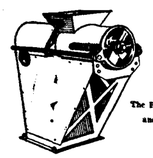
Rotorvanes GIVE YOU A POWERFUL MECHANIZED GRIP ON tea

Growing good tea isn't enough. You have to show quality after manufacture—and at an economical cost! The key of course lies in mechanising to a continuous system of manufacture.

THE McTEAR ROTORVANE CONTINUOUS TEA ROLLER gives you the stronger liquors and briskness that buyers are now looking for. Add to this negligible expenditure on spares and small power consumption and you have the machine which you have long been waiting for.



The Rotorvane will help you make good tea.

Rotorvanes are offered in two sizes. The Automatic Initial Feed is shown with the larger machine.

The Portable Intermediate feed conveys leaf to another Rotorvane or to a Ball Breaker.

The Rotorvane Ball Breaker and Aerating Machine.

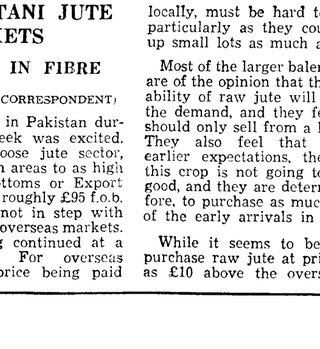
THE PAKISTANI JUTE MARKETS

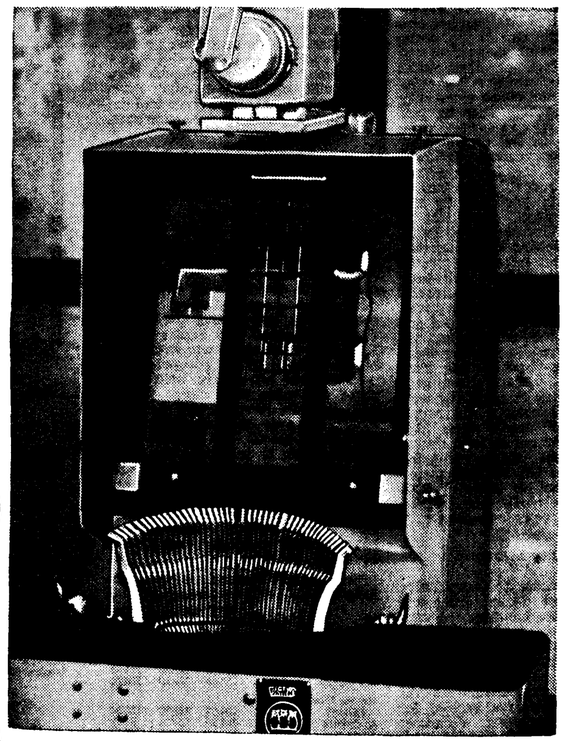
SHARP RISE IN FIBRE

(FROM OUR DACCA CORRESPONDENT)

THE fibre market in Pakistan during the last week was excited. Especially in the loose jute sector, prices rose in certain areas to as high as Rs. 33 for C Bottoms or Export Lightnings, which is roughly £95 f.o.b. —a price certainly not in step with the current trend in overseas markets. Despite this, buying continued at a tremendous pace. For overseas buyers, this high price being paid locally, must be hard to understand particularly as they could still pick up small lots as much as £10 lower.



Most of the larger balers in Pakistan are of the opinion that the total availability of raw jute will be less than the demand, and they feel that they should only sell from a long position. They also feel that contrary to earlier expectations, the quality of this crop is not going to be so very good, and they are determined, therefore, to purchase as much as possible of the early arrivals in July-August.



While it seems to be illogical to purchase raw jute at prices as much as £10 above the overseas market, this is not so ridiculous if one takes into consideration the belief that even Jat export lightnings may be scarce later in the season. Even now, more than 50 percent export hearts are appearing in all purchases. A fair percentage of S.M.R. is also coming in, particularly in the expensive area where the good jat jute is available.

In the pucca bale sector, there were some transactions in old crop Export Hearts, Output Tossa 2/3s and 4s, but the centre of attraction were cuttings, which were quoted in the February-March position as high as £58 f.o.b. Since there was a reluctance to deal in current crop long jute pucca bales, there was a fair amount of trading in kutcha bales of X Bottoms and C Bottoms. These X Bottoms or Balers' Bottoms, as they are called locally, correspond to a low uncut Export Heart. At present, there are buyers at Rs. 30 a maund and no sellers, and Rs. 30 a maund is approximately £18 a ton above minimum, which gives some idea of the state of the local market. Most balers were refusing to sell and were sitting out.

Registrations during the first half of July were higher than actually reported. They totalled 305,522 bales. These registrations are high and the second half of July will probably see a repetition of the trend.

"I check every type of the Typewriter on this machine

"It's the 3-Dimensional TYPE ALIGNING PROJECTOR —simultaneously projecting three images of a type on three adjacent screens. These images reflect three faces of the type (top, side and front) which must conform with pre-drawn markings on the screens. This enables me to check the projected type image for accuracy in type-soldering and bar-alignment. Faults, if any, are immediately corrected and types perfectly positioned to ensure smooth flow and light touch."

Modern precision equipment like the 3-D Type Aligning Projector and Braja Mohan Dan who works on it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

Over the years people in India have come to expect the standards set by REMINGTON—the highly responsive touch, light positive shift, smooth carriage action, and superior styling and finish—which make them so essential to distinctive correspondence.

Remington Rand of India Limited

COMPANY AND PUBLIC NOTICES

THE NUDDEA MILLS COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the Register of Members and Share Transfer Books of the Company will remain closed from 13th to 26th August, 1964, both days inclusive.

By Order of the Board,
MACNEILL & BARRY, LIMITED,
A. N. MITRA,
Secretary,
Managing Agents.

2, Fairlie Place,
Calcutta-1, 3rd August, 1964.

LODNA COLLIERY CO. (1920) LIMITED

NOTICE is hereby given that the Forty-third Annual General Meeting of Lodna Colliery Co. (1920), Limited, will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Monday, the 31st day of August, 1964, at 12-30 p.m. for the following purposes :—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1963.
2. To consider and declare a dividend in respect of the year ended 31st December, 1963.
3. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

4. To appoint a Director in place of Mr. C. N. Rodewald who retires from the Board and is eligible for re-appointment subject to compliance with Section 261 of the Companies Act, 1956, and in this connection to consider and, if thought fit, to adopt the following Resolution which will be proposed as a Special Resolution :—

"That Mr. C. N. Rodewald, a Director of Turner, Morrison & Co. Ltd., the Managing Agents of the Company, and as such Director, an associate, officer and employee thereof, be and is hereby re-appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation".

(Special notice has been received by the Company to move this resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956. The reasons which make the resolution necessary as set out in the special notice are (1) Turner, Morrison & Co. Ltd., are the Managing Agents of the Company and Mr. C. N. Rodewald a Director of the Managing Agents, is an associate, officer and employee thereof in terms of Section 261 (1) (f) of the Act, (2) the Managing Agents also being a body corporate holding the office or place of profit as aforesaid Mr. C. N. Rodewald is an officer and employee thereof in terms of Section 261 (1) (d) of the Act.

The Share Transfer Register of the Company will be closed from the 22nd to 31st August, 1964, both days inclusive.

Warrants for the dividend, when declared, will be forwarded in accordance with the registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration. An Explanatory Statement is annexed to the convening notice issued to members of the Company.

By Order of the Board,
For and on behalf of
LODNA COLLIERY CO. (1920) LIMITED,
D. M. JAFFRAY,
Director.

Calcutta, 3rd August, 1964

Note : A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not be a member of the Company, to attend and vote in his stead.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

THE Directors have today decided to recommend to the shareholders at the Annual General Meeting, to be held on 24th September, 1964, the payment of a final dividend for the year ended 31st March, 1964, of 2½% (subject to tax) which, together with the two interim dividends of 2% (subject to tax), makes a total of 6½% for the year (1963 8%).

The net profit for the year is Rs. 99,25,376 (1963 Rs. 1,80,23,592) after deducting all charges and expenses and after providing for taxation amounting to Rs. 1,87,45,944 (1963 Rs. 2,62,37,010).

The Directors also intend to declare a first interim dividend of 2½% (subject to tax) in respect of the year ending 31st March, 1965 (1964 2%).

The Company's business has been adversely affected by taxation measures in each of the last two Budgets and the Directors have considered it prudent to recommend a reduction in the final dividend. Prospects for the current year, however, warrant the declaration of a first interim dividend of 2½%.

The final dividend, if approved, and the interim dividend will be payable on 30th September, 1964 to the shareholders whose names appear on the register on 24th September, 1964. The share transfer books of the Company will be closed from 5th to 24th September, 1964, both days inclusive, and transfers received in order at the office of the Company's Registrars (Jardine Henderson Limited, 4 Clive Row, Calcutta 1) up to 4th September, 1964 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
P. J. RICKETTS,
Assistant Secretary.

Virginia House,
37 Chowringhee,
Calcutta.
3rd August, 1964.

DIMINISHING PROSPECTS OF THE KENNEDY ROUND

It has not been possible for some time to rank particularly highly the prospects of success in the "Kennedy Round" of the G.A.T.T. The history of the proceedings so far has been one of persistent retreat from the original "across-the board" principle for cutting tariffs as envisaged by President Kennedy. The primacy of the political considerations involved was established at an early stage, and these, together with the complications concerning trade in agricultural products and disparties in existing tariffs on industrial imports, to say nothing of "non-tariff" barriers to trade, have all along imparted an air of improbability to the deliberations which have now been in train, off and on, for over a year. Until recently, however, there has been some slight hope that progress of a kind might be achieved provided agreement could be reached on the "disparities" issue, the key factor here being accepted as the attitude of France. Now, and with the negotiating teams seemingly bogged down over the disparity complications, the onus of modest success or complete failure may be switching to the shoulders of West Germany. Whether or not this is welcome to the French—or even perhaps planned for by them—is of little interest to those countries, including the underdeveloped ones, who were hoping for at least some progress at Geneva.

It is difficult to decide to what extent Dr. Erhard's refusal to agree on an agricultural policy for the Common Market is due simply to election expediency or to the desire for greater Atlantic unity. Certainly West Germany is moving towards closer political and military links with the United States, and away from those established with France during the Adenauer era. The logical extension of such a policy is closer economic ties as well, probably involving Britain, but more certainly excluding the French. The West German Chancellor must know well enough that the existing structure of the European Community is not yet strong enough to survive any major rupture between his country and France, so the presumption must be that his actions will be directed to fall well short of provoking an outright split. Nevertheless, with the French insisting on a satisfactory agricultural policy as the price for conceding progress in the Kennedy Round, and perhaps of remaining in the Common Market as well, and with the foreign policy of the two countries drawing steadily further apart, it would be surprising if Chancellor Erhard were able to calculate the situation as finely as the circumstances obviously require. The best that can be hoped for would seem to be a protracted holdup, at least until the picture clears, in the various activities in which France and West Germany are at present co-operating. The worst is a speedy end to them all.

Ruling out for the time being the possibility that West Germany will go to the length of inviting the break-up of the European Community, the consequences of its present, more positive, policies are still likely to be felt in the numerous international fields of economic co-operation. The prospect is not a pleasant one. An unconscious inkling of this was probably behind some of the desperation shown at the U. N. Conference on Trade and Development held recently in Geneva. Certainly much of the exasperation currently felt by the underdeveloped members of the G.A.T.T. with the usefulness of this organisation to them can be traced to a realisation of the disproportionate extent to which its progress depends on the political attitudes of a few major participants. If the long post-war period of Franco-West German honeymoon is now drawing to an end, it is possible to predict considerable disruption in, and even slower progress for, existing international aid and trade bodies.

The position is further complicated by the apparent swing to the right which is now taking place in the United States. This might, or might not, fit in with any plans Dr. Erhard has for closer ties with his leading ally. Probably not, because at least so far the Chancellor appears to be seeking something in the nature of President Kennedy's "grand design" rather than a new right-wing link-up. It is doubtful whether Dr. Erhard would personally go along with a Goldwater policy of greater militancy towards the East; the chief danger is that he might not be able to help himself once he has weakened his links with France and formed a special relationship with the U.S.A. What Dr. Erhard must remember, if he is in fact seeking closer transatlantic ties, is that President Kennedy is dead, that the spirit of Atlantic unity which he sponsored is weakening, and that the risks of being drawn into a new ultra-nationalistic alliance against communism are growing. At present West Germany appears to be perched on a razor's edge, on either side of which the trend is towards greater nationalism, both political and economic. Whichever way she falls in pursuit of the international liberalism for which Dr. Erhard stands, she seems likely to be disappointed. This is true even if President Johnson is returned to the White House in November; the impact of Goldwaterism is bound to be to push any Administration, even a Democratic one, towards the right. All of which bodes ill for rapid progress in any of the existing ventures in liberal international economics.

There is, of course, some chance that Goldwaterism may persuade Chancellor Erhard that Dr. Adenauer was right after all, and that close links with France are more reliable than with the United States, and therefore worth paying a high price for. Such price, at least in the economic field, must include agreement on a Common Market agricultural policy, in which case France would not be quite so strongly tempted to wreck the Kennedy Round. But all this is hypothetical, and it might now be too late to reverse the trend of events, especially when the agricultural vote probably holds the key to the next election in West Germany. The Chancellor's hands may be more tied than he knows as he weighs the advantages of revamping the policies of the Adenauer era. Developments in the U.S.A. could by now have predestined his course of action for him.

A complete breakdown at Geneva would have serious consequences for the West. Without

necessarily diminishing the flow of international trade, it would certainly impose a sharp brake on its much-desired expansion. For the underdeveloped countries it would be a vindication, a justification of the despair which has been accumulating in recent years on the subject of the G.A.T.T. It is unlikely that the Action Programme could be preserved and proceeded with if the Kennedy Round were to collapse. So the entire burden of expanding trading opportunities for the poorer countries would fall on the shoulders of the U.N. Conference and its continuing organisation. Little has been heard of this since the Conference officially closed in June, and certainly nothing has been done to further the policies laid down. A swing to the right in the U.S.A. would probably have a direct impact on these too, along with international development schemes generally. Which all adds to the responsibilities that will fall on the new organisation and its secretary-general. Such considerations did not creep into the recent deliberations in Geneva—an interesting reflection on the rapidity with which the Goldwater star has risen. But they now have to be taken fully into account in formulating a concerted approach to the problems discussed at the Conference. The West German attitude towards aid and trade programmes has never been overwhelmingly helpful, so it is fortunate that Dr. Erhard's new departures do not appear to threaten any serious change for the worse.

The negotiators in the Kennedy Round are due to have their proposals for the first stage of tariff cutting ready by November, although no action is expected on them before next May at the earliest. It is not yet clear when serious discussion will begin on the Action Programme, or if in fact it will take place at all unless some success is recorded in other matters. There is considerable scope for prevarication on the part of any one of the main negotiators who might feel inclined to resort to it, and that without actually shouldering responsibility for an outright break. Accordingly, it will be difficult to judge what the position is from time to time; the main guide will probably remain the state of the relationship between the Common Market and the U.S.A. with the West Germans holding the key. This is far from satisfactory for the underdeveloped members of the G.A.T.T., and it will be the task of the new continuing organisation of the U.N. Conference to make the fact clear. The secretariat suggested at the Commonwealth Prime Ministers' Conference in London recently might also be useful in this respect, provided it comes into being in the first place.

The most likely consequence of a breakdown of the Kennedy Round, and perhaps the most distressing, would be the end of the G.A.T.T. as a truly international organisation. It was possible to predict a short time ago that the main purpose of the Kennedy Round was to prevent the Common Market from growing into a high-tariff, inward-looking monolithic trading bloc. With the future so uncertain it is not easy at this stage to say that this is now the way the Common Market is heading. The dissolution of the European Community altogether seems a more likely possibility if the present trends continue. What can be said with some certainty is that circumstances are changing now with increasing rapidity, and that although the Kennedy Round would appear to be an almost inevitable casualty, there is a good chance that it may not be the only one among the present selection of international bodies and organisations dedicated to increasing world trade and assisting the flow of development aid. It is perhaps fortunate at this juncture that the primary goods exports of the developing countries should, on the whole, be buoyant.

NEW CLOTH CONTROL MOVE

IT is quite some time since the Cotton Textiles Consultative Board recommended that up to 40 percent of the cloth supplied by mills should be subject to price and production control. Uncertainty continues about how exactly the scheme of partial control is going to be implemented. The Government is still busy finalising the details, but the delay is quite understandable. The Board itself had indicated that it would take at least three months before the partial control scheme could be enforced. The industry, however, seems considerably perturbed by the latest reports from New Delhi that the earlier proposal to select a cross-section of varieties has been rejected, and that the Government has decided to control fully the four most essential items, namely, *dhotis, sarees,* shirtings and long cloth, which between them constitute nearly 43 percent of the total mill cloth production. The official view appears to be that a restricted group of varieties will ensure stricter control and will enable the Government to direct the mills to increase production of that variety which is found scarce at a given time. Since the production of the major items of everyday use is proposed to be controlled and subjected to official directives, the scope for mills and the trade to derive an undue advantage from the decontrol of 60 percent of production will be greatly reduced. The selection of a cross-section consisting of some 150 varieties as proposed earlier, would have proved a blessing for the industry as the cross-section might have included many varieties which are not very essential, and mills eventually would have been in a position to charge higher prices for essential varieties in the non-controlled category. It remains to be seen if the revised scheme will succeed in keeping cloth prices under check. Much will, of course, depend on how carefully the scheme is implemented.

The cotton mill industry seems considerably agitated over the new official move. In his address to the recent annual meeting of the Indian Cotton Mills Federation, the chairman, Mr. Ramnath A. Podar, has warned that any attempt by the Government to clamp controls on isolated categories of cotton textiles will not only result in loss of production, but also create an unbalance between demand and supply to the detriment of the consumer. Mr. Podar says that the scheme, to which the representatives of the industry agreed to give a trial, visualised control being extended to a cross-section of the entire production, so that on the one hand, the consumer gets all types of his requirements from the pool of controlled varieties and on the other, all units of the industry contribute the same proportion of their production for the civilian market. But the Government is now thinking of bringing under control all *dhoties, sarees,* shirtings and long cloth, and since these items bear a different percentage ranging from nil to 100 to the total production of each mill, such a scheme of control would not only be inquitous to the mills, but would also adversely affect production. When the production patterns vary from one unit to another, it is well-nigh impossible to devise a scheme of partial control which would affect all the units in the industry to about the same extent. The new scheme proposed by the Government has much to commend itself. But there is considerable substance in the other point made by Mr. Podar that if the new proposals have been framed with the idea of eliminating the simultaneous supply of controlled and non-controlled *dhotis, sarees,* shirting and long cloth, the scheme will not fulfil this purpose, as these very items are also being produced by the decentralised sector which will remain outside the partial control scheme.

Much else of what the Federation chief has stated in his address seems all too familiar. He says that the textile situation would have been very different if the weaving capacity of the mill sector had not been frozen at the level of 200,000 looms for nearly 25 years. Additions of modern equipment which normal growth would have brought about would have made mills more competitive which would, in turn, have helped exports. The mill industry has been made to suffer from stagnation on the weaving side in the name of encouragement for the handlooms, whereas the real beneficiary has been the powerloom sector. Pointing out that there were indications that the Powerloom Enquiry Committee was thinking in terms of a continued freeze on the mill sector, Mr. Podar has cautioned that if instead of strengthening the mill sector, the Government adopted any such policy it would lead to a further worsening of the textile situation, both from the point of view of internal supply and exports. Referring to the permission recently given to mills to increase their spindles and looms by a certain percentage, he says that if the Government is really serious it cannot overlook the need for allowing machinery imports because the indigenous production of textile machinery is far short of the industry's requirements.

As for man-made fibres, Mr. Podar conceded that they had a bright future and a vast potential in their own right, but he added that it would be wrong to force the pace of their expansion with the idea that they could substitute cotton. He said that the production of cotton textiles would increasingly tend to concentrate in countries growing their own cotton and that international trade in cotton textiles would also be dominated by such countries. He felt convinced that with the largest area in the world devoted to cotton, India had a bright future in the international markets as a major cotton-producing country. Of course, it would all depend on how far cotton production is stepped up.

INFORMING THE SHAREHOLDERS

ALTHOUGH considerable improvement in corporate management has taken place in recent years, some malpractices still continue to afflict the working of many joint stock companies. No doubt the Companies Act contains comprehensive measures to check malpractices, but it is now being realised that it is not possible to eliminate them altogether by mere legislation. The Company Law Board has, therefore, been asked to undertake research for suggesting further reforms in company law. Judging from the experience of advanced countries, it appears that it is not possible to safeguard the interests of shareholders by mere legislation unless they are themselves more vigilant about their rights.

In countries like the U.K., the U.S.A. and Europe, good management has been ensured because companies have taken active steps to keep their shareholders informed about all developments. This has usually been done by issuing periodical reports. Company managements in India have done little so far to acquaint the shareholders about the latest developments relating to their companies. There has also been little public relations to promote close liaison between management and shareholders. The majority of Indian shareholders do not take any interest in their companies; they are satisfied as long as they get good dividends.

The address delivered by Mr. T. T. Krishnamachari, Central Finance Minister, at the concluding session of the conference on the promotion of research in corporate management and finance, held recently in New Delhi, has stimulated much interest. The Minister said that the Government was considering amending the Companies Act for compelling companies to provide more exhaustive information to shareholders about their financial operations. The balance-sheet of a company, Mr. Krishnamachari said, should be a true indicator of its financial position. But the drawing up of a correct balance-sheet, by itself, will not be of much help unless companies acquaint their shareholders with all developments from time to time. At present, most of the companies merely issue annual reports and accounts which are rather cryptic. Furthermore, shareholders are kept in the dark in the period between the issue of one annual report and another. Only a few companies have adopted the practice of issuing monthly or quarterly reports relating to production. In the absence of adequate information, cases are not rare when inside information of a company is used by interested persons to manipulate share prices. It is, therefore, time that active steps were taken to persuade companies to issue in advance reports relating to developments, so that nobody can take advantage of such information to the detriment of other shareholders. It may be difficult to compel companies to do so by means of mere legislation. It is, therefore, necessary to develop a healthy convention relating to company management by persuasion, public relations and mobilising public opinion.

The Central Finance Minister has also hinted at the possibility of placing further restrictions on private limited companies in order to remove malpractices. The need to restrain abuses is not questioned But it should be borne in mind that the main purpose of a private limited company is to allow small business men to enjoy the advantage of limited liability without much bother and expenses. Since a private company is not allowed to raise capital from the public, it is meant to be managed with capital subscriptions from only a few individuals. The question of safeguarding the public interest does not arise in the case of such a company. A private company combines the ownership of capital with management. Since these companies are usually formed by persons with limited resources, their working should be freed from the restrictions to which public limited companies are subjected. Many private companies cannot afford to maintain the elaborate staff required to comply with the provisions of the Companies Act. Although there is some logic in placing restrictions on the size of these companies, there is no point in trying to hamstring them by more elaborate legislation.

Current News and Comment

Selling Sugar in a Falling Market

There has been a sharp drop in the international price of sugar. It has declined to £30 from £103 a tonne since the beginning of 1964. The earlier fears of a big shortage in world sugar markets have not materialised. The prospect of a bumper beet crop in Europe, combined with increased production in several countries, has brought world supplies in close balance with demand. In any case, there is no likelihood of any great shortage developing in the near future, and, therefore, the price is likely to drop rather than harden. From India's point of view, the decline is not welcome. Even at the higher level of world prices, exports from this country have had to be made at a loss. As domestic production costs are far too high, any export can only be made at much below the production cost.

The loss on exports is being subsidised. The export target for 1963-64 has been cut to 300,000 tonnes from 350,000 tonnes due to the fact that production during the 1963-64 season will not be more than 2.6 million tonnes, against the original target of 3.3 million tonnes. But the Government is keen to boost sugar exports in the 1964-65 season. Considering the recession in the international price and high production costs, it will not be worth while to push up exports. This apart, the internal supply has fallen far too short of requirements. As a result, the consumers have had to go without sufficient supplies of sugar and have had to pay exorbitant prices.

The decision of the Centre to appoint a commission of enquiry for investigating the price and the distribution system for the sugar season commencing on 1st November, 1964, has not created much impression. Since the problems of the sugar industry have been fully discussed and are well known, it is difficult to understand how the proposed enquiry will serve any useful purpose. What is needed is to produce more sugar, and not to initiate further discussion and debate.

Whether production during 1964-65 will increase according to expectations, depends on the measures which are being adopted. It is time to encourage the production of more and better cane. Considering that the price of cane has now been raised to a fairly remunerative level, there is no reason why the cultivators should not feel encouraged to produce more cane and of the right variety. The yield can be increased, if suitable irrigation facilities are provided. The application of modern fertilisers can be of great help in improving the yield from each acre, which is very poor in this country at the moment. The quality also needs to be improved. It is unfortunate that the State Governments concerned have not given to cane cultivation the attention which it deserves. Although they have been collecting large amounts of money through various imposts for cane development, only small sums have so far been spent for the purpose.

The shortfall in sugar production during the past couple of years has been due mainly to inadequate cane supplies. These have been largely diverted to the manufacture of *gur* and *khandsari.* Unless active measures are taken to stop the diversion, it will be difficult to ensure an adequate supply of cane to sugar factories, particularly to those in northern India. In the meantime, business in sugar shares has dropped to a trickle, and buyers are difficult to attract even after discounting present prices. This lack of interest is solely due to the poor outlook for the industry. During 1963-64, the bulk of sugar companies, particularly in northern India, are expected to show poor results. Apart from the fact that their production costs are high, their profits have suffered due to lower output which in turn has raised unit costs. Under the present circumstances, most of the sugar companies will find it difficult to announce a good dividend. The price of sugar is already high enough. So there is virtually no scope for raising it further. What is necessary is to reduce production costs by improving the operational efficiency of sugar factories. The bulk of the equipment is old. Unless the sugar mills are modernised and their processes rationalised, their working will not improve. There are also many small factories which need to be amalgamated into larger and viable units.

Tea Production and Export Prospects

In his speech at the annual general meeting of the Tea Association of India in Calcutta last week, Mr. A. S. Bam, chairman of the Tea Board, said that production had been lower in both 1962 and 1963 because of unfavourable weather conditions in north-eastern India which accounts for over 75 percent of the total tea output in the country. Production in north-eastern India during the current year is expected to exceed 600 million lbs. Unfortunately, the output in south India up to the end of June this year has been lower than that during the same period of last year by 18 million lbs. This has been due to the late arrival of monsoon as a result of which extensive areas under tea had to be left unplucked. Conditions in the south have now improved and by the end of the year the shortfall may be made up to some extent. Mr. Bam said that production in south India during the current year might be more or less of the same quantity as in 1963. This will mean that total production in India during the current year will be around 800 million lbs. The sub-group on tea appointed by the Planning Commission revised the original figures for production and export from 900 million lbs and 610 million lbs to 830 million lbs and 530 million lbs, respectively. The tea industry should make all possible efforts to achieve these targets. Exports from India recorded a steady increase from 426 million lbs in 1960 to 455 million lbs in 1961, 472 million lbs in 1962 and 493 million lbs in 1963. During the past two years, exports have, therefore, increased at an average rate of 20 million lbs a year in spite of lower production. Considering this trend, Mr. Bam said, it was expected that exports during 1965 would be at least 530 million lbs.

The Tea Board chairman said that the different loan schemes run by the Tea Board had come in for comment on grounds of high rate of interest and rigorous terms and conditions. Continuous efforts are, however, being made by the Board to make these schemes as attractive as possible. The rate of interest on the plantation finance loans and the hire-purchase loans have been revised so that the effective rate for both types of loans is 6 percent. Mr. Bam assured planters that the Tea Board would try to liberalise the conditions further. A fresh scheme of Rs. 1 crore has been sanctioned by the Government of India for providing loans under the plantation finance scheme for the sinking of tubewells, construction of bunds and other minor irrigation works. An individual tea estate may obtain for this purpose a loan of up to Rs. 1 lakh. Referring to promotional measures, Mr. Bam said that the Board had persuaded France to set up a Tea Council. As for the European Economic Community, the prospects for increased consumption of tea are brighter now following the suspension of import tariff from 1st January, 1964.

In his address, Mr. S. R. Daga, president of the Association, welcomed the revision of the production and export targets for the third plan. But he urged the Government to grant bigger tax concessions to the industry. In the last Central Budget, rebates of corporation tax equivalent to 10 percent of the income tax plus supertax and 20 percent on surtax were allowed to the industry. But as only 40 percent of the industry's profits is taxable to Central income tax, and the balance of 60 percent is taxed as agricultural income by the States, the relief has been reduced to only 4 percent on income tax plus supertax and 8 percent on surtax. Mr Daga suggested that the rate of relief should be increased to 25 percent on income tax plus supertax and 50 percent on surtax to enable the industry to enjoy similar relief as other specified industries. Furthermore, after the abolition of the export duty on tea, the burden of excise duty has been made heavy. He urged the Government to take urgent steps to arrange for the refund of excise duty at least on teas exported.

The Importance of Neyveli Power

The completion of the first stage of the Neyveli thermal power project opens a new chapter in the history of energy generation in the south. With a total generating capacity of 250 MW to begin with, this will be the first major source of thermal power in the State of Madras, but that is not its only significance. Its importance lies in the fact that it will be able to supply power, using local lignite, throughout the year unhampered by seasonal factors, which affect the generation of hydro electricity leading to regular power cuts for industry. The power situation in Madras during last summer, for instance, was difficult, so difficult in fact that there was a complete stoppage for a week or so of supplies for industries on high-tension lines. It is, therefore, a wise decision to raise the capacity of the Neyveli power plant to 400 MW during the third plan itself. In the fourth plan period, the capacity will be further raised to 600 MW, which will make it one of the largest power stations in India, next only to the projected Santaldih super thermal power plant in West Bengal with a capacity of 1,000 MW. But if the capacity could be raised to 1,000 MW as is the latest reported move, then it would equal the West Bengal project in generation capacity.

As more than one authority have estimated, the energy requirements of Madras will go up to 2,000 MW in the fourth plan. (Incidentally, this is also the anticipated level of demand for power in West Bengal in the same period.) According to the tentative schemes, drawn up by the Madras Government, power generation in the State will be augmented by the installation of two thermal power stations, one in Ennore with an installed capacity of 300 MW and another in Tuticorin with a capacity of 100 MW; through an atomic power station in Kalpakkam with a capacity of at least 400 MW; by another 150 MW from sundry sources, and through expansion of the Neyveli plant to 600 MW. All these add up to about 1,500 MW. It will, therefore, be necessary to raise the capacity of the last-named to the level of 1,000 MW, for which the State Government has already made a move.

As is well-known, the Neyveli project is multi-purpose in character. Apart from power generation, the integrated project includes a fertiliser

and a briquetting plant. Work on these is in an advanced stage, and the units are expected to go into production by the middle of next year. The Rs. 29-crore briquetting plant is one of the largest in the world. At the full-production stage, it will turn out about 35,000 tonnes of carbonised lignite briquets for use as domestic fuel. Among the by-products, there will be phenols, cresols, xylenols, tar and middle oil. Another use for lignite will be in making steel from the high grade iron ore available in Salem. Technical tests on lignite as a possible fuel in ferrous metallurgy conducted abroad, have shown hopeful results, and the State Government is making rigorous efforts to push the steel project through.

Learning the Hard Way

The collapse of Mr. John Bloom's Rolls Razor Company is not the only big financial failure in postwar Britain, but it is the most sensational, because Mr. Bloom himself was so widely publicised and because his aggressive direct selling had introduced his products (particularly washing machines) into so many homes. Other big organisations, moreover, are involved in the collapse, including Barclays Bank, as one of the major creditors; and many small investors have suffered serious losses on Rolls Razor shares bought somewhere between their peak price of 48s late last year and their "throwaway" price around 6d after the crash. So the Secretary for Industry and Trade, Mr. Edward Heath, agreed readily to parliamentary demands for an investigation into the Company's affairs by the U.K. Board of Trade.

Some months will, presumably, elapse before the findings of this investigation are published, and in the meantime the City is considering the implication of the affair. The mechanism of the Stock Exchange itself has been criticised in the country at large, and a large part of the business community, as well as the City, is concerned with the question whether banks should be as liberal as Barclays was in granting advances. Merchant banking is involved in a different capacity: Kleinwort Benson has had the unenviable task of advising Rolls Razor and has been embarrassed by incorrect rumours that it was arranging a salvaging operation.

The background of the trouble is unusually interesting. Mr. Bloom saw possibilities of large-scale trade in domestic appliances at prices that could be considerably reduced by eliminating the retailers' considerable margin. The novelty was not in the principle but in the scale of operations. Having confirmed the one and partly developed the other, Mr. Bloom acquired Rolls Razor, which he built rapidly into a business that the stock market valued, at the shares' peak price, at approximately £13 million. Mr. Bloom had already turned his attention to continental Europe (whence he derived some of the products that he sold) when he ran into trouble at home.

There were errors of calculation and of policy in the management of Rolls Razor, but they were not the main cause of its collapse. The essential problem was in those margins that Mr. Bloom intended to exploit. His own costs of selling, which involved national advertising and generous commissions accorded to an army of travelling representatives, were ultimately not much less than the costs of distribution through the traditional system; and traditional retailers were persuaded to reduce their margins. Mr. Bloom had little room for manœuvre in the matter of price; and one of his major suppliers, Pressed Steel (now a major creditor of Rolls Razor), could not continue production at the prices that Rolls Razor could afford to pay. Powerful competitors reduced their prices. Rolls's sales declined, so that its unit costs were excessive.

There are two important lessons in this story. One is that in modern conditions it is very difficult to challenge successfully the orthodoxy of big companies. The other is that big companies, and their methods, are not made fully efficient until they are challenged by a vigorous unorthodox intruder. In a particular range of products (washing machines), Mr. Bloom proved that prices were too high. It is a disturbing thought that normal competition among big companies had not reduced them to economic levels. The British economy needs an occasional injection of men like Mr. John Bloom; but his failure will discourage others.

What the authorities—the Council of the Stock Exchange and the Board of Trade—could reasonably demand is full and prompt information—at the least, informative half-yearly statements—on the trade and profits of all "quoted" companies. In this matter of obligatory information, London is far behind New York (although in advance of most European centres), and only comparatively few British companies provide adequate information voluntarily.

Grace Period for Hoarders

The Prime Minister, Mr. Lal Bahadur Shastri, has warned hoarders of foodgrains that the Government would not hesitate to adopt "radical measures" against them if they were thought essential for solving the food problem. He has reportedly asked the State Chief Ministers to give a two-week grace period to traders to bring out concealed stocks and to allow them to sell the foodgrains in the open market at a reasonable price. After the end of the grace period, Mr. Shastri said, firm measures would be taken against hoarders. But he hoped that the trade would be sensible and would so conduct itself that the measures contemplated at present would not become necessary. The quantity of hoarded grains must be substantial, as has been recently pointed out by Mr. C. Subramaniam, Central Food Minister. But the hoarders apparently feel that the Government machinery is much too weak and inefficient to bring out the hoarded stocks. The threat to hoarders may not mean much unless the Government is prepared to take strong action. This apart, hoarders are well aware that the existing penal laws still contain loopholes. Mr. Shastri has not indicated whether the Government is thinking of plugging them before taking "radical measures" against hoarders and blackmarketeers. The prevalence of corruption is another basic weakness in the Government. Mr. Shastri has admittedly used strong language to threaten the hoarders, but people in this country will recall that Mr. Morarji Desai, the former Central Finance Miniser, did much the same thing to bring out hoarded gold stocks, but his threats, much to his dismay, proved ineffective.

The Prime Minister has appealed to Opposition parties to co-operate with the Government in putting an end to their agitational approach. But only time will show whether his advice will be heeded. The law and order situation has already become critical in some parts of the country. Although the "Gujarat Bundh" agitation has subsided for the time being, some leftist parties have staged a "Maharashtra Bundh Day." Mr. Dange, meanwhile, is planning to stage a million-strong demonstration as well as a general strike. True, the agitational approach will not help relieve the food scarcity. Rather, it will aggravate the law and order problem, giving less time and opportunity to the Government to ease the food shortage. It is a pity that the Opposition parties are planning to stage demonstrations without co-operating with the Government in fighting anti-social elements. The strikes will cost the nation heavily in terms of production loss and aggravate the shortages.

Without naming the States, Mr. Shastri frankly said that the situation in some of them was "rather acute". But he appeared to be optimistic when he said that in spite of tremendous difficulties, it would be possible to tackle the "baffling problem". He added that the coming lean months—August and September—were going to be a difficult period. But both rice and wheat are being imported in large quantities to cope with it. Admittedly, much of the success of official measures will depend on a strong and efficient enforcement machinery. Mr. Shastri was not unaware of the problem, for he said: "Enforcement has to be strict. The States are to be careful and vigilant. If the District Magistrate is alert, he can stop many of the evils". But it is necessary to ensure that political pressures are not brought to bear on efficient and honest administrators.

CORRESPONDENCE

TALKS ON SCIENCE AND TECHNOLOGY

(To The Editor of "Capital")

Sir,

I was glad to go through your notes on "Symposium on Science and Technology" on page 200 in *Capital* of 6th August.

Was it at all necessary to have such a big international conference to decide that scientific literature of the Afro-Asian countries should be exchanged? I think it would have been much better if, instead of a big multi-purpose (or no-purpose) conference, half-a-dozen smaller conferences on different specific topics could be arranged. The collaboration between scientists in the region would then have been better promoted. I do not know how much costly foreign exchange has been spent in this scientific *mela*.

Your comments on National Laboratories are rather too brief and sweeping. We had given some thought to this subject as the enclosed memorandum of our Institute will indicate.

Instead of trying to establish greater liaison between the laboratories and industry, is it not much better to have some of these laboratories, which are directly related to specific industries in their sphere of research, put under the corresponding Ministry? In such an arrangement, the Ministry and the industry will be more directly interested in such research institutions and it would not be necessary for laboratory officials to beg for merciful doles for their experiments. Before Mr. T. N. Singh and his colleagues think of imposing a new tax on industry, let them give a thought to this proposal. It seems to me that the Council of Scientific and Industrial Research, with its network of laboratories involving many disciplines, has become a cumbersome machinery with an added pinch of vested interest. Possibly a little scientific deflation might do it good.

Yours, etc.,
K. K. Sinha,
Director, Institute of Political and Social Studies

Calcutta, 7th August.

THE JUTE INDUSTRY

WE published in our last issue the results of the working of our local Jute Mills for the last eighteen months, and our readers will have observed that the industry has been steadily improving and is now in a very prosperous condition. But it may be as well to sound a slight note of warning, because we notice that the shares are being rushed up by leaps and bounds, and we anticipate the inevitable reaction later on. The present position is very analogous to that which obtained some nine years ago. The year 1895 marked a period of unusual prosperity and large dividends were the order of the day. Fort Gloster, which has been so much in evidence of late, paid 20 per cent that year, the Budge Budge 18 per cent, the Howrah Mills 20 per cent., Kamarhatty 22½ per cent., and as a result, just at this time of the year, a number of new Jute Mills were projected, the Standard, the National, the Alliance, and the Anglo-India, while extensions were in contemplation in many of the existing mills When the production of the new mills began to be felt there was a decline in the profits, and as a result in 1896 one of the local mills passed its dividend and in 1897 this was followed by four more An improvement set in in 1898, and the mills are now, as we have before observed, working to a large profit But extensions in progress are considerably larger than those in 1895, and we feel that there may be a pinch before the production of those extensions is satisfactorily worked off. That the industry is on a firm and safe basis we have no doubt whatever, but it must expect the usual ups and downs At the present moment we have some 16,000 odd looms at work, but 3,000 looms are in course of erection or in contemplation, and investors would be well advised to stand aside at the present moment and take advantage of the ruling rates to realise their profits, and certainly to refrain from purchases at the present inflated prices.

FROM
CAPITAL

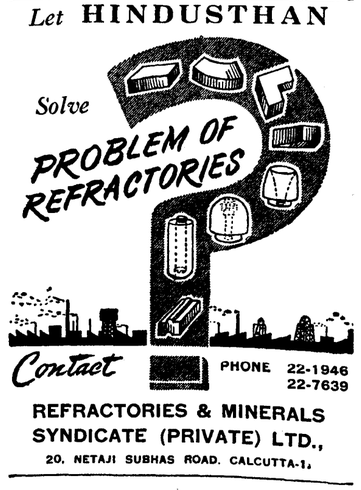
A Ditcher's Diary



At home or abroad, between now and November, President Johnson can do nothing—including literally, doing nothing—which will not invite the charge that he is electioneering. To say this is not to dismiss the very real doubts surrounding U.S. action last week in the Gulf of Tonkin. The Americans have only their very own Central Intelligence Agency to thank if reports of attacks against U.S. personnel here, there and everywhere are believed the more readily in Washington than in most other capitals. Neither Hanoi nor Peking can expect much friendliness around here; indeed, I have in the last few days seen a few happy faces because the Chinese are being punished at least somewhere. The satisfaction had better be quiet; only on Monday Mr. Chavan ruefully disclosed that Washington is distinctly cool towards Indian requests for modern aircraft. If one is an anti-communist one will find it not at all difficult to justify every bit of American action against the North Vietnamese. If, however, I were an American, I would be dismayed at the extent of "instant" anti-Americanism that can be unleashed the world over at very short notice. Yes, there were demonstrations in Dacca too. Having suggested here more than once that India's military and political involvements require urgent reappraisal, I have earned the right to submit it to Washington that, for all the might of America's war-making machine, the U.S.A. should also have another look at its international commitments. The late unlamented Diem is no longer there; but many Americans must already have begun to wonder just how much of an improvement General Khanh is. To say that the Americans are getting the Asians to fight their battle is to oversimplify matters, obliging communist propaganda in the process. On the other hand, I have seen no independent journal in which the word "advisers" is not within inverted commas when the reference is to those thousands of Americans in South Vietnam. I am not very good at reading public opinion: how the Americans will vote in November I simply haven't a clue. But democracy is not worth having if it means that President Johnson has to out-Goldwater Goldwater to stay in the White House.

Of all the tributes that have ever been paid to Sir Winston Churchill, the one I think he will cherish most is Mr. Harold Macmillan's description of him as England's greatest parliamentarian. Mr. Macmillan, himself no mean exponent of the parliamentary game, was speaking on the occasion of Sir Winston's retirement from the House of Commons. It was also Mr. Macmillan's, but that is another story. I consider the designation a good one, because to anybody unfamiliar with what constitutes a good parliamentarian the least explicable feature of Sir Winston's long political career must have been when he reverted willingly—although of course, not without regret—from his position as Britain's supreme warlord to that of just another front-bench member of His Majesty's Opposition. It is supposed to be a feature of great men that they rarely know when to die: that they often insist on carrying on long after their peak of greatness has passed, with consequent damage to the historical image they had planned for themselves. I have heard this said of Sir Winston; but I think such comment forgets the true meaning of the term parliamentarian. Sir Winston was Britain's Prime Minister during the war; he was only incidentally her leader. Before that he had been many other things, and afterwards he was more again. But service to Parliament and what it stood for always came first, before the calls of Party loyalty or of personal ambition. One M.P. once wittily remarked that although he himself had been a member of his Party longer than Sir Winston, he had not been one as often. Indeed, it is doubtful whether anybody during Britain's long parliamentary history has been anything quite as often as Sir Winston. So many national leaders throughout the world—although not yet in India I am glad to say—owe their survival to antidemocratic devices designed to substitute for the public adulation which originally swept them to power. Of all Britain's Prime Ministers since Walpole, Sir Winston was probably in the best position, round about 1945, to emulate such behaviour. But he wisely resisted any temptations he might have had and waited until the swing of the political pendulum elevated him once again to high office. Such is the mark of the true democrat and the true parliamentarian. I cannot imagine it happening, say, with Mr. Khrushchev.

Our legislatures are so morbidly touchy that it is hazardous in the extreme to write almost anything critical about them; a journalist is up for contempt before he has said Jack Robinson. So let us forget the M.L.A.s of the West Bengal Legislative Assembly and talk instead of a body of ordinary folk who have behaved on the streets of Calcutta in a manner recently witnessed somewhere west of Esplanade and east of the Hooghly. From time to time I have seen reports of extensive arrests made by the Anti-Rowdy section of the Calcutta Police. This section would almost certainly have gone into action in a big way; and all of us would have said, "Time too". But I can see a certain amount of satisfaction in two places. One, the Corporation of Calcutta. Two, the various examination halls of Calcutta where delinquents destroy stationery and furniture in addition to their own future and others' because the question papers are "stiff", meaning that they have not read a thing. These latter categories can well claim now that, so far as public misbehaviour is concerned, there is very little to choose between one section and another. With due respect now to the West Bengal Legislative Assembly, it has to be pointed out that neither side of the House covered itself with glory in recent goings-on leading to the *sine die* adjournment. This plague-on-both-your-houses attitude is all right as far as it goes; but it goes farther and breeds the most dangerous kind of cynicism among the public. If this sort of thing continues to be indulged in indefinitely by the ruling Party in competition with the Opposition, all political activity will be held in complete public contempt. Politicians the world over have worked hard to create and sustain the notion that a man goes into politics only to feather his own nest. Now, then, is the time to recall the cynicism that prevailed in the Weimar Republic in Germany and the Fourth Republic in France; nobody believed that the politicians were there to serve the public that had elected them. And what happened? The most idiotic reaction to a phenomenon abroad is the smug "It can't happen here". The warning is as much for the ruling Party as for the Opposition; both may be smothered before they know what's happening to them.

To many a matronly miss life becomes a marry chase. So indeed it became for Denise Darvel, a Parisian novelist, who decides to marry for the most unexpected reason in Alan Melville's *Dear Charles*. The title-bearer of this sparkling comedy is an old oil painting bought by Denise and on which she had conferred, besides a local habitation and a name, the status of father for her three children born out of wedlock. In a scene replete with humour, she reveals the truth to her grown-up children and tells them about her decision to marry one of the three real fathers. In the second scene the three fathers come and the responsibility for choosing her husband is left to the children. The third scene brings the climax which is as disappointing—to the fathers, I mean—as it is surprising. The Dramatic Club of Calcutta made a chic presentation of this comedy last week at the New Empire in aid of St. James's Church Centenary Fund. The play had a talented cast and was light and racy. As with most drawing-room comedies, its success was mainly due to the exploitation of dialogue for characterisation and atmosphere. Sheila Maunder as Denise, the mother who must marry, gave a competent performance. A tricky script, which could easily fall flat under too cautious or careless acting was given remarkable animation, zest and sparkle by her. John Comyn, Adi Dalal and Basil Gill as the three widely dissimilar fathers did their parts well. In particular, the performance of Dalal

as Jan did much to liberate the humour of the comedy, and he was no doubt helped in this by the dialogue. Terence Rochford, as the doctor friend of the family, added some spice to the situations by his deft acting. *Dear Charles* is certainly among the more enjoyable comedies I have attended.

THE RECEPTION ACCORDED TO PRESIDENT TOMAZ OF Portugal during his recent visit to Mozambique must have surprised many people. I admit it did me. Of course, there have been previous incidents where representatives of a metropolitan power have been fêted with enthusiasm one year only to be expelled at bayonet point the next; I remember something of the sort in *Algeria*. The fact is that mobs are fickle, and in the event their reactions count for little. But if the Portuguese were out to impress the world with how popular they are in Mozambique, I suppose they have achieved their object. Just as long as they are not seeking to imply by this that their stay in Africa will be a permanent one. For such demonstrations are really irrelevant to the progress of de-colonisation. Few liberations start in the hearts of the people; the majority result from the ambitions of individuals and the ability of the few to persuade the many that their natural grievances in life have a simple explanation. Irrelevant, too, is the legal status of Mozambique as an integral part of metropolitan Portugal; such a device did not protect Goa. My guess is that "liberation" will come to that part of Africa when the neighbouring African powers have found some suitable Mozambiquian—if that is the correct word to use—whom they can back as a future national leader with their own arms and money. When such a person is found, then the cheering for President Tomaz will be seen as the unimportant, if quaint, little piece of nonsense that it was. If this sounds to be rather a cynical attitude to take towards what has now become the sacred process of de-colonisation in Africa, I cannot deny it. After some years of experience of what it means for the people concerned, and how it is brought about by outside powers largely for their own purposes, I cannot accept that any other point of view is justified.

NORTHERN RHODESIA'S ALICE LENSHINA, "THE prophetess", fascinates me. She cures me of the superior notion that sophisticated societies have lived down man's desire for a messiah. The prophetess's disciples have done some pretty ghastly things, virtually unthinkable in most other climes. But John Hatch of the *New Statesman* tells us that one of her commandments is, "Thou shalt not take part in politics". Politics for the most part being what they are in most of Africa today, I find Lenshina's commandment almost sensible. She has apparently heard of Sir Winston Churchill; it is unlikely still that she is familiar with the writings of Lenin. This last-named once said something to the effect that not to have a philosophy could itself be a philosophy and I am not sure that Lenin did not apply the dictum to politics. I shall accordingly assume that Lenshina is intensely political but just does not like Mr. Kenneth Kaunda's *United National Independence Party*. Let us imagine now that Lenshina has abjured violence and is prepared to contest elections. It is easy to see what her "platform" will be. Black God is stronger than White God. Now black man is superior to the white man. Now make these two laws stand on their heads; and there you have a platform the Americans will soon be very familiar with. The Africans' drum is no match for combined operations by radio, Press and television; but I do not know that decibels make any significant difference to the sensibility or otherwise of a proposition. I think it was Arthur Koestler who once argued that 90 percent of what we call the political animal is composed of the subconscious, the world of the dream, the ductless glands, the autonomous nervous system, the id. In Lenshina I thus see a potential election winner; it will surprise me not at all if Madison Avenue sends a couple of psychiatrists and other "experts" to Lenshina's Lumpa Church in Landawzi to learn a trick or two.

THE DITCHER

Guide for Investors

INDIAN IRON REPORT IMPRESSES INVESTORS

(BY A SPECIAL CORRESPONDENT)

THE price of Indian Iron has fluctuated widely during the past week or so because of various economic and political uncertainties. Investors, meantime, have been impressed by the good performance of the Company for the year ended March 1964. The steadiness has been reinforced by the growth prospect for the shares, as has been outlined by Sir Biren Mookerjee in his chairman's statement which has been circulated to shareholders along with the report and accounts for 1963-64. (A fuller version is printed on a later page in this issue of *Capital*.) The balancing of plant project to increase the steel-making capacity of the Burnpur works by some 300,000 tonnes a year has been undertaken. To finance it, the Company has taken a loan of Rs. 16.21 crores. When this scheme is completed, the second phase of the expansion will be considered. Preliminaries have already been taken up with the Government of India and the World Bank. The second phase of the project will raise the production capacity by a further 700,000 tonnes a year. So the capacity will be raised by 1 million tonnes when the two projects are completed. Additional finance will also have to be raised for modifying and improving the existing plants and for meeting other expenses on capital account.

These considerations have led the directors to plough back a substantial amount from the profit for 1963-64. Sir Biren has indicated the willingness of the management to reward the shareholders by issuing bonus shares through the capitalisation of reserves from time to time. But the Company has been restrained from doing so by the heavy taxes imposed on bonus shares. In fact, it is almost impossible to issue bonus shares except by capitalising share premium account under the present policy of the Government. The chairman indicated that in order to help the shareholders, the Company was thinking of paying an interim dividend for the current year, in addition to a final dividend which would be declared at the usual annual general meeting.

The Company has already reached its rated output cappacity. But steps have been taken to increase production by adopting new techniques with the aid of research. Measures have also been adopted to improve operational efficiency. Since the quality of raw materials, particularly of coking coal, limestone and iron ore has deteriorated, intensive research has been undertaken to use these raw materials more economically. The steel-making processes are also being improved with the aid of research. Waste products have been successfully used and the Company is producing building bricks and mortar out of blast furnace slag. Due to import restrictions, the Company has started manufacturing many engineering spare parts. Rolls for the works are also being produced. The Kulti foundries have been modernised and expanded, and new machine shops have been attached to these foundries. The order-book for the Kulti foundries has been satisfactory, but the output for the current year depends on an adequate supply of foundry-grade pig iron.

Commenting on the partial decontrol of steel, Sir Biren said that the system of retention prices for steel had now been abolished. The new prices which have been given to the producers contain a differential between the tested and the untested categories. It is yet too early to assess the adequacy of the revised planning arrangements under the Joint Plant Committee. The retention of control by the Government over certain categories of steel has done little to restrain the black market in items which are in short supply. The Company has suffered a loss of income because the retention prices for earlier years were fixed below the rates recommended by the Tariff Commission. Sir Biren said that it has been difficult to find out any approved basis under which the future prices of steel would be adjusted in relation to productive capacity, capital block and working costs.

Higher Costs Reduce Tata Steel Profit

THE preliminary report on the working of the Tata Iron and Steel Company for the year ended March 1964, released along with the announcement of an increase in the dividend from Rs. 11 to Rs. 12 a share, suggested that although both sales and profit were higher, the performance was far from encouraging. For despite an increase of nearly Rs. 11 crores in the sales from Rs. 99.65 crores to Rs. 110.44 crores, the pre-tax profit had registered only a small increase from Rs. 14.51 crores to Rs. 16.47 crores, and much of this rise had been due to the fortuitous addition to revenues of Rs. 85 lakhs written back from excess provisions made in the previous year.

Reviewing the Company's operations during 1963-64, the directors state in their report that the year ended with a record production of over 1.5 million tonnes of salable steel, showing an increase of about 6.7 percent over the previous year's figure of 1.4 million tonnes. The output of iron rose by 2.6 percent from 1.76 million tonnes to 1.81 million tonnes, and that of steel ingots by 5.2 percent from 1.8 million tonnes to 1.89 million tonnes. What is more, the increase in production was achieved despite various difficulties relating to raw materials and operating conditions at the plant. But the financial results are somewhat disappointing. The operating profits for the year are not significantly more than the previous year's mainly because the higher earnings from increases in despatches, amounting to 84,000 tonnes, were largely offset by increases in costs.

These cost rises resulted principally from increases in railway freight rates, higher cost of coal supplies from the Government's Bhojudih washery and factors such as statutory increases in provident fund contributions, the interim relief granted by the Steel Wage Board and various duties, cesses and royalties on stores and materials. No increase in retention prices was granted until the end of the year, and this offset only a part of the cost increases beyond the Company's control.

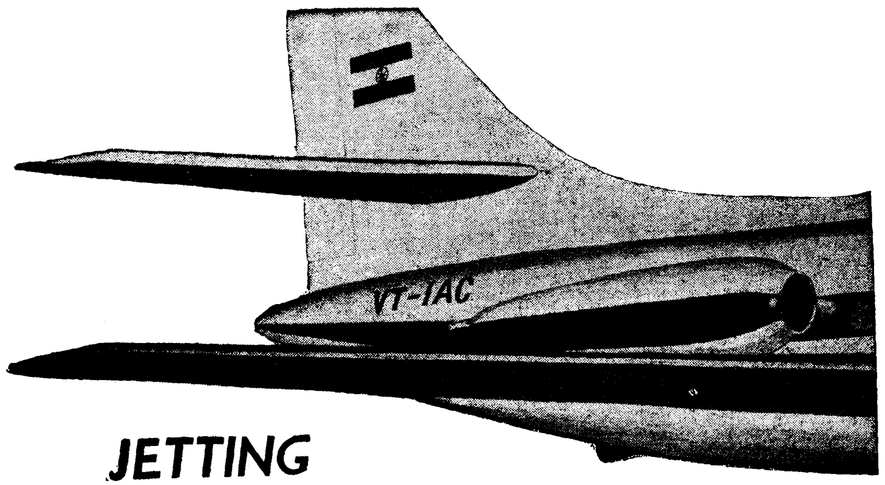
An increase in prices was sanctioned by the Government only from March 1964. The prices of controlled categories were raised by an average of Rs. 11 a tonne, whereas the prices of decontrolled categories, representing 45 percent of the Company's production, were raised by an average of Rs. 30 a tonne. Apart from the delay in announcing the higher price which caused considerable loss of revenue to the Company, the increase in the prices of controlled varieties is stated to have been substantially less than expected on the basis of an announcement made by the Central Minister of Steel. To overcome the difficulties and loss of production caused mainly by the deterioration in the quality of coal and iron ore, a number of inter-related schemes, known as "balancing schemes", have been formulated with the approval of the Government of India and in consultation with the technical study team of the World Bank. These are estimated to cost about Rs. 25 crores of which approximately half will be in foreign exchange which is to be obtained in the form of a further loan from the World Bank.

These balancing schemes include mine development and ore beneficiation programme at a cost of Rs. 13.4 crores, and installation of a new battery of coke ovens including a by-products plant involving an outlay of Rs. 6.6 crores. The new battery will not only provide the extra coke required as a result of the higher ash content of coke, but will also ensure adequate supplies of coke in future when coke oven batteries are shut down in turn for rebuilding. The other relatively smaller schemes included in the programme will provide auxiliary facilities required to sustain and improve production in various units of the plant. These will ensure regular supplies of ore and limestone to the blast furnaces from the stockpiles.

Referring to further expansion that the Company is being requested by the Government to undertake, the chairman, Mr. J. R. D. Tata, says that the scheme contemplates the installation of the necessary facilities for making, in the first instance, an additional one million tons of ingot steel to be rolled into sheets and strip in a continuous or semi-continuous strip mill. (The full text of the chairman's speech appears on another page in this issue of *Capital*). The Company expects to appoint a firm of consulting engineers shortly to prepare a detailed project report which should be received in about eight months after their appointment. While only preliminary estimates have been made, the indications are that the cost of this further expansion would be of the order of Rs. 170 crores, of which probably a little more than half would be in foreign exchange.

The chairman says that the most difficult problem will be that of finance, particularly as this project will be super-imposed on a programme already in hand for expanding and modernising the Company's ore mines, building a battery of coke ovens, adding some equipment to S.M.S. 3 and doing a few other things at a cost of about Rs. 25 crores and on the project for increasing the output of Jharia collieries by 1 million tons of washed coal at an estimated cost of about Rs. 30 crores. The chairman, however, finds no cause for alarm at the prospect of such large commitments. The recently completed two-million ton programme and the results achieved in the form of increased dividends and reserves are an indication of the benefits and added strength which accrue to the Company and its shareholders from expansion resulting in lower costs, better utilisation of total assets and increased productivity.

Mr. Tata has assured the shareholders that the directors will sanction a further expansion only if they are thoroughly satisfied that the project is technically and economically sound and that it can be undertaken on terms wholly fair to the shareholders. Referring to the recent amendment to the Companies Act empowering the Government unilaterally to convert into shares loans advanced by it to the joint stock companies, Mr. Tata says that the Company has made strong representations to the Government with whom discussions have been held and are still continuing towards "what I hope will be an equitable and mutually satisfactory solution".



The financial position of the Company is strong. Against a paid-up capital of Rs. 38.05 crores, of which equity capital amounts to Rs. 27.55 crores, the Company has reserves and surplus amounting to Rs. 50.25 crores. Secured and unsecured loans have dropped to Rs. 47.26 crores from a high of Rs. 64.07 crores two years ago. The gross block has increased from Rs. 195.88 crores to Rs. 200.37 crores over the year, while the net block has declined from Rs. 103.32 crores to Rs. 100.15 crores. The net worth an ordinary share works out to Rs. 197, compared with Rs. 179 a year ago. The net earning of an ordinary share comes to Rs. 29.60, against Rs. 24.26 at the end of the preceding year. The debt-equity ratio is 0.44 to 10.

Macneill and Barry Jute Mills Repeat

THE results of the Macneill and Barry group of jute mills—The Nuddea Mills Co. Ltd and the Gourepore Co. Ltd—for the year ended March 1964, have been published. The directors have pointed out that although the price support scheme for raw jute has been successful in maintaining the minimum price of fibre, the move has impaired the efficiency with which the raw material-buying activity of mills is conducted. The jute buffer stock is a costly proposition which has added about Rs. 2 a maund to the mills' consuming price of the raw material.

Commenting on the increased production costs, they have pointed out that the cost of power has risen at a time when it is essential to hold down costs to meet the rising competition from Pakistani mills. Since the production of jute goods by Indian and Pakistani mills has overtaken demand, the prices have dropped. Fibre rates have tended to rise, and the profit margins of mills have been shrinking. The prospects, therefore, are not so encouraging as they were a year ago.

During 1963-64, trading conditions were favourable, although the margin of profit has been reduced. Nuddea Mills have earned a profit of Rs. 20.45 lakhs for 1963-64, against Rs. 39.44 lakhs for 1962-63, after transferring Rs. 10.35 lakhs (against Rs. 8.49 lakhs) to depreciation. The taxable ordinary dividend of 10 percent, including an interim of 4 percent, has been repeated, which works out to a yield of 9 percent at the present price of Rs. 11.12 a share of Rs. 10 each. Taxation is allocated Rs. 10.40 lakhs (against Rs. 17.45 lakhs), development rebate reserve Rs. 79,920 (against Rs. 4.93 lakhs) and general reserve Rs. 2.50 lakhs (against Rs. 7.25 lakhs). The carry-forward

JETTING AHEAD WITH EXPERIENCE

IAC is eleven years old. Graduating from faithful Dakotas through Viscounts and Friendships to fast Caravelles, the airline has earned more than a million hours of flying experience. Linking 70 stations on a 32,000 kilometre network, it offers speedy travel throughout India.

Eleven years of steady growth pointing to a brighter future ahead. IAC owes it to the people of India—for it is not only an airline but a public service as well.

1953-1964

INDIAN AIRLINES

Eleven years old on 1st August

IAC-202 A

is Rs. 20,062, against Rs. 13,111 brought in. Orders have been placed for the installation of 40 wide looms to produce jute backing for the tufted-carpet industry. The first batch of these looms went into production in the month of July 1964, and this unit is expected to make a significant contribution to the Company's earnings.

The profit of Gourepore Co. has amounted to Rs. 65.24 lakhs, against Rs 74.10 lakhs, after providing Rs. 21.81 lakhs (against Rs. 14.75 lakhs) for depreciation. The taxable ordinary dividend of 20 percent, including an interim of 10 percent, has been repeated. The yield amounts to 8.7 percent at the present price of Rs. 23 a share of Rs. 10 each. Taxation absorbs Rs. 30.10 lakhs (against Rs. 37.80 lakhs) and surtax on profits Rs. 6·15 lakhs. In 1962-63, a sum of Rs. 9.30 lakhs was allocated to super profits tax. Development rebate reserve absorbs Rs. 3.94 lakhs (against Rs. 4.83 lakhs) and general reserve Rs. 13 lakhs (against Rs. 6 lakhs). The carry-forward is Rs. 41,505, against Rs. 28,659 brought in. There are now 124 broad looms to produce carpet-backing. Although America has been the principal market for the cloth, progress has been made in developing markets in other parts of the world.

More from Karanpura Collieries

THE Karanpura Collieries Ltd has increased the taxable ordinary dividend from 10 percent to 12 percent for the year ended 29th February, 1964. The yield amounts to 9.6 percent at the present price of Rs. 12.50 a share of Rs. 10 each. The profit has improved from Rs. 10.02 lakhs for 1962-63 to Rs. 14.55 lakhs for 1963-64, after providing Rs. 2.35 lakhs (against Rs. 2.22 lakhs) for depreciation. Taxation absorbs Rs. 7.63 lakhs (against Rs. 5.71 lakhs), super profits tax relating to the previous year Rs. 10,000 (against Rs. 1.03). A sum of Rs. 1.29 lakhs (against Rs. 50,000) has been provided for statutory development rebate reserve before arriving at the profit figure.

The carry-forward is Rs. 1,971, against Rs. 9,997 brought in. Raisings were higher at 265,945 tonnes, compared with 320,083 tonnes, and despatches rose from 276,844 tonnes to 315,956 tonnes. Although wagon supplies improved, stocks rose. The expansion of the siding to take full rakes of box wagons and the installation of the weighbridge have been completed. The equipment under the World Bank loan has arrived, and the bulk of it have been installed or are in the course of installation.

Calcutta Tramways Raises Dividend

THE ordinary shares of Calcutta Tramways Co. Ltd have been sluggish around Rs. 10.50 in spite of a higher dividend declared for the year ended December 1963. A taxable ordinary dividend of 6 percent, against 5 percent for 1962, has just been announced. It absorbs £42,000 and works out to a yield of 6.3 percent at the present price of Rs. 10·50 a share of £1 each. The revenue has amounted to £193,185, after transferring £100,000 to renewals and replacement account. Taxation absorbs £118,000 and debenture interest £18,826. In accordance with the agreement between the Government of West Bengal and the Company, a sum of £56,359 has been credited to shareholders' account. Debenture stock redemption is allocated £9,652 and preference dividend £7,656. A sum of £2,949 has been brought forward on shareholders' account. The annual general meeting will be held in London on 8th October, 1964.

Share Offer by Selected Satgram Collieries

SELECTED Satgram Collieries Ltd will soon issue fresh capital of Rs. 30 lakhs divided into ordinary shares of Rs. 100 each for Rs. 20 lakhs and preference shares of Rs. 100 each for Rs. 10 lakhs. When the issue is subscribed, the Company's share capital will amount to Rs. 70 lakhs dividend into Rs. 60 lakhs of ordinary shares and Rs. 10 lakhs of preference shares. The new shares will be offered to the existing shareholders in the proportion of one new ordinary share for every two held and one new preference share for every four ordinary shares held. The shares which are not subscribed by the existing shareholders will be later offered to the public through prospectus.

A part of the issue has been underwritten, it is reliably learnt, by the Life Insurance Corporation of India. Negotiations are proceeding for further underwriting by various financial institutions. In 1962, the directors decided to offer ordinary rights shares for Rs. 30 lakhs. But the issue was postponed because of the uncertain conditions in the capital market. Proceeds of the issue will be used for setting up an engineering works and to expand the New Majri colliery in Maharashtra. A licence has been obtained to increase the output of the colliery to 25,000 tonnes a month. The present production of the colliery is about 15,000 tonnes a month.

Kailas Rubber Does Well

THE working of the Kailas Rubber Co. Ltd for the year ended February 1964, has resulted in a profit of Rs. 3,67,180, after providing for depreciation and all charges and also Rs. 2,90,000 for taxation. The net profit for the previous year amounted to Rs. 3,59,687, after providing for depreciation and all charges and also Rs 2,90,000 for taxation. With the balance of Rs. 22,903 brought forward, the total available for appropriation comes to Rs. 3,91,083.40. Out of this, the interim dividend of 15 percent has absorbed Rs. 1,77,855. The final dividend of 15 percent will absorb Rs. 1,77,855. The balance of Rs. 35,373 is carried forward. During the year, 40 acres in Kutikul estate have been replanted with Malayan clonal rubber seeds. The rubber crop for the year amounted to 456,137 kilograms. The estimated rubber crop for 1964-65 is put at 421,000 kilograms.

Bonus from Polychem

THE working results of Polychem Ltd for the year ended March 1964, show an impressive improvement over the previous year's performance. The turnover, inclusive of excise duty, is up by about 36 percent from Rs. 2.01 crores to Rs. 2.73 crores, and the gross profit has shot up by as much as 130 percent from Rs. 38.43 lakhs to Rs. 88.12 lakhs. The ratio of gross profit to sales has improved substantially from 18.5 percent to 32.2 percent. The dividend has just been maintained at 15 percent, but the directors have proposed the issue of bonus shares in the ratio of three bonus shares for every seven equity shares held. This will be done by capitalising the share premium account amounting to Rs. 24 lakhs. The bonus issue is subject to the sanction of the Controller of Capital Issues.

After providing Rs. 56.47 lakhs (against Rs. 6.30 lakhs) for depreciation, Rs. 27.33 lakhs (against Rs. 2.44 lakhs) for development rebate and nil (against Rs. 17 lakhs) for taxation, the net profit amounts to Rs. 4.32 lakhs, against Rs. 29.69 lakhs in the preceding year. After transferring Rs. 6 lakhs (against nil) from dividend equalisation reserve, Rs. 27,000 (against nil) from dividend reserve, writing back a sum of Rs. 96,140 (against nil) being the excess provisions made in the previous years and taking credit for Rs. 83,250 (against Rs. 21,561) being the tax recovered from dividend on preference shares, the disposable surplus comes to Rs. 12.39 lakhs. From this, a sum of Rs. 63,000 has been set aside for tax on dividend in the previous year and Rs. 4,602 have been provided for capital reserve. After transferring Rs. 11.75 lakhs to general reserve, there remains a surplus of Rs. 6,016 to be carried forward, against Rs. 9,857 brought in. The proposed dividends on preference and equity shares, absorbing Rs. 11.73 lakhs, are to be paid out of the general reserve account.

The directors state that, during the year, the work on the two projects, namely, styrene monomer plant and the alcohol distillery, was completed, and both the plants have been in regular production. The products made in both these plants are said to conform to the standard specifications. The expansion of the polystyrene plant which was completed last year has added further flexibility and capacity for the simultaneous increased production of both general purpose as well as high impact grades of polystyrene. Now that the basic raw material styrene monomer is being manufactured in its plant, the Company is no longer dependent on imports for any of its raw materials. It is now in a position not only to meet the demand of its products fully, but will also be able to maintain adequate stocks of all grades of polystyrene at important consuming centres. Since the close of the year, the Company has repaid on capital account Rs. 10.13 lakhs to the Industrial Finance Corporation of India, thus making a total repayment of Rs. 20.19 lakhs.

Western India Spinning Pays More

THE directors of the Western India Spinning and Manufacturing Co. Ltd have stepped up the final dividend for the year ended March 1964 from Rs. 40 to Rs. 45 a share of Rs. 250, making a total of Rs. 69 a share, against Rs. 64 a share paid in the previous year. This follows the marked improvement in the Company's gross profit from Rs. 21.81 lakhs to Rs. 32.28 lakhs. The 50 percent increase in the profit has been achieved with only a small increase in the sales from Rs. 3.40 crores to Rs. 3.56 crores. Apparently, the Company is enjoying the benefit of rationalisation and modernisation schemes. It might be noted here that the management of the mills has changed hands from Thackerseys to Messrs Pratap Shoorji Vallabhdas and Dilipsinh Shoorji Vallabhdas since December 1963.

According to the preliminary report, the provision for depreciation has been raised from Rs. 10.79 lakhs to Rs. 12.23 lakhs, while allocation to the development rebate reserve is lower at Rs. 1.10 lakhs, against Rs. 2.53 lakhs. The provision for taxation is appreciably higher at Rs. 11 lakhs, against Rs. 4.25 lakhs. After making these allocations, the net profit is shown at Rs. 7.97 lakhs, compared with Rs. 4.24 lakhs in 1962-63. The preference dividend absorbs Rs. 84,000 (the same) and equity dividend accounts for Rs. 6.52 lakhs, against Rs. 6.14 lakhs. The directors state that the Company has started manufacturing superfine cloth and also terelyne cotton textiles under the new management. The rationalisation and modernisation programme is under way. The Company has been liecensed to install 5,428 new spindles. New machinery worth Rs. 6.02 lakhs was received during 1963-64, and orders for additional machinery worth Rs. 50,000 have been placed. The Rs. 250-paid share of the Company is quoted nominally around Rs. 825.

Sayaji Mills Fares Well

THE Sayaji Mills Ltd reports highly encouraging results for the year ended March 1964. The turnover has gone up by nearly 40 percent from Rs. 6.19 crores to Rs 8.62 crores, and the gross profit also has risen by about 40 percent from Rs. 60.21 lakhs to Rs. 86.65 lakhs. The directors have recommended a higher gross dividend of Rs. 25 plus Rs. 1 by way of bonus a share. In the preceding year, the Company had paid Rs. 8 as gross dividend, and declared a one-for-20 bonus issue which, however, was rejected by the Controller of Capital Issues.

Appropriations of the year's profits include depreciation Rs. 29.95 lakhs (against Rs. 18.95 lakhs), development rebate Rs. 9.86 lakhs (against Rs. 3.73 lakhs), taxation Rs. 21.50 lakhs (against Rs. 20 lakhs), donations Rs. 41.159 (against Rs. 95,296) and general reserve Rs. 21.62 lakhs (against Rs. 13.04 lakhs). After making these allocations, there remains a nominal surplus of Rs. 681 to be carried forward, against Rs. 550 brought in. The proposed dividend is to be paid out of the general reserve. The Company spent Rs. 59.38 lakhs on additions to fixed assets during 1963-64, compared with Rs. 1.18 crores in the preceding year. The Company has plans to spend a further sum of Rs. 2.50 crores on expansion, modernisation and rehabilitation during the next four years. The Company's mills in Bombay exported cloth worth Rs. 1.34 crores during 1963-64.

Premier Cable Share Offer

THE Premier Cable Company Ltd which proposes to undertake the manufacture of 18 million core yards of P.V.C. cables and 270 miles of plastic insulated power cables a year in Karukutty (Kerala State) will soon be in the market to raise Rs. 52 lakhs in equity and preference shares through public subscription. The project is estimated to cost Rs. 1.20 crores, which will be met by the issue of share capital of Rs. 70 lakhs and by a loan of Rs. 50 lakhs from the Industrial Finance Corporation. The construction of the factory is in progress. The Company has been granted two import licences for import of plant and machinery, worth Rs. 11 lakhs from West Germany and Rs. 31.18 lakhs from East Germany. Orders for these have already been placed.

The Company has entered into a technical collaboration agreement with VEB-Kabelwerk Oberspree of East Germany (formerly controlled by A.E.G.). The foreign collaborators will be given a lump-sum fee of

Road Safety is a matter of life...and death

Issued in the interest of Road Safety by Burmah-Shell.

AD 67 BS. 5168

Rs. 10.50 lakhs, and there will be no royalty to be paid by the Indian firm.

The Company has an authorised capital of Rs. 1 crore made up of Rs. 75 lakhs in equity shares of Rs. 10 each and Rs. 25 lakhs in 9.3 percent redeemable cumulative preference shares of Rs. 100 each. The issued capital comprises Rs. 48 lakhs in equity shares, and Rs. 22 lakhs in preference shares. Out of these, the promoters, directors and their friends have taken up equity shares worth Rs. 18 lakhs. The balance of equity capital of Rs. 30 lakhs and preference shares worth Rs. 22 lakhs are being offered for public subscription. The entire public issue has been underwritten.

The subscription list will open on 18th August and will close on the 28th or earlier, but not before 20th August. P.V.C. insulated power cables are fast replacing the conventional paper insulated cables. At present, there is a sizable shortage of power cables in the country and the demand is growing. The board of directors includes Mr. P. C. Periwal, Mr. Muthia Annamalai Chidambaram, Mr. B. G. Bangur, Mr. Basudev Somani, Mr. Charles G. Gorton, Mr. Sohanlal Mohta and Mr. Hanuman Mall Periwal.

Minerva Mills Disappoints

MINERVA Mills Ltd reports disappointing results for 1963, and the dividends on ordinary and preference shares have had to be skipped. In 1962, the Company had paid a dividend of Rs. 3.50 a share. Despite a rise in sales from Rs. 1.70 crores to Rs. 2.05 crores, the Company has incurred a loss of Rs. 70,477, against a profit of Rs. 1.96 lakhs after providing Rs. 8,513 (against Rs. 4.45 lakhs) for depreciation, Rs. 40,000 (the same) for managing agents' remuneration and nil (against Rs. 1.37 lakhs) for development rebate. After adjusting the sum of Rs. 8,714 brought forward, there remains a debit balance of Rs. 61,763 which has been adjusted against the uncommitted reserves amounting to Rs. 72,327, leaving a balance of Rs. 10,564 to be carried forward.

The directors state that the work of installing the bulk of new machinery under the N.I.D.C. scheme led to considerable dislocation of operations during the first half of 1963. Furthermore, because of the reduction in the actual users' quota for superfine cotton, the number of spindles operating on superfine yarn had to be reduced during the year from 50 percent to 25 percent of the total spindles. Besides, the prices of superfine yarn were reduced in February 1963 under the voluntary price control scheme. The N.I.D.C. scheme, which is now almost fully implemented, has resulted in the transformation of the mills from an obsolete unit into a modern one. Renovation is still continuing.

Greaves Cotton Pays the Same

GREAVES Cotton and Co. Ltd has maintained the dividend for the year ended March 1964 at 12 percent. The brief preliminary report on the Company's working results shows a fair improvement over the previous year with both sales and profit setting new records. The increase in profit, however, is much smaller compared with the rise in sales. The turnover has gone up by nearly 40 percent from Rs. 7.84 crores to Rs. 10.93 crores, while the profit has risen by hardly 11 percent from Rs. 54.53 lakhs to Rs. 60.48 lakhs. The figures about depreciation and development rebate have not been released by the Company. The tax liability is estimated at Rs. 28.50 lakhs, against Rs. 23 lakhs in the preceding year. Dividends on equity and preference shares will absorb Rs. 19.78 lakhs.

The directors propose to provide for the payment of tax and dividends from the general reserve which has been allocated Rs. 61.25 lakhs, against Rs. 54.50 lakhs in the previous year. The Company's subsidiary and associated companies are reported to have shown satisfactory results with both turnover and profits recording considerable improvement. The Company's own manufacturing divisions, namely, cone and tube plant and diamond drilling bits have shown substantial improvement contributing significantly to the Company's turnover and profitability. The current year's working continues to indicate satisfactory progress so far. The Rs. 100-paid share of Greaves Cotton is quoted around Rs. 174, offering a gross return of about 6.8 percent.

Project Costs of Camphor and Allied Rise

CAMPHOR and Allied Products Ltd, which commenced production of camphor on 29th April after detailed testing of the process equipment, has produced about 50 tons of camphor till date. The directors state in their third annual report for the nine-month period ended 31st December, 1963, that barring unforeseen events, the Company will be able to produce about 350 tons before the end of 1964. Its product is stated to have been received well in the market and in view of the arrangements already made for the sale of its entire production, the directors do not visualise sales difficulties. The capital cost of the camphor project including the allocation of pre-operative expenses to be capitalised is estimated to increase to Rs. 1.50 crores, as against the original estimate of about Rs. 1.15 crores. The directors attribute the increase in the capital cost mainly to delay in the completion of the project, consequent capitalisation of the increased expenditure during construction and general rise in the price level.

Referring to the industrial licence granted to the Company for the manufacture of formic acid, the directors state that the Company has received two proposals for obtaining know-how. Both these proposals are being considered and the management will accept whichever proposal is found to be more advantageous. The Company has submitted an application for the import of necessary capital goods. Considerable preliminary work is said to have been done for the scheme to manufacture various chemicals based on the Company's by-products. The Government has already granted the letter of intent for the manufacture of these chemicals. The Company's accounts for the nine-month period ended December 1964, show a loss of Rs. 26.890 after transferring Rs. 11.38 lakhs to the "expenditure during construction account", and after adjusting Rs. 9,285, as excess provision for taxation. Adding this loss to the balance of Rs. 65.256 brought forward from the last year's account, the total deficit of Rs. 92.146 is being carried forward. The Rs. 100-paid share of Camphor and Allied Products is available at around Rs. 82.

Progress of Simco Meters

THE third annual report of the directors of Simco Meters for the year ended March 1964, says that in addition to the sterling loan of £1,37,500 (equivalent to Rs. 18,33,330) sanctioned by the Commonwealth Development Finance Company Ltd, London, the Company has also availed itself of a medium-term loan of Rs. 6.67 lakhs from a commercial bank. The accounts disclose a loss of Rs. 3,31,484 for the year ended March 1964, after porviding full depreciation of Rs. 1,80,871. The payment of royalty to the collaborators, Messrs Denis Ferranti Meters Ltd of the United Kingdom, has been provided for. The accounts, however, do not include Rs. 4,81,000, being the Company's claim for development rebate, for which a reserve will have to be created in subsequent years out of profits.

The directors hope that with the successful establishment of regular commercial production of single phase meters now and the introduction of polyphase meters, for which there is a great demand and less competition, into the market, the coming year will produce better results. The working of the factory during the year was satisfactory. By about the beginning of June, four technicians from the collaborators' factory arrived to assist the Company in trial production. But due to the low levels in hydel reservoirs, high-tension power supply was suspended from 20th June, 1963 to 5th July, 1963 The factory commenced trial production only later and has produced till 31st March, 1964, 19,710 meters. At the time of the report, the factory has exceeded its rated capacity of 200 single phase meters a day. The daily average production has exceeded 350 single phase meters.

Raghuvanshi Mills Repeats Dividend

THE Raghuvanshi Mills Ltd reports encouraging results for the year ended March 1964. As against an increase of a little over 7 percent in the sales from Rs. 2.32 crores to Rs. 2.49 crores, the gross profit has gone up by about 25.8 percent from Rs. 28.65 lakhs to Rs. 36.02 lakhs. The performance looks fairly impressive when viewed against the background of rising costs in the textile industry. The dividend has been maintained at 12 percent.

Appropriations include depreciation Rs. 11.10 lakhs (against Rs. 8.34 lakhs), development rebate Rs. 1.39 lakhs (against Rs. 1.38 lakhs), taxation Rs. 15.36 lakhs (against Rs. 10.75 lakhs), general reserve Rs. 70,000 (the same), gratuity reserve Rs. 50,000 (the same), goodwill Rs. 8,000 (against Rs. 6,930) and dividend reserve Rs. 5.10 lakhs (the same). After making some minor adjustments, there remains a small balance of Rs. 3,488 to be carried forward, against Rs. 3,621 brought in. The dividend is to be paid out of the dividend reserve. The directors state that the Company has been continuing its programme of progressive modernisation of its plant and machinery. Additions to fixed assets made during the year amounted to Rs. 12.25 lakhs, and at the end of the year further commitments for more machinery were of the order of Rs. 24.30 lakhs.

It is hoped that when all these new machinery would be installed and put into commission, the working of the mills would show a considerable improvement and it would be better placed to face competition and increase in the cost of production. The Company exported during the year considerably in excess of its quota under the obligatory scheme of exports. It has received permission to install 6,788 more spindles and it has been further licensed to install another 4,000 spindles. Orders have already been placed for the supply of these spindles which are expected to be delivered in about two years. On the completion of the installation of these spindles, the total spindleage of the mills will rise to 44,000.

Velimalai Rubber Maintains

FOR the year ended February 1964, the Velimalai Rubber Co. Ltd has earned a pre-tax profit of Rs. 1,60,818.39 compared with the previous year's profit of Rs. 1,62,702.54. With the amount of Rs. 6,425.31 brought forward, the total comes to Rs. 1,67,243.70. Out of this, the provision for taxation amounts to Rs. 55,000 (against Rs. 55,000). A sum of Rs. 40,000 is transferred to debenture redemption reserve (against Rs. 40,000), and Rs. 4,742.43 is transferred to Rubber Replanting Reserve (against Rs. 2,138.60). The 7 percent preference dividend subject to deduction of tax amounts to Rs. 17,500. The proposed ordinary dividend of 7 percent (the same) will absorb Rs. 42,000. The balance of Rs. 8,001.27 is carried forward.

A rubber crop of 221,220 kilograms was harvested, against 215,817 kilograms in the previous year. The tea crop harvested amounted to 17,555 kilograms, against 20,667 kilograms for the previous year. The Company has now completed the process of replacing the tea area by rubber. The net average prices realised were 306.59 paise a kilograms for rubber and 397.64 paise a kilogram for tea, against 322.13 paise a kilogram for rubber and 354.80 paise a kilogram for tea.

The directors state that the Company's coconuts and pepper have been a good source of income, enabling it to maintain the profits in spite of increased costs and decreased sale proceeds of rubber. The estimated rubber crop for 1964-65 is put at 205,000 kilograms.

Clarion-McCann Advertising

THE Government of India has sanctioned the collaboration agreement between Clarion Advertising Services Private Ltd, the largest Indian owned advertising agency, and McCann-Erickson Corporation of the U.S.A., a leading international advertising agency. The former was formed as a co-operative venture by the staff of a well-known British advertising agency which closed down its head office in Calcutta in 1956. Due to the collaboration agreement, Clarion will now have direct access to reliable world-wide marketing information and facilities through McCann-Erickson's 75 offices in 32 countries.

Export advertising through the new agency will save India foreign exchange because 50 percent of the commission earned by the firm will be retained in this country. Clarion will continue to manage the new Company which will be called Clarion-McCann Advertising Services Private Ltd. The American Company will hold 49 percent of the shares in the new concern. The agreement opens a new opportunity for Indian exporters, and brings the latest techniques of advertising and marketing into this country.

New Capital Issues

SEVEN companies including four Central Government undertakings, have been authorised to raise

fresh capital totalling Rs. 17.74 crores. Of these, one company is issuing bonus shares, four are issuing equity shares and two equities plus preference shares. Two companies involve foreign collaboration. One of them is offering part of its shares to the public by prospectus. The consent of the Controller of Capital Issues is valid for 12 months in all cases excepting one where it is valid only up to 7th April. The following are the details:

Heavy Electricals (India) Ltd, Bhopal, a public sector undertaking, will be issuing further capital of Rs. 9 crores divided into 90,000 equity shares of Rs. 1,000 each for cash at par. The capital will be used for civil engineering works, purchase of machinery and plant, training of engineers, etcetera.

Indian Drugs and Pharmaceuticals Ltd, a Government of India undertaking, is to issue capital of Rs. 5.20 crores divided into 52,000 equity shares of Rs. 1,000 each to be issued for cash at par. The capital will be utilised for financing the drugs and surgical instrument plants.

Bharat Earth Movers Ltd, Bangalore, in the public sector, is to issue capital of Rs. 1 crore divided into 10,000 equity shares of Rs. 1,000 each to be subscribed privately for cash at par. The money will be used for the manufacture of heavy earth moving equipment and rail coaches.

National Buildings Construction Corporation Ltd, Delhi, a Central Government undertaking, is to issue capital of Rs. 26 lakhs divided into 2,600 equity shares of Rs. 1,000 each for cash at par. The capital will be used for construction of buildings, roads and other civil works throughout India.

Sandur Manganese and Iron Ores Private Ltd, Bangalore, is to issue capital of Rs. 68,47,500 consisting of equity capital of Rs. 52,47,500 and 9.3 percent preference capital of Rs. 16 lakhs. Equity shares of the value of Rs. 17 lakhs (consisting of Rs. 2 lakhs for consideration other than cash against technical know-how and Rs. 15 lakhs for cash) will be issued to Societe Anonyme D' Applications De-Chimle Industrial and Societe Commercielle De-Mines Mineralise and Betaux of Belgium respectively. Out of the above, such numbers of shares of each kind as would qualify the scrip to be listed on the recognised stock exchange will be issued to the public by prospectus. The money will be used for the manufacture of pig iron.

Engine Valves Ltd, Madras, will be issuing further capital of Rs. 32,22,800 (including Rs. 4 lakhs raised under the exemption order) divided into 25,000 equity and 7,228 cumulative redeemable preference shares of Rs. 100 each carrying dividend at the rate of 9.1 percent a year, for cash at par. Out of the issue, equity shares of the value not exceeding Rs. 14 lakhs will be offered to Farnborough Engineering Company Ltd, Birmingham, or their parent company against supply of plant and machinery to be imported. The money will be used for financing expansion of the manufacture of valves.

Associated Cement Companies Ltd, Bombay, which was given consent on 8th April to the capitalisation of share premium not exceeding Rs. 1,19,21,800 and issue bonus shares has now been permitted to capitalise Rs. 1,27,16,600 from the share premium and issue bonus shares to the existing shareholders. The consent is valid up to 7th April, 1965.

THIS ANNOUNCEMENT IS NOT A PROSPECTUS.

Persons interested in full details are requested to obtain copies of the prospectus which are available from the Registered Office of the Company or from the Offices of the Company's Underwriters, Brokers and Bankers.

THE SUBSCRIPTION LISTS WILL OPEN AT THE COMMENCEMENT OF THE BANKING HOURS ON 18TH AUGUST, 1964, AND WILL CLOSE AT THE END OF BANKING HOURS ON 28TH AUGUST, 1964, OR EARLIER AT THE DISCRETION OF THE DIRECTORS, BUT NOT EARLIER THAN CLOSE OF BANKING HOURS ON 20TH AUGUST.

THE PREMIER CABLE COMPANY LIMITED

(Incorporated on 10th of April, 1962 under the Companies Act, 1956). Registered Office: 14/15, Block F, Connaught Place, New Delhi-1.

EXISTING & PROPOSED ACTIVITIES OF THE COMPANY

The Company plans to manufacture immediately 18 million crore yards of P.V.C. cables and 270 miles of Plastic Insulated Power Cables per annum.

P.V.C. Insulated Power Cables are fast replacing the conventional paper insulated cables throughout the world and in India also.

At present there is a sizable shortage of Power Cables, demand of which is expected to increase still further because of the various power projects under execution. In the Kerala State itself where the factory will be located several power projects like Panniar Pampa, Idukki are under execution.

TECHNICAL COLLABORATION

The Company has entered into a technical collaboration agreement with M/s. VEB Kabelwerk Oberspree of German Democratic Republic (formerly controlled by AEG), who were established 65 years ago and are reputed to be one of the leading cable manufacturers in Europe.

The agreement shall be in force for 10 years. The collaborators shall train 10 Indian personnel in their factories and the Company shall also be entitled to use their Trade Mark and benefit of the improvements made in production techniques by the collaborators. They shall be paid a total sum of Rs. 10,50,000/-; no royalty is payable.

LOCATION

The factory shall be located at Karukutty in the State of Kerala.

IMPORT OF MACHINERY

The Company has been granted two import licences for import of plant and machinery, worth Rs. 11 lacs from West Germany and Rs. 31.18 lacs from German Democratic Republic. Orders for these have already been placed.

CAPITAL LAYOUT

The capital cost of the project is estimated to be about Rs. 1.20 crores, which shall be met out as below:—

Share capital ..	Rs.	70 lacs
Loan from Industrial Finance Corp. ..	Rs.	50 lacs
	Rs.	1.20 crores

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allotment is shares of the value of Rs. 52 lacs, being the whole of the present issue.

PROSPECTUS AND APPLICATION FORMS

Application forms along with copies of the prospectus can be had from the Registered Office of the Company and from the Bankers, Underwriters and Brokers, whose names are mentioned above.

Application for shares must be for minimum 25 Equity shares or multiples thereof and for a minimum of 5 Preference shares or multiples thereof.

The Stock Markets

SHARES CLOSE STEADY AFTER EARLIER NERVOUSNESS

Wednesday Evening.

THE Calcutta stock market has been fairly steady during the past week. The earlier nervousness caused by disturbing developments in south-east Asia has vanished to a large extent. Operators are, however, restrained by economic and political uncertainties. Lyons Range is inclined to await the outcome of the various measures which the Government proposes to take to check inflationary pressures. Although the tripartite conference on the bank dispute will be held on Thursday, the working of banks continues to be interrupted. The settlement of the dispute between the management and workers of the State Bank of India has given rise to the hope that the grievances of other bank employees will be resolved satisfactorily. Mr. Lal Bahadur Shastri's statement to the effect that plan priorities should be revised on a more realistic basis has created a good impression.

Disturbances along the Indo-Pakistani border have, however, called for caution. The clearing on Wednesday passed off smoothly. The carry-forward charges have shown little change, compared with those of the previous settlement. Indian Iron are fairly steady due to a good report. In his statement circulated to the shareholders of the Company, the chairman, Sir Biren Mookerjee, pointed to the growth prospects for the shares. The first stage of further expansion to raise the production capacity by 300,000 tonnes has already been undertaken. The second phase to increase the capacity by a further 700,000 tonnes will be taken up in due course. Details of the projects have been dealt with in the "Guide for Investors" section in this issue of *Capital*.

