firms. In fact a large part of our loans and over-drafts have been to Ceylon nationals or firms they control. In 1963 we offered a sum to help small-scale industrial enterprises approved by the Government, and we could do more in this and other ways

to strengthen Ceylon's economy if we were not hampered by restrictions placed on the opening of new accounts with us by Ceylonese nationals. As a result of these our deposits have declined in the past year.

Burma

Nationalisation took from us our business in Burma on 23rd February, 1963. As reported to you last year, it was expected that a settlement on compensation would be made within three months. We have received K.5 lacs which represented a loan granted by the Bank to its Rangoon Branch but there is still no settlement of our main claim for compensation.

The profit earned up to 23rd February, 1963 has not been remitted and has therefore not been included in our profit figures for this year.

East Africa

The independence of Kenya was achieved on 12th December, 1963 in circumstances far more promising than most prophets could have predicted. That this was so is due in the main to the political leadership of Kenya and to Mr. Malcolm Macdonald.

The future of the East African Common Services Organisation now rightly falls to be decided by fully independent governments but we should not be impatient if they take a little time before deciding about this and about Federation. Anyone responsible for banking in East Africa can have little doubt about the economic advantages to the territories of full and free co-operation between them, but other factors have rightly to be taken into consideration before final decisions can be taken. A separate but related question concerns the formation of a Central Bank. In solving this too regard has to be had to the different economic, political and social conditions in the territories.

General

After a year when Britain's visible trade exports have reached new records it is perhaps right to emphasize the value to that trade of the British overseas banks and the importance of the so-called invisible exports which accrue from them. The growing interest in our aims and problems taken by U. K. High Commissioners and their staffs, and by the Government in London, is both welcome and encouraging. If, as I hope, this country is further to expand its investment in commonwealth and other developing countries—and to request others to do the same—it is also right that Britain's policies and actions should foster its existing investment in those territories.

Overseas, each year adds to the importance of the help we can give to the development of industry, new and old, in each territory. This often requires longer term finance than that to which bankers were accustomed earlier in the century.

The note on which I wish to end my first statement is that of efficiency and modernisation of our methods. I have seen many improvements at home and overseas in recent years. Good evidence of this at home is the computer which Mr. Michie opened on 30th December last. In India and our other territories there are varying degrees of mechanisation in different branches. What is right in one place may not be right elsewhere. And our staff must be carried along with our plans. But in the long run the test whether the service we provide will be preferred to the service of others is the test of efficiency, coupled of course with the human understanding of our customers' needs of which the three forebears of this Bank have always been proud. We intend to see that with the co-operation of our staff we use the best machinery and methods that are appropriate to each of our branches. The quality of service we offer shall be second to none.

New Delhi

U.S. BUSINESS MEN TO STUDY INVESTMENT PROSPECTS

(FROM OUR NEW DELHI CORRESPONDENT)

THIRTY high-powered representatives of U.S. industrial houses are due to visit New Delhi for a week, starting from 13th April. They will hold discussions with the Government of India with a view to exploring the possibility of U.S. investment in fields in which, according to the mid-term appraisal of the third plan, there have been serious shortfalls. The Indian Investment Centre will play the host.

The industries in which they may prefer to invest include petrochemicals, fertilisers, alloy steels, machine tools, foundries, heavy engineering, mining machinery, food processing and hotels. Actually, Hilton holiday Inns and Hotel Corporation of the U.S.A., has already offered to build hotels in India provided the Government relaxes its prohibition policy as far as its particular venture is concerned, and permits the Company to import motor-cars suitable for tourists. Visits to Calcutta and Bombay are also included in the visitors' programme.

FOREIGN INVESTMENT

Tax Changes Suggested

A timely publication by the National Council of Applied Economic Research, entitled *Foreign Investor and Tax Reforms*, says that it may be worth while for the Central Ministry of Finance to consider whether increased taxes on personal incomes and corporate profits rendered necessary on account of the defence needs of India or other special circumstances, might not be confined to Indian nationals and domestic investors so that foreign investment might be ensured a reasonable stability of return. The N.C.A.E.R.'s review suggests the reforms which would help remove tax deterrents and improve the general climate for foreign investment. The more important of the recommendations are:

- (1) The same tax treatment for managerial personnel as for technicians in manufacturing industries.
- (2) Provision of tax-free allowances in view of the special expenditures occasioned by service in India.
- (3) Adjustments of particular tax rates—super tax, super profits tax and inter-corporate dividends tax—in order to make the total tax burden on foreign branches, subsidiaries and minority shareholdings in India comparable with the total burden in other countries.
- (4) Further reduction of the tax rate on royalty incomes of foreign companies in order to place India in a better position to attract the latest industrial techniques.

The Council's recommendations, in detail, are:

Personal Taxation:

- (1) As for the concession offered to foreign technicians, the restriction by which the tax exemption is denied if the individual had been resident in India in any of the four financial years immediately preceding the year in which he arrives in India, should be removed.
- (2) The time limit of six months for tax exemption for foreign managerial personnel should be extended and they should be treated on a par

with technicians in constructional or manufacturing operations.

- (3) In view of the additional expenditures incurred by foreign personnel serving in India, a system of tax-free allowances may be constituted. This should take account of the two special requirements of foreign nationals: (a) recurring expenditure on education of children and/or maintenance of other dependents in home countries; and (b) actual expenses incurred on medical treatment. The system of special allowances should, of course, specify maximum limits.
- (4) The taxes on the investment income of a non-resident individual, when his income consists only of dividends and/or interest, should be limited to 30 percent, without any additional tax liability. Moreover, the non-resident individual should not be required to file any returns of income.

- (5) Pensions of foreign personnel should be charged to tax at the scheduled rates applicable to residents without taking into consideration the foreign incomes of those individuals. Further, in the case of foreign employees, the Government may permit the trustees of superannuation funds to take out insurance policies with insurance companies of their home country, if they so desire. Indian taxes due on pensions would continue to be paid by the trustees.
- (6) Registered firms in legal, accounting and similar professions which are prevented by Indian laws and regulations from forming themselves into companies may not be subjected to income tax on the registered firm as such.

- (7) The partners of a registered professional firm may be allowed tax relief for contributions to approved superannuation and provident funds, now restricted in the income tax law to employees only.

Company Taxation:

- (8) In order to make the tax holiday granted to new enterprises more effective, carry-forward facilities should be built into the relevant section of the income tax law.
- (9) The rates of super tax and super profits tax, applicable to foreign investment in different forms, should be revised in order to reduce the disparity in this matter between India and other capital-importing countries.

- (10) Taxes on inter-corporate dividends to foreign companies should be gradually eliminated. As a first step, the rate may be reduced to 25 percent from the existing 35 percent on dividends which do not enjoy the super tax exemption under Section 99(1) (iv) of the Income Tax Act. Correspondingly, the rate on dividends from Indian companies engaged in industries specified in Parts A and B of the Fifth schedule to the Income Tax Act may be reduced from 25 percent to 15 percent.

- (11) The combined rate of income and super taxes on royalty income of foreign companies may be reduced from the existing rate of 50 percent to 35 percent, which is the rate of taxes on inter-corporate dividends to foreign companies.

- (12) In dealing with private and closely-controlled public companies, the Indian tax law should recognise

the principle that such concerns have varied needs to plough-back profits for the expansion of their business. These needs may exceed the statutory percentage now permissible under the law. Companies should, therefore, have the right of appeal against the application of the penal provisions. This appeal may be made direct to a board of referees constituted for the purpose. Further, Indian subsidiaries of foreign private and closely-held public companies may be exempted from the penal provision of Section 104 of the Income Tax Act, as the question of evading progressive personal super tax rates does not arise in the case of corporate shareholders.

PAPER INDUSTRY

Report on Productivity

The Indian National Productivity Council's report on the paper industry in Japan, Mexico, Venezuela, the U.S.A., the U.K., Canada, Finland and Sweden shows some of the defects from which the Indian paper industry is suffering. With reference to productivity, the report says: "In India, there are nearly 30,000 workers employed in an annual production of 400,000 tons of paper and board. In the U.S.A., nearly 500,000 workers are producing nearly 33 million tons a year of similar products. So production an employed person is nearly four times in the U.S.A., compared with India. The most important reason for this vast difference is large-scale automation in the U.S.A. There is no doubt that similar automation does not suit Indian conditions at the present state of development of the country. It is, however, to be pointed out that even for the operation of similar equipment and under similar conditions of working, there are more persons employed in India, compared with other countries like the U.S.A., Canada, Mexico and Japan visited by the Team. For example, in India, the number of workers required for operating a Fourdrinier paper machine is much more than in the U.S.A.

"The team was much impressed with the high productivity of Japanese workers. The wages in that country are comparatively low, but the productivity is very high, with the result that the overall cost of production of pulp and paper in Japan is lower than in India. The selling price of ordinary writing and printing paper in Japan is 55nP to 60nP a lb. The selling price of coated Duplex board, 350 g.s.m., with 80 G.E. whiteness of the liner, is only about 33nP a lb. Toilet tissue sells at approximately 60nP a lb. The cost of wood, the primary fibrous material in Japan, is nearly Rs. 160 a ton delivered at the mill site for soft wood and nearly Rs. 100 a ton delivered at the mill site for hardwood. The manufacturers pay nearly 50 percent of the mill cost of wood for standing lumber and the balance is their cost of extraction and transportation to the mill site. So it will be seen that, even with relatively high cost of wood, the Japanese paper industry can manufacture and sell paper at a much lower cost than the Indian paper industry. The reason is the high productivity of labour, utilisation of best and most economical techniques and a high standard of

operational efficiency in the Japanese mills.

"The manufacturing techniques are being constantly improved upon in that country by continued research effort to decrease the cost of manufacture. For example, corrugated containers are being manufactured in Japan using wire joints. If wire joint is replaced by glue joint, the productivity can increase manifold. If by wire joint, one worker can produce 3,000 boxes in eight hours, by glue jointing one worker can make as many as 132,000 boxes in eight hours. So the Japanese industry is planning to adopt glue joint in the manufacture of corrugated containers. The team visited a mill in Japan where, with the same number of workers, the production in the mill had increased three times within the period 1949 to 1960.

"In the Indian paper mills, a feeling of complacency has developed among the manufacturers and there seems no compelling necessity to improve the manufacturing techniques. In all other countries visited by the team, it was found that the pulp and paper industry is highly competitive. The same is the case with a converting industry like the manufacture of corrugated containers. In highly developed countries like the U.S.A., the converting industries are working at a very nominal profit and, in some cases, without any profit just to enable the associated paper mills to dispose of their manufacture conveniently. In Japan, the profit in the converting line is hardly 2 percent on sales. The same was found to be the case in Canada. Working under highly competitive conditions, all the manufacturers have to pay constant attention to productivity and, unless they keep their production costs down, they cannot survive.

Mexico and India

"Labour conditions in Mexico have much similarity with conditions prevailing in India. The Mexican paper industry employs nearly 9,000 workers for the production of 400,000 tons a year. So production per more hours is very high in Mexico as well. The unskilled worker in Mexico earns 20 pesos a day, which is equivalent to Rs. 7.50 a day. A skilled worker in Mexico may earn 45 to 75 pesos a day or Rs. 16 to Rs. 26 a day. In Mexico also, workers are covered by a system of social security and retirement benefits. Some units in Mexico give facilities like free housing, free electricity, free fuel, free water, free school and free hospitalisation to their employees. The system of payment of annual bonus and incentive bonus is also there. The Mexican Government has enacted comprehensive legislation just like India to protect the interests of the working class. Workers get 19 to 20 days' leave with pay every year. There are 48 working hours a week. The laws concerning working hours and days of rest are strictly enforced as in India.

"In India, labour unions are organised on a political basis in different paper mills. Many times non-employees are found to be running the union. These non-employees have no stake in the well-being of the manufacturing unit. There is no national union for the paper mill workers. In the U.S.A., Canada and other countries, in which pulp and paper manufacture is a major industry, there are national unions for the entire industry. Local units of the national union are organised in different mills and these units are run by the employees of mills under the advice and guidance of the national union. These unions have no direct connection with political parties. Perhaps such a set-up may be better for the Indian paper industry. An all-India union of paper mill workers may assist to focus attention on the problems of industrial relationship in the paper industry, and a uniform

Sterling is standing up well to this first test. The pound rallied in the exchange market after an earlier fall, and there is no sign of any withdrawal of foreign funds.

This is **AEI** today

LARGEST SUPPLIER OF ELECTRICAL EQUIPMENT TO INDIA

...and among the world's major manufacturers of electrical equipment. AEI's origins go back more than 60 years. Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, Siemens Edison Swan, Henley's, Ferguson Pailin, Birlec and Hotpoint.

60 factories... 100,000 employees

The Commonwealth's largest electrical manufacturer, AEI has 60 factories and 100,000 employees the world over—

engaged in every field of electrical activity. AEI is the centre of five main groups controlling twelve product divisions and all subsidiary companies. Each division offers specialisation in design, production, sales and service plus the vast research, development and financial resources of AEI as a whole.

40 years is a responsible age

AEI's history in India dates back forty years and includes association on such massive projects as the heavy electrical factory at Bhopal, the Durgapur steel works, and the Bhakra dam project.

The AEI factory in India has been supplying industry and the home with a wide range of electrical equipment since the 1930s. The range now includes furnaces, motors, motor control gear, transformers, switchgear, fans and lighting fittings. The famous MAZDA lamps are also marketed in India by AEI.

It's great to be No. 1!

In India and abroad, AEI has a succession of 'firsts' to its credit. Punjab's first major power project at Joginder-

nagar uses AEI equipment. India's largest generators, installed at Bhakra, are made by AEI. Assam's 720 mile oil pipeline—India's most ambitious scheme of its kind—will use AEI equipment. AEI built the world's first jet engine, powered the first gas turbine ship, developed Britain's first electron microscope and constructed the first ever water-cooled generator.

Planning 6,000 futures

AEI's training scheme is the most comprehensive in the electrical industry. More than 6,000 apprentices are

training at AEI factories in the U. K. They come from all over the world. In India, AEI has advised on the establishment of a training school at Bhopal. It is attached to Heavy Electricals (India) Limited and can train 3,000 men at a time. 250 AEI U. K.-trained engineers are now working at Bhopal; another 150 Bhopal-trained engineers are training with AEI U. K. In addition, 500 Indian engineers have taken their training in AEI's U. K. factories. This is a record believed to be unsurpassed by any other electrical engineering company operating in India.

What could AEI be doing with 700 Scientists?

AEI spends over 6 crores of rupees annually on research and development. More than 700 scientists are employed

in extensive laboratories attached to the main AEI groups in Britain. This vast complex of laboratories and personnel has one ultimate aim: to benefit the man in the street by effectively contributing to progress in electrical science and technology.

AEI PRODUCES EVERYTHING ELECTRICAL FROM LILLIPUTIAN TRANSISTORS TO THE WORLD'S BIGGEST TURBINE GENERATORS

Principal Products

Steam and gas turbines and generators • Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • Power and telephone cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters. Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

Jute

STEPS TO RAISE GUNNY EXPORTS TO WESTERN EUROPE

IMEDIATE implementation of the quality control scheme by jute mills, the use of better-grade fibre for manufacturing standard goods and grant of high priority for improving the quality of jute grown in India are some of the major recommendations of the five-man jute delegation which toured west European countries recently. The delegation was led by Mr. G. C. L. Joneja, Jute Commissioner. European consumers are fastidious and lay a lot of emphasis on the colour, cleanliness and finish of a product. The available better-grade fibre is now absorbed in the manufacture of carpet-backing cloth and other specialties. The use of inferior-grade fibre for manufacturing standard goods seems to be a serious handicap in expanding gunny exports to the European market. So the jute delegation has emphasised the need for improving the quality of raw material supplied to the industry. As a stopgap measure, the delegation has suggested liberal imports of high-grade jute and cuttings from Pakistan.

Observing that the Calcutta Jute Fabrics Shippers Association's standard contract terms are "biased in favour of manufacturers and shippers" leading to dissatisfaction among customers and loss of confidence, the delegation has considered it necessary to revise the terms in order to ensure that customers are given better service in matters of claims settlement, arbitration, late shipment penalties and the like. Such a step, the delegation observes, will enhance the popularity of Indian jute goods among overseas buyers.

The delegation feels that it is necessary to set up a marketing organisation of the Indian jute industry in western Europe. The body may be associated with the London office of the I.J.M.A., or stationed somewhere on the Continent. The administrative expenses may be shared jointly by the I.J.M.A. and the C.J.F.S.A. It should be staffed with technical personnel having adequate knowledge and experience of the Indian jute industry. The organisation should maintain close liaison with the industry and exporters at home on the one hand and the consumers on the other. It should carry out continuous market surveys, ascertain the specific needs of consumers, and, where necessary, suggest suitable packing material to potential customers. The technical wing of the body should be capable of drawing up precise specifications, preparing samples and working out likely costs in response to enquiries from potential customers. The wing could also be used for inspecting jute goods concerning which quality claims may be made by importers or consumers. Such a service, the delegation feels, will greatly facilitate the early settlement of disputes and avoid recourse to arbitration.

Product Development Work

The delegation has suggested that more emphasis should be laid on product development work in the I.J.M.A.R.I. and the I.C.J.C. laboratories. Although investigations have been made into the feasibility of mixing jute and synthetic fibres, the results are not yet known to the industry. In order to avoid the duplication of efforts and to pool the results of all research, proper arrangements should be made for collaboration among the I.J.M.A.R.I., the I.C.J.C.

laboratories and the British Jute Trade Research Institute, Dundee.

In the course of discussions with importers and trade organisations in western Europe, the delegation got the impression that jute goods might be able to halt the advance of paper and plastics into the packaging trade through barter deals. So it has requested the Government to reconsider its decision to exclude gunnies from barter deals. In view of the from barter deals, in view of the fertiliser industry's plans to double its production soon, all possible help should be given to enable jute goods to maintain their share of this market. Besides, facilities should be given to the industry at home for further modernisation and rationalisation, which will help reduce production costs. More liberal imports of specialised equipment like special types of sewing machines and other finishing equipment should also be allowed to help produce packing material suitable for the specific needs of the west European market.

Need for Bag-making Units

The delegation has suggested that the Government should consider the possibility of setting up bag-making units and small establishments for manufacturing speciality products. The former should be equipped to make all types of bags and to provide high-grade multicolour branding. They should be able to handle small orders for bags of standard or special specifications, which cannot be executed by the mills. Western Europe has a wide market for bags with multi-coloured branding. In view of the extensive potential market for high-grade carpet yarn, fuse yarn, fine yarn, light weight union fabrics and the like, smaller units equipped with specialised machinery should be set up.

The delegation has suggested that India should become a member of the International Packaging Convention to facilitate the import of Indian

gunnies into Europe and their subsequent re-export to France. The I.J.M.A. should prepare suitable sample folders showing special products manufactured in India for distribution among prospective importers and consumers. The folders may be distributed through the Indian embassies, consulates and trade centres.

Fall in Gunny Offtake

Gunny exports fell sharply from 71,400 tonnes in December to 59,200 tonnes in January due to the temporary dislocation of port activities during the disturbances in Calcutta. So there was a severe setback in the despatches of gunnies from 105,800 tonnes to 92,400 tonnes from the mills reporting to the I.J.M.A. Hessian declined from 47,400 tonnes to 38,700 tonnes, sacking from 44,600 tonnes to 39,800 tonnes and miscellaneous goods from 6,400 tonnes to 6,300 tonnes. The offtake of carpet-backing cloth rose slightly from 7,400 tonnes to 7,600 tonnes. Exports of hessian fell from 43,200 tonnes to 34,200 tonnes, sacking from 17,900 tonnes to 14,900 tonnes and other goods from 2,800 tonnes to 2,500 tonnes.

Domestic consumption recorded a small decline from 34,500 tonnes to 33,200 tonnes due to the seasonal slackness in demand and small Government orders. The offtake of heavy goods fell by 1,800 tonnes to 24,900 tonnes. This was partially offset by a modest increase of 300 tonnes to 4,500 tonnes in hessian and of 200 tonnes to 3,800 tonnes in other goods.

In January 1963, the total offtake was 94,900 tonnes—42,900 tonnes of hessian, 41,000 tonnes of sacking, 5,100 tonnes of carpet-backing cloth and 5,900 tonnes of miscellaneous goods. Exports absorbed 63,700 tonnes—37,900 tonnes of hessian, 18,300 tonnes of sacking, 5,100 tonnes of carpet-backing cloth and 2,400 tonnes of other goods. Internal consump-

tion totalled 31,200 tonnes—5,000 tonnes of hessian, 22,700 tonnes of sacking and 3,500 tonnes of miscellaneous goods.

Rise in U.S. Burlap Consumption

U.S. burlap consumption has risen sharply from 77 million yards in December to 81.6 million yards in January. The latter figure was the highest on record since March 1963 when the offtake totalled 85 million yards. Consumption in January last year was only 68 million yards. U.S. stocks during January 1964 declined by 3 million yards to 291 million yards due to a slackness in shipments during December and early January. Of the stocks, 141 million yards, against 144 million yards, were afloat, while the spot stocks remained unchanged around 150 million yards. At the end of January 1963, the stocks were 306 million yards—112 million yards spot and 194 million yards afloat. At the rate of consumption in January, the stocks will last for 3.56 months. The corresponding stock duration was 4.50 months on the same basis at this time a year ago.

In spite of higher consumption and lower inventories, U.S. buyers have shown little interest in placing orders. Shipper circles ascribe the present lull to the scrapping of the I.J.M.A. Working Time Agreement from this month. Meanwhile, New York has reported a decline in burlap prices in sympathy with the softer trend in Calcutta. Between 4th February and 24th February, spot and afloat 40in. 10oz. heavy duty burlap, duty paid New York, has declined from 11.75 cents to 11.50 cents a yard.

Purchase Quota Proves Burdensome

Although the February purchase quota of 540,000 bales has practically been lifted by the mills, it has proved to be "the last straw" for some of them. Because of the shortage of funds and the scarcity of warehousing accommodation and due to large accumulation of fibre, they had sought some relief from the Jute Commissioner. But the latter, it is reported, has said that in view of the increase shown by the final jute crop forecast by 500,000 bales to 5.91 million bales, it is not possible to reduce the quota since the growers need funds for sowing operations. The mills have pleaded that the Jute

A whistle blows, it's a penalty...and referee Vaidya's decision is always correct!

On the field, he's an athletic, fast-moving figure. Watching the ball carefully. Keeping an eye out for infringements—fouls, off-sides. His decisions are never questioned, for Vaidya is respected by players and spectators alike. Not so long ago, he was a crack football player. He was chosen to represent India at the Olympics, but an accident kept him out. Today, he referees with skill, intelligence and good judgment...qualities which Vaidya brings to bear on his work as Technical Foreman at Burmah-Shell's Lub. Oil Blending Plant at Bombay.

'RECIPES' FOR OVER 300 LUBRICANTS

'Every engine and moving part,' says Vaidya, 'needs lubricating oil.' And it's Vaidya's job to supervise the blending of over 300 grades of lubricants. With the help of his colleagues, he ensures strict quality control in production so that the oils are on specification.

TODAY, AS EVER, PEOPLE LIKE VAIDYA ARE WORKING FOR YOU

'Work must be balanced by physical exercise and relaxation,' says Vaidya. 'That's why I play football and bridge.'

Vaidya and people like him—at all levels of responsibility—are Burmah-Shell. Today, as ever, they are hard at work...working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

Buffer Stock Association should be asked to enter the market and banks should be prevailed upon to extend financial accommodation against the raw jute holdings of mills. It may be mentioned that against the previous estimated fibre availability (including imports and smuggled supplies from Pakistan) of 7.5 million bales, the mills have already lifted 6.105 million bales and the J.B.S.A. 150,000 bales.

THE JUTE MARKETS

Manufactured Goods: Opening on a subdued note due to the lack of overseas enquiries or business, the Calcutta gunny market picked up strength on reports of a sizable Government tender for B Twills for February-April deliveries. Scattered short and shipper-covering in hessian also helped sentiment. The rise in U.S. burlap consumption failed to produce the expected result due to the continuing lull in fresh U.S. bookings. A further deterioration in the tempo of loading was reported at Calcutta port. Apart from a shortage of shed berths and lighters, a cut was imposed in river drafts, which interrupted the loading of export cargo. Barring a ready transaction for 2,000 bales of heavy goods for Saigon, no fresh foreign business was reported. Occasionally, talk of enquiries from shippers in hessian and sacking for the ready and near positions induced minor rallies, but the improvements were not sustained at the close due to selling pressure in the futures market. The February contracts were closed on Friday and the outstanding ones were converted into May contracts on payment of higher contango charges. Business in May contracts commenced from the same day. Sacking closed with a moderate gain, while hessian finished a shade higher from the opening levels after narrow fluctuations. Turnover was fair in heavy goods and small in hessian, and the undertone was steady at the close.

Wednesday's quotations were as follows:

	Feb.	Mar.	Apr.- June	July- Sept.
40in. 7oz.	34.40	34.50	34.35	34.25
40in. 8oz.	37.00	37.00	36.85	36.75
40in. 10oz.	45.80	45.90	46.00	45.90

(Plain)	111.00	111.25	111.25	111.50
A Twills	139.00	135.50	135.00	135.00
Liverpools	127.00	126.50	126.50	126.50

Raw Jute: Easy conditions prevailed in the raw jute market during the past week. Having almost completed their February purchase quota, mainly from the upcountry markets in better-grade fibre for long positions, mills and mill agents were practically out of the picture. As the better-grade jute for the season has already been disposed of, a glut of stocks seemed to emerge in offgrade fibre in Calcutta and in secondary markets. The holders were keen on clearing them at slightly lower prices, but not below the official minima. Weak holders sold small lots at slightly lower levels. In the futures market, Upper Assam White Bottoms for March continued to be nominally transacted around the official floor levels. Business in June contracts commenced from Monday. There were many conversions of outstanding March contracts into June ones on the payment of higher contango charges. Turnover was small in the spot market and moderate in the futures market. The undertone was hesitant at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)		T.S.D. Minimum Prices	
	Rs. A Ql	Rs. A Md	Rs. A Ql	Rs. A Md

THE PAKISTANI JUTE MARKETS

RISE IN FIBRE

(FROM OUR Dacca CORRESPONDENT)

CONTRARY to expectations, there was considerable buying during the Idd holidays, particularly by the United States of cuttings. So local prices rose by some Rs. 5 a bale or £2 5s a ton. It is not known what quantities of cuttings America bought, but they were large enough not only

to push prices up locally but to make ready cuttings very scarce indeed.

THE U.K. JUTE MARKETS

FIBRE IN DEMAND

(FROM OUR DUNDEE CORRESPONDENT)

THERE was a firmer tendency in the raw jute market in Pakistan during the past few days. This related mainly to white jute, possibly due to imports from upcountry being small. Some sellers withdrew from the market for this reason as they expected prices to rise. On the other hand, prices of Tossa qualities remained unchanged with supplies very easily obtained. Some buying interest was shown by Dundee spinners for shipment jute. The quantities available ex warehouse Dundee are now small and mainly of unwanted or poor quality fibre. It is expected that fairly steady buying will take place in the U.K. during the next three or four months.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during January was 6.6 million yards more than during December 1963, and 14.2 million yards more than in January a year ago. Last January's bag cut-up was 59.1 million yards and piecegoods deliveries 22.7 million

yards, compared with 53.9 million yards and 21.3 million yards in December 1963 and 52.1 million yards and 15.5 million yards in January 1963. U.S. spot stocks and floats decreased from the end of December by only 2.4 million yards, in spite of the much larger consumption.

A new link with

Andhra Pradesh

Now...Alind forges a new link with an old customer! Many of the major transmission lines in Andhra Pradesh are all Alind lines. Indeed, Alind's bare conductor supplies to the State would come to about 100,000 km—roughly one-fifth of the company's output so far.

But that is not all! For it was Andhra again, who came out with a sizeable order for Alind's weather-proof wires—not many months after the company had commenced production at Kundara of this new line.

To serve this dear customer even better, Alind is now setting up plant facilities for the manufacture of covered or insulated aluminium conductors at Lingampalli, Ramachandrapuram, near Hyderabad, fast developing into a vast industrial complex.

Geared for an annual production of 10 million core metres of CAC, this brand-new Alind plant will not only serve as a strategic supply source...but can well be the nucleus of a bigger plant to come...dramatically diversifying its lines of manufacturing activity.

ALIND

DEMAND FOR TEA GOOD BUT PRICES LOWER

(BY A SPECIAL CORRESPONDENT)

THE Commodity markets continue to report a generally good demand for tea leaf and dusts in Calcutta, Cochin and Colombo, but in most cases, the profit margin is narrow. In north India, the plucking season ended in December, and most of the output is on its way to Calcutta for sale or shipment. The statistical situation is not bad, although 1963 yielded about 40 million lbs less than 1961. But internal consumption has fallen off, and it looks as if world offtake is also less. If so, the situation could be serious if the crop from north India proves to be a bumper one. Meantime, south India may again go ahead. Africa may expand production further. Larger supplies at lower costs would seem to be the only solution for India in a market when demand fails to keep pace with supplies.

Amenities for Tea Workers

The Wage Board for the tea industry is expected to make further recommendations at an early date. Should another rise in the wages be recommended, the expansion programmes will cost more money. The 900 million lbs plan target by 1965, is not expected to mature, and how can future progress be assured unless the profit motive is taken into account. Today tea garden workers are among the fortunate section of the Indian population. They are provided with many amenities and generally enjoy working conditions in healthy surroundings now free from malaria.

In Assam, there is a plantations provident fund: the scheme already covers life risks for about 65,000 workers. It is expected to be expanded to cover some thousands of workers in the age groups 18 to 40. This service is said to be free, as premiums are paid by the Board of Trustees without charging the workers or the employers. The L.I.C. is understood to have helped by eliminating medical examinations and simplifying formalities required for issue of insurance policies.

The export propaganda is being continued and at a recent meeting in Calcutta, Mr. B. C. Biyani, president of the Tea Packers Association confirmed that his Association was

determined to increase the export of packet tea. Mr. A. S. Bam, chairman of the Indian Tea Board, had a few words to say on the subject of export of both packet and loose tea. It is gratifying to note that Indian tea exports have improved from 193 million lbs in 1960 to 223 million lbs in 1963, and over the same period, foreign exchange earnings are reported to have moved up from Rs. 120 crores to Rs. 132 crores. Mr. Bam advised exporters to offer at more competitive rates by reducing their profits, but as noted by this correspondent earlier, Calcutta brokers offer lines to outmarkets at wholesale rates, but state that Africa and Ceylon as well as Indonesia and other common tea producers, still under-cut Indian prices.

Production in Russia

From time to time reference has been made in these columns to the Russian policy of gradually turning to the manufacture of articles needed for consumption in that country. It is said that the Russians started experimenting with various tea seeds in early 1895, but since 1930, definite progress has been recorded and production is steadily growing. The planted area has gone up from around 3,000 hectares to 60,000 hectares in the past 35 years. Whereas India actually has less tea in the north than before the second World War (India and Pakistan had approximately 840,000 acres in 1938-39 according to the International Tea Committee's Bulletin), India today has 333,500 hectares and Pakistan, say, 32,500 hectares, or a total of 365,500 hectares together. (1 hectare=2.471 acres). Due to reasons beyond the control of the authorities, the demand for India's output barely covers the cost of producing it. Furthermore, Russia has started exporting. The 1963 figures state that 2,000 tons of black tea and 2,800 tons of other tea were sent to Poland, Bulgaria, Czechoslovakia and Germany. It is reported that Georgia is also exporting to the U.K.

The above figures are small in comparison with world trade, but they indicate the fact that there is and will continue to be growing competition for consumers' markets.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to January 1964. As compared with December, the January index for Food reveals a drop of

7 points. The indices for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 609 and 321 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living dropped by 4 points during January 1964.

COMPANY AND PUBLIC NOTICES

UNITED BANK OF INDIA LIMITED

Regd. Office : UNITED BANK BUILDINGS,
4, CLIVE GHAT STREET, CALCUTTA-1.

NOTICE

NOTICE is hereby given that the next Annual General Meeting of the shareholders of UNITED BANK OF INDIA LIMITED will be held at the hall of the Academy of Fine Arts at Cathedral Road, Calcutta 16, on Monday, the 30th March, 1964 at 11 a.m. to transact the following business:—

1. To receive the Directors' Report and Audited Accounts for the year ended 31st December, 1963;
2. To declare a Dividend;
3. To elect a Director in place of Dr. N. N. Law, who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Dr. N. N. Law, who has completed 76 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

4. To elect a Director in place of Dr. S. B. Dutt, who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Dr. S. B. Dutt who has completed 69 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

5. To elect a Director in place of Nawab Sir K. G. M.

Farouqui who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Nawab Sir K. G. M. Farouqui, who has completed 67 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

6. To elect a Director in place of Sri S. N. Ray who retires but offers himself for re-election.

7. To appoint Auditors and fix their remuneration.

AS ORDINARY RESOLUTION

To consider and, if thought fit, to pass the following resolution as Ordinary Resolution:—

8. "By virtue of the discretion vested in the General Meeting by Section 228(3) of the Companies Act, 1956 as amended in 1960, it is hereby resolved that the accounts of the Branch Offices of the Bank in India as well as outside India (including any branch which may be opened hereafter either in India or outside) may be audited otherwise than by the Company's Auditor and it is further resolved that the Directors be and are hereby authorised to appoint from time to time persons qualified for appointment as auditors of the Company for audit of accounts of such branch offices in consultation with the Company's Auditor and pay them such remuneration as the Directors may decide."

AS SPECIAL RESOLUTION

To consider and, if thought fit, to pass the following resolutions as Special Resolutions:—

9. (A) Resolved that with effect from March 30, 1964 each of the Directors shall be entitled to remuneration as hereunder:

(i) For every meeting of the Board attended, not exceeding Rs. 250.

(ii) For every meeting of any Committee of Directors attended, (a) Chairman not exceeding Rs. 150, (b) other Directors not exceeding Rs. 100.

- (B) Resolved that Article 111 of the Company's Articles of Association be and is hereby altered by substituting therein for the words "Rupees One hundred" the words "Rupees Two hundred and fifty."

10. Resolved that the consent of the Company pursuant to provisions of Section 314 of

the Companies Act as amended in 1960 be and is hereby accorded to the fitting in of the undermentioned Officers who are relatives of Directors of the Company at the salary in the grade and scales of pay mentioned against their names together with the usual allowances, benefits, amenities and facilities applicable to other Officers in the respective grade and scales of pay occupying similar posts.

- (iv) Dividend Warrants will be posted to shareholders at their registered addresses or in accordance with their mandates. Such mandate and intimation of any change of address, if not already given, should be given to the Bank early in time.

The explanatory statement required under section 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

MARTIN BURN LIMITED

NOTICE

AT a meeting of the Board of Directors held today the Directors have recommended payment of a gross dividend for the year ended 30th September, 1963, of 25%, or Rs. 2.50 per share, on the Ordinary Share Capital, subject to deduction of tax at the appropriate rates. This dividend awaits sanction by the shareholders at the Annual General Meeting to be held on Monday, the 30th March, 1964.

The Ordinary Share Register and Transfer Books of the Company, will be closed from the 16th March, 1964 to 30th March, 1964, both dates inclusive, and the dividend if sanctioned will be paid on or after the 1st April,

1964, to those shareholders whose names appear on the Register of Members on the 30th March, 1964.

By Order of the Board,
MARTIN BURN LIMITED,

L. K. SEN CHOWDHRY,

Secretary.

Registered Office:

12, Mission Row,

Calcutta-1.

Dated 21st February, 1964.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends T means that dividend tax is deducted at source.

THE BUDGET AS A STEP TO NATIONALISE SAVINGS

THE Indian Budget for 1964-65, presented by the Finance Minister, Mr. T. T. Krishnamachari, to Parliament last Saturday, is a striking essay in ingenuity. Some may recall with trepidation that the last Budget which Mr. Krishnamachari presented, in May 1957, was notable for its ingenuity too—with not entirely happy results. There followed some years of humdrum (alias more orthodox) budgeting by Mr. Morarji Desai; it was during these years that the damage done by the historic effort of May 1957 was repaired in some degree, and the economy managed to stage a recovery which was responsible for the greater part of whatever limited success was achieved in completing a badly truncated second five year plan. But, feeling perhaps a little desperate and frustrated by the limitations of fiscal orthodoxy under the pressures of the emergency, Mr. Desai—or his mentors—decided to follow the Krishnamachari tradition by devising a clever Budget for the last year of his tenure at the Central Finance Ministry. That Budget, despite the gloss of optimism featuring the official speeches, surveys and statements of recent months, did not take the economy all the way to disaster, but did bring it dangerously close to economic stagnation.

Indian economic history thus suggests that the premium to be put on fiscal ingenuity is not necessarily and automatically high. If commentators have called for "fresh thinking", "bold approaches" and "new ideas", they have perhaps failed to the extent that they have not always made it clear that they did not want a budgetary revolution for its own sake. They have taken it for granted that the freshness, the boldness and the newness would be limited by the realities of the political and economic situation, as well as by the sentiment of individuals and the ability of the bureaucracy. Several aspects of Mr. Krishnamachari's Budget are bold and shrewd, the intellectual progeny of deep thought. But that does not alter the fact that the Budget as a whole, and the philosophy it reflects, give cause for serious dismay. Contrary to a popular impression, the Budget does not seek economic revival by exorcising the fiscal ogres born in the later days of the Desai era. Nevertheless although it may seem trite and platitudinous to say so, in its innovations it is very much a Krishnamachari Budget, in the sense that it reflects the personality and prejudices of the new Finance Minister. The insight and intellectual eminence of Mr. Krishnamachari is not in doubt; nor is the catholicity of his experience. The question must nevertheless be asked whether it is right for a country's fiscal thinking to be swerving constantly this way and that in response to the personal predilections of its necessarily impermanent Finance Ministers.

The aims the Budget is designed to achieve, as Mr. Krishnamachari has explained, are many. But, as he has not explained, they are also often in conflict. The primary aim rightly, is stated to be to accelerate economic growth. For this the rate of saving has to be increased. Thereafter, it is proposed that investment should be more

purposefully directed; instead of capital funds knocking around aimlessly like bagatelle balls, they should be moved to the sectors and industries where they are most required. The investment should then be made and used according to stricter criteria of economic efficiency; in that way would fresh funds be generated for further investment. At the same time, there is to be a strong attack on monopolies and on the concentration of economic power, the ultimate aim being to achieve a greater measure of social equality. If in the process voluntary savings dry up or efficiency suffers, that is of no great importance. The assumption is implicit throughout that the Government will step in to cover any shortfalls which may arise. Individually and collectively, these aims seem to add up to an admirable menagerie of sound ideas—in theory. But they are based on the unproven assumption that the Government itself has an unlimited fund of wisdom, experience, ability, honesty, knowledge and efficiency, the only thing it lacks being money. May one ask, however, that if this were actually the case, should not everything have been nationalised? More pertinently, if it were actually the case, would the economy today be in the shambles it is?

Mr. Krishnamachari's Budget is not designed to nationalise the economy, nor even any definite part of it. But it does not stop far short of nationalising savings—especially the voluntary savings which have hitherto nourished the growth of private enterprise and industry. The strategy for the purpose is clear. It is based on the assumption that people do not save enough, so the Government will force out of them whatever it thinks they ought to save. Part or much of the extra money thus squeezed will be put into the Government's coffers, and then handed out directly or through Government-owned institutions to the entrepreneurs and industries the Government happens to favour. In this way—so the argument runs—saving will be ensured instead of being left to the chancy quirks of the vulgar rich; the right investments will be made in accordance with whatever are the economic priorities; and, finally, a long step will have been taken towards reducing social and economic inequalities.

The argument, however, has at least three faults. First, if the nation's total pool of savings is to be increased, the primary attack ought rationally to be on people who save very little or nothing at all at present; there is little point in siphoning voluntary savings into the Government's coffers in the form of forced saving through direct taxes, compulsory deposits or annuities. Secondly, there is no inherent virtue in compelling entrepreneurs to seek capital from the Government or Government-sponsored institutions rather than from the open market; the wisdom of the latter has by no means yet been proven inferior to that of the former. Thirdly, economic inequalities arise not from the normal functioning of private enterprise, but from tax evasion; to claim that a certain fiscal structure will reduce inequalities is untruthful unless it can first be demonstrated that evasion has been checked. The Government

knows as well as anybody else that if evasion could have been stopped totally, India would have already, in the year of grace 1964, been the egalitarian envy of the reddest of red-hot socialist countries.

The process through which the flow of voluntary savings, especially the voluntary savings going to private industry, stands in danger of drying up is a simple one. It is not necessary to reissue the long moan about the steady increase in taxation in recent years, or to embellish it with a re-gurgitation of the customary flood of accompanying tears. The experience of the past year is salutary enough: the industrial capital market has been pretty nearly dead, and the new issue market would have been carried away by the undertakers had it not been for an occasional heart-massage from the now repentant underwriters. The disturbing condition of the economy, as well of these two markets, owes more than anything else to the very clever Budget which Mr. Morarji Desai presented a year ago, and which succeeded in spiriting away well over Rs. 300 crores from private pockets into the pockets of the Government. On top of it is now to come Rs. 40 crores of additional taxation, Rs. 15 crores of it through direct taxes. But that is not all: no less than Rs. 50 crores more is to come through the annuity deposits—deposits which are forced out of Indians earning more than Rs. 15,000 a year or, in other words, out of precisely the income groups which do most of the voluntary saving at present.

Will the Economy Recover?

The question may well be asked: can the economy possibly recover after such a powerful new squeeze? And, assuming for the sake of argument that it might, will anything but a desiccated skeleton be left of the open market for industrial capital? Mr. Krishnamachari is said to hold the latter in contempt, in the belief that it is merely the playground of speculators and manipulators from the family dynasties of commerce and industry; whether that is true or not, that is certainly what his Budget indicates. It is nevertheless to be doubted whether finance from the institutions, in quality and quantity, can ever be a superior alternative to the traditional form of a flourishing private capital market, assuming that it is allowed to flourish for a start. Mr. Krishnamachari may believe that an increased flow of Government finance will lead to a corresponding increase in the flow of private finance, so in course of time the growth of private industry will be accelerated—as is claimed to have happened in Italy. The argument misses the point, however, that the taxes and compulsions suffered by potential savers have to be a good deal less drastic than they are now before the private finance is created, let alone before it begins to flow. Secondly, the Government's own record as sponsor, financier or partner in industrial enterprise has to be less dreary than it is in India if private finance is to be attracted. In Italy, State-supported enterprises were in the hands of men with the authority, independence and business acumen of people like Signor Mattei. In India, comparable enterprises are still in the hands of the spiritual descendants of Shri Bumble.

The philosophy underlying the Budget, though not without its superficial attractions for socialist gentry, thus has serious flaws. The first is that there is no inherent virtue in forcing savings out of voluntary savers, and then routing the savings via Government institutions to private industry. The second flaw lies in the assumption that to squeeze another Rs. 90 crores out of a stagnant economy which has been paralysed by last year's Budget of over Rs. 300 crores is the way to promote its speedy recovery. Some commentators, having succumbed to the conditioned reflex which leads them to expect a large new dose of additional taxation or forced saving each year, have shrugged off the latest increases as inevitable. A closer study of the Budget estimates, however, indicates that this is simply not the case. According to the revised estimates for the current year, 1963-64, the revenue from corporation and income taxes has exceeded the Budget estimates by Rs. 70 crores. The revenue from Customs and excise duties has exceeded the estimate by Rs. 35 crores, although the *Economic Survey* issued only a fortnight ago gave the impression that there would be no substantial increase. Less money has come by

way of compulsory deposits, because Mr. Krishnamachari drastically amended the scheme in September last year. Less has also come by way of emergency risks insurance premiums. But the overall amount flowing into the Government's coffers has nevertheless proved to be far in excess of the 1963-64 Budget estimates.

During the coming financial year, 1964-65, the revenue, without allowing for the latest Budget proposals, would have risen to Rs. 2,095 crores. Revenue expenditure would have risen to Rs. 2,041 crores. There would thus have been a revenue surplus of Rs. 54 crores; with the tax changes now proposed, this surplus will now rise by Rs. 40 crores. To that Rs. 40 crores will be added the Rs. 50 crores coming as savings through the annuity deposit scheme, as a result of which the overall deficit will be reduced by Rs. 90 crores—from Rs. 176 crores to Rs. 86 crores. It is possible to sympathise with Mr. Krishnamachari's view that, after the sharp increase in prices over the past year, the inflationary impact of deficit financing is to be greatly feared, and so more attention has to be given to reducing the overall deficit rather than merely the revenue deficit. It is not so easy to understand, however, why the same object could not have been achieved by economising on civil expenditure, including plan expenditure. The first is to shoot up by Rs. 191 crores in a Government that is busy proclaiming its new-found devotion to economy, efficiency and productivity. The second, in turn, is to be jerked up by around Rs. 300 crores too. Taxpayers might well feel impelled to ask: if your plan is in a shambles, where the dickens is all this money going? After all, if completing 100 percent of the plan was to have cost round about Rs. 11,000 crores, completing perhaps 70 percent or 80 percent of it should be costing around three-fourths as much. Is the rest, then, being diverted merely to the composition of speeches on efficiency? A more selective approach to the plan would have allowed the new burdens to be entirely avoided, and by that test they are wholly unnecessary.

Foreign Investors: Incentives

Coming to the Budget proposals themselves, it must be conceded straightaway that the Finance Minister has made a sincere, if modest, effort to meet the criticism from foreign investors about the Indian tax system. This at first seemed the one really encouraging feature of his Budget. But a closer analysis shows that many of the important concessions framed with foreign investors in mind have been undermined by other aspects of the taxation proposals. In particular, the wholly welcome abolition of the super taxes on intercorporate dividends is in many cases virtually offset by the imposition of the dividend tax. The reduction in the tax on "engineering services" from 63 percent to 50 percent seems satisfactory since it provides relief to foreign consultants. So does the proposal to assume powers to exempt foreign investors from tax on income derived from loans given by them to Indian companies with the Government's approval. Similar exemption is provided in the Finance Minister's proposals from tax on income from subscriptions by foreigners to approved securities, whether governmental or private. Profits accruing from the purchase of goods in India by foreign concerns for the purpose of export will also be exempted from tax to save them from double taxation; they will pay the tax only in their home country. On the other hand, the proposals provide for an unjustified increase from 63 percent to 65 percent in the tax on the Indian branches of foreign companies. In the sphere of personal taxation, as the table on the next page shows, the reduction in the taxes on non-Indian nationals is small but welcome, although in several cases it may be neutralised by the reintroduction of the expenditure tax. It is good, however, that deductions will be allowed in relation to the expenditure on their children's education. The liberalisation of the provisions for employing technicians and experts on tax-free salaries with the Government's approval is also welcome.

On the whole, however, the first point to note about the Budget proposals is that the clever little

fiscal toys which Mr. Morarji Desai—or his mentors—invented last year are not being flung out of the window, as they should have been. They are merely being painted in nicer colours, given new names, and presented as yet another tribute to fiscal ingenuity. The new surtax on company profits, which is to replace the super profits tax, represents a rather less reprehensible Tweedledum than the existing Tweedledee of the S.P.T. has ever been. Similarly, the annuity deposit scheme, which is to replace the compulsory deposits scheme, serves much the same aim through much the same method—although in this case the improvement is not unquestionable. Finally, the previous Budget perpetrated what in another context would be given the misnomer of racial discrimination by allowing a company to spend more than Rs. 5,000 on a non-Indian employee but penalising it for spending that much on an Indian employee. Mr. Krishnamachari has now thought up a more respectable variation of the same idea, by deciding that the spending power of Indians will be reduced through an annuity scheme whereas the spending power of non-Indians will not.

Surtax on Company Profits

For the more efficient sections of business and industry, the centre-piece of the proposals for corporate taxation is the new surtax on company profits. It should be declared straightaway that the surtax is more liberal than the super profits tax it replaces, and to that extent represents a step forward to realism. But it is still a tax on efficiency, and in at least one detail is more retrograde than the super profits tax; the latter was calculated after deducting 10 percent of the company's gross profits, whereas the surtax provides for no such deduction, although that 10 percent deduction was the S.P.T.'s sole concession to efficiency.

The main concessions the surtax gives are four. First, the capital base on which it is calculated has been greatly widened; under the super profits tax the capital base consisted of paid-up capital and reserves, whereas under the surtax it consists of equity and preference capital, reserves, debentures, loans from approved financial institutions and loans for ten years or more from banks or from foreign sources for creating capital assets. Secondly, the S.P.T. applied at the rate of 50 percent for the first slab of super profits and 60 percent on the remainder; the surtax is to be at the uniform rate of 40 percent on any profits to which it may be applicable. Thirdly, the S.P.T. did not apply to a company which made a profit of up to Rs. 50,000; the surtax now will not apply to a company which makes a profit of up to Rs. 2 lakhs. Fourthly, a rebate of 20 percent of the surtax assessed will be given to companies belonging to specified "important" industries. Against all this, however, the surtax suffers from one major disadvantage: it makes no provision for the carry-forward and set-off of deficiencies in surtaxable profits, and to that extent will hit companies with fluctuating incomes badly.

The right thing to do would have been to abolish the super profits tax and not replace it by a surtax at all. Both, in the final analysis, are a penalty on the efficiency and productivity which Mr. Krishnamachari has otherwise been earnestly protesting he is eager to promote. But political pressures appear to have forced the Finance Minister to a poor compromise, for the surtax means that the super profits tax has not really been abolished but has only been diluted. The change in nomenclature is presumably intended as a psychological "concession" to investors, particularly foreign ones; they were appalled by the thought that the Indian Government should use so pejorative a term as "super profits" for what were really the fruits of efficiency. One wonders, however, whether psychological "concessions" given through titular transformations can have much value for hard-headed business men. Preliminary calculations suggest that although the concession in money terms is genuine, it is not large enough to repair the damage done by the wholly irrational principles on which both the S.P.T. and the surtax are based.

It is intriguing, furthermore, to know why the Finance Ministry is so reluctant to disclose the revenue it expects from the new surtax. It is even more intriguing to know why it is reluctant to disclose the revenue it has got from the super profits tax; with the financial year almost ended,

it must surely have a fairly good idea of the money the monster has fetched. Parliament may not condescend to be fobbed off so easily; it has a right to ask what the expected revenue is before it lets itself in for something so clever.

The next, and welcome, change in the sphere of corporate taxation is that companies belonging to specified "important" industries will get a rebate of corporation tax equivalent to 10 percent of the income tax and super tax normally payable by them. The "important" industries include basic metals like steel, copper and aluminium, mining of coal, lignite, iron ore and bauxite, industrial machinery and machine tools, cement, fertilisers, paper and pulp, tractors, equipment for generation of electricity, and tea, coffee, and rubber. These industries are also the ones which qualify for the 20-percent rebate of surtax mentioned earlier. The company tax rebates for them represent a satisfactory, if inadequate, compromise. It was clear that the burden of corporate taxation had become too heavy and needed to be reduced. Mr. Krishnamachari has now decided to reduce it, but only selectively. That, however, seems to have been only a subsidiary intention; the main one is to divert investment from "unimportant" industries to what Mr. Krishnamachari has chosen to describe as important ones.

In theory, the idea is once again good. But, in practice, the list he has chosen for a start is not comprehensive enough. There is also a danger that, in time, fiscal policy may come to be used as an instrument for distorting industrial priorities under political pressure. The choice of "important" industries assumes an omniscience on the part of the Government that is not always in evidence. If that omniscience had existed, some may ask, would the growth of these industries have been sluggish, and would it have been necessary to give them special concessions now? The expansion of the industries in question has been retarded, more than anything else, by the Government's own price, production and distribution controls, and by its ideological choices. Its claims to wisdom and omniscience can, therefore, be forgotten. Except for the good fortune of a hard kick from the World Bank, the errors which have continued uncorrected for the best part of eight or ten years would still not have begun to be corrected. Official claims to speed, efficiency and adaptability can, therefore, also be forgotten.

Tax on Dividends

Among the most deplorable aspects of the proposals for corporate taxation is the decision to revive the tax on dividends—at the rate of 7.5 percent on the amounts distributed as dividend on capital other than preference capital. Exemptions have been given to companies where dividends have to be compulsorily distributed and to new companies. But the first effect of the tax will be to reduce drastically the value of the concessions given to companies—as well as to foreign investors. The ostensible idea is that companies in general should not use the concessions they may have got for "dissipating" their resources in higher dividends; they should instead "strengthen the reserves and augment the capacity of the corporate sector to develop". But the idea that higher dividends amount to dissipation is no more than a personal whim; the evidence shows that only when attractive dividends are paid do savings get promoted and investible funds become easier to attract. At a time when interest rates are being jerked up "to reflect the scarcity of capital", dividend rates are sought to be jerked down to comply with a private fancy. Nor will shareholders be allowed to draw much satisfaction from the spectacle of having their companies bulging with reserves. That end of the problem has been seen to by deciding that not only is the bonus issue tax of 12.5 percent to stay unchanged, but bonus shares will now be subject also to a punitive capital gains tax in shareholders' hands.

The scheme of changes is thus a neat one. Equity shareholders should not expect bigger dividends. Nor, to save their skins, should they ever ask for bonus shares. Their satisfaction, if any, must come from the aberrations of fiscal ingenuity, as they watch the equity market knocked for a six and their companies compelled to depend increasingly on institutional finance. If it be thought that the irrationality of the dividend tax is com-

pensated for in some cases by the abolition of super tax on intercorporate dividends, it need not be supposed that the compensation is great. The moderate concession to intercorporate investment is realistic, although it does not go far enough; it could encourage companies with large reserves to promote the growth and diversification of industry by investing more freely in other companies. But the dividend tax on the income which such investment will bring will, in many cases, neutralise the super tax concession which has been given.

Personal Taxation

The scheme of changes relating to personal taxation is not quite so ingenious as the one relating to corporate taxation, but it has some pleasant aspects. The changes start with a falsehood: it lies in the claim that the regrading of the personal income tax structure "will mean a reduction of tax at all levels." As the accompanying table shows, it will not mean a reduction at all levels of salary income at least. The misrepresentation was supported by a trick whereby the 1963-64 tax liabilities were shown without making allowance for the compulsory deposits; and were then compared with the proposed tax liabilities for 1964-65. The comparison might have been valid if people had paid no compulsory deposits, and had preferred instead to pay the full Union surcharge on after-tax incomes. But few could have been guilty of such deliberate lunacy. The only valid assumption in the circumstances is that people have paid prac-

The reason is that the repayments, added to the rising top slab of their incomes, will suffer steadily, rising rates of tax each successive year. For the majority, therefore, the annuity deposit scheme is not a reward for saving at all; it only means that assesseees will be forced to give the Government a loan at an uneconomically low rate of interest (4 percent), in return for which the Government will merely defer the collection of the related tax liability. The main ones to benefit will be those approaching retirement; their tax liability may be significantly reduced in the last years of service, and the tax they pay on annuity repayments received after retirement will probably be small.

The most disturbing aspect of the annuity deposit scheme is that, by siphoning off an extra Rs. 50 crores from private pockets into the Government's coffers, it will shut the tap of individual voluntary savings almost completely. This will be no accident; the whole scheme of the Budget suggests that this is precisely what it intends to achieve. In answer to the call for socialism at Bhubaneswar, estate duty is being sharply raised, and so is the gift tax which is advertised as its logical corollary. Stiffer taxes are proposed for wealth, and for capital gains, particularly from houses and landed property. The reintroduction of the expenditure tax may shorten the joys of many in the higher income groups who may be celebrating the reduction in their income tax liabilities. The justification for reintroducing the tax remains unknown. It may diminish "conspic-

TAXES AND DEPOSITS ON SALARIES COMPARED

Income from	1963-64			1964-65		1964-65
				Indian National	Annuity Deposit	Non-Indian National
Salary	Gross	C.D.	Net Tax	Tax	Rs.	Tax
Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
5,000	241	(149)	92	84	—	84
10,000	930	(250)	680	709	—	709
15,000	1,881	(337)	1,544	1,584	—	1,584
20,000	3,270	(415)	2,855	2,384	1,000	2,584
25,000	5,300	(479)	4,821	3,834	1,875	4,490
40,000	12,979	(639)	12,340	10,340	3,000	11,990
70,000	33,588	(845)	32,743	26,590	7,000	31,490
1,00,000	56,625	(999)	55,626	44,615	12,500	53,990
2,00,000	1,40,031	(1,368)	1,38,663	1,15,865	25,000	1,36,490

tically all the compulsory deposits they were asked to. Now, for the income groups up to Rs. 15,000 a year, the "take-home pay" will be larger because compulsory deposits have been abolished and the annuity deposits scheme will not apply to them. But the total amount many of them (e.g., those earning between Rs. 7,500 and Rs. 15,000 a year) have to pay in income tax will still be marginally bigger in the coming year than it was in 1963-64.

For most people in the income groups above Rs. 15,000 a year, there is a welcome, if in many cases only marginal, reduction in the income tax and super tax liability. But in the case of Indian citizens (the annuity deposit scheme does not apply to foreigners), the "take-home pay" will be less since the annuity deposit they will be forced to make will be much bigger than the compulsory deposits they have made hitherto. In this way the Finance Minister has tried to give such people the psychological satisfaction that, while they will be forced to save much more, they will at least have to pay less in taxes. But here again the satisfaction is in large measure illusory. The annuity deposit will admittedly be allowed as a deduction in computing the total income for the year in which it is made. But when it is repaid—in ten equated annual instalments of principal and interest commencing from one complete year after the year of assessment—the repayments will be assessed as income in the year in which they are made.

Thus, the annuity will not escape tax in the vast majority of cases. Assuming that tax rates remain unchanged over the next decade—a large assumption indeed—a person with a constant income may benefit a little. Those with fluctuating incomes may or may not benefit. But people with rising incomes—and most normally expect to belong to this category—will in all probability lose.

ous consumption"—but only of the honest assesseees. As a measure to check tax evasion, it is worthless; and its nuisance value cannot be easily forgotten by those who spent the better part of 1957-62 compiling their expenditure tax returns. In all these ways, it is hoped that in the years to come India will have a more egalitarian society—more egalitarian at least for those who care to pay their taxes honestly. It need not be supposed, however, that honesty will necessarily increase in response to the drastic measures Mr. Krishnamachari has proposed to check tax evasion. Indian experience shows that the net effect of such measures usually is that several small fry get caught, or succumb to constant harassment, while the big fish escape scot-free.

Checking Evasion

The Finance Minister has boldly declared that this time the big fish will get caught too. But he is no doubt aware that the political realities of the country do not really allow such phraseology to be reiterated with any conviction. The removal of the secrecy provision in the Income Tax Act will be warmly welcomed by the growing tribe of vengeful informers and blackmailers. The drastic powers for searching people and premises which are to be given to income tax officers stand in danger of being used with the same merry abandon as the comparable powers now exercised in private crusades under the Sea Customs Act, 1962. The main consequence may be that reputations will be besmirched at will, whether or not anybody's guilt is ultimately proven. In the process, a fair proportion of the "unaccounted money" may pass from the private pockets of income tax assesseees to the private pockets of income tax collectors. If Government servants are paid too little, that deficiency too may soon be corrected through the growing premiums of dishonesty.

A CLOSER LOOK AT THE TAX CHANGES FOR COMPANIES

By K. C. Khanna

THE mixed bag of tax proposals—good, bad and indifferent—which the Finance Minister presented to the Lok Sabha last Saturday will baffle even the most versatile of fiscal jugglers. He would be a bold, if not rash, tax adviser indeed who could explain in detail straightaway the full impact of all the Budget proposals after only a first reading of the Finance Bill and the related documents. Professor Nicholas Kaldor described the provisions for company taxation in India as "a perfect maze of unnecessary complications". Successive Budget changes seem to have added to the confusion in spite of strenuous, and possibly earnest, efforts to simplify the law. In an attempt to rationalise and reform the tax structure, the Finance Minister's proposals in the latest Budget touch the whole gamut of direct taxation—corporate taxes, including super profits tax; and personal taxation, including gift tax, wealth tax, estate duty, expenditure tax and capital gains tax. The precise implications of the changes for particular individuals and companies will be known only after the proposals have been considered in detail. But an attempt is made here to review briefly the amendments proposed in company and intercorporate taxes, and to evaluate the effect of the intended changes as compared with the existing levels of corporate taxation.

In his Budget speech, the Finance Minister stated: "In the corporate sector, the primary need of the hour is to infuse some confidence. The resources of this sector have to be augmented from within as well as from without, and it is, therefore, necessary to provide incentives for the existing companies to plough back a larger share of their profits and also diminish the disincentive for intercorporate investment. In this process, it seems to me necessary to make a distinction between capital-intensive industries and others. The need for basic industries to grow is recognised on all hands. Therefore, selective support has to be given to these industries".

With these objectives in view, he has proposed certain welcome changes in the tax structure. These include the abolition of the super profits tax; the grant of a 10 percent rebate of tax to companies engaged in specified industries; a reduction in the tax on intercorporate dividends, and the relaxation of the provisions relating to the compulsory distribution of dividends. Unfortunately, the salutary effect of these changes will be almost wholly nullified by the simultaneous introduction of other levies and amendments which will adversely affect the corporate sector. These include a surtax on the profits of companies; a tax on dividends; a drastic increase in the tax payable by companies in which the public is not substantially interested; a rise in tax chargeable on Indian branches of foreign companies; and the possible withdrawal of the development rebate from 1st April, 1966. The cumulative effect of the changes in tax rates applicable to different types of companies (excluding public companies with an income of less than Rs. 25,000 and companies with foreign minority shareholding formed before 1st April, 1959) is illustrated by the tables below. They do not take into account the burden of the proposed surtax on profits or of the super profits tax in force hitherto.

(A) Companies in which the public is substantially interested—income over Rs. 25,000

	Basic Industries	Others
Taxable profit	100.00	100.00
Company's tax	45.00	50.00
Dividend tax	55.00	50.00
Distributable dividend	3.84	3.49
Shareholder's tax @ 25%	51.16	46.51
Net return to shareholding company	12.79	11.63
	38.37	34.88
	(37.50)	*(35.00)

(B) Companies in which the public is not substantially interested

	Basic Industries	Others
Taxable profit	100.00	100.00
Company's tax	54.00	60.00
Dividend tax	46.00	40.00
Distributable dividend	3.21	—
Shareholder's tax @ 25%	42.79	40.00
Net return to shareholding company	10.70	10.60
	32.09	30.00
	(37.50)	*(35.00)

Notes: (1) Figures in brackets show net yield to shareholding company at existing rates of taxation. Those marked with an asterisk * represent net yield to parent company from an Indian subsidiary formed before 1st April, 1961.

(2) New companies will not be liable to dividend tax on dividends of up to 10 percent for a period of five years.

(3) In table (B) if the shareholding company is a foreign company, shareholder's tax will be charged at the rate of 15 percent and the net return will be 36.37 percent.

In the case of Indian branches of foreign companies, the tax liability has been increased from 63 percent to 65 percent, reducing the net return to the foreign company from 37 percent to 35 percent.

The tables show that only companies engaged in "important" or "basic" industries and in which the public is substantially interested, and their shareholding company, will benefit slightly from the proposed changes. The benefit, however, is too meagre to warrant any jubilation over tax reduction. Since a tax of 7.5 percent on dividends distributed will be payable by such companies, any assessment of the aggregate tax burden must take into account the dividend tax liability and proceed on the assumption that the entire profits will ultimately be distributed to shareholders. It is true that the tax on intercorporate dividends has been reduced; but the reduction is to a large extent wiped out by the imposition of the tax on dividends, with the result that the combined burden of company and intercorporate taxation goes down by less than 1 percent.

Companies in which the public is not substantially interested are affected worst of all. Whether engaged in an "important" industry or otherwise, such companies will have to bear a higher tax burden. Thus a company engaged in an "important" industry will have to bear a combined total burden of corporate taxes which will leave only 32.09 percent to the Indian shareholding company; the net return to a foreign shareholding company will be 36.37 percent. In the case of others, the yield to the shareholding company will go down from the existing 35 percent and 32.5 percent (depending on whether the company is a subsidiary formed before 1st April, 1961, or other) to 30 percent. The combined burden of company and intercorporate taxes on such companies will now rise to the confiscatory level of 70 percent! As remarked by the National Council of Applied Economic Research, this form of organisation is useful for small entrepreneurs who are able to expand their enterprises from small proprietary concerns. There are also a large number of medium-scale undertakings which find that public participation is either not forthcoming or is impracticable. Long-established and well-run organisations too often find public participation difficult to obtain because of the risky nature of their enterprise. All such undertakings play a vital part in the country's economy. What, then, can be the justification for penalising them if their only offence is that they came in at a time when, or ventured into a business where, others were afraid to enter? With a distribution of dividends forced on most of them, there is no ground whatsoever

CAPITAL, 5th March, 1964.

for an increase in the rate of tax applicable to such companies.

It may be noted at this stage that the position of companies in which the public is not substantially interested and which are engaged wholly in the manufacture or processing of goods (other than specified articles) is not quite clear. It seems that, besides paying income tax and super tax at the rate of 60 percent, they will also have to pay tax at the rate of 7.5 percent on all dividends distributed. Since such companies have been exempted from the provisions of Section 104 of the Income Tax Act and fall within the category of an Indian company which is not referred to in Section 108 of the Income Tax Act and whose business consists wholly in the manufacture or processing of goods, they seem liable to the dividend tax of 7.5 percent in addition to the rate of 60 percent of income tax and super tax chargeable on them. If this position is accepted, the net return to the shareholding company that has invested in a manufacturing company in which the public is not substantially interested, will be reduced to about 27.75 percent, which is astonishing. An amendment is called for in this respect.

It is apparent from this analysis that the proposals framed by the Finance Minister neither diminish the disincentives for intercorporate investment nor provide incentives for the existing companies to plough back a larger share of their profits because a considerable share of such profits is still appropriated by the Exchequer. It is true that some relief has been given to companies engaged in "important" industries, but the schedule of such industries is strictly limited (only 14 are listed in the Finance Bill). The imposition of the dividend tax has taken away most of the benefit sought to be conferred by the reduction in the tax on intercorporate dividends. It is imperative in the larger interests of the corporate sector that the tax on intercorporate dividends be reduced further.

One of the stated objectives of the Finance Minister is to augment "the sources of this (corporate) sector from within as well as from without". It has been shown above that there is very little scope for the augmentation of the resources from within. Do the Budget proposals assist in augmenting the resources from without? An investor in equities looks, among other aspects, to the following three factors: (a) a reasonable return on investment; (b) capital appreciation; and (c) growth prospects. The dividend tax will adversely affect the declaration and payment of dividends, and will reduce the return on investment. As for capital appreciation, the proposed amendment to the capital gains tax will usurp most of the appreciation. With reference to growth prospects, the tax on bonus issues is still retained and this will inhibit capitalisation issues. What is worse, an inequitable provision is proposed which renders liable to tax a gain on bonus shares received by shareholders even though such a gain has not been realised by the sale of shares and may perhaps never be realised. This is contrary to all accepted principles of taxation. It is clear that the proposals run counter to the intentions expressed in the Finance Minister's Budget speech.

Next in the list of amendments affecting corporate taxation is the replacement of the super profits tax by the surtax on company profits. On the very first look it is apparent that the new levy is nothing but a sugar-coated variety of the original bitter pill which it seeks to replace. It is disappointing to find that although the Finance Minister has admitted the uneven nature of the effects of the super profits tax on industry, an almost similar levy should have been proposed. There are certain modifications, no doubt. For instance, the rate of tax has been lowered and the capital base has been enlarged; the monetary burden of the super profits tax has, therefore, been lightened. But the basic inequity inherent in the original levy is continued in the new tax. The surtax will, like its predecessor, act as a guillotine on efficiency and its uneven nature will perhaps be felt more than before.

The super profits tax at least provided for a certain variation of the standard deduction depending on the profitability of a company, and to this extent it reduced the disincentive to efficiency. Although the statutory deduction has been raised to 10 percent of the capital base, the exemption of 10 percent of the total income from the charge to tax has been withdrawn. Debentures and loans will no

CAPITAL, 5th March, 1964.

be included in the capital base, but the interest or servicing charges on such borrowings will be added back to the chargeable profits. Moreover, the conditions for treating loans as part of capital are stringent. Contrary to court rulings, an artificial definition of reserves has been included in the Companies (Profits) Surtax Bill which narrows down the capital base. There is no provision for the carryforward and set-off of deficiency, and the dividend tax, even though paid by a company, cannot be deducted from the chargeable profits. With all these inequities built into the Surtax Bill, some companies may even find that they are being pushed out of the frying pan into the fire.

The table below shows that the total burden of corporate tax, dividend tax and surtax is not much

Total income as percentage of capital and reserves	Effective rate of corporate taxes as percentage of total income	
	Proposed	Existing
	Rates	Rates
15	53.47	50.00
25	57.20	58.00
30	59.70	60.66
40	62.80	64.00
50	64.66	66.00
60	65.88	67.33
80	67.44	69.00
100	68.37	70.00

Note: The above analyses are based on the assumption that the total income does not include any exempt items, that the statutory deduction is above the prescribed minimum and that the company has no loan capital.

less than the combined impact of corporate tax and super profits tax at the existing rates. The comparison suffers from certain minor flaws, but it shows that the new proposals do not materially reduce the existing burden.

A valuable change for the corporate sector is the proposed amendment of Sections 104 to 109 of the Income Tax Act, 1961, relaxing the provisions relating to the compulsory distribution of dividends. This reform was long overdue, and it is heartening to know that the right step has now been taken. It is hoped that in due course the provisions will be relaxed still further to enable non-manufacturing companies in which the public is not substantially interested also to expand and develop their resources.

As mentioned before, the implications of all the complicated proposals will be known only after they have been fully analysed and digested. All that can be stated at this stage is that there is not much to write home about. Whether the proposals contained in the latest Budget will achieve the desired objectives remains open to serious doubt. One thing, however, is certain: the Finance Minister has still a long way to go if he is to infuse confidence in the corporate sector and to attract the foreign investor. He has made a few useful changes; but the march has yet to proceed on realistic lines. The reduction in company and intercorporate taxes has to be carried further and inequitable burdens like the surtax on profits have to be removed. Only then will the intentions reflected in the Budget speech be fulfilled.

PARTIAL DECONTROL OF STEEL

WHETHER control over steel pricing has at all been lifted by the steps announced this week is still an open question. The transfer of decision-making authority from the Ministry to a joint plant committee gives, of course, the appearance of freedom, but the substance will depend on how this committee sets about its task. If the State-owned steel industry functions in a genuinely independent manner, its preponderance in the committee is no cause for misgiving. The essential identity of interests among all major producers should, exceptionally in this matter, produce a unified approach. But if Hindustan Steel's nominees have to do New Delhi's bidding, the joint plant committee cannot hope to evolve a healthy consensus. In the event, the transfer of pricing authority to the producers will be no more than a facade concealing the reality of the Ministry's arbitrary powers. In fact, the situation is made worse than it is now by the fiction that the Ministry no longer has any responsibility.

Some indication of the Ministry's likely attitude to the question of pricing may be obtained from the way in which the controlled categories have been dealt with. Against the private producers' claim for Rs. 37 a tonne, the Ministry has allowed only an average increase of Rs. 30 a tonne, but the gap between the two is wider than the two figures suggest. Since the claim of Rs. 37 was made in November, railway freights, excise duties and coal prices have gone up and these increases require to be neutralised. By deciding on the low figure of Rs. 30—the basis for which has not been disclosed—the Government seems to be rejecting the producers' plea for an adequate margin of profitability. The producers—Tata Steel and Indian Iron—had modestly suggested assuming a block of Rs. 1,500 a ton, as against Rs. 1,176 adopted in the 1962 price award and the Rs. 1,900 favoured by the Raj Committee. The provision for depreciation at 5 percent and for return on capital at 8 percent can hardly be considered unreasonable. Yet Mr. C. Subramaniam, Central Minister of Steel, Mines and Heavy Engineering, has chosen to disregard the producers' viewpoint to make what looks like an arbitrary decision as the one he handed down 18 months ago. On this basis, misgivings about the joint plant committee are not unwarranted. Apart from Hindustan Steel's majority the committee will have a Ministry official as its chairman and cannot, therefore, be expected to depart from the pattern Mr. Subramaniam has set. The revised prices for decontrolled categories to be announced later this month—the list issued on Monday is purely tentative and makes only marginal adjustments

for freight and excise duties—may turn out to be as disappointing as the decision on the controlled items just announced.

That this reluctance to allow fair returns is at variance with what Mr. T. T. Krishnamachari, Central Finance Minister, promised in his Budget speech is a question which will be raised both within the country and outside. New Delhi may not like to be reminded of it, but the fact remains that the Indian Government is not entirely a free agent in this matter. The World Bank, which has lent large sums of money to the two private producers (including, in Tata Steel's case, part financing through private banks), has a natural interest in the health of these enterprises. At a time when a fresh approach is being made for loans to meet the foreign exchange costs of the expansion of the Jamshedpur and Burnpur steel works, the Bank will need to be reassured that the pragmatism claimed for India's economic policies is genuine. It may not be easy to carry conviction if it turns out, after all the fanfare with which steel is being partially decontrolled, that the industry is just as badly off as ever, notwithstanding the tax reliefs granted by Mr. Krishnamachari. In the case of Tata Steel, the actual tax liability, according to one estimate, will increase by Rs. 22.4 lakhs under the new dispensation, while the relief obtained by Indian Iron will be only Rs. 26 lakhs.

From the consumers' point of view too, the merits or otherwise of decontrol are difficult to assess at this stage. They will undoubtedly have to pay more for all categories but since a price rise was inevitable even otherwise, this cannot be held

HANDICAPS OF EXPORTERS

THE deliberations of the Export-Import Advisory Council in New Delhi last week brought to the surface some of the major handicaps in stepping up the country's exports. Admittedly, there has been a big improvement in exports during 1963, the foreign exchange earnings having risen by Rs. 704 crores to an all-time high of Rs. 791 crores. Again, as Mr. Manubhai Shah, Central Minister of International Trade, pointed out in his address, the improvement is spread over almost all the items—traditional goods, commodities which are difficult to export and new manufactured products. Even cotton textiles, which had shown a declining trend, have earned more foreign exchange. Although certain special circumstances like the inclusion of

against decontrol. The Raj Committee found that the larger consumers were buying from the free market a third or a fourth of their total requirements, while smaller ones had to obtain three-quarters or more in this irregular manner. Decontrol need not necessarily mean any increase over free-market prices, after allowing for the overdue escalation on account of the rise in costs, but it remains to be seen how much of essential demand will be met on a priority basis under the new arrangements. If consumers should now find that the new priority definitions oblige them to look to the market for a larger proportion of their requirements, the effect could be an uncompensated increase in their raw material bills against which the present cost-plus contracts might provide no relief.

Consumers stand to gain if the joint plant committee is able to use its freedom to adjust category-wise prices to bring them closer to the actual costs. The present reluctance to roll particular categories should then largely disappear, and with it the unfortunate unbalances that make the steel shortage worse than it need be. But a fuller solution depends a good deal on the direction which the re-rolling industry takes after decontrol. It has hitherto tended to concentrate on doing the same things that bigger plants can do better and far more economically, instead of creating for itself an assured market through specialisation. The warmth with which re-rollers have greeted the pattern of decontrol now adopted, contrary to the vigorous protests they were making earlier, raises the suspicion that a sufficient push has yet to be given towards making re-rollers do what they should really have been doing all along. Until that happens, the problem of matching sections, required mostly in small lots, will remain because re-rollers will be too busy making profits out of bars, rods and such things to want to take on more difficult items. It is too early to say definitely how things will shape, but this is an aspect which the Ministry should bear in mind in relation to the prices it has set for billets. The rationalisation of the steel industry to allocate well-defined responsibilities to the large works and the smaller units is something which needs to be tackled now, as delay will only make a logical and technologically correct solution more difficult.

To the trader, decontrol undoubtedly poses a challenge and his reaction will depend on how well-placed he is to meet it. The mushrooming stockists with no greater claim to existence than political patronage may indeed have a hard time because survival will depend, for the first time in 25 years, on their ability to meet competition. With everyone free to obtain steel directly from the producers on a "first come, first served" basis, business will naturally gravitate towards those who can provide better service—ready stocks, facilities for minor processing to meet the exact requirements, and credit terms. This is all for the good unless of course the Government is still sticking to the Raj Committee's fantastic idea that all orders should be accompanied by a large deposit. One hopes that this recommendation has been dropped because it can only give an unfair advantage to dealers vis-à-vis the consumer, who may find it impossible to tie up his working capital in this manner. In sum, the proposed pattern of decontrol may yet be an improvement over the present system, although it is partial in more senses than one. A more definite judgment must wait until one can see how the system is worked, since many of the essential decisions have yet to be made.

Goa's exports have helped the trend, there is no doubt that exports, on the whole, have shown a buoyancy beyond all expectations.

But this should not induce any complacency or minimise the need for vigorous export promotion measures. The two biggest foreign exchange earners—jute goods, which have fetched Rs. 160 crores in 1963, and tea which has earned Rs. 133 crores—are facing strong competition in overseas markets. Pakistan, with its several natural and artificial advantages, has already taken away many of India's traditional sacking markets, and with the development programme she has in hand for her jute industry she may soon be able to enter the markets for specialties too in a big way. In the

case of tea, there is stiff competition from Ceylon and east Africa. It is true that the total earnings during 1963 have risen to Rs. 133 crores from about Rs. 124 crores in 1962, and the average export price a kilogram has been higher at Rs. 5.92, against Rs. 5.84 in 1962. But the improvement is largely due to the general rise in international prices, since tea exports have increased only marginally by 2 million kilograms to 216 million kilograms. Furthermore, India's output of tea has declined in 1963 and this may affect the export earnings in 1964. Since the common teas are subject to keen competition, the industry has to concentrate on producing quality teas, which command a high price abroad. Tea is one of the most heavily taxed industries in the country, and if it is to maintain its export earnings, the industry has to be relieved of much of its fiscal burden to enable it to undertake replantation and modernisation. In view of its importance to the economy, it is surprising that the Central Budget has not given the industry any relief apart from a rebate in corporation tax (equivalent to 10 percent of the income tax and super tax payable by tea companies) and in surtax. As for sugar, which has earned Rs. 26 crores in 1963, against Rs. 15 crores in 1962, it is now certain that the production target of 3.3 million tons is not going to be achieved. The Government had claimed that the production might amount to about 2.9 million tons, while industry sources think that the season's output will at most be only 2.6 million tons. This shortfall is not likely to permit larger exports of sugar this year.

As Mr. A. D. Ogilvie of the Associated Chambers of Commerce suggested, it is important to grant incentives for the export of traditional items, which yield the bulk of the country's foreign exchange earnings. Although Sir Ramaswami Mudaliar reportedly differed from this view on the ground that the very significance of export incentives would be lost if they were also extended to traditional items, it cannot be gainsaid that the latter do need fiscal and other concessions since they are facing stiffer competition. Export promotion, to be successful, has to be selective, and this calls for directing the promotional efforts to commodities which offer the best prospects in terms of market potential and comparative cost advantage. Mr. Shah too emphasised the need for selectivity in order that expertise and high standards of production are developed in commodities which contribute substantially to the earnings. A committee under the chairmanship of Sir Ramaswami has recently been set up to suggest a programme of selective trade with western Europe. A two-tier strategy, aimed at cultivating big potential export markets and boosting the exports of the main commodities, is being visualised.

Export promotion cannot work in isolation, but has to be supported by far-reaching changes in official policies. Mr. Shah himself recognised this indirectly when he said that the strength of the economy lay in its ability to compete, and that only by producing more at lesser cost could the country hope to achieve external viability. A major element in industrial costs today is represented by the fiscal levies on raw materials and capital equipment. Mr. Bharat Ram, president of the Federation of Indian Chambers of Commerce and Industry, called for an examination of the impact of excise duty on raw materials and intermediate products, and of the rising Customs duty on essential commodities like cotton, raw rubber and industrial machinery. As Mr. S. L. Kirloskar put it, the most important element in industry's cost structure is the cost of running the Government. A considerable portion of the taxes collected from the people goes to maintain an endlessly proliferating bureaucracy. Then there is the spate of labour legislation, which has greatly added to the burden of industry without increasing productivity. Mr. Prabhu V. Mehta, president of the All India Manufacturers Organisation, stressed that an increase in wages should be linked with a rise in productivity in order to keep costs down. The pressure of the Government's fiscal and labour policies is so widespread and far-reaching that the entire economy is in the throes of cost inflation. If the competitive position of the export industries is to be strengthened, the Government's economic policies have to become realistic and must aim at cost reduction.

The question of cost reduction is also closely linked with the optimum use of installed capacity. There is a considerable volume of idle capacity in

many industries, one of the major reasons for it being the shortage of imported raw materials, components and spare parts. According to some estimates, if the existing capacity is fully used, production can increase by over 10 percent. The import policy should permit larger imports of industrial raw materials and components. Mr. Shah's speech indicated the prospect of a slight liberalisation of the import of plant and equipment, components and basic materials—particularly those used by industries with an export potential. An equally important need is to streamline the licensing procedures with a view to speeding up the work. Mr. Ogilvie in fact emphasised the importance of expediting the disposal of applications for grants under the Kipping Loan, which has been earmarked by Britain to facilitate imports of raw materials and components by industries which traditionally depend on imports from the U.K.

A disconcerting aspect of Mr. Shah's speech was the reference to the widening rôle of State trading.

Current News and Comment

More State Budgets

Orissa, Madras, Kerala, Punjab, Madhya Pradesh, Gujarat and Mysore were the States which presented their Budgets last week. Only Gujarat of the seven has a genuine surplus on revenue account; Kerala, too, shows a revenue surplus, but because of the proposed expenditure on "social welfare measures" during 1964-65, the net position is changed into a deficit. (The social welfare measures are mainly increased dearness allowance for Government employees and other benefits including a liberal family pension scheme, which are a common feature of all State Budgets for 1964-65). The Finance Minister of Gujarat, Mr. B. Mehta, estimates revenue receipts for the current financial year at Rs. 94.15 crores and expenditure at Rs. 88.38 crores. He proposes no new taxes, on the other hand, passenger tax in municipal areas has been reduced. The additional expenditure on account of State Government employees is apparently covered within the budgeted expenditure. The Chief Minister of Kerala (who also holds the Finance portfolio) estimates the next year's revenue at Rs. 79.58 crores and expenditure at Rs. 76 crores, but because of the proposed measures to increase the welfare of Government servants, the revenue surplus of Rs. 3.58 crores will be converted into an overall deficit of Rs. 2.76 crores. Another southern State, Mysore, too shows a small revenue surplus (revenue receipts for 1964-65 have been estimated at Rs. 111.06 crores and revenue expenditure Rs. 110.9 crores), but the expenditure of Rs. 20 lakhs for old age pensions, Rs. 1.25 crores for increased dearness allowance to Government employees and Rs. 25 lakhs for giving more dearness allowance to pensioners, has not been taken into reckoning. The Finance Minister, Mr. B. D. Jatti, has left these items uncovered, with the remark that "it would be necessary to find resources to meet the expenditure on the above accounts." This presumably means that the State will either go in for borrowing or additional taxation later.

All the others show deficits on revenue account. Madras State which has been making a bold, big move in the field of social welfare by making secondary education free in the State apart, of course, from the steps to better the lot of Government employees, estimates its revenue income for the next financial year at Rs. 137.48 crores and revenue expenditure at Rs. 140.82 crores. The Chief Minister, Mr. Bhatkavatsalam (also the Finance Minister) proposes to cover the deficit by fresh taxation. Sales tax on cotton will be raised from 1 percent to 2 percent at the point of last purchase in the State. The tax on cotton waste, cotton yarn waste, artificial silk fibre yarn and staple fibre yarn will be similarly raised. A total of Rs. 1 crore is expected from these measures, so the net deficit is Rs. 2.34 crores. Another State which is levying fresh taxes is Madhya Pradesh; a tax is proposed on urban immovable property, the exemption from sales tax for several commodities has been withdrawn and in many cases, rates of the tax have been raised. Entertainment tax

He said that the quotas of established importers would be further reduced, and some of the highly profitable items handled by them would be canalised through State trading organisations and other organised agencies. Although he has not indicated whether these items will continue to be "highly profitable" for the State Trading Corporation, experience shows that as far as consumers are concerned, the prices of the imported goods will remain as high as ever before and that the big profits will be only transferred to the S.T.C. Established importers, by virtue of their long experience and contacts with overseas suppliers, offer definite advantages in arranging purchases on the most favourable terms. If their rôle is to be transferred to some other organisation, the object should not be to appropriate the high profits in a particular trade, but to offer the imported goods to consumers at lower prices. Trade associations may be able to do this better than the S.T.C.

will now cover admission fees of even 12nP and below. These measures will have the effect of yielding a fresh revenue of Rs. 1.45 crores. The revenue for the next year is estimated at Rs. 107.72 crores and the expenditure at Rs. 108.41 crores. But judging from the revised revenue and expenditure figures for 1963-64, it looks as if the Finance Minister is again under-estimating the revenue. During 1963-64, the revised revenue figure stands at Rs. 103 crores and expenditure at Rs. 96.98 crores. There is thus a revenue surplus of Rs. 6.9 crores. It is also possible that he has over-estimated next year's expenditure at Rs. 108.41 crores, in spite of the additional outlay which the Government will be incurring to better the service conditions of its employees.

The Finance Minister of Punjab, Mr. Gopi Chand Bhargava, after various adjustments in his revenue and capital Budgets for 1964-65, shows an overall deficit of Rs. 1.58 crores (revenue receipts have been placed at Rs. 112.67 crores and revenue expenditure at Rs. 112.91 crores). The deficit, he says, is likely to rise to Rs. 11 crores on account of extra expenditure on flood control and other schemes of agricultural improvement including horticulture, animal husbandry and industries. But he does not propose any fresh taxation. He hopes to borrow later "a substantial amount from the people" to finance nation-building schemes, particularly those relating to flood control. The Finance Minister has also announced substantial benefits for Government employees. Mr. Bhargava claims that the State has been able to fulfil the expenditure target for the first three years of the third plan. The plan for 1964-65 has been cut down to Rs. 55.50 crores from Rs. 57.50 crores, but it is nevertheless proposed to set up an industrial development corporation with a capital of Rs. 10 crores. Orissa has a fairly sizable deficit of 3.92 crores on revenue account, with receipts estimated at Rs. 74.53 crores and expenditure at Rs. 78.45 crores. The Chief Minister, Mr. Biren Mitra, who is also Finance Minister, levies no further taxes and proposes to raise Rs. 7 crores in loans to finance the State's social security programme, and Rs. 5 crores will be raised on behalf of the Paradip Port Trust. Orissa's financial position is unenviable. Her debts keep mounting every year, and it is estimated that as much as 18 percent of the revenue for 1964-65 will be spent on servicing the State's debts. Mr. Mitra, however, is making efforts to obtain further grants-in-aid from the Centre.

Machine Tool Output behind Target

Inaugurating the annual general meeting of the Indian Machine Tool Manufacturers Association in Ludhiana (Punjab), the Central Minister for Steel, Mines and Heavy Engineering, Mr. C. Subramaniam, regretted that new investment in the machine tool industry had remained inadequate, even though demand was assured, there was no

price control and the industry enjoyed protection. One of the causes for this unsatisfactory position, as Mr. S. L. Kirloskar, president of the Indian Machine Tool Manufacturers Association, pointed out in his speech, is the low return on capital earned by the industry due to the Government's defective economic and taxation policies. Moreover, in spite of some progress, the industry depends to a considerable extent not only on imported raw materials and machinery, but also on imported designs and technical know-how. Cumbersome formalities and frustrating procedural delays involved in getting sanction for foreign collaboration schemes, the limitation of 5 percent on royalty in the case of such collaboration and undue delays in getting approval for the terms of collaboration, in obtaining import licences and foreign exchange, all hamper the growth of the machine tool industry.