Engineering shares attract little interest, and prices have on the whole tended to drop slightly. In the miscellaneous section, Indian Copper have been steady on expansion prospects, as was outlined by the Company's chairman in his address at the annual general meeting held on Wednesday. Not only is the electrolytic plant expected to start operating from 1965, but the Company has also been given a licence to expand copper production and to manufacture sulphuric acid. It is proposed to build a new smelter with a bigger capacity. Dunlop Rubber have attracted scattered support. India Steamship have been freely offered due to the passing of the dividend. National Insulated Cable have met with scattered buying. Hindusthan Twyford have gained on replacement purchases Alkali and Chemical and Union Carbide are sluggish. Among electric companies, U.P. Electric have improved on renewed support. In managing agency shares, Martin Burn are steady. There has virtually been no interest in bank and insurance shares. Among paper shares, Orient have retreated due to the disappointment over the maintenance of the dividend. Seshasayee Paper have improved on replacement buying. Scattered support has been extended to India Paper Pulp and Bengal Paper.

Birla are a prominent feature in jute shares and the scrip have risen substantially after intermittent profit-taking. Interested buying has contributed to the steadiness. Business in other jute shares has been cautious. Union, Kinnison and Anglo-India have been transacted. Ganges have hardened on rumours of a good dividend. The sharp rise in the price of raw jute has made the investors cautious. Coal shares have been neglected and stray business has passed in Burrakur, Central India and Western Bengal.

Selected cotton mill shares have been about steady on the prospect that there will be a more abundant supply of raw cotton during the current year. J. K. Rayon, Bharat Commerce and Dunbar have been bought. There has been limited turnover in tea shares and attention has centred on good Assam and Dooars gardens.

Government securities are quietly steady. The 3 percent Conversion Loan 1986 has been quoted around Rs. 63.50. Turnover has been restrained since the investors seem to be conserving funds for subscribing to the forthcoming State Government loans. The interruption of work in banks has been partly responsible for the lack of institutional support.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during July 1964 was: iron 162,500 metric tonnes; steel ingots 161,800 metric tonnes and salable steel 130,000 metric tonnes.

Bombay

SHARES STEADY, BUT TURNOVER FALLS

MOVE TO CHANGE PLAN PRIORITIES WELCOMED

Wednesday Evening.

THE Bombay stock market has been steady during the past week, although turnover has shrunk considerably. Interest is largely confined to clearing shares, while the prices of cash scrip have tended to drop in the absence of support. The earlier weakness arising out of the disturbing developments in south-east Asia has almost vanished. Dalal Street is impressed by the keenness of the Prime Minister to tackle the problems of food shortage and inflation. The proposal to reduce Government expenditure and to reorder plan priorities has been bullishly interpreted.

Meanwhile, corporate news has also been good. Greaves Cotton has repeated the dividend. Indian Dyestuff proposes to issue rights shares in the ratio of one new share for every 14 held, at par, to raise funds for expansion. Larsen and Toubro will also issue rights shares at par and debentures to obtain funds for expansion.

Tata Steel ordinary have closed around Rs. 155 and investors have been busy examining the financial implications of the proposed expansion. Tata Engineering have attracted support. Premier Construction, Mukand Iron and Larsen and Toubro have been steady. In motor-vehicle shares, Premier Automobiles have been bought on hopes of improved working results. Hindustan Motors have met with pressure, particularly from outside sources.

Selective cotton mill shares have hardened on replacement purchases. Turnover has, nevertheless, been limited because investors are inclined to await the details of the partial control on cloth. Century, Bombay Dyeing, Kohinoor and Svadeshi have recovered on short-covering. Interest has been taken in Gokak, Standard and Morarjee. India United ordinary and Tata Mills have been steady.

In the miscellaneous section, cement shares have been steady. Associated Cement and Digvijay have changed hands. Sugar shares have been quiet. Belapur have reacted due to profit-taking. In mining shares, Be Be Petrol have lost on profit-taking. In steamship company shares, Scindia Steam have recovered on short-covering.

Chemical shares have been steady. Support has been forthcoming for Tata Chemical and Indian Dyestuff. Polychem have been sluggish. Among rayon shares, National Rayon have been supported on prospects of expansion. Voltas and Tata Oil have been taken. Despite limited turnover in bank shares, prices have been fully steady. Dena Bank and Central Bank have been transacted. In

electric company shares, Ahmedabad and Tata Hydro have been maintained.

Madras

SHORTAGE OF FUNDS CUTS ACTIVITY

GOOD PREFERENCE SCRIP IN DEMAND

Tuesday Evening.

THE Madras stock market has been steady during the past week. Turnover has, however, declined. Business, particularly in clearing shares, has shrunk due to the lack of support from outside centres. The restoration of the power cut has helped sentiment, but investors are cautious because of the shortage of funds and the still uncertain economic outlook. Interest has been shown in good preference shares, but sellers have been difficult to locate.

Government securities are sluggish in view of the forthcoming State Government loans. Bank shares have been fully steady, and Indian Bank have been done at Rs. 155 on declaring an interim taxable ordinary dividend of 7½ percent, including a bonus of 2½ percent. In electric company shares, Cochin State have changed hands at Rs. 12.75 and South Madras at Rs. 12.12. Sugar shares have tended to drop. Deccan have been available at Rs. 11.60 and E.I.D. at Rs. 35.50. Travancore have been transacted at Rs. 7.27 and India at Rs. 9.10. Madura have come to hand at Rs. 9.44 and K.C.P. at Rs. 24.

In the planting section, selected tea and coffee shares have met with support, while rubber shares have been freely offered. Blue Mountain have dropped to Rs. 2.20 and Cochin Malabar to Rs. 6.35. Consolidated Coffee have been steady at Rs. 23.60 and Ouchterlony at Rs. 3.15. Periakaramalai have come to hand at Rs. 3.45. Kailas have been done at Rs. 6.28 on declaring a taxable final ordinary dividend of 15 percent. Midland have been transacted at Rs. 11.30 on declaring a taxable ordinary dividend of 10 percent. Mysore Coffee have been taken at Rs. 4.22 on paying a taxable ordinary dividend of 6 percent. Lingapur have been supported at Rs. 5.17 on declaring a taxable final ordinary dividend of 5 percent. Kalasa have been taken at Rs. 4.25 on paying a final taxable ordinary dividend of 7½ percent. Parkside have been done at Rs. 25.25, Peermade at Rs. 20.50, Rajendra at Rs. 12.35 and Badra at Rs. 2.90.

In textile shares, South India Viscose have weakened to Rs. 114 and Travancore Rayon to Rs. 19.62. Lakshmi have been about steady at Rs. 130.25 and Madura have been done at Rs. 33.70. Buckingham has been quoted at Rs. 274.50 and Bangalore Woollen at Rs. 267.50. Loyal have been steady at Rs. 39.75 and Mettur at Rs. 277.50. Vijayakumar have changed hands at Rs. 150 and Radhakrishna have been done at Rs. 26.60.

In miscellaneous shares, Aluminium Industries have hardened to Rs. 21.15 and Ashok Leyland to Rs. 6.70. Dalmia Cement have been quoted at Rs. 12.50, but India Cement have been easier at Rs. 5.47. Mettur Chemical have been fully steady at Rs. 14.40, but F. A. C. T. have reacted to Rs. 5.15. Seshasayee Paper have been bought up to Rs. 7.60 and Mysore Paper have changed hands at Rs. 12.62. Enfield have been done at Rs. 10 and Madras Machine Tool have been transacted at Rs. 96.50 on declaring a taxable ordinary dividend of 5 percent. Business has passed in Mysore Stoneware around Rs. 11.57 on paying a taxable ordinary dividend of 12½ percent. Parry's Confectionery have been steady at Rs. 2.96 and Spencer at Rs. 21.25. Textool have come to hand at Rs. 150.50, while Madras Rubber have been weak at Rs. 11.37. Binny have been steady at Rs. 271.60, while Standard Motors have been freely offered down to Rs. 9.64.

WITH MILLS
TUBULAR SCAFFOLDING

The Nangal Silo is just one site where Gammon India Ltd. have used MILLS Scaffolding. Safe, practical and economical, MILLS Tubular Scaffolding is being used in the building of more and more projects because it can be used over and over again. Simple to erect, this versatile scaffolding saves time, labour and money. Free advice on installation with drawings can be supplied by Stewarts and Lloyds. The tubes for the scaffolding are made by The Indian Tube Company (1953) Limited. The fittings are made by Guest, Keen Williams Ltd.

London

SHARES KEEP STEADY ON POLL RESULTS

TURNOVER RESTRICTED BY HOLIDAYS

London, 12th August.

IN spite of the upheaval in international affairs, the stock market gave an extremely good account of itself over the past week, and see-sawing movements left prices little changed on balance. With many investors on holidays, business was on the small side and, therefore, the all too many emergencies that arose did not produce the scale of selling that might have been expected. Helping sentiment was the smaller-than-expected fall in the gold reserves and also the latest political opinion polls which showed the Conservatives more favourably placed. Gilt-edged held fairly steady and if anything were slightly higher, but in the foreign market, Greek bonds were marked down following the shock news from Cyprus. Dollar stocks usually followed transactions which were somewhat erratic. A feature in equities was the marked strength of shipping shares, which was touched off by excellent statements from P. and O. and Furness Withy. Tobacco shares went ahead on the rise in cigarette prices, but other leading stocks moved narrowly. Insurance policies moved up, but the gains were not held. In gold shares, the finance issues were wanted at one time, but prices ran back later. Political developments in East Africa did not help coppers, and tins reflected the situation in North Viet-nam and weakened almost daily. British petroleum went ahead on the news of the oil strike, but the market as a whole was quiet. Rubbers also lost ground.

HIDES AND SKINS

The market showed little change. Stocks of hides were higher, but those of skins were less than in the previous week.

Bazaar Sales

(Between 4th and 10th August, 1964)

Cowhides: Wet salted (Ord) 24,000 pcs. on the basis of Rs. 8.25 to Rs. 9.62 and Rs. 10.75; Wet salted (Slaughtered) 34,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50; Wet salted (Ord) 3,000 pcs. on the basis of 52 Paise per lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 67,500 pcs. on the basis of Rs. 240 to Rs. 270, Rs. 310 to Rs. 330 and Rs. 370 to Rs. 380; Wet salted (hekilled) on the basis of Rs. 4 and (shekilled on the basis of Rs. 3.75 a piece; Purneah-Kissenganj 19,600 pcs. on the basis of Rs. 265 to Rs. 275; Pakur 8,000 pcs. on the basis of Rs. 245; Purneah-Kissenganj 2,000 pcs. on the basis of Rs. 465 to Rs. 500.

Bazaar Stocks

(10th August, 1964)

Cowhides: Wet salted 74,800 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 71,500 pcs; Assam-Dinajpur 67,000 pcs; Muzaffer-pore-Patna - Pakur - Purneah - Kissenganj 234,000 pcs.

THE CALCUTTA MONEY MARKET

CALL RATE CONTINUES FIRM

Wednesday, 12th August.

THERE has been a small decrease in the general level of advances in the Calcutta money market during the past week. The decrease has been brought about by the slight fall in the credit given to the cotton and jute mills. Advances to sugar factories, the iron, steel and engineering units, and to the foodgrains trade remain almost unchanged. In the interbank market, conditions have eased slightly but the call rate quotes around 4¼ percent.

The exchange market has been fairly active, with a good supply of tea and gunny bills. The demand for remittances is moderate. In London, sterling remains weak against all important currencies except the Belgian franc and the Danish krone.

BULLION WAS STEADY IN CALCUTTA during the past week on fresh support induced by various rumours. Silver was quoted at Rs. 256.35 and 14-carat gold at Rs. 72. Silver fetched 112¼d in London and 129.3 cents in New York.

DURING THE WEEK ENDED 7TH AUGUST, Government of India Treasury bills for Rs. 138,41,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 11th August. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.400 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 17th August.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 12th August to 14th August at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 5th August to 8th August amounted to Rs. 3,53,25,000.

THERE WERE RISES OF Rs. 39.52 crores to Rs. 2,458.93 crores in active notes and of Rs. 12.47 crores to Rs. 2,468.92 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 7th August, 1964. The currency expansion was adjusted by increasing rupee securities by Rs. 15.10 crores to Rs. 2,160.80 crores in the paper currency reserve. Deposits of the Government of India dropped by Rs. 31.79 crores to Rs. 83.04 crores, while those of State Governments rose by Rs. 7.39 crores to Rs. 26.57 crores. Balances of scheduled banks at Rs. 94.83 crores showed a decline of Rs. 5.72 crores. Their loans from the Reserve Bank dropped from Rs. 3.66 crores to Rs. 3.41 crores, of which advances against usance bills amounted to Rs. 1.15 crores (Rs. 2.05 crores). Balances held abroad at Rs. 8.20 crores showed a drop of Rs. 33 lakhs. Investments declined by Rs. 14.16 crores to Rs. 275.88 crores. Ways and means advances stood at Rs. 16.88 crores, against Rs. 24.46 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 31st July, 1964, shows a rise of Rs. 35 lakhs to Rs. 647.75 crores in total deposits. Investments in Government securities are up by Rs. 18.98 crores to Rs. 288.23 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 34 lakhs to Rs. 344.65 crores. Cash and balances are, in consequence, shown at Rs. 32.14 crores or Rs 5.83 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 31st July, 1964, shows Demand and Time liabilities at Rs 1,282.25 crores (Rs. 34.47 crores on account of borrowings from banks) and Rs. 1,399.42 crores (Rs. 16.84 crores), compared with Rs. 1,279.73 crores (Rs. 32.42 crores) and Rs. 1,397.39 crores (Rs. 15.49 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 32 lakhs and Rs. 1.37 crores to Rs. 63.09 crores and Rs. 95.48 crores, respectively. There is a rise of Rs. 23.92 crores to Rs. 761.36 crores in investments. Advances and bills discounted at Rs. 1,738.21 crores show a drop of Rs. 3.12 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 64.8 percent, against 5.9 percent and 65 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 14-8-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
14-8-64	17-11-64	2,00,00	Rs. 2.400%

THE TATA IRON AND STEEL COMPANY LIMITED

STATEMENT OF THE CHAIRMAN

The following statement by Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company Limited, dealing with the Company's working for the year ended March 31, 1964, has been issued to the shareholders. The Annual General Meeting of the Company will be held on Thursday, September 3, 1964 at 4-30 p.m. at the Birla Matushri Sabhagar, 19, Marine Lines, Bombay-1.

To the Members,

As this review comes to you only a bare two months after the death of Jawaharlal Nehru, it is fitting that it should begin with a tribute to his memory and an expression of our grief at his passing. In every age, a few men are born destined to shape the course of history and it was fortunate for our country that at one of the most critical turning points of its history, one of his heroic stature was there to lead it.

After Gandhiji led us to freedom, Jawaharlal undertook the prodigious task of changing the outlook, beliefs and way of life of hundreds of millions of people steeped in ignorance, poverty and despair; giving them faith in themselves and showing them that with education, hard work, modern ideas and methods and the application of science and industry, they could build a new and better life for themselves and their children. Many years must still pass before Jawaharlal Nehru's dream of a modern industrialised India comes true, but he lived to see the success of the greatest and boldest experiment in parliamentary democracy the world has ever known. If through all the emergencies and crises, which it had to face and surmount over these seventeen years, India has clung so tenaciously to the democratic way of life and remains today a nation of free people, we owe it mainly to him.

The Steel Works and the city of Jamshedpur held a special place in the thoughts of Jawaharlal Nehru for, long before other steel plants were built in the country, they were to him the symbol and the promise of a new India. In 1958, on the occasion of our Golden Jubilee, while dedicating the Jubilee Park, which the Company presented to the citizens of Jamshedpur, he said "I have come here because this great Steel Works and the city of Jamshedpur have become symbolic of the growth of Indian industry.....but the biggest reason of all is to pay homage to the memory of Jamsetji Tata." It is appropriate to recall these words today since this year marks the 125th anniversary of the birth of Jamsetji Tata and the 60th anniversary of his death. Referring to Jamsetji's courage and vision, he said "It is right that we should honour his memory and remember him as one of the big founders of modern India." The great heart that paid this gracious tribute is now stilled, but, as his biographer has said, "India will remember Jawaharlal as the man who saw the vision big and tried, with all his faith and will, to make it great."

As we mourn the passing of Jawaharlal, our thoughts, sympathy and good wishes turn to the dedicated man who has taken on the heavy burden of leading the country. The unanimous choice of Lal Bahadur Shastri as Prime Minister and the smooth transition to the new regime have given proof of the maturity and soundness of our parliamentary democracy. I am sure that shareholders will join me in assuring Prime Minister Shastri of the full support and co-operation of the Company in whatever way it may be called upon to help in the further development of India's steel industry.

The Year's Results

The Company made satisfactory progress during the year under review and reached the production target of 1.5 million tons of finished steel while the output of steel ingots fell short of the 2 million ton target by only 5%.

On the financial side, however, the results of the year's operations were somewhat disappointing. Although the profit before taxes was nearly Rs. 2 crores higher than in the previous year, much of the excess was due to the fortuitous addition to revenues of Rs. 85 lakhs written back from excess provisions made in previous years. Discounting this item, the profit was only marginally higher than in the previous year in spite of the substantial increase in sales and the ratio of profit before taxes to sales was 14.2% as against 15.4% in the previous year. The slight deterioration in profit per ton was due, as stated in the Directors' Report, to a rise in costs uncompensated by a corresponding increase in retention prices. Increases in prices were sanctioned by Government only from March 1964, although the increases in costs beyond the Company's control which such escalation in prices is intended to cover had taken place much earlier. The delay caused the Company the loss of a substantial amount of revenue and therefore of profit during the year. Furthermore, as stated in the Directors' Report, the price increases from March 1964 in categories of steel over which price control has been retained after partial decontrol, were substantially less than expected on the basis of an announcement made by the Minister of Steel in that month.

Shareholders will have noticed the six-fold increase in taxes this year. Whereas in the previous year the bulk of the profit was absorbed, for tax purposes, by arrears of development rebate, there was no similar set-off this year as all such arrears have been fully made up. The provision for taxes would, in fact, have been Rs. 2.70 crores larger but for the higher depreciation allowed under the reducing balance method of calculation adopted by the tax authorities than under the straight line method followed by us. I am sure, you will approve of the Directors' decision to set aside this saving in tax to a deferred taxation reserve for the reasons explained in the Directors' Report.

As against the increase of Rs. 6.65 crores in the provisions for taxes, including deferred taxation, as compared to last year, the allocation to the development rebate reserve is as much as Rs. 7.70 crores less than in the previous year. Taking into account all the variations between the two years' allocations and provisions and last year's transfers of Rs. 3.84 crores from reserves, the final balance available for disposal was larger this year by Rs. 3.12 crores.

As you are aware, our general reserves were heavily depleted by transfers to profit during the last few years to compensate for the exceptionally large amounts set aside for special reasons towards additional depreciation and arrears of development rebate. In the interests of the shareholders, it is necessary that we should build up these general reserves again whenever possible after paying reasonable dividends. Your Directors have, therefore, set aside Rs. 2.75 crores to General Reserve No. 1 this year and at the same time were able to recommend an increase of Re. 1 in the dividend on Ordinary shares.

Impact of Inflation

A matter of much concern to us as to all engaged in industry has been the continuous increase in costs, year after year, not only in steel but in almost every single product made or grown in India. Although the accelerating rise in the cost of living index during the last year has been principally due to soaring food prices, themselves due to insufficient production combined with a greatly increased purchasing power, the cost of all industrial products, including those which, like steel, do not depend on agricultural raw materials, has continued to rise relentlessly with no sign of abatement in sight.

Steel provides a striking example of the marked deterioration in the country's cost/price structure. Whereas until 1955 Indian steel was amongst the cheapest in the world, it has become one of the costliest although the basic elements which make up the total manufacturing costs have not materially changed in relation to those of other countries. At the end of 1963, the average price of the common categories of steel in India was more than two and a quarter times the 1948 price, one of the largest single elements of increase being in respect of excise duty which increased no less than fifteen times from Rs. 5 to Rs. 75 per ton. Actually the full incidence of excise duties and other taxes on the final price of steel is much greater than that as practically every item which goes into the making of steel, including fuel, power, raw materials and stores, is itself subject at one or more stages of production to its own excise duties and other taxes. In addition to the growing burden of direct taxes of one sort or another, freight rates charged by the Indian Railways are today four to five times what they were fifteen years ago.

The damage caused by rising costs to the economy and to the country's long-term plans of development cannot be exaggerated. Not only does the resulting decline in the purchasing power of the rupee cause severe hardship to every family in the country, but increases in costs have a number of other dire consequences. For instance, they have already rendered uncompetitive in world markets almost every exportable Indian product other than tea and jute, thus severely restricting our earnings in foreign exchange; they have inflated expenditure under the country's development plans and this, in turn, has necessitated, apart from further additions to our already crushing burden of taxation, a further rise in deficit financing, aggravating inflationary pressures and leading to still higher costs and prices, a vicious circle indeed.

While appreciating the magnitude and complexity of the problems involved and the grievous burden of additional Defence expenditure since last year, I venture to suggest that the deterioration in our price structure is largely due to our forcing the pace of economic development beyond the country's capacity in physical and financial resources. The inflationary effect of spending too much too quickly has been aggravated in our case by the fact that so much of the total expenditure has been incurred on unproductive civil administration and on costly long-term projects which can add to the national income only after long gestation periods and which, even when completed, produce little for the consumer.

Unfortunately, there seems to be no recognition as yet of the need for a reappraisal of resources and priorities in our planning. From the tentative figures recently announced for the Fourth Plan period it would seem that the remedies for our present ills are thought to lie in still larger plans involving still heavier doses of taxation, deficit financing and foreign borrowings.

Special Advance

You will, no doubt, expect me to make some reference in this Statement to the recent amendment to the Companies Act empowering Government unilaterally to convert into shares loans advanced by them to joint stock companies, and to the discussions which we and the Indian Iron and Steel Company have been having with Government in regard to the repayment of our respective special advances.

We have viewed the passing of the above amendment with deep concern, not only because of its potentially grave impact on the Company and its shareholders, but also because of the arbitrary and unfair nature of the measure and of its disregard of past undertakings in so far as the two Steel Companies are concerned. The scheme for the special advances of Rs. 10 crores made by Government to each of the two main producers towards the cost of their modernization and expansion programmes was formulated in consultation with a World Bank Mission in 1952 and, as memories on the subject seem to be short, I feel it necessary to review once again the genesis and history of these advances.

From the end of the war until the mid-fifties, the retention prices allowed by Government to the steel producers were fixed at levels far below import prices, on the unrealistic basis of a gross return of 8% on block, from which had to be provided profit sharing bonus, Managing Agents' commission and taxes, leaving only about 3½% for dividends and reserves. This price scheme had disastrous consequences for it left virtually nothing in the hands of the industry for rehabilitation and modernisation, leave alone expansion, and made it impossible to attract any fresh capital. As a result, the country had to spend immense amounts in foreign exchange every year on imported steel, which could have been saved if Government had followed a more realistic price policy.

When Government finally accepted the need for modernising and expanding the country's steel industry, we urged that our prices should be raised by Rs. 100 per ton which we undertook to apply exclusively, after taxes, to the modernisation and expansion of the plant. Even with this increase, our average retention price would at that time have been about half the price of imported steel. This modest and perfectly sound proposal was turned down by Government who, instead, decided to increase selling prices without raising retention prices. The funds generated by this increase to the consumer, which would normally and legitimately have accrued to the producers, was taken to an equalisation fund, from which the special advances were made to the two Companies. As I pointed out at that time, this amounted to lending us our own money. This was, in fact, recognised, at least by implication, in the terms of the special advances which made it clear that they were no loans in the ordinary sense, for the advances were to have no fixed maturity date and were to be repaid with interest only if and when a special element was added to the normal retention prices specifically for that purpose. In their 1962 inquiry into the steel industry, the Tariff Commission were specifically asked by Government to recommend a

special element in the retention prices towards the future repayment of the advances and interest thereon from July 1958. The Commission recommended Rs. 8 per ton, Government, for reasons of their own which I have not been able to understand to this day, changed their mind and announced in Parliament and elsewhere that they were considering other means of recovering these advances, including their conversion into shares. It was presumably in pursuit of this objective that the extra-ordinary amendment to the Companies Act mentioned earlier was passed in December 1963. Whether the real purpose was actually to convert the advances into shares or merely to induce the Companies, under the threat of such conversion, to repay them in abrogation of the terms of the agreements between the Government and the Companies, has never been made clear to us. We naturally made strong representations to Government with whom, I am glad to say, discussions have been held and are still continuing towards what I hope will be an equitable and mutually satisfactory solution.

While not relevant to this particular issue. I may mention that we have protested with equal earnestness against another amendment of the Companies Act recently introduced by Government, which is in breach of the spirit if not the letter of the Constitution. Under this amendment, the voting rights attached to shares of joint stock companies held in trust are to pass to a Public Trustee, who incidentally, has still to be appointed by Government. This measure, which has at one stroke disenfranchised every trustee shareholder in the country, except in the case of trusts of less than Rs. 5 lakhs, is an extra-ordinary piece of legislation which illustrates the present tendency to disregard the rights of individual citizens and a growing readiness to rely on compulsion in enforcing Government's will on the people. Although it is now part of the law of the land, it has not yet been put into actual operation as the appointment of the Public Trutee has still to be notified. I hope, even at this late stage, that some convention or "modus vivendi" will be established whereby, in practice, the voting rights of trustee shareholders will be left undisturbed except when they are abused or where the Public Trutee has grounds to apprehend the misuse of such rights by the trustees.

Further Expansion

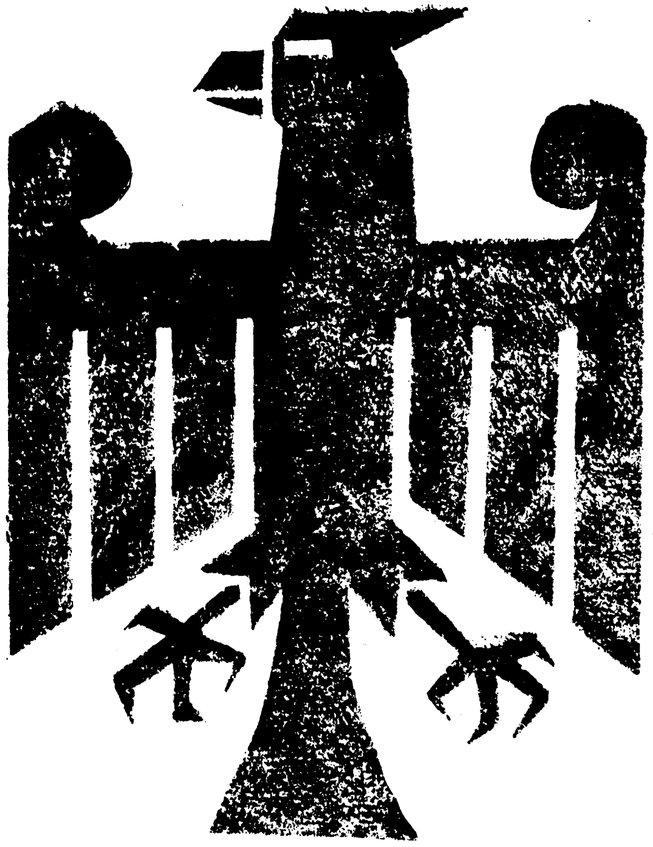
In my Statement last year, I mentioned the possibility that our Company might be called upon to undertake a further large-scale expansion of capacity at Jamshedpur during the Fourth Five-Year Plan. Government have, indeed, requested us to undertake such expansion and further progress has been made in the examination of the project. The scheme, as it has now emerged from such a study and from discussions with Government, contemplates the installation of the necessary facilities for making, in the first instance, an additional million tons of ingot steel to be rolled into sheets and strip in a continuous or semi-continuous strip mill.

We expect to appoint a firm of consulting engineers shortly to prepare a detailed project report which should be received in about eight months after their appointment. While only preliminary estimates have been made, the indications are that the cost of this further expansion would be of the order of Rs. 170 crores of which probably a little more than half would be in foreign exchange.

As I hinted last year, the most difficult problem will be that of finance, particularly as this project will be super-imposed on a programme already in hand for expanding and modernising our ore mines, building a battery of coke ovens, adding some equipment to SMS 3 and doing a few other things, at a cost of about Rs. 25 crores and on the project for increasing the output of our Jharia Collieries by a million tons of washed coal at an estimated cost of about Rs. 30 crores.

There is no need for alarm at the prospect of such large commitments. The recently completed Two Million Ton Programme and the results before you in the form of increased dividends and reserves are an indication of the benefits and added strength which accrue to the Company and its shareholders from expansion resulting in lower costs, better utilisation of total assets and increased productivity. At this early staged, I can only repeat that your Directors will sanction a further expansion only if they are thoroughly satisfied that the project is technically and economically sound and that it can be undertaken on terms wholly fair to the shareholders.

Communal Disturbances



The Directors' Report contains a brief factual reference to the tragic events which overtook Jamshedpur in March this year and which, in addition to the loss of valuable life, brought great misery and hardship to thousands of innocent men, women and children. This explosion of communal violence was all the more shocking for having occurred at Jamshedpur which, for over a half century, had established an exemplary record of peace and harmony, maintained unsullied even in the darkest days of 1947.

It is poor consolation to know that the troubles were least pronounced in the Steel Plant and in the areas inhabited by the Steel Company's employees. This was to be expected as a large proportion of our present employees consists of second and third generation citizens of all communities who were born in Jamshedpur, went to school together and form a mature and stable cosmopolitan community. These elements conducive to happy relations between communities are lacking among the newer industries of Jamshedpur, most of whose employees have come from outside the city and, being younger, are more easily swayed by troublemakers.

The lesson to be learnt from this tragic episode is the need for continuous vigilance and sustained action in

COUNTRIES WE EXPORT TO (5)

WEST GERMANY

OF FOOTWEAR FROM
Bata INDIA

the promotion and maintenance of good relations amongst the various communities as well as for a strong civil administration endowed with the necessary authority and the will to take firm and instant action in emergencies. Although the local Government authorities, including the Police, no doubt did their best to bring the situation under control, they were at first overwhelmed by the suddenness and magnitude of the events which offered evidence of having been deliberately planned.

One of the possible causes for the situation having gone out of hand for a while is the fact that Jamshedpur, although the second largest city in the State of Bihar and perhaps the most vital industrial centre in the whole country, is still administratively treated as a sub-division of a district, the headquarters of which are in a small neighbouring town. As a result, the law enforcement machinery is inadequate for dealing with serious emergencies. We have, therefore, urged that early consideration be given to the possibility of upgrading Jamshedpur to an administrative status commensurate with its importance to the State and to the country and with the magnitude of the problems and the task of administering it.

As stated in the Directors' Report, the Company, along with sister concerns at Jamshedpur, took quick and effective steps to provide relief and rehabilitation to the families of the affected communities. Although not relevant to this review, I think, shareholders may be interested to know that, recognising the similar misery and hardship suffered by thousands of refugee families from across the country's borders, the Steel Company, along with Telco and the Tata Trusts, are planning to undertake a programme of relief at one or more refugee camps in Bihar.

Sir Jehangir Ghandy

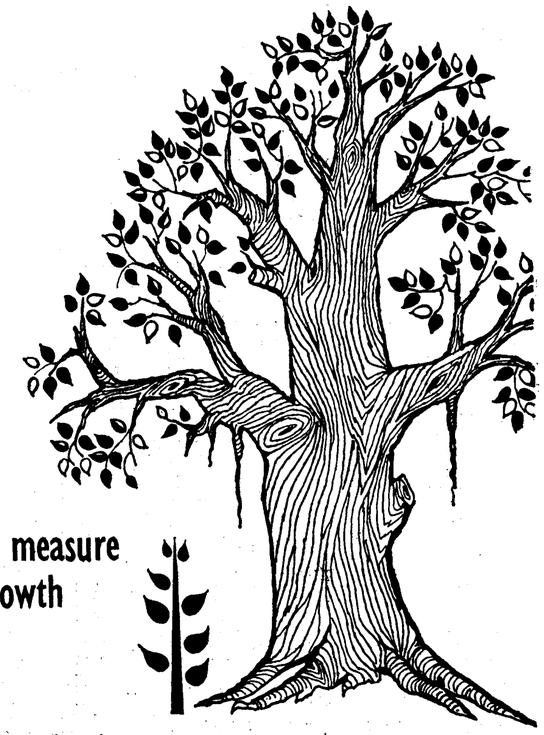
It is customary for me to end my annual statement to the shareholders with an expression of thanks to the officers, supervisory staff and workers at Jamshedpur and elsewhere for their contribution during the year to the further progress made by the Company. Now that I am no longer inhibited by his membership of the Managing Agents Firm. I should like to pay a special tribute to my old friend and colleague, Sir Jehangir Ghandy, who retired as Director-in-Charge of the Steel Company at the end of the year under review. "Joe" Ghandy, as he has always been known to those who have worked with him, joined the Steel Company as a trainee in 1917, nearly 47 years ago, and left for the U.S.A. eighteen months later for advanced post-Graduate studies. He returned to Jamshedpur in 1921, and has been there ever since. From the start, he showed such exceptional ability and drive that it took him only nine years to be put in charge of the whole plant as General Superintendent and another eight years to become the first, as well as the youngest, Indian General Manager. Since 1946, he was in charge of the Company's affairs at Jamshedpur, first as Resident Director of the Managing Agents, and then as Director-in-Charge. To him goes a major share of the credit for the progress and growth of the Company over the last thirty years.

Sir Jehangir Ghandy achieved prominence and countrywide recognition in various fields of national endeavour and was closely associated with many of the country's leading technical institutions; but it is as an outstanding Engineer-Administrator and for his unparalleled services to this Company and to the Indian steel industry as a whole that he will be remembered and for which we all owe him a deep debt of gratitude.

Although no longer concerned with the day-to-day conduct of the Company's affairs, Sir Jehangir, happily, continues his connection with the Company as a member of its Board, as a Director of Tata Sons and as Chairman of three important enterprises associated with the Steel Company at Jamshedpur. I am sure shareholders will wish to join me in thanking him for all he has done for the Company over these four decades and more, and in wishing him many years of good health and happiness.

The work and responsibilities of Sir Jehangir at Jamshedpur are now shared by two Resident Directors of the Managing Agents, Mr. S. K. Nanavati, in charge of Operations, and Mr. R. S. Pande, in charge of Administration. Mr. Nanavati retired as General Manager of the Company in September last year on his joining the Board of the Managing Agents' Firm after a brilliant career with the Steel Company covering a period of over 29 years, and was succeeded as General Manager by Mr. G. Kumar.

Mr. Pande had a distinguished record of service with Government prior to joining the Steel Company in 1958 as Director of Personnel. He was appointed Agent in April 1959 and retired from the Company's service on 1st April this year when he joined the Board of Tata Industries.



The Company's operations are safe in the hands of this strong and experienced team backed by a group of able and devoted officers.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

How to measure Growth

All things grow in age—but only *some* grow in size and stature. A young sapling shoots up—sprouts new leaves and branches. But how does one measure the growth of a bank? Take the Bank of Baroda, for instance.

One way would be to compare figures. The Bank of Baroda began in 1908 with a single office in Baroda. Now it has as many as 210 branches in India and abroad. And deposits exceed Rs. 140 crores.

A strong and progressive institution with 55 years of experience, the Bank of Baroda has had a successful programme of branch expansion. It has also aimed at an ever-widening pattern of service. Indeed the Bank's chief goal has been to widen the range and scope of its banking services for the convenience of its customers.

THE BANK OF BARODA LTD.

(Estd. 1908) Head Office: Baroda

now has over 210 branches all over India and abroad with deposits totalling over Rs. 140 crores

THE INDIAN IRON & STEEL COMPANY LIMITED

CHAIRMAN, SIR BIREN MOOKERJEE'S STATEMENT

The following statement by Sir Biren Mookerjee, Chairman of the Indian Iron & Steel Co. Ltd. dealing with Company's working for the year ended 31st March, 1964, has been issued to shareholders. The Annual General Meeting of the Company will be held on Tuesday, the 8th September, 1964, at 3 p.m. at the Registered Office of the Company, 12, Mission Row, Calcutta-1.

Before dealing with the affairs of the Company, I would refer to the national tragedy we have experienced in the death of our late Prime Minister, Pandit Jawaharlal Nehru on the 27th May, 1964 and would give public expression on behalf of the Board of Directors and all members of the Company to our feeling of profound sorrow at the passing of one who played a leading part in the attainment of freedom by our Country and who since the achievement of independence, guided in so able a manner on the home and international fronts the destinies of India through the momentous events of the past seventeen years. His memory will remain with us always.

Operations

From the figures given in your Directors' Report it will be seen that production of steel during the year under review has again approximated to the rated capacity of the Plant. This position barring untoward events it is hoped to maintain, but having reached the plant capacity as it stands under present working conditions no improvement in production of any magnitude can be looked for except to such extent as the introduction of new techniques may render possible. To this end intensive research continues to be carried out by your Company's technical staff into the beneficiation of raw materials, improvement of blast furnace operational conditions and added use of oxygen in the Melting Shop. I will refer to this matter of research in greater detail at a later stage in this Statement.

Accounts

Those shareholders who are unfamiliar with the provisions of the Income-tax Act and the Companies Act may find difficulty in fully understanding the reasons which have necessitated the raising of the provision for depreciation from Rs. 3,40,18,269 for the previous year to Rs. 4,40,25,006 for the year under review and I should, therefore, perhaps supplement the brief technical explanation given in the Report by your Directors.

Section 205 of the Companies Act provides that no dividend shall be paid by a Company for any year except out of the profits for that year arrived at after providing for depreciation. Certain alternative bases are then laid down for computation of the provision for depreciation that chosen by your Company being stated in Section 205 (2) (b) as provision "in respect of each item of depreciable asset, for such an amount as is arrived at by dividing 95% of the original cost thereof to the Company by the specified period in respect of such asset." The term "specified period" is then defined in the following words—"specified period in respect of any depreciable asset shall mean the number of years at the end of which at least 95% of the original cost of that asset to the Company will have been provided for by way of depreciation if depreciation were to be calculated in accordance with the provisions of Section 350." Section 350 then provides that depreciation shall be taken at the rate specified for the assets by the Income-tax Act and the rules made thereunder for the time being in force as normal depreciation "including therein extra and multiple shifts allowance."

Referring back to Section 205 (2) (b), it will now be appreciated that 95% of the original cost of assets is a definite unvariable amount but that the factor by which this amount is to be divided in order to arrive at the amount of depreciation to be provided, namely the "specified period", is by reason of Section 350 dependent upon the Income-tax rates of depreciation applicable from time to time. If these rates are increased then the more quickly will 95% of the original cost of the assets be covered, the shorter will be the "specified period" by which the 95% of the original cost of the assets has to be divided and the greater in consequence the amount of depreciation that has to be provided against profits. This is the position for the year under review where it has been announced that the income-tax depreciation rates that will be applicable in respect of that year are to be increased by the re-introduction of triple shift allowance with consequent increase in the depreciation provision made in the Profit & Loss Account.

Dividend

In view of the magnitude of the amount, some comment will no doubt be expected from me regarding the sum of Rs. 5.43 crores set aside to General Reserve from the profits of the year in relation to the amount proposed to be distributed as dividend. It is perhaps appropriate that I should therefore list the very heavy loan liabilities outstanding at the 31st March, 1964 in respect of the completed Expansion Schemes together with the finance that has to be found for the further Schemes to which reference has been made in your Directors' Report. These are :—

	Rs. crores
World Bank Loans :	
1953 Extensions ...	7.18
1955 Extensions ...	5.31
Government of India Loan Collieries Development Project ...	4.61
Balancing of Plant Project	23.19
	16.21
Total ...	56..50

Following upon completion of the Balancing of Plant Project which, as you are aware, will increase the steel-making capacity of the Burnpur Works by some 300,000 tonnes of crude steel per annum, our plans are that implementation of the second phase of further expansion shall be put in hand and preliminary steps towards this end have already been taken with Government and the World Bank. This second phase of expansion would give added capacity of approximately a further 700,000 tonnes per annum, the two Projects together therefore covering the raising of our present capacity by some 1,000,000 tonnes of crude steel per annum. The phasing of this further 1,000,000-tone expansion into two parts follows our policy that no individual expansion project should be of such magnitude as to impose too great an immediate financial burden on the Company or impair the dividend position to the detriment of the interests of the shareholders but rather that expansion should be gradual, each stage being followed by a period of consolidation before the undertaking of the next. No firm estimate of the cost of the second phase of the further expansion can be made until decision is taken as to what form the end products will take, this being dependent upon the future requirement of the country, but the cost will naturally be of very great magnitude and constitutes therefore a major factor in an appreciation of the financial requirements of the Company.

Additionally, finance has to be found for expenditure on capital account in connection with the modification and improvement of the existing plants, the provision of additional housing and amenities for staff and workers together with the large general capital expenditure that must constantly be incurred in every efficient and expanding organisation. Viewed in this light, the necessity for the ploughing back of profits not only for the year under review but also for the future will, I trust be clearly apparent.

In compensation in some measure for the restriction of dividend so caused it would normally have been the desire of your Directors to capitalise from time to time by the issue of bonus shares a portion of the reserves of the Company which are already out of all proportion to the share capital. It is a matter of regret to them that such a course is however impracticable under present taxation principles involving, as it would, heavy liability for tax both on the Company and on the shareholders and is, in fact, impossible under the current policy of Government which it is understood is to permit bonus issues solely out of any share premium account.

As possibly of some assistance to the shareholders in the spread of their income, I would however say that I am considering recommending to my Board that for the current and future years an on-account distribution of profits should be made by way of declaration of an interim dividend during the course of the year, the balance of dividend only then being left for declaration in the normal course at the Annual General Meeting.

Research and Development

The steady deterioration during the last ten years in the quality of the primary raw materials, particularly coking coal and limestone for pig iron production, has presented a serious challenge to the Company's technical staff but thanks to the operational research carried out by them capacity production from our Blast Furnaces has been achieved and is being maintained. As examples of some of the problems with which we are faced, the ash content of our coking coal currently averages about 19% compared with 16% ten years ago, but what is worse is the wide range between the maximum and minimum ash content at 24% and 14% respectively. Similarly, the effective lime content of the present-day limestone varies between 30% and 45%. The quality of our iron ore too has been adversely affected by increasing demand and mechanisation of the Iron Ore Mines. Nevertheless, these are the raw materials with which our country is endowed and we have to learn, and learn, quickly, how to use them to better advantage to enable us to produce iron and steel efficiently, both from a productive and economic point of view.

A large part of the solution lies in raw material preparation which, if we are to avoid merely blindly copying what others have done or are doing, calls for more and more expenditure on operational research. To take a specific case—raw material preparation includes crushing to an optimum maximum size and restricting the minimum size to give an aggregate best acceptable to the process. From this procedure in the case of iron ore, a large quantity of undersize material will accrue to become an expensive discard unless steps are taken to convert it into a useful material.

The most well known, long-standing and orthodox way of doing this is by sintering, a process which has resulted in improved blast furnace practice. We, ourselves, however have never accepted that this expensive process is necessarily the best solution to the problem in relation to Indian iron ore and have consequently refrained from any hasty decision that would commit us to the very heavy capital expenditure involved. That this has been the prudent course is borne out by modern research which has suggested that other forms of agglomeration could be capable of producing better results with Indian iron ore than the sintering process.

Over the past few years your Company has accordingly been carrying out extensive research with its own iron ore in an effort to find the best way of utilising the undersize ore which as a result of crushing and screening is accruing at our Ore Mines. I am happy to say that this research has shown much promise so much so that our own findings involving a combination of direct reduction, magnetic separation and agglomeration have been confirmed on reference by us for test by an independent overseas research organisation. The product obtained in our Pilot Plant is of high purity and is likely to have in the future a great influence on the operation and efficiency of Indian blast furnaces. Sufficient information has now been obtained to enable the engineers to design the appropriate plant.

We have also investigated the questions of humidity control and fuel injection in relation to the operation of the Blast Furnaces, the increased use of oxygen in the steelmaking processes and the possibility of future production of such a standard grade of iron as would enable us eventually to eliminate the rather costly and wasteful intermediate Bessemerising process that under present conditions is necessary for purification of the hot metal before charge to the Melting Shop Furnaces Suitable inclusion towards this ultimate latter end has in consequence been made in the Collieries Development and Balancing of Plant Schemes.

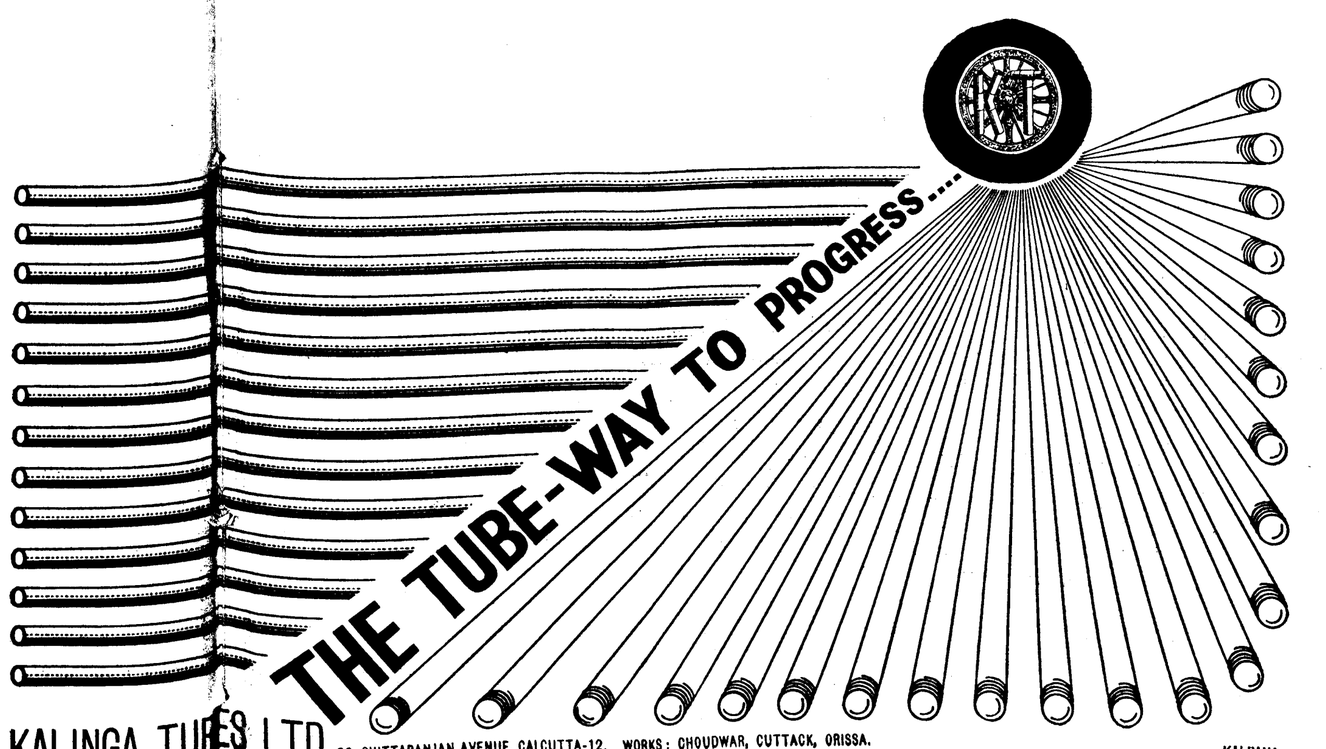
The utilisation of waste products has also been engaging our attention. For instance, we have been producing for a number of years building bricks and mortar manufactured from waste blast furnace slag.

Import restrictions on engineering spares has forced us into developing manufacturing techniques for which we more often than not are ill-equipped. The recurring expense of importing rolls for our Rolling Mills, for instance, is a serious drain on the country's foreign exchange resoures. Here, although not having been granted a licence to manufacture rolls for the purpose of selling, we have as a result of experiments carried out at our Kulti Foundries and with the help of the British Rollmakers Corporation, been able successfully to manufacture rolls for our 18" Mill which have proved to be equal to, if not better than, those imported. For this size of roll we can now support ourselves, saving approximately Rs. 13 lakhs per annum in foreign exchange. The factor limiting our ability to produce rolls in greater numbers and in larger sizes is the capacity of our existing Foundry and Machine Shop at Kulti which we hope to enlarge in course of time so that we may be able to cover also the roll requirements of the Merchant Mill and Sheet Bar and Billet Mill.

Miscellaneous engineering spares previously imported are now regularly being produced by our associated Companies within the Martin Burn Organisation for consumption at Burnpur resulting in a considerable and recurring foreign exchange saving. We have also been able within this Organisation to secure the manufacture to our specifications of items of capital plant for which we had previously to look to foreign suppliers. As examples, these cover such diverse items as Hot Metal Ladles, Ingot Casting Cars, Ladle Cranes, Bessemer Converter Shells, Hot Metal Transfer Cars and Bogies, Ground Charges, Slag Ladle Carriages, Special Type Discharge Wagons, Coke Quenching Cars, Acid Tanks and Acid Vats, the total value over the past nine years approximating to some Rs. 50 lakhs.

Kulti Foundries

Modernisation and expansion has been carried out of the Non-Ferrous Foundry and the Steel Foundry at your Kulti Works and an additional Annealing Furnace for the latter installed. New Machine Shops have been attached to these two foundries and the pressure on the main Machine Shops relieved to this extent.



The order position continues to be satisfactory but output for the current year remains dependent upon adequacy of the supplies of foundry grade pig iron.

During the year loss was suffered by the death of Mr. S. N. Gupta, the Works Deputy General Manager (Commercial) who had charge of Kulti. Mr. R. G. da Costa, a Mechanical Engineer of wide experience, has since been appointed and has assumed charge as Deputy General Manager (Kulti).

Decontrol

In my Statement last year I indicated that Government were considering decontrol of the distribution and prices of steel and that it had been arranged that the producers should submit joint concrete proposals for the setting up and operating of a Joint Organisation following upon decontrol and for the prices that should become effective at the date of decontrol. Representatives of the producers met on several occasions at various levels to discuss and work out joint proposals but unanimity was not able to be achieved and ultimately the producers

■ HIGHEST QUALITY TUBES CONFORMING TO INDIAN STANDARD SPECIFICATION

KALINGA TUBES LTD 33, CHITTARANJAN AVENUE, CALCUTTA-12. WORKS: CHOUDWAR, CUTTACK, ORISSA.
KALPANA K.T.38

in the private sector were asked to put up their views independently of the public sector. Accordingly, your Company jointly with the Tata Company submitted a memorandum on the 7th November 1963 suggesting the formation of an Iron & Steel Board. The memorandum contained details as to the functions of the proposed Iron & Steel Board together with recommendation regarding the prices to be effective on decontrol. These suggested prices were based on a block of Rs. 1,500/- per tonne of saleable steel as being more truly representative of present-day conditions than the figure of Rs. 1,176/- per tonne adopted by Government in the last fixation of retention prices. The proposed prices on this basis were about Rs. 35/- per tonne higher than the retention prices excluding the assessed increased incidence in respect of freight equalisation.

Matters rested at this stage until unilateral decision was taken by Government regarding the planning of production and control and the pricing and distribution of Iron & Steel, the principles of which were conveyed to the representatives of your Company and those of the Tata Company who were called to meet the Minister for Steel in Delhi on the 26th February 1964. The salient features of Government's decision were as follows :—

(1) Statutory control over the price and distribution of all categories of steel except pig iron, ingot moulds and bottom plates, billets and tin bars, plates. sheets, wide strips, skelp, tin plates, hoops and their respective defectives would be abolished with effect from 1st March, 1964.

(2) Indents for categories of iron and steel which continued to be controlled would require to be supported by quota certificates as hitherto.

(3) A Joint Plant Committee would be constituted with an accredited representative from each of the Steel Plants and with the Iron & Steel Controller as its Chairman. A representative of the Railway Board would also be a member of the Joint Plant Committee. This Committee would be entrusted with the task of (a) the planning of production both of controlled and decontrolled categories ; (b) the announcement and listing of prices of the decontrolled categories of steel and (c) the administration of the freight equalisation fund for both the controlled and decontrolled categories.

(4) Government would set up a high level steel priority committee which would determine priority ranking in relation to bulk allocations of steel.

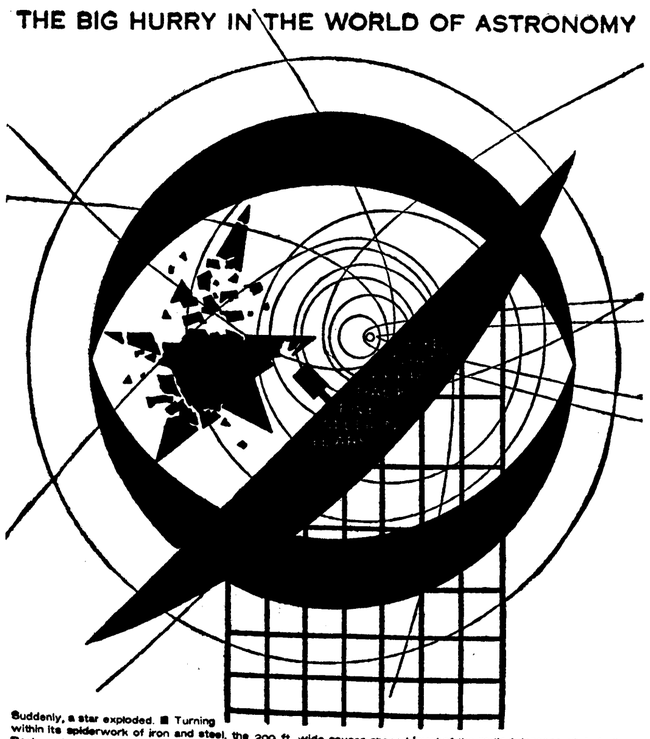
(5) Re-rollers would be virtually made free from all control, as also would stockists and retailers in the case of all decontrolled items.

The decision of Government followed the general recommendation of the committee appointed by Government in September 1962 on decontrol of steel and popularly known as the Raj Committee.

Simultaneously with the decision of partial decontrol of steel, Government announced increases in the Excise Duty mainly to compensate the loss of surcharge with the abolition of the equalisation fund with effect from the 1st March 1964. The average rise in the Excise Duty calculated on your Company's 1963-64 output of steel is about Rs. 18/- per tonne. The selling prices for the decontrolled categories announced by the Joint Plant Committee, and the prices directly notified by Government for the controlled categories, include an element of Rs. 62/- per tonne on account of freight equalisation to cover the distribution of steel to consumers at all rail head stations throughout India at a uniform price. The system of retention prices has been abolished and the new prices to producers have a differential of Rs. 45/- per tonne between the 'tested' and the 'untested' categories, which under the new arrangements is now retained in full by the producers as against Rs. 10/- per tonne only under the old system of retention prices.

Owing to force of circumstances the prices announced by the Joint Plant Committee had of necessity to be based on the previous retention prices adjusted for excise duty and additional freight, the effective increase to the producers arising therefore almost wholly from the additional realisation in respect of tested materials. The prices of the decontrolled categories were later revised from the 13th April 1964 in partial compensation of increases in production costs not reflected in the previous retention prices.

The average increase in the case of your Company on the decontrolled categories of steel forming nearly 60% of the total output is of the order of Rs. 30/- per tonne on the basis of the product mix and the proportion of 'tested' to 'untested' steel achieved in the year 1963-64. In the case of the controlled categories, the effective increase has been of the order of Rs. 4/- per tonne only on account of reduction in the net price of billets and the assumption by Government of an incorrectly high percentage of 'tested' galvanised sheets in working out the prices despite the fact that on protest the price of untested billets was revised upward by Rs. 15/- per tonne from 30th May 1964. On the basis of our production for 1963/64 the over-all average increase in respect of our total output of controlled and decontrolled categories of steel is approximately Rs. 20/- per tonne, effective in successive stages of Rs. 10/-, Rs. 8/- and Rs. 2/- per tonne from the 1st March 1964, the 13th April 1964 and the 1st June 1964 respectively.



It is too early yet to assess the adequacy of the revised planning arrangements under the Joint Plant Committee and I would only say at this juncture that the retention of control by Government over certain categories of steel, particularly in the case of sheets, has done little to curb the activities of the black market in the items in short supply.

On the financial side, we have grounds for dis-satisfaction inasmuch that the cut imposed by Government on the retention prices recommended by the Tariff Commission for the two years ended the 31st March 1962 and continuing up to the date of revision of prices under the above arrangements together with certain interim increases in production costs have remained uncompensated and that funds to this extent have been denied to the Company which would otherwise have been available against the heavy capital expenditure on staff housing, modernisation and expansion with which we are faced. We are also unaware of the reasons for non-acceptance of the prices put forward to Government under the joint proposals of the Tata Company and ourselves and by reason of the somewhat *ad-hoc* nature of determination of the prices now current are also unware of any approved basis for future adjustment of these prices in relation to productive capacity, capital block and working costs.

Acknowledgements

In conclusion, I would express on behalf of the Board of Directors our appreciation of the services rendered by the General Manager, Mr. J. McCracken, his executive heads and the entire staff and workers of the Company whose efforts have contributed so largely to the results that have been achieved.

NOTE : This does not purport to be a record of the proceedings of the Annual General Meeting.

Suddenly, a star exploded. ■ Turning within its spiderwork of iron and steel, the 200 ft. wide saucer-shaped 'eye' of the radio telescope at Jodrell Bank looked deep into black space and recorded : the star had exploded FIVE MILLION YEARS AGO ! ■ Peering so deep into space as to question time itself such radio telescopes are revealing to us the breathtaking, even frightening, dimensions of space and time, gathering astronomical data that are making space travel a fast nearing reality ■ Into the fashioning of the 2000 ton Jodrell giant went the most advanced technique and knowledge of welding and gas cutting. ■ It is this precise knowledge of industrial gas and its diverse applications that Indian Oxygen affords Indian industry.

INDIAN OXYGEN LIMITED IOL

New Delhi

Mr. SHASTRI URGES ECONOMY IN GOVERNMENT SPENDING

(FROM OUR NEW DELHI CORRESPONDENT)

THE Prime Minister is reported to have addressed a letter to Central Ministers urging them to avoid commitments on new projects in the field of heavy industries and concentrate on the expeditious completion of schemes already being implemented. New projects for increasing agricultural production will only be allowed to be taken up. A second look at defence expenditure has also been urged for avoiding waste. Mr. Shastri has also advocated the slowing down of cultural activities. He has suggested that the Central Finance Minister and the Deputy Chairman of the Planning Commission should make a fresh assessment of projects and programmes for which funds are being allocated now or will be allocated next year. The Prime Minister thinks that the consolidation of past gains should take precedence over new schemes and that the fourth plan should be drawn up realistically on the basis of third plan performance. He has called for full support for the Central Finance Minister's proposal to cut Central Government expenditure by Rs. 70 crores. He feels that public-sector undertakings should yield returns commensurate with their investments. The return to the community from these projects, the Prime Minister thinks, has so far been totally inadequate in comparison to the tax burden the community has been called upon to bear during the past decade.

FOODGRAINS

Threat to Hoarders

With a view to securing the co-operation of the Opposition parties for bringing down food prices, the Prime Minister, Mr. Lal Bahadur Shastri, held discussions last week with the leaders of the Opposition groups in Parliament. He appealed to them to refrain from the agitational approach to the food problem at this juncture.

Addressing a Press conference after the meeting, the Central Minister for Food and Agriculture, Mr. C. Subramaniam, said that although there were *differences of opinion* concerning the Government's food policy, the Opposition leaders, by and large, *agreed* with the measures taken by the Government to control the situation. The consensus at the meeting was that food zones should be abolished. Mr. Subramaniam said that while the zonal system was proposed to be continued till the next harvest to avoid further complications, the Government would think about its reconstitution or its ultimate abolition, if the situation so requires.

The Opposition leaders, however, were sharply divided on the need for going in for State trading in foodgrains. While Mr. Dahyabhai Patel of the Swatantra Party was opposed to State trading, the communist leader, Mr. A. K. Gopalan, said that the proposed Foodgrains Trading Corporation was no substitute for State trading.

The other suggestions made by the Opposition leaders to tackle the food problem included the *regulation of* bank credits, abolition of sales tax on foodgrains and vigorous efforts to curb Government expenditure. They also suggested the reclamation of wastelands, ravines and the long stretches of land along the railway tracks for growing more food. Some members expressed concern over the diversion of the cultivated area from under foodgrains to cash crops, particularly sugarcane, and criticised the Government for providing higher prices for cane. The part played by unaccounted money in encouraging hoarding also figured prominently in the discussions.

Concern over Price Spiral

In a communication addressed to State Chief Ministers, the Prime Minister has expressed grave concern over the deterioration in the price situation. He has advised the State Governments that with a view to bringing out hoarded foodstocks, they may not take penal action for the next two weeks if any trader or stockist dishoards any stocks of foodgrains not previously declared. At the expiry of the two-week period, firm action should be taken in dealing with the defaulters.

In the present difficult situation, the Prime Minister thinks that there is no alternative to import cereals as *quickly as possible*. Arrangements have already been made to import during the next few months 4 million tons of wheat and 300,000 tons of rice from the U.S.A., 71,000 tons of rice from Pakistan and 10,000 tons of rice from Thailand. Substantial quantities out of these imports will be available during the current month itself. Negotiations are also being carried on for importing 60,000 tons of rice from Cambodia and another 50,000 tons from Thailand. The impact of these imports should begin to be felt by *the end of this month.*

But the situation can ease considerably if the people in the cities enforce a greater discipline on themselves. The Prime Minister has suggested that the larger hotels and retaurants, which serve a wide variety of dishes, should cut down their consumption of rice and wheat. Those who are non-vegetarians should also curtail their consumption of cereals. Similarly, it will be good to cut out from meals, rice at least for one month especially *in areas* like Punjab, Delhi, Uttar Pradesh, Rajasthan and Madhya Pradesh.

The Prime Minister has also urged State Government officials to be firm in implementing the price policy and has suggested that they should frequently go round and find out for themselves if the items of daily consumption are being sold at prices fixed by the Government. The Prime Minister has also emphasised that the bigger cities like Calcutta, Bombay, Madras and *Delhi* have to be dealt with in a special way. If necessary, "we should be prepared to introduce rationing in these cities."

Special Task for Panchayats

For easing the situation in the rural areas, the Prime Minister has suggested that *panchayats* should take upon themselves a special responsibility under the present circumstances. Each village *panchayat* should keep an eye on every man in the village to see that there is no starvation. *Panchayats* should also be in a position to know with whom stocks are available. They should use persuasive methods to bring out the stocks.

The Prime Minister has appealed to the surplus food producing States to keep the all-India picture in view and not to enforce restrictions and measures from their own narrow point of view.

Detailing the measures, such as the setting up of the Foodgrains Trading Corporation and a commission to suggest producer and consumer prices, the Prime Minister has asked the State Chief Ministers not to spare *any pains to step up food production.* He has also expressed himself in favour of fixing the prices of such commodities as cloth, vegetable oils, sugar, matches, kerosene, tea, soap and *vanaspati.* He has also stressed the need for setting up of as many consumer co-operative societies as possible.

FOURTH PLAN

Resources Reassessed

After a reassessment conducted by the experts of the Planning Commission on the resources that may be available for financing the fourth plan, it is felt that an investment of the order of about Rs. 11,000 crores will be feasible in the public sector during the period. With an investment of about of Rs. 7,000 crores in the private sector, the total investment component of the fourth plan may be about Rs. 18,000 crores.

Balances from current revenues, it is expected, will yield about Rs. 1,900 crores during the fourth plan period. Another Rs. 900 crores to Rs. 925 crores may be available from the surpluses of public-sector enterprises at the present prices. The contribution of the railways may amount to about Rs. 450 crores. The market borrowing programmes may yield nearly Rs. 1.600 crores and small savings, including annuity deposits, about Rs. 1.200 crores. A sum of Rs. 500 crores may be forthcoming from provident fund accounts. Miscellaneous capital receipts may be of the order of Rs. 775 crores to Rs. 800 crores. It is assumed that the economy will be able of take in deficit financing to the tune of Rs. 500 crores. Assistance from friendly foreign countries may be of the order of Rs. 2,500 crores to Rs. 2,600 crores. The remaining financial resources, it is thought, can be conveniently raised from additional taxation. Slightly larger contributions may also be expected from the public-sector enterprises.

The figure of Rs: 2,500 crores to Rs. 2,600 crores of external assistance is net, excluding about Rs. 700 crores that may be available under P.L. 480 and Rs. 300 crores anticipated to be the net inflow of foreign capital. In addition, aid will be required for re-financing the repayments of the loans maturing during the fourth plan period. Interest payments on foreign loans already contracted for have, however, been taken into account in arriving at the Rs. 2,500 crores or Rs. 2,600 crores foreign aid figure.

BOKARO

Steel Team from Russia

A fairly large team of steel experts from Russia, headed by Mr. A. Goubert, chairman of the Gipromez, the Soviet enterprise handling exports of metallurgical plants and equipment and specialising in setting up steel plants, is expected here shortly for further investigation and detailed discussion on the proposed Bokaro steel plant. This was disclosed by Mr. N. N. Wanchoo, Secretary to the Central Ministry of Steel, on his return from Russia. The Gipromez experts are understood to have proposed some significant changes in the Dastur report on the Bokaro plant in the light of the latest Russian techniques of steel production.

The Wanchoo mission, which included Mr. K. M. George, Managing Director of the Bokaro Steel Ltd, and Mr. M. N. Dastur of Dastur and Company, Central Government's Indian technical consultants for Bokaro, is stated to have impressed upon the Russian authorities the anxiety of the Government of India to complete the first 1.5-million-tonne stage of the steel plant on a priority basis so that it can start production by the end of 1968. The Russian authorities are stated to have agreed to the proposal.

The Wanchoo mission is also believed to have urged Russia to explore the possibilities of providing at the Bokaro steel works the continuous casting process of steel production. This process, which is the latest Russian technique for steel-making, eliminates the traditional blooming and slabbing mills and thus helps in saving nearly Rs. 20 crores in the cost of setting up a steel plant. The technique also reduces the wastage of steel when it is rolled into products from about 15 percent through the conventional method to about 5 percent.

The Russian authorities have expressed their desire to assume full responsibility for the designing of the plant and for supervision of its construction. If this is not done, they say, it will be difficult to guarantee the completion of the plant according to schedule as also its performance. They have also stressed the need for using 100-percent sinter for steel manufacture at the Bokaro plant. Russia has agreed to the fullest utilisation of the available Indian capacity to fabricate steel-making equipment.

To initiate preparatory work at the Bokaro plant, orders for the purchase of over Rs. 1-crore worth of earth-moving and construction equipment from Russia are proposed to be placed shortly. This equipment is expected to start coming in the last quarter of 1964 or carly 1965.

The Central Government is expected to sign a formal contract with Russia in the middle of October defining the scope of the Bokaro steel plant. The supply agreement will be signed early next year. It is only then that the estimated cost of the project can be known.

The Wanchoo mission also had discussions with the Russian authorities on the fourth plan expansion programme of the Bhilai steel plant which would raise its capacity from 2.5 million to 3 million or 3.5 million tonnes of ingots a year.

The Indian delegation also visited Czechoslovakia and explored the possibilities of further Czech collaboration in the Indian heavy engineering industry, particularly for the manufacture of electric equipment for steel production. It is possible that part of the equipment required for the Bokaro plant may be imported from Czechoslovakia through Russia, as was done in the case of the Bhilai steel works.

Steel Sections Rationalised

The Government of India has accepted the recommendations of the *ad hoc* committee constituted in August 1963, for selecting rationalised sections to which the rolling of steel

could be restricted. It has been decided to limit the number of structural steel sections rolled by the main producers to 153. Special sections such as crossing sleepers, bearing plate bars, telegraph channels, and sheet piling sections will, however, continue to be rolled by main producers to meet specific demands. At present, the main producers roll about 300 sections, while the number of such sections included in the relevant Indian standards is about 516.

As it will take some time for the existing rolls to wear out and for designs using these structural sections to be changed, it has been decided that the change-over to the rationalised sections will take place from 1st January, 1965.

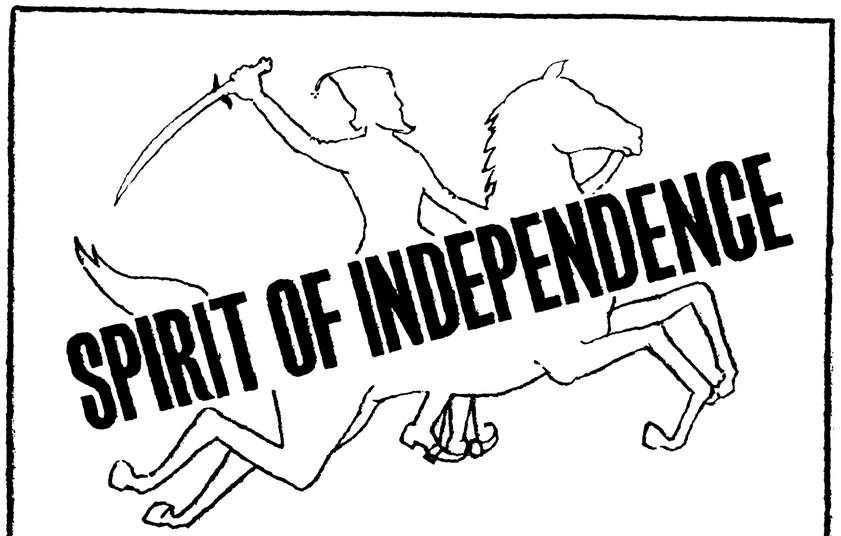
The main producers have been asked to take all possible steps to ensure that all the rationalised steel sections are made available to consumers in sufficient quantities and in time. The Central and State Government departments have also been requested to modify and base all their designs on these rationalised sections.

All consumers of steel will place indents from 1st January, 1965, on the basis of these sections, and imports of steel sections not included in the rationalised scheme will not be allowed on the ground that the structures were designed to use the other sections.

U.S.A.

New Loans Offered

Four new loans totalling $62.3 million (Rs. 29.7 crores) have been made available by the U.S. Government for India's economic development. The largest of these credits is for a sum of $50 million (Rs. 23.8 crores). It can be used for financing maintenance imports from the U.S.A. The commodities, the import of which can be financed from this loan, are steel, lubricants, machinery and machinery parts, sulphur, rubber, tyre cord, carbon black, caustic soda, insecticides, chemicals and various components and other materials needed to boost industrial production. With this loan, the total untied assistance made available by the U.S.A. during the current plan period now amounts to $735 million (Rs. 350 crores).



The second loan is for a sum of $7.2 million (Rs. 3.4 crores). It is to be used for purchasing 25 broad-gauge 26,000 horse-power diesel locomotives by the Railway Board for use on the Dhond-Manmad and Dhond-Sholapur-Wadi sections of the Central Railways in Maharashtra. This is the sixth credit provided by the U.S.A. for dieselisation of the Indian railways.

The third loan for $3.1 million (Rs. 1.5 crores) is meant for financing the foreign exchange cost of installing the eighth 89,100-kilowatt generator in Sharavathi. Credits to the tune of Rs. 47.3 crores have already been provided by the U.S.A. for financing the project.

The fourth loan is for $2 million (Rs. 1 crore). It is to be used for financing the services of U.S. consulting firms and individual experts who will provide assistance to the agencies of the Government of India and private firms. This is the first loan of its kind provided by the U.S. Government.

All these four loans are being routed through the U.S. Agency for International Development. They are repayable in dollars over a period of 40 years, with no repayments called for during the first ten-year grace period. Like all the other loans routed through the U.S.A.I.D., the new loans carry interest at the rate of three-quarters of 1 percent a year during the grace period and 2 percent a year for the remaining 30 years.

Six new grants, totalling $1,801,000, have also been announced by the Ford Foundation for assisting India's family planning projects and for the provision of electronic data processing equipment to three Indian institutions. The beneficiaries of these grants are: (1) Gandhigram (Madras) $465,000; the Institute of Obstetrics and Gynaecology (Madras) $182,000 the American Public Health Association $171,000; the University of Bombay $226,000; the University of Delhi $371,000; and the Indian Agricultural Research Institute (Pusa) $386,000.

Imbibed with the Spirit of Independence, the birth right of everyone, our Leaders after a long and continuous struggle achieved the Indian Independence on **15th August 1947.**

Anticipating by forty years the advent of Indian Independence, our Promoters, men of vision and goodwill imbibed with the same Spirit of Independence to attain freedom in the world of Banking and Finance made a successful bid and formed the Indian Bank at Madras on **15th August 1907.**

We pay homage to those great men.

Secretary: **G. S. Sundaram**

ELEGANT

WEST GERMANY

Credit for I.C.I.C.I.

The Industrial Credit and Investment Corporation of India (I.C.I.C.I.) has obtained a further line of credit of 10 million deutschemarks from the Kreditanstalt for Wiederaufoau (K.F.W.) of West Germany.

The new credit is in addition to the two loans aggregating 25 million deutschemarks which the I.C.I.C.I. has already obtained from the organisation. It forms part of the assistance committed by West Germany under the aegis of the Aid-India Club for 1963-64.

In addition, the I.C.I.C.I. has obtained so far five credits, aggregating $(U.S.) 90 million from the World Bank and another line of credit of $5 million from the U.S. Agency for International Development. The total foreign currency resources available with the I.C.I.C.I. thus amount to $(U.S.)104 million.

MADRAS REFINERY

Decision Delayed

The Central Government's decision on the collaboration offers for the Madras refinery has been delayed further. The decision is expected to be taken when the Central Minister for Petroleum and Chemicals, Professor Humayun Kabir, returns from his European tour.

The delay in arriving at the decision has been occasioned by some modifications effected by the Burmah Oil Company and Shell International in their proposals. The revised offer of the B.O.C.-Shell International, Professor Kabir disclosed on the eve of his departure for Rome, was "extremely attractive".

The main modification effected by the Burmah Oil Company and Shell International in their original proposals is that they will be prepared to associate the Central Government with all crude purchases to be made abroad for the Madras refinery. This should imply that if the Government of India is able to negotiate suitable crude supplies for the Madras venture on rates more competitive than the B.O.C.-Shell International, it will be welcome to bring in this crude. The Burmah Oil Company and Shell International have already agreed to process at the proposed Madras refinery any crude oil that may be found by the Oil and Natural Gas Commission, if it succeeds in its oil exploration and prospecting programme in the Middle East.

The Burmah Oil Company and Shell International are understood to have also agreed that the products of the Madras refinery will be marketed by the Indian Oil Company. They have, however, asked for some safeguards for the existing oil distribution business of Burmah-Shell.

The real tussle for putting up the Madras refinery now appears to be between the B.O.C.-Shell International and the National Iranian Oil Company. The Government of India wants the N.I.O.C. to reduce its crude price further. No reply to this, however, has yet been received from the Iranian Company. A representative of the N.I.O.C. is expected in New Delhi for further discussions in the next few days. Meanwhile, the Government is understood to be anxious that the construction work on the Madras refinery should start by December this year.

The decision on the proposed Haldia refinery is expected to be taken early next year. The construction of the refinery is proposed to be taken up by October 1965.

During his current visit to the Continent, Professor Kabir will be visiting the United Kingdom, France, Italy, Czechoslovakia and Rumania. He will be exploring the possibilities of securing financial and technical assistance for the development of petroleum, petro-chemical and fertiliser industries in India.

BARAUNI REFINERY

Gasoline and Kerosene

The first 1-million-tonne refining unit of the Russian-built Barauni refinery started turning out aviation gasoline and kerosene last week. The quality of these products is stated to be satisfactory. The refinery at present is said to be working to a capacity of about 2,000 tonnes of crude a day, yielding products worth Rs. 2 lakhs.

The refinery has been designed for a throughput capacity of 2 million tonnes, capable of expansion to 3 million tonnes. The second 1-million-tonne unit is expected to go on stream in the next three or four months. The expansion to a capacity of 3 million tonnes is expected to be completed by 1965-66. The refinery will also have a lubricating oil manufacturing plant which is expected to be commissioned by April-May next year.

INDO-AFRICAN TRADE

Analysis by Commerce Ministry

A recent analysis made by the Central Commerce Ministry of the Indo-African trade has revealed that India's exports of cotton textiles and jute goods to African countries have suffered a serious setback during the past few years. The fall in textile exports is attributed to two main factors: firstly, the growth of indigen-

another order for CELCON® came the other day

Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

CELCON® is a trademark

ous industry in the importing countries, and secondly the fast changing tastes. Exports of jute goods have gone down due to keen competition from Pakistan.

The Ministry, however, feels that the damage can be undone and exports of these two traditional items increased substantially if exporters concentrate on the supply of processed and finished cloth to the African markets and the jute industry improves the quality of its products and brings down prices to levels competitive with Pakistan. At present, African countries import from India only such portions of their jute goods requirement as cannot be made available by Pakistan.

It is pointed out that in spite of the remarkable increase in the domestic production of cloth in Africa, nearly 60 percent of the total requirements of the continent are still imported. The population of Africa, which stood at 254 million in 1960, is expected to go up to about 325 million by 1970. On the basis of the present *per capita* consumption of 19.5 yards, the total requirements of the African people will be of the order of 6,340 million yards by the end of this decade. Africa, therefore, offers great scope for Indian textiles, provided the right type of cloth is exported.

There is a good market for Indian green tea in various African countries. Recently, India secured a token order for the export of 250 tons of green tea to Morocco. The Ministry feels that if this order is executed satisfactorily, it should help open up a big market in Africa for the commodity.

There is also considerable scope for further increasing the export of engineering goods to Africa, which have steadily gone up from Rs. 1.46 crores in 1961 to 1.72 crores in 1962 and to Rs. 2.4 crores in 1963.

COMPANIES ACT

Tax on Excess Profits

In accordance with Section 349 of the Companies Act, 1956, the Company Law Board has decided to notify the surtax chargeable under Section 4 of the Companies (Profits) Surtax Act, 1964, as being in the nature of a tax on excess or abnormal profits.

Accordingly, in computing their net profits for the financial years ended on or after 8th August, 1964, the companies concerned will be required to deduct the surtax chargeable under Section 349 of the Companies Act. 1956. This section lays down the manner in which the net profits of a company are to be determined for the purposes of computing the remuneration of the managing agents, managing directors, etcetera.

SPAIN

Pact on Atomic Energy

The Government of India will soon sign a collaboration agreement with Spain to develop atomic energy for peaceful purposes. The collaboration, however, is proposed to be of a limited nature. It will cover the sale of nuclear equipment, co-operation in prospecting atomic resources and exchange of unclassified data and scientific personnel between the two countries.

India has already signed similar agreements with Denmark, Sweden, Poland and the United Arab Republic. Some small quantities of uranium concentrate have been imported by India from Spain in the recent past on "normal commercial terms."

FERTILISERS

New Expert Body Planned

The Central Ministry of Food and Agriculture will soon appoint a committee of technical experts to go into the existing system of distribution and marketing of fertilisers for agricultural purposes and to suggest improvements. The decision to this effect was taken at last week's meeting of the Agricultural Production Board in view of the constant complaints that cultivators find it difficult to get fertilisers when they need them the most.

The committee will also make recommendations about the effective ways of promoting the use of fertilisers on a large scale during the fourth plan period. Besides economists and other technical experts, the committee will include an expert in co-operative marketing.

DEARNESS ALLOWANCE

Probe by Independent Body

The Government of India has decided to set up an independent body consisting of a single person to examine the amount of dearness allowance that should be paid to Central Government employees as compensation for the rise in prices.

The last increases in the rates of dearness allowance announced by the Government early in May were calculated to ensure at the minimum of each pay slab up to Rs. 300, roughly 75 percent neutralisation of the total rise of 20 points in the average price index since 1st July, 1959. It has been represented by certain associations of employees that this increase is not adequate. In terms of statements made on behalf of the Government in Parliament in August 1960, the Government had agreed to 50-percent neutralisation of the increase in prices and, if necessary, to the appointment of an impartial body to consider what portion, if any, of the other 50 percent should be neutralised. As employees are not satisfied with the substantially higher increases given them from time to time, the Government has decided to appoint an independent person to go into the matter and report quickly

A Poplin for privileged people by BINNY

Double Diamond is a new quality poplin woven from fine Egyptian cotton. It's cool and comfortable to wear, handsome in appearance and, above all, has that built-in durability characteristic of every BINNY fabric.

THERMAL DESIGNS

New Organisation

A thermal designs organisation is expected to start functioning in the Central Water and Power Commission in about a month's time. This will not only help accelerate progress on thermal designs but is also expected to save a good deal of foreign exchange. Some of the staff necessary for the organisation has already been sanctioned.

There are about 30 thermal stations now under construction in India with an installed capacity of 4 million kilowatts. The country is paying as much as Rs. 6 crores, two-thirds of it in foreign currency, for the designs. For further power development, it is proposed to take up another 30 stations with an installed capacity of 6 million kilowatts and half of these have already been sanctioned. It is, therefore, felt that in order to save expenditure on the designs of the new projects as much as possible and also to conserve foreign exchange, it is necessary to establish a thermal designs organisation. So far, the Central Water and Power Commission has only been giving general assistance in designing thermal stations.

SUGAR

Enquiry Body Set Up

The Government of India has appointed a commission of enquiry to go into the determination of price and distribution of sugar and the policy on the licensing of new sugar factories and the expansion of the existing ones. The Commission has been appointed under the Commissions of Enquiry Act.

Dr. S. R. Sen, Adviser (Programme Administration), Planning Commission, is the commission's chairman. The other members of the commission are: Mr. S. C. Choudhuri, Economic and Statistical Adviser, Ministry of Food and Agriculture; Mr. N. Krishnan, Chief Cost Accounts Officer, Central Ministry of Finance; Mr. S. C. Gupta, Director, National Sugar Institute, Kanpur; and Dr. Dharam Narain, Institute of Economic Growth, Delhi University. Dr. P. K. Mukherjee, Deputy Economic and Statistical Adviser in the Central Ministry of Food and Agriculture has been appointed the member-secretary of the commission.

The commission has been asked to submit an interim report by the end of this month concerning the determination of the price of sugar. This will form the basis of the Central Government's sugar policy for the next crushing season.

NEWSPRINT

Advisory Body

The Central Government has formed a 17-member committee to advise it on matters relating to the import and allocation of newsprint and printing machinery for newspapers and other such matters. The Deputy Minister for Information and Broadcasting, Mr. C. R. Pattabhiraman, has been appointed chairman of the committee.

Six of the members of the committee are officials, three nominees of the Indian and Eastern Newspaper Society, two nominees of the Indian Languages Newspapers' Association and five non-officials nominated by the Government. The chairman has been given powers to co-opt some more members if he thinks it necessary.

The term of membership of non-official members is two years from the date of appointment, but the retiring members will be eligible for re-appointment. The committee will ordinarily meet twice a year.

The members of the committee are: Mr. G. N. Sahi, of the *Hindustan Times*, New Delhi; Mr. D. M. Harris, of the *Statesman*, Calcutta; Mr. C. G. K. Reddy, of the *Hindu*, Madras; Mr. D. S. Katdare, of the *Vasant*, Bombay, Mr. Uma Shankar Dikshit, M.P.; Mr. A. D. Mani, M.P.; Mr. R. K. Khadilkar, M.P.; Mr. K. R. Pattabiram of the *Deccan Chronicle*, Secunderabad; Mr. M. Yunus, of the *Shama*, New Delhi; a representative of the Ministry of Commerce; a representative of the Ministry of Industry and Supply; a representative of the Department of Economic Affairs, Ministry of Finance; a representative of the State Trading Corporation; the Registrar of Newspapers for India; and Deputy Secretary, Ministry of Information and Broadcasting, in-charge of Press matters, who will also be the secretary of the committee.

IMPACT OF U.S. TRADE EFFORT ON U.K. EXPORTS

(FROM OUR LONDON CORRESPONDENT)

LAST week, it was necessary to record the reactions caused by the adverse showing of the June trade returns. One big factor underlying the widening of Britain's trade gap this year is the growing competitiveness of American industry. Success for the United States in its efforts to reduce the deficit was bound to have an adverse effect on other countries' balance of payments. The U.K. Board of Trade's analysis of trade trends in the first half-year leaves little doubt that this accounts, in part, for both the sluggishness of our exports and the steep rise in imports in recent months. The figures for the six months show that exports to the United States have been declining since the end of 1963. At the same time, imports from North America, which had already begun to move up early in 1963, rose substantially in the first half of this year.

Fortunately, while British exports to North America have been going down, sales to western Europe have bounced up. In the first half-year, they were 4 percent (£6 million a month) more than in the second half of 1963, and 9 percent more than a year earlier. Exports to the Common Market have risen again in the past six months after being flat in the second half of 1963. Exports to France and Italy have, not surprisingly, dropped. But sales to West Germany have picked up well. Exports to the Netherlands and Belgium have risen substantially, and sales to the E.F.T.A. countries are still growing strongly. The sterling area has also contributed a further modest increase in sales.

On the export side, in fact, the analysts can find no real cause for gloom. The seasonally adjusted average for the first six months of the year works out at £354 million, which is 2 percent more than in the second half of 1963 and 7 percent above the first half. Moreover, the U.K. Board of Trade says that the small fall between the first and second quarters should not be taken to indicate that exports have stopped growing. It makes the important point that the wide month-by-month changes in the export total can be traced in large part to irregular deliveries of engineering goods, many of which are sold in big units of high value. Significantly, the value of these exports in June was perceptibly below the first half-year's average. The fastest growth in exports this year has come in chemicals, metals, and textiles. Exports of motor-cars and some other finished manufactures are also up. But machinery exports have shown no change and ship exports have fallen.

Higher Import Bill

Ships have also played a part in pushing up the import bill. The arrival of two big tankers, each valued at about £6 million, helped to swell the January and March figures. But the chief reason for the much higher cost of imports so far this year is the heavier intake of industrial material. While the rise began early last year, imports of materials in the first half of 1964 cost 12 percent (£20 million a month) more than in the second half and 26 percent more than in the first half of 1964. Higher prices were one important reason: but much more of the increase was due to heavy stockpiling, and it is something that the figures for industrial material imports still show a slowing down in the rate of growth.

If there is any evidence at all that the imports of finished goods may be on the point of slackening, the U.K. Board of Trade does not mention it. This is rapidly becoming a key test of the competitive ability of British industry. Imports of finished manufactures in the first half of the year were 23 percent (£14 million a month) more than in the previous half-year and 32 percent (£17 million a month) more than a year earlier. Moreover, of this figure of £17 million, £11 million was accounted for by capital goods. Imports of machinery and instruments were rising strongly at the end of 1963, and this continued in the first six months of 1964," the Board of Trade comments.

The answer must be either that British industry is slow to respond to rising demand or that it is being beaten on price (and, perhaps more important, quality) by foreign competitors. In either case, the implications are disturbing. Repeated talk of inflation on the Continent may have done a disservice to British industry by leading it to suppose that competition would lessen. The fact is that West German prices have been kept down, while the United States has been gaining ground on everyone in the past two years, with wage rises contained within the growth of productivity.

Measures to Boost Exports

What is Britain doing to counteract the slowing down of the export effort which is having this unfortunate effect on her trade balance? A new "ginger group" organisation to try to improve Britain's exports was announced in the House of Commons shortly before it recessed. At the centre of the organisation will be a new body, the British National Export Council. Linked with it will be bodies operating in specific areas of the world, including America, Canada, and Europe. The first chairman of the new Council, Sir William McFadzean, at present chairman of the Export Council for Europe, described its job as "to try to inspire, guide, jerk-up and make people go into exports."

Making the announcement in the Commons, Mr. Edward Heath, Secretary for Trade, gave the new Council four tasks: (1) Initiate, guide, and inspire export efforts in all markets. (2) Advise on the formation of bodies to foster British exports in particular areas of the world. (3) Provide a means of coordination between such bodies and of Britain's export effort generally. (4) Provide the necessary finance and services for that purpose.

Mr. Heath said that three new bodies would be formed to continue and develop the work formerly carried out in Canada, America, and Latin America by the Western Hemisphere Export Council, which has been dissolved. Two bodies already in existence, the Export Council for Europe and the Council for Middle East Trade would continue, and other new bodies would be formed as the need arose. Lord Watkinson, former Defence Minister and now the group managing director of Schweppes, will form the body for America. The body for Canada will be formed by Mr. Peter Allen, a deputy chairman of I.C.I., and the one for Latin America by Sir Berkeley Gage, former Ambassador in Peru.

The new Council, which is being sponsored by the Federation of British Industries, the National Association of British Manufacturers, the Association of British Chambers of Commerce, the T.U.C. and the City Financial Advisory Panel on Exports, will be financed jointly by industry and the Government. It will consist of 15 to 20 members.

Only Canada among the Commonwealth countries is specifically dealt with by one of the bodies linked to the new Council. In the Commons, Mr. Heath said that as far as the other parts of the Commonwealth were concerned, there were the Commonwealth Chambers of Commerce. After Mr. Harold Wilson had urged Mr. Heath not to wait passively for a recommendation from the new Council about the Commonwealth, Mr. Heath said that the new body would co-ordinate all the activities of the Commonwealth in advising the Government on the setting up of other bodies in individual areas of the world.

At a Press conference later, Mr. Heath said that he expected the new Council to advise him whether bodies were required for other parts of the world, including the Commonwealth. Sir William FcFadzean, the new chairman, said that the Council's first priority would be to review the whole world situation. "Once the Council gets going we must look at markets where we are not doing as well as we think we should be doing. There are parts of the world that need a tonic—but I wouldn't like to go further than that today." Lord Watkinson said of the American market: "We have got to do a lot better in what is a tough and extremely difficult market". Sir William, the chairmen of the other bodies, and all the members will be unpaid. The staff of the new Council will consist of six people—including three typists.

Need for Cautious Expansion

Whether this attempt to boost exports will be productive of the anticipated results will depend to a large extent on the economic climate generally, and it is advisable to remember in this connection that some slowing down in the rate of U.K. growth is now called for if a return to excess demand and balance of payments difficulties is to be avoided, according to the Organisation for Economic Co-operation and Development. In the report on its economic survey of the United Kingdom, the O.E.C.D. says that, with appropriate private demand management, a notably higher rate of growth than in the past decade should be achieved. The following are the conclusions of the survey:

(A) The response of the economy to last year's reflationary measures has been so lively that some slowing-down in the rate of growth is now called for if a return to excess demand and to balance of payments difficulties is to be avoided.

(B) It is still too early to judge whether the moderately restrictive tax measures in the last Budget will prove to be all that is required to stabilise the growth rate at a sustainable level. It was appropriate that the Government should avoid measures that risked totally ending the expansionary phase. But in the months ahead, the Government should be prepared, if necessary, to make prompt use of the weapons it has at its disposal to dampen demand.

(C) Although it is unlikely, in view of the rates of increase in gross national product and imports which would be required, to prove possible fully to reach the targets for the period 1961-66, with appropriate private demand management a notably higher rate of growth than during the last decade should be achieved:

(D) Much depends, however, upon an improvement in the relative competitive position of the United Kingdom, which would take some of the strain off the balance of payments. To achieve this will require vigorous action to stimulate competition and to moderate the rise in money incomes.

(E) Successful demand management calls for more varied and flexible instruments for stabilising demand. Improved information on the economic situation and prospects would also be useful.

(F) Measures are required to improve the flexibility of the economy. Areas where changes are most urgent are: pricing policies in industry, collective bargaining, labour mobility and apprenticeship.

The report does not altogether avoid the contradiction between calling for steady long-term growth and for stricter short-term "demand management." "It is more important to keep the economy growing at a steady and rapid rate," it states, "as implied by the 4 percent target, than to achieve precise quantitative targets ... and if it should prove necessary to accept for the time being a smaller current balance of payments surplus than the one aimed at for 1966, so that the growth rate can be maintained, it would seem appropriate, from both a national and an international point of view, to give priority to growth."

On the other hand, the report points to the severe strain on the construction industry because of a sharp rise in private investment now being superimposed on steeply rising public investment. It points with concern to the recent rate of wage increases and to the higher cost of basic materials to manufacturing industry. "The problems confronting economic policy-making in the U.K.," appear to look no simpler when considered from across Channel than they must seem in Whitehall.

Jute

BUFFER STOCKS TO BE RELEASED

REVIEWING the present market situation last Monday the Committee of the Indian Jute Mills Association has expressed concern over the unwarranted steep rise in the price of raw jute, and its effects on the finished goods market. In view of the fact that cheapness and price stability are necessary for the successful promotion of jute goods sales against substitute materials, it says that both these essentials have been placed in jeopardy by the recent developments in the market.

The Committee suggested an urgent assessment of the availability of raw jute during the current season. There is nothing in the situation justifying the behaviour witnessed in the market during the past few days. With production continuing at existing levels, it is likely that some further decline in the carry-forward of jute at the end of the season may take place. The Committee does not feel that this will be of such dimensions as to create a shortage.

It seems that the present excitement is the result of fears in Pakistan of a reduced crop in that country. In the context of India's competitive position with Pakistan, it is unfortunate that the Pakistani situation should have been allowed to influence sentiment in India and spark off speculative sprees here.

Release of Buffer Stocks

One of the reasons for establishing a jute buffer stock has been to meet a situation of this kind, and it is now expedient to tap these reserves. The Jute Commissioner has agreed to release the buffer stocks presently held by the industry and defer the date of their replacement from November to February 1965. This will help offset the slowness of new crop arrivals due to seasonal factors. As a further measure to prevent unduly heavy purchases for speculative reasons, the Committee says that consultations are taking place with the Jute Commissioner about the need for introducing maximum jute purchase quotas related to the stocks and undelivered balances of individual mills.

The Committee has deplored the opportunity lost to the industry to make purchases of fibre from Pakistan at reasonable rates. Had the Government of India acted on the industry's advice to provide the minimum allocation of foreign exchange necessary for imports at the right time, the industry would not have been placed in a position where, because of current price levels in Pakistan, it finds itself unable to operate in that market. The industry has thus been deprived for the time being of a source of supply, which for certain high grades and cuttings, is of the very greatest importance.

This situation is a repetition of what has taken place regularly during the past few seasons despite the industry's representations to the authorities. The Committee has hoped that with this most recent example of the results of inaction, the Government would, without further delay, put the necessary foreign exchange at the disposal of the Jute Commissioner to be used in consultation with the industry.

The Committee feels that should the price situation in Pakistan continue, it would not be unreasonable for the industry to expect the Indian Government to subsidise such additional imports from Pakistan as may become necessary in order to ensure that the industry's overseas customers can obtain their finished goods at a price which will retain their confidence.

Unfair Pakistani Competition

An earnest appeal to the Government of India to help the jute industry meet the State-subsidised competition from Pakistani mills was made by Mr. D. Duncan-Smith in Calcutta last Tuesday. In his chairman's speech at the annual meeting of the Calcutta Jute Fabrics Shippers Association, Mr. Duncan-Smith said that with its long experience and knowledge of world markets, the industry was well equipped to meet any fair competition. But it could not be expected to compete with subsidies provided by another Government. So it is for the Indian Government to devise ways and means for coping with the problem. He said there was no use adopting an ostrich-like policy and hoping that the Pakistani industry would cease to grow, when indications were that encouraged by its recent successes, it would continue its fast expansion. He hoped that ultimately Indian and Pakistani industries would reach a form of working agreement, both in relation to raw materials and finished products, so as to avoid chronic surplus capacity and over-production in their mutual interests.

Speaking on the trend of exports during 1963-64, the chairman said that there was considerable improvement over the previous years. Exports of hessian rose by 61,000 tonnes, but sacking dropped by 7,700 tonnes. In hessian, there was a sharp spurt in the offtake by Russia, the Argentine, the U.S.A. and to a lesser extent by Canada. But western Europe and some smaller markets took less of the fabric. In sacking, Indian gunnies suffered the biggest losses in Africa and western Europe. In spite of an overall increase in Australian consumption of heavy goods to around 81,000 tonnes, India could not regain the ground she lost in 1962-63 when her exports sagged to 34,300 tonnes from 60,400 tonnes for the previous year. India's loss meant a gain for Pakistan and for the 11-month period ended May 1964, the latter shipped 38,620 tonnes to east and west Africa, against about 12,600 tonnes by the former during the same period. Explaining the increase in world gunny consumption during the past year, Mr. Duncan-Smith said that the failure of the grain harvest in Russia and other east European countries stimulated big wheat purchases from Canada, the U.S.A. and Australia, indirectly raising the offtake of jute bags.

Need to Improve Quality

The chairman expressed satisfaction over the trend of raw jute production and prices during the past two seasons. Although India had practically attained quantitative sufficiency in the fibre, there remained a lot to be done concerning quality. For stepping up the quality of the end-product, the industry must get good raw material at a reasonable price. The Pakistani industry had a clear advantage in this matter. In fact, the quality of Indian finished goods had suffered due to the poor quality of the raw jute received by mills. He referred to the adequate supply of the fibre at reasonably stable prices during the past two seasons which helped mills to operate economically.

Serving Foreign Customers

With their long experience in overseas trade, Indian shippers of jute fabrics are pre-eminently in a position to render efficient "after-sales service" to their overseas customers. Admitting the need for arranging a quicker settlement of claims, Mr. Duncan-Smith said that the cumbersome arbitration clause in the existing contract form, which was drawn up long ago, did not appear suitable for the more advanced markets now. He suggested that reports from competent inspectors about the quality of goods should be accepted by both shippers and mills, and disputes be settled promptly.

The second hurdle to a quick settlement was the financial settlement on the basis of the factual report. Quite often, Calcutta shippers were not aware of the use to which the fabric or bag was to be put by overseas consumers. Sometimes it was found that they intended the bags or the fabric to carry a commodity entirely unsuitable for the specification of the bags indented and shipped. In these cases arbitration was necessary to arrive at an agreement about the financial settlement. He referred to the delay in securing the permission of the Reserve Bank to remit the rebates agreed upon to overseas buyers, and suggested that the Bank should streamline the procedure in order to help the industry to create goodwill among foreign customers.

Sharp Spurt in Gunny Stocks

Mills reporting to the I.J.M.A. have shown a sharp increase in the closing stocks of gunnies from 126,300 tonnes at the end of June to 135,200 tonnes at the end of July. Sacking stocks rose by 7,700 tonnes to 52,900 tonnes, carpet-backing by 1,000 tonnes to 22,400 tonnes and hessian by 700 tonnes to 45,900 tonnes, while miscellaneous goods declined by 500 tonnes to 14,000 tonnes. At the end of July 1963, the stocks were 104,200 tonnes —32,500 tonnes of hessian, 53,100 tonnes of sacking, 8,300 tonnes of carpet-backing and 10,300 tonnes of other goods. Market circles did not appear to be much worried about the rise in heavy goods stocks for it seemed to be a usual feature at this time of year. Mills were used to keeping such stocks ready for meeting the demand from the seasonal industries. Besides, substantial lots of July delivery cargo against huge Government tenders for B Twills could not be cleared due to the bottleneck at Calcutta part.

THE JUTE MARKETS

Manufactured Goods: Erratic conditions marked trading in the Calcutta gunny market during the past week. With the imposition of margins on hedge trading, speculators diverted their attention to the spot market and induced mills to book orders in both hessian and sacking for all positions up to January-March at high prices. Overseas orders were few and far between. There was some business with the U.S.A. in hessian. Cambodia had invited a tender for 5,000 bales of B Twills for August delivery. The U.K. too had booked moderate lots of gunnies. The Government of India entered the market with a tender for 4,000 bales B Twills for August-September delivery. Shippers had to cover their ready and near-term open positions at higher prices. The publication of the stock figures at the end of July showing an increase of 8,900 tonnes over the figures for the previous month produced only a temporary setback due to the interest taken by speculators. Towards the close the market eased somewhat with the emergence of more mills as keen sellers for all positions at the higher levels. In the hedge markets, bulls turned cautious and carried on trading without inviting margin penalties. There was sizable liquidation in both hessian and sacking partially erasing top gains. But bears covered their open positions at the dips absorbing all offers. Turnover was moderate in the spot market and fair in the hedge market, and fluctuations were wide in both. The closing undertone was easier.

spite of an increase in daily arrivals to around 70,000 maunds. Upcountry roads continued to be in a bad condition and prevented the movement of the fibre from the interior markets in appreciable lots. Brisk speculative support induced by runaway fibre prices in Pakistan made sellers reserved. Mills became nervous and sought to book offers of higher-grade fibre. Sentiment did not ease even after the announcement on Tuesday that the Jute Commissioner had released the entire J.B.S.A. stocks to the industry for immediate use. He also agreed to defer their replacement from November to February when plentiful fibre supplies would be available in India. In the hedge market, Upper Assam White Bottoms for September ruled firm due to hectic bull-squeeze and closed around the pre-margin levels after wide fluctuations. Turnover was small in the spot market and fairly heavy in the hedge market, and the undertone was exceptionally firm at the close.

Wednesday's quotations were as follows:

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of jute goods for July as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
9,994 tonnes	(9,836 tons)
2,68,67 thousand metres	(2,93.8 lakh yds.
1,88.3 lakh nos.	
(b) Sacking	
44,865 tonnes	(44,157 tons)
9,73.13 thousand metres	(10,64.2 lakh yds.)
4,96.3 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
39,146 tonnes	(38,528 tons)
13,16.22 thousand metres	(14,39.4 lakh yds.)
(b) Sacking	
1,558 tonnes	(1,533 tons)
33,72 thousand metres	(36.9 lakh yds.)
3. Carpet-backing	
8,168 tonnes	(8,039 tons)
62,13 thousand metres	(68.0 lakh yds.)
4. Other Manufactures	
13,942 tonnes	(13,722 tons)
5. Total Production (All kinds)	
1,17,673 tonnes	(1,15,815 tons)

I.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of July as follows:

Description	31st July, 1964		30th June, 1964		Increase over (+) or decrease from (−) last month		31st July, 1963	
	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)
Hessian cloth and bag	14,81.51 (16,20)	45.9 (45.2)	14,53.39 (15.89)	45.2 (44.5)	+28.12 (+31)	+0.7 (+0.7)	10,51.74 (11.50)	32.5 (32.0)
Sacking cloth and bag	11,78.12 (12,88)	52.9 (52.1)	10,10.26 (11.05)	45.2 (44.5)	+1,67.86 (+1,83)	+7.7 (+7.6)	11,73.18 (12.83)	53.1 (52.3)
Carpet-backing	1,79.13 (1,96)	22.4 (22.0)	1,72.79 (1.89)	21.4 (21.0)	+6.34 (+7)	+1.0 (+1.0)	64.80 (71)	8.3 (8.2)
Others		14.0 (13.8)		14.5 (14.3)		−0.5 (−0.5)		10.3 (10.1)
Grand Total (000 Tonnes/Tons)		1,35.2 (1,33.1)		1,26.3 (1,24.3)		+8.9 (+8.8)		1,04.2 (1,02.6)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British measures.

Summary			
	(000 metres and 00,000 yds.)		
	July '64	June '64	July '63
Hessian	15,84.89 (17.33)	14,46.43 (15.82)	15,20.44 (16.63)
Sacking	10,06.85 (11.01)	8,91.14 (9.75)	9,22.72 (10.09)
Carpet-backing	62.13 (68)	59.98 (66)	65.64 (72)
	(000 tonnes and tons)		
	July '64	June '64	July '63
Hessian	49.1 (48.4)	44.3 (43.6)	45.8 (45.1)
Sacking	46.4 (45.7)	41.2 (40.6)	43.0 (42.3)

THE PAKISTANI JUTE MARKETS

STEADY RISE IN FIBRE

(FROM OUR DACCA CORRESPONDENT)

PRICES in all sectors continue to rise, and it is perhaps appopriate to review the situation in this context.

Towards the end of the last season, it was generally felt that the 1964-65 crop had been well sown and sown early, and up to May, had enjoyed ideal growing conditions. From this it appeared that the supply of jute would be about the same as, in the previous year, and naturally the price trend was expected to be more or less the same. There were also reports that as the growers had received better prices for white than for tossa, less tossa would have been sown. This would result in a slight easing of the white prices and might make it slightly easier to set Outport Tossa 2/3 without raising the price too high. There was, in fact, every reason to believe that there would be another buyers' market.

In mid-June it became apparent that heavy rains had delayed the ripening and, therefore, the harvesting of the crop. A late crop early sown, produces poor quality fibre. The next step was the news of the carryover, which contrary to expectations, was negligible. This bullish factor was accentuated by continuous unseasonal heavy rains, which damaged the growing jute, badly affected the young tossa jute and eventually because of the high level of the rivers, has resulted in early harvesting of the midland crop thus reducing its quantity outturn.

The reduction in export duty and the lowering of the E.P.C., both of which represented considerable economies for the balers, a large proportion of which could easily have been passed on to the buyers, had no effect whatsoever on the market. At present, there is a crop which due to the above-mentioned reasons, is some 500,000 bales to 600,000 bales less than the previous crop, and since the carry-

over is also some 500,000 to 600,000 bales less than the previous carryover, there is a reduction in the supply of some 1.1 million bales. Most balers are bullish and are buying heavily. Some small balers sold speculatively early in the season, and are now trying to cover, thus further exciting the market.

The striking mills, which had been out of the market for nearly a month, are beginning to buy again, which will push the market up even further. The middle men, encouraged by the daily rise in prices, had been sitting back for a few days before bringing in more jute, and that explains why the arrivals have fallen off, further increasing the demand. As a final touch, the U.S. naval actions in the Gulf of Tonkin has encouraged people to talk of a second Korea. In fact, there is now one of the strongest bull markets the jute trade has seen since the Korean War.

Under such circumstances, one must try to keep a clear head and see if there are any bear factors at all. These, although existing, are weak. There is the remote possibility that 1963-64 carryover was larger than indicated. Dundee, the largest buyer, was fairly well stocked last season. The mills in Pakistan will have reduced their consumption by approximately 100,000 bales due to the strike. Under present conditions, it is hard to see how any of these factors can really bring prices down anywhere near the level they were at the beginning of the season.

In the loose market, the condition of the arrivals in most places is bad. The quality of the fibre is poor, much of it being weak and dazed. In Mymensingh and Ashuganj and to a lesser extent in Chandpur where the inherent qualities of the jute make it more able to withstand the ravages of excessive water, prices as much as £6 a ton higher are being paid than in other baling stations. Encouraged by the continual rise in prices, arrivals have fallen off.

Another reason for the reduction in arrivals is that the floods have caused the growers to turn to harvesting the midland crop early. This early harvesting will result in shorter jute, but possibly of slightly better quality as it will be immature. Another example of the strength of the market is that everywhere sellers are insisting that the balers should pay separately for S.M.R. in loose purchases, and the level of this is some £5 or £6 a ton above the price of Export Hearts of the last season.

In the pucca bale market, the difficulty is not to settle prices but to find a seller. Cuttings forward have been down at a parity of £69 f.o.b. Old crop Outport Tossa 4s have changed hands at approximately £82 10s f.o.b. and Export Hearts new crop at £91. The cost of an Export Lightning for any position from August to November ranges from £95 f.o.b. to £99 10s f.o.b. depending upon the market. These ridiculous prices are encouraged by one large baler recently entering the market blindly, and by the resumption of buying by the mills, who were on strike.

Even the overseas buyers, immediately after the holiday period, have been shaken into paying some realistic prices. They are beginning to realise that against the cheap offers which they had taken up, very little jute of the right standard will materialise. The London agents who bought cheap instead of waiting to take a profit, are very wisely unloading not only the jute but the responsibility of cheap and probably unsafe buying. The more reliable balers are either not offering at all or else keeping their prices well above the cost price, which very few buyers are prepared to meet.

The Pakistan Jute Association Committee has pushed up in the last few days the P.J.A. prices rather more rapidly than even the market justifies, on the ground that it is better to do this than to continue raising E.P.C.s by one or two pounds here and there daily.

It is interesting to note here below the changes in E.P.C. prices since the beginning of the season:

	1st July £	7th August £
Export Firsts ...	91	99
Export Lightnings	80	90
Export Hearts ...	69	78
Dacca Tossa 5 ...	105	118
Dacca Tossa 6/Dundee Tossa 4 ...	91	100
Dundee Tossa 2/3	100	113
Outport Tossa 2/3	83	88
Outport Tossa 4 ...	73	78
S.N.C./D.T.C. ...	50	60
N.C./T.C.	42	54
Cut Ropes	38	50
Habijabi ...	40	50
S.M.R.	50	60
Mesta A	75	82
Mesta B	67	74
Mesta C	59	66
Mesta Cuttings ...	41	51

These prices are all f.o.b. 90 days sight and from the look of things, both E.P.C.s and the market will have to go a good deal higher before coming down again.

ORWO FILMS IMPORTED AGAINST RUPEES

Films and other photographic materials produced by WEB Filmfabrik, Wolfen (East Germany), the factory which has been manufacturing the famous Agfa films, are now being marketed under the trade name of "Orwo". The materials will be sold in India by two new organisations—by Orwo Private Ltd in western and northern India and by Orwo Films Eastern Unit in eastern and southern India. Orwo products are imported into India on rupee-payment basis.

IMPORTANCE OF TECHNOLOGY

World of Opportunity. (Published by the United Nations, New York. Price $(U.S.) 6, pages 267.)

This is the first of eight volumes of a report on the U.N. conference on the application of science and technology for the benefit of the less developed areas. The report contains details of discussions held as also papers contributed at the conference. The style is non-technical to make it easily readable.

The key to progress is to be found in science and technology. On it depends all development and future well-being of the under-developed countries. The latter have to foster science if they are to overcome poverty, malnutrition and disease.

The first volume starts with an assessment and appraisal of the world's natural features. It shows that these can become wasting assets by misguided human interference without full realisation of the consequences. At the same time, by careful planning and the application of science, these can be harnassed to the service of man. The inventory of natural resources includes human beings, although it is recognised that human "reasourcefulness" is more important than human "resources". The report classifies these resources and examines in detail how the objective can be achieved by their planned and efficient use towards economic advancement.

The report goes on to discuss the revolution of rising expectations and that of science and technology. The two belong together, because with science has come awareness; at the same time the fulfilment of these expectations lies in science. Constitutional freedom has come to many nations, but this is not by itself any guarantee of welfare and equality. Political inequality is passing away but in its place there is the inequality between the haves and the have-nots. These enormous disparities between the peoples of the world are a problem not only for the poorer nations but for the world as a whole. One of the primary objectives of the conference has been to consider ways and means of closing the gap between the rich and the poor countries; between potential wealth in natural and human resources of the less developed countries, and the poverty of their ordinary people.

Part 2 of the first volume contains a report of the work done in the sessions of the conference. The various aspects discussed are the development of natural resources (mainly water, mineral and energy resources) and human resources which constitute the real hope for the future. Also considered at length is agriculture in its various aspects, industry and the strategy that should be employed for its development, transport, health and nutrition, social problems of rural development and urbanisation, and finally the organisational planning and the programmes for economic development, as also the scientific and technological policies to be adopted for this purpose. The importance of international co-operation and the training of technical personnel is also dealt with.

The achievement of the conference has been not only to bring scientists and technologists together in an awareness of the tremendous powers for good or ill they collectively weild, but also in creating a partnership in human endeavour. The report discusses the practical methods to achieve the goal. A comprehentive index is provided to facilitate reference.

ORIENTATION OF WORK IN RUBBER ESTATES NEEDED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

WORK orientation has become a pressing necessity in the rubber planting industry of south India. This industry was established in the early years of this century. During the past 40 years, most of the rubber grown was from ordinary seedlings. Most of the workers were familiar with and accustomed to deal with a tree population greatly depleted by casualties and producing a small quantity of rubber. Their work attitudes belong to that era. Their attitude has not advanced to take account of the new type of trees that stand in most estates now.

The chairman of the Mundakayam Planters Association, Mr. George John, said while addressing the recent annual meeting of this body that the work orientation required to deal with new production techniques and new opportunities of earning had to be conveyed to labour. Today the labour was so militant that any change in work methods could not be introduced without adequate preparation and training and the creation of a favourable climate of public opinion. Unfortunately, it had not been possible to achieve this, largely because only the employers had been able to recognise the meaning of the changes in production facilities. During the past year, a number of incidents had taken place to highlight this particular aspect of the problem. In one area where workers were offered increasing opportunities for earning more by introducing the ladder system, they were willing to accept the extra task. It was the labour unions which intervened and obstructed the workers from taking advantage of the increased earning. Not only the producers and workers, but also the nation had suffered as a consequence, Mr. George John said.

In certain other areas, production had been impeded because unions did not want workers to accept a larger number of trees for tapping, although the tappers were relieved of the work of carrying their crop from the fields to the factory. In fact, the workers would not have working longer hours, but they would have been using the same number of hours more productively. The whole scheme was thwarted because unions felt that this would weaken their bargaining position. Although we were confronted with this problem of unions becoming an active agency for the prevention of changes which were so desirable, we as a progressive industry, should work to seek their co-operation, he said, and added that they were not dealing with the 1930 rubber plants any longer. Scientific research and field experiments had produced a new kind of rubber tree capable of producing several times more than its ancestors. "We ought to keep with the changes that these trees have brought about", he said.

CASHEW

Bonus Issue Settled

The cashew processing industry in Kerala has escaped this year from the usual labour unrest on the question of bonus. This thorny problem has been settled through negotiations, and labourers will be getting 7½ percent bonus this year. The distribution of Rs. 30 lakhs required for this purpose would be completed before the Onam festival in the third week of this month.

Even in spite of the undisturbed functioning of the processing factories ensured by the peaceful settlement of the bonus question, it does not appear that the production of cashew kernal will reach last year's record of 2.3 million cases of 50 lbs each. A shortfall of about 200,000 cases is forecast by the processors in Quilon. Their reason is that the quality of raw nuts received from Africa this year was poor.

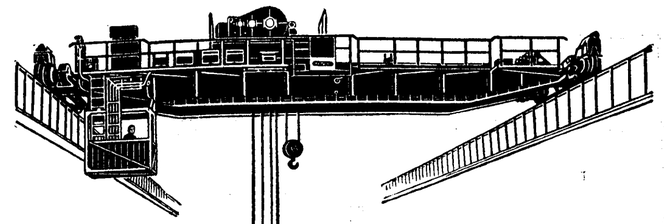
Export, on the other hand, is on the high side. According to the Cashew Export Promotion Council, India could export as much as 25,000 tonnes of processed cashew kernels worth about Rs. 11.76 crores during the first half of 1964. This was a record performance for the cashew processing industry in this country. The U.S.A. with an import of over 13,000 tonnes was the main buyer. East European countries together imported over 6,000 tonnes. Exports to other countries like the U.K., Canada and Australia also were maintained. Cashew shell oil exports also registered a fair increase both in quantity and value. Exports during this period amounted to about 7,000 tonnes which was double the quantity exported during the first half of last year. Foreign exchange earned through cashew shell oil export was to the tune of about Rs. 1 crore, against Rs. 40 lakhs of the corresponding period of 1963. The main buyers were the U.S.A., U.K. and Japan.

SPICES

Export Earnings Rise

According to the latest available report from the Spices Export Promotion Council in Ernakulam, India's export earning on spices during the first four months of 1964 was to the tune of Rs. 7.1 crores, representing an increase of Rs. 1.6 crores over that of the corresponding period of 1963. Black pepper, cardamom, chillies, ginger, turmeric and minor spices like fennel seed, aniseed, cassia and mace, have contributed to the larger export earning. Some 8,688,227 kilograms of black pepper valued at Rs. 2.7 crores were exported from India during the period under review. Cardamom export amounted to 9,46,940 kilograms worth Rs. 1.3 crores. Ginger exports came to 2,395,132 kilograms, valued at Rs. 72 lakhs.

TEA



Output and Exports Rise

(BY A SPECIAL CORRESPONDENT)

THE north Indian crop up to 31st July, 1964, was 226,577,310 lbs, compared with 195,629,157 lbs on the same date a year ago. It will be noted that the lead is maintained, and there is an increase over the past month. The tea districts have since suffered from flooding which appears to be rather more serious than usual. This may restrict plucking temporarily, but teas continue to be despatched by factories as boats and river steamers can bring down pproduce for sale and export. Offerings todate remain on the low side; approximately 41,000 packages were advertised at Sale No. 11.

Bright liquoring teas met with a good general demand, with a renewed enquiry for Assam Orthodox types and C.T.C. were definitely firmer. Darjeeling with flavour sold well.

Calcutta auctions to the end of July disposed of leaf tea amounting to 11,987,362 kilograms at Rs. 6.07 a kilogram, against 10,526,674 kilograms at Rs. 6.36 a kilogram a year ago. The average price at Sale No. 11 was Rs. 6.20 a kilogram, against

NSE

Service to Industry

NEW STANDARD ENGINEERING CO. LTD.

Regd. Office: Carroll Road, Bombay 13 • Phones: 62111/62164

Factories at: Carroll Road, Byculla, Santa Cruz, Goregaon

NSE 25 YEARS SERVICE TO INDUSTRY 1939-1964

Rs. 6.43 a kilogram a year ago. To-date dust teas have sold for Rs. 5.06 a kilogram, against Rs. 5.20 a kilogram, but dusts made a better showing at today's levels. Current prices at Rs. 5.14 a kilogram this season compare with Rs. 5.05 a kilogram in 1963.

Export figures from 1st to 27th July make satisfactory reading at approximately 27 million lbs this year, compared with 21.71 million lbs in 1963. As usual, the U.K. heads the list of importers at 20.75 million lbs, against 15.60 million lbs a year ago. The U.S.A. shows an upward crawl.

In the U.K. little is heard about tea being a sound refresher and a diet drink, whereas in the U.S.A., that is one of its advantages. The Americans are very weight-conscious and it is recorded that the soft drink industry is going ahead fast on diet drinks and that the U.S. population is consuming 227 bottles a head a year These diet drinks use saccharine in place of sugar. Iced tea contains useful tonic effects if sweetened with sugar substitutes.

Very heavy sums are said to be spent on advertising Pepsi Cola, Royal Crown, Coca Cola and Canada Dry drinks, and one can only hope the Tea Council of America can keep on increasing its propaganda as the coffee suppliers are also working on campaigns to increase their share of consumer markets.

Edible Oil from Tea

The Chief Minister of West Bengal, Mr. P. C. Sen was recently shown a laboratory method of extracting edible oil, which can be used as a cooking medium from tea seed, and he is convinced that there are good prospects of it being produced on a commercial scale in West Bengal. As old plants yield seed, the Government may have to ask planters to retain such plants and expand their gardens to accommodate new plants. If necessary, the Government will secure the land for this purpose. Mr. Sen told reporters last week that oil from tea seed might relieve to a considerable extent West Bengal's dependence on other States for the supply of mustard oil. He said that the oil tasted well and had the potentiality of replacing mustard oil as a cooking medium in the State.

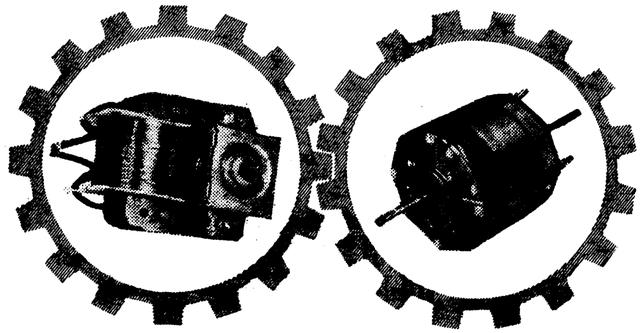
COFFEE



Higher Wage Claims by Labour

IN his address from the chair at the latest annual meeting of the Shevaroy Planters' Association, held recently in Yercaud, shevaroy Hills, Mr. M. S. P Rajes, said that the Wage Board for Coffee Plantation Industry suggested the payment of wages to the workers on the Shevaroys at Rs. 1.50 a man a day, and Rs. 1.26 a woman a day, but the wages for the workers on the Shevaroys was being paid according to the agreement entered into with the labour union. There was also a move to increase the wages for the workers as a second and final increase. Any further increase would do injury to this industry, Mr. Rajes warned. The lower selling price and higher production costs rendered the industry incapable of shouldering the further burden and unless the yield was increased and the cost of production reduced, without affecting the general efficiency of the estates, it might not be possible to increase the wages.

The issue of labour bonus for 1963-64 was a major issue and important policy decision had to be taken in the light of the recommendation of the Bonus Commission. The major question was whether industry-wide *ad hoc* settlements could be continued in future or whether bonus to be paid unitwise, according to the Bonus Commission formula, as finally to be approved by the Government of India. The recommendations of the Commission appear to have far-reaching consequences which may seriously affect the industry. Suitable and proper representations have been made to the Government of India by the Association of Planters of the State of Madras, Coonoor and the United Planters' Association of Southern India, Coonoor, so far as the plantations are concerned and the United Planters' Association of Southern India will take necessary action in this matter.

In order to ensure proper cultivation of coffee, it is essential that shade trees among the coffee plantations should be regulated periodically by cutting and removing some of the overgrown trees. According to the recent amendments made by the Government to the Madras Hill Stations (Preservation of Trees) Act, 1965, only the cutting or pruning of the branches of any tree for the purpose of producing proper shade for coffee plants is permitted. But according to the recommendations of the officials of the Coffee Board Research Department, several trees are to be removed to lessen the shade in order to increase the yield. On the representation made by the Association of Planters of the State of Madras, Coonoor, the Government was now agreed to consider the question of exempting the planted area from the provisions of the Act and the estates concerned have also applied to the Government requesting exemption from the operation of the Act.

In spite of the efforts taken by this Association and by the public, the Madras Electricity Board has not so far taken any action for the extension of electricity to the Coffee estates and the villages. Shevaroy Hills is a very backward area which has been declared by the Government as a tribal block with sufficient funds to elevate the conditions of the villages, and as such the extension of electricity is a vital need to improve the economic conditions of the backward villages. As electricity is required for the villages and for the several agricultural operations in the coffee estates, the Electricity Board should take immediate action for the extension of electricity to the interior parts of Shevaroy Hills.

COMPANY AND PUBLIC NOTICES

THE INDIAN CABLE COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Forty-fifth Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta on Friday, the 25th September, 1964 at 3 p.m. for the following purposes:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1964.
2. To declare a Dividend.
3. To appoint a Director in the place of Mr. M. A. Sreenivasan who retires by rotation and who has attained the age of 65 years, and to consider and, if thought fit, to pass the following resolution of which a special notice, as required by Section 281 of the Companies Act, 1956, has been received by the Company:

   "Resolved that Mr. M. A. Sreenivasan, a Director of the Company, who retires by rotation and who attained the age of 65 years on 20th September, 1962, be and is hereby re-appointed a Director of the Company and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and if thought fit to pass with or without modifications the following resolutions:

(a) **As an Ordinary Resolution.**

(i) "That Mr. Aroon Kumar Basak who vacates his seat as Additional Director of the Company at this meeting be appointed a Director of the Company."

(ii) "That subject to the approval of the Central Government Mr. Aroon Kumar Basak be appointed a Deputy Managing Director of the Company for a period of five years with effect from 16th January, 1964, on the remuneration and subject to the terms and conditions contained in the Agreement dated 24th January 1964, made between the Company and Mr. Basak and submitted to this meeting, or on such other remuneration and terms and conditions (not being more favourable to Mr. Basak) as may be approved by the Central Government and agreed to by the Board of Directors of the Company and Mr. Basak."

(b) **As an Ordinary Resolution.**

(i) "That Mr. Jan Hormusji Faramji Manekshaw who vacates his seat as Additional Director of the Company at this meeting be appointed a Director of the Company."

(ii) "That subject to the approval of the Central Government Mr. Jan Hormusji Faramji Manekshaw be appointed a Deputy Managing Director of the Company for a period of five years with effect from 16th January, 1964, on the remuneration and subject to the terms and conditions contained in the Agreement dated 24th January, 1964, made between the Company and Mr. Manekshaw and submitted to this meeting, or on such other remuneration and terms and conditions (not being more favourable to Mr. Manekshaw) as may be approved by the Central Government and agreed to by the Board of Directors of the Company and Mr. Manekshaw".

(c) **As an Ordinary Resolution.**

"That subject to the approval of the Central Government Mr. Ronald Bowyer be re-appointed a Deputy Managing Director of the Company for a period of five years with effect from 1st April, 1964, on the remuneration and subject to the terms and conditions contained in the draft Agreement submitted to this meeting and signed by the Chairman for the purpose of identification, or on such other remuneration and terms and conditions (not being more favourable to Mr. Bowyer) as may be approved by the Central Government and agreed to by the Board of Directors of the Company and Mr. Bowyer."

(d) **As an Ordinary Resolution.**

"That subject to the approval of the Central Government Dr. William James John Curry be appointed Managing Director of the Company with effect from 3rd April, 1964 to 31st March, 1966 on the remuneration and subject to the terms and conditions contained in the draft Agreement submitted to this meeting and signed by the Chairman for the purpose of identification, or on such other remuneration and terms and conditions (not being more favourable to Dr. Curry) as may be approved by the Central Government and agreed to by the Board of Directors of the Company and Dr. Curry."

(e) **As a Special Resolution.**

"That Article 44 of the Company's Articles of Association be deleted and substituted by the following new Article:

44. No fee will be chargeable for registration of transfers. probates, letters of administration, certificates of death or marriage, power of attorney or other instruments."

(f) **As a Special Resolution.**

"That Article 14(2) of the Company's Articles of Association be altered by inserting in the first sentence and between the words "additional certificates" and "the Company" the following words—

'of any denomination other than 100 shares'."

The Share Transfer Books of the Company will be closed from 10th September, 1964 to 25th September, 1964 both days inclusive.

The dividend that may be declared at this Meeting will be payable on or after 9th October, 1964 to Shareholders registered on the Company's Books on 25th September, 1964 or their mandatees.

On behalf of the Board,

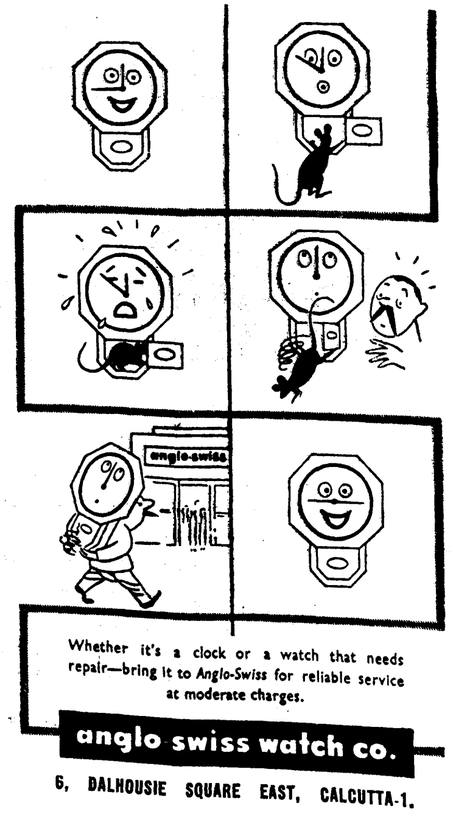
A. K. BASAK,
Deputy Managing Director.

9, Hare Street,
Calcutta
24th July, 1964.

Note: A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

(An Explanatory Statement as required by Section 173 (2) of the Companies Act is being sent to all members.)

(Situation Vacant)
CAMBRIDGE UNIVERSITY, ENGLAND



SOUTH ASIAN ECONOMICS

THE Economics Faculty of Cambridge University wish to appoint an Assistant Lecturer in South Asian Economics. The candidate appointed should be a person who has had direct experience of economic conditions and problems in some regions of South Asia and should possess a degree in economics and be otherwise suitably qualified. The appointment would be for 3 years, with possible extension to a total of 5 years. The appointment would be on the scale £1,200—£1,570. Applications (one copy only) giving full details of the candidate's career and the names of three referees should be sent to **Posner, Economics Faculty, Sidgwick Avenue, Cambridge, England,** as soon as possible and in any case so as to arrive not later than 30th November. The starting date of the appointment would be not earlier than 1st June, 1965, and could be later than that date.

INTRODUCING REALISM IN PLANNING

IT calls for an extraordinary degree of insulation from *reality* to ignore the elephant that has strolled into the drawing-room. But it is precisely in such a purblind exercise that the experts in Yojana Bhavan are now engaged. The worsening price situation has given a big jolt to everyone in the country, to politicians and people alike. But to the planners it has caused the least concern, and they are busy as ever visualising a grandiose investment of Rs. 20,000 crores or Rs. 22,000 crores during the fourth plan. The present critical situation is mostly the result of the Government's gargantuan spending programme in *utter disregard* of the real resources of the economy. The outlays on defence and development have been stepped up sharply from Rs. 1,443 crores in 1961-62 to over Rs. 2,400 crores last year and to about Rs. 2,850 crores this year. True, the stagnation in agriculture has also been responsible for the spurt in *prices*, but basically the price crisis has stemmed from an investment programme which has been out of all proportion to the country's real resources. However, this harsh fact has not prevented the planners from pursuing their essays in gigantism. Among the many airy principles to emerge from the ivory towers in Yojana Bhavan is the decision to determine the size of the plan in the light of the country's needs without regard to the resources available. Although there is nothing new in this approach—the earlier plan periods have in fact witnessed this economic version of a toad swelling itself to size of ox and its consequences—it is surprising that it should be continued in spite of the critical situation in which the country has been placed.

While the planners are preoccupied with their grandiose target-setting exercises with faith derived, no doubt, from the unremitting fecundity of the Security Press, it is reassuring to hear the earth-bound suggestions of the Prime Minister, Mr. Lal Bahadur Shastri. In a letter to his colleagues in the Cabinet, he has suggested postponing some heavy industrial projects on which work has not started and making a fresh assessment of the projects and programmes for which funds are to be allocated during the remainder of the third plan period. While making it clear that he is *not* suggesting a permanent shift in emphasis, he has said that attention should be concentrated only on those projects which will be immediately productive. He is also convinced of the need for a vigorous pruning of public expenditure. In fact, the Central Finance Minister, Mr. T. T. Krishnamachari, had already decided to cut non-plan expenditure by about Rs. 70 crores, but Mr Shastri obviously feels that a cut in plan outlay is equally important He has pointed out that the Government's policies should be geared to meeting the immediate needs of the *common man such as* food, clothing, shelter, medical facilities and employment opportunities. In suggesting a change in emphasis, albeit temporary, from heavy industries to quick-yielding projects in the remainder of the third plan period, Mr. Shastri has adopted a bold and realistic stand.

It is a basic defect of Indian planning that heavy industry in the public sector has claimed an unduly large share of the nation's limited resources. Because of their long gestation periods heavy industries are slow to yield results, and this tardiness has been worsened by the inefficient and dilatory ways of the public sector. Meanwhile, the large sums of "created" money pumped into the economy without a matching rise in output have accentuated the inflationary pressures. Mr. Shastri has candidly pointed out that the return to the community for the investments made at great sacrifice is "totally inadequate". The pressure on prices has also necessitated the imposition of self-defeating restraints on the economy. The net result is that the growth of real national income, *per capita*, in this country is among the slowest in the world, perhaps even slower than what it would have been had there been no planned development. A shift in the investment emphasis from heavy industry in the public sector to agriculture and consumer goods industries in the private sector will bring about a more equitable distribution of resources between the present and the future. In concrete terms, such a shift in emphasis will mean that the people will be better fed, clothed and housed, and there will be an increase in national savings, which can pave the way for economic growth.

The time has come when the country has no choice left between the alternatives of stability and growth. Under present circumstances, priority has to go to price stability rather than to growth. In a sense, there is no inherent contradiction between the two, and a balance between them can be achieved. But with the conditions obtaining in India, where bureaucratic controls constrict growth as much as production, the dichotomy between stability and expansion becomes real. An important argument adduced in favour of heavy industry is that it is indispensable for self-sustaining growth. While there is some substance in this point, it has to be borne in mind that their import-saving potential can be easily exaggerated. Experience shows that, by and large, the more industrially advanced a country is, the larger is its need for imported raw materials and other goods. In the case of India herself, the need for *maintenance imports* has vastly increased in the wake of planned development.

While a shift from heavy industry to quick-yielding consumer goods industries is welcome, the process itself is fraught with difficulties. As Mr. Shastri has rightly indicated, the projects on which a start has already been made cannot be called off. Some of the big projects for which foreign exchange has been arranged only recently or has not yet been found will perforce spill over into the fourth plan period. Barring these, the choice of schemes for postponement will be difficult. Since the stepping up of farm production is vital, it is obvious that the fertiliser projects cannot be stayed. It is also clear that infrastructure schemes like power and transport cannot be deferred since that will mean hampering the working of the existing industries. Then there are special projects like steel expansion, which are sacrosanct in the eyes of the Govern-

ment. Pruning thus becomes a delicate and, in in some ways, an invidious job. The Deputy Chairman of the Planning Commission, Mr. Asoka Mehta, has in fact pointed out that a fundamental change in the development programme could not be envisaged, although he agrees that "some limited rephasing in the economy is always possible." However, this need not conflict with Mr. Shastri's pragmatic plea for a selective pause in the execution of new projects and for consolidation of the schemes already in progress.

WORRIES OF CEMENT PRODUCERS

THE cement industry in India, which will be completing 50 years in October 1964, can look back on its achievement with a measure of pride. True, the production of cement continues to be considerably short of the country's requirements, but to be able to produce at the rate of 96 percent of capacity in the face of several difficulties is a creditable performance. Actual capacity and production at the close of the third plan period are unlikely to exceed 11.5 million tonnes and 11 million tonnes, respectively, representing 77 percent and 85 percent of the targets. This will mean a shortfall of 3.5 million tonnes and 2 million tonnes in relation to the targeted capacity and production. But it is the Government and not the industry which is mainly responsible for these shortfalls. In his presidential address at the recent annual general meeting of the Cement Manufacturers Association, Mr. Dharamsey M. Khatau rightly said that the industry could have given a much better account of itself had the Government shown a more sympathetic understanding of its problems. The industry's growth, like that of certain other key units, has been stifled by the Government's unrealistic pricing policies. The World Bank Mission drew New Delhi's attention to this matter and said that the coal and cement industries had both been experiencing difficulty in attracting capital for development in recent years due to the unrealistic price policy. Another reason given by Mr. Khatau for the stalemate in the industry's expansion programme is the experiment in granting licences for additional capacity to newcomers with no experience of the industry. Instead of allowing the existing units to expand in all possible ways, the Government has adopted a doctrinaire approach in granting licences to new aspirants, but many of these licences have had to be revoked as the parties failed to implement their projects.

A shortfall in the output of an essential commodity like cement leads to great dislocation and delay in the execution of important national projects, inflates overall costs, tempts irresponsible agencies freely to indulge in adulteration and causes a host of adverse chain reactions. It is, therefore, only proper that the Government should allow reasonable adjustment in the price of cement and help the industry to expand output and accelerate the overall growth of the economy. The producers have already submitted a representation to the Government suggesting measures to quicken the development of the industry. These suggestions include an increase in the development rebate, granted in terms of the income tax provisions, from 20 percent to 40 percent, a more rational basis for granting production incentives, a higher price for additional production achieved by the expansion of the existing plants or the setting up of new plants and a realistic retention price. Mr. Khatau said that the industry's plea for higher development rebate had not been conceded. The question of granting a more realistic production incentive is still receiving the Government's attention. The latter has agreed to allow a higher price for production resulting from expansion of the present plants and new plants at Rs. 77.75 a tonne. But it is doubtful whether the Government will take a realistic view of the retention prices payable to producers.

Mr. Khatau has referred to various reports about the Government's intention to decontrol cement partially, establish a cement corporation to set up 31 new units in the public sector and to assist the existing plants in expanding their capacity. It is strange that the Government should not have cared to consult the industry on these matters. Conditions in the capital market have been far from favourable for a long while and the position of various priority industries, including cement, has been worsened by the Government's constricting pricing policy. This has created a climate for the public sector to enter the industry. Undoubtedly, the Government can always finance the setting up of public-sector units. But the important question that one has to ask is whether it would not be more advisable to rectify the defects in the price structure and liberalise the development rebate which would improve the investment climate, facilitate the growth of new ventures and accelerate the expansion of the existing units than to start new units in the public sector.

One must ask whether in the long run it would not be cheaper and more economical to allow the present units to expand production. Surprisingly enough, the Government is contemplating the import of five new units involving a huge outlay of foreign exchange when the existing plants are not allowed foreign exchange for obtaining all their requirements of maintenance equipment and spares. Mr Khatau suggested that if the Government must import such complete units, they should be placed at the disposal of the existing manufacturers. The latter have the know-how, the requisite technical personnel and the experience to work them efficiently. He has also urged that the imported units should conform to accepted standards both in size and type with due consideration to the development of the young cement machinery manufacturing industry operating in the country.

Referring to the proposed import of 500,000 tonnes of cement in order to tide over the present shortage, Mr. Khatau recalled how the country could have secured an additional 1 million tonnes of cement if only the Government had accepted the industry's plea, made some two years ago, to make available blast furnace slag—a waste product of steel plants—for manufacturing cement. Some of the units in the industry were then even prepared to set up plants for the manufacture of slag cement. While welcoming the Government's decision to revise partially the formula for packing charges, Mr Khatau stated that the price of old bags assumed still remained unchanged. He urged the Government to revise the basis for arriving at the price of old bags with reference to the trend of the market rates.

Mr. Khatau's view that the fourth plan target of 23 million tonnes is over-ambitious will be widely endorsed. Cement production in the last year of the current plan is unlikely to exceed 11 million tonnes. This means that over the 15-year period covered by the three plans, all that is being achieved is an increase of a little over 8 million tonnes—from 2.7 million tonnes to 11 million tonnes. As for the fifth plan target of 36 million tonnes, it is much too premature to talk about it. A better perspective of the target for the fifth plan can be had only when the working of the industry during the fourth plan is assessed. It is surprising that the industry should not have at all been consulted while formulating the targets. It is only proper that a realistic appraisal be made of the prospective demand for cement in consultation with the industry, and steps be devised to attain the targeted capacity. Meanwhile, the industry's decision to set up a research laboratory on a co-operative basis to carry on research in the technology of cement and its uses will be greatly welcomed. Negotiations are in progress between the Government of Punjab and the Cement Research Institute of India—the body set up to look after the project—for a suitable site in Punjab. An outline of the research programme has been drawn up, and it is hoped that the research laboratory will commence work in the near future.

SQUEEZE IN COMPANY PROFITS

THE study of the finances of Indian joint-stock companies published in the July issue of the *Reserve Bank of India Bulletin* confirms the general analysis of the causes which have led to the depression in the capital market. It is based on the working results of 1,333 selected medium and large public limited concerns (with paid-up capital of more than Rs. 5 lakhs) for 1962-63. Although sales and gross profits of these companies were higher in 1962-63 than in 1961-62, the after-tax profits fell for the second year in succession, because the increase in profits was inadequate to offset the further dose of taxation. The proportion of tax provision to pre-tax profits rose substantially from 43.3 percent in 1961-62 to 50.6 percent in 1962-63. Net profits dropped by Rs. 5.7 crores, compared with a decline of only Rs. 1.5 crores in the previous year.

The impact of heavier taxation was more on dividends than on retained profits. The average rate of dividends dropped from 10.9 percent to 9.9 percent. Apart from the decline in the total sum available for dividends, there was also an increase in the paid-up capital during the year. As Company managements have adopted the policy of not cutting retained profits as far as possible in view of the urgent need for modernisation, expansion and diversification, they have been unable to pay good dividends. That has aggravated the depression in the capital market. In the circumstances, the need for raising dividends has become more urgent. Not only has the policy of dearer money resulted in the hardening of interest rates, the investors have also suffered income losses, along with others, because of the fall in the purchasing power of money. As the cost of living keeps rising, they naturally expect companies to compensate them for the loss of value in their incomes.

The rate of growth of assets as well as capital formation declined during 1962-63. It amounted to 8 percent to 10 percent. It is significant that external sources provided about 31.5 percent of the total funds of companies, compared with 44.6 percent in 1961-62. The contribution from the capital market, particularly in the form of new issues as a proportion of the total external finance, dropped from 26 percent in 1961-62 to 16 percent in 1962-63. The trend has deteriorated since and the response to new issues during recent months has been poorer. The bulk of these issues have been taken up by the underwriters themselves. The prices of most of the new shares are now quoted below par. The poor outlook will hurt the economy because many new issues will be floated in the coming months.

Considering the poor response from investors, it was a move in the right direction to increase the equity-debt ratio of companies from the present level of 1 : 2. Although new financing institutions, like the Development Bank, have been set up to enlarge borrowing facilities, loans by themselves will not solve the basic problem. Apart from imposing recurring liabilities in the form of interest and capital repayments, loans cannot play the same rôle as equity capital. The total gross assets of the 1,333 companies increased by Rs. 367.3 crores to Rs. 4,065.6 crores during 1962-63. Their gross profits rose by Rs. 23 crores to Rs. 254 crores, out of which the tax provision amounted to 50.6 percent, dividends 31.3 percent and retained profits 18.1 percent.

The improvement in sales and gross profits during 1962-63 was due to many favourable developments. Because of the Chinese aggression towards the close of 1962, companies were asked to increase their output to comply with defence requirements. They also produced more to meet development needs. Industrial activity was assisted by increased supplies of raw materials, power, fuel and transport. Many industries succeeded in using a greater part of their installed capacities. New capacity was also installed in response to the rising demand. As a result, the index of industrial production rose by 8 percent in 1962-63 (against 6.5 percent in 1961-62) although it was still short of the average target set under the third plan.

Judging from current indications, however, it looks as if the activity in the private sector was restrained by the stagnation in agricultural production, combined with restrictions on imports of raw materials and spare parts. Consequently, several commodities continued to be in short supply. The working of the cotton textile and sugar industries, in particular, was adversely affected by the shortage as well as high prices of raw materials and components. The most discouraging factor was the general rise in the production costs of all industries. Although the prices of many manufactured goods were raised, the increase did not compensate the producers fully. The Government raised the prices of controlled commodities like coal, cement and steel, but the increase fell short of the rise in production costs. The margin of profit in industries, therefore, declined from 10.2 percent in 1961-62 to 10.1 percent in 1962-63.

Current News and Comment

Lower-grade Collieries on Bad Days

Lower-grade coal producers are passing through bad days. Their difficulties arise mainly from overproduction for which they are at least partly responsible. In spite of the relaxation of control over distribution for the lower grades, the producers have not been able to turn the corner, for according to them, the wagon supply by the railways is still much too restricted. Whatever be the reason, pithead stocks with them have accumulated abnormally, and at one time in recent months, it was close on 3 million tons. The producers have naturally been moving New Delhi to do something about their grievances, and they feel "hurt" that the additional 9 million tons of non-coking coal which is to be raised during the remaining period of the third five year plan, will be of the higher grades entirely. In a memorandum submitted recently to the Central Minister for Steel and Mines, the Indian Colliery Owners Association of Dhanbad has pointed out that the current lack of balance between suply and demand arises from the fact that the use of coal has not been scientifically planned. As the Assessment of Resources Committee, appointed by the Government in 1963 to investigate the resources and the consumption pattern, has found, selected grades form only 2 percent of the total estimated reserves of 51,312 million tons, as against which their consumption by various users is 26 percent of the total. The medium grades (Grades I and II, both coking and non-coking) are only 7 percent of the reserves (against 62 percent of the total consumption). Lower grades form by far the biggest proportion at 91 percent, while only 12 percent of the total consumption is accounted for by these grades. These findings have been corroborated by all other committees which studied the coal problem before and after the 1963 committee went into the matter.

The Association has impressed on the Minister the necessity for "a thorough recasting of the schedule of gradewise allocations for various industries and changing the very pattern of consumption on a realistic basis in the light of the proved reserves." It gives some specific instances of the use of higher grades of coal where, in its opinion, lower grades would do just as well. A considerable quantity of Grade I coal, for example, was allowed to be used for brick-burning in 1963. These not only restrict the uses of lower grade coal, but also amount to a waste of a scarce national resource. Another competitor for the lower grades is the washery middling which is now being produced in large quantities.

The Association has drawn the Minister's attention to the report of the *Ad Hoc* Committee on Non-coking Coal, which was constituted recently to study the pattern of coal utilisation in the country. After a careful study of all the relevant data, the Committee has recommended that the basis of planning requires immediate reconsideration as well as reassessment of the grades and their allocation for consumption. According to the memorandum, the Committee even said that the unplanned output from the lower-grade collieries had not only been fully absorbed, but substantially more quantities would be required in future also. For instance, the demand for lower-grade coal in the countryside (in the shape of soft coke) could be very large, provided the Government followed a suitable policy for encouraging its consumption. As the study by the National Council of Applied Economic Research has shown, immense quantities of cow dung, firewood and vegetable wastes are being used as domestic fuel which could be used as manure for the nationally more useful purpose of raising food production. The Director-General of the Council has pointed out that the amount of cow dung burnt in India can produce, if used as manure, about 9 million tons of foodgrains every year, which means that "the loss is roughly equivalent to burning 12 Sindris every year."

F.I.C.C.I. View on Monopolies

Several business associations have submitted memoranda to the Monopolies Commission pointing out that there is no monopoly in the private sector in India. The latest from the Federation of Indian Chambers of Commerce and Industry considerably reinforces the case. The F.I.C.C.I. memorandum does not elaborately deal with the issues of concentration of wealth and economic power. This it has already done in a separate booklet as a rejoinder to the Mahalanobis Committee report. In the present case, it concentrates on monopolies and restrictive practices which are the main items of the Monopolies Commission's terms of reference. The working definition of a monopoly in the countries where the State has already taken measures to curb such practices, the F.I.C.C.I. points out, is that a seller or manufacturer must control at least one-third of the total output. Among important industries in India, only a few, notably, matches and cement, control more than this proportion. But that does give them monopoly power, for their freedom to charge any price is effectively curtailed by rigorous State regulation. Apart from exercising both direct and indirect control over private enterprise, the State itself has entered industry and trade in a big way. It is already a dominant partner in basic industries like iron and steel, fertilisers, machine tools, and participates substantially in yet others like ship-building, coal, drugs, cables, newsprint, electricity and insurance. In fact, the Government has secured absolute monopoly power in industries like aircraft, air services, life insurance, telephones, D.D.T. and the railways. These have led to a situation where the public ownership of the nation's reproducible tangible wealth has increased from 17 percent in 1950 to 25 percent in 1961. By the end of the third plan, the contribution of the public sector will have increased from less than 2 percent to nearly 25 percent in organised manufacturing industries, and from less than 10 percent to nearly 33 percent in mineral production.

Monopolies and restrictive practices grow in conditions of comparative plenty, and not while shortages are persisting. The growth and development of Indian industries have proceeded strictly according to plan targets. These have put restrictions not only on the growth of specific industries but also on the unit size, the number of manufacturers, types of commodities and processes of manufacture, all of which are important for determining the market structure. There may be fields where only a small number of industries exist. But this is due to their pioneering nature and the limited size of the market, not because of any deliberate attempt to prevent new entrants from coming in. Indeed, in certain lines, where the elasticity of supply is high and that of demand low, only large firms reaping economies of scale and employing high-level technology can be viable. These must not be confused with monopoly power. Further development will necessarily bring in more producers by the very assertion of the forces of individual enterprise, it is pointed out.

Discussing the logic of industrial development in the Indian context, the F.I.C.C.I. forcefully argues that such regulations and controls as the State now exercises over private enterprise, are already a serious deterrent to further economic progress. At all levels, industrial and business activity is strictly controlled. In fact, this makes any statistical measurement of concentration ratios almost irrelevant to the issues. Functionally, business management is so hamstrung by various legislative enactments and administrative regulations governing industrial development that the entrepreneur's economic power has really shifted to the State. The Central Finance Minister has himself admitted that controls "in their actual implementation often impede the operation of those very forces which might make for the elimination of the shortages and introduce some degree of competition." For this reason, the Government has been reviewing the operation of controls over a number of sectors in the country for some time now, and it has come to the conclusion that gradual and orderly relaxation of some of the controls would be in the interest of stimulating economic growth. If this is really the Government's policy, no further regulation of industrial growth is called for. "An objective analysis will lead to the conclusion that even the prevailing legal and administrative regulations cannot give rise to restrictive practices or to monopolistic control, but have, on the other hand, rendered economic power of entrepreneurs ineffective, let alone permit any concentration," the F.I.C.C.I. memorandum concludes.

Raw Materials for Small Units

The Central Minister for Industry and Supply, Mr. H. C. Dasappa, called for a new aproach for the development of small-scale industries while opening a two-day meeting of the Small-Scale Industries Board in New Delhi last week. The Minister made some constructive suggestions for accelerating the progress of small-scale industries, such as the proper use of capacities already created in different lines after a careful expert assessment; exploration of the possibilities of meeting defence requirements and the production of such goods which can be exported for earning a larger amount of foreign exchange. Admittedly, the progress of these industries would have been more satisfactory if they were not faced with an acute shortage of essential raw materials. As it happens, Mr. Dasappa assured the small entrepreneurs that the growth of small-scale industries, which depended on scarce raw materials, would have to be promoted on a regulated and selective basis. It is necessary to see that the available foreign exchange is put to maximum use and that new entrepreneurs have not to face difficulties in procuring raw materials. Mr. Dasappa said that he did not envisage any rigid system of licensing for small-scale units, but it would be necessary to have screening committees at the State or Central levels. These bodies should scrutinise applications for setting up units dependent on scarce raw materials. The Minister hoped that once the schemes were aproved by the committees, the small industries concerned should be assured of raw material supplies for one-shift working. The growth of the small-scale industries using non-scarce raw materials will, however, continue to be free.

Some such procedure, as suggested by the Minister, is necessary because the present system of allocation of raw material resources for small industry leaves much to be desired. There is no official machinery, for example, to ensure that the raw materials are equitably distributed between large and small industries, although the Ford Foundation team, it will be recalled, urged the Government to remove this defect. It is, therefore, pleasing to note that the Government has appointed the Lokanathan Committee to determine the equitable distribution of raw materials between large and small industries. But since the Committee will consist of representatives of both the sectors,

it is to be hoped that their conflicting claims and interests will not retard its activities. As for the ancillary industries, their progress so far has not come up to expectations. Mr. Dasappa did not refer to this problem in detail, but only said that "measures should be devised to induce each large-scale undertaking, both in the public and private sectors, to examine its production and purchase programmes so as to farm out components to competent, small-scale units." Many ancillary industries are unable to produce components of the required quality and specifications, so large-scale industries, by and large, are unwilling to place orders with them. But the progress of ancillary industries would undoubtedly have been greater if the Government gave them more impetus for their growth.

It is true that small industries have received a fillip during the last ten years. There are at present over 57,000 such units which have been registered with the various State Directorates of Industries. The number of non-registered small-scale factories, which avail themselves of the facilities from the Central Small Industries Organisation, has been estimated at about 200,000 to 250,000. Even the limited data available on the production and employment potential of small industries shows that the gross value of their output is about Rs. 1,400 crores or about 31 percent of the total output of the industrial sector. Small-scale industries, it is pleasing to note, are now increasingly participating in the Government's stores purchase programme. The experience of their development during the past decade has shown that given a certain amount of initial assistance, they do not take long to become viable and self-reliant.

Bonus Report Criticised

The Council of Indian Employers has made a representation to the Central Labour Ministry asking for an opportunity to put forward its further views on the Bonus Commission's report before the Government takes a final decision. The Council, which has been constituted by the Employers Federation of India and the All-India Organisation of Industrial Employers, opposes the Commission's recommendation concerning the minimum bonus as being wrong both in principle and practice. The minimum bonus, it says, is nothing but an indirect increase in wages. Moreover, when a unit makes a loss, the question of bonus should not arise at all. The Commission's report has undoubtedly raised large issues of principle and policy. But if its recommendations are implemented without considering the consequences, not only will production costs rise, but capital formation in industry will also be retarded. The Council has rightly pointed out that the payment of bonus based on profits puts a premium on those who shirk hard work and is entirely at the cost of the consumer For achieving greater efficiency, it would have been proper to replace it by a system of bonus related to the productivity of workers. Supporting the minute of dissent submitted earlier by the employers' representative to the Commission, the Council has stated that the rate of return on both capital and reserves should be higher than the 7 percent prescribed by the Commission. Furthermore, the Commission should have provided a suitable percentage of the available surplus as a prior charge for rehabilitation. According to the Council, all corporate taxes, which are levied at present or might be imposed in future, should first be deducted before the available surplus for the payment of bonus is worked out.

The Council has argued that the Commission's principal recommendation is to grant to workers the major portion of the surplus of industries after deducting certain prior charges. This will produce adverse consequences by discouraging investment, reducing employment and real wages and retarding production. The Council has reminded the Government that the former Central Labour Minister, Mr G. L. Nanda, assured employers that the Commission's recommendations would not be implemented straightaway, but that the question would have to be considered afresh, independent of the report.

4¾ PER CENT MAHARASHTRA STATE DEVELOPMENT LOAN, 1976 ISSUE PRICE AT PAR

OPEN ON MONDAY, THE 24th AUGUST, 1964

THE loan will be closed as soon as the total amount of Rs. 15 crores has been subscribed and in any case not later than the close of business on the 29th August, 1964.

The applications for the loan will be received at—

(a) the offices of the Reserve Bank of India, Bangalore, Bombay (Fort & Byculla), Calcutta, Madras, Nagpur and New Delhi,

(b) the branch of the State Bank of India at Patna,

(c) the branch of the State Bank of Hyderabad at Hyderabad,

(d) the branches of the State Bank of Hyderabad conducting Government treasury work within the State of Maharashtra,

(e) the branches of the State Bank of India within the State of Maharashtra except at Bombay and Nagpur and at places covered by item (d),

(f) the Government treasuries and Sub-treasuries in the State of Maharashtra at places not covered by items (d) and (e).

Full particulars can be obtained at any of the offices mentioned above.

HOME RULE FOR SCOTLAND

THE judgment of the House of Lords in the great Scottish Ecclesiastical Case is one that may well revive an urgent demand for Home Rule for Scotland in all that concerns her own internal affairs. When the crisis termed the Disruption came in 1843, which split the Established Church of Scotland in Twain, the seceders from that State Church came out solely on the ground that they wished independence in all matters pertaining to spiritual things within their Church. They formed themselves into the Free Church of Scotland, and although, when they came out (save in this one, but to them, all important matter of spiritual independence) they were at one with the State Church in matters of worship and doctrine and Confession of Faith, they possessed the inherent right—indeed that was the *raison d'être* of their existence as a separate church—to alter or modify their Confession as they believed the spirit of Truth gave them enlightenment to do so. And as a matter of fact modifications have been made. In this realm they differ entirely from the position of the State Church of Scotland. The Confession of the State Church is embodied in an Act of Parliament and the Clergy and Office bearers of that Kirk are tied neck and heels to that Confession unless they can get that unspiritual instrument, the British Parliament, to slacken the bonds for him. Meantime Tim Healy and the Roman Catholic Members of Parliament, and all the other motley mixture of brewers and Barristers and Soldiers and merchants who belong to various churches or no churches at all and who make up the House of Commons are the absolute masters, dictating to the State Church of Scotland what they are, and what they are not to believe, if they are to remain within the pale of that Kirk. Not so very long ago, there was a movement to try and get their Confession of Faith revised, but an astute ecclesiastical lawyer advised them to "let sleeping dogs lie", or else they might get more than they bargained for.

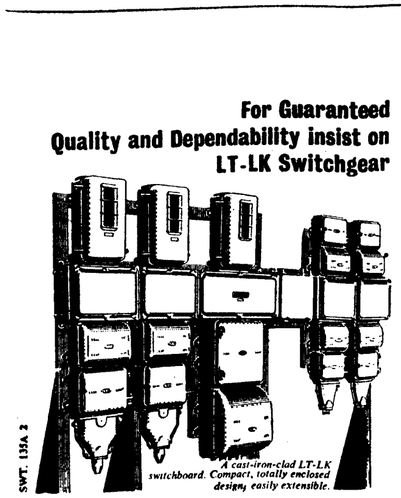
A Ditcher's Diary

A CORRESPONDENT ONCE WROTE TO *The Times* TO say that although it is quite possible to overcall one's hand in bridge, it is physically impossible to overplay one's hand. I am no authority on bridge, auction or contract. The phrase does seem, on closer examination, somewhat dubious. I have been wondering whether President Soekarno has not in fact overplayed his hand against Malaysia. He has indeed got away with a great deal of impudence in the past; on occasion India has found herself obliged to support him, not always on merit but simply because his adversary was white and European. This time it is a different kettle of fish; it is now Asian against Asian. The fact that India's differences with China remain unresolved will no doubt be the reason for some to tell Djakarta where it gets off; that Malaysia fully supported India against China is an additional factor. New Delhi must take all this into consideration; but I can see no semblance of justification for Indonesia's antagonism to Malaysia. India, I think, should say so in plain language. If the Bandung spirit, such as it was, has evaporated, it is certainly not India's fault; China remains fully guilty. Next to be blamed is Indonesia's own Dr. Soekarno. It may well be a good idea for all concerned to give up the pretence that there is anything still left of Afro-Asian solidarity. That done, it may again be possible to discuss issues and decide policies not on the basis of Asian or European claims but strictly on merit. Aspects of Malaysia may not appeal to some Indians; but, surely, aspects of Dr. Soekarno are even less appealing. Even as Nigeria has called the bluff of the ambitious Dr. Nkrumah of Ghana, some comparable operation against Dr. Soekarno seems inevitable as well as desirable. Are there any illusions left in New Delhi that Djakarta, if adequately appeased, will extend some support to India against China? The memory of the Asian Games incidents must still be sharp in many Indian minds. I am suggesting that India will fare no better, and Indonesia will be no fairer, in any continuing Asian political game.



IT IS NOT FOR THE PRESS TO COMPLAIN THAT THE speeches made in New Delhi and the State capitals on Independence Day did not have a great deal new to say; the newspapers were not very original either on the occasion. Prices, food and unity; oh, I'm bored. And yet, what else is there? On prices, I am beginning to wonder whether the Government is very serious about doing anything much. The high prices fill some pockets; and from those pockets come the funds for the Party that sustains the Government. This is not a very original observation, I know; but I have not yet seen a convincing refutation of the charge. On food, I think the Government is reasonably earnest; yet official and political thinking seems confined to imports and P.L. 480. To meet immediate needs imports are of course essential; but in 17 years of independence this country has shown astonishingly little enterprise in increasing food production. I hear of a row between the Ministry of Food and that of Community Development. There is little to show that Mr. Shastri has yet addressed himself to these problems of his Government. Concern over the Prime Minister's health equals the country's sympathy for him; if, however, controls are to be effective, there must first be an effective Government in New Delhi. There isn't; and only Mr. Shastri could make his Government effective. I get the impression that he has not yet made himself felt. His reputation for persuasiveness is great; this can be a handicap. All his colleagues and perhaps not a few of the officials are simply waiting to be persuaded; they have to be told, sometimes perhaps a little abruptly, even perhaps rudely. Of all that talk of collective leadership we have had our fill; the Prime Minister now needs to be Prime Minister, even if it means making a few enemies here and there.

THE LIFT WAS THERE AFTER ALL. THE PRIME Minister climbed to the ramparts of the Red Fort on his own and allowed himself to be drenched. Still I will give him only two cheers and no more. First, Mr. Shastri must find out the overenthusiastic official responsible for the installation of that lift at the expense of the taxpayer—and then punish him. Since that scandal in Parliament over certain Ministers' water and power bills, ministerial ostentation has been less conspicuous. Good; but there is a lot more to be done in that direction. Those who are really earnest about living simply, as Mr. Shastri obviously is, should look into the rôle of officials and their wives in setting the pace of life in New Delhi. It is they, rather than the Ministers, who are responsible for the philosophy that your importance is to be measured by the size and location of your bungalow, the country of origin of your car, the number of saris your wife and daughters are able to sport. And how do you go about getting those things? First you corrupt your Minister into accepting luxuries you are seeking for yourself and your family. The rest is easy; the Minister grants similar luxuries for yourself. Precedents have by then been set; and the Deputy Minister does not care to go to office until there has been installed the secretariat table he has been told he is entitled to by virtue of his position in the Government. Work is irrelevant. It is bad enough when Secretaries secure favours from Ministers through flattery. But the taxpayer has a right to complain when flattery takes the shape of an expensive, temporary and eventually unused lift at the Red Fort. To some it may seem that I am making a lot of fuss over a lift. Not at all. It is in these apparently small things that the whole approach of a Government is symbolised. I do not greatly admire austerity for its own sake; Ministers are entitled to comfort. A very different thing is ostentation, which is plain vulgarity, indulged in by only those whose minds are empty and have only things to show.

IT IS NOT VERY OFTEN THAT I HAVE KNOWN THE pleasure of finding myself in agreement with Mr. Jayaprakash Narayan; even now the agreement is more in principle than in detail. Yes; I am talking about his recent statement that a settlement be sought with China on the basis of leasing out Aksai Chin. I am not good enough at reading maps precisely to judge the validity of the offer; but Mr. Narayan at least gives some evidence that he is concerned over the issue. The spokesman of the Ministry of External Affairs has already spoken—and given evidence that thinking in New Delhi has made no progress at all beyond the barren Colombo proposals. The fate of a plan, for anything, is in the final analysis dependent upon its acceptability; and, except in principle which can mean exactly nothing, China has not accepted the Colombo proposals. Why, then, pathetically cling to them? I have no means of knowing that Peking will accept Mr. Narayan's suggestion, which is not altogether new. But why not find out? If New Delhi has other ideas on early accommodation with China, why has nobody heard of them? Mr. Shastri did indeed refer to the problem in his Independence Day piece but chose to say nothing beyond the country's dignity and honour, which are important enough, without being remotely concrete on a specific question. The time has come also to ask whether the emergency is going to be a permanent feature of life in India. It suits some people, I am sure; but it simply does not suit a democracy that claims to have come of age. There is constant nudging from London and Washington for an Indo-Pakistani settlement; this is also one of the bees in Mr. Narayan's bonnet. This would indeed be desirable. But if I were asked to award priorities, I would unhesitatingly say that a *détente* with China seems at once more urgent and possibly more attainable.

WHENEVER I HAVE BEEN SCOLDED BY SOMEBODY because what I have said in this diary has contradicted some well-thought-out official line, or has threatened a particular vested interest, my stock answer has always been: journalists are not

For Guaranteed Quality and Dependability insist on LT-LK Switchgear

A cast-iron-clad LT-LK switchboard. Compact, totally enclosed design, easily extensible.

SWT. 135A 2

Type MK1, 15Amps automatic direct-to-line motor starters for motors up to 7.5 h.p.

Type MF1, 15 Amps manually operated motor starters for motors up to 7.5h.p.

Switch-fuse gear — available as switch unit, fuse unit, and combined switch-fuse unit in ratings of 60/100 to 1000 Amps, 500 Volts

It is false economy to buy inferior switchgear. Of the finest quality, LT-LK is made in India in collaboration with the leading European manufacturers of switchgear — Laur Knudsen Ltd. of Denmark.

L&T also manufactures control panels (floor mounted, wall mounted or console type) for India's power generating and distribution stations and industrial installations.

diplomats. I am willing to concede that there are occasions when a journalist must be diplomatic. But otherwise his duties begin and end with collecting news, publishing it within the limits set by the law and his own professional conscience, and subsequently commenting on it. They certainly do not include behaviour calculated to further the interests of politicians, business organisations, or, for that matter, the journalist's own country. And if they are discharged conscientiously, they involve quite enough responsibility for any one man. Having delivered myself of that little sermon, I now feel more free to admit that there might be exceptions. Such as a journalist using what contacts he has to help prevent a world thermo-nuclear war. This is no wild supposition; according to an article by Mr. Roger Hilsman, former Director of Intelligence and Research in the U.S. State Department, published in a recent issue of *Look*, this is what actually happened during the Cuban incident to Mr. John Scali, a correspondent of the American Broadcasting Corporation. Mr. Scali, who at the time was accredited to the State Department, was approached by a contact of his in the Soviet Embassy in Washington, referred to in the article as Mr. X, with a proposed plan for the solution of the crisis and a request that he should convey it to his friends in the State Department. This he did, and, according to Mr. Hilsman, it was subsequently accepted. It is certainly gratifying that any member of my profession should play what the State Department has euphemistically called, "a useful and responsible rôle", in an affair of such historical significance. Mr. Scali deserves the gratitude of all mankind, and I am sure that under similar critical circumstances he, or any other journalist, would be only too willing to oblige again if able to do so. But before journalists become accepted in the minds of a desperate humanity as having great promise in the rôle of international fixers, may I draw attention to what I said earlier—to the fact that by temperament and training we are not fitted to become established substitutes for the more conventional channels of diplomacy.

THE DECISION OF THE GROUP MANAGEMENTS controlling the *Daily Express* and the *Daily Mail*, two of Britain's leading morning newspapers, to co-operate in the publication of a weekly colour supplement, is being acclaimed in Fleet Street as a victory for goodwill and enlightened self-interest. To me it looks more like a triumph for the lion in his plans for lying down with the lamb. I wonder if Fleet Street would so readily have accepted the arrangement as innocuous if Lord Beaverbrook had still been alive. For this is not a union of equals. The *Express* has almost double the circulation of the *Mail*—which it is rumoured has been ailing financially for years—and at the moment is expanding faster. What, therefore, could be more natural when the *Mail* finally—and inevitably some say—decides something must be done about its predicament, than that it should "co-operate" with the *Express* for all other issues as well? All of which might be very cosy for the financial interests involved, but nevertheless represents a further contraction in opportunities for the employees and a narrowing in the choice of daily reading matter for the British public. It would also constitute an all-too-convenient method of presenting the authorities, who have been increasingly concerned in recent years about the concentration of ownership in the Press, with a happy little *fait accompli* which it would be impossible to unscramble under any pretext acceptable to a democratic electorate. Oh yes, very convenient indeed. There is good reason to believe that this spread of colour in Britain's newspaper industry will bring about even more consolidation than what has been promised. It is an expensive business producing a multi-coloured supplement, although the rewards are correspondingly large, and to bring out over 6 million copies of a single issue, as will be necessary in the *Express-Mail* joint venture, requires a considerable amount of plan and organisation. The fashion was set two years ago by the *Sunday Times* and is soon to be followed by the *Observer* and the *Daily Telegraph*. I cannot see them all making an equal success of it.

Guide for Investors

INDIAN IRON TO MAKE SPUN IRON PIPES

IN the latest report of the Indian Iron and Steel Co. Ltd for the year ended March 1964, the directors say that the I.I.S.C.O.-Stanton Pipe and Foundry Co. Ltd has been incorporated to manufacture spun iron pipes and ancillaries in collaboration with Stanton and Staveley Ltd of the U.K. A suitable site has been selected in Ujjain, Madhya Pradesh. A licence has been obtained to import plant and equipment, and construction work at the site is expected to begin within the next three or four months. The implementation of the collieries development project has been undertaken. The total cost of the project is estimated at Rs. 23.19 crores, of which the foreign exchange expenditure will amount to Rs. 8.73 crores.

The profit of the Company has increased from Rs. 9.12 crores for 1962-63 to Rs. 11.52 crores for 1963-64, after providing Rs. 4.40 crores (against Rs. 3.40 crores) for depreciation. The taxable ordinary dividend has been increased from 16 percent to 17 percent, including a special cash bonus of 1 percent. The yield amounts to 6.7 percent at the present price of Rs. 25.22 a share of Rs. 10 each. Taxation is allocated Rs. 3.87 crores (against Rs. 3.56 crores). Referring to the replacement of the super profits tax by surtax on profits, the directors say that there is no liability of the Company to the latter tax in relation to the profit for 1963-64. Development rebate reserve absorbs Rs. 8.44 lakhs (against Rs. 22.14 lakhs) and general reserve Rs. 5.43 crores (against Rs. 3.64 crores). A larger transfer to reserve has been justified in view of the substantial funds required to finance the various expansion projects. The Burnpur works has attained the installed capacity. The production of ingot steel rose by 24,747 tonnes to 1.03 million tonnes. The output of the Kulti foundries was affected by the shortage of pig iron, so it declined by 8,706 tonnes to 215,653 tonnes. Despatches of salable steel amounted to 808,393 tonnes, against 797,960 tonnes. The working has been affected by the decline in the quality of coal supplied.

Growth Prospects for Indian Copper

THE shares of Indian Copper Corporation Ltd have been steady around Rs. 3.26 due to the growth prospects for the shares. These were outlined by Mr. S. C. Gladstone in his chairman's address (a full text is printed on a later page in this issue of *Capital)* at the annual general meeting of the Company held in Calcutta last week. Although the construction of the electrolytic plant has been delayed by various difficulties beyond the control of the Company, it is expected to begin operating from 1965. The working, however, depends on the supply of blister copper which has to be imported from the U.S.A. It is short of blister copper for the time being. It was originally thought that the copper would be imported from Africa. The Company has been permitted to manufacture 260 tonnes of nickel sulphate as a by-product of the electrolytic plant.

Steps have been taken to produce it early in 1966. An industrial licence has also been obtained to increase the production of copper and to manufacture sulphuric acid. A new smelter with a larger capacity is proposed to be built. New equipment for developing mines will be installed. A concentration plant, an additional grinding plant and a new crushing plant will be installed. The total cost of the projects has been estimated at £2,875,000 which will be obtained in the form of bank overdrafts, foreign exchange loans and a debenture issue. When the new smelter is set up, the output of copper is expected to rise to 12,130 tonnes for the first year; and to 12,950 tonnes in the second. A quantity of 100 tonnes of sulphuric acid will be produced daily.

The output of copper dropped by 199 tonnes to 9,582 tonnes in 1963 largely because of deterioration in coal supplies and poor working conditions. The rolling mills produced 9,376 brass sheets and circles. Since zinc is used in these products and it has to be obtained by utilising U.S. aid, the outlook should be assessed carefully. This apart, the sale of brass sheets and circles to the utensil industry has been restricted. The export of kyanite dropped from 27,682 tonnes to 18,792 tonnes. The demand for kyanite has fallen due to the growth of synthetics and because of poor market conditions. The recession in the steel industry has contributed to the decline in demand.

The outlook for the current year is better because up to July 1964, exports have amounted to 13,000 tonnes. They will rise to about 17,000 tonnes by August 1964. Mr. Gladstone mentioned that the high level of international price of copper may not be sustained for long. It should settle down to a reasonably lower level considering that there is a close balance between supply and demand relating to copper. The profit of the Company has amounted to £1,384,875 for 1963, against £1,351,771 for 1962. The taxable ordinary dividend of 12 percent has been paid on the increased share capital. The yield amounts to 4.9 percent at the present price. Taxation is allocated £821,855, depreciation £170,000, general reserve £26,597. A sum of £21,694 has been provided for the kyanite decretal amount.

Larsen and Toubro Sales and Profit Up

THE preliminary report on the working of Larsen and Toubro Ltd for the year ended March 1964 shows that the Company has done exceedingly well during the year. Sales rose by about 41 percent from Rs. 5.82 crores to Rs. 8.20 crores and other income increased by about 24 percent from Rs. 70.73 lakhs to Rs. 87.74 lakhs. The gross profit rose impressively by about 68 percent from Rs. 70.25 lakhs to Rs. 1.18 crores. Every division of the Company contributed significantly to the increase in sales and really remarkable is the fact that there was a reduction in the cost of production in spite of a rise in the cost of labour, raw materials, power, etcetera.

In his statement to shareholders which has been circulated along with the directors' report, the chairman, Mr. H. Holck-Larsen, says that the improved results were the cumulative effect of careful planning, judicious investment, proper budgeting and efficient execution of the Company's development plans over the previous years. The chairman's speech holds out the promise of a bright future. Mr. Larsen says that "with our wide range of activities, our long experience in the engineering field, our worldwide contacts with leading manufacturers of plant and machinery, and the recognised ability and outstanding team-spirit of our staff and workers, I feel confident of our future growth and strength."

Speaking about the Company's performance during 1963-64, the chairman says that the output from the Company's workshops in Powai increased by 62 percent over that of 1962-63. This significant rise means that the production has more than trebled in three years. All manufacturing units in Powai operated with increased efficiency and have either reached or exceeded their production targets. The general workshop in Powai was fully occupied with the fabrication and assembly of plant and equipment for the chemical, pharmaceutical and food processing industries and cooling towers. The switchgear factory increased the production of switchgears, motor starters, control and instrument panels and kerbside petrol dispensing and metering pumps. Production of switchgear equipment exceeded the target and the factory requires a further expansion to meet the increasing demand of our high quality products. The contract business of the Company has been fairly satisfactory.

The Company's subsidiaries are making satisfactory progress. Alu Capsules Ltd, a wholly-owned subsidiary, which initially manufactured bottle capsules from aluminium foil, has extended its activities and now also manufactures press tools, jigs, fixtures, plastic and bakelite moulds and dies for pressure die castings in collaboration with Interfonda Ltd of Switzerland. Christensen-Longyear (India) Ltd, 51 percent of whose capital is owned by Larsen and Toubro, manufactures drilling equipment and diamond drill bits in collaboration with two reputed American firms. As sole selling gents of this subsidiary, Larsen earned a commission of Rs. 6.57 lakhs during 1962-64. The civil engineering and constructing business of Engineering Construction Corporation Ltd showed a substantial increase during the year ended September 1963. The future working of this subsidiary is expected to show improvement. The production and sales of another subsidiary —Indian Crown Cork Co. Ltd—also showed an improvement. The associate companies continued to progress according to expectations and there was a steady increase in the Company's income from selling agency commission and dividends.

Sales of Audco India Ltd, showed a steady rise during 1963-64 and plans are in hand to widen the range of products. The production of Eutectic Welding Alloys of India Ltd is expected to commence towards the end of this year. The Company was scheduled to start production during 1963-64, but it could not do so due to the delay in the receipt of import licences and difficulty in the procurement of indigenous raw materials. Sales of Utkal Machinery Ltd are expected to rise during 1964-65 which will increase Larsen and Toubro's commission. As for the dividend, the chairman says that it will take some years.

Speaking about development and future prospects, the chairman says that the expansion of Larsen and Toubro between 1960-61 and 1963-64 resulted in a doubling of the Company's equity capital from Rs. 80 lakhs to Rs. 1.65 crores, whereas production, sales and profits before tax have almost trebled. The forecast of production and sales for the three years, 1964-65 to 1966-67, also shows an encouraging rise. To meet the financial requirements, the Company has prepared a comprehensive three-year plan, which visualises that the increased financial resources required will be raised by issuing additional shares, arranging further medium and long-term loans and securing adequate banking facilities.

A beginning has been made by the proposed issue of 660,000 equity shares of Rs. 10 each at a premium of Rs. 2 a share which will fetch Rs. 79.20 lakhs. The Company also proposes to issue debentures of about Rs 1 crore some time towards the end of

Keys call the tune for Dorothy Almeida...

She wouldn't put it quite like that herself. She'd say she enjoys playing the piano in the evenings. She'd tell you about the composers she likes, her favourite numbers, her preference for jazz. At work, it's the typewriter keys that call the tune. Here a different touch is needed: brisk, sure, efficient. Whatever the content or the mood—an official letter or a Gershwin blues number—Dorothy Almeida has it at her fingertips!

EFFICIENCY COUPLED WITH PRUDENCE...

...is the keynote to success in her career. Efficiency and prudence meet behind Dorothy Almeida's laughing eyes and gay, infectious smile. Secretary to the Personnel Manager of Burmah-Shell, Bombay, her work is concerned with people. She knows them. Not as functions. As people and individuals. She keeps records about their work and themselves, with care. And there is routine work—correspondence, appointments for the Manager. Her filing is neat, systematic, ready for reference. The Personnel Manager finds his Secretary prompt with intelligent assistance.

TODAY, AS EVER, PEOPLE LIKE DOROTHY ALMEIDA ARE WORKING FOR YOU

For all her clockwork efficiency, there is nothing mechanical about Dorothy Almeida. Her tall, supple figure moves with grace at table tennis, while swimming, and on the dance floor. It's a full life.

Dorothy Almeida and people like her, at all levels of responsibility are Burmah-Shell. Today, as ever, they are hard at work, working to ensure that vital petroleum products, essential to India's growth and progress, are brought to you at the right place and time, in the right quantities.

BURMAH-SHELL are People in the service of the People

the current year. It is likely to issue further rights shares in 1966-67. During the current year, the Company has obtained from the State Bank of India additional cash credit facilities. The additional finance and increases in current assets will provide for the necessary expansion in the existing business, such as increasing the production capacity of Powai workshops, establishing additional facilities for sales and servicing of "caterpillar" equipment, and improving and expanding the workshop in Madras.

Indian Dyestuff Disappoints

THE preliminary report on the working of the Indian Dyestuff Industries Ltd for the year ended March 1964 shows that the Company has fared badly during the year. In spite of an increase of about 8 percent in the sales from Rs. 2.39 crores to Rs. 2.58 crores, the gross profit is down by nearly 16 percent from Rs. 52.18 lakhs to Rs. 43.80 lakhs. Apparently, the profit margin has been further squeezed by the rising costs of production and lower realisation for the Company's products due to competition. The dividend, however, has been maintained at 7 percent—Rs. 7 a share. The directors have been obliged to withdraw as much as Rs. 17.42 lakhs from the reserves, compared with Rs. 6 lakhs in the preceding year for the purpose of dividend payment. The directors have also decided to issue 15,000 equity shares of Rs. 100 each at par to existing equity shareholders in the ratio of one new share for every 14 equity shares held.

Originally, the Company had reserved 75,000 equity shares of Rs. 100 each for its foreign collaborators, A.C.N.A. of Italy, to be allotted to them, against the supply of plant and machinery. Out of these 75,000 shares, the foreign collaborators have taken up about 60,000 shares and the balance is being offered to the other shareholders. Out of the year's profit of Rs. 43.80 lakhs (against Rs. 52.18 lakhs), the directors have allocated Rs. 32.76 lakhs (against Rs. 16.18 lakhs) for depreciation, Rs. 9.97 lakhs (against Rs. 20.62 lakhs) for statutory development rebate and Rs. 1.07 lakhs (against Rs. 3.58 lakhs) for managing agents' commission. No provision is made for taxation which accounted for Rs. 4.30 lakhs in the preceding year.

Equity and preference dividends will absorb Rs. 17.43 lakhs (against Rs. 15.77 lakhs) and this is being paid by withdrawing Rs. 10.83 lakhs from the general reserve and Rs. 6.59 lakhs from the development rebate reserve. After making various appropriations, there remains a surplus of Rs. 1,801 to be carried forward, against Rs. 3,006 brought in. The Rs. 100-paid share of Indian Dyestuff which had touched a high of Rs. 362.50 earlier in the year is currently quoted around Rs. 260.

Jardine Henderson Repeats

THE ordinary shares of Jardine Henderson Ltd have been sluggish around Rs. 75 due to the maintenance of the taxable ordinary dividend at 7 percent for the year ended March 1964. The yield amounts to 9.3 percent at the present price of Rs. 75 a share of Rs. 100 each. The usual interim preference dividend for 1964-65 has also been declared. The pre-tax profit for 1962-63 has amounted to Rs. 44.78 lakhs (against Rs. 41.88 lakhs). The Company has also realised a profit of Rs. 3.91 lakhs on investments. Taxation is allocated Rs. 17.24 lakhs (against Rs. 17.12 lakhs) and general reserve Rs. 13.24 lakhs (against Rs. 12.67 lakhs). Goodwill to the extent of Rs. 1.68 lakhs has been written off.

Orient Paper Maintains

THE ordinary shares of Orient Paper Mills Ltd have reacted to Rs. 33.55 due to disappointment over the repetition of the taxable ordinary dividend of 20 percent for the year ended March 1964. The stock market had earlier marked up the price on hopes of a larger dividend. The yield amounts to 6 percent at the present price. The profit has amounted to Rs. 51.77 lakhs, against Rs. 51.84 lakhs for 1962-63, after providing Rs. 50.40 lakhs (against Rs. 60.45 lakhs) for depreciation, Rs. 75,000 (against Rs. 2.50 lakhs) for development rebate reserve, Rs. 47 lakhs for taxation (against Rs. 70 lakhs) for deferred taxation reserve and Rs. 25 lakhs (against Rs. 15 lakhs) for general reserve. A sum of Rs. 93,457 has also been brought in.

India Paper Pulp Expanding

THE ordinary shares of India Paper Pulp Ltd have been steady around Rs. 22.31 because of growth prospects. During the year ended March 1964, paper output rose by 995 tonnes to 16,636 tonnes, compared with that for 1962-63, and there has been a further increase in pulp production. The rise in paper production is attributable to modifications to the No. 3 paper-making machine while the installation of the forced circulation plant has resulted in the higher pulp production. It is expected that the production of paper and pulp will show a small rise during the current year. A substantial increase will not take place until the installation of the jute sticks pulp plant is completed and production is started in April 1965. When the latter plant is commissioned, the pulp-making capacity will rise to about 23,000 tonnes a year, so corresponding increases are being effected in the paper-making capacity. The Company has obtained a licence to increase the latter to 19,000 tonnes and an application has been submitted to the Government to increase the capacity by a further 4,000 tonnes. When the necessary modifications are made to the plants, speciality papers, which are now in short supply, will be manufactured. The alterations to the No. 3 paper-making machine will be completed by the middle of 1965, but the full benefits of expansion will not be obtained until 1967.

The cost of the expansion schemes has been estimated at Rs. 1.60 crores. It has been decided to raise funds amounting to Rs. 40 lakhs by issuing 7-percent debentures to finance expansion. It is also proposed to obtain further credit facilities from the Industrial Credit and Investment Corporation of India to meet the foreign exchange expenditure of the projects. The Company has decided to issue 352,800 bonus shares by capitalising the share premium account. Although the production of paper and pulp rose in 1963-64, the consequent reduction in indirect production costs was more than offset by the rise in prices of raw materials and wages. The rise in the profit has almost entirely been due to the increased sale of celex—a by-product of the Company. In spite of the substantial rise in production costs, the selling prices of paper are still lower than what they were in 1959. Although the Company has so far been able to offset the steadily rising costs by larger production and the development of celex, it has not been able to provide necessary funds for expansion and rehabilitation.

The profit has amounted to Rs. 42.51 lakhs for 1963-64, against Rs. 40.65 lakhs for 1962-63, after transferring Rs. 13.50 lakhs (against Rs. 13.87 lakhs) to depreciation. A taxable ordinary dividend of 15 percent, including an interim of 5 percent, has been maintained. The yield amounts to 6.7 percent at the present price. Taxation, including Rs. 1.90 lakhs for surtax on profits, is allocated Rs. 22.40 lakhs (against Rs. 22 lakhs), development rebate reserve Rs. 73,252 (against Rs. 2.85 lakhs) and general reserve Rs. 6 lakhs (against Rs. 2.75 lakhs). The carry-forward is Rs. 43,578, against Rs. 28,615 brought in.

Kesoram Industries Raises Dividend

KESORAM Industries and Cotton Mills Ltd has increased the taxable ordinary dividend from 13 percent to 15 percent for the year ended March 1964. The yield works out to 5.6 percent at the present price of Rs. 26.87 a share of Rs. 10 each. The trading profit has risen from Rs. 1.98 crores to Rs. 2.58 crores. Depreciation is allocated Rs. 95.28 lakhs (against Rs. 82.49 lakhs), taxation Rs. 53 lakhs (against Rs. 8 lakhs) and development rebate reserve Rs. 4.78 lakhs (against Rs. 39.21 lakhs). General reserve absorbs Rs. 55 lakhs (against Rs. 22 lakhs) and dividend reserve Rs. 37.50 lakhs (against Rs. 40 lakhs). The proposed dividends will be paid out of the latter reserve.

The directors take an optimistic view of the outlook. The modernisation and expansion of the textile unit are in progress. During 1963-64, a sum of Rs. 11.23 lakhs was spent for modernisation. The Company is increasing the installed capacity to the extent of 7½ percent in spindles and 10 percent in looms. It is proposed to install a new unit at Budge-Budge, near Calcutta, for the purpose. The two rayon units have worked satisfactorily because of improved production techniques and better operational efficiency. The rayon industry, it is pointed out, is facing difficulty in the matter of caustic soda supplies. The transparent paper plant has done well. But the industry has found it difficult to compete with other products manufactured by different processes which enjoy a lower excise duty than the transparent paper plant. The moisture-proofing, printing and bag-making plants have begun production. The installation of the second casting machine has been undertaken, and it may start producing in the current year. A factory to manufacture spun pipes and fittings is being constructed in Bansberia, near Calcutta. The bulk of imported equipment have arrived at the site. It is expected that the plant will go into production in the near future. The licence to import equipment for the steel tube project has not yet been secured. The issue of 17,500 debentures carrying a fixed interest of 7 percent has been fully subscribed.