The Defence Department followed a "closed-door policy," Mr. Kirloskar added, and favoured public sector enterprises. There is no genuine justification for it, and it is definitely hindering the growth of the Indian machine tool industry. Mr. Subramaniam's suggestion to start joint ventures between public and private sectors to make machine tools is not likely to help much because the real problem is the shortage of raw materials, imported parts and components and the lack of suitable designs and specifications. As long as these difficulties persist, joint ventures might be as helpless as the existing ones. As against the Government's exhortation to the machine tool industry to increase its production by 30 percent to meet the national emergency, it increased its output of graded machine tools by nearly 42 percent. In terms of value, production rose from Rs. 7.33 crores in 1961 to Rs. 10.40 crores in 1962. If the Defence Department places more orders with the private sector and comes forward with constructive proposals, there is no reason why the latter should not be able to develop new lines of manufacture to meet the former's requirements.

It is not a small achievement for the machine tool industry that the output in 1963 was higher than in 1962, and the range of machine tools produced indigenously is much wider. But even with the present rate of increase in output, the total production by the end of the third plan is not likely to reach the Rs. 25-crore mark, as against the target of Rs. 30 crores and the expected demand of Rs. 65 crores. Unless special efforts are made to increase production, machine tool imports will have to be increased. In this connection, Mr. Kirloskar's suggestion deserves careful consideration. He has asked the Government to reconsider the policy that a new manufacturing unit should start with an initial 80-percent indigenous content. It is, of course, desirable that the indigenous content of machine tools produced in the country should be increased, but it unduly handicaps the infant industry when the "irreducible minimum" is fixed at 80 percent.

The Indian Standards Institute, it is reported, is engaged in formulating standards of tests for the various types of machine tools produced in the country. While it is absolutely necessary to improve the quality of machine tools, to be able to increase their exports and to sustain a higher rate of industrial growth, it is equally necessary that standards of tests should be in conformity with the level of development which the industry has so far reached. According to Mr. Kirloskar, the I.S.I. charts are prepared with more emphasis on theoretical considerations than on practical ones, and sooner or later the machine tool manufacturers may be unnecessarily saddled with standards which it would be difficult to realise in practice.

Sources of Share Capital

A study of prospectuses issued during July-September 1963, which Messrs S. M. Dugar and G. C. Banga have made and which appears in the latest issue of *Company News and Notes*, shows the sluggishness of the Indian capital market during this period. Only 13 prospectuses were issued, of which 11 were recorded by the Registrar of Companies. The number of issues and the total amount of capital involved was considerably less than in the previous quarter. The number of issues was almost halved, and the amount of capital issued was reduced by nearly one-third. Because of the decline in investment confidence, promoters tried

to raise funds through preference capital rather than ordinary. The offer of a high rate of fixed dividends on preference shares served as an added attraction. The percentage of equity and preference capital in the total capital issued stood at 72.6 percent and 27.4 percent, respectively, compared with 88.8 percent and 11.2 percent in the previous quarter.

A steep decline in the percentage of shares taken by foreign collaborators, promoters, directors and their friends was a disturbing factor. The bulk of the issue had to be offered to the public for subscription. Financial institutions did not participate in the share issues at all. In the previous quarter they took up about 3 percent of the total issue. Nevertheless, share capital continued to be the main source of finance for various projects although it contributed only 35.2 percent of the total project costs, compared with 50 percent in the previous quarter. Foreign loans also constituted an important source of finance. The domestic financial institutions played a significant role by providing long-term funds in the form of loans to meet the project costs of several companies. A happy feature was that the cost of raising capital dropped and amounted to 1.6 percent of the project costs, compared with 2.8 percent in the previous quarter. Of the total amount of share capital offered to the public about 83.7 percent was underwritten. Financial institutions like the Life Insurance Corporation of India, commercial banks and general insurance companies underwrote about 56 percent of the total underwritten amount. There was no managing broker for any of the issues. It is thus clear that underwriting was about the most important source of funds, which it has been in recent times.

Calcutta Industries Fair

The Calcutta Industries Fair, near Talla Park, was opened in January and will continue for a few more weeks. It is the third of the series—the first one was held in 1960 and the second in 1962. The main object of the Fair is to disseminate know-

ledge about India's economic development during the past few years. Various industrial products, machinery and equipment have been exhibited. There are many exhibits to show the progress achieved in science, literature and culture. Special attraction has been provided by working a television set. The Fair is expected to help promote closer contact between manufacturers, traders and consumers.

Small Rise in National Income

The national income of India (at 1948-49 prices) was Rs. 13,370 crores in 1962-63 and Rs. 13,060 crores in 1961-62, compared with Rs. 12,730 crores in 1960-61 at the beginning of the third five-year plan. The per capita income at 1948-49 prices has been estimated at Rs. 294.7, Rs. 294.3 and Rs. 293.2 in the years 1962-63, 1961-62 and 1960-61, respectively. This is revealed by the eleventh issue of the annual White Paper on national income just released by the Central Statistical Organisation.

The estimates for 1961-62 included in this paper are based on the detailed methods of estimation followed for the earlier years and show an increase over the preliminary estimates published last year. These increases, among others, have been due to the incorporation, for the first time, of the results of the random sample crop-cutting survey concerning sugarcane in Punjab. The estimates for 1962-63, which are still preliminary and based on partial material, have also undergone a slight upward change, compared with the "quick" estimates released in November last year.

As in 1961-62, which recorded a small rise of 2.6 percent in the total national income over the previous year, the year 1962-63 also witnessed a smaller increase of 2.4 percent in the total national income over 1961-62. This was due to a fall of 2.2 percent in agricultural output in 1962-63, the contribution to national income from agriculture in that year being less by Rs. 110 crores compared with the previous year. This fall was, however, more than offset by a total rise of Rs. 420 crores in

the contribution made by all other sectors taken together.

Columns 2 and 3 of the following statement show the trend in net national output at current and at 1948-49 prices, respectively, during the last twelve years (1950-51 to 1962-63), whereas columns 4 and 5 reveal the trend in per capita income based on the latest available Census figures of 1941, 1951 and 1961 released by the Registrar-General.

Years	Net national output (in Rs. 100 crores)		Per capita net output (in Rs.)	
	at current prices	at 1948-49 prices	at current prices	at 1948-49 prices
1	2	3	4	5
1950-51	95.3	88.5	266.5	247.5
1951-52	99.7	91.0	274.2	250.3
1952-53	98.2	94.6	265.4	255.7
1953-54	104.8	100.3	278.1	266.2
1954-55	96.1	102.8	250.3	267.8
1955-56	99.8	104.8	255.0	267.8
1956-57	113.1	110.0	283.3	275.6
1957-58	113.9	108.9	279.6	267.3
1958-59	126.0	116.5	303.0	280.1
1959-60	129.5	118.6	304.8	279.2
1960-61	141.4	127.3	325.7	293.2
1961-62	148.0	130.6	333.6	294.3
1962-63	154.0	133.7	339.4	294.7

(preliminary)

After adjusting for purely statistical differences between the crop production estimates of 1960-61, 1961-62 and 1962-63, the increase in national income

and per capita income in real terms amounts to 5.0 percent and 0.5 percent, respectively, during the first two years of the third plan period. Expressed at current prices the national income was Rs. 15,400 crores and Rs. 14,800 crores in 1962-63 and 1961-62 respectively, as against Rs. 14,140 crores in 1960-61. The per capita income at current prices was Rs. 339.4, Rs. 333.6 and Rs. 325.7 in 1962-63, 1961-62 and 1960-61 respectively. The larger increase at current prices than at constant prices was due to the increase in prices.

Tea Consumption Survey

The Indian Tea Board has brought out a booklet on the tea consumption survey in certain selected towns in Andhra Pradesh, Gujarat, Kerala, Madras, Maharashtra and Mysore. The survey was conducted in 1962, but the booklet has been published in January 1964. The time-lag between the two shows the promptness with which the data collected were processed and published. Nowhere in the booklet is there any reference to the shift in consumption patterns as a result of fiscal changes, although it needed to be explored in the survey. Nevertheless, the object of the survey is laudable because, as the booklet points out, it presents a continuous picture of the pattern of tea consumption in some parts of the country. Admittedly, such sample surveys provide an effective method of estimating the increase or decrease in tea consumption. Apart from a study of the tea-drinking habits of the population in the towns concerned, the survey throws light on the local tea trade, both wholesale and retail. If the data in different towns are added up, they will provide interesting information on the internal tea trade. Because of the crucial need to promote exports for

earning foreign exchange, it is necessary to undertake market research and consumer surveys in different tea-consuming countries of the world. The Tea Board thinks that the experience gained through market surveys conducted in India and the methods and techniques developed for the purpose will prove useful for undertaking similar surveys in other countries, no matter whether they are undertaken by the Tea Board itself or any other local agency.

The survey under review is the seventh one undertaken by the Statistics Branch of the Board. The six earlier surveys were conducted during the years 1954-56, 1957, 1958, 1959, 1960 and 1961. The present issue contains the details of 16 towns in six States. Apart from such general details as location and population, transport and communications, educational and recreation facilities and the economic conditions of the towns concerned, the sample survey gives information on the number of families selected at random, and the findings are described in percentage terms. The percentage of individuals taking tea is given for men, women and children and also the reasons for preferring tea to other competing beverages. In the majority of towns selected for the survey, the main reason given for not taking tea is the lack of habit. In many of them, males drink more tea than women, although it is not suggested whether this is due to social taboo or greater conservatism among women. In all south Indian towns, according to the survey, the preference for coffee is greater than for tea, as is only to be expected. But it would have been useful if the data on different towns covered by the survey were compared in one section and broad conclusions drawn on the increase or decrease of tea consumption and the prospects ahead.

This has been done only in the last few pages covering the appendix where the main findings of the surveys of some towns and those of the repeat surveys are compared and the results shown in percentage terms. This is no doubt easier, and the results obtained are more accurate. The repeat surveys on Bidar, Gondal, Nizamabad and Parbhani show that tea is gradually getting popular in these areas. But the Tea Board should undertake repeat surveys on the other towns included in its latest booklet in order to arrive at definite conclusions on the consumption patterns in these areas.

JUTE MILL BLOCK

"IGNORAMUS" in the last issue asked us to point out the inwardness of the tabular statements regarding Jute Mills published in our Stock and Share List, as he does not quite understand what Block Account means, and for the information of such of our readers as are not at fault in these matters, we will shortly publish a few articles on share capital, debentures, reserve funds, block, and so forth. Meantime, we may mention that a Jute Mill costs from Rs. 6,000 to Rs. 7,000 per loom to erect, and that a rough idea of value may be obtained thus. Take the Block Account, deduct therefrom the amount standing at Reserve Fund, etc., add the premium on the shares, and divide by the number of looms. The result will show the cost per loom to the would-be investor. Thus, for instance, the Budge-Budge Mill Block is Rs. 50,51,041. Deduct Reserves Rs. 20,40,000, and add the premium, Rs. 30, on 18,000 shares—Rs. 5,40,000; the result is Rs. 35,51,041. Divide this by 782, the number of looms, and the quotient Rs. 4,540 represents the cost per loom, taking the shares at Rs. 130. Again, in case of the Delta Jute Mills these shares are at a small discount, so the formula here will be all deduction, thus—Block Rs. 14,98,958 minus Reserve Fund Rs. 95,000 minus discount of Rs. 5 on 6,750 ordinary shares, Rs. 33,750, or a net sum of Rs. 13,70,208. This divided by the number of looms, 340, yields the sum of Rs. 4,030, as the cost per loom, buying in at Rs. 95 per share. Of course there are other factors besides these: the previous record of the Mill, its age, and the dividends paid, which must also be considered.

A Ditcher's Diary

KASHMIR'S PRESENT GOVERNMENT IS UNDOUBTEDLY an improvement on the Bakshi régime of ten years; ten years too long. Perhaps even the Shamsuddin Government was better; almost anything would be. I have a feeling still that this may not prove a complete answer to what Kashmir needs. To begin with, if Bakshi Ghulam Mohammed proposed the election of Mr. G. M. Sadiq, the new Premier certainly starts under somewhat inauspicious circumstances. If I were in Mr. Sadiq's shoes, I would be scared of Bakshi Ghulam Mohammed if he came with his blessings. From what I know of Mr. Sadiq, he is a thoroughly honest man, leftist or no, but I am not so sure that he is a thoroughly healthy man; and it is not often remembered how important physical fitness is in a political career today. It is almost more important than mental strength, going by the mental age of several successful politicians in India and abroad. To underestimate the rôle of politicians, as opposed to that of administrators, is to be downright undemocratic and reactionary, I know; it may yet be true that Kashmir's first need is not merely a political upheaval but also an administrative one. Over the years, Bakshi Ghulam Mohammed filled the Government with his "boys"; and any new régime will feel totally frustrated even after it has taken the right decisions; these will simply not be implemented. New Delhi's bureaucracy will no doubt be tempted to fill the Kashmir back with its own kings, queens and jacks; and in N.E.F.A. at least it chose such wrong men that trouble followed. Inevitably there are many demanding an end to political horse-trading in order to win a fair number of Kashmiri hearts. Whether this is possible with Bakshi Ghulam Mohammed around I just don't know.

TOO MANY HATS IN THE RING; so it's not at all easy to say who are going to be the final contestants for the U.S. Presidency later this year, let alone predict the next President. In this century Presidents by assassination have had a better chance of a second term than was the case in the last; as far as can be seen, Mr. Johnson has so far played his cards well. The Democrats do not appear to be looking for another candidate, although the Vice-Presidential candidate may be harder to choose. Whether Mr. Robert Kennedy will agree to run as L.B.J.'s mate is anybody's guess. It is the Republicans who seem to be in considerable disarray. Mr. Barry Goldwater's prospects once looked alarmingly good; G.O.P. is perhaps having second thoughts on him. The other names mentioned are not very well known here-

abouts, except that of Mr. Nixon. Messrs Romney, Scranton and Cabot Lodge and Mrs. Chase are unlikely to give Mr. Johnson any formidable fight, although Mr. Cabot Lodge wears what might be called a "Demorep" look. That the Republicans desperately want to re-enter the White House is not in doubt. Paradoxically, desperation can drive political Parties to either of two very contrary courses. It may lead to compromise and caution; equally, it may counsel greater radicalism. We have only to think of the Labour and Conservative Parties in Britain, with whose politics we are rather more familiar. In India there are few admirers of the Tories; I shall never forget the look of total disbelief on many faces when the Tories were defeated in 1945 and again when Labour was defeated in 1951. Wasn't the latter Party the one that had given Britain all sorts of welfare benefits? I imagine that the "image" of the Republicans conforms, in India, to that of the Tories; and popular sympathies are undoubtedly with the Democrats, especially after the recent assassination. To Americans it may look very different. I have heard them complain on occasion that they do not understand the complexities of Indian politics. My usual answer is, "Yours are not much clearer to us". And then there are the "invisibles" of politics—anywhere.

WHEN I MENTIONED TO SOME PEOPLE THE OTHER day that I had never heard the Beatles, they looked at me with amazement. "That must be because you have no teenage daughters", was their verdict. Perhaps; but I have heard of the Beatles, indeed who has not? And as one interested in business affairs I must confess I am fascinated by their success. The chairman of Electrical and Musical Industries Ltd, the group of companies which produces their records—or "discs", to use the jargon—announced the other day that the Beatles' earnings were currently running at over £6 million a year. Since they visited the United States, this estimate has become hopelessly out-of-date. There, official Beatles clothing is expected to net over £18 million this year alone; it will be substantially more if trade pirates—"Beatleleggers", as they are being called—can be kept from taking a cut. It is little wonder that, in sharp contrast to Mr. Macmillan, the Beatles are the darlings of that high-minded but nevertheless financially interested journal, the *Tailor and Cutter*. What the Federal Reserve Board thinks about the drain on the U.S. gold reserve has not yet been made public. Now whatever one may say about western "pop" music, or about the Beatles personally, it is im-

possible to withhold admiration for success on this scale. It may be true that, in a couple of years' time, the names of the four young men will be forgotten, even by those who are going into ecstasies over them now. But the fact remains that, barring accidents, they will be surpassingly rich for the rest of their lives. They will have added to their country's foreign exchange earnings as much as, say, one whole month's exports of motor-cars; and as for their usefulness to Mr. Maudling, well I should not be surprised to discover that he had taken out an insurance policy on their collective lives. All of which I have no doubt proves a great deal to a sociologist. To me it means only regret: regret that India cannot boast a few equally successful pop groups. What a difference it would make to this country's development plans if it could rely on such a fruitful source of foreign exchange!

WHATEVER ONE MIGHT THINK ABOUT PRESIDENT de Gaulle, it must be admitted that he has an irritating habit of being right nine times out of ten. Which is just about nine times more often than the Americans are, at least when it comes to the affairs of south-east Asia. After the last coup in South Vietnam, the gloating in Washington over the setback to de Gaulle's plan for neutralisation was only too audible. Now I suspect President Johnson would dearly like to find some honourable way out of his commitment to pursue the war there, because if there is anything certain in this world it is that the Americans are losing it. I for one am not surprised. East Asian peasant populations have what to the dedicated anti-communist must seem like a very annoying custom: they compromise with the winning side, whatever its ideology. So now the United States is faced with the prospect of having to father unaided what is fast becoming a very ugly and unruly child indeed: anti-communist nationalism in South Vietnam. For my money, better de Gaulle's neutralism any day. I wonder the Americans have not been able to see the danger before now. If there is any lesson that communist expansion in the postwar years ought to have taught, it is that the only possible counter to guerrilla warfare supported from a neighbouring country is to carry it back to those who are sponsoring it. The inability to do this, as de Gaulle must well remember, is what cost the French North Vietnam as it did Algeria. Why, then, do the Americans not make things equally uncomfortable for the communists by supporting guerrilla war against them? This is a question that has always puzzled me, and I can only conclude the reasons are either that it has been found impossible to provide that essential for all guerrilla activity, a cause to fight for, or that the risk of sparking off a general war is regarded as too great. Well, there is always a danger of touching off a wider conflict, as was shown in Korea; although if the communists are willing to

face it, the free world must be prepared to as well or else shut up shop altogether. But if the fact is that freedom is no longer accepted as able to provide the motive for fighting which ideology is at present doing, then all I can say is that the past few years must have seen a remarkable change in human nature.

INTERNATIONAL AIRLINES, VALUED ADVERTISERS in the Press the world over, are notorious pamperers; some say so in their advertisements. The glorious variety of individual experience remains. A friend flying the Caravelle from Calcutta to Bombay says that while he appreciated the speed, he did not care much for the service. He had to proceed farther on and, judging by his letter, he seems to have fallen foul with both his airline and the Customs. Travellers are habitual bellyachers; but my friend may have a point. In his suitcase were a number of books which he will almost certainly not have the time to read during his hectic travel; but his airline told him that his baggage was four kilos in excess of the permissible limit though, if he carried some books under his arm, everything would be all right. To my friend this seemed a mild form of sadism for, he tells me, he could not see how anyone gained from making him carry the books in hand rather than in his suitcase. Then came the Customs. He was given a re-import permit for his typewriter and his transistor radio but not for his nine-stone ring; it was not necessary, he was told. The trouble is that on an earlier sortie abroad from another point of departure from India he had been given a permit for his ring and he wondered whether there would be a comeback on the ring when he got back. This healthy mistrust of officialdom was naturally dismissed by officialdom, whereupon my friend argued and argued. The result, let us say, was inconclusive. I think I will write to him to say that life would be very dull if airlines and Customs officials were uniformly consistent and logical. He is sure to retort that, in that event, he is all for dullness. On the virtues of dullness my friend can be truly brilliant.

Nobody who reads this diary regularly can be in any doubt concerning my views on the American Peace Corps. I cannot recall the number of times I have declared its sole virtue as being the opportunity it provides for American youth to see something of underdeveloped countries, and the chief among its many drawbacks to be that it invites communist retaliation. Well, that seems to be just what it has done. I see that the Russians are to have their own Peace Corps, and I cannot for the life of me believe that it is going to have any more to recommend it than the American one. The United States can at least claim that it has something to teach underdeveloped countries on the subject of feeding themselves; the Russians cannot even do that. Nor are their numbers going to ease the irritation of local people at having well-meaning but wholly tactless foreigners attempting to teach them what they probably know well enough already, and succeeding only in annoying them thoroughly in the process. In fact, the Russians promise to make an even worse job of it than the Americans. The essence of Peace Corps work, unlike the kind of technical co-operation which built the Bhilai steel plant, is that it should deal with matters which intimately concern the ordinary people, such as agriculture, elementary rural construction and perhaps the odd simple machine or so; and to do this it is necessary to mix freely at all levels. Yet mixing is something that all but a few Russians abroad have hitherto resolutely refused to do; or, perhaps more correctly, have been ruthlessly prevented from doing. If the new Peace Corps venture means that Russians are in future going to mix freely with the people of their host country, just like other foreigners, then there might be something to say for it. But if it is going to be simply another example of communist segregation, the Russians are likely to do themselves considerable damage in the eyes of the people from whom they intend to keep themselves separated. It is no good their reserving the social mixing function for a few trusted officials, as they do in polite society; in the villages they are likely to be judged according to how closely their social behaviour conforms to that of ordinary human beings.

THE DITCHER

Guide for Investors

WORLD PRICE INCREASE LIFTS INDIAN COPPER

THE sharp rise from Rs. 3.37 to Rs. 3.76 in the price of Indian Copper Corporation shares during the past fortnight or so has largely been due to the sudden spurt in the international price of copper after a long interval. During the past couple of years the producers have succeeded in maintaining the price at a stable rate of \$326 a ton. Now the price on the London Metal Exchange has suddenly jumped to about \$269 a ton, although the producers are still maintaining their own selling price of \$236 a ton. It may be noted that only a small proportion of the metal is in fact being bought at the higher level.

Speculation has been rife about the future trend. The rise on the Metal Exchange is due to the depletion of dealers' stocks, combined with increased purchases by the U.S.A. and the Continent. One view is that the producers will be able to ensure sufficient supplies to take care of the 5 percent to 6 percent rise in consumption. They, it is believed, are holding substantial stocks, but the question is how soon these stocks can be moved from the mines. An encouraging factor is that Rhodesian producers switched to full capacity at the beginning of 1964, so a bigger output is likely. At the same time, the possibility of interruption of supplies by strikes cannot be ruled out. The producers are keen not to raise prices further, lest consumers take to substitutes, but the question is whether they will be able to resist pressure for long in case the disparity between their price and the market one widens further. If they succeed in holding out over the next few months, the price is likely to react.

The bullishness of Indian Copper Corporation shares is based on the belief that the domestic price should harden if the international trend is sustained at a higher level. The Company is the only producer of copper in India at the present time. Its output is still much smaller than the total demand, so it has no difficulty in disposing of its entire output. The prospect should be even better when the electrolytic project is completed.

Dena Bank Earns More

THE latest report of the Deykaran Nanjee Banking Co. Ltd (popularly known as the Dena Bank) for 1963 shows all-round encouraging progress. The bank opened 17 new branches during the year, raising the total number of branches to 129. The number of accounts rose from 250,000 to 300,000 and that of safe deposit vaults from 34 to 40. Deposits increased by nearly 16 percent from Rs. 51.06 crores to Rs. 59.09 crores. Of this rise, savings bank deposits alone accounted for a rise of about 27 percent from Rs. 12.91 crores to Rs. 16.36 crores. Fixed deposits at Rs. 27.98 crores were Rs. 3.28 crores higher over the year. The bank's total advances recorded an increase of about 14 percent from Rs. 25.40 crores to Rs. 29.01 crores. Advances to industry accounted for 53.06 percent and those to trade about 30.55 percent. Investments rose from Rs. 16.02 crores to Rs. 20.19 crores. The gross revenue of the bank improved from Rs. 2.65 crores to Rs. 3.23 crores. The income from interest and discount increased from Rs. 2.17 crores to Rs. 2.73 crores and that from com-

mission, exchange and brokerage from Rs. 36.21 lakhs to Rs. 38.44 lakhs. Interest paid on deposits and borrowings was higher at Rs. 1.54 crores, against Rs. 1.22 crores. The salary and wage bill increased from Rs. 74.90 lakhs to Rs. 88.42 lakhs. The total assets of the bank rose from Rs. 62.99 crores to Rs. 76.08 crores. The profit, after taxation, increased from Rs. 24.08 lakhs to Rs. 26.59 lakhs. The dividend has been raised from Rs. 5.50 to Rs. 6 a share and the total distribution is substantially higher at Rs. 12 lakhs, against Rs. 5.90 lakhs, because of the increased capital, the new shares being entitled to the full year's dividend.

Indian Tack and Nail Makes Profit

THE Indian Tack and Nail Co. Ltd has made a profit of Rs. 51,807 for the year ended December 1963 after providing Rs. 2.27 lakhs for depreciation (against Rs. 1.93 lakhs), compared with a loss of Rs. 3.19 lakhs for 1962. The dividend has again been passed, but the debit balance has been reduced to Rs. 3.68 lakhs which is being carried forward. The output of tacks has been restricted by a shortage of raw materials. The factory has been asked to get steel sheet from the Rourekela works, but the material has not yet been received. Whatever stocks have been received have flowed through Calcutta stockists. Wire supplies have to be imported, but they have been restricted by the shortage of foreign exchange. Import licences have been issued against A.I.D. supplies so the cost has been substantially higher. Although sales have been satisfactory, competition from products imported against export promotion licences has increased. The quality of the products manufactured by Indian Tack and Nail are good, but their prices have been high due to the increased costs of raw and packing materials.

Syndicate Bank Maintains

THE directors of Syndicate Bank Ltd have maintained the dividend at 20 percent on the equity shares for the year ended December 1963. The net profit for the year amounts to Rs. 39,91,729 (against Rs. 30,33,234). With the balance of profit of Rs. 77,782 brought forward from the previous year, the total comes to Rs. 40,69,512. After providing Rs. 9 lakhs to the statutory reserve fund and Rs. 7,931 to contingency reserve, a sum of Rs. 31,61,580 is available for appropriation. The proposed dividend at 20 percent on A, B and C class of equity shares, subject to deduction of tax, amounts for Rs. 9,82,648. The preference dividend at 8.57-percent cumulative preference shares of Rs. 100 each and at 7.15 percent on cumulative preference shares of Rs. 10 each will absorb Rs. 1,83,696. Provision for taxation amounts to Rs. 14,78,193 and bonus provision to Rs. 500,000. The balance of Rs. 17,040 is carried forward.

The total reserve fund and other reserves stand at Rs. 75,25,000 (against Rs. 66,00,000), inclusive of the share premium. The total paid-up capital and reserves (including share premium and advance calls) now stand at Rs. 1,55,83,467, against

Rs. 1,42,64,986 at the end of last year. During the year, the bank took over three banks, namely, the Citizen Bank of India, Robertsonpet, the Pollachi Town Bank, Pollachi, and the Coimbatore Sri Kannikaparameshwari Bank Ltd, Coimbatore. During the year, the bank was licensed to deal in foreign exchange, and the business in the first year has been quite satisfactory. The bank has at present 190 branches.

Referring to significant developments during the year, the chairman says that the bank has been able not only to reach new heights in deposits, advances, and gross and net income, but also to extend the activities to other important fields. Total deposits of the bank rose from Rs. 32.65 crores to Rs. 45.49 crores, representing an increase of 38 percent over the previous year's figure. This includes the deposits of the banks taken over by the Syndicate Bank. Total advances, including bills discounted, improved to Rs. 27.83 crores, constituting 60 percent of capital, reserves and deposits.

Canara Banking Pays Less

THE net profit of the Canara Banking Corporation Ltd for the year ended December 1963, amounts to Rs. 4,99,754, after making the necessary provisions including provision for taxation. This net profit compares with the previous year's pre-tax profit of Rs. 8,54,629. With Rs. 15,444 brought forward from the previous year, the total available for appropriation comes to Rs. 5,15,199. After setting aside Rs. 1,45,000 to the statutory reserve fund, there remains a balance of Rs. 3,70,199. Out of this, the proposed dividend of 12 percent on ordinary shares, against 15 percent last year, will absorb Rs. 2,78,219. The preference dividends at the rate of 7.15 percent and 6.43 percent on 5-percent first preference and 4-percent first preference shares account for Rs. 82,891. The balance of Rs. 9,088 is carried forward.

During the year, the bank has shown further progress in paid-up capital, reserve, deposits, advances, gross earnings and the total working capital. But the decline in advances against gold was further aggravated in the first half of the year under report. The bank had to seek fresh fields to cover the considerable fall under those advances. The directors say that the efforts in the direction of channelling the surplus left on account of the fall in gold advances

to other safe and remunerative advances have borne fruit. This is evident from the fact that the advances have moved up to Rs. 6.58 crores at the end of the year, against Rs. 5.87 crores on 31st December, 1962. The inevitable time-lag required for such an unusual shift of advances resulted in a lower advance-deposit ratio during the major part of the year with the liquidity of resources at its peak. This fact, coupled with the burden of heavier establishment charges and the increase in capital, led to a slight cut in the dividend on ordinary shares.

Less from Indian Wood Products

THE profit of the Indian Wood Products Co. Ltd has declined from Rs. 21.72 lakhs for 1961-62 to Rs. 17.94 lakhs for the year ended September 1963, after increasing depreciation from Rs. 89,007 to Rs. 94,176. The drop has largely been due to the rising cost of raw materials. The prices of products manufactured by the Company have had to be cut due to the dull conditions of the market. The directors nevertheless say that more stable conditions have now returned. The Company continues to buy khair trees from the auctions. Since stocks of timber with the Company have dropped, the price of raw material may rise further. So the profit during the current year may suffer to some extent.

The taxable ordinary dividend has been reduced from 30 percent to 21 percent, including an interim of 14 percent, to absorb Rs. 5 lakhs. The yield amounts to 8.5 percent at the present price of Rs. 29.50 a share of Rs. 10 each. Taxation is allocated Rs. 8.85 lakhs (against Rs. 11.81 lakhs), and super profits tax for the previous and current years absorbs Rs. 5.75 lakhs. A sum of Rs. 1.15 lakhs has been transferred to general reserve which was allocated Rs. 2.50 lakhs in the previous year. Special reserve gets Rs. 42,000. It has been pointed out that the dividend cut has largely been due to heavier taxation. The carry-forward is Rs. 3,056, against Rs. 3.26 lakhs brought in.

Allahabad Bank Profit Up

ALLAHABAD Bank Ltd has shown satisfactory progress during the year ended December 1963. Deposits rose by Rs. 5.19 crores to Rs. 67.84 crores. They were profitably used in advances, which increased by Rs. 7.54 crores to Rs. 45.91 crores. Investments were Rs. 13 lakhs larger at Rs. 17.87 crores. Cash at Rs. 6.42 crores showed a decline of Rs. 2.26 crores. (The balance-sheet is printed on a later page of this week's Capital.)

The profit has improved from Rs. 22.44 lakhs for 1962 to Rs. 26.41 lakhs for 1963. Interest paid on

Work the VISADEX way to get the best out of your men, machines and materials.

VISADEX can tell you what you need to know at a glance. VISADEX offers you a fluent indexing system by which records are kept on cards, while colour signals spotlight what things are in stock or needed, whether production is ahead of or behind schedule, sales are increasing or

decreasing, where to intensify advertising, which department requires more personnel, who owes you and how much... VISADEX, in short, affords greater control at less cost, besides keeping records secure.

Our VISADEX Representative will be happy to show you, without obligation, how simple VISADEX is to operate—either with Card Pockets or Brass Card-holders—and how easily it can meet your specific requirements.

deposits and borrowings amounted to Rs. 1.92 crores (against Rs. 1.78 crores) while interest and discounts earned rose from Rs. 3.32 crores to Rs. 3.81 crores. A taxable ordinary dividend of 15 percent, including an interim of 7.5 percent, has been declared. The usual preference dividends have been paid. Reserve fund is allocated Rs. 5.30 lakhs and bonus to staff Rs. 11.30 lakhs, leaving a carry-forward of Rs. 4.68 lakhs. Investments have been shown at less than the actual market value. The bank hopes to open several new offices in 1964 for which permission of the Reserve Bank of India has been obtained.

P.S. Ball Bearing: A New Venture

P. S. Ball Bearing Co. Ltd.—a new venture—which proposes to set up a factory near Ballabgarh in Gurgaon District of the Punjab will soon be in the market to raise Rs. 25 lakhs through public subscription. The Company has secured the technical collaboration of Osaka Bearing Manufacturing Co. Ltd. of Japan which will assist in procuring the requisite raw materials from abroad. The project is estimated to cost about Rs. 1.10 crores which will be met from the issued capital of Rs. 60 lakhs, a loan of Rs. 35 lakhs from the Industrial Finance Corporation of India and bank borrowings of Rs. 15 lakhs. If all goes well, the factory is expected to go into production before the end of the current year. The Company has an authorised capital of Rs. 2 crores made up of Rs. 1.50 crores in equity shares of Rs. 10 each and Rs. 50 lakhs in 9.3 percent preference shares of Rs. 100 each. The issued capital will be Rs. 60 lakhs, of which Rs. 10 lakhs will be in preference shares, which are being taken up by the Punjab Government. Of the equity capital of Rs. 50 lakhs, the directors, their friends and associates will take up shares of the value of Rs. 25 lakhs. The balance of Rs. 25 lakhs is to be offered shortly for public subscription.

Impressive Results from Bombay Potteries

THE report of Bombay Potteries and Tiles Ltd for the year ended September 1963, shows all-round progress which has encouraged the directors to step up the dividend from 15 percent to 18 percent. Sales are up by about 30 percent from Rs. 42.37 lakhs to Rs. 55.05 lakhs and the gross profit has risen by nearly 40 percent from Rs. 15.99 lakhs to Rs. 22.48 lakhs. The turnover has increased in spite of the fact that the Company has had to reduce prices drastically from time to time in order to meet severe competition. As a result of the continued and persistent technical improvement effected from time to time, the output of glazed tiles exceeded the target set earlier and two furnaces were exclusively used for their production. Production of tiles increased by about 42 percent to 1,634 tonnes to 2,333 tonnes and that of sanitarywares by 41 percent from 615 tonnes to 876 tonnes. Acute shortage of space in both in factories continues to hamper further expansion activities.

The tempo of increase in production during 1962-63 was maintained by effecting various adjustments in the existing space, but this, according to the directors, has now reached a saturation point and no further adjustment seems possible. Efforts are being made to acquire the low lying land adjacent to the existing unit in Kurla to expand the production of sanitarywares as the present production is falling short of the licensed capacity. Plans are said to be under way for increasing the production of

insulators and for starting the manufacture of steatite porcelain. Arrangements have been made with the I.C.I.C.I. to provide for the foreign exchange required for the import of equipment for improving the quality of the existing products. The Company is making efforts for exporting its products. It has secured an order for 6,000 glazed tiles from Kuwait and a small order for porcelain teat formers from Pakistan. Appropriations of the 1962-63 profit include depreciation Rs. 3.04 lakhs (against Rs. 2.71 lakhs), development rebate Rs. 11.837 (against Rs. 1.42 lakhs), taxation Rs. 10.70 lakhs (against Rs. 6.85 lakhs), general reserve Rs. 3.40 lakhs (against Rs. 30,000), plant rehabilitation reserve Rs. 25,000 (against Rs. 50,000), gratuity reserve Rs. 50,000 (against nil), super profits tax for 1961-62 Rs. 1.55 lakhs, bonus for the previous year Rs. 71,535 (against Rs. 84,969) and dividend reserve Rs. 3.19 lakhs (against Rs. 2.76 lakhs). After making certain minor adjustments, there remains a surplus of Rs. 2,821 to be carried forward. The Company has a paid-up capital of Rs. 24.54 lakhs which is supported by reserves amounting to Rs. 25.22 lakhs. The Company's net block is valued at Rs. 31 lakhs.

Hindustan Steel Shows Loss

IN his report to the shareholders of Hindustan Steel Ltd, the chairman takes a fairly encouraging view of the future. In spite of the loss incurred for the year ended March 1963, there has been an all-round improvement in operational results. The production targets have been reached. Emphasis is being laid on improving quality, and profitable production has been planned. The chairman said that the plants were now poised for entering a new phase. The prospects of a higher sales income and greater earnings during the current year are better, but the Company has to bear the burden of interest payment, and heavy depreciation charges. It will be possible to wipe off the accumulated losses of early years following heavy capital charges provided the expanded units reach full production. The total output of all plants has reached 89 percent of the rated capacity in iron, 83 percent in ingot steel, 76 percent in salable steel and 96 percent in plates.

The gross sales of iron and steel materials have risen from Rs. 79.3 crores in 1961-62 to Rs. 130.5 crores for 1962-63. New products include additional heavy structural sections and crossing sleepers from Bhilai, full coils from Rourkela and fish-plates, angles, wheels and axles from Durgapur. Substantial quantities of special quality steel have been produced to meet defence needs. Exports of bars and structurals, although small, have been made for the first time. The export prospects for the current year are considered better. The export activity has nevertheless been hindered by the sharp decline in the price of steel in the international market. Sales of coke oven by-products have greatly improved.

The gross profit has amounted to Rs. 6.64 crores. A sum of Rs. 17.5 crores has been charged to the profit and loss account on account of interest on Government loans. Depreciation absorbs Rs. 30.6 crores. An additional expenditure of Rs. 1.2 crores has been incurred on account of the emergency risk insurance premium, but the Government has allowed an increase of Rs. 10 a ton in the retention price to cover this expenditure. So the net loss incurred by the Company has amounted to Rs. 23.9 crores. To this Rourkela has contributed Rs. 10.7 crores, Durgapur Rs. 8.4 crores, Bhilai Rs. 4.5

crores and coal washeries Rs. 25.3 lakhs. Commenting on the increase in the retention prices of steel and pig iron, the chairman said that the rise did not take into account the capital block of the Company which is larger than that of the private-sector companies. So Hindustan Steel is at a disadvantage. The Government subscribed for Rs. 60 crores towards the share capital of the Company in 1962-63, raising it to Rs. 367 crores. Loans given by the Government amount to Rs. 357 crores.

Merck Pharmaceutical Plant Opened

MERCK Sharp and Dohme of India's new pharmaceutical and chemical plant in Bhandup, Bombay, which was inaugurated by the president of Merck Sharp and Dohme International, New York, Mr. Antonie T. Knoppers, on 1st March is said to be the largest and most modern in Asia. The plant has been set up in partnership with Tatas. Of the total cost of Rs. 1.50 crores, 40 percent has been contributed by Tatas and the balance by Merck. The plant is designed not only to produce the Company's present range of products, but its flexibility will also ensure its capacity to manufacture new products discovered by the research laboratories of Merck Sharp and Dohme. The antibiotics subdividing departments alone can turn out up to 50 million vials of life-saving drugs every year. Vitamin B12 has in the past been manufactured from imported intermediates. The new chemical plant produces this powerful red molecule from basic fermentation at a foreign exchange saving of about Rs. 15 lakhs a year.

Dr. Knoppers told newsmen that the Bhandup plant is the only one with fermentation facility which Merck has abroad. He said that Merck's policy was to hand over to the people of the country the plants it set up when the local staff was in a position to meet the exacting standards laid down by Merck in the U.S.A. In addition to antibiotics and vitamin B12, the Bhandup plant will produce a wide range of vitamins, sulfas, steroids, diuretics, antihypertensives, anthelmintics, antihistamines and other products vital to the country's needs.

Dr. Knoppers said that the standard of quality of products made in India is as high as those produced in any other plant of Merck in any part of the world. The new plants have already gone into full production, and the turnover during 1964 is expected to reach Rs. 3 crores. Merck Sharp and Dohme of India Ltd has an authorised capital of Rs. 4.70 crores. Merck of the U.S.A. has an outstanding record of "firsts" in the war against disease and all these advances will be available to India. In 1963, Merck spent over \$23 million in basic research. Dr. Knoppers presented a mobile dispensary to the Government of Maharashtra on 1st March at the dedication ceremonies of the new plant.

Rock Mount Tea Share Offer

ROCK Mount Tea Estates Ltd, which proposes to acquire a tea factory and tea estate in the planting district of Peermade, Kottayam, Kerala State, is offering 81,500 equity shares of Rs. 10 each and 58,500 10 percent cumulative redeemable preference shares of Rs. 10 each for public subscription. The list will open on 5th March and will close on 11th or earlier but not before 9th March. The authorised capital of the Company consists of Rs. 24 lakhs in equity

CAPITAL, 5th March, 1964.

shares and Rs. 6 lakhs in preference shares. The issued capital will be Rs. 20 lakhs, of which Rs. 6 lakhs will be in preference shares. The directors and their friends and associates are taking up equity shares worth Rs. 75,000 and preference shares Rs. 15,000. Equity shares worth Rs. 5 lakhs are to be allotted to vendors of the tea factory and estate. The balance of equity shares worth Rs. 8.15 lakhs and preference shares of the value of Rs. 5.85 lakhs are being offered for public subscription. The board of directors includes Mr. S. Ganapatisundaram, Mr. G. S. Reddi, Mr. K. M. Cherian, Mr. Mathew Cherian and Mr. Jacob Cherian.

Engel India Issue Fully Subscribed

THE shares offered recently by Engel India Machines and Tools Ltd for public subscription have been fully subscribed. Allotment letters have been despatched to the applicants in accordance with the scheme of allotment approved by the Calcutta Stock Exchange Association. The Association has also granted it permission for listing and dealing in the shares.

Digvijay Tiles Shows Loss

THE Digvijay Tiles and Potteries Ltd has reported disappointing results for the year ended June 1963. Sales are down from Rs. 26.68 lakhs to Rs. 25.06 lakhs, and the loss incurred by the Company amounts to Rs. 7.29 lakhs, against Rs. 3.89 lakhs in 1961-62. After providing Rs. 2.65 lakhs (against Rs. 2.85 lakhs) for depreciation and Rs. 5.422 (against Rs. 2.133) for development rebate, the total loss amounts to Rs. 9.99 lakhs, compared with Rs. 6.76 lakhs in the previous year. The preference dividend has been held over for yet another year. With the deficit of Rs. 7.81 lakhs brought forward from the previous years, the aggregate loss, which is being carried forward, amounts to Rs. 17.80 lakhs. The directors attribute the Company's disappointing performance to higher prices of raw materials, electricity rates, excise duty, provident fund contributions, etcetera.

New Capital Issues

TWO companies have been authorised to raise fresh capital amounting Rs. 10.60 crores. One of them is Bokaro Steel Ltd, a Central Government undertaking, and is issuing equities worth Rs. 10 crores. The other is also issuing its capital in equity shares. It is offering part of the equities to the existing shareholders as rights and the rest to the public by prospectus. The consent of the Controller of Capital Issues is valid for 12 months in both the cases. The following are the details:

Bokaro Steel Ltd, a Central Government undertaking, is to issue capital of Rs. 10 crores divided into 100,000 equity shares of Rs. 1,000 each to be issued privately for cash at par. The capital will be used for setting up a new steel project in Bokaro.

Poysha Industrial Company Ltd, Bombay, having a subscribed capital of Rs. 25 lakhs, is to issue capital of Rs. 60 lakhs in equity shares of Rs. 10 each for cash at par. Out of this, 18 lakhs shares of the value of Rs. 18 lakhs will be issued to existing shareholders as rights and the remaining Rs. 42 lakhs to the public by prospectus. The money will be used for financing the expansion involved in the manufacture of tin containers.

CAPITAL, 5th March, 1964.

The Stock Markets

LYONS RANGE REACTS BEARISHLY TO THE BUDGET

Wednesday Evening.

THE Calcutta stock market has reacted unfavourably to the Budget presented to Parliament last Saturday by the Central Finance Minister, Mr. T. T. Krishnamachari. Although the implications of his financial proposals will take time to be fully assessed, it looks as though the benefits of the concessions which have been given will be neutralised by the new tax measures. As a result of the changes in corporate taxation, some companies will enjoy relief while others will have to bear an increased burden. The replacement of the super profits tax by a surtax on profits has not introduced any fundamental change except for the fact that the burden of the latter will be lighter. The new levy is, in principle, as bad as the former and will continue to penalise efficiency. Since the capital base under the surtax has been broadened to include debentures and loans from approved financing institutions including banks, companies employing large borrowed funds will enjoy bigger benefits than those who employ only their own capital.

The tax concessions given to industries producing important items like steel, copper, aluminium, coal, iron ore, fertilisers, cement, paper and pulp, coffee, tea and rubber have been welcomed. These industries will enjoy rebates on corporation tax and surtax. But the good effects of the concessions have been partly counteracted by the imposition of a new dividend tax of 7½ percent on all companies. New companies will, nevertheless, be exempted from this impost under certain conditions. Although the deduction of income tax at source from dividends has been reduced from 30 percent to 20 percent, the outlook for dividends has suffered due to the levy of the new tax on dividends. It will restrain companies from increasing their dividends. The ploughing back of money into business is no doubt good, but forcing companies to conserve resources at the cost of the shareholder cannot be justified if there is no encouragement to use the resources in other ventures. The Government has not sufficiently reduced the tax burden on intercorporate investments to encourage diversification of activities.

Investors have been greatly disappointed by the proposal that the receipt of bonus shares will be treated as a capital gain. It is unfair to force companies to conserve resources by restraining dividends, and at the same time to discourage the issue of bonus shares. They already carry a penal tax. In the circumstances, the issue of bonus shares will become few and far between. As far as the flow of funds into the stock market is concerned, the outlook is far from encouraging. The replacement of the compulsory deposit scheme by a new annuity scheme for the middle and high income groups will virtually siphon off all savings from these classes. The steep rise in gifts tax and estate duty will also affect the supply of money to the stock market. The wealth tax too has been increased.

Indian Iron have been sluggish since steel has been only partially decontrolled, instead of being fully decontrolled as was expected earlier. Investors fear that as a result of the new move the position of the private sector companies may not change

much. So the increase in the retention prices of controlled steel products by Rs. 30 a ton has been overlooked. There has, meanwhile, been a general decline in the output of the Company for February which was a short working month. The production of pig iron has declined from 109,243 metric tons to 103,411 metric tons, and that of steel ingots from 87,771 metric tons to 80,243 metric tons. The output of salable steel has risen from 63,185 metric tons to 66,435 metric tons. Despatches of salable steel has declined from 63,800 metric tons to 59,881 metric tons. Engineering shares have generally been quiet.

Clearing miscellaneous shares have lost on balance although aluminium, motor-vehicle, electric, cement and paper companies have suffered less. Cotton textiles and rayon shares have borne the brunt of the pressure due to the steep increase in excise duty. Coal shares have not responded to Press reports about an increase in the price of good-grade coal. Jute shares have been fairly steady, but turnover has declined. There are prospects of a big crop in the next season. Stray business in tea shares have not been influenced by the tax concessions given to the industry.

Government securities have been dull and quiet. The 3 percent Conversion loan 1986 has quoted Rs. 63.20. Support has been lacking due to the prospect of an increase in the interest rate on the new loans to be offered during 1964-65.

Bombay

NEW TAXES AFFECT SENTIMENT BUDGET OVERSHADOWS STEEL DECONTROL

Wednesday Evening.

THE Budget presented by the Central Finance Minister, Mr. T. T. Krishnamachari, has been bearish-

ly interpreted in Dalal Street. Share prices have dropped due to nervous liquidation, combined with bear pressure. The replacement of the super profits tax by a surtax on profits has been a big disappointment. The introduction of a dividend tax, combined with the proposal to regard the issue of bonus shares as a capital gain, has depressed sentiment. Cotton and rayon shares have suffered heavily due to the increase in excise duty. Investors have been discouraged by the sharp rise in gift tax and estate duty.

As a result of the disappointment over the Budget, the partial decontrol of steel announced by the Government has been virtually overlooked. Even the increase of Rs. 30 a ton in the average retention price of controlled steel products has had little effect. Towards the close, selling pressure has slightly abated and share prices have tended to be steady around lower levels due to short-covering.

Tata Steel ordinary have closed at Rs. 150.50, but turnover has been restrained since operators have not yet been able to make up their mind about whether the partial decontrol of steel will benefit the producers. Among engineering shares, Tata Locomotive, Premier Construction and Alcock Ashdown have declined. In motor-vehicle shares, Hindustan Motors have lost, but Premier Automobiles have shot up on influential support. The latter scrip have attracted a margin on purchases since the price has risen by more than 10 percent of the last clearing rate.

Cotton mill shares have suffered heavily. Century have fallen substantially. Standard, Kohinoor, Svadeshi, Morarjee and Bombay Dyeing have lost considerably. India United ordinary have been sold freely at lower prices.

Miscellaneous shares have generally weakened in sympathy with the general trend. Among cement shares, Associated Cement and Digvijay have

Madras

CLEARING SHARES FALL STEEPLY NEW TAXES MAY REDUCE FLOW OF FUNDS

Tuesday Evening.
THE Madras stock market has closed the past week in a quiet mood due to disappointment over the financial proposals presented to Parliament last Saturday by the Central Finance Minister, Mr. T. T. Krishna-

machari. The weakness has been aggravated by easier advices from the Calcutta and Bombay stock markets. Although the super profits tax has been abolished, it has been replaced by an equally bad levy in the form of a surtax on profits. The outlook for equities has suffered heavily due to the dividend tax and the decision to consider the issue of bonus shares as a capital gain. The flow of funds into the stock market, it is feared, will be hindered by the sharp rise in the estate duty and gift tax. Clearing shares have nose-dived due to selling pressure, especially from outside sources. Buying interest has been confined to selected tea and coffee shares. Towards the close,

CAPITAL, 5th March, 1964.

pressure has abated but support has been conspicuous by its absence.

Business in Government securities has been negligible. Among banks, Canara Banking have been done at Rs. 73 and Indian Overseas at Rs. 146.50. In electric companies, stray business has been transacted in Ellore at Rs. 18.50 and in West Coast at Rs. 20.50. Sugar shares have weakened on fears that output during the current season will be much smaller than was expected earlier. Deccan have fallen to Rs. 12.10 and Andhra to Rs. 15.75. Mysore have quoted Rs. 44.65. The Company has issued rights ordinary shares in the proportion of one new share for every share held, at a premium of Rs. 2 a share. After the issue of the rights shares, the Company will issue bonus shares in the proportion of one bonus share for every four held, by capitalising reserves.

Except for a few selected scrip, planting shares have generally declined. Blue Mountain have been transacted at Rs. 2.43. Cochin Malabar at Rs. 6.44. Consolidated Coffee at Rs. 20. Ouchterlony at Rs. 4.28 and Periakaramalai at Rs. 3.43. Kumergode have been done at Rs. 4 on declaring a taxable dividend of 14 percent. Swinton have been transacted at Rs. 2.68 since the Company is likely to sell the Swinton and Aislaby Estates for Rs. 7.25 lakhs. Thamarapally have changed hands at Rs. 16.40. Emerald Valley at Rs. 6.10. Chembra Peak at Rs. 4.68 and Amalgamated at Rs. 10.01.

In textile shares, South India Viscose have dropped sharply to Rs. 136.50 and Travancore Rayon at Rs. 25 due to the steep increase in excise duty. Madura have been about steady at Rs. 35.50 and Lakshmi at Rs. 137. Dhanalakshmi have come to hand at Rs. 216 on paying a taxable ordinary dividend of 12 percent. Bangalore Woollen have been taken at Rs. 236 and Buckingham at Rs. 293. Mettur have been steady at Rs. 266, but Loyal have declined to Rs. 40.50.

In the miscellaneous section, Aluminium Industries have lost at Rs. 19, but Ashok Leyland have been maintained around Rs. 7.23. Among cement shares, Dalmia have weakened to Rs. 13.35 and India Cement to Rs. 5.73. Mettur Chemical have quoted Rs. 13.50, but Seshasayee Paper have lost at Rs. 8. Tube Investment have been available at Rs. 215 and Enfield at Rs. 10.40. Parry's Confectionery have quoted Rs. 3.33 on declaring an interim taxable ordinary dividend of 8 percent. K.I.C. have been done at Rs. 10.91 on paying a taxable ordinary dividend of 8 percent. Madras Vanaspathi have changed hands at Rs. 16.25 on the decision to convert 15,000 ordinary shares of Rs. 30 each into 150,000 ordinary shares of Rs. 3 each. Spencer have been steady at Rs. 22.25 and Textool at Rs. 145.50.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

London

SHARES RISE DUE TO SMALL OFFERING GILT-EDGED DOWN

London, 5th March.
IT was an eventful week in the stock market with the most important factor to influence sentiment coming on Thursday with the surprise hoisting of Bank rate to 5 percent. However, it made little impact on prices, as such a move had been expected for some time, although not particularly last Thursday. This was viewed as no more than a move to check exuberance in the economy and to stem the flow of funds from London, and was considered as an encouraging sign. Gilt-edged were unsettled as were other fixed interest stocks, but there was no marked fall in prices. Equities, on the other hand, encountered an increased investment demand and with sellers holding off, prices moved up. Good company news helped to a considerable extent with the excellent results from I.C.I. and Unilevers making a marked impression.

FUNCTIONS OF THE NEW DEVELOPMENT BANK

(BY A SPECIAL CORRESPONDENT)

The new development bank, which will be shortly created as a subsidiary of the Reserve Bank, will be assigned many functions, the main one being the promotion of new enterprises in both public and private sectors, but its success will largely depend on co-ordinating the activities of all State financial institutions properly.

THE development bank is a post-war phenomenon. These banks were started in many countries primarily to route the World Bank assistance. They played an important rôle in rehabilitating the war-torn economies and promoting economic growth in the less developed countries.

In India, the Industrial Finance Corporation was set up soon after independence. Later on, various State finance corporations were set up. While the Industrial Finance Corporation concerned itself with big and medium projects, the State finance corporations assisted the medium and small enterprises at the State level. These latter, however, suffered from several drawbacks, the main one being the lack of resources. They were wary in taking risks because of their inadequate

equity base. There was also no proper co-ordination among institutions engaged in industrial financing. The Reserve Bank started a Refinance Corporation for Industry in 1958, to encourage commercial banks to go in for term-lending. The corporation was prepared to assist the State finance corporations also. Yet the total quantity of credit provided has been much less than the requirements.

The Finance Minister, Mr. T. T. Krishnamachari, therefore, introduced a Bill on 27th February for the setting up of a comprehensive development bank. It will not only refinance medium-term (ten years) and long-term (25 years) loans, but provide ten-year deferred payment credit for promoting exports. It will give direct loans to industry, subscribe to shares, underwrite new

issues and promote the establishment of new enterprises, especially key industries.

The bank will help industrial enterprises in both the public and private sectors. It will be a wholly-owned subsidiary of the Reserve Bank with an initial issued capital of Rs. 10 crores, and an authorised capital of Rs. 50 crores. The initial capital can be increased and the authorised capital raised to Rs. 100 crores with the approval of the Central Government.

The Bank will have a special fund to provide loans to industries which cannot secure loans from other banks or financial institutions for reasons such as the heavy investment involved or the anticipated rate of return on capital. This was done because many desirable projects were not being financed by existing

CAPITAL, 5th March, 1964.

institutions on account of considerations of profitability.

Close Liaison

The new development bank will maintain close liaison with the Refinance Corporation for Industry and the Industrial Finance Corporation. The Refinance Corporation will be transferred to the bank at a later stage. Provision has also been made for the merger of the Industrial Finance Corporation with the development bank or its conversion into a wholly owned subsidiary of the latter if the need arises.

The shares held by the Reserve Bank and the Central Government in the Industrial Finance Corporation are to be transferred to the new development bank. What prevented the authorities to rationalise the existing institutional structure taking advantage of the setting up of the new institution is hard to understand. The amalgamation of all institutions in the public sector, including the State finance corporations, would have made for proper co-ordination among these institutions.

The development bank has been set up on the analogy of the Industrial Development Bank of Canada. The directors of the Indian institutions will, therefore, be only from the Reserve Bank. The Reserve Bank Governor will be the chairman of the board. An additional deputy governor, enjoying the rank of vice-chairman, will be appointed in course of time. The method of financing the medium and long-term credits has been borrowed from West Germany and Italy. The provision for promoting new enterprises in key industries follows the Japanese example. West Germany, Italy and Japan have been enjoying some of the highest growth rates in the post-war world, and it was probably considered desirable to take a leaf from their example.

Acceptable Security

No provision has been made concerning the nature or types of security against which refinance or direct assistance may be granted. The bank, it is expected, will exercise its discretion in such matters. But the very nature of financing is such that it may invite controversy. A more precise definition of the type of securities to be accepted is necessary. At least broad guide-lines should have been provided for the financing of ventures which are considered unremunerative by commercial banks.

The development bank will underwrite new issues, particularly in those cases in which facilities for this purpose are normally not available. It has been empowered to provide technical and administrative assistance to industrial concerns and undertake research or techno-economic surveys and studies on its own initiative or otherwise, for the promotion of new enterprises. The bank has been given powers to constitute subsidiaries for any of these or all of these purposes.

The Central Government will grant loans to the bank. An interest-free loan of Rs. 10 crores will be given by the Government as soon as the bank is started. The loan will be repayable in easy instalments over a period of 15 years. The after a period of 15 years. The income accruing to the bank from the utilisation of this loan will enable it to meet the expenses until it starts earning on its own. The bank will also grant to the bank Centre will also grant to the bank such other loans on usual conditions as may be necessary from time to time. In addition, the bank will be borrowing from the market through its own bonds or debentures. Normal banking accommodation for formal banking accommodation for periods up to 90 days will be available to the new institution from the

PITAL, 5th March, 1964.

Reserve Bank. The development bank can take loans and advances from the Reserve Bank on the security of commercial or trade bills of industrial concerns maturing within five years which are held in its portfolio.

New Fund

The Reserve Bank will be establishing a new fund to be known as the National Industrial Credit Fund to which allocations will be made from out of the surplus profits of the Reserve Bank. The number of directors of the Reserve Bank has been raised from 15 to 20. While adequate provision has been made to place sizable resources at the disposal of the development bank, the successful functioning of the institution will depend on the degree of co-ordination which it can bring about among the various industrial financing institutions existing in the public sector. Otherwise, it will be only increasing the confusion which prevails in India in the field of industrial financing.

THE CALCUTTA MONEY MARKET

MODERATE RISE IN ADVANCES

Wednesday, 4th March.

THE general level of advances has shown a moderate increase in the Calcutta money market during the past week. The requirements of the cotton, jute and sugar mills are slightly higher. But the credit given to the iron, steel and engineering industries, and to the foodgrains and seeds trade, is unchanged. In the interbank market, conditions have been tight. The call rate has been hovering around 6 percent most of the time, but has gone up to 6½ percent towards the close as the time approaches for making tax payments.

There has been a moderate supply of tea and gunny bills in the exchange market. The demand for remittances has been fair. In the London market, sterling has improved since Bank rate was raised in relation to all the major currencies except the Swedish.

SILVER WAS STEADY IN CALCUTTA during the past week due to a rise in the seasonal demand. The price rose from the previous week's level of Rs. 260.50 to Rs. 263.50 a kilogram quoted today. The London and New York prices stood at 111½d and 129.3 cents.

In spite of a rise in silver, gold moved narrowly and the price of 14-carat was sluggish around Rs. 68.25.

DURING THE WEEK ENDED 28TH FEBRUARY, Government of India Treasury bills for Rs. 24,40,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 3rd March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.410 percent were accepted in full, the average rate of acceptance being Rs. 2.360 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 9th March.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 4th March to 7th March at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 26th February to 29th February amounted to Rs. 60,00,000.

THE DECLINE OF Rs. 11.15 CRORES TO Rs. 2,423.16 crores in active notes was

a notable feature of the return of the Reserve Bank of India for the week ended 28th February, 1964. The total note issue was Rs. 32 lakhs larger at Rs. 2,450.42 crores. Notes held in the Banking Department consequently rose by Rs. 11.48 crores to Rs. 27.27 crores. Deposits of the Government of India rose by Rs. 17.77 crores to Rs. 76.27 crores, but those of State Governments dropped by Rs. 4.86 crores to Rs. 9.07 crores. Balances of commercial banks at Rs. 85.85 crores showed a rise of Rs. 5.58 crores. Balances held abroad improved by Rs. 2.75 crores to Rs. 21.10 crores. Investments at Rs. 213.43 crores showed a drop of Rs. 13 lakhs. Loans given to scheduled banks rose from Rs. 52.61 crores to Rs. 67.54 crores, of which advances against usance bills amounted to Rs. 33.24 crores (Rs. 23.24 crores). Ways and means advances stood at Rs. 40.14 crores, against Rs. 38.31 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 21st February, 1964, shows a rise of Rs. 3.56 crores to Rs. 600.05 crores in total deposits. Investments in Government securities are down by Rs. 2.76 crores to Rs. 235.24 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 8.35 crores to Rs. 339.97 crores. Cash and balances are, in consequence, shown at Rs. 23.61 crores or Rs. 2.57 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 21st February, 1964, shows Demand and Time liabilities at Rs. 1,187.99 crores (Rs. 33.67 crores on account of borrowings from banks) and Rs. 1,299.09 crores (Rs. 15.14 crores), compared with Rs. 1,178.16 crores (Rs. 31.64 crores) and Rs. 1,290.78 crores (Rs. 12.85 crores), respectively, in the previous week. Cash has risen by Rs. 3.54 crores to Rs. 60.76 crores, while balances with the Reserve Bank have fallen by Rs. 87 lakhs to Rs. 76.74 crores. There is a drop of Rs. 3.49 crores to Rs. 646.33 crores in investments. Advances and bills discounted, in consequence, shown at 5.5 percent and 70.8 percent, against 5.5 percent and 70.6 percent.

TREASURY BILL MATURITIES

BURNPUR —A PORTRAIT IN STEEL

A busy steeltown. Alive to the problems of the day, prepared for the challenge of tomorrow. Thousands live and work here day and night. All of them think in terms of steel—and more steel, for India.

Yet less than ten years ago, the rated annual capacity at Burnpur was about half a million tons of crude steel and a similar quantity of pig iron. A two-step expansion programme has since raised annual production at the integrated steelworks to 1 million tons of crude steel and 1.3 million tons of pig iron.

The smallest additional capital cost can expand production further, by another million tons of steel if need be.

Meanwhile, IISCO steel—in all the shapes that steel can take—serves India's developing economy.

New Delhi

WORKING GROUP URGES RAISING OF STEEL CASTING CAPACITY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Working Group on Steel Casting has placed India's total requirement of the product by 1970-71 at 411,000 tonnes a year. It says that "the two main users of steel castings are the metallurgical industries and the railways. While the capacity to meet the requirements of the metallurgical industries has been created, the position in relation to the railways' requirements lags behind. As a result of the lack of facilities for producing intricate and relatively large (in size and not in weight) steel castings, the railways have had to adopt alternative designs of fabricated components and sub-assemblies. An outstanding example of this is the fabricated bogie instead of cast steel bogie for new wagons. The adoption of such an expedient results in considerable increase in maintenance costs, apart from the reduction in the payload of the vehicle. "If all bogie wagons were to be fitted with cast steel bogies, the requirements of steel castings for wagon production in 1970-71 would be around 170,000 tonnes. Since the production of a cast steel bogie requires very special manufacturing techniques, it may not be possible to generate the necessary capacity for meeting such a large demand by the end of the fourth plan period. It should, however, be possible to meet 50 percent of the demand for such new wagons to be fitted with cast steel bogies by 1970-71.

"Similarly, steel castings for motor-cars, jeeps and commercial vehicles have been reduced on the assumption that adequate malleable casting facilities would have been created. The requirements, for maintenance account relate to steel castings as such required by the user. They do not include castings which form a part of the equipment obtained as a whole in replacement.

Developing the Export Market

"Although an export market could be developed for steel castings, the already wide gap between production and domestic requirements suggests that the necessary efforts for export may not be possible. No provision has, therefore, been made on this account. Under normal working conditions and considering the problems of balancing orders, an average productivity of around 80 percent may be taken for steel castings. In other words, the installed capacity necessary for an assured production of 411,000 tonnes a year in 1970-71 will have to be of the order of 515,000 tonnes.

"Against an estimated demand at the end of the third plan of 240,000 tonnes, the present production capacity is only for 58,000 tonnes. If to this are added the 224,000 tonnes already licensed and assuming that all these programmes will be implemented within a reasonable period of time, the total installed capacity will be 332,000 tonnes a year.

"It will, therefore, be necessary to create an additional installed capacity of 183,000 tonnes a year of steel castings by the end of the fourth plan period. Apart from the captive steel foundries which, among other things, are intended to meet their own internal demands, there are around 15 units producing steel castings. Apart from the 32 new units licensed for

steel castings in the private sector with an anticipated capacity of around 130,000 tonnes, the steel casting facilities being established in the public sector would account for nearly 95,000 tonnes.

"Excluding the larger units in the public sector, most of the units in existence or licensed would have an average production capacity of around 5,000 tonnes to 8,000 tonnes a year. Thus, most of the foundries already licensed could, to advantage, be permitted to expand their production capacities. In doing so, the special requirements, particularly for the railways, for which no capacity exists in the country at present shall have to be borne in mind. The demand for such specialised castings is already considerable, and it will be advantageous if new facilities are developed to cater for such requirements.

"Considering these factors, the additional installed capacity of 132,000 tonnes to be developed in the fourth plan period could be effectively met by the expansion of existing facilities in the public and private sectors by 520,000 tonnes and the establishment of new facilities to the extent of 800,000 tonnes.

Making Specialised Castings

"A sizable proportion of the new capacity to be created will, therefore, relate to the production of specialised castings required for the railways. Similarly, the increased requirements of relatively heavier steel castings for metallurgical industries will also have to be provided for. It is, therefore, suggested that the additional capacity of 800,000 tonnes a year to be created through the establishment of new units be determined as follows:

"(1) One steel foundry with an initial installed capacity of 25,000 tonnes to 30,000 tonnes a year, essentially for the production of specialised castings such as cast steel bogies for railway wagons.

"(2) Two or more units with an initial installed capacity of around 15,000 tonnes a year with special facilities for the production of heavy castings, such as required by the metallurgical industries.

"(3) Two or three units, each with an initial installed capacity of 8,000 tonnes to 10,000 tonnes a year for the production of lighter castings but of a more repetitive nature such as are generally required by the railways for axle boxes, etcetera.

"At the present day levels of equipment costs, the overall average investment for the new foundries will be of the order of around Rs. 3,400 a tonne. As for the balancing and additional equipment required for the expansion of existing facilities, the investment will be around Rs. 1,300 a tonne. On this basis, the total investment for the creation of 132,000 tonnes of additional steel casting capacity during the fourth plan would be around Rs. 34 crores. Of this, the foreign exchange element may be placed around Rs. 14.2 crores.

"Like castings, forgings are also intermediate engineering products. These products usually form components or parts of machinery and equipment needed in a variety of applications. There are also a few

forged products which are not intermediate in nature but which are of direct use, such as, forged hand tools, agricultural implements, etcetera.

"The total requirements of steel forgings in 1970-71 are placed at 441,000 tonnes. Under normal working conditions, an average productivity of around 90 percent may be taken for steel forgings. In other words, the installed capacity necessary for an assured production of 441,000 tonnes a year in 1970-71 will have to be of the order of 1,90,000 tonnes a year.

"The present installed capacity for the production of steel forgings is 87,300 tonnes a year, including the captive forging facilities of the railways. To this may be added an additional 232,000 tonnes a year which have been licensed but have yet to commence production. On the assumption that all programmes so far licensed will be completed in a reasonable period of time there will be an installed capacity of around 319,000 tonnes of steel forgings a year.

"It will, therefore, be necessary to create an additional installed capacity of 172,000 tonnes a year to ensure that the requirements at the end of the fourth plan are fully met. There are 35 firms already producing steel forgings in the country. An additional 46 units have been licensed in the private sector, although these have yet to come into production. Of these, only ten units have, or will have, an annual production capacity of over 5,000 tonnes a year, accounting for a total of 71,000 tonnes of production on a two-shift basis. The balance are smaller units with a capacity of about 500 to 1,500 tonnes a year.

Forging Requirements

"Sizewise, the requirements of forgings below 250 kilograms a piece will be around 341,000 tonnes a year and around 100,000 tonnes of heavier forgings a year. The shortfall between the required installed capacity and the available installed capacity in the fourth plan period of 171,300 tonnes has been analysed and will be of the order of 120,000 tonnes of the lighter forgings and 500,000 tonnes of the heavier forgings.

"Excluding the plants with very small production capacities which may not readily lend themselves to economic expansion and also those which are being set up in the public sector for very heavy forgings, there is considerable scope for the expansion of production capacity in the remaining plants already in existence and which may be expected to go into production in the near future. It would be desirable to aim for an average production level of around 4,000 tonnes a year for such plants, so as to achieve maximum economic benefits. On this basis, nearly 710,000 tonnes of capacity could be created by expansion. The balance of 100,000 tonnes a year will have to be created through the establishment of new plants.

"An analysis of the requirements of steel forgings towards the end of the fourth plan period shows that special consideration will have to be given to the creation of production capacity for (i) relatively heavy forgings such as rotors for electrical machinery, components for large diesel engines, pumps and compres-

sors, etcetera, and rolls for metallurgical industries and (ii) automotive forgings.

"Considering all these factors, it is suggested that the additional capacity of 100,000 tonnes a year to be created through the establishment of new units be determined as follows:

(1) "Two forge plants, each with an installed capacity of around 20,000 tonnes a year on a two-shift basis for the production of heavy forgings such as rotors for electrical machinery, rolls for rolling mills, pipe moulds, etcetera.

(2) "Six plants, each with an installed capacity of around 10,000 tonnes a year on a two-shift basis for the production of relatively close tolerance forgings as required by the automotive and allied industries.

"At the present-day levels of equipment costs, etcetera, the overall average investment for the new forge plants will be of the order of Rs. 4,100 a tonne. As for the expansion of existing facilities, the order of investment will be around Rs. 2,500 a tonne.

"On the above basis, the total investment for the creation of additional capacity for steel forgings during the fourth plan period will be of the order of Rs. 58.75 crores. A large proportion of equipment for the heavier forgings will have to be imported, although in the case of the lighter forgings a somewhat higher proportion will be available indigenously. Thus, the foreign exchange element has been placed around Rs. 23 crores.

PRECISION INSTRUMENTS

Two New Units Planned

The Government of India, it is learned, has decided to set up two public-sector plants—one in Kotah, Rajasthan and the other in Palghat, Kerala—for the manufacture of industrial process control instruments with Russian collaboration. The Kotah plant envisages the manufacture of pyrometers, resistance thermometers, signalling, regulating and recording instruments, and transmitting elements for temperature measurements. The Kerala unit will manufacture mechanical hydraulic and pneumatic instruments, such as flow meters, pressure and level gauges, the associated primary sensing elements, pneumatic recorders, controllers and timers and other ancillary equipment.

When in full production, the total annual output of the two plants will be Rs. 10 crores at the c.i.f. price (the Kotah unit, Rs. 11.3 crores and the Kerala unit, Rs. 7.8 crores), or Rs. 30 crores at current market prices. The Kotah unit, it is expected, will go into production by the middle of 1966 and both should be in full production in six years. The demand for these instruments is placed at Rs. 25 crores a year to be stepped up to Rs. 40 crores by 1970-71. Imports should have to continue for industries, such as sugar, cement and paper.

There are two other units in the field, namely: the National Instruments Ltd, Calcutta, and the Government Precision Instrument Factory in Lucknow. They manufacture pressure and vacuum gauges. It is, however, pointed out that by 1971, the demand would include instruments, not so far included in the manufacturing programme of such public-sector projects as gas and spectrum analysers, viscosity meters, hydro-meters, pyro meters, conductivity meters, radiation pyrometers, thermo meters, linear dimension meters, meters for oxidation and reduction measurement, stream gauges and meters for measuring electrical parameters. There could be two alternatives, namely, the expansion of the public-sector units to include such items, which are

not included in their manufacturing programme, or to create new capacity, in either the public or the private sector, for their manufacture. An early policy decision on this issue is expected.

DEVELOPMENT BANK

Bill Introduced

A Bill seeking to establish a statutory bank for providing credit and other facilities for the development of industry in India was introduced in the Lok Sabha last week by Mr. T. T. Krishnamachari, Central Finance Minister. The bank is to be known as the Industrial Development Bank of India. It is to have an authorised capital of Rs. 50 crores. It is likely to have its head office in Bombay. In the first instance, its issued capital is to be Rs. 10 crores and is to be subscribed wholly by the Reserve Bank.

The new bank, which will be a wholly "owned subsidiary" of the Reserve Bank, has been considered necessary because "the existing arrangements for the provision of credit for the expansion or development of industry are not adequate in relation to the needs of the various enterprises and projects," according to the statement of objects and reasons. The bank is to be managed by a board of directors, whose membership will be the same as that of the central board of the Reserve Bank. It is planned as an institution which will co-ordinate the activities of all institutions engaged in the task of financing industrial development. It is to refinance such institutions as well as grant loans direct to industrial concerns. It will generally promote and develop key industries.

Some of the activities of the Development Bank are as follows: (a) It will grant long-term loans repayable in 25 years and short loans, repayable in ten years, to other industrial financing institutions.

(b) It will grant financial accommodation up to ten years to industrial concerns for the export of capital goods or other commodities on deferred payment terms and credit facilities for importers of these items in other countries.

(c) It will grant loans to or subscribe to the shares or debentures of industrial concerns, which cannot get loans and other accommodation from the existing financial institutions and commercial banks.

(d) It will be able to accept or discount the bills of industrial concerns arising out of bona fide commercial or trade transactions. It may do this either directly or when these bills are presented through scheduled and State co-operative banks.

(e) It will underwrite new issues, especially where such facilities are

not normally available, provide technical and administrative assistance to industrial concerns and undertake research or techno-economic studies and surveys to promote the establishment of new enterprises.

(f) It will form subsidiaries specialising in any of these objects, if necessary.

Interest-free Loan

The Central Government is being authorised by the new legislative measure to grant an interest-free loan of Rs. 10 crores to the Development Bank. It will also be able to borrow in the open market. The Reserve Bank will give it normal banking accommodation up to 90 days. It will also be entitled to loans and advances from the Reserve Bank.

The Reserve Bank is to establish a new National Industrial Credit (Long-term Operations) Fund, to which it will allocate its surplus profits and from which the Development Bank will be able to get loans for acquiring shares in other industrial finance and credit institutions, for subscribing to bonds and debentures of such institutions, and for financing its own business activities.

The Development Bank will also be able to borrow amounts in foreign currencies on terms and conditions approved by the Central Government. The bank will create a Development Assistance Fund with an appropriate initial contribution from the Central Government for granting assistance to industry. The principal beneficiaries of the fund will be industries considered to be of importance, but unable to get funds in the usual course, either because of the heavy investment involved or the low rate of return anticipated on capital.

The Refinance Corporation will continue to carry on its business even after the establishment of the Development Bank, but there is a provision in the Bill for the transfer of its business to the new bank in the light of "further developments." Provision has also been made for the Development Bank to make the Industrial Finance Corporation its subsidiary, or to absorb the Corporation completely.

COMMODITY IMPORTS

U.S. Loan for India

The Governments of India and the United States have concluded an agreement providing for an American loan of Rs. 107 crores to finance commodity imports into India. The loan is part of the U.S. commitment of \$435 million for the third year of the third plan. The broad commodity import groups for which the loan funds will be used are: steel, non-ferrous metals, lubricants, fertiliser, machinery and machinery parts, sulphur, rubber, tyre cord, carbon black,

caustic soda, D.D.T., chemicals, vehicle and other components. Within these broad categories, the Government of India is free to set the amounts of imports according to the needs of the economy.

The bulk of the commodity imports financed under this credit—about 80 percent—will be for the needs of private industry. It is expected that over 6,000 individual licences will be issued under this loan. The loan has been channelled through the U.S. Agency for International Development. It carried an interest of 3 percent a year for the first ten years and 2 percent a year for the remaining years. Repayment in dollars will be spread through 40 years after the first disbursement, with no payments for a period of ten years.

The United States extended to India non-project loans totalling \$469 million for the first two years of the third plan. Thus, with the loan announced, the total of such financing to date for the third plan is \$685 million and comprises 48 percent of the U.S. commitment of \$1,415 million for the first three years of the third plan.

In the present year, American aid to India will total roughly \$880 million or equivalent to Rs. 419 crores. A sum of \$449 million or about Rs. 210 crores is in dollar grants and loans and \$439 million or Rs. 209 crores is for about 3.6 million tons of wheat, cotton, rice, powdered milk and other food products.

A sum of \$435 million in dollar loans is in turn roughly divided into two categories. Firstly, there are the so-called project loans which are tied to specific projects. In the last few years, such loans have contributed to the building of 20 power plants, including both hydro-electric projects and steam plants in 12 States. By 1967, these U.S.-financed projects will be capable of producing 3,600,000 kilowatts of electricity, or 50 percent of the increase in the electric generating capacity projected in the present five year plan and 35 percent of all electric power in India. The U.S. loans also include \$193 million or Rs. 92 crores in rail-road equipment, such as diesel locomotives and signalling equipment.

The other half are "non-project assistance" which the Indian Government may use for a wide variety of overseas purchases. The U.S. Government announced an agreement to provide India with 300,000 U.S. bales (375,000 Indian bales) of upland cotton worth about \$47 million (Rs. 22.3 crores). This figure includes some of the cost of ocean transport. The cotton, to be shipped by 30th June, 1964, is to help Indian mills to meet their current requirements of raw cotton and increase the supply of a buffer or working stock, and also to help stabilise the price of raw cotton and cotton goods.

WOOL

Modernisation of Mills

In its report submitted in the middle of December, the team of Australian wool experts has laid considerable emphasis on establishing competitive quality and cost structures by a selective process which will result in the modernisation of those units which are capable of taking advantage of modern wool textile technology. The report, among other things, has suggested that the programme should mainly be confined to the "hard core of competently-managed operations" and should be done with the up-to-date machinery. As for small units, the team has suggested that they could be gradually improved by the small-scale industry with the help of the State and Central Governments. Steps are being taken to carry out the modernisation pro-

CAPITAL, 5th March, 1964.

gramme in relation to the competent-ly-managed bigger units for the present.

YUGOSLAVIA

Aid for Shipyard

Yugoslavia has agreed to assist India in improving the Visakhapatnam shipyard. It has also agreed to supply more ships. The type and number of vessels and the terms of payment will be finalised later. Yugoslavia will also assist India in establishing industries.

Both countries have agreed that in many industries, particularly those where enterprises in both have similar technical collaboration arrangements, it should be possible to produce certain components and parts in such a way as to meet their requirements. Some of the fields in which such mutually profitable co-operation can be undertaken are motor-cars, lorries, tractor components and parts. If this co-operation materialises, it is stated, the production of Fiat cars in India can be greatly increased. Yugoslavia will explore the possibility of importing from India diesel engines, piston rings, shock absorbers, radiators, fuel injection equipment and electrical equipment for motor-cars.

A broad agreement on the exchange of goods has also been arrived at. India will export iron ore, manganese ore, ferro-manganese, jute manufactures, hides and skins (tanned and semi-tanned), chemicals, cattle feed, fish meal, cotton textiles, shellac, seedlac and tobacco. She will import fertilisers, lubricating base oil, non-ferrous metals, mercury, electric equipment and material, machine tools, machinery and complete plants, tractors and agricultural implements, refractories, pig iron and steel, including special steel.

Yugoslavia will also investigate the possibility of importing, on a long-term basis, commodities like lemon-grass oil, sandalwood oil, mica, salt, ilmenite, bauxite, Bengal Deshi, cotton, cigarettes, cheroots, banana and fruits from India.

U.S.A.

Survey by Specialists

A team of three U.S. specialists will be arriving in India shortly to survey the water and land resources of the country and advise the Government of India on the organisation, administration and technical implementation in management, water storage, utilisation and drainage.

The team will review the present policies affecting watershed management, dam construction and the management of water distribution and the drainage system within a watershed. It will inspect representative watershed and catchment areas to determine the adequacy of planning and implementation. It will also assess the ability of the various organisations to undertake the planning and implementation of projects within a watershed. The report of the team will outline comprehensive land and water management requirements to conserve and maximise land and water resources.

The development and protection of soil and water resources will have a direct effect on the rural development programme. India is developing an extensive programme of river valley catchment treatment to protect the watershed of major dams. The programme includes intensive work on soil conservation in sub-catchment on agricultural lands.

The expert team consists of Mr. Ellis Hat, an engineer with wide experience in irrigated agriculture who served in India for two years as

CAPITAL, 5th March, 1964.

Water Use and Soil Conservation Consultant of the Ford Foundation; Mr. Norman Tripp, Assistant Director of the Division of Flood Prevention and River Basin Programme of the United States; and Mr. John Spencer, Consultant to the U.S. Agency for International Development, Washington, Jordan and Brazil.

The team is expected to visit the following ten States: Andhra Pradesh, Bihar, Himachal Pradesh, Madhya Pradesh, Madras, Mysore, Punjab, Rajasthan, Uttar Pradesh and West Bengal. The projects to be studied and reviewed are: Damodar Valley, Machkund, Kundah, Tunga Bhadra, Chambal, Bhakra-Nangal and the Rajasthan Canal. The team is expected to submit its report in about three months.

E.E.C.

Tariff Concessions

It is officially confirmed that the E.E.C. had agreed to grant, unilaterally, with effect from 1st January, 1964, and initially for a period of two years, tariff concessions on some of the items included in the *aide mmoire* which was presented by India to the Commission in April 1963. Tariffs are totally suspended on cardamoms (crushed and uncrushed) coriander (crushed and uncrushed), ginger (including preserved and conserved in sugar), bleached shellac, mango chutney, curry paste and powder, tobacco, seed oil and articles for cricket and polo. Furthermore, there has been a reduction in tariffs on cashew kernels (from 5 percent to 2.5 percent), chillies (from 20 percent to 10 percent), chilli powder (from 25 percent to 12 percent) and castor oil (from 8 percent to 7 percent).

In addition, the import duty on black tea in bulk has been reduced from 26.4 percent (national tariff) to nil and on black tea in packets from 27.9 percent (national tariff) to 5 percent *ad valorem*. How far these reductions in duties on tea will increase tea consumption in France will depend on various factors, such as the extent of the reduction of tariff which is passed on by the tea trade in France to consumers, the incidence of internal taxes, promotional measures adopted to create an image of Indian tea, present consumer habits and promotional measures adopted by other beverages in a country like France which traditionally is in favour of coffee. The Tea Board has, however, started on a promotional campaign for Indian tea in the E.E.C., including France, to create a more vigorous image of Indian tea.

MICA

Regulating Exports

Some explanation is now available for the stoppage of mica exports on a consignment basis. The Government noticed that whereas the total quantity of mica exported from India had been increasing, the total foreign exchange earnings and prices a unit had been declining. The main reasons for this are the following:

(1) Due to internal competition and pressure of foreign buyers, the Indian suppliers were under-cutting prices below reasonable levels.

(2) Exports of mica were generally made on a consignment basis with the result that labourers working in the industry were not often getting their wages regularly because the payment to them depended on the realisation of earnings against sales made on a consignment basis. This, in some cases, was delayed as much as 18 to 24 months from the date of shipping the consignments. Furthermore, consignment sales gave a bargaining ad-

vantage to importers. The latter, taking advantage of the position, sometimes dictated terms which the exporters had no option but to accept. This made the sale of mica very uneconomic with the result that some of the mines had to close down.

(3) Mica waste exports were coming in the way of the export of mica splittings to the detriment of exports and the earning of foreign exchange.

As already reported, the Government has taken the following steps to regulate the export of mica: (a) The export of mica on a consignment basis as also of mica scrap, mica waste and factory cuttings have been banned with effect from 1st February, 1964. (b) Floor prices for certain broadly accepted varieties of splittings have been fixed and their shipments from 15th February, 1964, are allowed, on those floor prices or at higher rates.

GLASS

New Hyderabad Factory

The licensed capacity of the proposed composite glass factory in Hyderabad to be set up with Hungarian collaboration is as follows for the various items:

Name of article	Capacity (annual)
Sheet glass	24 million square feet
Glass bottles	12,000 tons
Glass shells	20 M. pieces, i.e., 900 tons
Glass tubes	900 tons
Crystal glass and glass-ware	1,500 tons

The terms of collaboration are being considered.

RUBBERISED COIR FIBRE

Licences Granted

The following three firms from Kerala have been granted licences for the import of machinery for the production of rubberised coir fibre articles: Fibre Foam (Private) Ltd., Baliaapatam, Basco Enterprises, Bombay, and Associated Rubber and Fibre Industries, Cochin.

TRANSFORMERS

New Kerala Factory

The Kerala State Industrial Development Corporation Ltd. Trivandrum, has been granted a licence under the Industries (Development and Regulation) Act, to set up an industrial undertaking in Ernakulam for the manufacture of transformers in collaboration with Hitachi Ltd of Japan. The foreign company will participate in the issued capital of the proposed undertaking to the extent of 26 percent and will also be paid of 26 percent and technical assistance royalty and charges. The factory is expected to go into production by 1965.

S.T.C.

Trade Delegation to Russia

A trade delegation of the State Trading Corporation headed by its chairman, Mr. B. P. Patel, left for Moscow to negotiate for the supply of 150,000 tons of ammonium sulphate from Russia. It will visit Berlin to negotiate the import of 50,000 tons of fertilisers from East Germany for the current year. Discussions will also be held for the supply of cinema carbons, caustic soda from East Germany and exports of opium and manioc meal to Russia and East Germany. It will also visit Prague for talks with the Chemopol of

Czechoslovakia for the import of chemicals. The chairman of the S.T.C. will also visit the Leipzig Fair.

NEWSPRINT

Imports from Canada

The contract recently signed with Abitibi Sales Co. Ltd, Toronto (Canada) by the State Trading Corporation provides for the sale of about 25,000 metric tons of unglazed newsprint to be supplied between 1st April, 1964, and 31st March, 1965. The minimum quantity which can be supplied as a separate lot is 25 metric tons and the sellers have undertaken to use Indian ships for transporting at least 50 percent of the total tonnage. The current year's requirements of imported newsprint by the newspaper industry are about 120,000 metric tons. Imports are likely to be limited to 90,000 metric tons.

TELEPHONE

Foreign Firm Wins Contract

The Government of India recently announced its decision in Parliament to enter into a contract, subject to a satisfactory settlement of terms, with the Bell Telephone Manufacturing Company, the Belgian subsidiary of the International Telephone and Telegraph Corporation of the U.S.A. for

the purchase of crossbar type of telephone switching equipment as well as its manufacture at the Indian Telephone factory in Bangalore. The Government will import 48,000 lines crossbar switching equipment to be installed in New Delhi, Bombay and Madras at an estimated cost of \$6.5 million to be financed from the World Bank loan extended to India for the development of telecommunication facilities. The plant and equipment for the factory will be designed to manufacture 100,000 lines of crossbar type of telephone switching equipment on a single shift basis and will be financed from the Belgian credit extended to India last year. The factory will have an installed capacity of 150,000 lines a year with the possibility of a second unit of similar capacity being set up in due course. The output will commence with assembly from piece parts and will rise to full production in three to four years. Bell Telephones has won the contract in the face of keen competition from Japan and Sweden.

DEVELOPMENT INSTITUTE

Mr. W. Clark to Visit India

Mr. William Clark, Director of the Overseas Development Institute, London, is to spend a fortnight in India. A former correspondent of the *London Observer* in New Delhi, he is due to arrive in the Indian capital on 11th March.

Exide Batteries still keep going when the rest have stopped

Silver Exide are the strongest, most reliable batteries under the sun. They are quality tested at every stage of production... that's why you're sure of a long and

trouble free life. Silver Exide Batteries are obtainable from dealers everywhere. So don't delay—and you'll still keep going when the rest have stopped.

PROSPECTS FOR ECONOMIC EXPANSION IN U.K.

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer has made a number of speeches lately dealing with the economic situation, and they have gone a long way to dispel the anxiety occasioned by the January trade figures. On television the other day, when discussing the subject with Mr. Callaghan, his opposite number in the Labour "shadow" Cabinet, Mr. Maudling listed five reasons why Britain's economy is now better equipped than in 1960 to withstand a balance of payments crisis. The differences, he said, between this time and before are: (1) The country has far greater resources to support sterling; (2) the outer sterling area is in a position of surplus rather than of deficit; (3) the economy is much stronger because of recent investments; (4) there is less scope for expansion in consumer credit and bank advances; and (5) people understand far better than before the fundamental need for an incomes policy and restraint of incomes if exports can be maintained at a high level.

Apparent in all the Chancellor's remarks has been the continued confidence of the Government in the strength of the economy, even though a recurring theme has been a warning against rises in wages and profits, which represent the "major threat." Success in exports and the achievement of the target for steady expansion depend on the acceptance of restraint on incomes. There was no getting away from this simple fact for trade unions or for management. "If trade unions should insist on exploiting their monopoly position to demand with threats of industrial action wage increases or reductions in the working week which outstrip the growth of productivity: if employers should accept these demands with the intention of exploiting the present buoyant home market by passing on the increased costs with interest to the consumer in the form of higher prices, then they will themselves be undermining the prospects of growing prosperity that lie in front of us."