India Cements Sales and Profit Up

A substantial increase in sales by more than Rs. 70 lakhs and an impressive rise of about Rs. 21 lakhs in the profit feature the working results of India Cements Ltd for the year ended March 1964. The report says that during the year, production at the Sankarnagar factory amounted to 465,166 tonnes of clinker and 494,601 tonnes of cement. It will be recalled that the directors in their last report said that the new factory in Sankaridrug, Salem district, was expected to commence production in September 1963. There was, however, slight delay in commencing production. The kiln was commissioned during the first week of November 1963 and the erection of the cement mill was completed by January 1964. Commercial production of cement started from the first week of February 1964. The working of this unit has been satisfactory. The report adds that work on the expansion of the Sankari unit has already been taken on hand. Firm orders for plant and machinery have been placed. It is expected that the expanded unit would go into production in the latter half of 1965. With the completion of this expansion programme, the rated capacity of the factories both in Sankarnagar and Sankaridrug would be of the order of 900,000 tonnes of cement a year.

The directors state that there has been a steady increase in the cost of production of cement on account of the increase in the price of coal, freight on movement of all goods, and the surcharge on electricity. The Company has, however, been able to provide for the full development rebate reserve of Rs. 40,72,125 for the new unit at Sankaridrug out of the profits of the Company, after setting aside dividend to the preference shareholders amounting to Rs. 2,77,639 and a dividend at 6 percent a year to the equity shareholders amounting to Rs. 20,97,845. In view of the full and substantial provisions under the statutory reserve for development rebate, no separate allocation has been made towards reserve for rehabilitation, modernisation and development. The Company has provided depreciation on the straight line method in accordance with Section 205(2) (b) of the Companies Act, 1956, for the Sankari unit instead of on the written-down value method, which continues to be adopted in relation to the Sankarnagar unit.

Total cement sales for the year amounted to Rs. 4,65,85,923 (against Rs. 3,95,06,397). The net profit of the Company for the year amounts to Rs. 69,95,280, after providing Rs. 41,14,183 for depreciation. The previous year's net profit was Rs. 42,83,281, after providing Rs. 37,00,993 for depreciation. Adding to the year's net profit a sum of Rs. 1,46,643 brought forward from the previous year and Rs. 85,755 transferred from development and rehabilitation fund, the total available for appropriation amounts to Rs. 72,27,678. Out of this, a sum of Rs. 40,72,125 (against Rs. 35,000) is transferred to development rebate reserve. Donations amounted to Rs. 1,77,343 and income tax and super tax relating to previous years to Rs. 3,26,891. Expenses relating to previous years amounted to Rs. 7,459. The preference dividend at 7.5-percent grossed up, that is, Rs. 8.325 a share of Rs. 100 each, absorbs Rs. 2,77,639. The proposed ordinary dividend takes Rs. 20,97,845 (against Rs. 26,74,835). Capital reserve gets Rs. 75,000 and investment reserve Rs. 100,000 (against nil). The balance of Rs. 93,376 is carried forward.

Gillapukri Tea Reduces Dividend

THE Gillapukri Tea and Seed Co. Ltd has earned a profit of Rs. 89,461 for the year ended December 1963, against Rs. 49,047 for 1962, after providing Rs. 70,930 (against Rs. 72,083) for depreciation. The taxable ordinary dividend has been reduced from 13 percent to 12.5 percent to absorb Rs. 62,970. The yield works out to 4.5 percent at the present price of Rs. 27.56 a share of Rs. 10 each.

Taxation is allocated Rs. 34,000 (against Rs. 20,000) and development rebate reserve Rs. 1,862 (against Rs. 1,572). A sum of Rs. 7,046 has been

written back from unclaimed dividends. The carry-forward is Rs. 2,446, against Rs. 4,482 brought in. The crop amounted to 327,853 kilograms, against 319,932 kilograms. The amount of tea seed produced was 12,740 kilograms, against 5,180 kilograms. The crop in 1964 has been estimated at 400,000 kilograms and the output has amounted to 65,293 kilograms up to 30th June, 1964.

A Good Year for Bengal Chemical

BENGAL Chemical and Pharmaceutical Works Ltd has done well during the year ended March 1964. Both sales and profits have been higher than those of 1962-63. The Company has maintained the taxable ordinary dividend at 10 percent. In his chairman's address at the annual general meeting in Calcutta last Friday, Dr. B. N. Ghose said that in spite of the Company's encouraging performance, the working has been interrupted by an acute shortage of industrial alcohol and rectified spirit. (A fuller version is printed on a later page in this issue of *Capital*). Since the expansion schemes of the Company have already been completed, it will be necessary to transfer a substantial sum to development rebate reserve during the current year, so it will have its effect on the profit.

The Company has made good progress in the field of heavy chemicals. The new alum plant is now under trial run and is expected to begin production in the near future. An industrial licence has been obtained for manufacturing sodium aluminate, stannate, naphthenates and other products. Export prospects for heavy chemicals are considered encouraging, and the Company has been negotiating to export a large quantity of alumino ferric. The installation of an additional sulphuric acid plant with a daily capacity of 50 tonnes has made progress. It is expected to start production by the end of the current financial year. The Company's business in road tar has been hindered by the shortage of crude coal tar, so efforts are being made to make alternative arrangements. The Company has obtained an industrial licence to manufacture 16 tonnes of caffeine a year. So the plants have been expanded to attain the production target. But the supply of tea waste, which is the chief raw material, has been inadequate.

The Company will soon sell anti-snake-bite syrum and tetanus toxoid. Negotiations are continuing with some foreign firms for the production of the new items. The Company is trying to explore markets in south-east Asia, Middle East and Africa. Dr. Ghose said that the export of surgical cotton wool had dropped due to keen competition from other countries. The difficulty has been aggravated because the import entitlements from the export of surgical cotton wool have been cut. Commenting on the price control order of drugs, the chairman said that it had been difficult to adjust the prices of various products in line with production costs which had steadily moved up due to the rising prices of raw materials.

Less from Hoograjuli Tea

THE Hoograjuli (Assam) Tea Co. Ltd has reduced the taxable ordinary dividend from 12½ percent to Rs. 12.5 percent to absorb Rs. 62,500. The yield amounts to 4.5 percent at the present price of Rs. 27.62 a share of Rs. 10 each. The profit has dropped from Rs. 1.53 lakhs for 1962 to Rs. 1.37 lakhs for 1963, after providing Rs. 83,017 (against Rs. 81,525) for depreciation. Taxation absorbs Rs. 65,00 (against Rs. 77,000) and development rebate reserve Rs. 6,650 (against Rs. 1,760). The carry-forward is Rs. 7,836, against Rs. 9,295 brought in. The crop rose from 345,217 kilograms to 350,876 kilograms. The crop has amounted to 72,718 kilograms up to 30th June, 1964.

Okayti Tea Maintains

OKAYTI Tea Co. Ltd (a Darjeeling garden) has earned a profit of Rs. 35,702 for the year ended December 1963, against Rs. 2.15 lakhs for 1962, after transferring Rs. 31,972 (against Rs. 27,225) to depreciation. The taxable ordinary dividend of 25 percent has been maintained which offers a yield of 4.2 percent at the present price of Rs. 600 a share of Rs. 100 each. Taxation absorbs Rs. 24,000 (against Rs. 1.05 lakhs) and development rebate reserve Rs. 2,300. A sum of Rs. 70,000 has been transferred from revenue reserve. The carry-forward is Rs. 3,675, against Rs. 3,663 brought in. The crop amounted to 105,012 kilograms, against 99,371 kilograms. But the average sale price dropped from Rs. 10.07 to Rs. 7.81 a kilogram. The crop for 1964 has been estimated at 120,000 kilograms at a cost of Rs. 8 lakhs.

A. P. Paper Mills to Enter Market

PRESIDING over the extraordinary general meeting of the West Coast Paper Mills in the absence of its chairman, Mr. G. L. Bangur, Mr. G. D. Somani stated that the Company's investment of Rs. 66 lakhs in the equity capital of the Andhra Pradesh Paper Mills Ltd, a joint venture of the Government of Andhra Pradesh and West Coast Paper, would prove to be quite profitable. West Coast has at present large liquid resources for which there seems no better opportunity of investment than the proposed scheme. The Company could not take up the rayon pulp project as it was considered riskier, and it was not possible to undertake any further big expansion of West Coast in the immediate future because of the premature flowering of bamboo in that region. Mr. Somani stated that from its investment in the new venture, West Coast will get about 6 percent initially and later, about 12 percent instead of the present 3 percent on its liquid resources.

The shareholders have been assured that West Coast's profitability will not be adversely affected in any way. The current working of the Company is reported to be satisfactory and by the time it would be required to invest the full amount of Rs. 66 lakhs, it would have generated enough funds so that no borrowings would be necessary to meet this obligation in stages. The chairman has pointed out that the Company would receive technical fee enough "to cover the interest part of the investment even during the construction period, during which no dividend would be available." He is of the view that there would be considerable capital appreciation of the proposed investment in the course of the next two or three years.

The new Company, namely, Andhra Pradesh Paper Mills, is likely to enter the capital market by the end of the current year with a public issue of Rs. 1.16 crores, consisting of Rs. 66 lakhs in equity shares of Rs. 100 each and Rs. 50 lakhs in 9.3 percent cumulative redeemable preference shares of Rs. 100 each. The Company has an authorised capital of Rs. 5 crores made up of Rs. 3.75 crores in equity shares and Rs. 1.25 crores in preference shares. The issued capital comprises equity shares worth Rs. 2 crores and preference shares worth Rs. 1 crore. Of the issued capital, one-third will be taken up by the Andhra Pradesh Government, one-third by West Coast and the balance wil be offered to the public. Of the preference capital of Rs. 1 crore, the State Government is taking up Rs. 50 lakhs. The balance of Rs. 50 lakhs will be offered for public subscription. The total capital outlay on the project is estimated at Rs. 7 crores, which will be met from the capital of Rs. 3 crores, a loan of Rs. 1.5 crores from the State Government, borrowings of Rs. 1.5 crores from financial institutions and Rs. 1 crore by deferred payment credit facilities.

The import component is placed at Rs. 3 crores. Empacel of France will supply plant and equipment on a package deal basis. The Company's plant which is to be set up in Rajahmundry (Andhra Pradesh) will have a licensed capacity of 60 tons of paper a day. Together with the existing capacity of 10 tons a day of the small plant, the total licensed capacity will be 70 tons a day. But the promoters expect to start production with a rated capacity of 100 tons a day. The plant and equipment of the new paper mill have already arrived at the site and commercial production is expected to begin by about the middle of 1966. The Andhra Pradesh Government has allocated 100,000 tonnes of bamboos sufficient to produce 100 tonnes of paper a day for which a royalty of Rs. 5 a tonne will be paid. The project is stated to have been planned on the lines of West Coast Paper Mills and the price paid for machinery is said to be quite economical, about Rs. 1 crore cheaper than current prices.

Mettur Industries Pays Less

METTUR Industries Ltd has not fared well during the year ended March 1964, but its working results are not as disappointing as the cut in the dividend from 20 percent to 15 percent would seem to suggest. The gross profit has registered only a modest fall from Rs. 28.10 lakhs to Rs. 27.64 lakhs, but the decline has occurred even though the sales are higher at Rs. 1.85 crores, against Rs. 1.70 crores. The profit margin has been squeezed by the all-round increase in the cost of production, but the Company might not have fared badly but for the loss of production of about 286,000 metres of cloth because of the power cut.

After providing Rs. 2.54 lakhs (against Rs. 2.50 lakhs) for managing agents' commission, Rs. 1.83 lakhs (against Rs. 1.98 lakhs) for depreciation, Rs. 17,000 (against Rs. 20,925) for development rebate and Rs. 13.20 lakhs (against Rs. 13.51 lakhs) for taxation, there remains a surplus of Rs. 9.90 lakhs which is about the same as in the preceding year. The directors have set apart Rs. 1 lakh for the general reserve. In the previous year, a sum of Rs. 1.75 lakhs had to be transferred from this reserve to provide for the payment of the dividend. The proposed dividend absorbs Rs. 9 lakhs (against Rs. 12 lakhs), leaving a small sum of Rs. 291 to be carried forward, against Rs. 10,434 brought in.

The directors have struck an optimistic note about the outlook for coming years due to the implementation of the rehabilitation programme. The Company took advantage during 1963-64 of the permission given by the Government for the installation of additional spindles and looms. It is hoped that during the current year, additional two spinning frames and 48 looms will go into operation. Orders have been placed for the conversion of the Company's existing spinning plant into a modern system, which will increase the production of yarn. The cloth produced by the Company continues to be in good demand.

Good Outlook for P. and O.

PENINSULAR and Oriental Steam Navigation, the £290-million shipping group headed by Sir Donald Anderson, is making a one-for-three scrip issue and forecasts a maintained total dividend of 10 percent on the enlarged capital—an effective increase of 2½ percent. The trading surplus for the first six months of 1963-64 is up by £2 million and that for the second half is expected to be "a little better" than for the corresponding period of 1962-63. This news is particularly encouraging as only four months ago, Sir Donald told shareholders that the next dividend increase would have to be preceded by "more definite evidence than we have now of the trend of profits." The board must now have this evidence.

But any profits projection is complicated by the fact that this is the first time the P. and O. has given an indication of its half-year trading results. Simply to halve last year's total pre-tax surplus of £4.2 million for purposes of comparison, would be an over-simplification. The big passenger liner business on the Australia-U.K. run is in the August-November period, and certain sections of the freight trade have seasonal fluctuations. But the improvement in P. and O's fortunes seems to have been widely spread throughout the passenger and freight trades with bigger cargoes helping load factors.

Since the group has yet to feel the benefits of its more efficient Far Eastern freight service, which now calls at Rotterdam, the phrase "a little better" could well turn out to be accountants' jargon rather than an indication that the rate of advance achieved in the first six months has begun to flag. P. and O.'s pre-tax profits could thus top £7 million this year, and even without tax refunds (which will bring in less than last year's £1.6 million), earnings on the enlarged capital could exceed 27 percent. Before the scrip issue, which involves capitalisation of £10,784,863 of reserves, the authorised capital is to be increased from £40 million to £50 million. The issue is stated to be another step towards reducing the disparity between the issued capital and the capital actually employed in the business. P. and O. shares have been a firm market on the London Stock Exchange both before and after the announcement.

More from Chembra Peak Tea

A SUBSTANTIAL rise in the profit and a higher dividend of 25 percent feature the working results of Chembra Peak Estates for the year ended March 1964. The record tea crop, improved tea and coffee prices and the C.T.C. manufacture introduced in the Company's Elstone factory have contributed to the year's better results. The profit before taxation is Rs. 10,11,099, compared with the previous year's net profit of Rs. 6,05,922. After deducting the tax provision of Rs. 4,50,000 (against Rs. 3,15,000), the net profit comes to Rs. 5,61,099. Adding to it a sum of Rs. 22,758 being the surplus brought forward from the previous year and Rs. 54,996 being excess tax provision in previous years written back, the total available for appropriation comes to Rs. 6,38,853.

Out of this, a sum of Rs. 100,000 is transferred to general reserve (against nil), and Rs. 75,000 is transferred to dividend equalisation reserve (against nil). Contingent reserve gets Rs. 25,000 (against nil). A sum of Rs. 82,300 is transferred to development rebate reserve (against Rs. 14,000). A sum of Rs. 3,55,000 is transferred to dividend reserve. Out of this reserve, the directors have recommended the payment of a dividend of 25 percent (against 20 percent) which will absorb Rs. 3,50,025. The balance of Rs. 1,553 is carried forward.

The tea crop for the year amounted to 851,234 kilograms (against 836,263 kilograms. All-in-cost of production amounted to Rs. 3.62 a kilogram (against Rs. 3.51 a kilogram), but the average sale price realised was higher at Rs. 4.55 a kilogram, against Rs. 4.07 a kilogram. The coffee crop for the year amounted to 179,209 tonnes, against 172,569 tonnes. The coffee crop is valued at Rs. 2.25 a point. The estimated tea crop for 1964-65 is put at 870,000 kilograms and the coffee crop is estimated at 200 tonnes.

No Take-over of Nedeem Tea

AFTER having reached a peak of 27s 3d at the height of the recent struggle for control of the Nedeem Tea Company, the shares have suffered a substantial drop. In the circumstances, it was only proper that the directors should issue a full statement explaining the situation, for the Company has paid no ordinary dividend since 1954, yet the directors rejected a share offer from K. C. Sethia (1944) and recommended other shareholders to do likewise. The bidder holds 27½ percent of the preference stock and 23½ percent of the equity and its offer was conditional on majority control.

The Nedeem directors now disclose that with the support of two others, they are in a position to stop the bid going through. One large holder giving them support and helping them to secure more than 50 percent opposition to the offer is Walter Duncan and Goodricke, whose Octavius Steel and Co. subsidiary acts as secretaries to the Nedeem Company. The directors say that earnings for 1963 are expected to show a "small increase," contrary to the general trend of Dooars experience. They are convinced that the more positive association with Duncan and Goodricke will provide the surest protection for shareholders in the long run. Both preference and ordinary shares carry votes.

Paper Mill Plant Pays Maiden

THE Paper Mill Plant and Machinery Manufacturers Ltd reports encouraging results for the year ended March 1964. Sales have gone up from Rs. 42.42 lakhs to Rs. 52.94 lakhs, and the gross profit has recorded an impressive rise from Rs. 4.19 lakhs to Rs. 12.31 lakhs. Improved results have made it possible for the directors to declare a maiden dividend of 6 percent. Appropriations include depreciation Rs. 2.44 lakhs (against Rs. 2.42 lakhs), development rebate Rs. 3,000 (against Rs. 2,000), preliminary expenses, brokerage, etcetera, Rs. 70,000 (against nil), taxation Rs. 1.60 lakhs (nil), general reserve Rs. 85,000 (against nil) and special reserve Rs. 2.65 lakhs (against nil). Dividend absorbing Rs. 2.28 lakhs is to be paid out of the special reserve. The allocations have been made after adjusting the previous year's net loss of Rs. 3.09 lakhs. The directors state that during 1963-64, orders of the value of Rs. 45 lakhs were executed. The total value of orders on hand is around Rs. 60 lakhs. Further orders worth about Rs. 1.28 crores are under negotiation.

Surat Electricity Pays Slightly More

THE Surat Electricity Company Ltd reports encouraging results for the year ended March 1964. In spite of restrictions and the acute power shortage, the sale of energy increased by 13.98 percent from 61.12 million kWh to 69.67 million kWh. Larger sales of energy were due mainly to the unprecedented spurt in the installation of powerlooms in the city of Surat and the revival of activity in the jari industry. Earnings from the sale of energy rose from Rs. 1.126 crores to Rs. 1.265 crores, and the gross profit increased from Rs. 24.15 lakhs to Rs. 25.85 lakhs. The total dividend has been raised from Rs. 8.50 to Rs. 9 a share. Appropriations include depreciation Rs. 6.12 lakhs (against Rs. 6.01 lakhs), development rebate Rs. 1.30 lakhs (against Rs. 3.17 lakhs), taxation Rs. 7.21 lakhs (against Rs. 7.82 lakhs), other reserves Rs. 2.89 lakhs (against Rs. 47,000), preference dividend Rs. 42,000 (the same) and equity dividend Rs. 6.30 lakhs (against Rs. 5.95 lakhs).

In his statement to shareholders accompanying the directors' report, the chairman, Mr. A. N. Haksar, says that the Company proposes to install a third receiving station with a capacity of 15,000 kVa to meet the growing demand for power. The land for this purpose has been purchased and efforts are being made for the purchase of plant and equipment. The capital required for this expansion is proposed to be secured through bank borrowings. The construction of industrial estates in the Company's area of supply, the coming into being of housing colonies and requests for extension of distribution lines into the adjoining villages indicate fair prospects of increasing demand for power in the coming years. The Company will receive additional firm bulk supply of 6,000 kVa when the Dhuvaran power station of the Gujarat Electricity Board goes into commercial operation. If the restrictions on power consumption in its area of supply are then relaxed, the Company will have a sizable increase in its turnover.

Outlook for Globe Auto Electricals

THE Rs. 100-paid share of Globe Auto Electricals Ltd is currently quoted around Rs. 77. From what the Company's managing director, Mr. Ratilal Zatakia, told newsmen in Bombay on 10th August, the shareholders can take a reasonably optimistic view of the future outlook. The Company has started production of all the Marelli and Prestolite items and the turnover for the year ended September 1964, is expected to be around Rs. 20 lakhs. Mr. Zatakia stated that the Company would enter the stage of profitability in October 1964 with a monthly output valued around Rs. 4 lakhs to Rs. 5 lakhs. The turnover for 1964-65 is estimated around Rs. 50 lakhs.

The products of the Company, namely, ignition coil, distributor, windshield wiper, voltage regulator, alternator, dynamo and starting motor, have been accepted as original equipment by leading vehicle manufacturers in India, including the Ministry of Defence. The Company has developed a small economic alternator for passenger cars and its production is likely to start before the end of the current year. It has obtained an industrial licence for the manufacture of ignition switches and production is likely to start shortly, within a few months.

The Company has formulated plans to import balancing machinery worth Rs. 5 lakhs with a view to achieving 90 percent indigenous content in production by 1965, and the Company is hopeful of getting the requisite foreign exchange for the purpose. It proposes to raise an additional rupee capital of Rs. 5 lakhs from institutional investors, promoters and friends. Mr. Zatakia indicated that the Government would ban the import of all auto-electrical goods from the next licensing period. This would help indigenous manufacturers considerably. Referring to the World Bank team's visit to the Company's plant, Mr. Zatakia said that the team was greatly impressed by the rise in the indigenous content of the products.

Everest Refrigerants Share Offer

EVEREST Refrigerants Ltd which proposes to undertake the manufacture of various gases and chemicals in collaboration with Technical Enterprises Inc., New York, is entering the market to raise Rs. 25 lakhs through the issue of equity and preference shares. The Company has been licensed to manufacture annualy 1,200 tons of fluorchloromethane gas like freon, 1,155 tons of hydrofluoric acid, 1,980 tons of carbon tetrachloride, 990 tons of aluminium fluoride and 4 million cans of aerosol composition. Fluorochloromethan gases are essential items in air-conditioning and refrigeration and they are also useful in aerosols which is a push-button device to dispense insecticides, cosmetics and pharmaceutical products with ease and efficiency. Hydrofluoric acid and carbon tetrachloride to be produced by the Company will be used largely for captive consumption. Since the items proposed to be manufactured by the Company are at present being imported, the Company will have no difficulty in marketing its products.

The project is estimated to cost Rs. 1.20 crores, and it will be financed by the issued capital of Rs. 60 lakhs and a loan of Rs. 60 lakhs approved by the U.S.A. acting through the Agency for International Development. The Company has already been sanctioned a loan of Rs. 27.5 lakhs from the D.L.F. to meet the bulk of foreign exchange requirements. The balance of foreign exchange needs will be met by the investment of Rs. 10 lakhs in equity capital by the foreign collaborators. The Company has received import licences for capital goods and it has opened the letter of credit. Shipment of capital goods has commenced. The plant is expected to start production by about the middle of 1965 and full production is likely to be achieved in about three years after the start of initial production. The factory will be located in Andheri, Bombay. When in full production, tre Company will have a turnover of about Rs. 2 crores; sales in the first year of production will be around Rs. 1.40 crores. The Company has an issued capital of Rs. 60 lakhs comprising Rs. 48 lakhs in equity shares of Rs. 10 each and Rs. 12 lakhs in 9.3 percent cumulative redeemable preference shares of Rs. 100 each. Out of this, the promoters, directors and their associates have taken up equity shares worth Rs. 19 lakhs and preference shares worth Rs. 6 lakhs. The foreign collaborators are taking up equity shares of the value of Rs. 10 lakhs.

The balance of equity shares worth Rs. 19 lakhs and preference shares of the value of Rs. 6 lakhs are now being offered for public subscription. The list will open on 24th August and will close on 29th or earlier but not before 27th August. The entire public issue has been underwritten. The board of directors includes Mr. D. M. Khatau (chairman), Mr. Harshavadan J. Shah, Mr. M. B. Nanavati, Mr. R. J. Chinai, Maharaja Virendrasingh N. Chowan of Chhota Udepur, Mr. Alexander Redniss, Mr. S. R. Vakil, Mr. R. K. Patra, Mr. Mahendra J. Shah, Mr. S. M. Nanavati, Dr. V. K. Sahu and Mr. R. H. Pandit.

New Capital Issues

FIVE companies have been authorised to raise fresh capital exceeding Rs. 15.45 crores. Of these, one is issuing bonus shares and four are floating equities. Three companies will offer part of their share capital to the public by prospectus. Two of them involve foreign collaboration. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Tata Oil Mills Company Ltd, Bombay, is to issue Rs. 35,03,750 bonus capital in 140,150 equity shares of Rs. 25 each, to be issued as bonus shares on capitalisation of share premium account. The bonus shares will be issued in the proportion of one for every three equity shares held.

National Organic Chemical Industries Ltd, Bombay, is to issue share capital of Rs. 10 crores in equity shares of Rs. 100 each for cash at par. Of this, shares of the value of Rs. 3.34 crores will be subscribed in sterling by Shell International Chemical Company Ltd, U.K. and out of the balance, Rs. 3.40 crores approximately will be subscribed by the Mafatlal group, their friends and associates and the balance Rs. 3.26 crores will be offered to the public by prospectus. The capital will be used in establishing a naphtha cracker unit and the manufacture of organic and inorganic chemicals at the Thana-Belapur area of Maharashtra.

Polyolefins Industries Ltd, Bombay, will be issuing capital of Rs. 3.60 crores in equity shares of Rs. 100. All the shares will be issued for cash at par and Rs. 1.20 crores will be subscribed in deutschemark currency by Farbwerke Hoechst A.G., West Germany; Rs. 1,17,60,000 will be offered to the public by prospectus and the balance Rs. 1,22,40,000 will be subscribed privately. The money will be used in the manufacture of high density polyethylene, polyethylene products and Zieglar Catalysts.

Chowgule Steamships Ltd, Goa, is to issue further capital of Rs. 1 crore divided into 100,000 equity shares of Rs. 100 each to be issued privately for cash at par. The capital will be used in meeting the Company's commitments in acquiring ships.

Tractors and Bulldozers Ltd, Baroda (a private Company converted into a public one on 19th January 1964), engaged in the manufacture of Zetor diesel agricultural tractors, is to issue further capital of Rs. 50,00,000 in equity shares of Rs. 100 each, for cash at par. Out of this issue, approximately Rs. 35 lakhs will be offered to the public by prospectus. The capital will be used for financing expansion of the existing activities of the Company.

The Stock Markets

SHARE PRICES RISE UNDER THE LEAD OF INDIAN IRON

Wednesday Evening.

THE Calcutta stock market has welcomed the report of the Indian Iron and Steel Co. Ltd for the year ended March 1964 by marking up the price of the scrip. The prospect of an interim dividend from the Company during the current year has influenced sentiment. The Company will henceforth pay an interim dividend, in addition to the final dividend which will be declared at the annual general meeting. In sympathy with Indian Iron, the prices of several selected scrip have forged ahead in a fresh buying spree. There has also been a great deal of short-covering in clearing shares, and turnover in them has been fairly heavy. Selected cash scrip have also improved mainly because of the shortage of sellers.

The good response to the units of the Unit Trust and the decision to increase the price of the units seem to have been bullishly interpreted. Lyons Range thinks that with a bigger flow of funds into the units, the Unit Trust will take greater interest in industrial equities. In fact, it is believed to have bought a fair parcel of industrial shares during the past few days.

The stock market is inclined to think that the Government will soon provide incentives to stimulate activity in the capital market, although it is difficult to find any basis for such hopes. Corporate news has, on the whole, been encouraging.

Although the Prime Minister, Mr. Lal Bahadur Shastri, has made a realistic approach to planning by pointing out that it is time to reconsider plan priorities, it remains to be seen whether he will succeed in convincing the Congress Party of his views. In any case, the Indian economy has run into serious difficulties. Unless vigorous measures are taken forthwith to check inflation, stresses and strains in the country will be aggravated.

Indian Iron have gained considerably. Selected engineering shares like Texmaco, Burn and Indian Standard Wagon enjoy support. Clearing shares are prominent in the miscellaneous section. Kesoram Industries have responded to a good report and Dunlop Rubber, Indian Copper and Indian Aluminium have been supported. Rohtas and Jaipur Udyog have met with scattered buying. Associated Battery and British Paints have improved. Interest has been shown in National Rolling Mills and British India Corporation. In managing agency shares, Jardine Henderson are sluggish due to the maintenance of the dividend. In electric companies, U.P. Electric have improved on steady support. Among new shares, Hindusthan Twyfords and Hindustan Aluminium have been bought. Aluminium Corporation have risen on paying a higher dividend. Among paper shares, Orient have gained and India Paper Pulp have been steady on expansion prospects. Seshasayee Paper have improved on a good report.

Birla have been in the limelight in the jute section and have gained considerably after intermittent profit-taking. Ganges, Anglo-India, Kinnison, Northbrook and India have been supported. Coal shares are dull and have fluctuated narrowly. Burrakur, Central India and Western Bengal have been bought. Selected cotton mill shares are steady. J.K. Rayon have recovered on short-covering. Bharat Commerce, Dunbar and Elgin have changed hands. Stray business has been transacted in selected Assam and Dooars gardens. Teliapara have met with support. Scattered interest has been shown in Patrakola.

Government securities are dull and quiet because investors have conserved funds to subscribe to the forthcoming State Government loans. The 3 percent Conversion Loan 1986 has been quoted around Rs. 63.30. The prices of short- and medium-dated stocks have been about maintained, but there have been few sellers.

Bombay

SUPPORT FOR EQUITIES FROM INSTITUTIONS

EXPANSION PROSPECTS LIFT STEEL

Wednesday Evening.

THERE has been a substantial improvement in the tone of the Bombay stock market during the past week. Prices of selected shares have recovered smartly under the lead of steel shares on fresh support, combined with short-covering. Dalal Street is hopeful that the Government will soon take measures to revive confidence in the capital market. Operators have been encouraged by better institutional support for equities during the past few days. The Unit Trust of India, it is believed, has bought industrial equities. It is likely to buy more shares since the funds of the Trust are steadily increasing.

Tata Steel ordinary have improved to Rs. 162.50 due to prospects of expansion. Selected engineering shares have met with replacement purchases. Tata Engineering, Cooper Engineering and Premier Construction have been taken. Alcock Ashdown, Mukand Iron and Larsen and Toubro are steady. In motor-vehicle shares, Premier Automobiles have gained on improved working. Hindustan Motors have enjoyed support from outside sources.

Selected cotton mill shares have recovered on replacement buying. Century, Bombay Dyeing, Kohinoor and Svadeshi have been in the limelight. Morarjee, Standard and India United ordinary have improved. Investors are inclined to take a fairly encouraging view of the outlook for the current year because there may be a bigger supply of cotton during the current season.

In the miscellaneous section, cement shares have attracted support. Associated Cement and Digvijay have gained. Sugar shares are, however, sluggish. Belapur and Walchandnagar Industries have been barely steady. In steamship company shares, Scindia Steam have recovered on short-covering. Chemical shares are steady, and support for Tata Chemical has been forthcoming. Polychem have nevertheless lost on profit-taking. Rayon shares are buoyant. National Rayon and Gwalior Rayon have improved. Mining shares are quiet, and Shivrajpur Syndicate have been sold freely. Bombay Burmah, Voltas and Tata Oil have attracted support. West Coast Paper have been taken on prospects of diversification of activity.

In spite of limited turnover in bank shares, prices have been maintained. Bank of India and Central Bank have been transacted. In insurance shares, New India Assurance have improved. Electric company shares have been steady. Some business was transacted in Ahmedabad Electric and Tata Power.

Madras

MARKET IMPROVES ON BOMBAY ADVICES

INVESTORS STILL CAUTIOUS

Tuesday Evening.

THE tone of the Madras stock market has improved during the past week following firmer advices from Dalal Street. Turnover has, however, been small because investors have tended to keep commitments light in view of the uncertain economic outlook. It remains to be seen how the Government tackles the growing food shortage problem and the rise in prices. The imposition of further restrictions by the Reserve Bank on bank advances against foodgrains has called for caution.

In Government securities, there have been few transactions in view

of the forthcoming State Government loans. In spite of interest in good preference shares, turnover has been small because sellers have been few.

In the planting section, attention has centred on selected tea and coffee shares. Blue Mountain have been done at Rs. 2.23 and Cochin Malabar at Rs. 6.43. Consolidated Coffee have changed hands at Rs. 23.50 and Ouchterlony at Rs. 3.15. Periakaramalai have been transacted at Rs. 3.43. Midland have fetched Rs. 11.30 on declaring a taxable ordinary dividend of 10 percent. United Nilgiri have been bought at Rs. 23.10 on paying a final taxable ordinary dividend of 11 percent. Nelliampathy, Nonsuch and Peermade have been steady. Nilgiri have been taken at Rs. 9 on declaring a taxable ordinary dividend of 7½ percent. In coffee shares, Mysore, Rajendra and Swinton have been maintained.

Bank shares have been fully steady. Canara have been done at Rs. 81 and Indian Overseas at Rs. 143. In electric company shares, Negapatam have attracted support up to Rs. 11.12 and West Coast have been done at Rs. 13.50. Sugar shares have been sluggish. Deccan have been transacted at Rs. 11.65 and E.I.D. at Rs. 35.35. Mysore have been quoted at Rs. 28.33 and K.C.P. at Rs. 24. Travancore have been taken at Rs. 7.35 and Andhra at Rs. 13.55.

In textile shares, South India Viscose have reacted to Rs. 114.50 and Travancore Rayon to Rs. 19.75. Lakshmi have been taken at Rs. 130.50 and Madura at Rs. 33.85. Sarvaraya have been steady at Rs. 10.25 on declaring a taxable ordinary dividend of 9 percent. Tirupati have been done at Rs. 10.12 on paying a taxable ordinary dividend of 7½ percent. Anglo-French have been steady at Rs. 142, Ramnarayan at Rs. 85 and Ranga Vilas at Rs. 50.50. Bangalore Woollen have come to hand at Rs. 269 and Mettur at Rs. 277.50.

In the miscellaneous section, Aluminium Industries have been maintained at Rs. 21.35 and Ashok Leyland at Rs. 6.65. In cement shares, Dalmia have been done at Rs. 12.45 and India at Rs. 5.52. Mettur Chemical have improved to Rs. 14.45. Seshasayee Paper have been steady at Rs. 7.53 and Mysore Paper at Rs. 12.50. Kirloskar Electric have gained at Rs. 19 on prospects of a rights issue. Mysore Electrical Industries have been taken at Rs. 168 on paying a taxable ordinary dividend of 12 percent and Mysore I.T.L. have been quoted at Rs. 6.92 on declaring a taxable ordinary divedend of 11 percent. W.I. Plywoods have changed hands at Rs. 215 on paying a taxable ordinary dividend of 16 percent. Parry's Confectionery have gained at Rs. 2.90 and Spencer have been steady at Rs. 21.25. Textool have been quoted at Rs. 152 and T. Stanes at Rs. 30.50.

another order for CELCON® came the other day

Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

CELCON® is a trademark ®

CELCON

ACETAL COPOLYMER
MADE BY THE CELANESE CORPORATION OF AMERICA

DUNCAN BROTHERS & CO. LTD. ARE THE EXCLUSIVE SALES AGENTS IN INDIA FOR CELCON: 31, NETAJI SUBHAS ROAD, CALCUTTA-1: 39, WITTET ROAD, BALLARD ESTATE, BOMBAY-1

London

POLL RESULT BOOSTS INDUSTRIALS

GILT-EDGED RISE

London, 19th August.

THE stock market made further progress prior to the week-end, but quieter and easier conditions developed afterwards. On balance however, the market gave quite a good account of itself and many gains were recorded on the week. The pre-weekend advance carried the *Financial Times* industrial ordinary index to a new all-time peak, but there was some reaction subsequently. While Cyprus and the Far East situations were restraining influences, the market was dominated by domestic politics in view of the approaching general election which is only about two months ahead. A public opinion poll indicating that the Labour Party's lead in the election stakes had been virtually eliminated was mainly responsible for the rise which took the index to its new peak. There was a large option business in steels and properties. Leading industrials moved up prior to the week-end, but the gains were substantially reduced later. Many good features appeared elsewhere in industrials following good company news or favourable Press comment. Gilt-edged improved to show small gains on the week. Mining sections moved within narrow limits with the firmness of leadzincs the best feature. Sharp rises in B.P. and Burmah provided the features in oils. Rubbers displayed features in oils.

Money

THE CALCUTTA MONEY MARKET

SLIGHT DECREASE IN ADVANCES

Wednesday, 19th August.

THERE has been a slight decrease in the general level of advances in the Calcutta money market during the past week. This is due to the slight fall in the credit given to the iron, steel and engineering industries, and to the foodgrains trade. Advances to cotton, jute and sugar mills remain unchanged. In the interbank market, conditions are easy, and the call rate has been marked down to 1 percent.

The exchange market has been moderately active, but the supply of tea and gunny bills is considerably less than last week. The demand for remittances is poor. In London, sterling has lost further ground against all important currencies except the Danish krone.

BULLION WAS STEADY IN CALCUTTA during the past week. Silver was quoted around Rs. 248.25. The price amounted to 112⅛d in London and 129.3 cents in New York.

In sympathy with silver gold was steady and the price of 14-carat rose to Rs. 74 a 10 grammes.

DURING THE WEEK ENDED 14TH August, Government of India Treasury bills for Rs. 84,55,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-day Government of India Treasury bills were opened on 18th August. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.400 percent were allotted 50 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.4 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Kanpur up to the close of business on 29th August 1964, and at other centres up to the close of business on 31st August.

IT IS STATED THAT 91-DAY INTERmediate Treasury bills will be sold from 19th August to 29th August at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 12th August to 14th August amounted to Rs. 8,55,75,000.

ACTIVE NOTES DROPPED BY Rs. 5.96 crores to Rs. 2,452.97 crores, according to the return of the Reserve Bank of India for the week ended 14th August, 1964. The total note issue was Rs. 30 lakhs larger at Rs. 2,469.22 crores. So, notes held in the Banking Department were Rs. 6.26 crores bigger at Rs. 16.25 crores. Deposits of the Government of India declined by Rs. 14.24 crores to Rs. 68.80 crores and those of State Governments by Rs. 3.36 crores to Rs. 23.21 crores. Balances of scheduled banks at Rs. 113.46 crores showed a rise of Rs. 18.63 crores. Balances held abroad rose by Rs. 60 lakhs to Rs. 8.80 crores. Investments at Rs. 250.01 crores showed a drop of Rs. 25.87 crores. Loans to scheduled banks declined from Rs. 3.41 crores to Rs. 1.89 crores of which advances against usance bills amounted to Rs. 50 lakhs, against Rs. 1.15 crores. Ways and means advances stood at Rs. 19.20 crores, against Rs. 16.88 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 7th August, 1964, shows a rise of Rs. 51 lakhs to Rs. 648.26 crores in total deposits. Investments in Government securities are up by Rs. 1.88 crores to Rs. 290.11 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 19 lakhs to Rs. 344.84 crores. Cash and balances are, in consequence, shown at Rs. 25.73 crores or Rs. 6.41 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 7th August, 1964, shows Demand and Time liabilities at Rs. 1,284.01 crores (Rs. 34.12 crores on account of borrowings from banks) and Rs. 1,404.05 crores (Rs. 16.04 crores), compared with Rs. 1,282.25 crores (Rs. 34.47 crores) and Rs. 1,399.42 crores (Rs. 16.84 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.63 crores and Rs. 8 lakhs to Rs. 64.72 crores and Rs. 95.56 crores, respectively. There is a rise of Rs. 2.85 crores to Rs. 764.21 crores in investments. Advances and bills discounted at Rs. 1,745.16 crores show a rise of Rs. 6.95 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6 percent nad 64.9 percent, against 5.9 percent and 64.8 percent.

THE BOMBAY GAS COMPANY LIMITED

CHAIRMAN, MR. N. K. JALAN'S ADDRESS

The following is the address by the Chairman, Mr. N. K. Jalan at the Annual General Meeting of The Bombay Gas Company Limited on Tuesday the 18th August, 1964.

Gentlemen,

I have pleasure in welcoming you to the Annual General Meeting and to present to you the Balance Sheet and the Annual Accounts, together with your Directors Report, for the year ended 31st December, 1963. These have been in your hands for some time now and, with your permission, we may take them as read.

Company Incurs Substantial Losses

You would have found that the Accounts for the year 1963 reveal a very poor and disappointing financial result of the working of the Company, entailing a very heavy and abnormal loss of Rs. 10.31 lakhs compared with a loss of Rs 1 92 lakhs for 1962. The principal factors responsible for this further substantial increase in the Company's loss to the tune of some Rs. 8.39 lakhs were (a) increase in cost of coal and freight charges by Rs. 3.37 lakhs, (b) Emergency Risk Insurance, being Rs. 1.53 lakhs against nil in 1962, (c) interest on overdraft, etc., and (d) other general increases and incidence of annual increase in total staff and labour payments, etc. Your Directors regret that owing to this extremely unsatisfactory financial result of the operation of the Company, no dividend can be paid to the stockholders for the year under review, this being the second consecutive year for which the Company has been unable to declare a dividend. We need hardly point out that this is bound to produce further unfavourable reaction on the already depressed investment market of the country.

The current year's (i.e., 1964) working is going to be affected still more adversely on account of substantial increases in cost under several items. Thus, the increase in railway freight/surcharge from 1st April, 1964, and increase in cost of coal from 5th June, 1964, together with the full impact of the rise in the cost of coal sanctioned earlier in 1963, are estimated to cost an additional amount of Rs. 4.52 lakhs. Secondly, as per the Lakdawala Committee's recommendations regarding increases in the dearness allowance of workers and staff and as sanctioned by the Maharashtra Government with effect from 1st January, 1964, the annual salaries and wages expenditure would increase by Rs. 2.10 lakhs. Thirdly, the projected minimum bonus as per the recommendations of the Central Bonus Commission, which are currently under the active consideration of the Government of India, when applied to the existing level of wages and salaries, without taking into consideration the effect of time-scale increment as per Awards, etc., would add a further amount of Rs. 1.54 lakhs to the total expenditure. Fourthly, time-scale increment of wages and salaries would cost Rs. 95,000 per year. These items, together with the increased impact of certain other statutory increases in the course of 1963, fully operative in 1964, increases in municipal rates/taxes etc., would account for an increased expenditure of over Rs. 10 lakhs in 1964 above that of 1963. On this basis, the total loss from the Company's operations in the current year (1964) would come to the alarming figure of well over Rs. 20 lakhs.

The paid up capital of the Company is Rs. 40 lakhs and there is a Reserve of Rs. 12.61 lakhs, out of which Rs. 9.50 lakhs has already been eaten up on account of the heavy loss incurred during 1963. With the currently running rate of loss of Rs. 20 lakhs per annum, by the end of the present year, practically the whole of the Reserves and fully one-half of the paid up capital of the Company would have gone. It would be easily appreciated that, with its capital and Reserves drastically depleted to the extent of Rs. 30 lakhs, or by almost 60 per cent of the total, it will just not be possible for the Company to carry on any longer.

The Accounts of the Company are also independently audited every year by the Government Auditors. According to the Reports of the Deputy Director of Government Commercial

Mr. N. K. Jalan

Audit, the Company had incurred deficits in what is considered to be reasonable return in 1959, 1960, 1961 and 1962, the deficit for 1962 having been as high as 162 per cent. And on the basis of the financial results of the Company's working in 1963, the percentage of deficit, according to the methods adopted by the Director of Government Commercial Audit, would be 5.3 times as high, i.e., 860 per cent of the reasonable return. In this connection, it may be pointed out that for purposes of calculating reasonable return for 1961 and 1962, the Deputy Director of Government Commercial Audit, under instructions from the Government, arbitrarily and drastically reduced the capital base of the Company from that used for the immediately preceding two years, i.e., 1959 and 1960. Thus, whereas the capital base used for 1959 was £875,396 (Rs. 1.17 crores), the capital base used for 1961 was taken at only £269,213 (i.e., Rs 35.90 lakhs), which meant an unjustifiable reduction in the capital employed by about 70 per cent. Again, whereas, in the earlier two years of 1959 and 1960, the rate of return on capital was taken at 8.9 per cent, the rate taken for 1961 and 1962 was 7.5 per cent. On this account, whereas the amount of reasonable return for 1959 was estimated at £77,910 (i.e., Rs. 10.30 lakhs), the corresponding figure of reasonable return for 1962 was only £21,302 (i.e., Rs. 2.84 lakhs). Had the capital base and the rate of return thereon for 1962 been calculated under the same principles and methods as had been applied for the years 1959 and 1960, the figure of deficit for 1962 would have become much higher than what it is shown to be.

Prima Facie Case for Increase of Gas Price

These recurring and rapidly mounting shortfalls in what the Deputy Director of Government Commercial Audit has determined to be reasonable return on the capital employed by the Company, for four successive years, 1959 to 1962, at long last convinced the Government that there was a strong prima facie case for an increase in the price of gas and a high-power Gas Advisory Committee was appointed on the 16th February, 1963, to go into the question of a reasonable price for gas. At the instance of the Committee, experts of the Finance Department of the Government carried out a thorough examination of the Accounts of the Company and confirmed that the current rate for gas was clearly and definitely uneconomic in the sense of not even covering the bare costs of production and distribution of gas, with the result that the Company was running at a loss. Subsequently, in August, 1963, the Advisory Committee held detailed discussion with the Company's representatives and, apparently, the Committee, also, was convinced that there was a clear and strong case for an increase in the price of gas.

Appointment of Gas Advisory Committee

The Committee would have submitted its findings and recommendations to the Government by 31st October, 1963, being the date of expiry of its term of office, i.e., after eight and a half months from the date of its appointment.

As indicated in the earlier paragraphs, due to continuous rises in the costs of production and distribution of gas, the Company's financial condition was fast deteriorating and the Company made urgent representations to Government for an early sanction of a reasonable rise in the price of gas. And, full five months after the submission of the Advisory Committee's Report, the Government wrote a letter to the Company on 31st March, 1964, in which the Government asked for a "binding undertaking" to implement an expansion programme in the event of a reasonable increase in gas price. In reply to this letter, the Company solemnly re-affirmed the undertaking that had been already given in the course of its several representations, to implement a programme of expansion designed to give 15,000 to 20,000 new gas connections within a period of 3 to 4 years, in the event of an early and adequate rise in the price of gas.

Consumers Enthusiastic for new Gas Connections with moderate increase of price—Company takes preliminary steps

In the light of the foregoing developments, the Company had been led to anticipate a rise in the price of gas. And it proceeded to circularise some 3000 applicants for gas connections on its waiting list to the effect that if they were still interested in receiving gas connections, the Company would survey their premises and prepare and furnish estimates of costs of fittings, labour, etc., The Company received an immediate and enthusiastic response from over 1500 would-be consumers, and several hundred citizens got their premises surveyed and promptly deposited the estimated costs of fittings, etc. In the circulars issued to the applicants for new gas connections, it had been clearly pointed out that these essential preliminaries were being carried out to facilitate the immediate installation of gas connections without allowing any loss of time, in the event of an increase in gas price being sanctioned by Government. The very fact that over 1500 applicants for new gas connections eagerly responded to the Company's circular by requesting the Company to survey their premises while a majority of them promptly deposited with the Company the estimated costs of fittings, etc., would go to show very clearly that the members of the public were ready and willing to pay an adequately increased price for gas to receive new gas connections. Information regarding these important preliminary steps for giving new gas connections, was duly communicated to the Government.

Government's Mysterious Silence on the Gas advisory Committee's Report

The Government having appointed, under Section 5 of the Bombay Gas Supply Act, 1939, a Gas Advisory Committee to go into the question of a fair and reasonable price for gas, and the said Committee having duly submitted its recommendations to the Government in this behalf, we are advised that the Government were required under Section 6 of the same Act, to make rules prescribing, in accordance with the recommendations of the Advisory Committee, the limits of prices which the Company may charge. It is a matter of great regret and surprise that, even eighteen months after the date of the appointment of the Advisory Committee and over nine months after the receipt of the Committee's Report in this bahalf, and in spite of our repeated representations pointing out the financial difficulties through which the Company had been passing, the Government has not yet seen fit to sanction the gas price increase to which the Company is specifically entitled in law and equity.

Established Principles of price Fixation

In the matter of price control, it is a well-recognised principle or convention that control prices of commodities and services should cover (a) all indisputable cost increases, (b) a moderate return on the capital employed, and (c) reasonable surplus for Reserves. In a number of important cases, such control prices sometimes include also a substantial element intended to contribute partially towards the cost of expansion. This principle has been honoured in India over a wide field of price control, more or less continuously, ever since control was instituted during the Second World War. It has also been honoured by and large in all the advanced and developing countries. In India, in accordance with this principle, practically all control prices, such as those of iron and steel, cement, coal, sugar, etc., have gone up several times. Thus, for instance, in the case of a basic commodity like steel, the control price of which had been fixed at Rs. 393 per ton from 1st February, 1956, was raised to Rs. 474.59 per ton, i.e., by Rs. 81.59 or 21% with effect from 31st March, 1960, and again to Rs. 522.50 per ton, i.e., increased by Rs. 47.91 or 10% with effect from September, 1962, the total increase within the period of 6½ years being 31%. With effect from 29-2-64, several items of steel, viz., structurals, light bars, heavy bars, rails, blooms and hoe-bars were decontrolled and the authority for the fixation of their prices was given to the Joint Plant Committee comprising the Iron & Steel Controller and representatives of all the steel producers in the public and private sectors. Immediately, the prices of most categories were raised, the increase in the case of untested rails being from Rs. 655 to Rs. 710 per tonne or 8.4% and tested rails from Rs. 694 to Rs. 755 per tonne or 8.8%. With effect from 1st March, 1964, the prices of several categories of iron and steel, such as Pig Iron Grade 1, Ingot Mould 1 tonne and below, billet, tin bars, skelp, black sheet, G. C. sheet, plates, R. R. strips, C. R. sheets, cotton baling hoops, jute baling hoops, etc., which are still under control, were also raised. Thus, for example, the price of pig iron grade 1 was raised from Rs. 246 to Rs. 282 per tonne or by about 15% ingot mould, 1 tonne and below, from Rs. 148 to Rs. 223 per tonne or 50.7%. The price of untested tin bars was raised from Rs. 473 to Rs. 547 per tonne or by 16% and tested tin bars from Rs. 503 to Rs. 592 per tonne or by 17%. (The above prices are inclusive of excise duties.) As regards coal, the cost of coking coal, inclusive of freight, as

supplied to the Bombay Gas Co., was increased from Rs. 47.36 per tonne in 1957 to Rs. 56.73 per tonne in 1961, to Rs. 59.67 in 1962, to Rs. 63.31 in 1963, and to Rs. 68.13 in the early part of 1964, the total increase during the last seven years being Rs. 20.77 per tonne or 43.86%. In Bombay itself, the Tata Hydro Electric Co. raised the rate for electricity by levying a surcharge of 10.5% from 1st July, 1962, and again by 26.4% with effect from 1st May, 1963, on account of increase in the cost of coal, freight, etc. It may also be noted that in the same city of Bombay, the municipal assessment of cotton mills was raised on the basis of quinquennial valuation from Rs. 3 in 1933 to Rs. 7 in 1958 per 100 sq. ft. of processing block, i.e., by 133 per cent in 25 years; and from Rs. 2 in 1933 to Rs. 6 in 1958 per 100 sq. ft. of non-processing block, i.e., by 200 per cent in a period of 25 years. It may be mentioned that the increased rates of 1958 were imposed in spite of general public protest. The Maharashtra State Electricity Board itself, after the takeover of the Poona Electric Supply Co., raised the rate for electricity in Poona per unit from 13 nP to 31 nP, i.e., by 138% on account of rise in cost. The Oriental Gas Co. of Calcutta, which was taken over by Government in 1960, has recently increased the effective price for gas by approximately 35 per cent in an indirect manner on the plea of improvement in quality. It is pertinent to mention that this Company had already before raised the rate for town's gas from Rs. 4 per '000 cubic feet in 1945 to Rs. 5.75 per '000 cubic feet in 1948, i.e., by 43.75 per cent. Thus, in the case of the Oriental Gas Co., the increase in the price of gas over a period of 19 years has been about 95 per cent. Incidentally, it may be mentioned that the nationalisation of the Oriental Gas Co. of Calcutta, instead of improving the quality of service and reducing the price for gas, has, on the country, led to a substantial increase in the price of gas on the one hand and serious deterioration in the quality of service to the consumers on the other, and, consequently, there has been much public criticism and resentment at the arbitrary manner in which the increased charges for gas are billed. The B.E.S.T. undertaking of the Bombay Municipality, with effect from 21st April, 1963, has raised the minimum bus fare from 7 nP to 10 nP, i.e., by 43 per cent. It is also reported that the same undertaking is presently contemplating further increases in bus fare. During the last six years (1958-64), in the city of Calcutta, the bus and tram fares have been raised twice, first in 1958 on the recommendation of a Commission of Inquiry and just recently, with effect from 29th April, 1964, on accont of rise in the cost of maintenance and service, and the public of Calcutta have accepted these two rises without any protest whatsoever. On this latest occasion, the lowest tram fare in Calcutta was raised from 6 nP to 7 nP per ticket, i.e., by 17%. Likewise, Delhi Transport Undertaking is reported to have also recently increased the bus fares by 50 to 80 per cent. It may also be mentioned that the Bombay Municipality, within a period of 8 years, from 1948 to 1956, has raised water charges per '000 gallon from Re. 1 to Rs. 1.50, i.e., by 50 per cent. It will be noted that these are very essential commodities and services affecting the pockets of even the poorest working class people.

Consumers do not Grudge reasonable increase in Gas price

The claim of the Bombay Gas Company to an adequate increase in the price of gas is based on the well-recognised economic principle or convention mentioned above. It is, also, as explained earlier, based specifically on the Company's legal right under the Bombay Gas Supply Act, which is the obverse of its legal obligation under that Act to supply gas at such control price as may be fixed by Government from time to time in accordance with the recommendations of the Gas Advisory Committee. Such being the case, it is difficult to understand the reasons or the motives which may be weighing with the Government in taking no action, or, at any rate, in going slow in dealing with, the Company's well-proven case for an adequate increase in the price of gas. The spokesmen of the Government have sometimes suggested that the consumers of gas, by and large, being lower middle-class people, a rise in the price of gas would hit them hard and provoke resistance. Such a view would be altogether ill-founded and unsound, for, by far the largest number of consumers of town's gas reside in such aristocratic localities as Malabar Hill, Marine Drive, Cumballa Hill, Cuffe Parade, Fort, etc., or are flourishing business units in different parts of the City. At a time when even the poorest classes are under compulsion to bear the heavy burden of rising prices of essential commodities and services, like electricity, transport, etc., it is most unreasonable to hold that a moderate increase in the current price of gas, which, by the way, was fixed as long ago as in 1949 and which, incidentally, is somewhat lower than what it had been in 1926, would inflict an excessive burden on the rich and prosperous individuals who are priviledged to live in those expensive areas and who have enjoyed the advantage of subsidized gas price over the years. That there is no substance at all in this view regarding the burden of an increase in gas price on the consumers, would be crystal-clear from the fact that, according to available information, there are at the present time in the city of Bombay itself over 104,000 consumers of Liquid Petroleum Gas with the trade names of 'Burshane' and 'Mobilflame', with another 64,000 consumers of this bottled gas being located in other parts of Maharashtra and certain parts of Gujarat (i.e., old Bombay State), who readily buy this Liquid Petroleum Gas at nearly 4 times the price of town's gas. It is altogether anomalous, unjust and inequitable to hold that a moderate increase in the present town's gas price of Rs. 3.94 per unit consumed by some 18,000 rich and prosperous consumers including modern, luxurious hotels and big industrial units, would be an excessive burden to them while in the very same city of Bombay hundreds of thousands of consumers, many of them being in the Middle-Income brackets, are eagerly and spontaneously buying and consuming Liquid Petroleum Gas at a higher price of around Rs. 16 per unit, without causing any complaint or unfavourable comments in any quarters including the general public and the Government. In this connection, it is interesting to note that at the present time ESSO Oil Company is reported to be enlisting 2,000 new consmers every month in the Bombay city itself and that in the city of Calcutta, where the supply of Burshane was started on 1st July, 1964, the registration of new consumers of this bottled gas is proceeding at the rate of 400-500 per day. In this connection, it would be quite proper and pertinent to raise the question whether it was not a patently and grossly discriminating policy on the part of the Government to peg down, most rigorously and inflexibly, the control price of town's gas to Rs. 3.94 per '000 cubic feet over a period of almost two decades despite enormous increases in all important costs and prices during the time, while, at the same time, freely allowing two Oil Companies to sell a substitute for piped town's gas, namely, Liquid Petroleum Gas, at almost four times the price of town's gas, namely, Rs. 16 or more per equivalent unit in terms of thermal power to over 168,000 consumers of middle-income bracket groups in the self-same city of Bombay and in certain contiguous areas of Maharashtra and Gujarat, the unjust discrimination being in effect applied against the Bombay Gas Co., which has been rendering a good service to the city of Bombay, continuously for almost two decades, by supplying piped gas, the most convenient form of fuel, at a rate which is by far the cheapest rate in any part of the world including the most advanced countries of modern times. It may also be pertinently asked whether it is not extremely anomalous and paradoxical that, whereas the rate for electricity in greater Bombay has been increased by 37.1 per cent in the course of only 2 years, which certainly hit hard many millions of consumers of lower-income groups, the Government of Maharashtra is found to show such excessive solicitude for the 18,000 consumers of town's gas belonging to the upper-income bracket groups, that they appear to have firmly resolved that not even a moderate increase be granted in the price of town's gas however justifiable it might be in law and equity and by considerations of indisputable and well-proven increases in the costs of production and distribution of gas.

Company has made Substantial Expansion of Supply

The present management carried out substantial expansion of production and increased gas supply by 64 per cent from 988,242,300 cft. in 1946 to 16,13,887,000 cft. in 1963. New gas connections came to 3,430, out of which 2,500 were given in 1957-58, in response to an assurance informally given by the then Ministers concerned to the effect that if the Company carried out expansion and gave new gas connections, the Government would favourably consider the question of an increase in the price of gas. The Company, in good faith, carried out this substantial expansion programme. In this connection, it may also be pointed out that, had the average consumption of gas per consumer remained unchanged at the level of 1946, the expanded gas supply would have sufficed to add some 9,000 new gas connections to the 14,831 in existence at 1946. However, while the Company invested a considerable amount on this occasion to give new gas connections and thus fulfil its part of the informal understanding, the Government gave no price increase whatsoever. This was also an important instance of unfair and inequitable treatment received by the Company at the hands of the Government.

We invested in 1946 a very large amount of money to acquire the assets of the Bombay Gas Co., from its foreign owners. This fact was admitted by the First Gas Advisory Committee headed by Sir Navroji J. Wadia, a retired Judge of the Bombay High Court. Since then, the Company has put back into the undertaking some Rs. 70 lakhs of which about Rs. 17.31 lakhs was spent as lately as in 1962 and 1963 to provide some ancillary facilities, such as complete re-sheeting of a gas-holder, setting up an elevated purifier box and enlarging the gas mains at important places, etc., with a view to facilitating the flow of larger gas supplies proposed to be immedi-

NEPAL BANK LIMITED

	1,21,628	1,01,484		1,21,628	1,01,484

this case, also, the Compay put back into the undertaking these large sums in perfect good faith in the intentions of the Goveernment to give a fair deal to the Company. And we are shocked to learn that Government now propose to forsake all considerations of justice and fair play in dealing with the Company.

The Company's fixed assets, recently revalued by the wellknown surveyors Messrs. IBCON (P) Ltd., in the light of present-day market prices of such assets and after providing for full depreciation, stand at Rs. 3.19 crores, as at 31-12-1963.

Company's Dividend Policy has been Conservative

It is sometimes held against the Company that it had distributed high dividends in the past. The actual facts are as under:

Average annual dividend during 1947-52 ... 7.12%
Average annual dividend during 1953-56 ... 12.50%
Average annual dividend during 1957-62 ... 3.52%
1962—Substantial loss and no dividend.
1963—Much heavier losses and no dividend.

The above percentages of dividends are on the basis of the paid-up capital of Rs. 40 lakhs as shown in the Company's books. Actually, however, the present management had paid, as mentioned above, a much larger amount in acquiring the valuable assets of the undertaking from the foreign stockholders. This high acquisition price was based on the then ruling market price of the stock of the Company. In relation to the cost of acquisition of the assets of the Company, the dividends would be as follows:

Average annual dividend during 1947-52 ... 2.49%
Average annual dividend during 1953-56 .. 4.38%
Average annual dividend during 1957-62 ... 1.23%

And it is obvious that these effective dividend rates were much too low by any standard and these figures would completely demolish the wrong impression that the Company had indulged in paying excessively high dividends for certain years in the past.

With an Economic Price for Gas, the Company will Readily Improve Workers' Remuneration and Amenities

One of the direct and devastating effects of the continuance of an uneconomic price for a prolonged period has been that the Company's finances are so crippled that it has not been possible for the Company to bring about any upward wage revision, or to give any bonus to its employees, for the past several years. Today, there is acute unrest among the workers, and great dissatisfaction among the members of the staff on this account, which is an extremely unfavourable trend even in normal times, and more so at the present juncture. The workers have preferred a claim for the payment of bonus for the year 1962, and their "Charter of Demands" claiming several benefits, is pending before the Conciliator. Similarly, the Company's Staff Association has put in a claim for upward revision of salaries, and for other benefits. If these claims are allowed, it would be an unbearably heavy burden on the present slender resources of the Company. In this connection, it would be pertinent to point out that the Government's directive to industrial units to pay higher dearness allowance to employees pursuant to the recommendations of the Lakdawalla Committee has also imposed a very heavy financial burden on the Company to the tune of over Rs. 2 lakhs per year. The issue of a Notice in this behalf by the Company notifying to the employees its intention to discontinue paying the re-adjusted dearness allowance caused considerable unrest among the employees, who waited in deputation on the Labour and Industries Ministers, and in consequence the Government have referred the matter for adjudication to an Industrial Tribunal. The Government has been stoutly advocating industrial peace and better understanding between management and labour, and very rightly so. An adequate increase in gas price, and a consequent improvement in its financial position, would enable the Company to consider favourably the claims of the employees for better terms during the present times of economic stress and mounting costs of living.

Ill-Conceived and Ill-Timed Nationalisation or Municipalisation Talk—the Prime Minister's Grave Warning and Wise Advice regarding Priorities

In response to a very recent personal representation to the Government, earnestly pleading for an immediate and adequate rise in the price of town's gas, we were informally given to understand that Government were presently considering the question of nationalising or municipalising the Bombay Gas Company. The question of nationalisation or municipalisation is a question of high policy. It may, however, be pointed out that, according to the Industrial Policy Resolution, dated 30th April, 1956, carbonisation of coal is included in Schedule B. In the said Resolution it is mentioned that, while, with a view to accelerating their future development, the State will increasingly establish new undertakings in the industries in Schedule B, at the same time, private enterprise will also have the opportunity to develop in this field, either on its own or with the State participation. It can be reasonably argued that, since there is already a well-established, experienced and efficient private sector unit of gas industry in the Bombay city, it is entitled to be allowed to continue to render its service to the Bombay city under suitable economic conditions. This point of view derives special support from the fact that the Union Government, in accordance with the Industrial Policy Resolution cited above, has recently given a licence for the installation of a coke oven plant in the Maharashtra State, in the private sector, the licensee being Messrs. Shanta Bros. Private Ltd. Town's gas, however, is relatively low in the scale of priorities for nationalisation with a view to carrying through rapid expansion and providing for substantially wider availability. There are several other items which have much higher priority from the point of view of social welfare-cum-economic development, such as adequate supply of drinking water in the towns and villages, road transport, electricity, slum clearance, working and middle-class housing and state-wide health services with hospitals—all of which would involve development on a colossal scale, entailing huge capital outlays and employment of large numbers of top level administrative personnel. When these high-priority items have been taken care of, say, within a period of four or five years, it would then be appropriate time for Government to review the question of taking over relatively low-priority items like town's gas. It would be partinent to point out that many of the huge capial-intensive enterprises in the public sector, according to the findings of the Estimates and Public Accounts Committees of Parliament, have failed to show any conspicuous success in respect of planning, programming, executing and financing. On the contrary, there have been far too many cases of lack of proper programming and phasing and of absence of efficient operation, with the result that there has been colossal wastage of money, material and manpower, and the return on the huge investments has been extremely poor and disappointing, being, for instance, as low as 2.5 per cent, in 1962-63, even after ignoring the huge losses sustained by Hindustan Steel Ltd. In this connection, we do hope that all parties, concerned with the economic progress and social welfare of the country, will give serious heed to the wise advice and timely warning that has been recently given by our beloved Prime Minister, Shri Lal Bahadur Shastri, regarding the imperative need of applying stricter standards of priorities in our development plans and programmes. In the undoubtedly grave situation of a developing crisis which the country faces, the Prime Minister rightly says, "It is imperative that Government policies in the immediate future should be geared to meeting the requirements of the common man. . . ." The Prime Minister goes on to say, "What is needed at the present time is not the launching of new projects but ensuring that those already in execution are completed expeditiously, giving a good return to the community". The Prime Minister, also wisely points out that "the people should feel that the additional burden they carried during the last few years has brought tangible results to them. So far such returns have been totally inadequate and not commensurate with investments made at great sacrifice and with a rising tax burden."

The proposal for the municipalisation of the Bombay Gas Co., was mooted long ago. But, by requiring the Company to undertake an expansion programme, by setting up a Gas Advisory Committee, by demanding a "binding undertaking" from the Company, and by allowing the Company to proceed with important preliminary steps for giving new gas connections, the Government had clearly indicated that the question of municipalisation had been put off by a few years and that, in the meantime, the Bombay Gas Co. would be allowed to continue and that, as clearly implied by the very fact of the appointment of a Gas Advisory Committee, the Company would be given a rise in the gas price if recommended by the Advisory Committee.

We have taken great pains to nurture the Company for the last eighteen years. We invested very large amounts in acquiring the former British-owned Company and in developing it over all these years. We have effected all-round improvement in its efficiency. The quality of its service would compare very favourably with that of any other public utility concern in this country, including even the largest Electric Supply Undertakings in Bombay, Calcutta and elsewhere. By taking over the Company at a huge capital expenditure, we have saved year after year, over this long period, substantial amounts of foreign exchange which would have been otherwise remitted abroad by way of transfer of profits. We have also completely Indianised the managerial and technical staff, thereby also saving considerable amounts of foreign exchange. And we still hope that, in consideration of these substantial contributions to the national economy, Government would give us that justice and fair deal to which we are clearly and definitely entitled.

Plant and Machinery

During the year we have added plant, machinery and equipment worth Rs. 2.50 lakhs, including one additional Holmes Commersville Station Meter having a capacity of 6 million cu. ft. per day, one Sternette Compressor unit for oil refrigeration and one 100 KW Germanium Rectified set.

Appreciation

Before I conclude, I would like to express our warmest appreciation to the workers, the staff and officers for their wholehearted co-operation and specially to Shri S. Chowdhary, your General Manager & Secretary, and Shri A. S. Rao, your Deputy General Manager, for their invaluable services.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

4¾% Orissa Government Loan, 1976.

Issue Price Rs. 99.50 percent.

Opens on the 24th August, 1964.

APPLICATIONS for the Loan will be received at (a) the Offices of the Reserve Bank of India, Bombay (Fort and Byculla), New Delhi, Madras, Nagpur and Bangalore. (b) the branch of the State Bank of India at Patna, (c) the branch of the State Bank of Hyderabad at Hyderabad (d) the branches of the State Bank of India located in the State of Orissa, and (e) the Government non-banking Sub-Treasuries in the State.

Full particulars can be obtained at any of the Offices mentioned above.

INDIAN COPPER CORPORATION LIMITED

CHAIRMAN, MR. S. C. GLADSTONE'S ADDRESS

The following is the address delivered by Mr. S. C. Gladstone, Chairman of Indian Copper Corporation Ltd. at the Annual General Meeting of the Company for the year ended 31st December, 1963 held on the 12th August, 1964.

Gentlemen,

The Report of your Directors and the Accounts for the year ended 31st December, 1963 have been in your hands for several weeks. Fortunately, the restrictions imposed in 1963 by the Government of India under the Defence of India Rules, which prohibited the publication of the Accounts, have now been relaxed.

This is the first time that I have had the privilege of addressing you, but before I begin my review I should like to pay tribute to the late Prime Minister, Pandit Nehru. After leading the freedom movement for many years, he became the first Prime Minister of independent India in August, 1947 and for 17 years he never spared himself in the service of the country. He will undoubtedly go down in history as one of India's greatest men.

Your Chairman last year, Mr. J. W. Easson, who left India on retirement in March this year, has been connected with the Company for 29 years and has been your Chairman for the last two years. I am sure that you would all like to join me in wishing him a happy retirement, which has been so well earned.

I will now give you a general review of the affairs of your Company during 1963.

General Review

During the first nine months of last year there was ample copper to meet world demands and the price remained steady at about £234 per ton. In the last quarter of that year demand began to overtake supply, but it was not until the New Year that prices began to rise. In spite of increased production and sales the price on the London Metal Exchange, which had been steady since June, 1961, rose to around £300 per ton where it has since remained.

At the present time production capacity probably just about balances the world demand and but for industrial disputes the price could be expected to recede to between £240 and £250.

The shortage of copper, especially in the U.S.A., has had a most unfortunate effect on your Company in as much as the new Electrolytic Refinery is based on the import of Blister Copper. It was originally intended to import Blister Copper from Africa, but as a result of the foreign exchange shortage the Government of India have only been able to allow us a licence to import from the U.S.A. and at the present time Blister Copper is not available from this source.

Working Review

The production of copper in 1963 was 9,582 metric tonnes, a small decrease of 199 tonnes compared to the previous year due to a number of factors such as the deterioration in the quality of coal and operating conditions.

In the middle of 1962, as a result of the acute shortage of good quality coal, the Coal Controller reduced our quota of Selected 'A' coal by 50% and substituted coal of inferior quality for the balance of our requirements. Inevitably this has had a significant effect on the efficiency of your smelter.

Your Company's Rolling Mill produced 9,376 tonnes of Brass Sheets and Circles during 1963 and for this imported Zinc is required. Import licences for Zinc are now based on value and are financed by U.S. AID and thus the high price of this metal in world markets, and particularly in the U.S.A., has resulted in a substantial reduction in the tonnage that can be purchased. The Government of India have also imposed restrictions on the sale of Brass and Copper Sheets to the Utensil Industry, our traditional and principal consumers. The effect of these restrictions began to be felt in the second half of 1963 and the burden this year will be heavier.

Mining exploration at your Surda and Patharghora Mines continued, but a serious breakdown of the main Compressor restricted development work at the main Mine at Mosaboni. In spite of the most energetic efforts, it took eight months to obtain an import licence and procure spare parts for this machine, during which time all available compressed air was used to maintain production and development was at a standstill. In spite of this, our reserves increased by over 2,000 tonnes, which is satisfactory, and I am pleased to say that the Compressor was put back into operation in January 1964.

Electric supplies were adequate throughout the year, but pig iron and coke for the Foundry and cement were in very short supply. Thanks to a better supply of wagons, despatches showed some improvement resulting in a decrease in stock of finished products.

The financial results of your Company for 1963 were satisfactory considering the rise in prices in the wake of the Emergency. Labour costs and the expenses of mining at greater depths continue to mount; nevertheless, the successful results reflect credit on all concerned.

During the year under review labour relations were generally good and a dispute over the payment of profit sharing bonus was settled in Conciliation proceedings. Towards the end of the year, however, the Unions submitted fresh demands for very substantial increases in wages, which cannot be justified. I regret to report that while negotiations were in progress the Works Union recently called a three-day protest strike to bring pressure to bear in support of their demands. Negotiations are still in progress.

Kyanite

Exports of Kyanite fell from 27,686 tonnes in 1962 to 18,797 tonnes due to competition from synthetics and poor market conditions. The recession in the steel industry abroad in 1962 led to a reduced demand for Kyanite in the following year. At the same time there was a big improvement in the supply of railway wagons to carry the ore from your Mines to the docks, which encouraged your customers to reduce their stocks. This has led to a temporary fall in exports, but I am happy to say that up to the end of July over 13,000 tonnes had been exported and by the end of this month the figure will approach 17,000 tonnes.

Electrolytic Plant

When your Directors' Report was written in May this year, it was predicted that the new Refinery would be completed in September this year, but I regret to report that there have been further serious delays since that date.

There have been many delays in the construction schedule chiefly due to a shortage of essential materials such as cement, roofing sheets and steel and the failure of most suppliers of indigenous plant to keep to promised delivery dates. Much of this can be traced to the Emergency created by the Chinese invasion in November, 1962. There has also been pilferage in the Calcutta Docks. All this is completely outside our control and although everything is being done to speed the work on the final stages of the plant, it is anticipated that production will not commence before the New Year. This will, of course, depend on the supply of Blister Copper to which I have referred earlier.

Your Company has also been licensed to produce 260 tonnes of Nickel Sulphate, which will be a bye-product of the Electrolytic Plant. Foreign exchange has been arranged and the final details of technical know-how are now being negotiated. It is hoped to start production in the first quarter of 1966.

Expansion Plans

Your Company has been granted an Industrial Licence to expand production of copper and to produce Sulphuric Acid as a bye-product and negotiations for foreign exchange loans are far advanced. The present Smelter is now over 30 years old and has for some time been operating at well above its designed capacity. No plant can be expected to remain at peak efficiency after so many years service. It will, therefore, be necessary to instal a new Smelter of larger capacity and of a type that will allow the recovery of waste gases in the form of Sulphuric Acid.

At Surda new equipment is required to allow for development in depth and also a Concentration Plant. Additional grinding plant is required at your Works and a new Crushing Plant at your Mosaboni Mine to deal with the increased capacity. It is expected that after this new equipment has been installed, production of copper will rise to 12,130 tonnes during the first year of operation of the new Smelter and to 12,950 tonnes during the second year. Sulphuric Acid will be produced at the rate of 100 tonnes a day.

The total cost of this plant will be £2,875,000, which, it is planned, will be financed by Bank overdrafts, foreign loans and a Debenture Issue.

Accounts

The profit for the year before providing for Taxation, Depreciation and Reserves amounts to £1,384,875, as compared with a profit in 1962 of £1,351,771. Income Tax and Super Tax on profits, however, amounted to no less than £821,855, partly because of the Bonus Issue in 1963 and the new tax on dividends. Your Directors have decided to place £170,000 to Depreciation and £98,000 to General Reserve. £26,597 is allotted to Development Rebate Reserve and £21,694 to provision for Kyanite Decretal Amount.

There is a balance available of £247,299 and your Directors are recommending that the same amount as last year, i.e. £246,834, equivalent to a Dividend of 12%, subject to tax, on the new capital of the Company should be distributed, leaving a balance of £465 to be carried forward.

Staff

It remains for me to thank the General Manager, Mr. N. A. B. Hill, and the Staff and Workers, both at the Mines and the Works. I am sure that you would all wish me to thank them for their exertions on your behalf which have led to yet another successful year.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains a number of cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

  - consumer market surveys
  - industrial prospecting
  - readership analysis
  - economic indices
  - business research.

P.O. Box 14, Calcutta-1, or 5, Mission Row, Calcutta, India.

BENGAL CHEMICAL & PHARMACEUTICAL WORKS LTD.

CHAIRMAN, DR. B. N. GHOSE'S SPEECH

The following is the speech delivered by Dr. B. N. Ghose, chairman, Bengal Chemical & Pharmaceutical Works Ltd., at the Sixtyfourth Annual General Meeting of the Company held on 14th August, 1964 in Calcutta.

Gentlemen :

It is a great pleasure for me to extend to you all on behalf of the Board of Directors as well as on my own a hearty welcome to this 64th Annual General Meeting of your Company.

Gentlemen, we are meeting here today under the shadow of a national gloom. The sudden death of our first Prime Minister, Pandit Jawahar Lall Nehru, has created a void in the national and political life of India, which it will be very difficult to fill. A towering personality and a Champion of World Peace Pandit Nehru was one of the greatest sons of the soil. So, before I take up the business on the agenda to-day may I request you all to rise in reverence to the memory of our late beloved Prime Minister and stand in silence for two minutes to pay our respectful homage to the departed soul.

Gentlemen, The Annual Report and Accounts for the year ended 31st March, 1964, have been in your hands for some time past, and with your permission I take them as read.

Shortage of Raw Materials

The performances of your Company despite various difficulties it had to encounter during the year under review are encouraging although the net operating results are below our expectations. But for the acute shortage of industrial alcohol, rectified spirit and special denatured spirit during the latter half of 1963, which are essential raw materials in pharmaceutical industries, we could report better turn-over this year with a corresponding increase in profits. To ensure smooth and uninterrupted working in the pharmaceutical industries it is considered a matter of paramount importance to see that effective steps are taken by authorities concerned to maintain adequate supplies of alcohol so vital for such industries. We must admit here that the Excise Authorities of West Bengal helped the industries of the State substantially by exercise of their good offices and eased up the acute situation by their sincere efforts in the right direction.

The trading results of your Company for the year ended 31st March, 1964, are on the whole satisfactory notwithstanding the fact that we continued to be confronted with troubles relating to procurement of raw materials, problems of transport, interrupted supplies of power and rising costs in a number of directions. I am sure you will agree with me that with the reduction of all these factors as far as possible which have direct impact on the trading activities of any industrial and manufacturing concern, your Directors will be in a position to report more satisfactory results in years to come.

Your directors recommend maintenance of the same dividend @ 10% on all classes of Ordinary Shares as in the last year and propose to carry forward a sum of Rs. 1,00,000/- to General Reserves No. II after providing for all prior charges. I would like to add here that the completion of the various expansion schemes of the Company this year will necessitate the transfer of a substantial amount to Development Rebate Reserve next year which will have its reflection on the profits of the Company.

Steady Progress

The overall business in the field of Heavy Chemicals in your Company shows a sign of steady progress, the sales during the year under review having increased substantially over the last year's figure. I as glad to report that the new Alum Plant is almost completed and it is now under trial run. We do hope the new Alum Plant will go into production very soon. You will be glad to learn that the Government of India have granted your Company Industrial Licence to carry on business for the manufacture of Sodium Aluminate, Stannate, Naphthenates, etc. The export potentialities of some of the products of the Heavy Chemicals Section of your Company are now being studied and negotiations to export a large quantity of Alumino Ferric are going on.

The installation of an additional 50 ton/day Sulphuric Acid Plant at Panihati is steadily progressing and we hope this plant will start production by the end of this financial year.

Regarding your Company's business in Road Tar, it may be recalled that I struck a note of pessimism in my review last year. The difficulties in procuring Crude Coal Tar continued during the year as before. This set-back in the Tar Distillation Industry has substantially affected our business in the by-products of Coal Tar. Nevertheless efforts are being made for alternative arrangements to meet the situation.

Gentlemen, there is a sweeping allegation gaining currency that pharmaceutical industries are making excessive profits. I may be allowed to say that any one with adequate knowledge of the cost economics of the manufacture of pharmaceuticals and drugs would hardly subscribe to this wrong view. In my humble opinion the cost factors which are taken into consideration in determining the selling prices of drugs, viz. overhead, labour charges, distribution costs, sales promotion including advertisement, research expenses, quality control and other business costs which should be added to the cost of raw materials in arriving at a correct pricing policy, are presumably ignored completely when such reckless allegations are levelled against pharmaceutical industries.

Drug Price Control

Drug Price Control was introduced under the Defence of India Rules from November, 1963 and its enforcement with retrospective effect from April, 1963 has landed the pharmaceutical industries in practical difficulties in fixing the prices of drugs manufactured by them commensurate with the prevailing costs. It is pitifully interesting to note in this connection that while there is no check in prices of raw materials and other essential commodities the Price Control Order of drugs is being enforced. It has of late been a problem to us to adjust prices of our finished medicines on the basis of the costs of raw materials which are daily mounting by leaps and bounds. The pharmaceutical industries will be grateful if the Government revise their fiscal policy and withdraw various levies by way of Excise Duties, Sales Tax, Octrois etc. on drugs, pharmaceutical and medicinal preparations. You will be surprised to note that Government undertakings also have enhanced the prices of raw materials which are essential components of our manufactured products. This upward trend in the prices has resulted in the poor profitability in respect of certain items.

I reported to you last year that we have taken up in hand certain development programmes. Your Company is one of the pioneers in India in the field of manufacture of Caffeine. I am glad to report that Industrial Licence for manufacture of 16 tonnes of Caffeine annually has been obtained from the Central Government and our plants have been expanded accordingly to reach the production target. But unfortunately, the supply of Tea Waste, the principal raw material for manufacture of Caffeine, is too inadequate to meet the increased demand.

You will be glad to note that the services of a well-known Bacteriologist and Immunologist is being utilised by the Company in its Biology Department for researches in various directions. As a step towards our declared policy of expansion the Company will soon market Anti-snake-bite serum and Tetanus toxoid. The utilities and the market potentialities of these two products are too obvious to need any emphasis. Your Company is also under negotiation with some foreign firms for introduction of new items.

We are trying to explore various markets in South East Asia and Middle East and African countries. Our exports of Surgical Cotton Wool have suffered a setback due to severe competition from other countries. We had previously been able to meet this competition to some extent from the import entitlements obtained under the special Export Promotion Scheme against our exports of the item.

Import Entitlements

Unfortunately the import entitlements have been suspended by Government presumably because no imported materials are required for manufacture of the products. We are unable to accept this contention as substantial entitlements have been granted under the Special Export Promotion Scheme on exports of many other items which require no imported materials for production. For example import licences are granted against exports of Drugs & Pharmaceuticals irrespective of the contents of the products being imported or not. Our numerous representations that Surgical Cotton Wool falls under this category have not met with any satisfactory response though considerable time has elapsed. We feel also that Government should recognise that the gain to the country is greater when wholly indigenous products are exported and exports of this category should be encouraged by extending full benefits under the Scheme. The Government of India have not yet decided to include this export in the granting of Import Licences under the Export Promotion Scheme. If the entitlement is granted against this export we can import Essential Oils, Aromatic Chemicals, etc. to cover our shortfalls for such raw materials due to drastic cut in our usual Import Licences.

In an attempt to further promote its sales in Delhi and adjacent areas your Company cancelled its previous arrangements with the distributors and opened on 1-4-64 a Depot of its own at Delhi for distribution of its products. Of course, this is an experimental measure in this direction and if it proves economical, we have in our mind to have similar measures in other parts of India as well.

The Company's business at its branch factories at Bombay and Kanpur is progressing satisfactorily. In this connection I may inform you that a strip of land of our Bombay Factory has been acquired by Greater Bombay Municipal Corporation under Town Planning Scheme. Besides, loss of land the Company has to pay an additional amount of Rs. 4000/- and odd by way of betterment fee to the Bombay Municipal Corporation. Further, this acquisition of land has also necessitated partial re-planning of the said Factory and reconstruction of its compound wall and passage-ways resulting in substantial amount of capital expenditure.

The Accounts

I will now turn to analyse more salient points in the Profit & Loss Accounts for the year under review. You must have noticed in the Accounts forwarded to you that there has been a decrease by more than Rs. 4½ lacs under the head "consumption of raw materials". The increase in profit has been effected by revision of the terms to our customers resulting in savings to the Company and strict control of purchase. You will also notice that Development Rebate Reserve which has been charged to Profit & Loss Account has been much less this year. These are amongst others, the contributory factors for an increase in profits by over Rs. 5 lacs against an increase in sales by about Rs. 7 lacs.

Gentlemen, I am thankful to you for giving me a patient hearing. The progress that your Company has made in its trading activities during the year 1963-64 despite multifarious difficulties should not give all concerned a feeling of complacency. In these days of economic struggles and keen competition the rule of "Survival of the fittest" should always be borne in mind. The management of your Company has accordingly been wedded to such policies as would, in all probability, lead the Company to greater prosperity in the usual course of its business in future.

Finally, I conclude with an expression of gratitude to my colleagues for their co-operation, advice and mature guidance. My thanks are also due to the members of the staff at all levels without whose sincere efforts the satisfactory results would not have been possible. I also acknowledge with thanks the patronage of the members of the medical profession, our customers, stockists and distributors.

N.B.—This does not purport to be a record of the proceedings of the Annual General Meeting.

A NICHOLAS (N) PRODUCT

ANNOUNCEMENT

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT OF THE PROPOSED ISSUE OF CAPITAL. PERSONS INTERESTED MAY OBTAIN COPIES OF THE PROSPECTUS FROM THE COMPANY'S REGISTERED OFFICE, BANKERS, BROKERS AND UNDERWRITERS.

THE MYSORE ELECTRO CHEMICAL WORKS LTD.

(Incorporated as a Public Limited Company under the Mysore Companies Act, 1938)

REGISTERED OFFICE: Rajajinagar, Industrial Suburb, Yeshwantpur, Bangalore-22.

POSTAL ADDRESS: P.B. No. 1022, Malleswaram, Bangalore-3.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The Company is already manufacturing various types of Storage Batteries for Motor cars, Trucks Forklifts, Motor cycles and Scooters and for Defence Services, etc., under the name and style of "MEC" Batteries.

The quality of the Batteries manufactured has satisfied rigorous consumer standards and has been approved by the Indian Standards Institution.

By reason of the considerable increase in the demand for Storage Batteries in various fields including Defence and Communication requirements of the country, the company has launched a programme of expansion of its present capacity to manufacture various types of batteries. Apart from the manufacture of the Automobile Batteries, Traction Batteries, Heavy Duty Batteries, Aircraftt Batteries, Stationary Batteries, etc., the company will also be taking up the manufacture of specialized batteries for Electronic Flashes, Transistorised and Electronic Equipments and Wireless Sets.

With the completion of the expansion scheme the Company will also be self sufficient with regard to the requirements of Hard Rubber Containers and Lead Oxide which are now being procured from other sources.

The expansion and development of Road Transport, Railways, Telegraph and Telephone Systems and Electronic Equipments in our country under the Five Year Plans has enlarged the demand for Storage Batteries of various sizes and descriptions. The requirements of the Defence Department have also increased considerably. The prospects for export of batteries are also very bright. As such the Directors of the Company have every hope that under the present arrangements made for the expansion of the factory with West German Collaboration the Company will be able to earn sufficient profits in a short time and pay reasonable dividends to the Shareholders early.

LOCATION OF THE FACTORY

The factory is situated in the fast developing area of the Industrial Suburb of Rajajinagar, Yeshwantpur, Bangalore. The Company has necessary land in possession for the proposed expansion.

COLLABORATORS:

M/s Accumulatoren Fabrik Sonnenschein, G.m.b.H., West Germany.

M/s. Semperit, Vienna, Austria.

SHARE CAPITAL

AUTHORISED CAPITAL:

1.	10,000—9.3% Redeemable Cumulative Preference Shares of Rs. 100/- each	Rs. 10,00,000.00
2.	3,65,671 Equity Shares of Rs. 10 each	Rs. 36,56,710.00
3.	68,658 "A" class Equity Shares of Rs. 5/- each	Rs. 3,43,290.00
		Rs. 50,00,000.00

ISSUED & SUBSCRIBED CAPITAL:

1,00,000 Equity Shares of Rs. 10 each	Rs. 10,00,000.00

PAID UP CAPITAL:

68,658 Equity Shares of Rs. 10/- each reduced to Rs. 5/- each	Rs. 3,43,290.00

PRESENT ISSUE:

i. 2,00,000 Equity Shares of Rs. 10 each	Rs. 20,00,000.00
ii. 5,000—9.3% Cumulative Preference Shares of Rs. 100/- each (Subject to Tax)	Rs. 5,00,000.00
	Rs. 25,00,000.00

Out of the present issue, the 5,000—9.3% Redeemable Cumulative Preference Shares of Rs. 100/- each are set apart for allotment in favour of Messrs. Accumulatorenfabrik Sonnenschein G.m.b.H., of West Germany, the Technical Collaborators of the Company:

1,00,000 Equity Shares of Rs. 10/- each will be allotted to the Directors and their friends.

THE BALANCE NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION:

1,00,000 EQUITY SHARES OF Rs. 10/- EACH.

TERMS OF PAYMENT

On application	Rs. 5/-	per Share
On allotment	Rs. 5/-	per Share

THE EQUITY SHARES HEREIN OFFERED FOR PUBLIC SUBSCRIPTION ARE FULLY UNDERWRITTEN BY—

INDUSTRIAL FINANCE CORPORATION OF INDIA, NEW DELHI.

APPLICATIONS

Copies of the application forms and Prospectus can be obtained from the Registered Office of the Company or from the Brokers, Bankers and Underwriters listed herein.

LOAN CAPITAL

The Mysore State Finance Corporation has been pleased to sanction a loan of Rs. 14.30 lacs to meet a part of the Capital requirements of the expansion project of the Company.

TECHNICAL COLLABORATION

The Company is already having Collaboration arrangements with M/s. Accumulatorenfabrik Sonnenschein G.m.b.H., West Germany for both technical collaboration and participation in the Company's Share Capital. M/s. Accumulatorenfabrik Sonnenschein G.m.b.H. are a leading firm of Battery Manufacturers in West Germany for more than 50 years and have considerable experience in the manufacture of various types of Lead Acid Storage Batteries and Accumulators of special types, such as, those used in Electronic Flashes, Transistorised and Electronic Equipments, Wireless sets, etc. They now operate two large Factories in West Germany. They enjoy a very strong Domestic market and export their products to more than 100 countries.

They have agreed to subscribe for the full issue of Preference Capital, partly by supply of machinery and partly in cash.

Further the Company has also received Government of India's sanction for entering into an agreement with Messrs. Semperit, Austria for technical collaboration to manufacture Hard Rubber Containers for batteries. M/s. Semperit are well known manufacturers of Tyres and Battery Containers, in Europe.

BOARD OF DIRECTORS

1. **Sri N. KRISHNA IYER**, M.A., B.L., Chairman, Advocate, Brindavan, Kottayam. Director: Travancore Cements Ltd., etc.
2. **JANAB ABDULLARHOY M. BHAGAT**, 10, Sembudoss Street, Madras-1. Director: Aluminium Industries Limited, Andhra Cement Co. Ltd., Tubes & Malleables Ltd., etc.
3. **Sri N. RAMACHANDRAN**, M.A., B.L., 5, Nandanam Extension Chamiers Road, Madras-35. Director: Modern Housing Construction & Properties Limited, etc.
4. **Janab HUSENY J. BHAGAT**, 10, Sembudoss Street, Madras-1. Director: Andhra Cements Co. Ltd., etc.
5. **Sri K. VENKATACHALAM**, B.Sc., B.E., Bangalore-1.
6. **Sri LACHHMANDAS S. MANKANI**, 3-4-849, Barkatpura, Hyderabad.
7. **Sri K. NEELAKANTA IYER**, B.Com., 4/4, Crescent Road, High Grounds, Bangalore-1. Director: Cardamom Marketing Co. (Travancore) Ltd., etc.

LEGAL ADVISOR

Sri S. G. SUNDARASWAMY, Advocate, Bangalore-9.

AUDITORS

Sri S. R. MANDRE, M.A., B.Com., F.C.A., F.S.A.A. (Lond.), Chartered Accountant, M/s. S. R. Mandre & Co., 97, Gandhinagar, Bangalore-9.

MANAGING DIRECTOR

Sri K. NEELAKANTA IYER, B.Com., 4/4, Crescent Road, High Grounds, Bangalore-1.