Restraining Demand

How is the outlook viewed in other quarters? The National Institute of Economic and Social Research—an

independent group of economists who have been impassioned advocates of expansionist policies all along—now puts the case for early action to restrain the rise in demand clearly and forcefully. The economy is now moving at great speed. In the absence of Government intervention, the total demand is likely to grow between now and mid-1965 at a rate of 5½ percent a year, or possibly more. Plant capacity is probably adequate for a rise of this order, but the labour supply is clearly not. The right course, therefore, is to begin slowing down now.

Use of Regulator

The Institute is equally clear about the way it thinks this could best be done. It has no faith in monetary measures. Use of the "regulator" would mean pushing up prices and providing the unions with an excuse for bigger wage claims. Government expenditure might be cut; or there could be a phasing out of public sector investment to ease the pressure on resources in the next 18 months. But more than that is needed, and the Institute plumps for a rise in direct personal taxation of around £200 million in the Budget to hold back consumer spending.

The writers of the *Economic Review* are emphatic that this would not mean a return to "stop-go". The adjustment they propose would, they think, still leave real demand rising at 4 percent a year. The way would still be open for further Government action later in the year, either to step up demand again if the measures taken turned out to be too severe, or to reinforce restraint if the economy still seemed to be going too fast. The danger of postponing action is that the country may run into a serious crisis which would require much tougher measures later in the year. The damage to confidence and to long-term growth prospects would then be all the greater.

This is a fair assessment. If anything, the Institute is too optimistic. It assumes that unemployment will not drop below 1.5 percent before the end of this year where already—in what is usually the worst month—it is down to 2 percent. It also

is possibly blunt but nevertheless effective early warning that the economy must not be allowed to get overheated.

Survey of Industrial Opinion

There are two sides also to the latest survey of industrial opinion carried out by the Federation of British Industries. The mood of optimism about business prospects at home and in exports continues unabated. That fits in with all the other evidence. The second result is more unexpected: there are still few signs of shortages or strain. Half the firms replying to the F.B.I. questions were still working below capacity in the ten days ended 4th February when the returns were made. A year ago, 68 percent said they were working below capacity. The lowest figure recorded in these enquiries was 40 percent in June 1960.

Other replies support the impression that the U.K. has not yet reached the stage of general boom. The percentage of those who think that further expansion may be limited mainly by the shortage of plant capacity has risen since October from 12 to 19 and in the case of firms expecting skilled labour shortage to be the more important obstacle from 16 to 19. These figures are still fairly low. Substantial majorities expect employment to increase further and the level of output to go on rising over the next four months. While labour is, on balance, "less easy to get" than it was four months ago, the difficulty has not yet grown acute, to judge from the figures.

F.B.I. statisticians interpreted the results as meaning that the peak of the boom was still a considerable time ahead. On statistical grounds alone, the present point in the trade cycle could be compared very roughly with February 1960, which was between four and eight months before the top of the boom. But comparisons must not be pushed too far. This time public investment will play a much greater part in generating the boom, and no one can tell precisely when this expenditure will come into full flood. The latest enquiry again confirms that private industrial investment is about to rise strongly. For plant and machinery a substantial majority of firms expect to authorise more capital expenditure in the next 12 months than they have done in the past 12.

There is strangely little evidence of movement in stocks. Majorities report rising stocks of raw materials and work in progress, but the shift is not large. Even the expectations for the next four months do not indicate any widespread anxiety to build up stocks.

assumes that exports will rise by 8 percent between the fourth quarter of 1963 and the fourth quarter of 1964, and that the adverse balance of visible trade will be no more than around £55 million in the first half of this year. Already in the last three months, the trade deficit has been running at a far higher rate. In November to January, there was an adverse balance of probably about £100 million. This may turn out to be exceptional: exports, after seeming to flatten, might rise again in the next few months. But it would not be prudent to bank too much on a big revival of exports at this stage.

The case for restraint is sufficient-ly strong on domestic grounds, anyway, even if the balance of payments does not give us worse worries. Almost certainly if demand is left to grow unchecked the country will run up against the limits of labour supply some time in the next year. (Regional policies can at most buy a little more time.) Unless there is a strong incomes policy in force by then, wages will once again begin to push ahead much faster than productivity.

Raising Taxes

But will the Government dare do what the Institute suggests, and put taxes up steeply in an election year? An increase of £200 million in direct taxation (6d on the standard rate) is a tall order politically at any time. The temptation to look for other, less painful remedies, must be strong. One idea that is beginning to be talked about again by economists in responsible places is selective control of imports. This is not the sort of control advocated by Sir Roy Harrod a year or so ago, designed to choke off some of the excessive rise in imports of consumer goods brought on by trade liberalisation. Rather the object would be to moderate the rapid build-up of stocks of industrial materials, which seems to lie behind the latest upsurge in imports.

The City remains as sceptical of such devices as it is cynical about the Government's willingness to risk losing votes by raising taxes. For this reason, Bank rate has been raised by 1 percent to 5 percent. This

SMALLER FIBRE PURCHASE QUOTA ISSUED FOR MARCH

THE Jute Commissioner has announced a purchase quota of 430,000 bales—400,000 bales for the L.J.M.A. mills and 30,000 bales for the rest—for the five-week period ending 4th April. The purchase quota for February was 540,000 bales. With the issue of the latest quota, 6.69 million bales, amounting to 83.62 percent of the season's estimated fibre availability of 8 million bales (including imports and smuggled supplies from Pakistan) will be disposed of, leaving roughly 1.31 million bales with growers and holders. The latest quota is deemed adequate to absorb the approximate daily arrivals of about 40,000 maunds in the terminal markets. The Jute Commissioner, Mr. G. C. L. Jones, stated at a Press conference in Calcutta last Monday that purchase quotas would also be issued in April and May, as was done last year, to help in the disposal of the remainder of the 1963-64 crop. Replying to a question, he said that about 10 percent of the total crop was of inferior quality. In view of the preference of mills for high-grade jute, the Government was exploring the feasibility of importing more long jute and cuttings from Pakistan.

Asked about the crop prospects for the 1964-65 season, the Jute Commissioner said that in view of the steady trend of fibre prices this year and the fair return received by growers, there was every likelihood of a good crop, provided the weather was good. The authorities are optimistic about achieving the third plan target of 8 million bales without affecting the acreage under foodgrains. With the gradual attainment of the target, efforts are being concentrated on improving the quality and yield of the fibre. Fourteen districts have been selected for an intensive "package programme" of jute cultivation. Of these, eight are in West Bengal, three in Assam, two in Bihar and one in Tripura. Two more package schemes are proposed to be taken up. The first will cover the canal-irrigated districts of Cuttack, Balasore, Sambalpur and Puri in Orissa, and the second will cover the Kheri, Sitapur and Bahraich districts of Uttar Pradesh.

A New Product

The Fabric Research Laboratories in Dedham, Massachusetts, have developed a moulding compound named "contourite" from samples supplied by the L.J.M.A., according to Mr. William A. Nugent, the L.J.M.A. representative in New York. The product is a new processed form of jute fibre capable of many end-uses in the U.S.A. It will be put to commercial use by the Contours Unlimited, Inc., Franklin (Mass.) as soon as the trade mark application is sanctioned. The new material, it is claimed, will go into panels and furniture and will be used in building industries, since the laminated surface offers a finish which is durable and impervious to denting and scuffing.

Jute and burlap are now used for manufacturing shells of luggage, radio, and hi-fi cabinets and musical instrument cases. Jute products have been facing stiff competition from synthetic fibre, glass fibre, plastic sheets and light weight of processed jute have helped jute goods to meet a sizable part of the demand. In spite of this U.S.A. have been steadily rising and the consumption in 1963 was an all-time peak for postwar years. With

the development of new processes and the evolution of newer uses, the consumption is expected to rise further, according to Mr. Nugent.

Shippers to Tour Africa

A four-man delegation of jute goods shippers will shortly visit countries in northern and western Africa. Led by Mr. N. L. Kanoria, the team will tour these countries for about four weeks to explore the prospects of stimulating the consumption of jute goods. India's annual exports to these markets average 110,000 tonnes, valued at around Rs. 17 crores. Calcutta shippers feel that despite Pakistani competition, there is considerable scope for expanding the market for Indian gunnies, provided effective steps are taken to inform consumers of the merits of Indian goods.

THE JUTE MARKETS

Manufactured Goods: Barring small enquiries from the U.S.A. and the Argentine for ready hessian, and scattered Indian Government tenders for B Twills for the near positions, interest was lacking in the Calcutta gunny market during the past week. Towards midweek, shipper covering against end-of-month bookings caused a marginal improvement. But sentiment deteriorated with the emergence of a large number of mills as keen sellers for all positions. As a result, the earlier gains were partially erased at the close. Reports of a further deterioration in Calcutta port due to the dearth of lighters for loading, and a serious cut in drafts forcing some export vessels to shut out cargo, depressed the market. Shippers and overseas buyers were notified of the likelihood of delays in shipment due to these factors. In the futures market, last-minute covering against due-date transactions helped a minor rally earlier in the week. But prices eased after Monday on reports of a weak trend in the spot market combined with sizable bull liquidation and even some bear-selling. The market closed with a small gain, on balance, over the previous week's closing levels in both hessian and sacking. The fluctuations were moderate in the former and wide in the latter, and the undertone was quietly steady at the close.

Wednesday's quotations were as follows:

	Mar.	Apr.	July.	Oct.
	June	Sept.	Dec.	
40in. 7½oz.	34.55	34.55	34.45	34.30
40in. 8oz.	37.15	—	—	—
40in. 10oz.	46.05	46.30	46.30	46.05
B Twills	111.20	112.15	112.75	112.50
Corn sacks	115.90	115.10	115.65	115.40
Heavy Coes (Plain)	111.50	111.65	112.25	112.65
A Twills	135.50	135.25	135.00	135.50
Liverpools	127.00	127.00	127.00	127.00

Raw Jute: Easy conditions prevailed in the raw jute market during the past week. The Calcutta market was dull due to the absence of mill interest. In the upcountry agencies too, mill agents were virtually inactive. The daily arrivals, mainly of low-grade fibre, had declined to around 40,000 maunds. Holders seemed to be worried over their offgrade stocks and were inclined to discount prices to around the official floor levels. The February purchase quota of 540,000 bales was duly lifted by the mills. For the five-week period end-

ing 4th April, the Jute Commissioner issued a fresh quota of 430,000 bales. But it failed to tone up the market. Transactions were of a routine nature in selected grades, generally for long positions in the secondary markets around previous levels. Fluctuations were narrow. In the futures market, Upper Assam White Bottoms June suffered a mild reaction after moving within a narrow groove. The earlier firmness induced by brisk short-covering could not be maintained due to large-scale profit-taking. Turnover was moderate and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basic Bottoms)		T.S.D. Minimum Price	
	Current Prices

THE U.K. JUTE MARKETS FAIR BUYING IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market in Pakistan, is firm and sellers of white jute have shown a tendency to raise their prices. Imports of loose jute from uncountried areas are small but at the same time there is no large demand from any overseas country.

Dundee spinners have been buying fairly steadily, and this should continue for some time. The quantity of jute available ex warehouse, Dundee, is now small and more interest is being shown for shipment parcels. Dundee spinners, it is estimated, have still to buy about 200,000 bales from the present crop.

Offers being made here are irregular and business does not always take place at the lowest quoted rates. Spinners are selective in their buying because of the irregularity in quality this season. Offers are lowest at £148 for Mill Firsts, at £110 10s for Mill Lightnings, at £96 for Mill Hearts, and at £82 10s for Grade Tossa-2/3. Offers for February-March shipment. Grade Tossa-2/3 is still available to a limited extent at £124 10s and Grade Tossa-4 at £108. Dacca Tossa-5 is offered at £135 10s and Dacca Tossa-6 at £108 10s. There are sellers of Outport Tossa-2/3 at £94 15s and of Outport Tossa-4 at £84 10s, for February-March shipment.

The E.P.C. values of cuttings were recently raised by £1 a ton and very few offers are now being made. S.N.C. is quoted at £62 and N.C. at £53, c.i.f. U.K. The official prices of cut ropes, S.M.R. and H.J.R. were also raised by £1. Mesta is firm, and offers are rather scarce.

ALLAHABAD BANK NOMINEES LIMITED

REPORT OF THE DIRECTORS

The Directors submit their Report and Accounts for 1963.

The Company had neither any income nor any expenditure during the year and all out-of-pocket expenses have been borne by Allahabad Bank, Limited.

Mr. Malise Julian Maclaren resigned from the Board of Directors with effect from the 17th April, 1963, upon his retirement from India.

Sri Sri Narain Mehrotra was appointed a Director under Article 51 with effect from the 26th April, 1963.

Under Article 55, Mr. W. Smith retires from office by rotation but is eligible for re-election.

The Auditors, Messrs. A. F. Ferguson & Co., retire and offer themselves for re-appointment.

Calcutta : 19th February, 1964.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the attached Balance Sheet of Allahabad Bank Nominees Limited as at 31st December, 1963 and also the attached Profit & Loss Account of the Company for the year ended on that date, and report that:

- (1) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit;
- (2) in our opinion, proper books of account as required by law have been kept by the Company so far as appears from our examination of the books;
- (3) the Balance Sheet and Profit & Loss Account dealt with by the report are in agreement with the books of account;
- (4) in our opinion and to the best of our information and according to the explanations given to us, the accounts give the information required by the Companies Act 1956, in the manner so required and give a true and fair view:
 - (a) in the case of the Balance Sheet, of the state of the affairs of the Company as at 31st December, 1963; and
 - (b) in the case of the Profit & Loss Account, of the profit/loss for the year ended on that date.

Calcutta : 20th February, 1964.

Rotorvanes

GIVE YOU
A POWERFUL
MECHANIZED
GRIP ON

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanizing to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for. The Rotorvane will help you make good tea.

The Portable Intermediate Roll machine is very fast to assemble. Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

AIDS TO INCREASING TEA EXPORTS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA'S tea export trade is improving in spite of a stagnation in production and this, in the opinion of the Tea Board chairman, is largely due to the rationalisation of the physical structure of the exports. In 1963, India exported 493 million lbs of tea valued at Rs. 132.4 crores, and this was the highest for the past five years. This was in spite of the fact that production was smaller in 1963. The 1963 crop of 752 million lbs was as much as 30 million lbs down, when compared with the 1961 output.

The Tea Board chairman, Mr. A. S. Bam, claimed while talking to news-

men in Ernakulam recently that the increase in exports was due to the rationalisation of the physical structure of India's exports. The export duty on tea which had existed since January 1948 was totally abolished last year. Earlier the export duty had been reduced from 44nP to 24nP. Besides, the exporters enjoyed a refund of zonal export duty of 15nP a kilogram at the point of export. Therefore, the overall benefit accruing to exporters on this head was 34nP a kilogram of exported tea in 1962-63. He pointed out that thus for the first time in the history of the tea trade in India, both inter-

nal and export teas were subject to the same amount of duty. Up to now, export tea was at a disadvantage because it had to bear the internal as well as the export levies. Trade circles, Mr. Bam claimed, appreciated this gesture on the part of the Government in abolishing the export duty.

The chairman said that production in south India amounted to over 190 million lbs, and this was the highest on record. South Indian output had been going up steadily, although the country's overall production last year and the year before was maintained more or less at the same level. This was due to unfavourable weather conditions in north India where 75 percent of the country's tea was produced. He said Cochin's share in the country's tea export trade also had been on the increase. Last year, tea exports through Cochin reached 44 million kilograms, valued over Rs. 30 crores. The chairman said that the tea traders in Cochin had

CAPITAL, 5th March, 1964.

told him that they were experiencing several handicaps and one of them was the incidence of the sales tax of the Kerala Government on tea exports. The traders argued that if at all there was to be such a levy on export tea, it should be confined to a single point. Another suggestion put forward was that the tea industry should have the facility of bonded warehouses. These points would engage the Tea Board's attention soon, the chairman said.

Mr. Bam said that the Board was fully conscious of the competition posed to Indian tea by Ceylon, Indonesia and such producers abroad. The Board was prepared to render all possible assistance to the gardens to produce more tea and the trade to export more tea. The Board had been extending to producers loans on easy terms for the purchase of equipment and renovation of machinery, increasing the area under cultivation, etcetera. The Board had also evolved a scheme whereby

CAPITAL, 5th March, 1964.

planters could obtain additional advances based *pari passu* on the securities already lodged by them with banks against earlier loans received by them. The Board was always anxious to help exporters in this country, and would be prepared to extend whatever concessions were possible whenever the need arose, he added.

Speaking of promotional activities on the part of the Tea Board, Mr. Bam said its annual expenditure on this head was steadily going up. Last year, it spent Rs. 35 lakhs and this year, the provision was Rs. 60 lakhs. This might go up further in 1964-65, he said. The Board was trying not only for expanding the internal consumption of tea, but also for finding new markets for Indian tea abroad. He mentioned the promotional activities in the U.K., the U.S.A., the Continent, Australia, Egypt, etcetera, in this connection. The Board had opened tea centres in these countries. It was operating mobile vans in Jeddah, Mecca and the U.A.R. The Board would be sending its vans shortly to Afghanistan and Sudan also, he added.

Offerings at Cochin Auctions

A Special Correspondent writes: Cochin is developing as a tea auction and export centre. South India produced 194 million lbs last year of which about 44 million kilograms were exported through Cochin. The chairman of the Indian Tea Board at a recent meeting in south India said that the quantity of teas coming to the Cochin auction was progressively increasing year after year. About 30 million kilograms of tea were offered in the Cochin auction last year, compared with 24.5 million kilograms in 1962 and 22.4 million kilograms in 1961. He remarked that the Tea Board was now stepping up its foreign promotional activities with a view to developing not only the conventional markets, but also exploring new markets for Indian tea.

The tea industry was today a well organised and well-regulated industry employing over 1 million persons. Mr. Bam said that the Tea Board would take all correctional steps with a view to giving export relief and rationalising the fiscal structure in order to help the tea industry to export more.

He pointed out that India was trying to step up her market for tea in west Asian countries. The Tea Board had opened tea centres in Cairo, Edinburgh and Dublin, and it was proposed to open a tea centre in London and another in Sydney shortly. India exported 493 million lbs of tea and earned foreign exchange worth Rs. 132.4 crores in 1963. This was the highest export performance in the last five years, both in terms of foreign exchange and the volume of exports, he said.

The findings of the Bonus Commission are said to be unfavourable to plantation interests, who had drawn attention to some inherent characteristics which are absent from working conditions in urban industries, and it was expected the Commission would take due note of the differing circumstances. But from a perusal of the advance summary, it is feared the point has been ignored. As the Commission has stated "there is no reason for recommending exemption of plantation industries".

It may be noted that in its questionnaire, the Commission asked every industry to state special features for consideration, and plantation managements cited a number of them pertaining to agricultural work such as weather, soil, pests, disease and differences of location, terrain, types of trees, bushes, also wide varieties of yields, temperatures and

such important points where agriculture and its difficulties differ from industrial and urban working. Even under fiscal laws, agriculture and industry are treated differently. Rehabilitation is needed on many plantations, and it was urged that prior charges calculated on the replacement value of assets in respect of buildings, plant, machinery, etcetera, should also cover expenditure on rehabilitation of planted areas. For that is where the revenue comes from, and it is essential to secure an adequate return on all capital employed (not only on the original invested capital). It is understood that these representations have been ignored.

The Commission recommends a return an equity capital of 7 percent and only 4 percent on working capital. The planting industry had asked for 10 percent minimum. With debentures yielding 7 percent and preference issues giving 9.3 percent, further comment is unnecessary.

Competition for U.K. Market

Individual campaigns are being waged by Indian and ceylonese interests to secure more of the U.K. tea market, and Ceylon seems to be out to offer a "better product packed in a more attractive cover". The Ceylon Tea Centre is reported to be against price cutting which results in inferior blends, but, if producers and distributors let tea slide down to being a cheap beverage, no amount of advertising will haul it up again. It must be noted that these recommendations come from Ceylon, not the big U.K. blenders. What they are doing to capture new markets remains unanswered.

Tea business with U.S.A. has become more dynamic, and the outlook is considered healthy. Contrary to London, it is claimed that the future for tea in the U.S.A. is good because of three product innovations, namely, iced tea, tea bags and cold water soluble instant tea.

Mr. Geo N. Witt, president, Tea Association, U.S.A., asks, "What's new? What will be the next innovation—some kind of a product change is a certainty. How else can tea stay competitive?" As it has been a marketable commodity in world markets for 200 years, this certainty of change is a new line of reasoning. Iced tea has increased the demand and now that instant tea is on the market, further advances are hoped for. Mr. Witt points out that tea competes with beer, wine, whisky, milk, cola, fruit and vegetable drinks as well as coffee and the cost of advertising may be \$40 to \$1 against tea. But tea has two important points—low calories and economy. The first affects the waist line and the second the pocket. And tea still has, with flavour, lightness, iced, it is a good thirst quencher, wholesome and thanks to tea bags and instant tea, it is convenient to prepare. Furthermore, over the years prices have kept reasonably stable. In the U.S.A., with assured supplies and quality at stable prices, tea must be made available everywhere in forms that the people want and at prices that would keep it competitive.

Tea has been doing fairly well for over a decade, but progress is only at the 2 to 3 percent mark. In view of the strong competition, however, in the U.S.A., tea sales have made satisfactory progress. Mr. Witt concludes, "How far and how fast we continue to move, no one can say. I personally feel that it depends on ideas, research, experiment and the eventual answer to the question: what's new?"

The dust auctions held in Calcutta last week resulted in further irregular prices. Considering the lighter crop to come under the hammer,

growers appear to be hurrying sales as offerings are not far short of 100,000 packages a week. Lower prices are also reported from Cochin, although in that market, quality teas have fetched full prices. South India is going ahead as that area now accounts for over a quarter of this country's production. During the past 10 years, progress has been marked and the south reaps the advantage from two monsoons.

COCONUT

Output Increases

According to the Chief Minister of Kerala, coconut which claims the biggest share in the State's agricultural income, registered an increase in production to the tune of 58 million nuts in 1963 over the previous year's. He made this claim in his Budget speech on 28th February. Almost 70 percent of India's coconut output is from Kerala. According to an estimate of the State Government there were 1,247,000 acres under coconut cultivation in Kerala in 1961-62. Production that year was to the tune of 3,247 million nuts. Production in 1962-63 is estimated at 3,305 million nuts. India is not self-sufficient in coconut. She has to import large quantities of copra and coconut oil from countries like Ceylon. In 1962-63, Rs. 10 crores was to be spent on the import of copra and coconut oil.

Coconut provides the raw material for the coir industry which supports a large number of people in Kerala, and earns foreign exchange to the tune of over Rs. 10 crores annually. As a matter of fact, coir and coir products valued at about Rs. 12 crores were exported from India in 1963. There has been a certain amount of stagnation in coir exports over the past few years, and this is said to be mainly due to the ruling high prices. According to the Kerala Government, the basic cause of high prices and stagnant trade is the continued use of traditional methods of production and the insufficient endeavour to find diversified uses for husks. The Coir Board is sponsoring some schemes for modernising and diversifying the production and manufacture of coir goods. The panel for coir and coir manufactures of the Government of India has recommended the release of necessary foreign exchange for the phased mechanisation of the coir matting sector.

RUBBER

Production Up

Rubber, which is another important crop of Kerala, registered a sharp improvement in 1963. Out of the 361,000 acres under rubber cultivation in India 340,000 acres representing 94 percent of the total is in Kerala. Kerala accounts for 90 percent of the country's production of natural rubber. The Chief Minister, Mr. Sankar, said in his Budget speech that among the plantation crops of Kerala, rubber has recorded the maximum increase in output. Its production increased by about 16 percent compared with 1961-62. Rubber is an important industrial raw material whose production in the country is very much short of demand.

It is said in one of the budget papers that the average yield of rubber in Kerala is only a little more than half of the yield in neighbouring Madras State. The average yield from each acre in Kerala increased from 141 kilograms to 143 kilograms during the second plan period, whereas in Madras it increased from 203 kilograms to 250 kilograms during the

same period. During the first two years of the current plan period, the progress was even faster in Madras where the yield from each acre rose up to 280 kilograms by 1962-63 and the Kerala average to 150 kilograms. The slow pace of development in Kerala is attributed largely to the higher proportion of small and uneconomic holdings in this State. About two-thirds of the area under rubber in Kerala are in the holdings of less than 50 acres, whereas in Madras only one-third of the areas in small holdings of the above size. The average size of a holding in Kerala is only 3.28 acres, while the minimum size for a unit to be economic is 5 acres.

The decontrol of rubber has not so far resulted in any rise in the price of this commodity, which is said to be in short supply in India. It is said that consumers are now organising themselves to meet a situation in which prices would shoot up if there is any hectic buying of rubber. The tyre manufacturers are reported to have set up a purchasing organisation of their own since the decontrol, they have not been in the market and are said to be operating by running down their buffer stocks which normally consisted of three to four months' consumption. Other rubber goods manufacturers are also said to be doing like this. It is emphasised that this is done not with a view to depriving the producer of a higher price, but to see that the consumer gets his rubber at reasonable prices. Tyre manufacturers who take as much as 65 percent to 70 percent of the production are in a strong bargaining position.

LEMONGRASS OIL

Liquidating Stocks

The State Trading Corporation has recently completed arrangements for liquidating the lemongrass oil stocks, which it bought under the price support scheme of the Government of India. There was a big stock estimated at between 800 tons and 1,000 tons with the S.T.C. and the export trade in the country was urging its speedy liquidation even if it amounted to a loss to the corporation because there was the danger of lemongrass oil in stock losing quality due to aging and this stock hanging over the market and depressing the price of the new season's crop. According to the S.T.C. sources, the corporation had to give a discount of about 20 percent over the purchase price to the foreign buyers who had agreed to take this oil from the Corporation. It entered the market towards the middle of last year on the instructions of the Central Government and brought lemongrass oil from producers at the floor price fixed by the Government. The S.T.C. had to be sent to the market in view of the unwillingness of the regular trade to pay to the producers the floor price fixed by the Government. The floor price was Rs. 137.50 to 147.50 a 10 kilograms depending on variations in quality.

The new season is to begin by May in Kerala, where almost the entire Indian crop is produced. In the meanwhile, the small carry-over from the last season's crop is going in for prices at around Rs. 100 a 10 kilograms since the S.T.C. had stopped its purchase programme under the price support scheme. The export trade has been urging the Central Government to revise the floor price downward to the level of the international price and if possible to abandon the system of price control in order to enable the export trade to compete with rivals like China and Guatemala in the world market.

LIC DECLARES HIGHER BONUS

WHOLE LIFE ASSURANCES

Rs. 17 • 50
per thousand per annum

ENDOWMENT ASSURANCES

Rs. 14 • 00
per thousand per annum

4TH VALUATION RESULTS

Life Insurance
Corporation
of India

The Life Insurance Corporation has pleasure in declaring the rates of bonus as a result of the fourth Valuation of its liabilities and assets as at 31st March 1963. These bonus rates are applicable to with-profits policies issued by the Corporation and which were in force for full sum assured as at the date of Valuation.

The total sums assured and bonuses under 94,93,033 policies in force on the date of the Valuation amounted to Rs. 3,166 crores, and the total amount payable under 10,303 Life Annuities was Rs. 1,05,13,117 per annum. Out of the total profits available for distribution amounting to Rs. 26.71 crores, a sum of Rs. 25.39 crores has been utilised for allotting bonuses to the policyholders. Government's share of surplus amounted to Rs. 1.32 crores.

The rates of bonus on with-profits Policies of the erstwhile Insurers are governed by the Life Insurance Corporation of India (Classification of Policies for Differential Bonuses) Regulations, 1961 and these have been similarly increased, wherever applicable.

All Policies entitled to participate in profits on the Valuation date are eligible for :-

- Two years' bonus—If the Policy was effected in the months January to March of any year prior to 1.1.1963.
- One year's bonus—If the Policy was effected between 1.1.1963 and 31.3.1963 or in the months April to December of any year prior to 1.1.1963.

Bonus intimations in respect of the fourth Valuation will be sent out to the policyholders as soon as possible.

(Continued from foot of previous page)

These notes refer to the Debentures on the next page.

Option to repay at par on 5 months notice—

- (a) Option to extend the redemption period for further 10 years
(b) at any time after 1-1-61.
(c) on or after 1-1-61.
(d) option to redeem at 2 1/2% Prem. after 14-5-64 and before 15-5-64.

Option to repay on 5 months notice—

- (1) at any time after 30-6-61 at 10 1/2%.
(2) at 10 1/2% between 1-1-61 & 31-12-64.
(3) at 10 1/2% after 30-6-64 but before 30-6-64.

Option to repay on 3 months notice—

- (1) at any time at 3% Premium.
(2) at 1% Prem. after 1-3-64 but before 1-3-67 and 1% Prem. on or after 1-3-67.
(3) at any time at par.

- (4) at any time after 31-3-62 at the rate of 1% Premium.
(5) at any time after 31-3-62 at the rate of 1% Premium.

- (m) redeemable at 103% on 31-12-64 with option to redeem on any interest date at same premium after 30-6-64.
(n) at any time on two months notice—

- (o) to be redeemed at a premium of 10% i.e. 10.00 to be redeemed annually by drawing on 3 months notice with option to redeem all after 5 years from date of issue on 5 months notice. Option not exercised repayment to be made after full term.

Option to repay

- (p) at par after September 1960.
(q) at par on or after 1-12-64.
(r) with option to redeem at 101% after 10 years or at 100 1/2% after 12 years.

- (s) Ra. 100,000 to be redeemed annually by drawing from 1-6-61 with option to redeem at 100 1/2% between 1-6-61 to 1-6-64 and at 101% afterwards.
(t) with option to redeem at 101% after 10 years or at 100 1/2% after 12 years.

- (u) with option to redeem all or any of the Debts at 101% at any time after 31-3-64 and at 100 1/2% at any time after 31-3-64.

- (v) Ra. 80,000 are being redeemed annually repayment of Debentures commencing serially from No. 1 to No. 80 on 31-12-68.

- (w) Redeemable at any time at a per cent premium (a) on 3 months notice by the Company or (b) in the event of the security becoming enforceable or at par if the Corporation of Calcutta or Howrah purchase the undertaking on 1st January 1945 or every seventh year thereafter.

- (x) At par all or any of the Debts on 31st December 1960 or on any subsequent interest date.

- (y) Redeemable (a) at 102% on 1st October 1974 or in the event of voluntary liquidation of the undertaking being purchased or (b) at 102% at any time after 31st March 1962 on 3 months notice from the Co. (c) also redeemable out of a sinking fund (commencing in 1938) by drawing at 102% or purchase at or under 102%.

- (z) Also redeemable out of a cumulative sinking fund of 1 1/2% per annum commencing in 1945 by purchase at any price less than par or by annual drawing at par.

- (H) May be redeemed at a premium of Ra. 20/- per debenture (i.e. 2%) if redeemed earlier than 31st Dec. 1955 on 3 months notice.

- (I) The Company has option to repay all or any at par by giving notice for 3 months expiring on any interest date after 30th Sept. 1955. At any time on or after 1st Oct. 1957 the holders may convert each note of Ra. 500/- into 25 ordinary shares to take effect on 1st Oct. in each year on giving 15 days' notice prior to such day.

- (J) May be redeemed at 101% at any time after 31st March 1963 and at 104% on any time after 31st March 1965.

- (K) Ra. 1,00,00,000 Debentures will be redeemed at par annually by drawing from 1-6-65. Any Debenture outstanding on 1-6-65 will be redeemed on that date with option to redeem all Debentures at 101% on 1-6-64.

- (L) Any time on months notice.
(M) At par in September 1960.
(N) May be redeemed at the end of 1965 or thereafter at 101%.

- (O) Option to repay at par on or after 31st May 1961.
(P) These Debentures are registered and are transferable by transfer deeds.

- (F) Redeemable at par on 31st Dec. 1972 with option to redeem at par at any time on 6 months notice after 30th June 1968. At any time after 31st Dec. 1948 each note of Ra. 500/- may be converted into two ordinary shares of Ra. 100/- each ranking for dividend from 1st January following.

- (X) Ra. 3,00,000 will be redeemed each year from and after 1964.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends. T means that dividend tax is deducted at source.

TEA COMPANIES

O. Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. 'P' next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

A PLEA FOR RATIONALISING THE COAL INDUSTRY

UNTIL a year or two ago, the Indian coal industry's headaches centred on three main problems. The first was that because production costs had been rising faster than selling prices, profitability had suffered, so resources for investment became difficult to conserve or attract. The second was that because investment had been slow the output of coal stayed short of the demand. The third was that because rail transport capacity was inadequate, even the relatively limited quantities of coal which were produced could not be moved to consumers regularly and in time. Over the past fifteen months or so, however, these problems have been gradually waning—thanks initially to the impetus given by the emergency. Although the profitability of the industry is still nowhere near what it should be, its investment in expansion plans has been greatly accelerated through special measures, and with the help of a loan given by the World Bank to the Indian Government for the use of the private collieries. Output has risen impressively, from 55.2 million tonnes in 1961-62 to 63.8 million tonnes in 1962-63 and a probable 66 million tonnes in 1963-64. Finally, the transport shortage has eased to an extent that would have been unimaginable two years ago—so much so that the railways are now in a position to carry almost all the coal they are offered. The result of all these changes together is that the industry is entering an era of stronger competition than at any other time since the end of the second World War. Competition, sometimes, is the progenitor only of moans; but far and away the most encouraging quality of Mr. Pran Prashad's address from the chair at the annual general meeting of the Indian Mining Association in Calcutta last Saturday is that it is bold, progressive and optimistic in its thinking. (A fuller version of the address is published on a later page in this issue of *Capital*.)

The first notable point emerging from the address is a familiar but important one. It is that to talk of a coal "surplus" is misleading, for some grades are in surplus, whereas others are not. The "surplus", such as it is, is confined to the lower grades, and it has arisen because a host of lilliputian mines have suddenly increased their production to an extent which neither the planners nor the country wanted them to. Having done so, those that can survive deserve good luck; those that cannot, may deserve a good-bye. For the fact, fortunately or unfortunately, is that the competitive conditions which have set in now call for more efficient working, and that in turn implies modernisation and large-scale operations of a sort of which the multitude of low-grade producers are basically incapable. As Mr. Prashad put it, "no other country in the world today is obliged to keep 850 and odd coal mines in production to produce merely 66 million tonnes of coal per annum." The production of fuels at the lowest possible cost can in modern conditions be achieved only by units capable of ultimately producing upwards of half-a-million tonnes of coal per annum. The Indian coal industry is now well set on the road to expansion, and "there is a splendid opportunity to leap at

once from the age of the pick-axe to the age of full mechanisation."

Many of Mr. Prashad's ideas bear the clear impress of the thinking of Lord Robens, the bluff and hearty chairman of the U.K. National Coal Board who visited India last October after having scored an astonishing success in reversing the British coal industry's slow march towards its dark and gloomy grave. Lord Robens shrewdly recognised that the U.K. mines' first and most important need was for advanced management techniques; Mr. Prashad endorses the prescription for the Indian industry. Lord Robens saw, secondly, the need for mechanisation, modernisation and large-scale operations with the latest possible equipment in the effort to cut unit costs; Mr. Prashad sees the need no less clearly. Thirdly, as the Labour Party's most worthy capitalist, Lord Robens was aware of the social and political consequences of mine-workers being displaced in the process; Mr. Prashad gives the Indian answer to the problem by saying that large new employment opportunities will be created in the secondary industries to which an increase in coal production will give rise. Finally, Lord Robens knew that mechanisation was the main way to increase labour productivity, and thus incidentally to become able to afford the wages necessary to stem the drift of the best workers away from the British coal mines; Mr. Prashad recognises that much the same thing is necessary in India if collieries are ever to be able to afford the exorbitant wages and other benefits they are already compelled to give.

The genesis of the ideas notwithstanding, and allowing for the important differences between British and Indian conditions, there can be no doubt that Mr. Prashad is fundamentally right. Critics may ask whether the Indian coal industry, which has for many years been desperately short of capital for investment, will find it easy to secure the rupees and the foreign exchange necessary for a major programme of mechanisation and modernisation. Others may question whether the managerial and technical resources exist to cope with so ambitious a venture. But the availability of these elements is, to some extent, chiefly a matter of time, and depends on the realism of the policies adopted for the future. It is primarily as a plea for realism and foresight that Mr. Prashad's address deserves careful thought, for the cost of conservation and inefficiency in so basic a sector as coal is something which in the final analysis the economy as a whole will have to suffer. The point is one which the large army of Luddites—in Central and State Governments, in the unions and, not least, in the industry itself—will need to bear in mind.

The case for rationalisation and efficiency through mechanised and concentrated large-scale production acquires further strength if one considers the vast scope for increasing the use of coal. The producers of the lower grades in particular, who have been basking in the sunshine of a coal shortage for many years, need to explore the potential markets more energetically before they

bellyache about current surpluses. As Mr. Prashad pointed out, millions of tonnes of firewood, animal dung and vegetable wastes are burnt in the rural areas each year; according to one estimate, the quantities burnt are equivalent to 80 million tonnes of coal annually. More enterprising salesmanship, supported perhaps by a small subsidy, could encourage villagers to switch gradually to coal; the manure could then be put to its proper use and the country could save some of the foreign exchange it has to spend on fertiliser imports. Similarly, outside the villages, there is vast scope for using coal to produce electricity from thermal generating plants—an idea that was once grandiloquently aired by the former Central Mines and Fuel Minister, Mr. K. D. Malaviya, although not a great deal has been done about it subsequently. Finally, there are signs that the Government may be reversing its policy of encouraging the use of furnace oil in western India; indeed, with an increase in coal supplies as well as in transport capacity, there is little point in spending foreign exchange on larger petroleum imports for the purpose.

Whatever the immediate prospects of reducing the surplus of the lower-grade coals by more aggressive selling, there is an urgent need to ensure that plans to expand the output of the higher grades should gather momentum. As Mr. Prashad pointed out, the supply of the latter has hardly managed to keep pace with demand; a serious shortage would have arisen "if expansion in steel and other important sectors had proceeded at the rate originally envisaged". Expansion in coal depends primarily on greater profitability. The

latest Budget proposals are welcome in that they include coal among the basic industries which will be entitled to rebates of corporation tax and surtax, although it is disappointing that the plea for a depletion allowance has not been conceded. Mr. Prashad also welcomed the decision announced last week to increase the prices of the better grades of coking coal and the Selected grades of non-coking coal; he thought, however, that the exclusion of Raniganj Grade I and Grades I and II coals produced from the outlying fields was unjust. The basic difficulties of the industry, in general, nevertheless remain.

Any increases in selling prices allowed so far have only gone some way towards neutralising increases in production costs. The profitability of the industry has, therefore, not been improved to the extent that is necessary to enable it to attract and service the large amounts of capital it requires for investing in expansion plans. The difficulties could be eased to some extent if assistance were given on a more realistic and liberal basis for such things as stowing, working difficult mines, strengthening railway sidings and extending facilities for mechanical loading. But the fundamental need is to ensure that the prices fixed for particular grades of coal reflect their real values more accurately; in other words, the range of prices requires to be widened by increasing the selling rates of the higher grades whose supply is still inadequate. In this way, the production of the grades which the country needs most would be expanded more rapidly. At the same time, the true purposes of conservation would be served in that consumers would be given a cost-incentive to switch as far as possible to the use of the lower grades.

THE CUP OF TEARS

IF the tea industry continues to make a handsome contribution to exports, it is more because of its own, largely unappreciated efforts than because of any assistance extended by New Delhi. This may seem an uncharitable thing to say so shortly after Mr. T. T. Krishnamachari, Central Finance Minister, has made Indian tea companies eligible for tax rebates until one notes the limited nature of the concession. Non-resident sterling companies, which account for 55 percent of the local tea output, are not eligible for the rebates, and will in fact have to pay slightly more to the Exchequer in 1964-65 because of the increase in corporate taxation from 63 percent to 65 percent. One cannot but agree, therefore, with the view expressed by the Hon. S. P. Sinha in his address from the chair to the Indian Tea Association in Calcutta last Friday that the tea industry views the new Budget proposals with considerable disappointment.

The basic fact is that an increase in production—as Mr. Manubhai Shah, Central Minister for International Trade, acknowledged a fortnight ago in an address to the Import-Export Advisory Council—is a "precondition" for larger exports. A sustained rise in output is also needed to maintain supplies to the domestic market, which is growing at the average rate of 15 million lbs a year. This is fully recognised in the targets set by the planners for the industry, which erred if anything in being overambitious. Unfortunately, however, the planners' prescription for rapid growth is still to be matched by action at the executive level to help the industry secure the necessary resources. The scale of its requirements is evident from the figure of Rs. 3,500 an acre cited by the I.T.A. chairman as the average cost of replanting, coupled with the fact that a sizable proportion of the acreage under tea in north India is past its prime. The bushes which have done duty for 50 years or more may soon have to be uprooted and replanted. The outlay in these days of high wages and soaring costs does, of course, throw a large burden, but this is aggravated by the loss of production for five or six years before newly planted bushes will yield a marketable quality of leaf.

The unsatisfactory tax treatment of the expenditure on replanting has been a major grievance of the industry which loans from the Tea Board have failed to remedy. The Board's terms—an effective interest rate of 6½ percent—seem at first sight fair, but to say so would be to miss the heavy incidence of stamp duties involved in creating a *pari passu* first charge. Mr. A. S. Bam, the Board's chairman, is perhaps willing to go as far as he can

to help, but he cannot ignore the limits set to his discretion by the legal red-tape which surrounds Government lending. His problems will be evident from the tiresome delays in advancing irrigation loans, where the Board found itself unable to assist in the sinking of tube-wells because of the difficulty of creating a suitable mortgage. Its readiness to finance the purchase of equipment alone has proved, therefore, an inadequate answer to the industry's needs, as is now being recognised. Some uncharitable critics are inclined to dismiss the problems involved here; they argue that the industry must not make itself so wholly dependent on State-assisted financing, but this is to overlook the debilitating effect that the Government's taxation policies have had.

The welfare concept has added to the damage by imposing on the industry liabilities which must mean an unwise diversion of resources from the essential tasks of expansion. The industry cannot have any quarrel with the aspiration of its workers for a better life, but the pace of change and the share of responsibility to be borne by the gardens are matters which admit of differences. It is pertinent to ask why the obligations which the State accepts elsewhere for providing medical care and schooling should automatically devolve on the industry in tea garden areas. The isolation of these areas in the past may have warranted throwing such responsibilities on employers but this does not hold good now in many of the more populous regions in which tea is being grown. While a fairer division of responsibility with the State is an issue which will take time to resolve, it would be ruinous if current policy-making did not keep this perspective in mind. In Assam, for instance, the Govern-

ROLE OF PRIVATE SECTOR

MR. Bharat Ram's presidential speech at the annual session of the Federation of Indian Chambers of Commerce and Industry in New Delhi last Saturday was remarkable for its refreshing blend of candour and persuasiveness. Without appearing to be self-righteous, he exposed the inherent contradictions in the Government's policy as a result of which production has suffered and prices have risen. The malady that is afflicting the economy has often been diagnosed and prescriptions suggested. But political considerations have stood in the way of applying the right remedies.

ment has done little to ensure a steady and adequate supply of foodgrains for tea garden labour; incompetence and maladministration have led to recurring crises. The State Government, furthermore, is insisting on specifications for workers' housing which virtually double the cost of building. The demand is less than responsible, and the attitude underlying it has its roots in the present system under which the Government itself can disown all social welfare obligations towards citizens who happen fortuitously to live on the tea estates.

On a similar plane is the indifference which marks the outlook of State Governments towards tea plantations in their areas. There is a long history of neglect in providing serviceable roads and other communication links in tea districts. On top of this deficiency, highlighted during the emergency of 1962-63, there is an unfortunate reluctance to take any steps at all to assist the growth of the industry. Land needed for new planting has been extremely difficult to acquire even though the maintenance of production in the short-term and the expansion of output over a longer period must depend on the extent to which this is available. Mr. Manubhai Shah had promised last year to intervene on the industry's behalf with State Chief Ministers; even if he has done that, there is so far no perceptible change in a situation made sorer by the unceasing exhortations from New Delhi to accelerate replanting.

These domestic disabilities are hampering the industry's export effort, which depends in the highly competitive situation now emerging on its ability to reduce its unit costs through a larger volume of production. North India's common teas are, despite the deceptive rise in export figures, getting priced out even in a year when demand well matches the total of world supplies. Higher productivity is the obvious, answer to the problem arising from competition but not one that is of any immediate relevance, even if one assumed the removal of the present constraints upon progress in this direction. In the short term, there is no alternative to fiscal adjustments to reduce the burden carried by common teas in order to make them marketable. This is what the I.T.A. chairman presumably had in mind when asking for a rebate of excise duty in the case of teas which are exported. A rebate on exports will make domestic sales marginally less attractive and thus help to secure adequately competitive offerings for export.

The concession will undoubtedly mean some loss of revenue—about Rs. 3.2 crores at the old rate of a flat refund of 15p a kilogram—but it is not beyond the Finance Minister's ability to offset the loss through suitable adjustments elsewhere. The demand for an excise duty rebate will need to be pressed in the coming weeks because of the disquieting trend revealed by the export returns for the current marketing season which began last July. The comfort derived by the Ministry of International Trade from calendar year figures seems to be based on nothing more substantial than the spillover of despatches from the last months of 1962 to early 1963 because of the delay in getting north Indian teas down to Calcutta during the weeks when transport was disorganised first by the steamer strike and later by the emergency. Had Mr. Manubhai Shah taken this into account, he might have been persuaded to press the industry's case more forcefully upon his colleague in the Finance Ministry before the Budget. This particular opportunity has been lost but that is no reason why relief should be deferred until next March.

Although the Central Finance Minister has defined the aim of his fiscal policy as the promotion of economic growth, some of his proposals are manifestly contrary to this purpose, as Mr. Bharat Ram pointed out.

The Federation feels that the cumulative burden of the surtax and dividend tax will not be much lower than that of the super profits tax. Furthermore, the levy of capital gains tax on bonus issues, the expenditure tax, and the almost compulsory increases in gift tax and estate duty, will weaken the forces of economic growth. In

spite of the lip-service paid to promoting growth, the fact remains that the Finance Minister has decided to pump out an additional Rs. 90 crores from the people, which is bound to affect the savings of the community—savings that normally would have been available for investment in private ventures. The F.I.C.C.I. has taken the view that the distinction between distributed and undistributed profits, which discriminates against equity capital, will defeat the purpose of improving the investment climate. Mr. Bharat Ram rightly called attention to the dangers of investing the executive with "ominously large" discretionary powers in a bid to get more revenue. There is considerable substance in his view that the new measures may cause much harassment to honest taxpayers by exposing them to the prejudices of individual tax collectors.

The Central Home Minister, Mr. G. L. Nanda, in his inaugural address to the F.I.C.C.I. session, referred to the increase in prices and asked business men to co-operate "more fully" with the Government in bringing prices down. While the short-fall in agricultural production has contributed to the rise, he maintained that traders too had been quick to exploit temporary shortages and raise prices on the slightest pretext. This made controls necessary. While this justification for controls looks impeccable on paper, actual experience is different. First, the Government does not have adequate and efficient machinery to administer controls, with the result that the first thing the announcement of controls over a particular commodity stimulates is a flourishing black market. It also enlarges the opportunities for corruption in the administration. At the same time, the restraints imposed on a particular commodity make its production unprofitable, and thus discourage further investment and expansion of output. The working of important industries like cement, fertilisers and coal during the past few years bears testimony to the stifling influence of controls. It is only recently that the Government awakened to the folly of enforcing controls in basic industries. Another point about the increase in prices is that the Central and State Governments themselves have been responsible for it by their indiscriminate levy of taxes. Again, the under-utilisation of industrial capacity, over which the producer has no control, is a major cause of high production costs and high prices. The problem of high prices has to be tackled by creating conditions for bigger production and not by im-

posing restraints on consumption and distribution, which at best are only temporary palliatives.

The discussion at the F.I.C.C.I. session inevitably centred on the rôle of the private sector. Mr. Bharat Ram emphasised that, by and large, the private sector had fulfilled the functions expected of it. There has been a big expansion of industries in the fields in which private enterprise has been allowed to function; over 188 major new products have been manufactured for the first time in the last five years, the quality of output has been improving and the output itself has doubled during the last decade. With all this, he said, the view was spread that private enterprise in industry and trade had somehow failed, and newer agencies were recommended to replace it. Although ideologically the Bhubaneswar session of the Congress broke no fresh ground after Avadi, the former has raised a cry, to quote Mr. Bharat Ram, "for nationalisation and establishment of co-operatives in respect of all conceivable economic activities—from banks to rice mills and wholesale and retail trade". These radical demands are largely a reflection of the mood of despair in the ruling Party at having achieved very little and the need to woo electors, particularly after the recent reverses at the polls.

The rift within the Party is particularly glaring in the case of the demand for nationalising banks. Party men apart, even ministers have demanded the nationalisation of banks, which is rather incongruous when the Central Finance Minister, Mr. T. T. Krishnamachari, has disapproved of the step. In the cry for nationalising banks, the interest and preference of the depositor are forgotten. Mr. Nanda acknowledged that the private sector had made a valuable contribution in increasing production, but wished the private sector had done more to improve the quality of its products and to reduce costs. He also stated that in several key areas where the private sector alone operated, there had not been much advance. While this may be true, in most cases the poor progress is due to the unimaginative policies adopted by the Government, such as the one which has restricted the profitability of key industries. But in the case of public-sector enterprises, in spite of the monopolistic positions they enjoy, the working has been poorer still. In fact, their inefficient working is an important cause of the inflationary pressures in the economy, since the large volume of funds invested in them have yielded very little in terms of output.

Current News and Comment

Fourth Valuation of L.I.C.

The fourth valuation report of the Life Insurance Corporation of India, based on its assets and liabilities as on 31st March, 1963, shows a profit of Rs. 26.34 crores, against Rs. 34.45 crores in the previous valuation for the two years 1960 and 1961. In accordance with the provisions of the Life Insurance Corporation Act, 1956, the share of policyholders in the profit amounts to Rs. 25.39 crores, against Rs. 32.73 crores in the previous valuation period. The Central Government's share is Rs. 1.32 crores, against Rs. 1.72 crores. The return to the Central Government on its capital investment amounts to 20.57 percent a year, against 15.95 percent in the previous valuation period. On the whole, the Corporation has raised the bonus rates on insurance policies for the 15-month period ended March 1963. The bonus on whole life policies has been raised from Rs. 16 a year for Rs. 1,000 assured to Rs. 17.50 a Rs. 1,000, and that on endowment assurances from Rs. 12.80 a Rs. 1,000 to Rs. 14 a Rs. 1,000. Proportionately higher bonuses have similarly been declared on the participating policies of erstwhile insurers, in accordance with the classification of policies under Differential Bonuses Regulations, 1961. The higher distribution, the L.I.C. pointed out, is made possible by the larger profit earned in the intervalation period, in spite of the slight increase in the rate of interest used in the valuation.

According to the L.I.C. Act, the Corporation shall—at least once every two years—ask the actuaries to undertake an investigation into its business, including the valuation of its assets and liabilities. It is not, however, mentioned in the section what

should be the qualifications of the actuaries and how they should be appointed—whether they should be employees of the Corporation or independent actuaries. The public interest demands that persons entrusted with the investigation should be independent of any control or influence from the Corporation or the Central Government. Furthermore, policyholders should have a say in the appointment of actuaries. Since the Corporation has always gone by the valuation reports of its own employees, the valuation has inevitably suffered from certain weaknesses, which would have been absent if an independent actuary did the work.

In reply to the suggestions made from time to time that in view of the favourable mortality experience the L.I.C. should have reduced the premium rates, the L.I.C. chairman, Mr. B. K. Kaul, said that when most of the insurers substantially reduced the rates in 1954, the current favourable experience concerning mortality and interest was anticipated and taken into account. He further pointed out that, in adopting in 1956 the premium rates of the "Oriental" after further reducing them by Re. 1 on an assured sum of Rs. 1,000 or 5 percent of the premium whichever was less, the Corporation had expected some economy in expenses. This was, however, belied. In view of the increasing pressure of inflationary forces, he said it would be too much to expect any significant reduction in expenses in the near future. Mr. Kaul said that the general practice among insurers even in foreign countries was not to revise the premium rates frequently for with-profit policies. Insurers think that changes in experience concerning mortality, interest and expenses can be more equitably handled under the with-profit policies by changes in

the bonus rates than by changes in premium rates. Mr. Kaul pointed out that when 90 percent to 95 percent of the new business is generally under with-profit plans, the passing of the benefits of favourable experience in the form of reversionary bonuses to policyholders rather than by a reduction in the premium rates was desirable since the former was anti-inflationary.

In accordance with this view, the Corporation has not only raised the bonuses on its own policies but also on those issued by the erstwhile insurers. But while the bonus rates of some of the latter showed substantial increases, the increase in the rates on the Corporation's policies is more nominal than real. So it does not offset the progressive erosion of policyholders' savings resulting from inflationary forces. Nor is the increase a true index to the Corporation's success in cutting down expenses. For some years, the expenses of the Corporation have been mounting. The renewal expense ratio for the intervalation period was 14.13 percent, against 12.42 percent in 1961 and 12.90 percent in 1960. The net rate of interest earned in the intervalation period was 4.08 percent, compared with 4.14 percent in the previous valuation. The chairman explained that the lower yield had to be attributed to the comparatively few dividend declarations on preference or ordinary shares made from January to March. All these factors, one way or the other, tended to erode the funds of the Corporation. So policyholders did not get a higher yield in the shape of dividends which they fondly expected after the chairman announced some months ago that the favourable experience would be passed on to them in the form of reversionary bonuses. Policyholders have no alternative now but to watch whether the L.I.C. offers greater rewards in its next valuation.

Cotton Control Controversy

The Gujarat Government seems to have succeeded in convincing the Central authorities that the Textile Commissioner's ban on the movement of cotton in the State and the requisitioning of some 3,000 bales of Digvijay cotton had not only caused great discontent among cotton growers and co-operative societies, but these measures were also likely to jeopardise the State Government's plans to grow more cotton. The Central Minister for Agriculture, Dr. Ram Subhag Singh, is reported to have stated at a recent meeting of the Executive Committee of the Congress Parliamentary Party that the Textile Commissioner had banned the movement of cotton in Gujarat without consulting his Ministry and that neither the ban nor the requisitioning of stocks was in the interests of growers. A similar ban last year, he added, had cost growers about Rs. 1 crore. This brings to surface the differences between the Ministry of Industry and the Ministry of Food and Agriculture on the issue of cotton.

Whatever the merit (or demerit) of the case, the Agriculture Minister's statement seems indiscreet as it is likely to undermine respect for the Textile Commissioner's authority and his policies, which is not conducive to efficient administration. The Gujarat Government's anxiety about securing the highest possible price for the product of its farmers in understandable. But surely prices cannot be allowed to pierce the statutory ceilings. The movement of cotton had been banned by the Textile Commissioner in order to prevent prices moving beyond the ceiling. That almost all varieties of Gujarat cotton were quoted well above the ceiling when the ban was imposed, is common knowledge. The Textile Commissioner has all the authority for enforcing the price control order. Gujarat farmers' plea that Digvijay cotton is not properly priced in relation to other varieties and that it deserves a higher ceiling price is quite a different issue and it cannot be made an excuse for pushing Digvijay prices beyond the existing statutory ceilings. It may, however, be pointed out that Digvijay A is at present fetching a price higher than that of comparable American cotton.

The Central Minister of Industry, Mr. Nityanand Kanungo, has assured the Gujarat Government that the Centre would pay the maximum price for Digvijay cotton which had been requi-

sitioned in Gujarat, and that it would also institute an enquiry into the recent requisitioning of this cotton. The Minister is reported to have pointed out that if ceilings were observed and sales were made to *bona fide* mills, the Textile Commissioner's office would issue permits of movement "within four hours." Fortunately, cotton prices have fallen appreciably over the past few weeks; not only have unofficial premiums disappeared but most varieties are now quoted well below the ceilings. The fall in prices, ranging from Rs. 20 to Rs. 60 a candy, has been brought about by the upward revision of crop estimates and the U.S. Government's permission allowing India to import 275,000 bales (of 400 lbs each) of Upland cotton under P.L. 480.

The 1963-64 cotton crop which at one time had been talked down to 5.4 million to 5.5 million bales because of the prolonged cold spell in certain cotton growing areas, particularly Gujarat, is now placed around 5.8 million bales to 5.9 million bales—an all-time record. Besides, the entire U.S. cotton allowed under P.L. 480 is expected to reach India before the end of the current season. Imports from other sources since the beginning of the season up to about the middle of February, are placed around 260,000 bales. If all goes well, total imports this season might well exceed 700,000 to 800,000 bales. The supply position of cotton should, therefore, cause no serious anxiety, increased mill consumption notwithstanding. Odds are that cotton prices will now keep within the statutory ceilings, thereby eliminating the need for official intervention. This is not to suggest that all is well with the supply position because imports still continue to hold the key to cotton prices. If the industry's growing requirements are to be met at reasonable prices, domestic production of cotton will have to be increased appreciably. More efficient means of production rather than higher prices are needed for stepping up output.

Minimum Price for Sugarcane Raised

The Indian Government has announced the minimum sugarcane price for 1964-65 in advance of the sowing season. The minimum price at factory gate for a recovery of 9.4 percent or below for the 1964-65 season—to be in force from 1st November, 1964, to 31st October, 1965—is Rs. 4.96 a quintal compared with the present season's price of between Rs. 4.69 and Rs. 4.85 a quintal. The result of this change is that for the entire country, the minimum sugarcane price will be Rs. 1.85 a maund for recoveries of 9.4 percent or below, against Rs. 1.75 a maund in 1963-64 for a recovery percentage of 9. This rise will not only bring sugarcane prices into parity with those of other agricultural commodities, but will also compensate the cultivators for higher production costs. This is calculated to raise sugarcane output for the 1964-65 season, in order to enable the factories to produce more. But if the production of better quality cane is to be stimulated, a mere increase in the basic minimum price will achieve little. It is necessary to widen the price differentials between the lower and higher grades of cane to encourage production of cane with higher sucrose content. As a result of the higher cane prices, sugar may cost more in the next season, but this is inevitable if the output of the commodity is to be increased.

As in the past, the actual price to be paid for sugarcane will be linked with the recovery percentage of sugar. At present, the Government has announced the basic minimum price; the minimum price of sugarcane payable by each factory would be announced when the final position about recovery in the current year is known. Prior to 1962-63, an unduly large amount, ranging from 32nP to 96nP a quintal, was deducted from the factory gate price of sugarcane depending on the distance of the purchase point. As in the current season, the permissible reduction from the factory-gate price of sugarcane for other purchase points in 1964-65 will continue to be 32nP a quintal, in the case of both rail and road transport, and the balance of expenses up to a maximum of 64nP a quintal will be taken to be the manufacturing cost. This method has worked quite satisfactorily in the current year, and its extension to the next crushing season seems justified. But in some cases, the

sugar factories have incurred a higher transport cost and provision for this should be made.

Producing Cheap Cars

The Central Minister for Steel, Mines and Heavy Engineering, Mr. C. Subramaniam, recently referred to the manufacture of low-cost cars and a reduction in existing car prices. But from the statements he made on the production of cheap cars, it appears that he has not yet made up his mind on the issue. The Minister said recently that he would put forth a proposal to the existing producers to pool their capacity for producing small and cheap cars. He added that the informal discussions he had had with producers were not helpful. But he insisted on submitting the proposal officially to know the final reaction of producers and come to a firm decision. Mr. Subramaniam is obviously uncertain about the outcome of his scheme. But he pointed out that the original idea of merging the existing three units producing motor-cars "bristled with difficulties." He, therefore, hinted at the possibility that the Government might start a public-sector project or select one of the existing units for the manufacture of small and cheap cars. But the Government does not seem to be definite about what it will do if it adopts the latter course. Mr. Subramaniam referred to three possibilities. One is that the firm selected for the purpose may get Government assistance. The other is that the Government itself may seek participation in the venture. Thirdly, it may run it as a full-fledged State-owned concern.

The selection of one of the three units producing passenger cars may make the Government liable to the charge of discrimination. Nor will it be easy to predict which of the three units will be able to produce cheap cars efficiently. Mr. Subramaniam, however, appeared to be much too enthusiastic about Government participation in the venture although, judging from the working of State-owned concerns, the scheme would be better if left to private enterprise. The pooling of capacity will lead to formidable technical problems. The ruling prices, Mr. Subramaniam said in Parliament recently, could not be brought down unless production was increased to an economic level. The demand for motor-cars, he said, would be around 30,000 a year by the end of the third plan, while production was not likely to exceed 22,000. The ex-factory price of a small car should be fixed at between Rs. 6,000 to Rs. 8,000. But whether this would be possible is another matter. As Mr. G. H. Turnbull, director and general manager of Standard Triumph International Ltd of the U.K.—the British collaborators of Standard Motors of Madras—rightly said recently, a sizable reduction in the price of motor-cars will not be possible unless the Government reduces the taxes on motor-cars and their components. But the Government seems to be reluctant to do this.

The Government, Mr. Subramaniam said, had taken steps to raise the proportion of indigenous components in motor-cars to 90 percent. But it is time to consider whether the increased use of these components has affected the durability of cars and has led to a sharp rise in their manufacturing costs. The ancillary industries in India, as is well known, lack experience and technical know-how. Nor do they always have the resources to requisition the services of experts to improve the quality of the spare parts and components they produce. The Government should, therefore, appreciate that self-sufficiency in components is not an unmixed blessing and that it should not be carried too far. Before a low-cost car is produced, it is also necessary to examine whether roads can bear the increased traffic. The Buchanan Committee in the U.K. has recently pointed to the mess in traffic conditions in that country and the need for advance action for the future.

Using Irrigation Facilities

Inaugurating last week the fifth Near East and South-Asia Irrigation Practices Seminar, sponsored by the United States A.I.D. and the Government of India in New Delhi, the Central Minister for Food and Agriculture, Mr. Swaran Singh, observed that

the only way to meet the demands of a growing population for food was to increase the area under irrigation. In India, for example, out of a total area of 322 million hectares, some 132 million hectares are already under cultivation, and it is not possible to increase the cropped land area any further. The hope of increasing food production, therefore, lies in more intensive methods of farming backed by efficient and adequate irrigation facilities. Since 1947 nearly 8 to 10 million hectares of additional land had been brought under irrigation in India. But even the present irrigated area of 28 million hectares is inadequate, and an effort will have to be made to increase within next 20 years the irrigated area to 70 million hectares. But this is going to take time and cost a lot of money. In the meanwhile, it is essential to devise scientific methods of soil and water management and land conservation so that the best use is made of the available irrigation facility, and such evils as water-logging, salinity and alkalinity of soil as a result of irrigation, are avoided. Another very important problem is that much irrigation water is lost by seepage in field channels. It is necessary to devise cheap and effective methods of lining the channels so that the wastage is avoided.

India is not the only country which has faced such problems, although some of them are peculiar to this country. It is necessary to devise practical methods of dealing with them. The seminar, which is to last two weeks, should keep this question in view.

In India and the other countries of the region, the problem is not only to increase irrigation facilities and to devise methods for utilising the irrigation potential, but, as Dr. K. L. Rao, Minister for Irrigation and Power, told the Seminar, it is to conserve river waters by building dams to prevent the wasteful flow of riverine waters. Dr. Rao estimated that, on an average, Rs. 3 to 7 crores are required to conserve water in India. The difficulty, however, was not so much in finding this money as in its proper utilisation. The experience of the third plan shows that although the allotment of money for irrigation purposes was quite adequate, the States have not made proper use of it. If waste in expenditure is avoided, and actual results are achieved, there is no reason why India should not become self-sufficient in wheat and other foodgrains. Dr. Rao estimated that self-sufficiency in wheat could be achieved if another 4 million acres of land could be effectively brought under irrigation.

Cotton Textile Exports Up

Exports of mill-made cotton piecegoods from India in 1963 amounted to 531.15 million yards valued at Rs. 41.02 crores, compared with 508.36 million yards valued at Rs. 39.956 crores in 1962. While exports were higher in both quantity and value, the average price realised during 1963 was lower at 77nP a yard, against 79nP a yard in 1962 and 80nP a yard in 1961. This shows that India has been obliged to reduce its prices in order to be able to compete in overseas markets. Little comfort can be derived from the improvement in exports over the previous year when exports fell to a record low since 1949. Of the 531.15 million yards exported last year, the European zone accounted for 168.44 million yards (152.10 million yards in 1962) to be followed by Asia with 131.09 million yards (115.34 million yards), Africa with 117.24 million yards (143.29 million yards), America 72.52 million yards (53.98 million yards), and Oceania 41.86 million yards (43.14 million yards). The ten major markets for Indian textiles in order of importance were: the U.K. 155.65 million yards, British East Africa 45.44 million yards; Sudan 35.07 million yards, the U.S.A. 32.73 million yards, Australia 29.34 million yards; Malaya and Singapore 21.83 million yards; Afghanistan 21.06 million yards, Ceylon 20.03 million yards, Canada 19.18 million yards, and Burma 17.15 million yards.

Exports of apparel rose impressively from Rs. 16.5 lakhs in 1962 to Rs. 2,538 crores in 1963. Shipments of cotton yarn rose from 22.96 million lbs to 29.87 million lbs and foreign exchange earnings increased from Rs 52.28 million to Rs. 61.91 million.

Shipments of mill-made cotton piecegoods from the Bombay port, which accounts for nearly 90

percent of the country's total exports of cotton textiles, in February are placed around 32.82 million yards valued at Rs. 2,833 crores, compared with 46.17 million yards valued at Rs. 3,687 crores in the previous month. While exports are substantially lower, the value realised is much higher at 86nP a yard, against 80nP in January.

Cloth Stocks with Mills Down

The output of cotton textiles by Indian mills in January is provisionally placed at 426 million yards. While this is three million yards less than the December production of 429 million yards, it is appreciably higher than the January 1963 figure of 410 million yards. The average monthly production for 1963 works out to no more than 403 million yards. Yarn output in January is placed at 176 million lbs, as against 180 million lbs in the preceding month and 162 million lbs in January 1963. Cloth stocks with mills at the end of January at 262,400 bales (of 1,500 yards each) were 41,800 bales less than the December-end figure; unsold stocks declined from 123,700 bales to 100,100 bales, and there was also a decline of 18,200 bales under "sold but not lifted".

The January-end figure of 262,400 bales is a record low since April 1961. The decline in stocks in spite of the improved production trend over the past few months indicates an improvement in domestic offtake. The cotton piecegoods market has been quite active in recent months and there has been a fair increase in the prices charged by mills, more particularly for the popular varieties. With the Government in no mood to accept the industry's plea for higher cloth prices in order to compensate for the rise in production costs since the cloth prices were last fixed, mills have been trying to manufacture new varieties, thereby circumventing the so-called voluntary scheme of price regulation. Price stamping has been reduced to a farce.

Two French Missions for India

In response to a suggestion made some time ago by Mr. Manubhai Shah, Central Minister for International Trade, two trade missions from France are visiting India this week. The first is an official mission led by Mr. J. Wahl, director of the Trade Department in the Ministry of Finance and Economic Affairs. The team will be in New Delhi from 9th March to 13th March studying the prospects of closer Indo-French economic relations, the possibilities of increasing the import quotas for Indian goods, including gunnies, and of lowering Customs duties.

The second mission, which will be in New Delhi from 11th March to 15th March, represents importers of tea, jute goods, hides and skins, fats and oils, tobacco, manganese, cotton goods and pharmaceutical products. Besides meeting Mr. Manubhai Shah and Mr. N. Kanungo, Central Minister for Industries, the mission will hold discussions with the Federation of Indian Chambers of Commerce and Industry. The chairman of a major French tea firm and a representative of the jute industry, who have come with the mission, will visit Calcutta later. The former will also visit Darjeeling and Assam. The latter will be in Calcutta from 15th March to 21st March.

Tasks of Personnel Management

A number of interesting problems connected with personnel management were discussed at the annual conference of the Indian Institute of Personnel Management in Jamshedpur, and at the personnel management seminar organised in Ahmedabad by the Ahmedabad Management Association. Inaugurating the annual conference of the Indian Institute of Personnel Management, Sir Jehangir Ghandy emphasised the basic fact that personnel management was not the monopoly of the personnel manager of the firm, but was the responsibility of all supervisors. An important point which he made was that, while keeping the human factor in mind, personnel managers should develop cost-consciousness and ensure that unnecessary expenditure was avoided. This should not be difficult because, given a democratic set-up and enlightened enterprise, the long-term interests of

employers and workers are identical and one could not prosper without sharing benefits with the other. But for creating such cost-consciousness, it is necessary that personnel managers should receive some training in costing and budgetary control. The Indian Institute of Personnel Management could help in developing facilities for training experts in personnel management.

One of the speakers at the Jamshedpur conference made the suggestion that in order to prove more effective, a personnel manager should win the co-operation of line managers and the confidence of top management, and should act as the guardian of staff morale. To achieve these results, the personnel manager should not only have a human approach, a clear grasp of labour and factory legislation, but also have considerable skill in his work. Personnel managers are a buffer between management and labour, and while they help the former in conforming to the requirements of labour laws, they help the latter in getting humanitarian treatment from employers.

At the Ahmedabad seminar, Mr. Gautam Nanavati, chairman of the personnel panel of the Ahmedabad Management Association, observed that the importance of the human approach in personnel management was no more a debatable issue. The real problem was to give effect to this human approach in such a fashion as to improve industrial relations and at the same time increase the efficiency of labour. For this, it is necessary for top management to make the duties and functions of the personnel department quite specific, so that there may be a correct appreciation of the work of personnel managers.

One of the difficult tasks which the personnel manager faces is to prevent interruption of work by strikes, lock-outs and go-slow tactics. One of the speakers told the Ahmedabad seminar that collective bargaining should be used by every management as a matter of basic policy; healthy traditions should be built, so that this method might be used as a real tool for promoting peaceful industrial relations. The opinion generally held is that the multiplicity of trade unions in India makes collective bargaining ineffective, but this speaker was of the view that the multiplicity did not make collective bargaining useless, although it did make it slightly difficult. With tact and patience, collective bargaining could be made successful. In this connection, he defended the practice of some companies of signing agreements with more than one union. It would surely help matters if the negotiations were related to industrial problems and if ideological friction is kept out of them. But when employers have to enter into a simultaneous agreement with a number of trade unions, ideological considerations and party factions would inevitably creep in. Besides, it is not always easy to formulate the terms and conditions which might at once be acceptable to numerous trade unions.

As for labour participation in management, a speaker at the Ahmedabad seminar held a critical view. According to him, the concept of "labour participation in management" meant different things to different people, and its emotional espousal in India had unduly raised expectations which could never materialise. This, according to him, explained the failure of this experiment in India. He further pointed out that the moment labour joined management, it ceased to propound the functional interest of labour, and, in fact, it created further complications without solving any. He suggested that collective bargaining and organisational pressures were better instruments than "labour participation in management" for improving the conditions of labour, and for ensuring better industrial relations.

Fresh Taxation in Assam and Rajasthan

The Assam Budget for 1964-65 follows the usual pattern of declaring a surplus on revenue account and then showing an overall deficit because of additional expenditure on "social security" measures like increased emoluments for Government servants, and plan schemes. Assam also has lined up with those States who have made efforts to raise fresh funds from their own resources. For a relatively small sum like Rs. 85.9

lakhs, this State has cast its net rather wide. The new tax proposals include an increase in the general rate of sales tax, the increase being bigger in the case of luxury articles; there will be a sales tax on coal, coke and coal gas at the rate of 2nP in the rupee, an electricity duty of 2nP a unit, increased excise duty on liquor and enhanced agricultural income tax at a graduated rate. Some of these items are obviously ill chosen, especially those on electricity and coal, which would add to the production cost of industries, and Assam would now find it harder to attract entrepreneurs from outside unless it offers them electricity at cheaper rates as Andhra has been doing. However, in spite of the revenue surplus and the expected yield from the new taxation measures, the Budget, with its capital and revenue sides taken together, is expected to close with a deficit of Rs. 2.30 crores. The revenue receipts for the year are estimated at Rs. 61.78 crores, and expenditure at Rs. 59.05 crores, but in the capital Budget, as against an estimated outlay of Rs. 38.72 crores, firm provision has been made for only Rs. 28.84 crores. This gap of Rs. 5.88 crores can be partly bridged by the revenue surplus and fresh taxes, but further Central assistance is essential to cover the entire deficit. The Finance Minister, Mr. Fakhruddin Ali Ahmed, made some bitter comments in his Budget speech against the Planning Commission, accusing the latter of going back on its promise of allocating Rs. 28.6 crores for the State's 1964-65 plan, and for unilaterally reducing the amount to Rs. 22.1 crores. The State, however, has drawn up a plan costing Rs. 34.2 crores, more or less on the lines of the estimates it had originally submitted to the Planning Commission. Mr. Ahmed hoped that the latter would now redeem its promise, taking into consideration the special needs of the State, which is now facing more difficult problems because of the emergency and the influx of refugees from East Pakistan. The major needs of Assam relate to power and transport facilities, without which much industrial development cannot take place. The Budget reflects the anxiety of the Government to remove these deficiencies and substantial allocations for these have been made on the capital side. For power alone, the allocation is Rs. 9.5 crores, that is, 26 percent of their total. Flood control measures get an allocation of Rs. 3 crores. Other major items of capital expenditure include industries (Rs. 2.35 crores), education (4.15 crores) and transport (Rs. 1.93 crores).

The main features of the Rajasthan Budget for 1964-65 are a revenue deficit of Rs. 62 lakhs (estimated revenue income Rs. 72.19 crores and expenditure Rs. 72.81 crores) and a deficit of Rs. 1.38 crores on capital account. The additional taxes proposed by the Finance Minister, Mr. Bal Krishna Kaul, are a tax on vacant land in urban areas, increased sales tax on bullion, on tyres, tubes and tractors and plastic goods, a duty on exports of hides and skins and yarn from the State, and an excise duty on liquor. These levies are expected to yield an income of Rs. 58 lakhs, so the overall gap of Rs. 2 crores has been left partly uncovered. The State also proposes to float a public loan of Rs. 5 crores some time in the next financial year. The "social security" feature of the Budget includes an old age pension scheme covering destitutes and persons who are over 65 and have no means of livelihood or supporters. They will get a pension of Rs. 20 a month. Provision has also been made for increased dearness allowance to Government employees.

Progress of Central Warehousing Body

The results of the Central Warehousing Corporation for 1962-63 show an all-round improvement. It is the first year of its working since the Corporation was reorganised under the Warehousing Corporation Act, 1962. The Central Government has become its shareholder in place of the National Co-operative Development and Warehousing Board. Warehousing facilities have been extended to several commodities, particularly iron and steel, insecticides, rubber, Portland cement, paper, pulp, paper products, leather goods, etcetera. The number of Central warehouses has risen from 60 to 78 with the result that the target for the year has been achieved. The targets fixed in relation to the storing capacity and stocks have been exceeded. New warehouses have been set up in ten

centres and the opening of warehouses in 34 other centres is being considered. New commodities are being taken for storing, so the business potential of warehouses has increased greatly.

All agricultural commodities received in warehouses are analysed and graded according to standard specifications. The Corporation has participated in the price support scheme of the Government to stabilise the price of raw jute and has handled large stocks of fertilisers in many centres on behalf of the Central Government. It has undertaken to construct warehouses on a large scale in Assam to meet local requirements. As for the storage of tea by the Corporation on behalf of the Tea Board, the completion of new specialised warehouses by the Port Commissioners of Calcutta has been delayed. Since this undertaking involves considerable obligation, the Tea Board is proceeding cautiously in the matter.

The working of the Cetral warehouses has yielded a profit of Rs. 2.20 lakhs, against Rs. 1.80 lakhs for 1961-62, although the curbs imposed by the Reserve Bank of India on advances against paddy and rice and other foodgrains interrupted the business during 1962-63. Storage charges have risen from Rs. 14.26 lakhs to Rs. 20.48 lakhs, but the overall net deficit of the Corporation has amounted to Rs. 2.20 lakhs. The loss is understandable considering that warehouses generally take several years to show profitable results. This apart, it has spent large sums of money on promotional activities in order to impress on the agricultural population the benefits of warehousing. It has already invested more than Rs. 56 lakhs in the share capital of the State Warehousing Corporations, against Rs. 18 lakhs during 1961-62. The issued share capital of the Corporation amounts to Rs. 10 crores. The major shareholder is the Government of India. The remaining shares have been subscribed by the State Bank of India, scheduled banks, co-operative societies, insurance companies, investment trusts, other financial institutions, recognised associations and joint-stock companies dealing in agricultural produce or notified commodities. The Central Government has guaranteed a dividend of 3.5 per cent on these shares.

Calcutta Port Finances

Calcutta port is expected to handle a little more than 11 million tons of traffic during 1964-65, compared with 10.5 million tons in the previous year, which in turn was 600,000 tons more than the traffic handled in 1962-63. Port charges were also enhanced in 1963-64. The income during the next financial year is expected to rise to Rs. 11.77 crores, but the expenditure, too, is expected to rise to Rs. 17.56 crores. Presenting his Budget for 1964-65 to the Port Commissioners recently, the chairman, Mr. B. B. Ghosh, explained why he was expecting only a nominal surplus, although the earnings during next financial year is likely to be Rs. 30 lakhs more than in the revised Budget for 1963-64. This is mainly because of the heavy expenditure on debt services, which alone will amount to Rs. 31 lakhs. Higher wages for labour and a bigger establishment cost also will take away a substantial part of the port's revenue. Calcutta port's debts are sizable. During 1963-64, borrowings on account of capital schemes from the Government and the World Bank amounted to Rs. 4.275 crores—Rs. 1 crore from the former and the balance from the latter against the first and second loan of \$29 million and \$21 million, respectively, besides the 30-year loan of Rs. 1 crore carrying interest at 5 percent. During the next financial year, the Port Commission proposes to borrow Rs. 3.25 crores from the Government and about Rs. 6.43 crores from the World Bank. It is also proposed to raise a market loan of Rs. 1 crore. It is clear that for servicing these debts, the port's earnings must rise, but a large increase will not be possible until the Haldia dock starts functioning and the conditions in the Hooghly improve as a result of the barrage being built at Farakka. However, the port authorities do not propose to vary their charges for the next financial year. In fact, a relief of Rs. 2 a tonne will be granted to iron ore exporters. They have been complaining that Calcutta port charges for the ore are higher than those of other ports. No general relief for other goods could be considered "unless the Government finds it possible to meet the Commis-

CAPITAL, 12th March, 1964.

sioners' request for assistance towards the cost of the river's maintenance," Mr. Ghosh said.

Pump Production and Exports Rise

Under the third plan the production target for pumps has been fixed at 150,000, and the industry has already achieved it. There has been a steady rise in production from 127,200 in 1961 to 150,000 in 1963 (estimated on the basis of eight months' production). Manufacturers have also made considerable progress in the diversification of their output with a view to meeting industrial requirements. Speaking at the annual general meeting of the Indian Pump Manufacturers Association in New Delhi last week, Mr. R. V. Deshpande, chairman, said that since there were still two more years of the third plan to go and because the demand for pumps was rising, it might be necessary to raise the third plan target. Unfortunately, there is a ban on the expansion of capacity since the third plan target has been reached. But there is scope for further expansion of the capacity not only for special types of pumps but also for small ones needed for irrigation. Mr. Deshpande emphasised the need for licensing additional capacity for the manufacture of such pumps as are being imported. India still imports pumps worth Rs. 2 crores every year, but it will be necessary to cut down these imports during the fourth plan. The Government should, therefore, examine the possibility of achieving self-sufficiency in all kinds of pumps, "except a very few number of very special types or of exceptionally large sizes of pumps, the demand for which is too small to justify their manufacture at economical costs."

The value of pumps exported in 1961-62 was Rs. 4.85 lakhs which increased to Rs. 12.75 lakhs in 1962-63. The average monthly rate of exports up to October 1963 exceeded Rs. 1 lakh. The trend is encouraging, so it is hoped that the industry would be able to make a substantial contribution to India's foreign exchange earnings. The Government, the chairman said, should allow further licensing of capacity during the current plan for units interested in exporting part of their production.

CORRESPONDENCE

NEW CENTRAL BUDGET

(TO THE EDITOR OF "CAPITAL")

Sir,

A casual reader may be inclined to think that India's Finance Ministers are actuated more by personal pique than by public interest in formulating some of the details in their financial policy. For instance, because Mr. Morarji Desai abolished the expenditure tax introduced by his predecessor, Mr. T. T. Krishnamachari, the latter dropped partially the compulsory deposit scheme soon after he assumed office and has now completely done away with it in the Budget for 1964-65. That this impression is not wide of the mark is confirmed by the views expressed by some of the important persons one of whom has gone even to the extent of describing one of the purposes of the Budget to be "to undo what Mr. Desai had done."

Having proposed to abolish the compulsory deposit scheme, there is no point whatever in requiring that outstandings on account of the scheme during the current year should be paid before the close of it. It is doubtful if this infliction should continue. The Finance Minister expects to collect over Rs. 50 crores under his annuity deposit scheme. He may, therefore, be magnanimous to pay up the amounts already collected under the C.D.S., close the accounts without keeping them open for five years and leave the scheme to sink into oblivion. It will be noted that the new annuity deposit scheme is not different from the previous scheme except that it affects a smaller number of persons. What the Budget looks like giving with one hand, it takes away even in a larger measure with the other, so that such class of assessee are really worse off.

The Finance Minister has endeavoured to plug some of the holes in the administration of the Income Tax Act, and the results remain to be seen. In the matter of taking gifts made in previous years into account for the purpose of levy-

ing the gifts tax, there is nothing new since it is merely a provision in one of the earlier Budgets which was dropped during the discussions in Parliament.

In order to stop evasions and delays, some new provisions are being introduced which are rather drastic. For instance, an assessee, in whose case the amount of tax payable on the basis of his return of income exceeds Rs. 500, is required to pay the estimated amount of tax within 30 days of the submission of his return, failing which he is liable to the imposition of a penalty not exceeding 50 percent of the tax so payable. The Government also takes paternal interest in its employees. Not only are they given increases of pay and allowances, privileges and amenities from time to time but they are also being relieved of responsibility and failures on their part to do their duty. At present, an Income Tax Officer is authorised to issue, soon after the commencement of a year, a notice of demand requiring the payment in advance in instalments of the amount of tax likely to be due from an assessee on the basis of his income during the current year. Having so collected the moneys due to the Government, the officer loses interest in the assessee and the final assessment is delayed. Does the Government pay interest on the amount of excess collection?

It cannot be stated that many of the assessee to income tax are conversant with the provisions of the Act. The correct course for the Government is, wherever advance payment is not demanded, to complete the assessment of the return forthwith on receipt and in the event of any unforeseen delay to make a provisional assessment and require the assessee to pay the amount assessed within 30 days as at present, subject to the proviso that where the amount so demanded and paid is in excess of what may be finally found to be due, the Government undertakes to pay interest at, say, 6 percent a year, provided the amount of interest falling due exceeds, say, Rs. 5.

The Central and State Governments are entering fields of industry and manufacture in a larger measure, and the indications are that they will do so more and more. The Finance Minister has, therefore, stressed the need for speedier exe-

cution of projects and of earning better returns from investments that are being made. He has disabused the idea that public-sector enterprises should work on no-profits or low profits and emphasised that they should make not only profits but also good profits. This should not encourage them to proceed on a policy of profiteering, of which enterprises in the private sector are often accused and glaring instances of which have frequently been brought to the notice of the public in relation to public undertakings.

The Finance Minister has further stated that one of the prime objectives of the Government's economic and fiscal policy is to generate savings in the hands of both individuals and corporate bodies. "To this end", he adds, "our policy in relation to incomes, wages and consumption has to be reoriented towards savings as a consequence, by a margin between consumption and incomes or wages." One wonders if this expression of policy is genuine. It is well known that savings generate savings and tend to provide increasing funds for investment in private enterprises or in the form of loans to the Governments. The action of the Government does not show that it is genuinely anxious to increase savings. It looks more like the liquidation of the well-to-do which is, after all, a relative term.

L.I.C. AS GENERAL INSURER

(TO THE EDITOR OF "CAPITAL")

Sir,

The entry of the L.I.C. into general insurance has raised various problems which need calm and careful thinking. Competition will, no doubt, be intensified, and the industry will have to be prepared to meet the onslaughts of a powerful rival, armed with almost unlimited assets, consisting of the accumulated savings of thousands of persons,

FAR-REACHING....

Contact between peoples of the world is of first importance in modern civilisation. Poor communications can precipitate a crisis or stultify business and trade. Links provided by telephony, radio and other forms of telecommunication have brought far-flung capitals and cities of the world nearer... within dialling distance, you may say!

Single and Independent Side Band Transmitters and Receivers are designed to meet heavy traffic requirements in all climates. Made by B.E.L. and used by the Overseas Communications Service, these equipment have simplified long distance radio telephone communications.

A contribution to far-reaching importance indeed! GEARED UP TO MEET THE NATION'S NEEDS

and with the full backing of a Government, which seems to have thrown all ethical considerations to the winds, and decided upon a course of penetration and semi-nationalisation, to be achieved without payment of compensation. To say the least, it is a very tricky situation, and any hasty or emotional reactions will not be to the industry's advantage. Scrapping the "Code" may improve the competitive ability of a few selected companies, but by and large, it is likely to release forces which will

only provide a ready handle to the detractors of the industry.

One has to remember that, at the time of nationalisation, of life insurance, the emphasis of Mr. C. D. Deshmukh was not on the requirements of the various plans, but upon the so-called "misdemeanours" of the industry, with pointed attention to a single unit. Even the present Finance Minister emphasised the effect that the entry of

the L.I.C. will have in improving the "standards" prevalent in the industry. But at the Bhubaneswar session, the cat leapt out of the bag, and the real intentions of the Government were revealed. I wonder if under the Constitution of the country, the Government can declare its intention to semi-rationalise an industry in this manner, and avoid payment of compensation, which is obligatory under the Constitution.

Quite apart from that, those running the industry must realise that while relaxations of the "Code" here and there, may become necessary, any "free for all" competition will only provide the authorities with an opportunity to "give the dog a bad name" before hanging it. On the other hand, it is necessary to acknowledge and to publicise the fact that with its own efforts, the industry has made tremendous strides in the last few years in building up new business, in reducing premium rates and in improving its own working in every way. The private sector has plenty of detractors waiting to throw stones at the slightest opportunity. One cannot, however, suppress one's surprise, when such slings come also from otherwise friendly quarters.

ASSESSMENT OF POVERTY

ADAM Smith who may fairly be called the founder of English Political Economy, called his great work, as everybody knows, *The Wealth of Nations*, and he brought the whole of the resources of his peculiarly practical intellect to bear upon the problem of those causes which make for wealth. He was, of course, almost necessarily compelled to consider causes which make also for poverty, but he has devoted to this side of the question nothing like the analysis and illustration which he bestowed on the economic origins of wealth. The difficulty of defining a standard of wealth, or a standard of poverty, would seem to be almost insuperable; but the problem is nevertheless one of considerable practical interest for India as indeed for all countries. It was only the other day that addressing a meeting of the Edinburgh Association, the Chairman of that body thought fit to make once again the oft repeated assertion as to India's poverty. After alluding to the ignorance which prevailed in Great Britain on many elementary points regarding India, he went on to indicate in general terms the distressful condition of this country in so far as the poverty of the masses are concerned. The first impression of a visitor to India, according to Mr. Rhenius, who, in his position of President, occupied the chair, is "the terrible poverty of the great mass of the people." I can't quite understand whence this "visitor" would derive primary impressions of this melancholy nature. If he landed at Bombay I should imagine he would naturally conclude that he had set foot upon a singularly busy, flourishing and, on the whole, wealthy portion of the British Empire. If he landed at Calcutta, the same kind of reflection might naturally enough arise in his mind, and I certainly do not know that a first view of Madras or Karachi would arouse the suspicion of terrible poverty. Poverty, of course, there is in these places. So there is in Spitalfields, or White Chapel or the Bowery in New York, or Ancoats, Manchester, or Patrick's Market, Sydney—or, well, almost anywhere. The point is how are we to estimate poverty? According to Mr. Carroll D. Wright of the United States Labour Department we should estimate the cost of living in the number of days' earning absorbed by the purchase of the necessities of life. Judged by this test I am inclined to think the Indian urban and agricultural labourer might possibly compare not unfavourably with the working units of other nations. How many working days in India are required to cover the cost of housing, food, clothing, lighting, heating and taxation for the ryot? It would be interesting to get some statistics of this kind and if every reader of *Capital* were to contribute the results of personal enquiry at first hand from time to time, we might arrive at figures from which some fairly sound inferences might be drawn.

A Ditcher's Diary

AS MEMORIES OF THE COLONIAL DAYS BEGIN TO fade, I suspect a new generation is growing up which will know nothing or little about certain usages in the English language which bore the more or less innocent stamp of imperialism. How many of my young friends, Indian or British, know the subtle distinction that once was heartbreakingly real between "Mr.", "Esq." and "Babu"? The egalitarian "Sri" has wiped out all differences; with them, also, a bit of Indo-British history. "Babu" was once a very respectable honorific—until it was debased by the ignorant, even as "native" is a useful word and, once, was not pejorative at all. Not many in India cared to notice in those angry days that, as Otto Jespersen knew, the British were as chary of extending the dignity of "Mr." to Europeans. The French spoke of Monsieur Churchill (however outrageously pronounced) and the Germans spoke of Herr Churchill; but, for the British, it was always Herr Hitler and Monsieur Daladier (remember him?). As the days were getting warmer towards the end of February, I remembered that it was once the practice to refer to India's cooler months—all right, have it your way, the less hot months—as the "cold weather". "Winter" it never was. I am now beginning to wonder whether even "cold weather" is not a bit of an exaggeration. So far as Calcutta, at least, is concerned, this season we knew only a very few pleasant days; really cold days could be counted on one's fingers, not requiring all twenty. It is not, I suggest, a question of comfort only, nor one of productivity, although both are important. The temper of a society is determined by the natural climate it lives in. I will not go so far as to say that there would have been no riots at all in Calcutta if there were more of cool days; but the two may not be as unrelated as some may think. A temperate climate lends a certain grace to life, individual as well as collective. If I were to suggest an alternative direction for the millions of dollars now spent on nuclear weapons, I would unhesitatingly say: Do something about the weather in the tropics.

CONSIDERING THE EXTENT OF TAX EVASION IN INDIA, it is not difficult to appreciate the Finance Minister's eagerness to ensure that taxpayers in future submit more accurate returns of their income to the tax authorities; there are obvious dangers in the proposal that you should be liable to stiff penalties if your income, as declared, is less than 90 percent of your income, as finally assessed, although the broad purpose of the move, as such, may not be easy to question. Nevertheless, I cannot help noticing the sad coincidence whereby the Finance

Ministry, in its eagerness to teach accuracy to others, has forgotten the need for the same excellent quality in its own case. I trust it has by now been demonstrated to Mr. Krishnamachari's satisfaction that income tax has not been reduced "at all levels", as he was rash enough to claim in his Budget speech. But those who ought to know tell me that this is not the only discrepancy—to use a euphemism—between his Budget speech and the Finance Bill he himself had the honour to introduce. In the speech, it is proposed that the exemption limit for gift tax purposes should be reduced from Rs. 10,000 to Rs. 5,000; although I have not had the time to wade through the details of the Finance Bill, I am reliably assured that, through a lapse of memory not wholly dissimilar to that for which evaders are sometimes condemned, it contains no such proposal. Finally, the Finance Minister gave an advance warning that the development rebate for companies might not be continued in its present form beyond 1st April, 1966; it now transpires that the date indicated in the Finance Bill is a year later, 1st April, 1967. My own very indulgent view is that these are but minor discrepancies, magnified only by the accident that they are rare in the fiscal history of any country in the world, including diligent India. I am intrigued nevertheless by another reported discovery—the estimate that the annuity deposit scheme, which the Finance Minister originally said would bring in Rs. 50 crores more, might now bring in Rs. 57 crores more. It will, I hope, be possible to issue a denial, or an explanation, even if Rs. 7 crores is mere chicken-feed by the standards of accuracy in estimating receipts shown by the Indian Exchequer in recent years. Those who still, twelve days later, are unable to assess the cumulative impact of the tax proposals have an uncommon consolation this year; the Budget appears to have baffled those who wrote it as much as it has baffled those now reading it.

WHENEVER EDUCATIONISTS FOREGATHER, THEY bemoan the decline in standards of teaching and learning, pass pious resolutions, and then return quietly to the old dens of slumber. If the subject under discussion is technical education, the theme varies but little: we have five steel plants today, and we shall have ten tomorrow, so more engineers, technicians and technologists are required. The discussion sometimes is spiced with a denunciation of industry for doing little to help colleges and technical institutions create the sort of men it needs. The criticism is not unjust: Indian industry has yet to show a proper awareness of the importance of specialised training for the people it em-

ploys. The question may still be asked: if much of the product of general education at the primary and secondary levels emerges as unusable pulp, can industry do much to shape it into something more worth while at a later stage? The trouble, in other words, goes deeper, and one sign of how deep it goes is to be found in the Education Ministry's proud claim this week that no less than 66 million children will be attending school a couple of years hence, by the end of the third plan. To have 66 million in school out of a total population of 440 million is no mean achievement, and the Ministry deserves qualified credit for it. The point still remains unanswered: does the country need all 66 million half-trained parrots of the variety the schools normally produce; and, if not, what on earth is going to be done with them? The resources, for education as for anything else, are limited; by spreading them thinly in giving "education" of a sort to what will ultimately turn out to be a multitude of unemployable semi-literate, the Government is only wasting other people's time and its own money. Educational reform, in India, has to begin at the grass-roots. Unless the numbers entering primary and secondary schools are drastically cut, and the remainder then given instruction of the quality they deserve, moans about the inadequacy of technical education—and about industry's indifference to it—will remain irrelevant. The seminar on "collaboration between industries and technical institutions," organised by the Institute of Applied Manpower Research in Bombay over the week-end, seems to me to have discussed everything under the sun. But not this basic problem.

THERE IS A BIG AND LEARNED TOME TO BE WRITTEN on the currency of corruption which itself needs precise definition. Cash, sex and flattery perhaps came early on in political and corporate life, although not necessarily or always in that order. The motor-car is a relatively recent thing but its position is already secure in political affairs the world over. In Kerala Minister Sankar had to explain the transfer of some lorries or buses from one party to another. Mr. Krishna Menon is believed to have insisted on a new Rolls Royce on his translation to the High Commission in London, a practice since imitated in Nairobi by Jomo Kenyatta. Neither of course is corrupt. But, especially when there are import restrictions, as in India, the car acquires a special attraction. In Delhi, for instance, a humble Ambassador is enough for Mr. Nehru, except when he is on a long tour. Not so for lesser Ministers. I happen to know of one, famous for his simple living, who would be content with nothing less than a Cadillac and got the State Trading Corporation to sell him or his Ministry one. And among the cars of the world there is a fairly rigid caste system. That Rolls Royces and Cadillacs are Brahmins admits of no doubt. A name that is fast making the grade

Swiss Industries Fair Basle

11th—21st April 1964

When a country has no raw materials of its own, there's only one way to prosperity: import them, process them, re-export the finished products. And in doing so there's only one way to success: perfection. You'll find the proof at the Swiss Industries Fair Basle. You'll find it in tiny watches, in jewelry, in electrical engineering, heavy machinery, machine tools, tools, instruments, textiles... every one of the quality products presented at this trade fair reflects the high standard of Swiss industry, craftsmanship and resourcefulness. Your visit to Basle is an excellent opportunity for establishing useful contacts and initiating new business connections. For detailed information, booklet, catalogue... and good advice on a fast and comfortable flight to Basle simply contact

is the Mercedes Benz, a brand currently very highly regarded without many owning one. Cattle used to be once the main currency of corruption. Today, I say, count and classify cars. If "status symbol" is now a cliché, one's status is today largely determined by the car one rides, and in the United States, a chauffeur-driven car is an immediate key to recognition. I suddenly remember that writing on corruption—or not writing on it—can also conceal a multitude of corrupt transactions. Time, therefore, to stop.

A CORRESPONDENT HAS WRITTEN FROM LONDON to say that although he has not yet read Michael Edwards' book, the *Last Years of British India*, which I mentioned here a few weeks ago, he is nevertheless interested in the theory that the Jallianwallah Bagh massacre played a greater part in the independence movement than the Sepoy Mutiny. While not denying that the incident is of considerable importance, he has recently formed the opinion that it might be so rather because of the political and propaganda use which was subsequently made of it on both sides than for what in fact happened. He bases his doubts on an article by Brian Bond in a recent issue of *History Today*, which attempts to reassess the character of General Dyer and the circumstances with which he had to contend. Without going into too great detail, the burden of the argument is that far from being an ignorant and hot-headed soldier with little knowledge of local conditions and even less sympathy with the "natives", he was in fact an intelligent, efficient and conscientious officer with an admirable record and strong family connections with the country. He was sent to Amritsar with wholly inadequate forces to quell a riotous situation which had already resulted in a number of murders and in which both the Sikh and European communities throughout northern India were seriously threatened with extermination. Memories of the Mutiny played a big part in this fear, by the way. He did not open fire without warning; in fact, the threat that any unlawful assembly would be immediately fired on had been repeated by every available means for several days beforehand. Throughout, Dyer had the support and sympathy of the authorities, both Indian and British. The valid charges against him, according to Mr. Bond, were that he did not give the rioters time to disperse, that he continued firing too long, and that he made no effort to tend the wounded afterwards. But even here there were mitigating circumstances in that he might have judged that his men were in danger of being overpowered by vastly superior numbers. Afterwards he was congratulated by Sikhs and Europeans alike, and was actually invested as a Sikh by the guardians of the Golden Temple. His downfall came when, to propitiate Indian nationalist feeling, he was selected for sacrifice by Montagu, with the support of Winston Churchill, of all people, who was then Secretary of State for War. But the Hunter Committee exonerated Dyer, and the British Army, despite considerable pressure, flatly refused to cashier him.

AT A TIME WHEN CONFUSION OVER THE BUDGET proposals is widespread, one should be grateful for comments that are clear and consistent. It is a rare pleasure to be able to compliment our valued contemporary, *Indian Finance*, on its analyses this year, from which the following two extracts are taken:

"It is a strange and heartening experience, after a lapse of some many years, to be able to welcome wholeheartedly and almost without qualification the contents of a Central Budget. What is significant about Mr. T. T. Krishnamachari's effort for 1964-65 is not merely that the additional revenue sought is small; the Finance Minister is to be congratulated on having based his proposals on correct considerations, and also for an eminently fitting approach to the very task of Budget-framing."—*Indian Finance*, Special Budget Supplement, 4th March, 1964.

"There has since been time enough for second thoughts, and if studies under way in our office are any indication, we are afraid we have regretfully to come to the conclusion that, whatever may have been Mr. Krishnamachari's stated intentions in his speech, the Finance Bill that has been introduced makes a mockery of practically every one of the reliefs and concessions that had ostensibly and on surface been extended to a long-suffering tax-paying public."—*Indian Finance*, 7th March, 1964.

THE DITCHER

Guide for Investors

TAX CONCESSIONS AND PRICE RISE FAIL TO LIFT COAL SHARES

(BY A SPECIAL CORRESPONDENT)

THE index for ordinary coal shares has declined from 115.3 to 103 (1952-53 equals 100) over the past year. The long-awaited increase in the prices of good-grade coking and selected grade non-coking coal, which the Government sanctioned last week, has had virtually no effect on investors. They have not also been impressed by the tax concessions granted to the industry by the Central Finance Minister in his Budget for 1964-65.

It looks rather odd at first sight that coal shares have not responded to these favourable developments and continue to remain as sluggish as before. A careful analysis, however, shows that investors have good reasons not to feel enthusiastic. Rebates of 5 percent in the corporation tax and of 20 percent in the surtax on profits allowed to the industry are no doubt steps in the right direction. But the benefits have been greatly neutralised by two new measures proposed by the Finance Minister. Firstly, all companies, including coal companies, will have to pay a dividend tax of 7.5 percent on distributed ordinary dividends. The burden of the levy will be considerable, particularly on those coal companies which pay good dividends.

Secondly, confidence has been shaken by the proposal to treat bonus shares as capital gains, because the glamour of growth depends greatly on the prospect of bonus share issues. Since the decision to consider bonus shares as a capital gain has been superimposed on the existing penal rate of tax on such shares, companies in general will be restrained from issuing bonus shares. It is particularly depressing for the coal industry since it has committed itself to investing large sums of money in capital assets for expanding output.

Nevertheless, the recent price increase has been welcomed by the industry, although it may not go beyond neutralising the rising production costs. Since the increase has been confined to only good-grade coal, the output of other categories will continue to remain as uneconomical as before.

Even after taking into account the higher development rebate which the industry enjoys, the tax concessions given by the 1964-65 Central Budget and the increase in the prices of good coal, it does not appear that the profitability of the industry has improved. The most disappointing feature is that the question of offering a depletion allowance to the industry has not yet been considered by the Government. The need for this allowance cannot be exaggerated because depreciation allowed at inadequate rates has been far too inadequate to cover the cost of replacing plant and equipment. No industry other than coal needs to incur capital expenditure more urgently because coal mines are a wasting asset. Every coal company has to replace an exhausted mine by opening a new one, which involves considerable capital expenditure. In the circumstances, coal companies require funds not only to expand output but also to maintain the existing level of raisings.

A generous World Bank loan of \$35 million given to the industry for expansion, has not been fully used

due to the shortage of rupee resources. Only a few large and better-managed collieries have been able to make use of the facilities provided and even their resources have been greatly strained. Because of the low profitability of the industry, it has not attracted capital from the market. Furthermore, since profits have been low, coal companies have not been able to plough back sufficient money into the business.

This apart, investors have been disturbed by the decline in the demand for coal. The pithead stocks at collieries have already risen to about 5 million tons. Although the surplus relates mostly to the power grades, since all good coal has been well absorbed, the industry has suffered greatly for the time being. Under the circumstances, investors cannot be expected to lend support to coal shares unless they are assured that the profits of coal companies will improve substantially in the future. As long as investment in the industry remains less remunerative than in others, coal companies will find it extremely difficult to attract capital.

Good Progress of A.C.C.I. Expansion Schemes

COMMENTING on the Central Budget for 1964-65 in his chairman's statement at the annual general meeting of the Alkali and Chemical Corporation of India Ltd, held in Calcutta last week, Mr. A. R. Foster welcomed the abolition of the super profits tax. It has been replaced by a more realistic surtax on profits by increasing the statutory deduction to 10 percent and broadening the capital base. (A full text of the speech is published on a later page in this week's issue of *Capital*). Concessions to some industries have been given to encourage their development. The withdrawal of the super-tax on inter-company dividends is a step in the right direction, but it may give no right inducement to the potential foreign investor. Alkali Chemical will have to bear an additional tax burden of Rs. 3.5 lakhs due to the levy of the new tax of 7.5 percent on ordinary dividends, on the basis of the current dividend of 15 percent, taxable.

The Company has been given no relief in corporate taxation by the Budget. He thinks that the better way of encouraging plough-back would be to give tax rebates for amounts transferred to reserves rather than by the imposition of a penal tax on dividends. The levy will deter potential investors. The Finance Minister's observation that the development rebate may be withdrawn from certain industries by 1966 has caused concern. He hopes that all projects so far licensed will qualify for the rebate, even if they are unable to begin production before 1966, because commitments will have already been made on hopes of receiving the rebate. Investment in India will suffer greatly without this concession. (It may, however, be noted that a recent Press report from New Delhi says that the rebate in its present form will continue until 1st April, 1967, and not 1st April, 1966, as mentioned by the Finance Minister in his Budget speech). As a result of

the tax changes proposed, he thinks some companies may benefit; many may be a little better off and some worse off particularly when the impact of the dividend tax is considered.

As for expansion in Alkali Chemical, the plan to increase the production of paints has made satisfactory progress and the new units may begin production within the next year or so. Steps have been taken to increase the range of polymers and extend the rubber chemicals plant. Production for 1962-63 has shown an all-round improvement. The output of paints has been maintained at a high level in spite of raw material difficulties. A record production of polythene has been achieved and the plant for the production of intermediate density polymer has begun to function. The working has, nevertheless, been interrupted by an acute shortage of alcohol. Unless an adequate supply of this item is ensured, output during the current year will suffer. The production of rubber chemicals from the new plant has been satisfactory and should meet the entire domestic demand. Sales at Rs. 8.13 crores were the highest ever made. The abolition of price control on caustic soda, liquid chlorine and hydrochloric acid is a welcome step, and the Company has raised the prices of these products only marginally in the interests of consumers.

Martin Burn Earns More, Pays the Same

THE working of Martin Burn Ltd for the year ended March 1964 shows an improvement in the trading profit and in the managing agency commission earned before providing for taxation, but additional taxation provision has to be made for the super profits tax. In order to reduce the impact of these levies, it has been found necessary to transfer the requisite amounts from profits to a special reserve to be used in the manner permitted by the Act. So profits available for distribution amounts to more or less the same as for 1961-62. The engineering group of companies has shown better results. The electric group had more or less maintained its position, but the U.P. State Electricity Board has given notice of its intention to exercise the option to purchase the undertakings covered by the licences operated by the U.P. Electric Supply Co. Ltd in September 1964. The railway companies

have faced difficult working conditions. The increase in road competition, combined with the rising administrative costs, has proved a heavy burden on all the railways managed by Martin Burn.

The profit has amounted to Rs. 44.60 lakhs, against Rs. 41.67 lakhs for 1961-62, after providing Rs. 2.84 lakhs (against Rs. 2.89 lakhs) for depreciation, and Rs. 47 lakhs, including Rs. 2.50 lakhs for the super profits tax (against Rs. 36.50 lakhs) for taxation. The taxable ordinary dividend of 25 percent has been maintained, absorbing Rs. 36.78 lakhs. The yield amounts to 8.9 percent at the present price of Rs. 28.12 a share of Rs. 10 each. Special reserve under the Super Profits Tax Act is allocated Rs. 12 lakhs and general reserve Rs. 3.75 lakhs (against Rs. 1 lakh), leaving a carry-forward of Rs. 1.289, against Rs. 2.45 lakhs brought in.

E.I.D.-Parry Group Profit Rises

IN a statement circulated to the shareholders of E.I.D.-Parry Ltd, Mr. H. V. R. Iengar, chairman, has explained the setback which the Ennore fertiliser factory has suffered due to causes beyond the control of the Company. (The full text is published on a later page in this issue of *Capital*). The contractors and their sub-contractors who have built the factory have been responsible for not being able to get it into full running condition. Instead of an expected output of 56,000 tons, the factory produced only 11,500 tons. As a result, the Company has had to sustain considerable loss on account of this factory. It is expected that the factory will be able to show a better performance during the current year.

It is nevertheless encouraging that the loss has been absorbed because the group has done very well in other spheres. The group profit has improved from £252,287 for 1962 to £360,047. But the higher profit has mainly been due to tax concessions which the Company has enjoyed as a result of a substantial development rebate for the Ennore factory. The Company has done well in sugar, pottery and sales of fertilisers and general goods. Although manufacturing activities have grown considerably, great importance has been attached to maintaining trading activities at a high level. In view of the uncertainty concerning the working of the Ennore factory, the directors have decided to cut the dividend from 21.3/7 percent to 18 percent.

As for the manufacture of sugar, the outlook is assessed with caution. There has been a shortage of cane supplies due to their diversion for the manufacture of gur. Mr. Iengar thinks that the prospect for the sugar industry in 1964 is uncertain. The cane price has been further in-

IMPERIAL
COMPRESSORS, HOISTS
TROLLEY JACKS, CAR WASHERS

Armstrong Smith Ltd.

creased, so its impact on sugar factories needs to be carefully watched. In ceramics, the Company has expanded the production of sanitary-ware substantially at the Ranipet factory in collaboration with Doulton and Co. Ltd. of the U.K. A new range of patterns has been developed and introduced in the market. The standard and quality of products have improved progressively. Referring to the Visakhapatnam fertiliser project which is estimated to cost about Rs 33 crores, Mr. Iengar pointed out that arrangements for its implementation are nearing completion. It is expected that an offer of shares will be made to the public in the near future. E.I.D.-Parry will hold Rs. 55 lakhs of equity share capital in the new company which will run the Visakhapatnam fertiliser project. E.I.D.-Parry will also act as the principal selling agent for fertilisers to be produced. The Vishakhapatnam factory is expected to manufacture about 365,000 tons of ammonium phosphate and 16,500 tons of urea.

National Pipes and Tubes Repeats

THE output of National Pipes and Tubes Co. Ltd rose during the year ended September 1963 due to an improved supply of raw materials. The fabrication work also increased considerably. Sales rose from Rs. 1.07 crores to Rs. 1.20 crores. The profit has risen from Rs. 21.94 lakhs to Rs. 30.79 lakhs, after increasing tax provision from Rs. 11.07 lakhs to Rs. 19.23 lakhs, out of which the super profits tax absorbs Rs. 4.12 lakhs, and after transferring Rs. 18.131 (against Rs. 21.148) to depreciation and Rs. 35,435 (against Rs. 15,600) to development rebate reserve. The taxable ordinary dividend of 20 percent has been repeated, absorbing Rs. 6 lakhs. This works out to a yield of 6.8 percent at the present price of Rs. 29.25 a share of Rs. 10 each. A further provision of Rs. 2.74 lakhs has been made for the super profits tax for 1963-64. General reserve is allocated Rs. 2 lakhs (the same) and dividend equalisation reserve Rs. 2 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 19,484, against Rs. 52,804 brought in.

The directors say that modern machinery has been installed at the factory for improving quality and efficiency. Considerable progress has been made in the expansion scheme and it is expected that the installed capacity for the production of hollows will soon be increased. Orders for the necessary equipment have already been placed.

Madura Mills Raises Dividend

THE increase in the dividend from 15 percent to 17½ percent by the Madura Mills Co. Ltd for 1963 is fully justified by the Company's improved performance. As against an increase of a little over 11 percent in the sales from Rs. 16.3 crores to Rs. 18.1 crores, the gross profit has recorded an impressive increase of 21.4 percent from Rs. 1.68 crores to Rs. 2.04 crores. After providing Rs. 57.18 lakhs (against Rs. 43.53 lakhs) for depreciation and Rs. 58.32 lakhs (against Rs. 65.67 lakhs) for taxation and deducting other prior charges, the net profit amounts to Rs. 80.17 lakhs, against Rs. 51.51 lakhs in 1962. Allocations to the debenture stock redemption reserve and the National Industrial Development Corporation loan redemption reserve have been maintained at Rs. 10 lakhs, and Rs. 7.50 lakhs, respectively. The provision

for development rebate reserve has been stepped up from Rs. 9.68 lakhs to Rs. 27.38 lakhs, and a sum of Rs. 14.92 lakhs (against nil) has been set aside for the general reserve. After providing for the payment of the proposed dividend which absorbs Rs. 30.63 lakhs (against Rs. 26.25 lakhs), there remains a surplus of Rs. 59,353 to be carried forward, against Rs. 10.85 lakhs brought in.

The directors attribute the improvement in the Company's working results to the modernisation and rationalisation or workloads achieved during the year and to the increase in internal yarn prices. The 450-loom project has been implemented in full and permission has been obtained for the installation of another 500 looms which are being imported from Belgium and for which necessary licence has been sanctioned. The construction of the weaving unit in Ambasamudram is said to be making satisfactory progress, and it is expected to be completed before the end of this year. The Company has applied to the Government for permission to import up-to-date machinery for additions to the bleaching, dyeing and finishing plants. The total capital expenditure incurred by the Company during 1963 amounted to Rs. 1.99 crores, while outstanding commitments at the end of the year were of the order of Rs. 1.49 crores. These commitments do not include the additional looms under negotiation.

Star Paper Skips Dividend

IN their report for the year ended September 1963, the directors of Star Paper Mills Ltd point to the rising production costs due to the increased wages as well as the emergency war risks insurance premium paid by the Company. The new plant has achieved a satisfactory standard of output. As a result of improvement effected in the plant, production during the current year is expected to show further improvement. Certain additions are being made to the new plant to raise production. The Company is considering renovating the old plant. A new washing plant for the old machine has been ordered and its installation is expected to be completed during the current year. The directors say that the present selling prices of paper are uneconomic.

The profit has improved from Rs. 13.79 lakhs for 1961-62 to Rs. 34.96 lakhs for 1962-63, after providing Rs. 25.38 lakhs for depreciation. A sum of Rs. 25.15 lakhs has been provided to cover depreciation for 1961-62, leaving a balance of Rs. 10.37 lakhs. The ordinary dividend has been passed. In order to pay tax-free dividends on preference shares, it is proposed to hold meetings of preference and ordinary shareholders to obtain their sanction. When the shareholders make their decisions the directors intend to declare interim dividends on preference shares for 1959-60.

Sen-Raleigh Pays Nil

SEN-RALEIGH Ltd has passed the ordinary dividend for the year ended September 1963, against a taxable ordinary dividend of 8 percent paid for 1961-62. Sales fell from Rs. 4.86 crores to Rs. 4.68 crores. The trading profit has dropped from Rs. 45.23 lakhs to Rs. 32.65 lakhs. Depreciation absorbs Rs. 21.03 lakhs (against Rs. 21.86 lakhs) and taxation Rs. 7.51 lakhs (against Rs. 11.86 lakhs). Sums of Rs. 3.75 lakhs (the same) have been allocated to the repayment of loan

reserve and of Rs. 1.12 lakhs (against Rs. 57,757) to development rebate reserve. Super profits tax liability for 1961-62 has been provided to the extent of Rs. 32,914.

The unsatisfactory results have been due to a smaller production following the shortage of raw materials. It has been pointed out that after three years of near stagnation, the demand for bicycles and components has begun to improve. The expansion programme for bicycle production has made satisfactory progress. When it is completed the financial results should improve as a result of greater economies in output. The Company proposes to expand the production of components after completing the expansion of the bicycle-manufacturing plants. As for making house service meters, good progress has been made. The Company has made vigorous efforts to expand the export of its products.

Nylon from Century Spinning

IT is reliably learnt that a provisional agreement has been finalised between Century Spinning and Manufacturing Co. Ltd. and Messrs Algemene Kunstzijde of Holland and Vereingde Glanzstoff Fabriken of West Germany for a joint venture to establish a factory to manufacture nylon 1. It is proposed to build a plant with a capacity for producing 2½ tons a day at a cost of Rs. 4 crores. The plant is expected to go into production by the middle of 1966 and is likely to be located in Poona, Maharashtra State. Active steps are being taken to form an Indian Company at an early date with a board of directors consisting of Mr. B. K. Birla, two representatives of the foreign collaborators and two other Indian directors. The foreign collaborators will take 45 percent of the equity capital, and the balance will be raised by public subscription from Indian citizens. The new issue may be floated within the next three or four months.

Mahindra and Mahindra Fares Well

THE preliminary report of the Mahindra and Mahindra Ltd for the year ended October 1963, shows that the Company has fared much better than in the preceding year. The turnover has risen by about 15 percent from Rs. 13.88 crores to Rs. 15.92 crores, and the gross profit, after providing Rs. 29.70 lakhs (against Rs. 24.02 lakhs) for bonus to staff, has increased by about 20 percent from Rs. 98.28 lakhs to Rs. 1.187 crores. Although the dividend has only been maintained at 12½ percent, the total amount to be distributed among the equity shareholders is larger at Rs. 22.36 lakhs, against Rs. 18.22 lakhs as the new shares are entitled to a dividend of 88pP a share against 26pP paid in the preceding year. Appropriations include Rs. 17.18 lakhs (against Rs. 15.79 lakhs) for depreciation, Rs. 3.36 lakhs (against Rs. 3.87 lakhs) for development rebate, Rs. 50.18 lakhs (against Rs. 44.39 lakhs) for taxation, Rs. 7.84 lakhs for the new sur tax and dividend tax (against Rs. 11.22 lakhs for super profits tax) and Rs. 14 lakhs (against Rs. 3.50 lakhs) for general reserve. After providing for the preference dividend amounting to Rs. 4.49 lakhs (the same) and ordinary dividend of Rs. 22.36 lakhs (against Rs. 18.22 lakhs), there remains a small surplus of Rs. 13,000 to be carried forward, against Rs. 80,985 brought in. The directors point out that in maintaining the dividend at the previous year's level, they have taken into account the pressing need for liquid funds for

CAPITAL, 12th March, 1964.

meeting the Company's expansion programme in Kandivli where all the plants engaged in producing jeep components are proposed to be consolidated and integrated in one area. Construction work has already started and it is hoped that new facilities will be in operation by about the middle of next year. The Rs. 10-paid share of Mahindra and Mahindra is currently quoted around Rs. 15.48.

I.C.I.C.I. Help for Industry

THE Industrial Credit and Investment Corporation of India has been playing an increasingly useful rôle in the economy of the country. In normal times, it carries out scrutiny of projects and guides entrepreneurs about their projects; and in times of sluggishness in the capital market, it provides funds to enable the flow of investment to continue. During 1963, when investment seemed to falter and entrepreneurs tended to postpone undertaking further projects, the gross assistance sanctioned by the I.C.I.C.I. in the form of loans, underwriting and direct subscriptions reached a record high of Rs. 24.94 crores, against Rs. 19.60 crores in 1962. This was divided equally between foreign currency loans and rupee assistance. Net assistance sanctioned amounted to Rs. 23.05 crores. Rupee assistance in the form of loans, underwriting of and direct subscriptions to ordinary and preference shares and debentures amounted to Rs. 12.59 crores to 33 companies and foreign currency loans for the equivalent of Rs. 12.35 crores to 57 companies. Among these companies, 17 were sanctioned assistance both in rupees and foreign currencies. Total disbursement was Rs. 10.76 crores of which Rs. 6.14 crores was in foreign currencies. Addressing a Press conference convened for releasing the Corporation's annual report for 1963, the chairman, Mr. G. L. Mehta, made a pointed reference to underwriting business. The I.C.I.C.I. gave underwriting sanction for Rs. 3.68 crores in 1963. Eleven underwriting operations were completed during the year for a total amount of Rs. 1.77 crores, against which the Corporation was called upon to take up Rs. 83 lakhs. This, said Mr. Mehta, is a measure both of the state of the capital market during 1963 and of the Corporation's policy in coming forward and providing assistance to enable industries not to suffer for lack of funds.

Of the total net financial assistance amounting to Rs. 23.05 crores sanctioned by the Corporation during 1963, Rs. 16.07 crores (including Rs. 7.36 crores in foreign exchange) was for 52 new projects. The total cost of these projects including working capital of Rs. 31.13 crores would amount to Rs. 123.37 crores, of which Rs. 36.91 crores would be required in foreign exchange for fixed assets. When in normal production, the total turnover of these projects would be about Rs. 68.10 crores, which is expected to yield a net foreign exchange saving of about Rs. 46 crores.

The total of net operations sanctioned during the nine years from the inception of the Corporation in 1955 until the end of 1963, amounted to Rs. 83.21 crores to 248 companies of which 105 were new undertakings. Out of the rupee loans and guarantees sanctioned totalling Rs. 21.74 crores, the amount disbursed up to end of 1963 was Rs. 10.41 crores. Out of the foreign currency loans sanctioned amounting to Rs. 39.47 crores, the amount disbursed was Rs. 17.44 crores. Similarly, out of Rs. 16.86 crores sanctioned for underwriting up to the end of 1963 the Corporation completed 50 operations in all amounting to Rs. 13.49 crores, against which it was called upon to take up Rs. 6.52 crores in shares and debentures on which

CAPITAL, 12th March, 1964.

an amount of Rs. 6.33 crores was paid up. Out of the direct subscriptions to ordinary and preference shares and debentures sanctioned of Rs. 5.14 crores, the Corporation subscribed to Rs. 4.89 crores on which Rs. 4.84 crores was paid up. The Corporation thus disbursed a total amount of Rs. 39.02 crores up to the end of 1963.

The total repayments of loans up to the end of 1963, amounted to Rs. 4.02 crores, and the sale proceeds of investments to Rs. 3.37 crores. Companies to which assistance has been sanctioned are located in different parts of the country. State-wise, Maharashtra accounts for 33.8 percent of the total financial assistance to be followed by Madras with 11.9 percent, Gujarat 10.3 percent, Mysore and West Bengal 8.6 percent each, and Andhra Pradesh 7.7 percent. The share of Kerala State is a mere 0.8 percent and Rajasthan accounts for no more than 0.7 percent. Answering questions from newsmen about the wide variations in the State-wise distribution of financial assistance, Mr. G. L. Mehta said that the Corporation's assistance broadly followed the pattern of industrial licensing and the viability of projects seeking assistance.

To meet the increasing business, the Corporation has taken steps to increase both its rupee and foreign currency resources. Last year, the Government of India gave a loan of Rs. 10 crores and the World Bank sanctioned the fifth line of credit of \$30 million—the largest so far. With these additional resources, total rupee funds of the Corporation amounted to Rs. 32.5 crores and foreign currency funds to the equivalent of Rs. 48.12 crores (\$30 million from the World Bank, \$5 million from the A.I.D. of U.S.A. and 25 million Deutschmarks from K.F.W. of West Germany). In addition, the Corporation can use the funds arising out of securities and out of the sales of appreciable plough-back of profits. Reflecting the increased operations, the sources increased appreciably and its profit, subject to tax, amounted to Rs. 101.54 lakhs in 1963, against Rs. 78.90 lakhs in 1962. The profit after tax is larger at Rs. 57.88 lakhs (against Rs. 46.38 lakhs) and the dividend has been stepped up from 6.5 percent to 7 percent. The chairman stated that as a result of the new Budget, the Corporation would have to pay more tax on the dividend distributed, but it hoped to get some relief because of the removal of tax on inter-corporate dividends. In the present position, the net additional tax liability would be about Rs. 1.50 lakhs.

The performance of development banks like the I.C.I.C.I. is not to be judged by the profit that it makes and the dividend it declares for the shareholders. Such an institution has to stand by industry when the capital market is not in good shape, and conditions in the capital market in India have been far from favourable in the past year or so. In his statement to the shareholders, the chairman, Mr. Mehta, says that as the capital market seemed to dry up, industry increasingly turned to the I.C.I.C.I. and other financial institutions for finance to implement earlier. (A fuller version of the speech appears on a later page of this week's Capital.) Often enough financial plans had to be changed and entrepreneurs who would have issued rights shares turned to financial institutions for loans, and those who in more normal times would have approached the market directly, turned to the I.C.I.C.I. for underwriting their issues to ensure their success. And the Corporation rose to the occasion well. The process of industrialisation consists in drawing

into the vortex of industry persons from outside it. Here again, the Corporation has been playing an important rôle. Many projects financed by the Corporation have been started by new entrepreneurs coming from a variety of fields—trading, management, engineering and other professions. The Corporation has been providing various ancillary services to new entrepreneurs. The readiness of institutions like the I.C.I.C.I. to come forward with support and assistance has prevented a decline in the level of investment which public apathy would otherwise have brought about. Besides, the Corporation has been investing its funds in non-traditional industries—particularly metal-based and chemical industries—which involved taking greater risks. But in keeping with the planning effort in the country, the Corporation has considered it desirable to mould its investment according to the requirements of the economy.

Cane Supplies for Phalton Sugar

THE Phalton Sugar Works Ltd proposes to offer 20,000 cumulative participating preference shares of Rs. 50 each at par to cane-growers who agree to deliver cane to the Company. These shares will carry a fixed dividend of 8 percent which is lower than the prevailing rate of 9 to 9.5 percent on preference shares. A limited participation right up to 12 percent is, therefore, in case the attached to these shares. In case the equity dividend in any year exceeds 18 percent the holders of the preference shares will be entitled to an additional dividend of 1 percent over 18 percent. The maximum dividend on preference shares will not, however, exceed 12 percent in any case. The preference shares will have no right to participate in the surplus assets of the Company on winding up and will not ordinarily be transferable for a minimum period of five years from the date of allotment. The directors say that in view of the Maharashtra Agricultural Lands (Ceiling on Holdings) Act, 1961, the Company has handed over the possession of surplus agricultural lands to the State Government. In order to ensure the continuous supply of cane to a scheme factory, the directors feel that a scheme of participation in the Company by cane suppliers of the adjacent area will prove very useful.

The preliminary report for the year ended September 1963, released along with the announcement of an increase in the dividend from Rs. 7 to Rs. 10 a share, shows that while sales have just been maintained at Rs. 1.73 crores, the gross profit has shot up from Rs. 11.85 lakhs to Rs. 50.59 lakhs. According to the directors' report, several factors have contributed to the impressive rise in profits. The change in the manufacturing programme from refined to raw sugar has resulted in a considerable saving in the cost of production. As the internal demand for refined sugar continued to be brisk, the year's entire output as well as all the brought-forward stocks could be liquidated. So no stocks of sugar are being carried forward to the 1963-64 season.

Although the cane crushed during the season was lower at 123,307 tonnes (against 125,378 tonnes), sugar manufactured was higher at 160,949 bags (against 150,225 bags). The recovery was much better at 12.97 percent, against 11.94 percent.

The directors state that the Company has made provision in the accounts for the value of lands handed over to the State Government on the basis suggested in the Act, and that this has resulted in a loss. The

value to be received for buildings has not been determined. The payment for land and buildings will be in the form of transferable bonds to be issued for the purpose. The Company has submitted bills for Rs. 24.28 lakhs for tractors, implements, trailers, etcetera, of which only bills amounting to Rs. 12.39 lakhs have so far been settled.

Coonoor Tea Pays the Same

DESPITE a record tea crop, the gross profit of the Coonoor Tea Estate Company for the year ended September is down from Rs. 3.14 lakhs to Rs. 2.63 lakhs. The working results are said to have been adversely affected by the rise in production costs on account of higher labour charges and the decline in the average sale price of tea. The tea crop harvested during the year amounted to a little over 200,000 kilograms (452,000 lbs), against 195,000 kilograms (431,000 lbs) in the preceding year. The average cost of production of made tea was slightly higher at Rs. 1.54 a lb. The average sale price realised during the season was Rs. 2.25 a lb, against Rs. 2.32 a lb in the previous year. The outlook for the 1963-64 does not seem promising as the crop is estimated around 191,000 kilograms (420,000 lbs) at an average cost of Rs. 1.58 a lb (Rs. 3.48 a kilogram). After providing Rs. 37,219 (against Rs. 35,661) for depreciation and Rs. 1 lakh (against Rs. 1.28 lakhs) for taxation and deducting other prior charges, the net profit for 1962-63 amounts to Rs. 1.10 lakhs, against Rs. 1.30 lakhs in the preceding year. With Rs. 46,800 brought forward and including Rs. 10,000, being excess provision for taxation made in previous years no longer required, the disposable surplus amounts to Rs. 1.67 lakhs. A sum of Rs. 2,622 (against Rs. 272) has been set aside for development rebate. Preference dividend absorbs Rs. 8,473 (the same) and equity dividend of 17.5 percent (the same) takes up Rs. 99,177, leaving a balance of Rs. 56,592 which has been transferred to the general reserve, which did not receive anything in the preceding year. The Rs. 10-paid share of Coonoor Tea is quoted around Rs. 18.37.

Progress of Durgapur Projects

THE Durgapur Projects Ltd took over from 15th September, 1961, the "Durgapur Project" a complex of State-sponsored enterprises, managed by the Durgapur Industries Board constituted by the West Bengal Government. The Company is at present engaged in diversified industrial enterprises comprising the coke plant, benzol recovery unit, tar distillation plant, gas grid and power plant, but all these units are interlinked and inter-dependent. New additions include the tar distillation plant and the Durgapur-Calcutta gas supply scheme. The coke plant is in full production and has reached 95 percent of the rated capacity. The tar distillation plant has produced about 40 tons of tar a day, against a minimum target input of 70 tons a day.

The capital programme during the third plan period consists of expansion of generating capacity of the power plant, extension of the power transmission and distribution systems, doubling the capacity of the coke plant and the construction of a coal washery. The construction programme is proceeding satisfactorily and the Durgapur-Bandel H. T. line should be ready during the first half of 1964. The expansion of the coke plant and the installation of the washery may be completed early in 1965.

In addition to these expansion schemes, certain other projects like fertilisers and chemicals project undertaken by the Government of India will be handled by the Company as agents. Durgapur Projects has been doing considerable civil engineering construction work for the Central and State Government Departments.

In its report for the year ended March 1963, the Company has earned Rs. 1.09 crores. Depreciation absorbs Rs. 64.24 lakhs. After using the net surplus of Rs. 45.10 lakhs towards interest charges on capital works in progress, there remains a balance of Rs. 38.72 lakhs on interest account which is shown as a loss. But this will be reduced to Rs. 31.73 lakhs, if the interest liability is taken at 5.5 percent. The surplus amount of Rs. 45.10 lakhs represents a return of 3.03 percent on the depreciated value amounting to Rs. 14.82 crores of the fixed assets of the plants in commercial production.

This is the second year of the Company's working. The investment of Rs. 34.37 crores to which equity capital has contributed Rs. 15 crores and loan capital Rs. 19.37 crores. A sum of Rs. 92 lakhs was repaid to the Government in 1962-63 out of which Rs. 20 lakhs represent interest and Rs. 72 lakhs repayment of capital. The directors are considering various schemes for implementation during the fourth plan period. It is proposed to produce 100,000 tons of high silicon pig iron a year for foundry use, and to set up a unit for manufacturing 100 tons of methanol a day. In addition, schemes for manufacturing plastics, extending gas supply to various points and installing further thermal power are being considered.

Walchandnagar Industries Fares Better

ALTHOUGH the dividend has only been maintained at 12 percent, the working results of Walchandnagar Industries for the year ended September 1963 show that the Company has done much better than in the previous year. Against an increase of a little over 4 percent in the sales from Rs. 5.38 crores to Rs. 5.61 crores, the gross profit is up by about 23 percent from Rs. 67.11 lakhs to a record high of Rs. 82.80 lakhs. After providing Rs. 27 lakhs (against Rs. 29.13 lakhs) for depreciation, Rs. 2.50 lakhs (against Rs. 4.31 lakhs) for development rebate and Rs. 22.50 lakhs (against Rs. 15.50 lakhs) for taxation, the net profit amounts to Rs. 25.34 lakhs, against Rs. 14.38 lakhs in 1961-62. With Rs. 1.14 lakhs brought forward from the previous year and including Rs. 17,508, being provisions made earlier but now no longer required, the disposable surplus amounts to Rs. 26.65 lakhs. Out of this, the directors have transferred Rs. 26.64 lakhs to general reserve, leaving Rs. 1,059 to be carried forward. The proposed dividends—both preference and ordinary—absorbing Rs. 23.18 lakhs are to be paid out of general reserve.

The directors say that the sugar-cane crushed during the year was lower at 190,000 metric tons, against 203,000 metric tons in the previous year. The sugar output declined from 248,000 bags (of one quintal each) to 231,000 bags. The recovery was lower at 12.13 percent, against 12.25 percent. The distillery fared better with the output of spirit rising from a mere 762,000 litres to 3,722,000 litres. The sugar mill machinery supplied during 1962-63 rose from Rs. 2.13 crores to Rs. 2.29 crores. The plastic factory supplied goods worth Rs. 5.61 lakhs, against Rs. 5.05 lakhs. The Company has recently entered into an agreement with Prerovske Strojirny, Czechoslovakia, for the

manufacture of complete cement plant and parts in Walchandnagar.

The agreement for technical collaboration with Escher-Wyss of Zurich for the manufacture of paper plants and ancillary equipment has been finalised and is awaiting the Government's approval. Negotiations are in progress for technical collaboration with M.A.A.G. Gear-Wheel Company of Switzerland for the manufacture of speed reduction gears, pinions and their accessories as required in sugar, cement, paper and pulp industries. A proposal to manufacture steam turbines for sugar mills at the Company's factory in Walchandnagar in collaboration with G. and J. Weir Ltd of Glasgow is also being considered. The I.C.I.C.I. has sanctioned a loan of \$525,300 (about Rs. 25 lakhs) to meet the cost of imported equipment for the cement machinery making project. The Company has completed deliveries of sugar machinery to three co-operative sugar factories and it has secured further orders for the supply of two complete sugar factories.

National Ekco Does Well

IN 1963, National Ekco Radio and Engineering Co. Ltd produced 70,000 sets, of which 13 percent were transistor sets, valued at Rs. 1.27 crores. Production this year is expected to rise to 90,000 sets, including about 45,000 transistor radio sets, valued around Rs. 1.70 crores. The output is likely to increase to 108,000 sets in 1965 and 136,000 in 1966. The indigenous content of the Ekco set, which was about 30 percent in 1957, is now as high as 84 percent. The Company has shifted its factory to a new building in Andheri which has many facilities, namely, modern flow-line lay-out, material handling systems, automatic printed circuit machine and greatly improved facilities for quality control and for the special "monsooning" process.

The factory has a capacity to produce 125,000 sets a year. Talking to newsmen recently, the General Manager, Mr. G. R. S. Rao, said that the Company has so far produced radio sets worth Rs. 10 crores since its inception in 1949. Its Andheri factory, it is claimed, is the largest radio factory in the country. The Company's production accounts for nearly 20 percent of the total production of radio sets in India. National Ekco is expected to be self-sufficient in about seven years, that is, the radio set will be completely indigenous. The Company is enjoying collaboration of E. K. Cole Ltd (Ekco of England). National Ekco has recently started exporting its radio sets to Ceylon, Kuwait and a few other countries. Although the prices realised from export sales were very low, they helped the Company to obtain some of its raw material requirements.

Osmanshahi Mills Suffers Loss

THE Rs. 100-paid share of Osmanshahi Mills is quoted nominally around Rs. 45, which reflects the Company's continued disappointing performance over the past many years. Losses have mounted to Rs. 33.26 lakhs and arrears of depreciation add up to Rs. 47.76 lakhs. The shareholders have gone without any dividend for the past seven years ended September 1963. The Company's latest annual report for 1962-63 shows that it has fared worse than in the preceding year, but the outlook seems to have considerably improved with the change in the management

since about the middle of 1963 and the chairman's statement circulated along with the directors' report holds out the promise of a better future. The chairman, Mr. Motichand Bagri, has expressed the hope that the Company will be able to wipe off the past losses during the current year. The management has taken steps for the modernisation of the spinning department by the introduction of the high drafting system. A screen printing plant has also been installed. The management has taken various measures to improve the efficiency of the mills.

The Company's working results for 1962-63 show a loss of Rs. 20.02 lakhs (against Rs. 13.25 lakhs) after setting aside Rs. 3,800 (against Rs. 50,000) for development rebate reserve. No provision has been made for depreciation which works out to around Rs. 6.81 lakhs, bringing the arrears of depreciation to Rs. 47.76 lakhs. With the loss of Rs. 13.24 lakhs brought forward, the total deficit carried forward amounts to Rs. 33.26 lakhs. The working was particularly discouraging during the first half of the year, losses during the five-month period—October 1962 to February 1963—totalling Rs. 22.93 lakhs. Conditions improved after the change in the management in March and the mills made a profit of about Rs. 4.92 lakhs in the second half of the year. The current working of the mills is said to be quite encouraging.

Azam Jahi Mills Disappoints

THE Azam Jahi Mills reports extremely disappointing results for the year ended September 1963. In 1961-62, the Company had made a gross profit of Rs. 13.88 lakhs, and had paid a dividend of Rs. 3.50 a share. But the working results for 1962-63 show a loss of Rs. 17.16 lakhs, and the dividend has had to be skipped. The turnover has suffered, although not very much. Sales of cloth and yarn are down by about 9 percent from Rs. 2.67 crores to Rs. 2.43 crores. The directors attribute the Company's disappointing performance to high cotton prices, the increase in cost of stores and the unfavourable conditions in the cloth market, which, of course, are by no means peculiar to this Company. No provision has been made for depreciation which accounted for Rs. 9.33 lakhs in the previous year. After providing Rs. 95,000 (against Rs. 2 lakhs) for development rebate and Rs. 5,000 (against Rs. 6,000) for taxation for previous years, the total deficit of Rs. 18.16 lakhs has been carried forward. The Rs. 100-paid share of Azam Jahi is quoted nominally around Rs. 55.

United Bank Pays More

THE profit of the United Bank of India Ltd has risen from Rs. 21.20 lakhs for 1962 to Rs. 26.40 lakhs for the year ended December 1963. Including Rs. 3.26 lakhs brought in, the amount available for distribution amounts to Rs. 29.66 lakhs. The reserve fund is allocated Rs. 5.30 lakhs. The taxable ordinary dividend has been increased from 6 percent to 7.5 percent. This gives a yield of 9.1 percent at the present price of Rs. 8.25 a share of Rs. 10 each.

The balance-sheet (published on a later page in this week's issue of Capital) contains an interesting table showing the distribution of shareholdings of the bank. The number of shareholders amounts to more than 21,700, out of which small holders having shares of not

more than Rs. 2,500 each comprise about 90.4 percent of the total number of shareholders. The liquidity ratio of the bank has been maintained at 14.94 percent, against 12.22 percent. The bank opened seven branches in 1963 and it has bought land in Dalhousie Square to build a multi-storeyed building for its head office. Deposits rose by Rs. 7.90 crores to Rs. 72.60 crores and advances by Rs. 3.26 crores to Rs. 47.16 crores. Interest paid on deposits and borrowings amounted to Rs. 1.25 crores while interest and discounts earned improved from Rs. 2.90 crores to Rs. 3.32 crores.

Rajasthan Spinning to Expand

RAJASTHAN Spinning and Weaving Mills Ltd has made satisfactory progress during the year ended September 1963. The mill started production in December 1962, but since October 1963, all spindles have been working and the entire installed capacity has been functioning from January 1964. The Company has imported two English frames and has been granted a licence to import three American frames. As for the expansion programme, the Government has sanctioned additional spindles to the Company which proposes to increase them to 26,350. Sales amounted to Rs. 41.14 lakhs. The trading profit has amounted to Rs. 2.63 lakhs, before providing for depreciation and interest on loans. After meeting all charges, there is a loss of Rs. 14,300. Bringing in a loss of Rs. 9,430, the total loss of Rs. 23,730 has been carried forward.

Fixed assets of more than Rs. 25 lakhs were acquired in 1962-63. The major part of the acquisition was financed by borrowings from the Rajasthan Financial Corporation and the Industrial Finance Corporation. So loans from these two institutions have risen to Rs. 43 lakhs. The paid-up share capital has also risen from Rs. 29.24 lakhs to Rs. 29.88 lakhs.

Indian Overseas Bank Raises Dividend

FOR the year ended December, 1963, the net profit of the Indian Overseas Bank Ltd amounts to Rs. 16,23,333, after paying Rs. 9 lakhs to the staff gratuity fund. The net profit for the previous year was Rs. 19,99,875. Adding to the net profit a sum of Rs. 8,69,766 transferred from the pension and gratuity fund account and with Rs. 2,03,043 brought forward from the previous year, the total available for appropriation comes to Rs. 26,96,143. Out of this, the directors have transferred Rs. 6.75 lakhs (against Rs. 4 lakhs) to the reserve fund. Development rebate reserve gets nil (against Rs. 2 lakhs.) Provision for bonus amounts to Rs. 6 lakhs (against Rs. 4 lakhs). The dividend at 14 percent (against 12 percent) accounts for Rs. 13,19,293 (against Rs. 10,19,764). The balance of Rs. 1,01,850 is carried forward, against Rs. 2,03,043 brought in. The bank took over during the year certain assets and liabilities of the Coimbatore Standard Bank and also Nanjinad Bank Ltd.

Share Offer by Bhaskar Textile

BHASKAR Textile Mills Ltd is offering 140,000 ordinary shares of Rs. 10 each and 7,000 preference shares of Rs. 100 each for public subscription at par. The preference shares carry a fixed dividend of 9.5

percent, tax-free. The applicants for equity shares will have to pay Rs. 2.50 each on application and allotment while those for preference shares will have to make a payment of Rs. 25 with application. Applications should be made for ten or multiples of ten ordinary shares while preference shares should be applied for five or multiples of five. The entire public issue has been underwritten. The list opens on 23rd March, 1964. (Details of the issue are printed on a later page in this week's issue of Capital).

The Company will set up a factory with an installed capacity of 25,000 spindles to manufacture cotton yarn. At present, it is proposed to install only 15,000 spindles. The site has been located in Jharsuguda, Orissa, with an assured supply of power. Licences to import equipment from abroad have been obtained and orders for plant and machinery placed with foreign manufacturers. The plant, it is expected, will begin production by the end of 1964. The board of directors consists of Messrs Surajmal Mohta, P. D. Himatsingka, Baijnath Tapuria, Rasiklal Maneklal, Beni Prasad Maheshwari, M. K. Mohta and B. D. Kothari. The subscribed capital amounts to Rs. 14 lakhs divided into ordinary shares.

New Capital Issues

CAPITAL totalling over Rs. 2.07 crores will be raised by four companies. Two involve foreign collaboration and one is offering part of its new capital to be raised by public subscription. One company is giving part of its capital to its foreign collaborator on a rights basis and two companies are issuing partly cumulative redeemable preference shares. One company will be buying ships from abroad. The consent of the Controller of Capital Issues is valid for 12 months in all cases. Here are the details:

Warrior (India) Ltd, Bombay, is to raise further capital of Rs. 20 lakhs, divided into 20,000 equity shares of Rs. 100 each at par on a rights basis. Some 10,300 shares will be allotted to Nuckey Scott and Company Ltd of the U.K. or to their nominees in consideration of the capital equipment to be imported by the Company and 9,500 shares to Indian shareholders for cash. The money is needed for financing the expansion scheme involved in the manufacture of threading tools, namely, taps and dies.

In supersession of an earlier consent, *Thakur Shipping Co. Ltd*, Bihar, is to issue capital of Rs. 1.13 crores divided into 33,000 9.3 percent cumulative redeemable preference shares of Rs. 100 each and 800,000 equity shares of Rs. 10 each at par. Of this, 320,000 equity shares will be allotted to Ultramar Fischer and Co., West Germany, for consideration other than cash. Out of the remaining shares, 33,000 preference shares and 330,000 equity shares will be offered for public subscription by prospectus. The capital will be used for purchasing ships from abroad.

Vijay Engineering Company Ltd., Howrah, is to issue capital of Rs. 44,58,900 divided into 295,890 equity shares of Rs. 10 each and 15,000 9.5 percent cumulative redeemable preference shares of Rs. 100 each for cash at par. The proceeds will be used for the construction of a factory for the manufacture of cranes and hydraulic structures and tanks.

Gujarat Machinery Manufacturers Ltd is to issue Rs. 30 lakhs equity capital in shares of Rs. 100 each, for cash at par. The money will be used for the manufacture of glass-lined equipment and printing machinery.

The Stock Markets

NERVOUSNESS CONTINUES IN LYONS RANGE

Wednesday Evening.

THE Calcutta stock market has been quiet during the past week. Turnover has dropped appreciably and has largely been confined to clearing scrip. Weak holders were particularly nervous and hastened to sell their shares. Share prices have, on the whole, drifted downwards since there are few buyers. The clearing on Wednesday passed off uneventfully and carry-forward charges were about the same as at the previous settlement.

Towards the close, nervousness has been accentuated by the statement made by the Finance Minister, Mr. T. T. Krishnamachari, in Parliament on Tuesday. The panic which followed the Budget had abated somewhat on hopes that the Finance Minister may modify some of his harsh tax proposals, but it now appears that he will not do so. Operators have also been disturbed by adverse political rumours. The tension between India and Pakistan is growing. Sino-Indian relations continue to be strained. Since all bullish factors have been discounted, the market has again become sensitive to political news. A section of Lyons Range, nevertheless, thinks that prices have already reached the bottom. The technical position has improved due to large-scale liquidation by weak holders, so any big fall is unlikely.

Investors have meanwhile preferred to hold off since it is believed that the Budget proposals will affect shareholders. Although the burden of taxation on some companies has been marginally relieved, it is doubtful whether the benefit will be passed on to shareholders in the form of dividends. Unless the new dividend tax of 7.5 percent and the decision to tax capital gains on bonus shares are withdrawn, the outlook for equities will suffer. New issues have borne the brunt of pressure; almost all of them are quoting below par because the concessions given to new industries have not impressed investors.

Indian Iron have lost further ground due to bear pressure in the absence of support. Investors fear that the partial decontrol of steel may not benefit the producers. So the tax concessions given to steel companies have been overlooked. Engineering shares like Guest, Keen, Williams, Texmaco, Burn, Jessop and Indian Standard Wagon have on the whole eased. Selling pressure has, however, been light. Scattered support has been extended to Kumardhubi Engineering and J. K. Steel.

Attention in the miscellaneous section has centred on clearing scrip, but they have lost towards the close. Indian Aluminium, Indian Copper and Hindustan Motors have dropped. Union Carbide have weakened on repeating the dividend. Alkali Chemical have not responded to an encouraging speech from the chairman of the Company at its recent annual general meeting. Electric company shares have been sluggish and small business in Calcutta Electric has passed.

Managing agency shares like Jardine Henderson and Balmer Lawrie have been easier, although Martin Burn have been steady on a good report. Among new shares, Hindustan Aluminium, India Carbon

and Phillips Carbon have weakened on pressure. In banks, scattered support has been extended to United Bank on paying a higher dividend. Paper shares have declined in sympathy with the general trend. Orient, Sirpur, Seshasayee and Titaghur have quoted lower.

Prices of jute shares have dropped, although turnover has been smaller. Birla, New Central, Ganges and India have been available at lower prices. The absence of foreign enquiries in jute goods has disturbed investors. Coal shares have been sluggish in spite of an increase in the price of good coal. Stray business has been transacted in Burra-kur, Bengal and Central India. Support has been lacking because it is thought that the increase in prices will merely help collieries to cover their rising production costs.

Cotton mill shares have been subdued due to the sharp increase in excise duty. J. K. Cotton, Bharat Commerce, Elgin and Jay Shree Textiles have been easier. In tea shares, only a few transactions have been done in selected Assam and Doars gardens. Investors have been disappointed since the Budget has done nothing to help the industry to expand tea exports. In Doars group, Mim have changed hands after a long interval.

Government securities have been dull and quiet. Buyers have been conspicuous by their absence. The 3 percent Conversion loan 1986 has dropped to Rs. 63.30. Prices of short- and medium-dated stocks have, nevertheless, shown little change due to the absence of declared sellers. Some institutional support has been extended to selected State Government loans.

Tata Steel Output

Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during February 1964 was: iron 118,600 metric tons; steel ingots 139,000 metric tons and salable steel 109,100 metric tons.

Bombay

TEXTILE SHARES FALL SHARPLY

QUIET MOOD IN DALAL STREET

Wednesday Evening.

THE Bombay stock market has closed the past week in a quiet mood after showing a mixed trend. The earlier recovery was due to hopes that the Central Finance Minister, Mr. T. T. Krishnamachari, might modify his Budget proposals. Towards the close, these hopes have vanished as the Finance Minister indicated in Parliament on Tuesday that he was not prepared to consider any change except one or two minor ones. Share prices have declined due to pressure, especially from weak holders. Cotton textile and rayon shares have suffered heavily due to the steep rise in the

excise duty. Steel shares have also turned weaker on second thoughts about the partial decontrol of steel. It is doubtful whether the profits of steel companies will improve as a result of the move. Turnover has largely been confined to clearing shares, while cash scrip have been neglected. New issues have suffered heavily due to the absence of buyers.

Tata Steel ordinary have declined to Rs. 149. The decline in production figures for February has been an additional damper. The earlier support for Premier Construction following the rise in the dividend has petered out at the close. Tata Locomotive, Mukund Iron and Alcock Ashdown have quoted lower. Motor-vehicle shares like Hindustan Motors and Premier Automobiles have dropped.

Cotton mill shares have shown widespread losses. Century, Bombay Dyeing and Kohinoor have declined. India United ordinary, Simplex and Svadeshi have been weaker. Morarjee have not responded to the prospects of a rights issue. The Company has decided to issue rights ordinary shares at par to the existing shareholders in the ratio of four new shares for every nine held. It may be interesting to note that the Company had earlier reversed its decision to issue rights shares because the Controller of Capital Issues insisted on a heavy premium. Now that the Company is free to issue new shares to the extent of Rs. 25 lakhs, the present move has been made. Osmanshahi have been offered freely without attracting buyers, since the Company has passed the dividend for the seventh year in suc-

HOW SHALIMAR WORKS ? ...No. 7 Ship Repairers

This is an industry that has grown from the early days of nailing a tingle* on a wooden bottom (ships) to the modern practice of completely rebuilding a 10,000 ton steamer in 36 hours. The knowledge and skills required to do this are a closed book to all but ship repairers.

*Derivation from the sensation of missing the nail and hitting the thumb or index finger. (Author)

THE SHALIMAR WORKS LTD.
4 Garden Reach Road, Calcutta 23

cession, Sassoon and Alliance Silk have attracted little notice, although the Company has declared an ordinary dividend of 6 percent after a lapse of six years.

Miscellaneous shares have moved down in sympathy with the general trend. In cement shares, Associated Cement and Digvijay have dropped. In sugar shares, Belapur and Phaltan have been offered at lower prices. Scindia Steamship have lost on pressure among steamship companies. Shivrajpur Syndicate have been sold freely in the mining section. Chemical shares have been quiet, and Tata Chemical have quoted lower. Rayon shares have weakened appreciably. National Rayon have declined in spite of rumours of an increase in the dividend. Voltas have been steady on prospects of a rights issue. Bank shares have been sluggish, while electric companies have on the whole shown losses.

BOMBAY ADVICES KEEP MARKET SUBDUED

SELECTED PLANTINGS REMAIN STEADY

Tuesday Evening.

THE trend in the Madras stock market has largely been influenced by advices from Dalal Street during the past week. Share prices

recovered earlier in the absence of selling pressure. But towards the close, sentiment has weakened on easier advices from Bombay. Investors have been reluctant to extend their commitments, since they have not yet been able to make up their mind about the possible impact of the Budget proposals. Sellers of tea, coffee and rubber scrip have been reserved, although companies engaged in these industries have been given tax concessions in the Budget.

Turnover in Government securities has been negligible, and attention has centred on high-yielding State Government loans. Bank shares have been sluggish. Stray business has passed in Indian Overseas and in Syndicate Bank. Electric company shares have been very steady. Negapatam have quoted Rs. 10.70 and South Madras Rs. 11.10. Sugar shares have been easier, and Deccan have quoted Rs. 12.10 in spite of paying an interim taxable ordinary dividend of 6.5 percent. Andhra have declined to Rs. 14.75 and E.I.D. to Rs. 36.87. Business in Mysore has been done at Rs. 44.65 and K.C.P. have been available at Rs. 22.85.

Prices of selected planting shares have been steady due to the absence of selling pressure, although investors have been discriminating in their purchases. Blue Mountain have improved to Rs. 2.45 and Cochin Malabar to Rs. 6.44. Support has been extended to Consolidated Coffee at Rs. 20.87. Ouchterlony have changed hands at

Rs. 4.40 on declaring a taxable ordinary dividend of 12.5 percent. Periakaramalai have quoted Rs. 3.43 and Coonoor Rs. 18.37 on paying a final taxable ordinary dividend of 10 percent. United Nilgiri have been bought up to Rs. 23.75 on declaring an interim taxable ordinary dividend of 7.5 percent. Mercara have come to hand at Rs. 7.75, Thamarapally at Rs. 16.40, Nonsuch at Rs. 23 and Peer-made at Rs. 20.50. Amalgamated have been done at Rs. 10.01, Ossoor at Rs. 2.60 and Swinton at Rs. 2.68.

In textile shares, South India Viscose have lost at Rs. 134 and Travancore Rayon at Rs. 24.90. Madura have been steady at Rs. 35.50 and Lakshmi at Rs. 135. Vasanta have changed hands at Rs. 255 on paying an interim taxable ordinary dividend of Rs. 4.22 percent. Anglo-French have been done at Rs. 153 and Dhanalakshmi at Rs. 216. Buckingham have quoted Rs. 233 and Bangalore Woollen Rs. 236. Mettur have been bought at Rs. 286 and Loyal at Rs. 40.50.

Among miscellaneous shares, selected cement scrip have been supported. Dalmia Cement have been taken at Rs. 13.30 and India Cement at Rs. 5.79. Aluminium Industries have gained at Rs. 20, but Ashok Leyland have been weak at Rs. 7.10. Mettur Chemical have recovered to Rs. 13.88. F.A.C.T. have been weaker at Rs. 5.80, but Seshasayee Paper have met with support up to Rs. 8. Enfield have gained at Rs. 10.25, but Tube In-

CAPITAL, 12th March, 1964.

vestment have been sluggish at Rs. 215.

Jeewanlal have quoted Rs. 10 and the Company has issued 480,000 ordinary shares at par, out of which 10 percent has been reserved for preferential allotment to the existing shareholders. Kirloskar-Asea have been transacted at Rs. 100. The Company has issued 15,000 ordinary shares of Rs. 100 each at par, out of which the existing shareholders have been offered 6,000 shares in the ratio of three new shares for every five held. Spencer have been steady at Rs. 22.37 and Parry's Confectionery at Rs. 3.33.

London

GALLUP POLL RESULTS HELP SENTIMENT

EQUITIES IMPROVE ON INDUSTRIAL NEWS

London, 11th March.

ALTHOUGH the volume of business continued on a rather disappointing scale, the stock market maintained a satisfactory tone over the past week. Political uncertainties again restrained buyers, and there was some small selling at the end of the account which coincided with a warning from the Chancellor of Exchequer that it would be necessary to raise considerable sums from the taxpayer. Helping sentiment was good news from industry and the trend in the political opinion polls which favoured the Government. Gilt-edged securities made a satisfactory showing, although the market was quieter.

Dollar stocks usually reflected the trend on Wall Street where the industrials average stood at its highest ever. Good company news helped numerous equities, but business was selective and interest was largely confined to the lesser known issues. F. and O. were a dull market after the chairman's remarks about current earnings. Gold shares were active and quite strong with buying stimulated at one time by Press comment concerning the gold price. Coppers were quiet and tins were dull on most days. The big event in the oil share market was the preliminary statement from the Royal Dutch Shell group. After the announcement both the shares were subdued. B.P., however, continued a strong market in front of their results which are due next month. Burma were also well favoured. Rubbers and teas moved narrowly.

CHECKING THE GROWTH OF UNACCOUNTED MONEY

(BY A SPECIAL CORRESPONDENT)

In his latest Budget, the Central Finance Minister has proposed a number of measures to check the growth of unaccounted money. But, for a permanent solution, more effective ways to sterilise currency hoards may have to be found.

UNACCOUNTED money circulates in an economy whenever controls are imposed due to the scarcity of goods. In several European countries and Russia, during the postwar period such currency was withdrawn from circulation by exchanging the old currency for "new" units. In India, soon after the second World War, the war-time hoarded currency was supposed to be unearthed by the Demonetisation Ordinance. The continuous inflationary conditions created by shortages in vital-sectors, high taxation, "black" payments, transactions in real estate, etcetera, increased the volume of unaccounted money circulating in the economy. Its existence was felt but it was not

given explicit official recognition until a few months ago. It goes to the credit of Mr. T. T. Krishnamachari, Central Finance Minister, to draw attention to the existence of unaccounted money. He frankly admitted that the monetary policy had been ineffective in checking it. At the Bhubaneswar session of the Congress Party, Mr. Krishnamachari said that it was one of the most difficult and biggest problems requiring urgent solution. After the Bhubaneswar session, attention has been drawn to "unaccounted money" by politicians and economists. In the Budget for 1964-65, Mr. Krishnamachari has outlined several measures to check tax evasion.

Although no reliable estimates are available, it is widely held that "unaccounted money" amounts to about Rs. 1,000 crores or almost 50 percent of the total currency, and it is continuously increasing.

Illicit Channels

"Unaccounted money" is in quest of illicit channels and quick profits. It is either employed in the unorganised sector where concealment is easy and profits are high or in unproductive, low priority lines. It has been responsible for the ineffectiveness of the Reserve Bank's policies to check inflation and the consequent deterioration of the economic condition of the fixed income groups. How did unaccounted money grow to such proportions? The injection of fresh money year after year through deficit financing, unaccompanied by a matching rise in the right type of goods and services, which could have checked inflationary conditions, is responsible for the accumulation of unaccounted money. It is converted into open income through various devices. For instance, it is employed extensively in *poorja* of indigenous bankers who receive a consideration for converting the money into a legal earning. Furthermore, real estate transactions, such as the purchase and sale of land and flats in big cities, offer a convenient cover to bring "black" money into the open. Until recently, gold was another favourite form for accumulating illicit gains. The Government machinery has so far been unable to do anything worth while to curb the activities of holders of unaccounted money. But the measures proposed by the Finance Minister in his recent Budget to check tax evasion may not bring to light much of the illicit fortunes.

Checking Tax Evasion

One of the proposals made in the 1964-65 Budget to check tax evasion is to amend the existing provision in the Income Tax Act concerning the levy of penalty for the concealment of income. In the new provision, where the income returned by a person is less than 90 percent of his assessed income, the assessee will be deemed to have concealed his income unless he proves his *bona fides*. The burden of proving innocence is thus thrown on the assessee. Secondly, the Government proposes to take extensive powers to search for evaded wealth. But what shape this will take has not yet been outlined by the Finance Minister.

Thirdly, the secrecy provision in the Income Tax Act will be done away with. Fourthly, every tax return will carry an affirmation about its correctness. The tax due, according to the return, has to be deposited within one month of the submission of the return, failing which the assessee will be liable to a substantial penalty. Nearly 40 percent of total tax collections remain to be collected or are outstanding, so the

provision is expected to ensure quicker collection.

Main Solution

The main solution to the problem of unaccounted money is to raise the production of goods and services which are in short supply. The Government should, however, keep down deficit financing to the minimum if it is altogether unavoidable. The Finance Minister has kept deficit financing to the minimum in his Budget consistent with the increase in expenditure on defence and development.

This apart, it seems essential that the Government should seek ways and means to sterilise the idle hoards of currency. It could perhaps retire the existing currency and substitute it by fresh currency, just as several European countries once did. But the trouble now is that money is being hoarded in smaller denominations after the experience of demonetisation of high denomination notes.

THE CALCUTTA MONEY MARKET MODERATE INCREASE IN ADVANCES

Wednesday, 11th March.

THE aggregate level of advances has increased moderately in the Calcutta money market during the past week. The main contribution to the increase has been made by the iron, steel and engineering industries. The requirements of the cotton, jute and sugar mills are also slightly higher, but the credit given for the storage of foodgrains and seeds is unchanged. In the interbank market, conditions are slightly tighter and the call rate is quoted at 6½ percent.

The exchange market has been fairly active, with a large supply of gunny bills but fewer tea bills. The demand for remittances is poor. In the London market, sterling has not maintained the firmness it showed after the U.K. Bank rate increase, and has suffered losses in relation to all the major currencies except the Canadian and Italian.

SILVER WAS QUIET IN CALCUTTA during the past week. The price declined from the previous week's level of Rs. 263.50 to Rs. 258.50 a kilogram, quoted today. The London and New York prices stood at 11½d and 129.3 cents.

In sympathy with silver, gold was quiet and the price of 14 carat dropped from Rs. 68.25 to Rs. 67.75.

DURING THE WEEK ENDED 6TH MARCH, Government of India Treasury bills for Rs. 1,95,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 10th March. The total amount offered was Rs. 2,12,00,000. Tenders at Rs. 99.410 percent were allotted 94 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.360 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 16th March.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 11th March to 14th March at Rs. 99.426 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 4th March to 7th March amounted to Rs. 1,32,75,000.

RISES OF Rs. 42.41 CRORES IN ACTIVE notes and of Rs. 31.35 crores in the total note issue marked the statement

of the Reserve Bank of India for the week ended 6th March, 1964. The currency expansion was covered by increasing foreign securities by Rs. 10 crores to Rs. 112.46 crores and rupee securities by Rs. 25 crores to Rs. 2,144.69 crores in the Issue Department. These changes were made by contra transfers from the Banking Department in which balances held abroad dropped by Rs. 7.93 crores to Rs. 13.17 crores and investments by Rs. 24.77 crores to Rs. 188.66 crores. Deposits of the Government of India rose by Rs. 30.50 crores to Rs. 106.17 crores while those of State Governments declined by Rs. 4.04 crores to Rs. 5.03 crores. Balances of scheduled banks at Rs. 82.47 crores showed a drop of Rs. 3.38 crores. Their loans from the Reserve Bank rose from Rs. 67.54 crores to Rs. 106.94 crores, of which advances against usance bills amounted to Rs. 46.64 crores (Rs. 33.24 crores). Ways and means advances stood at Rs. 45.21 crores, against Rs. 40.41 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 28th February, 1964, shows a rise of Rs. 3.34 crores to Rs. 603.39 crores in total deposits. Investments in Government securities are up by Rs. 4.94 crores to Rs. 240.18 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 28 lakhs to Rs. 339.63 crores. Cash and balances are, in consequence, shown at Rs. 26.22 crores or Rs. 2.41 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 28th February, 1964, shows Demand and Time liabilities at Rs. 1,198.48 crores (Rs. 29.28 crores on account of borrowings from banks) and Rs. 1,288.42 crores (Rs. 14.84 crores), compared with Rs. 1,187.99 crores (Rs. 33.67 crores) and Rs. 1,299.09 crores (Rs. 15.14 crores), respectively, in the previous week. Cash has declined by Rs. 73 lakhs to Rs. 60.03 crores, by Rs. 73 lakhs to Rs. 60.03 crores, while balances with the Reserve Bank has increased by Rs. 4.24 crores to Rs. 80.98 crores. There is a rise of Rs. 4.90 crores to Rs. 651.23 crores in investments. Advances and bills discounted at Rs. 1,771.70 crores show counted at Rs. 11.27 crores. The an increase of Rs. 11.27 crores. The ratios to total liabilities of cash and balances, and of advances and disbursements, are, in consequence, shown at 5.7 percent and 71.2 percent, against 5.5 percent and 70.8 percent.

TREASURY BILL MATURITIES

CLEARING HOUSE RETURNS

Week	Calcutta	Bombay
6-3-64	1,23.96	1,50.39
20-2-64	1,15.26	1,15.29
21-2-64	82.71.02	1,13.98
14-2-64	96.82.86	1,18.82

AT THE ANNUAL GENERAL MEETING OF stockholders of The Chartered Bank due to be held on 1st April, the directors will recommend a final dividend of 7½ percent actual less income tax. The consolidated profit for 1963 has amounted to £1,069,378 (against £1,076,748 for 1962). After deducting a transfer of £450,000 to reserve funds (against £450,000) and paying dividends of £606,375 (against £606,375), the carry-forward is increased by £13,003 to £574,024. They propose to make a rights issue to stockholders on register at the close

of business on 22nd February in the proportion of one £1 share for every £6 stock held at 40s. a share.

THE DIRECTORS OF AMERICAN EXPRESS Company have declared a quarterly dividend of 35 cents a share on its \$5 common stock payable on 1st April. In making the announcement, President Howard L. Clark said that this is the same quarterly dividend as was paid in each quarter of 1963. It is the 95th consecutive year in which American Express will have paid dividends.

Annual Report

To be placed before the shareholders at the Annual General Meeting to be held at the hall of the Academy of Fine Arts at Cathedral Road, Calcutta 14, on Monday the 30th March, 1964 at 11 A.M.

ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1963.

The Directors beg to submit to the shareholders the Audited Balance Sheet of the Company as at 31st December, 1963 and Profit and Loss Account for the year ended 31st December, 1963, together with the Auditors' Report thereon.

The Profit for the year after making provision for taxation and including the balance of Rs. 3,26,06,24 brought forward from the previous year's account amounts to

Rs. 29,65,814.66

Out of this amount the following appropriations have been made: To Reserve Fund under Section 17 of the Banking Companies Act Rs. 5,20,000.00 Leaving an available balance of

Rs. 24,35,814.66

Out of the above, the Directors recommend the payment of a Dividend to the shareholders @ 7½% per annum, subject to deduction of tax at the prescribed rates in accordance with the provisions of the Income Tax Act absorbing

Rs. 20,20,000.00

Balance to be carried forward to next year's account

Rs. 4,15,814.66

The Bank's business during the year made satisfactory progress.

During the year under report, 7 branches were opened of which 4 were in Calcutta and its suburbs, namely—Jadavpur, New Alipour, B. E. College (Shibpur) and Bhatpara, Assam and one at Nizamuddin in New Delhi.

The Bank during the year under report, purchased 57 Cottahs of land on Old Court House Street, Calcutta to build a multi-storied building to house the Head Office of the Bank.

Dr. N. N. Law, Dr. S. B. Dutt, Nawab Sir K. G. M. Faruqui and Sri S. N. Ray retire by rotation and being eligible offer themselves for re-election.

The shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

Sri M. J. Vaidya, being out of India, could not sign the Report and Accounts.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1963 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which the returns from the Branches audited by other Auditors are incorporated. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949 read with the provisions to sub-sections (1) and (2) of section 211 and sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations, which to the best of our knowledge and belief were necessary for the purpose of our audit and have found them to be satisfactory.

(b) The transactions of the bank which have come to our notice have been within the powers of the Bank.

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank.

(d) The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns.

(e) In our opinion and to the best of our information and according to the explanation given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Dated, Calcutta,
The 21st February, 1964.

RAY & RAY,
Chartered Accountants

Schedule of particulars required under the Banking Companies Act, 1949, attached to and forming part of the Balance Sheet as at 31st December, 1963.

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF CAPITAL BY BHASKAR TEXTILE MILLS LTD. A COPY OF THE PROSPECTUS TOGETHER WITH THE DOCUMENTS AS REQUIRED BY SECTION 60 OF THE COMPANIES ACT, 1956 HAS BEEN DELIVERED TO THE REGISTRAR OF COMPANIES, WEST BENGAL FOR REGISTRATION.

BHASKAR TEXTILE MILLS LIMITED

Incorporated on 4th August, 1962.

Registered Office: 2, BRABOURNE ROAD, CALCUTTA 1.

EXISTING AND PROPOSED ACTIVITIES:

The Company was incorporated with the object of carrying on all or any of the businesses namely spinners, yarn merchants, cloth manufacturers, etc. The Government of India have granted a licence bearing No. L/23/1/243/Tex/62 dated 4-4-62, subsequently amended by letter No. 10/629/62-Tex(B) dated 5-9-62 for manufacture of cotton yarn for this undertaking with an installed capacity of 25,000 spindles. The present project is to set up a spinning plant of 15,000 spindles. The Company has been allotted approximately 126.05 acres of land by Government of Orissa at Jharsuguda. Adequate supply of power has also been assured. Licenses to import major items of machinery from abroad have since been obtained and orders for plant and machinery have already been placed with the manufacturers. It is expected that the plant will go into production by June/September, 1964.

LOCATION OF THE INDUSTRY.

Jharsuguda in the State of Orissa.

BOARD OF DIRECTORS:

Sri Surajmal Mohta, 2, Brabourne Road, Calcutta.	Sri Rasiklal Maneklal, Vasant Vilas, Babulnath Road, Bombay-7.
" P. D. Himatsingka, 6, Old Post Office Street, Calcutta.	" Beni Prasad Maheshwari, 9, Brabourne Road, Calcutta.
" Baijnath Tapuriah, 9, Brabourne Road, Calcutta.	" B. D. Kothari, P-10, Debendra Dutt Lane, Calcutta.
	" M. K. Mohta, 2, Brabourne Road, Calcutta.

	No. of Shares	Nominal value of each share	Amount
Authorised Capital:

Proposed issue:			
Equity Shares ...	1,40,000	Rs. 10/-	Rs. 14,00,000/-
Preference shares ...	7,000	Rs. 100/-	Rs. 7,00,000/-
			Rs. 21,00,000/-
(9.5% Tax free Cumulative redeemable Preference shares).			
Terms of Payment:—	Per Equity Share.	Per Preference Share.	
On Application ...	Rs. 2-50 nP.	Rs. 25/-	
On Allotment ...	Rs. 2-50 nP.	Nil.	

APPLICATIONS FOR SHARES.

Applications for Shares must be for 10 or multiples of 10.

Applications for Preference Shares must be for 5 or multiples of 5.

The entire issue of Equity and Preference Shares will be offered to the Public for subscription in cash at par. Subscription of the amount is assured by the reason of the whole issue having been underwritten.

DATE OF OPENING AND CLOSING OF THE SUBSCRIPTION LIST

The subscription list will open at the commencement of Banking hours on 23rd March, 1964 and will close at the close of the Banking hours on 4th April, 1964 or earlier at the discretion of the Board of Directors but not before the close of the Banking hours on 30th March, 1964.

Application forms along with copies of the Prospectus can be had from the registered Office of the Company or from the underwriters, Bankers or Brokers, whose names and addresses are given below:

UNDERWRITERS
Orissa State Financial Corporation, Killa Maidan, Cuttack-1.
Industrial Finance Corporation of India, Reserve Bank Building, Parliament Street, New Delhi-1.
G. Padia & Co., India Exchange, Calcutta-1.
The United Commercial Bank Ltd., 2, India Exchange Place, Calcutta-1.
BANKERS
The United Commercial Bank Ltd., 2, India Exchange Place, Calcutta-1, or any of their Branches in India.
The Bank of Baroda Ltd., India Exchange, Calcutta-1, or any of their Branches in India.

The American Express Co. Inc.,
21, Old Court House Street, Calcutta or any of their Branches in India.

BROKERS
Basiklal Maneklal & Co., Stock Exchange Old Building, Bombay.
G. Padia & Co., India Exchange, Calcutta-1.
Murarka Brothers, 7, Lyons Range, Calcutta-1.
Harbans Singh Mehta & Co., 33, Regal Building, Parliament Street, New Delhi.

Rajpal Chadha & Co.,
Delite Cinema Building, Asaf Ali Road, New Delhi.

AUDITORS
Messrs S. S. Kothari & Co., Chartered Accountants, 21, Old Court House St., Calcutta.
Messrs, Jhunjhunwala & Co., Chartered Accountants, 6, Commercial Buildings, Calcutta.

CAPITAL OUTLAY
The total cost of the present project, including the working capital, will be Rs. 1,09,00,000/- estimated as follows:—
Land ... 1,25,000/-
Buildings ... 19,75,000/-
Machinery ... 69,50,000/-
Miscellaneous assets ... 4,50,000/-
Preliminary and Miscellaneous expenses of this issue ... 1,75,000/-
Working Capital ... 12,25,000/-
1,09,00,000/-

It is proposed to meet the capital outlay as follows:

FINANCIAL RESOURCES
Equity Shares ... 28,00,000/-
Preference Shares ... 7,00,000/-
Deferred payment facilities ... 29,00,000/-
Secured loan from the Bank of Baroda Ltd. 45,00,000/-
1,09,00,000/-

Rights of Preference Shares
The Preference shareholders are entitled to a Cumulative Preferential dividend of 9.5% p.a. free of Company's tax. The shares are redeemable immediately after 12 years from the date of issue on 3 months notice.

(PRESSMAN)

INDIAN MINING ASSOCIATION

HIGHER PRODUCTIVITY, MECHANISATION AND BETTER MANAGEMENT TECHNIQUES ESSENTIAL

MR. PRAN PRASHAD'S SUGGESTIONS TO GOVERNMENT AND PRODUCERS

The following speech was delivered by Mr. Pran Prashad, Chairman of the Indian Mining Association at the Annual General Meeting of the Association held in Calcutta on 7th March, 1964 at the Bengal Chamber of Commerce and Industry.

Gentlemen,

It is customary for the Chairman of this Association at its Annual General Meeting to review the main events of the past year, but on this occasion, as I shall be vacating the Chair at the end of this meeting I propose to address myself rather more to the future than to the past. The Committee's Report indicates the problems that confronted the Industry since we last met and the steps taken by the Association to overcome them. Many of these are only too well known to require reiteration, and I shall deal today with only those which have a direct bearing on our future. I have a feeling that a dynamic approach, requiring in some cases bold and possibly unconventional decisions, is called for in meeting some of the challenges that face the Industry.

Never before has this Industry seen so much investment put into it in so short a space of time. Much of the investment, made possible by the foreign exchange loan granted by the International Bank for Reconstruction and Development to the Government of India specifically for the expansion of private sector coal, has been made by the larger and better organised units of the Industry, which have thus acquired an important stake in the future. Obviously, this investment will lay the foundations for the further advance which the private sector must make to play its part in the Fourth, Fifth and subsequent Plans.

Excessive Production

Before the investment has been fully deployed, a curious difficulty has arisen due to excessive production of lower grade coals outside the Plan from smaller collieries. These units are unfortunately incapable of undertaking the long-term preparations needed for a permanent expansion in their output. The spurt in production from these smaller units is thus a purely temporary phase and cannot be maintained. Should this unplanned increase in output of grades not required under the present pattern of demand continue unchecked, the long-term coal production programmes cannot but suffer a setback. Advances in current mining technology have left these smaller units untouched and they continue to be run on cottage industry lines using quaint but not very engaging methods of production. These units plead on the one hand their inability to conform to the many rules, regulations and other statutory obligations that govern the Industry, but keep on demanding on the other that their cases warrant special consideration.

This Association, representing in the main the larger units of the Industry, bears the smaller units no ill-will, but I feel the time has come when responsible coal producers must start to consider the total picture. No other country in the world today is obliged to keep 850 and odd coal mines in production to produce merely 66 million tonnes of coal per annum. The production of fuels at the lowest possible cost can in modern conditions be achieved only by units capable of ultimately producing upwards of half-a-million tonnes of coal per annum. For the Indian Coal Industry which is now well-set on the road to expansion, there is a splendid opportunity to leap to the age of full mechanisation, obviating the long and tedious crawl through intervening stages of advance. Can we afford to let this significant opportunity slip through our fingers?

I realise that it is no easy task to make this leap; there are several requirements to be fulfilled if we are not to fail. Action on four fronts is urgently called for: first and foremost, better and advanced management techniques are essential to ensure available production facilities are utilised to the maximum extent. Like all developing countries, we also, to a substantial degree, face a severe shortage of adequately trained and, more important, experienced managerial personnel. Partly as a result of the expansion of training facilities, a much to my regret, by some lowering of standards, there is at the moment no dearth of men, but certainly experience and ability to utilise production potential to maximum advantage is sorely lacking. Remedial action must at once be taken to safeguard the future, since it is from the ranks of the young Mining Engineers of today that the future expertise must emerge. We are, indeed, grateful to Lord Robens, the Chairman of the British National Coal Board, who during his brief visit to us in October last year offered not only to train some of our promising recruits. In addition, he agreed to send out a team of experienced engineers and specialists to India to extend modern management techniques to Mining Engineers here, who, because of their key positions, cannot be spared to undergo a long course of training overseas. This is undoubtedly the right way to proceed and I do hope that managements will not fail to take advantage of this opportunity.

Technical Equipment

The second front on which action is needed is the technical equipment of mines. We tended to rely in the past on labour-intensive methods of operation, largely because man-power was cheap. This level of technology will not be adequate in future years in a basic industry like Coal. The expansion of production at the rate needed to sustain the economy's long-term plans cannot be achieved except by large-scale installation of mechanical equipment. There are clear technical limits beyond which underground mining not only becomes ineffective without fuller mechanisation but also impossible. There is also the question of the cost at which coal is won, which has a direct bearing on the entire economy. This calls for looking into the possibilities of reducing costs through improved technology on a much larger scale. These factors clearly show that a steadily rising trend in the future thus lies in the development of large mines whose output can absorb not only the higher overheads but also leave a surplus for re-investment on technological improvement and renewal of assets by opening up new areas. The Amalgamation Committee originally proposed that a mine producing 10,000 tons per month should be considered a minimum economic unit. This figure was later reduced to 7,000 tons per month, but in view of what I have said, amalgamation, if it is at all to take place, must be based on a much larger unit if the higher overheads on modern equipment are to be absorbed.