UNDERWRITERS

M/s. Industrial Finance Corporation of India, Reserve Bank Buildings, Parliament Street, New Delhi Rs. 10,00,000/-

BANKERS TO THE ISSUE

1. M/s. State Bank of India, Post Box No. 511, Bangalore-2.
2. M/s. State Bank of Travancore, Post Box No. 34, Trivandrum
3. M/s. Canara Bank Limited, Post Box No. 1007, Nichi Buildings, Malleswaram Circle, Bangalore-3.

3. M/s. Raj Paul Chadha & Co., Delite Cinema Building, Asaf Ali Road New Delhi.
4. M/s. P. S. Khambete & Company, M-45, Connaught Circus New Delhi-1

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON THE 17TH DAY OF AUGUST, 1964 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON THE 31ST DAY OF AUGUST, 1964 OR EARLIER AT THE DISCRETION OF THE DIRECTORS AS SOON AS THE SUBSCRIPTIONS APPROXIMATING TO THE AMOUNT ISSUED HERE ABOVE TO THE PUBLIC HAVE BEEN RECEIVED BUT NOT EARLIER THAN 27TH DAY OF AUGUST, 1964.

New Delhi

SCREENING OF PROJECTS STARTED ON ECONOMY DRIVE

(FROM OUR NEW DELHI CORRESPONDENT)

VARIOUS Ministries at the Centre are understood to have initiated action on the screening of projects on which fresh commitments can be postponed by a year or so in terms of the recent communication of the Prime Minister, Mr Lal Bahadur Shastri, to his colleagues in the Central Cabinet.

But the selection of projects which can be postponed is a very arduous job requiring the utmost care, lest wrong choice should create complications at a later stage as happened after the 1958 reappraisal of the second plan schemes. Seven or eight projects for which foreign exchange has either been arranged only recently or has not yet been found will automatically spill over to the fourth plan. Included in these are the Bokaro steel plant, the heavy plate and vessels works, the organic chemicals project, the Khetri copper smelting project, the Amjhore pyrites project and the Madhya Pradesh aluminium plant. But some of the projects, for example, the Bokaro scheme and the Khetri copper smelter, are of such vital importance to the economy that work on them has to go on at any cost. The same is the case with some of the fertiliser and oil projects and the expansion programmes of various public-sector enterprises such as the Bhilai, Rourkela and Durgapur steel works, Hindustan Machine Tools, heavy electricals and engineering projects.

Advance action on the important fourth plan projects in the field of power, *transport and heavy* and basic industries cannot also be postponed arbitrarily. But actual implementation in some cases may not take place after the preliminary paper work has been finalised.

Cut in Central Expenditure

If the aim is to effect a reduction of only about Rs. 70 crores or Rs. 80 crores in the Central Government expenditure this year, the objective may well be achieved without upsetting the progress in the field of public-sector industries. If earnest efforts are made to reduce waste and unproductive expenditure, it may not be necessary to postpone some of the essential projects. The organic chemicals scheme, Amjhore pyrites plant and the Madhya Pradesh aluminium unit, may, however, be postponed. The two coal briquetting schemes recently added to the third plan may also be postponed, if necessary.

The proper course of screening the projects which can be postponed is, however, to have a clear idea of what is to be attempted during the fourth plan period and then to work back so as to eliminate expenditure on the undue augmentation of capacity both in the public and private sectors. A good deal of saving in Government expenditure can also be effected if efforts are made to consolidate the achievements in the fields of community development and *Panchayati Raj*. Indiscriminate expansion of these activities can well be held in abeyance for a year or two.

CAPITAL ISSUES

New Underwriting Agency

The resources for underwriting new capital issues should be considerably strengthened if the proposal to use some of the P.L. 480 counterpart funds for this purpose materialises. A concrete scheme to give effect to this idea, it is understood, is being prepared. If all goes well, a new agency either to underwrite directly new capital flotations or to provide refinance to the existing agencies engaged in this task, may be established by next month.

It is proposed to place initially at the disposal of the new agency Rs. 10 crores or Rs. 15 crores out of the P.L. 480 counterpart funds. Since this money belongs to the American taxpayer, priority will be given to the underwritting of new issues of Indo-U.S. ventures. Surplus funds would, of course, be used for underwriting other issues.

The agency is envisaged to function on a no-profit-no-loss basis. It will charge a nominal fee for its services. The administration of the agency is proposed to be vested in a board on which India will be suitably represented.

The unsold blocks of the underwritten shares will be held by the proposed agency for such periods as the public in India is unable to absorb them. Any profit accruing from the sale of these shares to the public will be put into the revolving fund for further use. All Indo-U.S. ventures in which Indian private capital is to be associated will be eligible for securing underwriting facilities from the new agency. Safeguards will be provided against the sale of the unsold blocks of underwritten shares by the agency to a few selected individuals. Unsold shares will be put in the market for public subscription and a stipulation may be made that no individual should acquire these shares beyond a specified limit.

The agency will supplement and not supplant the existing underwriters. It will maintain the fullest liaison with the other underwriters.

U. S. A.

New Business Team Expected

As a follow-up measure to the Galloway delegation which visited India in April at the invitation of the Indian Investment Centre, the U.S. Department of Commerce has sponsored a seven-member investment and industrial development commission to visit this country early next spring. The commission will consist of five top business men in such industries as chemicals, plastic and synthetic fibres, machine tools, fabricated metal products, materials handling machinery and equipment and printing machinery, and two U.S. Commerce Department officials —one to serve as the director of the commission and the other its trade development officer.

Unlike the Galloway delegation whose main concern was to study the investment climate in India in general, the proposed commission will discuss with Indian entrepreneurs specific collaboration offers on behalf of the U.S. companies interested in investing in India. It will also invite collaboration proposals from Indian entrepreneurs and put them, on its return to the U.S.A., before American industrialists.

The commission is expected to arrive in New Delhi on 27th February, 1965—just on the eve of the presentation of the 1965-66 Central Budget so that it can negotiate, on behalf of U.S. industrialists, collaboration offers in the light of the latest taxation proposals. It will remain in this country up to 27th March, 1965. During its one-month tour, it will visit Bombay, Calcutta and Madras for discussions and negotiations with prominent Indian business houses, trade and industrial organisations.

Business information centres will be established in each of the above-mentioned cities where the members of the commission will meet Indian business men interested in the proposals made by the U.S. firms or in presenting business offers of their own.

STEEL

Equipment from Consortium

The Anglo-American consortium of steel equipment manufacturers, which was formed last year with the object of supplying machinery, on commercial credit, for the Bokaro steel plant, will be sending a negotiating team to India in the middle of next month for talks with the Central Government. The discussion will centre on Anglo-American collaboration in setting up the fifth public-sector steel plant during the fourth plan period, either in the Goa-Hospet or the Visakhapatnam-Bailadila area.

Steel machinery manufacturers of three other countries—France, Poland and Japan—have also showed interest in supplying equipment for the fifth public-sector steel plant. Discussions with them may be held after the talks with the Anglo-American consortium team.

Scientific Innovations at Bhilai

The Bhilai steel plant is stated to have developed several scientific innovations to tackle the problems of production, construction and maintenance. These innovations are expected to go a long way in increasing productivity, reducing cost and in better utilisation of indigenous raw materials and skill.

The following are some of the important innovations: (1) development of a coke blend incorporating 10 percent to 20 percent inferior (unwashed) coal; (2) a sinter containing more fluxes which gives more iron at much lower coke rates; (3) use of surplus gases from blast furnaces and coke ovens as open-hearth fuel; and (4) speedy repair of open-hearth bottoms within two hours lasting for 100 heats, against the usual 5 to 6 hours lasting for only 20 to 30 heats.

The plant has also adopted various modern construction and maintenance techniques to suit its requirements.

AFRICA

Industrial Collaboration

Two delegations of Indian industrialists—instead of one already agreed to between the Central Ministry of Commerce and the Federation of Indian Chambers of Commerce and Industry—may be sent to Africa for studying the scope of setting up medium-sized industrial units there in which the Indian industrialists will co-operate with the African entrepreneurs. One of these delegations will visit the English-speaking areas in east Africa and the other west African countries, including Nigeria and Ghana, which are mostly French-speaking.

A third delegation of small-scale industrial machinery manufacturers is also proposed to be sent to Africa to explore the possibilities of African collaboration in setting up some small-scale units there for the production of such commodities as pencils, chalk, and small bulbs. It is said that great opportunities exist for establishing such small industrial undertakings in most of the newly-independent African countries.

As far as medium-sized industries are concerned, three countries—Uganda, Liberia and Sierra Leone—have already shown interest in seeking Indian collaboration for setting up sugar-producing factories. Four African Governments—Liberia, Sierra Leone, Northern Rhodesia and Nyasaland—have indicated the possibilities for establishing cotton blanket manufacturing units.

Among the other industries in which African countries have shown interest are engineering (air-conditioning equipment, bicycles, etcetera), cotton textiles, glass, paints and varnishes, razor blades, fertilisers, and concrete pipes. Establishment of some units in these lines of manufacture have already been agreed to between the Indian industrial houses and the African countries. Clearance for them has also been given by the Government of India.

The Central Government allows Indo-African partnership ventures on the condition that the Indian subscription to the equity capital of these enterprises is in the form of machinery, equipment, technical know-how, etcetera, to be exported from here.

NEWSPRINT

Larger Role for Public Sector

Disappointed at the performance of the private sector in augmenting the pulp and newsprint manufacturing capacity, the Central Government is said to be thinking in terms of entrusting a major portion of this development work during the fourth plan period to the public sector.

The demand for newsprint is expected to go up to about 300,000 tons by 1970-71. It is proposed to achieve self-sufficiency in the commodity by the end of the fourth plan period. It is, therefore, felt that the 1970-71 capacity target for newsprint manufacture should be fixed at 330,000 tons. By the end of the current plan period, only 30,000 tons of capacity will be available. The gap between the fourth plan requirements and the available capacity in 1965-66 is proposed to be filled through the expansion of the Nepa mills, implementation of the already licensed projects in the private sector and the setting up of a second newsprint manufacturing plant in the public sector.

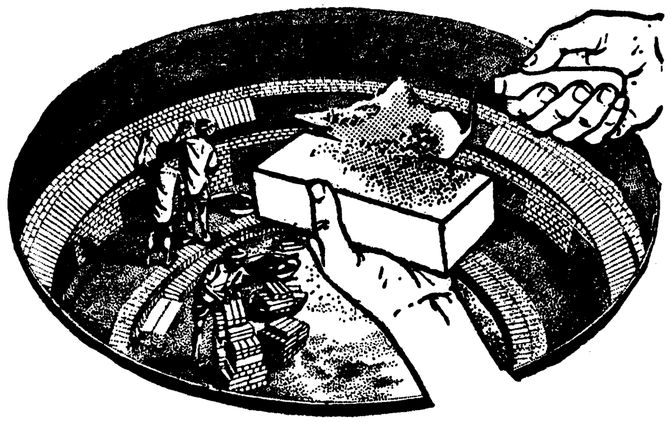
As for paper and paper board, the demand is expected to rise to 1.2 million tons by the end of the fourth plan, against the actual likely production of 650,000 tons in 1965-66. To achieve production corresponding to the anticipated demand at the end of the fourth plan, a capacity target of 1,500,000 tons has been proposed.

Although the capacity licensed for the manufacture of paper, board and

newsprint during the third plan was in excess of the demand estimates for 1965-66, the implementation of many a licensed project has been retarded by financial difficulties and uncertainty concerning the availability of cellulosic raw materials.

To overcome the shortage of raw material, it is proposed to blend at least up to 20 percent long-fibre pulp with bagasse pulp. Since bamboo resources are also in short supply in the country, the new paper mills will have to be based substantially on bagasse as the source of pulp production.

To meet the demand of long-fibre pulp, two or three central pulp plants with a daily capacity of 300 tons or 400 tons each would be established in the public sector in areas richly endowed with bamboo resources.



SUGAR MACHINERY

Manufacture of Complete Plant

The Central Ministry of Industry reportedly thinks that the various sugar machinery manufacturers should be allowed to fabricate complete plants. This is now considered necessary for introducing an element of competition in this line of manufacture.

With a view to reducing manufacturing costs, the Government earlier was in favour of sugar plant manufacturers undertaking the production of only those parts and components for which their machinery and equipment was most suited. Manufacturers, however, had opposed this on the ground that their foreign collaborators would not accept the suggestion of a common production programme with a view to standardising some of the parts and components for using them in plants of different makes.

The sugar machinery manufacturers, it is learnt, have developed adequate production facilities for the fabrication and supply of complete plants They are also assisting in the development of ancillary industries for securing some of the parts needed by them.

ACCOSET-50

—ACC High Temperature Refractory Cement—

for streng firebrick linings and joints

Composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals, ACCOSET-50 gives good bonding strength and high heat resistance. Once it is dried and burnt ACCOSET-50 becomes one with the bricks.

YOU CAN USE ACCOSET-50 ■ for jointing, repairing and patching ■ for bonding and laying firebricks of any shape ■ for protective wash for furnace walls and floors ■ for monolithic and rammed linings, gunning etc.

Technical literature sent free on request

COTTON TEXTILES

Second Wage Board Set Up

The Government of India has announced the setting up of the second wage board for the cotton textile industry to consider the question of a further revision of the wage structure While making its recommendations, the wage board shall keep in view (1) the recommendations of the first wage board for the industry and the Government's decisions on them; (2) the principles of fair wages as set forth in the report of the Committee on Fair Wages; (3) the needs of the industry in a developing economy, including the need for maintaining and promoting exports; (4) the various elements of labour costs (excepting bonus), apart from wages; (5) the requirements of social justice; (6) the need for adjusting wage differentials in such a manner as to provide incentive to workers for advancing their skill; and (7) the desirability of extending the system of payment by results. In applying the system of payment by results, the wage board shall keep in view the need for fixing a minimum (fall-back wage) and also the necessity to safeguard against overwork and undue speed.

The wage board shall also consider the demands for the introduction of a gratuity scheme on an industry-wise basis. The board will consist of Mr. K. Bhimasankaram, retired Judge of the Andhra Pradesh High Court (chairman); two independent members—Mr. Tulsidas S. Jadhav, M.P., and Professor M. B. Desai; two representatives of employers—Mr. D. C. Kothari and Mr. Surottam P. Hutheesing; and two representatives of workers—Mr. G. Ramanujam and Mr. A. N. Buch. The headquarters of the wage board will be located in Hyderabad.

FOODGRAINS

Talks of Farm Economists

The panel of agricultural economists, constituted recently to advise the Central Minister for Food and Agriculture for solving the food problem, held its first meeting here last week. It decided to conduct four important studies. The first study will deal with the behaviour of foodgrain prices during the current season and the rôle played by bank credit in the foodgrains trade so that action may be taken to avoid the recurrence of a steep rise in foodgrain prices. The second study will relate to the various aspects of the trade in rice, wheat and other foodgrains with the object of preparing the ground for the proposed Foodgrains Trading Corporation. The third study is proposed to be made for finding out how an incentive price for foodgrains influences their production, wages of agricultural labour, marketable surpluses, etcetera. The aim of the fourth study will be to assess the efficiency of the present system of collection of statistics.

The panel felt that the main idea behind ensuring remunerative prices for foodgrains and other farm products should be to provide an incentive for increasing production through the use of agricultural inputs like seeds, fertilisers and irrigation and the application of pesticides as a prophylactic measure.

Distribution of Improved Seeds

Some significant changes have been proposed by the experts of the Planning Commission in the programme of multiplication and distribution of improved seeds during the fourth plan period. It has been suggested that no new seed farms need be set up during the next plan and

that efforts be concentrated on the expansion of the existing farms and provision of necessary physical facilities for them, such as irrigation, seed storage, fencing, land development, cattle sheds, implements and equipment for cultivation and testing and treatment of seeds. It has been further recommended that the multiplication of improved seeds should be taken up in compact areas around the existing seed farms and that this work should be directly supervised by the staff located at the seed farms. The third crucial suggestion made is that the distribution of certified seeds from Government and institutional seed stores, including co-operative stores, should be banned, area by area, in a phased manner. A comprehensive seed law should be enacted and enforced in the interest of seed certification and seed control.

The other suggestions made by the experts include the strengthening of the technical administrative arrangements for the supervision of multiplication, testing, treatment, certification, purchase, storage and distribution of improved seeds. Research programmes, it was suggested, should be accelerated for evolving improved varieties with desirable characteristics, particularly high absorption capacity for fertilisers.

KANDLA

Free Trade Zone

At a meeting held here last week under the chairmanship of Mr. D. S. Joshi, Secretary to the Central Ministry of Commerce, the Advisory Committee on the Kandla Free Trade Zone decided to set up a selection committee for the allotment of plots to applicants for setting up industries inside the zone.

The committee will consist of Mr. D. S. Joshi (chairman) and the representatives of the Central Ministry of Commerce, Ministry of Finance (Department of Economic Affairs), Ministry of Industry and Supply, Director-General of Technical Development, the Planning Commission, the Kandla Port Trust, the Gujarat Government and the Chief Controller of Exports and Imports. It will hold its first meeting towards the end of September.

Applications for the allotment of plots in the free trade zone will be received up to 31st December, 1964. The allottees will be required to start construction within a few months of the allotment of plots. They will be expected to commence production within a specified period.

A total area of 1,386,000 square metres is being developed in the zone for the present. Out of this, an area of 268,650 square metres is being reserved for industries requiring very big plots. Out of the remaining area, it is proposed to carve out 67 plots of 1,650 square metres each, 36 plots of 2,475 square metres each and 82 plots of 4,070 square metres each. Provision is also being made for constructing 20 sheds for small industrialists and exporters who may prefer to hire accommodation instead of building their own sheds. A railway station and a marshalling yard will be provided within the zone. Residential buildings will not be allowed inside the zone, but ancillary industries such as printing press for publicity and the manufacture of packaging materials will be allowed. Sufficient flat land is available for the future expansion of the zone. Since the area has hard murram and substratum, the structures will require only ordinary foundations.

Lease of land to industrialists and exporters will be granted for a term of 30 years commencing from the date on which possession of land is offered to the lessees. Leases for shorter or longer periods will be considered for special reasons. The annual rate of ground rent payable by the lessees will be 50 paise a square metre. The ground rent will be payable in advance each year. The rate may be revised every ten years from 1st October, 1964, subject to the condition that the increase, if any, shall not be more than 50 percent of the existing ground rent on any particular revision. The rent will be so fixed as to enable the zone to function on a no-profit-no-loss basis.

Power Supply

The Government of Gujarat has already made arrangements for the supply of sufficient electricity to the zone. Electric energy will be provided by the Gujarat Electricity Board by about June 1965, from its Kandla thermal power-house which is being expanded to meet the full requirements of industries. The Kandla Port Trust will be in a position to supply sufficient water to the zone by the end of this year. Industries which require huge quantities of water cannot be accommodated unless brackish water obtained from tube-wells within the zone can be used. For other industries, adequate supplies through pipelines connected to a high service reservoir will be provided. The present water supply is from tube-wells. With the sinking of additional tube-wells and the laying of the pipeline, the additional supply is expected to be 3 million gallons a day.

Reasonable rates for the supply of water and electricity will be fixed by the State Government from time to time. The rates for the supply may vary according to the requirements of different industries.

The basic idea for setting up the zone is to provide for the maximum relaxation of the Customs documentation and paper control so that the activities in the zone may have more advantages than are available in bonded warehouses or in the system of manufacture in bond. The extent of relaxation would, however, be governed by reasonable safeguards against malpractices. The following are the safeguards:

(1) That all the imports from the free trade zone do reach the zone;

(2) that exports from the zone are really exported from the country;

(3) that all foreign exchange earnings are credited to the foreign exchange pool; and

(4) that nothing goes into the Customs territory for home consumption without a valid import licence and the payment of Customs duty.

Imports into the zone intended for re-export as "entrepot" trade will not be debarred. The stockpiling of important items of imports for subsequent distribution into the country may also be permitted in special cases. Although industries which are set up in the zone will be expected to export their entire production, certain percentage as wastage, to be fixed industrywise and which cannot be avoided, will be allowed in special cases under certain conditions. For goods diverted for internal consumption, the distribution will be done by a Government-nominated body after the payment of Customs duty.

A list of articles like diamonds, precious stones, gold, watches and narcotics, which can be smuggled into the country comparatively easily, will be circulated and the import of such articles into the zone will be completely banned.

No Quota Restriction

While normally no quota restriction will apply to the import of commodities into the zone, it will, however, be necessary to maintain proper accounts and submit periodical returns of stocks lying with the licensees in the zone which will have to be filed with the Customs authorities to enable the Government to satisfy itself that all the articles imported into the zone from abroad are properly accounted for.

In the case of an excisable commodity sent free of duty to the zone, which is subsequently returned without being utilised in the manufacture of some exportable commodity, the duty payable on that commodity would be at the rate which is in force on the date on which duty is paid, in terms of rule 9-A of the Central Excise Rules, 1944. In addition, if such a commodity is converted into some other manufactured product, as for instance if unmanufactured tobacco is taken to the zone and returned to the country as cigarettes, Customs duty would be payable on these cigarettes as if they are being imported into the country from some other country.

The zone will be administered directly by the Central Ministry of Commerce through an administrator. The general rules framed for the registration and licensing of industrial undertakings will be applicable to the industries established in the zone. These industries will be entitled to tax concessions like development rebate as applicable to similar industries elsewhere in India. They will be subject to the normal income tax laws and rules applicable to similar industries elsewheree in India and other regulatory industrial, labour and security rules.

The proceeds of all exports from the zone will be credited to India's foreign exchange pool. The import of raw materials or semi-processed or fully manufactured goods into the zone will be permitted ordinarily on the understanding that they will be paid for through exports or from the foreign exchange holdings abroad or foreign exchange borrowed from a bank or national of another country. Indian business men settled abroad, either acting on their own or in conjunction with Indian partners residing in India, can set up industries in the zone.

SMALL INDUSTRIES

New Body Set Up

Addressing the concluding session of the two-day conference of the Small-scale Industries Board, the Central Minister for Industry and Supply, Mr. H. C. Dasappa, announced the decision of the Government of India to set up a seven-member committee to determine the allocation of raw materials to large and small-scale industries on an equitable basis.

The committee will be headed by Dr. P. S. Lokanathan. Its other members will be: Mr. A. R. Bhatt, president of the Federation of the Associations of Small Industries; Mr. G. L. Bansal, Secretary-General of the Federation of Indian Chambers of Commerce and Industry; Mr. S. S. Kumar, Director-General of Technical Development; Dr. D. K. Malhotra, Joint Secretary, Planning Commission; Mr. Merani, Development Commissioner for Small-scale Industry in the Ministry of Industry and Supply and Mr. S. V. S. Sharma, Secretary of the Small-scale Industries Board. Mr. Sharma will also act as the secretary of the committee. The committee will not only determine the allocation of raw materials, but will also ensure proper use of the allocations.

Mr. Dasappa also said that he would discuss with the Central Finance Minister the possibility of raising the foreign exchange allocation for the import of raw materials for small-scale industries. The present allocation of Rs. 14 crores for this purpose is inadequate.

The Central Minister for Commerce, Mr. Manubhai Shah, who also addressed the conference, wanted the small-scale sector to concentrate on exports. There was considerable scope for exporting the products of the small-scale sector. Certain case studies, namely, umbrellas, bicycles and bangles, he said, had indicated that the small-scale sector could export more. He felt that export houses could be organised in the small-scale sector.

It was revealed at the conference that the National Small Industries Corporation had resumed entertaining fresh applications for the import of machinery. Efforts were being made to allocate further funds to the Corporation so that they could accept applications for imported machinery of the order of Rs. 2 crores a year. It was also disclosed that the Life Insurance Corporation had agreed to advance long-term loans to co-operative societies or joint-stock companies for constructing industrial estates. Necessary formalities had been completed and nine industrial estates had been recommended for assistance from the L.I.C. by the respective State Governments.

List of Reserved Industries

Details are now available of the 54 industries, the further expansion of which is favoured by the Planning Commission only in the small-scale sector, at least during the fourth plan period. The following are the industries:

All wire products such as wire nails, hob nails, panel pins, handout tacks, horse shoe nails (sheets); wire brushes and fibre brushes; metal buttons and badges; square, hexagonal and welded wire mesh; expanded metal; steel furniture; weights and measures; beam scales; barbed wire; machine screws; wood screws; ordinary bolts and nuts; builders' hardware; all types of locks; ball points and refills; press buttons and snap fasteners; shoe eyelets; stoves, lanterns, blow lamps and burners; spray paint guns; mechanical toys; collapsible tubes; flexible tubes (metal); cycle pumps; garmet hook and eyes; cigarette lighters; rivets of all types; student and medical type microscope; spectacles hinges and frames; garment buckles; hand numbering machines; postal franking and cheque writing machines; pressure cookers; spring washers; machine shop vices; diamond tools; steel wool; wood wool; tape recorders; mechanical gramophones; hearing aids; house and industrial wiring accessories; hair clippers; all plastic processed products as decided by the Licensing Committee in its meeting held on 23rd December, 1962: (i) bottle caps, buttons, lamps shades, etcetera, produced by the compression moulding technique; (ii) plastic articles manufactured from plastic sheets rods, or tubes by the fabrication technique, including the technique of vacuum forming, (iii) polyethylene films (films with a thickness of less than 1 millimetre) and products made from the film such as bags, etcetera; (iv) mono filaments from polyolefurs; (v) blow-moulded containers and other similar products manufactured by the blow-moulding technique; (vi) finished products manufactured from expanded (foamed) polystryrene leads; (vii) spectacle frames from sheets by the fabrication technique or by injection moulding; (viii) manufacture of polyster sheets from buttons and the processing of these sheets so produced to manufacture buttons; dyes: (i) azodyes (ii) basic dyes (iii) all processed dyes such as stabilised azoics, indigosols, vat dyes paste, pigment paste, pigment emulsions; paints and varnishes—dry distempers, red lead, red oxide, aluminium paints, bitumen paints to I.S.

specification, wagon blacks, graphite paints, all paste paints. All pesticide formulations; detergent formulations; laundry soap; leather footwear; sports goods; paper conversion products; glass products which may be made by the batch process; fire chemicals; and formulated perfumery compounds.

Common Production Programmes

Besides this reservation, common production programmes are favoured in the following 26 industries: electrical and electronic measuring and indicating instrument; electric motors; record players and changers; bicycles and their components; cameras, enlargers and projectors; radios and their components; public address equipment; plant protection equipment like sprayers, and dusters; pressure and vacuum gauges; water meters; A.A. conductors; plastic processed products (excluding those decided by the Licensing Committee to be reserved exclusively for development in the small-scale sector in its meeting held on 23rd December, 1962); dyes (excluding those reserved for development in the small-scale sector); paints and varnishes (excluding those reserved for development exclusively in the small-scale sector); soap, excluding laundry soap; detergents; food industries; leather tannery; pharmaceuticals and drugs; glass and ceramics; cosmetics and perfumes; industrial rubber products; synthetic resins; synthetic driers; printing inks; and inorganic pigments.

Illustrative List

The National Small Industries Corporation has published an illustrative list of 99 industries which have scope for development in the small-scale sector. The list includes a number of light engineering industries, such as small tools and hand tools, instruments, electrical goods and appliances and non engineering industries such as rubber and plastic goods, glass, ceramics and cement products, leather and leather goods, chemicals, paper and paper products and food processing industries.

The Corporation has also brought out a comprehensive directory of machines available with it for prospective small-scale industrialists on hire-purchase terms. Details of the facilities from the Corporation and the various service institutes and extension centres, which are available to small industrialists, are outlined in the directory. The latter also gives an account of various measures taken by the Corporation for the development of ancillaries, industrial co-operatives and small industries in rural areas. An index of suppliers has been added so that those interested in buying machines may refer to suppliers concerned.

INDUSTRIAL UNDERTAKING RULES

Draft Amendments

The Central Ministry of Industry and Supply has notified, for eliciting comment, some draft amendments to the Registration and Licensing of Industrial Undertaking Rules. The amendments are intended to give effect to certain modifications in the application forms recommended by the Industries Development Procedures Committee (popularly known as the Swaminathan Committee) and approved by the Government.

The draft amendments will be finalised after 10th September, 1964, after examining the comments and suggestions received from the parties concerned.

COMPANIES ACT

Exemption Granted

The Government of India has granted exemption from certain provisions of the Companies Act, 1956, to non-profit associations engaged in the promotion of art, commerce, science, religious charity and any other useful object which are licensed under Section 25 of the Act. This follows several requests received from chambers of commerce and other trade associations seeking the desired concession.

The exemptions relate to Sections 193, 259 and 292 of the Companies Act. They are expected to facilitate the functioning of the non-profit making associations.

As a result of the exemptions granted under Section 193, minutes may now be recorded within 30 days of the conclusion of every meeting in case of companies where the articles of association provide for confirmation of minutes by circulation. Under Section 292, matters referred to in Clauses (c), (d) and (e) of subsection (i) may be decided by the board by circulation, instead of at a meeting. There will be complete exemption from Section 259.

INDO-PAK TRADE

Protocols Signed

Details are now available of the two trade protocols signed between India and Pakistan on 17th July, 1964. Under the first protocol, Pakistan is to supply to India rice worth Rs. 3.65 crores in exchange for coal worth Rs. 2 crores, biri leaves worth Rs. 40 lakhs, spices excluding chillies, ginger, cloves and turmeric worth Rs. 45 lakhs, limestone worth Rs. 10 lakhs, umbrella fittings worth Rs. 12 lakhs, stone boulders worth Rs. 10 lakhs, crude drugs worth Rs. 12 lakhs, and specified railway equipment worth Rs. 36 lakhs.

All payments for sales and purchases under this special arrangement shall be made by Pakistan and India in non-convertible Indian rupees from special accounts to be opened by the National Bank of Pakistan and the State Bank of India.

The other protocol provides for the exchange of fresh fruits between India and Pakistan to the extent of Rs. 50 lakhs for each country on a self-balancing basis. A special non-convertible Indian account is to be opened by the National Bank of Pakistan and the State Bank of India, New Delhi, for this purpose.

Further information needed by traders on arrangements under the two protocols can be obtained from the Chief Controller of Imports and Exports and from the State Bank of India.

RUSSIA

More Credit Wanted

The Government of India, it is understood, has requested the Russian Government for granting further credits during the fourth plan for importing Soviet oil equipment, contract surveys for oil, etcetera. It has been suggested that Rs. 10 crores out of the unused Russian credits might be utilised for advance measures for the fourth plan projects. Russia has also been approached for supplying specially equipped helicopters for oil exploration in difficult areas.

Importing Fruit Juice

Russia will import 500 tons of mango and other fruit juices from India. A contract to this effect was signed here last week between the Russian trade organisation, V/O Prodintorg, and the State Trading Corporation of India. This is the second contract signed by Russia for the purchase of Indian fruit juices. The first such pact was signed in Moscow last year. Negotiations are continuing for the purchase by Russia of additional quantities of mango and other fruit juices from India.

Look what you get with
HONEYWELL instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes.

You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system.

You get training for your instrument technicians in the most up-to-date maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay.

You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

London

U.K. EXPORTERS OPTIMISTIC ABOUT TRADE PROSPECTS

(FROM OUR LONDON CORRESPONDENT)

THIS week there is yet another contribution to the export puzzle —why are exports sticky when all business men say export orders are rolling in splendidly? This time a sample of U.K. merchants engaged in foreign trade report to the Association of British Chambers of Commerce. The firms who replied to the enquiries account for an annual turnover of about £445 million—just under 7 percent of total U.K. exports and about 3½ percent of U.K. imports in 1963.

The importance of merchants in foreign trade varies a great deal in different trades. In textile and clothing, where they play a substantial part, the survey covers 28 percent of U.K. exports and over 17 percent of imports (of textile materials). This is the eighth enquiry of this kind undertaken by the Association. Its upshot is that "the degree of optimism about both the general business situation and exports is not very different from that expressed four months ago." In the export trade, merchants report little change in the rate of orders received over the past four months, and about half of them say that prices have risen. In the coming four months, more firms expect export business to increase than to decline, and about a third think prices will rise still further.

Some increase in business is expected by every trade group covered. As for different export markets, all trades report improving prospects in Australasia, and all except textiles and clothing remain confident of doing well in west European markets. There is no sign of revival in India, Pakistan and Ceylon, and trade in south-east Asia is, of course, affected by the Indonesia-Malaysia dispute. Two interesting contrasts emerge. Textile and clothing, the biggest single group in the sample, reports worsening export prospects in all markets except Africa and Australasia. Exporters of engineering products, on the other hand, take a more optimistic view than they did four months ago in all markets except Africa and the Indian sub-continent. In general, prospects in North America are believed to be unchanged, but those in Central and South America have improved.

On the import side, more merchants expect a further rise than a fall in arrivals, and a majority also expect new import orders to increase. The main exception is the textile materials group which forecasts a drop in imports. The following are some of the statistics of the survey. Asked: "Do you feel more, or less optimistic about exports than you did four months ago?" 23 firms said "more," 18 said "less" and 59 "unchanged." Replies to a question on likely export orders in the next four months were: up 26, same 56, down 18. The last three figures are almost precisely the same in a forecast of imports in the next four months. No doubt merchants nowadays form only a modest part of the country's trading force, but as far as the survey goes, it fits in with the tenacious official belief that the "underlying trend" of exports is upwards, whatever the monthly returns may say.

British Aid Helps

The British Government's recent statement that aid to developing countries depends primarily on the U.K.'s balance of payments is strongly criticised in a report published by the Overseas Development Institute. Much of the aid, the report states, returns directly to Britain and in no way represents a loss to the balance of payments. Britain, as a major exporting nation, stands to gain from other donors' increased aid. The level of that aid is influenced by British aid policy, so that increased British aid can be expected to bring extra export earnings financed not only by British aid, but also by that of other donors.

This argument is supported by World Bank figures. Betwen 1945 and June 1963, Britain's contributions to the World Bank have totalled a little more than £113 milion. Imports from Britain financed by World Bank loans have amounted to £217 million. The basis of the argument is that aid from developed countries will be used in turn to buy goods or services from the developed countries. Britain stands to gain along with the rest if all the developed countries increase their aid to developing countries.

The report, financed by the Nuffield Foundation and prepared by Mr. Athole Mackintosh and Mr. Andrzej Krassowski with the help of Miss Juliet Clifford, goes through recent aid figures in some detail, and concludes that "the apparent outflow of £140 million in bilateral aid in 1962-63 could well have disguised a net gain of £30 million," and that even on the most unfavourable assumptions, the loss in terms of reserves was hardly more than 10 percent of total aid. The pamphlet illustrates the close relation between those countries which receive British bilateral aid and those which, among developing countries, are Britain's major customers. It argues in general, however, against "tied" aid, for the purchase only of British goods, since Britain would be a major loser if other donors similarly tied their aid.

The authors draw attention to the way terms of British aid get worse when colonies become independent. They write that well over half of British aid to independent countries (including Commonwealth countries) is in the form of Export Credits Guarantee Department loans, tied to British exports. These create a growing debt burden, such that gross aid to India, for instance, will have to be nearly doubled by 1966-67 if India's net receipts are to remain at their present level. If future debt-service commitments are taken into account, the authors continue, the "real" value of total British aid is reduced to about half its nominal value.

Direct overseas investments by British companies are estimated by the Board of Trade at a book value of £3,600 million. Including accumulated depreciation for fixed assets, the amount rises to nearly £4,500 million. Current market values are, of course, in many cases much higher. Moreover, the figure excludes oil, insurance and banking—three industries in which British companies have particularly large investments abroad. Clearly, Britain has rebuilt its overseas investments on a large scale since the sales and losses which reduced the pre-war total during the war years. Well over half the investments are in the overseas sterling area—a total of nearly £2,000 million. Much the biggest single component is the investment in Australia, which is estimated at £522 million. Next comes South Africa with £269 million and India with £256 million. Malaya follows with £126 million. Net assets of direct investment in North America just exceed £1,000 million, of which £672 million are in Canada. The figure for Europe is £362 million of which almost £250 million is in the Common Market. Manufacturing industries account for the great bulk of the holdings, but agriculture (including plantations) and mining together make up about a fifth.

U.K. Investment

The estimates of book values are for the end of 1962. Other Board of Trade estimates indicate that the U.K.'s stake in direct company investments abroad is being steadily increased year by year. Between 1960 and 1963, annual additions varied only from £209 milion to £247 million. Last year, almost half the new investment of £223 million was financed by unremitted profits. Altogether, in each year since 1959, the total earnings of private direct investment were bigger than the new amounts invested. In 1963, when the figures for the first time included insurance earnings, the figure rose to £312 million. Only oil now remains excluded from the annual figure.

Per contra, direct investment by overseas companies in the U.K. rose in 1963 to £150 million, returning roughly to the level of 1959 after three years in which investment (omitting the exceptional Ford deal of 1961) has been running at a lower level. About half the foreign investment was financed by reinvested profits: in most years the new investment was roughly equal to the earnings of the companies concerned from their U.K. activities. The Board of Trade Journal, which contains the new estimates in some detail, makes this comment: "On the basis of these figures there is no evidence that American investment—which is thought to have exceeded £100 million in 1963—has been diverted away from the United Kingdom.

The total net asset value of all overseas-owned businesses in the U.K. —excluding oil, insurance and banking—at the end of 1962 is estimated at £1,500 million or, including depreciaion, at £1,870 million. Of the former figure, £1,081 million is accounted for by U.S. companies established in Britain, and £234 million by companies in western Europe, of which the Common Market makes up only £92 million.

British Research

The British Government is spending more than £2 million a year on research for the developing countries. An outline of its scope is given in a White Paper just issued by the Department of Technical Co-operation—*Research Assistance for the Developing Countries* available from H.M. Stationery Office.

Africa and the West Indies are the areas in which the main effort is concentrated, but the range of activity

is wide—from bilharzia research in Tanganyika to studies in animal nutrition and on cocoa in the West Indies and soil surveys in Sarawak. More than one-third of the money is spent in Britain on research in home-based institutions. The report points out that the Anti-Locust Research Centre in London, with its new laboratories and specially designed breeding rooms, has become the main establishment in the world for advice and information on locust and grasshopper research and control.

The Tropical Products Institute, also in London, gives advice to countries all over the world on new uses for tropical products, market surveys, new ways of processing tropical crops, and preventing damage to crops from various natural causes. Other comparable research centres in Britain include the Tropical Stored Products Centre in Slough, the Tropical Pesticides Research Unit in Porton, the tropical section of the Road Research Laboratory at Harmondsworth, and the tropical division of the Building Research Station in Garston, Watford.

British shipowners who have traditionally operated services to and from Karachi face crippling competition as a result of the decision of the new Pakistan National Shipping Line to increase its fleet from seven to 34 ships by the end of next year. Pakistan will try to capture at least half the trade, and plans to run services to all parts of the world. Ships are being sought from many countries, including Britain. Some are being bought second-hand and others are being specially built. The line's new flagship, the *Abasin*, 5,500 tons, is now on her maiden voyage from London to Pakistan.

Stock Exchange Turnover

In order to assist the monetary authorities in their study of the financial system and its working, the London Stock Exchange undertook some time ago to obtain turnover figures from members. From the beginning of September stockbroking firms are being asked to supply the Stock Exchange Council with daily details of business done. Returns are to be submitted by noon of the following day, showing separate figures for purchases and sales and the number of bargains in five major categories of security. These are British Government securities, local authority loans, overseas government securities, other fixed interest stocks, and equities.

The returns will be collated under conditions of secrecy and the aggregates passed in confidence to the Bank of England and Central Statistical Office within 24 hours. At the end of each month, the monthly totals will be published by the Stock Exchange. It is also proposed eventually to obtain an analysis of bargains according to category of client, but this will not begin for some months. In a letter to senior Partners, Lord Ritchie of Dundee, the Stock Exchange Council's chairman, says that each broker firm will be allocated a code number which will be changed every three months. The returns will bear no other identification and will be destroyed immediately. Only the Council secretary and his assistant will know the codes.

I.J.M.A. URGES GOVERNMENT TO HELP INDUSTRY

WORRIED about the alarming loss of sacking markets to Pakistan, the Indian Jute Mills Association has appealed to the Central Government "to come to the industry's aid so that a concerted effort can be made to win back lost markets and to ensure that India obtains a fair share of any rise in world demand." An I.J.M.A. delegation, led by Mr. R. H. Morrison, has been discussing the problems facing the industry with the appropriate ministries in New Delhi since Monday. It is likely to make concrete suggestions for devising suitable reliefs to the industry, without infringing the G.A.T.T. fair trade practices, to help it meet the unfair competition from Pakistani mills. The fixing of the targets for jute goods production and exports in the fourth plan will also figure on the agenda.

A Press note issued by the I.J.M.A. in Calcutta during the week-end says that the sharp increase in stocks during July emphasises the need for immediate action to avert a situation which will be detrimental to the country and the industry. Local conditions have, no doubt, contributed to the big rise in sacking stocks. But industry circles feel that it will not be possible to achieve the export targets without stimulating overseas demand, particularly for sacking. The I.J.M.A. deplores the inordinate delay on the part of the Government in extending positive assistance to the industry to counteract the advantages offered by Pakistan to her mills.

Pakistani Industry Expanding

The Press note says that the Pakistani industry has already been operating at a level of 325,000 tons a year, or about 25 percent of India's production. Besides, the plans in various stages of implementation in that country will raise the capacity by 20 percent over the next 18 months. "In striking contrast to the fluctuating fortunes of the Indian industry", continues the Press note, "the Pakistani jute mills have enjoyed uninterrupted prosperity since their very inception". It has enabled them to build up great corporate strength. The fact that the Pakistani Government is ready to pay an additional subsidy of 10 percent, even under such conditions of prosperity, can only be seen as a measure of its resolve to expand at the cost of the Indian industry, the note says. What is needed at the moment is a "boldly conceived plan of assistance to the industry to help it achieve the desired objective."

Margins for T.S.D. Contracts

In order to arrest unhealthy speculation in raw jute and gunnies in the spot market as well, the East India Jute and Hessian Exchange has imposed margins for trading in T.S.D. contracts from 13th August. *Bona fide* export commitments and Government tenders have been exempted from the margins. Besides, no margin is payable by a member of the Jute Goods Dealers Panel or the Jute Goods Manufacturers Panel up to specified limits under certain conditions.

Every member of the Association is required to pay margins on the total of the outstanding long transactions in gunnies due for delivery in August, September, October-December, January-March and April-June and for all varieties of raw jute, including cuttings and mesta for August and September deliveries whenever their respective closing rates rule at or above the following maxima:

Constructions	Price ceilings	Margin rates
Hessian (100 yards)		
40in. 10oz. ...	Rs. 52.00	Rs. 13.00
	Rs. 54.00	Rs. 27.00
40in. 7½oz. ...	Rs. 39.50	Rs. 10.00
	Rs. 41.50	Rs. 20.00
Sacking (100 bags)		
B Twills ...	Rs. 138.00	Rs. 35.00
	Rs. 143.00	Rs. 71.00
Australian Cornsacks	Rs. 143.00	Rs. 36.00
	Rs. 148.00	Rs. 74.00
Heavy Cees ...	Rs. 138.00	Rs. 35.00
	Rs. 143.00	Rs. 71.00
Raw Jute (A maund)		
Assam Bottoms ...	Rs. 37.50	Rs. 9.50
	Rs. 39.50	Rs. 19.50

T.S.D. contracts in jute goods constructions other than those mentioned above, providing for options to tender any of the above types, or providing for options to be declared at a subsequent date, will also be subject to the deposit of margins at rates specified for the particular constructions.

Sharp Rise in Gunny Output

Working at the maximum level for 216 hours in July, against 200 hours in the previous month, mills reporting to the I.J.M.A. show a sharp increase in gunny production from 107,000 tonnes to 117,700 tonnes. The output of hessian rose by 4,800 tonnes to 49,100 tonnes, of sacking by 5,200 tonnes to 46,400 tonnes, of carpet-backing by 300 tonnes to 8,200 tonnes and of miscellaneous goods by 400 tonnes to 14,000 tonnes. The mills worked at the same level for the same 216 hours during July 1963, producing 108,900 tonnes of jute goods—45,800 tonnes of hessian, 43,000 tonnes of heavy goods, 8,200 tonnes of carpet-backing and 11,900 tonnes of other goods.

Fall in U.S. Burlap Consumption

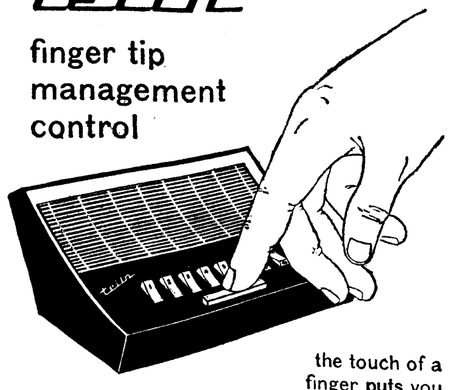
The consumption of burlap in the U.S.A. has declined from 69.5 million yards in June to 64 million yards in July. The country used 68 million yards a year ago. The total offtake for the seven months ended July 1964 has also dropped to 500.3 million yards from 531.7 million yards for the comparable period of 1963. The monthly average so far in 1964 is 71.47 million yards, against 75.95 million yards last year. U.S. stocks rose during July from 285.8 million yards to 300 million yards. Of these, 152 million yards, against 156.8 million yards, were spot stocks and 148 million yards, against 129 million yards, were afloat. They were 297 million yards—176 million yards spot and 121 million yards afloat—at the end of July 1963. At the July level of consumption, the stocks will last 4.69 months. The corresponding stock duration on the same basis a year ago was 4.36 months.

Statistics of U.S. burlap imports show that the total offtake of hessian for the six months ended June 1964 has declined by 17.71 percent to 487.9 million yards from 593.4 million yards for the corresponding period of 1963. Imports from India dropped by about 20 percent from 509.2 million yards to 406.9 million yards, and from other countries from 31.5 million yards to 27.5 million yards. Those from Pakistan, however, showed a fractional increase from 52.7 million yards to 53.5 million yards.

Industry circles in Calcutta attribute the drop in U.S. offtake to the gradual shift to the use of paper and synthetic packaging materials. The big "ventilation advantage" offered by gunny packaging has been negatived with the introduction of woven or perforated kraft paper bags, which allow contents like potatoes to get air during storage and transit. Paper bags are not subject to such fluctuations in prices and supplies as hessian bags.

THE JUTE MARKETS

Manufactured Goods: Erratic conditions marked trading in the Calcutta gunny market during the past week. In spite of the imposition of heavy margins on trading in T.S.D. contracts, the market could not recover from the effects of the bull pressure prevailing during the two previous weeks. Open market transactions declined appreciably and prices fluctuated within narrow permissible limits without attracting penal margins. But bulls remained active on the kerb liquidating their outstanding long positions. As a result, kerb prices gradually dropped considerably. Excepting scattered hessian transactions with the U.S.A. and the U.K., overseas business was negligible in the spot market. Shippers and shorts, however, were obliged to cover their open positions for ready and near delivery at higher prices. The publication of the higher production figures for July did not have any effect on sentiment. In the hedge market, sacking for August and November continued to be firm gaining daily by the permissible fluctuations after which official trading in these were suspended for the day. Hessian also moved in the same way till the week-end. From Monday, hessian for August and November suffered a mild setback on reports of a decline in U.S. burlap consumption and an increase in American stocks during July. On Tuesday, reports of a sharp decline in fibre prices in Pakistan softened spot gunny prices by about Rs. 2 in heavy goods and about Re. 1 in 40in. 10oz. hessian from the day's top levels. Trade circles believed that the drastic action so far taken by the authorities would help restore normal conditions in the market in a couple of weeks. Fluctuations were wide. Turnover was heavy in the hedge market, and moderate in the spot market. The undertone was hesitant at the close.



Wednesday's quotations were as follows:

	Aug.	Sept.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	36.40	36.50	36.75	37.00
40in. 8oz.	39.00	—	—	—
40in. 10oz.	48.25	48.50	48.75	49.25
B Twills	132.25	132.50	133.00	134.00
Cornsacks	135.50	136.00	135.50	136.00
Heavy Cees (Plain)	132.00	131.50	132.00	133.00
A Twills	158.50	159.00	160.00	160.50
Liverpools	146.50	147.50	148.00	149.00

Raw Jute: Steady conditions prevailed in the raw jute market during the past week in spite of a gradual increase in upcountry arrivals and reports of a sharp decline in fibre prices in Pakistan. Agency prices continued to rule above Calcutta parity levels due to the reluctance of holders to extend commitments at prevailing prices. Sellers in Calcutta also became cautious in view of the upcountry trend. Mills were keen on replenishing their stocks as the 560,000 bales of raw jute held by the Jute Buffer Stock Association at the end of June had already been absorbed by mills. But the prevailing high prices of raw jute made it difficult for them to offer gunnies at prices which the market could afford to pay. All offers of better-grade fibre around the existing levels for ready and near delivery positions were absorbed. In the hedge market, Upper Assam White Bottoms for September continued to rule firm, the price gaining daily by the permissible fluctuation of 25 paise. Turnover was moderate and the undertone

THE U.K. JUTE MARKETS

FIBRE PRICES RISE BUT BUYERS HOLDING OFF

(FROM OUR DUNDEE CORRESPONDENT)

SINCE the beginning of this month, prices of raw jute in Pakistan have risen by £30 to £40 a ton. The main reason for this is the fear that the crop will not produce sufficient fibre to meet demand. Flooding has also taken place in the growing areas, but this should not reduce the quantity of jute available, although it may spoil the quality of the fibre.

There is no doubt that a certain amount of panic buying has taken place and this has helped to force prices to a very much higher level. Imports of loose jute from upcountry in Pakistan into baling stations are very small and shippers are finding it difficult to obtain supplies. With a late crop and the Pakistani mills taking regular supplies, no stocks are accumulating. Some shippers are remaining out of the market until they have actual stocks of raw jute.

Dundee spinners have shown a small interest at the higher level of values, but generally they are refusing to pay the prices asked until the position becomes more stable. Offers being made in Dundee are scarce and irregular. Export Lightnings range from £125 to £140 and Export Hearts from £125 to £138, c.i.f. U.K., for September-October shipment. Grade Tossa-4 ranges from £135 to £144, Outport Tossa-2/3 from £125 to £138, and Outport Tossa-4 from £115 to £120, September-October. Cuttings are named at £87 for N.C.

The Siam jute market is also much dearer with prices at £93 for grade A, at £89 for grade B and at £85 for grade C, delivered mill Dundee for November-January shipment.

The Calcutta goods market was dearer, but there was some easing of the position during the past few days. Quotations were at 78s 11d for 40in. 10 oz. and at 59s 7d for 7½oz. a 100 yards c. and f., U.K., for August shipment, at 79s 3d and 60s September and at 80s 1d and 60s 4d October-December. B Twills were at 221s 3d, 222s and 223s 6d for the respective shipment periods.

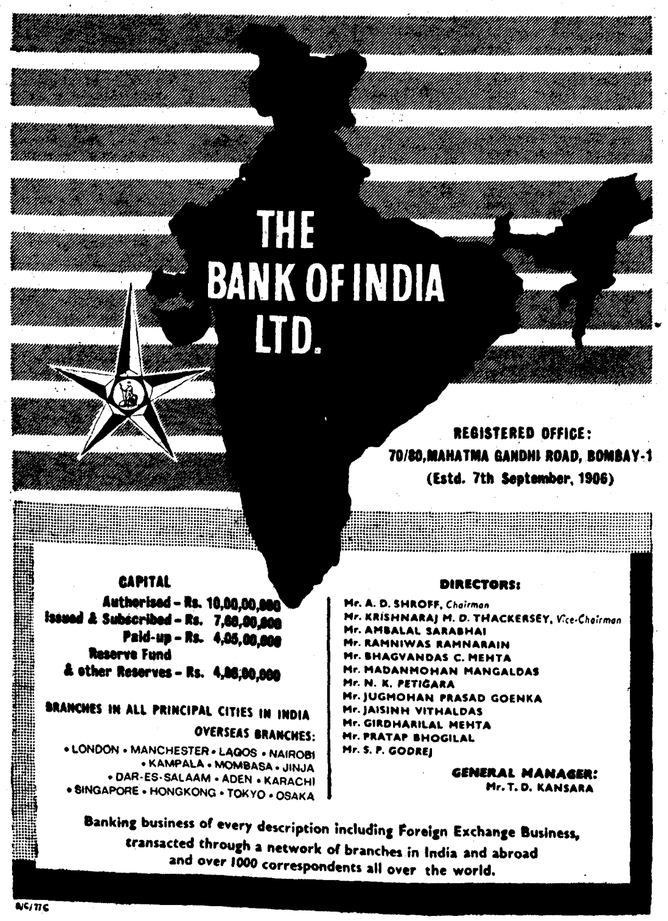
A substantial business took place in yarns and cloth at Dundee before the rise in raw material prices. Producers are now well placed for delivery several months. So far spinners have increased their yarn prices by only 58d a lb which is eual to about £5 a ton. On the other hand, they are unwilling to transact further business until more is known about the raw material position.

THE PAKISTANI JUTE MARKETS

RAPID RISE IN FIBRE

(FROM OUR DACCA CORRESPONDENT)

WITHIN the last month and a half, the price of the lowest grade of loose jute has risen from Rs. 24 a maund to Rs. 46 a maund and at the present rate, by the time this despatch is printed, the price may even be Rs. 10 higher. Most balers, particularly the larger ones, continue to buy loose jute as if every maund available might well be the last bit of jute to be seen this season. Naturally the sellers, taking full advantage of this undisguised eagerness, have been raising prices by as much as 10 percent daily. Since even such daily increases in prices has not dampened the enthusiasm of the buyers, the brokers and *beparis* have taken to withholding the jute for a few days in the expectation of still higher prices.



There is no doubt that a level of prices has been reached, which can neither be paid for by the overseas buyer nor, for that matter, by many of the local buyers. As far as the former is concerned, there comes a time when it is cheaper either to stop the mills or to buy substitute fibres. In the case of local buyers, there are definite limits to their finances and when 20,000 bales, which is not a large quantity, cost the baler £200,000, it is not difficult to appreciate that the baler must stop buying. One has also to remember that any sterling credits overseas will be difficult to get out of the London agents in a season like this.

Furthermore, it takes practically two months after a baler has bought his jute before he can get his money back by exporting. The excitement continues mainly because two big balers are still covering their short position. Others, who want to continue buying, are having to pay these high prices or sit out. With the market rising at this speed, it takes a lot of courage even for a baler, who has a long position to stop buying and wait for lower prices. Nevertheless, logically it is impossible for these prices and these rises to be maintained and if overseas buyers pay even the new E.P.C. prices, now would appear to be the time to sell.

A recent survey of the crop in the Mymensingh and north Bengal areas did not show very much damage from floods. That is to say, there are no indications that large quantities of jute have gone under water or been swept away as was the case three seasons ago. There are, however, indications that in some areas, rice was sown in the jute field which is a positive sign of reduced sowings. The vast areas flooded confirm reports of excessive water, which will definitely affect the quality of the crop, and to a lesser extent, the outturn possibly by another 5 percent. What appears to be most tragic is the damage to the quality, firstly by excessive water and secondly, by receding floods which leaves hard-centred jute. With the present high standard of Export Hearts, this will even reduce the outturn of Export Hearts and will force some buyers to start purchasing S.M.R. To take S.M.R. from any one except from highly reputable balers is an extremely risky business.

Unfortunately, the Faridpur crop, which up to July was the best sown and which gave every indication of producing excellent jute, has suffered the worst from flooding. Since this is a tossa area, which cannot stand much water, this means that the quality of hard district tossa will once again be poor. In pucca bales, the rise in prices has not been so sharp as in loose jute. The latest report in cuttings is that business has been done at £95 f.o.b. Little business is reported in other pucca bales because there are no sellers.

From overseas high prices are reported, but very little about actual business. To report the current E.P.C. values is impossible since they are out of date within 24 hours. To push Export Hearts up by £23 in two days as has happened is unprecedented. Meantime, "Korean" prices have been exceeded, and flood waters in the towns of Dacca and Narayanganj are creating a sentiment of flood damage to the crop which exceeds the facts of the case.

MADRAS CONSIDERING TAX RELIEF FOR TEA

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Madras Government is considering the question of giving relief for tea under the agricultural income tax. This was disclosed last week by Mr R. Venkataraman, Madras Minister for Industries, while addressing the annual conference of the Association of Planters of the State of Madras, held in Coonoor last week. The Governor of Madras, Mr. Jaya Chamaraja Wadiyar, who inaugurated this conference has urged planters to devote increasing attention to improving the quality of plantation products, particularly tea, so as to enable Indian tea to hold its own amid the stiff competition in the world markets. Quality improvement was even more important than stepping up production. The chairman of the Association, Mr. M. R. M. Punja, made a bitter complaint against the unbearable tax burden on the industry and said that unless the industry had the capacity of generating and ploughing back substantial resources of its own, credit would not be forthcoming and loans could not be serviced. He pointed out that the various institutional credit facilities which existed or were being proposed could only supplement and not substitute for the inherent financial soundness of the industry itself. "Before one thinks of facilities for credit, one should ensure the creditworthiness of the industry", he added.

Mr. Punja said that the Central Commerce Minister, Mr. Manubhai Shah's recent announcement that replanting expenditure would be allowed as a legitimate charge in the assessment of *income tax* was encouraging and suggested for the consideration of the Government that the field assets in the form of stands of tea, coffee and rubber were in no way different from the plant and machinery in other industries and were, therefore, entitled to depreciation. He noted with satisfaction that Madras was the first State to give the lead in the matter of the depreciation element in the case of rubber as recommended by the Tariff Commission. He pleaded for similar gestures in the case of tea and coffee also. The increase of tax burden on a static industry might in due course result in the reduction of revenues from a long-term point of view. Therefore, it would be fiscal prudence to aim at increasing the gross tax revenues by ensuring the expansion of production.

Rationalisation of the excise duty was another demand of Mr. Punja. He said that the Nilgiris was the only district in south India which had to pay a penalty for its quality, as it fell in Zone IV, notwithstanding that a considerable proportion of the production in the district was common tea and was no different from the teas produced in Zones I and II, which were paying lower rates of excise. He also pleaded for a drawback on excise duty on exported teas for encouraging exports. As regards sales tax, the 5 percent levied on teas exported from Cochin continued to be a handicap in the way of enhancing exports as it added to the costs, and thereby affected hte competitive position of Indian tea.

Mr. Venkataraman felt that the internal market would stand the levy of a 5-percent sales tax. However, he agreed that there was a case for reduction in the case of exported tea. He asked the Association to submit concrete proposals to the Centre which was now considering a reduction in the rate of levy of sales tax on exports. Mr. Venkataraman said that he was sympathetic to the demand of reclassification of excise zones, as common teas should not pay the same high rate as quality tea. He welcomed concrete proposals for differentiation.

Mr. Punja referred to the "virulence" of *panchayat* house tax which had risen to an "intolerable degree", and said that the recommendation of the Working Group on Housing for exempting the workers' houses provided by the employer free of rent as a statutory obligation should receive the immediate consideration of the State Government. The tax levied on the electricity produced by tea and rubber factories with their own generators. particularly during the times of power crisis or in response to the appeal of the Electricity Board for co-operation was. he pointed out, iniquitous and unnecessarily added to costs. He appealed to the Minister to grant the industry total exemption from this unjustified impost. The chairman stated that factors other than tax which added to the costs of production were the welfare commitments such as housing and medical facilities for estate workers. The time had come when. as recommended by the Working Group on Housing, a helping hand from the Government by way of a subsidy and long-term adherence to the standards for housing would go a long way in enabling the industry to better its performance. he said.

Referring to the forest legislation of the Madras Government; he said that restrictions have now spread even to the felling of shade trees in planted areas in the course of routine agricultural operations. He appealed to the Government to end the uncertainties by denotifying all the reserve lands of plantations without further delay. In cases. where estates had put up proposals for extending their planted area. the specified lands should be denotified forthwith and permission granted to proceed with clear-felling. Unless the restrictive forest laws were placed on a rational footing, the production of tea and coffee in the Nilgiris. Shevaroys and Anamallais would be greatly retarded. he added.

The Minister said by way of reply that the Government would not give any general exemption in the case of plantations. Every case would be judged on merit. The Government, he said, was interested in improving plantations as well as preserving forest which was only 17 percent of the area of the State. As for *panchayat* taxation, the Minister said that the Government had no power to interfere and suggested that the planters should discuss this problem with the *panchayats*.

The chairman said that so far as the State of Madras was concerned, the production figures of the three main plantation crops registered a further climb along the vertical axis of the graph. Tea production touched 44 million kilograms in 1963, against 41 million kilograms in 1962. The corresponding figures for rubber were 3,169 tonnes in 1963, compared with 2,567 tonnes in 1962. Only in the case of coffee, there was a fall. production in 1963 being 7.710 tonnes, against 8,185 tonnes in 1962. But this was in keeping with the cyclical variation which was so characteristic of coffee. However, the planters had a bad luck with a long spell of severe frost towards the close of 1963, and early this year, followed by prolonged drought, unparalleled in recent memory. Production of tea is already lagging behind by 9.3 million kilograms in south India for the six months ended June 1964. Mr. Punja hoped that this was only a temporary setback.

Co-operative Tea Factory Opened

The Industries Minister, Mr. Venkataraman, inaugurated formally last week in Kundah on the Nilgiris a co-operative tea factory, first of its kind in India. The Kundah Industrial Tea Manufacturing Society, under whose aegis this factory was set up last year, has now a membership of 140 small tea growers in the Kundah Firka. This factory has been started for the benefit of the large number of small tea growers on the Nilgiris. The directors claim that they were able to pay 80 paise a kilogram of green leaf and sometimes 90 paise to small growers who supplied green leaves to this factory for the manufacture of tea, against 40 to 50 paise a kilogram paid by privately owned factories in the locality. They were also able to export 107,628 kilograms manufactured in this factory to countries like the U.K., Egypt and Russia during 1963-64 and earn foreign exchange worth Rs. 6 lakhs. Besides, 80 percent of the members of the society are paying a sum of Rs. 500 a month for the cumulative deposit scheme of the Government of India. The factory started working from September 1963.

Irregular Price Trend at Tea Auctions

A Special Correspondent writes: With a small increase in the offerings of north Indian teas in Calcutta and London, some slight irregularity in demand was noticed in both centres. In Calcutta, the tone was reported hesitant at the opening, then firmer in mid-sale but again easier at the close, but some good prices were recorded for the best teas and Darjeelings sold readily.

The London sale included only 5,037 chests from north India, and prices were inclined to be easier except for good Assams which met with a useful enquiry, but Dooars teas were irregular, while Africans were also occasionally easier. Colombo reported a serious fall of from 20 to 30 pice; said to be caused by the decision of the Iraqi Government to restrict tea imports. Iraq imports about 9,000,000 dinars worth of tea every year.

The 11th August Sale at Cochin followed normal lines with low mediums and mediums fetching prices round last year's level, but good mediums were lower and Nilgiri B.O.P. fetched Rs. 4.75 to Rs. 7 this year against Rs. 5.20 or Rs. 9. in 1963. At the 13th August sale in Calcutta 31,669 chests of dusts were advertised for sale. There was a fair demand, but at considerably lower levels. The price range was Rs. 4.20 to Rs. 6.00 with a few good Assam C.T.C. dusts fetching up to Rs. 6.50 a kilogram.

During July, weather conditions in many districts were too wet, and floods affected plucking. Nevertheless production moved ahead again to show a surplus of round 30.5 million lbs at the end of the month. Immediate prospects are reported fair in upper Assam and fair to good in central and lower Assam. Cachar is experiencing difficult climatic conditions, but in central Dooars, the outlook is good and similar hopes hold good in western areas, but in east Dooars, prospects remain fair, Terai is producing below normal, and in Darjeeling, abnormally wet weather was reported, but prospects remain fair.

Since independence tea from Indonesia shipped to Europe has been mostly sold through Hamburg and Antwerp, but it is possible that the old selling agencies with Amsterdam may be revived. The Amsterdam interests are said to have approached the India. Tea Board's representative in Brussels with a suggestion to ship a portion of Indian production to Holland for disposal. The Dutch know and understand tea and might help develop. Italian and Swiss interests are also reported to have made a reference to the Tea Board for advice in promotional campaigns, and Indian tea will be made available at the Brussels food fair in October and again in Paris in November.

That is the point one hopes the recently appointed Tea Committee will be able to deal with. But Mr. Punja had further advice to offer. He noted "the increase of the tax burden on a static industry must in due course result in reduction of revenue. Therefore, it would be fiscal prudence to aim at increasing the gross tax revenues by ensuring the expansion of production." Rationalisation of excise duty on tea was also overdue. The 5 percent tax levied on tea exports from Cochin was a handicap to the expansion of exports.

In the 6th issue of *Capital*, there is a reprint from its issue of 11th August, 1904, relating to costs and production. The matter is of live interest today. Firstly, the area planted on 31st December, 1963 was 524,827 acres. Now it is 334.093 hectares. Approximately 801.000 acres. Between 1884 to 1903, the planted area was increased by 85 percent. The five year period 1896-1900 witnessed extension of approximately 106,770 acres. The cost was from £23 to £30 an acre. Today it is Rs. 4.000 to Rs. 6,000, in Darjeeling. The above extensions began to produce full crops by 1904 with a consequent fall in commodity prices, but this correspondent seems to remember the low price level as being due, in part, to stocks being released in the U.K. at end of the Boer War.

The above facts have a bearing on present planning. If with short labour supply the extensions recorded could be planted out labour can easily do better today, but costs rule out any private extensions on a grand scale. The money will have to be found in India whereas in 1904, 90 to 95 percent of capital in tea belonged to non-residents.

Under the heading of "Finance for Tea Industry" a Calcutta daily publishes another essay on this subject. It says, "Under the plan, the industry will be required to produce an additional 250 million lbs, raising the country's target to 1,000 million lbs. Estimating the yield at 1,000 lbs an acre, the new area that should be brought under tea comes to 250,000 acres. At Rs 4,000 an acre, the cost of planting would be Rs. 100 crores". Today to spend Rs. 100 crores on tea development will merely add to inflation. It cannot produce the goods for years and if ever financed on these fantastic lines will spell losses, not profit.

It is not easy to forecast what the Tea Committee will recommend because of the simple fact that if tea is to remain a profitable industry, the Government will have to assist by lending cheap money, reducing taxation, refunding excise on exports and arranging for cheaper river transport. Meantime, it is doubtful if internal consumption is keeping pace with the population increase.

COMPANY AND PUBLIC NOTICES

JARDINE HENDERSON, LIMITED

Notice of Annual General Meeting

NOTICE is hereby given that the eighteenth annual general meeting of the members of the above-named company will be held at the registered office of the Company, No. 4, Clive Row, Calcutta-1, on Tuesday, the 29th day of September, 1964 at 11-15 A.M. for the following purposes :—

1. To receive and consider the Audited Accounts for the year ended 31st March, 1964, the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors thereon.
2. To confirm the dividends already paid on the Preference Shares and to declare a dividend on the Ordinary Shares of the Company.
3. (a) To appoint a Director in place of Mr. D. Fordwood who retires at the forthcoming annual general meeting.

(b) To appoint a Director in place of Mr. I. F. Morriss who retires at the forthcoming annual general meeting.

(c) **(As special business)** To appoint a Director in place of Sir Asoka K. Roy who retires by rotation at the forthcoming annual general meeting and in this connection to consider and if thought fit to pass the following resolution of which special notice as required by section 281 of the Companies Act, 1956 has been received by the Company, viz :—

"That in accordance with the provisions of section 281 of the Companies Act, 1956, Sir Asoka K. Roy who has attained the age of 78 years and who retires from the Board at this time be and is hereby re-appointed a Director of the Company whose period of office will be liable to determination by retirement of Directors by rotation and it is hereby specifically declared that the age limit of the Directors prescribed by section 280 of the said Act shall not apply to him and that he be remunerated by way of a fee of Rs. 600/- for each meeting of the Board attended subject a maximum in the aggregate of Rs. 6,000/- per annum."

4. To appoint Auditors and to fix their remuneration.

Notice is also given that the Share Transfer Books of the Company will be closed from 16th September to 29th September, 1964, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself on a poll and a proxy need not be a member of the Company.

By Order of the Board,

JARDINE HENDERSON, LIMITED,

Sd. C. EVANS,

Secretary.

4, Clive Row,
Calcutta-1,
13th August, 1964.

Note : 1. The dividend if approved will be payable on and after 23rd October, 1964 to those members whose names are registered in the books of the Company on 29th September, 1964.

2. **The explanatory statement required to be annexed to the notice convening the general meeting pursuant to the provisions of section 173 of the Companies Act, 1956 is being forwarded to the members.**

GOVERNMENT OF UTTAR PRADESH

Finance Department

Dated Lucknow, August 4, 1964

PRESS NOTE

4½ per cent Uttar Pradesh State Development Loan, 1976

The Government of Uttar Pradesh are floating a loan of Rs. 10 crores in order to finance development schemes particularly those relating to electricity, irrigation and industries. The loan will open for subscriptions on August 24, 1964 and will close on August 29, 1964, unless closed earlier. The main terms of the loan are that the issue price will be Rs. 99.75 for every Rs. 100 of the loan applied for ; the loan will have a currency of 12 years from August 24, 1964, and will be repaid at par on August 24, 1976 ; the loan will carry interest at the rate of 4½ per cent per annum from August 24, 1964 payable half-yearly on February 24 and August 24, the payments being subject to tax under the Income Tax Act, 1961. Subscriptions for the loan can be made in the form of cash or cheque or securities of 4 per cent Uttar Pradesh Loan, 1964 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India, the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore, the branch of the State Bank of India at Patna and the branch of the State Bank of Hyderabad at Hyderabad.

Full details of the terms of the loan are contained in Finance Department notification no. B1—3054/X—88-64, dated August 4, 1964, copies of which, along with the application form, are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh—

Revenue position—During the years 1959-60 to 1962-63, the Revenue receipts and expenditure were as follows :

(Figures in lakhs of rupees)

	Revenue Receipts	Revenue expenditure	Surplus (+)
1959-60	12,955	12,816	+139
1960-61	14,835	14,431	+404
1961-62	15,399	15,111	+288
1962-63	19,000	18,867	+133

The Accounts for 1963-64 have not yet been finally closed, but the indications are that the year might close with a revenue surplus of about Rs. 10 crores.

Balances in the Reserve Funds—The balances at the credit of the various Reserve Funds at the end of 1963-64 were Rs. 65.40 crores of which a sum of Rs. 54.84 crores is invested in Government securities.

Debt position—The total debt of the Government of Uttar Pradesh as on March 31, 1964 was about Rs. 406.59 crores consisting of Rs. 331.63 crores as loans received from the Government of India, Rs. 64.75 crores on account of open market loans, Rs. 9.31 crores representing loans from the Agricultural Credit Fund of the Reserve Bank of India and from the Life Insurance Corporation of India, etc., and a sum of Rs. 90 lakhs in respect of issue of U. P. E. E. Act Bonds. There are Sinking Funds for the public loans (both Liquidation and Depreciation) and the balance at the credit of these Funds which amounted to Rs. 27.40 crores on March 31, 1964 is invested mostly in Government of India securities. A sum of Rs. 16.83 crores—mostly invested—is also available in the Sinking Fund built up for the amortisation of loans obtained from the Government of India which are repayable in lump sum. Besides the above debt of Rs. 406.59 crores, the State Government also issued Zamindari Abolition Compensation Bonds and Rehabilitation Grant Bonds, the outstanding balance of which on March 31, 1964 amounted to Rs. 81.40 crores.

Assets of the Government—Against the outstanding debt of Rs. 406.59 crores there are assets in the shape of the Ganga, Yamuna and Sarda Canals, various other canals and the State Tube-wells, Government Cement Factory, Government Precision Instruments Factory, Government Bus Services and Rihand Electricity Scheme, in which a total sum of about Rs. 321.44 crores has been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances made amounting to about Rs. 194.31 crores. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

MACHINERY WANTED

DIESEL Engines in good running order two each 250 HP or Four each 125 HP offers stating make, year of manufacture and speed to Box 4812 "CAPITAL", P.O. Box 14, Calcutta-1.

DELTA IRRIGATION PROJECT

TENDER CALL NOTICE

Sealed Quotations are invited to be received by the undersigned upto 3-00 P.M. on the 20th September, 1964 for the supply of 400 (Four hundred) square metres of 12 m.m. thick Expansion Jointing material. The tenderers should supply sample along with their tenders. Tenders will be opened at 3-30 P.M. on the above date in the presence of the tenderers or their authorised agents.

The authority reserves the right to reject and or all tenders without assigning any reason thereto.

Sd/- B. Misra

Superintending Engineer
Delta Irrigation Circle
Keshari Nagar, Bhubaneswar-1

MASSIVE PUBLIC OUTLAYS CAUSE INFLATION

THE Reserve Bank's *Report on Currency and Finance* for 1963-64 provides a strong statistical, although verbally mute, indictment of the Government's prodigal financial and fiscal policies, which have landed the country in the morass of inflation. If the economy has produced more bad news than goods, the fault lies mainly with the Government's unrealistic fiscal and financial policies on the one hand and extravagant spending programmes on the other. The outstanding feature of the economic scene, says the Reserve Bank report, has been the strong and persistent pressure on the price level, the rise in the wholesale price index being much larger than in any year since the commencement of planning in 1951, except in 1955-56. It adds that the accentuation of inflationary pressures during the year was basically the outcome of the widening gap between aggregate demand and supply. The situation during the months following the period covered by the Reserve Bank report has been worse still. The rise in prices since April 1964 has been even bigger than the increase during the whole of 1963-64. During the four months from April to July this year the wholesale price index has shot up by about 15 points (base year 1952-53 equals 100), as against a rise of only 12 points during 1963-64.

On the supply side, production has stagnated both in the farms and factories. Agricultural output failed to respond to the Government's pep talk and grandiose schemes, while industrial production, particularly of consumer goods, showed only a nominal improvement. In brief, there is now only scarcity to distribute. On the demand side, population has been expanding merrily at an annual rate of 2.3 percent or 2.4 percent, which means that some 10 million new mouths have to be fed every year. The Government, on its part, has been assiduously engaged in eroding the value of the rupee by indulging in an unrestrained spending spree, largely financed by the Security Press. The Central Government's expenditure in 1963-64 is likely to shoot up by Rs. 723 crores, and the situation is aggravated by the fact that it comes in the wake of an almost equally large rise of Rs. 684 crores in the preceding year. Similarly, the States' outlay in 1963-64 is expected to jump by Rs. 342 crores on top of a rise of Rs. 200 crores in 1962-63.

The massive outlays on wasteful and unproductive schemes and the huge investments on public-sector projects which have offered poor returns, have had the effect of pumping a large amount of money into the economy without a corresponding increase in production. This has amounted to concealed deficit financing, which in its direct, recognisable form has, by itself, far exceeded the limits of prudence. The State Governments too have indulged in reckless expenditure and in the process taken unsecured overdrafts on a grand scale from the Reserve Bank; these overdrafts have ultimately gone to swell the volume of deficit financing. In the wake of such mammoth public outlays, a price crisis is only inevitable. Obviously, the Planning Commission could not have exerted a moderating influence on the Government since that august body has in the first instance provided the inspiration for the reckless outlays by setting grandiose targets. In the circumstances, only the Reserve Bank, as the country's chief monetary authority, could have given the Government a counsel of moderation and sobriety. It is not known whether such advice was indeed given or whether the Bank has remained, like any other department of the Government, a passive onlooker of the developing crisis. A former Governor of the Reserve Bank in fact did fear that serious differences could develop some day between the Bank and the Government over the latter's budgetary policy, in particular, its light-hearted recourse to huge deficit financing.

Belatedly, the Central Finance Minister has decided to cut non-development expenditure by Rs. 70 crores, but in the context of the magnitude of the Budget this is more a token gesture than a serious attempt at slashing public expenditure. There is considerable scope for curtailing development outlay too. Indeed, to make any perceptible impact on prices the total Central outlay, to begin with, will have to be brought down to at least last year's level, a step which will entail the slashing of development and defence expenditure by about Rs. 400 crores. Equally important, deficit financing will have to be halted immediately. The State Governments too should cut their outlays drastically and accept an austerity programme. These are the basic requirements of any policy which seeks to curb the inflationary pressures in the economy. The Reserve Bank obviously cannot be unaware of these imperatives and it is to be hoped that it will have the courage to spell them out to the Government.

The Reserve Bank report observes with an air of smug satisfaction that the Central Budget has refrained from effecting any major increase in indirect taxes in order that inflationary pressures are not accentuated. While this may be true of the current year's Budget, it cannot be gainsaid that the cumulative burden of indirect taxes levied in past years has already sent a big wave of cost inflation through the economy. Central levies on commodities alone have risen from Rs. 300 crores to Rs. 980 crores between 1955-56 and 1963-64, while State taxes have increased from Rs. 350 crores to Rs. 950 crores during the period. These increases have greatly added to industrial costs and prices.

Again, the Reserve Bank has patted the Central and State Governments on their backs for initiating "bold programmes of resource mobilisation" in order to contain the inflationary consequences of huge budgetary outlays. While taxation may have an anti-inflationary impact, the Reserve Bank's thinking seems to miss certain vital points. First, it cannot be seriously contended that a certain sum of money mopped up as tax will exactly offset the economic effect produced by it when it was first put in circulation. Second, the disinflationary effect of taxation will depend largely on how the proceeds are spent. If they are spent on unproductive schemes or slow-yielding projects—as they indeed have been—they will only add to

the pressure on prices. The Reserve Bank report says, with evident approval, that the Central Budget "seeks through concessions and incentives to infuse confidence in the capital market." Obviously, this stands forcefully contradicted by what has happened in the wake of the Budget. The present state of the stock markets and the failure of many good new issues clearly shows how far the Budget has succeeded in this aim. The Government's tax policy has, in fact, depressed the capital markets and queered the pitch for new industries.

Referring to the banking situation, the Reserve Bank feels happy in the thought that in spite of the wide seasonal swings in credit the position was "more comfortable than in 1962-63" because of the substantial accretion to bank resources. So the banking system was not only able to meet the greatly enhanced credit demands but was also able to build up its investment portfolio and cash reserves. It is pertinent to point out that the increase in bank resources was by no means the result of any conscious effort on the part of the Reserve Bank or the banks themselves. Nor was it the outcome of the buoyancy of the economy. It was solely an incidental benefit flowing from massive Government disbursements to the corporate sector. This was reflected in the shape of a much bigger increase in demand deposits than in term deposits.

FOURTH PLAN EXPORT TARGET

THE woolly debates on the question of exports in the fourth plan have been carried a step forward by the Board of Trade deciding in favour of a target of Rs. 5,100 crores at its meeting in New Delhi last week. The Central Ministry of Commerce and the Planning Commission engaged themselves in a wordy duel over the subject some time ago. The former stuck to a target of Rs. 5,100 crores, which has now been endorsed by the Board of Trade, while the Planning Commission wanted the target to be fixed at Rs. 5,300 crores. Since the gap between the two targets is only marginal, the whole controversy has been a waste of time. This apart, there is no point in attaching any serious significance to either of the targets, since they cannot be realistic if fixed without a clear knowledge of the likely developments during the fourth plan period. Since the outline of the latter has not yet been finally decided upon, it is too early to assess the export prospects.

The fourth plan export target seems to be completely divorced from realities. Judging from the export earnings during the past few years, it does not look as if the target is likely to be attained. Exports during 1963-64 were no doubt buoyant; during the first quarter of 1964-65 they have further improved but at a slower pace. But India will have to make tremendous efforts if she is to attain the target of Rs. 850 crores by 1966. In spite of the improvement in exports during the past year or so, they still constitute a very small fraction of the national income. The recent deliberations of the Board of Trade are nevertheless interesting because the Board has focussed attention on some fundamental principles which need to be adopted for promoting exports. But it is feared that most of the principles preached will be kept in cold storage as was done previously. It is an unexceptionable principle that the export policy must be integrated and co-ordinated with a country's economic development. Furthermore, the State Governments must be expected to help in implementing the country's export policy. The export of tea, for example, has been hindered by the irrational policies of the State Governments of Assam and West Bengal; the high rate of agricultural income tax of the Assam Government and the octroi levied by the Government of West Bengal have seriously affected tea exports.

On a careful scrutiny of the composition of India's exports, one is likely to be sceptical about the realisation of the target recently fixed. The bulk of India's exports consist of agricultural commodities. But not only has agricultural production in recent years been poor, but it still continues to be a gamble on the monsoons. An important reason for the buoyancy of exports is that the terms of trade for agricultural commodities have been favourable during the past couple of years or so. Whether the trend will continue depends on the pattern of world trade. Although efforts are being made to increase the range of exportable industrial products, the progress is likely to be much slower than expected. Besides, India will find it a hard task to get a foothold in export markets by ousting her competitors. If the export of industrial products is to be promoted, it will be essential to focus greater attention on the price, quality and after-sales service. Many Indian commodities are, in fact, being priced out of foreign markets due to their high prices and poor quality. It is unfortunate that although several institutions have been set up and large sums of money have been spent, no tangible result has so far been achieved in reducing production costs and in improving quality. Although the Government of India is believed to have set up a department to reduce production costs, nobody hears about its activities. The Planning Commission has also established a cost reduction cell, but it does not seem to have done any useful work so far.

The Board of Trade has called for restraint on consumption for promoting exports. Although exportable surpluses are essential for this purpose, the present time is inopportune for austerity. As it is, the bulk of the people are not having even the minimum essentials of civilised existence such as food, clothing and shelter. So any rise in exports will have to be backed by an increased production of agricultural as well as industrial commodities. Vigorous measures must, therefore, be taken to step up production at all levels. Although the Government has given incentives to export-oriented industries from time to time, their beneficial effects have been greatly neutralised by frequent changes and shifts in policies. So it is essential to initiate policies on a long-term basis in order to help industries to undertake export production programmes.

The lack of proper policies has been responsible for the loss of substantial exports in many instances. Because of domestic shortages, the export of vegetable oils has had to be stopped. Confidence of overseas customers is shaken unless continuity in supplies to foreign markets is assured. Again, sugar exports have had to be cut because the Government has miserably failed to stimulate production. Since it is planned to step up iron ore exports to 25 million tonnes by 1970-71, strenuous efforts will have to be made to effect corresponding improvements in mining, transport and port facilities. The export of marine products cannot be pushed as long as the bulk of the installed capacity in the refrigeration industry remains idle due to the shortage of equipment and raw materials. Again attention will have to be concentrated on raising traditional exports like jute and tea which are the major earners of foreign exchange. Admittedly, the development of the tea industry has been hamstrung by heavy taxes. The export of jute goods, particularly of sacking, has been threatened by the increasing competition from Pakistani mills. The danger is the greater because the Government of Pakistan is likely to grant a further subsidy of 10 percent to its mills for promoting exports. Since the Pakistani industry already enjoys the advantages of cheap fibre and the export voucher scheme, it is necessary to strengthen the competitive position of Indian manufacturers. This will necessitate the grant of financial assistance, particularly for the manufacture of sacking in which competition is most formidable.

IMPROVING THE TERMS OF TRADE

THERE are both psychological and statistical inconsistencies in a world where most countries imagine that their balance of payments is or will soon be in deficit. The notable exception is West Germany, whose surplus is formidable but not big enough to cause deficits everywhere else. In fact, the West German surplus is a problem in the European Economic Community rather than in the world in general; and even in West Germany bankers have recently warned again of threatening inflation. The reduction of the U.S. deficit is worrying many countries; but it is still a deficit, of considerable proportions. It is difficult to find the surpluses that are the aggregate counterpart of all the real or imagined deficits. The fact remains that many countries are worried by the problem, and are contemplating, if they have not already enforced, remedial action. The question which methods of regulation or adjustment are most effective and least harmful is being debated again.

One method that bankers firmly reject (they rejected it again at a recent international financial discussion in Oxford, England) is devaluation of currencies. Certainly, competitive devaluation would be useless and chaotic. But some economists regret that for individual countries, the adjustment of the currency is not recognised as a quick and simple method of realigning prices. The idea that the devaluation of the currency will only aggravate the problem is untenable in view of the rehabilitation of the French economy after the devaluation of the franc at the end of 1958. However, it is undeniable that this method causes serious disturbance if it is used extensively.

Economic management is the preferred alternative. But there are sharp differences of opinion on this method of regulating the balance of payments. Should the balance be adjusted directly by controlling external trade, or indirectly by controlling internal demand? If the latter, should demand be regulated directly by taxation (or even more positive controls), or indirectly by interest rates and the supply of credit? In some minds, the restriction of imports is almost as objectionable as devaluation of currencies. Certainly, if it becomes competitive, it strangles world trade. But there are important differences in methods of controlling imports; and even Britain's liberal-minded Chancellor of the Exchequer, Mr. Reginald Maudling, has recognised (in his Budget speech this year) that it may be better to restrict imports than to restrict the whole economy.

The conventional methods of restricting imports—raising basic tariffs, applying quotas, and licensing—are not readily acceptable when the developed nations are trying to promote, in international negotiations, the principle of free trade. But an additional levy on imports, by a tariff surcharge, would be more obviously temporary in character and could be flexible in operation. It would require the approval of the G.A.T.T., which should be forthcoming, as the G.A.T.T. recognises the principle of import restriction in emergencies. The best-known example of the levy is Canada's applied a year or two ago. Canada imposed three rates, 5 percent, 10 percent, and 15 percent. A country such as Britain, where this idea has recently been discussed, might be even more selective, exempting entirely raw materials and basic foods and discriminating among processed products in favour of those most useful in her export industries.

It should be frankly admitted that the immediate purpose of such a levy is to eliminate or reduce the price advantage of imported goods, and in certain cases to reduce demand for inessential goods that are not made locally. But local industry should be firmly warned that the additional protection was a by-product of a particular financial situation and that it would be removed as soon as that situation was adjusted. Britain, for instance, needs more, not less, foreign competition to force her industries to reduce their costs. On the other hand if she can readily produce at home some of the goods that have rather alarmingly increased her import bill this year, she may feel that importing these goods is an unnecessary extravagance

In this method of control, certain principles should be observed. One is that the goods against which an importing country discriminates should be exports of developed, not of developing countries. Another is that international specialisation in capital goods is generally beneficial and that a policy of substituting inferior home-produced equipment for imported special-purpose equipment would be short-sighted. On the other hand, manufactured industrial materials such as chemicals and steel vary between countries more in price than in quality, and a slight increase in average material costs arising from a levy would not be disastrous.

Almost any restraint on international trade must be regretted in principle, of course, but in a difficult situation it is necessary to compromise. This particular compromise, the levy, incorporates at least one good principle, flexibility. If this virtue must be excluded from the system of exchange rates, it is the more necessary in other economic functions. Some people, whose opinions must be respected, will persist in their belief that the proper way to curtail a country's imports is to cut its total demand, but in a world which demands continuous growth such ideas are decreasingly popular. In Britain, where the choice may be obligatory within a year, or half a year, if the growth of imports of manufactured goods continues, it would seem rather perverse to reduce the total demand by, say, £1,000 million in order to economise, say, £250 million of imports.

Current News and Comment

Payments Crisis in Cotton Futures

Trading in cotton futures in Bombay came to a standstill on 19th August because of the payments crisis resulting from the failure of a leading bear operator to meet his commitments. Efforts at a negotiated settlement having failed, the East India Cotton Association was obliged to declare a member broker as a defaulter on 21st August. The broker was stated to have a short position in the August contract to the tune of 23,400 bales, and his liabilities were said to be of the order of Rs. 12 lakhs. That a payments crisis should have overtaken the cotton futures market in spite of the penal margin to bring about a reduction in the volume of outstanding business in the maturing contract, might seem somewhat surprising. But it might not perhaps be wrong to suggest that the market would not have got into serious difficulties if the Forward Markets Commission had not discriminated against the bulls by fixing different rates for bulls and bears for the payment of margin.

The Commission's action encouraged bears to keep their sales alive in the fond hope that the margin of Rs. 75 a bale at above Rs. 750 would force bulls to liquidate their positions, thereby bringing about a fall in prices. But these expectations were completely belied; instead of reducing their commitments, Bulls chose to pay the margin. The bears then tried to depress the market by issuing huge tenders even by delivering cotton of very doubtful quality, which is evident from the rejection of a large number of lots in survey and appeal. A prominent bull operator held his grip tight notwithstanding the penal margin, and record tenders amounting to 21,050 bales had been issued by 19th August. The maturing contract which had been quoted around Rs. 740 at the beginning of the month was bid up to Rs. 780 in unofficial dealings on 20th August. Bears lost far more than they were prepared for. And when one prominent bear chose to default, it precipitated a payments crisis—the first of its kind in many years.

The view is widely shared that the crisis could have been easily averted if the Board of the East India Cotton Association had exercised vigilance over the operations of its members who are required to submit lists of their outstanding business regularly. But when the Board members have themselves a huge stake in the market as bulls and bears, it is not possible for the Board to act in a manner which would be in the best interests of the trade. The Forward Markets Commission cannot escape the blame for allowing the situation to worsen because it is represented on the Board, and it is possible for the Government director to have, if he cares to, a reasonably good idea of the market situation. To have allowed a payments crisis to develop even when fluctuations in the August contract have been relatively small does little credit to the market authorities.

Free Export for Bengal Deshi

The Government of India has decided to allow free licensing of Bengal Deshi cotton for export during the 1964-65 season. Export will be allowed on shipping bills accompanied by the usual certificate from the Appeal Committee. However, in order to watch the progress of exports, shippers will be required to register their sales with the Joint Chief Controller of Imports and Exports, Bombay. The new policy is realistic, in that it removes individual ceilings and there will be no need for bank guarantees. This will help a smoother flow of export business. How export business will actually develop will, of course, depend to a great extent on the competitive strength of the Indian Deshi cotton. Fortunately, the preliminary reports indicate that the new Deshi crop will be better than the previous season's output. This will mean a larger exportable surplus. The performance during the current season has not been as promising as was generally expected. Sales up to about the middle of August, are placed around 227,000 bales. It seems doubtful whether total shipments by the end of August would exceed 260,000 bales. It is possible that in the event of a larger exportable surplus, the Government might have to provide some relief in export duty and sales tax in order to make Indian cotton more attractive for the overseas buyers.

Along with the announcement of export policy for Bengal Deshi, the Government has also announced a 100 percent quota for mills to make the purchase of Indian cotton equivalent to consumption during the current season. A stipulation has, however, been made for the compulsory purchase of Cambodia A and/or B cotton to the extent of 7½ percent of the consumption of Indian cotton during the 1963-64 season. This stipulation is applicable only to mills which have been using these varieties of cotton during the three seasons ended 31st August, 1964. Every mill is required to complete its purchases as early as possible of the entire quantity of indigenous cotton so allowed and in any case, not later than July 1965. The textile industry is pleased with the Government's decision allowing liberal allocation of indigenous cotton quotas. Normally, only quarterly quotas were being issued which led to all sorts of difficulties. If the new cotton crop turns out to a bumper one, the textile industry will have nothing to complain about the procurement of its raw material, and it might not be unreasonable to expect a moderate improvement in cloth production in the year ahead.

Poor Growth in Industrial Output

The industrial production figures for May 1964, released by the Central Statistical Organisation, show a discouraging drop for the second month in succession. The index has declined from 166.5 in April 1964 to 162.3 in May 1964 (base year 1956 equals 100). It is smaller by about 7.4 percent, compared with the index of 174.3 in January 1964. Compared with the figure of 161.9 in May 1963, the index in May this year shows only a fractional increase of 0.25 percent. There is no doubt that output since the beginning of 1964 has been poor and has fallen much below the third plan target. Against the average targeted rise of about 11.1 percent a year, the index went up by 6.5 percent in 1961-62, by 8 percent in 1962-63 and by 9.4 percent in 1963-64.

The decline has largely been due to a fall in the production of a wide range of industrial goods, such as coal, cigarettes, textiles, paper, rubber products, chemicals, fertilisers, paints, iron and steel, cement, copper and transport equipment. Even the index for electricity, which has usually been buoyant so far, has risen fractionally from 293.4 in March 1964 to 295.6 in May 1964. Although the indices for June and July have not yet been published, it is feared that they may not show much improvement. The fact that industrial production has been sluggish while farm output has stagnated, is a disturbing pointer to the unsatisfactory trends in the economy. Apart from various difficulties relating to supplies of raw materials, spare parts and transport, industrial production has been discouraged by fiscal disincentives. In view of heavy taxation, the majority of industries have been unable to plough back sufficient funds into the business to finance modernisation, expansion and diversification of activities. The near-term outlook is being viewed cautiously due to the growing labour unrest following the sharp rise in the prices of essential commodities.

More on Monopolies

Since the appointment of the Monopolies Commission, there has been a steady flow of publications explaining why private monopolies cannot grow in India. The latest to come on the subject is a study by the Economic and Scientific Research Association, Calcutta. Although a good deal of the ground in the study has been covered already, its usefulness lies in providing a more detailed analysis of the Indian industrial structure. It says that most industries have more than six firms, but there are some which have only a limited number. A list of 20 important consumer goods industries and another of 16 producer goods having not more than six units each, is furnished in the annexures. Due to the limited number of units operating in each of these industries, it is possible that one or the other of them may command one-third or more of the market—the sense in which a monopoly is regarded as possible according to British norms. But a close examination of the list, says the study, will show that, if only a few units exist in a particular industry, it is because of one of the following reasons: (i) There is only a limited market for the commodity produced, as in the case of domestic refrigerators: or the growth of the industry is limited by natural factors such as availability of mineral ores, as in the case of copper. (ii) They are industries which have only recently been started in India to meet the needs of a wide and established market hitherto depending on imports; typewriters, for instance. (iii) They are comparatively new industries to India, and a demand for the products has still to be built up (for example, linoleum, synthetic detergents). (iv) They are industries which, by their very nature, do not admit of a large number of units because of the huge capital outlay involved and the comparatively limited market; (motor-cars, aluminium, etcetera). (v) They are public-sector industries, such as, industrial explosives and newsprint. In most of these industries which are open to private enterprise, more units may be expected to come into being as demand increases. There is, therefore, no qestion of monopolising in the sense of preventing other units from coming in.

A brief account of monopoly legislation in other countries is also given in an annexure. The countries covered are the U.K., West Germany, the U.S.A., France, Holland, Belgium and Italy. From this it is seen that there is no objection to monopolies as such, but only when they go against public interest are they objectionable. For example in the U.K., as one enquiry revealed, nearly two-thirds of cigarettes and tobacco consumed were supplied by Imperial Tobacco, while Gallahars supplied nearly all the remainder. The investigators saw nothing contrary to the public interest in this situation as such, on the other hand, competition between these big two was fierce. There are, however, certain features in the U.S. anti-trust law, which makes it somewhat extreme and unbalanced. The study aruges that the U.S. authorities do not sufficiently realise that competition among a few big producers can be no less real than among a large number of small units; (2) that competition is only a means to the attainment of social good and there can be no justification for sacrificing the interest of the consumer in order to preserve competition: (3) that vertical integration of industry can promote

stability and increase efficiency and is not, in itself, objectionable; and (4) that any sort of legislative regulation of monopoly will lead to the subordination of economic considerations to the legal ones.

Control on Rice Trade

At a time when the Government of India and the State Governments have decided to introduce full-scale rationing and State trading in foodgrains, the demand of the Calcutta Rice Mills Association for withdrawing controls and allowing free movement of foodgrains throughout the country is likely to fall on deaf ears. But there is no denying that the Association's views on the Government's policy have elements of truth, which cannot be overlooked in the context of the prevailing situation in the country. Many may agree with the view, for example, that there is really no shortage of foodgrains in India; and if there is any, it is not of such magnitude as to justify the present high prices of foodgrains. The present rice scarcity, to all intents and purposes, has been artificially created by hoarders and speculators with the help of unaccounted money, which has seemingly played a large rôle in boosting prices. Because of the use of unaccounted money, the Reserve Bank's credit curbs have not been effective in bringing out the hoarded foodgrains. It is evident that the Government has been unable to take any serious step against the use of unaccounted money in the foodgrains trade. But there is some substance in the Association's view that if the zonal system had worked properly, the country would not have been faced with a food crisis. West Bengal, for example, has been tagged to Orissa. But instead of allowing free movement of rice and paddy between West Bengal and Orissa, restrictions have been imposed by the latter on such movement.

The Association has complained that while free movement of paddy and rice from Orissa has been hindered, even the quantities promised by that State to West Bengal this year has not been made available; the actual supply to this State amounted to 84,000 tons of rice, against the promised quota of 300,000 tons. The rice mills in Calcutta, according to the Association, were unable to procure paddy in required quantities because of the restrictions imposed by the Orissa Government on the movement of paddy from that State. The Association says that Orissa is now exploiting the difficult food situation in West Bengal. Orissa rice of common quality, which is far inferior to Bengal common quality, is now selling at the rate fixed for Bengal superfine variety. But in fixing the blame on Orissa, the Association seems to have taken a one-sided view of the matter. Orissa herself was anxious to avert a food shortage and a rise in grain prices in the State. So it would be wrong to blame her if she had to impose restrictions on the movement of foodgrains. Furthermore, Orissa objected to the price unilaterally fixed by West Bengal for her common-quality rice.

The Association has rightly expressed concern over the move for State trading in foodgrains and for setting up mills in the public sector. It says that mills in the private sector have more than sufficient capacity to meet the requirements of the country. The cry for nationalising the rice mills, or starting new ones in the public sector is, according to the Association, unwarranted. It has been raised to divert the attention of the public from the "miserable failure" of the Government on the agricultural front. Whether State trading in foodgrains will be an effective substitute for a free market, time alone can show. But there is no doubt that in the absence of a well-equipped administrative machinery, State trading will lead to corruption, inefficiency and bungling. So the Government should seriously consider the issues involved before it introduces State trading in January.

The Ravage of Floods

With the onset of the monsoon, certain parts of India have again been affected by floods. There have been reports of damage, particularly in Assam and Bihar. According to recent information, about 3.5 million acres have been affected in seven States, including Assam, Bihar, Punjab and Delhi and nearly 35,000 residences damaged in Bihar, U.P. and Punjab. Earlier indications were that the impact of floods had not been increasing, in fact, in areas like those of the Brahmaputra and Kosi, where control measures had been taken, there was definite improvement in the position. The floods of 1963 were said to be less severe than those of the previous year. But whether this encouraging trend will be sustained this year and enable a more firm assessment to be made of the measures taken over the decade, it is perhaps too early to say. It is still the middle of the flood season.

Since the inception of a national flood control policy in 1954, considerable technical data of the rivers concerned have been collected. More than 200 gauging stations have been established in the various river basins to observe levels and discharges. Aerial photography of over 40,000 square miles has been completed: topographic surveys of river basins over 1,000 miles of river length have been undertaken. Silt and sediment load of the rivers have been measured at selected stations where discharges have also been observed. Thus, during the decade 1954-1964, most of the necessary data have been collected to enable a scientific approach to the problem of planning flood control on a long-term basis. The physical achievement during the period has also been considerable. A total length of 3,900 miles of new embankments has been constructed and about 800 miles of existing embankments have been raised and strengthened. Over 1,000 miles of drainage channels have been excavated and schemes have been completed for the protection of 60 towns in different parts of the country. Also, 4,376 villages, usually subject to inundation, have been raised above flood level so as to be free from the recurring havoc. About 7 million acres of area, usually subject to flood damage, already enjoys immunity. Additional benefits will accrue as a result of the works now under way and which will be completed by the end of the third plan. Assuming that an additional area of 5 million acres would thus benefit, the total area likely to enjoy flood protection by the end of the third plan may be reckoned at 12 million acres. A sum of nearly Rs. 61 crores was spent on flood control works during the first two plans, and over Rs. 83 crores will be spent during the third plan period.

CORRESPONDENCE
DEPRECIATION AND DEVELOPMENT

(To The Editor of "Capital")

Sir,

There is a tendency among companies to exhibit losses needlessly in their working results and to disturb the equanimity of shareholders. Section 205 of the Companies Act 1956, lays down that no dividend shall be declared or paid by a company for a financial year except out of the profits of the company for that year arrived at after providing for depreciation. It further lays down that if any company has not provided for depreciation in any financial year or years which falls or fall after the commencement of the Companies Amendment Act 1960, it shall, before declaring or paying any dividend for any financial year, provide for such depreciation out of the profits of the financial year or out of the profits of any other previous financial year or years. It will be seen from the above that when there is no profit to be divided among the shareholders, the question of accounting for depreciation in the annual accounts does not arise. To do so is merely adding to the figures in the balance-sheet and does not make any one the wiser or richer. A reduction is shown in the value of the block and an addition to the loss in working on the same side of the balance-sheet.

Development rebate is a reduction allowed from the net profits prior to assessment of income tax, at 25 percent or 20 percent on the plant or machinery installed, and this deduction will not be allowed unless an amount equal to 75 percent of the rebate allowed is actually debited to the profit and loss account and credited to the reserve fund. It will thus be noted that where a company has made no profit in any year, the question of assessment of tax does not arise; much less of claiming any development rebate and crediting it to a reserve fund. To account for any development rebate in such circumstances is another piece of book-keeping, showing a liability under development fund on one side, and an equal amount under loss on the other.

The result of these accounting juggleries is that a naive shareholder gets a wrong impression of a company's financial position. When recurring losses are shown for several years and a mounting loss on the assets side, he begins to despair, and although he may not commit bodily suicide, he does so financially by trying to sell his shareholdings even at a loss. In such circumstances, can a certificate recorded by the auditors appointed by the shareholders on their behalf that the accounts and the balance sheet *give a true and fair view* of the Company's affairs be accepted as satisfactory and a fulfilment of their duty to shareholders?

The Government has laboriously built up the Companies Act, 1956—a tome of over 600 Sections. But has it done its duty in this matter? When the propriety of accounting for depreciation in the above circumstances was referred to the Government, it first ruled that depreciation should be provided for in the accounts irrespective of the fact whether the Company had earned profits or incurred losses. Later, however, it relented and accepted that a note in the profit and loss accounts to the effect that no provision has been made for depreciation, and a mention of the quantum of depreciation computed in the manner provided in the Act, will suffice. As for development rebate, the authorities expressed the view that they saw no objection to a company showing the provision for development rebate in its profit and loss account and that by doing so, it did not contravene and of the provisions of the Companies Act.

This view is, however, surprising, for if depreciation which is unavoidable is not required to be shown in the profit and loss account and a note at the foot of the account will suffice in the eye of the law, where is the sense in requiring that development rebate, which is after all optional and may be forgone by a company—though no sensible concern will do so—should be shown in the accounts?

Yours etcetera,
K. V. IYER

THE TATA RESEARCH INSTITUTE

WITH the death of Mr. J. N. Tata there passed away the noblest and the greatest of India's sons. He was a philanthropist in the truest and the best sense of the word. He loved India as few Indians have loved her, with the passionate devotion of a son for his mother, from whom he has received all his gifts and whom it is the main business of his life not only to honour and love, but also to serve. Mr. Tata was endowed with the highest qualities of the mind and of the heart. He was a great traveller and he had stored in his capacious memory the facts that he had discovered in his travels throughout the world He had seen nations rise from small beginnings and advance towards a high level of excellence. Like other great men he was a seer, that is to say, he saw visions of the future He dreamt a dream in which he saw India, equipped as she was with material resources of all kinds, take a high place among nations. He believed that the sons of India, trained in Western methods, would utilise her resources for the good of the country and elevate her from the dregs of poverty; famine and plague would be no more, and men and women would live contented lives under the British Flag. The great philanthropist made up his mind to translate his dream into reality. He sought no honours for himself either from Government or from the public. With the help of a representative committee and of an enthusiastic Secretary he submitted to Lord Curzon, when he first landed in Bombay, a rough scheme for the establishment of an institute for training young men in Western methods of scientific research and offered a munificent sum, namely, thirty lakhs of rupees, in furtherance of his project.

A Ditcher's Diary

For years now one of my persistent themes has been the irrelevance of ideology in the shaping of political affairs; the more a politician talks about idealism the more I suspect him. This is why I got by heart what Mr. Krishna Menon told the Hyderabad Press Club on Monday: "The Congress has neither a Left wing nor a Right wing. Only there are some self-seeking people and those who are less so. There are some who believe in astrologers and others who believe in fertilisers. Some are modern while others are not so". The phrasing is not particularly felicitous; the contrast between astrologers and fertilisers is unclear; to be modern may not be a virtue by itself. It is to be doubted whether Mr. Menon will accept it as a compliment; but it is true that the late Mr. John Foster Dulles once divided mankind on very similar lines—the modernists and the fundamentalists. But that is beside the point. Mr. Menon's statement is welcome because here a Congressman is not only having a dig at identifiable colleagues but also exposing the present character of the Congress Party. I say this without Mr. Menon's cynicism, for I have never considered self-seeking a mortal sin. What, then, do Congressmen, all politicians of any party, seek? Office. Why? For power or profit. I have no objection at all. Within the rules, both ambitions are legitimate. The first rule to be laid down is that the search for either be open and public. What breeds political cynicism, a dangerous disease, is the pretension of most politicians that power and profit are the last things they covet; and this hypocrisy is nowhere greater than in India. (Mr. Menon is not a bad practitioner at all in this.) Why can't politics become another profession, another career? The public would not mind paying politicians if the services they rendered were obvious to their master, the public. These services should not begin and end with the making of speeches. In the Soviet Union technicians hold cabinet posts; out of the Government, they get other jobs. Mr. Menon is a good and unusual example; he has resumed his legal practice. I wonder if he is as happy as he could be.

Fleet Street has no monopoly of the silly season. In Calcutta on Monday the *Statesman* gave us its vision of the Calcutta Corporation running the Calcutta Tramways: free rides for Councillors and a special tram-car for the Mayor which holds up all cars behind and presents a visiting V.I.P. with large crowds on the streets. Jolly good exercise, I thought, and capable of endless embellishment. One of these days the Corporation should make a take-over bid for the Government of West Bengal; there is more money, plus patronage, for somebody to distribute. (Who may this somebody be? No names, no pack-drill.) It really is intolerable that the Calcutta Port Trust should be administered by the Government of India; surely our Corporation is competent to take care of the port with its usual efficiency? The day may not be far off when the Corporation will want to control all the industries in Greater Calcutta. As this process continues and all else is at a standstill, the citizens will attain something very like *nirvana;* the spiritually inclined can ask for no more. Then it will no longer be necessary to criticise the Corporation for its total failure in performing the most elementary functions of a municipality such as provision of water, clean streets and sewerage. But it has become tiresome to make fun of our Councillors. On occasions it pays a criminal to pass for a clown; and some in the Corporation are apparently content to be laughed at rather than stoned. There is one respect in which the Corporation's *take-over of the State Government might make* sense. Because the districts return the larger number of M.L.A.s in the general elections, the major political Party has a tendency to pamper the countryside at the expense of the metropolis; this might be reversed if the Corporation controlled Writers' Building instead of the latter controlling the former. As I write this piece, on Tuesday morning, it is raining outside; and already I can see the water level rising in the streets around my office. And it is not raining fish or straw; soon there will be mud.

Saigon's ten-day wonder is already at an end, not a day too soon. When General Khanh set up his régime the other day, I wrote here that the American people might already be wondering *whether the General was a great improvement on* the late Diem. The Buddhists and students in Saigon have done the wondering more promptly. Already, I find, a U.S. Senator is quoted as saying that he does not want "an African Vietnam in the Congo". Well, the parallel is not at all inapt. *And I am inclined to the view that in both continents* the U.S. State Department is being "too clever by half". To the Americans it may be self-evident that to resist communism is sacred and all else secondary; not so to all countries in Asia and Africa. I am not for a moment suggesting that the Chinese are angels; they obviously are up to a great deal of mischief on an international scale, as the Soviet Union too is realising. Nor is it suggested that surrender of countries to China is not enlarging the danger that China potentially is to the whole world. But where even Senator Goldwater is right in criticising U.S. policy is that it lacks direction. In the U.S.A. itself it has been said more than once that in Vietnam the Central Intelligence Agency was working as a parallel State Department. In the Congo American planes and pilots were seen; the Chinese said so and the State Department denied it Only a few days later it was apologetically admitted in Washington that the C.I.A. had indeed been busy in the Congo. President Johnson should seriously ask himself whether this duality of control, such as it is, is worthy of the great power the U.S.A. has become. It is possible that the C.I.A. has already become too big a monster for Frankensteins in Washington to suppress; but the President should be seen to make an attempt. The fact that Mr. Edgar Hoover is still being used by the President for assignments in the south makes me wonder whether the lessons of the Bay of Pigs have been learnt by all. The lessons of the Plain of Jars were no different.

A correspondent writes from London to say how much the summer tourist season there suffers these days from the virtual absence of the colourful Indian *sari.* No doubt, a few are to be seen, but they are chiefly worn by Pakistani women and somehow the brightest coloured ones appear to have been left at home. Which he considers a great pity, because this is perhaps Britain's best summer for some years and there has been just enough sunshine to do them justice. Temperatures in Britain have indeed been a little higher than usual and my correspondent, who lived in Calcutta for a number of years and whose recollections, or so I suspect, are not as reliable as he thinks they are, says he finds London in the 80s (Fahrenheit, of course) far more uncomfortable than Calcutta ever was at 110 degrees. Well, it is said that pain has no memory. He also tells me that this year tourists are finding that London is not the cheap city it used to be. The price of food is still reasonable, although the service is not. But underground and taxi fares are up, and the cost of hotel accommodation is now abreast of that in New York and only just behind Paris. In France, of course, the Government is beginning to do something positive about the problem of over-charging, which is hardly surprising following a year in which the tourist trade fell by 20 percent largely due to this single factor. As one who has always believed that the French would add substantially to their national reputation for honesty and straightforwardness simply by relieving the tourist of his wallet at the point of entry and putting him back on his plane or boat, I can understand what has been happening. Now, so my correspondent tells me, the British Government is considering measures to protect the tourist from a fleecing. I do not think myself that any are necessary yet; the weather is still by far the greatest deterrent to anybody planning a holiday in Britain. On that subject, my correspondent remarks rather cynically, neither of the main Parties

contesting the general election has yet got round to making any promises. Thus, the weather is now the last aspect of Britain's traditional life for which reform is not planned.

THIS HAS INDEED BEEN AN OUTSTANDING MONTH FOR all marvellers at man's stupidity towards man. Primarily, of course, I am referring to those two grizzly anniversaries, the beginning of the first World War and the erection three years ago of the Berlin wall. Of course, from an academic point of view, the interesting one among these events is the Berlin wall. I could never understand what prompted the Russians to approve the erection of that wall in the first place; like the Berlin blockade, its obvious purpose was immediately defeated, and since then it has survived only as the best possible tribute to the attractions of West Germany's affluent democracy. Now it is unlike the Russians to insist on providing their opponents with a permanent propaganda weapon of this kind, one maintained at the communist world's expense. The speed with which they abandoned the blockade when they saw their mistake was proof enough of that. So one can only conclude that the Russians have little to do with it: that the wall is now entirely the responsibility of the East German authorities who insist on retaining it for reasons of their own. And that is where the interesting bit comes in. What possible reasons can there be? True, the drain of skilled labour to the West has been staunched, which I suppose is an important gain for a tottering economy. But surely there are ways this aim could be achieved, particularly in a communist autocracy such as East Germany is, without advertising to the world a government's lack of faith in its own ability to retain the loyalty of its citizens. What, then, are the real reasons? There I must confess I do not know. The Berlin wall will remain for me the perfect enigma, a baffling symbol of the twisted motives which can prompt a country to damage itself without apparent hope of any offsetting benefits.

I REMEMBER WRITING IN THIS DIARY SOME YEARS ago about Vladimir Nabokov's *Lolita*; I remember too the many requests I received from friends who wanted to borrow the copy I had borrowed from another friend who had acquired the two-volume Olympia Press edition in Paris. These circuitous manœuvres are unnecessary for Nabokov's *Pale Fire*, which I have just finished reading. It has none of the prurient appeal of the earlier work; it is not easy to read but, I think, is well worth the effort. It's a curious book; it has an introduction which is never convincing; then follow four cantos of verse, couplets. Finally there is the commentary where sustained imitation of the jargon of American literary criticism ceases to be *funny after a few pages*. But the kind of mind Nabokov reveals in the book is astonishingly complicated and hence very interesting. That Nabokov collects butterflies has, I suppose, some effect on his style. That he is a White Russian in exile since the revolution must have shaped his attitudes considerably; he has not yet come to terms with America. What, however, fascinates me most is his experiment with the English language; the way he coins words, puts new meaning into *clichés*. He writes of "the farmhouse between Goldsworth and Wordsmith." Well, he is a wordsmith himself—in a way even Joyce wasn't. Arthur Koestler once made the point that only a foreigner could discover the imagery behind what has since become a *cliché*. I also like the gentle cynicism behind Nabokov's attitude to just about anything; he writes, "while snubbing gods, including the big G". But *Pale Fire*, for all its light touches here and there, is a serious work which I shall re-read when I have the time. Let me quote another bit:

> My God died young. Theolatry I found
> Degrading, and its premises unsound.
> No free man needs a God, but was I free?

Nabokov is in his sixties; yet there is about his writing a freshness, a verve that many younger might envy. Somewhere in the book he speaks of "not text, but texture". Texture is what Nabokov gives.

THE DITCHER

Guide for Investors

ENCOURAGING PROSPECTS FOR T. E. L. C. O.

THE Tata Engineering and Locomotive Company did farely well in the year ended March 1964, and it is expected to do much better in the current year. During 1963-64, the Company's turnover increased from Rs. 43.64 crores to Rs. 51.51 crores and the gross profit increased from Rs. 5.50 crores to Rs. 6.65 crores. Replying to shareholders' questions at the Company's annual meeting last week, the chairman, Mr. J. R. D. Tata, stated that sales in the first four months of the current year are around Rs. 20 crores, compared with Rs. 51.5 crores in the entire previous year. The Company has started producing 1,500 lorries a month from the beginning of August, which will further boost the turnover.

The Company is actively engaged in stepping up its production capacity. The second stage of the expansion programme, involving an outlay of Rs. 19 crores to Rs. 20 crores, will raise the production capacity to 24,000 lorries from the present 18,000 lorries. The target will be reached in 1966-67 and the full benefit of this expansion will be reflected in the financial results for 1967-68. Mr. Tata stated that the *management would not consider any* diversification of activity until the second phase of the expansion programme has been completed. Referring to exports, the chairman pointed out that the Company is losing about Rs. 6,000 to Rs. 7,000 a lorry on its exports, but the loss is compensated to a large extent by the export incentives which enable the Company to import certain raw materials and these raise the Company's productivity. Exports during the first three months of the current year are placed at Rs. 3.40 lakhs.

The chairman informed the shareholders that the Company had received the Government's permission to issue rights shares in the proportion of one new share for every five held at a premium of Rs. 30 a share. The Company's proposal visualised a rights issue at a premium "not exceeding Rs. 50 a share." The rights issue made by the Company in 1963 was at a premium of Rs. 50. The Government's decision to allow rights issue at a lower premium, which seems very fair, reflects a helpful change in the official attitude as the capital market is still in poor shape.

The chairman has assured the shareholders that the management would consider the issue of bonus shares by capitalising the share premium account at the appropriate time, not in the distant future perhaps. The share premium account will amount to around Rs. 1.60 crores after the proposed rights issue at a premium of Rs. 30. The Company would issue bonus shares when it is certain of maintaining the dividend on the increased capital. The other information provided by the chairman in reply to shareholders' questions was that the L.I.C. held 55,000 equity shares of the Company and the Unit Trust of India held 4,500 shares. The exact surtax liability for 1963-64 is Rs. 1.62 lakhs, against which Rs. 2 lakhs have been provided. At present, there are 80,000 T.E.L.C.O. lorries on the roads.

Ganges Manufacturing Maintains

THE Ganges Manufacturing Co. Ltd has earned a trading profit of Rs. 63.80 lakhs for the year ended March 1964, against Rs. 90.84 lakhs for 1962-63. Depreciation has been increased from Rs. 6.61 lakhs to Rs. 12.23 lakhs. A sum of Rs. 7.11 lakhs has been transferred to development rebate (against Rs. 3.28 lakhs). Taxation, including Rs. 21,621 for surtax on profits, absorbs Rs. 18.50 lakhs (against Rs. 51 lakhs) and general reserve Rs. 19.57 lakhs (against Rs. 18.92 lakhs). A sum of Rs. 6.50 lakhs has been written back from taxation provision which is no longer required. A taxable ordinary dividend of 20 percent has been maintained which offers a yield of 13.5 percent at the present price of Rs. 14.81 a share of Rs. 10 each.

The directors say that the Company's working results are satisfactory, especially when the prices of jute goods dropped while those of fibre rose. There was also an increase in wages as a result of the Wage Board's recommendations. Since the Working Time Agreement was abolished on 1st February, 1964, there has been a slight increase in output.

Aluminium Corporation to Increase Share Capital

THE Aluminium Corporation of India Ltd has increased the taxable ordinary dividend from 5 percent for 1962-63 to 9 percent for 1963-64. The yield amounts to 7.1 percent at the present price of Rs. 12.75 a share of Rs. 10 each. The gross profit has risen from Rs. 46.78 lakhs for 1962-63 to Rs. 63.38 lakhs for 1963-64. Depreciation is allocated Rs. 23.70 (against Rs. 16.20 lakhs) and development rebate reserve Rs. 12.71 lakhs (against Rs. 12.39 lakhs). Taxation, relating to previous years, absorbs Rs. 1.27 lakhs (against Rs. 2.27 lakhs). A sum of Rs. 25.39 lakhs (against Rs. 17 lakhs) has been transferred to general reserve, raising it to Rs. 53.7 lakhs. A sum of Rs. 11.56 lakhs has been set aside for bonus to workers for 1957-58. The carry-forward is Rs. 22,287.

The expansion programme of the integrated plant has reached the final stage. The alumina plant has been expanded and new additions have helped to treble the capacity. The new melting shop and the extrusion plant have attained full production. The cable plant to manufacture A.C.S.R. conductors and the new rolling mills have started operating. The foil plant is likely to be completed in the near future and production will start shortly. It is interesting that the expansion schemes have been completed with the maximum use of indigenous equipment involving a small expenditure of foreign exchange. The cost of the projects will amount to about Rs. 5 crores. The Company raised Rs. 31.25 lakhs by issuing rights ordinary shares in 1961. The Company proposes to issue further share capital for Rs. 42.81 lakhs to meet deferred payments, repayment of loans and to reduce bank borrowings. It is proposed to issue 25,000 cumulative preference shares of Rs. 100 each, carrying a fixed dividend of 9.3 percent free of company tax but subject to the usual tax deduction at source, and 178.125 ordinary shares of Rs. 10 each at par. The new issues will be offered to existing holders of the ordinary shares in the ratio of one preference share for every 47 ordinary shares held, and one equity share for every seven ordinary shares held.

Bombay Gas Incurs Heavy Loss

THE Bombay Gas Co. Ltd has produced disappointing results for 1963 and has incurred a heavy loss of Rs. 10.31 lakhs, compared with one of only Rs. 1.92 lakhs for 1962. So the Company has been forced to pass the dividend for the second year in succession. In his address at the Company's annual general meeting last week, Mr. N. K. Jalan, chairman, referred to the depressing outlook for the current year. (A fuller version of the speech was printed in last week's *Capital*.) The loss has occurred because of the all-round rise in production costs. The price of gas has meanwhile been pegged down to an uneconomic level for several years. Mr. Jalan hinted that the loss in the current year might amount to Rs. 20 lakhs or so. The Government of Maharashtra appointed a high-powered Gas Advisory Committee to investigate the question of a reasonable price for gas. The findings of the Committee have not yet been published, but there are reasons to think that the present price has been found to be uneconomic.

The Government indicated to the Company that it would consider increasing the price of gas if Bombay Gas were to undertake an expansion programme. Although the Company has undertaken to expand the capacity substantially, the Government has not yet sanctioned a higher price to the Company. Judging from all indications it looks as if the Company is entitled to an increase in the price of gas in law and equity. It may be mentioned in this context that the Oriental Gas Company of Calcutta, which was taken over by the Government in 1960, has recently increased the effective price for gas by about 35 percent in spite of its poor service to consumers.

Mr. Jalan said that the consumers in Bombay were unlikely to resist a reasonable increase in the price of gas. This is because a large number of people have been using liquid petroleum gas by paying a much higher price than that charged by the Bombay Gas Company. Meantime, the Company has been informally given to understand that the Government of Maharashtra is considering the question of nationalising or municipalising the Company. Bombay Gas has been efficiently running the service. So there is no point in nationalising it under the present circumstances. This apart, it is difficult to understand how the Government can think of taking over a concern which has been incurring substantial losses.

New Manbhoom Coal Loses

THE New Manbhoom Coal Co. Ltd has incurred a loss for the year ended March 1964 since the steel industry did not consume sufficient coking coal. The Government had earlier instructed the coal companies to increase their production to meet the demand for the steel industry, but the expansion of the latter did not materialise according to expectations. As a result, the output of coking coal has had to be restricted. The Company has reduced its raisings from 16,000 tonnes to 11,000 tonnes a month and large stocks of coal have accumulated at the pithead. The directors think that this unfavourable development will continue for a few more months. Afterwards, the demand for coking coal will increase. The quality of coal produced by the Compnay has been upgraded and has fetched higher prices.

The loss has amounted to Rs. 38,384, after providing Rs. 83,553 (against Rs. 64,432) for depreciation. Development rebate reserve is allocated Rs. 51,373 (against Rs. 16,981). Bringing in Rs. 26,173 and making other adjustments, a debit balance of Rs. 66,880 has been carried forward. The dividend has been passed, but a taxable ordinary dividend of 12 percent was paid for 1962-63. Raisings dropped from 169,792 tonnes to 162,395 tonnes and despatches from 157,131 tonnes to 138,077 tonnes.

Good Results from Tata Hydel Group

THE Tata hydel electric group—comprising Tata Hydro, Tata Power and Andhra Valley—reports highly encouraging results for the year ended March 1964. The combined revenue of these three Companies shows an increase of about 45.5 percent over the previous year, from Rs. 11.03 crores to Rs. 16.03 crores. The total profit after providing for managerial remuneration and depreciation has gone up by as much as 80 percent from Rs. 2.24 crores to Rs. 3.99 crores. Although the rise in equity earnings is somewhat lower because of higher prior charges—the tax liability is appreciably higher—earnings on a share have improved sizably in each case and this has encouraged the *management* to step up the final dividend by 1 percent from 6 to 7 percent so as to make a total of 10 percent, against 9 percent, including a bonus of 1 percent, in 1962-63.

According to the preliminary figures released by the Companies along with the announcement of final dividends, the revenue from power supply of the Tata Power Co. Ltd has risen from Rs. 5.56 crores to Rs. 8 crores, that of Andhra Valley Power Supply Co. Ltd from Rs. 3.16 crores to Rs. 4.57 crores, and that of Tata Hydro-Electric Power Supply Co. Ltd from Rs. 2.31 crores to Rs. 3.46 crores. The pre-tax profit of Tata Power is up from Rs. 1.304 crores to Rs. 2.266 crores, that of Andhra Valley from Rs. 56.97 lakhs to Rs. 1.032 crores and that of Tata Hydro from Rs. 59.21 lakhs to Rs. 1.123 crores.

After bringing in the previous year's surplus and making adjustments for previous years, the directors of Tata Power have allocated Rs. 90.59 lakhs (against Rs. 50.48 lakhs) for taxation, Rs. 10.77 lakhs (against Rs. 5.60 lakhs) for contingencies, Rs. 34 lakhs (against Rs. 7.50 lakhs) for general reserve, Rs. 15 lakhs (against Rs. 7 lakhs) for debt redemption reserve, Rs. 39.36 lakhs (against Rs. 34.20 lakhs) for dividend reserve, Rs. 2.44 lakhs (against Rs. 2.69 lakhs) for development reserve, Rs. 7.17 lakhs (against Rs. 0.34 lakhs) for tariffs and dividends control reserve and Rs. 7.17 lakhs (against Rs. 2.58 lakhs) for consumers' benefit account. The interim dividend on preference and ordinary shares absorbs Rs. 18.72 lakhs (the same). The final distribution on preference and ordinary shares absorbing Rs. 39.34 lakhs (against Rs. 34.18 lakhs) is to be paid out of the dividend reserve.

Appropriations of Andhra Valley's profit after bringing in the previous year's surplus and making adjust-

"CUPPACHA?"

Besides adopting the Indian word for tea, the U.K. in the month of March 1964 alone, also took Rs. 1.04 crores worth of tea. The rest of the world took Rs. 4.89 crores worth. A year's export of tea will earn enough foreign exchange to finance a project twice as large as the nuclear power plant at Tarapur. That's how important tea exports are — how important exports are to India.

The demand for Indian goods is growing everywhere. We know. We are practically everywhere ourselves. We can provide you with expert banking assistance where it counts: on the spot. Around the world.

ments for previous years include taxation Rs. 31.98 lakhs (against Rs. 8.42 lakhs), contingencies reserve Rs. 6.35 lakhs (against 3.62 lakhs), arrears of depreciation Rs. 1.18 lakhs (against Rs. 1.18 lakhs), write-offs Rs. 93,000 (against Rs. 66,000), development reserve Rs. 1.61 lakhs (against Rs. 3.68 lakhs), tariffs and dividend control reserve Rs. 3.53 lakhs (against Rs. 1.14 lakhs), general reserve Rs. 14.10 lakhs (against Rs. 1.72 lakhs), debt redemption reserve Rs. 6.60 lakhs (against nil), dividend reserve Rs. 22.93 lakhs (against Rs. 19.90 lakhs) and interim dividends Rs. 10.81 lakhs (the same). Final dividends absorbing Rs. 22.92 lakhs (against Rs. 19.89 lakhs) are to be paid out of the dividend reserve.

Allocations of Tata Hydro's profits after bringing in the previous year's surplus and making adjustments for previous years, include taxation Rs. 43.44 lakhs (against Rs. 22.79 lakhs), contingencies Rs. 5 lakhs (against Rs. 2.55 lakhs), general reserve Rs. 4.50 lakhs (against nil), dividend reserve Rs. 19.93 lakhs (against Rs. 17.60 lakhs), arrears of depreciation Rs. 27.000 (the same), write-offs of intangible assets and other expenditure Rs. 1.35 lakhs (against Rs. 75,000), development reserve Rs. 12.18 lakhs (against Rs. 1 lakh), tariffs and dividend control reserve Rs. 2.96 lakhs (against Rs. 12,000), consumers' benefit account Rs. 2.96 lakhs (against Rs. 12,000) and interim dividends Rs. 10.32 lakhs (the same). Final dividends absorbing Rs. 19.92 lakhs (against Rs. 17.32 lakhs) are to be paid out of the dividend reserve.

Periakaramalai Tea and Produce Earns More

THE directors of Periakaramalai Tea and Produce Co. Ltd have recommended a dividend of 13½ percent for the year ended March 1964. The Company declared a dividend of 15 percent for the previous year which included a golden jubilee interim dividend of 2½ percent. According to the preliminary figures, the profit for the year, before taxation, amounts to Rs. 20,40,349 (against Rs. 14,67,409). After deducting the tax provision of Rs. 10.46,449, which includes Rs. 34,449 being the taxation relating to previous years (against Rs. 7,80,000 for the previous year), the net after-tax profit comes to Rs. 9,93,900. With Rs. 58,308 brought forward, the total available for appropriation comes to Rs. 10,52,208. Out of this, Rs. 51,289 (against Rs. 17,500) is transferred to development rebate reserve. A sum Rs. 1 lakh (against nil) is accounted by retirement gratuity. A sum of Rs. 9 lakhs is transferred to general reserve. The balance of Rs 919 is carried forward. The directors have recommended the payment of a 13½-percent dividend out of general reserve, absorbing Rs. 7,82,309.

Indian Dyestuff Diversifies

THE preliminary report on the working of Indian Dyestuff Industries showed that the Company had fared badly during the year ended 31st March, 1963. In spite of an increase of some 8 percent in the sales from Rs. 2.39 crores to Rs. 2.58 crores, the gross profit declined by about 16 percent from Rs. 52.18 lakhs to Rs. 43.80 lakhs. The directors have had to withdraw a substantial amount from the reserves in order to maintain the dividend at 7 percent. In their full report which strikes an optimistic note about the prospects for the current year, the directors state that the Company's sales during 1963-64 were adversely affected in the first few months due to serious competition created by liberalised imports of dyes, but sales improved later when market conditions got stabilised.

However, the production cost increased because the Company had to purchase the essential raw materials at higher prices. But judging from the results of the first three months of the current year, the directors feel that the working of the current year will improve substantially since the benefits resulting from the expansion programme will be fully realised during the year. In addition to the manufacture of intermediates like beta-amino anthroquinone and benzan, production of new dyes such as violets, magenta, etcetera, has started and the production of the rest of the dyes under the expansion programme will be established before the end of the year. Moreover, the production of sulphuric acid and oleum is also scheduled to begin towards the end of the year.

The Company has received preliminary data of the technical know-how from the collaborators A.C.N.A. of Italy for the manufacture of 1,000 tonnes a year of anthraquinone. The Company has not been able to take further steps towards implementing this manufacturing programme on account of the delay in the clearance of capital goods licence for the import of plant and equipment. The directors expect to receive the import licence shortly. The Company has been given a letter of intent for the manufacture of several inorganic chemicals and necessary steps are being taken to manufacture aluminium chloride, caustic soda, caustic potash and chlorine in the first instance. Since the close of the last financial year, the Company has placed orders for machinery and equipment worth Rs. 3.83 lakhs for its expansion programme.

Dawn Mills Maintains Dividend

THE Dawn Mills Ltd reports fairly encouraging results for the year ended March 1964. The dividend, however, has been maintained at 30 percent—Rs. 15 a share of Rs. 50. According to the preliminary figures, sales are up by about 20 percent from Rs. 2.15 crores to Rs. 2.56 crores, and the gross profit has gone up by nearly 29 percent from Rs. 31.11 lakhs to Rs. 40.07 lakhs. After providing Rs. 9.37 lakhs (against Rs. 6.48 lakhs) for depreciation and development rebate and Rs. 17.99 lakhs (against Rs. 14.50 lakhs) for taxation, the net profit amounts to Rs. 9.90 lakhs, compared with Rs. 7.74 lakhs in the preceding year. The entire amount has been transferred to the general reserve, out of which dividend amounting to Rs. 8.40 lakhs will be paid. In the preceding year, a sum of Rs. 11.40 lakhs was transferred to the dividend equalisation reserve and the dividend was paid out of this reserve. The Rs. 50-paid share of Dawn Mills is currently quoted around Rs. 167, offering a gross return of about 9.6 percent.

Bradbury Mills Repeats

THE Bradbury Mills Ltd has maintained the dividend for the year ended March 1964 at 30 percent. The preliminary report shows that the Company has not fared well. For even though sales have been almost maintained—they are in fact slightly better at Rs. 2.32 crores, against Rs. 2.27 crores—the gross profit is down by nearly 17 percent from Rs. 17.80 lakhs to Rs. 14.75 lakhs. After providing Rs. 6 lakhs (against Rs. 5.12 lakhs) for depreciation and development rebate and Rs. 3.50 lakhs (against Rs. 3.75 lakhs) for taxation, the net profit amounts to Rs. 4.52 lakhs, compared with Rs. 8.11 lakhs in the preceding year. The directors have provided a sum of Rs. 1.99 lakhs (against Rs. 4.40 lakhs) for arrears of bonus and transferred Rs. 2.50 lakhs to the general reserve. The dividend on equity shares amounting to Rs. 3 lakhs (the same) and on preference shares amounting to Rs. 1.47 lakhs (the same) will be paid out of the general reserve.

In the preceding year, a sum of Rs. 5 lakhs had been transferred to dividend equalisation and the dividends were paid out of this reserve. After making various appropriations, there remains a surplus of Rs. 24,000 to be carried forward, against Rs. 21,000 brought in. The Rs. 50-paid share of Bradbury Mills is quoted around Rs. 162.50, offering a gross yield of about 9.4 percent.

Mettur Chemical Profit Rises

THE working of the Mettur Chemical and Industrial Corporation Ltd for the year ended March 1964 bears the full impact of the expansion from 20 tons to 40 tons capacity in the caustic soda section. A fresh impetus in sales and a marked improvement in profit are the highlights of the working results of the year. The directors' report says that caustic soda production reached an all-time high of 12,700 tons, which is the rated capacity of the expanded 40-ton plant. Correspondingly, liquid chlorine production also increased substantially. The output of bleaching powder, for which a third plant was commissioned during the year, was maintained at about 6,900 tons. The output of vegetable oil products as well as of other chemicals was maintained at satisfactory levels.

As for further expansion, the directors state that the creation of a further 20-ton capacity for caustic soda making 60 tons in all in the existing factory premises itself, by installing 60 additional Hooker cells and auxiliary equipment, has been achieved. The plant was brought into commission in March 1964. Substantial progress has also been made in the setting up of the second factory to produce 60 tons a day of rayon grade caustic soda. The construction work is making rapid progress. As for plants for the manufacture of organic chemicals, satisfactory arrangements have now been made for obtaining technical collaboration. It is expected that the first stage of the expansion programme at the new factory can be put on stream by the end of the current financial year. Further share capital to the extent of Rs. 60 lakhs worth of equities and Rs. 30 lakhs worth of 9.3-percent preference shares, was issued to existing shareholders as rights. Apart from the issue of share capital for expansion, the Company executed the trust deed for the rupee-*cum*-dollar subloan totalling Rs. 1.367 crores from the Industrial Finance Corporation.

The net profit for the year amounts to Rs. 40,49,636, after providing Rs. 15,99,734 for depreciation and Rs. 2,30,347 for managing agents' remuneration. This compares with the previous year's net profit of Rs. 29,82,180, after providing Rs. 16,32,651 and Rs. 1,62,893, respectively. With the amount of Rs. 11,631 brought forward from the previous year, the total comes to Rs. 40,61,267. Out of this, the provision for taxation amounts to Rs. 14,10,00 (against Rs. 7,50,000). A sum of Rs. 4,62,000 is transferred to developmnet rebate reserve (against Rs. 2,50,000). The interim preference dividend at 3 percent has absorbed Rs. 78,000. The interim ordinary dividend at 6¼ percent amounted to Rs. 8,74,882. The final preference dividend at 3 percent amounts to Rs. 78,000. The preference dividend on 9.3 percent new preference shares for two months amounts to Rs. 23,250. The final dividend of 6¼ percent on old ordinary shares and dividend on new ordinary shares at an annual rate of 12½ percent for two months on the paid-up value of Rs. 5 a share, amounts to Rs. 9,37,383. The balance of Rs. 12,185 is carried forward. The total equity dividend for the year is maintained at 12½ percent, despite the increased capital.

Western India Plywoods Raises Dividend

THE working results of the Western India Plywoods Ltd for the year ended March 1964 are encouraging. Sales and profits have improved over those of the previous year. The dividend is raised to 16 percent from 15 percent. The profit for the year amounts to Rs. 23,37,370, after providing Rs. 48,998 for depreciation, and Rs. 83,691 for development rebate. This profit compares with the previous year's figure of Rs. 20,90,582, after providing Rs. 42,476 for depreciation and Rs. 73,863 for development rebate. With the amount of Rs. 9,200 brought forward, the total comes to Rs. 23,46,570. Out of this, the provision for taxation amounts to Rs. 12,00,000 (against Rs. 12,51,616). A sum of Rs. 30,000 is transferred to general reserve (against Rs. 50,000). A sum of Rs. 300,000 is transferred to dividend equalisation reserve (against nil). A sum of Rs. 2,50,000 is transferred to the reserve for the Industrial Finance Corporation of India loan repayment (against Rs. 2,50,000).

The preference dividend at 7.8 percent amounts to Rs. 48,165. The proposed ordinary dividend of 16 percent will absorb Rs. 5,03,392. The balance of Rs. 15,013 is carried forward. Total sales for the year amounted to Rs. 1,28,75,333 (against Rs. 1,05,74,642). The Company has been granted income tax relief under Section 84 of the Act. Appropriate relief has also been passed on to shareholders for tax deductions, while paying dividends to them last year. Income tax relief under this head would be available in the current year also. Arrangements for doubling the Company's capacity in the hardboard plant are nearing completion. The plywood plant is also being modernised at a cost of about Rs. 6 lakhs.

Indian Steel Rolling Repeats

THE working results of the Indian Steel Rolling Mills Ltd for the year ended March 1964, are satisfactory in spite of the closure of the mills for over 20 days on account of the power cut, heavy rain and cyclone. This stoppage resulted in considerable loss of production, which accounts for the lower turnover. But it has been possible to maintain the profits at last year's level in spite of the lower turnover, on account of better performance of the wire plant. The profit for the year amounts to Rs. 10,06,606.83, after providing Rs. 3,01,532 for depreciation and Rs. 100,000 for technical assistance remuneration. The profit for the previous year was Rs. 9,85,120, after providing Rs. 2,61,216 for depreciation and Rs. 100,000 for technical assistance remuneration. With the balance of Rs. 19,483.22 brought forward, Rs. 1,55,174.03 being the amount transferred from repairs and renewals reserve, and Rs. 278.48 being excess provision written back, the total available for appropriation comes to Rs. 11,81,542.56. Out of this, the provision for taxation amounts to Rs. 4,26,000 (against Rs. 6,20,000). A sum of Rs. 1,50,000 is trans-

reserve (against Rs. 43,000). A sum of Rs. 1,03,207.39 is transferred to general reserve (against nil). The preference dividend at 7.15 percent amounts to Rs. 35,746.43. The ordinary dividend at 9 percent (the same) will absorb Rs. 4,39,072.20. The balance of Rs. 27,385.29 is carried forward.

As for modernisation and expansion, the directors' report says that the new re-heating furnace is now in full operation, and is yielding good results. It is expected that during the current year, production will substantially increase as a result of the operation of this new furnace. Modernisation and improvements to the existing 10in. and 14in. mills have been taken up, and the replacement equipment ordered is being received. It is expected that the new 16in. mill for roughing down larger-sized ingots will go into commission during the current financial year.

Referring to the continuous wire rod mill, the report says that the I.C.I.C.I had agreed to advance the necessary foreign exchange and the rupee finance required for the project. All formalities have been completed in connection with this loan for Rs. 25 lakhs. Orders have been placed for the machinery and the mill is expected to be delivered before June 1965. With the installation of the mill, it will be possible for the mills to produce 6 millimetre rounds in larger quantities, which will be of very great help to the Company in diversifying production. The continuous wire rod mill will also be able to produce both coir and cotton haling hoops.

Progress of Hindusthan Twyfords

HINDUSTHAN Twyfords Ltd has produced satisfactory results for the year ended March 1964. In December 1963, the big tunnel kiln came into production. Output amounted to 1,720 tonnes, against a rated capacity of 5,400 tonnes. The quality of the products has been satisfactory. The Company has begun to produce for the first time in India vitreous china sanitaryware. The directors have pointed to the slow offtake in view of the sluggish progress of house-building. So there is now a buyers' market for the products manufactured by the Company. During the current year the plant will run at about "half-speed."

Sales rose from Rs. 3.89 lakhs to Rs. 45.98 lakhs. The gross profit has amounted to Rs. 19.97 lakhs, out of which depreciation absorbs Rs. 12.23 lakhs and development rebate reserve Rs. 1.03 lakhs. Bringing in a loss of Rs. 11.51 lakhs, the debit balance has been reduced to Rs. 5.11 lakhs.

Hindustan Wires Maintains

IN their latest report for the year ended March 1964, the directors of Hindustan Wires Ltd say that the Company has received import licences of Rs. 35 lakhs under the yen credit, and the shipment of equipment has begun. The expansion programme of the Company, including the manufacture of tyre bead wires, should be completed during the current year. So the profit and and sales are expected to improve considerably. The Company has started producing high-tensile wires for prestressed concrete, and its results will be reflected in the current year.

The profit has amonted to Rs. 10.87 lakhs for 1963-64, against Rs. 10.16 lakhs for 1962-63, after increasing depreciation from Rs. 1.45 lakhs to Rs. 2.45 lakhs. A taxable ordinary dividend of 6 percent has been maintained which works out to a yield of 6.2 percent at the present price of Rs. 9.75 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 3 lakhs (against Rs. 3.93 lakhs), general reserve Rs. Rs. 5 lakhs (against Rs. 4 lakhs) and taxation Rs. 5,000. The carry-forward is Rs. 14,354, against Rs. 32,525 brought in. Sales rose from Rs. 87.16 lakhs to Rs. 1.09 crores, including process charges which amounted to Rs. 1.42 lakhs. In spite of power failures and restrictions, a higher level of output was attained. The Company was sanctioned additional power in March 1964, so it is expected that production will improve during the current year. The output of high carbon and other specialised wires has risen with effect from 1st Mach, 1964. The distribution and price control on wire rods has been lifted. This will enable the Company to earn a reasonable margin of profit on the finished products.

Kadambini Tea Pays More

THE Kadambini Tea Co. Ltd (a Dooars garden) has earned a profit of Rs. 6.40 lakhs for the year ended March 1964, against one of Rs. 2.47 lakhs for 1962-63, after transferring Rs. 2.64 lakhs (against Rs. 2.20 lakhs) for depreciation. The taxable ordinary dividend has been increased from 8.33 percent to 13.33 percent. The yield works out to 13.33 percent at the present price of Rs. 15, which is the par value of the share. Development rebate reserve absorbs Rs. 30,500, taxation Rs. 2.85 lakhs and reserves Rs. 1.20 lakhs. The carry-forward is Rs. 91,067, against Rs. 1.20 lakhs brought in. The crop rose from 1.10 million kilograms to 1.12 million kilograms.

K.C.P. Cement Machinery for Orissa Project

THE K.C.P. Ltd, Madras, which has entered into an agreement with the Industrial Development Corporation of Orissa Ltd, Bhubaneswar, for the supply and erection of a cement plant with a capacity of 1,200 tons a day in Bargarh, Sambalpur district, has made satisfactory progress in manufacturing and despatching a major part of the machinery for the project. Roughly two-thirds of the machinery and equipment is of indigenous origin and the balance is being imported from France. About 1,100 tons of imported machinery and euipment arrived in Madras recently. The fabrication of the balance of indigenous machinery is going on at the works of the K.C.P Ltd in Madras. The cement factory in Bargarh is expected to go into production by the end of 1965.

A Good Year for Seshasayee Paper

THE report of the Seshasayee Paper and Boards Ltd for the year ended March 1964, states that the entire plant came into continuous and full operation in July 1963. A 15-day test run was carried out in August 1963 to assess the capacity and performance of the equipment individually and collectively. On the successful completion of the test run, the installation was formally taken over by the Company and the suppliers were relieved from their obligations under the contract. During the year, 16,800 tonnes of writing and printing paper were produced. It is encouraging to note that this was possible during the very first year of production in spite of the teething troubles and shutdowns for check-up, which are incidental to a project of this magnitude.

The directors add that the rated capacity of 1,500 tonnes a month was reached in the very first month of trial operations. Thereafter, production has been consistently in excess of capacity and reached a peak of 1,860 tonnes in January 1964. As for raw materials, the report says that the Company has adequate stocks of all raw materials and chemicals. The directors except to draw bagasse from the Pugalur sugar factory in about three months for a continuous production of bagasse pulp. Out of 16,800 tonnes of paper made during the year, 16,700 tonnes were sold. The directors have expressed satisfaction over the granting of a rebate of 15 percent in the excise duty by the Government of India. It is reported that the request for a suitable readjustment of the selling price of paper to offset the increase in working costs is still being considered.

The working results for the year show a turnover of Rs. 2.95 crores. The trading result for the year, after meeting the interest charges, shows a profit of Rs. 6,19,017. The surplus after adjustment of the loss carried over from last year is Rs. 2,08,480. Depreciation calculated under the straight-line method amounting to Rs. 16,08,738 for 1962-63 and Rs. 30,00,529 for 1963-64 has yet to be provided. During the year, the directors have returned the first instalment of the principal of Rs. 5 lakhs to the Industrial Credit and Investment Corporation of India, and Rs. 14 lakhs to the P.L. 480 Funds.

Bajaj Auto Does Better

THE preliminary report on the working of Bajaj Auto Ltd for the year ended March 1964, shows an improvement over the previous year's performance, in that both sales and gross profit are higher. The rise in profit, however, is small in relation to the increase in sales. The turnover has gone up by nearly 30 percent from Rs. 1.403 crores to Rs. 1.839 crores, while the gross profit is up by about 10.6 percent from Rs. 26.87 lakhs to Rs. 29.71 lakhs. The directors have postponed the decision concerning the dividend, but when declared it will be paid out of the general reserve. In the previous year, the Company paid at the rate of Rs. 10 a share on the fully-paid shares and Rs. 7 a share on the partly-paid shares.

The provision for depreciation has been raised from Rs. 8.56 lakhs to Rs. 11.41 lakhs, but development rebate reserve gets less at Rs. 2.84 lakhs, against Rs. 7.40 lakhs. Taxation accounts for Rs. 5 lakhs, against Rs. 3.86 lakhs. After writing back excess provisions amounting to Rs. 1,205 (against Rs. 78,792), the directors have transferred Rs. 10.46 lakhs (against Rs. 2.89 lakhs) to general reserve. In the preceding year, a sum of Rs. 5.20 lakhs had been transferred to the dividend reserve, out of which the 10 percent dividend absorbing Rs. 5.19 lakhs was paid.

Share Offer from Batala Engineering

THE Batala Engineering Co. Ltd, a subsidiary of Mukand Iron and Steel Works Ltd, is offering 73,636 equity shares of Rs. 10 each at par for public subscription. The entire public issue has been underwritten. The list will open on 28th August and will close on 10th September or earlier, but not before 2nd September. The Company, which is currently engaged in the manufacture of machine tools, particularly planing machines and lathes, re-rolling of wire rods, mild steel bars, flats and squares from billets procured from the main steel plant and of meehanite castings, has launched major expansion schemes at an estimated capital investment of Rs. 1.62 crores. The expansion programme includes the setting up of a new factory in Balabgarh to manufacture open side hydraulic planers and geared head lathes, modernisation of machine tools and foundry and re-rolling mills in Batala and manufacturing of wood working machinery at Batala.

The Company has secured the collaboration of two Italian firms, Soc. Graziano and Co for geared head lathes and Officeina Meccanica Favretto for open-side hydraulic planing machines. Negotiations are in progress for securing technical collaboration of Machinenfabrik Zuckermann of Austria for the manufacture of wood working machinery. The project cost of Rs. 1.62 crores, it is proposed, will be met by the issued capital of Rs. 7.36 lakhs, further issue of shares worth Rs. 22.64 lakhs, loan of Rs. 15 lakhs from the N.I.D.C., loan of Rs. 45 lakhs from the I.F.C. which is under negotiation, bank borrowings of Rs 38 lakhs and temporary loans of Rs. 34 lakhs. The further issue of capital is likely to be made after about one-and-a-half years. The Government of India has approved in principle import licence application for equipment worth Rs. 39.36 lakhs, subject to availability of a foreign exchange loan of Rs. 22.05 lakhs from the Industrial Finance Corporation of India.

Mr. Jayant H. Shah, managing director of the Company, told newsmen in Bombay on 17th August that the Company's working during the first seven months of the current year was better than in the previous accounting period of nine months ended December 1963. The profit for these seven months is expected to be higher than during the preceding nine-month period. Mr. Shah said that the Company would be able to maintain the 11.5 percent dividend on the increased capital. On the completion of the project in about two years' time, the Company's sales would be around Rs. 1.85 crores, of which Rs. 1.50 crores will be accounted for by machine tools.

Hind Rectifiers Pays More

THE increase in the dividend from 5 percent to 8 percent for the year ended March 1964 by Hind Rectifiers Ltd, is fully justified by the Company's improved performance during the year. The turnover has risen by nearly 53 percent from Rs. 26.06 lakhs to Rs. 40.08 lakhs, whereas the gross profit has more than doubled from Rs. 3.32 lakhs to Rs. 7.92 lakhs. Appropriations include depreciation Rs. 1.65 lakhs (against Rs. 1.08 lakhs), development rebate Rs. 70,139 (against Rs. 14,861), taxation Rs. 2.56 lakhs (against Rs. 55,000) and general reserve Rs. 2.52 lakhs (against Rs. 12,000). In the preceding year, a sum of Rs. 60,000 had been transferred to the dividend reserve out of which 5 percent dividend absorbing Rs. 52,470 was paid. After writing back excess provisions amounting to Rs. 27,932 (against nil), the directors have used Rs. 15,000 (against Rs. 15,827) to write off capital issue expenses. The dividend for 1963-64 will absorb Rs. 1.48 lakhs, and it is to be paid out of the general reserve. The Company expects to maintain satisfactory increase in sales during the current year. The capacity of the selenium plant is being increased. Import licence under U.K. credit (the Kipping Loan) has been received. The Company has received an industrial licence for the extension of the range of sillicon diodes. Westinghouse Brake and Signal Company has agreed in principle to supply the necessary machinery and accept payment in the form of fully-paid equity shares. The Company has entered into a technical collaboration agreement with English Electric Co. of the U.K. for the manufacture of rectifiers' assemblies required for electric locomotives and suburban trains. The Government of India's approval is awaited.

Coorla Spinning Pays the Same

THE Coorla Spinning and Weaving Co. Ltd has maintained the dividend for the year ended March 1964 at Rs. 11 a share. The working results of the Company, however, show a considerable improvement over the previous year's performance. Against a rise of about 10 percent in the sales, the gross profit is up by nearly 25 percent from Rs. 16.59 lakhs to Rs. 20.70 lakhs. After providing Rs. 7.10 lakhs (against Rs. 6.15 lakhs) for depreciation, Rs. 94,000 (against Rs. 52,000) for development rebate and Rs. 7.25 lakhs (against Rs. 6 lakhs) for taxation, the net profit amounts to Rs. 5.41 lakhs, against Rs. 3.92 lakhs in the preceding year. A sum of Rs. 1.88 lakhs (Rs. 44,000) has been transferred to the general reserve, and Rs. 26,649 (against nil) have been provided for development reserve. The proposed dividend will absorb Rs. 2.86 lakhs. After making some minor adjustments, there remains a surplus of Rs. 40,785 to be carried forward, against Rs. 5,342 brought in. The Company spent Rs. 5.23 lakhs on new machinery during the year 1963-64.

C.I.M.M.C.O. to Run Hind Cycles

AN extraordinary general meeting of the Hind Cycles is being convened on 7th September at Nagda to approve of the directors' proposal to let out the undertaking of the Company on lease to the Central India Machinery Manufacturing Co. Ltd. (C.I.M.M.C.O.). The lease will be for a period of three years on an annual rent or compensation of Rs 25 lakhs. All rent and outgoings concerning the factory premises during the term of the lease will be paid by the lessees; services of workmen and staff will be continued without break of service and raw materials and stores will be taken over on payment at the prevalent market value; spare parts and goods in progress will be taken over at cost price and finished products at the current list price less dealers' commission. The directors state that the working of Hind Cycles in the past has not yielded sufficient profits with the result that it has not been possible to pay dividends even to the preference shareholders.

The Central India Machinery Manufacturing Co. is engaged in the manufacture of various types of machinery and engineering goods and is interested in utilising the factory and facilities of the Company for continuing to manufacture bicycles and also undertaking the manufacture of other products. It is understood that C.I.M.M.C.O. has received fairly large orders from the Government and some of the work might be executed through the workshops of Hind Cycles. The Rs. 100-paid share of Hind Cycles is quoted nominally around Rs. 75. The Company is in arrears of preference dividend for 1961-62 and 1962-63, and arrears of depreciation amount to Rs. 11.45 lakhs.

Central India Machinery Results Impress

THE Central India Machinery Manufacturing Co. Ltd reports excellent results for the year ended March 1964. Sales have risen by about 45 percent from Rs. 3.42 crores to Rs. 4.94 crores, the gross profit has shot up by as much as 80 percent from Rs. 35.59 lakhs to Rs. 64.12 lakhs and the dividend has been raised from 7.5 percent to 10 percent. Allocations include depreciation Rs. 21.66 lakhs (against Rs. 16.07 lakhs), development rebate Rs. 2.94 lakhs (against Rs. 5.37 lakhs), taxation Rs. 6.50 lakhs (against nil), general reserve Rs. 18 lakhs (against Rs. 17.50 lakhs) and dividend reserve Rs. 15 lakhs (against Rs. 15.50 lakhs). The proposed dividends absorbing Rs. 14.03 lakhs have to be paid out of the dividend reserve.

The auditors of the Company have pointed out that the provision for depreciation amounting to Rs. 21.66 lakhs is inadequate and the directors state that they have not been able to provide more because of insufficient profits to meet the full liability for depreciation. The arrears of depreciation calculated in accordance with Section 205 (2) of the Companies Act amount to Rs. 41.84 lakhs. The directors point out that the automatic looms manufactured in technical collaboration with Enshu of Japan are being well received in the market, but the demand has fallen short of expectations on account of the restrictions by the Government on installation of automatic looms.

The production capacity of the Gwalior factory, therefore, is being used only partially and this has adversely affected the profit of the Gwalior unit. The order position for plain looms also continues to be discouraging on account of the restrictive policy of the Government in the matter of installation of plain looms. The progress of the calender bowl plant in Gwalior and the shuttle factory at Bombay is, however, satisfactory and the high-speed winding machines manufactured in collaboration with a West German firm continue to be well received. The production at the Company's wagon and structural shop division in Bharatpur continues to be satisfactory. The construction work of the steel casting factory is progressing well and the directors expect it to go into production some time during the current year.

Calicut Spinning to Issue Shares

THE Calicut Modern Spinning and Weaving Mills Ltd is a new venture in Kerala State. The Kerala State Industrial Development Corporation has underwritten Rs. 4.5 lakhs worth of shares, apart from giving deferred payment guarantee for Rs. 22.65 lakhs. The mill is erected in Ramanattukara, very near Calicut, and the construction of buildings is expected to be completed by next September, and the erection of machinery is likely to commence from October. The factory is expected to go into full production with 12,000 spindles by the beginning of 1965. The buildings have been designed to house 25,000 spindles. The blow-room and preparatory machinery ordered for, are also for feeding 25,000 spindles. After the erection of the first stage of 12,000 spindles, and commencing production, orders will be placed for a further 13,000 spindles, licence for which has also been received, and thus the mill will be brought to an economic unit of 25,000 spindles.

The cost of the first stage of 12,000 spindles, with blow-room and preparatory machinery to feed 25,000 spindles, is Rs. 64.65 lakhs. This is largely met by (a) share capital of Rs. 20 lakhs, out of which the promoters, directors and friends have already provided Rs. 10.5 lakhs, leaving the balance of Rs. 9.5 lakhs offered to the public, fully underwritten (b) a medium-term loan of Rs.

trust only genuine spare parts

No problems ! No worries
Problems always arise if you neglect your Jeep.
It works hard and long for you and may at times need certain replacements.
Factory approved spare parts guarantee a new life and maintain the excellent performance with minimum upkeep. Rely with confidence on genuine spare parts —only with them will you get complete satisfaction.

lakhs from a bank, and (c) a deferred payment guarantee of Rs. 22.65 lakhs sanctioned by the Kerala State Industrial Development Corporation, and (d) a short-term deposit of Rs. 2 lakhs from any institution.

The capital cost of the second stage, that is, expansion by a further 13,000 spindles, is placed at about Rs. 20 lakhs, and this will be met by ploughing back the development rebate, depreciation in the first two years of working, etcetera.

Kerala Spinners to Raise Capital

KERALA Spinners Ltd has received the consent of the Controller of Capital Issues for Rs. 40 lakhs worth of equity shares. The Company will enter the market with its issue for equity share capital before the end of the current year.

The Company is registered in Kerala for setting up a spinning mill with a licensed capacity of 25,000 spindles. The Kerala Government and the Kerala State Industrial Development Corporation are actively participating in the venture. Land measuring 25 acres has been purchased and the plan for building has been finalised. An order for indigenous machinery valued at Rs. 23 lakhs has already been placed with Texmaco. For importing machinery from abroad, the Company is carrying on negotiations in Japan, and orders will be placed soon.

At a recent meeting, the board of directors has been finalised with Mr. Devji Rattansey, chairman of the Union Bank of India Ltd, Bombay, as the chairman of the Company. The eight other directors are Mesrs D. P. Kejriwal, Nandlal More, Abdul Salam and R. C. Warrior (Managing Director and Development Commissioner, respectively, of the Kerala State Industrial Development Corporation), Bhagawatiprasad Goenka, Nand Kishore Ruia, Hariram Singhal and B. N. Mehta.

Mohini Mills Pays Less

THE Mohini Mills Ltd has reduced the dividend for the year 1963 from 11 percent to 7.5 percent. This follows the Company's disappointing performance during the year. Despite an increase of about 14 percent in the sales from Rs. 2.30 crores to Rs. 2.62 crores, the gross profit is down by nearly Rs. 12 crores from Rs. 15.77 lakhs to Rs. 13.87 lakhs. After providing Rs. 86,580 (against Rs. 1.12 lakhs) for the managing agents' commission, Rs. 5.01 lakhs (against Rs. 4.62 lakhs) for depreciation, Rs. 19,061 (against Rs. 20,304) for development rebate reserve and Rs. 4 lakhs (against Rs. 5 lakhs) for taxation, there remains a surplus of Rs. 3.60 lakhs, against Rs. 4.83 lakhs in the preceding year. A sum of Rs. 65,000 has had to be transferred from the dividend reserve for the payment of the reduced 7.5-percent dividend. The dividend absorbs Rs. 4.25 lakhs (against Rs. 5.13 lakhs), leaving a balance of Rs. 10,319 to be carried forward, against Rs. 10,082 brought in.

New Capital Issues

SIX companies have been authorised to raise fresh capital aggregating Rs. 5.13 crores. Of these, two are issuing debentures, three are issuing equities and one equities plus redeemable preference shares. One company is offering part of its shares for public subscription by prospectus. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

The Tata Engineering and Locomotive Company Ltd, Bombay, is to issue 200,000 equity shares of Rs. 100 each for cash at a premium of Rs. 30 a share. The shares will be offered to the existing equity shareholders of the Company in the proportion of one for every five equity shares held. The capital will be used on the expansion programme in the manufacture of diesel vehicles.

The Tata Mills Ltd, Bombay, is to issue Rs. 81,85,950 capital—Rs. 60 lakhs in 5 percent (1966-71) debenture stock, and Rs. 21,85,950 in equity shares of Rs. 25 each. The money will be used for modernisation and renovation programme of the Company.

The Choregale and Company Ltd, Mormugao Harbour, is to issue further capital of Rs. 2 crores divided into 200,000 equity shares of Rs. 100 each to be issued for cash at par. The money will be used for the payment of advances made by the directors.

The Madanapalle Spinning Mills Ltd, a Company incorporated in Andhra Pradesh, will be issuing capital of Rs. 30 lakhs divided into 40,000 equity shares of Rs. 50 each and 10,000 redeemable preference shares of Rs. 100 each, to be issued for cash at par. Of this issue, such number of shares of each kind as would qualify for listing on recognised stock exchanges would be offered for public subscription by prospectus. The capital will be used for financing the setting up of a new spinning mill in Madanapalle in Andhra Pradesh. This is in supersession of an earlier consent dated 26th July, 1963.

The Gauhati Bank Ltd, Gauhati (Assam), is to issue further capital of Rs. 6,38,100 divided into 127,620 shares of Rs. 5 each for cash at par.

Kadoari and Sons Ltd, Madras, is to issue debentures of Rs. 15 lakhs carrying interest at 7 percent a year which will rank *pari passu* to the existing first mortgage debentures of Rs. 30 lakhs. The capital will be used for the purchase of additional rotary printing machine and for working capital.

The Stock Markets

GOOD CORPORATE NEWS CHEERS LYONS RANGE

Wednesday Evening.

THE Calcutta stock market has been fairly buoyant during the past week, although share prices have reacted slightly towards the close due to profit-taking. Activity has, however, been largely confined to clearing shares. Investment support is cautious in view of various uncertainties. Turnover shrunk considerably towards the close due to settlement on Wednesday. It passed off smoothly and carry-forward charges are slightly higher than those on the previous occasion. In view of the sharp rise in the prices of clearing shares during the past few days, there has been a great deal of short-covering. Any further improvement in the trend is, therefore, likely to take place at a slower pace.

Lyons Range has been cheered by several favourable developments. Corporate news is good. Tata Engineering, for example, will issue rights shares at a reasonable premium. The management of the Company has also hinted that it will issue bonus shares and maintain the dividend on the increased capital in due course. The good response to the units of the Unit Trust of India is being bullishly interpreted. The market hopes that the Life Insurance Corporation and the Unit Trust will buy a fair amount of ordinary shares in the near future.

It is reliably learnt that the U.S. Goverment has indicated its willingness to use P.L. 480 funds for stimulating activities in the capital market. In addition to extending financial assistance to Indo-U.S. ventures, the funds are likely to be used for underwriting new issues. Whether a new institution will be set up for the purpose or the funds will be routed through existing financing institutions has not yet been settled. In any case, the news is encouraging, particularly since a large number of new shares are quoting below par. The performance of several new companies has been disappointing and they have not progressed according to their plans. In order to revive confidence, it is essential that new industrial schemes should be approved only after a close scrutiny of their feasibility has been made.

After an earlier rise, Indian Iron have slipped back towards the close, but there is little selling pressure. Selected engineering shares like Guest, Keen, Williams, Texmaco, Indian Standard Wagon. Burn and Jessop have been supported. Scattered interest in Kumardhubi, Jay Engineering and Indian Steel and Wire Products has been shown.

In the miscellaneous section, interest centres on clearing scrip. Indian Copper have been a steady feature due to the rise in the international price of copper. Kesoram Industries, Hindustan Motors, Dunlop Rubber and Indian Aluminium have attracted support. Rohtas, Jaipur Udyog and Indian Cable have also improved. Indian Oxygen, Alkali and Chemical and Union Carbide have gained. Managing agency shares like Martin Burn and Jardine Henderson have been sluggish. In electric companies, U.P. Electric have improved on sustained support. Among new shares, Hindusthan Twyfords have been steady on a good report. Hindustan Aluminium have also improved. Selected paper shares have been steady. Orient, Seshasayee, India Paper Pulp and Ballarpur have changed hands. Bank shares have been neglected. Sugar shares are being freely offered without attracting buyers.

Birla are again prominent among jute shares. Support has been forthcoming for Ganges, Kinnison, Kelvin, Anglo-India and Barnagore. Turnover has, nevertheless, been restrained because of the growing uncertainty over the marketing of jute goods, particularly of sacking. Despite limited interest, selected coal shares are quotably higher. Burrakur, Central India and Western Bengal have risen. Cotton mill shares have been selectively bought. J. K. Rayon, Bharat Commerce and Elgin have been steady. Tea shares are being dealt in cautiously due to the poor marketing outlook for the commodity. Stray business in Assam and Dooars gardens has been transacted. Some Pakistani gardens have attracted support due to interested buying.

Government securities are dull and prices, particularly of long-dated loans, have tended to drop. The 3 percent Conversion Loan 1986 has been quoted around Rs. 63.20. The new State Government loans floated last Monday have met with good response. Five loans were fully subscribed and their lists closed on the opening day. In spite of the encouraging support, some of these loans are being quoted at a slight discount.

Bombay

NEW ACCOUNT STARTS IN CHEERFUL MOOD

TURNOVER CONCENTRATED ON CLEARING SCRIP

Wednesday Evening.

THE Bombay stock market started the new account last Monday in a cheerful mood. Prices, particularly of clearing shares, have sharply risen on replacement buying, combined with brisk short-covering. Turnover has largely been concentrated on clearing scrip, but selected cash shares have also met with support.

Dalal Street has taken an encouraging view of the seriousness with which the Government has started tackling the food problem. It is also thought that the Government may formulate the fourth plan on a more realistic basis. The first Press conference held by Mr. Swaran Singh, Central Foreign Minister, has created a good impression. Corporate news has also been excellent. Investors have been encouraged by the news that Tata Engineering will issue rights ordinary shares at a small premium of Rs. 30 a share, instead of Rs. 50 a share as was reported earlier. Mr. J. R. D. Tata, chairman of the Company, has hinted the possibility of issuing bonus shares in the future.

Tata Steel ordinary have been in the limelight and have closed at Rs. 162.75. Selected engineering shares are buoyant. Tata Engineering have improved on reports of better worknig during the current year. Mukand Iron, Standard Engineering and Larsen and Toubro have attracted support. In motor-vehicle shares, Hnidustan Motors and Premier Automobiles have gained. Cotton mill shares have improved all round. Century, Bombay Dyeing, Kohinoor and Standard have risen. Interest has been taken in Morarjee, India United ordinary and Svadeshi.

Miscellaneous shares have also moved up in sympathy with the general trend. In cement shares, Associated and Digvijay have been prominent. In steamship company shares, Scindia Steam have improved on short-covering. Chemical shares have been fully steady. Tata Chemical, Indian Dyesutff and Polychem have gained. Sugar shares have been selectively bought. Belapur and Walchandnagar Industries have been steady. Mining shares have been neglected. Be Be Petrol have been sluggish. Rayon shares have met with strong support due to the prospect of a reduction in the import duty on rayon yarns. Bombay Burmah have improved on replacement purchases. Voltas and Tata Oil have been steady.

Turnover in bank shares has been limited. Bank of India and Central Bank have changed hands. Electric company shares have gained on the payment of higher dividends by the Tata group of companies. Tata

SHARE PRICES REMAIN STEADY

BUSINESS BROADENS ON GOOD BOMBAY ADVICES

Tuesday Evening.

THE Madras stock market has been very steady during the past week. Business in both clearing and cash shares has broadened following good advices from Dalal Street. Operators are inclined to believe that the Government may soon give incentives to stimulate activity in the capital market.

Turnover in Government securities is negligible because of subscriptions for the new State Government loans. Bank shares are sluggish. Indian Overseas have been done at Rs. 145.50 and Syndicate Bank "A" shares at Rs. 143.50. Interest in electric company shares has shrunk. West Coast are available at Rs. 13.50 and Vellore at Rs. 15.62. In sugar shares, Deccan have slipped back to Rs. 12, but E.I.D. have been maintained around Rs. 35.75. Travancore have hardened to Rs. 7.65 and Mysore to Rs. 28.33. Madura have been done at Rs. 9.44 and India at Rs. 9.10.

In the planting section, Blue Mountain have changed hands at Rs. 2.27, Cochin Malabar at Rs. 6.51, Consolidated Coffee at Rs. 23.55, Ouchterlony at Rs. 3.20 and Periakaramalai at Rs. 3.43. Woodland have been transacted at Rs. 6.90 on paying a taxable ordinary dividend of 5 percent. Talayar have been done at Rs. 1.93 on declaring a taxable ordinary dividend of 5 percent. Amalgamated Coffee have attracted support up to Rs. 10.01 on paying a taxable ordinary dividend of 10 percent. Nilgiri have been steady at Rs. 9, Nonsuch at Rs. 29.87, Peermade at Rs. 20.62 and Ossoor at Rs. 2.72.

Among textile shares, South India Viscose have risen to Rs. 116 and Travancore Rayon to Rs. 20.50. Lakshmi have been bought at Rs. 131 and Madura at Rs. 34.50. Tirupati have changed hands at Rs. 117.20. The Company proposes to increase the preference dividends from 8.93 percent to 9.5 percent. Bangalore woollen have been done at Rs. 269 and Bunckingham at Rs. 275. Business has passed in Mettur at Rs. 277, in Ramnarayan at Rs. 85 and in Ramakrishna at Rs. 199.40.

In the miscellaneous section, Aluminium Industries have hardened to Rs. 21.65 and Ashok Leyland to Rs. 6.75. In cement shares, Dalmia have been steady at Rs. 12.55 and India at Rs. 5.52. Mettur Chemical have been quoted at Rs. 14.55. Seshasayee Paper have attracted support up to Rs. 7.53 and Southern Structurals have been transacted at Rs. 10.28. The Company proposes to issue further redeemable cumulative preference shares with rights to convert them into ordinary shares. These shares will be issued as rights shares to the existing shareholders in the proportion of one share for every four held. Parry's Confectionery have risen to Rs. 2.97 on declaring a second interim taxable ordinary dividend of 10 percent. T. Stanes have been bought up to Rs. 30.50 on paying a final taxable ordinary dividend of 20 percent. Kirloskar Electric have gained at Rs. 18.75 on prospects of a rights issue. Mysore Tobacco have been taken at Rs. 11.50 on declaring a taxable ordinary dividend of 11 percent.

Auckland (2nd Pref.)—Rs. 60/00—60/00—60/00—60/00—(57/00).

All tyres may look alike-BUT

there is a difference with

Firestone

Look at the tread—there are thousands of non-skid angles that adjust automatically to give you skid protection in starting, stopping and on turns.

The exclusive gum-dipped cord body eliminates tyre growth and gives you outstanding protection against blow-outs and ply separation.

This name on the tyre is the most important difference. It's *your symbol of quality and service.*

Alliance—Rs. 108/00—119/00—108/00—119/00—(130/00).

Do. (Pref.)—Rs. 71/00—71/00—71/00—71/00—(72/50).

London

U.K. ECONOMIC OUTLOOK UNSETTLES SHARES

GILT-EDGED STEADY DESPITE WEAK STERLING

London, 26th August.

UNSETTLED condtions were experienced in the stock market over the past week. Although a certain amount of selective buying went on at times, the general trend of prices was towards lower levels. Sentiment was upset at one period by the latest survey of the National Institute of Economic Research with its forecast of a balance of payments crisis, and although the Chancellor of the Exchequer in a week-end statement refuted this (at the same time admitting that exports were disappointing), the market remained in a lethargic mood. Weakness in sterling as a result of economic uncertainties and the latest trade figures were, of course, not helping, but gilt-edged stood the strain fairly well.

Equities see-sawed narrowly, but the market was not without its good features. Rootes Motors were in demand and B. M. C. were wanted on consideration of the group's new car with Rolls Royce engine. Output of the group is still booming. Dollar stocks continued to reflect Wall Street trends which was usually easier. Canadian stocks found good support and shares of the banks were well favoured. Gold shares fluctuated narrowly in very quiet trading. Sea Diamonds went ahead at one time in response to Press comment. Coppers eased and other base metal shares drifted lower, although tins showed some improvement latterly. Oils were again disappointing with B. P. losing ground after their recent rise. Rubbers and teas were on the dull side.

THE CALCUTTA MONEY MARKET

CALL RATE RISES SHARPLY

Wednesday, 26th August.

THERE has been a slight decline in the general level of advances in the Calcutta money market during the past week. This has been brought about by the small decrease in the credit given to sugar mills and to the foodgrains trade. Advances to cotton and jute mills, and to the iron, steel and engineering industries remain unchanged. In the interbank market, some tightness has developed because of the demand for funds to subscribe for the State loans. So the call rate rose sharply from ½ percent to 4 percent and has closed at 3¼ percent.

The exchange market has been quiet, with a moderate number of gunny bills and poor supply of tea bills. The demand for remittances is moderate. In the London market, sterling has weakened further against all currencies with the exception of the Dutch guilder.

BULLION WAS STEADY IN CALCUTTA during the past week. Silver rose from the previous week's level of Rs. 248.25 to Rs. 255.50, quoted today. The price was quoted at 112¼d in London and at 129.3 cents in New York.

In sympathy with silver, gold was quietly steady and the price of 14-carat fluctuated between Rs. 74 and Rs. 74.24 a 10 grammes.

DURING THE WEEK ENDED 21ST August, Government of India Treasury Bills for Rs. 37,25,50,000 were sold in favour of the Reserve Bank.

IT IS STATED THAT 91-DAY INTERmediate Treasury bills sold from 19th August to 22nd August amounted to Rs. 12.90 crores only.

THERE WERE DECLINES OF Rs. 29.15 crores to Rs. 2,423.83 crores in active notes and of Rs. 23.34 crores to Rs. 2,445.88 crores in the total note issue according to the return of the Reserve Bank of India during the week ended 21st August, 1964. The currency contraction was covered by reducing rupee securities of the paper currency reserve by Rs. 25 crores to Rs. 2,135.88 crores. Deposits of the Government of India rose by Rs. 9.44 crores to Rs. 78.24 crores, while those of State Governments dropped by Rs. 10.12 crores to Rs. 13.09 crores. Balances of scheduled banks at Rs. 122.16 crores showed a rise of Rs. 8.70 crores. Balances held abroad rose by Rs. 4.20 crores to Rs. 13 crores while investments at Rs. 247.28 crores showed a decline of Rs. 2.73 crores. Loans to scheduled banks dropped from Rs. 1.89 crores to Rs. 1.84 crores, of which advances against usance bills amounted to Rs. 20 lakhs (Rs. 50 lakhs). Ways and means advances stood at Rs 25.77 crores, against Rs. 19.20 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 14th August, 1964, shows a rise of Rs. 4.56 crores to Rs. 652.82 crores in total deposits. Investments in Government securities are down by Rs. 15.01 crores to Rs. 275.10 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 1.38 crores to Rs. 346.22 crores. Cash and balances are, in consequence, shown at Rs 31.60 crores or Rs. 5.87 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 14th August, 1964, shows Demand and Time liabilities at Rs. 1,288.47 crores (Rs. 33.92 crores) on account of borrowings from banks and Rs. 1,406.47 crores (Rs. 15.47 crores), compared with Rs. 1,284.01 crores (Rs. 34.12 crores) and Rs. 1,404.05 crores (Rs. 16.04 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 39 lakhs and Rs. 9.96 crores to Rs. 65.11 crores and Rs. 105.52 crores, respectively. There is a drop of Rs. 9.32 crores to Rs. 754.88 crores in investments. Advances and bills discounted at Rs. 1,745.83 crores show a rise of Rs. 67 lakhs. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.3 percent and 64.8 percent, against 6 percent and 64.9 percent.

NEW STANDARD ENGINEERING CO. LTD.

CHAIRMAN, MR. R. G. SARAIYA'S SPEECH

The following is the Speech delivered by the Chairman, Mr. R. G. Saraiya at the Annual General Meeting of the Company held at Carroll Road, Bombay 13 on Wednesday, 26th August 1964.

Passing away of Nehru

Before I turn to review the operations during the past year, I must give expression to our deep sense of grief and loss over the passing away of Shri Jawaharlal Nehru. It is now about three months since death removed him from our midst, but our feeling of loss still persist. He was the one man, who above all others played an outstanding role in holding the Indian people together in troubled and difficult times and securing for them the gains of progress with stability at home together with respect and recognition abroad. He is now no more at the helm, and if our ship of state is to steer clear of troubles and dangers ahead, we have above all to pull together. Our national solidarity could be the best homage that we could pay to his memory.

The audited statements of Accounts for the year 1963-64, together with the Directors' Report, have been in your hands for some time and, with your permission, I shall take them as read.

New Directors

I should like to extend here a special welcome to our two new Directors, Shri S. P. Mehta and Shri Prabhu V. Mehta. As you have seen from the Agenda, they were both co-opted as Directors by the Board and seek election at your hands in this Meeting. Shri S. P. Mehta is an eminent Advocate of the Bombay High Court, who is particularly known all over the country as an authority on Tax matters. With his deep study of industrial and technical problems, Shri Prabhu Mehta has carved out for himself a position of leadership in the business community, despite his young years. He was President of the All-India Manufacturers' Organization last year, and held his office with distinction. The Board of Directors has already profited from their advice and guidance, and I am sure their continued association with us will be of great help to the Company.

Pace of Progress

I am glad to report that during the year under review, the Company continued to show good progress in its operations as well as development. Sales reached the record level of Rs. 2.40 crores as against Rs. 1.83 crores in the previous year. Against the increase of only Rs. 21 lakhs in 1963, sales showed an appreciable increase of Rs. 57 lakhs during the past year. It is a matter of satisfaction that your Company has been able to register such a marked rate of increase of over 30%, even at increasingly higher levels of operations, especially in the midst of expansion and development.

Increase in Costs

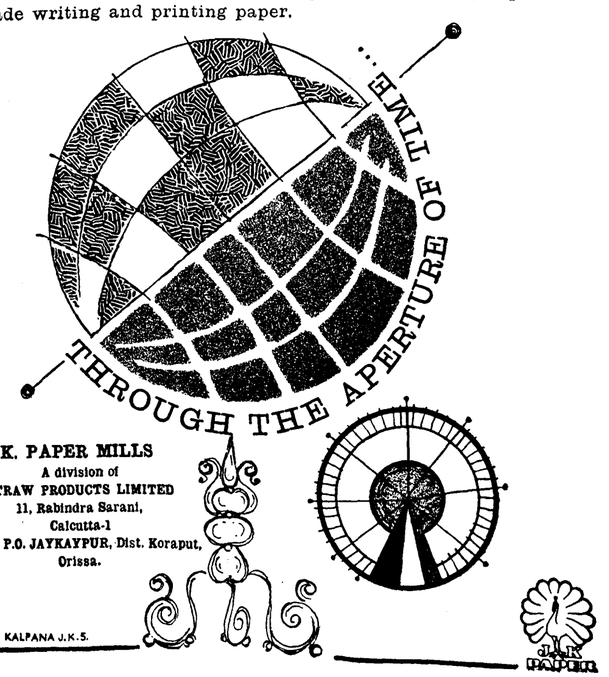
The year under review has witnessed a steady pressure of an all round increase of costs. With the increase in prices of materials such as steel, pig iron, coke, electric motors, etc., there has also been an increase in wages, dearness allowance, bonus and other benefits to labour. To this has been added statutory increase in customs duty, central sales-tax, employers' contributions for Provident Fund, ESIC, etc. It has not been possible to offset fully this rise in costs by increased productivity or higher prices for our products, with the result that gross profits have not shown the same rate of increase as in the case of sales and output. However, your Company's profit performance can also be looked upon as satisfactory. As against Rs. 22.88 lakhs in the previous year, the gross profits in the year under report were Rs. 26.87 lakhs. The corresponding figures for net disposable profit after Depreciation, Development Rebate and Taxation are Rs. 7.73 lakhs and Rs. 10.05 lakhs respectively. With this increase in profits, your Directors have thought it fit after careful consideration to recommend Silver Jubilee bonus dividend @ 1% on Equity Shares, while maintaining the previous year's Equity and Preference dividends each @ 9%. With the increase in dividend distribution of Rs. 1.11 lakhs, it has also been possible to transfer Rs. 2.75 lakhs to General Reserve as against Rs. 75,000/- only in the previous year.

The fixed assets of the company increased during the year by Rs. 15.88 lakhs as against increase of Rs. 46.03 lakhs, Rs. 25.99 lakhs and Rs. 29.44 lakhs in the previous three years. As you will see from this, there is some slowing down of the tempo of development particularly in the past year. While this is to some extent due to a deliberate policy of phased expansion and delay in issue of import license for Foundry machinery, it also reflects the general problem of finding funds for development. I propose to revert later in this Speech to the consideration of this important problem, which not only affects your Company's development, but also threatens the growth of our national economy.

Silver Jubilee Celebrations

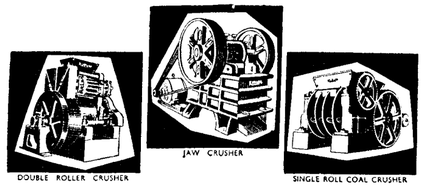
This is the Silver Jubilee year of your enterprise, which started as far back as 1939 as a proprietory concern founded by Shri J. V. Patel our Managing Director, and which has blossomed out after many phases of expansion, into a Public Limited Company in its present form over five years ago. A Souvenir Brochure entitled "25 years of Service to Industry" was issued to mark this historic occasion. It was released formally by Shri S. G. Barve, Minister for Industries, Government of Maharashtra, at a small, informal function, held at our Goregaon Works on 25th January, 1964. Copies of this Brochure have been sent to you all as well as distributed amongst our many friends and associates, at home and abroad. We have received heartening messages of congratulation from some of our share holders and well-wishers, to whom we are deeply grateful for their words of encouragement.

The Directors' Report has reviewed in some detail the Company's operations during the past year, with special reference to progress of foreign collaboration and development at Goregaon, to which there is little that remains to be added. I should like to mention here the publication of our House Magazine entitled "We in NSE" which was first issued under the name of "NSE Sandesh" on 1st October, 1953. Four numbers have also been published in abilingual edition of English and Marathi. It is proposed to enlarged the scope of this new publication and to make its issue more frequent so that the benefit of this forum of communication and self-expression can reach all the ranks of our employees.



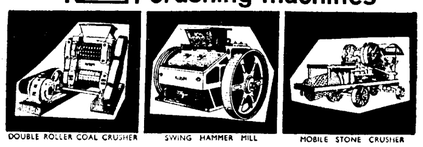
Labour Problems

This brings me to the outlook for the Company in the current year. In line



Sir Isaac Newton held that gravity is a force, whereas Einstein regarded it as a property of space, which he believed was curved. But they had one thing in common. Both the Law of Gravitation and the Theory of Relativity were put down on papers for the consumption of knowledge-hungry world.

The world's first paper was made by the wasp for nesting purposes. The Egyptians manufactured Paper by cutting strips from the stem of the Papyrus plant-moistening them and laying them flat.



In modern India, J. K. Paper Mills produce all quality high grade writing and printing paper.

25, SWALLOW LANE, CALCUTTA-1

with the rising levels of production during the past year, and the previous years, we have set for ourselves higher targets for 1964-65. Unfortunately the progress of the first quarter in the current year was marred by labour trouble which culminated in a strike paralysing operations in one Department for over a month and in the entire works for ten days. Reference has already been made in the Directors' Report to the strike, which was pending at the time the Report was signed. The strike was precipitated by the Management's chargesheet against one of the workers for misbehaviour. I am glad to report that the strike has now been called off, and the dispute has been referred to an Industrial Court through the good offices of the conciliation machinery of the State Government. Now that the matter has been amicably settled with the workers and the Union, I do not wish to prolong the controversy.

However, I cannot help making here some general observations concerning the present labour situation in the country. While times are undoubtedly difficult owing to, what may be called the growing pains of development, as indicated by rising prices, there is no need for acts of indiscipline, acts of intimidation and sometimes even violence and sabotage as part of the methods employed to redress real or imaginary grievances. These activities may in course of time not only retard our economic growth but also pose a challenge to our national stability and integrity. There may be legitimate differences between labour and management, and there may even be room for strikes. But every thinking section of the community must unequivocally condemn some of the methods which have been recently adopted in an increasing measure by a section of the workers in various institutions both in the public and the private sector.

Lack of Funds

Before I conclude, I should like to turn to the other serious problems faced by industry at present in general, and by your Company in particular. This is the problem of finding adequate funds for further development. As you no doubt are aware, your Company has been well established for the manufacture of engineering goods. It has gained considerable management and engineering experience and built up a corps of trained personnel which is capable of handling much further development of your industry. It has resources in land, power and water supply which are also capable of further development. As a proof of the growing potential of your Company, we are receiving almost every month proposals for collaboration for entry into further lines of manufacture, and your Company has turned down several proposals owing to lack of funds.

Apathy among Investors

This brings me to the problem of the complete apathy of the capital market towards new issued and stagnation, if I may use term, in the Stock market. In spite of some concessions made in the last Budget by the Finance Minister, the investment and taxation climate of the country is such that it is almost impossible to attract funds to new ventures. It is desirable that there is considerable rethinking on the taxation front by the Government of India. It is not merely doling out of one concession or the other to the Corporate Sector, but the creation of a climate favourable to generation and accumulation of savings in the community, which is most important. With heavy Governmental expenditure on the one hand, and rising prices on the other, the individual who has ultimately to bear the brunt of taxation is not able to find the wherewithal for investment in new industry. I realise that the Finance Minister has an extremely difficult role to play between the needs and the clamours of realising social objectives and the basic discipline required for economic growth. It is, however, possible to carry social objectives to a point which will defeat the main objective and spread poverty instead of prosperity, if economic growth is not achieved, if agricultural and industrial production is not increased and there is a general climate of stagnation and frustration. I do trust that the authorities will before long undertake measures to restore the climate of confidence, so that it may be worthwhile on the part of the individual to save and invest.