Thirdly, the effect of the progressive advance in technology on the employment potential in this industry needs to be considered. While I am fully conscious of the anxiety over the deteriorating employment situation, the fact has to be faced that the level of employment in coal will surely reach a plateau as has happened in other countries. The trend is already evident from the fact that we have been able to step up the annual output from 38 million tonnes at the start of the Second Plan to the present level of 66 million tonnes with an increase in the labour force of slightly over one hundred thousand persons. Efforts to increase employment opportunities in India must, therefore, be concentrated mainly in secondary industries which are sustained by the supply of basic fuels.

This brings me to the fourth aspect, namely, productivity. In the last five years the proportion of coal won by machines has increased by 70 per cent. The quantity of mechanically-loaded and conveyed coal has increased threefold. Nevertheless, the average output per man-shift in India at present is of the order of half-a-tonne, although considerably more than this average is being achieved in some of the larger and more mechanised units. On the other hand, it is disturbing to record that we have only now regained the level of output per man-year which was being obtained in 1935. The improvement in productivity must come largely through mechanisation effected with the willing co-operation of our labour unions which I hope and expect will be readily forthcoming. Besides, the natural hazards of mining can be reduced by mechanisation since the less people in the pits the smaller the number likely to be involved in unforeseen accidents.

Coal Target

Turning now to coal production, we were able, as you may recall my saying to you last year, to step up output by 8 million tonnes in 1962-63 over that attained in 1961-62. It did seem at the time that the private sector's Third Plan coal target was within its grasp. My predecessors and I have always held the view that the targets set for the private sector of the Industry were well within its ability. The performance of the Industry in the recent past has more than borne this out. The momentum gained during the period of the Chinese attack has continued and we have witnessed a remarkable change from shortage to surplus in coal supplies. I believe that coal production must always be slightly in excess of demand in an expanding economy. I am not, therefore, too worried about the surplus that we see today, although the situation has been needlessly aggravated by the unplanned increases of lower grade coal production to which I referred earlier.

Coal being at the core of our Plans and mining being a hazardous industry,

calculated risks must be taken by those responsible for its affairs. This Industry must be strong enough in the larger interests of the Nation to withstand temporary economic setbacks of the type we are witnessing today. Therefore, I cannot but agree with the views expressed by the workers' representatives in their depositions before the Coal Wage Board that marginal units which lack the resources and the strength to withstand such temporary crises should in the interests of all concerned close down and leave it to those stronger, more organised and responsible units of the Industry to meet the demands of the future.

The cry of over-production which has been repeatedly raised last year calls for a more searching enquiry. It is but human to be critical and to lay the blame for the present situation elsewhere, but can all the sections of the Coal Industry do this with a clear conscience? When the draft outline of the Third Five Year Plan was published, it was made clear that the Private Sector was required to step up its output of only the better grades of coal which had all along been in short supply. Its target, made up of programmes submitted by individual units, was accepted only after searching enquiries by three separate committees in respect of each project. The over-production has, therefore, to be analysed in this background. I venture to suggest that if the current production and stock figures of those units with approved expansion plans in the Bengal and Bihar fields are examined, it will be found that except in cases where downgrading has taken place the problem by and large has not arisen. In fact, as far as production of the selected grades of both coking and non-coking coals are concerned, we have hitherto been able to keep pace with demands only because industrial expansion has not proceeded at the rate envisaged in the Plan. The Planning Commission's Third Plan mid-Term Appraisal recognises this and specifically mentions that the situation calls for organising production of better quality coals from deeper levels and virgin areas.

Great stress was also laid on the rapid expansion of output from the Central India Coalfields to meet the needs of consumers in Western India. Many units in this area made arrangements at considerable expense to cope with the likely demand which unfortunately has not materialised. As a result, production cuts have had to be adopted, with some mines being obliged to adopt a 5-day working week until their stocks were reduced. Such situations cannot but affect seriously the viability of these producers and their future long-term development.

Demand under Fourth Plan

Looking ahead to the end of the Fourth Five Year Plan, it is essential that a more realistic estimate of future demand is made, and while detailed planning will not be possible till this is done, it is, in my view, extremely important that the instruments of planning are used with greater precision. This is all the more so having regard to the very great increase in coal production that is essential if a substantial national growth potential is to be achieved.

Quite apart from the industrial demand for energy from coal, which in any event must increase, there is yet a very large potential for consumption in the countryside, for the development of which no serious attempts appear to have been made hitherto. The National Council of Applied Economic Research in a recent survey on Domestic Fuel Consumption in the rural sector drew pointed attention to the fact that consumption of secondary fuels comprising of firewood, animal dung and vegetable wastes aggregated 160 million tonnes in the rural sector alone. This could be equated to ap-

proximately 80 million tonnes of coal equivalent of which soft coke and kerosene at present provide less than 6%. A reduction in the use of firewood and farm wastes from the energy consumption pattern in the rural sector is also essential for other sound economic reasons. The diversion of farm wastes for manuring purposes is essential to enhance farm production, and this is vital if we are to be self-sufficient in food.

I am cognisant of the fact that these secondary fuels are available to our villagers at little or no cost, whereas their replacement by primary fuel will involve substantial expenditure. However, the significant experimental work done by the Central Fuel Research Institute on low temperature carbonisation of coal to produce smokeless domestic fuel cannot be ignored. The long-term solution may be in the establishment of a string of these plants spread throughout the country. Furthermore, the desirability of subsidising the price of primary fuels supplied to the villages to discourage the use of farm wastes may need to be considered in order to improve farm productivity. The decision, I submit, should be guided by assessing where the balance of advantages—in making subsidised supply of domestic coal fuels to conserve manure or in large foreign exchange outlays on fertilizers. If the industrial sector in Southern and Western India is subsidised in the matter of freights on coastal shipments, is there any reason why the rural sector cannot also be subsidised even if initially it is introduced on a small scale? This should provide a potential market for the lower grade coal that is today surplus. In the context of demand I welcome the Hon. Minister's far-sighted decision to permit any consumer to draw any quantity of coal that he requires subject only to Railway availability. This should give the industry an admirable opportunity to display its salesmanship, develop fresh demand and explore new markets.

Energy Potential

Although India has a large energy potential in her many rivers and hydro-electric schemes admittedly have attractive operating economics, there are areas in the country where coal-based thermal generating capacity will serve better for a number of reasons. First, a hydro-electric scheme cannot be successfully devised without detailed information about water flows and the like, the compilation of which is time-consuming. Moreover the urgency of power requirements may, therefore, make thermal generation imperative. Secondly, the distances between possible sites and load centres create serious handicaps. Finally, the necessity to beneficiate our coals makes it imperative to find an outlet for the very large tonnages of middlings which will be produced. We, therefore, welcome the decision to instal thermal power stations in the coal and lignite bearing regions. We also welcome the formation of the Regional Electricity authorities, the purpose of which is to co-ordinate the efforts of the States and improve overall operational efficiency.

As against the future demand for domestic fuel and for power generation, it could be contended that the present situation of over-production is aggravated, firstly, by the conversion to use of oil by major consumers in Western India, and, secondly, the recent increase in the Railway freights which would tend to increase the cost of coal by up to Rs. 3/- per tonne to consumers in this area. Conversion to oil which at the present has replaced coal to the extent of about 4 million tonnes has in the past been directly and indirectly encouraged by Government for a variety of reasons. While the problem has not yet affected the Coal industry to any great extent, I submit that the situation now warrants serious re-examination. Oil consumption, des-

pite the discoveries of new deposits, in the foreseeable future must depend on imports. With our current difficulties over balance of payments, any indiscriminate conversion from coal to oil should be avoided. It was, therefore, a source of satisfaction to coal producers to learn that Government was seriously reconsidering the matter and I do hope all factors will now be re-examined.

I now come to the subject of grading. After much discussion with Government we were only recently informed that the recommendations of the Experts Committee will be implemented in stages. This will to a large extent eliminate the numerous complaints by both producers and consumers as regards quality. Quite naturally, in view of the considerable period which has elapsed since these matters were first considered, both producers and consumers await with some impatience the early implementation of the new grading and pricing based on calorific values.

Linked to the subject of grading is the vital question of prices. Despite the current quantitative surplus, qualitatively we can hardly manage to keep pace with demand. We would indeed be faced with serious shortages if expansion in steel and other important sectors had proceeded at the rate originally envisaged. Our price structure is controlled on an ill-conceived "cost plus" basis which is unsatisfactory to us, to our customers and to the economy. The low rate of profitability in coal is well known and I warmly welcome its inclusion in the short list of industries which will be entitled under the budget proposals of last week to tax rebates. Together with the higher development rebate given earlier, the Government has indeed come a long way to meet the Industry's viewpoint but I am disappointed that the need for a depletion allowance is still to receive recognition. Let me say here and now that we ask for nothing more than a price structure which, while ensuring a fair and reasonable return to attract much-needed capital for development, will not give rise to a chain reaction of price increases in the coal-based industries.

Neutralising Enhanced Costs

Our numerous representations resulted in Government agreeing to examine the merit of the claim for neutralising enhanced costs in terms of the recommendations of the Coal Prices Revision Committee. In the subsequent discussions which ensued between our representatives and the Government Cost Accountants, we believe that we were able to establish beyond doubt that representative units of the Industry were not earning even the meagre profit margin of Rs. 1.75 nP, per tonne allowed by the Coal Prices Revision Committee in its 1959 price award.

We welcome the increases in the prices of the better grades of coking coal and the Selected grades of non-coking coal which were announced by the Hon'ble Minister last Wednesday. In this connection, I am happy to report that the majority of our members producing coking coals had, prior to this announcement, communicated individually to Government, their agreement to joint analyses at Steel Plants based on an equitable formula fair to both buyer and seller. While the prices announced largely neutralise the increase in costs of these grades since the last review of 1962, the exclusion of Raniganj Grade I and Grades I and II coals produced in the outlying fields is, in my view, injudicious. It is well known that the approved expansion projects for non-coking coals in the current Plan were mainly in these grades. I can only say, therefore, that the viability of those producers who are modernising and expanding their production of such coals at considerable expense will be seriously

affected. I trust that Government will concede this legitimate claim for neutralisation since their production is not only essential but within the approved Plan Target.

While the impact of cost neutralisation on our financial resources is significant, it is dwarfed by the importance of attracting and servicing capital to sustain expansion. But even maintenance of output might not be possible without fresh capital. As one area in a mine gets exhausted, other areas have to be opened up; in mining, planning and with it capital expenditure thus become a continuing process, more so because historical depreciation alone as a source of capital is quite inadequate under present-day conditions. With the steep rise in the investment rate per tonne of coal produced, which in some cases is now well over Rs. 200/- per tonne, is it possible or fair to insist that the Coal Industry must continue to be satisfied with a notional gross profit of Rs. 1.75 per tonne of production? It is necessary to recall what Shri Asoka Mehta, Deputy Chairman, Planning Commission, recently said:

"...prices that have concealed subsidy in them distort the priorities of end-uses; for instance, if the price of steel or cement is kept artificially low, not only will the expansion of production suffer, but also its use will not be economical. Profit, in a developing economy, is a *growth point and not a dirty word*. But only that profit acts as the trigger of growth, which is ploughed back; what is withdrawn for consumption, particularly ostentatious and conspicuous, is wasteful, counter-productive. Without profits, there will be little assets-building and only earnings that are turned into assets can claim to enrich the community."

Producing Better Coal

Unless the Industry is placed in a position to step up its production of better coals, particularly of the coking variety, the country may again find itself held back by shortages, specially in relation to new Steel capacity. The price differentials between the lower and higher grade coals today are unrealistically low, more so when considered in terms of delivered prices. A wise policy for conservation calls for opening out the spectrum still further. This should encourage those users whose quality needs are not essential, to switch to lower grades. It becomes a national imperative to widen the differentials not only because the higher cost of winning quality coals should be adequately compensated but also to give an impetus to use these efficiently. Is it sound economics that beneficiated coking coals having an ash content of 17% should fetch a price of about Rs. 50/- per tonne while raw coal of similar quality should be sold at only half this price?

It has been urged by some people that a policy of encouragement to higher grade coals runs counter to the need to conserve this so-called scarce resource. This view is short-sighted and perverse. One should note that the existing proved reserves of high grade coal, are sufficient to last for more than a hundred years. In any case, the conservationist argument needs to be re-examined and I say this not because of this Association's stakes in better coals but because of the larger national issues involved. Are we right in discounting the ability of science and technology to provide for tomorrow? Conservation is one thing but hoarding quite another: the first duty we owe to the future generations is to build a strong and self-reliant economy as speedily as possible using the resources available to us today. We shall stand condemned by history if we yield to irrational fears and thereby slow down the pace of economic advance. Thus it is all the more

essential for the prices of better coals to project their proper values today.

I turn now to the allied subject of stowing and the subsidies paid for this purpose which form the cornerstone of our conservation policies. The purpose behind the stowing subsidy scheme is to encourage stowing by meeting the entire cost. I appreciate the necessity for imposing ceilings in the rates of assistance but I submit that the extension of this principle to each and every item of "admissible costs" is not in keeping with the spirit of the Coal Prices Revision Committee's recommendation. This proposed that the full costs of stowing should be subsidised, subject to overall limits in rates of assistance. The result of such a policy is that apart from a proliferation of paper work arising from the numerous instructions in the Coal Board's Manual, the stowing costs at those units which have mechanical sand-gathering arrangements remain unneutralised to as much as Rs. 1.50 nP, per tonne. May I ask if it is reasonable for the Board to agree to disburse a subsidy of as much as Rs. 10/- per tonne of sand when transported by lorry while limiting the assistance to Rs. 3.50 per tonne when carried by ropeway over the same distance? This amounts to penalising the more efficient and forward looking forms of transportation in favour of one which has a high recurring foreign exchange cost. Besides the present system also involves delays in the actual payment of the subsidies to the collieries, which have to deploy larger sums by way of working capital, the quantum of which must keep on increasing due to rising coal stocks and the ever-increasing wage bill. I do hope the Coal Board who are examining the issue will adopt a more liberal, realistic and simplified procedure without delay.

Subsidies for working under adverse conditions have indeed materially assisted the Industry. Although the scales of assistance were revised in 1962, no account has been taken of the changing circumstances. The pattern of mining is altering rapidly and any scheme which may have been adequate on the basis of past hypotheses is now wholly unrealistic. The problem here is to ensure some degree of flexibility to provide for new factors encountered as mining progresses. This matter also is under examination and urgent decisions are now imperative.

Transport Facilities

Coming now to the question of transport, it is with pleasure that I am able to strike an unfamiliar note this year in the customary reference to the Railways. The average daily loadings in 1962-63 in all coalfields recorded a rise of 11.2% from 5999 wagons to 6669 wagons per day, and for the first nine months of the year to 7047 wagons per day. The Railways currently are able to move all coal offered for rail transport and it is gratifying to note from the Railway Minister's recent budget speech in Parliament that the Railways are now fully geared to keep carrying capacity ahead of demand. One cannot but agree that our Railways have served the Nation well despite the limitations under which they operate. I do, however, feel that some credit may also be legitimately claimed by the largest Railway user, the Coal Industry, which has regularly subordinated its convenience to that of the Railways.

While the Industry as a whole has not agreed to bear the cost of strengthening of sidings or the installation of mechanical loading arrangements, several of the more progressive managements affiliated to this Association have done so. Personally, I favour the installation of such equipment more widely. As bulk movement and 5 hour loading will be the pattern of the future, it will be necessary to extend mechanical loading arrangements

throughout the Industry by arranging for smaller units to club together. Ultimately it is a question of time, the economic cost and the benefits accruing from the installation of such equipment. The immediate beneficiaries are the public of India who not only consume the coal but also own the Railways. It is, therefore, but fair and proper that the Exchequer should facilitate the installation of such equipment through grants and loans to collieries. One way in which this may be done is through the creation of a fund by the levy of a cess on despatches, but the responsibility for providing assistance should more legitimately be taken by the Railways whose financial resources are now in far better shape. In this context I should like to refer to the interim report submitted by the World Bank Study Team on Coal Transport. The Team has not only recognised the desirability of extending mechanical loading arrangements at collieries, but has also taken note of the fact that the capital required is sorely lacking. It has, therefore, recommended that Government should consider ways of providing the necessary finance. I hope that this suggestion will merit early and sympathetic consideration.

The interim report also urges that the Railways should operate as a service organisation capable of meeting the reasonable demands of shippers and consignees. The report confirms that collieries have a right to expect the regular supply of empties and withdrawal of loaded wagons in accordance with the requirements of production. We are told that there is today a surplus of wagons, and their stabling is a source of embarrassment to the Railways. I am sure that the larger units would welcome an arrangement for stabling at colliery yards and loading them when needed, subject to suitable adjustments in loading time. I do hope that our Railways will take due note of this. At this stage it would be appropriate to record the Industry's sincere appreciation of the very valuable service rendered by Shri R. Maulik, a former Chairman of your Association, who was deputed to assist the Team in its time-taking and complex task.

World Bank Loan

Much publicity has been given in the Press to the Coal Industry's failure to utilise in full the World Bank loan of 35 million Dollars. The main difficulty has been the shortage of Rupee resources. While there were numerous problems over co-obligation guarantees and the legal wrangles with State Governments over the assigning of mining rights, the larger and better managed units were able to make use of the facilities provided. Not surprisingly, even they find themselves subject to great financial strain. The solution, as I have said earlier, lies in allowing an increased rate of profitability to the Industry.

Our periodic meetings with the Chief Inspector of Mines have, as usual, proved useful to both the producers and the Mines Inspectorate. I am happy to record that the Department has been understanding, and constructive in its approach. Numerous directives have from time to time been issued by the Chief Inspector in the interests of a greater measure of safety. The Industry has no quarrel whatsoever with the implementation of these directives. The fact remains, however, that almost all the measures proposed by the Chief Inspector involve collieries in considerable expenditure. For instance, the construction of stone-dust barriers in gassy mines and the isolation of old areas by construction of explosion-proof stoppings involve the Industry in an expenditure of anything up to Re. 1.00 per tonne in the affected mines. This additional expenditure reduces still further their profit margin.

We are also concerned to note that further amendments to the Mines Act

to increase the penal provisions and to impose some more restrictions on mine managements are to be considered shortly. While no one disputes that the changing pattern in mining conditions calls for constant review of safety legislation, I submit that this is already being done in the form of the many directives that are issued by the Chief Inspector to which I have just referred. The proposed amendments introduce a provision for inspection of the workmen by or on behalf of the workmen. Our workings at present are already subject to inspection by the Mines Inspectorate, the Coal Board, the State Governments and by other agencies. The practice of workmen's inspectors inspecting workings is already in force in other countries and it is but right that our workmen, too, should have the same right of inspecting the workings from the point of view of safety. However, as in other countries we hope the rules will provide that such inspections are carried out only by qualified mining engineers representing the workers.

I regret to record that there has not been any substantial progress in the settlement of our dispute with the West Bengal Government over the question of royalties. We were hopeful of an amicable settlement fair to the producers as also to the State but while discussions have continued, the demand made by the Government for immediate payment of disputed royalties is, if I may say so, not particularly conducive to an agreed settlement which the industry hopes will still be possible. As regards Bihar collieries, an advance copy of the Bill to amend the Land Reforms Act was sent to the Association for its comment. In the opinion of this Association, the proposed amendment would not be intra vires of the State legislature. Discussions have, therefore, been held with the Bihar Government which has agreed to reconsider the matter. On the subject of Royalty I might mention that the basis of calculation as a percentage of the f.o.r. price of coal leads to numerous complications and arguments with the State Governments. The Central Government has already accepted this principle and has notified that royalty on iron ore, manganese, limestone and dolomite should be paid on fixed tonnage rates, rather than ad valorem. I submit that Government should seriously consider extending this to coal, since this would eliminate disputes.

Labour Relations

Our relations with Labour have generally been satisfactory. There is no doubt that the Industrial Truce Resolution of November 1962 has had its effect in ensuring closer co-operation between managements and their workmen. It is also gratifying to note that the Code of Discipline has continued to stabilise labour-management relations. The concept of voluntary arbitration, which was first introduced in the Coal Industry with the Das Gupta Award, has been further advanced through the Industrial Truce Resolution. At a Seminar on Voluntary Arbitration organised by the Em-tary Arbitration Organisation of India and the All-India Organisation of Industrial Employers at Delhi, it was recognised that arbitration had worked satisfactorily in the Coal Industry. There is no doubt that voluntary arbitration provides a means for expeditious settlement of minor disputes which might otherwise assume larger proportions. I do, however, hope that the suggestions made at the Delhi Seminar for a forum of appeal against perverse awards by arbitrators will be acceptable to Government. Moreover, we believe that recourse to voluntary arbitration would be encouraged greatly if Government were to draw up a special panel of arbitrators who are familiar with the working of the Mining Industry and permit the appointment of assessors by managements and

unions to assist in making expeditious and satisfactory awards.

By far our greatest pre-occupation in the field of labour relations has been the preparation and submission of replies to the exhaustive questionnaire issued by the Wage Board for the Coal Mining Industry. The Board commenced its public sittings in the month of July last, and after listening to the general submissions of the unions gave us an opportunity to appear before it in September. I appeared on behalf of the Employers and submitted that I was sympathetic towards the workers' natural aspiration for a better way of life. I, however, stressed that the Board should not be carried away by sentiment or prejudice but that it should view the whole problem of wage fixation in as objective a manner as possible.

The Bonus Commission's Report was tabled in Parliament only the other day. This report is not unanimous and the Dy. Labour Minister has stated that because of the numerous important issues raised, Government has not yet taken any decision. The majority view is that despite the statutory bonus which is said to be a part of the wage structure, workers in coal mines should also be allowed to participate in the prosperity of the Industry. The Commission, however, has recognised that payment of profit-sharing bonus will mostly be at the minimum level and even this will necessitate an increase in price, thus establishing the low level of prosperity in the Industry. I hope the Coal Wage Board will take due note of these factors.

A legislative matter which is presently under consideration and which greatly concerns us is the proposed amendment to the Industrial Disputes Act. This seeks to provide for payment of full retrenchment compensation in cases of closure of mines due to expiry of leases or exhaustion of reserves. This proposal, if enacted in its present form, would result in serious difficulties. Our approach to this matter is simple. Where the reserves of a mine are exhausted, we agree that it is the duty of the Industry to provide full retrenchment compensation. On the other hand, where the management of a mine is obliged to cease its management due to the untimely termination of a lease which was not originally under the contemplation of the owners, it is but right that the previous limit of three months' wages as compensation should continue to apply. I make this point more particularly as the termination of a lease under these circumstances does not imply the closure of the mine but merely a change in its management. I hope that Government will take note of this suggestion.

Relations with Government

I would be failing in my duty if I did not record that our relations with Government and in particular the Coal Controller, the Coal Board and their organisations have as always been excellent. Mr. Bose has now been with

us for some time and while we have on occasions agreed to differ, we have continued, nevertheless, to receive every consideration from him and his staff.

As for the Mineral Industry other than Coal, the performance on the whole during the year under review was satisfactory in spite of a number of adverse factors. The production of iron ore recorded a significant rise over the previous year and in addition to meeting the increasing demand of the growing Steel Industry within the country, it was possible to achieve a rise in the exports despite keen competition in the International Market. Iron ore is now emerging as one of the major foreign exchange earners and it is envisaged that the export capacity of 16 million tonnes, including 6 million tonnes from Goa, will be achieved by the end of the Third Plan. According to official estimates an export potential of 25 to 30 million tonnes is likely to be developed by 1970 and it is understood that the Government is taking action to provide the necessary transport and port facilities in this connection. I feel I ought to mention here that there is a rising trend in the costs of production due to various reasons and unless this trend is arrested and costs are stabilised at an economic level, it will not naturally be possible to achieve the export targets in view. In this context it is heartening to note that the Calcutta Port Authorities in their recent budget have announced a relief of Rs. 2/- per tonne from 1st April, 1964, and I am sure this will provide a great filling to exports from this Port.

The production of limestone and dolomite kept pace with the increasing demand of the Steel Industry. Concerning Manganese ore exports, the position during 1963 continued to be disappointing and I regret to say that as things are future prospects are not very encouraging. The main unfavourable factors in this respect are the emergence of new and cheaper sources of supplies and lesser dependence on manganese ore in steel production on account of technological advances in steel making. As a result, the available supplies of manganese ore are far in excess of the demand and the world prices continue to record a progressive decline. It is reckoned that at the present time the Indian prices are out of line with the International prices by about \$ 4 to \$ 5 and most of the present business is therefore only possible through barter transactions.

The Iron Ore Mines Welfare Cess Act, 1961, was enforced with effect from 1st October, 1963, at the rate of 25 nP, per tonne on production. In this connection representations have already been made to the Government that it would be equitable if the basis of imposition of this cess is changed from "production" to "despatches" as is the case with royalty. Two Wage Boards for Iron Ore and Limestone-cum-Dolomite Mining Industries were set up during the year. While I am happy to say that the Association has

E. I. D.-PARRY LIMITED

ADDRESS BY MR. H. V. R. IENGAR, CHAIRMAN, TO SHAREHOLDERS

The following statement has been circulated to Shareholders of E.I.D.-Parry Limited by the Chairman, Mr. H. V. R. Iengar. Sixty-sixth Annual General Meeting to be held on 30th March, 1964.

been given representation on the Wage Board for Limestone and Dolomite, I regret that this representation has been denied in the case of the Wage Board for Iron Ore although the constituent members of the Association produced approximately 42% of the country's total production in 1962. They also employed 22,000 workers out of the total of 55,000 workers in the Industry. Both these Wage Boards recommended interim wage increases with effect from 1st January, 1964, and these recommendations have been accepted by the Government of India.

My Association has for a considerable period been alive to the need for research in all branches connected with the Mining Industry such as mining technique, safety, beneficiation of products, adaptation of metallurgical processes and the like. We have also felt for some time that it is the duty of an enlightened Organisation such as ours to reward worthy thinking and ingenuity. I am pleased to announce that my Committee has agreed that with effect from 1st April next we will put aside a sum of Rs. 20,000/- a year for the next five years from that date for the purpose of providing scholarships, prizes and the like to deserving people, whether they are engaged in the Public Sector, the Private Sector, the Universities, National Institutes or in Government service. The exact details are now being finalised.

Gentlemen, I ask your indulgence to touch upon one more point before I close. Controls are necessary in a shortage-ridden economy but the extent of control and the points at which they are applied require further consideration. No industry today is subject to the degree of control that producers of coal have to contend with.

Three Organisations

It is known that there are three separate organisations dealing with the main features of this Industry, namely, production, distribution, conservation and safety. Two of them, namely the Coal Controller's Organisation and the Coal Board, deal with the first three subjects and are under the Ministry of Mines, while the fourth subject is looked after by the Chief Inspector of Mines under the Ministry of Labour. Here I am treading on dangerous ground but I consider it appropriate that Government should now take a good hard look at this situation. I feel that the original hypotheses have now changed and require re-examination. There is much duplication in the first two organisations and while they are intended to be complementary in character I feel that their objectives and methods need to be redefined. In this context while one can appreciate the need in earlier years for the Inspectorate of Mines to be under the Ministry of Labour, it is my conviction that in considering safety one has to consider also the needs of the Nation and a close correlation between safety and production is now essential. I believe that this can be more properly achieved if all these functions are within the same Ministry although quite naturally the watch dog functions of the Inspectorate of Mines must be separated from the production and conservation branches. It is my feeling that Government should consider the appointment of a small high-powered committee to go into this whole question urgently and decide what changes are needed.

I have been frankly forthright and, I hope, clinical in my approach. I have felt this to be no more than my plain duty. I trust that the suggestions I have made will receive the attention of the authorities concerned and I can assure them of the whole-hearted and continued support of my Association in dealing with the formidable challenges which face us in the future. We are confident that we will not be found wanting.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

In the speech which I delivered last year I made some observations on the general subject of British investment in India, of Indo-British co-operation and of the part that could be played by organisations such as this Company in promoting such co-operation. I would have greatly wished to have devoted the major part of my speech this year to some other subject of general importance, for I think this practice, which the Chairmen of some Companies have adopted, of discoursing at some length on a topic of general economic importance is a good practice. Unfortunately, however, I have so much to tell you about the domestic problems of our own Company that it would not be possible for me to travel beyond that without making the speech unduly long.

You will remember that in the speech last year I said, referring to the Ennore Fertiliser Factory, that although there had been delay in its commissioning, I thought that the major problems had been overcome, that the factory was at the time in full production and that it would make a substantial contribution to the earnings of the group during the year 1963. I much regret to have to tell the shareholders that my anticipations have not proved correct and that although the factory was in production at the time I prepared last year's speech, it was so only for a very brief period and that, since then, we have been dogged by a series of misfortunes for none of which the Company is responsible.

The Superphosphate Factory

Although we were equipped within our organisation to put up a superphosphate factory and successfully commissioned, by purely departmental effort, the superphosphate factory of our wholly-owned subsidiary, Andhra Fertilisers Private Limited, at Tadepalle, we felt that for putting up a complex factory such as the one that has been attempted at Ennore it would be desirable to give what is commonly known as a turn-key contract to a firm with an established reputation. We accordingly gave such a contract to Messrs. Simon-Carves Limited of the U.K. in the confident expectation that the factory will be completed and put into commission to our satisfaction in time. The Directors were aware that in a works of the complexity of the Ennore Factory, teething troubles are to be expected, but events at Ennore have gone far beyond what can be regarded as normal in this context. I attach a statement to this speech setting out the major incidents that have taken place at Ennore. These indicate that on the part of the Contractors and some of their sub-contractors there have been lapses which we had not anticipated and which we had no reason to anticipate. This has been to us a bitter disappointment. The consequence has been that against a possible total of 56,000 tons, up-to-date only 11,500 tons have been produced. At the date of this speech the works have been re-started, but in view of past performances, I hesitate to make any categorical statement as to when we will have a trouble-free run. In the meanwhile the Works have not yet been taken over by us. Shareholders will naturally

want to be assured that everything is being done to get the Works functioning on a satisfactory basis as quickly as possible and that their interests in the matter of damages will be adequately protected. On both points I can give the fullest assurances to the shareholders. No one could be more distressed than your Directors that this project on which such high hopes had been built should have been subjected to so many frustrations and they have been giving the highest priority to ensuring that it is properly put on its feet. Naturally they are taking the best possible legal advice.

The financial significance of the difficulties that we have encountered at Ennore is that in the year 1962-63, we suffered a very heavy direct loss even without taking into account the dividend that we paid on the additional capital that was raised expressly for the Ennore Factory. But it says much for the inherent strength and resilience of the group that it has been able to absorb this serious loss and to show reasonable profits. Apart from demonstrating the inherent vitality of the group, our experience of last year also demonstrates the great advantages of the diversification of the group's activities.

Before dealing with the accounts, may I recapitulate a point that not all of our shareholders always remember? This meeting is a meeting of the shareholders of E.I.D.-Parry. This Company owns one hundred per cent of the equity in Parry & Co. but none of the Preference capital in that Company. E.I.D.-Parry also owns the entire capital of Andhra Fertilisers and Parry, Murray & Co. whilst Parry & Co. owns the entire share capital of the Mofussil Warehouse and Trading Co. The existence of these subsidiaries is due to historical reasons which it is not necessary to elaborate at this stage. The accounts that are presented of E.I.D.-Parry have been prepared in accordance with the requirements of the English Companies Act and are the Group accounts, that is to say, they show the profits of E.I.D.-Parry, of Parry & Co. and of the other subsidiaries all put together, and you will notice that the interests of outside shareholders, namely, the Preference shareholders of Parry & Co. have been shown separately and deducted from the total Group profits. Apart from statutory requirements, I think there is justification, in common sense, for this arrangement because, in fact, Parry & Co. (with the exception of the interest of the Preference shareholders) and the other subsidiaries are the property of the shareholders of E.I.D.-Parry. But you will appreciate that although Group profits as shown in the accounts pertain in the broad sense to the shareholders of E.I.D.-Parry a dividend to them can be paid only out of the profits of the main holding company, namely, E.I.D.-Parry.

Group Profits

The Group profits after taxation of the year under review together with the Group profits in previous years are shown below:

1959	£386,058
1960	£378,483
1961	£351,392
1962	£252,287
1963	£360,047

You will find that the figures for 1963 are substantially higher than the figures

for 1962 in spite of the deplorable performance of Ennore. There are two main reasons for this. The first is that we have done well in our other activities such as sugar, pottery, and sales of fertilisers as well as general sales. In this connection, shareholders may be interested in the following figures. The sales of goods manufactured within the Group rose from £6.8 million in 1962 to £8.0 million in 1963. The sales of goods manufactured outside the Group and purchased by us outright rose likewise from £6.3 million to £8.2 million. Sales on Consignment account rose from £5.0 million to £5.8 million. Shareholders may recall that in my speech at the last annual meeting, I pointed out that while the growing emphasis on manufacturing activities was undoubtedly correct, I attached great importance to the continuance of our trading activities—a view which gains point from our experience of last year. The second reason for the higher profits is that the taxation for 1963 is very much reduced, being only £189,509 against nearly £381,561 in the previous year. The reason for the reduced taxation is, of course, that we have become eligible for a heavy development rebate in respect of the Ennore Factory amounting in the year under review to as much as £217,350.

Dividend

The Directors have given a great deal of attention to the problem of the dividend that should be declared for the year 1963. There are arguments to support the proposition that it would be justifiable to repeat the same dividend as for last year, namely, a total of 21 3/7%. The main argument for this would be that the profits of the Group for 1963 after tax are substantially higher than in 1962 and are, indeed, at the same level as the average for the years 1959, 1960 and 1961 and that it is legitimate for the shareholders to claim that the dividend should be based on the Group profits after taxation. There are, however, equally weighty arguments which suggest that the dividend should be reduced. In particular, I would mention that if we want to claim Development Rebate as indeed we must, we must by law appropriate £165,300 to the Development Rebate Reserve—this in effect largely represents the tax "wind-fall" given to new concerns to strengthen their reserve. After this appropriation the sum available for dividend from the net profit of E.I.D.-Parry is only £120,192—as compared with £259,650 that we will need for dividends including the Ordinary Dividends of 21-3/7%. This sum of £120,192 could, of course, be supplemented by recourse to the reserves. Shareholders will remember that in the year 1959 a Dividend Equalisation Reserve was created amounting to £150,000. If a dividend at the same rate as last year is to be declared, almost the whole of this reserve would have to be withdrawn leaving only a nominal sum in the reserve. Whether this would be appropriate would depend on whether we are satisfied that we would be able to repeat the same dividend for the year 1964 and subsequent years.

That depends to a large extent on Ennore, more particularly during the current year. We are satisfied that our other activities will show a sustained improvement but, unfortunately, we are not in a position at the moment to make any forthright prognostications about Ennore. In any event, it is clear that the year 1964 would also see a loss on Ennore and that the E.I.D.-Parry profits

for that year, by themselves, may not justify a dividend of 21 3/7%. To do this we would have to withdraw from the General Reserve.

Here again arguments could be made on both sides. It could be pointed out in justification for maintaining a dividend at last year's level, that although we may be withdrawing almost the whole of the Dividend Equalisation Reserve of £150,000 we would be putting into other reserves a sum of £262,800. In other words, the use of almost the entire Dividend Equalisation Reserve would not leave the total Reserve position any weaker. In fact, the net Reserve position would actually be stronger. But it must not be forgotten that the Development Rebate Reserve arises in reality from a tax concession and any prudent Company would wish to use such a concession to strengthen the reserve position. After the most careful consideration of the arguments on both sides, the Directors consider that it would be wise to make use of only part of the Dividend Equalisation Reserve in 1963 and leave the other part for use in 1964, if necessary. They have, accordingly, decided to recommend that a sum of £104,000 be taken out of the Dividend Equalisation Reserve for the year 1963 and that a total dividend of 18% be paid to the shareholders.

Sugar

Historically the manufacture of sugar has formed a big part of our activities though with increasing diversification its place in our total Group effort is getting gradually reduced. Nevertheless it remains important enough for me to refer to it. I am afraid the problems of the Sugar Industry continue to multiply. In 1963 we saw again an acute shortage of sugar throughout the country, and the re-introduction of control. It is ironical to recall that only a year ago Government restricted production by 10% because they feared a crisis of surplus. Because of this cut in production the area planted with sugarcane was reduced as farmers had no indication from Government whether they would permit factories to crush all the available cane. At the same time attractive prices were offered for Gur, which in addition to its normal use in the Indian household, is also one of the basic raw materials for illicit distillation, and consequently cane for the legitimate sugar manufacturing industry was in short supply, especially in the North, and only 21.5 lakhs tonnes were produced throughout the country in 1962-63 against 27.2 lakhs tonnes in the previous year. With a rapidly increasing population and a rising demand for sugar, this was a serious set back. In spite of the lower production Government exported 4½ lakhs tonnes, primarily at a loss, although international sugar prices started to rise before all the contracts were completed.

In the South the fall in production was not more pronounced than in the North, and the States of Madras, Mysore, Andhra, Kerala and Pondicherry produced 4.33 lakhs tonnes against their previous year's production of 4.58 lakhs tonnes. At Nellikuppam 3,17,757 tonnes of cane were crushed against 3,83,455 tonnes in the previous year, to make 29,542 tonnes of sugar against 35,395 tonnes in 1962.

It will be recalled that the Government of India, with the declared intention of paying for cane on the basis of quality, instituted a sliding scale for cane payments in 1962-63. In reality, however, the price paid continued to be much higher than the real value of the sugar in the cane, and farmers who grew cane of low quality were compensated almost to the extent of those whose cane was superior.

In order to boost production, Government offered an incentive by way of a rebate in excise duty of 50% on the

additional sugar produced over the previous year's figure in the period 1st July to 31st October. It will be observed that within 18 months the Government's policy changed from restriction in production to inducement for increased output. At Nellikuppam, for the first time, a special season was introduced in the months of September and October 1963. Although the experiment was not entirely satisfactory, and the recovery of sugar was lower than we expected, we had hoped that the excise duty rebate would, to some extent, compensate for the poor results. Unfortunately the Government of India ruled that factories who had not in any previous year produced sugar during the period 1st July to 31st October would not be eligible for the rebate and Nellikuppam fell under this category. Representations have been made against this decision and it is hoped that they will be successful.

There are more uncertainties for the sugar industry in 1964. The Government have progressively increased the ment have progressively increased the price of cane and the latest increase of 7 nP. per maund was without any compensatory rise in the sugar price in South India. We will naturally do our best, but the degree of control exercised by Government and the constant shifts of policy are discouraging. As the years go by, I fear that sugar manufacture will become of less and less importance in the totality of our activities.

Ceramics

Shareholders may remember the announcement made by Mr. Noel-Tod at the annual general meeting two years ago, of our agreement with Messrs. Doulton & Co. Ltd., U.K., in the matter of sanitaryware production. I am happy to say that our relationship with this Company continues to be most satisfactory and, with their assistance, we have

completed a substantial expansion of the sanitaryware works at Ranipet, that the third kiln has now been commissioned and, in fact, will be officially inaugurated in the beginning of April. A new range of patterns has been developed and introduced on the market, standards and quality are improving progressively, and we are looking ahead to further interesting developments arising from our fruitful association with Messrs. Doulton & Co. Ltd.

Visakhapatnam Fertiliser Project

In my speech last year and in those of my predecessors for the previous two years, reference was made to our association with California Chemical Company and International Minerals & Chemical Corporation in the Rs. 33 crore Fertiliser Factory at Visakhapatnam.

I am glad to inform you that arrangements for the integration of this Project are now nearing completion and it is anticipated that an offer of shares will be made to the public in March/April 1964.

Your Company will hold approximately Rs. 55 lakhs of the equity share capital of the new company, which will operate the Visakhapatnam Fertiliser Project, of which approximately Rs. 49 lakhs will be subscribed for in cash.

Your Company's contribution to the success of this Project, is not, however, limited merely to financial participation. We are assisting the new Company in the implementation of its seeding programme to familiarize the farming community with the advantages that will accrue from the use of complex fertilisers similar to that which will be produced by the Company and when the new Company's factory at Visakhapatnam goes into production, this Company will, in its capacity as Princi-

pal Selling Agents, be mainly responsible for the marketing of the factory's production.

We are proud to be associated with the American Collaborators in this venture, which is one of the major projects included in the Third Five Year Plan. The Fertiliser Factory at Visakhapatnam will have an annual production capacity of about 365,000 tonnes of Ammonium Phosphate and 16,500 tonnes of Urea which will not only make an important contribution to the much needed increase in food production in the country but will also result in a foreign exchange saving of the order of Rs. 10 crores per annum.

Staff Relations

I am happy to state that our relations with all categories of employees have been satisfactory and I would like to take this opportunity of thanking them for the part they have played in the development of Group activities. I would in particular mention our staff at Ennore. They have had an exceedingly difficult and what must often have been a frustrating time but their cheerfulness and willingness to put in hard work have been most praiseworthy.

Changes in Management

Mr. M. J. Edwards, the Managing Director, is retiring with effect from the 1st April after 35 years of service. I am sure shareholders will want to convey to him all their good wishes for his future. Mr. John K. John will be Joint Managing Director and Mr. Bowen, Deputy Managing Director from the same date. Having worked with them I can assure you that they will form a strong and coherent team.

The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on 30th March, 1964.

THE MARK OF QUALITY

We have pleasure in announcing that we have started commercial production of Mild Steel Tubes to I.S. 1239/58 at our Works at Vatva. All enquiries for booking of orders, etc. may please be made to our Sole Distributors:

TUBE DISTRIBUTOR
31-33 Jhaveri Chambers, Station Road, Ahmedabad 2.

SHRI AMBICA E.R.W. STEEL TUBES ARE STRONGER:
All pipes tested individually to hydraulic pressure of 700 lb/sq. in.

SHRI AMBICA TUBES LIMITED
AHMEDABAD 8

THE INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LIMITED

CHAIRMAN, MR. G. L. MEHTA'S STATEMENT

The Annual General Meeting of the Shareholders of the Corporation will be held at the Registered Office of the Corporation, 163 Backbay Reclamation, Bombay 1, on Thursday, 9th April, 1964, at 4 p.m. The following is the Statement by the Chairman, Shri G. L. Mehta, circulated to the Shareholders with the Directors' Report and Accounts for the year ended 31st December, 1963.

I have great pleasure in welcoming you and placing before you the Ninth Annual Report of the Board of Directors of the Corporation for the year ended 31st December, 1963.

The Chinese aggression came towards the end of 1962, and its impact on the economy was felt during most of 1963. First came a budget which, in its call on the nation's resources, was unprecedented. Secondly, and more importantly, during most of the year, the economy seemed to show signs of faltering. I would like to state that this was not a new phenomenon but a confirmation and accentuation of a trend that had set in some time in the middle of 1962.

One consequence of the emergency was a realisation of more careful assessment and husbanding of our resources and of the need to seek their allocation according to priorities which necessarily had to be defence oriented. This, no doubt, was an operation whose object was to change the trend of the economy, and I shall not concern myself with it. But the Chinese action also seemed to have had a cathartic impact on the economy, including a considerable amount of rethinking on what I would like to call the efficiency of the economy and the factors influencing it. This being a matter vital to a development bank like ICICI, I shall briefly dwell on it.

Partly as a legacy of the last world war and to some extent in consonance with the philosophy of planning, we have now a vast mechanism of controls and regulation. Of these, those that concern us most are industrial licensing, capital issues control, import (and consequent exchange) control, and price fixation policy. All these policies affect the efficiency of industry and their justification must be sought in a balance between social benefits and economic cost.

Long-term Criteria

In a planned economy, the channels into which investment flows have necessarily to be determined on a priori long-term criteria. Moreover, we are far from an era of vast resources when we can afford to let them be used without regard to objectives. Consequently, we have priorities and a mechanism to ensure that resources are used according to these priorities. While there may be differences on specific points, I believe that broadly, the priorities we have set before ourselves are appropriate to our conditions and needs.

However, the essence of planning lies not only in laying down the right order of priorities but in setting up a mechanism to ensure the effective utilisation of resources. In the sphere of industry, for example, as regards the utilisation of foreign currency resources made available by international

and foreign agencies or of the industrial capacity set up with such help, or in the synchronising of industrial capacity and the infra-structure (power, transport, communications and so on), our administration has admittedly fallen short of the goals largely because of the magnitude, complexity and novelty of the tasks.

I have no doubts about the necessity for the regulatory function of the State in an economy like ours. In an economy where priorities have to be determined, industrial licensing is essential to ensure their observance in regard to industries. In an economy where capital is short, control on resort to the capital market is unavoidable. An economy which derives almost the whole of the foreign currency resources required for capital development from foreign assistance needs to ensure careful and prudent use of such resources not only to satisfy foreign lenders but also for its own benefit. And for all these reasons—development according to priorities, scarcity of indigenous and foreign currency resources—because the normal forces of competition do not operate to ensure a fair deal to the consumer, it may in some cases be necessary to impose limits on the prices an enterprise may charge to the consumer.

State Intervention

Granted the need for all these, the areas in which State intervention should take place need to be determined on grounds of social utility of such intervention or, as I said earlier, on a balance of social and economic considerations. While necessarily the demands on the State would be diverse and compelling, the State might be tempted to do too many things all at the same time.

A welcome result of the Chinese incursion and the subsequent stagnation of the economy has been to set off inquiries into the functioning of our economic system. As a first measure, the Government has already announced increased exemption limits for industrial licensing and capital issues control and removed price control on sixteen commodities; a Committee headed by Shri T. Swaminathan (Secretary of the Ministry of Heavy Engineering) is examining the impact of control on industrial production and has already issued an interim report suggesting revised licensing procedures; another Committee headed by Dr. V. K. R. V. Rao, member of the Planning Commission, is at present considering import licensing procedures and machinery so as to recommend measures for accelerating the use of foreign currency resources. Measures for decontrol of steel prices are also under active consideration.

Gradually, as the year has passed by, economic conditions have stabilised. Our exports have increased easing somewhat the strain on foreign exchange resources. Money market conditions have been easy, and in the capital market conditions have to some extent improved; buyers have become selective, and the market for preference shares and debentures has tended to revive.

The Finance Minister has announced various steps to accelerate the tempo

of activity in the economy. Besides relaxation in the Reserve Bank's lending policy, a Unit Trust is being set up to enable the middle classes to participate in investment in industrial securities. There is also a proposal to set up another development bank which would help to strengthen the institutional arrangements for providing industrial finance and particularly in bridging the gap in respect of large issues. The Finance Minister has also under consideration the giving of fiscal incentives for reviving confidence in the capital market.

Productive Capacity

This is a beginning well made. But along with a search into procedures and machinery, it is also necessary to take stock of our productive capacity and to ensure the maximum output from it. While more and more factories and plants are being set up and are increasing our manufacturing capacity, we appear to have taken it for granted that once capacity is set up, it automatically gets fully utilised. In fact, for various reasons such as scarcity of foreign currency resources for maintenance imports, want of power and other ancillary facilities in some places, lack of adequate supervisory and skilled workers and inadequate selling effort, we are not using our resources to the maximum. This is a waste of capital resources which a poor economy like ours can hardly afford. Unglamorous as the task may appear, it is necessary that we make an inventory of our production facilities unit by unit and take up steps to obtain the maximum output from them.

Such an inventory will also reveal many gaps in our industrial structure—in the form of lack of complementary production facilities for goods which, at present imported or import-restricted, can be produced internally. To relieve the immediate pressure on our foreign trade account and even to set free foreign currency resources for newer industries and further development, it is necessary to set up a priority programme for setting up these industries. It is time we tried to consolidate our gains in recent years, determine the gaps in our industrial structure and accordingly, devise priorities for the next phase of economic advance.

The hesitation shown by the economy during 1963 should thus be used to round the economic structure and to lay the basis for further advance on the course set for the economy. Economic development is a continuous task and there is no respite from it. But in its nature, development is a dynamic process, and men's minds and thinking often fail to keep up with the dynamism of the economy. The year 1963 is important in focussing the need for such adjustment.

Development Bank

The role of a development bank such as ICICI in the prevailing conditions needs to be clearly understood. I had stated in my last year's Statement that we considered the long-term prospects of industry in this country to be good and that we would be willing to stand by industry in the immediately difficult situation faced by it in the capital market. As the capital market

CAPITAL, 12th March, 1964.

seemed to dry up, industry increasingly turned to ICICI and other financial institutions for finance to implement projects which had been worked out, some of them even in the pre-emergency period. Often enough, financial plans had to be changed and entrepreneurs who would have issued rights shares turned to financial institutions for loans, and those who, in more normal times, would have approached the market directly turned to us for underwriting their issues to ensure their success. As a measure of our response to this demand, I may mention that in a year when investment seemed to falter and entrepreneurs tended to postpone undertaking further projects, ICICI's net assistance, as you will notice from the Directors' Report placed before you, has been a record maximum at Rs. 23.05 crores. In 1963, ICICI gave underwriting sanction for Rs. 3.68 crores for 18 operations. Of 11 issues (total ICICI underwriting being Rs. 177.5 lacs) which came to the market, 3 operations for Rs. 65 lacs were over-subscribed; in the case of the other 8 operations for Rs. 112.5 lacs, we had to take up Rs. 83.25 lacs. Clearly, apprehensions regarding the state of the capital market were not unfounded.

Moreover, a development bank like ICICI has a long-term contribution to make in an economy like ours. While planners must necessarily conceive and project in terms of national strategy and comprehensive policy, their plans have to be worked out in the form of individual projects, and the proper financing, management and economics of the projects ensured. This requires careful scrutiny of the details of individual projects, advice to entrepreneurs on the various means of strengthening the viability of the projects by adequate safeguards in collaboration arrangements, and a close watch on the progress of the projects to ensure their timely completion and efficient working. If planning is found necessary at the national level, it is also indispensable at the project level. The role of a development bank is to ensure such planning at the project level.

The process of industrialisation consists in drawing into the vortex of industry persons from outside it. ICICI has, as a matter of general policy, tried to contribute to this development. Many projects financed by ICICI have been started by entrepreneurs for whom these projects were the first step in the industrial field. ICICI's new entrepreneurs have come from a variety of fields—trading, management, engineering and other professions. Promotion and management of industry requires qualities which the new entrepreneurs do not always possess from their earlier background. While to the established entrepreneur, a development bank like ICICI might appear only as a source of funds, I should mention that an institution of this character plays and should play an important part in providing various ancillary services to new entrepreneurs. We advise them on the various formalities to be fulfilled in setting up a manufacturing unit, on a suitable capital structure for the project and the need for (and, if so, the terms of) foreign collaboration arrangements.

Underwriting by I.C.I.C.I.

I would also like to reiterate two other points which I had made in my last year's Statement: the role of ICICI in the underwriting field and the role of ICICI in financing non-traditional industries. Confidence is a tender plant and those who, carried away by the large over-subscription to new share issues during 1960-1962, were inclined to under-rate the role of underwriters, would have been disillusioned by the lack of public response even to good issues in 1962-1963. The readiness of institutions like ICICI to come

12th March, 1964.

forward with support and assistance has prevented a decline in the level of investment which this public apathy would otherwise have brought about. Moreover, since its inception ICICI has invested funds in non-traditional industries—particularly metal-based and chemical industries. This has involved taking greater risks; however, in keeping with the planning effort in the country, we have considered it desirable to mould our investment according to the requirements of the economy.

Working Results

In these multifarious ways, ICICI as a development bank seeks to foster investment on healthy lines: in times of sluggishness in the capital market, it provides funds to enable the flow of investment to continue; in normal times, it carries out scrutiny of projects, guides entrepreneurs about their projects. ICICI itself has made special efforts to assist new entrepreneurs, to take up riskier forms of financing like underwriting and to invest in non-traditional industries. To carry out this task, ICICI has developed a cadre of competent professional staff and evolved procedures to ensure sound judgement. In the final analysis, the quality of work depends upon the competence and integrity and co-operative spirit of the staff, and our energies are continuously devoted to build up such staff and ensure the efficient working and development of the Corporation.

The efficiency of an economy depends upon having a machinery for decentralised decision-taking and administration of such decisions. Even as governmental administration and industry become more complex, it is necessary all the time to review the division of functions and the nature of such functions. In such a set-up, an independent development bank acts as a mechanism for ensuring planning at the project level. It is in this spirit that we carry on our work, and, I am sure, given confidence and resources, we shall be able to make this institution increasingly useful to the national economy.

Financial Assistance

The net financial assistance sanctioned by the Corporation during 1963 amounted to Rs. 23.05 crores. Of this, the amount sanctioned for new projects was Rs. 18.07 crores (including Rs. 7.36 crores in foreign exchange) in respect of 52 projects. The total cost of these projects (including working capital of Rs. 31.13 crores) would amount to Rs. 123.37 crores of which Rs. 36.91 crores would be required in foreign exchange for fixed assets. The total cost would be financed by share capital of Rs. 36.95 crores (Rs. 34.98 crores ordinary and Rs. 1.97 crores preference), long-term loans of Rs. 62.68 crores and bank borrowings and cash accruals of Rs. 33.74 crores. When in normal production, the total turnover of these projects would be about Rs. 68.10 crores. The net foreign exchange saving as a result of output from these projects would be nearly Rs. 46 crores.

As the operations of the Corporation have increased, it has been found necessary to augment its resources, in respect of both foreign currency and rupee resources. Earlier in 1963, after a visit by a joint mission from the International Bank for Reconstruction and Development (World Bank) and International Finance Corporation (IFC) I went to the United States and had negotiations with the World Bank which resulted in the Bank sanctioning a loan of U.S. \$30 million to ICICI, the largest single loan obtained by ICICI so far. Subsequent to this, the Government of India have sanctioned to ICICI a rupee loan of Rs. 10 crores out of PL 480 funds. Towards the end of 1963, the loan of DM 20 million from Kreditanstalt für Wiederaufbau, re-

ferred to by me in my last year's Statement, was made effective. I take this opportunity to express our gratitude to the Government of India, the World Bank and the Kreditanstalt für Wiederaufbau, for their loans and to the Government of India also for the guarantee on the World Bank loan. We value highly the co-operation and confidence of the Government and these institutions.

Available for Dividend. The Directors recommend a dividend of 7 per cent.

We have been able to extend and strengthen our relations with sister development banks outside India. Mr. Robert Michel Titus of the Agricultural and Industrial Credit Corporation, Liberia, visited ICICI for a period of four weeks under a UN-TAO programme. Mr. Tat Pang Cheam of the Malayan Industrial Development Finance Ltd., Malaya, and Mr. Cham-long Tohtong of the Industrial Finance Corporation of Thailand, were with ICICI for a period of two weeks each. In addition, Shri R. N. Sahoo, Managing Director of the Orissa State Financial Corporation, Dr. G. Varade Gowda, Assistant Director of Industries, State Government of Mysore and Shri M. R. C. Warriar, Development Commissioner of the Kerala State Industrial Development Corporation, were with us for short periods to study procedures and working. We welcomed the opportunity of making contacts and rendering some service to similar institutions in the country and abroad.

Shri J. S. Raj, our Deputy General Manager, visited Tehran to attend a

Conference on Stock Exchanges; later, he also went to Afghanistan on the IFC (Washington) mission to examine the problem of providing industrial finance there. In October 1963, Shri H. T. Parekh, our General Manager, attended the Second Regional Conference of Development Banks in Asia, convened by the Industrial and Mining Development Bank of Iran. I am also glad to state that at the request of the World Bank and IFC (Washington), we have lent the services of Shri J. S. Raj, for a period to head a new development bank being set up in Nigeria. In all these ways we are co-operating with other institutions to provide a basis for friendly relations.

Finally, I would like to state that the present position of ICICI is due to the competence, devotion and team work of the ICICI staff. I take this opportunity to express my sincere appreciation of their work.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

ITC/SL-73

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LIMITED

CHAIRMAN, MR. A. R. FOSTER'S SPEECH

Speech delivered by the Chairman, Mr. A. R. Foster, at the Twenty-seventh Annual General Meeting held at Calcutta on Wednesday, 4th March, 1964.

Gentlemen,

The audited Accounts and the Directors' Report have been in your hands for some time and with your permission I shall take them as read.

You will have noted that the Profit before Tax at Rs. 111 lacs showed a substantial increase over the previous year's figure. After Tax Provision for the year of Rs. 33.5 lacs and the statutory transfer to Development Rebate Reserve of Rs. 25 lacs the amount available for distribution is, after taking into account the balance brought forward from the previous year, Rs. 53.6 lacs.

Comments on the Budget

You will appreciate that there has been very little time since the Finance Minister's Budget speech and his presentation to the Lok Sabha of the 1964 Finance Bill, for us to come to any final conclusions on the effect on your company of Mr. Krishnamachari's proposals. Let me say straightaway, however, that he has made a number of proposals which we welcome. He has made a number of moves in the right direction, and if he has not been able to go as far as we would have liked, it is perhaps understandable in present circumstances.

Abolition of S.P.T.

We particularly welcome the abolition of the super profits tax. It is to be replaced by a surtax on companies' profits, which appears to be more realistic in that the statutory deduction is now 10% and the capital base is being widened. The full implications of this change in tax, however, have yet to be calculated. The Finance Minister's concessions to some sectors of industry whose development he wishes to encourage will doubtless be appreciated by them, although your company is not a beneficiary.

The withdrawal of super tax on inter-company dividends is also a move in the right direction which we welcome, but it does not in any way benefit your company as we do not hold any shares in other companies. Nor does it benefit your company's principal shareholders, Imperial Chemical Industries Ltd., London, as your company is what used to be known as a 56A company and has all along enjoyed the remission of the 5% super tax on dividends. This piece of legislation, therefore, will merely bring other companies into line with such companies, and will offer no new

inducement to the potential foreign investor.

We are most concerned by the proposal to charge an extra tax on the paying company of 7½% on dividends paid on equity shares. This would entail your company having to bear additional tax of Rs. 3.5 lacs in respect of dividends declared at the current year's rate of Rs. 1.50 per Rs. 10 ordinary share, although in fact the Budget proposals bring no relief in corporate taxation to your company. Whilst we appreciate and share the Finance Minister's views that companies should retain an adequate portion of their profits available after tax, we are of the opinion that a better means of achieving this objective in an expanding economy would be by way of tax rebates in respect of amounts transferred to reserves, rather than by the imposition of a penal tax on companies in respect of the amounts distributed as dividends. This measure, I feel, will be a deterrent to potential investment, and further thought will need to be given on how to achieve the objective the Finance Minister has in mind with the least damage to progressive industry.

Development Rebate

Another measure which will cause potential investors concern is the Minister's reference to the likely withdrawal of development rebates from certain industries by 1966. This will cause unease in their minds until more is known about what categories of industry will be allowed to enjoy this benefit in future. It is to be hoped that all projects so far licensed will qualify, even if they are unable to commence production before 1966, as the investor will have made his commitment in expectation of receiving this concession. Without it the attraction to invest in India will be seriously lessened.

To summarise, the abolition of S.P.T. is most welcome, but the implications of its replacement by a surtax on profits have yet to be worked out. Some companies may benefit. Many, however, may be little better off, and some worse off, particularly when the impact of the dividend tax is taken into account. I feel a fresh look at the dividend tax will be necessary if we are to create the climate for investment which is so desirable at the present time. There are other aspects of the Budget which will attract criticism, but I do not propose to comment on them on this occasion.

Production

Total production over the year showed a substantial increase over the figures for the previous year and I

would like to say a few words about some of our production units.

Paints production was maintained at a high level in spite of raw material difficulties. Extensive research has continued aimed at the substitution of imported raw materials by indigenous ones without departing from the high standards of quality on which the range of products has been established.

A record production of polythene was achieved during the past year and I am glad to announce that the new plant for production of intermediate density polymer was recently commissioned. Unfortunately, an acute shortage of alcohol has seriously hampered production during the current year. The plant is at present shut-down and unless substantial allocations of alcohol are made immediately the new unit will remain idle and production from the plants will be lower than last year. Vigorous representations have been made on the matter to the Central and State Governments.

Production of rubber chemicals from the new Plant is proceeding satisfactorily. The output from this plant is sufficient to meet most of the rubber industry's present requirements of accelerators, antioxidants and retarders.

Sales

Sales at Rs. 8.13 crores were the highest ever and I would like to express our appreciation of the selling and technical service efforts of our selling agents, Imperial Chemical Industries (India) Private Limited, in achieving this figure notwithstanding considerable competition.

It has been necessary in previous years to point to the unremunerative prices obtained for Caustic Soda, Liquid Chlorine and Hydrochloric Acid as a result of Government-imposed price ceilings. The recent removal of this price control has therefore been welcomed by your Company and by the industry as a whole. Your Company is mindful, however, of the cost structure of the industries to which these products are supplied and has limited the price increases introduced recently to the minimum required to cover costs and a modest margin of profit.

Expansion Schemes

Our plans to increase production of paints are making satisfactory progress and it is hoped that the new units will go on stream within the next year or so.

Plans are also in hand for increasing the range of polymers available for the plastics industry and for a marginal extension of the rubber chemicals plant

CAPITAL, 12th March, 1964.

to include non-staining antioxidants and improved accelerators.

As in previous years, I would like to thank our associates in the U.K., Imperial Chemical Industries Limited, for the technical assistance they have given us in all our development projects.

Staff and Workers

Our policy in imparting on-the-job training and improving skills through training courses is continuing to yield positive results and I am happy to say that a number of graduate apprentices have been absorbed as process foremen in our plants after completion of their training. Foreign instructors are no longer necessary for training mechanical trades, though we will need to rely on assistance from abroad in respect of instrument technicians and electrical trades. In this connection, I wish to thank Imperial Chemical Industries Limited, U.K., for the loan of the services of one of their Craft Training Instructors from their Wilton Works.

I referred in my speech last year to our activities in the field of productivity and work study and I have spoken elsewhere on the importance of this subject to Indian industry as a whole. I am glad to report that your Company's experience with work study and work reward schemes continues to be satisfactory, and we expect the number of workers participating in these schemes to rise progressively.

Directors

The Directors' Report contains details of recent changes in the constitution of your Board. I would only like to add that Mr. S. C. Bhandari and Mr. E. F. F. Davis were appointed Directors with effect from 1st February 1964 and I welcome them both to the Board.

Mr. G. J. F. Mackay, Mr. A. G. Pollard and I retire by rotation and will be seeking reappointment in the usual way.

Auditors

Messrs Lovelock & Lewes, the Company's Auditors, retire and have expressed their willingness to continue in office. Their present fee is Rs. 15,000/- plus out-of-pocket expenses and they have asked for it to be raised to Rs. 22,000/- plus out-of-pocket expenses. Their request has been examined and there is no doubt that the substantial increase in the volume of the Company's business, which is a continuing trend, has meant that considerably more time has to be spent by the auditors on their audit of the Company's accounts. I am satisfied that the increase sought by the auditors is justified and would recommend its acceptance.

New Chairman

I would like to end on a personal note. This will be the last occasion on which I shall be addressing you as Chairman as I shall be leaving India shortly prior to retirement. During the 3 years that I have occupied the Chair I have been sustained in all my endeavours by my colleagues on the Board and by the efforts of the staff and workers of the Company. To all of them I offer my very sincere thanks. I would also like to take this opportunity of informing you of your Board's intention to appoint Mr. C. A. Pitts as Chairman from 1st April 1964. As you know, Mr. Pitts has been a Director of the Company for several years, and for 2 years, from 1960 to 1962, he also served as Managing Director. I have no doubt that the affairs of the Company will prosper under his guidance and I wish him success in all he does in the challenging years ahead.

And now, before I invite you to ask questions, which I shall do my best to answer, I want to thank all of you for finding the time to be present here today.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 12th March, 1964.

New Delhi

F.I.C.C.I. BLAMES FISCAL POLICY FOR SLOW ECONOMIC GROWTH

(FROM OUR NEW DELHI CORRESPONDENT)

THE two-day annual session of the Federation of Indian Chambers of Commerce and Industry was inaugurated here last week by the Central Home Minister, Mr. Gulzarilal Nanda. The Prime Minister, who had been inaugurating the sessions since 1947, was unable to do so this year. The session had five resolutions on the order paper, including one on democratic socialism and another on "trust the trading community."

In its resolution on "democracy, economic welfare and fiscal policy," the F.I.C.C.I. regretted that "certain sections of political opinion are assiduously propagating the adoption of means which will not result in economic welfare or in promoting the democratic way of life, and, worse still, are commending the pursuit of these means as if they were ends in themselves. This confusion between ends and means seems to be the prime reason for the advocacy of nationalisation of industry, trade, finance and other economic activity. Of serious concern in this matter is the demand in certain quarters for nationalising that, along with the State Bank and its subsidiaries, the entire field of banking may become a Government monopoly."

Nationalisation of Banks

According to the Federation, nationalisation of joint-stock banks will not only eliminate competition, resulting in the lowering of standards of service to depositors, but also supplant the present flexibility of the banking system by a bureaucratic rigidity, and open up avenues for political interference, leading to slowing down of growth in the large-scale as well as small-scale industry and trade, in which free enterprise predominates. This will retard the rate of economic growth and the realisation of the ultimate end of economic welfare.

The Federation also cautions the public against indiscriminate extension of the co-operative form of organisation in such fields as agriculture, small-scale and processing industries and wholesale and retail trade. The country's experience so far does not indicate the advisability of an extension of the co-operative sector without considering the effects on overall production and productivity.

The Federation thinks that the doctrinaire approach in the Government's fiscal policy, pursued over a period of years now, is chiefly responsible for the fall in the rate of economic growth. The savings of the public are not only diverted to the executive—not all of which are productive—and the types of taxes levied have also substantially reduced the capacity of the people to save and invest.

The Federation expressed concern over the powers assumed by the executive in excess of their requirements, thereby placing honest assesses in a vulnerable position without the protection of law against avoidable harassment. The Federation urges the authorities "to take immediate steps to reshape the fiscal policy, as also the administrative procedures, so as to encourage savings, reward effort, stimulate investment, protect honest tax-payers, and create a climate of

confidence in Government policy as well as its implementation."

Trusting the Traders

The second resolution on "trust the trading community" says that "there have been incursions by the State and State-supported co-operative societies into the field of normal trade channels. On account of import restrictions flowing from the paucity of foreign exchange, those in the import trade have also been affected. "It is distressing to find that the traders covering the entire gamut of wholesale and semi-wholesale distribution and retail trade are subjected to unfair criticism and chastised for situations over which they have no direct control. A Damocles sword virtually hangs over the heads of the trading community, and every now and then it is threatened with extinction. The record of newer agencies like the State and co-operative societies—most of which indeed are not genuine ones in terms of their counterparts in other democratic countries—has been far from favourable, judging from their services to consumers and fair commercial practices. In the circumstances, it is a matter not only of surprise but also disappointment that faith should be reposed in these newer agencies and the view propagated that their multiplication and expansion are in the interests of the country."

"The Federation appeals to the authorities and the public to take a dispassionate view of the important rôle of the trading community in the national life. As indispensable links between producers and consumers, traders have to discharge vital economic, financial and social functions. Belonging as most of them do to the middle class, they constitute the very backbone of democracy. At the same time, the Federation would like to call upon the trading community to undertake their difficult functions with keener zest by way of acquiring technical skills and know-how to handle new products and with a greater sense of discipline, so that their part can be better appreciated by the authorities and the public. Organised industry should help the traders to the fullest extent possible, not only by refraining from directly entering the trade, but also in guiding and organising the trade to fulfil its new rôle effectively. Any attempt at disturbing the regular and uninterrupted functioning of the normal trade channels cannot but have deleterious consequences on the economy of the country in general."

One view which is gaining ground here is that the Government should adopt the policy of "responsive co-operation," that is, co-operating with those sections of the community which are readily co-operating with it. It will be for the Federation to prove how much it is supporting the Government in putting down the un-social activities of some of its members. There would be no penal laws if there were no crimes.

The U.N. Conference

The F.I.C.C.I.'s third important resolution on the U.N. conference on trade and development, says: "It is necessary for the advanced countries to accept the principle of preferential treatment as also the removal of restrictions on both agricultural

Policy Resolution? The deal, it will be recalled, was put through by Mr. K. D. Malaviya himself.

TAX CONCESSIONS

Possibility Ruled Out

The Central Finance Minister, Mr. T. T. Krishnamachari, is understood to have ruled out the possibility of any tax concessions at the general body meeting of the Congress Parliamentary Party. He is reported to have pointed out that reliefs in excise duty on such consumer goods as cloth, sugar and kerosene, would be meaningless without proper control over distribution. As for direct taxes, neither the corporate sector nor individual taxpayers could expect further concessions.

Rejecting the demand for the nationalisation of banks, the Finance Minister explained the details about their working and their relation to the private sector. The use of funds at the disposal of banks, he said, depends largely on the ability of users to pay the price and to get the needed security. Bank credit could be further popularised even with the existing powers of the Government. Mr. Krishnamachari said that as long as this position obtained, mere nationalisation of banks could not solve monetary problems.

The Finance Minister pointed out that through nationalisation the Rs. 1,400-crore worth of deposits would not automatically come into the Government's coffers because the credit needs of the private sector also had to be met. The banking industry as a whole, does not make a profit much in excess of 7 percent on capital and reserves. This cannot be regarded as excessive.

Mr. Krishnamachari explained why the Monopoly Commission would take the form of a commission of enquiry for the time being. He is said to have pointed out that it would not be compulsory to seek repayment of the annuity deposits within the stipulated period.

POWER ALCOHOL

Shortfall in Production

The Central Minister for Petroleum and Chemicals, Professor Humayun Kabir, held a conference of Excise Commissioners here last week to discuss the shortfall in the production of power alcohol, following the fall in sugarcane production. The meeting allocated alcohol and molasses from surplus to deficit States. It will be difficult to meet the existing commitments for molasses, it is learnt.

DEVELOPMENT BANK

Clarification from T.T.K.

The Central Finance Minister, it is expected, will soon clarify the point that the Government does not intend to withdraw the provision for development rebate. What is intended is to withdraw its general applicability and make it selective.

CONTRACEPTIVES

New Units in Public Sector

Two public-sector units will soon be set up to manufacture 200 million pieces of contraceptives a year. In this connection, a member of the Planning Commission, Dr. V. K. R. V. Rao, has been holding discussion with the State Governments to start literacy and family planning campaigns in one selected district of every State, in order to cover the entire State within a foreseeable period.

Against the estimated demand of 500 million male rubber contracep-

tives a year and 10 million female contraceptives a year, the total existing and licensed capacity in October 1963 was placed at 94.32 million a year as follows:

	(In million)
Male contraceptives	94.15
Female contraceptives	0.17

The Government is considering at least three applications from the pri-

vate sector to manufacture about 250 million contraceptives.

BANKS

Extending Employees Award

The question of extending the bank employees award by another year is

being examined here. Meanwhile, the working of banks is causing some anxiety, the worst trouble-spot being Kanpur. Go-slow tactics, refusal to work overtime and rowdy demonstrations are becoming an everyday affair in banks. The demand for the nationalisation of banks is supported by bank employees. It is not generally

realised that by defective working bank employees are losing the sympathy of their customers, who, by and large, have been their supporters. While on this subject, it may be added that the Government's decision to appoint a second wage board for the textile industry has already been announced, and a working group is now studying the question of a wage

board or wage boards for the engineering industries.

FOREIGN INVESTMENT

T.T.K. Clarifies Policy

The Government of India will encourage foreign private investment in specified industries, including State undertakings, on a minority participation basis. Clarifying this policy, the Central Finance Minister, Mr. T. T. Krishnamachari, told a meeting of the Parliamentary Consultative Committee that there was no shift in the basic approach to the issue.

The Minister explained the implications of the incentives offered by the Central Budget to foreign investors. The purpose, he said, is to create a better climate for foreign investment and to restore confidence in the domestic capital market.

The Minister assured the committee that the Government did not propose to throw the door open for unrestricted foreign investment. He said that the scope for external assistance on a Government-to-Government basis was necessarily limited and that foreign private investment would be needed to finance the foreign exchange cost and to get technical experts in certain industries.

Mr. Krishnamachari said, in reply to some questions, that there had not been many new investment offers from abroad since 1960 and that much of the accretion was on account of the ploughing back of profits of foreign companies. The net inflow of foreign investment in 1961 was about Rs. 70 crores, and private investment amounted to Rs. 30 crores to Rs. 35 crores. The balance came from official agencies.

The total private foreign investment approved during 1961-63 was Rs. 102.37 crores. It was Rs. 35.40 crores in 1961—Rs. 18.87 crores in new companies and Rs. 29.61 crores in existing companies; Rs. 29.61 crores in 1962—Rs. 19.92 crores in new companies and Rs. 9.69 crores in existing companies; and Rs. 37.36 crores in 1963—Rs. 26.58 crores in new companies and Rs. 10.78 crores in the existing companies.

U.N.O.

Trade Conference

The Indian delegation to the U.N. conference on trade and development, to be held in Geneva from 23rd March to 15th June, 1964, will be led by the Central Minister of International Trade, Mr. Manubhai Shah. The other members of the delegation will be Professor V. K. R. V. Rao, member for foreign trade, Planning Commission; Mr. B. R. Bhagat, Minister of Planning; Mr. R. K. Nehru, Ambassador on Special Duty in the Central Ministry of External Affairs; Mr. P. R. Ramakrishnan, M.P.; Mr. Ravindra D. S. Joshi, Secretary to the Central Ministry of International Trade; Mr. T. Swaminathan, Secretary to the Department of Supply; Mr. K. B. Lall, India's Ambassador to Belgium; Mr. K. P. Goenka; Dr. B. N. Ganguli, Pro-Vice-Chancellor, Delhi University; Mr. G. L. Bansal, Secretary-General of the Federation of Indian Chambers of Commerce and Industry; and Dr. S. R. Sen, Adviser to the Planning Commission.

The ministerial conference will last for two weeks from 23rd March. After that the conference will break-up into the following five main committees: (1) The committee on international commodity problems; (2) the committee on trade in manufactures and semi-manufactures; (3) the committee on the improvement of invisible trade of developing countries and financing for an expansion

of international trade; (4) the committee on institutional arrangements, methods and machinery to implement measures relating to the expansion of international trade; and (5) the committee on the expansion of international trade and its significance for economic development and the implications of regional economic groupings.

There have already been three sessions of the preparatory committee, and various proposals and ideas have been put forward for consideration of the conference. It is likely that the main proposals which the less-developed countries will press for at the conference will fall into the following six categories.

(1) the removal of trade barriers (quotas, tariffs and high revenue duties) affecting products which are important to the less-developed countries;

(2) the granting of preferences by developed countries to the less-developed ones and by less-developed countries to one another;

(3) the stabilisation of commodity prices at a satisfactory level;

(4) in so far as commodity agreements fail to achieve this stabilisation, the institution of a system of compensatory finance under which, subject to various conditions, the developed countries will guarantee the maintenance of foreign exchange receipts of the less-developed countries;

(5) in the event of the developing countries' failing to achieve the proposed 5-percent growth rate by 1970, the provision for more financial aid to fill the gap; and

(6) the establishment of new institutions to carry out the policies of the conference.

MOTOR-CARS

Reducing Prices

The Government of India hopes to reach an early decision on its proposal to select one of the existing motor-car manufacturing concerns and promote substantial expansion. The Central Minister for Steel, Mines and Heavy Engineering, Mr. C. Subramaniam, said in a Press conference here that the Government had originally thought of merging the three units—Premier Automobiles, Hindustan Motors and Standard Motors. It is now found that the proposition bristles with difficulties.

An alternative suggestion now being examined is to choose one of them and thus expand the programme for the manufacture of small cars. Although the Minister did not give any details, it is reported that the Government is thinking of taking over the Standard Motors of Madras. Mr. Subramaniam said that one of the three courses might be adopted. The firm selected for the purpose might itself be helped to expand by giving necessary assistance or the Government might seek participation in the venture or it might be run purely as a State-owned concern.

Reiterating his determination to bring down car prices, the Minister said that if none of the existing firms could be taken over on reasonable terms, the Government would even think of a separate unit in the public sector—a revival of the original proposal.

Mr. Subramaniam was confident that once the Government was able to promote sufficiently large-scale production (50,000 cars, ultimately going up to 100,000 a year), the prices would come down. On the present level of production, it is not possible to achieve a substantial reduction in prices, the Minister said. If one unit leads the way, other manufacturers, he said, will be forced to improve

their efficiency and service. The Minister said that the question of further allotments of foreign exchange to the existing manufacturers for expanding their production of passenger cars would not be decided until a final decision was taken on the new move.

SUGARCANE

Minimum Price Raised

The Central Food and Agriculture Minister, Mr. Swaran Singh, recently announced an increase in the basic minimum price of sugarcane. It will be Rs. 4.96 a quintal from the next crushing season, beginning in November. The Minister said in Parliament that a uniform price of Rs. 4.96 a quintal had been fixed for a recovery of 9.4 percent and below, against the present level which ranged between Rs. 4.69 and Rs. 4.85 a quintal. The premium of 4nP a quintal for every additional 1 percent of recovery will continue as before.

A notification prescribing the minimum price payable by each factory will be issued after reports on the recovery for the current year are received. The new price, which will apply throughout the country, works out to about Rs. 1.85 a maund and will be in force from 1st November, 1964, till 31st October, 1965. This still falls short of the industry's demand for a minimum price of Rs. 2 a maund.

POWER

New Schemes Approved

The Planning Commission has accepted in principle the following ten power schemes, proposed for the fourth plan, for advance action in the current plan:

Andhra Pradesh:

1. Kothagudem extension (thermal) 120 MW
2. Ramagadam extension (thermal) 200 MW

Gujarat:

3. Dhuvaran extension (thermal) 250 MW

Madras:

4. Kodayar hydro-electric scheme 90 MW
5. Basin ridge power-station (thermal) 30 MW
6. Neyveli extension (thermal station, to be executed by the Neyveli Lignite Corporation) 400 MW to 600 MW

Maharashtra:

7. Purli power-station (thermal) 60 MW
8. Nasik power-station (thermal) 280 MW

Uttar Pradesh:

9. Harduaganj extension (thermal) 100 MW

West Bengal:

10. Durgapur coke-oven (sixth unit) thermal 150 MW

SHIPPING

New Company Proposed

An Indian shipping company is proposed to be established in the private sector with foreign collaboration to the extent of 40 percent as provided under the Merchant Shipping Act, 1958. Phillips Petroleum of the U.S.A. will be the foreign collaborators with 40-percent shares.

The company proposes to purchase new tankers. The specifications of the tankers will be settled by consultation between the Cochin refinery and the company on both of which

Phillips Petroleum will be represented. These will then be submitted to the Director-General of Shipping for approval.

Phillips Petroleum which, in terms of the Cochin refinery agreement, will act as agents to the refinery for arranging the purchase of crude oil on the best possible terms, wanted to use its own tankers for carrying crude oil. The Government, however, wanted Indian tankers to be employed for this purpose. It was, therefore, decided that Phillips Petroleum will collaborate in the formation of a new Indian shipping company, which will acquire tankers out of its own resources and charter them to the refinery at competitive rates

SODIUM SILICATE

Excise Levy

An excise duty at the rate of Rs. 4 a quintal has been levied on sodium silicate from 1st March, 1964. The duty is payable on all quantities of sodium silicate manufactured on or after this date. It is to be paid before the goods are cleared from the factory.

Apart from paying the duty, manufacturers have to take out a Central excise licence and observe certain other incidental formalities (e.g., the maintenance of accounts and submission of monthly returns) prescribed in the Central Excise Act and Rules.

To facilitate compliance with these requirements and also for removing any difficulty or doubts in following the prescribed procedure, all manufacturers who have not yet done so, are advised urgently to contact the nearest Superintendent or the Assistant Collector of Central Excise who will take necessary steps to explain the procedures and to resolve their difficulties to the extent possible.

FRANCE

Trade Mission to Visit India

A five-member official economic mission, led by Mr. Jean Wahl, Director of Commercial Policy in the French Ministry of Finance, and a delegation of leading French importers will arrive here shortly at the invitation of the Central Ministry of International Trade. The discussions will cover closer economic co-operation between the two countries, and the difficulties faced by Indian exporters in the European markets.

IRON ORE

Exports to Rumania

Pending the finalisation of the 1964 contract, Mineral Import-Export of Rumania has agreed to purchase 170,000 tons of various grades of iron ore during January-April 1964. The contract is within the long-term inter-Governmental agreement concluded between the two countries in December 1960 under which a quantity of 3,450,000 tons (including 800,000 tons at the seller's option) of iron ore were to be exported during 1962-63 against the import of petroleum products, drilling equipments, etcetera, from Rumania. The prices of iron ore to be supplied were to be negotiated every year. A delegation of the Minerals and Metals Trading Corporation will shortly visit Rumania to negotiate and finalise the 1964 contract for the supply of iron ore.

FOREIGN INVESTMENT

T.T.K. Clarifies Policy

The Government of India will encourage foreign private investment in specified industries, including State undertakings, on a minority participation basis. Clarifying this policy, the Central Finance Minister, Mr. T. T. Krishnamachari, told a meeting of the Parliamentary Consultative Committee that there was no shift in the basic approach to the issue.

The Minister explained the implications of the incentives offered by the Central Budget to foreign investors. The purpose, he said, is to create a better climate for foreign investment and to restore confidence in the domestic capital market.

The Minister assured the committee that the Government did not propose to throw the door open for unrestricted foreign investment. He said that the scope for external assistance on a Government-to-Government basis was necessarily limited and that foreign private investment would be needed to finance the foreign exchange cost and to get technical experts in certain industries.

Mr. Krishnamachari said, in reply to some questions, that there had not been many new investment offers from abroad since 1960 and that much of the accretion was on account of the ploughing back of profits of foreign companies. The net inflow of foreign investment in 1961 was about Rs. 70 crores, and private investment amounted to Rs. 30 crores to Rs. 35 crores. The balance came from official agencies.

The total private foreign investment approved during 1961-63 was Rs. 102.37 crores. It was Rs. 35.40 crores in 1961—Rs. 18.87 crores in new companies; Rs. 29.61 crores in existing companies; Rs. 29.61 crores in 1962—Rs. 19.92 crores in new companies and Rs. 9.69 crores in existing companies; and Rs. 37.36 crores in 1963—Rs. 26.58 crores in new companies and Rs. 10.78 crores in the existing companies.

U.N.O.

Trade Conference

The Indian delegation to the U.N. conference on trade and development, to be held in Geneva from 23rd March to 15th June, 1964, will be led by the Central Minister of International Trade, Mr. Manubhai Shah. The other members of the delegation will be Professor V. K. R. V. Rao, member for foreign trade, Planning Commission; Mr. B. R. Bhagat, Minister of Planning; Mr. R. K. Nehru, Ambassador on Special Duty in the Central Ministry of External Affairs; Mr. P. R. Ramakrishnan, M.P.; Mr. Ravindra Varma, M.P.; Mr. Nath Pai, M.P.; Mr. D. S. Joshi, Secretary to the Central Ministry of International Trade; Mr. T. Swaminathan, Secretary to the Department of Supply; Mr. K. B. Lall, India's Ambassador to Belgium; Mr. K. P. Goenka; Dr. B. N. Ganguli, Pro-Vice-Chancellor, Delhi University; Mr. G. L. Bansal, Secretary-General of the Federation of Indian Chambers of Commerce and Industry; and Dr. S. R. Sen, Adviser to the Planning Commission.

The ministerial conference will last for two weeks from 23rd March. After that the conference will break-up into the following five main committees: (1) The committee on international commodity problems; (2) the committee on trade in manufactures and semi-manufactures; (3) the committee on the improvement of invisible trade of developing countries and financing for an expansion

of international trade; (4) the committee on institutional arrangements, methods and machinery to implement measures relating to the expansion of international trade; and (5) the committee on the expansion of international trade and its significance for economic development and the implications of regional economic groupings.

There have already been three sessions of the preparatory committee, and various proposals and ideas have been put forward for consideration of the conference. It is likely that the main proposals which the less-developed countries will press for at the conference will fall into the following six categories.

(1) the removal of trade barriers (quotas, tariffs and high revenue duties) affecting products which are important to the less-developed countries;

(2) the granting of preferences by developed countries to the less-developed ones and by less-developed countries to one another;

(3) the stabilisation of commodity prices at a satisfactory level;

(4) in so far as commodity agreements fail to achieve this stabilisation, the institution of a system of compensatory finance under which, subject to various conditions, the developed countries will guarantee the maintenance of foreign exchange receipts of the less-developed countries;

(5) in the event of the developing countries' failing to achieve the proposed 5-percent growth rate by 1970, the provision for more financial aid to fill the gap; and

(6) the establishment of new institutions to carry out the policies of the conference.

MOTOR-CARS

Reducing Prices

The Government of India hopes to reach an early decision on its proposal to select one of the existing motor-car manufacturing concerns and promote substantial expansion. The Central Minister for Steel, Mines and Heavy Engineering, Mr. C. Subramaniam, said in a Press conference here that the Government had originally thought of merging the three units—Premier and Standard Hindustan Motors and Standard Motors. It is now found that the proposition bristles with difficulties.

An alternative suggestion now being examined is to choose one of them and thus expand the programme for the manufacture of small cars. Although the Minister did not give any details, it is reported that the Government is thinking of taking over the Standard Motors of Madras. Mr. Subramaniam said that one of the three courses might be adopted. The firm selected for the purpose might itself be helped to expand by giving necessary assistance or the Government might seek participation in the venture or it might be run purely as a State-owned concern.

Reiterating his determination to bring down car prices, the Minister said that if none of the existing firms could be taken over on reasonable terms, the Government would even think of a separate unit in the public sector—a revival of the original proposal.

Mr. Subramaniam was confident that once the Government was able to promote sufficiently large-scale production (50,000 cars, ultimately going up to 100,000 a year), the prices would come down. On the present level of production, it is not possible to achieve a substantial reduction in prices, the Minister said. If one unit leads the way, other manufacturers, he said, will be forced to improve

their efficiency and service. The Minister said that the question of further allotments of foreign exchange to the existing manufacturers for expanding their production of passenger cars would not be decided until a final decision was taken on the new move.

SUGARCANE

Minimum Price Raised

The Central Food and Agriculture Minister, Mr. Swaran Singh, recently announced an increase in the basic minimum price of sugarcane. It will be Rs. 4.96 a quintal from the next crushing season, beginning in November. The Minister said in Parliament that a uniform price of Rs. 4.96 a quintal had been fixed for a recovery of 9.4 percent and below, against the present level which ranged between Rs. 4.69 and Rs. 4.85 a quintal. The premium of 4nP a quintal for every additional 1 percent of recovery will continue as before.

A notification prescribing the minimum price payable by each factory will be issued after reports on the recovery for the current year are received. The new price, which will apply throughout the country, works out to about Rs. 1.85 a maund and will be in force from 1st November, 1964, till 31st October, 1965. This still falls short of the industry's demand for a minimum price of Rs. 2 a maund.

POWER

New Schemes Approved

The Planning Commission has accepted in principle the following ten power schemes, proposed for the fourth plan, for advance action in the current plan:

Andhra Pradesh:

1. Kothagudem extension (thermal) 120 MW
2. Ramagadam extension (thermal) 200 MW

Gujarat:

3. Dhuvaran extension (thermal) 250 MW

Madras:

4. Kodayar hydro-electric scheme 90 MW
5. Basin ridge power-station (thermal) 30 MW
6. Neyveli extension (thermal station, to be executed by the Neyveli Lignite Corporation) 400 MW to 600 MW

Maharashtra:

7. Purli power-station (thermal) 60 MW
8. Nasik power-station (thermal) 280 MW

Uttar Pradesh:

9. Harduaganj extension (thermal) 100 MW

West Bengal:

10. Durgapur coke-oven (sixth unit) thermal 150 MW

SHIPPING

New Company Proposed

An Indian shipping company is proposed to be established in the private sector with foreign collaboration to the extent of 40 percent as provided under the Merchant Shipping Act, 1958. Phillips Petroleum of the U.S.A. will be the foreign collaborators with 40-percent shares.

The company proposes to purchase new tankers. The specifications of the tankers will be settled by consultation between the Cochin refinery and the company on both of which

Phillips Petroleum will be represented. These will then be submitted to the Director-General of Shipping for approval.

Phillips Petroleum which, in terms of the Cochin refinery agreement, will act as agents to the refinery for arranging the purchase of crude oil on the best possible terms, wanted to use its own tankers for carrying crude oil. The Government, however, wanted Indian tankers to be employed for this purpose. It was, therefore, decided that Phillips Petroleum will collaborate in the formation of a new Indian shipping company, which will acquire tankers out of its own resources and charter them to the refinery at competitive rates

SODIUM SILICATE

Excise Levy

An excise duty at the rate of Rs. 4 a quintal has been levied on sodium silicate from 1st March, 1964. The duty is payable on all quantities of sodium silicate manufactured on or after this date. It is to be paid before the goods are cleared from the factory.