I am sure you would like to join me in thanking our Managing Director, staff and workers who have worked loyally and diligently for the satisfactory working of the Company during the year.

I have now pleasure in moving the adoption of the audited Statements of Accounts and Directors' Report for the year ended 31st March, 1964.

Note : This does not purport to be a report of the Annual General Meeting.

Yet, it would be wrong to think that Metal Box scientists are concerned only with basic developments in packaging. They work all the time with customers to solve individual packaging problems...help suppliers to develop improved materials.

And their discovery of many indigenous substitutes for imported raw materials helps save valuable foreign exchange. As does the work of the Metal Box Technical Development Division. Metal Box have designed and built in India can-closing and bottle-sealing machinery that used to be imported and cost the country a pretty penny.

Metal Box spend about Rs 10 lakhs every year on Research and Technical Development. That's a lot of money—but it pays rich dividends to the Company as well as the nation. Take just one instance. Enterprising packers in Kerala have won growing export markets for canned prawns in recent years. Metal Box know-how and the world-wide acceptability of Metal Box containers have helped to make this export success possible.

Yes, research is at the root of all progress.

Acid-resistant lacquer for prawns? No!

To keep prawns eatable, cans must be coated with a sulphur-resistant lacquer. It's plum cans which need one that is acid-resistant. Anyone can tell you that—anyone at the Metal Box Research Division.

New Delhi

HOME MINISTER HOLDS TALKS ON UNACCOUNTED MONEY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Home Minister, Mr. Gulzarilal Nanda, held discussions last week with bankers, economists, industrialists and some retired income tax officers on the question of black money and its rôle in accentuating the inflationary pressures. It was claimed that the amount of unaccounted money circulating in the country was much larger than was presumed. Unaccounted money, it was pointed out, formed a large part of advances against foodgrains and helped traders in indulging in hoarding and black marketing. Discussions held by the Central Home Minister were, however, inconclusive.

The meeting did not discuss how unaccounted money was generated and whether it was a new development. It will be recalled that various schemes to bring out unaccounted money were discussed some ten years ago, and a high official of the Central Ministry of Finance had evolved a fresh scheme some five months ago. It is strange that it was the Central Home Minister and not the Minister for Finance who held these discussions. The issue, to all intents and purposes, is linked with the evasion of taxes. There is no denying that some formula under which taxes could be realised without victimising the evaders of taxes may bring out this hoarded wealth and thereby normalise the economic life of the country.

The economic consequences of the Gold Control Act should also be considered. One view here is that unaccounted money was previously invested in gold. But the Act has made this almost impossible, so unaccounted money is now being invested in commodities.

A look at the July issue of the *Reserve Bank of India Bulletin* (pages 918-19) should reveal some of the causes of inflation. The unsecured (clean) advances by scheduled banks rose from Rs. 196.09 crores in May 1962 to Rs. 274.83 crores in May 1964. During the same period, their advances against *gur* increased from Rs. 2.87 crores to Rs. 5.20 crores. During June 1964, advances by the Reserve Bank to the State co-operative banks had increased by Rs. 20 crores, the total outstanding on 26th June, 1964, being Rs. 145.17 crores. It may be the policy of the Reserve Bank to increase the finances of the State co-operative banks, but the question which needs looking into is whether this money was used to encourage the farmer to hoard foodgrains.

Issuing Warnings

The Central Ministers in general and the Home Minister in particular have been issuing warnings to anti-social elements. Side by side, the Federation of Indian Chambers of Commerce and Industry has lodged a protest against police raids on some foodgrain godowns in Delhi. The F.I.C.C.I. says: "Today, there are forces sedulously to magnify alleged misdeeds on the part of the business community, and the authorities will be doing great injustice if they lend support to these forces, even unwittingly, for that would dislocate normal business and disrupt the democratic way of living".

In contrast, saner counsel was given to the socialist workers by the Deputy Chairman of the Planning Commission, Mr. Asoka Mehta. Speaking recently in Bhopal, he said: "There is, no cause for despair, much less for panic. The resources of our people are rich enough to shore up the difficulties but that requires a new social discipline and a renewed unity among the people. The political workers, particularly those who claim to be socialists, have to be in the forefront of the new efforts, because it is their dreams that are threatened today. The administration has to be made to discover efficiency and integrity. In the post-Nehru era, events have so shaped themselves that each one of us, the humblest among the political workers, has a vital rôle to play in restoring to our economy vitality and direction. The dedicated efforts at stepping up agricultural output and evoking social discipline demand of us our best. The challenge is there for all to see; the response has to begin with us".

ELECTRONICS

Manufacture of Components

The Central Ministry of Industry has been given the responsibility of developing the electronic industry, including the manufacture of components. A high level committee is likely to be appointed to work out the plan of development.

MANAGEMENT SEMINAR

Talks on Industrial Location

The Indian Institute of Management held a three-day seminar here last week, with Mr. T. Swaminathan in the chair, to discuss the problems of the location of industry. As a follow-up action, it is expected that an objective philosophy will emerge, which should help plan the location of industry on a scientific basis.

MACHINE TOOLS

Fourth Plan Programme

The machine tool manufacturers held a meeting here last week to review the performance of the third plan targets and to consider advance action for the fourth plan. Difficulties and requirements of individual manufacturers were ascertained at the meeting with a view to rendering them maximum assistance. Suggestions were put forward for developing the manufacture of accessories, ancillaries and hydraulic and electronic control equipment. It was recognised that the quickest progress in this field was likely to be made in the public sector.

COAL

Fourth Plan Targets

Tentative targets of coal production in the private sector during the fourth five year plan as well as the additional output for the remaining two years of the current plan have been indicated to the coal industry by the Central Ministry of Steel and Mines. According to the targets, the private sector is required to produce 5.14 million tonnes of additional coal in the remaining period of the third plan and 76.49 million tonnes during the fourth plan period.

The Planning Group on Coal has provisionally estimated the total demand by 1970-71 at 136.46 million tonnes. This is likely to go up by another 3 million tonnes on account of coal requirements for power.

The Government has asked the industry to go ahead with the formulation of its programme, particularly in relation to production under the fourth plan. The units which have to make contribution to the additional output in the fourth plan, have been called upon to furnish detailed year-wise plans supported by necessary blueprints.

The industry has also been told that individual units, which are to contribute towards additional production by depillaring operations when the central ropeways start functioning, should initiate advance action on the installation of sand-stowing equipment, etcetera, so that full use is made of the ropeways and the desired quantities of additional coking coal are produced in ime.

According to a rough assessment made by the Ministry, the total capital outlay by the private sector for the proposed programme will be Rs. 48.30 crores, of which about Rs. 14.74 crores will be for additional production of coking-coal and Rs. 33.56 crores for the maintenance of production.

The industry has been urged to make an assessment of the financial implications of the programme and has been asked to offer its comments on the assesment made by the Ministry. Also, they are to intimate to the Ministry the manner in which the additional resources are expected to be obtained by it for the necessary investment.

It has also been impressed upon the industry that it should make a realistic assessment of machinery and equipment—indigenous as well as imported—that will be needed during the fourth plan, both for the maintenance of production and for expansion and new development.

It has been assessed that the private sector should be able to raise an additional quantity of 10.67 million tonnes of coking coal during the fourth plan period, of which 1.42 million tonnes will be from the third plan schemes. This estimate is based on the offers made by the private sector in 1963 which have been found to be technically feasible.

Coking Coal Requirements

The requirements of coking coal, including those of iron and steel and

I.O.B. is big enough to serve you...

I.O.B. is an international bank with offices throughout India and South-east Asia and correspondents the world over. It offers a wide range of services to suit the needs of varied customers. Indeed, I.O.B. is big enough to serve you.

We asked our customers, thousands of them at random, what they thought of our service. They replied: "We are pleased". They also made several helpful suggestions which we are implementing. Indeed, I.O.B. is small enough to know you.

M. Ct. Muthiah, Chairman K. M. Nanjappa, General Manager

merchant cokeries, at the end of the fourth plan has been assessed at 46.05 million tonnes. The private sector is expected to produce 15.31 million tonnes of coking coal in 1965-66.

It is further estimated that the total production of non-coking coal, including blendable coal, for 1963-64 was 47.62 million tonnes. The requirements during 1965-66 have been assessed at 60-64 million tonnes, including 1 million tonnes of blendable coal for metallurgical industries. To meet this additional requirement of 13.02 million tonnes during the next two years, the private sector is required to produce an extra quantity of 4.40 million tonnes over the level of 1963-64.

It has also been stated that for the time being, Grade HH coking coal, which is surplus to the requirements of steel plants, should continue to be allowed to be used for non-metallurgical purposes. This surplus is estimated to be about 1.70 million tonnes, provided the industry does not further increase the production of this grade of coal. About 2.10 million tonnes is likely to come from the existing stocks of good quality non-coking coal.

The additional requirements of non-coking coal in 1970-71 work out to 28.40 million tonnes. Out of this, the private sector's share is 7.02 million tonnes. The additional new capacity of the private sector under the fourth plan is 3.95 million tonnes.

The production of blendable coal in the private sector during 1963-64 was about 2.50 million tonnes. This level of production is likely to be maintained during the remaining period of the current plant.

The requirtments of blendable coal for metallurgical industries at the end of the fourth plan have been assessed at 6.68 million tonnes, of which 3.24 million tonnes is likely to be produced in the public sector and the balance, namely, 3.44 million tonnes in the private sector. The private sector's share of the additional production of blendable coal during the fourth plan is estimated at 740,000 tonnes.

EXPORTS

Fourth Plan Targets

The export targets for the fourth five year plan were considered by the Board of Trade at its meeting held here last week under the chairmanship of Mr. Manubhai Shah, Central Minister of Commerce. There was a general consensus that, taking into consideration the export possibilities in the various agricultural and industrial sectors and the prevailing economic conditions, it would be reasonable to set a target of Rs. 5,100 crores for the five years of the fourth plan with the export earnings in the last year of the plan at Rs. 1,100 crores. The Board resolved that efforts should be made to achieve these figures and that work should continue for promoting even larger exports.

The Board felt that the achievement of the target would call for an integrated and co-ordinated policy designed to ensure that the required quantities of commodities become available for export even if this might involve a certain measure of restraint on domestic consumption or a certain amount of discipline. Furthermore, a high degree of co-ordination among the different Ministries of the Government of India as also between the Government of India and the State Governments would be required so that an integrated policy could be evolved and carried out without interruptions and breaks. It was also felt that in achieving the export targets, the various public-sector undertakings should play a definite rôle.

The Board was concerned to observe that the inflationary pressures that were developing in the economy might come in the way of larger exports. It suggested, therefore, that energetic measures would have to be taken to achieve some degree of price stabilisation with a view to reducing costs and making Indian exports competitive in the world markets. "In this matter, certain policy inputs and certain degree of co-ordination and advance action in certain export-oriented sectors would have to be initiated without delay."

The Board reiterated the view that increased agricultural and industrial production was vital to the promotion of exports. It regretted that the export of certain items like vegetable oils had to be banned suddenly on account of scarcity conditions prevailing in the domestic market. It was strongly of the view that continuity in supplies for export was absolutely essential for maintaining India's export markets. Abrupt stoppage of exports seriously affects the confidence of foreign buyers resulting in loss of goodwill and markets abroad. With a view to ensuring adequate supplies for export, the agricultural and industrial sectors should be given adequate assistance.

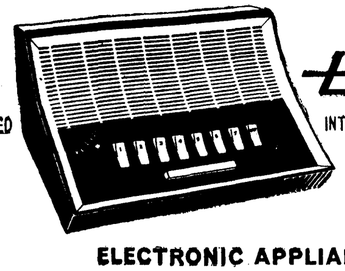
Long-term Planning

The Board stressed the need to ensure the continuance of export promotion policies over a reasonably long period of time so that the trade could plan its exports on a long-term basis. No major changes, it said, should be made in the export promotion policies during the currency of the plan period.

The Board also noted that among certain sections of the public, there appeared to be misconceptions concerning the effect of exports on the domestic situation. It was felt that there was need for educating the public about the vital rôle of exports in the economy and the marginal nature of the impact of exports on domestic availability and domestic prices in relation to all exports products.

These periodical exercises are, by and large, fruitless. An examination of the agenda papers, for example, should show that the Central Ministry of Commerce has worked up targets in terms of what are called traditional exports. The small booklet by the Indian Institute of Foreign Trade admits that the first inadequacy hindering the export trade is the lack of market research and area survey. About Rs. 18 lakhs have been budgeted for financing the activities of the Institute, which has produced beautifully printed market survey reports on such export items as Indian sports goods in Australia, printed and embroidered fine fabrics in Malayasia, cashewnuts in Switzerland, and canvas shoes in Canada. No attempt has yet been made to appraise the pattern of demand, say, in western or eastern Europe, in 1972. Eastern Europe is mentioned here because even the communist countries are becoming quality conscious and will not accept sub-standard goods as they had been doing so far. It may be added here that the American business men, who visited India last spring, repeatedly urged their counterparts in India to carry out market research. They were told that such a luxury was not needed, because India being an expanding, closed and protected market, even sub-standard goods could be sold, earning profits for their manufacturers.

The Board felt that there was need for educating the public about exports and the "marginal nature of impact of exports on domestic availability and domestic prices." It regretted that the export of certain items, such as vegetable oils, had to be banned suddenly on account of the scarcity conditions prevailing in the domestic market. It claimed that "abrupt stoppage of exports seriously affected the confidence of foreign buyers resulting in the loss of goodwill and markets abroad."



Two issues are involved in these assertions. It is not the Board but the Government of India which has to balance the relative importance of confidence of foreign buyers and of the Indian masses. Even the foreign buyer will not trade with a country seething with discontent. The second aspect of the problem is of equal importance. Sugar and edible oils form an integral part of the cost of living indices. Dearness allowance is linked to cost of living and any increase in cost of living is followed by a demand for a balancing increase in the dearness allowance. The wholesale price index of sugar and *gur* and edible oils as on 1st August, 1964, was 206.2 and 206.9, respectively, compared with 193.6 and 150.8, respectively, on 27th July, 1963. There should not be any surprise, therefore, that dearness allowance had to be increased, the high prices of sugar and edible oils being its contributory cause.

INCOME TAX

Exemption for Foreigners

The Central Finance Ministry has outlined the conditions under which foreign professors, teachers and research workers are eligible for exemption from income tax permissible under the Finance Act, 1964. It has also clarified the benefits available to them under this provision of the Act.

To be eligible for the exemption, a professor or a teacher employed in a university or an education institution in India must not be a citizen of India and he should not have been resident in this country in any of the four financial years immediately preceding the financial year in which he arrived in this country. Furthermore, his contract of service must be approved by the Government of India before or within one year of the commencement of his services.

In the case of professors and teachers whose service started before 1st April, 1964 the Central Government's approval must be obtained before 1st October, 1964.

Exemption in the case of research workers will be subject to two conditions, namely, (i) the Central Government's approval to the research scheme is obtained before 1st October of the relevant assessment year, namely, before 1st October, 1964, for the current assessment year 1964-65, and (ii) the emoluments for undertaking the research work is payable or paid directly or indirectly by a foreign Government or any institution or association or other body established outside India.

According to the benefits provided under the Finance Act, a professor or a teacher will not be required to pay tax on the remuneration received by him or due to him during the 36 months commencing from the date of his arrival in India. When he continues to remain in employment in India after the expiry of this period and the tax on his income chargeable under the head "salaries" is paid by the university or the educational institution concerned to the Central Government, the tax so paid for a period not exceeding 24 months will also not be treated as his taxable income.

A foreign research worker will not be required to pay tax on any sum due to or received by him during the 24 months commencing from the date of his arrival in India for undertaking the research work.

Requests for the Central Government's approval of the contract of service in the case of professors and teachers, and for the Central Government's approval to the research scheme in the case of research workers should be addressed to the Secretary, Central Ministry of Education, New Delhi.

The Ministry of Education has prescribed a *pro forma* for this purpose and applications seeking the Government's approval should be made in that *pro forma*. Copies of the *pro forma* are available from the Ministry of Education.

Requests for approval should be made sufficiently in advance so that the Government's decision may be communicated before the due date.

GOVERNMENT ACCOMMODATION

Rules Outlined

No Government employee owning a residential house situated in Delhi within 16 kilometres of the place of duty will be allotted Government accommodation. An employee already in occupation of such accommodation, will not be eligible for its continued retention. This decision has been taken by the Central Ministry of Works and Housing in view of the acute shortage of Government accommodation.

It has also been decided that if, after Government accommodation has been allotted to an employee, he becomes the owner of a house either in his own name or in the name of any other person or a member of his family becomes the owner of a house, such employee will notify that fact to the Director of Estates within a period of seven days from the date he or any member of his family becomes the owner. He is required to either surrender the Government accommodation within that period or pay the standard or pooled rent, whichever is higher, under the rules.

If the Government employee fails to inform the Director of Estates, his allotment will deem to have been cancelled with effect from the day he or a member of his family becomes the owner of a house.

An employee, who has been allotted Government accommodation before 20th July, 1964, and became the owner of a house after such allotment but before that date, has been allowed to retain the accommodation allotted to him by the Government. This will be subject to the fact that the employee pays the standard or pooled rent, whichever is higher, for that accommodation, with effect from 20th July, 1964. Also, he has to pay rent or damages or both for that ac-

Who has been one of the foremost names in commercial and industrial refrigeration and air-conditioning around the world for over 75 years?

York, of course

Since 1885 York have been making high quality refrigeration and air-conditioning machinery. York equipment, know-how and unparalleled service have been available in India for over 35 years.

York equipment will now be manufactured here by York India Ltd. in collaboration with Borg-Warner Corporation of U.S.A. York India will set a new standard in refrigeration and air-conditioning.

We will welcome an opportunity to discuss your specific refrigeration and air-conditioning requirements.

BRANCHES: CALCUTTA BOMBAY MADRAS

ASPY

commodation for the period prior to 20th July, 1964.

PALAM AIRPORT

New Terminal Area Planned

It is proposed to develop a new terminal area and to construct a new terminal building, south of the new jet runway at Palam airport. Plans for this building are being prepared.

To tide over the period until the new building is ready, additions and alterations are being carried out to the existing building. This work, estimated to cost about Rs. 8.73 lakhs, is progressing.

Palam airport, which was being jointly used by the Indian Air Force and the Civil Aviation Department, has been criticised for some time for its lack of proper terminal facilities. The building, for example, has had no accommodation for Customs, health, and immigration authorities. The joint control of the airport and the uncertain position about its ultimate ownership hindered the construction of a new airport terminal building so far. This uncertainty has now been removed by the Government's decision to develop Palam airport as an international airport under civilian control.

EAST GERMANY

Trade Team Arrives

A trade delegation from East Germany, led by Mr. Kurt Epperlein, Deputy Minister of the Ministry of Foreign Trade, has arrived here for talks with the Central Commerce Ministry for a long-term trade arrangement. The present arrangement, signed in 1959, was extended last year and expires in 1965. The delegation includes 12 members representing various Ministries of the East German Government.

The delegation has started talks for the new long-term trade arrangement with a Commerce Ministry delegation, led by Mr. D. S. Joshi, Secretary to the Ministry.

NEPAL

Indian Exhibition Planned

It has been decided by the Government of India to organise an Indian exhibition in Kathmandu, capital of Nepal. It will start in the fourth week of November and last approximately one month.

A wide range of goods, including capital goods, equipment, light engineering goods and consumer goods of all categories and types, which India can offer, will be displayed at the exhibition. The social, economic and industrial developments taking place in India under the five year plans as also the efforts in the field of science, technology and allied subjects will be displayed at the exhibition.

CEMENT INDUSTRY

Raising Productivity

The allocation of increased foreign exchange, standardisation of kilns, introduction of statistical quality control, mechanisation of quarries and improved working conditions are some of the major recommendations made by the productivity study group on the cement industry. The study group was appointed by the National Productivity Council for increasing the productivity in the cement industry.

According to the study group, the *per capita* consumption of cement in India is low, compared with some other countries, as is evident from the following table:

Country	Per capita consumption (In kilograms)
India	18
Switzerland	386
U.S.A.	272
Germany	295
France	204
Italy	191
U.K.	204

The productivity of the Indian workman in the cement industry, compared with his counterpart in the western countries, is also low. Man-hours a tonne of cement produced in various countries of the world are shown in the following table:

Country	Man-hours a tonne
U.S.A.	1.50
Belgium	1.51
Japan	1.75
U.K.	1.82
Germany	2.20
India	10.15

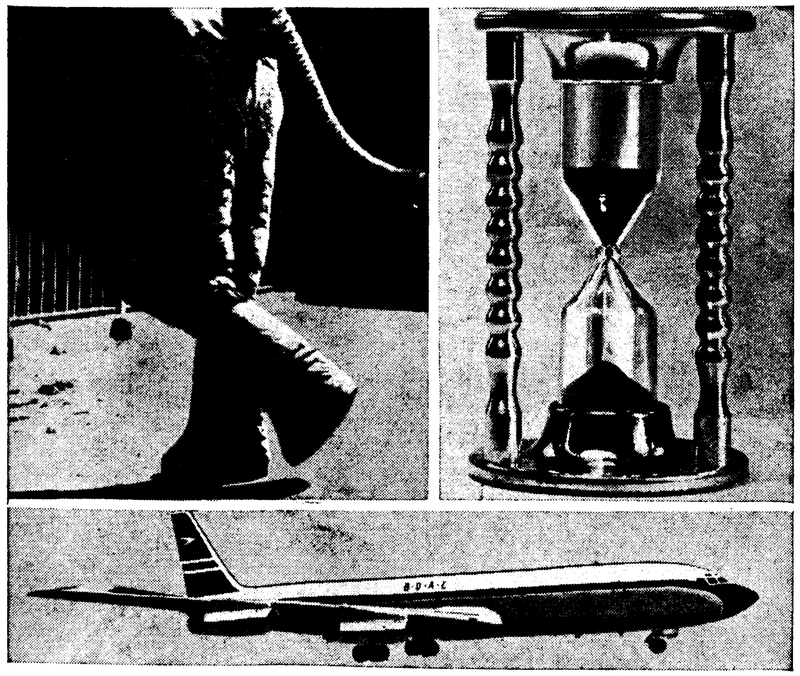
Among the important recommendations of the study group are: introduction of preventive maintenance; rehabilitation of old plants; provision of good quality coal; collection and feeding back of kiln chimney dust, which is otherwise wasted; correction of E.S.I. rules with a view to reducing labour absenteeism; training of labour; greater use of peace rate and incentive systems; and linking bonus to production.

SHIPPING CORPORATION

Radio Equipment for Vessels

The Shipping Corporation of India has had 11 of its cargo vessels equipped with V.H.F. radio equipment manufactured and installed by Associated Electrical Industries' marine communications department. Six of the vessels—plying between India and Britain—had been fitted with the equipment at ports in Britain. The remaining five had the equipment fitted at Indian ports. The radio equipment would be used for port control, docking, and ship-to-shore and ship-to-ship communications.

U.K.



Two Economists in India

Professor A. K. Cairncross, Economic Adviser to the U.K. Government, will visit Delhi from 25th to 27th August *en route* to Kuala Lumpur, where he is to attend the Commonwealth Finance Ministers' meeting as a member of the British delegation.

While in Delhi, Professor Cairncross will meet the Central Finance Minister, Mr. T. T Krishnamachari, members of the Planning Commission, and Government economists.

The head of the London School of Economics, Sir Sydney Caine, is also arriving here to stay with the Vice-Chancellor of Delhi University, Sir Chintaman Deshmukh.

London

OUTLOOK FOR U.K. BALANCE OF PAYMENTS DETERIORATES

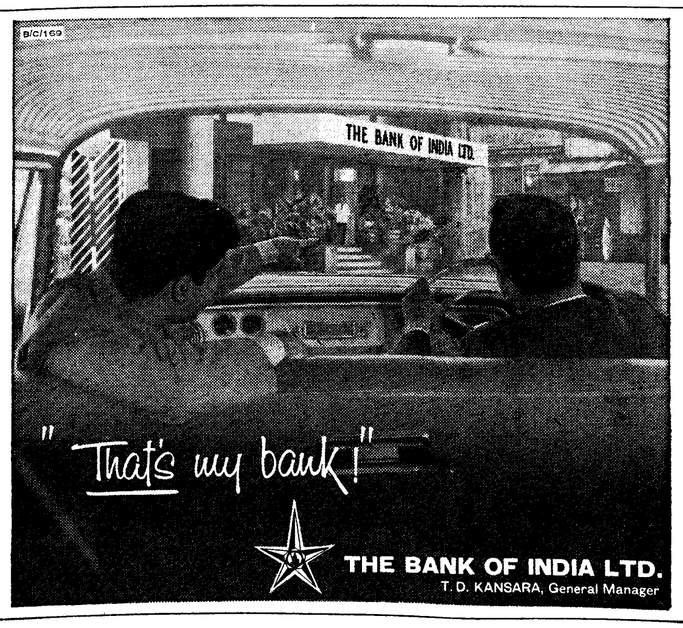
(FROM OUR LONDON CORRESPONDENT)

IT is not usual for this despatch to deal with the economic outlook for three successive weeks, but the present departure from the normal pattern is excusable on the grounds that the subject is of special importance under present circumstances. Also, there have been two somewhat significant developments that call for comment. The first of these is a gloomy forecast from the National Institute of Economic and Social Research. Its *Economic Review* published the other day says that the balance of payments deficit is growing fast and could well be as high as £500 million for 1964, with at least another £300 million in 1965—unless the Government intervenes.

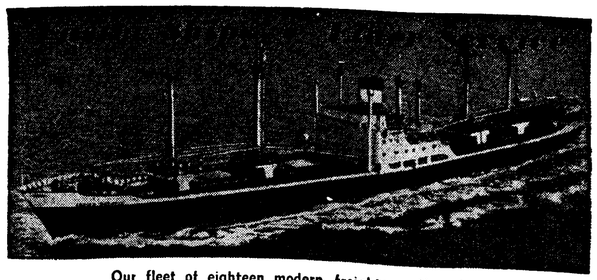
Analysing the state of the British economy, the *Review* suggests that the slowing down in recent months was largely temporary. In the second half of the year, demand is likely to rise again at about 4 percent a year, and unemployment to decline further. Exports may increase a little more, but imports will continue to rise more rapidly. By the end of the year, the "yawning gap" in the balance of payments will compel the Government—any government—to take some action. "It must either take measures which deal directly with the balance of payments, or it must deflate and face the prospect of another period of stagnation."

What is meant with dealing directly with the balance of payments, the Institute does not explain. It might be import controls, or it might be large-scale international borrowing. But as the writers point out, loans have to be repaid, and they can see no hope that Britain's payments balance will at any foreseeable time swing automatically back from deficit to surplus.

While the industrial production index has not moved since January, the Institute states, the total national output seems to have risen quite sharply in the first quarter and probably went up a little further in the second. Exports failed to rise in the second quarter, and an abnormally big increase in retail prices held back consumers' expenditure. From mid-year on, the prospect is for a 4 percent rise in national output—less than the 5 percent previously forecast by the Institute because the outlook for exports now seems less favourable. Unemployment, after a slight rise in July and probably August, should still be moving down slowly. As for other elements of demand, consumers' expenditure in real terms should from now on rise at some 3½ to 4 percent a year. Retail prices should rise more slowly, and incomes will continue to go up rapidly.



Total fixed investment is expected to go on rising at much the same rate as in 1963. Private manufacturing investment is probably increasing quite sharply. Public investment must also still be rising, although more slowly than last year. House building may be held at the high level of the first half of 1964 by a shortage of bricks. Stockbuilding, although it may not rise much further, is unlikely to fall much either. The general conclusion is that expansion will be resumed in the second half of this year, but the old sterling problem will soon compel the Government to put on the brakes again.



Trade Returns

On the day following the publication of this rather gloomy picture of the immediate outlook for the economy came the July trade returns, which had been eagerly awaited. In one way, they lend some support to the Institute's forecast of a balance of payments crisis towards the end of the year—this was in the rather disappointing export performance. So far from showing the increase expected, exports plus re-exports, at £344 million, were £16 million lower than in June and at the lowest level since January. On the other hand, the Institute's expectation that stockbuilding would continue—which would imply a rise in imports—is apparently not being realised. At all events, at £431 million, the total import bill was £43 million lower than in June. Mainly as a result of this, the trade gap, measured by the excess of imports over exports, was cut last month from the all-time peak of £114 million in June to £87 million, a £27-million improvement.

The postal strike had some effect on both sides of the July trade figures, but the Board of Trade believes that the impact was small. It estimates that after allowing for freight and insurance, which is largely paid for in the U. K. itself, the real payments deficit in July was £39 million, against £62 million in June. This deficit, which was at a monthly average of only £4 million in 1963, rose to £36 million a month in the first quarter and £45 million a month in the second quarter. The July figure of £39 million does not show much change of trend.

In the last three months, May to July, exports were 3 percent less than in the previous three months, February to April. In the first seven months of the year, they were 3 percent higher than the average for 1963. Imports have been running at about the same average rate in the last three months as in the previous three months, but in the whole period

January to July they were no less than 13 percent up on the average for 1963. The export figures have given rise to some puzzlement as well as disappointment in the Board of Trade and the Federation of British Industries. The F.B.I. spokesman said of them: "They are not consistent with the expectations shown by the F.B.I.'s recent surveys of industrial trends, nor can they be reconciled with the buoyancy of business activity and employment except on the footing of very serious overheating in the home market, which the available evidence does not indicate. The F.B.I. will immediately put in hand a pilot survey among large industrial exporters to see if light can be thrown on these discrepancies."

Industrial Output

Another set of official figures which seems not to fit in with the confident statements of industrialists is the index of industrial production. The Central Statistical Office has announced that after allowing for seasonal factors, the index for June has remained unchanged at 126 for sixth months running. This figure refers to all industries including construction and utilities. For manufacturing alone, the June figure is 127 and this has varied only between 127 and 128 since January. A six-month plateau in industrial output does suggest some conflict with the unprecedented level of civil employment announced recently and the official view that the economy is still expanding too fast. Could the figures be wrong?

Ministers have been optimistic about British export prospects ever since last autumn. World trade in manufactures has, in fact, been very active and other countries, particularly the United States and West Germany, have been able to increase their exports substantially. But although industrial firms have been reporting good and rising export orders all this year, the monthly trade returns have shown exports levelling off after the 1963 improvement. Some officials think the reason may be that the weight of export orders has been shifting towards capital goods which take a long time to produce. Others begin to question whether British goods are as competitive abroad as was widely believed last year, when costs and prices had been held steady here while inflation was rampant on the Continent.

Mr. Maudling, the Chancellor of the Exchequer, is about to return to the Treasury after his holiday and no doubt will make a dispassionate appraisal of the narrowing trade gap situation. He has come in for some criticism from both Mr. Callaghan and Mr. Brown over the dangers inherent in the deficit. The Chancellor has already made it plain that fears of electoral unpopularity will not deter him from any restrictive action which he considers essential. On the other hand, he is not the man to panic over figures which, after all, are an improvement on those of the previous month. He is more likely to take the view that there is nothing amiss which a really determined export drive cannot cure. This was probably the advice which Mr. Heath, Secretary for Industry and Trade, gave the Prime Minister when he saw him at 10, Downing Street, on his return from holiday, and there may be some significance in the fact that the same night, Sir Alec flew back to Scotland to resume his interrupted holiday.

Economic Failings

Believing that a large part of the U.K.'s external economic failings at present are only temporary, the *Guardian* cnosiders what the Chancellor ought to do if he is in fact obliged to take some avoiding action. The choice, it says, must be affected by estimates of major improvements in industry, which by next year or the year after may have boosted efficiency by more than the Institute's trends suggest. The Government should have better information on this than the Institute.

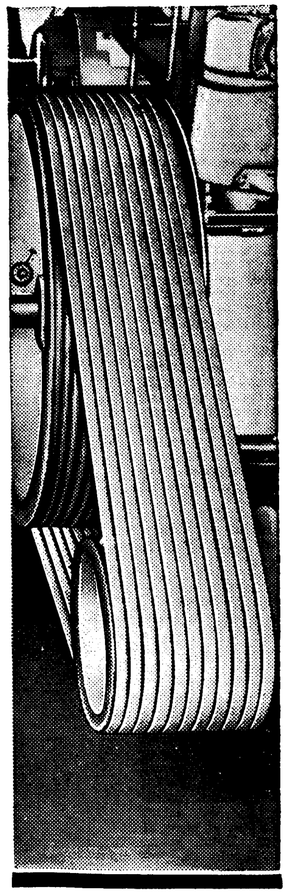
NOW-A NEW VEE-BELT WITH 40% INCREASED HORSE POWER RATING

DUNLOP

introduces

MAXRATE

Maxrate is one more major development by Dunlop in the field of industrial rubber products in India. This premium rated belt will bring economy of drive space, weight and cost. How? Read on.



The basic factor in assessing the utility of any vee-belt is its horse-power carrying capacity. More hp means more profitability. Maxrate is developed to do exactly this. Besides, it is backed by the technical know-how and expertise of Dunlop and manufactured from the finest materials for top performance.

Here's why Maxrate 40% higher hp capacity means more economy than normal vee-belts.

1. Higher hp capacity results in compact drives.
2. Compact drives mean savings in space, weight and cost.
3. No increase in price; thus increased value for your money.

Maxrate is manufactured by Dunlop in a wide range to suit every requirement. See your nearest Dunlop dealer for details or write to:

THE DUNLOP RUBBER CO. (INDIA) LIMITED
Industrial Products Division, 57B, Free School Street, Calcutta-16.

Jute

SPECULATIVE FACTORS PUSH UP FIBRE PRICES

THE speculative spree started earlier has been gathering strength, and prices are rising in spite of the imposition of drastic restrictions on trading in the hedge market and in T.S.D. contracts. This is rather inexplicable as the statistical position is sound; Indian mills have purchased more jute in July and during the preceding two months than they did in the comparable months of 1963. So the sort of crystal-gazing which has led to a rise of Rs. 2.50 a maund in the hedge market for Upper Assam White Bottoms, September delivery, and around Rs. 4 a maund in the spot market during the six days from 20th August is completely unjustified.

Jute circles in Calcutta believe that a large number of strong holders have been operating in the interior markets. Lifting the daily arrivals in the agencies, they have spread the scare of a poor crop in order to get bigger prices. The failure of the Pakistani crop can have but little effect on the Indian industry. No doubt, India may have to pay a higher price for Pakistani long jute and cuttings, but Pakistani fibre is a small fraction of the indutry's total fibre requirements; so the overall cost can rise by only a small percentage. Even if the Indian crop turns out to be small, it will not be far below the official expectation of eight million bales since the loss or deterioration suffered by the early crop in north Bengal, north Bihar and lower Assam valley during the May-June floods, has been made good by the bumper crop in the Daissee districts. Reports from the Tossa belt too are encouraging. There is no dearth of retting water.

Sound Statistical Position

A scrutiny of the statements of raw jute arrivals in Calcutta and the mill stations and purchases by mills reporting to the I.J.M.A. reveals a sound statistical position. During July 1964, deliveries of raw jute amounted to 338,000 bales, against 238,000 bales for the corresponding month of 1963. Of these, 12.000 bales (against 25.000 bales) were from Pakistan and 326.000 bales (against 213,000 bales) were from upcountry centres in India. During July 1964, Indian mills purchased 457,000 bales, against 379,000 bales during the corresponding month a year ago. Of these, 50.000 bales (against 5.000 bales) were from Pakistan and 407,000 bales (against 374.000 bales) from Indian sources. Hence, even though Pakistani fibre deliveries were lower this July, the shortfall will be made up by higher deliveries during subsequent months.

A comparison of the figures for the three months from May to July for the two years also tells the same story. During the period this year, fibre arrivals in Calcutta and mill stations totalled 995,000 bales, against 917.000 bales in the corresponding months of 1963. Of these. 38.000 bales (against 55.000 bales) were of Pakistani origin and 957,000 bales (against 862.000 bales) of Indian origin.

Total purchases during the three months from May to July this year amounted to 897,000 bales, against 960,000 bales—70.000 bales (against 43.000 bales) from Pakistan and 827.000 bales (against 917,000 bales) from India. The bigger purchases of Indian jute last year were due to the sluggish trend persisting in the market from the very beginning of the jute season, which prompted the Jute Commissioner to issue a compulsory purchase quota of 440,000 bales for July 1963.

Two Expert Bodies Set Up

The Government of India has set up two expert bodies last week to advise it on various matters affecting the jute industry and trade. The first, the Jute Textiles Consultative Board is a 12-member body with the Central Commerce Minister as its chairman; the Deputy Minister of Commerce is its deputy chairman and the Jute Commissioner is the member-secretary. The other members are: the Secretary and Additional Secretary, Ministry of Commerce, the chairman and three representatives of the I.J.M.A., a representative of the Calcutta Jute Fabrics Shippers Association, a nominee of the Central Ministry of Food and Agriculture and a representative of labour in the jute industry.

Defining the scope of the Board, an official resolution says that the Government would endeavour, as far as possible, to consult the Board generally on all important matters concerning the jute industry, particularly in regard to production, distribution and exports of jute goods, imports and exports of raw jute and matters relating to the development of and research in the industry, as also the procurement of raw materials, machinery and accessories. The Board will have a life of two years in the first instance.

The second body set up is the Jute Export Promotion Advisory Committee. It has been formed to help the jute industry overcome the severe competition it has been facing from other producing countries, as also from new substitutes entering the world market. The Committee will maintain intimate contacts between the Government and the industry, make recommendations on the best ways of expanding exports to traditional and non-traditional markets, arouse interest among manufacturers in the expansion of overseas sales, advise the Government on measures of export assistance and in the evolution and implementation of export promotion schemes. It will also co-ordinate the exports of jute goods, enforce quality control in collaboration with the industry and shippers and give any other assistance to exporters as may be necessary. It will have powers to set up sub-committees and expert panels to deal with special problems relating to the development of gunny exports.

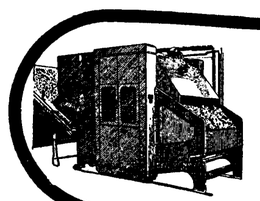
The Jute Commissioner will be the chairman of the Committee. Other members may include the Joint Secretary in the Central Ministry of Commerce, four representatives of the I.J.M.A., and the chairman and a representative of the Calcutta Jute Fabrics Shippers Association. This body will also have a life of two years in the first instance. The headquarters of the Committee will be in Calcutta. Both the bodies will hold their first session in Calcutta on 9th September.

Despatches of Gunnies Rise

A seasonal increase in internal consumption from 24,500 tonnes in June to 27.200 tonnes in July and a minor rise in the export offtake from 80.300 tonnes to 80,700 tonnes helped raise the total despatches of gunnies from 104,800 tonnes to 107.900 tonnes, from the mills reporting to the I.J.M.A. The rise in exports of hessian from 42,900 tonnes to 44,700 tonnes was about offset by the decline in the exports of sacking from 19,200 tonnes to 19,000 tonnes, in carpet-backing cloth from 7,700 tonnes to 7,000 tonnes and in the other goods from 10,500 tonnes to 10,000 tonnes. In internal consumption, sacking showed an increase from 17,800 tonnes to 19 300 tonnes, hessian from 3,300 tonnes to 4,100 tonnes and miscellaneous goods from 3,400 tonnes to 3,800 tonnes.

As for the total offtake, the maximum increase was registered in hessian from 46,200 tonnes to 48,800 tonnes, followed by heavy goods from 37,000 tonnes to 38,300 tonnes. The offtake of other goods declined by 100 tonnes to 13,800 tonnes and of carpet-backing cloth by 700 tonnes to 7,000 tonnes.

In July 1963, the total offtake was 100,500 tonnes—45,900 tonnes of hessian, 36.800 tonnes of sacking, 6,300 tonnes of carpet-backing and 11,500 tonnes of other goods. Exports absorbed 81,000 tonnes—42,700 tonnes of hessian, 22,600 tonnes of sacking, 6,300 tonnes of carpet-backing and 9,400 tonnes of other goods. Internal consumption totalled 19,500 tonnes—3,200 tonnes of hessian, 14,200 tonnes of sacking and 2,100 tonnes of miscellaneous goods.



THE JUTE MARKETS

Manufactured Goods: Buoyant conditions prevailed in the Calcutta gunny market during the past week in spite of the imposition of penal margins, limits on price fluctuations and suspension of trading. The buying spree was triggered by rumours of a sharp decline in Pakistani and Indian crops and the prevalence of high prices for fibre in the upcountry markets. Early in the week a rumour circulated that China had concluded a big deal with Pakistan for gunnies inducing the belief here that the heavy commitments already made by that country would help divert further overseas orders to India. Reports from major overseas markets indicated that prices of spot goods fluctuated moderately in sympathy with the trend in Calcutta. In New York, spot and afloat burlap prices hardened from 12.10 cents to 12.40 cents a yard during the short period. Overseas buyers generally remained on the sidelines and were not inclined to enter the markets until prices subsided to more reasonable levels. Loading in the Calcutta port was normal for this time of year. In view of the hardening trend, the Committee of the East India Jute and Hessian Exchange reviewed the position and allowed a relaxation of the daily fluctuation limits for hedge trading from Monday with the prior consent of the Forward Markets Commission. Barring the Indian Government tender for about 5,000 bales of B Twills for early September delivery and scattered hessian business with the U.S.A. for ready and near positions, short- and shipper-covering continued to sustain the markets. But mills booked a fair volume of business at the higher levels, although they were reluctant to extend commitments indiscriminately in view of the continued spurt in fibre prices. In the hedge market, fluctuations were within the permissible limits and trading was suspended immediately after opening in accordance with the restrictions. Trading in sacking and hessian for August was closed from Monday. All outstanding transactions were settled uneventfully. On Tuesday, the market suffered a mild setback on reports of a decline in fibre prices, inducing profit-taking by bulls. As a result, the top gains were partially erased. Turnover was moderate in the spot

Raw Jute: Firm conditions prevailed in the raw jute market during the past week despite an increase in daily arrivals to about 100,000 maunds in the agencies. Holders were demanding a premium over the current levels on fears of a lower crop. Up-country prices ruled above Calcutta parity levels and sellers in Cossipore also became hesitant. Even a drop in Pakistani fibre prices failed to produce any reaction on the market. Mills were reluctant to book orders at such high levels. Routine transactions were reported done in available lots of selected-grade fibre at the prevailing levels. On Monday speculative buying upset the trend and the price of Assam Bottoms, ready f.o.r., Calcutta, rose to Rs. 47 a maund. Next day the market suffered a reaction on profit-taking. In the hedge market, the price of Assam Bottoms for September rose daily within the permissible limits and touched Rs. 39.17 a maund on Tuesday. Trading was automatically suspended everyday in terms of the restrictions imposed by the East India Jute and Hessian Exchange. Turnover was moderate, and the undertone steady at the close.

THE U.K. JUTE MARKETS

FIBRE SOFTENS

(FROM OUR DUNDEE CORRESPONDENT)

THE rise in raw jute prices in Pakistan appeared to have halted during the past week. There were instances where sellers were willing to accept a good deal less than previously, but prices were still very high. As imports of loose jute from up-country in Pakistan increase, there is bound to be a certain amount of reaction in values. The feeling is that a very large proportion of the recent increase in prices of raw jute was due to panic buying.

Offers being made in the U.K. were very irregular, due to secured parcels being offered at well under shippers' prices. A small amount of business took place with Dundee spinners at the higher levels, but it is unlikely that bulk buying will take place until the position becomes more stable. Dundee spinners are holding fair stocks of raw material and it must be remembered that registered sales of raw jute to the U.K. were over 220,000 bales during July.

Offers of raw jute being made in Dundee were very irregular, with the lowest rates at £150 for Export Firsts, at £135 for Export Lightnings and at £128 for Export Hearts, c.i.f. U.K., for September-October shipment. Grade Tossa-4 was named at £150 and Dacca Tossa-6 at £155. There were sellers of Outport Tossa-2/3 at £135 and of Outport Tossa-4 at £129, for October-November shipment. Cuttings were also tending easier at £102 for S.N.C. and at £93 for N.C., September-October.

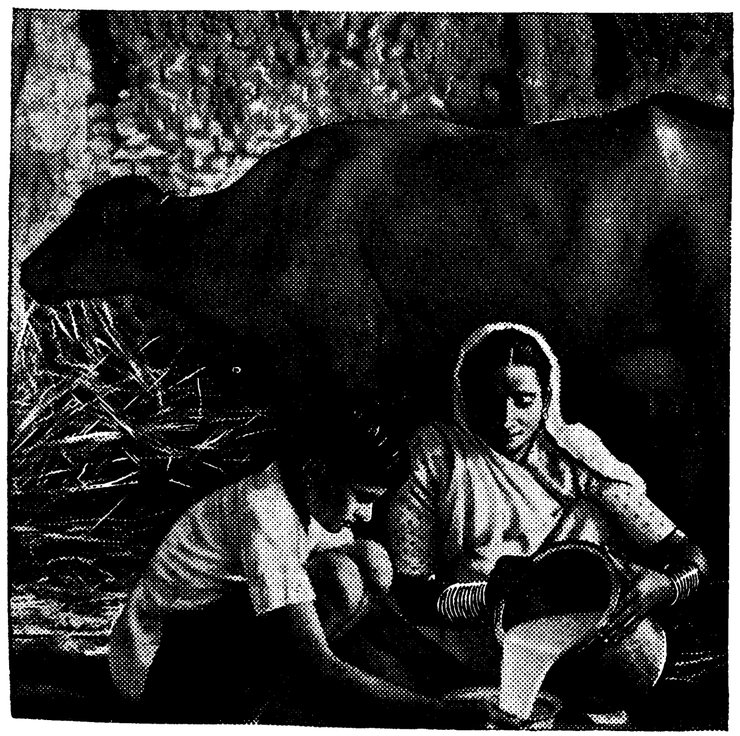
Although prices of Siam jute have risen, the increase is small when compared with prices of Pakistani jute. Some business took place in Siam jute and offers were at £102 for grade A, at £95 for grade B and at £85 for grade C, delivered mill Dundee for November-December shipment.

THE PAKISTANI JUTE MARKETS

FIBRE FALLS BACK

(FROM OUR DACCA CORRESPONDENT)

THE predicted turn in the market came. As is usual in such cases, the drop was as sudden as the rise. In loose jute, the price for Export Hearts had gone as high as £163 a ton f.o.b. in certain areas. The highest price paid for Cuttings had been £104 a ton f.o.b.



In the loose market, the fact that buyers continued to compete blindly to get the jute available, had pushed up prices by £50 a ton over a period of three days. This had encouraged sellers, who had been holding on to their jute to bring it in since it was obvious that these prices would not last.

The pucca bale market has followed the loose market downwards more in the absence of buyers than in the drop in prices, although there has been a fairly severe drop. Mills are largely the holders of high-priced goods, so these goods are not likely to come into the market with the drop.

The overseas buyers, although not over-stocked, have managed to reduce the rise successfully, helped by resellers who had bought cheap early in the season. Many of these cheap purchases will either be unfulfilled or unsatisfactory in delivery, but this bad effect will not be felt until much later in the season. In the meantime, with the fall in prices, even the reputable balers have come out as sellers at prices below replacement value, but they are finding few buyers.

A survey of what is known as the western area, has shown little or no damage from floods and fairly extensive harvesting. Since this is the area which supplies Narayanganj, which is the sentimental heart of the market, this will have a bearish effect. What must be remembered, however, is that the crop is undoubtedly short and even though E.P.C. levels may encourage substitutes and reduce overseas consumption, the fact remains that it is unlikely that supply will be equal to demand.

Jute goods have also risen to levels which tempted the mills some weeks ago to sell. The highest level in sacking still shows a loss even on today's market.

More for everybody

In thousands of villages today, Co-operatives are doing what no individual could do before. Behind them, a pillar of strength, the State Bank of India.

Every year, through over 1600 branches, the State Bank of India and its subsidiaries extend financial and other assistance not only to the co-operative banks but also directly to the co-operatives themselves, such as marketing and processing societies, sugar factories, industrial co-operatives, consumer wholesale stores, etc. It is a happy circle. We help them. They help the nation. That helps us. There is consequently more for everybody.

MYSORE STATE LAND TAX WORRIES PLANTERS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Mysore Government's proposed revision of land tax is agitating the planting community. The revision is on the basis of the Land Revenue Act passed by the State Legislature early this year. This Act has fixed the land tax rate at one-sixteenth of the gross produce value.

What has now happened is that the Commissioner for Survey and Settlement has directed his officers to apply the rule of one-sixteenth of the gross produce value in fixing the new rates. It is said that in the case of one district, the settlement officer fixed a tax which increased the existing rate by 100 percent and the same officer surveying another district has enhanced the rate by 3,700 percent. It does not appear that there had been any review of these rates before they were published for public opinion. Once they are published, the inevitable involvement of political factors makes a rational approach to the question of revising the rate with realism and justice almost impossible. It is said that the settlement officer has taken no account of the existence of the Agricultural Income Tax and the extractions made under this Act from the same income which he took for the purposes of computing the land rates.

In previous settlements, it was a practice to take the average price for a period of 20 years for the purpose of computing the gross produce value an acre. In this case, the average taken is for a period of five years and the rates now fixed would rule for a period of 30 years. The new rates were derived by the simple method of computing the rates on the basis of one-sixteenth of the gross produce value without taking into account the multiplicity of other taxes that are paid from the same income. Land tax is a primary charge on the land and, therefore, a charge on production. It will have to be paid whether a crop in a particular year fails or not.

The *Planters' Chronicle*, official organ of the United Planters' Association of Southern India, says while commenting on this issue editorially, that the burden cast by the new levy is not only onerous and harsh, but also patently unjust and from the long-term point of the State resources, self-defeating. "The procedure followed in Mysore and the principles involved in the fixation of the new rates are matters of significance to a much wider public than the planters directly affected. If it can happen in Mysore, it could with impunity happen in Assam, West Bengal, Kerala or Madras or for that matter in any other State", the journal adds.

COFFEE

World Crop Forecasts

If the current forecasts relating to the world coffee crop come true, the supply position is going to be tight for some time to come, and the prices are bound to rule high. The 1964-65 crop is placed at 52,613,000 bags by the U.S. Department of Agriculture in its first estimate of the crop. This represents a 20 percent fall from the 1963-64 crop which is now in the market. As in the past two or three seasons, Brazil mainly accounts for this fall with her crop falling to less than half of the 1963-64 output. That country which is the largest world producer of coffee has not recovered from the adverse effects of frost, drought and fire that hit her coffee plantations some time ago. Her 1963-64 crop itself was very much less than the normal on account of the very same factors.

India which produces only a very small fraction of the world crop had a really good harvest in 1963-64, the actual receipts in the Coffee Board's pool went up to as much as 67,989 tonnes to the end of last month. The corresponding receipt into the pool from the previous season's crop was only 54,964 tonnes. Unfortunately, the weather this year has been very unfavourable with a prolonged drought up to the middle of June last. This might adversely affect the standing crop. At this stage, it is not possible to forecast the crop with any accuracy. The Coffee Board has, however, placed the crop at 67,500 tonnes tentatively.

Absence of blossom showers and occurrence of inadequate showers during this season has brought home to several planters the importance of maintaining optimum shade and the usefulness of sprinkler irrigation equipment which could have easily come to the aid of planters in ensuring their crop in spite of uncertain weather conditions. There are instances where overhead irrigation has been of immense help in ensuring a good crop. The Coffee Board chairman, Mr. Sitaram Reddy, urged the planters to equip themselves with the sprinkler irrigation equipment in the course of his address to the recent meeting of the Coffee Board. He assured that the applications received from the planters for import of sprinkler irrigation equipment would be recommended to the Government by the Board.

CASHEW KERNEL

Prices Soar

Prices of cashew kernel continue to soar and the latest quotation is 70 U.S. cents a lb. This is said to be the highest in recent years and perhaps the highest on record. At present, both the U.S.A. and Russia are active buyers in the Indian market. The undertone of the market is very firm and exporters think that there are possibilities of prices going up further. Raw nut market also is equally strong. The new African crop is now commanding Rs 980 to Rs. 1,020 a ton, depending on variations in quality. The new crop from Africa is expected to reach India by November.

Export of the processed kernel is ahead of the last year figure. During the first half of 1964, as much as 25,000 tonnes worth Rs. 11.76 crores were exported. This was a record performance for the cashew processing industry in India. In spite of this good performance, it is doubtful whether this year's export will be as big as last year's in terms of quantity in view of the possible shortage in the production of cashew kernel. Some processing interests in Quilon are expecting a shortfall of about 200,000 cases of 50 lbs each. They anticipate this shortage in the light of the poor quality of the raw nuts received from Africa.

TEA

Offerings at Auctions Increase

(BY A SPECIAL CORRESPONDENT)

TEA supplies are rolling into Calcutta port for sale and export, and the offerings at the auction held on 17th August totalled 66,066 chests. On 19th August, a further 30,000 packages of Dusts were offered for sale. With the larger crop from the north and a further increase in the offering for the next five or six months in prospect, it is not surprising to read that, except for quality, ordinary rains teas are meeting with an irregular demand here and in Cochin. The best C.T.C.'s were sought after and the better type Assam Brokens and Fannings sold well, but Orthodox B.O.P. and Fannings were easier. Darjeelings sold readily round last rates. On 19th August, Dusts were easier, while conditions in Cochin remained much the same as reported last week.

U.K. tea stocks in warehouses for the week ended 14th August, totalled 114.9 million lbs, against 114.4 million lbs a week ago, but there were over 20 million lbs to be landed. The week's deliveries were just over 9 million lbs. Of the total afloat, Calcutta accounts for a little over 2 million lbs, but Cochin figures account for over 3 million lbs. The average price was 49.08d, compared to 47.43d a week ago, and 50.41d a year ago. These averages are for all teas sold during the week, of which supplies from north India remain comparatively small, although the industry is nearly half way through this year's plucking season.

At a time when the Government and the tea industry are understood to be examining what can be done to reduce production costs and expand exports, it is disappointing to note the raising of Indian Airlines Corporation's freight rates in the Calcutta-Agartala sector on 15th August. This was strongly criticised by Mr. Sachindralal Singh, Chief Minister of Tripura, at Dum Dum airport last week. He urged that the rates should be lowered for the sector, in view of Tripura's peculiar geographical situation. Mr Singh said that the State depended to a large extent on air services for the supply of essential commodities to and from Calcutta. But business men were now reluctant to book frieghters in view of the increased expenditure. This had hit Tripura economically.

He said the tea industry was the worst affected. Out of about 3 million kilograms of tea to be supplied to Calcutta so far, only about 200,000 kilograms could be sent.

An I.A.C. source in Calcutta admitted that the freight rates in the Calcutta-Agartala sector had been raised to 54 paise a kilogram on 12th July, and were again increased to 60 paise a kilogram on 15th August. The latest increase was because of the rise in the operational expenses. The flying time between Calcutta and Agartala had been increased by about 10 minutes following certain restrictions imposed recently by the Government of Pakistan on the flight of Indian aircraft over the former's territory.

It will be noted that the distributing trade in the U.S.A. expects a good business this year, and the methods of advertising may interest local blenders. But they admit being optimistic. Export figures to the U.S.A. compare as follows:

	(In metric tons)
1961 ...	42,603
1962 ...	43,665
1963 ...	36,876 (Provisional)

Current figures, however, make better reading.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to July 1964. As compared with June, the July index for Food shows a rise of 8 points. The indices for Fuel & Lighting, Clothing and Miscellaneous remain unchanged at 308, 609 and 331 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 5 points during July 1964.

THE BIRLA JUTE MANUFACTURING COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 15, India Exchange Place, Calcutta-1, on Monday, the 28th September, 1964, at 4-00 P.M. for the following purposes:—

1. To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1964.
2. To declare Dividends on Preference, Second Preference and Ordinary Shares.
3. To elect Director in place of Shri J. M. Goenka, who retires by rotation, but, being eligible, offers himself for re-election.
4. To appoint Auditors and to fix their remuneration.
5. As special business to consider and, if thought fit to pass, with or without modification, the following Resolutions:—

(i) **As Ordinary Resolution:**

"RESOLVED that Shri Rasiklal Naneklal Dalal, a Director of the Company who ceases to hold office under Article 138 of the Company's Articles of Association, be and is hereby re-appointed a Director of the Company."

(ii) **As Special Resolution:**

"RESOLVED that Shri Brijratan S. Mohatta, a Director of the Company who is an associate of the Managing Agents under the Companies Act, 1956, who ceases to hold office under Article 138 of the Company's Articles of Association, be and is hereby re-appointed a Director of the Company liable to retire by rotation."

(iii) **As Ordinary Resolution:**

"RESOLVED that the authorised capital of the Company be increased to Rs. 6,00,00,000 (Rupees Six crores) by the creation of 20,00,000 further ordinary shares, being equity shares, of Rs. 10 each and that the conditions contained in the Company's Memorandum of Association be deemed as altered accordingly."

(iv) **As Special Resolution:**

"RESOLVED that the provisions of the Articles of Association of the Company be altered in the manner following, that is to say that in Article 4 the words and figures 'At the date of the adoption of these Articles the share capital of the Company is Rs. 4 crore divided into 20,00,000 Ordinary Shares of Rs. 10/- each, 25,000 7½% (subject to Income Tax) Cumulative Preference Shares of Rs. 100/- each and 1,75,000 2nd Preference Shares of Rs. 100/- each.' be deleted and the following words and figures be substituted therefor:

"The Share capital of the Company is Rs. 6,00,00,000 divided into 40,00,000 Ordinary Shares of Rs. 10 each, 25,000 7½% (subject to income-tax) Cumulative Preference Shares of Rs. 100 each and 1,75,000 Second Preference Shares of Rs. 100 each.'"

The Register of Members and Share Transfer Books of the Company will remain closed from the 10th September, 1964 to the 28th September, 1964, both days inclusive.

By Order of the Board,
Per Pro: BIRLA BROTHERS PRIVATE LIMITED,
G. MAKHARIA,
Managing Agents.

Registered Office:
15, India Exchange Place,
Calcutta-1.
Dated, the 29th July, 1964.

N.B. (i) The Directors have recommended the following dividends for the year subject to deduction of tax under the I.T. Act, 1961:—

On Preference Shares @ 7.5% per annum (increased by 11% under the Preference Shares (Regulation of Dividends) Act, 1960, and after deducting Company's Income-tax).

On Second Preference Shares @ 7.86% per annum.

On Ordinary Shares @ Rs. 1.50 per share.

If dividends on shares as recommended by the Directors are declared at the Meeting, THE DIVIDENDS WILL BE PAYABLE TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 28th September, 1964, or to their order or to their Bankers. No application need be sent for dividends, as relative dividend warrants will be posted to such shareholders.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) AN EXPLANATORY STATEMENT IN RESPECT OF THE ABOVE ITEMS OF SPECIAL BUSINESS IS BEING FORWARDED TO THE MEMBERS OF THE COMPANY ALONG WITH THE CONVENING NOTICE OF THE MEETING.

BALLY JUTE COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 15, India Exchange Place, Calcutta on Monday the 28th September, 1964 at 3-00 P.M. for the following purposes:—

1. To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1964.
2. To declare dividends on Preference and Ordinary Shares.
3. To elect Directors in place of Shri M. P. Birla and Shri Arvind C. Dalal who retire by rotation, but being eligible, offer themselves for re-election.
4. To appoint Auditors and to fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions:—

(i) **As Ordinary Resolution:**

"RESOLVED that subject to the approval of the Central Government and the terms of such approval Messrs. Birla Brothers Private Ltd., be and are hereby re-appointed Secretaries & Treasurers of the Company as and from 1st April, 1965, for the period, at the remuneration and upon terms and conditions set forth in the draft agreement placed before the meeting and initialled for the purpose of identification by the Chairman of the Board and that the Directors of the Company be and are hereby authorised to enter into an agreement with Messrs. Birla Brothers Private Ltd., in terms of the said draft subject to any modification thereof as may be agreed upon between the Directors of the Company and Messrs. Birla Brothers Private Ltd., for the purpose of complying with any modifications required or conditions imposed by the Central Government in granting their consent aforesaid."

(ii) **As Ordinary Resolution:**

"RESOLVED that the consent of the Company be and is hereby accorded to the Board of Directors for borrowing moneys in excess of paid-up Capital and free reserves of the Company that is to say reserves not set apart for any specific purpose upto a sum not exceeding in aggregate Rs. 1 crore outstanding at any one time and that such borrowings shall be exclusive of the temporary loans obtained or to be obtained by the Company from its bankers in the ordinary course of business."

(iii) **As Ordinary Resolution:**

"RESOLVED that the authorised Capital of the Company be increased to Rs. 1,00,00,000 (Rupees one crore) by the creation of 60,000 further Ordinary Shares being Equity Shares of Rs. 100 each and that the conditions contained in the Company's Memorandum of Association be deemed as altered accordingly."

(iv) **As Special Resolution:**

"RESOLVED that the provisions of the Articles of Association of the Company be altered in the manner following, that is to say that in Article 4 the words and figures "At the date of the adoption of these Articles, the Capital of the Company is Rs. 40,00,000 divided into 20,000 Ordinary Shares of Rs. 100 each and 20,000 Preference Shares of Rs. 100 each," be deleted and the following words and figures be substituted therefor:

"The Share Capital of the Company is Rs. 1,00,00,000 divided into 80,000 Ordinary Shares of Rs. 100 each and 20,000 Preference Shares of Rs. 100 each."

The Register of Members and Share Transfer Books of the Company will remain closed from the 10th September, 1964 to the 28th September, 1964, both days inclusive.

By Order of the Board,
Per Pro: BIRLA BROTHERS PRIVATE LIMITED,
G. MAKHARIA,
Secretaries & Treasurers.

Regd Office:
15, India Exchange Place,
Calcutta-1.
Dated, the 29th July, 1964.

N.B. (i) The Directors have recommended the following dividends for the year subject to deduction of tax under the Income-tax Act, 1961:

On Preference Shares @ 10% per annum, and

On Ordinary Shares Rs. 20/- per share.

If dividends on shares as recommended by the Directors are declared at the meeting, THE DIVIDENDS WILL BE PAYABLE TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 28th September, 1964 or to their order or to their Bankers. No application need be sent for dividends, as relative dividend warrants will be posted to such shareholders.

ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

iii) The Registered Shareholders of the Company, whose names appear on the Company's Register on the 28th September, 1964, will be entitled to the offer and allotment of any Right Shares which the Directors may decide to make in that behalf in due course.

iv) AN EXPLANATORY STATEMENT IN RESPECT OF THE ABOVE ITEMS OF SPECIAL BUSINESS IS BEING FORWARDED TO THE MEMBERS OF THE COMPANY ALONG WITH THE CONVENING NOTICE OF THE MEETING.

THE INDIAN STEEL AND WIRE PRODUCTS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN that the Twenty-ninth Annual General Meeting of the Shareholders of The Indian Steel & Wire Products Limited will be held at its Registered Office, No. 7, Wellesley Place, Calcutta-1, on Tuesday, the 29th September, 1964, at 11-30 A.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet, Manufacturing, Trading and Profit & Loss Account and Profit & Loss Appropriation Account of the Company for the year ended 31st March, 1964.
2. To declare dividend.
3. To appoint a Director in place of Sardar Ajaib Singh, who retires by rotation and is eligible for re-election. In this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 261 of the Companies Act, 1956, of intention to move it as a special resolution for the reason that the said Sardar Ajaib Singh is a member and director of Indra Singh & Sons Private Ltd and therefore "an Officer and associate of the Managing Agents" has been received by the Company and is hereby given to the members:

As Special Resolution:

"RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Sardar Ajaib Singh, a Member, Director, Officer and associate of Indra Singh & Sons Private Ltd, the Managing Agents of the Company, be and is hereby re-elected a Director of the Company."

4. To appoint a Director in place of Mr. B. B. Ghose, who retires by rotation and being eligible, offers himself for re-election.
5. To appoint Auditors for the Current year and to fix their remuneration.

The Transfer Books of the Company will be closed from 9th September, 1964 to 29th September, 1964, both days inclusive.

By Order of the Board of Directors,
INDRA SINGH & SONS PRIVATE LTD.,
A. SINGH,
Director,
Managing Agents.

Registered Office:
7, Wellesley Place,
Calcutta-1.
21st August, 1964.

Note:—(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll to vote instead of himself and that a proxy need not be a member of the Company.

(2) The relevant Explanatory Statement in respect of item No. 3 of the Notice of the Annual General Meeting to be held on 29th September, 1964, has been/will be sent to the shareholders as required by Section 173 of the Companies Act, 1956.

(3) If the dividend on shares, as recommended by the Directors, is passed at the meeting, the payments will be made on or after the 8th October, 1964, to those shareholders whose names are on the Company's Registers on the 29th September, 1964, or to their mandatees.

TEA COMPANIES—Contd.

O., Po., C. and Dd indicate Ordinary Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TOKYO MEETING: A BRAVE NEW ROLE FOR I.M.F.

THIS year's Fund-Bank meeting, to be held in Tokyo next week, could prove to be the most important since the war, particularly so far as it concerns the development of the International Monetary Fund. Such a statement is not intended to imply that any decision more significant than that existing quotas be increased, is likely to be made in the meeting. This was presaged some time ago, and it is doubtful whether action on the questions facing the Fund, as distinct from various analyses of them, will go further for the time being. The main point to recognise, however, is that the move to increase quotas is in the nature of a rearguard action, a gesture on the part of those who still counsel orthodoxy, towards those who are urging that the Fund be immediately transformed into something more suited to dealing with the world's growing liquidity problems. There is still considerable resistance to overcome before any such transformation can take place, in particular among the creditor members of the "Paris Club" group of ten countries, and it may be some years yet before this is reduced to the point where radical reform can be undertaken. But the writing is on the wall. The need for action to improve international liquidity is becoming increasingly recognised, and the key rôle which the I.M.F. must play is now widely accepted. Thus, despite the probable avoidance of any really radical decisions at Tokyo this year, the meeting could go down in history as marking the watershed between the growing movement for progress and reform in world liquidity matters, and the still entrenched forces of reaction.

Compared with those of the I.M.F., this year's annual deliberations on the World Bank's affairs promise little of lasting significance. Under its new President, Mr. George Woods, the Bank is feeling its way into new fields of international lending and will, no doubt, go on doing so. This is all very satisfactory, and is unlikely to encounter much unfavourable criticism in Tokyo. It is still too early to visualise the future work of the Bank developing along any other lines, at least under its present organisational set-up. Yet changes may be on the way for the Bank too, although so far they appear on the horizon as no larger than a man's hand. For instance, there is a clear need to link any ambitious scheme for improving world liquidity with the problem of expanding development aid. And what better institution could be employed for doing this than the World Bank? But such development is a long way ahead, although it would be surprising if Mr. Woods does not already have it firmly in the forefront of his plans for the future.

It has been obvious for some years now that if international trade is to expand at the rate required to ensure continued prosperity in the developed world and rapid economic growth in the underdeveloped, a large and sustained increase in world liquidity is unavoidable. Among the various ways in which this could be secured, a revaluation of the prevailing gold price has already been firmly ruled out by the United States. The alternative, therefore, is an expansion of the world's credit supply. This has in fact been taking place steadily over the past few years, but through a series of makeshift expediencies which cannot hope permanently to answer the need. At present this is where opinions differ. For instance, a number of important nations still take the view that present facilities are adequate, and that any increase would only encourage world inflation and reckless national housekeeping. There is some substance in this somewhat spartan approach to the problem, but it is difficult to accept it as anything but an example of "sour grapes" thinking evoked by the fact that perhaps the first main beneficiaries of any improved system of world liquidity would be Britain and the United States. Some European countries, France in particular, are unable to forget that when their own need for credit facilities to bolster up flagging balances of payments was at its greatest, the United States, then at its peak as the world's creditor, was reluctant to offer anything other than stern advice and a measure of aid for which the recipients were expected to be duly grateful. It will be many years before this is forgotten in some corners of Europe.

There is nothing to suggest, however, that once having made their point, the opponents of change will not eventually yield to reason provided they are given sufficient time. This is what appears to be happening at the moment; even among the most intractable members of the Paris Club the truth is beginning to dawn that current arrangements cannot be expected to work indefinitely. The present bewildering range of "swap" and "co-operation" facilities has filled a difficult gap between the dethronement of the dollar as the world's most suitable reserve currency, and the provision of an adequate alternative. But this stop-gap system cannot be expected to go on expanding at the pace required to accommodate world trade; besides, it takes no account of the growing needs of the underdeveloped countries. The conversion of the United States to this point of view some time ago was the beginning of wisdom. Since then opinion has gradually been changing under the impact of various suggestions for reform such as the Triffin and the Baruch plans. There can be no denying that international opinion on monetary matters has not yet travelled anywhere near as far as the acceptance of these blueprints would require. But that time may not now be too far away.

Probably the main advocate of reform in Tokyo this year will be Britain. That country has been increasingly active in recent years in pushing world monetary opinion towards changes. The motives are not at all unselfish. Sterling is the most favoured international currency after the dollar, yet the vulnerability of the British domestic economy continues to restrict the scope of the pound, and this is once again giving cause for anxiety. Britain's balance of payments is now moving sharply into deficit, and the impact on the sterling area's reserves, the facilities available to support the pound, is at present cushioned only by the increased earnings of other members. When this factor ceases to operate, as it is expected to do in the fairly near future, the drain on the

reserves can possibly be sustained only if Britain is able to draw on credit from international sources. It is highly unlikely that the swap facilities available will be sufficient to bridge what is hoped will be a temporary gap, but which might persist for at least a couple of years, and the only alternative—now that the United States is no longer in a position to perform the kind of operation which helped Italy back on its feet some months ago—is resort to the I.M.F. This appears disarmingly simple. But it must be remembered that the rules which cover borrowing from that source can often have inconvenient consequences for the borrower's internal economy.

The current plight of Britain highlights the inadequacies of the I.M.F., given its present organisation, as a source of increased international liquidity. There is reason to believe that the main reason why Britain's balance of payments is moving so rapidly into deficit is that bouts of internal restraint stretching back over the past 12 years have so discouraged modern, cost-saving investment in Britain's economy, that her goods are now no longer competitive in world markets. The remedy, or so it is maintained, would be to follow a sustained programme of economic growth which would eventually secure the modernisation of British industry. Yet the application of the I.M.F. rules would lead only to another period of economic stagnation such as has proved so damaging in the past. There is every reason to believe such rules will not be applied with full vigour. Nevertheless, they remain as a distinct threat to Britain's continued prosperity and a persistent discouragement to any other country which might find itself in a similar position.

The discipline which usually goes with I.M.F. borrowing can be especially irksome to an underdeveloped country, for whom continued economic growth might be a matter of political life and death. That is why so many recent plans for increasing world liquidity have been linked to the provision of development aid. The one proposed by Mr. Maxwell Stamp is perhaps the most ambitious, but that put forward recently by the Japanese economist, Mr. Kojima, is undoubtedly the most ingenious. What such plans chiefly have in common is the provision that increases in world liquidity should first be made available to the underdeveloped countries, perhaps through allocation by the World Bank, who would then put them into circulation by using them for payment against development goods. The idea is sound enough; indeed, it involves nothing more novel than what is already embodied in many existing international aid plans. What it would do, however, is ease the strain which these so often impose on donor countries' balances of payments. Fears that it would also inevitably lead to over-ambitious and inflationary schemes among the recipient countries themselves are probably beside the point; there is no evidence that the lack of it at present results in any excessive caution.

So the opportunities facing the I.M.F. in the future are both far-reaching and challenging. There is still considerable opposition to overcome, although, fortunately, and contrary to what was feared when he was appointed, the Fund's new Director, M. Paul-Pierre Schweitzer, appears to have been among the first to grasp that things cannot remain permanently as they are. It is to be hoped that new ideas concerning the Fund's future rôle will receive a thorough airing in Tokyo. It is important that world opinion be alerted as soon as possible to the problems which lie ahead. Progress must of necessity be slow. But it will be quicker if discussion is rapidly lifted beyond the circle of a few academic economists, to the realm of the practical administrator who will be called upon to put any new schemes into operation. This year's meeting in Tokyo could be the start of that important process.

BONUS DECISION UNREALISTIC

IF the Bonus Commission's recommendations were utterly lacking in economic realism, the Government of India's decision on them is by no means an improvement. The old anomalies and inconsistencies remain, although in a somewhat attenuated form. Obviously political expediency has got the better of economic common sense and the Commission's manifestly untenable recommendations have been accepted, though with some modifications. But this is not to say that the Government's move has in any way served to placate labour since its representatives have, predictably enough, reacted to it strongly. The communist leader, Mr. Dange, now foresees "a wave of disputes and strikes". In fact, bonus has been one of the most prolific causes of industrial disputes, and it appears that it will continue to be so in spite of the Government's misdirected attempt to purchase peace.

The modifications made by the Government are mainly three. Firstly, all direct taxes and fiscal concessions to industry, including the surtax and the development rebate, will be taken into account in determining the "available surplus" out of which bonus will be distributed. But strangely enough, industry's legitimate claim for rehabilitation has been ignored. This is a vital need since rehabilitation and modernisation are indispensable for industrial growth. After frittering away 60 percent of the available surplus on distributing bonus, the balance will be too small to take care of the needs of modernisation and expansion—particularly when replacement costs are soaring—and the several other purposes for which corporate reserves are absolutely necessary.

The second modification relates to the rate of return on capital to be allowed as a prior charge in calculating the available surplus. This will be (a) the actual rate payable in the case of preference capital and (b) 8.5 percent on the paid-up equity capital and 6 percent on reserves, as against 7 percent and 4 percent respectively, recommended by the Bonus Commission. In the case of banks, the rate will be only 7.5 percent and 5 percent respectively. These are just small mercies which do not go far enough. It is difficult to see how the liberalised rate of return accords with the current trends in the capital market. When even preference capital cannot be raised by offering less than 9 percent and interest rates are going up, it is unrealistic in the extreme to suggest that risk capital be remunerated at 8.5 percent. Indeed, the Government itself is expecting a return of 10 percent on some of its investments in the public sector. Equity investment will become unattractive for investors in these circumstances. The third modification, however, has some merit in that it will help lessen the inflationary impact of the bonuses. The Government has decided that beyond a certain maximum, bonus should be paid in the form of securities and not in cash; the nature and extent of such investment is to be decided by negotiations or t partite discussions.

From the above modifications it is clear that while a small attempt has been made to accommodate the employers' point of view, the incongruities implicit in the Bonus Commission's proposals still remain. The Commission's stand that bonus is "sharing by the workers in the prosperity of the concern in which they are employed" does not quite hitch in with its recommendation to distribute a minimum bonus of 4 percent of the total basic wages and dearness allowance or Rs. 40 (whichever is higher) even in years when a concern suffers losses. The incidence of a minimum bonus will be particularly hard on labour-intensive industries like plantations. In the case of the tea industry, for instance, the minimum bonus will severely hit many of the marginal gardens, which are not necessarily small in size. Particularly in Darjeeling and Cachar districts, there is a danger of some gardens having to close down in the cold weather in order to save on labour costs. The tea industry has hitherto been distributing a percentage of profits as bonus, but to compel it to pay bonus even when it makes no profit will greatly hamper the export drive—something which the country can ill afford in view of the industry's position as a major foreign exchange earner. The Government, in fact, had assured the industry that it would be consulted before a decision is taken in the matter, but this has obviously not been done. As it is, the bonus formula will throw a heavy burden on many tea companies since they are under-capitalised on paper. It will work unfairly as between one company and another and as between one labour force and another.

There is considerable substance in the contention of Mr. N. H. Tata, president of the Employers' Federation of India, that in accepting the recommendation on minimum bonus, a straight increase in wages has been given to all industrial workers, something which could be done only if justified by the wage boards, which have been specifically set up for this purpose in various industries. Mr. Tata rightly says that it is inappropriate to grant a straight increase in wages and call it bonus after having defined it as a share in profits. It is obvious that the bonus decision will seriously affect corporate development by diverting the greater part of companies' resources for immediate consumption by workers. In particular, it will hurt those industries whose products are subject to price control. In the case of others, the bonus costs may be made up through an increase in prices, but this will tell on the cost of living and the competitive strength of their products. Furthermore, the distribution of large sums of money for immediate consumption by labour will add to the pressure on prices.

PROTECTION TO DYESTUFFS

THE Indian dyestuff industry has been enjoying protection for the last nine years and it has made substantial progress during this period. There were only eight units producing dyes in 1954 when the industry first came under protection, but now there are 21 units in the organised sector, and some 120 small-scale units. The total capacity of the industry, which was 2,022 tonnes in 1954, rose to 13,625 tonnes in 1962, and the figure for 1964 is placed around 21,300 tonnes. In this, the share of the protected sector in 1964 is mentioned at 12,496 tonnes. Between 1954 and 1964, the capacity of the organised sector increased from 2,022 tonnes to 9,584 tonnes. The growth of the small-scale industry seems to be more remarkable: its capacity was reported to be negligible in 1954, but it rose to 3,979 tonnes in 1962 and shot up further to 11,722 tonnes in 1964. The big rise in the capacity of the small-scale sector during 1962 and 1964 is not due to emergence of new units. The data relating to the period before 1962 had been unreliable and it was only in 1962 that the Directorate of Small Industries conducted a proper survey of the capacity in this sector.

The production of dyestuffs during the last decade has shown a steady rise from a mere 674 tonnes in 1953 to 7,104 tonnes in 1961 and 8,689 tonnes in 1963. Of the total production in 1963, protected dyes accounted for 4,520 tonnes, and non-protected dyes for 4,169 tonnes. Production in the small-scale sector, which was negligible in 1954, increased to 1,427 tonnes in 1961 and 3,055 tonnes in 1963, while production in the organised sector rose from 674 tonnes in 1953 to 5,677 tonnes in 1961 and 5,634 tonnes in 1964. These figures indicate that whereas the utilisation of installed capacity in 1963 was around 60 percent in the organised sector, the figure for the small-scale units was much lower around 26 percent. The large volume of idle capacity in the small-scale sector is presumably attributable to the difficulties which the smaller units have to face in securing raw material supplies.

The production of dyestuffs has, no doubt, increased by more than ten times during the last nine years and the industry has also started production of some intermediates. The quality of the indigenous product is, by and large, considered satisfactory. However, most of the intermediates and many varieties of dyes still continue to be imported. With the increasing domestic demand for dyes and the slow progress in the sphere of manufacture of intermediates, the dyestuff industry has still a long way to go to achieve self-sufficiency. Since protection granted to the industry is due to expire at the end of the current year, the Tariff Commission has been asked to examine whether protection should be continued beyond 31st December, 1964. All sections of the industry have pleaded for continuing protection for many more years. Manufacturers have argued that when the dyestuff industry is protected even in such advanced countries as the U.S.A. and the U.K., the need for protection to the infant industry in this country is very strong.

The Tariff Commission's public enquiry commenced on 28th August. After reviewing the progress of the industry since 1954, the chairman, Mr. M. P. Pai, stated that since the dyestuff industry occupied an important place in the whole organic chemical industry, its growth would not only contribute to strengthening of the national economy, but would also help in the technical progress of the organic chemical industries as a whole. The enquiry that the Commission is now conducting will be a comprehensive one. It will cover all the four categories of the protected dyes and the seven categories of non-protected dyes. In addition, the Commission will examine the question of granting protection to two intermediates, namely, beta amino anthraquinone and benzanthrone. Mr. Pai has urged that for further development, the dyestuff industry should concentrate on the enhancement of its productive efficiency and quality control, production of intermediates, technical research for new dyes and coordinated growth. He also asked the industry to ensure that its products reached consumers readily and at reasonable prices. Referring to future expansion, the Tariff Commission chairman said that expansion licences had been granted to existing units for a total capacity of 6,022 tonnes. Apart from this, four new units in the organised sector had been licensed with a capacity of 602 tonnes. The small-scale sector has also been granted a capacity of 1,266 tonnes. The total capacity for the fourth plan would be around 29,000 tonnes.

Mr. Pai felt that the licensed capacity might well exceed the projected demand. The consumption of dyestuffs which was 11,688 tonnes in 1961, declined to 11,276 tonnes in 1962 and still further to 10,629 tonnes in 1963. Manufacturers attributed the decline to the shift in demand in favour of better dyes which were lighter in weight and pointed out that it was erroneous to estimate demand in terms of tonnes. They also criticised the Government's import policy as erratic. They suggest a progressive import ban as more and more items are manufactured within the country. The representatives of the small-scale manufacturers have urged that in future no unit should be licensed in their sector without the consent of the Directorate of Small Industries.

Current News and Comment

State Loans Fully Subscribed

As was to be expected, the response to the State Government loans floated last week was good. Thirteen State Governments received subscriptions amounting to Rs. 109.70 crores for the 4.75 percent 1976 loans offered for a total amount of Rs. 100 crores. The States are entitled to keep subscriptions equivalent to 10 percent in excess of the notified amounts. Five State loans were over-subscribed and their lists closed on the very first day. The rest were fully subscribed within the scheduled time.

Support has largely come from commercial banks, the State Bank of India and the Life Insurance Corporation. Semi-Government agencies like port trusts, the State Financial Corporations and apex co-operative banks have also extended substantial support. Five of the 13 States offered conversion facilities. Conversion subscriptions have amounted to Rs. 3.87 crores, against outstanding maturities for Rs. 20.96 crores. Conversion applications for the Maharashtra loan has amounted to Rs. 1.07 crores, against outstanding maturities for Rs. 5.86 crores; for the Uttar Pradesh loan to Rs. 1.02 crores, against outstanding maturities for Rs. 5.82 crores; for the Madras loan to Rs. 1.09 crores, against outstanding maturities for Rs. 5.25 crores; for the Madhya Pradesh loan to Rs. 21 lakhs, against outstanding maturities for Rs. 2.03 crores; and for the West Bengal loan to Rs. 48 lakhs, against outstanding maturities for Rs. 2 crores.

Although the total size of the loans is fairly heavy, it does not seem to have strained the money market overmuch. After rising sharply when the lists opened, the call rate has now slipped back. The absorption of the loans by the money market was facilitated by the return of large funds to the banking system during the current slack season. Deposits of scheduled banks have risen by Rs. 212.11 crores to Rs. 2,720.02 crores since the beginning of the present slack season.

Despite the good response to the loans, there was some amount of persuasion and pressure by various State Government to secure subscriptions. As a result, most of the new loans are being dealt in at discounts ranging from 10 paise in the case of the Maharashtra loan issued at par to Rs. 1.50 in the case of the loans issued at Rs. 90.50. The market expects that the selling pressure will increase in the coming weeks. But commercial banks and the Life Insurance Corporation are believed to be keen on buying these loans at a discount. The banking community is eager to invest in Government securities for two reasons. Firstly, the increased liquidity requirements have to be complied with by the middle of September. Secondly, Government securities provide a suitable outlet for the large volume of funds flowing into banks during the slack season.

Failure of Food Planning

The F.I.C.C.I. conference on agricultural development and economic progress, held last week in New Delhi, provided a forum for the exchange of views between the Government and the Federation's representatives, on some of the pressing economic problems of the day, especially those relating to food production and prices. The Central Food Minister, Mr. Subramaniam, who inaugurated the conference, differed sharply with Mr. S. L. Kirloskar, vice-president of the Federation, about the basic causes of the current rise in food prices. While the latter attributed them to such factors as the rapid increase in population, rising incomes and standards of living, redistribution of income through fiscal devices and the high level of public expenditure, the former was of the view that the hoarding and manipulations of unscrupulous traders were entirely responsible for the crisis, "aided and abetted by substantial sums of unaccounted money." The Food Minister gave examples of countries where the State has already taken a firm control over the food distribution arrangement. In Japan, the Government is a monopoly trader in rice. In Australia, the Wheat Board handles the trade in wheat, while in the United States, the Commodity Credits Corporation plays an important rôle in stabilising market prices. Therefore, the Government of India is justified in stepping into the trade in order to ensure an adequate supply of food at reasonable prices. The Food Minister also declared that the newly created foodgrains trading corporation would have sufficient resources to give advances to cultivators to help increase their output and at the same time it will bind them to sell their produce to the Corporation only. Also, it would be invested with sufficient powers to acquire stocks from wholesale traders at declared prices.

Whatever may be the justification for the Government to take these measures, there is no denying the fact that the serious increase in food prices in recent months is basically due to a fundamental lack of balance between food supply and demand. Mr. Kirloskar was right in criticising economic planning for its failure to raise food production in the country in step with the growing demand. In spite of 13 years of planning, the country has made no worthwhile progress in agriculture; in fact, food production over the past few years has stagnated. Moreover, the Government's zonal distribution policies, by hampering the free movement of foodgrains, have aggravated the shortage, especially in deficit States. Mr Kirloskar criticised the administrative restrictions which prevent the free flow of foodgrains even within the zones themselves. Mr. Subramanian has already taken some steps to modify the system, but there are still many defects which stand in the way of greater mobility of supplies. As Mr. Kirloskar pointed out, without adequate supplies, it would be impossible to stabilise prices, and the supplies can increase only when there is greater production.

The present agricultural policy of the Government has not produced the desired result as priorities have been mixed up. The relative importance of alternative solutions has not been carefully weighed, with the result that disaproportionate attention is being given to matters having less immediate relevance to the basic problem. For example, land reforms, community development and *panchayati raj* may be socially necessary measures, but their contribution to increasing food production has not been very significant. On the other hand, such physical factors as irrigation, fertilisers, soil conservation and waterlogging are not being given the attention due to them. Mr. Kirloskar suggested that the Government should now concentrate on these latter to get quicker results. Return from these is directly measurable, and it is possible to plan farm production with a higher degree of accuracy on the basis of these factors. The Government is no doubt trying to expand the irrigation acreage, but there is reason to suspect that it is not being done on economic considerations alone. A significant question, which Mr. Kirloskar asked in this context, is whether the distribution of water has been done on the basis of maximising output. He wondered whether water supply had not been more thinly spread so as to include wider areas under irrigation.

Fertiliser consumption in the country is low too—about 3 lbs an acre, that is, about 1 percent of what Japan consumes. The production target of 1 million tons set under the third plan has no chance of being achieved. It might at best be 600,000 tons by the end of 1965-66. Considering that a ton of fertilisers produces nearly ten times as much of foodgrains, steps should be taken to increase the output of the farmer as fast as it can be done. A better balance in the crop pattern also needs to be secured. This will not be possible as long as the Government's policy is guided by short-term considerations only. Mr. Kirloskar suggested that a more comprehensive policy should be formulated to achieve a consistent pattern of cropping. Such a policy should be realistic and be based on the needs of agriculture; above all, it must provide enough incentive for the farmer to produce more. From this point of view, farming needs to be treated as an industry, not in the sense of being capital-intensive, but as Mr. Kirloskar emphasised, a form of enterprise which would be "ruled by the spirit of entrepreneurship and the motive to make the maximum gain from the available resources."

Housing under the Fourth Plan

In fixing the targets for various sectors under the fourth plan, the Planning Commission is paying some attention to housing. But the report of the working group it recently appointed to study the question in detail makes dismal reading. According to the expert body, there is little prospect of the acute housing shortage being removed during the fourth plan period even if the total outlay for housing, as recommended by the group, is ultimately accepted. By the end of the third plan, the country's requirement—taking into account the backlog of the second plan—is estimated at 8 million houses. But since the net addition during the period is not likely to exceed 1.5 million houses, the net shortage at the beginning of the fourth plan is estimated at 6.5 million houses. This suggests that the fourth plan housing target should be fixed still higher; but the gap between promise and performance being what it is under the third plan, the working group is obviously unwilling to fix an unrealistic target The additional fourth plan requirement of houses, the working group has estimated, is 12 million, against the target envisaged by it at 7,150,000 houses. Even on a conservative estimate, the country will, therefore, have a shortage of 10 million houses at the end of the fourth plan. This is undoubtedly a desperate situation, especially since food, clothing and housing constitute the bare necessities for living, le

lone decent living. But considering the various difficulties in fixing an ambitious target, the working group has recommended an investment of Rs. 700 crores for housing schemes under the fourth plan. Time alone can show whether it is realistic in assuming that the Life Insurance Corporation will contribute Rs. 150 crores and the provident funds Rs. 100 crores in fulfilling this target.

As it is, housing schemes have been retarded, not only by the shortage of money but also by the lack of materials. The country is facing an acute shortage of cement which has held up the progress of many essential projects in both private and public sectors. The shortage of building materials has led to high prices, although the planners have assured the prospective house-builders from time to time that the price of bricks would be reduced by more than 75 percent if mechanical brick plants are installed in various parts of the country. But little or nothing has been done to fulfil that promise. So the growing population of the country faces an acute housing shortage, which has encouraged rack renting, growth of slums and overcrowding and insanitary conditions in much of the urban areas. Unfortunately, the Government has failed to take adequate steps to prevent any of these developments. Nor has it taken any positive steps to promote housing co-operatives for middle-class people and to develop new areas to house the growing population. The shortage of building materials apart, the assistance from the L.I.C. and the provident funds is difficult to obtain, mainly because of the procedural formalities involved in getting the money in time.

In spite of the lip-service paid by the planners to rural housing from time to time, the progress in this sphere, to all intents and purposes, has been disappointing. The working group has calculated that of the 12 million houses required under the fourth plan, 4 million will be needed in the urban areas and 8 million in the villages. In addition, there is a large deficit from the previous plans to be made up in both urban and rural areas. The working group visualises that investment in the private sector is expected to rise to Rs. 1,870 crores in the fourth plan from Rs. 1,350 crores in the third. But it is not difficult to foresee that much of the investment planned in both private and public sectors under the fourth plan will be confined to urban areas, leaving little for the rural sector which has all along been the cinderella in official housing programmes.

I.F.C. to Relax Curbs on Loanee Firms

The chairman of Industrial Finance Corporation has assured the committee of the Indian Merchants Chamber during the course of his informal discussions in Bombay last week that the provision prohibiting the loanee concerns from declaring a dividend of more than 8 percent without the prior consent of the Corporation will be soon modified. He agreed with the president of the Chamber, Mr. Dhirajlal Maganlal, that looking to the needs of the capital market, the present limit was low. Mr. Baksi added that the provision was "a historical legacy and out of tune with reality." But he was quick to point out that while the Corporation was planning to relax this provision, it could not open the door wide for dividends. Referring to various other points raised at the meeting, Mr. Baksi said that it was not possible for the Corporation to reduce the rate of interest on its loans.

The Corporation borrowed at a rate of 5 percent, and it could not afford to charge less than 7½ percent if it were to stay in business. As for the suggestion that the Corporation should play a more dynamic rôle in the country's industrialisation by taking a more active interest in the underwriting of public issues and direct subscription to such issues—the total assistance by the Corporation on these two counts so far adds up to no more than Rs. 9.48 crores—the I.F.C. chairman pointed out that it was doing its bit. The Corporation could only afford a measure of help as it could not undertake the risk of locking up funds in underwriting business. It had after all to operate with borrowed funds. Moreover, there were other Government-sponsored institutions which were engaged in underwriting operations.

Further massive underwriting could affect the voting rights of promoters very considerably. In any case, there could be no substitute for a good entrepreneur and promoter. He urged that the companies should give greater importance to equity capital and not rely much on preference capital. Mr. Baksi dispelled apprehensions that the setting up of the Industrial Development Bank would in any way adversely affect the status and functions of the Industrial Finance Corporation. On the contrary, the Corporation's link with the Bank would open up interesting possibilities, and the interests of the industrial community would be served much better. Mr. Baksi appealed to the chamber to exert its influence in making the Corporation's Rs. 6-crore bond issue a success. (The list for this loan will open on 15th September.) He regretted that the Corporation could not make more foreign exchange loans available as its line of credit was restricted.