Apart from paying the duty, manufacturers have to take out a Central excise licence and observe certain other incidental formalities (e.g., the maintenance of accounts and submission of monthly returns) prescribed in the Central Excise Act and Rules.

To facilitate compliance with these requirements and also for removing any difficulty or doubts in following the prescribed procedure, all manufacturers who have not yet done so, are advised urgently to contact the nearest Superintendent or the Assistant Collector of Central Excise who will take necessary steps to explain the procedures and to resolve their difficulties to the extent possible.

FRANCE

Trade Mission to Visit India

A five-member official economic mission, led by Mr. Jean Wahl, Director of Commercial Policy in the French Ministry of Finance, and a delegation of leading French importers will arrive here shortly at the invitation of the Central Ministry of International Trade. The discussions will cover closer economic co-operation between the two countries, and the difficulties faced by Indian exporters in the European markets.

IRON ORE

Exports to Rumania

Pending the finalisation of the 1964 contract, Mineral Import-Export of Rumania has agreed to purchase 170,000 tons of various grades of iron ore during January-April 1964. The contract is within the long-term inter-Governmental agreement concluded between the two countries in December 1960 under which a quantity of 3,450,000 tons (including 800,000 tons at the seller's option) of iron ore were to be exported during 1962-63 against the import of petroleum products, drilling equipments, etcetera, from Rumania. The prices of iron ore to be supplied were to be negotiated every year. A delegation of the Minerals and Metals Trading Corporation will shortly visit Rumania to negotiate and finalise the 1964 contract for the supply of iron ore.

FORESTS

Survey by Swedish Experts

A Swedish forestry expert, Mr. Erland Freden, has been appointed

BUSINESS MACHINES BRING NEW EFFICIENCY TO INDIA'S BUSINESS & INDUSTRY

Figures! Millions of them! Adding, subtracting, dividing manually... what a colossal loss of time, what a futile waste of labour! ■ For dynamic industrial growth, for greater efficiency, management needs modern business machines to keep on top of its problems every minute and to have facts and data at its fingertips. Through the years, Blue Star has been bringing greater efficiency to industry and business with German Business Machines. ■ This is one of the many ways Blue Star serves Indian industry.

THIS IS BLUE STAR

Manufacturing: Water Coolers □ Packaged Air Conditioners □ Commercial Refrigeration Equipment □ Engineering & Contracting: Industrial Ventilation and Humidification □ Air Conditioning and Refrigeration—WORTHINGTON (U.S.A.) □ Instrumentation—MONEYWELL (U.S.A.) □ Distribution: Instruments for research, education, industry—PERKIN-ELMER, VARIAN (U.S.A.) □ Heavy Electrical Equipment for power projects—SCHWEIDER, WESTINGHOUSE (France) □ Pumps for all purposes—SIGMUND (U.K.) □ Material Testing Machines—VEB WERKSTOFFPRÜFMASCHINEN (G.D.R.) □ Business Machines—BÜROMASCHINEN-EXPORT (G.D.R.) □ Thermal Insulation—TECHNI-GLASS LTD. to conduct the planning of a large F.A.O. scheme of making an inventory of India's forest resources. The planning alone is estimated to cost around Rs. 150 crores. The project is the first major effort to establish a balance in agricultural and forest development in India. The inventory will be made by means of serial photogrammetry and the results obtained will be processed in data machines.

Mr. Freden, who arrived in India in December last after having spent some time at the F.A.O. headquarters in Rome, will also be responsible for planning reafforestation and other measures designed to improve sylviculture in India.

TELEPHONE

Expansion Schemes

The progress report on telephone schemes should be read with some

interest: telecommunication cable project: The railways have been progressively changing over to A.C. high voltage traction in different sections of the railways and, as a consequence, cabling of the open wire telecommunication circuits coming within the hazardous influence of the electric traction system along these routes has become inescapable. The project has been included in the core of the third plan and work is in progress in various sections to keep well within the targets set by the railways.

Out of the total of 2,800 kilometres scheduled for cabling in the second and third plans 243 kilometres were completed in the second plan. Work in the Rajkharwan-Dungapossi, Asansol-Sini, Asansol-Gaya, Asansol-Durgapur, Gaya-Moghalsarai, Tata-nagar-Rourkela, Tatanagar-Kharagpur, Sealdah-Krishnagar City, Sealdah-Bongaon, Ranaghat-Santipur, Damodar-Radhanagar, Chowrashi-Ramkanali sections, totalling 1,101

kilometres, have been completed. Work is in progress in Sealdah South, Madras-Villupuram, Rourkela-Birmirapur and Adra-Jamadoba sections and would be completed by March 1964, adding further 412 kilometres. Work in the Mughalsarai-Allahabad and Durgapur-Howrah Dock sections has also commenced.

The total expenditure on the scheme in the third plan is expected to be Rs. 14.2 crores. A total expenditure of Rs. 7.39 crores is expected to be incurred by the end of March 1964, out of which Rs. 2.1 crores has been incurred during the third plan. A provision of Rs. 3.20 crores has been made in the Budget estimates for 1964-65.

Calcutta auto project: For the replacement of the manual telephone system of Calcutta, 55,000 automatic lines were sanctioned in January 1949 at a net cost of Rs. 12.35 lakhs. The revised cost of the project is now estimated at Rs. 13.20 lakhs. The work on the project has been completed

CAPITAL, 12th March, 1964.

except for certain minor items. All the 15 exchanges covered by the scheme have been cut into service at different stages—the last one in January 1958. A provision of Rs. 51,000 has been made in the Budget estimates for 1964-65, mainly for the clearance of pending adjustments, etcetera.

Coaxial Routes

Bombay-Calcutta coaxial expansion scheme: The project provides for equipping the coaxial routes between Bombay-Delhi and Calcutta to the full extent required for introducing subscriber trunk dialling between all the major cities connected by the route. A cable route directly linking Delhi and Jaipur via Alwar is also proposed. This constitutes the second phase of development in the Bombay-Delhi-Calcutta sections. It has been approved for execution during 1964-65 and onwards at an estimated cost of Rs. 195 lakhs. A provision of Rs. 2.2

CAPITAL, 12th March, 1964.

lakhs has been made for expenditure during 1964-65.

Calcutta-north Bengal-Assam-micro-wave scheme: The project envisages the linking of Calcutta with Asansol, Darjeeling, Siliguri, Cooch Behar, Gauhati, Shillong, Dibrugarh and Tinsukia by a high grade microwave telephone circuit capable of giving adequate number of circuits required in the near future. It is the first time that such a scheme of communication is being introduced in India. The Calcutta-Asansol link will be a wide band system with 1,200 channels. The rest will be a narrow band link with an ultimate capacity of 240 channels on the main routes. It is being introduced in the above regions as it is suitable to the mountainous terrain of these areas. The project has been sanctioned at an estimated cost of Rs. 1.65 crores and the work on it is expected to commence during 1963-64, for which a provision of Rs. 1.51 lakhs has been made. A provision of Rs. 1.25 crores has been made for the scheme in the Budget estimates for 1964-65.

Long-term expansion of the Bombay telephone system: To meet the growing demand for telephone service in Bombay, a scheme for the expansion of the Bombay telephone system has been prepared. But as this is expected to take considerable time, a project to provide for some interim relief was sanctioned at a total cost of Rs. 3.13 crores. The project envisaged the installation of 18,000 lines of new equipment in existing exchanges, recovery of 1,600 lines of old equipment and rearrangement of 3,375 lines of old equipment. The work on the project has been completed. A provision of Rs. 1,000 only has been made in the Budget estimates for 1964-65 for some pending adjustments.

The detailed scheme for long-term expansion of the Bombay telephone system was sanctioned in July 1956. The project provides for the expansion of capacity of the telephone system to 79,700 lines by the installation of 51,000 lines of new equipment in 13 new exchange buildings to be constructed and the recovery of 13,460 lines of old equipment. So far 11 sites out of the 12 required for new buildings have been acquired. Buildings for new exchanges in Mandvi, Matunga, Chembur, Pawai, and Borivli have been completed and those at Andheri, Khar and Shivaji Park have also been practically completed. The telephone exchange at Andheri has been put into service on 9th November, 1963 with 2,200 lines. Building works in Malad, Fort, Gamdevi and Thana exchanges are in progress. By the end of November 1963, 27,000 lines have been put into service in stages. This includes 3,650 lines of equipment temporarily installed in Bandra, Kandivili and Ghatkoper, which have also been put into service. Other installation works and cable laying are in various stages of progress.

Cross-bar Type Equipment

Bombay central west: Replacement of 7,250-7,500 lines equipment by 1,000 lines equipment. The project has been sanctioned at a cost of Rs. 1.98 crores in August 1963. It envisages the installation of a new 10,000 lines cross-bar-type equipment in the Wandri Road exchange building in replacement of the existing 7,250 lines at the Central West Wing exchange. Imported new equipment will be installed there. Work on the project has not commenced. It will cater for the demand for new connections in that area. The expenditure expected to be incurred up to 31st March, 1964, is Rs. 46,000.

Bombay-Gamdevi-Extension of Exchange I and II by 8,500 lines: The project provides for the installation of additional 8,500 lines at the Gamdevi exchange to meet the growing demand for telephone connections in

that area and has been approved at an estimated cost of Rs. 1.23 crores for execution during 1964-65. A sum of Rs. 75,000 has been provided for the project for 1964-65.

Bombay-Madras coaxial cable scheme: The scheme constitutes an extension of coaxial cable already under execution in the Calcutta-Delhi-Bombay sections and will connect Bombay with Belgaum, Bangalore and Madras. There are provisions for extending groups of circuits to Trichy and Coimbatore. The project has been sanctioned at a total cost of Rs. 4.31 crores. A provision of Rs. 3.06 crores has been made in the Budget estimates for 1964-65. The anticipated expenditure during 1963-64 is expected to be nominal (Rs. 10,000 only).

Bombay-Nagpur coaxial cable scheme: The project provides for laying two tube coaxial cables between Bombay and Nagpur with a spur from Dhulia to Indore-Jalgaon; Manmad and Akola will be dropping stations en route. The estimated cost will be Rs. 4.52 crores, of which Rs. 9.5 lakhs has been budgeted for 1964-65.

Expansion of the Madras Central Exchange by 8,000-12,000 lines: A project for the expansion of the capacity of the Madras central exchange

to 8,000-12,000 lines was sanctioned in August 1954, at a cost of Rs. 1.27 crores and revised in August 1963 to Rs. 1.30 lakhs. It provides for the installation of 8,000 lines of auto exchange in replacement of the existing 3,500 lines of worn-out equipment. The work on the project was commenced in December 1956 and the exchange was cut over in September 1961. The total number of connections given upto 30th September, 1963, is 1,640. Cable laying work and certain other minor items such as the installation of stand by engine alternator and time speaking clock are in progress.

Madras-Ernakulam coaxial cable scheme: The project envisages the laying of two tube coaxial cable in the Madras-Trichy-Colombatore-Ernakulam sections. Terminal equipment will be installed in Trichy and Coimbatore and dropping equipment in Villupuram en route. The estimated cost will be Rs. 2.77 crores, of which Rs. 79 lakhs has been budgeted for expenditure in 1964-65.

Coaxial Trunk Cables

Laying underground coaxial trunk cables between Delhi-Bombay-Calcutta: The project provides for the laying of coaxial trunk cables connecting Delhi, Bombay and Calcutta

and linking cities en route. The project was sanctioned in August 1956 at a total cost of Rs. 7.95 crores and aims at a quicker and more reliable telephone service between the cities served by this trunk cable. Work on all sections between Delhi and Asansol, including Kanpur and Varanasi, has already been completed and equipment commissioned into service. The work is in progress in the Agra-Ahmedabad section. The total cost of the project is now expected to be changed to Rs. 9.66 crores.

The expenditure on the project up to the end of 1963-64 is expected to be Rs. 7.97 crores and a provision of Rs. 94.7 lakhs has been made for 1964-65.

Delhi-Jullundur coaxial cable scheme: The project which will connect Delhi with Meerut, Muzaffarnagar, Ambala, Ludhiana and Jullundur will constitute a link between the existing Bombay-Delhi-coaxial project and microwave schemes for Ambala-Chandigarh-Simla which have also been sanctioned. The project has been sanctioned at an estimated cost of Rs. 2.01 crores. A sum of Rs. 10,000 is provided for 1963-64 as the project is expected to be taken up for execution. For 1964-65, a provision of Rs. 84 lakhs has been made.

Shalimar Industrial Finishes

Shalimar Paints offer you a wide range of industrial finishes, ready-made or specially formulated for stoving, air-drying, dipping and spraying; litho varnishes and stand oils, fire-resistant paints, epoxide chemical-resistant paints, wire enamels and insulating varnishes and compounds. Like every Shalimar product, Shalimar Industrial Finishes bring you the sum of four decisive elements—resources, research, know-how, quality-control—that guarantee superior quality and performance.

NAS-PS-948

SETTING NEW STANDARDS FOR STOCKBROKERS

(FROM OUR LONDON CORRESPONDENT)

STOCKBROKERS will in future have to serve a three year "apprenticeship" and pass a written examination before they are admitted to membership of a Stock Exchange: if draft proposals for the co-ordination of all British stock exchanges are accepted. The scheme is aimed at creating a Federation of Stock Exchanges and to apply common standards and rules all over the country. "One-man firms" are given five years to amalgamate or close down. The object of the examination will be to ensure that the candidate has a knowledge of stock exchange rules and procedure, company law, accountancy and taxation. Each candidate will also have to produce two sponsors, who must themselves be members of a federated exchange.

No one will be allowed to act as broker and jobber at the same time. Every member firm will have to submit an annual report by an accountant on its balance-sheet and to maintain at all times a free capital fund equal to £5,000 for each partner. Draft proposals for setting up the Federation and bringing the new rules into force, have now been sent to members of all British stock exchanges by a co-ordinating committee which has been at work for several years. Mr. R. F. M. Wilkinson, deputy chairman of the London Stock Exchange, anticipates that if all goes well, the Federated Stock Exchanges

of Great Britain might start life early in 1965.

It is an unanimous report, but the members of the committee have signed it in their personal capacities and not as representatives of their various bodies. Comments and criticisms are bound to pour in and amendments may still be made. But members of the committee said that they hoped to have the full draft prospectus ready by the end of June and to complete the remaining work by the end of the year so that the Federation could start early in 1965.

It has been no easy task to reach a workable compromise between the views of brokers and jobbers, large and small firms, London and provincial members. A good deal of doubt and suspicion has had to be overcome. Important personal interests are involved and the acceptance of the new standards is bound to create hardship. Much reorganisation is proposed for the smaller bodies. After five years each constituent exchange will be required to have at least 25 individual members, and after ten years 50 members. Candidates for membership will, in future, have to undergo a three-year period of training with a member firm and will then have to pass a written federal examination in such subjects as stock exchange rules and procedure, company law, accountancy and taxation.

There are to be common rules and requirements for the granting of

quotations. A central "new issues panel" will judge each application for quotation by the requirements now made in London. Only if the panel decides that these requirements have been met will any local council or committee be entitled to grant a quotation. Among other proposed changes, the Federation will require that no member may, without the consent of his committee, be engaged in any business other than that of broker or jobber "as a principal or employee." This does not apply to ordinary directorships. Firms at present carrying on an additional business must dispose of it within ten years. In the same period, the business of brokers and jobbers is to be separated so that no one will be allowed to act in a dual capacity.

Another reform is the creation of a large compensation fund and the linking of compensation resources of all the federated exchanges. Each exchange is to form a fund calculated on the basis of £200 for each member and this is expected to make rather more than £800,000 immediately available. If these funds should be exhausted by default, each federated exchange would be liable to contribute a further amount equal to £1,000 a member, which would provide an additional sum of over £4 million.

Satisfaction of claims from the public arising from default or negligence or improper acts of a member or firms will remain at the discretion of the Federal committee. However, the new arrangement will give much greater assurance to the investing public than the present separate compensation funds which add up to about £7,000. As a further assurance to the public, all member firms will be required to maintain insurance policies against forged transfers and frauds committed by employees.

Retail Price Maintenance

The Government is determined to go on with its proposals to legislate against retail price maintenance, despite the controversial nature of the measure and strong opposition from its own backbenchers. The Resale Prices Bill, just published, is intended to stop manufacturers and other suppliers from fixing minimum retail prices and from enforcing them by withholding supplies. The Bill does not affect the existing right of a supplier to maintain and enforce maximum prices, or to limit the distribution of his goods to selected retailers. The Bill will give the supplier a remedy against a retailer who offers "loss leaders"—goods at or below the price he paid for them—to lure customers into his shop.

The Restrictive Practices Court, to which three more judges may be appointed (with an extra judge to the Court of Session in Scotland), will have the power to exempt particular classes of goods. It will have to be satisfied that "the injury to the public inherent in maintained prices is outweighed, in the case of those goods, by other specified disadvantages"—"specified," that is, to the court and not in the text of the Bill.

Provisions relating to the court and to the appointment of more judges will operate from the date of the enactment of the Bill. The exemption provisions will apply one month

CAPITAL, 12th March, 1964.

later, and the general prohibitions in the Bill will apply "not earlier than" four months after enactment. The Board of Trade will fix the date. If the Bill were passed by the end of May, the court might start examining applications for exemption by October. Price fixing may continue until the court has decided an application.

Mr. Heath has not attempted to state in the Bill detailed criteria, on the French and Swedish patterns, by which a price arrangement may be held to be in the public interest, but has laid down three general tests by which the court may decide that the abandonment of a price arrangement would be to the detriment of the public as consumers or users of goods:

(1) The quality of varieties of goods for sale would be substantially reduced; or

(2) The number of retail shops would be substantially reduced; or

(3) Any necessary services provided with or after the sale of goods would be stopped or substantially reduced.

The court would have to be satisfied not only that one of these tests was passed by an applicant, but also that the maintenance of fixed prices would cause less harm to the public than its abolition in such a case.

In general, the Bill will make minimum price fixing a civil, not a criminal offence, and any part of a contract fixing minimum prices (but only that part of a contract) will become void. Anyone who suffers from a breach of the Bill's provisions, but not a third party, will have a remedy against a supplier for breach of statutory duty. The Crown will also have power to bring civil proceedings for an injunction or other appropriate relief.

"Loss leading" is to be stopped by a clause which permits a supplier to withhold goods from a dealer who has, in the past six months, been selling goods "otherwise than at seasonal or clearance sales," at or below the sum which he paid for those goods. The Bill does not define "seasonal or clearance sales."

Review of Decisions

The Bill provides for the review of decisions reached by the court—two years after the decision has been reached. The registrar of the court, or any supplier, may apply for a review. Suppliers will be allowed to recommend the prices at which their goods may be sold, and may issue price lists or advertisements giving their recommendations. Suppliers may not be withheld from a retailer who sells below the recommended price. The Bill makes no exemption for suppliers who have already submitted applications to the Restrictive Practices Court for authority to continue price fixing agreements and have already been allowed to do so. The Government assumes, however, that this court—like other courts—will take account of its own past decisions, and that, in the case of the book trade and the cigarette manufacturers, there should not be a long hearing before the court as a result of this Bill.

The Labour opposition has decided not to oppose the second reading of the Bill when it comes up. Although not satisfied with the measure, a majority of the Parliamentary party felt that it would be unwise to lay itself open to the charge of voting against a measure designed to benefit the consumer. Instead, on several major points the Opposition will seek amendments at the committee stage. Meantime, efforts continue to be made behind the scenes to overcome the objections of the dissenting Conservative backbenchers.

CAPITAL, 12th March, 1964.

Jute

NEED TO REDUCE THE MINIMUM PRICE OF FIBRE

MANY people in the trade and industry are worried over the hint reportedly given by the Jute Commissioner at his Press conference earlier this month that the Government might fix the floor price of raw jute at Rs. 30 a maund, basis Assam Bottoms, f.o.r., ready, Calcutta, for the 1964-65 season. The Jute Commissioner stated that the price which was fixed during the 1962-63 season was considered fair and would offer sufficient incentive to farmers to grow enough jute. Spokesmen of the industry have repeatedly drawn the Government's attention to the serious competition Indian gunnies are facing from Pakistani goods in overseas markets. Pakistani producers have three specific advantages: their fibre is of better quality, its price is lower, they enjoy an export subsidy. The Indian Government has recognised the basic soundness of the industry's arguments. Even the Shrivastava Committee admitted this fact reluctantly.

It is surprising that the Government has not realised that the floor price of Rs. 30 a maund, which might have been justifiable when hessian prices ruled around Rs. 49.60 a 100 Yards and B Twills around Rs. 115.50 a 100 bags, is no longer so. Now that the prices of these goods are hovering around Rs. 45.65 and Rs. 111.60, respectively, the price of fibre, which represents as much as 55 percent to 60 percent of the cost of production, should also be reduced. In order to cater to the fastidious demands of foreign consumers, mills have to use better-grade fibre which will cost them much more.

In view of the improvement in the quality of fibre, growers often get Rs. 36 to Rs. 48 a maund on a fairly substantial proportion of their output. It is felt that the floor price of fibre should be fixed on a more realistic basis from the 1964-65 season. The price should be related to the grades which are produced most in the country and not to the Bottom grade, which amounts to about 10 percent of the total output and is of little use to mills.

Expansion of Broad-loom Capacity

The most important single development in recent years is the phenomenal growth in the production of wide hessian cloth used in the manufacture of tufted carpets, says a note prepared by the Central Ministry of Industry. The note was placed before a meeting for the Informal Consultative Committee of Parliament last week by Mr. Nityanand Kanungo, Minister for Industry. In view of the steady rise in demand for wide hessian, particularly from the U.S.A., the note continues, the present production in India is almost double of what it was at this time last year. Such a rise in output has become possible due to the substantial expansion of broad-loom capacity. Against the end of June 1962, there are more than 2,600 looms at present, and most of them are working three shifts a day. Striking a note of caution, the note says that in addition to the established industries in Europe, Pakistan is coming up fast in this sphere. She will soon emerge as a serious competitor because of the availability of high-grade fibre at lower prices. Besides, the U.S.A. is carrying on vigorous research to find a suitable substitute for carpet-backing cloth.

Outlining the salient aspects of gunny exports during the past year,

the note says that in 1963 U.S. burlap consumption reached the highest level in three decades. Canada, Argentina, Chile, Australia, New Zealand, Belgium, West Germany, Denmark, Italy, the Netherlands, Sweden, Russia, Bulgaria, Czechoslovakia, the Philippines, Iraq and the Sudan imported more hessian from India. But the U.K., Hungary, Poland, Yugoslavia, Iran, Turkey and Egypt bought smaller quantities. In sacking, there was some increase in exports to Chile, the Dominican Republic, New Zealand, Britain, Italy, the Netherlands, Russia, Cambodia, Syria and Ghana. But the U.S.A., Cuba, Peru, Australia, Hungary, Poland, Rumania, Burma, Indonesia, Malaya, Thailand, Iraq, Turkey, Mali, Nigeria, Southern Rhodesia and Tanganyika took less of heavy goods. There was an appreciable increase in internal consumption; the total went up from 331,800 tonnes in 1961-62 to 371,000 tonnes in 1962-63. The note expresses the hope that by the end of the third plan period, internal consumption will be stepped up to 400,000 tonnes.

Mr. Kanungo revealed that the Government recently introduced a "self-

financing scheme" to accelerate the pace of modernisation and improve the competitive position of the industry. Under the scheme, jute mills can pay for imported machinery out of their export earnings within two years. The Government is also examining the question of allowing imports of 225,000 bales of long jute and 275,000 bales of jute cuttings from Pakistan to help the industry meet its requirements of such fibre during the next financial year.

Small Decline in Gunny Stocks

Mills reporting to the I.J.M.A. showed a small decline in their closing stocks of jute goods to 121,200 tonnes at the end of February, from 121,300 tonnes at the end of January. The decrease in sacking (by 2,000 tonnes to 46,500 tonnes) and in hessian (by 1,300 tonnes to 42,300 tonnes) was practically offset by the increase in miscellaneous goods (by 1,700 tonnes to 13,800 tonnes) and in carpet-backing cloth (by 1,500 tonnes to 18,600 tonnes). Circles close to shippers and mills say that there was a dislocation in gunny shipments due to the shortage of lighters. Besides,

draft restrictions prevented a large number of vessels from entering the jetties and also from taking a full load. As a result, there remained a heavy backlog of the previous month's shipments. At the end of February 1963, the mills had a closing stock of 82,200 tonnes, of which 44,000 tonnes were sacking, 24,400 tonnes hessian, 10,500 tonnes miscellaneous goods and 3,300 tonnes carpet-backing cloth.

Package Programme in Nadia

A package programme for stepping up jute production has been taken up in the Nadia district of West Bengal. There is a large concentration of East Pakistan refugees in this district. They are acquainted with the techniques of jute production. Two seed-multiplication farms, one in Krishnanagar and the other in Bhajanghat, are now working in the district, supplying improved types of jute seeds to farmers. Being a predominantly agricultural district, special steps have been taken by the authorities to ensure adequate irrigation facilities and supply improved seeds, chemical fertilisers and pesticides.

Last year, 112 deep tube-wells were sunk, bringing the total of such wells to 200. A scheme for sinking 200 more wells is soon to be implemented. As a result, 40,000 acres of land will be provided with irrigation facilities. Besides, 123 minor irrigation schemes, benefiting 9,000 acres of land, were executed during 1963-64 at a cost of Rs. 5,60,000. More than

I.J.M.A. STOCK FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of February as follows:

Description	29th February, 1964		31st January, 1964		Increase over (+) or decrease over (-)		28th February, 1963	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Hessian cloth and bag	13,46.29 (14.72)	42.3 (41.7)	14,16.89 (15.50)	43.6 (42.9)	-70.60 (-78)	-1.3 (-1.2)	8,08.87 (8.85)	24.4 (24.0)
Sacking cloth and bag	10,58.78 (11.58)	46.5 (45.7)	11,05.31 (12.09)	48.5 (47.7)	-46.55 (-51)	-2.0 (-2.0)	9,73.96 (10.65)	44.0 (43.3)
Carpet-backing	1,48.67 (1.53)	18.6 (18.3)	1,37.19 (1.50)	17.1 (16.8)	+11.48 (+13)	+1.5 (+1.5)	27.04 (27)	3.3 (3.3)
Others		13.8 (13.6)		12.1 (12.0)		+1.7 (+1.6)	10.5 (10.3)	
Grand Total (000 Tonnes/Tons)		1,21.2 (1,19.3)		1,21.3 (1,19.4)		-0.1 (-0.1)	82.2 (80.9)	

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

100 maunds of improved seeds were distributed, and 6,000 maunds were exchanged among progressive farmers during the previous season.

THE JUTE MARKETS

Manufactured Goods: Opening on a subdued note, the Calcutta gunny market picked up strength during the past week on reports of scattered hessian purchases by the U.S.A. and the Argentine. Brisk local covering in heavy goods, against the previous week's Government tender for ready and near positions, was another stimulant. But sentiment suffered a sharp setback on the publication of the I.J.M.A. gunny stock figures for February. Mills could not arrange for the clearance of all February-shipment cargo due to the shortage of lighters, and the chances of any improvement in the loading position were deemed remote. Draft restrictions prevented a large number of vessels from entering the berths and obliged most of them to take only a small load. Consignees were notified of these difficulties. Additional bearish factors were the limited activity in the New York bur-lap market (since most users and converters had adequate stocks for near-term requirements), and the reports of a decline in spot and float hessian prices from 11.55 cents to 11.50 cents a yard. On Tuesday, mills emerged as keen sellers for all positions and booked substantial business. The futures market moved in line with the general trend. Earlier in the week, vigorous bear

support helped prices firm up appreciably in sacking and to a smaller extent in hessian. But on Tuesday they slipped back—erasing a major portion of the week's gains—on persistent bull liquidation, combined with bear hammering. Turnover was fair and the undertone hesitant at the close.

Wednesday's quotations were as follows:

	Mar.	Apr.	July	Oct.
40in. 75oz.	34.75	34.35	34.35	34.25
40in. 80oz.	37.00	—	—	—
40in. 100oz.	45.70	46.10	46.15	46.05

Liverpool	127.75	127.75	127.75	127.75

Raw Jute: Steady conditions prevailed in the raw jute market during the past week, following scattered mill buying against the March purchase quota in the Calcutta and upcountry markets. In view of the shortage of better-grade fibre for which mills showed a particular preference, holders were reserved and obtained a higher price, helping the trend somewhat. A decline in arrivals in the agencies to around 40,000 maunds a day also helped sentiment. Holders of lower-grade jute and mesta were, however, nervous and were inclined to discount prices below the official floor levels. But mills declined to accept their offers. In the futures market, Upper Assam White Bottoms for March and June hardened on brisk covering by bears induced by the

forthcoming end-of-account adjustments against the former and the conversion of March contracts into June ones on payment of higher contango charges. Bulls continued to book profits and bears absorbed all offers at higher prices. A fair turnover was reported against both the contracts after wide fluctuations. The undertone was firm at the close.

Wednesday's quotations were as follows:

THE U.K. JUTE MARKETS

FIBRE PRICES FIRM

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was firmer in Pakistan last week and some sellers here raised their prices. Offers

CAPITAL, 12th March, 1964.

of white jute were not being quite so freely made as previously, but there were plenty of sellers of Tossa qualities. Although Continental spinners were buying fairly steadily, demand from Dundee was small and mainly for Outport Tossa-2/3.

The quantity of jute available ex warehouse Dundee is now small, and this will eventually bring out more buying interest for shipment parcels. Spinners are holding considerable stocks, but it is estimated that they will require to purchase at least another 150,000 bales from the present crop. Consumption of jute by Dundee mills is running at a high level and this is expected to continue for some time yet.

Offers were still irregular with the lowest rates at £148 for Mill Firsts, at £111 15s for Mill Lightnings, at £97 for Mill Hearts and at £82 10s for Grade Hearts, c.i.f. U.K., for March-April shipment. Grade Tossa-2/3 was named at £124 10s and Grade Tossa-4 at £108 5s. There were sellers of Outport Tossa-2/3 at £96 10s and of Outport Tossa-4 at £85 10s. Dacca Tossa-6 was at £110, March-April. Cuttings were scarce and prices were tending dearer. S.N.C. was at £61 10s and N.C. at £53. Mesta prices are firm at £85 15s for A, at £75 for B and at £70 for C, c.i.f. U.K., March-April. Little change took place in prices of Siam jute of late. Offers were not being freely made, but there were sellers at £84 for Super A, at £77 for grade A, at £69 for grade B and at £65 10s for grade C. delivered mill Dundee for March-April shipment. No buying interest was shown in this type of raw material by Dundee spinners as prices were considered too high.

THE PAKISTANI JUTE MARKETS

FIBRE ARRIVALS FALLING

(FROM OUR DACC A CORRESPONDENT)

ARRIVALS of loose jute are becoming smaller and smaller; perhaps not much is left with the growers now. What stocks are left, are with the middle men who have more holding power. It is reported that since rice is now very cheap growers are holding rice and selling jute. Despite this, however, arrivals are small, and loose jute prices have increased both in white and tossa. The quality, of course, as can be expected at this time of year, is poor.

In pucca bales, cuttings have maintained their high prices with a premium in the forward position due to a shortage of ready cuttings. Enquiries continue to come in from overseas, but prices have not risen further locally.

E.P.C. minima for all grades of mesta were raised at the end of last month and there are reports that those for cuttings may be raised again and that even those for Export Hearts may be raised because of the Jute Marketing Corporation's sales. The Corporation is reported to have sold cuttings at the big shippers' minima and is now offering £1 above. It has sold Export Hearts at the big shippers' minima and is now offering old crop Export Hearts at the small shippers' minima.

From overseas, reports indicate an inactive market or occasionally a steady undertone, but there is never an admission that buyers will pay higher prices. In fact, in view of the great variety of standards being kept by different balers, it is difficult to give an accurate assessment of the overseas market. Nevertheless, regular buying continues.

The biggest problem of this season continues to be shipping. Chittagong is congested due to excessive imports

CAPITAL, 12th March, 1964.

SOLVING U.K. HOUSING PROBLEM WITH FACTORY-MADE HOMES

By Hubert E. Wouters

HOUSING is a universal need, and the problem is not confined to any particular country. Populations everywhere are showing a tendency to increase and naturally must be housed. Traditional building methods have failed to keep pace with the demand, and in an effort to meet the shortfall by cutting down construction (and ultimately, it is hoped, the cost) industrialised building—prefabrication, in fact—is being more widely adopted. As far as Britain is concerned a great task lies before the construction industry—to provide the people with the buildings they need as quickly and economically as possible. Productivity must be increased in every branch from designers to the labourer on the site.

Looking at the problem recently, Mr. Geoffrey Rippon, U.K. Minister of Public Buildings and Works, divided it into four key needs. First, to try to get a reasonably steady demand for building; to even out some of the peaks and the troughs. To do this one must look as far ahead as one can, and try to organise the U.K.'s building requirements so that all concerned can see the task which they have to do well ahead. Secondly, to improve the country's technology. This is where industrialisation comes in. Thirdly, to get the relationship within the industry right so that the users of buildings, the designers and the contracting side of the industry, come together to tackle their problems jointly. Fourthly, to think clearly about research and the way in which information is disseminated and used, and the pattern of recruitment and training in the industry.

What does the "industrialisation" of building mean? It implies the application of more machinery to the process of building. It means making more horse-power available a man. The machinery may be used in factories, in temporary workshops near building sites, or in the erection process itself. Industrialisation does not mean standard buildings. What it does mean is that more of the parts of a building will be in their final form when they are erected; that more of them will be joined together by dry methods instead of with mortar and grout; that building will be more a process of assembly than of construction.

Rapid Building Methods

The U.K. Government is encouraging smaller local authorities to band together to place big, joint housing orders to be built by the prefabrication system. A director-general of research and development has recently been appointed in the Ministry of Public Buildings and Works with the special job of co-ordinating the development of new and rapid building methods. Mass-production, factory methods are beginning to be applied to building in Britain in several different ways. In some cases, part of the process is speeded up by taking factory equipment to the site itself. Concrete is poured into heated moulds on the site to form the crosswalls and ceilings of several rooms at a time. The concrete sets in a quarter of the usual time. Outside walls are of panels previously made in the main factory.

At present, about 5 percent of all building in Britain—including factories and schools—is carried out by non-traditional methods. The U.K. Minister of Housing stressed recently that there is no likelihood of this system of building ousting traditional

methods. But if the new techniques are developed as fast as the Government clearly hopes, they will raise problems for both small builders and building workers in general. Housing constructed from factory-built kit systems has to be planned beforehand to the last detail. Ceiling and window heights must be standardised before the moulds for wall sections are made. Ducts for plumbing, wiring and sometimes heating may have to be included in the prefabricated section.

At present, a kit of different parts is usually constructed specially for each large order. But eventually, it may be worth a big manufacturer's while to mass-produce a variety of parts in standard measurements, from which customers can choose and which they can combine to suit their own design. To encourage this, a Government working party is now busy on a programme of "dimensional co-ordination"—working out suggested standard measurements for building components. Although sections may be standardised, the design of homes that can be produced from kit systems is flexible. Because the weight is often carried on the internal cross-walls of the building, the outside walls are simply panels, which can be made of variety of materials—glass, wood, tiles, plastics.

New Plan for Building Industry

The Director-General of Research and Development at the Ministry of Works, Sir Donald Gibson, lost no time in drawing up a plan for radical changes in the organisation and methods of the building industry to speed up economies in Britain's housing programme. His first step was to send to Mr. Geoffrey Rippon, the Minister, a seven-point "charter" outlining the research projects and ideas he wished to examine. With the "charter" went a request for financial aid in assembling a team of architects, economists, efficiency experts, and engineers to staff a new department. Sir Donald said: "Once the team is appointed I feel that we can start to make some impression on the problems of the building industry within weeks."

Britain has taken a long time to rationalise house-building. She still builds them by some of the most diehard, outworn preposterous processes ever evolved. The most advanced of the Continental prefabricated housing systems are probably those operating in Sweden, which mainly derive from the Sundh system, whereby a crane hoists factory-made parts into position. Now the Alibetong system seems a favourite, a system which sharply reduces the labour force.

Under this system buildings containing 100 apartments are finished in nine months after the construction of the basement and by a total labour force of 75 men. More advanced is the Skarne system—a method of using heavy prefabricated elements of room size. The slabs are joined over the bearing walls and the joints are, therefore, invisible. All the concrete elements are produced in a field factory on the building site and all necessary ducts and electrical equipment are cast in. Everything except the foundation is generally prefabricated, but in a few places, the basement has been constructed in situ. Another method of using precast elements for building large blocks of flats is represented by the Goteborgsbostader sys-

tem. The basement is constructed in situ, but the superstructure is entirely precast.

When building small houses two methods using normal concrete or lightweight concrete may be mentioned, the "Corpus" system and the Erbest system. A Corpus house consists of a number of closed boxes, the interior of which are ready-made rooms, painted, glazed and with floor and wall covering complete. The kitchen and bathroom are ready for use at once. A house of 100 square meter is built in three days. On the first day, the boxes are assembled on the pre-constructed foundation. Adjustments are made by screws fastened in the concrete. Protruding water and heating pipes are welded together, the ready-made outside roof and the roof insulation are placed, joints are filled, and all covering made. The weight of the parts is up to 13 tons and a special crane truck is used. The selling price of this house is rather low considering the quality. The Erbest is a small-element system assembled on the building site. In the Erbest system the outside concrete walls, the concrete slabs, and the roof are built first. This assembly takes three men two or three days.

Although various attempts have been made in Britain to evolve new forms of factory-made small houses she does not seem to have achieved anything as advanced as the Camus system developed in France. The Reema system of housing from the factory has been used successfully on a variety of projects throughout Britain. Basically, the system consists of precast storey-height hollow concrete wall panels, which are delivered from the factory and erected on a prepared foundation. The recesses in the solid edges of the hollow panels from the shuttering for an "in situ" reinforced concrete "frame" which ties the whole building together and provides the waterproofing at the joints. As the emphasis both in manufacture and assembly on site is on simplicity, and repetition of straightforward operations, the requirements for craftsmen and skilled supervisors are much reduced compared with traditional building. With the high proportion of work done in the factories, and the quick erection and weatherproofing of the buildings, delays from inclement weather are greatly reduced.

Reema factories have varied from open-air casting yards with cover for the curing of the units only, to more highly mechanised and permanent manufacturing centres which can turn out 1,000-2,000 house units a year. The capital outlay for a simple Reema installation would be of the order of £150,000, including transport vehicles and erection plant, for 500 house-units a year. Factories abroad have been demountable, so that after year's casting they can be removed to another contract.

A Rationalised Approach

The Reema system, however, is more a rationalised approach to multi-storey construction, with an emphasis on precast concrete wall panels, than a plan for mass-production of all the elements needed. So, too, with the Bison Wall Frame system and Taylor Woodrow's Anglian system. The latter is to be employed for the London County Council's £2 million contract for Britain's first complete factory-made estates. Blocks of flats to be erected in Woolwich will arrive at the

site in room-size units complete with doors and windows and ready for immediate assembly. They will be made at the Norwich works of Taylor Woodrow-Anglian, an associate company of Taylor Woodrow. For the Woolwich contract production is to be geared to a rate of two dwellings a day, but to meet a big demand which is expected to follow a successful completion of the scheme, the works are being extended to cope with an output of six flats a day.

In the immediate post-war years, prefabs did provide basic dwelling for thousands of homeless families. The builders were well on the way to evolving a brand new machine-made house. Then, thanks to criticism by well-meaning social workers, these methods were abandoned in favour of a return to slower traditional methods and more permanent houses. A pity. By now Britain might well have been leading the world and sending highly civilised prefabs to Siberia, India and South America. In a world where population growth seems unstoppable (outside Europe), this could be one of the greatest and most valuable export markets of all time.

Factory production methods new in Britain are now in full swing in Heywood, Lancashire, in the construction of four 13-storey blocks of flats for Manchester overspill population. John Laing and Son, the builders, are making the first use in Britain of the Sectra system developed by a French engineer, one of the five they employ. The other four are Jespersen, Easton, Laingwall and Laingspan, each intended for the construction, by "factory-made" units of different types of structure.

The Heywood Scheme

The Heywood scheme, one of the first major efforts to show what can be achieved by the new ideas, already promises impressive results in fast construction. The builders say that work will be completed in about half the time taken by traditional building. Another advantage in an industry with a limited labour force is that the labour employed is less than half the normal number. Instead of the usual timber moulds, steel moulds are in use in Heywood. These, cleaned and oil-polished after each concreting operation, ensure accuracy, and the concrete is so smooth that walls and ceilings are not plastered and need only wallpaper or paint.

"Tracoba" is an industrialised system developed in France and first used in 1959. It is based on the use of a site factory in which the large precast concrete elements are manufactured without transport restrictions and with only limited capital outlay, largely offset by saving in transport costs. The structure consists essentially of internal load-bearing walls, arranged to give adequate transverse and longitudinal stiffness, which support the floor units. External walls are generally non-load-bearing and are hung from the cross walls. They may project or may be set back relative to the general building face to provide loggias or balconies.

The load-bearing walls are of solid reinforced concrete. The floors are either solid or may incorporate lightweight blocks. They are supported at the cross walls by projecting spurs, leaving freedom in between for the easy construction of the in situ connection between the wall and the floor units. In this way, continuity is effected and an uninterrupted passage is ensured for the transfer of vertical loads from the upper to the lower wall elements. This allows the safe construction of tall blocks, at the same time ensuring very substantial strength to resist horizontal forces on

NATIONAL AND GRINDLAYS BANK LIMITED

Thermocole®

KEEPS IT COOL AT CIBA

Research has a perfect setting at the new CIBA centre in Bombay. It has the perfect insulation, too, thanks to THERMOCOLE.

There are many organisations in India that know and use THERMOCOLE for insulation, and CIBA is one of them. No matter how hot and noisy it is outside, THERMOCOLE keeps it cool, quiet and comfortable inside.

THERMOCOLE is foamed polystyrene—the lightest rigid insulation material in the industry. It has a very low thermal conductivity. It can deaden airborne and vibrational sound and cut out heat, dust and humidity.

There is one sure way to work under ideal conditions: insulate against heat and sound with THERMOCOLE.

The Trade Name — Thermocole
is your Guarantee of Quality
for Expanded Polystyrene

When the need is insulation
against heat and sound, call in...

the building and allowing the use of the system even in seismic zones.

The sole concessionaires in the U.K. are Messrs Gilbert-Ash (Structurer) Ltd. and the consulting engineers Messrs Lowe and Rodin. Truscon Ltd consider the greatest saving of erection time in building can be made if particularly all the building trade work together with the fabrication of the structure is carried out in a factory leaving an absolute minimum of work to be done on the site. After carrying out experimental research based on this concept, Truscon have designed and developed a system of prefabricated housing which consists primarily of prefabricated structural boxes placed side by side and one above the other. Each box in the system is 6ft. 8in. deep, one storey in height and from 16 to 20 feet wide. This variation depends upon the design width of the dwelling required. Each structural box, incorporating a high standard of thermal insulation, consists of a ribbed concrete floor with ribbed concrete walls at each end supporting timber joists carrying a fibreboard ceiling. Internally, the prefabricated structural boxes are equipped with partitions, cupboards, doors, sanitary and kitchen fittings, complete lighting, plumbing and heating systems, and all but the final finishes applied.

The Truscon prefabricated system is designed for flats or maisonettes; lift wells, staircases and cantilevered access balconies are provided as structural precast concrete units. Varied elevational treatment can be achieved by using cladding panels of timber, fibre-glass or precast concrete on the boxes forming the external walls. The gable have an outer skin of precast concrete exposed aggregate panels which can be varied in colour and texture. The prefabricated structural boxes are transported to the site, lifted by crane onto the prepared foundations and grouted together. The services are connected floor by floor and the final finishes are applied. This process can be repeated for buildings up to 20 storeys in height. The amount of site work is basically: (1) preparation of foundations, drainage and services; (2) erection of the prefabricated structural boxes; (3) application of the final finishes; (4) landscaping the site. By using the Truscon prefabricated housing system it is possible to erect and to complete a block of 16 three-bedroom maisonettes four storeys high in approximately three weeks.

Plastics in House-building

It certainly looks as though the house of the future is going to be factory-built. So far the basic material of construction employed in the various systems is concrete. There are, however, other competitors in the field. Some of the ways in which plastics could revolutionise the building industry are on show in an experimental "Plastics Development House" at Welwyn Garden City. In all it contains about three tons of plastics, 60 times as much as in a typical modern house.

It has been built by the Plastics Division of I.C.I. partly as an exhibition and partly as a place to test new materials in real working conditions. Some of the components are already in use in the building industry, others are still at the prototype stage. At present the house is unoccupied, but later it may be lent to company employees with families to see how the various new materials stand up to the wear and tear of ordinary life.

The most advanced part of the house is the virtually all-plastic bathroom, which was built in the Plastics Division's development workshops, wheeled over to the house, and installed as a unit. Only the hot and cold water supplies, the soil pipes and the electricity had to be connected. All the plumbing in the house, inclu-

ding the hot water system and the tank, is plastic. There is even an experimental plastic hot water cylinder with an immersion heater.

Steel House

In the grounds of Sketty Hall, Swansea, the headquarters of the British Iron and Steel Research Association, stands a small, two-storey, steel structure which may mark a revolution in building techniques in this country. It was designed and produced by G. M. E. Cooke, of the mechanical working division at Sketty Hall, embodying many ideas which are fairly straightforward: but whereas most conventional forms of construction employ a framework which supports the floors and the wall which supports the frame-cladding, in this building the framework and the wall cladding are one.

The load-bearing qualities of steel—in this case sheet steel panels—are fully used. There are two basic steel elements—the panel and the connector piece. The panel consists of a tor piece. The panel consists of a box section of thin gauge with facing sheets riveted to it, with the space enclosed filled with rigid polyurethane foam. The connector piece has tubular prongs which clamp the panels together. Using this method, the factory-made elements, compact and light, are easily transportable and, it is claimed, capable of being assembled rapidly by unskilled labour, without the assistance of tower cranes and other heavy handling equipment. Magnets have been suggested as tools for lifting and positioning the panels.

The steel "sandwich," with its foam filling, is well insulated against heat loss, and its absorption of water is negligible. It has been calculated that the thermal insulation properties of an 11-inch cavity brick wall can be matched by those of a steel-foam panel only half an inch thick. The panel, however, requires modification if a high degree of sound deadening is wanted. When used in party walls it might have to have something heavier than foam inside, perhaps bringing the weight up to 90 lb a square foot. The B.I.S.R.A. is studying the employment of a thin sheet of lead suspended in the foam, giving the panel equivalent sound

insulation at one-third of the weight of traditional methods.

Fire resistance might be maintained either by adding a substance to the foam or by spraying one of the inside faces of the panel with asbestos before the foam is inserted. Distortions of the panel when in position are accommodated by flexible rubber seals which also safeguard unprotected surfaces of the steel from corrosion. The steel plates themselves are coated with a bonded plastic.

What of the future? It seems fairly clear that future building systems will be based almost entirely upon mass production in the factory. The building industry must move with the times, as other industries are doing. It is not only a question of the present shortage of housing in all countries, but also the fact that the population of the world will grow from 3,000 million to 7,000 million or more during the next 50 years, unless something untoward happens. But if Britain does not solve the housing problem (and of course provide enough food), nothing can prevent a disaster.

ACC HIGH ALUMINA FIREBRICKS

—manufactured to your specifications

Suitable for all types of kilns and furnaces, ACC HIGH ALUMINA FIREBRICKS possess all the physical properties required for long, trouble-free service under the most severe operating conditions.

ACC FIREBRICKS ensure: ■ high refractoriness ■ higher furnace availability ■ longer life of furnaces and kilns ■ lower maintenance costs ■ increased output

SOMEONE, SOMEWHERE NEEDS ELECTRICAL CONSULTANTS

And **AEI** goes into action

All the superlatives come to mind. The Bhopal Project for the manufacture of heavy electrical equipment is the largest in Asia and among the biggest of its kind in the world. Its training school is one of the most comprehensive to be found anywhere. When completed, the Bhopal factory will employ about 30,000 people and meet a good part of India's requirements of electrical equipment. India can look to the project with understandable pride. AEI as official consultants, are happy to be associated with it.

East and West meet...

Highly skilled Indian engineers and AEI personnel work shoulder to shoulder at Bhopal, busy making switchgear, transformers, capacitors and traction motors for India's power projects and industry. Of five projected factory blocks three are operating; when the

remaining blocks are complete, production will extend to water and steam turbines, industrial motors and heavy rotating and other plants. The Bhopal factory combines the latest equipment, techniques and quality control measures. It will make a decisive contribution to industrial progress in India, and save vast sums of foreign exchange.

The tiger didn't like it...

...when they cleared away his jungle! At Bhopal, much attention is paid to welfare schemes for workers. A town has arisen on what was very recently thick jungle. There are neighbourhoods, laid out with an eye to space, light and utility. They house executives, clerical staff and workers. The statistics on

welfare read impressively. Over seven thousand homes have been built, 13 hostels, a 75-bed hospital, three dispensaries, three clubs and two auditoriums, including the Assembly Hall of the Training School. This city in miniature

has 85 miles of road, a water purification plant, a sewage disposal unit, a modern telephone exchange and 15 cultural associations. The AEI hostel consists of two well-appointed buildings, where 25 AEI engineers from Britain are resident.

What would you do with 3,000 points of view?

The Bhopal training school is a small factory, complete with all departments, a rigid production schedule and a commercial output. The school offers courses to graduates, diploma holders, junior draughtsmen and artisans. About 300 full-time instructors and lecturers work with 3,000 students at a time. Three buildings house school, workshop and laboratories. Already, 4,200 trainees who have passed out are employed at the main factory. In addition, trainees are graduating to projects all over the country... A seat of technical learning has been successfully established at Bhopal.

40 years is a responsible age

The Bhopal project is one of the more recent associations between the Government of India and AEI. In India, AEI's activities date back about forty years and include contributions to the Joginder-nagar power project (Punjab's first), the Bhakra Dam power project (Punjab's latest and India's largest), the steel works at Durgapur and the 720 mile oil pipeline in Assam. AEI has been manufacturing electrical equipment in India for over twenty years and a wide range of products is now serving the needs of industry and the home.

We don't usually indulge in name-dropping, but...

In our case it's justified. AEI is no newcomer. Its origins go back more than sixty years. Today, Associated Electrical Industries Limited embraces such famous names as British Thomson-Houston, Metropolitan Vickers, Siemens Edison Swan, Henley's, Ferguson Pailin, Hotpoint and Birlec. Worldwide, AEI operates 60 factories and employs 100,000 people. It produces everything electrical from lilliputian transistors to the world's biggest turbine generators.

Principal products worldwide

Steam and gas turbines and generators
• Hydro-electric generators • Marine propulsion equipment • Electric drives for rolling mills and mine winders • Electric furnaces • Traction and railway signalling equipment • Transformers and switchgear • Power and telephone cables • Motors and their control gear • Electronic apparatus and radar equipment • Particle accelerators, electron microscopes and mass spectrometers • Industrial controls, instruments and meters • Semiconductor devices and power rectifiers • Private and public telephone exchanges and other telecommunication equipment • Lamps and lighting fittings • Heating equipment • Electro-medical apparatus • Nuclear power station equipment • Domestic appliances.

Commodity Markets

NEW SUGAR MARKETING BOARD PROPOSED

(BY A SPECIAL CORRESPONDENT)

REPORTS are now current that the Central Government is considering a proposal to set up a Marketing Board for Sugar. Two advantages have been claimed for the latter, namely, stability in sugar prices in the interest of the consumer and protection to weaker units in the industry. But, it appears, the first advantage claimed is imaginary, since what the Marketing Board can at best do is to fix the ex-factory price of sugar. But this alone cannot ensure a fair and stable price to the consumer, since the price will continue to be determined by the forces of supply and demand at various consuming centres.

It will be pertinent to recall here the experience of sugar controls which are now in force. The factories are required to sell their entire output at fixed control rates to registered dealers against Government allotment orders. The distribution aspect is the responsibility of the State Governments who have taken various measures for the purpose. Some have introduced rationing, while others have resorted to distribution through fair price shops. This regulation of the ex-factory price and the distribution of sugar through State agencies, which is more or less the pattern which the Marketing Board is likely to adopt, has not checked the rise in prices at consuming centres and shortages are not an uncommon feature. So consumers not only face difficulties in procuring adequate quantities of sugar, but have also to pay much higher prices than those warranted by the ex-factory control rates fixed by the Government. If the present control measures introduced by the Government of India and State Governments have not been able to keep the prices in check, it is difficult to understand how the mere creation of a Marketing Board will improve the situation.

Removing Shortages

Except following the existing pattern of distribution, what other measures can the Board possibly take? It is unlikely to undertake the responsibility of retailing sugar throughout the country. This is neither practicable nor does it seem to be the intention of the authorities. Even the large-scale rationing of sugar introduced during the second World War period could not prevent prices from rising. It is common knowledge that consumers were compelled to pay much higher prices in the open market for meeting their requirements. The setting up of the Marketing Board by itself will not, therefore, remove the shortages such as the ones now being experienced.

Admittedly, the long-term stability in prices can be achieved only through the steadily rising production of sugar. The mere creation of a Marketing Board cannot achieve this basic objective. On the contrary, it is feared that it will retard production, leading to perpetual shortages and higher prices to consumers. So the very objective for which the Board is being created will be defeated. The Board will merely concentrate on the distribution of available supplies, while the production of sugar will suffer.

It is feared that the cost of sugar to the consumer is likely to go up in various ways. In the first place, the Marketing Board is bound to impose a heavy administrative charge

which will mean a permanent load on consumers. Secondly, the creation of a Marketing Board will perpetuate inefficiency in the industry, so consumers will suffer in the long run. The Board will destroy the initiative of producers to improve either efficiency or the quality of sugar.

Protecting Weaker Units

The second advantage claimed, namely, protection to weaker units in the industry, also appears to be illusory. Even when the Government exercised complete control over the industry, it failed to give any protection to weaker units. It has been the experience of the industry that during the period of control, uneconomic rates were fixed, regardless of the actual cost and its adverse effect on production. If the past is any guide to the future Government policy, it is clear that in the matter of price, the industry can never hope to get a fair deal at the hands of the authorities. With the creation of a Marketing Board, it is feared, the industry will be destined to bear an uneconomic price structure permanently. The hope that

the Marketing Board will protect the small and weaker units is thus rather far-fetched.

Furthermore, due to the imposition of an uneconomic price structure, the industry's interest are likely to suffer in other directions as well. For instance, producers of quality sugar will be adversely affected. So the quality will deteriorate in the long run. The main inducement to produce high quality sugar is the premium it commands in the open market. This enables the factories to install costly plant and machinery required for its production. If the premium is reduced in an arbitrary manner, as has been done during control periods, manufacturers will not find it economical to produce quality sugar. Furthermore, freight advantage enjoyed at present by certain factories will disappear. This is hardly fair, since in a free economy the advantage of location is an important factor. In some cases, the disappearance of the freight advantage will cause severe dislocation to the economy of the factories concerned.

The scheme for a Sugar Marketing Board is thus not desirable, especially because the Government can readily bring about stability in the prices by regulating releases. The same means can be profitably employed to protect the interests of the consumer as well.

Rising Demand

Another serious disadvantage from the creation of a Marketing Board

will be that it will sap the initiative in the industry for expansion and extension. This will hamper production in future years. The demand for sugar is continuously rising. According to the Planning Commission, it is expected to reach 3 million tons by the end of the third plan period. This steady increase is likely to continue over future plan periods. Moreover, India needs to export sugar with a view to earning the much-needed foreign exchange. The country has, therefore, to keep these aspects in view while considering the proposed Marketing Board. What is needed in the present context of the Indian economy is a continuous flow of capital into the industry to ensure a rising trend of production. Any step which will sap initiative to expand will cause a serious damage not only to the industry but also to the Indian economy at large.

The sugar delegation, which visited Australia and Indonesia in 1955, opposed the setting up of a central marketing organisation in its report, since it will lead to a setback to all expansion programmes of the industry. This holds good for the present also. The vast expansion programme undertaken by the industry requires ever increasing new investments. As the whole economy is now being geared up on an emergency basis and production in all sectors is being increased, no step should be taken which may affect production. In the context of this need to increase production it will not be

BIRD'S CENTENARY YEAR

PAPER FOR THE EXTENSION OF EDUCATION

"Education is the most important single factor in achieving rapid economic development...", reports the Planning Commission. To spread education, paper is a vital requirement. The Bird-Heilgers Group, one of the largest manufacturers of a wide range of quality paper, is helping in this task with an ever-increasing supply for books, journals, charts and other needs of education.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy... through planned diversification and expansion.

advisable, to quote the words of the said delegation, to "produce rather incongruous results if the second largest industry in the country is selected for control measures which cannot be properly co-ordinated with changing conditions in the rest

of the economy". It is hoped that the Government will avoid any hasty decision on the creation of a Marketing Board for Sugar, since it will seriously undermine the interests of the industry, cane-growers and consumers.

NO FISCAL INCENTIVE TO PRODUCE QUALITY TEA

(BY A SPECIAL CORRESPONDENT.)

AT the annual meeting of the Indian Tea Association last week in Calcutta, Mr S. P. Sinha explained some of the industry's difficulties. He said the plainer types of tea found it difficult to obtain buyers in the world market in competition with Ceylon, East Africa and other countries. High quality teas still enjoyed a premium in the world market, and buyers looked to India to produce them. He suggested that there should be incentives to produce more and expressed his disappointment at the Central Budget which, he feared, was unlikely to assist the industry in expanding its production

and exports to the degree expected by the planners in Delhi.

With reference to the five year plans and the need to earn more foreign exchange, emphasis had been put more and more on the expansion of production and exports. India remains the greatest producer and exporter of tea in the world. "It would be wrong to imagine that we are in any way a back number in the export trade and with an earning of about Rs. 130 crores a year, we vie with jute in bringing in more foreign exchange than any other industry. Of great importance is the

fact that we also require a very much smaller proportion of import of foreign goods to keep our manufacture going than is the case, with other comparable export industries. But although our exports are steady and even increasing, we are not maintaining our percentage share of the world market and other producing countries, many of them new entrants, are adding more and more to the world's total supply of tea."

The industry faces difficulties in the way of obtaining food and other supplies for tea estates and other workers and he pleaded for their incentives to production. He said: "We were grateful for what we hoped was a final relief from export duty last year, but we regret that the already heavy burden of excise has been further increased to make up the Government's loss of revenue and that the previous practice of allowing some rebate of excise when tea is exported has been stopped. From no other commodity has this privilege been withdrawn, nor does the current Budget indicate any relief in this direction".

To increase the production of quality teas it is essential to encourage

CAPITAL, 12th March, 1964.

the producer to expand on virgin soil with modern methods of propagation and the best stock which scientists and planters can provide. Equally good results will not result from replanting old areas. "We hope that one day, the Government will allow the cost of planting tea as a revenue charge. We are disappointed that such a concession was not announced in the recent Budget. We trust that the Union Government may yet make this change by a notification or departmental instruction. If production is to be increased during the fourth plan an early decision on this matter is essential. At present, we are neither allowed any depreciation on our tea bushes nor are we allowed to deduct the cost of planting them against anything for taxed profits."

Expansion in former days was almost entirely financed out of ploughed back profits earned by the company itself. Now taxation as well as housing and labour costs are so heavy that the surplus was not there with which to provide the funds for expansion. Some easing of the industry's burdens would go a long way to promote expansion both in production and exports. It was difficult to determine what effect the new Budget was likely to have on the industry as a result of the rather complicated changes in the company tax structure. But at first sight, considering that the aggregate of income tax and super tax for non-resident companies had been increased from 63 percent to 65 percent and that they were not entitled to the 20 percent rebate on surtax, it seemed apparent that for sterling companies at least, no relief from the tax burden was to be granted. For the resident companies also, such reliefs as were indicated in the Finance Bill would be offset by the proposed 7½ percent tax on dividends distributed. The Budget was, therefore, unlikely to assist the industry in expanding its production and exports to the degree expected.

Much could be done by way of rationalisation of taxation. "As our agricultural income tax is assessed on the basis of the Central Government's assessment of company income it would be reasonable for agricultural income tax to be limited to the same rate as that of the Central tax. Duties such as the entry tax on tea brought to Calcutta for sale could well be abolished and the States in return allowed a grant from the Centre in proportion to the excise on the tea grown within their boundaries."

The Chairman drew attention to the need to expand the buyers market for Indian tea and stressed that a great opportunity to secure substantial business with the European Common Market was available. He also urged the Government to realise the importance of India's internal market. This could act as a buffer to cover production as well as an insurance against falling demand elsewhere.

From 1st July to 15th February, exports from north India were given as: 200,868 million lbs in 1963-64, compared with 210 million lbs in 1962-63 and 200,719 million lbs in 1961-62.

Shipments to the U.S.A. were 12,842,000 lbs in the current season, compared with 13,160,000 lbs a year ago and 10,663,000 lbs in 1961-62.

So over the three-year period, north India records a gain in this most valuable market.

Total despatches through Calcutta port were 306,054 million lbs, against 318,983 last season and 312,623 in 1961-62.

CAPITAL, 12th March, 1964.

Books

A CRITIQUE OF ECONOMIC PLANNING

Indian Planning and Economic Development. By B. R. Shenoy. (Published by Asia Publishing House. Price Rs. 15, pages 152.)

The book presents a frank and outspoken criticism of the five year plans and the policy adopted by the Government to build a socialist economy in India. According to Professor Shenoy, planning has been defective right from the beginning in as much as it lays disproportionate emphasis on heavy and basic industries and neglects agriculture and light and consumer goods industries. Uneconomic manufacturing units have been given liberal assistance to grow up, whereas impediments have been placed on established industries like cotton textiles to modernise and expand. The result, as expected, is a slow rate of growth, widening foreign exchange crisis and lower employment potential, not to speak of the threatening inflationary crisis which constantly tends to eat up the fruits of all efforts for development. The correct emphasis should have been placed on agriculture and the light and consumer goods industries to obtain a higher rate of output, stable prices and greater volume of employment.

The author directs his attack at the Government's policy of maintaining the foreign exchange value of the rupee at the present artificial level. The rupee should have been devalued at its purchasing power parity and the country's economy allowed to adjust itself to a realistic cost-price structure. This would have saved the economy of the heavy expenditure connected with the maintenance of a complicated bureaucratic machinery for controlling imports and subsidising exports. The present system, he alleges, has promoted corruption, nepotism and blackmarketing of import licences. Next the author turns his attention to foreign aid. It is dangerous to depend too much on aid from foreign countries as foreign loans with interest have to be ultimately paid for by increased exports. Aids from abroad have unfortunately been concentrated on heavy industries and big projects. The import of food under P.L. 480 has tended to make the policy-makers complacent enough to ignore the prior necessity of self-sufficiency in agriculture. Professor Shenoy is correct in saying that socialism in this country is in fact shaping as "statism". Private initiative is hampered in many ways which can only result in lower output. Inefficient organisation and slow rate of economic progress. Many may not approve of the way in which the author has launched his uncompromising attack. In the context of the Chinese invasion and the strategic need to develop India's defence potential, some of his arguments may require modification, but his reasoning is basically sound.

CORPORATE FINANCE

Corporate Finance 1955-61. By V. G. Kulkarni. (Published by Popular Prakashan, Bombay. Pages 210, price Rs. 20.)

This is a financial study of India's industrial economy which incorporates 18 industries and no less than 377 joint-stock companies. The progress made by them during the first two five year plans and the prospects on the basis of their performance in the final year of the second plan have been systematically presented by the author. On the whole, industries in

the private sector have done well, although established industries like cotton textiles, jute and sugar have suffered a setback in relative terms. Selected consumer goods industries have shown an overall decline and some of the newly developed units for the manufacture of paper, chemicals and allied products have shown disappointing results.

During the first five year plan period, the pace of industrial progress was admittedly slow as the plan gave more attention to the utilisation of existing capacity. The second plan gave emphasis on industrial expansion and impetus was given to new industries destined to produce capital goods and producers' goods rather than consumers' articles. The third plan with its added emphasis on machine building has carried the process still further. The author, however, feels that the targets set for the third plan are too high when compared with the output of a vast number of industries at the end of the second plan. As many as 12 industries will have to show a more than 200-percent increase if the scheduled targets are to be achieved. The possibility is, of course, remote. The book provides an admirable collection of useful data like the trend in gross sale, growth in net profit, working expenses, etcetera, in order of individual industries.

FOREIGN TRADE

India's Foreign Trade. By Dr. S. K. Verghese. (Published by Allied Publishers. Pages 328, price Rs. 15.)

This is a welcome addition to the literature on India's foreign trade. It analyses the practical aspects of the country's international trade that is increasingly gaining in importance. The author lucidly explains the organisation of imports and exports, the parts played by managing agents and banks in financing transactions and the overall control exercised by the Government through the Reserve Bank in terms of the Exchange Control Act, 1947.

One of the interesting points which the author has stressed is the growing participation by Indian concerns in foreign trade. Approximately 70 percent of imports are handled by firms of Indian origin, whereas the share of non-Indian firms in exports declined from nearly 40 percent in 1951 to 29 percent in 1958. Established British managing agency houses with their long experience and valuable contacts have still considerable influence on production and export of tea and jute manufacturers, and in spite of adverse criticisms made against them, the Export Promotion Committee in 1957 cautioned the Government against interfering with the established trade channels.

Since tea and jute are India's main foreign exchange earners, the author has devoted a chapter to each of them. The financing of these two commodities from the very early stage of production to their final export to foreign countries has been related with admirable precision. The difficulties of expanding Calcutta tea auctions and the relative advantages of the traditional auction centre in London have been discussed. The author feels that undue reliance on a single market for important items of India's exports should be discouraged and

diversification of the export trade by developing direct commercial relations with other countries is necessary in the general interest of the country's economy.

TEXTILE INDUSTRY

Asian Textile Annual, 1963. Edited by Kayser Sung and Daniel Wolfstone. (Published by the Far Eastern Economic Review Ltd, 411-414A Marina House, Hongkong. Pages 184.)

The publication is divided into four parts. There is an introduction by Mr. Dick Wilson, editor of the *Far Eastern Economic Review*, commenting on some of the highlights of the Asian textile industry in 1962-63, particularly the implementation of the Geneva agreement and its effects on the world textile trade. The second section contains a survey of Asian textile exports to North America, Britain, the E.E.C. countries, Australia and Russia, contributed by Messrs Richard Lawrence, Kayser Sung, Malcolm Subhan, John Jackson and Michael Connock. The policies of these countries towards low-cost imports from Asia are discussed in these chapters. The third section contains a review of the raw material and machinery supplies for the Asian textile industry, the cotton market, man-made fibres, wool and textile machinery. The fourth and final section is the longest: a series of detailed reports from expert correspondents on the latest position of the textile industry and trade in the 20 countries of south and east Asia.

While Japan, India, China and Hongkong naturally dominate the book in terms of space, there is adequate and up-to-date information on every country of Asia, however small. Even Nepal and Malaya are fully treated. The book maintains the high quality of the *Far Eastern Economic Review* and presents an up-to-date and balanced picture of the Asian textile industry.

ANNUAL NUMBERS

Eastern Economist, Annual Number 1964. Edited by V. Balasubramanian. (Published by the Eastern Economist Ltd, United Commercial Bank Building, Parliament Street, New Delhi. Price Rs. 10, pages 1270-1532.)

The latest annual number of the *Eastern Economist* has chosen "The Battle of Industrial Production" as its theme. The choice is particularly happy because under the existing state of emergency, India is faced with the problems of defence and development which have made it imperative to build up her industrial base as fast as possible. The slowing down of industrial expansion is causing much concern to both planners and policy-makers, and even Mr. T. T. Krishnamachari, Central Finance Minister, said the other day that the economy would not achieve the take-off stage before 1970-71. Due to the shortages of power, raw materials, spares and components, foreign exchange, and a back-breaking burden of taxation, India's industrialists have been unable to maintain the tempo of industrial expansion, while the Government has urged them, in and out of season, to increase production all round. To crown all, the Leftist elements in the Congress Party have now raised the cry of democratic socialism which, inevitably, poses a threat to the private sector.

This is the background of the annual number, and some of these problems have been adequately dealt with in the first leading article. The annual has discussed the problems of almost all important industries, such as cotton textile, cement, jute, steel, aluminium, industrial machinery and machine tools and has given statistical data on their production,

demand, exports, etcetera. Some general articles have been included in the section entitled "India and the World". There is a thought-provoking article on development planning in underdeveloped countries where its author, Mr. Vinay P. Bhende, makes use of the linear programming technique and suggests how the rate of growth can be quickened.

The Economic Weekly Annual Number. Edited by Sachin Chaudhuri. (Published by Asian New Age Publishers Private Ltd, 65 Apollo Street, Bombay 1. Price Rs. 3, pages 370.)

The annual numbers of the *Economic Weekly* have, over the years, acquired a reputation for quality. The latest annual maintains the high standard of its predecessors. It contains a number of articles, some by well-known writers, on contemporary economic and political problems. Special mention may be made of the article on the Chinese economy by Joan Robinson and on public sector projects by H. K. Paranjape. Mrs. Robinson discusses the various changes that have come over China and devotes considerable attention to agricultural communes, which, she says, represent the most interesting of all the economic experiments being carried out in that country. The annual number is well edited, and the subjects chosen cover a wide field, including politics.

The editorial discusses the gaps in the strategy of planning. The crucial deficiency, it says, is in agriculture, which can be removed only if the political elements in rural areas are mobilised. The annual carries a separate section on agriculture, where topical questions like size of holdings and productivity, factors impeding growth, etcetera, are discussed in detail. The rôle of capital is dealt with in another section.

The section on "Institutional Set-up" discusses the deficiencies of the *panchayat raj*, the effects of Government procedures on industrial development, the allocative efficiency of controls and the managing agency system. Among non-economic subjects, mention may be made of the article on "The Sanctity of the Cow in Hinduism" by W. Norman Brown, on "Religion in India and Ceylon" by D. G. Mandelbaum, and on Family and Social Change in India and South Asia" by Andre Beteille. The annual will be read with interest by both laymen and students of economics.

Svarajya Annual Number (1964). Edited by Pothan Joseph. (Published by Bharathin Publications (P) Ltd, Kalki Buildings, Kilpauk, Madras 10. Pages 240, price Rs. 5.)

This annual number is in refreshing contrast with the general run of such publications and carries enjoyable contributions from many eminent men. Mr. Rajagopalachari writes on the problems and prospects of democracy in India and also makes another contribution in a lighter vein. There is a lucid and candid analysis of the concept of democratic socialism by Mr. Bhaskaran. He reasons that both democracy and socialism are western concepts and even the literate man is confused on their relationship. He concludes: "The Indian mind with its transcendentalist obsession seems to be brewing a meta-communism more deadly than crypto-communism". Dr. Mankekar makes an assessment of India's foreign policy, and Mr. Shiva Rao gives new information on the Kashmir tangle. There is erudition and also righteous indignation in Mr. Subramania Iyer's "a fraud on the Constitution". Mr. Bharadwaj cogently reasons that the Gold Control has failed and Mr. T. T. Krishnamachari's Bill will be another instrument of corruption and oppression. There are also contributions from leading public men like Kripalani, Prakasa, Bhabha, Masani and Ruthnaswamy, etcetera.

Serving heavy industry...

SCHLOEMANN

As early as 1937, the existing blooming mill at TISCO was modernised by Schloemann. TISCO have now installed a new Schloemann blooming mill for their expansion programme

COMPANY AND PUBLIC NOTICES

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office: 2, India Exchange Place, CALCUTTA-1.

NOTICE

NOTICE IS HEREBY GIVEN that the TWENTYFIRST ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 8th April, 1964 at 4 P.M. to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1963 and Profit & Loss Account for the year ended 31st December, 1963;
2. To declare a dividend;
3. To appoint a Director in the place of Mr. G. D. Birla who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution of which special notice as re-

quired by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank;

"That Mr. G. D. Birla, who has attained the age of 69 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him".

4. To appoint two Directors in the place of Mr. L. P. Goenka and Mr. Y. N. Mafatlal who retire under Article 92 of the Articles of Association of the Bank and being eligible, offer themselves for re-appointment;

5. To appoint a Director in the place of Mr. R. L. Nopany who retires under Article 92 of the Articles of Association of the Bank but does not seek re-appointment and to consider and, if thought fit, to pass the following resolution of which due notice in writing as required by

Section 257 of the Companies Act, 1956, has been left at the office of the Bank;

"That Mr. Mohanlal Nopany be and is hereby appointed a Director of the Bank"

6. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS:

To consider and, if thought fit, to pass with or without modification, the following resolutions as Ordinary or Special Resolutions as indicated against each Resolution:

7. (As an Ordinary Resolution of which due notice in writing as required by Section 257 of the Companies Act, 1956 has been left at the office of the Bank):
"That Mr. S. T. Sadasivan be and is hereby appointed a Director of the Bank."
8. (As a Special Resolution if the Resolution referred to in item No. 7 is passed): That the consent of the Com-

pany be accorded to the holding by Mr. S. T. Sadasivan, on his appointment as a Director, of an office or place of profit under the Company, namely, as an officer on leave preparatory to retirement.

9. (As an Ordinary Resolution): That the payment of Rs. 6,159—12 out of the unappropriated balance of Rs. 25,151—41 at credit of the Profit & Loss Account on 31-12-1962 being the difference in the amount of dividend due at Rs. 0.375 per share, less tax, and that authorised by the Twentieth Annual General Meeting to be paid at Rs. 0.250 per share, less tax, on 49,273 New Shares (Part of 80,780 New Shares) be and is hereby confirmed.

10. (As a Special Resolution if the Resolution referred to in item No. 7 is passed): That pursuant to the provisions of Section 314 of the Companies Act, 1956, consent be, and is hereby accorded to Mr. P. Nagarajan who is a relative of Mr. S. T. Sadasivan whose name has been proposed for appointment as a Director, holding and continuing to hold an office or place of profit under the Company, namely, an employee of the company on the terms and conditions as to remuneration specified in the Explanatory Statement annexed hereto and on such other benefits, terms and conditions as may be applicable as per Bank's rules from time to time and the Board of Directors or a Committee thereof be and they are hereby authorised to grant a higher increment, in the scale at their discretion.

NOTE:

1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.
2. (a) The Transfer Books of the Bank will be closed from Monday, the 23rd March, 1964 to Wednesday, the 8th April, 1964, both days inclusive;
(b) The dividend, if sanctioned, will be payable on and after the 9th April, 1964, to those Members whose names appear on the Company's Register on the 8th April, 1964;
(c) Dividend Warrants will be posted to the Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any;
(d) The Explanatory Statement as required under Section 173 of the Companies Act, 1956, has been forwarded to the Members of the Company.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

Calcutta,

IN STEP WITH TOMORROW

New processed foods, new pharmaceuticals, and many more new products are coming on the Indian market every day. They create new packaging problems. At Poysha, one of the leading tin container makers in the country, they are always geared to meet the requirements of their customers. In 1963 they pioneered the manufacture of 5½ oz. juice cans. Soon these will be lithographed too. Next on the agenda is a much wider expansion of the range of packaging material. What is more, plans are ready for the setting up of subsidiary factories in the heart of the fruit and vegetable growing areas to help the canners with quick and economical canning facilities. Poysha are indeed always in step with tomorrow.

WORLD TRADE AND ECONOMIC DEVELOPMENT

THE season is just opening for an important series of discussions on international trade and development. In Geneva next Monday there starts the United Nations Conference on Trade and Development, and in May, in the same city, will begin the eagerly-awaited second stage of the Kennedy Round of tariff negotiations within G.A.T.T. The two events are not altogether unrelated, although the U.N. conference owes its origin to a Russian initiative which had little if anything to do with the purely Western objectives of the Kennedy Round. Now the Russian interest has narrowed to the problem of East-West trade, and the underdeveloped countries have taken the idea over in the hope the conference will provide them with the opportunity to present their views in a way the Kennedy Round almost certain will not. The hope, in other words, is that a concerted underdeveloped countries' point of view will emerge which can in future be represented whenever the opportunity arises. It must be said right away that this is highly unlikely to happen. The conference is altogether too large and unwieldy for any sharply-defined attitude to be formulated. The more probable outcome is a somewhat blurred picture of the general requirements of underdeveloped countries in matters of trade and aid which should nevertheless carry considerable weight for the future. It might even help to instil an element of sober urgency into the Kennedy Round negotiations, which at present threaten to dissolve into a series of interminable wrangles over tariff disparities.

The European Economic Community is not unaware that its firm stand on the disparity problem may endanger the case for the underdeveloped countries in the Kennedy Round. At the beginning of February the Common Market Commission put forward proposals for helping the exports of these countries which it is hoped will gain the approval of all the Six. Indeed, it has been suggested that France might be happy to see world attention diverted altogether from the G.A.T.T. negotiations, which she may well be intending to wreck anyway, to the U.N. conference and the problems it will raise. This is mere conjecture. What is certain is that the attitude of the Common Market towards the problems of the underdeveloped countries promises to be rather more pliable than it is likely to be towards the "across-the-board" principle which the United States and the E.F.T.A. are going to sponsor in the Kennedy Round. What concrete form this amenability will take is by no means clear. The E.C.M. Commission has advocated that the Six should negotiate trade concessions on various items which feature most prominently among the exports of the underdeveloped countries. Scope here will inevitably be limited by the Community's obligations to its "associates". But there is no reason, if the underdeveloped countries' point of view is expressed sufficiently strongly at Geneva, why there should not be room for extracting some valuable concessions out of the Six as at least partial compensation for the damage which may eventually be done by the common external tariff.

The deliberations at the U.N. conference will centre on five main issues, each of which

is to be in the hands of a separate committee. They are: the general problems of expanding international trade and its significance for economic development; the problem of primary commodities; manufactured exports; development financing; and "institutional problems". One of the committees is likely to have an Indian chairman. The general pattern of the conference will be laid down by its Secretary-General, the Argentinian economist, Dr. Raul Prebisch. He is expected to guide discussion along certain specific lines which have so far found little favour among the developed countries. His thinking has been presented in the form of a plan which, briefly, provides that apart from finding aid for development plans, steps should be taken to compensate underdeveloped countries for any losses incurred due to deteriorating terms of trade, and substantially increased trade credits should be granted for financing exports of manufactured goods to primary producers. Also, and this is likely to prove the most controversial part of the plan, Dr. Prebisch proposes that the major industrial nations should join together to give "blanket" preferences to the manufactured exports of the underdeveloped countries. There is nothing particularly revolutionary about such proposals, but so far they go well

instance, has indicated that she may be unwilling to consider granting new preferences to any significant extent for balance-of-payments reasons. She has warned that Dr. Prebisch's proposals would mean the end of the Commonwealth preference system. France, too, has shied away from this implication; for reasons of her own, she does not wish to see an end to the existing arrangements with her former African dependencies. There is a general fear among the developed countries that to underwrite world commodity prices would impose altogether unacceptable burdens on balances-of-payments, especially for countries which, like Britain, depend to a disproportionately large extent on imports for their food and raw material supplies. Such countries, it is pointed out, would be called upon to carry more than a fair share of the burden involved in supporting the underdeveloped. The British view, already stated, is that any scheme for blanket preferences would require the participation of all major industrial countries.

Political factors are also important in reactions to the Prebisch Plan. The United States has always been reluctant to grant development aid on a purely international basis unless the communist bloc is willing to do the same, and it is unlikely she will be attracted by any scheme which would take politics out of the problem of helping the underdeveloped countries altogether. The strength of this point has recently been illustrated by the stopping of aid to the United States' Western allies because they insist on trading with Cuba. Nor is the U.S. Administration going to be anxious to accept any plan which involves throwing open the highly protected American home market to the manufactured exports of underdeveloped countries. This provision of the Prebisch Plan, therefore, can be dismissed as unlikely ever to be adopted in practice; the combined will among the developed nations, including Russia, to unilateral or large-scale, selective tariff-cutting simply does not exist.

That is probably one of the reasons why the developed countries of the West have been show-

ing signs that they would prefer the underdeveloped nations to pursue their interests through the G.A.T.T. mechanism rather than by sponsoring ambitious, but largely impracticable, schemes such as Dr. Prebisch's. They are apt to point out that progress has been made through G.A.T.T., and that more of the same can probably be expected in the future. They tend to discount the risk that the Kennedy Round will either collapse altogether or be indefinitely prolonged by wrangles over disparities, but their attitude has at least the virtue that it would not leave the problems of the underdeveloped countries to the mercy of what might turn out to be yet another forum for propaganda posturing. This fear is probably also at the root of their objection to the Russian proposal for setting up a new international organisation to deal with trade problems, in which the Russians themselves would participate. Before such an attitude is dismissed as unjustified, it would be as well to remember that if the Russians were in fact interested in trade rather than politics there is no reason why they should not join G.A.T.T.

The one fact which emerges from any careful survey of the prospects of the U.N. conference and the Kennedy Round is that nothing worthwhile is going to be achieved in a hurry. With three months in which to debate their points of view, the underdeveloped countries are unlikely to restrict themselves to bare essentials. And with the chances of an indefinite period of haggling between the G.A.T.T. partners, the possibility of any clear-cut and imaginative proposals emerging are equally remote. This is not an encouraging prospect for those who see the future for the underdeveloped countries in terms of "trade rather than aid". The most likely consequence is a growing sense of frustration all round. To avoid this it will be necessary for both the developed and the underdeveloped nations to show considerably more imagination and sense of responsibility at the coming conference than at the moment appears to be even remotely possible.

RESERVE BANK TURNS TURTLE

WITHIN less than five months, the Reserve Bank has decided to reverse its policy of liberalising the supply of bank credit inaugurated in November last year. The reversal is unflattering; it shows that the Reserve Bank and its mentor, the Central Finance Ministry, lack a sense of purpose and firmness in framing their credit policy. The change will not only embarrass banks, trade and industry; it is also unlikely to serve the purpose for which it is intended. The Reserve Bank appears to have been panicked by the sharp rise in bank advances since the busy season began. The expansion of bank credit since November 1963 has approached a new high of Rs. 300 crores and scheduled banks' borrowings from the Reserve Bank have touched a peak of Rs. 107 crores. The Reserve Bank is greatly disturbed by the rise in prices during the current busy season. The wholesale price index had dropped by 2.3 percent during the 1962-63 busy season, but has risen by about 1.2 percent during the current one. Prices, particularly of food-grains and industrial raw materials, have risen. The Government apparently still expects that agricultural production during the current season will be somewhat larger than in the past one, so the rise in prices has been attributed to the credit expansion. It is feared that part of the credit supply has been used for hoarding commodities. But even assuming that the Reserve Bank's diagnosis is correct, there is no point in restricting the credit expansion late in the season since the damage has already been done. Any credit required for hoarding commodities will have already been taken by this time. The move, therefore, will do little to discourage hoarding and speculation; on the contrary, it may create more problems than it seeks to solve.

There is no doubt that the rise in the prices of agricultural commodities at this time of year—when the pressure of the new crops should be felt in the markets—is extremely disturbing. The Reserve Bank, however, can help restrain price inflation only to a limited extent. Huge amounts of "unaccounted money" are available for financing hoarding and speculation. Those holding such

money cannot be deterred by restrictions on bank credit or by fiscal measures since they have become experts in the art of avoiding both. The latest restrictions on advances against groundnuts and other oilseeds, along with the earlier restrictions on advances against paddy, are unlikely to achieve any great success in restraining price rises. The Reserve Bank's power to regulate agricultural financing, finally, is undermined by the fact that it has virtually no control over the large amounts of credit which are pumped into the co-operative sector for financing agricultural activities.

The new credit policy seeks to restore the tier system of lending by the Reserve Bank to scheduled banks which prevailed between 3rd January, 1963, and 29th October, 1963. The amount of accommodation which a scheduled bank can automatically obtain from the Reserve Bank has been reduced from 150 percent of its statutory reserves to 100 percent. The quota available at the Bank rate of 4½ percent has been cut from 75 percent to 50 percent of a scheduled bank's statutory reserves. The second quota, available at an interest rate of 6 percent, has similarly been cut from 75 percent to 50 percent. A third tier of accommodation in excess of statutory reserves will be given by the Reserve Bank at its discretion, but a penal interest rate of 6½ percent will be charged on it, instead of the interest rate of 6 percent charged hitherto. The average cost of borrowing an amount equivalent to a bank's statutory reserves is thus being raised from 4.37 percent to 5.25 percent. The accom-

modation given at the Reserve Bank's discretion will obviously be restricted by the penal rate of interest. The immediate effect of the new credit policy will be to reduce scheduled banks' borrowings from the Reserve Bank which are in excess of 100 percent of their statutory reserves. The sum involved is estimated at about Rs. 32 crores.

The claim has been made that the new policy will not restrain the supply of credit to industries. The Reserve Bank has asked commercial banks to reduce their clean advances other than those given to industrial borrowers. Banks have also been asked to provide an adequate supply of credit to the industrial sector to stimulate production for defence and exports and for genuine purposes. The directive is unexceptionable in theory but it is doubtful how far banks can succeed in distinguishing between advances. In the process of implementing the credit squeeze, the axe might well fall on industrial advances too. Statistics are not yet available to indicate the expansion in the supply of credit to the industrial sector during the current busy season; but it is almost certain that the expansion which has taken place so far is fully justified. It is true that the growth of industrial production has fallen short of the planners' expectations, but the rate of expansion seems to have been accelerated since the end of 1963. The financial requirements of industries have risen as the prices of raw materials, coal, fuel, power and labour have increased. Some industries, like the jute industry, have been forced to build up large stocks of raw materials; the jute mills have also been carrying large stocks of finished products due to the decline in overseas demand.

In spite of the more liberal supply of credit from banks, industries have found it difficult to get enough short-term working capital, as well as medium-term and long-term funds. The shortage of finance has worsened since the new issue market remains sluggish. In trying to supplement the flow of credit to industries, the Government has made an effort to replenish the resources of the Industrial Finance Corporation and State Financial Corporations. The Unit Trust has been set up with a view to diverting savings into industrial investments. It is also proposed to set up a development bank to help finance industries. The Reserve Bank has asked banks to take active measures to increase their deposit resources since it hopes that they will rely more and more on their own resources to finance economic activity. The increase in deposits will be necessary for a more immediate reason, which is that banks will have to comply with the law prescribing a higher liquidity ratio by September 1964. Banks have, therefore, been advised to re-examine the interest rates they pay on deposits. The idea is to explore the possibility of attracting deposits by increasing the interest rates they could earn. Many savers are influenced by interest rates, and banks need to consider the idea seriously.

Now that the Reserve Bank is raising the effective rate of interest on the money it lends to banks, it is expected that interest rates on advances will also be raised in due course. Higher advance rates will have some inflationary influence since they will tend to raise production costs. But the new credit policy in any case is unlikely to restrain the inflationary pressures which have been aggravated by the sharp rise in the money supply over the past year. The money supply has risen from Rs. 3,218 crores to Rs. 3,652 crores, the substantial increase in Government expenditure having made a major contribution to the increase. That is where the root of the trouble lies. Fiddling around with the credit policy can serve no purpose; the Government first has to reduce its expenditure if inflation is to be checked.

FOREIGN AID PROSPECTS

IN the context of the Aid-India Club meeting which will have been held in Paris by the time this issue of *Capital* is in print, the first task is to assess the deficit between the foreign resources in sight and the needs arising out of the development programmes undertaken during the third plan. By the end of 1963-64, the commitments already

made will amount to a little over Rs. 2,366 crores. The sum includes the carryover of assistance from the second plan period, the pledges given by the Aid-India Club for the first three years of the third plan and various small amounts received outside the consortium arrangements. Considering that the third plan had estimated a gap of Rs. 2,600 cro-

res between the country's capacity to pay out of current earnings and the total import payments, one would think that India was only marginally short of the external resources required during the 1961-66 period. This is far from being the case, as is evident from India's further request for Rs. 548 crores by way of consortium aid this year. The discrepancy arises in the first place from the serious underestimation of the capital costs of plan projects. This is tacitly admitted in official documents, although they tend to explain away the default by pointing to the rising prices of capital goods and the inclusion of new projects in such fields as power and transport within the five-year programme. Nothing is said, however, about the offsetting savings from projects which have failed to get off the ground, among them the fertiliser unit in Durgapur and the organic chemicals plant near Bombay. Secondly, requirements of maintenance imports have risen for the simple reason that the output realised from new exchange-saving industries like steel, non-ferrous metals, machine building and non-ferrous metals is running at a much lower level than was optimistically assumed in the plan. The result is seen in the sharp rise in requirements of non-project assistance from Rs. 700 crores assumed in the plan to at least Rs. 1,015 crores, the figure mentioned in the mid-term appraisal which may yet be revised again.

While there is no official estimate of the total project aid India will need during the current plan, non-project requirements—including refinancing of debt—have been put at Rs. 450 crores for the two years 1964-65 and 1965-66. This figure takes into account unspent credits, those now in hand as well as those likely to spill over into the next plan period. Against the total of Rs. 450 crores, this country is reportedly asking the Aid-India Club for Rs. 168 crores this year and has indicated that her request for 1965-66 will be of the order of Rs. 280 crores. Subtracting the component to be used for commodity imports, the aid being requested for continuing projects under way or for starting new ones comes to Rs. 380 crores. The aid memorandum, presumably anticipating the objection that commitments at this rate will run far ahead of the premises on which support for the third plan was predicated, disarmingly claims that a fair proportion of the assistance now sought is to be used for fourth plan projects, particularly in the fields where shortages already exist and which must receive priority attention. Unfortunately the sector-wise break-up of the aid request does not immediately disclose the weight given to advance action of this nature in framing the estimate. Iron and steel, undoubtedly a field where the long gestation period makes an early start necessary, is put down for only about Rs. 20 crores or less than five percent of the total.

India's chances of getting the Club to agree to more or less the total she is asking for depend on several factors. The request for non-project assistance will presumably receive sympathetic consideration because of the demonstrated value of this form of assistance in improving the condition of the economy and strengthening its ability to help itself. At Rs. 168 crores, the sum is well below last year's commitment of Rs. 200 crores on this account and forms moreover a smaller proportion of the total. The World Bank, anxious to see India's existing industrial capacity used more fully, will perhaps lend its strong and influential support in line with the thinking which has prompted its President to suggest that the Bank itself should be willing to assist in this direction. But the decision on the project component will be harder to reach because of the growing disappointment of many aid-giving countries about the pattern and pace of Indian development. It was to this anxiety that Mr. Asoka Mehta, deputy chairman of the Planning Commission, referred last December when he said that the halting pace of the plan was disillusioning India's best friends.

Judging from the trend of official pronouncement in recent months, anyone can see that Mr. Mehta was not talking out of turn. Leaders of the Government, including Mr. T. T. Krishnamachari, the Central Finance Minister—have said a good deal to indicate that an effort to reorient policies was under way. Any causal connection between such reorientation and the views of aid-givers will, of course, be at once disclaimed but this is only to be expected. One must also acknowledge that the disclaimer gains a certain plausibility because domestic pressures, chief among them the mass

discontent against rising prices and the misery of the growing army of the unemployed, also point towards a shift in economic thinking. It is fair to say that Mr. Krishnamachari's plea for an income-oriented pattern of growth in a widely noted address delivered in Bombay towards the end of 1963 was not a fortuitous interjection of realism but a reflection of the wider rethinking now in progress. This was made clearer in his Budget speech in which he deprecated the "race" for making new starts while neglecting to get full value out of the facilities created.

When Mr. Krishnamachari himself has such misgivings, one need not be surprised if the aid-giving nations in Paris ask for more rigorous proof of the soundness of new schemes than they have sought in the past. This was doubtless anticipated in New Delhi, and one hopes that the Indian representatives have gone to Paris fully prepared to answer awkward questions. More than the merit of individual schemes, Aid-India Club members probably want to know what is being done to reduce the excessive reliance on government-to-gov-

ernment aid in Indian economic planning. The fact that official estimates of foreign private investment over the third plan period have recently been revised from Rs. 300 crores to only Rs. 150 crores will need some explaining, especially in the context of the view widely held abroad that this shrinkage cannot be blamed on any lack of interest in India among the capital-exporting countries. One of Mr. Krishnamachari's declared aims in framing the new Budget is to stimulate the flow of private capital into India but it remains to be seen whether the fiscal measures have produced the effect in Paris that the Finance Minister was apparently hoping for. The moves made in the past few weeks to restore some freedom to the economy by freeing industries from the straitjacket of controls should reinforce the Indian case. But these changes have come too slowly to be of much benefit. While the final outcome is not known at this writing, it is not difficult to predict that the negotiations begun this week will need to be pursued vigorously at both the political and the economic levels before commitments on the scale India has asked for materialise.

Current News and Comment

Deposits with Joint-stock Companies

The extent of deposits from the public accepted by joint-stock companies is usually exaggerated. This is evident from the detailed information relating to these deposits for the three-year period from 1960-61 to 1962-63 given in the February issue of the *Reserve Bank of India Bulletin*. Towards the close of last year, the Reserve Bank was authorised to collect information on these deposits. But no regulatory measures are contemplated, at least for the time being. The Bank's study is based on the accounts of 1,111 public limited companies which, in terms of paid-up capital, cover nearly four-fifths of the entire non-Government non-financial public limited joint-stock companies. Since the accounts of some companies do not show the figures of public deposits separately as deposits from directors, managing agents, etcetera, and security deposits of employees, agents, etcetera, have been excluded, the data presented by the Bank indicate only an upper limit of public deposits held by selected public limited companies.

Total deposits amounted to only Rs. 34 crores for 1962-63, Rs. 29 crores for 1961-62 and Rs. 25 crores for 1960-61. Although there has been a steady increase in deposits at the rate of about 15 percent in 1962-63. Deposits have also been small in relation to bank borrowings (the ratio of deposits to borrowings from banks has amounted to about 8 percent). Deposits have flowed mainly in the form of fixed deposits and their proportion to the total has varied from 65 percent to 67 percent. Companies in the largest size-group with paid-up capital of more than Rs. 1 crore each have accounted for about 30 percent of total deposits held at the end of 1962-63. They have also absorbed nearly 59 percent of the increase in deposits during 1962-63. The practice of accepting deposits has been less widespread among smaller companies with paid-up capital of between Rs. 5 lakhs and Rs. 10 lakhs each.

Deposits have largely been concentrated in sugar, cotton, engineering, chemicals and trading companies which together account for about 75 percent of the total for 1962-63. The acceptance of deposits is fairly widespread among the cotton textile and sugar industries. More than half the number of companies in the cotton textile industry and two-fifths of the companies in the sugar industry accepted deposits at the end of 1962-63. The proportion of companies reporting deposits amounted to about 24 percent in the chemical industry and less than 20 percent in the engineering and trading groups.

Although public deposits form a small part of the total resources of joint-stock companies, their importance should not be overlooked. For some cotton mills and trading companies they have served as a useful source of finance for many

years. Under the circumstances, there is no ground for interrupting the flow of deposits into industry, trade and commerce. The statistical information provided by the Reserve Bank does not prove that these deposits have ever posed a threat to the deposits of banks and other financing institutions. The size of companies' deposits pales into insignificance when they are compared with total scheduled bank deposits of Rs. 2,486.88 crores. An important factor which has led companies to rely on public deposits has been the shortage of financial facilities from banks and other financing institutions. If the supply of institutional credit is not supplemented by public deposits, the genuine activities of trade and industry may suffer. This apart, several business firms find it difficult to comply with all the rules and regulations governing the supply of institutional credit.

The acceptance of public deposits by companies is unexceptionable in principle. There is nothing wrong if the public is willing to keep deposits with companies on which they earn an attractive return. In fact, deposits with companies should be encouraged to promote a healthy competition among deposit-gatherers. But this is not to imply that companies should be given complete freedom in collecting deposits. Since it is necessary to devise safeguards for ensuring the safety of depositors, the authorities will be justified in regulating company deposits through businesslike measures. Meanwhile, the flow of deposits into companies should not be interrupted by cumbersome rules and regulations.

E.C.G.C. Makes Good Progress

The Export Risks Insurance Corporation, which has recently been transformed into the Export Credit and Guarantee Corporation (E.C.G.C.), has an unbroken record of progress. Export risks insurance is still in its early stages of development in India, but its importance is now being increasingly felt. The number of policies—standard as well as packing credit—issued by the Corporation during 1963 rose impressively by 31.1 percent over the previous year. Standard policies increased from 502 to 577 and packing credit policies from 52 to 148. The policies in force at the end of December 1963 totalled 802, compared with 599 at the end of 1962. The maximum liability in force showed an increase of 3.6 percent from Rs. 19.26 crores to Rs. 19.95 crores; the figure for 1961 was substantially lower at Rs. 12.91 crores. The value of risks covered—the real measuring rod of growth—rose substantially by 42.3 percent from Rs. 20.69 crores to Rs. 29.45 crores. The average premium rate for overseas insurance continued to remain around 1 percent. The Corporation is underwriting risks of far-reaching significance, but its premium rates are being kept deliberately low in the interest of export promotion. Even so, the Corporation's pre-

mium income at Rs. 6.47 lakhs shows a rise of 14.7 percent over the 1962 figure of Rs. 5.63 lakhs, and the increase works out to as much as 85.6 percent, when compared with the 1961 figure of Rs. 3.48 lakhs. The claims paid during 1963, amounted to Rs. 6.51 lakhs, against Rs. 1.55 lakhs in the previous year. The liabilities for these claims were, however, not all incurred during 1963, and a bulk of them pertained to earlier periods. The recoveries made came to Rs. 92,333 and the net claims paid totalled Rs. 5.59 lakhs. After payment of claims, a sum of Rs. 4.03 lakhs is being carried to the reserve for unexpired risks. This reserve had been created in 1962 by crediting to it a sum of Rs. 4.54 lakhs.

The value of risks covered during 1963 at Rs. 29.45 crores works out to only 4 percent of the country's total exports. But then over 60 percent of India's exports are in traditional items for which Indian exporters have old and established connections, and do not feel the need of risk insurance so keenly. A bulk of the remaining trade is, again, done against letters of credit. All in all, the E.C.G.C. covers some 15 percent of the country's insurable export credit risks. This compares reasonably well with the performance of its overseas counterpart organisations of the same age. The Corporation continues to make sustained efforts to bring home to the export trade the enormous benefits accruing from insuring export credit risks. It offers a full range of policies to suit the varying needs of exporters, and it is able to cover the exporters' risks, both commercial and political, right from the date of the contract to the due date of payment. It also endeavours to examine the probity and financial status of every overseas buyer on its record and, at the same time, offering its policyholders an insight into the standing and creditworthiness of their clients.

The Corporation has built a library of credit information on as many as 15,000 overseas buyers, and this service is being rapidly improved and enlarged. The Corporation is offering credit insurance facilities in line with those of the leading credit insurers of the world. The bank finance availed of by exporters under the Corporation's packing credit and assignment policies amounted to Rs. 8.07 crores in 1963, compared with Rs. 5.09 crores in 1962. The Export Risks Insurance Corporation has recently been transformed into a full-fledged Export Credit and Guarantee Corporation (E.C.G.C.) which, besides covering the scheme of export risks insurance formerly administered by the E.R.I.C., will also furnish various kinds of guarantees to banks, with a view to securing for the exporters more liberal credit facilities at finer rates of interest. The Corporation has already acquired some experience in the field of guarantees to banks and the guaranteeing functions of the Corporation will be substantially enlarged by the E.C.G.C., and there are plans to evolve new covers to make it possible for banks not only to discount bills which they would ordinarily accept only for collection, but to provide more liberal credit facilities at the post-shipment stage as well. The E.C.G.C. will not compete, but collaborate, with the banks in the provision of credit facilities, which are so essential for the rapid growth of India's foreign trade. The E.R.I.C.'s encouraging performance in the past holds out the promise of a brighter future for the E.C.G.C.

Woollen Industry Faces a Crisis

The Central Government has reduced the ceiling on raw material imports for the Indian woollen industry from Rs. 10½ crores in 1963 to Rs. 5 crores in 1964. As a result of this slashing, the existing capacity in the industry would be used only to the extent of 19 percent in spinning, 11.4 percent in weaving and 43.9 percent in the shoddy sector. This is what Mr. R. K. Birla recently told the Development Council for the woollen industry. Since the Indian woollen industry depends on imported raw material, and most of the Indian wool is unsuitable for making apparel, the crisis in the industry cannot be overcome unless the Government finds it possible to allot more foreign exchange for importing wool.

Out of the Indian output of some 72 million lbs a year, nearly 30 million lbs are exported, earning foreign exchange to the tune of Rs. 8 crores annual-

ly. But if larger exports are permitted in the shape of wool, blankets and other goods, it is possible to earn more foreign exchange. If export of some 60 million lbs of wool in different shapes is allowed, which is not impossible, India would earn another Rs. 8 crores of foreign exchange. This should make it possible for the industry to import the necessary raw materials and thus to increase the utilisation of machinery and the level of output. But the condition that first the necessary foreign exchange should be earned before a larger import quota is allowed is unfair. In any case, as Mr. Birla rightly pointed out, the Government should announce the ceiling for raw material imports for 1965 sufficiently in advance as it takes six months for importing greasy wool and converting it into wool tops for use as raw material by the producers.

The Indian woollen industry is undertaking renovation and modernisation of machinery which would cost a huge sum of money. The Central Government has also sanctioned the expansion of capacity in the Indian woollen industry by another 11½ million lbs. But unless the industry is allowed to import more raw material, the modernisation of plant and machinery and the expansion of productive capacity would serve no purpose. In fact, the danger is that in the absence of an assurance of greater raw material supply in the remaining two years of the third plan, modernisation of plant and expansion of capacity might both be slowed down.

Role of Monopolies Commission

In keeping with its pledge to introduce democratic socialism in India, the Government will be appointing a Monopolies Commission. In the last session of the Congress Party in Bhubaneswar, the newly-elected president of the Party, Mr. K. Kamaraj, moved a resolution to the effect that the growth of monopolies needed to be probed by a Monopolies Commission. The proposal caused not a little surprise among non-Congressmen because important clues to the growth of monopolies were expected to be obtained from the report of the Mahalanobis Committee which, meanwhile, has submitted its findings to the Government of India. But those who expected that the Committee would startle the country by revealing a lot of unknown facts about the concentration of wealth and economic power had obviously been dismayed because the expert body has not produced any definite conclusions about the changes in income distribution in India. The Committee's observations on income distribution, if anything, are tentative and highly circumscribed. It could not gather sufficient data to say something definite about the concentration of wealth one way or the other. True, statistics can be interpreted according to one's likes and dislikes, but the Committee has not ventured to do even that, presumably on political considerations. It is no wonder, therefore, that it has stated candidly that "except for the complexes, statistics do not show any definite and significant trend in concentration ratios during the first ten years of planning."

It would have been useful to appoint a Monopolies Commission if the Mahalanobis Committee in its report had pointed to the increasing concentration of wealth and economic power. The spectre of monopolies may haunt such developed western countries as the U.S.A. and the U.K. But in a country like India which is determined to expand the public sector at the expense of the private, the growth of monopolies is difficult, if not impossible. On the other hand, there should be some sort of a decision against the growth of such State monopolies as the State Trading Corporation of India which are merely exploiting consumers. For one thing, the growth of monopolies in India has been retarded by a stringent company law, capital issues control and a rigorous system of industrial licensing. If, in spite of all these, there have been monopolies, the Government itself is to blame because its system of industrial licensing could not check the tendency.

Nor should the Government forget that its Industrial Policy Resolution has reserved important industries to the public sector so that the growth of monopolies in the private sector might be checked well in advance in keeping with its avowed faith in a socialist pattern of society. Special facilities and aid for small industry, the growth of co-

operative organisations in industry and agriculture and the encouragement of newcomers in the private sector, have all been intended to check the growth of monopolies. Furthermore, if by "monopolies" the Government means a handful of large-scale industrial enterprises who are allegedly exploiting consumers, the question arises whether this class of entrepreneurs can be replaced by newcomers who, because of their lack of experience, will only produce shoddy goods and charge high prices from consumers. Mr. Asoka Mehta, deputy chairman of the Planning Commission, said recently in New Delhi that the proposed Monopolies Commission "would not make any raids on development but only provide the traffic rules of growth." India's entrepreneurs will, however, honestly hope that the Government will not use the proposed commission for witch-hunting in industry to serve political ends.

Strengthening Local Finances

Inaugurating the sixth session of the All-India Mayors' Council in Kanpur last week, Mr. Lal Bahadur Shastri emphasised the fact that local bodies in India are the basic units of self-Government and could do much to improve social welfare. Such fields as education, health, sanitation services, housing and other civic facilities come within their jurisdiction. The local bodies, however, are to a large extent ineffective in increasing the people's welfare because of the paucity of their resources. It has been estimated that in 1963-64, all the local authorities—city corporations, port trusts and municipalities—taken together had an annual revenue of less than 1½ percent of the national income. This is too low a proportion, whereas the total annual revenue of the Central and State Governments and local bodies taken together is 10 to 12 percent of the national income.

Mr. Shastri told the Mayors' Council that a Bill might soon be introduced in Parliament to enable local bodies to levy taxes on Government property. This reform has long been overdue and the power to levy taxes on Government property, as on all other property, will certainly give the city corporations and other local bodies some more revenues. But in order to place them on a sound financial footing and to make them really effective in increasing social welfare, it is necessary to assign some elastic sources of revenue—such as a share in sales taxes, entertainment duty, electricity duty and motor vehicles taxes—to them. There is a considerable justification for this. The shop-keeper, cinemas and other entertainment houses, motor-vehicles and industries use facilities provided by local bodies and it is only fair that some of the taxes paid by the former should go to the latter. It is a disquieting situation that the receipts from rates and taxes account only for less than two-fifths of the local bodies' revenues in India, and the rest is obtained from Government grants and subventions and loans. This makes the condition of local finances highly unstable.

Mr. Shastri suggested that a committee should be appointed to go into the demand of local bodies for more powers and financial resources. There have been a number of such committees in different States and they have recommended much the same thing. It is doubtful whether one more such committee would serve any worthwhile purpose. What is needed is that the State Governments should make up their mind for parting with some of the revenues in favour of local bodies in order to stabilise their finances and thus enable them to discharge their functions more efficiently.

Apart from finances, a serious difficulty is experienced by the mayors and deputy mayors of city corporations in getting their policies implemented. While the corporations take the decision, the actual implementation is in the hands of the executive under the control of the chief executive officer. Theoretically, there is no reason for this separation between responsibility for taking decision and that for actual execution, but in actual practice, much dislocation has resulted from the fact that while the mayor, deputy mayor and councillors take decisions they have no hand in the actual implementation. The powers are with the chief executive officer, which is not under the control of the elected representatives of the people. It is necessary to give the mayors and deputy mayors some effective control over the

chief executive officer to ensure that decisions taken by them are properly implemented. As Mr. Shastri mentioned in his speech, it is a matter to be decided by the political party in power whether the members of these local bodies should function on the basis of their party affiliations.

Promoting Technical Education

Inaugurating the six-day seminar on "collaboration between industries and institutions in the field of technical education" in Bombay last week, the Central Minister for Steel, Mines and Heavy Engineering, Mr. C. Subramaniam, emphasised the need for greater co-operation between educational institutions, especially universities, and industries for increasing the facility for technical research and technical training. The Minister pointed out that in the past, the colleges and other educational institutions were designed to turn out clerks, lawyers and civil servants, and they now found it difficult to change over to the production of scientists, technicians and industrial managers. But somehow in the first hectic phase of growth of technical education over the past ten years, the physical shortage of personnel had to a considerable extent been overcome and for the future, there was need for stabilising the gains and placing emphasis on qualitative improvement. In the past, there was much need for civil engineers, but in the future, there would be a greater need for those skilled in electronics, automation and designing and industrial techniques. India should plan for increasing their supply.

It is an unfortunate fact that in India, the collaboration between universities and industries is not as great as in the U.S.A., the U.K. and other industrially developed countries of the world. In India, the universities impart technical training but to a much smaller extent than in some of the foreign countries. Mr. Subramaniam pointed out that whereas in the U.K., the proportion of university students taking technology for study in 1962-63 was 19 percent, in India, it was less than 5 percent. An effort has to be made for popularising technology as a subject of study by extending research grants and scholarships. Mr. Subramaniam was right in observing that in India there is too much reliance on national institutions for increasing the research facilities and for producing engineers. But this has been so because these national institutions alone can give adequate and long-period financial assistance necessary for encouraging industrial and technological research and for increasing the supply of engineers and technicians. The Government of India has increased the provision for industrial and scientific research from Rs. 15 crores in 1958-59 to Rs. 40 crores in 1963-64, but even this increased outlay forms too low a proportion of the national income. Moreover, in the current financial year, out of Rs. 40 crores, nearly Rs. 10 crores are provided for the national laboratories alone. This means that the other institutions will not get adequate financial assistance, especially in the matter of importing the machinery and equipment for increasing research and training facilities.

In the future not only the Government but industrial units will have to provide larger sums of money for industrial and scientific research and for technical training schemes to increase the supply of properly-trained technicians and to help the scientists evolve more effective and cheaper techniques of production. It is necessary to give the scientists and researchers the feeling of freedom and self-respect without which much progress is not possible. The Government and industrial employees will have to recognise this fact in order to ensure stable progress. Moreover, the technicians in all the industrially advanced countries are better paid than civil servants. But in India, the case is the reverse. Consequently, the best talent often goes not to scientific and technical vocations, but to the civil service. This trend will have to be changed to increase the tempo of scientific, technical and industrial research in the country.

Industrial Peace during the Emergency

Speaking at the annual general meeting of the Employers Federation of Southern India in Madras

last week, Mr. A. D. Galloway, chairman, said that when the state of emergency was declared in November 1962, trade unions gave an undertaking that there would be no stoppages of work during the period. But several strikes occurred during the past year, which caused considerable dislocation of work and loss of production. Most of the strikes were declared without notice, and so were illegal. They were caused by inter-union rivalry and the unrestrained activities of minority unions. When the emergency was declared, the main organisations of employers and labour agreed that all industrial disputes should, as far as possible, be settled by arbitration, and that the disputes relating to dismissals and discharges should be voluntarily referred to the Labour Commissioner for arbitration.

Although the employers' organisations have accepted this in principle, they have encountered a number of practical difficulties in referring cases to arbitration. The chairman said that the allegations frequently made by the trade unions—that employers were unwilling to accept arbitration in cases of dismissal and discharge—were not borne out by facts. A survey recently carried out by the Government of India has shown that the response from employers has been encouraging and that the number of industrial disputes referred to voluntary arbitration has steadily increased since the Industrial Truce Resolution was adopted in November 1962. Referring to the Bill to amend the Industrial Disputes Act, which the Government has recently introduced in the Rajya Sabha, Mr. Galloway said that the clause relating to the definition of "continuous service" for paying retrenchment and lay-off compensation was objectionable.

But the most controversial proposal recently made by the Central Government is an amendment to the Act to enable individual workmen to "take disputes relating to their dismissal or discharge to a tribunal for adjudication, and to empower the tribunal in such an adjudication to go into the merits of the case."

Credit Curb on Groundnut Tells

The oilseeds market which had been displaying remarkable strength for a long while has developed a marked weakness all too suddenly. In a matter of few days, groundnut futures have come down from Rs. 239.50 to Rs. 232.50 a 250 kilograms, groundnut ready Kanpur Bold has fallen from Rs. 51 to 48, (a 50 kilograms), groundnut oil ready has lost Rs. 1.25 a 10 kilograms, from Rs. 20 to Rs. 18.75 and groundnut expellers futures have moved down from Rs. 415 to Rs. 390. Castorseed and linseed have also fallen sizably. Considering that oilseeds prices had been bid up to the highest levels for the season, technical considerations alone could have produced a substantial setback. But the abrupt change in the mood of the market was due primarily to the Reserve Bank's announcement on 11th March about tighter credit control and restrictions on advances against groundnut.

The minimum margin on bank advances against the security of groundnuts has been raised from 45 percent to 50 percent, and the ceiling restriction on such advances which had been allowed to lapse in March 1963 has been reimposed. Under the new directive, scheduled banks are re-

TIME IS MONEY

FOR CHAIRMEN, MANAGING DIRECTORS & COMPANY SECRETARIES

Make the most of both. With Lombard Banking Limited, money earns the maximum safe rate of interest and your deposit is supported by paid up capital and reserves in excess of £12,000,000. Current rates, paid without deduction of U.K. Income Tax, and withdrawal periods are as follows:—

3%	on Deposits for a minimum period of 7 days at 7 days' notice of withdrawal.
3½%	on Deposits for a minimum period of 1 month at 1 month's notice of withdrawal.
4%	on Deposits for a minimum period of 3 months at 3 months' notice of withdrawal.

LOMBARD BANKING

LIMITED

Head Office: Lombard House, Curzon Street, Park Lane, London, W.1. GROsvenor 4111 (30 lines)

quired to maintain, in the two-month period March-April 1964, an average aggregate level of credit which shall not exceed 130 percent of such credit actually maintained in the corresponding period of 1963. Subsequently, in each two-month period commencing from May-June 1964, the ceiling limits are fixed at 120 percent of such level of credit actually maintained during the corresponding period of 1963. The liberal credit facilities granted to exporters of H.P.S. groundnut and groundnut oil as well as to integrated oil expeller mills for exports of groundnut cake are being continued. Besides, banks have been asked to meet any further credit requirements of exporters on a priority basis, within their general permissible limits of lending against groundnuts. The provisions relating to the margin requirements against the security of other oilseeds, as set out in the earlier directive, are continued without any change.

Scheduled banks' advances against groundnut stood around Rs. 13.53 crores on 27th December, 1963—the last date for which figures are available, compared with Rs. 10.77 crores in December 1962 and Rs. 9.07 crores in December 1961. Between 25th October, 1963, and 27th December, 1963, secured advanced against groundnut registered an increase of Rs. 11.77 crores, compared with Rs. 7.48 crores in the same period of 1962. While the higher level of advances against groundnut does not necessarily mean that credit has been used for speculative hoarding of goods, the Reserve Bank's decision to restrict credit against groundnut should be welcome if it can discourage speculative tendencies and have some restraining

effect on the rising trend in the prices of groundnut and groundnut oil. The authorities might take credit for having checked the boom in oilseeds through credit curbs, but it might be rash to read too much into the recent fall in prices. Groundnut prices might not have declined so sharply if sentiment had not been unsettled by reports, although still unconfirmed—that the Government had decided not to extend the period for the shipment of groundnut oil to Burma beyond 15th March. Moreover, overseas advices concerning groundnut extractions have also not been very encouraging because of the seasonal slackness. The current fall in oilseeds prices might turn out to be a passing phase. Discussions with the trade indicate that it is not the excessive supply of scheduled banks credit which has pushed up the prices of groundnut and groundnut oil and other oilseeds. The strength in oilseeds prices reflects primarily the chronic unbalance between supply and demand. Shortages persist in spite of increased production because demand is growing at a faster rate. Besides, the marketing pattern has also been undergoing a steady change as farmers are becoming increasingly market-conscious. This process has been considerably helped by the progress of the co-operative sector under active official patronage.

Mention might be made here of the delay in the start of trading in the July contracts for groundnut and groundnut oil as a result of the sharp differences between the market authorities and the Forward Markets Commission concerning the terms and conditions laid down by the latter for trading in the new contracts. The Commission had raised the ceilings for groundnut and groundnut oil, but it had prescribed stiff margins along with the revised ceilings. The trade is opposed to the reintroduction of margins. The Commission has, however, expressed its willingness to permit trading without margins provided the ceilings are kept unchanged at the existing levels. It appears that trading in July contracts will be started under the existing rules without any margins.

Need to Evaluate Plan Progress

As against an annual growth target of 5 percent during the third plan, India has generated an income of even less than half the target figure during the first two years of the quinquennium. What makes it particularly disturbing is that the rate of population growth has gone up appreciably in excess of the growth rate of new income. That this should have happened after 12 years of planning is a melancholy fact and gives rise to many questions. Some of them asked by Mr. K. M. Wilcox, in the course of his presidential address at the latest annual general meeting of the Upper India Chamber of Commerce, held last week in Kanpur, were as follows: What has been the impact of planning and development? How much progress has been made and in what ways? Has industry become more dynamic and diversified? Has agricultural production increased? Is mass poverty receding? Is production growing faster than population?

Mr. Wilcox himself answered the questions he posed, and then proceeded to analyse the causes for the present slow rate of development. The first one is the poor progress in agriculture, which provides nearly 50 percent of the national income. Although it has been recognised that farming holds the key to economic growth and substantial investments have been made to provide such facilities as irrigation, power, fertilisers, improved seeds and so forth, India's agriculture is still dominated by natural factors and has not fully benefited from the development programmes. Mr. Wilcox has suggested that it needs to be enquired into whether the investment has been adequate, whether the major and minor irrigation schemes are being administered efficiently and whether correct priorities are being followed in agricultural programmes. There is a widespread feeling that development expenditures on farming are not being properly used and Mr. Wilcox thought that it would be a good idea if the activities of the different agencies connected with agricultural planning at national, State and local levels were closely examined in order to co-ordinate their activities properly and to achieve a higher rate of farm output.

As for industry, progress in this sector has been relatively impressive in some fields, but on the

whole, "the overall factors which induce a rapid rate of growth in industry do not appear to have been strengthened". As far as the private sector is concerned, the inhibiting factors have been shortages of basic facilities like transport and power, essential raw materials, spare parts and components. The position concerning power and transport has improved, but this is partly due to the failure of some of the important industrial projects to materialise. The progress in these fields, therefore, needs to be accelerated. As for the shortages of essential raw materials, components and spares, the industries which have particularly suffered are engineering units. Substantial installed capacity is lying idle. Since under-utilisation of industrial capacity renders machines and men idle, restricts production, and aggravates the high-cost character of the economy, immediate steps should be taken to obtain these necessities in adequate quantities. Industrial expansion depends as much on the supply of these essentials as on a correct price policy and judicious fiscal measures. Mr. Wilcox pointed out how unrealistic price policies followed in the case of many important industries have hindered their growth. The Government is now following a policy of gradual decontrol, which is welcome, but its fiscal policy, especially as represented by the latest Budget, does not indicate that an integrated approach to the question of industrial growth is being made. Mr. Wilcox did not offer any detailed comment on the latest Budget proposals. He hoped that they were based on a recognition of the fact that the capital market has lost its buoyancy, that the resources of private industrial undertakings have weakened partly because they are unable to build reserves and partly due to the slackness in the flow of foreign capital. He, however, pleaded for the rationalisation of the indirect tax structure so that taxes which unduly increase production costs can be avoided.

JUSTICE DELAYED

MR. Justice Ameer Ali is a painstaking and laborious Judge, but cases in his Court are not quickly brought to a termination; and unless the suitors before him are unusually wealthy they generally leave his precincts wiser and poorer men, with perhaps, the disposition but certainly not the means to appeal from his decisions. A recent case before him occupied as many days as it should have, albeit to the ordinary lay mind the question at issue was simple. It appears that a firm called P. Reddaway & Co. have for many years been manufacturing a belting which they call "Camel Hair" Belting, and which, we understand, had also the trade mark of a Camel. This belting has become known as Camel Hair or Camel Brand Belting, sometimes with the addition of Reddaway's and sometimes without; and to our minds there is no doubt that Reddaways are entitled to the exclusive use of the words "Camel Brand" in connexion with belting. But they claim the exclusive use of the words "Camel Hair". Now either the belting made by Messrs. Reddaway is manufactured of camel hair or it is not; if it is not it is clearly a false description, because camel hair belting can only mean, made of camel hair, whereas "Camel Brand" means quite another thing. In this state of things Messrs. Schroder Smidt & Co. lately imported a belting which they allege is manufactured of Camel hair, and which they described as Schroder Smidt & Co.'s Camel Hair Belting, or S.S. & Co.'s Camel Hair Belting; and if the belting is made of camel hair, we fail entirely to see in what way their conduct is blame-worthy, unless Messrs. Reddaway have a monopoly of the manufacture of camel hair. It is significant that when Messrs. Reddaway & Co. objected to Messrs. Schroder Smidt & Co. using the words Camel Hair, the latter offered to substitute the words Camel Wool belting; but this offer was refused. And the result was a case in Court which has terminated in a judgment of portentous length, and which, we trust, will be appealed. The effect of Mr. Justice Ameer Ali's judgment is that some manufacturers will not be able to call things by their proper designation. Thus, for instance, if Messrs. Bass & Co. brewed, in the first instance, a pale ale at Burton, and called it Bass' Burton Ale, no one else could describe an ale brewed at Burton as Burton Ale! Similarly a firm that first shipped bacon from Ireland and called it Irish! The thing to us seems too ridiculous for argument.

A Ditcher's Diary

THE MOST SATISFYING ASPECT OF THE hartals, FOR which Calcutta is rapidly regaining its old distinction, is that they bring a brief but beautiful calm to the unquiet city. The hooting of horns, the maddening rush of traffic, the shouting and jostling of the multitudes on the streets come to a stop in a symbolic blend of mourning and protest about the hardships of life; the holiday enjoyed and the nerves restored, people are able to return next morning to their daily chores fitter and fresher, grateful for a respite from work that the infrequency of Sundays and festival closures would otherwise make altogether too rare. It would, I imagine, be churlish of one, in the circumstances, not to express gratitude to the Save Pakistan Minorities Committee for affording us the unscheduled pleasure of the closure on Tuesday; it would, perhaps, be even more churlish, thereafter, not to compliment the West Bengal Government on its dexterity in having opposed the hartal, and simultaneously done all it could to make it a complete success. I have had occasion to meet conscientious individuals eager to know what the purpose of the hartal was; for some unaccountable reason, they seemed inclined to underestimate the value of such demonstrations in terrifying the East Pakistani régime and obliging it to reform its truly deplorable attitude towards the minorities of the province. I must confess that I have no time for such petty analyses and disputations. In the fashion of all true economists, I am a firm believer in the theory of the marginal disutility of labour which, translated into everyday terms, means simply that you must avoid work whenever you can afford to. In the rush and whirl of the modern world, leisure is becoming rarer and rarer; the time may be coming when society will have to evolve new ways of moderating the strains of contemporary living if its citizens are not to end up in the psychiatricists' consulting rooms. It is on considerations of psychotherapy that the Save Pakistan Minorities Committee deserves thanks for arranging the leisure which enabled most of us to stay at home on Tuesday. Some who did not stay at home played cricket on the Maidan. Some who neither stayed at home nor played cricket engaged in the always pleasurable pastime of pelting stones at passing ambulances and motor-cars. The unfortunate refugees coming from Pakistan may or may not be grateful for such impressive demonstrations of sympathy with their cause. The people of Calcutta would not be so mean as to be ungrateful for a very welcome holiday.

THE THEATRICAL ANTICS INDULGED IN BY THE counsel defending Jack Ruby could have surprised

nobody who has seen his quota of Hollywood films. For those who were shocked that such a solemn affair was being conducted in this manner, there is the consolation that American justice, in the event, seldom miscarries, if only because its clients enjoy almost infinite opportunities for challenging its processes and appealing against its decisions. Although Jack Ruby has been sentenced to death, I shall be extremely surprised if he is executed any time during the next ten years. It is not that I consider it unlikely that his appeal will be rejected; but past experience with such celebrated subjects as Chessman and the Rosenbergs indicates the chances which exist for delaying the inevitable. Public feeling is much more with Jack Ruby than it ever was with the others. I would not presume to pass an opinion concerning Ruby's guilt, although the fact that he did kill Oswald seems beyond question. What I shall content myself with saying is that it is not going to be easy to prove him guilty before a court outside Dallas; it might have been even more difficult to arrive at a just verdict on Oswald if he had lived. On the whole, Ruby probably did the U.S. Government a remarkable favour when he shot Oswald. If that man had ever been brought to trial, the disclosures might well have touched off a wave of anti-communist feeling such as has not been experienced since the McCarthy era. It would not have been necessary for Oswald's Russian associations to have been proved relevant to his alleged assassination of President Kennedy for them to be used as an excuse by interested parties to embitter relations between the two countries. That would certainly not have been in the interests of anybody, and we have all to be thankful that nothing of the kind occurred. I am sure Ruby's case will get a fair hearing on appeal; I am equally sure that it would have proved next to impossible to provide Oswald with a fair trial. For the former it has been difficult enough to find impartial jurors from among Texans. For the latter it would have been out of the question to find any throughout the whole of the United States, perhaps even the world.

IT WAS INEVITABLE, I SUPPOSE, THAT WHAT Mr. Harold Wilson said during his recent U.S. visit about placing units of the British Navy at the disposal of the U.N. should have been misquoted. The great weakness in Labour's election platform is its defence policy, and all statements which have even a remote connection with this are immediately publicised, often with more enthusiasm than accuracy. In fact, the idea of offering the Royal Navy's services for international peace-keeping is extremely sound, if a little nostalgic, because, as Mr. Wilson pointed out, its contribution to N.A.T.O.'s nuclear potential can at the

most be infinitesimal. So as long as Labour's intention is not to leave the British Isles without naval protection when needed, I cannot see the proposal to help the U.N. is going to lose it votes. But I often wonder whether Mr. Wilson is not being guilty of a little moral imperialism as well as strategic naïveté in his rather woolly schemes for abandoning Britain's nuclear plans and concentrating the resources saved on building conventional forces useful for an American-dominated N.A.T.O., and only incidentally for international police work. Britain is mistaken if she thinks that "moral leadership"—whatever that might mean in politics—can influence world peace in the way the *pax Britannica* once did. In an increasingly nationalistic world the primary tasks for military and diplomatic ingenuity must be to maintain the integrity of the British Isles. But Labour seems to think that the United States can invariably be relied upon to do this. Apart from the fact that the Suez incident should have taught a different lesson, the attitude is based on the simple-minded assumption that the current East-West line-up will continue indefinitely, and that it must always be in the U.S. interest to protect Britain. This seems to me the height of folly. Things change rapidly in this world, and it is not beyond possibility that in a few years' time the U.S.A. will be too interested in co-operating with Russia in resisting the Chinese to bother about the fate of Britain at the hands of a third power. That would be the time when Britain would find use for her nuclear arms, if only as a guarantee of the kind of stalemate which has preserved the peace between the Americans and the Russians all these years. But by then, of course, it would be too late to undo what Mr. Wilson now seems determined on doing for motives with which men of good will must otherwise find it extremely difficult to quarrel.

THOSE WHO HAVE HAD THE PLEASURE OF VISITING the Soviet circus on the Maidan might well be forgiven the arrogance of wondering whether the feats of the performers were more impressive than those of the audience. In terms of organisation and efficiency, the Russians are not exactly impeccable; nor, I suspect, is the West Bengal Government, which for no obvious reason appears to have favoured itself with responsibility for part of the arrangements. I had not, however, imagined that an alliance between the two could provide so forbidding an experience as the chaos in which the circus was presented last Sunday. The time advertised for the show was 7-30 p.m.; many, having purchased tickets well in advance, arrived half-an-hour earlier to find themselves at the end of an impatient queue two hundred yards long. A few were, perhaps, grateful for the fact that, contrary to local custom, there was a queue at all; satisfaction on this score was, however, soon modified by a wild stampede for seats when the gates were opened, a stampede that might well have struck terror in the hearts of the poor tigers had they not

shrewdly insulated themselves against their Calcutta admirers by staying in their cages. The seating arrangements, for a moment, seemed reasonably satisfactory; only after a time was it found that a fair proportion of the chairs, hoary with age, stood in danger of disintegrating under the weight of their distinguished occupants, and that much of the performance could not be seen by those fated to sit beyond the tenth row. When the show began, no more than forty-five minutes behind schedule, the rapport between performers and viewers was immediate: both found themselves simultaneously engaged in balancing acts of unusual dexterity, the first on their poles and trapezes and the second on their chairs. Duty now bids me to describe the circus as distinct from the audience. Two young ladies gave a display of physical training that deserves to be widely emulated for its muscle-building virtues, if not for its skill. The young ladies apart, there were some young men; also some tigers, some cockatoos, some horses, some trainers and some jokers. They did various things. Readers curious to know what they did will not learn anything by asking me. Nor, I am sure, by visiting the circus.

THERE IS NOTHING IN MR. KRISHNAMACHARI'S recent Budget that I have been able to find which is going to speed up the formation in this country of what the Americans call "philanthropic foundations". Unless, that is, we accept that a high rate of personal taxation is itself the main incentive behind the establishment of such bodies. It has often seemed to me a pity that so little positive inducement is given in this country; after all, an industrialist is more likely to put forward that little extra effort when it is going to benefit some charitable institution which possibly bears his name, than when he knows the Government will take the lot. Such is human nature. I was reading a short time ago that the growth of philanthropic foundations in the United States has been accelerating during the past three years, and that these bodies now dispose of assets totalling about \$14,500 million. The largest of them, the Ford Foundation, accounts for no less than \$3,320 million, a sum which somebody once pointed out was the rough equivalent of the sterling area's entire gold and convertible currency reserves. The paralysis of the Calcutta Metropolitan Planning Organisation notwithstanding, there is no need to inform anybody in this country what benefits accrue to the world from the wise and benevolent use of this huge endowment. In all, the American institutions are at present giving away nearly \$800 million a year, a considerable portion of which finds its way outside the United States. Of course, such activity is being attacked as blatant tax avoidance, as indeed it is; but when it is remembered what otherwise the U.S. Government would spend the money on, one cannot help but hope that the purists do not get their way. I am well aware that in this country the activities of certain existing foundations have not been above criticism. But on the whole I have always felt that their work helps, however inadequately, to fill a widening gap between society's requirements and what limited official action can provide in a socialist State. If philanthropic institutions are not able to do such work, then who is? And to ensure that it is done is certainly worth the loss of some small proportion of the total tax revenue.

AN ANXIOUS FATHER HAS SENT ME AN EXTRACT FROM a letter he received last week from his teen-age daughter now studying at a boarding school in Kent. The young lady writes:

We've just had "Current Events" and the headmistress told us a story about a captain who fell overboard from his own ship and kept himself alive clinging to a plank for five days and nights not knowing if a ship would come along or not—but one did and he was saved. "Let that be a lesson to you all", the headmistress concluded. "When everything has gone wrong and you're in terrible trouble, don't give in until you're picked up."

THE DITCHER

CAPITAL, 19th March, 1964.

Guide for Investors

STATE BANK LAUNCHES NEW EXPANSION SCHEME

IN his chairman's speech at the annual meeting of the State Bank of India, Mr. B. Venkatappiah has highlighted the bank's branch expansion programme and how the management is trying to tackle the various problems thrown up by such expansion. During 1963, the State Bank increased the number of its branches by 29 (of which 20 were under the second branch expansion programme) and of other offices by 37. In all, the bank had 1,644 offices, including 568 offices of its subsidiaries, at the end of 1963. And from January 1964, the bank has embarked on a new five-year phase of planned expansion comprising 75 branches to be opened before the middle of 1965 under the previous programme and 319 branches to be opened before the end of 1968 under the new programme, making a total of 394 in the next five years. (A fuller version of the speech appears on a later page in this issue of Capital).

This, says the chairman, is as big a project of expansion as the State Bank had undertaken in its establishment and successfully executed during 1955-60. It is at the same time more complicated in many ways. Suitable buildings are hard to come by in the smaller towns. Personnel have to be recruited and trained. Inter-branch accounts and their reconciliation will present further complications. The farther the Bank goes into semi-urban and rural areas, the greater will be the need for it to evolve new techniques whether for mobilisation of adequate deposits or disbursement of appropriate credit. The difficulties are real, but they are not insurmountable, says Mr. Venkatappiah, provided, of course, the perspective is long enough.

The State Bank is tackling the various problems posed by massive expansion in a planned manner. It has set up a Premises Division which devotes special attention to finding suitable sites and buildings, constructing new premises if necessary and renovating existing branches to improve customer service and the general working conditions. The bank has revised and expanded its scheme of training. There is now a three-level training programme for the officials and a two-level programme for the clerical staff with special courses for different categories wherever appropriate. The bank is also taking steps to simplify the accounting procedures which operate in and between branches. A Planning, Organisation and Methods Division has been constituted to deal with the long-term problems of the bank. As for the mobilisation of deposits in the rural areas and elsewhere, the bank is experimenting at several centres, keeping in view the need to improve customer service, employ suitable forms and media of communication and to ensure that the cost is commensurate with the results. The chairman urged shareholders to view the bank's branch expansion programme from the point of view of the stimulation it provided to the economy of the area concerned, and not solely from that of initial profits and losses from new branches. Mr. Venkatappiah compared the branch expansion programme to an irrigation system the benefits of which could not be measured solely on the basis of revenues immediately available from it. Answering ques-

tions at a Press conference the chairman said that the branches opened between 1955 and 1960 have more or less broken even, although individual branches continue to incur a loss. The losses incurred on new branches are reimbursed from the Integration Development Fund fully in the first five years and partially thereafter for four years. Overhead costs of expansion such as training and control are subsidised by the Reserve Bank to the extent of 50 percent.

Detailing the assistance to industries and co-operatives, the chairman said that about 30 percent of the State Bank's advances to the industrial sector were used by basic industries such as iron and steel, heavy engineering, cement and fertilisers and about 18 percent by export-based industries like jute textiles. The bank has not, of course, neglected agriculture and food. The jute buffer stocks financed by the bank account for more than Rs. 7 crores, and the advances to State Government for financing distribution of foodgrains totalled Rs. 13.5 crores last year. In the important sector of small-scale industry, the Bank's total commitments now aggregate Rs. 17.6 crores so far as working capital is concerned. The facilities that the Bank now offers to small industries include medium-term loans and instalment credit. The bank is continuously examining the scope of increasing assistance to small entrepreneurs, and it has implemented a number of measures suggested in this context by its Study Team. The credit limits for co-operatives which stood around Rs. 33.4 crores in 1962, increased to Rs. 45.2 crores in 1963, and outstanding at the end of 1962 and 1963 were Rs. 8.7 crores and Rs. 8.5 crores, respectively. The State Bank's activities, said Mr. Venkatappiah, had stimulated co-operative banking and in 1963, the remittances of co-operative banking funds by the State Bank amounted to Rs. 300 crores, against Rs. 225 crores in 1962.

Answering questions at a Press conference on the Reserve Bank of India's latest credit control measures, Mr. Venkatappiah stated that there would be no slowing down of the bank's advances for productive purposes and that the bank will continue to make available to other banks all the possible accommodation subject to its own resources. The credit control measures were unlikely to affect the State Bank to any appreciable extent as the State Bank borrows the least from the Reserve Bank. Against its statutory balances of over Rs. 15 crores to Rs. 17 crores, the State Bank's borrowings from the Reserve Bank has not exceeded Rs. 20 crores. The State Bank, said the chairman, is entitled to additional quota at Bank rate as it is a large lender to small industry, co-operatives and exporters. Referring to the Reserve Bank's advice to scheduled banks to reexamine the rates of interest offered by them on deposits, Mr. Venkatappiah said that the Bank would consider all the circumstances including the Reserve Bank's advice.

The State Bank of India's annual report for 1963 shows progress in its traditional as well as developmental activities, although the pace of credit expansion was slower than the growth of deposits and there was some slowing down of the implementation of its branch expansion programme. The bank's deposits, exclusive of P.L. 480 funds, rose by Rs.

69.3 crores, compared with Rs. 56.7 crores in 1962. This compares favourably with the growth in deposits of other scheduled banks of Rs. 178.6 crores in 1963, against Rs. 175.6 crores in the previous year. A significant feature of the rise in deposits is that of the total growth in time deposits of all the scheduled banks taken together, the State Bank's share (excluding P.L. 480 funds) was much larger than in the previous year. Total deposits of the State Bank, however, rose over the year by Rs. 25.3 crores to Rs. 521.6 crores, compared with a growth of Rs. 41.4 crores during 1962. The bank's credit rose by Rs. 13.5 crores to Rs. 273.7 crores, against a rise of Rs. 16 crores in 1962. The credit portfolio touched a new peak of Rs. 309 crores on 12th April, 1963, recording an expansion of Rs. 66 crores from the lowest level of Rs. 243 crores reached on 23rd November, 1962; the credit expansion over a similar period during the previous year was of the order of Rs. 60.3 crores.

In terms of the official busy season, however, the expansion of the bank's advances was of the order of only Rs. 43.4 crores, compared with Rs. 53.7 crores in the previous season, as against a credit expansion of Rs. 160.6 crores in the case of other scheduled banks, compared with Rs. 150.1 crores in the 1961-62 busy season. The State Bank's share of the credit expansion during the busy season thus came down from 26.4 percent to 21.3 percent. The credit-deposit ratio rose over the season from 50.4 percent to 61.9 percent. The credit-deposit ratio at the end of December 1963 was, however, lower at 52.5 percent, which is about the same as a year ago.

During 1963, the bank's investments increased by Rs. 23.3 crores, compared with an increase of Rs. 29.3 crores in the previous year, and the investment-deposit ratio moved up from 49.7 percent to 51.7 percent. The increase in investments of other scheduled banks during 1963 was Rs. 33.4 crores, against Rs. 43.6 crores in 1962. The bank's resort to borrowings from the Reserve Bank was limited to a few occasions and for short periods. On 1st April, 1963, the bank made certain upward revisions in its deposit rates to bring them on par with those offered by other large-sized banks under the Inter-Bank Agreement. Interest rates on advances were also raised from 5th April, 1963. The rate of interest on advances against Government securities was, however, maintained at 5 percent, and advances from small scale industries and co-operatives continues to enjoy concessionary rates of interest, the concessions being broadly of the same order as before.

The net profit made by the State Bank during 1963 is placed at Rs. 2.75 crores, compared with Rs. 2.69 crores in 1962. Earnings from interest and discount rose from Rs. 16.19 crores to Rs. 18.48 crores, while commission, exchange and brokerage fetched Rs. 6.62 crores, against Rs. 6.15 crores. On the expenditure side, interest paid on deposits, borrowings, etcetera, increased from Rs. 7.91 crores to Rs. 8.86 crores. Salaries, allowances and provident fund increased from Rs. 9.42 crores to Rs. 10.85 crores. Appropriations include reserve fund Rs. 56 lakhs (the same), provident fund Rs. 8.61 lakhs (against Rs. 7.42 lakhs),

staff welfare fund Rs. 5 lakhs (against Rs. 10 lakhs) and staff co-operative housing fund Rs. 5 lakhs (against Rs. 10 lakhs). Bonus to staff accounts for Rs. 82 lakhs, against Rs. 72 lakhs. Dividend has been maintained at Rs. 23 a share.

Chartered Bank Expansion

COMMENTING on India's economic development in his chairman's statement, which has been circulated with the report and accounts of the Chartered Bank for 1963, Mr. V. A. Grantham pointed to the disappointing performance of the agricultural sector in India. (A full text is printed on a later page in this issue of Capital. The population has grown at a rate of nearly 2.5 percent a year, so country has had to import substantial quantities of foodgrains. The success of her development programme depends largely on the efforts to raise agricultural production. Although industrial production has continued to expand, industries like coal and power, have been slow to grow. Many industries have been handicapped by the shortage of imported raw materials. Heavy taxation has been a disincentive to extra efforts to savings and to investments. Commenting on talk of nationalising banks, he pointed out that although the Government was unlikely to take the step, nationalisation had obtained greater support in political circles. He mentioned that if banks were nationalised, foreign investors would react unfavourably. The World Bank, on which India depends greatly for foreign aid, is also opposed to bank nationalisation. The important part that foreign banks play in India's economy has been appreciated by the Government. The Chartered Bank has opened a branch in Goa but its progress so far has been slow. The profit of the bank has amounted to £1,039,378. A final dividend of 15 percent, including an interim of 7.5 percent, has been declared. Rights shares have been issued in the proportion of one £1 share for every £6 of stock held at a price of 40s a share. It has been decided to open an agency in San Francisco. The Chartered Bank of London, a newly-formed subsidiary of Chartered Bank, has been granted a licence to undertake business in that country as a domestic banking corporation. The branch in San Francisco will be opened in June.

Sassoon Silk Resumes Dividend Payment

THE working results of the Sassoon and Alliance Silk Mills Co. Ltd for the year ended September 1963, show a marked improvement over the previous year's performance and the Company is back again on the dividend list after a lapse of six years. The dividend proposed is 6 percent—60p a share. Sales have risen by about 33 percent from Rs. 1.16 crores to Rs. 1.55 crores, and the gross profit has improved by nearly 63 percent from Rs. 4.77 lakhs to Rs. 7.79 lakhs. The provision for depreciation has been reduced from Rs. 3.26 lakhs to Rs. 2.92 lakhs, but the directors have set aside a sum of Rs. 1.62 lakhs for depreciation concerning previous years. Allocation to the development rebate reserve has been reduced from Rs. 75,000 to Rs. 7,500. A sum of Rs. 1.72 lakhs has been provided for general reserve and Rs. 1.50 lakhs for contingency reserve. The proposed dividend absorbs Rs. 60,000. The directors have written back a sum of Rs. 50,000, being excess provisions made earlier. No provision

has been made for taxation because of the losses brought forward and unabsorbed depreciation for previous years. The amount carried forward is Rs. 28,819, against Rs. 44,000 brought in.

The directors state that the disruption of trade following the Chinese aggression in the early part of the year resulted in the accumulation of stocks and consequent curtailment of production during subsequent months. The position improved as a result of the shift in the Company's production to higher-priced fabrics and varieties made from synthetic yarns. The export performance of the Company was also satisfactory. Additions made to the plant and machinery during the year are valued at Rs. 1.27 lakhs, and further orders for the purchase of machinery worth Rs. 31,600 have been placed.

Share Offer by Indian Graphic Arts

INDIAN Graphic Arts Equipment Co. Ltd, which is setting up a fac-

tory in Coimbatore for the manufacture of graphic art machines in U.S. firm of Miehle-Goss-Dexter, is offering 73,500 equity shares of Rs. 10 each at par for public subscription. The list will open on 20th March and will close on 24th March. The public issue has been underwritten. The Company has an authorised capital of Rs. 50 lakhs, made up of Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in 10,000 redeemable cumulative preference shares. The issued capital will be Rs. 30 lakhs—all in equity shares. Out of this, shares worth Rs. 7.65 lakhs have been subscribed by the promoters reserved for the U.S. firm which is and their friends. Equity shares of the value of Rs. 15 lakhs have been collaborating in the venture. The remaining 73,500 shares are being offered for public subscription.

The factory is likely to go into production by about the middle of next year. The prospects for the Company appear to be fairly promising. The demand for printing machines is both regular and large, and it is likely to grow appreciably with the

spread of literacy. Imports of printing machinery during the year ended March 1963 were worth Rs. 4 crores, in spite of the serious foreign exchange difficulties. The annual demand for printing machines by the end of the third plan is estimated at around Rs. 5 crores. Miehle-Goss-Dexter printing machines are quite popular in India. The board of directors of Indian Graphic Arts Equipment includes Mr. James W. Coultrap, Mr. Joseph A. Riggs, Mr. Theodore Niggle, Mr. V. Ramakrishna, Mr. P. R. Ramakrishna and Mrs. Rajeswary Ramakrishna. Ramakrishna Machinery Corporation Private Ltd will be the managing agents of the new Company.

Raza Buland Sugar Repeats

THE profit of Raza Buland Sugar Co. Ltd has risen from Rs. 18.80 lakhs for 1961-62 to Rs. 19.78 lakhs for the year ended October 1963, after increasing depreciation from Rs. 3.61

lakhs to Rs. 4.21 lakhs and transferring Rs. 1.20 lakhs (against Rs. 62,000) to development rebate reserve. The taxable ordinary dividend of 10 percent has been maintained, absorbing Rs. 6.50 lakhs. The yield amounts to 9.6 percent at the present price of Rs. 10.37 a share of Rs. 10 each. Gratiuity reserve is allocated Rs. 67,977 (against Rs. 94,037) and dividend reserve Rs. 6.50 lakhs. The proposed dividends will be paid out of the latter reserve. The carry-forward amounts to Rs. 10,419, against Rs. 10,384 brought in. Sales declined from Rs. 4.23 crores to Rs. 3.67 crores.

The cane crush declined from 4.1 million quintals to 2.8 million quintals. The cane supply was short, since it was largely diverted to the production of gur and khandasari. The acreage under cane also dropped. The cane deteriorated, but the Company was lucky to have a better recovery. As a result of quick sales and good recovery, the profit earned by the Company has improved. The Com-

pany has suffered a loss of Rs. 7.55 lakhs on exporting sugar. Raza Buland Sugar has collaborated with the State Government concerned for developing cane cultivation. Orders for equipment have been placed to expand the crushing capacity of both the factories to 1,500 tons a day. The expansion of the Raza factory is expected to be completed by November 1964 and that of the Buland factory by November 1965. The Company is likely to have a cane crush of 3.3 million quintals during the current season (1963-64). The supply of cane has nevertheless been interrupted by the failure of winter rain. Later the crop has suffered due to drought.

United Commercial Bank Profit Up

THE profit of the United Commercial Bank Ltd has improved from Rs. 73.33 lakhs for 1962 to Rs. 78.43 lakhs for the year ended December 1963. A taxable ordinary dividend of Rs. 6 a share of Rs. 100 each on which a sum of Rs. 50 has been paid-up, has been declared. This offers a yield of 8.3 percent at the present price of Rs. 72.25 a share. Reserve fund is allocated Rs. 17 lakhs and gratuity trust fund Rs. 4 lakhs. Bonus to staff absorbs Rs. 19 lakhs, leaving a balance of Rs. 75,941 to be carried forward, against Rs. 18,992 brought in. Interest paid on deposits and borrowings amounted to Rs. 3.37 crores, against Rs. 3.01 crores, while interest and discount earned rose from Rs. 4.84 crores to Rs. 5.41 crores. The directors consider it desirable to capitalise Rs. 20 lakhs out of Rs. 40 lakhs standing to the share premium account. They have applied to the Controller of Capital Issues for sanction. (The balance-sheet of the bank is printed on a later page in this issue of Capital).

Upper Doab Sugar Earns Profit

UPPER Doab Sugar Mills Ltd has earned a profit of Rs. 7.20 lakhs for the year ended September 1963, after providing for development rebate and meeting other charges. The Company suffered a loss of Rs. 35.85 lakh for 1961-62. Bringing in a loss of Rs. 35.61 lakhs, a debit balance of Rs. 28.81 lakhs has been carried forward. The dividend has again been passed.

The cane crush declined from 4.4 million quintals to 3.8 million quintals, but recovery improved from 8.62 percent to 9.34 percent. There has been a shortage of cane supplies due to their diversion to the manufacture of gur and khandasari. The distillery in Shamli has produced better results and the output rose from 612,442 gallons to 700,201 gallons, but the full capacity has not been used due to the shortage of molasses. The working of the distillery in Pilkhani has been interrupted by the shortage of molasses, but it showed a bigger profit because production costs have been reduced.

Albion Plywood Skips Dividend

ALBION Plywood Ltd has skipped the ordinary dividend for the year ended September 1963. It paid a taxable ordinary dividend of 10 percent for 1961-62. The Company has sustained a loss of Rs. 3.08 lakhs, against a trading profit of Rs. 5.21 lakhs for the previous year. Sales declined from Rs. 60.61 lakhs to Rs. 51.32 lakhs. Production fell from

7.8 million square feet to 5.9 million square feet due to the interrupted timber supplies from Assam and the Andamans. There has also been a substantial rise in the prices of timber and chemicals, but the price of finished products has been more or less stationary.

The veneering unit in the Andamans has begun production recently, but the supply from this unit has not yet come up to expectations. The output in that unit has been interrupted by the power shortage. So a steam generating set has been installed to increase the power supply. If the supply of timber from the Andamans unit improves, the plywood factory in Budge Budge, near Calcutta, should be able to raise its production. So the prospect for the current year depends greatly on the supply of timber from the Andaman factory. The Company has tried to expand exports, and attempts are being made to modify the incentive scheme in order to increase the export of products.

Belsund Sugar Shows Loss

IN their report for the year ended September 1963, the directors of the Belsund Sugar Co. Ltd pointed to the shortage of cane supplies while commenting on the unsatisfactory results. Not only had the cultivated area under cane declined, but the supply was also diverted to the production of gur and khandasari. So the cane crush declined from 1.8 million quintals to 6.4 million quintals, but recovery improved from 9.11 percent to 9.65 percent. The Company has incurred a loss of Rs. 30,816, against a profit of Rs. 5.09 lakhs for 1961-62, after providing Rs. 1.50 lakhs (against Rs. 3.04 lakhs) for depreciation. Full depreciation has not been provided for due to the loss. A taxable ordinary dividend of 31 percent has been declared. It offers a yield of 3.2 percent at the present price of Rs. 7.87 a share of Rs. 7.50 each. Dividend reserve is allocated Rs. 1.05 lakhs, out of which the proposed dividends will be paid. Bringing in Rs. 7,767 and making other adjustments, a balance of Rs. 2,237 has been carried forward.

The Company has manufactured raw sugar for exports, but it has sustained a loss of Rs. 3.54 lakhs on all exports. The directors hope for a better cane supply during the current season. They, nevertheless, think that the present price of sugar, as fixed by the Government, will not cover production costs fully.

Bank of India Earns More

THE profit of the Bank of India Ltd has risen from Rs. 1.12 crores for 1962 to Rs. 1.25 crores for the year ended December 1963, after providing Rs. 4 lakhs (against Rs. 3.50 lakhs) for development rebate reserve and Rs. 10.73 lakhs (against Rs. 6.24 lakhs) for depreciation. Interest paid on deposits and borrowings rose from Rs. 3.55 crores to Rs. 4.37 crores, while interest and discount earned improved from Rs. 6.83 crores to Rs. 8.59 crores. A taxable dividend of 18 percent, including an interim of 8 percent, has been declared. Reserve fund is allocated Rs. 25 lakhs, special reserve Rs. 40.50 lakhs and bonus to staff Rs. 36 lakhs.

The carry-forward amounts to Rs. 4.20 lakhs, against Rs. 13.10 lakhs brought in. The Bank proposes to issue bonus shares in the proportion of one new share for every 20 shares held by capitalising a sum of

Rs. 20.25 lakhs out of the share premium account, subject to the consent of the Controller of Capital Issues. Deposits rose from Rs. 157.16 crores to Rs. 173.98 crores. Investments improved from Rs. 29.97 crores to Rs. 35.43 crores, and advance rose from Rs. 127.20 crores to Rs. 135.94 crores. (The balance-sheet of the bank is published on a later page in this issue of Capital).

Guest, Keen, Williams Debenture Offer

IN relation to the offer of debenture for Rs. 75 lakhs by Guest, Keen, Williams, Ltd for public subscription, 348 applications for a total of Rs. 77.74 lakhs have been received. With the prior approval of the Calcutta Stock Exchange, applications for amounts of up to Rs. 1 lakh have been allotted in full and those for sums of more than Rs. 1 lakh have been allotted approximately 95 percent of the amount applied for. Cheques for refunds are being issued immediately. The balance of the total issue (for Rs. 1.50 crores) amounting to Rs. 75 lakhs has been subscribed by the underwriters and their friends and has been allotted in full. Stock certificates for the amounts allotted will be posted to the applicants under registered cover by about the end of March 1964.

Andhra Sugars Earns Less, but Pays the Same

THE Andhra Sugars Ltd reports a fall in profit for the year ended September 1963, although there was an improvement in sales. The profit of the Company for the year amounts to Rs. 14,83,727, after providing Rs. 14,49,052 for depreciation, compared with the previous year's profit of Rs. 26,57,796, after providing Rs. 10,66,581 for depreciation. Adding to the above profit a sum of Rs. 9,010 brought forward, Rs. 66,306 being excess provisions made in previous years no longer required, Rs. 3,535 being claims relating to the previous year, and a sum of Rs. 1,48,713 being excess provision of dividends made in the previous year credited back, the total available for appropriation comes to Rs. 17,11,291.

Out of this, the provision for tax comes to Rs. 6,10,000 (against Rs. 7,50,000). Transfer to development rebate reserve is Rs. 1,15,000 (against Rs. 800,000). Provision for gratuity comes to Rs. 10,000 (against Rs. 5,200). Donations amount to Rs. 66,160 (against Rs. 85,000). Contribution to the National Defence Fund is Rs. 50,101. A sum of Rs. 8,50,000 is transferred to dividend reserve for payment of dividends. The balance of Rs. 9,337 is carried forward. Out of the transfer of Rs. 8,50,000 to dividend reserve, the preference dividend at 9.3 percent accounts for Rs. 2,79,000. The proposed dividend of 12 percent on equity shares including the new shares (against 12 percent) will absorb Rs. 5,71,000.

The directors say that the working results for the year were not up to expectations, but the factors responsible were beyond their control. A large quantity of sugar released for sale by the Central Government could not be delivered to customers by 30th September, 1963, due to lack of adequate wagons. Sugar sales during the 1962-63 season included sugar exported and the sale of controlled sugar purchased from other factories, on both of which there was little margin of profit. The cane crushed during the year was also lower at 133,408 metric tons, compared with 1,65,978 metric tons crushed during 1961-62.

The working of the acetic acid and industrial alcohol plants has been satisfactory in spite of earlier teething troubles. It is hoped that with regular production of both acetic acid, and industrial alcohol in the current year and a reduction in the gallonage fees charged by the State Government, the results of this unit would be much better in the future.

Referring to the caustic soda-chlorine unit, the report says that the plant and machinery required for the expansion of this unit have been ordered from Japan. The same is expected to arrive within the next three to four months. Arrangements have been made for the erection of the machinery for expansion also, and both the original unit and the expanded unit are expected to go into production during 1964. The plant and machinery received from East Germany is under erection. The total cost of this project is put at Rs. 22 crores. Arrangements are reported to have been made with the Industrial Finance Corporation of India for a loan of Rs. 1.40 crores, and a guarantee of Rs. 28 lakhs for deferred payments to meet the fund's required for the completion of the caustic soda project. Additional capital required for the completion of the project is to be raised by the issue of 200,000 equity shares. Out of this, 100,000 equity shares have been issued to the public at a premium of Rs. 3 a share, and this issue has been heavily oversubscribed. The balance of 100,000 equity shares will be offered to shareholders as a rights issue in due course.

As for the fertiliser plant in Kothagudem, the report says that considerable progress has been made and all necessary approvals have been obtained for the implementation of the project, and a company is to be registered shortly for the purposes, in association with a leading U.S. firm. The plant is expected to go into production during 1966. The Company is entitled to relief under Sections 84 and 85 of the Income Tax Act, 1961, for the profits of its sulphuric acid-superphosphate factory in Kovvur. The Company has applied to the income tax authorities to fix the portion of the income which is exempt from tax and the shareholders will be entitled to a corresponding relief on their dividends.

Sarvaraya Sugars Skips Dividend

THE directors of Sri Sarvaraya Sugars Ltd have passed the dividend on ordinary and preference shares for the year ended 30th September, 1963. There was a sharp decline in the profit, because of a substantial reduction in the quantity of sugarcane crushed during the year. The low sugar recovery was due to the fact that the factory had to close the crushing in the middle of February itself, whereas the peak recovery period in the Company's factory area is the month of March. The factory had, therefore, to close the crushing season much earlier due to the large-scale diversion of sugarcane to jaggery manufacture due to the enormous increase in the price of jaggery during the months of January and February 1963.

The net profit for the year amounted to Rs. 67,071, after providing Rs. 8,91,451 for depreciation, compared with the previous year's net profit of Rs. 6,79,642, after providing Rs. 9,98,928 for depreciation. After providing for prior charges, the balance profit of Rs. 45,576 is adjusted against the brought forward loss of Rs. 6,55,220. This leaves a net loss of Rs. 609,644, which is carried forward to the next year. The total sales of sugar during the year amounted to Rs. 91,58,784.

GREATER SUPPLIES OF Mobil LUBRICANTS FROM INDIANOIL

The world-famous MOBIL automotive, industrial and marine lubricants are now supplied by INDIANOIL, whose round-the-clock service to industry and transport denotes speedy progress towards national self-sufficiency.

1964-65, will restrain companies from increasing dividends.

Scattered business has been transacted in selected State Government loans. In banks, Canara have come to hand at Rs. 81.50 and Indian Overseas have been done at Rs. 146.50. Interest has been shown in South Madras at Rs. 11.12 and West Coast have been taken up to Rs. 20.50, among electric companies. The latter Company has declared a taxable ordinary dividend of Rs. 10 a share out of the capital surplus realised on the acquisition of the Calicut electricity undertaking by the Kerala Government. The share capital has been reduced to Rs. 10 lakhs, divided into ordinary shares of Rs. 10 each, by repaying the 25,000 preference shares of Rs. 10 each. Except for K.C.P. which have been supported up to Rs. 24, sugar shares have been easier. Deccan have quoted Rs. 11.87 on paying an interim taxable ordinary dividend of 6.5 percent. E.I.D. have reacted to Rs. 36.87 and Andhra to Rs. 14.75. Cauvery has quoted Rs. 103 and Madhura Rs. 9.44.

In planting shares, Blue Mountain have been available at Rs. 2.42 and Cochin Malabar at Rs. 6.38. Consolidated Coffee have declined to Rs. 20.87 and Periakaramalai to Rs. 3.45. Ouchterlony have been taken at Rs. 4.40 on declaring a taxable ordinary dividend of 12.5 percent. Kumerode have changed hands at Rs. 4 on declaring a taxable ordinary dividend of 14 percent. Kil Kotagiri have been quiet at Rs. 4.90 on paying a taxable ordinary dividend of 20 percent. Thirumbadi have been steady at Rs. 1.90 on declaring a taxable ordinary dividend of 10 percent. Interest has been taken in Thamarapally at Rs. 16.40, in Nelliampathy at Rs. 3.80 and in Amalgamated at Rs. 10.01.

Among textile shares, South India Viscose slumped to Rs. 128.50 on pres-

sure from outside centres. Travancore Rayon have quoted Rs. 24.90. Business has passed in Lakshmi at Rs. 134.50 and in Madura at Rs. 34.60. Buckingham have been taken at Rs. 293 and Bangalore Woollen at Rs. 243. Vasanta have changed hands at Rs. 255 and Radhakrishna at Rs. 29.50.

In the miscellaneous section, Aluminium Industries have quoted Rs. 20, but Ashok Leyland have declined to Rs. 7.05. Among cement shares, Dalmia have been weaker at Rs. 13.15 and India Cement at Rs. 5.75. Metturr Chemical have dropped to Rs. 13.72, while Seshasayee Paper have been steady up to Rs. 8. Radio and Electrical have changed hands at Rs. 3.45 due to the issue of 250,000 new ordinary shares of Rs. 10 each at par. Spencer have risen to Rs. 22.37 and Parry's Confectionery have been steady at Rs. 3.33. Business has passed in Textool at Rs. 145 and in Kiroloskar Electric at Rs. 18.40. Madras Aluminium have gained at Rs. 78.50, while Madras Rubber have been sold freely down to Rs. 14.37.

London

SENTIMENT IMPROVES DESPITE POLL

EQUITIES HELPED BY COMPANY NEWS

London, 18th March.

IN SPITE of political uncertainties with the latest public opinion polls

showing that the Government is still well behind Labour in popularity, the stock market gave a good account of itself in the past week. Business was small and buying very selective, but there was a reluctance to part with good class stock, and consequently, prices held up well. In the better class issues, the stock shortage became acute in many cases. Gilt-edged gave a good performance with overseas buying helping at one time. A new Barbados 6½ percent loan established a small premium. Dollar stocks, of course, moved in sympathy with Wall Street, where it is commonplace these days to reach new all-time peaks almost daily. Company news helped to a large extent in equities, and the interim statement from the Rank Organisation was well received, although profit-taking brought the price back a little. Woolworths went ahead in their ex-capitalisation form, but Babcock Wilcox weakened after the profit warning. A.E.I. went ahead after the preliminary statement which mentioned brighter prospects. Tobaccos were a poor market on Budget fears. Gold shares were in good from and a feature was the strength of the finance issues where Union Corporation was outstanding. De Beers were a strong market. Coppers improved, being helped by the higher metal prices announced by the leading companies. Tins moved irregularly. Oils were quiet and moved narrowly, but B.P. were wanted on consideration of the Company's moves in Canada and on dividend hopes. Rubbers and teas were quiet.

TALL AMBITIONS

In his first year at school, this little chap is aiming high! Time flies swiftly; soon the time will come for his college education.

When your children are ready for college, will you be ready for the financial test? It's never too early to start saving for your children's higher education.

Start saving now by opening an account with the State Bank of India, where the service is prompt, courteous and helpful.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research.

P.O. Box 14, Calcutta-1, or 5, Mission Row, Calcutta, India.

INCREASING THE RESOURCES OF BANKS IN U.K.

(BY A SPECIAL CORRESPONDENT)

Business men in Britain fear that the shortage of bank funds will hamper economic growth. The measures suggested for increasing banks' resources are the offer of better interest rates to depositors and attracting new clients through the payment of wages by cheques.

THERE is usually one main theme common to all, or most, of the British bankers' annual statements. This year it is the problem of getting enough resources into the banking system; in other words, competition for deposits. Economic expansion has involved a big increase in the demand for bank finance, and advances have increased much faster than deposits. Last year was the first since the early-1930s when loans materially exceeded 50 percent of deposits, according to Mr. D. J. Roberts, chairman of the National Provincial Bank. The Bank of England has allowed a temporary reduction of the minimum permissible ratio of liquid assets to deposits from the traditional 30 percent to 28 percent so that economic expansion will not be impeded by financial stringency, but the concession does not solve the problem permanently.

The statistics of the problem were set out by Mr. Duncan Sterling, chairman of Westminster Bank, in percentage increases between 1951 and 1963: gross national product 99 percent, clearing bank deposits 29 percent, currency in circulation 73 percent, bank clearings 175 percent. But this statement of the problem shows how it has been partly solved. While bank deposits increased much less, bank

clearings increased much more, than the G.N.P., and the volume of cash handled by banks increased much more than deposits. The velocity of circulation of money through the banking system was accelerated, so that the stock of money in the system, though not much increased, did much more work.

Figures of bank clearings in 1963 have indicated that this acceleration lost momentum last year. But there are trends in the economy—similar trends are observable in other developed countries—which suggest that requirements of money for business do not increase proportionately with the volume of business. One of these trends is represented by amalgamations; when companies merge they can usually reduce costs in relation to turnover, and in some cases idle money in one component can be actively employed in the other. And in larger business (whether separate or merged) improved techniques of accounting and stock-control economise on finance.

Nevertheless, the supply of bank money may not be enough to sustain the growth of Britain's economy. The proportion of the savings, companies' and individuals', diverted from the banking system is tending to increase.

Some of the money invested outside the banking system finds its way into the banking system by devious routes; some of it is an effective substitute for bank money. But some of its functions—in building societies, for example—are specialised, whereas proportion of bank deposits that is available for advances can be employed more flexibly, where needed. Bank chairmen have mentioned particularly the competition of the Government's investment media, more particularly Treasury bills. Many companies with temporarily idle funds invest them in Treasury bills rather than deposit them with banks; foreign institutions do likewise. Thus the banking system is deprived not only of potential deposits but also of some of the paper that is suitable as a liquid asset. The competition for deposits and the competition for bills are two different matters. But the rate of interest offered by banks to depositors affects both.

The question whether more attractive rates should be offered to depositors is often discussed as though it were simply a problem of banking. As Mr. John Thompson, chairman of Barclays Bank, remarked, "having in mind that the main target is the money which eludes the banks by going into Treasury bills on either

CAPITAL, 19th March, 1964.

domestic or foreign account, too little attention has been paid to the counter-measures which the Government might take". Indeed, as the Treasury bill issue is one of the basic elements in the Government's financing, a large-scale diversion of funds from the bill market would involve a major reorganisation of the Government's methods; not only of financing but also of monetary control, as short-term credit is regulated by manipulation of the floating debt.

Attracting More Deposits

A problem more widely recognised is the cost of attracting substantially more deposits. "It has long been a basic principle of our banking system that the terms offered and the rates charged for the use of funds are inter-related, with Bank rate as the connecting link", stated Mr. Harold Peake, chairman of Lloyds Bank. Mr. Peake believes that, to maintain "the stock of raw material", it may be necessary to pay higher rates for time deposits, and that it would be necessary to adjust lending terms accordingly; but he adds that "the cost of bank accommodation in Britain is still likely to continue to be lower than it is abroad". But other bankers have warned of possible "sharp increases" in lending rates; and Mr. Thompson, of Barclays, observing that "present lendings are pretty well spread", has suggested that it would be against the public interest "to allocate too high a proportion to those who would be both willing and able to afford high rates of interest".

An alternative to attracting deposits by raising rates is to attract new depositors on current account. The system of paying wages by cheque was described by Sir Eric Carpenter, chairman of Williams Deacon's Bank, as "archaic". In Sir Eric's opinion, "the fuller use of bank accounts by which cheques take the place of bank notes would, taken all round, be a decided step in the direction of cheaper banking", and, substituting deposits for notes, it would increase

CAPITAL, 19th March, 1964.

the banks' capacity "to meet any upsurge in the demand for advances". But other bankers have emphasised, discouragingly, the disproportionate cost of operating small accounts.

So the working out of this year's British banking theme is inconclusive. It is not agreed that resources are inadequate, or that as a precaution they should be increased by raising rates, or that much more resources can be obtained economically from wage-earners. But the emphasis on this subject this year reflects a widespread apprehension among business men and it seems to have affected the Treasury that Britain's growth will eventually be retarded by lack of finance from the banks.

THE CALCUTTA MONEY MARKET

CALL RATE RISES

Wednesday, 18th March.

THERE has been a slight increase in the general level of advances in the Calcutta money market during the past week. This is because the requirements of the cotton and sugar mills have risen. The credit given to the iron, steel and engineering industries is fractionally down. But advances to the jute mills, and to the godowns and seeds trade, are unchanged. In the interbank market, conditions have been tight and the all rate has risen to 64 percent.

The exchange market has been moderately active, with a fair supply of both tea and gunny bills. The demand for remittances is moderate. In the London market, sterling has been steadier and shows small gains against all the major currencies, except the Canadian, Danish and Swedish ones.

SILVER WAS QUIET IN CALCUTTA during the past week. The price declined from the previous week's level of Rs. 258.50 to Rs. 254.50 quoted today. The London and New York prices stood at 111½d and 129.3 cents. In sympathy with silver gold was quiet and the price of 14-carat dropped from Rs. 67.75 to Rs. 66.75.

DURING THE WEEK ENDED 13TH MARCH, Government of India Treasury bills of Rs. 40,06,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 17th March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.375 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,500 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 3rd March.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 8th March to the 21st March at Rs. 9.391 percent subject to the conditions previously announced that sales can be stopped at any time without notice, if the Government thinks it necessary. These bills sold from 11th March to 14th March amounted to Rs. 21 lakhs.

RISES OF Rs. 6.81 CRORES TO Rs. 2,47,24.33 crores in active notes and of Rs. 4.92 crores to Rs. 2,45,66.69 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 13th March 1964.

raising rupee securities by Rs. 5 crores to Rs. 2,14,69.69 crores in the Issue Department. This was done by transferring securities from the Banking Department in which investments dropped by Rs. 4,52 crores to Rs. 184.14 crores. Deposits of the Government of India rose by Rs. 2,58 crores to Rs. 109.35 crores and those of State Governments by Rs. 3.39 crores to Rs. 8.42 crores. Balances of commercial banks at Rs. 77.81 crores showed a decline of Rs. 4.66 crores. Balances held abroad improved by Rs. 2.85 crores to Rs. 16.02 crores. Their loans from the Reserve Bank dropped from Rs. 106.94 crores to Rs. 95.46 crores of which advances, against usance bills amounted to Rs. 46.02 crores (Rs. 46.64 crores). Ways and means advances stood at Rs. 54.33 crores, against Rs. 45.21 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 6th March, 1964, shows a drop of Rs. 6.06 crores to Rs. 597.33 crores in total deposits. Investments in Government securities are down by Rs. 4.99 crores to Rs. 235.19 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 11.94 crores to Rs. 350.63 crores. Cash and balances are, in consequence, shown at Rs. 20.89 crores or Rs. 5.33 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 6th March, 1964, shows Demand and Time liabilities at Rs. 1,186.20 crores (Rs. 27.33 crores on account of borrowings from banks) and Rs. 1,282.12 crores (Rs. 14.24 crores), compared with Rs. 1,198.46 crores (Rs. 29.28 crores) and Rs. 1,289.42 crores (Rs. 14.84 crores) in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.18 crores and Rs. 89 lakhs to Rs. 61.21 crores and Rs. 81.87 crores, respectively. There is a drop of Rs. 6.76 crores to Rs. 644.47 crores in investments. Advances and bills discounted at Rs. 1,799.43 crores show a rise of Rs. 27.73 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 5.8 percent and 72.9 percent, against 5.7 percent and 71.2 percent.

ANNUAL REPORT.

To be submitted to the Shareholders at the Fifty-Eighth Annual General Meeting to be held at the Registered Office of the Company at 70/80, Mahatma Gandhi Road, Bombay-1, on Thursday, the 26th day of March, 1964, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1963.

The Directors submit to the Shareholders the BALANCE-SHEET and PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1963. The Auditors' Report is also annexed.

The transactions for the past year after provision for taxation have resulted in a profit of Rs. 1,38,09,847. To this has been added the balance of Rs. 13,09,847.5 brought forward from the previous year, making a total sum of Rs. 1,38,09,847.5

The following appropriations have been made :—

An interim dividend was paid at the rate of 8.00 per cent, subject to deduction of tax at the rates in force, on the Paid-up Capital of Rs. 4,05,00,000 which absorbed	Rs. 32,40,000 00
Transferred to the Reserve Fund	25,00,000 00
Transferred to Special Reserve	40,50,000 00
Bonus to Staff	35,00,000 00
To carry forward to the next account	4,19,847 75
	Rs. 1,38,09,847.5

The Directors recommend to the Shareholders payment of a final dividend at the rate of 10.00 per cent, subject to deduction of tax at the rates in force, making 18 per cent, for the year on the Paid-up Capital of Rs. 4,05,00,000 which will absorb Rs. 40,50,00,00.

The Directors propose, subject to obtaining the necessary consent from the Controller of Capital Issues, Government of India, and other authorities, to increase the Authorised Capital of the Company from Rs. 10,00,00,000 to Rs. 11,00,00,000 by the creation of 2,00,000 "A" shares of the face value of Rs. 50 each and to issue therefrom 40,500 "A" shares as fully paid bonus shares in the proportion of one such bonus share, held by a member on a date to be specified later, by capitalising a sum of Rs. 20,25,000 out of the Share Premium Account. The necessary application has been made to the Controller of Capital Issues in this behalf. After the necessary consent from him and other authorities has been obtained, the Shareholders will be requested to pass the necessary resolutions for this purpose at an Extraordinary General Meeting.

The business of the Company continued to function satisfactorily.

The Bank Rate was increased from 4 per cent. to 4½ per cent, with effect from the 2nd January, 1963.

Before the close of the year, a sum of Rs. 3,00,00,000 was transferred from the internal reserves to the Reserve Fund.

As in 1962, for the information of Shareholders, a statement is furnished on page 27 giving an analysis of sub-head (vi) of Advances being—

Debts due by companies or firms in which the directors of the banking company are interested as directors, partners or managing agents or, in the case of private companies, as members.

During the year, 37 Branches of the Bank were opened in India at Borivli, Chembur, Dadar, Khar and King's Circle in Bombay, at New Cloth Market, Relief Road, Sabarmati and Saraspur in Ahmedabad, at Bcw Bazar and Vivekananda Road in Calcutta, at Willingdon Island in Cochin, at Kamala Nagar in Delhi, at Telco Town in Jamshedpur, at Mylapore and Theagarayanagar in Madras, at Dharampeth and Gandhi Baug in Nagpur and at Anand, Bhopal, Dehu Road, Durga, Howrah, Jaipur, Karol, Kalyan, Kalyani, Kota, Naidad, Naroda, Navsari, Palanpur, Patna, Porbandar, Rourkela, Thana and Varanasi.

Under the provisions of Section 256 of the Companies Act, 1955, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election :—

Mr. Ramniwas Ramnarin
Mr. N. K. Petigara
Mr. Jaishin Vithaldas

The Shareholders are requested to appoint Auditors and to fix their remuneration.

A. D. SHROFF, Chairman, KRISHNARAJ M. D. THAKERSEY, Vice-Chairman, AMBALAL SARABHAI, JUGMOHAN PRASAD GOENKA, RAMNIWAS RAMNARAIN, BHAGVANDAS C. MEHTA, MADANMOHAN MANGALDAS, N. K. PETIGARA, PRATAP BHOGILAL, S. P. GODREJ, Directors.

T. D. KANSARA, General Manager, S. J. RUSTOMJI, Deputy General Manager, H. A. CURRIMBOY, Chief Accountant, Bombay, 20th February, 1964.

We have checked the above analysis with the records of the Bank and with the certificates furnished by each of the Directors of the Bank regarding their respective percentages of holdings in the paid-up share capital of the borrowing companies and have found it to be correctly made up.

Bombay, 20th February, 1964.

AUDITORS' REPORT TO THE MEMBERS

(1) We have audited the foregoing Balance-Sheet of The Bank of India Ltd. as at 31st December, 1963, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited returns from all the Branches, of which 64 Branches have been audited between us and 72 Branches by other Auditors.

(2) We report that:—

- we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from all the Branches of the Bank;
- the reports on the accounts of Branches audited by other Auditors have been forwarded to us and the same have been considered in preparing this report;
- the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the audited returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Bombay, 20th February, 1964.

Statement pursuant to Section 212 of the Companies Act, 1956.

The Profit and Loss Account of the Bank of India Ltd. for the year ended 31st December, 1963, does not include any profit or loss of its subsidiary. The Bank of India (U.K.) Nominees Ltd. (a nominee company incorporated and operating in the United Kingdom) as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Ltd. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that in relation to The Bank of India (U.K.) Nominees Ltd., a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Ltd. shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Ltd. is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

A. D. SHROFF, Chairman.
KRISHNARAJ M. D. THACKERSEY, Vice-Chairman.
H. A. CURRIMBHROY, Chief Accountant.
T. D. KANSARA, General Manager.
S. J. RUSTOMJI, Deputy General Manager.

THE BANK OF INDIA (U.K.) NOMINEES LIMITED

Directors' Report for the year ended 31st December, 1963.

The Directors submit the Balance-Sheet for the year ended 31st December, 1963. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Ltd., of which the Company is a wholly-owned subsidiary.

London, 1st January, 1964.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purpose of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1963, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

London, 1st January, 1964.

THE STATE BANK OF INDIA EXPANSION OF BUSINESS: ADVANCES TOUCH NEW PEAK

PROGRESS OF BRANCH EXPANSION PROGRAMME

CHAIRMAN, MR. B. VENKATAPPAH'S
SPEECH

The following is the speech of the chairman Mr. B. Venkatappaiah, at the 11th Annual General Meeting of the shareholders of the State Bank of India held in Bombay on March 12, 1964.

gentlemen,
I welcome you to this meeting and I am glad of the opportunity to tell you the progress which the State Bank of India and its subsidiaries have made since we met a year ago. More specially, we are concerned today with the part of the central board of directors of the State Bank of India for the year 63, the Bank's profit and loss account for the same period and the balance sheet as at December 31, 1963. You will already have had an opportunity of reading these documents.

Last year we met under the shadow of Chinese aggression. The impact of that event on the economy of the country and of particular relevance from our point of view, the dislocation caused to the normal operation of credit in certain sectors are no doubt still fresh in your mind. As I then told you, we immediately took several measures in collaboration with trade and industry, with the Reserve Bank of India and with the Government. This was in order to ensure that credit, both medium-term and short-term, was available in appropriate form and adequate quantity in what were then regarded as the more vulnerable areas; that the distribution of foodgrains, whether by Government, co-operatives or the trade, was suitably and promptly financed; that the manufac-

turers of goods and equipment for meeting the defence needs of the country were assisted with credit in all the ways open to the Bank and that such assistance was especially directed, for here the need was greatest, to small and medium entrepreneurs engaged in defence industries; that special attention was devoted to export credit with a view to stepping up exports, since, as I said last year, a new dimension of gravity had been imparted by the national emergency to the problem of foreign exchange; that the Bank and its subsidiaries, through every single one of their branches and offices—and these together now number 1,644—participated in the countrywide work connected with the collection of funds, gold and valuables for the defence effort; and, last but not least, that

special facilities, also on a countrywide scale, were made available to the members of the Armed Forces in the matter of maintenance of accounts and remittance of moneys to families and dependents. I am glad to be able to report to you that in all these respects we succeeded in acting promptly, helpfully and in large measure effectively. In what follows I shall tell you of our other and more usual activities those relevant to us as the biggest commercial banking organization in the country: one, moreover, which has been enjoined by its charter to keep in mind both its commercial character and the public interest. I shall endeavour to review briefly not only the financial results of the year's working—these are satisfactory in so far as we have more than maintained our profits—but also our total performance, firstly in relation to our normal banking activity and secondly with reference to those spheres of development which have all along claimed our special attention. Further, I shall try, in continuation of what I said last year, to indicate as succinctly as I can the progress we have made in other matters pertinent to our own growth and efficiency such as recruitment and training, premises and housing, personnel welfare and personnel relations, delegation and decentralization.

Rise in Income

In comparison with 1962 we earned substantially more in 1963. Our income went up for two principal rea-

CAPITAL, 19th March, 1964.

sons. The main one of course was expansion of business. The advances touched a new peak: Rs. 309 crores in 1963 as against Rs. 289 crores in 1962. I may mention in passing that in the current busy season, that of 1964, advances have already passed the 325-crore level. The other factor which contributed to increased earnings was the modification which we effected in our lending rates from the close of business on April 5, 1963, so as to bring them into greater conformity with prevailing conditions, including the already enhanced Bank rate, as also of course our own needs. The State Bank of India advance rate was accordingly raised from 5% to 6%. But the increases actually effected were graduated. Little or no addition was made to the higher ranges of interest rates charged by the Bank and the full rise of 1% was confined to the lowest range. Moreover, certain types of advances continued to be concessionary in the matter of interest. On loans to small industries, for example, the rates were stepped up only marginally; and on advances to cooperatives they were retained at broadly the same level as before. We earned more than we did in 1962 not only on interest and discount but also on commission, exchange and brokerage. It will be seen that, after allowing for all the usual and necessary provisions from the resultant earnings, our income has increased by Rs. 2.79 crores to Rs. 25.37 crores in 1963.

Dividend Maintained

Income being Rs. 25.37 crores and expenditure Rs. 22.62 crores, the net profit for 1963 is Rs. 2.75 crores (as against Rs. 2.69 crores for 1962). Together with the balance of Rs. 0.46 crore brought forward from last year, the sum available for appropriation to various heads, including dividend to shareholders and bonus to staff, is Rs. 3.20 crores. The dividend has been maintained at the same level as in the previous year, viz., Rs. 23 per share, subject to deduction of tax. This accounts for Rs. 1.29 crores. The bonus to staff is broadly on the same basis as last year, viz., two months' salary; the actual amount provided is however larger than last year's—Rs. 82 lakhs against Rs. 72 lakhs—because of the increase in the number of employees and the increments meanwhile earned by them. To the Reserve Fund has been added the same amount as in 1962, viz., Rs. 55 lakhs. Lastly, a sum of Rs. 5 lakhs has been transferred to the staff welfare fund and an equivalent amount to the staff co-operative housing fund. These provisions too are identical with those made last year.

It will be convenient if I refer at this stage to our subsidiaries. They have made progress in various directions. An outstanding measure of reorganization, as you are aware, was the establishment on January 1, 1963, of the State Bank of Bikaner & Jaipur. This institution, which in effect combined the State Bank of Bikaner and the State Bank of Jaipur in one large unit, is now in a position to serve more effectively than before the entire State of Rajasthan. In their traditional operations no less than in the developmental sphere, the performance of the subsidiary banks has been a noteworthy one. The number of offices of the seven banks together rose from 519 at the end of 1962 to 568 at the end of 1963. Also in the aggregate, their deposits rose by over Rs. 13 crores to Rs. 156 crores and their advances by about Rs. 4 crores to Rs. 75 crores. There was an increase in profits from Rs. 58.50 lakhs in 1962 to Rs. 67.97 lakhs in 1963. The State Bank of Travancore has raised the rate of dividend from 5% for 1962 to 6% for 1963. The State Bank of Patiala, which had not declared any dividend for 1962, has been able to declare a dividend of 5% for the year under review. The State Bank of Saurashtra, while once more not declaring a dividend, has nevertheless, taken opportunity to strengthen its reserves further. The other subsidiaries maintained the same level of dividend as in the previous year.

Branch Expansion

I will now turn to the programme of branch expansion of the State Bank of India and in the same context deal with connected topics such as premises, recruitment and training. As mentioned in the directors' report, the Bank had 4 local head offices, 733 branches and 332 sub-offices in India at the end of 1963. It had besides an office each in London and Colombo and five offices in Pakistan. In all, therefore, the Bank had 1,076 offices at the close of the year which together with the 568 offices of the subsidiaries make a total of 1,644, a figure I have already mentioned, for the entire organization. During the course of the year the State Bank of India increased the number of its branches by 29 (of which 20 were under the expansion programme) and of other offices by 37. In consultation with Government and the Reserve Bank of India the Bank has now entered, as from January 1, 1964, on a new five-year phase

of planned expansion comprising 75 branches (to be opened before the middle of 1965 under the previous programme) and 319 branches (to be opened before the end of 1968 under the new programme), making a total of 394 or nearly 400 for the next 5 years. This is as big a project of expansion as the State Bank had undertaken on its establishment and successfully executed during 1955-60. It is at the same time more complicated in many ways. Suitable buildings are hard to come by in the smaller towns. Personnel has to be recruited and trained. Interbranch accounts and their reconciliation, if only because of the number of branches and offices involved, will present further complexities. The farther the Bank goes into semi-urban and rural areas the greater will be the need for it to evolve new techniques whether for mobilization of adequate deposits or disbursement of appropriate credit. These difficulties are real but it is my firm faith that they are not insurmountable, provided always that, in finding solutions, we are allowed a perspective that is long enough. Endeavouring to act on this assumption we have already done some planning and taken certain measures. Premises divisions have been constituted both in the central office and at the local head offices in order to devote special attention to finding suitable sites and buildings, constructing our own premises if needed and, incidentally renovating existing branches wherever that may be necessary from the point of view of improved customer service or better working conditions. A committee has recently made detailed suggestions in all these respects and the recommendations are being implemented. I have earlier referred to the larger programme of recruitment at different levels which is already in operation. Further, we have revised and expanded our scheme of training. There is now a three-level training programme for the officials and a two-level programme for the clerical staff, with special courses for different categories wherever appropriate. The three-level programme consists of a preliminary and induction course, an intermediate course and a senior course, while the two-level programme consists of an induction course and an intermediate course. We have now, apart from the staff training college at Hyderabad, 4 residential training schools at Patna, Indore, New Delhi and Nagapattinam, in addition to 3 training schools at local head offices and 10 zonal centres. With these training facilities, as also the training arrangements provided by outside agencies in India and abroad, it has already been possible to train over 1,000 clerks and about 200 officers during the year. We have taken certain steps to simplify the accounting procedures which operate in and between our branches. For devising the further measures of reform that will no doubt be called for in this context, as also for dealing in a planned manner with the long-term problems of the Bank generally, a planning, organization and methods division has been recently constituted in the central office with appropriate personnel. Lastly, in regard to the mobilization of deposits in the rural areas and elsewhere we are experimenting at several centres, keeping always in view the need, firstly, to improve customer service, secondly to employ suitable forms and media of communication and, thirdly, to ensure that the cost is commensurate with the results. I may mention in passing though this has specific reference to the subsidiaries, that a committee has been asked to investigate and report on the subject of mobilization of rural deposits in relation to the area covered by the State Banks of Mysore, Hyderabad and Travancore. The committee has recently submitted its report.

New Institutions

Against the background of wider economic planning, may I at this stage

take the opportunity of welcoming some of the new financial institutions which have been or are about to be established? I refer to the Unit Trust in its bearing on investment, the Export Credit and Guarantee Corporation from the point of view of export trade and the Development Bank in relation to industry. These will fill existing gaps in institutional assistance and I have no doubt that, in more than one context, the State Bank of India will be able to collaborate fruitfully with the new institutions as it does with those already in the field. It is pertinent to mention here that our advances are now increasingly industry-oriented, while at the same time there is no decrease in the quantum of the credit we make available for trade and commerce. In relation to the total advances of the Bank, industry accounted for 72.1% in 1962. This percentage has increased to 75.1 in 1963. Further, about 30% of the advances to the industrial sector were utilized by basic industries such as iron and steel, heavy engineering, cement, and fertilizers, and about 18% by export-based industries like jute textiles. We have not of course neglected agriculture and food. Thus the jute buffer stocks financed by us accounted for more than Rs. 7 crores and the advances to State Governments for financing the distribution of foodgrains aggregated Rs. 13.5 crores. In the important sector of small scale industry, our total credit commitments now aggregate Rs. 17.6 crores, so far as working capital is concerned. I would point out that this figure is exclusive of advances granted to small units of a traditional type such as rice and oil mills. You are aware that the facilities we now offer to small industrialists include medium term loans and instalment credit. Further relaxations have been made in granting accommodation against supply bills drawn on the Directorate General of Supplies and Disposals. Also, where small units have secured orders from Government, we are arranging to ensure, by entering into a fresh agreement with the National Small Industries Corporation, that the units can obtain further facilities from us by way of advance payment for purchase of raw materials. We are thus continuously examining the scope of increasing our assistance to small entrepreneurs and have implemented a number of measures suggested in this context by the study team to which I made a reference last year. Further, in this sphere of our activity even more than elsewhere, we have been laying stress on simplification and improvement of procedures, introducing flexibility in our operations in order to meet the varied requirements of the small entrepreneurs, training our field staff specially for this purpose, and strengthening our staff position, in branches and local head offices so that the work is attended to with efficiency and promptitude.

Financing Cooperatives

We have made some progress in the financing of co-operatives, and the total credit limits sanctioned by the Bank to all types of co-operative institutions increased from Rs. 33.4 crores

THE UNITED COMMERCIAL BANK LIMITED—Contd.

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1963.

EXPENDITURE	Year ended Dec. 31, 1963	Year ended Dec. 31, 1962	INCOME (Less provision made during the year for bad and doubtful debts and other usual or necessary provisions)	Year ended Dec. 31, 1963	Year ended Dec. 31, 1962

Note:—Particulars of total remuneration Rs. 1,06,309=81 (Tax deducted Rs. 43,514=87) relating to the General Manager (Chief Executive Officer):
(i) Salary Rs. 72,000 (ii) Allowances Rs. 12,000 (iii) Bonus Rs. 12,000 (iv) Contribution to the Provident Fund Rs. 6,000 (v) Expenditure on maintenance of a car for his official duties Rs. 3,821=97 and (vi) Medical expenses Rs. 897=84

The above Accounts have been drawn up in accordance with the provisions of Section 29 of the Banking Companies Act, 1949.

REPORT OF THE AUDITORS

TO THE MEMBERS OF THE UNITED COMMERCIAL BANK LIMITED.

We have audited the attached Balance-sheet of the United Commercial Bank, Limited, as at 31st December, 1963, and the Profit and Loss Account of the Bank for the year ended on that date, annexed thereto, in which are incorporated the Branch returns audited by the Statutory or other Auditors. The reports on the accounts of the Branches audited by the Auditors have been forwarded to us and dealt with in preparing our report in the manner considered necessary by us.

We report that:
(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) in our opinion, proper books of account, as required by law, have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
(d) the Banks Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;
(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December 1963, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

leved if export earnings are improved. At first sight this might not appear too difficult, for international trade continues to grow, but significantly the trend is for the major part of that growth to be between the industrial countries, notably those in Western Europe. Nevertheless, in theory at least, primary producers in the developing countries should benefit from the steadily expanding demands of industry for raw materials, and the tendency for commodity prices to rise. This tendency is, however, by no means uniform for whereas tin and sugar have

found better markets the price of rubber, for example, has steadily declined, and rubber is a very important exchange earner for many South East Asian countries. The lower price of the commodity has not only had an adverse effect on export earnings but has adversely affected the government revenue needed for the local expenditure on development schemes.

There are thus grounds for anxiety that the industrial countries will continue only to expand trade amongst themselves and even to discriminate

against low-cost Asian manufactures, which would leave the developing countries further and further behind in the movement towards higher living standards. If the industrial countries allow this to happen they may not only encourage political unrest but may lose markets with enormous potential from rising living standards in these populous areas.

This problem will undoubtedly face the forthcoming United Nations Conference at Geneva on trade and development and if trade barriers are to

be removed much will depend upon the attitude of the European Economic Community (EEC) to such important matters as the preferences at present enjoyed by the former French dependencies in Africa in their trade with the Community. Help may also come from a general lowering of tariffs through what is known as the Kennedy round, but finally whether the living standards in developing countries are raised will depend upon the willingness of the industrial countries to open their markets to these new nations of the East.

New Delhi

SMALL CAR PROJECT WITH STATE PARTICIPATION

(FROM OUR NEW DELHI CORRESPONDENT)

THE Joint Secretary, Ministry of Heavy Engineering, Mr. R. V. Raman, recently visited Madras to explore the possibilities of Government participation in the capital and management of Standard Motor Products of India Ltd. During his visit he also had discussions with representatives of Leylands, who had flown from Australia for the purpose. Standard Motor Products of India, it is expected, will manufacture 4,000 motor-cars during 1964.

The Government is anxious to produce a car at a low cost. The possibilities of manufacturing such a car in the public sector have already been examined in great detail. The alternative before the Government is either to revive the old scheme of setting up a new unit in the public sector or to induce one of the existing units to come into partnership with it. Mr. Raman had been to Madras to explore the second alternative. The pattern of ownership being considered is that of the Cochran Refinery in which the Central Government has got the majority holding of 51 percent, the remaining 49 percent being shared by Phillips Petroleum, Duncan Brothers and the public. In the case of the proposed motor-car unit, the Government of India plans to take up a share of 51 percent in the equity capital, leaving the balance to be shared between the existing Madras Company and Leylands.

It is realized that an economic unit manufacturing cars for middle-income groups should produce at least 50,000 vehicles a year, for which there is no market at present. Initially, therefore, the cost of production in the proposed unit cannot be radically reduced. It is, however, hoped that by 1972, the demand for motor-cars would be high enough to warrant a production of 50,000 units a year, facilitating the desired reduction in prices. Birla Brothers, who have General Motors of the U.S.A. as their collaborators, are also examining the scheme of going into partnership with the Government, it is reported.

Reference was made in these columns to the offer of \$90 million by the World Bank to finance the manufacture of equipment for the automobile industry and other industrial and constructional equipment. This offer may be raised to \$100 million or \$120 million. Mr. R. V. Raman will be visiting Washington for detailed discussions concerning these loans. He is expected to leave India some time next month.

ALUMINIUM

Three Projects in State Sector

Definite steps have been planned to implement the three aluminium projects, two of which had originally been licensed to parties in the private sector. The Koyana project, originally licensed to Mr. Tendulkar, is being converted into a public-sector project with the Central Government and the Maharashtra Government taking the majority share in the equity capital. Mr. Khatau, who has replaced Mr. Tendulkar and his associates, will have the minority holding. The German firm of V.A.W. will be the foreign collaborators.

The Government, having revoked the licence of Mr. Murarji Vaidya, has decided to include the Mysore

project also in the public sector. Here again, the Central Government and the Mysore Government will be the major partners, if not the sole owners of the unit. So far the offer of the Canadian-backed Indian Aluminium Company appears to be the most favourable for this project.

The Madhya Pradesh project for which negotiations have been in progress with the Hungarian Government, may go to Reynolds of the U.S.A., whose offer is regarded as the most suitable one so far.

CAST IRON ROLLS

Government to Set Up Plant

The requirements of cast iron rolls corresponding to a steel production of 10 million tonnes has been estimated at about 42,000 tonnes a year. A number of schemes have been licensed in the private sector for the manufacture of rolls, but none of them has made any appreciable progress. The industry is highly capital-intensive and foreign technical know-how is essential for its establishment. The estimated demands for all types of rolls is expected to increase to about 78,000 tonnes a year by 1970-71.

In view of the importance of the industry and in view of the apparent inability of the private sector to establish capacity for it, it has been considered necessary to set up a public-sector project for manufacturing cast iron rolls.

RUSSIAN AID

Pumps and Compressors

The preparation of a techno-economic report for producing compressors and pumps in the country was one of the items included in the 112.5-million-rouble Russian credit. The Government of India entered into a contract with Prommasheexport, Moscow, for the preparation of this report. The cost of this report was about Rs. 1.5 lakhs.

The report was submitted in August 1962. It envisages the establishment of a unit for manufacturing heavy-duty compressors and pumps with a capacity of 16,700 tons a year. The examination of the report was entrusted to the National Industrial Development Corporation, which confirmed that there was scope for establishing a factory to manufacture compressors and pumps.

The Government has considered these recommendations and decided that early steps should be taken to call for a detailed project report from Russia and for selection of a site, etcetera. Accordingly, the Russian authorities have been requested to prepare a detailed project report.

RUPEE PAYMENT AREA

Grant of Technical Credits

Trade Agreements with Russia, Poland and other East European countries and the United Arab Republic stipulate that all commercial transactions between India and these countries are to be financed in non-convertible Indian rupees through the central clearing accounts maintained by each country with the Reserve Bank of India, Bombay. In order to ensure that the flow of

Indian exports to these countries is not affected by decreased imports into India from them at any particular time, the Government of India has agreed in principle to make available to these countries a technical credit in the form of a loan, partly interest-free and partly with interest at current Treasury bill rate.

The extent of technical credit to be afforded to these countries depends on the ceilings stipulated in the trade agreements with them as well as the actual volume of trade between India and these countries. A provision of Rs. 14.50 crores has been made in the Revised Estimates for 1963-64, taking into account the likely trade with the above countries during 1963-64. The trade with these countries is likely to increase during 1964-65, and as such a sum of Rs. 16 crores has been provided in the Budget estimates for 1964-65.

RUBBER

Kerala to Expand Acreage

The Government of Kerala is implementing a scheme for developing the rubber industry. Under this scheme it is proposed to plant 20,000 acres of land with rubber at a cost of Rs. 2.50 crores during the third plan period. Till September 1963, 10,000 acres have been planted with rubber. The State Government has registered a corporation called the Plantation Corporation of Kerala Ltd for implementing the scheme. The Central Government has agreed to give 100 percent loan assistance to the State Government for subscribing to the share capital of the Corporation. A sum of Rs. 31.39 lakhs was sanctioned in 1962-63. The Revised Estimates for 1963-64 has been fixed at Rs. 75 lakhs. A provision of Rs. 80 lakhs has been made in the Budget Estimates, 1964-65.

HINDUSTAN CABLES

Progress of Expansion

Hindustan Cables Ltd was incorporated in 1952 to run the Government-owned telephone cable factory at Rupnarainpur in West Bengal. The Company is engaged in the manufacture of dry-core telecommunication cables and co-axial cables under a technical consultancy agreement with Standard Telephones and Cables Ltd, U.K. The authorised capital of the Company is Rs. 3 crores and the paid up capital is Rs. 1.6 crores. Besides, the Company had also received a loan of Rs. 1.19 crores from the Government as on 31st March, 1963. The factory commenced the production of dry-core cables in 1954. The production of co-axial cables was undertaken during 1960-61. The Company produced 2,561 kilometres of dry-core cables (valued at Rs. 2.12 crores) and 776 kilometres of co-axial cables (valued at Rs. 1.19 crores) in 1962-63.

In order to meet the increasing demand of the Posts and Telegraphs department for telecommunication cables, the Company has undertaken the expansion of the factory (1) to increase the capacity of dry-core cables to 2,000 miles a year; (2) to set up a unit for the manufacture of 25 million core yards of plastic insulated cables and wires; and (3) to

set up a wire drawing plant with a capacity of 1,500 tons a year.

A provision of Rs. 3.5 crores (with a foreign exchange component of Rs. 1.2 crores) has been made in the third plan. The foreign exchange expenditure is to be met from the U.K. credit. The capital cost of the expansion programme was estimated at Rs. 1.79 crores (with a foreign exchange component of Rs. 1.31 crores). In addition, the cost of ancillary services, township and provision for water supply is expected to cost Rs. 76 lakhs.

Apert from this, the Company took up the manufacture of small tube co-axial cables at an expected capital cost of Rs. 14 lakhs met out of its internal resources.

L.I.C.

Break-down of Investment

As on 31st March, 1963, the L.I.C.'s investments in India out of the life funds amounted to Rs. 623.64 crores. They were distributed as follows:

Particulars of Investments	(In lakhs of Rs.)	Percent
Public Sector:		
1. Central Government securities	249.17.78	
2. State Government securities	136.35.72	
3. Municipal securities	19.43.28	
4. Improvement Trust loans	1.21.31	
5. Port Trust loans	3.68.82	
6. Shares and bonds of statutory corporations	15.54.73	
7. Electricity Board debentures	11.03.19	
8. Road transport debentures	68.54	
9. Shares of State Bank and its subsidiaries	22.28	
10. New Howrah Bridge debentures	18.06	
11. Debentures, preference and ordinary shares of Government Companies	87.38	
12. Loans to or guaranteed by Government (including deposits)	40.56.53	
	478.97.74	76.8
Co-operative Sector:		
1. Debentures of co-operative land mortgage banks	10.85.97

REPORT OF THE AUDITORS

TO THE STOCKHOLDERS OF THE CHARTERED BANK

We have obtained all the information and explanations which we considered necessary for our audit. In our opinion proper books of account have been kept by the Bank and proper returns adequate for the purposes of our audit have been received from the branches, which have not been visited by us. The annexed balance sheet of The Chartered Bank is in agreement with the books and returns.

We have also examined the annexed group accounts, comprising the consolidated accounts of the Bank and its subsidiaries, other than Allahabad Bank Limited, and the separate accounts of Allahabad Bank Limited, with the audited accounts of those companies, certain of which have not been audited by us. Subject thereto in our opinion the said balance sheet and group accounts give, in the prescribed manner, the information required of banking companies by the Companies Act 1948, and, on the basis indicated in Note (4) on the balance sheet, give a true and fair view of the state of affairs as at 31st December 1963 and of the profit, ascertained as indicated in the profit and loss accounts, for the year ended on that date of the Bank and its subsidiaries, so far as concerns stockholders of The Chartered Bank.

DELOITTE, PLENDER, GRIFFITHS & CO.
W. A. BROWNE & CO.

Chartered Accountants.

London, 4th March, 1964.

tional items, introduced for the first time in East Germany.

Among the commodities for which deals were made were storage batteries, electric motors, air conditioners, surgical instruments and hospital equipment, chemicals, tinned food, cigarettes and alcoholic and non-alcoholic drinks. Linoleum, handicrafts, coir products and cotton and handloom textiles were also sold. More contracts are under negotiation in Leipzig and will cover duplicating machines, refrigerators, drilling machines, etcetera.

Indo-East German trade, which has been progressively expanding since 1959, amounted to about Rs. 9 crores each way during 1963. In 1964 it is likely to be of the order of Rs. 15.5 crores each way.

TRADE

Indo-Rumanian Agreement

Letters relating to the trade between Rumania and India during 1964 were signed in New Delhi during last week.

The two Governments have agreed to extend the validity of the list of commodities enclosed with the long-term trade and payments agreement signed in Bucharest on 30th November, 1962. It is estimated that the total volume of trade each way during 1964 will amount to Rs. 7 crores as against the actual trade of Rs. 4.8 crores both ways during 1963.

Rumania will import from India during 1964 cotton textiles, jute manufactures, chemical products and pharmaceuticals, rolled steel products, various engineering goods including tools, rubber products, tinned fish and salted fish, paints, pigments, varnishes, enamelware, etcetera, apart from traditional goods like coffee, pepper, vegetable oil, shellac and iron ore.

Rumania's supply to India will continue to include oil prospecting and drilling equipment, capital goods, earthmoving and construction equipment and petroleum products.

N.C.D.C.

Second Deep Shaft Project

Work on the Monidih deep-shaft mine project of the National Coal Development Corporation in the Dhanbad area is to be formally inaugurated on 17th March. This is the second deep-shaft mine of N.C.D.C. and when completed it will produce 2 million tonnes of coking coal a year. Like the first deep-shaft mine at Sudamdih, the Monidih project is also being implemented with Polish collaboration. Shaft sinking at Monidih was inaugurated by Poland's Vice-Minister of Mines and Power, Mr. K. Fabris, who is in India on a nine-day visit. The function was presided over by Mr. C. Subramaniam, Central Minister of Steel Mines and Heavy Engineering.

The estimated capital outlay on the Monidih project is Rs. 17.5 crores, with a foreign exchange component of Rs. 4.1 crores. The Polish Government has extended to India necessary credits and technical aid facilities for developing, in all, nine deep-shaft mines and two coal washeries.

IRON ORE

Export to Poland

Pending finalisation of the 1964 contract for the supply of iron ore to Poland, the latter has agreed to buy 100,000 tons of 63-65 grade iron ore during January 1964-April 1964. Contract for the supply of iron ore has been entered into between the Minerals and Metals Trading Corporation of India and Statexport of Poland. A delegation of the Cor-

poration is visiting Poland to finalise the 1964 contract for the supply of iron ore.

NEYVELI POWER PROJECT

Capacity to be Expanded

A contract was signed in New Delhi between the Neyveli Lignite Corporation and Technopromexport of Russia for the supply of equipment, machinery and materials worth Rs. 7.75 crores in order to expand the capacity of the Neyveli hermal station from 250 M.W. to 400 M.W. The contract also provides for Russian technical assistance for erecting and putting into operation the equipment delivered. It will be financed out of the rouble credit extended to India under the Indo-Soviet Agreement of February 1960.

The Neyveli Lignite Corporation, a Government of India undertaking, is at present putting up a 250 M.W. thermal power station comprising five units of 50 M.W. each. Of the five units four are already in operation and the fifth unit will be commissioned in a month or two. The Corporation had entered into a contract with Technopromexport in February 1963 for the preparation of a detailed project report and working drawings for the expansion of the installed thermal capacity from 250 M.W. to 400 M.W. This project report was received in August 1963 and accepted by the Corporation.

Under the contract signed during the week, the delivery of equipment for the sixth 50 M.W. unit will begin during the second quarter and be completed in the third quarter of 1964. The delivery of the seventh 100 M.W. unit, which will take the total capacity to 400 M.W. will begin in the first quarter of 1965 and be completed in the last quarter of that year. This delivery schedule will enable the sixth unit to be commissioned by March 1965 and the seventh unit by about the end of the third plan period. The erection will be done by Indian personnel under the technical supervision and guidance of Russian specialists. The contract also provides for the training of Indian personnel in Russian power enterprises.

The total cost of the expansion of the Neyveli thermal station, including the rupee expenditure to be incurred on civil works is likely to be Rs. 18 crores. With this expansion, the second stage of the Neyveli power plant will be completed. It is expected that ultimately, this power station will be expanded to a capacity of 600 M.W.

U.S. A.I.D. LOAN

Methanol Plant to be Set Up

A loan to the Government of India of \$7.8 million (Rs. 3.7 crores), most of which will be used to make India self-sufficient in methanol, has been announced by the U.S. Agency for International Development. Methanol is a key chemical used in the manufacture of plastics, drugs, resins, dyestuffs, and synthetic fibres. The methanol plant will be constructed by the Fertiliser Corporation of India Ltd adjacent to its Trombay fertiliser plant, which is expected to go into production early next year. The methanol plant will use gases which are the by-products of fertiliser production.

Earlier loans from the U.S.A. totalling Rs. 27.7 crores are meeting the entire cost of the fertiliser plant, which will produce 420,000 tons of nitrogenous fertilisers annually, making it India's largest producer. It is estimated that the production of this quantity fertiliser will increase annual food production by more than 1 million tons. A portion of the new loan will make possible the instal-

lation of ancillary facilities, such as a sulphuric acid plant and an argon gas recovery plant in fertiliser production.

The F.C.I. is negotiating a contract with a U.S. firm for design, fabrication, and erection of the methanol plant, which will have an annual production capacity of 33,000 tons. At present, India's requirements of this chemical are met from imports. The total annual demand is estimated at approximately 20,000 tons. The plant's production will result in a foreign exchange saving equivalent to Rs. 4 crores a year. Argon gas, which is used primarily for arc-welding, will be obtained as a by-product in the synthesis of ammonia, a principal ingredient of nitrogenous fertilisers. The argon gas recovery plant will have an annual production capacity of 116,820 cubic metres, and will be the second plant in India. It will achieve a annual foreign exchange saving of the equivalent of Rs. 25 lakhs.

U.S. ASSISTANCE

Wheat Gift for Rajasthan

The U.S. Government has gifted 20,000 tons of wheat to the Indian Government to relieve the distress of people affected by drought in Rajasthan. The Government of India, in consultation with the Government of Rajasthan, has decided to distribute the wheat in part payment to 100,000 workers engaged in building roads and water supply projects in the districts of Jodhpur, Bikaner, Barmer and Jaisalmer. The workers will receive 60 percent of their wages in wheat. It is expected that heads of families will receive about 2 kilograms of wheat a day. The U.S. wheat gift is sufficient to cover distribution at this rate for 20 weeks, that is, until the arrival of the monsoon. A total population of 500,000, including dependents of the workers, is expected to be benefited from this programme.

The four affected districts will be benefited eventually by the Rajasthan canal, which is under construction. The United States Government has indicated that it will grant a credit of Rs. 16 crores to meet a part of the foreign exchange costs of the Beas dam, which will ensure a perennial supply of water to the canal.

The U.S. Government has also recently agreed to allocate to India 300,000 U.S. bales of cotton worth about Rs. 22.3 crores under P.L. 480.

SHIPPING

Need for Assistance Stressed

A representation has been received by the Government of India from the Indian National Steamship Owners Association urging the need for financial assistance to develop shipping, but it does not say that shipowners cannot avail themselves of loans from the Life Insurance Corporation and the Industrial Finance Corporation because of the higher rates of interest. The Association has suggested that financial institutions like the Industrial Finance Corporation of India, Industrial Credit and Investment Corporation of India and the Life Insurance Corporation should be asked

(1) to consider applications for foreign exchange loans;

(2) to agree to give suitable guarantees for foreign exchange loans arranged by the shipping companies abroad, at reasonable commission; and

(3) to provide rupee loans against adequate security at reasonable rates of interest, and of the interest payable, about 3 percent a year should

CAPITAL, 19th March, 1964.

be borne by the Shipping Development Fund Committee.

There are at present about 2,500 mechanised boats operating in Indian waters. This number is expected to increase to about 5,000 by the end of the third plan period. A more ambitious programme is contemplated for the fourth plan. To train skippers, navigators, engineers and master-fishermen, a Central Operatives Institute has been started in Cochin. The State Governments are being requested to open and expand training centres for deck hands. Foreign collaboration is being sought for boat building and deep-sea fishing with large trawlers.

Indo-Polish Shipping Service

A delegation of the Polish Ocean Lines, the State shipping company of Poland, headed by Mr. H. Barau, managing director, held discussions here with Indian shipping interests.

The Indo-Polish shipping service has assumed considerable importance and the volume of trade carried by the shipping lines of the two countries participating in this shipping service has been continuously increasing. In 1960, this service accounted for the carriage of 76,000 tons of cargoes, and in 1963 the tonnage increased to over 300,000. It is expected that in 1964 there will be further increase in the tonnage.

BHADRAVATI PROJECT

Austrian Collaboration

Mysore Iron and Steel Ltd, Bhadravati, has concluded a technical collaboration agreement with Bohlers of Austria concerning its alloy and special steels project. West German credit has been arranged for the project and the supply of plant and equipment is being negotiated.

MICA

Export Ban Relaxed

The ban on export of mica scrap and mica waste which was imposed from 1st February, 1964 has been relaxed. Mica scrap and mica waste will now be licensed for export by the Export Trade Control authorities at the ports and will be subject to a minimum f.o.b. price of Rs. 200 a tonne.

LIGHT ELECTRICAL INDUSTRY

N.P.C. Team Suggestions

Important recommendations for stepping up the development and productivity of the light electrical industry in India have been made by a study team sponsored by the National Production Council after a tour of Japan, U.S.A. and West Germany. The highlights of the team's recommendations are: Planning ahead for 5 years to 10 years; rational organisation and systematic budgeting, accounting and cost control; improvement of plant layout and modernisation of plant; decentralisation of authority; setting standards and targets; and checking up performance; quality control from raw materials to finished products and packing; scientific inventory control, and reduction of inventories; sound selling organisation with technical personnel and trained salesmen; carrying out of research and use of better technology and methodology; selection, training and education of work force; talent spotting and training for higher responsibility; encouragement of new ideas and suggestions; improved communication and industrial relations; constant endeavour to improve product-designs on the basis of customers' need for quality, style and convenience; through standardisation, simplification and specialisation; and provision of after-sale service.

CAPITAL, 19th March, 1964.

Jute

PAKISTAN TO EXPLORE AFRICAN MARKETS

THE Pakistan Jute Mills Association proposes to send a five-man trade delegation to the African countries to explore the market prospects there. The team will also study the feasibility of setting up jute mills in those countries in collaboration with local entrepreneurs. The itinerary includes Egypt, the Sudan, Uganda, Kenya, Southern Rhodesia, Nigeria, Ghana, Liberia, Senegal, Morocco, the Congo and Sierra Leone. The P.J.M.A. feels that expanding agricultural and industrial production in those countries will stimulate the demand for packaging materials in general and for heavy-duty gunnies in particular, in relation to which the Pakistani industry enjoys several advantages.

The move has been sponsored by the mill magnates of East Pakistan who plan to double the production of gunnies by 1970. The industry has been fast raising its capacity for making hessian, carpet-backing cloth and sacking. Production of jute goods increased from 271,081 tons in 1961-62 to 298,161 tons in 1962-63, out of which sacking constituted as much as 203,873 tons. During the half-year ended December 1963 the output increased at a faster rate to 165,500 tons, including 112,272 tons of heavy goods. The corresponding figures for the half-year ended December 1962 were 148,418 tons and 102,075 tons. Exports of gunnies kept pace with the increase in production. They spurted from 119,783 tons for the half-year ended December 1962 to 125,253 tons for the corresponding period of 1963.

The move for setting up jute mills in African countries is induced by the Pakistani desire to secure an assured market for the surplus fibre, which she is in a position to spare. The delegation will try to establish direct trade contacts. The present practice of routing the bulk of the exports through business houses in the U.K. is reported to be unsuitable, since it entails additional costs in the form of handling and shipment charges and normal middlemen's margins. They raise the price of Pakistani gunnies to the African consumer.

Fall in Gunny Output

Working at the maximum level for 184 hours in February, against 216 hours in the previous month, mills reporting to the I.J.M.A. produced 99,200 tonnes of gunnies last month, compared with 101,600 tonnes in January. February was a short working month, but work was interrupted during January because of communal disturbances. The output of hessian declined from 42,600 tonnes to 41,900 tonnes, of sacking from 41,400 tonnes to 38,400 tonnes and of carpet-backing cloth from 8,200 tonnes to 7,600 tonnes. But the production of miscellaneous goods increased by 1,900 tonnes to 11,300 tonnes. The sharp decrease in the output of heavy goods is ascribed to the diversion of sacking looms for the manufacture of hessian and miscellaneous constructions due to the lean offtake of sacking. The mills worked for 184 hours in February 1963, producing a total of 94,400 tonnes of jute goods—40,700 tonnes of hessian, 39,800 tonnes of sacking, 5,300 tonnes of carpet-backing cloth and 8,600 tonnes of miscellaneous goods.

Hessian Exports Rise

With the export of 52,000 tons of hessian during January 1964, total shipments of the fabric from India

during the seven months ended January were 344,200 tons, against 317,600 tons for the corresponding period of 1962-63. While hessian supplies to Russia rose from 18,500 tons to 32,200 tons, exports to east European countries declined from 7,800 tons to 7,300 tons, to the U.K. from 20,700 tons to 18,100 tons and to west European countries from 21,800 tons to 17,900 tons. Hessian offtake by the American countries showed a general improvement. Supplies to the U.S.A. rose from 143,700 tons to 151,200 tons. While Africa's offtake fell from 17,400 tons to 16,700 tons, shipments to countries in the east increased. The Far East absorbed 4,100 tons (against 3,900 tons), Australia 10,800 tons (against 10,500 tons), New Zealand 3,200 tons (against 2,700 tons) and to other countries 4,900 tons (against 4,700 tons).

THE JUTE MARKETS

Manufactured Goods: Despite the continued lull in overseas offtake and unsatisfactory turnaround of steamers in Calcutta port due to the shortage of lighters and shed berths and the six-inch cut in drafts in the Hooghly, steady conditions prevailed in the Calcutta market during the past week. The firmness was induced by scattered shipper- and short-covering in ready goods and by reports of a decline in the output during February. The large closing stocks for February included substantial lots of held-over February-shipment cargo. So market circles did not seem to be worried over the heavy carryover. Mills were, however, keen on replenishing their order-books and came out as sellers in both hessian and sacking. The week's transactions included an Indian Government tender for about 2,500 bales of B Twills for March-April delivery and odd lots of hessian business with the U.S.A. There was also some covering against the previous week's hessian deal with Russia. In the futures market, bears were active in squaring up their open positions at the lower levels in both hessian and sacking for May. Bulls booked profits as and when opportunity arose. On Tuesday, activity came to a virtual standstill due to the general strike. The week closed on an optimistic note after a moderate turnover. The undertone was firm at the close.

Wednesday's quotations were as follows:

	Mar.	Apr.- June	July- Sept.	Oct.- Dec.
40in 7½oz.	34.40	34.50	34.55	34.40
40in. 8oz.	37.10	—	—	—
40in. 10oz.	45.75	46.10	46.35	46.15
B Twills	111.75	112.85	113.90	114.25
Corn sacks	116.00	116.00	116.25	116.50
Heavy Cees (Plain)	112.25	112.75	113.40	113.75
A Twills	135.00	135.00	135.50	136.50
Liverpools	128.25	128.00	128.00	128.00

Raw Jute: Firm conditions prevailed in the raw jute market during the past week. The steadiness stemmed from the gradual decline in the stocks of quality jute with holders and mills' preference for selected grades. Against the approximate arrivals of 40,000 maunds a day in terminal markets, arrivals of white jute were very small and sellers were cautious in offering these grades. A

hardening trend in upcountry markets pushed up prices in Calcutta as well. Mills purchased moderate lots of selected grades in the agencies, generally for long positions, against their March quota. But holders of lower-grade fibre and mesta were nervous in view of the difficulty in disposing of their stocks. They were inclined to discount prices a little from the official floor levels. But mills were not inclined to accept their offers. In the futures market, transactions in Upper Assam White Bottoms for March were closed from 11th March. The price firmed up towards the close due to brisk bear-covering and higher contango charges for the conversion of March contracts into June ones. The due-date transactions were completed in the usual course. In June contracts, prices hardened on renewed bear-covering but top levels were partially trimmed due to profit-taking. Turnover was moderate and the undertone steady at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms)		T.S.D. Minimum Prices	
	Current Rs.	A. Qtl.	Rs.	A. Qtl.

I.J.M.A. PRODUCTION FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total production of jute goods for February as follows:

Description	Quantity
1. Gunny bags	
(a) Hessian	5,275 tonnes (5,192 tons)
1,38.62 thousand metres	(1,51.6 lakh yds.)
1,16.3 lakh nos.	
(b) Sacking	37,287 tonnes (36,698 tons)
82,828 thousand metres	(9,05.8 lakh yds.)
4,01.3 lakh nos.	
2. Gunny cloth	
(a) Hessian	36,596 tonnes (36,018 tons)
12,52.43 thousand metres	(13,69.7 lakh yds.)
(b) Sacking	1,097 tonnes (1,080 tons)
23.27 thousand metres	(25.5 lakh yds.)
3. Carpet backing	
7,644 tonnes	(7,523 tons)
58.91 thousand metres	(64.4 lakh yds.)
4. Other manufactures	
11,314 tonnes	(11,135 tons)
5. Total production (all kinds)	
99,213 tonnes	(97,646 tons)

	Summary (000 metres and 00,000 yds.)		
	Feb. '64	Jan. '64	Feb. '63

Hours Worked 184.0 216.0* 184.0
* This does not take into account hours lost due to the recent disturbances.

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

THE U.K. JUTE MARKETS

FIBRE HOLDS STEADY

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was quiet but steady in Pakistan during the past week. Very little change took place in prices quoted here, and most shippers were offering at the previous levels. Demand from Dundee spinners was small, but steady business was transacted with some Continental countries.

So far this season, the U.K. has secured approximately 620,000 bales and it is expected that about another 100,000 bales will be bought from the present crop. As there are no indications that prices are likely to alter much from the present levels, buying of the above quantity will likely be spread over the next three months.

The quantity of spot jute available in Dundee is small, but this will increase during the next month. This should be attractive to spinners as they can assess the quality of the fibre before buying. The quality this season has been very good, and it is hoped that this will be maintained until fibre from the new crop becomes available.

Offers were still irregular with the lowest rates at £148 for Mill Firsts, at £111 10s for Mill Lightnings, at £96 10s for Mill Hearts and at £82 10s for Grade Hearts, c.i.f. U.K., for March-April shipment. Spot parcels were available at less than the above rates. Grade Tossa-2/3 ranged from £126 10s and Grade Tossa-4 from £107. Outport Tossa-2/3 was at £96 10s and Outport Tossa-4 at £85, March-April.

Cuttings remained firm and offers were rather scarce. S.N.C. was named at £59 and N.C. at £53. Mesta was steady and unchanged at £85 for A, £75 for B and at £71 for C, c.i.f. U.K., March-April.

The Siam jute market as quiet and no buying interest was shown. Super A was at £84, grade A at £77, grade B at £69 and grade C at £65 10s delivered mill Dundee for March-April shipment.

The Calcutta goods market was easier and a little buying interest was shown. Prices were at 69s. 2d. for 40in. 10oz. and at 52s. 1d. for 7½ oz a 100 yards f.o.b. Calcutta for March shipment, at 69s. 8d. and 52s. 1d. April-June and at 69s 10d and 52s 1d July/September. B Twills were at 170s 2d, 171s 10d and 173s 7d for the respective shipment periods.

Dundee spinners were busy and supplies of yarns were difficult to obtain for reasonably early delivery. However, although many spinners were asking higher prices, these had so far not been paid. Demand from the carpet trade was steady, and this was taking up a large portion of the output in Dundee.

The cloth position was rather mixed at present. Orders were

placed for sugar and pulp bags and this would maintain steady production in some factories. The heavy end of the trade was quieter and very few new orders were received for sackings and tarpaulins during the past week.

THE PAKISTANI JUTE MARKETS

ARRIVALS STILL POOR

(FROM OUR Dacca CORRESPONDENT)

THE smallness of arrivals at all up-country stations including northern territories, continued during the past week. It was most obvious in white. In some areas, where the

arrivals even included some Export Firsts, the jute was not of much interest since moisture was apparent. The prices for loose jute continued to increase slowly, since arrivals had reached a stage where demand was overtaking supply. In pucca bale prices, there was little or no change either in cuttings or long jute.

From overseas not much was reported, although during the second half of February, 251,688 bales were bought. The U.K. bought 72,000 bales, an interesting fact if one took into consideration the stocks of warehoused jute in Dundee. The Dundee spinners, it is generally considered, have a finger on the market pulse, and such a large purchase in what is normally the slack season, can only mean that they expect

higher prices. The fact that Belgium bought 35,000 and odd bales indicates that there are still cheap offers available. The U.S.A. has purchased nearly 30,000 bales, mostly cuttings. The rest were normal purchases.

Purchases this season to-date have exceeded last season's purchases. This can only mean that buyers find these prices interesting and they are keeping their warehouses fully stocked. There is, however, a limit to their finances, and unless the next season's crop is smaller, very low prices may be seen.

In the ports there is no change, but it is reported that ample vessels will be available in Chalna shortly to lift all the U.K. Continental cargo. The weather continues dry which is seasonal.

CAPITAL, 19th March, 1964.

Books

HANDBOOK ON BRITAIN

Britain: An Official Handbook. (Prepared by the Central Office of Information, London. Price 16s, pages 590.)

This is the fifteenth in the series of handbooks prepared every year by the Central Office of Information, London. These handbooks have always served as valuable reference material on various aspects of Britain—the administration, the national institutions and the economy of the country. The data are collected from Government and other authoritative sources, and the publication is about the only volume of its kind presenting within a brief compass factual material on such a wide range of subjects.

The 1964 edition covers developments up to September 1963, and seeks to provide answers to the questions which are asked about Britain in other countries. The book provides information on such diverse matters as the country and her people, the Government and political institutions, defence, social welfare, education, planning and housing, the churches, the national economy, industry, finance, agriculture, trade, labour and employment and the Press. The appendix gives useful material for intending visitors to the U.K. The value of the publication is greatly enhanced by the inclusion of six maps—one of which shows the motorways and trunk roads—and an extensive bibliography for the benefit of those who want to know more on the subjects dealt with.

The handbook is written in simple and lucid English, and, besides providing factual information and statistics, makes very interesting reading. It is illustrated by photographs and diagrams and is well got up.

DANDAKARANYA

Development of Dandakaranya. (Compiled and published by the National Council of Applied Economic Research, 11, Indraprastha Estate, New Delhi. Price Rs. 10, pages 148.)

Dandakaranya comprises the Baster district of Madhya Pradesh and Koraput and Kalahandi districts of Orissa. It was chosen by the Government of India as the most suitable area for the speedy resettlement of displaced persons from East Pakistan. The report attempts to examine the resources position and to spell out the development possibilities. A total investment of Rs. 650 crores is envisaged for the period up to 1976, the bulk of which may have to be in the public sector for exploiting the iron ore resources. The net output from the proposed development programme is expected to be about Rs. 170 crores a year by 1976 and the employment potential about 150,000. The area holds much promise, even though the organisational problems have to be solved.

CENSUS SURVEY

Census of India, 1961, Vol. XVI Part VI, Village Survey Monograph No. 3. By J. C. Sen Gupta. (Published by the Manager of Publications, Civil Lines, Delhi. Price Rs. 2.50, pages 35.)

This monograph on Ghatampur, Hooghly district, is the third in the series that are proposed to be published on the socio-economic aspects of life in the rural areas of West Bengal and meant to help in the better appreciation of figures published in the census tables. Mr. Sen Gupta wields a facile pen, and this makes for the enjoyable reading of a difficult subject.

CAPITAL, 19th March, 1964.

Commodity Markets

MORE FOREIGN BUYING OF CASHEW KERNEL

(FROM OUR SOUTH INDIAN CORRESPONDENT)

BRISK activity is reported from the cashew market. It is said that the U.S.A. and some other buyers of the Indian cashew kernel had bought fairly large quantities in recent weeks at prices varying between 56 and 57 U.S. cents a lb. According to one report, the U.S.A. had bought over 50,000 cases of 50 lbs each for immediate shipment. Russia is also reported to have bought in a big way and the business already concluded covers about 150,000 cases for shipment up to June. The trade is generally of the view that the current year had started well. If the present trend is maintained, there is every possibility of the performance of the cashew processing industry in 1964 excelling the previous year's record. In 1963, cashew kernel exports from India amounted to 53,400 tonnes worth Rs. 22 crores.

The industry earns valuable foreign exchange for the country. During the period 1956-61, cashew exports earned for India \$142.87 million, representing 11 percent of India's earnings through exports to the U.S.A. There was a time when 80 percent to 85 percent of India's cashew kernel production was going to that country. But in recent years, there has been a diversification in India's export trade in cashew kernel. In recent years, India's exports to countries other than the United States had moved up to nearly 45 percent. This has been achieved through larger exports and without reduction in the actual amount of India's sales to the U.S.A. While the U.S.A. continues to be the largest buyer, there has been a phenomenal increase in the offtake by new buyers led by Russia.

Raw nut values are also firm at present. The imported nut from Africa is currently selling at around Rs. 800 a ton, representing an increase of Rs. 50 over the prices ruling a couple of months ago. The indigenous crop has started reaching the market. The expectations in trade circles are that the current Indian crop would be a normal one. While the normal size of the Indian crop is placed at around 60,000 tons, the official estimates put it at over 90,000 tons. According to a Kerala Government estimate, the production of cashewnuts in India last year amounted to 90,600 tons. Kerala is the largest cashew producing State in India. Imports from Africa in 1963 amounted to 161,415 tons valued at Rs. 10 crores. The average price for imported nut in 1963 was Rs. 618 a ton, against Rs. 803 a ton in 1960. However, imports in 1960 amounted to only 68,461 tons valued at Rs. 5.49 crores.

PEPPER

Stabilising Prices

Pepper growers feel happy over the recent announcement by the Central Minister for International Trade, Mr. Manubhai Shah, that the Government of India proposes to stabilise the price structure of pepper during the current year. If the Minister is thinking in terms of extending the price support scheme to pepper, as was done in the case of such commodities as cardamom and lemongrass oil, it will be a boon for pepper cultivators who are mostly small peasant holders. More than 75 percent of the

pepper grown in India is exported, so the price structure of the commodity here is to a large extent influenced by the variations in the international price of pepper. For the past few years—barring some occasional exceptions—Indian pepper has been suffering on account of competition from such producing countries as Indonesia and Sarawak. It appears that the supply has been outstripping demand also. Consequently, prices had collapsed, and the growers have been complaining that prices above become unremunerative for them. It is said that if the prices continue to remain unremunerative, the interest of growers in pepper production would diminish, so India's traditional position as the largest supplier of the commodity to the world might be lost.

The Government has been taking some measures to improve the export prospect of Indian pepper. The introduction of quality control, pre-shipment inspection and the inclusion of pepper as an export commodity from India in the bilateral trade agreements entered into with different countries were some among them.

The annual production of pepper in India is between 25,000 and 30,000 tons, and the world requirements are placed at 35,000 tonnes. India exported 11,951 tonnes of black pepper valued at about Rs. 3.77 crores during the nine-month period April to December 1963, against 13,888 tonnes valued at about Rs. 3 crores during the same period a year ago, according to the Spices Export Promotion Council in Cochin. There was a steep decline in the offtake of Indian pepper by the U.S.A. during the period. But the gap in earnings from the U.S.A. was reduced by about 50 percent due to increased offtake by the east European countries.

Pepper prices looked up a little in India last week-end because of reports that the communist countries had bought about 800 tons of Indian pepper recently. Local buying support was also visible. The week-end quotation from Cochin was garbled ready Rs. 310, March Rs. 321 and May Rs. 328 a quintal.

COFFEE

Pool Receipts Rise

Larger receipts from the new crop is reported by the Coffee Board. According to the Board's latest report, pool receipts up to the end of February last were to the tune of 40,798 tonnes, against 32,263 tonnes in the corresponding period of the previous year. The 1963-64 crop is currently placed at 60,000 tonnes, against 55,000 tonnes in the previous season.

Sales for export out of the 1963-64 crop up to 29th February, 1964, amounted to 3,517 tonnes, made up of 3,500 tonnes of Plantation and 17 tonnes of Arabica Cherry. Tenders have been invited for another 2,107 tonnes. The prices obtained in the last export sale varied between Rs. 200 and Rs. 245 a 50 kilogram. Sale through open auctions for export coffee is to commence from 8th April with a sale in Mangalore. Open auctions were abandoned after a brief period of trial in 1962. The sale at present is through closed bids. But

planters prefer open auctions to closed bid sales.

INSTANT TEA

Production from Kerala Plant

The instant tea manufacturing plant of the Tata-Finlay, near Munnar on the High Ranges of Kerala, is expected to go into production in May. The entire output of the factory is earmarked for export. The rated capacity of the plant is 1.5 million lbs a year. If this quantity is exported, India will earn foreign exchange to the tune of Rs. 2 crores. The factory is the first of its kind in India and its contribution towards promoting Indian tea exports will be valuable because instant tea has a good market abroad.

Mincing Lane auction reports for 1963 show a further decline in the prices realised by south Indian teas in the London market. South India offered only 364,594 packages for sale through London in 1963, against 380,430 chests in 1962. The lower prices realised in London auctions had been a matter of concern for the producers in south India and other interests having some stake in the south Indian tea industry. They have started thinking whether it is worth while sending their teas to this market for sale. On the other hand, sales through Cochin showed a contrary trend in 1963. Although more tea was offered, they were sold for better prices than those realised in 1962. Sale through Cochin appears to be more advantageous for south Indian producers at least for the time being.

RUBBER

Home Output and Imports

The rubber products manufacturing industry is resisting the Central Government's proposal to link raw rubber imports with the offtake of synthetic rubber from the Bareilly plant. Imports of natural rubber amounted to 24,989 tonnes in 1963. Indigenous production was as high as 37,200 tonnes, giving a total of 62,189 tonnes of natural rubber, against a total consumption of 79,509 tonnes during the year. The share of natural rubber was almost 80 percent of the total consumption. The offtake of synthetic rubber was only 11,624 tonnes and the balance was covered with reclaimed rubber, the use of which increased to 7,676 tonnes during 1963.

TEA

Greater Autonomy for Tea Board Urged

(BY A SPECIAL CORRESPONDENT)

THE Estimates Committee of the Lok Sabha, it is reported, has stated that the Tea Board has failed to increase the acreage under tea. The Estimates Committee's report on the working of the Tea Board presented to Parliament on 13th March, accused the Board of failure to discharge its functions relating to the promotion of the industry's welfare and expansion. The Committee has suggested augmentation of the Board's resources and a greater degree of elasticity and autonomy in its working. It feels this to be necessary if the Board is to discharge its responsibilities.

Some of the failures listed by the Committee concern the preparation of a programme to increase tea acreage, survey of land for expansion, compilation of cost figures for different regions and encouragement to

small units of the industry by supplying them with technical know-how and organising them into co-operatives. In the absence of cost figures, the Committee has not understood how the Board satisfied itself about the economy, efficiency and competitive position of the industry, but has recommended "very early" action in this regard.

The Committee has devoted considerable attention to the problem of replantation of over-age gardens and has concluded that the progress of replantation has been unsatisfactory and that there is no systematic programme yet. It blames the Government for not accepting the Plantation Enquiry Commission's recommendation on the creation of a fund for this purpose, through contributions from the gardens themselves. The committee has observed that replanting should be done by the industry with its own resources.

Apart from the vagaries of nature, according to the Committee, the absence of a programme for replantation, extension of gardens and lack of irrigation facilities and fertilisers have been responsible for the industry's inability to achieve a better level of production. The committee criticised the "imaginary" production targets set for the industry. It has also asked the Board to supply high-yielding planting material to the growers at a reasonable cost.

While expressing surprise as to how the board in the absence of any statistics, satisfies itself that there has been improvement in the production of quality tea, the committee felt concerned at the declining trend of exports, particularly to the traditional markets. Even more disturbing, the report says, was the failure to project the image of Indian tea favourably in the importing countries. As a result, Ceylon has stolen such a march over India that all good tea is now considered as "Ceylon Tea". The Committee has reminded the board of its duty to help boost exports and find new markets through improved campaigns.

The Committee suggests that had the board taken timely measures to step up production, India's tea exports would not have suffered because of an increase in demand in the domestic market. It notes that no unified research on tea has so far been carried out, and the achievements of research have not been widely disseminated.

With reference to the above findings, the preparation of land to increase acreage under tea is not a business proposition as costs are too high. The industry cannot finance replanting or new planting alone as profitable working on many estates can no longer be counted on and the Government's financial proposals are not economic. Long ago, the industry pointed out that the official targets were "imaginary," the Government still sticks to its figures, but have any steps been taken to supply high yielding planting material to producers at reasonable cost?

The failure to emphasise the quality of Indian tea as against Ceylon, is already being considered, and the comment that measures to step up India's tea exports should not suffer from an increase in demand in the domestic market is timely. But has there been any marked increase in the internal offtake since 1961?

Up to Sale No. 37 held during the first week of March, 91.5 million kilograms had been sold from north India at Rs. 5.20 a kilogram. The relative figures last year were 95.03 million kilograms at Rs. 5.29 a kilogram. Dust sales at 36 million kilograms at Rs. 4.82 a kilogram compared with 35.5 million kilograms at Rs. 4.89 a kilogram. To-day's average price of Rs. 4.23 compares with last year's Rs. 4.59 a kilogram. The undernoted

figures show how prices have given way in recent weeks (Rs. a kilogram):

CURRENT QUOTATIONS COMPARED WITH
THOSE AT MID-NOVEMBER 1963
(Same types of tea)

Clean Plain Leaf	4.90 to 5.30	5 to 5.30
B. Pekoe Plain	4.10 to 4.30	4.50 to 4.60
Medium Assam C.T.C.	4.60 to 4.80	5.10 to 5.30
Best Assam C.T.C.	Not quoted	
Fannings Plain	4.10 to 4.30	4.50 to 4.80
Fannings Medium	4.50 to 4.70	5.10 to 5.50

Exports (in lbs) from 1st July, 1963 to end-February 1964 were 314,238,000 lbs compared with 318,983,000 lbs in 1962-63 and 319,456,000 lbs in 1961-62.

After two disappointing crop years, the north Indian tea season is expected to open early this year, as can be judged from a summary of crop and weather telegrams received from different districts for February 1964 by the Indian Tea Association.

COTTON TEXTILES

World Cotton Consumption Likely to Rise

WITH much scope left for standards of living to rise in many parts of the world, the long-term trend of total consumption of textile fibres must remain upwards for many years to come. There are only occasional setbacks to the increase in the total, but setbacks in one particular fibre or another are fairly frequent. In cotton, world consumption decreased in 1960-61 and the next two seasons, but the upward course is expected to be resumed this season. It seems unlikely, however, that consumption will increase sufficiently to prevent a further rise in the world carryover at the end of July.

According to statistics issued by the International Cotton Advisory Committee, total world consumption fell from 47.2 million bales in 1960-61 to 46.7 million bales in 1961-62 and

to 45.9 million bales last season. At first, the fall occurred mainly in the United States and communist China—shortage of supplies being the principal factor in the second-named country—with consumption maintained or even increased elsewhere. In 1961-62, there was a downward turn of the cotton textile trade cycle in western Europe and a further fall in consumption in China. Last season brought the unusual combination of simultaneous reductions in the United States, western Europe, and Japan, and for the first time for many years, total consumption in the non-communist countries moved perceptibly lower.

Now, however, the downward phase of the textile cycle has apparently run its course, the latest I.C.A.C. review says, and in many countries there are indications of a rise in the level of cotton textile activity. There is a slow but steady increase in consumption in the United States, which may become more strongly pronounced before the summer, while the setback has been less severe in Canada than in most other Western

countries. For several months, the trend in the U.K. has been slightly upwards, and the present state of mill order books suggests that this will persist. There is a favourable movement in France, and though some other Continental countries—particularly Italy and Western Germany, where the encroachments of the man-made fibres on cotton seem, as in the United States, to be causing much anxiety—report less satisfactory conditions.

Western Europe as a whole seems likely to return a higher total than last season's.

Expanding textile capacity in Africa is likely to maintain the increase in consumption in that continent, while in Asia, India is expected to establish a new high record if ample supplies can be obtained, and, although expansion in Pakistan appears to have flattened out, Japan should reverse its recent downward trend with a market growth in its domestic market and some recovery in textile exports. Consumption in South America varies very little from one season to another.

Quality begins with components—believe Avery, leading manufacturers of weighing equipment for over 230 years. In its modern works at Calcutta, quality-conscious engineers scrutinize every vital component, follow advanced methods of production, to make Avery scales accurate. And accurate weighing means better profits, more goodwill. Ensure these by using Avery scales.

JUTE INDUSTRY PREPARES FOR THE CHALLENGE AHEAD

NOT often before in its long and chequered history has the Indian jute industry enjoyed two satisfactory years in succession. In terms of profitability, 1962 was probably better than 1963, but the latter was notable for two new records. First, at 1.3 million tons, the industry's production was the highest since its birth over a century ago. Secondly, at 900,000 tons its exports were the biggest in 15 years. The happy achievement was facilitated by the coincidence of a number of factors. The first and most important was that the demand for jute goods rose in consonance with the growth of world trade and industry. The second was that the supply of raw jute was plentiful throughout, if not always cheap. And the third was that the industry became more enterprising and aggressive in its marketing attitudes; if there had been a tendency once, in boom years and in the comforting era of semi-monopoly, to wait for buyers to queue up outside its salesmen's doors, there is not the slightest doubt that the happy illusions born of India's former dominance in the world jute goods trade are now firmly and irrevocably gone. Indeed, the feature of the speech delivered by Mr. J. V. Jardine Paterson, at the annual general meeting of the Indian Jute Mills Association in Calcutta last Saturday, is that it reflects a marked swerve to progressive ideas; it is a firm and down-to-earth expression of the industry's determination to win customers by offering them steadily improving standards of service and quality.

Relative prosperity of the sort the Indian jute industry has enjoyed over the past two years is productive sometimes only of cosy, motionless optimism. The Calcutta mills know, however, that while the optimism may be justified, the cosiness and immobility are not. More dangerous than ever before is the reality of growing competition from Pakistan. That country has a rapidly expanding jute industry, which has hitherto concentrated on the manufacture of sacking. The result of the expansion has been that it has captured a large proportion of the sacking markets overseas which India used to supply. India's sacking exports, correspondingly, have fallen to practically all the major markets, with the possible exception of Cuba. With the fall in exports, India has had to cut back the proportion of sacking in her total production of jute goods—a cut-back which would have been sharper but for the chance that the demand for sacking within India has been increasing.

55—The clue to Pakistan's success lies in two main elements. One is that the raw jute her mills get is not only better in quality but also cheaper in price. The second is that she operates an export bonus voucher scheme—a terminological conundrum which amounts to saying that she heavily subsidises her jute goods exports. As Mr. Jardine Paterson indicated, once the Indian and Pakistani mills have added up their plus and minus signs, the net result is that the Pakistani ones end up with a cost advantage of somewhere between Rs. 350 and Rs. 400 a ton. The Indian Government, delirious with joy over its subsidies for exporting such trifles as sugar, appears to be relatively un-

concerned about the handicaps facing what is far and away its biggest export industry. The question of helping neutralise the Pakistani industry's cost advantage is being considered. But, as the I.J.M.A. chairman said, "so far nothing definite has emerged". Which, perhaps, is a polite way of saying that the pushing of inter-ministerial files still takes precedence over the pushing of gunny exports.

The discomfiting truth is that New Delhi, instead of basking under the astrological influence of Mr. Micawber, and waiting for something to turn up, may soon find that it has to take positive action—and quickly. The Indian mills have so far been lucky that, while their sacking exports have declined, their exports of hessian and of “other goods” (especially carpet backing) have more than made up for the fall. But their luck has been due in no small measure to the happy accident whereby the Pakistani industry does not produce much of these latter commodities. As Mr. Jardine Paterson pointed out, however, the Pakistani mills are steadily acquiring the experience and the ability to increase their hessian production. They also have firm plans to increase their output of carpet-backing—an expanding market from which the Indian industry has profited well during the past year, but in which a surplus may soon be developing. The strong blast of Pakistani competition which has so far been felt mainly in the sacking markets overseas will before long be felt in hessian and carpet-backing too. The blast of competition might be stronger for the latter two commodities: they are, after all, finer fabrics requiring better quality jute, of which Pakistan has an adequate supply but India has not.

Against this background, serious rethinking has become necessary not only on the question of an export subsidy, but also on several aspects of India's raw jute policy. In purely quantitative terms, the country has achieved self-sufficiency in fibre, for which credit is due partly to the Government of India and partly to its sworn enemy, the weather. The supply of good-quality jute, however, is still inadequate. For the time being, therefore, it will have to be imported (so will cuttings) ; it is important that the imports should be prompt and liberal enough to take advantage of market conditions. The longer-term problem of growing better jute within India then remains. One way of tackling it is to increase the supply of better seeds, fertilisers, pesticides and water—particularly retting water. An equally important way, however, is to modify the minimum price scheme for raw jute. As Mr. Jardine Paterson pointed out, in spite of reservations the industry has done all it could to make the present scheme a success. The fact nevertheless remains that, because of the scheme, the Indian industry has been paying, on average, Rs. 6 a maund more for its raw material than its powerful Pakistani competitor. Furthermore, jute standards in India have been debased ; as a result, for the same classification of fibre, the mills now have to pay Re. 1 or Rs. 2 more than they would have done some years ago.

The poor quality of jute, as Mr. Jardine Paterson pointed out, tends to raise production costs.

because additional processing is required and the percentage of wastage is higher. What is worse, it lowers the quality of jute goods—at a time when buyers are becoming more discriminating and the demand for the better quality fabrics is increasing. An essential part of the programme for improving the quality of jute grown in India, therefore, would be to reduce substantially the minimum prices fixed for the lower grades, and in the process to widen the differentials between them and the higher grades. The Government has botched the north Indian sugar economy by succumbing to the pressure of the farm lobby and refusing to widen adequately the price differentials for the various qualities of sugarcane. It makes little sense to repeat the performance by botching the jute economy through a price policy that stuffs the mills up with a huge surplus of inferior, unusable fibre.

Many of these problems—evolving a realistic pricing policy for raw jute, and devising a subsidy to offset the Pakistani export bonus voucher scheme—are familiar ones, even if the relative prosperity of the past two years has enabled the Government to postpone positive remedies for the time being. But a less familiar, and wholly wel-

RECESSION IN REFRACTORIES

THE Indian refractory industry is facing a recession since the supply of its products is in excess of the demand. The difficulties of the industry have increased because the prices of refractories have changed little since 1960, while production costs have risen substantially. It is thought that by the end of 1966 the industry will have a total installed capacity of 1.6 million tons a year, but the demand is not expected to be more than 1 million tons even by 1970-71. In fact, the demand has tended to decline in recent years. The trend is understandable in view of the change in the pattern of offtake. The steel industry is about the biggest consumer of refractories. With the advances in steel technology, economies have been effected in the use of refractories. For instance, the introduction of the basic open-hearth furnace has reduced the consumption of silica. Similarly the development of the L.D. process and other processes using oxygen have brought about changes in the pattern of demand, leading to economies in the use of refractories. Although the output of steel may rise to 18 million tons by 1970-71, something like 10.5 million tons may be produced by the L.D. process. It is almost certain that the existing capacity for refractories will be sufficient to meet the entire requirements in the future. By the end of this year, the installed capacity of the refractory industry should amount to 960,000 tons. Foreign exchange has already been sanctioned for installing further capacity during the next couple of years. So there is little doubt that the problem of excess capacity will continue to worry the industry for many years to come.

Mr. N. S. Gilani has taken a realistic view of the outlook for the industry in his chairman's address at the annual general meeting of the Indian Refractory Makers Association, held in Calcutta last Friday. He has mentioned that the cost-price squeeze affecting the industry is not likely to be relieved until the Bokaro steel plant comes into existence. (A fuller version of his speech is printed on a later page in this issue of *Capital*.) So it is time to concentrate attention on diversifying the activities of the industry. It is no use wasting resources and energy on expansion because the existing capacity will be enough to meet all the requirements in the foreseeable future. The Government should not encourage any large-scale expansion of the refractory industry on the basis of the projected steel targets. It should not be forgotten that a steel plant usually takes five years or seven years to go into production. But the output of refractories can be expanded substantially within a short time without incurring much capital expenditure.

The importance of the refractory industry in sustaining the industrial base cannot be exaggerated since the supply of adequate refractory materials is essential for all high-temperature furnaces. Mr. Gilani stated that "refractory technology embraces a wide field including pure oxide for jet

come, feature of Mr. Jardine Paterson's address this year is its account of the ways in which the industry is gearing itself to meet the requirements of its customers more adequately. More attention is being paid to cost studies, technological improvements, quality control, product development, market research and sales promotion. There is a hint that more attention might even be paid to that ghastly necessity called public relations. A quality control and inspection scheme has been launched; new measures are being devised for promptly settling complaints from buyers; and work continues on the problem of drawing up standard specifications. The abolition of the Working Time Agreement will no doubt inspire to greater effort those mills whose achievements on these counts have so far been less than wholly admirable. The picture of the industry conveyed by Mr. Jardine Paterson's address is thus, on the whole, an encouraging one. It shows the Calcutta mills, collectively, as an enterprise which is vigorous and progressive in its outlook; and which, given a measure of realism in Government policy, has every intention of winning its share of the slowly expanding market for jute goods the world has to offer.

propulsion, nitrides and carbides for critical service conditions and a range of specialities to serve nuclear plants and space ships now literally reaching out for the moon and beyond." Although the use of refractories for more sophisticated purposes is remote as far as this country is concerned, the refractory manufacturers have to keep abreast of the changing technology in the iron, steel, chemical and other industries, and must diversify their production. In view of the encouraging working of the refractory industry in recent years, it is hoped that the Government will give the former all support for future development. The domestic producers should be able to manufacture a wide range of products if they are granted foreign exchange to import balancing equipment.

The importance of research in the field of refractories has become more urgent in view of the change in the demand pattern. The demand for

A BAD YEAR FOR CURRENCIES

THE recent recurrence of rumours that the deutschemark will be revalued again presages more trouble in the currency markets in 1964 than they experienced in 1963. It seems that this year attention will be focussed mainly on the West German currency, not, as last year, on the French franc, nor, as in some bad years, on the British pound, nor, as in many years, good and bad, on the U.S. dollar. Speculation in favour of the deutschemark persisted for some months after the value of the West German and Dutch currencies was modestly increased by 5 percent early in 1961. Speculators imagined that a charge of 5 percent could solve no basic problem, so they anticipated a further revaluation. But gradually the situation changed: inflationary tendencies in West Germany caused some anxious questioning at home whether the value of the deutschemark should have been raised at all. Last year the French franc obtruded as the currency that attracted too much foreign money. But inflation gained strength in France, and the tide turned again in favour of the deutschemark.

The movements of currencies have become more complex in recent years, and a development that arouses no more than intermittent comment in one situation may cause serious disturbance in another. The French franc exerted its magnetic pull when sterling was firm and anxiety concerning the U.S. payments deficit was being gradually relaxed. This comparatively favourable situation continues but for how long will it do so? The U.K. payments account is slowly deteriorating. President Johnson, like President Kennedy before him, has accorded high priority to the dollar problem, but the combined efforts of the two Presidents have not yet solved it. Both

non-clay refractories has steadily increased throughout the world and the trend is also noticeable in this country. The wider use of chemically-bonded bricks is welcome in so far as it reduces the need for large capital outlays and helps manufacturers to increase their production from existing facilities. There are enough natural resources in this country to expand the production of high-alumina bricks which are capable of giving longer service.

Mr. Gilani takes a fairly optimistic view of the prospects for exporting refractories. If the Government includes these products in its trade agreements with other countries and publicises them in trade journals, exports should be promoted. The domestic industry is capable of manufacturing refractories in accordance with international standards. The Government should, therefore, assist the industry in its export drive. An adequate supply of good-quality raw materials to the industry needs to be ensured. It is hoped that the Geological Survey of India will take vigorous steps to locate areas which may provide quality raw materials. The domestic industry has, for the time being, been handicapped by the shortage of high-alumina clays. It has, therefore, been obliged to rely greatly on bauxite. But the supply of good-quality bauxite is short. Although rich bauxite deposits have been located in Saurashtra, they cannot be used economically since most of the refractory plants are situated in eastern India. It is, therefore, hoped that the railway authorities will offer concessional freight rates to transport bauxite from Saurashtra. The existing mining rules and regulations have not always helped manufacturers to exploit raw material deposits. Whenever good properties are located, they tend to pass into the hands of speculators. The Government should take steps to rectify the situation.

Attention has been drawn to the need for improving the productivity of the refractory industry. The managers of the existing plants need to take a progressive view and develop their own in-plant training facilities to stimulate productivity. It is hoped that workers too will take a realistic view of introducing rationalisation. Ceramic technology has not yet received the attention it deserves. The Government could encourage engineers and scientists to take greater interest in this branch of technology.

Britain and the U.S.A. have entered a period of economic expansion, and experience has shown that economic expansion, in the intermediate phase, strains a country's currency. So a magnetic pull of funds into West Germany this year could cause much more trouble than did the attraction of France last year.

It should be observed, however, that the strengthening of the deutschemark and the weakening of the French franc are to some extent complementary developments. West German exporters have been particularly successful in both France and Italy since inflation pushed up prices in those countries, and a considerable proportion of the funds that have flowed into West Germany on trade account has come from those countries. The dollar and sterling are not necessarily improved in the movement unless the idea of revaluation of the deutschemark gets a firm hold in the world's money centres. However, at present, apparently, not much of the capital that is moving into West Germany is speculative: the German economy looks healthy for investment. And not all of the export surplus that is swelling the West German reserves is attributable to trade with Common Market partners. The techniques of international currency regulation that have been developed since the revaluation of the deutschemark in 1961 are probably capable of halting a speculative movement such as the one which partly caused that revaluation: and the Germans themselves are aware that the inflation that has erupted most obviously, in France and Italy, can spread to other parts of the European Economic Community. In any case, on trade account, a financial surplus is the counterpart of a physical deficit—less imports than exports—which is inflationary.

The problem of the deutschemark may substantially solve itself.

A more serious possibility—it would be irresponsible at this stage to describe it as a danger—is that sterling will relapse into its familiar malaise. London bankers are not deeply impressed by the authorities' confidence (real or simulated) that the effects of accelerated economic activity will be different this time. They note that, while the U.K.'s visible trade figures for the whole of 1963 were healthy enough, because in the first half-year exports were more buoyant than imports, the trends of the second half-year showed a decidedly unfavourable divergence between exports and imports. The timing of this development, a year or so after the start of an expansionary period, has uncomfortable precedents. If these precedents are relevant to the next phase one must expect a rapid deterioration in the U.K.'s balance of payments. So far as the currency is concerned, the situation is complicated by the Government's declared intention to let expansion proceed. (The present Government may be replaced before the situation becomes critical, but an alternative Labour Government, too, would be committed to

continuous expansion.) London bankers reserve judgment on the Government's resolve to steer an unrestricted economy through financial difficulties: when the difficulties arise the authorities' reactions will be watched with more than usual interest.

The British authorities emphasise, however, that their new policy on the use of external aid represents a new and important factor. Assistance from the International Monetary Fund will be requested not as an emergency measure but almost as a matter of routine; and the U.S.A.-U.K. currency exchanges and the central bankers' arrangement for "neutralising" surplus currencies will be strong reinforcements. Nonetheless, it should be recognised that a situation where the two slow-growing developed nations are simultaneously growing comparatively fast presents new problems. For it is not simply by coincidence that the nations managing the reserve currencies have been slowing down in the past. The obligations of managing reserve currencies are necessarily restrictive. The process of spreading these obligations over a wider international range has perhaps not yet gone far enough.

Current News and Comment

Capital Issue Consents

The Government has released the statistics relating to capital issues for the nine months ended September 1963. But they are not useful as a guide for judging the present trend in capital issues. Although the trend up to the end of September 1963 was fairly encouraging, it has taken a turn for the worse during recent weeks. The deterioration has been accentuated since the presentation of the Central Budget. The financial proposals of Mr. T. T. Krishnamachari have greatly impaired investment confidence. Apart from the extra tax burden imposed by the Budget, the psychological effects of the dividend tax of 7½ percent and the levy of the capital gains tax on bonus shares have been adverse. The harmful effects are evident since companies like Elgin Mills and T. Maneklal have already taken steps to cancel their bonus issues. It is feared that many companies will now be restrained from issuing bonus shares.

Although the Finance Minister has hinted at the possibility of modifying the capital gains tax on bonus shares, which are issued by capitalising premiums on shares, the relief will be far too meagre. The existing tax of 12½ percent on bonus shares is not only a heavy burden but is also iniquitous in principle. Since these shares are issued by capitalising reserves, which have already borne the brunt of the full company tax, there is no justification for further penalising the issue of bonus shares. Since reserves of companies are built because shareholders agree to forgo the payment of bigger dividends, the present fiscal system which penalises the issue of bonus shares should be regarded as a disincentive to corporate savings.

Consents by the Controller of Capital Issues during the nine months ended September 1963, amounted to Rs. 456.97 crores, compared with Rs. 298.62 crores for the corresponding period of 1962. The rise has been attributed to the liberal official attitude towards applications for capital issues. Nearly 88.1 percent of the amount of capital issues applied for have been sanctioned. For the corresponding period of 1962, the amount consented to formed only 54 percent of the amount applied for. It has been stated that consent was refused only when the applicant did not get an industrial licence or when a company had too big a loan or insufficient reserves.

Of the total consents during January-September 1963, more than 59 percent were accounted for by Government companies. Consents to non-Government companies amounted to Rs. 186.31 crores, compared with Rs. 156.70 crores for the corresponding period of 1962. About 84 percent of the consents related to industries. So there was a slight fall in the relative share of industries,

compared with the corresponding period of 1962. Non-industrial companies accounted for 14.7 percent of the consented amounts, against 7.5 percent for the corresponding period of 1962. The share of public companies against private companies showed a decline. Public companies accounted for 30.9 percent of the total consents, compared with 50.6 percent in the corresponding period of 1962.

The relative share of consents of initial and further issues declined from three-fourths to two-thirds, although they continued to be predominant. Loans which accounted for only 6.5 percent in the corresponding period of 1962, amounted to 31.8 percent during January-September 1963. The rising share of loans is understandable because the glamour for equities has greatly diminished. Consents for bonus issues declined from Rs. 12.25 crores in January-September 1962 to Rs. 6.93 crores during January-September 1963 due to the levy of the tax on these shares. Although most of the consents were given for ordinary shares, their position declined from 77.6 percent to 63.9 percent. But consents for preference shares improved from 1.7 percent to 1.9 percent. The trend is due to the drift from equities and because of the bigger dividends given on preference shares. Among the total consents, iron and steel accounted for Rs. 173.20 crores, water transport Rs. 56.33 crores, miscellaneous machinery Rs. 35.39 crores, electrical machinery Rs. 15.92 crores, crude petroleum and natural gas Rs. 1.67 crores, chemicals and fertilisers Rs. 13.60 crores, manufacture of cement Rs. 11.02 crores, cotton textile Rs. 10.27 crores, industrial chemicals Rs. 8.69 crores and motor-vehicles Rs. 8.42 crores.

West Bengal Business Convention

The first general session of the West Bengal Business Convention was held in 1959 in Calcutta, and after five years, the second was held last week. Mr. K. K. Birla in his presidential speech said that the problem of growing unemployment in the State and of the increasing concentration of people in Greater Calcutta, could not be solved unless there were more facilities for younger people to come up in industry and trade in different parts of the State. The aim of the Convention is to bring organised industry to play a leading part in this effort. During the past five years, the Convention, through a permanent organisation it has set up for the purpose, has been trying to do this, firstly, by organising small traders and industrialists in mofussil areas, secondly, by helping in the establishment of new enterprises there through technical and other assistance and thirdly, by bringing both big and small business men together on a common plat-

form to exchange ideas on how larger industries may help smaller concerns. There is a big field for developing modern small-scale industries as feeders and ancillaries to the larger ones. Mr. Birla said that the Convention had started some work in this direction.

Prospects for trade and industry in the State necessarily depend upon the speed with which West Bengal's economic problems are solved. Mr. Birla pointed out that while the population had increased by 33½ percent during the past decade, the State had lost its top position in the matter of new company registrations. It is, in fact, now lagging behind Madras and Maharashtra. The three main industries—jute, tea and engineering—are facing many difficulties. Pakistani competition is posing a big threat to the jute mills; the tea industry's production has not only fallen but its share in world exports has also somewhat declined. There is substantial idle capacity in the engineering units which are unable to get their raw materials in time and in adequate quantities. Food shortage has become chronic, and power and transport bottlenecks have been hindering the growth of industries, particularly in the districts where the network of roads is most inadequate and power supply is not only short but expensive. The port of Calcutta needs to be modernised and handling facilities have to be improved. These are problems which the State Government cannot solve by its own efforts. A generous measure of help from the Centre is necessary. Mr. Birla pressed West Bengal's case for further Central aid by pointing out that the State occupies an important place in the economy of the country and its strategic importance has increased in view of the current developments.

The Deputy Chairman of the Planning Commission, Mr. Asoka Mehta, who inaugurated the Convention, commended its objectives in so far as they helped the process of "deconcentration of industry and ownership", but he observed that unlike the southern and western parts of the country, he saw no growth centres in West Bengal. Calcutta still continued to be the focus of all development. Diffusion of industrial power was necessary to bring about a balanced development of the country, and industrial development had to be linked to the "totality of economic growth" which the country's plans aimed at. Mr. Mehta explained the strategy of planning to justify the present emphasis on heavy industries. Because of Chinese hostility and the current tension around India's borders due to the understanding between Pakistan and China for the common purpose of creating difficulties for this country, the burden of sacrifice must increase. Mr. Mehta visualised an annual fresh taxation of around Rs. 150 crores for the next few plans at least.

The Chief Minister of West Bengal, Mr. P. C. Sen, addressed the Convention on the concluding day. He maintained that the conditions in the State were favourable for further industrial development and felt an urgent probe was necessary to ascertain the causes as to why the economy was not moving forward faster, when this had become the supreme need due to the great influx of refugees in recent months. The Convention passed a number of resolutions one of which has urged the rationalisation of the existing sales tax laws and other regulations such as the Shops and Establishments Act which particularly affect smaller concerns.

Budget Will Hamper Growth

In his speech at the annual general meeting of the Bombay Chamber of Commerce and Industry last Saturday, the incoming president, Mr. P. L. Tandon, doubted if the Central Budget would accelerate economic growth. In a growth-orientated economy, the Budget should not be looked upon merely as a fiscal instrument, but as a positive promoter of growth. The Central Budget, however, has been half-hearted in its approach, much of its beneficial proposals having been negated or watered down by other measures. According to Mr. Tandon, India is still about the most heavily taxed country in the world, and it is worth considering whether incentives and relaxation will not achieve more for the economy than the ever-increasing fiscal levies. In particular, he drew

attention to four damaging aspects of the Budget. First, the tax on inter-corporate dividends, which still continues in a diluted form, discourages the diversification of activity and the development of management resources. If corporate bodies were encouraged to undertake new activities through separate companies, economic growth would be much faster. Secondly, the tax on unrealised capital gains in relation to bonus shares will hit a large number of genuine investors. An investor may not sell his bonus shares for many years, and when he does sell the price may well be lower than that at which he was taxed. Mr. Tandon suggested that tax-free sales of "old" shares after a bonus issue could be prevented by operating the L.F.O. (last in, first out) method, whereby whatever shares are sold will be deemed to have been sold out of the latest issue or purchase. The sale of part holding after a bonus issue will thus be treated as a sale of bonus shares, and so the gain will be taxable. Thirdly, the new surtax too is a levy on the efficient use of capital, when efficiency should be encouraged in a capital-scarce country rather than penalised. Lastly, the tax on dividends is no way to stimulate growth; the more constructive method, according to Mr. Tandon, would be to allow a tax rebate on profits which are ploughed back.

The outgoing president of the Chamber, Mr. Akbar Hydari, referred to the problems of Bombay city. It is the industrial and commercial metropolis of western India, and its port handles about 40 percent of the country's exports and imports. But the dock facilities have not kept pace with requirements. With the assistance of the International Development Association, a scheme has been drawn up to increase the number of berths for dry cargo ships, to extend Ballard Pier, to acquire more tugs and harbour craft and to formulate a master plan for providing other facilities. Mr. Hydari emphasised the need for cutting down delays suffered by vessels, which had become chronic over the past two years and might increase as the dock expansion scheme puts certain berths out of use. Mr. Hydari also called attention to the other problems of Bombay and suggested the setting up of a high-powered co-ordinating authority for evolving an integrated plan. The Chief Minister of Maharashtra, Mr. V. P. Naik, in his reply disclosed that a reconstituted committee under the chairmanship of the State's Minister for Industry would soon be asked to look into the city's problems.

N.C.A.E.R. Reviews Foreign Aid

A recent review of foreign aid for the period 1962-64 conducted by the National Council of Applied Economic Research shows some interesting trends. According to it, India's uncovered requirement of foreign exchange during the remaining period of the third plan is likely to amount to Rs. 1,600 crores, including Rs. 650 crores for maintenance imports. The achievements of the third plan have been below targets in almost all sectors. The Council points out that there will be a further shortfall in achievements during the third plan period and delay in implementing the projects at the beginning of the fourth plan if the aid-giving countries are unable or unwilling to pledge the required amount of foreign aid for India. Although at the recent two-day Paris session, the 12 aid-giving countries did not indicate the amount of aid they would provide to India during 1964-65—this would be done at the forthcoming meeting of the Aid-India Club in Washington in May—the chances for increased aid, especially for the amount of untied aid, are sufficiently bright.

The really disquieting trend indicated by the review is that although India's national income in the last year of the third plan, at 1960-61 prices, could be expected to total Rs. 17,200 crores, the rate of growth in national income over the third plan period would be of the order of 21 percent, against the plan target of 30 percent. A still more disquieting fact is that, due to the population explosion, the increase in the per capita income—from Rs. 327 to Rs. 350—would be only of the order of 7 percent, against the plan target of 17 percent. As far as the industrial sector is concerned, the rate of growth would be less than the plan target of 11 percent due mainly to the short supply of raw materials, power and coal and the shortage of foreign exchange for maintenance as well as capital goods imports. But with some effort, it

should be easy to accelerate the rate of industrial growth during the fourth plan period and to bridge the gap left in the third plan.

The really difficult problem is to accelerate the rate of agricultural growth which, on average, has been of the order of 4 percent a year since the end of the second plan, against the third plan target of 10 percent. The poor progress of the agricultural sector has been due to the halting manner in which farm development has been planned. A more determined pursuit of the objective during the fourth plan period should show better results. The N.C.A.E.R. has estimated that by 1971, the minimum nutritional requirements of a population of 555 million would be 136 million tons of foodgrains. But with the best of efforts it may not be possible to achieve this level of production by the end of the fourth plan period. So the conclusion emerges that although every possible effort should be made to increase foodgrain production during the remaining period of the third plan and during the fourth plan period, the country should arrange to import a sufficient quantity of foodgrains from abroad even though it may mean the expenditure of valuable foreign exchange resources.

Cotton Output Far Behind Target

The 89th session of the Indian Central Cotton Committee, held in Bombay on 21st March, was not very different from the earlier ones. It is about the same sad story that the Committee has to tell every time. Despite Central assistance for the package programmes and the useful research done by the Committee, cotton production continues to lag far behind the plan targets which themselves are not ambitious. India has the largest area under cotton in the world, but its yield is about the lowest—hardly one-quarter or one-fifth of the yield obtaining in some of the important cotton-producing countries like the U.S.A., the U.A.R. and Russia. Production during the third year of the current plan is estimated around 5.8 million bales which is nearly 400,000 bales less than the target set for the year.

In view of the halting progress during the first three years of the current plan, the Central Minister for Food and Agriculture, Mr. Swaran Singh, was understandably pessimistic when he stated in his inaugural speech at the I.C.C.C. meeting that there was little prospect of fulfilling the third plan target of 7 million bales, "unless extraordinary and unrelenting efforts are made by all concerned." A study of cotton production levels in different regions of the country shows wide fluctuations in the Vidarbha tract of Maharashtra, the Malwa and Nimar tracts of Madhya Pradesh and Rayalaseema area of Andhra Pradesh. The Minister urged the Committee to study these areas closely in order to find out which of the factors—the rainfall, the pattern of its spread during the cotton growing season, soil types and their moisture retentivity, soil drainage, etcetera—were responsible for causing the wide fluctuations. One should have thought that after 13 years of planning, the authorities were at least fully seized of the nature of the problem, even if they did not have the administrative ability to remove the obstacles to production. It does little credit to the authorities concerned that the package programmes have not been executed in the desired manner despite the fact that several facilities in the form of additional staff, provision of subsidies on seeds and other input requisites had been offered. Full use of these benefits had not been made by all the States, Mr. Swaran Singh said.

The point is often made that an upward revision of floor and ceiling prices—particularly the ceilings—would go a long way in promoting cotton production. The Central Minister for Food and Agriculture reminded the growers' representatives that Indian cotton prices were already quoted substantially above world parity, which in turn has seriously undermined the competitive strength of the Indian cotton textile industry in export markets. The Minister said that adequate incentives to cotton growers could be provided even on the basis of the existing basic maxima and minima if the floor and ceiling prices were determined with reference to technical considerations such as spinning capacity and other quality factors rather than basing them on mere staple length