In his welcome speech, the president of the Indian Merchants Chamber had urged that the Corporation should exhibit a greater degree of initiative and drive so as to play a more dynamic rôle in the industrialisation of the country. He also pleaded for larger foreign exchange loans. Mr. Dhirajlal Maganlal had also expressed the view that the underwriting operations of the Corporation were inadequate, looking to the rate of industrial development and the need for capital formation. However, he did not hesitate to acknowledge the valuable assistance rendered by the Corporation which amounts to nearly Rs. 202 crores, and the net assistance after allowing for cancellations and withdrawals is of the order of Rs. 164 crores. It is significant to note that the total cost of the projects which have come to fruition as a result of the Corporation's assistance is of the order of Rs. 433 crores or roughly 30 percent of the total net investment in the organised industries in the private sector since the attainment of independence.

Difficulties of Fabricators

Speaking at the annual general meeting of the Structural Fabrication Section of the Indian Engineering Association in Calcutta on Friday, Mr. M. Dhar, chairman, said that the supply of steel had improved during the current year, although manufacturers were still concerned over quality. The immediate need, however, is to ensure that they are distributed to fabricators in balanced amounts and that deliveries are properly phased. Many structural fabricators, Mr. Dhar said, were now facing acute handling and production problems arising from the excess stocks of steel. These stocks have accumulated because of the shortage of matching sections without which the work of fabrication cannot proceed. Towards the end of last year, the Structural Fabrication Panel produced a report showing the extent to which the unmatched stocks had accumulated, resulting in an acute congestion in the yards of fabricators and locking up of working capital. As a result of the representations made by the Association, the Government has agreed to grant some financial relief in the form of larger "on account" payments against Government contracts. In spite of this, some "physical difficulties" remain, and the loss to the nation represented by these unmatched stocks of steel and construction delays in important projects must be extremely heavy.

As a result of unbalanced deliveries of steel, a critical situation has developed, since some major fabricators have stocks which are equivalent to 18 months' consumption. When it is considered that stockyards in the U.K. and other countries are usually designed to accommodate not more than six months' requirements of raw steel, it will be possible to realise the magnitude of the difficulties which Indian fabricators are now facing. There is an urgent need to work out a programme of phased deliveries by agreement between steel producers and their clients. Another problem concerning steel supply relates to quality. The Association has made several representations to the Central Steel Ministry and to producers, and it is to be hoped that the situation will soon improve. Meanwhile, structural fabrication work is being hampered by a number of serious defects in supplies of indigenous steel. Among these, Mr. Dhar referred to the presence of laminations, irregular composition since the carbon content does not come within the specified range, and variations in the general dimensions and profiles of steel sections outside the specified tolerances. Fabricators are also finding it difficult to obtain steel material of specific length to suit their individual requirements. Furthermore, standard lengths seem to be more difficult to obtain than previously. The result is that an undue proportion of steel supplies has to go as scrap; the percentage of waste has shown a marked increase in recent months. This inevitably adds to the cost of fabrication and to some extent offsets the gains achieved through the increased output of steel.

World Population Increasing

The world's population is increasing by almost 63 million a year—an increase larger than the combined population of France and Czechoslovakia. By mid-1962, there were about 3,135 million people, and this figure was growing at an average rate of 2.1 percent a year, the highest world population growth yet observed. The fastest growing region in the world is middle America—including the Caribbean—where, since 1958, the population grew at an annual rate of 2.9 percent. But the largest regional increase in absolute numbers was in east Asia, where there were 74 million more people in 1962 than in 1958. These figures are given in the U.N. *Demographic Yearbook 1963*, issued recently. Covering almost 250 geographic areas, the compilation deals with international statistics on area, population, birth, death, marriage and divorce. For the first time, the *Yearbook* also shows figures on the numbers of the various tribes in several newly independent African nations. In addition to ethnic composition, the present issue features data, according to censuses held between 1955 and 1963, on literacy, language, religion, and the age and sex composition of urban and rural population, country of birth, country of citizenship, level of education, school attendance, fertility and other statistics.

At least 20 percent of the inhabitants of the world now live in mainland China. Although the U.N. Statistical Office does not have a current official estimate of the size of the population in mainland China, semi-official estimates placed the number at 670 million to 680 million in 1958. Mid-1962 estimates of nine other countries with very large populations are: India, 449 million; Russia 221 million; United States, 187 million; Indonesia, 98 million; Pakistan, 97 million; Japan, 95 million; Brazil, 75 million; Federal Republic of Germany, 55 million; and United Kingdom, 53 million. Approximately two-thirds of the world's population live in these ten largest countries. Measured by area, the ten largest countries in descending order of size are Russia, Canada, China (mainland), United States, Brazil, Australia, India, Argentina, Sudan and Algeria.

GROWING SISAL-HEMP

THE cultivation of fibre plants in India has been agitating the planting and commercial communities for some years. Rhea, plantain and aloe have been planted and small consignments have been sent home, brokers' valuations obtained which, if favourable, have caused an extension to be made of the plantation, or, if unfavourable, the experiments have been dropped; or some fibre has been obtained from a wild source, it has been prepared and sent to the market and when the supply has become exhausted, another product is taken up as a possible source of profit. This erratic exploitation of produce in our experience has happened in many cases. Sisal-Hemp is one of the fibres which has been the subject of much experiment and of numerous enquiries which have left the matter of cultivation in a more or less indefinite state. We, therefore, welcome fresh from the City Press, Calcutta, a business like pamphlet on "Sisal-Hemp Culture in the Indian Tea Districts," by Mr. H. H. Mann, M.Sc., Scientific Officer of the Indian Tea Association, and Mr. James Hunter, Manager of the Dauracherra Fibre Estate. The editorial combination results in scientific observation accurately recorded, and conclusions of an experienced planter drawn up and summarised with a wide knowledge of the requirements and capabilities of the tea planting districts. The pamphlet is clearly written and is excellently illustrated with numerous figures of the plants and of fibre extracting machinery.

A Ditcher's Diary

SOME 15 YEARS AGO THERE WAS A MEETING OF THE All India Congress Committee; and, for the feature then called "Current Coin", I wrote a paragraph and headed it "The Lost Weekend". Comment on the last A.I.C.C. session in New Delhi could equally aptly be so described. Those to whom the Kamaraj Plan made sense last year have decided to stick to it; those to whom it did not make sense then, as to this scribe, it still seems a lot of hokum. Some of the supporters of the plan went out of office because, for their own reasons, they wanted to go out; the others sacrificed, like goats in Kalighat, are openly resentful. The A.I.C.C. also discussed, I find, the food problem; the debate's contribution to thinking on the subject could hardly have been smaller. Let me put it this way: the A.I.C.C. is now a useless body, more or less like the Calcutta Corporation. Decisions are taken by three or four people; and then they are only occasionally enforced. Even more useless and enormously wasteful are the annual sessions of the Congress Party. All these get-togethers are supposed to be in aid of democracy, while the truth is that democracy has nothing to do with them. Every decision is the child of conflicting pressures from groups on whom the least decisive pressure is the people's. The recent verdicts on Mr. Khadiwala in Madhya Pradesh and Mr. Ram Ratan Gupta in Uttar Pradesh have shown what goes on in the name of ascertaining public opinion on men and affairs. All this will, no doubt, appear very summary and drastic; but I do think that hypocrisy has gone on too long. Democracy is simply not working all right; it is definitely being manipulated at every level. This is why I am thoroughly unimpressed by the continuing extension of what is called *Panchayati Raj*; that too is being manipulated in most places. Maybe this morning I got up on the wrong side of the bed; but the Indian polity today fills me with no less gloom than the Indian economy does. Neither is getting better; and the Congress Party's responsibility is great. The A.I.C.C. showed no awareness of it.

NOTHING BREAKS THE HEART OF "SHOW BIZ" SO much as popular indifference; and my first reaction to reports of raids on film artistes' houses for black money was that they were, perhaps, part of the elaborate gimmick in aid of a film now showing in Calcutta. I understand that the legality of these much publicised searches may soon be questioned; it is certainly extraordinary how a maid-servant was reportedly given her Rs. 300 and how the grandmother of an actress was let off with what was said to be her locker. Nor does it seem wholly convincing that some artistes' houses were raided and others' were not because the Enforcement Directorate did not have adequate personnel. That the film industry handles a lot of unaccounted money is not doubted; but then so do many others and the Government knows it. If I were one of the persons affected, my defence would be, "Your Honour, all right, I have made a good deal of money. I am prepared also to concede, purely for argument's sake and no more, that I may not have paid income-tax on every rupee I earned. (Incidentally, sir, some of my income may not be taxable at all.) I may now be permitted to submit that I made my money by entertaining people and not by starving them which, I understand, is another widely adopted way of making money". I find that the raids have now ceased. Well, I strongly suspect that somebody is getting away with something; and the somebody may be the Government itself. Mr. Nanda's Sadachar Samiti has recently been under criticism by some Congressmen themselves, perhaps for reasons not very difficult to guess; but the people must wonder whether there is not in progress something that a contemporary recently called a "conspiracy of noise". Raids on film artistes were assured of the widest advertisement. Advertising over, what next—if anything? A conspiracy of silence? I rather suspect so. If a certain amount of black money has gone into films, no less has gone into the less entertaining business of politics; and, in spite of Mr. Krishnamachari's talk of icebergs and all that, I just cannot see what the Congress can do about it—short of a revolution. And revolution, ladies and gentlemen, is not on the agenda.

SOMEBODY IN THE MINISTRY OF EXTERNAL AFFAIRS in New Delhi seems to have learned a new word; and he cannot help using it in or out of context. The word is "preposterous", which I found in the Ministry's statements in Tuesday morning's papers on both Pakistan on India's atomic bomb and China on its military posts in Ladakh. Chesterton once said about something that he had not prejudices but post-judices. I will grant that, at the moment, I am not favourably disposed towards the External Affairs Ministry; the new Minister has not yet settled down and the officials, I suspect, are ruling the roost. These officials have a vested interest in the rigid positions they have taken *vis-à-vis* China and Pakistan; after all, they have burnt not a little midnight oil preparing elaborate memoranda on India's rights here, there and everywhere; these theses are their children. To introduce the slightest flexibility is, for them, professional suicide; letting oneself down. This is not peculiar to the Indian bureaucracy; I have not the slightest doubt that in Peking and Rawalpindi there are civil servants equally jealously sticking to their guns. If, therefore, Messrs Shastri, Ayub Khan and Chou En-lai are serious about breaking the deadlocks confronting them, they must, as politicians, find a way of circumventing their respective bureaucracies. We have all heard of the managerial revolution; what may have happened even more surely is a bureaucratic revolution in which real power has passed from the Minister to the Secretary. Ministers can be up to all sorts of mischief; they frequently are. But they are, in the final analysis, responsible to Parliament and/or Party. But officials? I cred Peking and Pindi with nothing but malevolence but if New Delhi wants to wear a differer "image", it has gone about it very inepti Although New Delhi is never chary of sending ou Ministers and officials to all parts of the worl on the slightest pretext, how come that nobod has yet brought home the news that in man countries some Indian attitudes and claims ar considered—yes, that's the word, "preposterous"

BY NOW EVERYBODY MUST KNOW THE JOKE ABOU the owner of a Rolls-Royce who asked the manu facturers what its engine power was and receive the answer: "adequate". It is the kind of stor which fits the Rolls-Royce image, and it loses n strength from the fact that it may well have bee true. It is a fact that although the Company ha usually shown few inhibitions about revealing th cubic capacity of its motor-car engines, it has no until now been willing to disclose their powe output. There could be an unkind explanation fo this: a comparison of power and capacity gives clue to efficiency and performance. But it is mor likely, Rolls being Rolls, that the aim has merel been to avoid vulgar comparisons with othe manufacturers in a field where, as any schoolbo can tell you, Rolls have always been supreme, supreme, and inevitably will remain supreme But a few sentences back I used the words "unti now". Yes, at last Rolls have relented. The nev Vanden Plas Princess R, the product of thre years' technical collaboration between Britis Motor Corporation and Rolls-Royce, embodies a all-aluminium, six-cylinder, four-litre Rolls-Royc engine which produces 175 b.h.p. at 4,800 r.p.m Thus, the secret is out; and whatever claims th famous Rolls-Royce engines may have, superio performance is obviously not one of them. Th smaller capacity 3.4 litre engine which powers th Jaguar Mark 11 produces in excess of 210 b.h.p But no doubt Rolls-Royce can offer compensatin advantages, of which consistency, reliability smoothness, silence and longevity are in the bes traditions of the breed. This is the first time tha Rolls have descended into the popular price range too. The Princess R sells for under £2,000, a use ful level so far as taxation is concerned, compare with the standard Rolls-Royce saloon at anything from about £7,000. It is obviously designed for among other things, competition with the Mer cedes-Benz. Hitherto, perhaps, the British ca ranking closest to the Mercedes has been th

A SAVING ON EACH TROLLEY LOAD

WITH

DUNLOP

CUSHION TYRES

In factories, railyards or docks, wherever trolleys are used, Dunlop cushion tyre equipment will smooth the way for your loads. These tyres are specially designed to reduce vibration so as to give greater protection to your products. They reduce tractive effort and so permit speedier work. They are silent and help to eliminate costly repairs in the maintenance of flooring and pathways.

THE DUNLOP RUBBER CO. (INDIA) LTD.

DBTC-1A

Rover, though lacking, of course, the dazzling performance guaranteed by the famous German name. I predict the Princess R will enjoy a good reception among those status seekers who can neither afford a Rolls-Royce or Bentley, nor find accommodation for one if they could. What distresses me is that we are unlikely to see much of the new model over here. *Capital* has always prided itself on its association with Rolls-Royce motor-cars. We were privileged to be the last newspaper in India to carry their advertisements.

NOWADAYS, IF YOU ARE LOOKING FOR CRITICISM OF socialist economics, the place to turn to is the Soviet Union. When Mr. Khrushchev told President Eisenhower, as he then was, that the United States taxed its business men too heavily, I thought I had just about heard everything. But now we have a leading Russian economist, Academician V. Trapeznikov, urging in a recent issue of *Pravda* that the customary "norms" be dropped as the basis for judging performance in Soviet industry, and that substituted for it should be—well guess: yes, you have it, "profits". Of course, they are not the nasty kind of profits which are wrung from the oppressed workers in private monopolistically-controlled capitalist industry. These are communist profits, which might seem to be the same thing to the uninitiated, being, presumably, wrung from the oppressed workers in public monopolistically-controlled industry, but are really quite different. So, too, with the interest that Academician Trapeznikov suggests should be charged on Soviet industrial capital; again that must in no way be confused with the sort of thing which is paid by blood-sucking capitalist industry. Those, like myself who have never been able to follow communist jargon through its tortuous hair-splitting, will no doubt arrive at the wholly erroneous conclusion that profit is profit under whatever system it accrues. They might even go further and decide that the wheel has just about turned full circle, and that whatever differences now exist between communism as practised in Russia, and capitalism as operated elsewhere, are more apparent than real and certainly not worth arguing or fighting over.

AFTER PLAYS FROM TENNESEE WILLIAMS AND Shakespeare earlier this year, the Amateurs staged Christopher Fry's *A Phœnix Too Frequent* and Jean Anouilh's *Antigone* at the Hindi High School auditorium last week. Both were produced by Kamal Bhagat, and presented in each half of the show. Fry emphasises that the human desire (of women, in the play) to live is a much stronger force than the wish to die. And in his hands as a great master of wit and satire, the theme becomes not only convincing but highly enjoyable. Dynamene (Devika Singh), widow of Verilius, is preparing to die at the tomb of her dead husband; Doto, her loyal though slightly mischievious maid (Pam Gustavus-Jones), keeps company. At such a time, Tegeus, a soldier (Rajen Brijnath), accidentally stumbles into the place, and as it happens, Dynamene falls in love with him. After a little mental conflict as to the choice, she finally prefers life to death, that is, prefers Tegeus to death in the burial ground. Devika Singh made a good Dynamene indeed, while Pam Gustavus-Jones and Brijnath gave her excellent support. The Sophoclean tragedy, of which Anouilh's *Antigone* is only a modern version, was more serious stuff. Here, no such problem of life and death, but of death alone, because Antigone (Junie Bose) is convinced that she must die for the sake of burying her dead brother's body even though her uncle, king Creon (Vimal Bhagat) has forbidden it, the penalty for violation being death. The ruthless king argues and argues with her to give up the resolution, alternatively philosophising and chastising, but to no purpose. Such a dramatic situation demands a high standard of skill, and both Vimal Bhagat and Junie Bose were equal to the exacting requirements of their respective rôles, although the Anouilh dialogue, no doubt, helped them. *Antigone*, I must say, was a memorable performance by the Amateurs, and I would love to see more of such performances.

THE DITCHER

Guide for Investors

COPPER SHARES ENJOY GOOD INVESTMENT SUPPORT

(BY A SPECIAL CORRESPONDENT)

THE shares of Indian Copper Corporation Ltd have enjoyed good support due to several favourable developments. The growth prospects for the shares are being rated high because the electrolytic plant of the Company is expected to begin operations in the near future. This apart, the Company has received a licence from the Government to increase copper output substantially. The improvement in the price of the shares is also due to the general upward movement in all clearing scrip. For the time being, operators are entertaining bullish ideas because the Government may soon take measures to stimulate activity in the capital market.

The main reason for the rise in copper shares is the steep increase in the international price of the metal. It is being quoted around £376 a ton on the London Metal Exchange, which is more than £100 above the price at which various producers have agreed to sell copper since the beginning of 1964. After fixing the price at the beginning of 1964, manufacturers raised it only once by £8 a ton in spite of the rising trend in the price quoted on the London Metal Exchange. The disparity between the producers' price and that of the Exchange is due to the fact that consumption requirements have been much more than the supplies made available by manufacturers. In fact, supplies have tended to decline while the demand has steadily risen.

Since there was a cutback in output during the lean years, supplies have proved inadequate. Meantime, production has been hampered by labour troubles in the U.S.A. and Chile. Apart from political disturbances in northern Rhodesia, the two principal manufacturers there have been unable to meet their contractual liabilities due to a railway strike. Although manufacturers have been eager to hold the price of copper down to discourage substitution, particularly by aluminium, the agreement to maintain the price has now been violated. Anaconda, the U.S. producer, has alread raised its price by £16 to £260 a ton. The Company's decision to raise the price can be traced back to pressure from the Chilean Government for better returns.

Although commentators are predicting a copper surplus which will be as far-reaching in its depressing effects as the current shortage, it looks as if the squeeze will continue in the short-term. Since aluminium prices have risen and substitution is a costly process, the demand for copper is expected to remain buoyant. Meantime, there is no prospect that disturbances will end in the copper-producing regions. So the possibility of marketing the metal at lower prices and in sufficient quantities is remote. Copper will, therefore, remain a costly metal for some months to come. But the investors in Indian Copper Corporation shares will do well to take a sober view about the rising international price because the domestic price does not necessarily improve in line with the international one. Although the Company is at present the only worthwhile producer of copper, it regulates the price heavily. The international price, however, indicates that during the rest of 1964, the price of copper realised by the Company will be fully steady. An important factor contributing to its profitability is the production of brass sheets. The outlook for the latter should be assessed carefully because zinc for manufacturing them has been rendered costlier, since the bulk of it has to be procured from the U.S.A. This apart, the supply is not adequate due to the foreign exchange shortage.

Birla Jute Debenture Issue

THE Birla Jute Manufacturing Co. Ltd is offering 20,000 registered debentures of Rs. 1,000 each carrying interest of 7 percent. (The details of the issue have been printed on a later page in this week's issue of *Capital*). The debentures will be redeemed during 1975-77 and are secured by a Trust deed. The lists open next Wednesday. All aplications are to be made along with the full money for the debentures applied for. The issued capital of the Company amounts to Rs. 2.85 crores, divided into ordinary shares for Rs. 1.60 crores, and the rest consists of preference shares.

The Company has diversified activities. It began with the production of jute goods: it commenced the production of staple fibre yarn in 1957, calcium carbide in 1954 and cement in 1959. The oxygen and dissolved acetylene gas plants were put into commission in August 1964. It has taken steps to set up a second cement plant in Rajasthan. The jute mills, the calcium carbide factory, the staple fibre spinning plant and the oxygen and dissolved acetylene gas plants are situated in Birlapur, near Calcutta. The cement plant is situated in Satna, Madhya Pradesh. The proposed second cement plant will be built in Chittorgarh, Rajasthan. The construction of the plants has begun, and it should commence production by March 1966. The debentures are expected to prove attractive, considering that they are fully secured by the assets of the Company and the interest liability on account of the debentures is adequately covered by the earnings of Birla Jute. The Company has had a very good performance over many years and satisfactory dividends have been paid. The ordinary shares of the Company have recently been very active in the stock market due to influential support. After rising sharply, they have reacted due to profit-taking.

More from National Insulated Cable

THE profit of the National Insulated Cable Co. of India Ltd has improved from Rs. 61.15 lakhs for 1962-63 to Rs. 1 crore for the year ended March 1964, after increasing depreciation from Rs. 8.82 lakhs to Rs. 10.24 lakhs and providing Rs. 36,900 (against Rs. 1.75 lakhs) for development rebate reserve. The increased profit has been due to several factors. Firstly, the Company had large stocks of raw materials which were brought earlier at lower prices. Secondly, production has been concentrated on more remunerative types of output to ensure a better margin of profit. Thirdly, sales rose from Rs. 4.01 crores to Rs. 4.50 crores. The taxable ordinary dividend has been increased from 18 percent to 20 percent, which works out to a yield of 7.5 percent at the present price of Rs. 26.69 a share of Rs. 10 each. Taxation absorbs Rs. 61.25 lakhs (against Rs. 38.90 lakhs), taxation for the previous year Rs. 1.67 lakhs (against Rs. 57,359), general reserve Rs. 6 lakhs, dividend equalisation reserve Rs. 2 lakhs and bad and doubtful debts reserve Rs. 2 lakhs. The carry-forward is Rs. 40,361, against Rs. 21,708 brought in.

A new aluminium fine wire drawing machine imported from the U.K. has been installed. Additional domestic equipment has also been installed. This has helped to increase the output. The supply of electric power has improved. The directors, however, take a cautious view of the outlook for the current year in view of the increase in raw material prices. They think that it may be difficult to maintain the high profit ratio. Competition has increased since many new cable-manufacturing units have been set up.

Hindustan Motors Maintains

IN their report for the year ended March 1964, the directors of Hindustan Motors Ltd say that the demand for passenger motor-cars has increased considerably. At the present rate of production, the delivery of cars booked now will take three years. There is little possibility of increased production until the supplies of indigenous and imported components and raw materials improve. It is necessary to allocate more foreign exchange to motor-car manufacturers and ancillary industries. The sale of lorries is keeping pace with production. The Company has made good progress in increasing the indigenous content of its cars and lorries. With the installation of more machinery, the Company is likely to reach the target of 90 percent in indigenous components. The installation of all machinery should be completed by the end of 1964.

But the directors regret that it has not been possible to maintain the supply of spare parts to customers due to the foreign exchange shortage. The Company is expecting a loan of $23 million from the U.S. Agency for International Development to import equipment from increasing its lorry production capacity to 15,000 a year. Negotiations are proceeding for further loans from the general currency area. The heavy engineering division has made satisfactory progress. It has produced cranes, excavators, bulldozers, dumpers, etcetera. Orders for cranes have been booked for more than one-and-a-half years. A.I.D. has sanctioned a loan of $2.95 million to import equipment for the manufacture of shovels. The Company has applied to the Government for sanctioning foreign exchange to import equipment for the production of cranes and for the expansion of the steel structural shop of the heavy engineering division. It is proposed to install a steel foundry shop to make the Company self-sufficient in steel castings The construction of the shop has begun. It is also proposed to manufacture machine tools with foreign collaboration.

Sales rose from Rs. 29.29 crores for 1962-63 to Rs. 32.56 crores for 1963-64. But the margin of profit has tended to drop due to rising production costs. The net profit has declined from Rs. 3.40 crores to Rs. 2.62 crores after increasing depreciation from Rs. 71.50 lakhs to Rs 1.06 crores and development rebate reserve from Rs. 9.75 lakhs to Rs. 30 lakhs. A taxable ordinary dividend of 11½ percent has been maintained, which works out to a yield of 6.3 percent at the present price of Rs. 18.28 a share of Rs. 10 each. Taxation absorbs Rs. 1.43 crores (against Rs. 2.23 crores), general reserve Rs. 25 lakhs (the same) and dividend reserve Rs. 93.09 lakhs (against Rs. 93.13 lakhs). The proposed dividends will be paid out of the latter reserve. The carry-forward is Rs. 13,299, against Rs. 3,043 brought in.

The directors say that the working has been interrupted by non-availability of necessary licences for raw materials and components in time. The cost of production has steadily risen due to the increase in the prices of raw materials, indigenous components and wages.

Rights from Bally Jute

IN their latest report for the year ended March 1964, the directors of Bally Jute Co. Ltd say that the Company has installed 50 broad looms to produce carpet-backing cloth. It is proposed to increase these looms to 75 during 1964-65, provided market conditions remain favourable. The directors think that the paid-up capital of the Company is small in relation to the assets, so it is proposed to offer further ordinary shares for Rs. 20 lakhs as rights shares to the existing shareholders at par in the ratio of one new share for each share held. They are also considering further diversifying the activities of the Company. The existing ordinary share capital amounts to Rs. 20 lakhs, dividend into ordinary shares of Rs. 100 each.

The trading profit has dropped from Rs. 38.19 lakhs for 1962-63 to Rs. 26.28 lakhs for 1963-64. Depreciation is allocated Rs. 10.48 lakhs (against Rs. 6.39 lakhs), taxation Rs. 4 lakhs (against Rs. 19.70 lakhs) and development rebate reserve Rs. 6.95 lakhs (against Rs. 80,409). The taxation ordinary dividend has been reduced from 25 percent to 20 percent, which works out to a yield of 8.3 percent at the present price of Rs. 241. The carry-forward is Rs. 24,424, against Rs. 39,338 brought in. The decline in the profit has largely been due to the drop in prices of jute goods while the price of fibre has been maintained at a high level. The accumulation of jute goods following sluggish buying by overseas countries has also contributed to the reduced profit.

Anil Hardboards Repeats

THE preliminary report on the working of Anil Hardboards Ltd for the year ended March 1964, shows a fair improvement over the preceding year's performance. Sales are up by about 10.7 percent from Rs. 89.82 lakhs to Rs. 99.42 lakhs, and the gross profit has gone up by nearly 10.5 percent from Rs. 27.54 lakhs to Rs. 30.44 lakhs. The dividend has been maintained at 9 percent, but whereas the whole of the dividend paid in 1962-63 was free of tax, having been paid out of the Section 84 profit reserve, the dividend for 1963-64 is exempt from tax only to the extent of 5 percent.

Thus the net dividend works out to 8.2 percent, compared with 9 percent in the previous year. Appropriations of the year's profits include depreciation Rs. 16.66 lakhs (against Rs. 16.10 lakhs), development rebate reserve Rs. 4.12 lakhs (against Rs. 4.03 lakhs), taxation Rs. 3.10 lakhs (against Rs. 49,000), general reserve Rs. 2.65 lakhs (against Rs. 49,303) and Section 84 profit reserve Rs. 2.38 lakhs (against Rs. 5.32 lakhs). A sum of Rs. 17,672 has been provided for writing off preliminary expenses. Preference dividend absorbing Rs. 99,300 and equity dividend amounting to Rs. 4.31 lakhs are to be paid out of the general reserve and Section 84 profit reserve.

The directors point out that the Company received substantial orders from the Defence Department, the Indian Railways and the All India Radio. It also secured large orders for exports, a substantial quantity of which was despatched to the Middle East. The Company's hardboard factory worked practically to full capacity and the insulation board mills also worked satisfactorily except during the period June to October, when production was affected by the shortage of bagasse, the stocks of which were burnt down by fire. The Company's acoustic tiles and the printed boards have been well received and the directors expect an all-round further improvement in sales during the current year. The second plant for the hardboard mill is likely to go into production shortly.

The Company has received an industrial licence for the manufacture of mineral wool (12,000 tonnes a year) and mineral wool boards and acoustic tiles. Collaboration agreements with Conversion Development Corporation, U.S.A., and Baldwin-Ehret-Hill of the U.S.A. for the manufacture of fire-proof mineral fibre boards and granulated mineral wool, respectively, have been approved by the Government of India and the necessary import licences are expected shortly. Production of these boards and tiles is expected to start early next year.

New Standard Engineering Silver Jubilee

NEW Standard Engineering Co. Ltd is celebrating its silver jubilee this year. It has done well for 1963-64. Sales rose from Rs. 1.83 crores in 1962-63 to Rs. 2.40 crores for 1963-64, but the rise in profit has been restrained by rising production costs. The gross profit has amounted to Rs. 26.87 lakhs, against Rs. 22.88 lakhs. A taxable ordinary dividend of 9 percent has been maintained, and a silver jubilee bonus of 1 percent on ordinary shares has been recommended. Fixed asets rose by Rs. 15.88 lakhs, against in increase of Rs. 46.08 lakhs in the previous year. In his chairman address at the recent annual general meeting of the Company in Bombay, Mr. R. C. Saraiya said that the slow development is attributable to a deliberate policy of phased expansion and delay in the issue of import licences for the foundry. The problem of finding funds for development is also a restraining factor. (A fuller version of the speech was printed in last week's *Capital*.) Since the Company is a well-established unit in the engineering industry, it is capable of further development, provided necessary funds are available. In fact, it has been receiving many proposals for foreign collaboration. Commenting on the sluggish capital market, the chairman thinks that the investment climate should be improved by modifying the fiscal system to encourage the growth of savings and investment.

Poysha Industrial Expanding

PRESIDING at the recent annual general meeting of Poysha Industrial Co. Ltd, Mr. M. R. Ruia chairman, referred to the improvement in production during 1963-64. (A fuller version of the speech is published on a later page in this issue of *Capital*.) The output of containers rose by more than 18 percent. After providing Rs. 8.58 lakhs (against Rs. 2.95 lakhs) for taxation, the profit has risen from Rs. 2.11 lakhs for 1962-63 to Rs. 4.26 lakhs. Staff reorganisation has begun to yield good results. So the working during the current year is expected to be more satisfactory.

The expansion programme is making satisfactory progress. The new factory near Thana, Maharashtra State, is likely to be completed before the end of 1965. The Cochin factory will be constructed in Mamala, near Ernakulam. It will be situated near the new oil refinery. The site for the factory at Ghaziabad is being selected. Kaira Cane Company, an associate, has selected land, near Anand, to build a factory. A modern automatic printing plant for the Bombay factory has been imported. The Government of India has sanctioned a second automatic body-maker line for the Bombay factory. When these expansion schemes are completed, the Company will be an important producer of cane in this country. It has also produced various types of cylinders for the defence department.

Commenting on the supply of tinplate, the chairman pointed to the need to make it more regular. It is proposed to increase the capital from Rs. 25 lakhs to Rs. 1.10 crores. Since negotiations with financing institutions are progressing well, the Company will obtain the necessary funds for modernisation and expansion. The subsidiary Company, Colrige, has done well and a fair profit has been earned in 1963-64. Commenting on the cane-manufacturing industry, Mr. Ruia said that tinplate is facing rising competition from materials like aluminium, paper and plasties. So foreign countries have started manufacturing thin tinplate to meet the competition. They are also producing tinplate foil. Although it is proposed to manufacture electrolytic tinplate in Rourkela, is time that attention was given to producing thin tinplate and tinplate foil in this country. If these new products are manufactured, tin cans will be produced at smaller costs and the industry will succeed in meeting the competition from substitutes.

Sutlej Cotton Mills Repeats

SUTLEJ Cotton Mills Ltd has maintained the taxable ordinary dividend at 85.7 percent for the year ended March 1964. At the present price of Rs. 92.50 a share of Rs. 10 each, the yield amounts to about 10 percent. The gross profit has risen from Rs. 25.79 lakhs for 1962-63 to Rs. 34.16 lakhs. Depreciation is allocated Rs. 18.58 lakhs (against Rs. 8.65 lakhs), taxation in Pakistan Rs. 7 lakhs (against nil), doubtful debts Rs. 50,000 (against nil) and development rebate reserve Rs. 12 lakhs (against Rs. 6.54 lakhs). After bringing in Rs. 22,663 and Rs. 17 lakhs written back from taxation provision, the directors have appropriated Rs. 12.85 lakhs to pay the dividends A credit balance of Rs. 45,213 has been carried forward.

Attock Oil Profit Falls

THE Attock Oil Co. Ltd has earned a gross profit of £1.7 million for the year ended December 1963, against a profit of £1.8 million for 1962. Depreciation is allocated £263,127 (against £278,549) and taxation £825,485 (aganst £907,991). General reserve absorbs £125,000 (against £175,000). An interim dividend of 1s a £1 of stock was paid earlier. The final dividend of 1s 8d has been declared which will be paid on 1st September, 1964. Crude oil production rose from 2.30 million barrels to 2.37 million barrels. Pakistan Oil Fields Ltd, a subsidiary Company, produced 307,552 million barrels, against 182,166 million barrels.

The refinery has worked satisfactorily and continues to process all crude oil produced by the Pakistan Oil Fields Ltd and Pakistan Petroleum Ltd, in addition to the production from wells belonging to the parent Company. The gas pipelines have been sold to Sui Northern Gas Pipe Lines Ltd for Rs. 45 lakhs and the transaction will be dealt with in the 1964 account. It has been pointed out that the Government of Pakistan has again increased the development surcharge payable on the sale of various products reflecting a deduction in the cost of landed imported supplies. This will depress further the sales revenue of the Company. Representations have been made to the Government of Pakistan for relief in the matter of royalty payment.

Debentures from Dishergarh Power Supply

DISHERGARH Power Supply Co. Ltd has earned a profit of Rs. 20.80 lakhs for the year ended March 1964, compared with one of Rs. 14.13 lakhs for 1962-63, after increasing depreciation from Rs. 2.93 lakhs to Rs. 3.13 lakhs. A taxable ordinary dividend of 10 percent has been maintained. The yield amounts to 11.6 percent at the present price of Rs. 86 a share of Rs. 100 each. Taxation is allocated Rs. 12.92 lakhs (against Rs 5.78 lakhs), contingency reserve Rs. 60,128 (against Rs. 26,999), tariffs and dividend control reserve Rs. 24,200, consumers rebate Rs. 24,200, development reserve Rs. 77,211 (against Rs. 15,491) and general reserve Rs. 6 lakhs (against Rs. 7.25 lakhs). The carry-forward is Rs. 45,007, against Rs. 46,905 brought in.

The Company sold 157 million units, compared with 150 million units in the previous year. There was a general improvement in supplies of power from the Damodar Valley Corporation and supplies were also raised from the Rihand project. But the offtake from consumers other than collieries was restricted by Government orders. The installation of the new 5-megawatt turbo-alternator set and the 40,000-lb-hour boiler is progressing. But it is not expected that the turbo-alternator will come on load until October 1964 and the boiler until early 1965 due to the delay in the shipment of some parts. The commencement of supplies from the West Bengal State Electricity Board has been delayed and is unlikely to begin until early 1965. It has been decided to issue 7 percent debentures for Rs. 30 lakhs to finance the expansion programme. The issue is likely to be made during the next few months.

Central India Coal-fields Pays More

CENTRAL India Coal-fields Ltd has increased the taxable ordinary dividend from 9 percent to 10 percent for the year ended March 1964. The yield amounts to 10.7 percent at the present price of Rs. 9.37 a share of Rs. 10 each. The profit has risen from Rs. 3.15 lakhs for 1962-63 to Rs. 6.70 lakhs for 1963-64, after providing Rs. 3.46 lakhs (against Rs. 3.11 lakhs) for depreciation and Rs. 3 lakhs for taxation. The sum of Rs. 3.40 lakhs was transferred to taxation reserve in 1962-63. Development rebate reserve is allocated Rs. 2.12 lakhs (against Rs. 2.25 lakhs) and taxation for the previous year Rs. 65,000. The carry-forward is Rs. 20,778, against Rs. 11,486 brought in.

Raisings dropped slightly to 339,540 tonnes. Production from the Pure Chirimiri Colliery stopped due to its closure. The Orient colliery was declared as a gassy mine, so production was restricted. The accumulation of stocks at pitheads also hindered production. The directors have taken steps to replace the loss in output by raisings from other sources. Despatches amounted to 316,245 tonnes.

Premier Tyres Fares Better

THE fourth annual report of Premier Tyres Ltd, which covers a period of 15 months—January 1963 to March 1964—shows a considerable improvement over the previous year's performance though the working results leave much to be desired. The results for the two periods are not strictly comparable as the accounting period has been changed from December to March. The turnover has risen from Rs. 25.69 lakhs to Rs. 3.82 crores as the 15-month period represents the first full period of commercial production. With excise duty taking away Rs. 127.88 lakhs and raw materials accounting for another Rs. 1.86 crores, the Company's working results for 1963-64 show a gross profit of no more than Rs. 21.63 lakhs.

The ratio of gross profit to sales works out to merely 5.6 percent. In the previous year, however, the Company had suffered a loss of Rs. 15.70 lahks. After providing Rs. 20.25 lakhs (against Rs. 19.18 lakhs) for depreciation, the results for 1963-64 show a profit of Rs. 88,488, against a loss of Rs. 35.29 lakhs in the previous year. Adjusting this small surplus against the loss of Rs. 58.28 lakhs brought forward from the previous period, there remains a debit balance of Rs. 57.40 lakhs to be carried forward.

No provision has been made for development rebate during 1963-64. Apart from the huge outstanding loss, preference dividend is in arrears to the tune of Rs. 13.38 lakhs. The shareholders of Premier Tyres will, therefore, have to wait for quite some time before their investment begins to bear fruit. The current year's working, however, is reported to be considerably better than in 1963-64. The directors look forward to larger sales and higher profit in future. The Company is now working on two shifts at about 70 percent of the rated capacity. The factory's daily turnover is placed around 600 tyres as against the rated capacity of 800 tyres. Full capacity is expected to be reached within a few months. The Company is trying to explore the possibilities of selling its tyres abroad and a fairly good start is reported to have been made. It has been able to market its tyres in South-East Asian countries and some Middle-East countries. The Rs. 100-paid share of Premier Tyres is currently quoted around Rs. 80.

Midland Rubber Produce Maintains

THE directors of the Midland Rubber and Produce Co. Ltd have recommended a dividend of 10 percent (the same) on equity shares for the year ended March 1964. A substantial increase in the tea crop, lower cost of production and higher tea prices provide the encouraging features of the year's working. The profit for the year amounts to Rs. 9,94,509, after providing Rs. 1,03,675 for depreciation and Rs. 72,479 for managing agents' remuneration. The profit for the previous year amounted to Rs. 2,98,044, after providing Rs. 90,335 for depreciation and Rs. 50,000 for the managing agents' remuneration. With Rs. 1,229 brought forward from the previous year, the total available for appropriation comes to Rs. 9,95,738. Out of this, the directors have provided Rs. 4,50,000 (against Rs. 90,000) for taxation. A sum of Rs. 16,000 (against Rs. 2,000) is transferred to development rebate reserve. And Rs. 11,182 (against nil) is transferred to reserve for bad and doubtful debts. The preference dividend at 6 percent, tax-free (gross 6.4 percent), amounts to Rs. 1,10,080. The equity dividend at 10 percent amounts to Rs. 4,05,000. The balance of Rs. 3,475 is carried forward.

The total tea crop for the year amounted to 816,800 kilograms (against 673,700 kilograms). The yield an acre has risen considerably to 653 kilograms, against 539 kilograms. The cost of production a kilogram amounted to Rs. 3.21, against Rs. 3.87. The average sale price of tea amounted to Rs. 4.52 a kilogram, against Rs. 4.33 a kilogram. The rubber crop amounted to 443,648 kilograms (against 412,536 kilograms). During the year, the Company has been able to secure 101,800 kilograms over the estimate. Rubber production has been satisfactory because of the implementation of the replantation programme. The estimated tea crop for 1964-65 is placed at 800,000 kilograms at Rs. 2.90 a kilogram. The rubber crop is estimated at 420,000 kilograms for 1964-65. The directors say that the south-west monsoon has not been favourable, resulting in a loss of crop during the first quarter of the current year. It is, however, hoped that this will not seriously affect the overall production.

Manabarrie Tea Profit Falls

MANABARRIE Tea Co. Ltd (a Dooars garden) has earned a profit of Rs. 13,736 for the year ended December 1963, against Rs. 88,005 for 1962, after providing Rs. 70,860 (against Rs. 53,373) for depreciation. Development rebate reserve is allocated Rs. 7,525 (against Rs. 15,456). A taxable ordinary dividend of 10 percent has been maintained, which works out to a yield of 1.7 percent at the present price of Rs. 59.50 a share of Rs. 10 each. The carry-forward is Rs. 18,776, against Rs. 8,108 brought in. The crop dropped from 253,887 kilograms to 246,001 kilograms. The Company's Assam unit produced 87,666 kilograms of green leaf teas. The new plantation programme has made progress, and 87.82 hectares have been completed. The crop for 1964 has been estimated at 250,000 kilograms.

Burma Mines Passes Dividend

BURMA Mines Ltd has earned a profit of £10,242 for the year ended December 1963, against £12,559 for 1962. Taxation absorbs £4,062 (against £4,150), leaving a balance of £180,384 to be carried forward. Since there was again no dividend on the holding in Burma Corporation (1951) Ltd, which constitutes the Company's main investment, the directors have passed the dividend. During the 15 months ended September 1963, Burma Corporation (1951) Ltd earned a net profit of £204,671. So the debit balance was reduced to £146,348. The estimated results for the six months ended March 1964, confirm that the profitable operations are continuing. In view of the prevailing levels of metal prices, it is reasonable to assume that when the Corporation's present financial year ends on 30th September, 1964, a substantial operating profit will have been earned. But any operating profit will be almost entirely mopped up by the current penal scale of Burma taxation which rises rapidly to more than 99 percent. "In view of this, the very remarkable improvement in the fortunes of the Corporation will solely benefit only one of the joint partners, namely, the Burma Government." the directors have pointed out in their report.

Cuttack Electric Supply to be Wound up

THE Cuttack Electric Supply Co. Ltd will soon be wound up voluntarily, and an extraordinary general meeting of the Company has been called to pass the necessary resolution for the purpose. The valuation of the assets taken over by the Orissa State Electricity Board amounts to Rs. 29.01 lakhs. Out of this, Rs. 3.10 lakhs will go towards meeting certain liabilities of the Government of Orissa and Rs. 3.10 lakhs will be adjusted towards security deposits of consumers. Out of a balance of Rs. 23.79 lakhs, the Company has received Rs. 16.71 lakhs for the year ended March 1964 and Rs. 4.46 lakhs in June 1964. There is a balance of Rs. 2.62 lakhs due from the Orissa State Electricity Board. The sum of Rs. 1.44 lakhs has been withheld on account of the demand made on the Board by the income tax authorities and Rs. 1.18 lakhs have been withheld on account of the demand made by the Cuttack Electricity undertaking's employees for gratuity bonus, leave bonus, etcetera. Since the income tax authorities have withdrawn their demand, the sum of Rs. 1.44 lakhs should be refunded by the Electricity Board. As for Rs. 1.8 lakhs, the Company has accepted liability up to Rs. 35,792 and has claimed the refund of Rs. 82,208. The Company has received only Rs. 2.28 lakhs from the Orissa State Electricity Board on account of the outstanding book debts, but the total book debts unpaid amount to Rs. 1.06 lakhs. The Company has received an on account payment of Rs. 2 lakhs towards interest on the compensation money of Rs. 2.14 lakhs.

There is a total income of Rs. 2.35 lakhs for the year ended March 1964. After meeting all expenses, the profit has amounted to Rs. 1.71 lakhs. After adding Rs. 3.47 lakhs, the receipt from the profit on the sale of the undertaking and Rs. 23,415 for the sale of electricity and providing Rs. 1.06 lakhs for doubtful debts reserve, there is a balance of Rs. 2.64 lakhs. A sum of Rs. 3.41 lakhs has been transferred from general reserve. After bringing in a loss of Rs. 70,178 and providing Rs. 6.37 lakhs for taxation, there is a balance of Rs. 66,004. The directors have declared a taxable ordinary dividend of 10 percent.

Mahalaxmi Mills Makes Profit

THE Mahalaxmi Mills Ltd (Bhavnagar) reports encouraging results for the year ended March 1964. Sales have improved from Rs. 1.56 crores to Rs. 1.83 crores, and the Company has made a profit of Rs. 6.22 lakhs whereas in the previous year, it had incurred a huge loss of Rs. 23.54 lakhs. After providing Rs. 5.21 lakhs (against nil) for depreciation and Rs. 6,266 (against Rs. 17,270) for donation, the year's working shows a net profit of Rs. 59,416, against a net loss of Rs. 24.07 lakhs. The past losses stand at Rs. 24.16 lakhs at the end of March 1964. No dividend is being paid for preference shares.

Bombay Oxygen-Permanent Magnets Link-up

AN extraordinary general meeting of the shareholders of Bombay Oxygen Corporation Ltd has been convened on 28th September to approve the management's proposal for taking over the sole selling agency of Permanent Magnets Ltd by making an investment of Rs. 15 lakhs. Bombay Oxygen would buy 5,000 shares of Permanent Magnets at Rs. 300 a share, as against the prevailing market rate of Rs. 100 from the present sole selling agency firm, namely, Shamun (Private) Ltd belonging to the Ruia House. Mr. Madanmohan R. Ruia, chairman of Bombay Oxygen, who is also the chairman of Permanent Magnets, told newsmen on 27th August that the proposed investment of Rs. 15 lakhs would give a return ranging from 10 percent to 24 percent in the course of next four years.

It might be mentioned here that Shamun (Private) Ltd which is controlled by Mr. Madanmohan R. Ruia, had purchased, some four months ago, 5,225 shares of Permanent Magnets at Rs. 300 a share as against the then prevailing market price of about Rs. 150 a share. These shares had been purchased from Mr. Kantilal M. Desai, the founder of the Company. Mr. Ruia stated that Permanent Magnets was now doing reasonably well. Its sales during the first eight months of the current year are placed at Rs. 14 lakhs, compared with Rs. 6.51 lakhs in 1963. The turnover is expected to rise to Rs. 31.50 lakhs in 1965, Rs. 42 lakhs in 1966, Rs. 52.50 lakhs in 1967 and Rs. 63 lakhs in 1968. The Company is expected to pay a maiden dividend of about 6 percent in 1966. After allowing for an interest of 8 percent on the proposed investment of Rs. 15 lakhs, the Company would be in a position to have a net income of 10 to 24 percent from the commission on sales of magnets and dividends. Mr. Ruia said that since Bombay Oxygen had no bank borowings at present, it would not be difficult to secure a loan of Rs. 15 lakhs from banks.

The chairman did not anticipate any difficulty in obtaining the Government's sanction for the proposed investment. Whether the shareholders would approve of the purchase of the shares of Permanent Magnets at the exorbitant price of Rs 300 a share when they are available at par in the market, remains to be seen. Referring to the current working of Bombay Oxygen, Mr. Ruia stated that the Company was now showing satisfactory progress. The oxygen plant has been working at 50 percent capacity while the acetylene plant is working in full swing. Sales in 1964 are estimated around Rs. 25 lakhs, against Rs. 2.68 lakhs in 1963. Sales are expected to show a substantial increase in 1965. The Company has made a deal with another firm to sell its oxygen and two of its four plants would be shifted to Lonavala by 1966 where the factory of the other firm is located. Bombay Oxygen is likely to take up the manufacture of liquid oxygen and nitrogen. The chairman is likely to visit Austria shortly to buy valves and cylinders.

Chase Bright Steel Does Well

THE Rs. 10-paid share of Chase Bright Steel which had touched a low of Rs. 5.40 earlier in the year, is currently quoted around Rs. 7.16. These shares have been attracting some attention recently on a favourable reassessment of the Company's prospects. The working results for the year ended March 1964 show a considerable improvement over the previous year. The turnover has increased from Rs. 48.82 lakhs to Rs. 80.29 lakhs, and on this, it has made a gross profit of Rs. 4.79 lakhs, against a mere Rs. 4.217 in the preceding year. After setting off the loss of previous years amounting to Rs. 3.66 lakhs and providing Rs. 1 lakh for development rebate reserve, a sum of Rs 12,947 is carried forward. No provision has been made for depreciation and the arrears computed on the straight-line method amount to Rs. 4.19 lakhs.

The increase in the Company's turnover during 1963-64 reflects increased production, notwithstanding the shortage of raw materials. The Company has had to import its requirements under barter licences, against the export of minerals, which cost the Company an extra Rs. 4.60 lakhs on the import of raw materials. A good demand exists for the Company's products in the external markets, especially on the Continent and in West Asia and a small beginning in exports has been made. The directors expect the Company's turnover during the current year to exceed Rs. 1 crore. The Company has been permitted to increase its capacity from 6,000 tonnes to 12,000 tonnes a year on a two-shift basis.

Indian Bright Steel, a subsidiary of Chase Bright, proposes to set up its plant for the manufacture of bright bars in Madras, instead of Bombay as originally licensed. The Company is negotiating for loans for the project from the Madras Industrial Investment Corporation and a leading bank. The directors hope that the Company will be able to start production in the near future. After providing Rs. 1,112 (against Rs. 4,304) for depreciation, the Company's accounts for 1963-64 show a loss of Rs. 37,063, against Rs. 34,848 in the previous year. Including the deficit brought forward, the total debit balance of Rs. 91,449 is being carried forward.

More from Bombay Cycles

BOMBAY Cycles and Motor Agency Ltd has raised the dividend for the year ended March from 12.5 percent to 15 percent. This follows the Company's improved performance during the year. Despite a setback in the sales from Rs. 2.28 crores to Rs. 2.20 crores, the gross profit is higher at Rs. 5.52 lakhs, against Rs 3.34 lakhs in the preceding year. Sales declined mainly because of the reduction in supplies of lorries, Fiat cars and Air-temp room air-conditioners. Appropriations include depreciation Rs. 1.30 lakhs (against Rs. 1.32 lakhs), development rebate Rs. 645 (against Rs. 12,376),

taxation Rs. 2.34 lakhs (against Rs. 1.10 lakhs) and general reserve Rs. 49,000 (against nil). After writing back a sum of Rs. 2,244 from the development rebate reserve, the directors have provided Rs. 1.20 lakhs (against Rs. 1 lakh) for the payment of the proposed dividend, leaving a balance of Rs. 11,178 to be carried forward, against Rs. 30,964 brought in.

Madhya Pradesh Industries Maintains

THE Madhya Pradesh Industries Ltd has maintained the dividend on the equity shares at 10 percent for the year ended March 1964. The results for the year are encouraging. The Company's sales have increased to Rs. 18,14,712 from Rs. 15,59,018 in the previous year. It also earned higher additional income from its investments, that is, Rs. 4,12,274, against Rs. 2,91,411. The profits have gone up to Rs. 6,06,810 from Rs. 4,64,365. A sum of Rs. 20,188 has been provided for depreciation, against Rs. 22,553 while development rebate reserve takes Rs. 499, against Rs. 1,734. Taxation for previous years accounts for Rs. 62,041, against nil, while Rs. 2,00,000 have been provided for taxation against Rs. 1,75,000 in the previous year. A sum of Rs. 1,00,000 has been transferred to general reserve, against Rs. 1,51,000.

The circumstances under which the manganese trade had to operate during the year were difficult and unfavourable. The selling price of manganese ore further slumped by about 10 percent whereas there was an increase in the wage rates and costs all round. The internal consumption of manganese ore has increased due to the emergence of the ferro-manganese industry. A further rise is expected with the increase in production of ferro-manganese as a result of the rise in steel production in India.

CONTIN FINANCE & MINING CO. LTD.

CHAIRMAN'S REVIEW

The eighth annual general meeting of Contin Finance and Mining Co. Ltd., was held on August 26, 1964, in London.

Mr. W. J. C. Richards, Chairman, presided, and the following is an extract from his Statement circulated with the Report and Accounts for the year ended 30th June, 1964 :—

Political and economic forecasts and fears have influenced stock markets throughout the year. Generally, confidence has been at a low level and our operations have been guided by caution. The group net profit for the year is £1,767 down but it is sufficient to justify our recommendations to distribute the same dividend as last year.

Money in Burma

The money we have in Burma has been referred to year after year and it must now be stated that during the past year the likelihood of getting it remitted has receded. The Revolutionary Council, which is now the Government of Burma, has only permitted remittances having special characteristics, and these have been very few. Money is not blocked in Burma because Burmese foreign balances are inadequate, but as a point of policy in the Burmese Way to Socialism which the Revolutionary Council has adopted. As a result of a Court award to former employees of Consolidated Tin Mines of Burma our balance in Burma has been reduced by £6,156 leaving a balance of £20,522. The application has been passed by the Government Departments concerned and it is in order, but the Exchange Control Department's power to pass applications for the return of capital has suspended. The reduced balance is carried as an asset in the accounts of the subsidiary company, and the written down cost of the subsidiary company in the Balance Sheet of the parent company is less than the net value of the subsidiary's securities and cash excluding the balance of funds in Burma.

The Balance Sheet continues to be strong and it shows a surplus in cash and Treasury Bills which it is intended to reinvest more profitably as soon as a suitable opportunity occurs.

The report and accounts were adopted.

In September 1957, shareholders of The Consolidated Tin Mines of Burma Limited became entitled to shares in Contin Finance and Mining Company Limited, under a reconstruction scheme. A number of the registered shareholders of The Consolidated Tin Mines of Burma Limited could not be traced, and their shares in Contin Finance and Mining Company Limited, are now vested in Trustees for C.T.M.B. Shareholders at Alderman's House Bishopsgate, London, E.C.2. to whom any enquiries should be addressed.

Kemp and Co. Repeats

KEMP and Co. Ltd has maintained the dividend for the year ended 31st March 1964 at 10 percent—Rs. 20 a share of Rs. 200. The Company has done better than in the preceding year. Sales are up by about 19 percent from Rs. 15.65 lakhs to Rs. 18.67 lakhs and the gross profit has risen by nearly 24 percent from Rs. 3.05 lakhs to Rs. 3.79 lakhs. After providing Rs. 77,585 (against Rs. 74,454) for depreciation, Rs. 2,800 (against Rs. 2,300) for development rebate and Rs. 1.65 lakhs (against Rs. 1.17 lakhs) for taxation, the net profit amounts to Rs. 1.34 lakhs, against Rs. 1.12 lakhs in the preceding year. The proposed dividend will absorb Rs. 1.20 lakhs, leaving a sum of Rs. 15,464 to be carried forward, against Rs. 11,196 brought in. The Rs. 200-paid share of Kemp and Co. is currently quoted around Rs. 263.75.

Asian Electronics Share Offer

ASIAN Electronics Ltd which proposes to undertake the manufacture of electronic components in technical collaboration with a well-known Yugoslav firm will soon be in the market to raise Rs. 15 lakhs through public subscription for the Rs. 50-lakh project. The Company has been licensed to produce 12 million pieces of carbon film resistors and 7.5 million pieces of styroflex capacitors which is estimated to meet about 20 percent of the country's present requirements. The plant which is to be set up in Thana (Bombay) has been desgined to produce a minimum of 12 million pieces of carbon film resistor, 10 million pieces of styroflex capacitor and 60 million pieces of ceramic core. The Company will start with the basic components such as carbon film resistors, styroflex capacitors, cores, etcetera, in the first phase, and it proposes to produce various types of electronic instruments in the second phase and ultrasonic instruments in the third.

Most of the raw materials required for the manufacture of products which the Company proposes to undertake are available from indigenous sources, and the imported component is estimated hardly around 5 percent to 8 percent of the total value of the raw materials. The promoters hope to be able to export the Company's products. Marketing the Company's products within the country is unlikely to present any difficulty as domestic requirements are at present being met largely from imports. The components which the Company will be producing will meet the vital needs of a wide assortment of industries producing instruments used in radio, television, electronic measuring, telephone exchanges, radar, computers, nuclear counting systems, radiation survey meters, detectors, electronic timers, etcetera.

Avtomacija of Ljubljana, Yugoslavia, which is collaborating in the venture is an associate of internationally-reputed firm of I.S.K.R.A. The erection of the Company's plant in Thana is expected to start in the first quarter of 1965, and production is likely to commence by about the middle of the year. The project is estimated to cost about Rs. 50 lakhs, of which some Rs. 38 lakhs will be spent on machinery and installations. The cost of the project, it is proposed, will be met by the issue of capital amounting to Rs. 30 lakhs, medium-term loan of Rs. 15 lakhs and bank borrowings to the tune of Rs. 5 lakhs.

The Company has issued equity shares worth Rs. 7,38,500. The present issue consists of 22,615 equity shares of which the promoters, directors and their associates are taking up 7,615 equity shares. The remaining 15,000 equity shares are now being offered for public subscription. The list will open on 7th September.

Rane (Madras) Pays More

THE directors of Rane (Madras) Ltd have stepped up the equity dividend to 17½ percent for the year ended March 1964 from the previous year's level of 15 percent. The profit for the year is substantially higher than that of the previous year. According to the preliminary figures, the profit, before depreciation and taxation, amounts to Rs. 11,53,689, against Rs. 8,84,271. Out of this, depreciation provision gets Rs. 3,32,715 (against Rs. 2,11,417). Development rebate amounts to Rs. 1,29,378 (against Rs. 55,453). Provision for taxation amounts to Rs. 3,00,000 (against Rs. 2,75,000). After deducting the above provisions, there is a net profit of Rs. 3,91,596. With Rs. 8,309 brought forward, the total available for appropriation comes to Rs. 3,99,905. Out of this, the preference dividend at 9 percent on "A" preference shares absorbs Rs. 15,925. The preference dividend at 7.8 percent on 6-percent preference shares accounts for Rs. 14,832. The proposed equity dividend of 17½ percent will absorb Rs. 2,14,480. A sum of Rs. 1,50,000 (against Rs. 1,25.000) is transferred to general reserve. The balance of Rs. 4,668 is carried forward.

Mysore Stoneware Pipes Earns More

THE profit of the Mysore Stoneware Pipes and Potteries Ltd for the year ended March 1964 has recorded an improvement over the previous year. The rise in sales is another notable feature. The net profit for the year amounts to Rs. 75,530, after providing Rs. 80,651 for depreciation and Rs. 1,20,000 for taxation. The previous year's net profit was Rs. 23,136, after providing Rs. 76,951 for depreciation and Rs. 25,000 for taxation. With Rs. 190 brought forward, the total available for appropriation comes to Rs. 75,720. Out of this, the proposed dividend at 12½ percent (against 12½ percent) will absorb Rs. 75,000. The balance of Rs. 720 is carried forward. Sales for the year amounted to Rs. 15,46,777 (against Rs. 12,19,144).

The directors' report says that coal supply improved considerably during the year. So there were no holdups in production. The production of pipes and sales during the year were the highest in the history of the Company. Mysore Stoneware Pipes is continuing to use furnace oil in place of coal, although trials are still inconclusive.

The report adds that despite the competition in the market for stoneware pipes and firebricks, the demand for pipes is brisk, and the Company has large indents on hand and is booked for a few months in advance. The building construction for the expansion in the output of stoneware pipes was completed about 18 months ago and the kilns and plants are being maintained well. With the incentive production bonus scheme and the increased capacity of the plant, the director expect better results in the years to come. The Company is continuing its experiments for making white glazed sanitaryware in the pilot plant. In order to commemorate the occasion of the silver jubilee of the Company, the directors have recommended that a sum of Rs. 60.000 be capitalised from the share premium account and one bonus share for every ten shares held be issued to the shareholders.

Lynx Machinery Pays Maiden

LYNX Machinery Ltd has declared a maiden dividend of 2.5 percent —25 paise a share of Rs. 10—for the year ended March 1964. Although modest, the dividend is greatly welcome because the shareholders have suffered heavily by way of depreciation of their investments. The Rs. 10-paid share is currently quoted around Rs. 6.56; it was available around Rs. 4.24 a few weeks earlier. The Company's working results for 1963-64 hold out the promise of a better days ahead. The turnover has risen from Rs. 37.95 lakhs to Rs. 73.71 lakhs and the gross profit has gone up from Rs. 2.74 lakhs to Rs. 8.17 lakhs. After providing Rs. 87,575 (against Rs. 4.38 lakhs) for depreciation, Rs. 1.50 lakhs (against nil) for development rebate reserve and Rs. 72,000 (against nil) for taxation, the Company has made a net profit of Rs. 5.08 lakhs, whereas it had incurred a loss of Rs. 1.64 lakhs in the preceding year.

After adjusting the losses brought forward from the previous years, there remains a surplus of Rs. 1.87 lakhs. The proposed maiden dividend absorbs Rs. 1.50 lakhs, leaving a sum of Rs. 36,884 to be carried forward. The directors state that the Company's performance during 1963-64 would have been much better, but for the labour strike for one and a half months. The Company made considerable progress in the manufacture of cranes. It has recently put Lister engines in the market. The Company has received a licence for manufacturing marine diesel engines and the project is under consideration.

The working of the building machinery division has been satisfactory and in spite of increasing competition, the Company has been able to expand its sales of concrete mixers and concrete vibrators. The Company has been successful in negotiating with the State Government for supply and installation of an iron ore handling plant for Rs. 2.93 crores in conjunction with a foreign Company. The construction work of the Company's new factory in Calcutta has started. With the new factory coming into operation in course of time, the Company's activity will expand considerably and the directors look to the future with confidence.

The Stock Markets

FAIR TURNOVER IN CLEARING SHARES, SELLERS RESERVED

Wednesday Evening.

THE undertone of the Calcutta stock market has been steady during the past week. Turnover in clearing shares has been fair, while the prices of selected cash scrip have hardened mainly due to the reluctance of holders to sell at current low levels. The prices of clearing shares have, on the whole, been maintained despite profit-taking at every bulge.

Lyons Range has been impressed by good corporate news. A number of companies have earned larger profits and declared bigger dividends. But the investors think that current dividends are not sufficiently attractive because of soaring interest rates. Operators are also encouraged by rumours that the Government may soon provide incentives to stimulate activity in the capital market. But the more sober elements in the stock market think that no such measure is likely at least until the next Budget.

Towards the close, activity has been restrained because of the disappointment over the acceptance of the Bonus Commission's recommendations by the Government. Although the recommendations have been slightly modified, their implementation will hinder industrial development. The most damaging recommendation of the Commission relates to the payment of a minimum bonus whether a company makes profit or not. This apart, the Government's acceptance does not take into account the differences between industries and between regions. Anyway, the most likely result of the move will be that companies will be left with virtually little funds to finance replacements or modernisation.

The good response to the Unit Trust units, combined with the further increase in the price of the units, has caused optimism. It is felt that the Trust and the Life Insurance Corporation will soon buy ordinary shares. In fact, the Unit Trust has already bought a fair number of good equities. The growing shortage of funds is, however, an important restraining factor. The recent raids by the Government to bring out "unaccounted money" have caused some nervousness.

Indian Iron have held up well despite profit-taking. Selected engineering shares like Guest, Keen, Williams, Texmaco, Indian Standard Wagon, Jessop and Burn have been supported. J. K. Steel have improved on influential buying. Interest has been shown in Jay Engineering and Indian Steel and Wire Products. Among cotton mill shares, J. K. Rayon are steady. Elgin, Bharat Commerce and Dunbar have also gained. Despite a small turnover, selected coal shares like Bengal, Burrakur and Central India have improved.

Clearing scrip are prominent in the miscellaneous section. Hindustan Motors enjoy influential support. Jaipur Udyog has repeated the dividend in spite of a smaller profit. Indian Copper are steady due to the rise in the international price of the metal. Indian Aluminium, Dunlop Rubber and Indian Cable enjoy support. Union Carbide, Alkali and Chemical and Associated Battery have risen. Among new shares, Hindusthan Twyfords are a prominent feature due to a good report. Hindustan Aluminium have also hardened.

National Insulated Cable have been supported on increasing the dividend. Midnapore Zemindary have been fancied on prospects of diversification of activities. British India Corporation and Indian Oxygen have been steady. In managing agency shares, Martin Burn and Balmer Lawrie have changed hands. In electric companies, U.P. Electric have been bought. Bank shares are dull. Stray business in United Commercial and United Bank has been transacted. In paper shares, Orient have been active. Support has been forthcoming for Seshasayee, Bengal and India Paper Pulp. Titaghur have been sold on a disappointing dividend.

Birla Jute have retreated in jute shares due to profit-taking. Support has been extended to Ganges, Barnagore, Anglo-India and New Central. Investors are cautious because of the disappointing dividends declared by the Bird-Heilgers group of companies. Small business has been done in tea shares. Attention has centred on Assam and Dooars gardens. Some Pakistani gardens have also been bought by interested parties.

Government securities are steady, but turnover has been small. The 3 percent Conversion Loan 1986 has been quoted around Rs. 63.50. The good response to the State Government loans which were recently floated has been welcomed, although most of these loans are being quoted at a slight discount.

Bombay

SHARE PRICES FALL TOWARDS CLOSE

SETTLEMENT RESTRAINS ACTIVITY

Wednesday Evening.

THE Bombay stock market has been steady during the past week, although attention has largely been confined to clearing scrip. Towards the close, activity has been restrained and share prices have tended to fall because of the settlement on Wednesday. The market will be closed on Thursday and Friday. The flow of excellent corporate news has contributed to the renewed buying spree. There has also been brisk short-covering. Although turnover in cash scrip is small, some of them have improved smartly. Synthetics and Chemicals, for instance, have gained substantially on reports of good working.

Dalal Street has been cheered by the prospect that the Life Insurance Corporation and the Unit Trust of India will soon buy equities on a fair scale. Since the response to the sale of units by the Trust is encouraging, it is likely to invest large sums in equities. Operators have also been encouraged by the observations made by the Prime Minister, Mr. Lal Bahadur Shastri, on planned development. If expenditure on various projects, which are unlikely to be productive in the near future, is postponed, the economy should be stimulated. The decision of the Industrial Finance Corporation to liberalise the payment of dividends by borrowing companies is being bullishly interpreted. The offer of debentures for Rs. 6 crores by the Corporation has been welcomed because industries will enjoy the advantage of greater borrowing facilities.

Tata Steel ordinary have closed at Rs. 162.75. In engineering shares, Tata Engineering, Premier Construction, New Standard Engineering and Larsen and Toubro have been supported. Among motor-vehicle shares, Hindustan Motors and Premier Automobiles have been steady.

Selected cotton mill shares have improved all round. Century, Kohinoor, Svadeshi and Standard have recovered on replacement purchases. Interest in Bombay Dyeing has been shown after a long interval. India United ordinary, Morarjee and Gokak have gained.

In the miscellaneous section, cement shares have been steady. Associated Cement and Digvijay have been taken. In sugar shares, Belapur and Walchandnagar Industries have attracted support. In chemical shares, Tata Chemical are steady, but Polychem have reacted on profit-taking. Mining shares have been subdued. Be Be Petrol have reacted on profit-taking. Among rayon shares, National Rayon have improved, as have

Gwalior Rayon. Bombay Burmah, Voltas and Tata Oil have been supported.

Despite small turnover in bank shares, prices have been maintained. Bank of Baroda and Dena Bank have changed hands. Electric company shares have been steady. Tata Hydro, Tata Power and Bombay Suburban have changed hands.

Madras

OUTSIDE SUPPORT LIFTS SHARES

BUSINESS CONFINED TO CLEARING SCRIP

Tuesday Evening.

THERE has been an improvement in the Madras stock market during the past week largely due to the increased support from outside centres. Business has, however, been confined to clearing shares, although they have reacted slightly towards the close in response to profit-taking. Among cash scrip, attention has largely centred on selected planting and miscellaneous shares. Government securities have been dull, but the market has shown interest in good preference shares and debentures.

Small business has passed in bank shares. Indian Overseas have come to hand at Rs. 147 and Syndicate Bank at Rs. 143.50. In electric company shares, Karaikkal are quoted at Rs. 10.25 on declaring a taxable ordinary dividend of 10 percent. Tinnevely Tuticorin have been bought at Rs. 14 on paying a taxable ordinary dividend of 10 percent. Sugar shares have shown mixed trends. Travancore have been supported up to Rs. 7.65 on declaring a taxable ordinary dividend of 7½ percent. E.I.D. have retreated to Rs. 35 and Deccan have been dull at Rs. 12.35. Madura have come to hand at Rs. 9.44 and Andhra have been transacted at Rs. 13.55.

In the planting section, Blue Mountain have lost at Rs. 2.30, but Cochin Malabar are steady at Rs. 6.51. Consolidated Coffee have been about maintained around Rs. 23.42 and Ouchterlony have been done at Rs. 3.20. Periakaramalai have come to hand at Rs. 3.45. Malankara have been taken at Rs. 16.25 on declaring a taxable ordinary dividend of 16 percent. Business has passed in Kalpetta at Rs. 12.80 on the payment of a taxable ordinary dividend of 12½ percent. Kurchermala have been done at Rs. 5.07 on declaring a taxable ordinary dividend of 5 percent. Rajendra have been steady at Rs. 12.35 on declaring a taxable ordinary dividend of 25 percent. Interest has been taken in Thamarapally at Rs. 15.25 in Nonsuch at Rs. 21.87 and in Swinton at Rs. 2.68.

In textile shares South India Viscose have retreated to Rs. 118.50 and Travancore Rayon to Rs. 20.50. Lakshmi are available at Rs. 131 and Madura at Rs. 34.70. Bangalore Woollen are quoted at Rs. 270 on declaring an interim taxable dividend of 10 percent. Buckingham have been done at Rs. 275.50. Cannanore have changed hands at Rs. 97 on declaring a taxable ordinary dividend of 8 percent. Sarvaraya have changed hands at Rs. 10.25 on paying a taxable ordinary dividend of 9 percent. Business has passed in Mettur at Rs. 277.50 in Rajalakshmi at Rs. 85 and in Tirupati at Rs. 10.12.

Among miscellaneous shares, Aluminium Industries have hardened to Rs. 22.65 and Ashok Leyland to Rs. 6.80. Mettur Chemical have been bought up to Rs. 14.85. In cement shares, Dalmia are available at Rs. 12.55 and India at Rs. 5.52. Seshasayee Paper are steady at Rs. 7.53 and Standard Motors at Rs. 10.15. Binny have been bought up to Rs. 269 on declaring a taxable interim ordinary dividend of 10 percent. Marikar have improved to Rs. 74 on declaring a taxable ordinary dividend of 20 percent. Kirloskar Electric have risen to Rs. 19.25 and Parry's Confectionery have been done at Rs. 2.97. T. Stanes are quoted at Rs. 30.25 and Textool at Rs. 152.50.

BEFORE YOU BUY...

Quality garments or fabrics offered to you as made from 'TERYLENE' Polyester Fibre

LOOK FOR the trademarks

'Terylene' or

'TERYLENE' Polyester ICI Fibre

... and make sure that the fabrics, or garments made from them, indicate the exact proportion of 'Terylene'. Approved blends which contain the required *minimum* of 'Terylene' are:

55% 'Terylene'/45% wool
67% 'Terylene'/33% cotton
67% 'Terylene'/33% viscose rayon
and of course
100% 'Terylene'.

The word and device 'Terylene' are registered trademarks, the property of Imperial Chemical Industries Limited, London, England. ICI are manufacturers of the fibre and not the fabrics or garments.

Money

THE CALCUTTA MONEY MARKET

CALL RATE RISES FURTHER

Wednesday, 2nd September.

THERE has been a moderate decline in the general level of advances in the Calcutta money market during the past week. This is due to the slight fall in the credit given to jute and sugar mills, and to the iron, steel and engineering industries. Credit for cotton mills and for the storage of foodgrains remains almost unchanged. In the interbank market, conditions are tight, and the call rate has risen further to 5½ percent mainly because of the need for making tax payments.

The exchange market has been inactive, with a poor supply of tea and gunny bills. The demand for remittances has been moderate. In London, sterling has weakened appreciably against all important currencies.

SILVER REACTED IN CALCUTTA DURING the past week. The price declined from Rs. 255.50 to Rs. 255, quoted a kilogram today. The price fetched 112⅛d in London and 129.3 cents in New York.

In spite of the easier trend in silver, gold was steady and the price of 14-carat advanced from Rs. 74.25 to Rs. 74.50.

DURING THE WEEK ENDED 28TH August, Government of India Treasury bills for Rs. 53,31,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 1st September. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.400 percent were allotted 50 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 7th September.

IT IS STATED THAT 91-DAY INTERmediate Treasury bills will be sold from 2nd September to 5th September at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 24th August to 29th August amounted to Rs. 2 crores.

THERE WERE DECLINES OF Rs. 38.70 crores to Rs. 2,390.12 crores in active notes and of Rs. 18.08 crores to Rs. 2,427.80 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 28th August, 1964. The currency contraction was adjusted by reducing rupee securities by Rs. 20 crores to Rs. 2,115.88 crores in the paper currency reserve. Deposits of the Government of India rose by Rs. 17.97 crores to Rs. 96.21 crores and those of State Governments by Rs. 6.35 crores to Rs. 19.44 crores due to good tax collection. Deposits of scheduled banks at Rs. 91.91 crores showed a drop of Rs. 30.25 crores. Balances held abroad declined by Rs. 2.86 crores to Rs. 10.14 crores. Investments at Rs. 191.67 crores showed a decline of Rs. 55.61 crores. Loans to scheduled banks rose from Rs. 1.84 crores to Rs. 2.06 crores of which advances against usance bills amounted to Rs. 20 lakhs (the same). Ways and means advances stood at Rs. 21.93 crores, against Rs. 25.77 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 21st August 1964, shows a rise of Rs. 18.20 crores to Rs. 671.02 crores in total deposits. Investments in Government securities are up by Rs. 15.03 crores to Rs. 290.13 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have fallen by Rs. 6.72 crores to Rs. 339.50 crores. Cash and balances are, in consequence, shown at Rs. 35.38 crores or Rs. 3.78 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 21st August, 1964, shows Demand and Time liabilities at Rs. 1,301.75 crores (Rs. 35.17 crores on account of borrowings from banks) and Rs. 1,418.27 crores (Rs. 15.73 crores), compared with Rs. 1,288.47 crores (Rs. 33.92 crores) and Rs. 1,406.47 crores (Rs. 15.47 crores), respectively, in the previous week. Cash has declined by Rs. 1.50 crores to Rs. 63.61 crores, while balances with the Reserve Bank have increased by Rs. 6.25 crores to Rs. 111.77 crores. There is a rise of Rs. 20.23 crores to Rs. 775.11 crores in investments. Advances and bills discounted at Rs. 1,729.57 crores show a decline of Rs. 16.26 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.4 percent and 63.6 percent, against 6.3 percent and 64.8 percent.

THE DIRECTORS OF NATIONAL AND Grindlays Bank Ltd have declared an interim dividend for the current year of 7 percent, less income tax at 7s 9d in the £, payable on 9th October, 1964.

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF DEBENTURES.

This is NOT a Prospectus. Persons interested in full details may obtain copies of the Prospectus from the Registered Office of the Company or from the Bankers, Underwriters and Brokers named hereinafter.

THE BIRLA JUTE MANUFACTURING COMPANY, LIMITED

(Incorporated on 25th August, 1919 under the Indian Companies Act, 1913).

Registered Office : 15, India Exchange Place, Calcutta-1.

EXISTING AND PROPOSED ACTIVITIES OF THE COMPANY

The main activities of the Company consist of the production of Jute goods (including hessian goods, sackings, carpets and carpet backing cloth), Staple Fibre Yarn and the manufacture of Calcium Carbide, Cement, Oxygen Gas and Dissolved Acetylene Gas. The Company commenced its activities with the production of the Jute goods ; it commenced production of Staple Fibre Yarn in 1957. Calcium Carbide in 1954 and Cement in 1959. The Oxygen and Dissolved Acetylene Gas Plants of the Company were put into commission in August, 1964. In order to increase its production of Cement the Company has taken steps to set up its second Cement Plant in Rajasthan.

LOCATION OF THE FACTORY

The Company's Jute Mills, Calcium Carbide Factory, Staple Fibre Spinning Plant and Oxygen and Dissolved Acetylene Gas Plants are all situate at Birlapur, Budge Budge, in West Bengal, about 17 miles south of Calcutta. The existing Cement Plant of the Company is located at Satna in Madhya Pradesh.

The Company is setting up its second Cement Plant at Chittorgarh in Rajasthan, where sufficient land for this purpose has been acquired on 99 years' lease from the Rajasthan Government. The construction work of the Plant is in progress and it is expected that this Plant will be put into commission by March, 1966.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 9TH SEPTEMBER, 1964 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 15TH SEPTEMBER, 1964 or EARLIER AT THE DISCRETION OF THE DIRECTORS, BUT NOT BEFORE THE CLOSE OF BANKING HOURS ON 11TH SEPTEMBER, 1964.

POYSHA INDUSTRIAL COMPANY LIMITED

SPEECH OF THE CHAIRMAN, MR. M. R. RUIA

The following is the address of the Chairman, Mr. M. R. Ruia, delivered at the 7th Annual General Meeting of the Company held on Monday the 24th August, 1964.

I am glad to report that the year 1963-64 has been a satisfactory year in most respects. Even in the existing factory at Bombay, with all its limitations, we have been able to show a distinct improvement in production, by increased efficiency and a certain amount of rationalisation. Our production of containers increased by no less than 18% over last year's, and a substantial proportion of it was open top sanitary cans used mostly in the food preservation industry, the balance being general line cans for various industries like oils, paints, vanaspati, confectionery, etc. This performance must be regarded as quite satisfactory in relation to our resources. The very fact that, even after providing, among other things, Rs. 8.58 lakhs for taxation as against Rs. 2.95 lakhs in 1962-63, the profits for 1963-64 amounted to Rs. 4.26 lakhs as against Rs. 2.11 lakhs in the preceding year, is a measure of our striking improvement. The staff reorganisation already initiated has begun to produce results, and I am sure the performance during the current year will be even more satisfactory. I may mention that this will probably be the last year in which we shall function throughout the year in the present factory in Bombay, as we expect to move into the new modern factory near Thana before the end of 1965

Expansion Programme

We have not been idle regarding our expansion programme. We have now acquired a total area of 33 acres of valuable land for our factory near Thana from the Maharashtra Industrial Development Corporation. Tenders are being invited for the construction of the new factory buildings on the basis of plans and lay-outs prepared by our architects. We hope to begin construction soon after the monsoon, and shall complete it as speedily as possible.

The land for the Cochin factory, comprising about ten acres, has also been bought at Mamala near Ernakulam, and we are now studying the plans for the factory buildings and installation of the plant. The site is a good one, about a mile, as the crow flies, from the new Oil Refinery complex.

The actual site for the new factory at Ghaziabad has also been selected after personal inspection of the Uttar Pradesh Industrial Estate, and we are now negotiating the detailed terms of the purchase.

I may also mention that the requirements of our Associate, Kaira Can Company, which has been created solely to meet the needs of the Kaira District Co-operative Milk Producers' Union at Anand, have been receiving full attention. As there were difficulties in the procurement of land for this Company through the State Government our Associate carried on private negotiations and has succeeded in selecting a suitable site (about 10 acres) near Anand. The plans for the factory buildings are also under preparation.

As regards the plant, a modern automatic printing plant has already been imported for our Bombay factory and is now awaiting installation at the new factory at Thana. I am also glad to report that we have at last succeeded in getting permission from the Government of India for a second automatic bodymaker line for our Bombay factory, the absence of which has been a bottleneck in production there. The new equipment will enable quick changeovers from one can diameter to another, without appreciable loss of time, and we shall also be in a position to manufacture containers of larger diameters. The Government have also agreed to the importation of all the plant and machinery we had selected for the factories at Cochin and Ghaziabad, and we expect the import licences to be issued shortly.

The Kaira Can Company has already placed orders with American suppliers for the machinery required, and we expect the equipment to reach India some time before the end of this year.

Construction of New Factories

The present year and the next will, therefore, be a very active year for our Company, involving the construction of four new factories for ourselves and our Associate, and the installation of up-to-date plant in each of them. When they start production, we shall get rid of our present strategic disadvantage in having only one important manufacturing centre at Bombay, and having to bear the handicap of long transport and high packing costs to various markets in distant parts of India. We shall, like the major producer of cans in this country, be in the happy position of catering for regional markets from the regional plants.

I mentioned in my last review the new developments regarding receipt of orders for various types of cylinders, etc., from the Defence Departments. We have made much progress in this respect, and were able to secure substantial orders, a considerable part of which has already been executed.

Our share in the present export drive has continued to expand, and I am glad to report that during 1963-64 about Rs. 20 lakhs worth of goods were exported in our containers. The beginning of the present year has already shown further remarkable progress in this direction, and new export markets have been created.

I must mention one point in connection with the availability of our present raw material, namely tinplate. While on the whole we had a slightly better, though still not an adequate supply of tinplate for our manufacturing requirements, the disturbing feature has been that arrivals have not been following any regular pattern. We get very large quantities of tinplate in some months, followed by a lean period, including some months with no arrivals at all. This absence of a proper phasing militates against any sensible planning of our whole manufacture throughout the year, and causes our customers considerable inconvenience. I do not know what the Government can do in the present circumstances to help us out of this condition of a relatively hand-to-mouth existence; but any long-range programme by them involving the proper staggering of indigenous production, as well as of imports, would be a real boon to us.

You will be interested to see from the relevant Balance Sheet and Profit and Loss Account annexed to this report that our wholly-owned subsidiary, Colrige, has also had a successful year. The sales in 1963-64 exceeded Rs. 6 lakhs, and the previous loss has been converted into a sizeable profit.

Future Activities

A word regarding our future activities. You will observe from the Directors' Report that the capital is going to be increased from Rs. 25 lakhs to Rs. 110 lakhs. We have carried on detailed negotiations with important financing agencies like the Industrial Credit and Investment Corporation of India, Kerala State Industrial Development Corporation. Industrial Finance Corporation, Life Insurance Corporation, the U.P. State Industrial Corporation, and certain Banks, for foreign exchange or rupee loans, or underwriting facilities. I am confident that these negotiations will soon fructify and that we shall shortly be fully armed at every point to embark on our scheme of modernisation and expansion, at the end of which we and our Associate will have four modern plants, combining the latest Continental and American techniques, and located at strategic centres, to enable us to cater for the greater part of India, besides contributing our tangible share to Indian exports.

All this has been possible as the result of combined team-work at all levels. Our staff have fully co-operated, and our relations with labour continued to be harmonious. I am happy to convey my thanks to them on your behalf.

Finally, I feel I should take the opportunity to refer to a topic which will be of paramount importance to the Can manufacturing industry in this country within a decade or two. As you are well aware, tinplate has been facing increasing competition from other materials like aluminium, paper, plastics, etc., and has had to adapt itself to meet this competition. The enormous impact of aluminium as a package material on the American beer can manufacture industry first made American tinplate producers seriously think of a modified tinplate to meet this formidable challenge; and "thin tinplate", otherwise known as "double cold reduced tinplate" was expressly created to meet the challenge. A survey of current tinplate manufacture in the United States reveals that this particular variety of tinplate is now developing very rapidly and that almost all producers, including the "Big Three", have now started large-scale manufacture of this type. Another recent development is tinplate "foil" which has a paper-thin gauge of two-thousands of an inch. We, in this country, cannot afford to stand still while all these modifications are going on in the largest tinplate producing country in the world, whose practices and methods are bound to have a controlling effect on tinplate manufacture elsewhere. Many other countries outside America (e.g., the U.K. and Japan) have also taken up the manufacture of thin tinplate and are likely to take up the manufacture of tinplate foil also. All of India's tinplate production at present is hot-dipped, which is already outmoded (less than 3% of the total manufacture of tinplate in the U.S.A. is of this variety today), and I note that a beginning is to be made in Rourkela in the manufacture of electrolytic tinplate. This is good so far as it goes. Unless, however, the Government take a long-range view, and modify the Rourkela programme in the Fourth Plan and take steps now for the manufacture of at least a certain percentage of thin tinplate and tinplate foil, I am afraid we will be hopelessly outclassed in the not too distant future. The same consideration applies to the proposed new plant at Bokaro. I would earnestly request the Government to give this matter serious thought and arrange for a progressive increase in the manufacture of these two new varieties which have a great bearing on reducing the cost of tin cans and will enable our industry to face competition from containers made of other materials, not only in India but as regards exports also. An ancillary suggestion I would also make is that during the period in which this manufacture is being started in this country, imports should be allowed of tangible quantities of these two new varieties of tinplate to enable us to try them out on our plants and get ready in time to cope with full-scale production when the need arises. This need, I repeat, will be on us within possibly a decade.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

New Delhi

NEW WORLD BANK TEAM TO STUDY RESULTS OF PLANNING

(FROM OUR NEW DELHI CORRESPONDENT)

THE president of the World Bank, Mr. George Woods, spent a busy and useful week in Delhi during which "the content and direction of economic progress made by India" were discussed. According to reports, he assured the Prime Minister, Mr. Lal Bahadur Shastri, that the World Bank would continue to assist economic development in India in every possible way by rendering expert advice and by offering loans for sound development projects.

Mr. Woods said in a Press conference that a World Bank mission would arrive in India in the third week of September. It will stay in this country for nine to 12 months. It will make a detailed study of the Indian economy and the impact of three five-year plans on its growth. The study will include the use of foreign aid and the potentialities of development in the private sector. The team will be headed by Mr. Bernard Bell.

Larger Assistance

Mr. Woods also stated that the Bank was devising means to facilitate larger assistance to the private sector in the developing countries. This will be done through an amendment of the Bank's charter to enable it to lend funds to the International Finance Corporation—an affiliate of the Bank—without Government guarantee.

The Bell mission, it is expected, will study during the first six months the implementation of the third plan with special reference to agricultural stagnation and the continuous rise in prices. In the remaining period of its stay in India, it will study the fourth plan, which should be ready by then.

The Central Finance Minister, Mr. T. T. Krishnamachari's statement in July that it would be unrealistic to provide for an expenditure of more than Rs. 18,000 crores under the fourth plan, and the Prime Minister, Mr. Lal Bahadur Shastri's emphasis on meeting such requirements of the common man as food, shelter, medical facilities and employment opportunities, have deflated the earlier claims made by the Perspective Planning Division of the Planning Commission which placed the fourth plan outlay at Rs. 22,000 crores. The presence in India of the Bell mission during the preparatory stages of the fourth plan should have a further sobering influence on the Commission.

Mr. Woods has made it clear that the rôle of the World Bank will continue to be that of an adviser. The Bank will not dictate, which should mean it will dictate neither to India nor to other aid-giving countries. It should, therefore, be clear that the Government of India would pay due attention to the advice of the World Bank and, in particular, to that of the Bell mission.

One basic question on the appraisal of the third plan could be what steps, if any, were taken by the Government to remove the causes which had impeded its progress, as shown by the mid-term appraisal of the Commission. It was, for instance, pointed out that multiplicity of agencies hinged to an employment-oriented economy had led to agricultural stagnation. Various committees, for example, have pointed to the deficiencies of the Central Ministry for Community Development. Instead of taking any definite action, another departmental committee has been set up to reiterate what has already been stated earlier. Menwhile, what is needed is not committees, but a definite action to streamline the administration dealing with agriculture.

The Heavy Engineering Project

The Heavy Engineering Corporation in Ranchi should provide another example where speedy decision could have been taken. It is a Rs. 225-crores project in the public sector included in which are the following: foundry-forge project Rs. 100 crores, heavy machine-building project Rs. 43 crores, coal-mining machinery project in Durgapur Rs. 32 crores, and heavy machine tool project Rs. 20 crores. The Corporation is managed by a board of directors, some part-time and some functional. In addition, each project has a general manager.

There was a disastrous fire in the machine-building factory in January last. The causes and responsibility for the fire have since been enquired into by a judge of the Allahabad High Court. Although the report on the enquiry has not yet been published, indications available here suggest that divided leadership at the top had badly affected the discipline in the factory. It should be a matter for some concern that when Congress leaders are devoting their time and energy towards national integration, provincial considerations often triumph over efficiency and discipline in some public undertakings.

Some questions might be asked in this context. Firstly, why the well-merited process of decentralisation, introduced in the management of Hindustan Steel, has not yet been introduced in the Ranchi project, making the four general managers independent in day-to-day administration? And is there any justification for tying up the coal-mining machinery project in Durgapur with the other three projects in Ranchi?

It should be conceded that if the World Bank were to evoke the interest of the aid-giving countries to contribute liberally to the financing of the fourth plan, it should be satisfied that the public-sector projects were well managed. Then again, questions are often asked about the final cost and the delay in commissioning a public-sector project. One might also ask whether any serious analysis has been made to ascertain whether the original cost of a project and the time-schedule for its commissioning were correct. It should be a fascinating study to make such an analysis of the various river valley projects on which rosy pictures, not only of irrigation but also of navigation, were painted, all assuring a fair return on the capital. Any realistic analysis shall have to take into consideration the various bottlenecks, such as transport, power, technical personnel, foreign exchange, congestion at ports, labour troubles and the time-lag in importing plant and machinery.

It is emphasised here that there was no desire to delay or put aside any project which was being commissioned. The imperative necessity of stepping up production, including the productivity of labour, has been emphasised. Meanwhile, what the Prime Minister has urged is wise spending of the hard-earned money of the taxpayer. Similarly, expenditure on feasibility studies on projects to be included in the fourth plan will not be curtailed, the idea being to keep the blueprints of all projects ready, some of which could be taken up during the fourth plan if circumstances favoured their commissioning.

BONUS REPORT

Decision Taken

The Government of India has accepted the Bonus Commission's recommendations, subject to certain modifications relating to prior charges on the gross profits before amounts available for distribution are computed. Such prior charges include direct taxes and fixed percentages of return on capital as well as provision of reserves. The Commission's formula is applicable also to public undertakings which compete with the private sector.

Existing agreements between managements and their employees providing for a large amount of bonus will not be disturbed, but whenever a dispute arises the Commission's formula will prevail.

The modifications introduced by the Government are: (1) In computing the "available surplus", all direct taxes for the time being in force will be deducted as prior charges. Tax concessions given to industry to provide resources for development will also be accepted as prior charges. Steps are to be taken to ensure by law that the amounts involved in such concessions are used for the purposes for which they are given.

(2) The rate of return on capital to be allowed as a prior charge deductible before calculating available surpluses should be, (a) the actual rate payable on the preference share capital; (b) 8.5 percent, taxable, on paid-up equity capital, and in the case of banks 7.5 percent; and (c) 6 percent on reserves—in the case of banks 5 percent.

(3) The Government considered it desirable that beyond a certain maximum, the bonus should be paid in the form of securities, instead of in cash. This matter is to be discussed and decided by negotiations with the parties concerned, including labour organisations, and, if necessary, by tripartite discussions. Suitable legislation is to be promoted to give effect

A NICHOLAS (N) PRODUCT

to the proposals which have been accepted by the Government.

A consequential modification relates to the giving of retrospective effect to the decision. "In cases where any retrospection has been settled through agreement or by a decision having been given, the matter would not be reopened." In other cases, where a dispute is raised or is pending, it will be related to the accounting year ending on any date in the calendar year 1962. In all other cases, it will be related to the calendar year 1963.

Broad Features

The broad features of the Commission's formula are as follows: The "available surplus" from out of which bonus will be paid should be arrived at after deducting from the gross profits the following prior charges: (a) depreciation as admissible under the Income Tax Act; (b) income tax and super tax; and (c) return at the actual rate payable on the preference share capital and at 4-percent on reserves.

Sixty percent of this "available surplus" should be distributed as bonus subject to a minimum equivalent of 4 percent of the annual basic wages and dearness allowance, or Rs. 40 whichever is higher, and a maximum equivalent of 20 percent of the annual basic wages and dearness allowance. The payment should be in cash. Where the amount to be allocated as bonus exceeds the maximum of 20 percent of the earnings, the excess up to a further limit of 20 percent is to be carried forward to be "set on" in the succeeding years up to a period of the next four years. Similarly, where there is no "available surplus" or the amount of the "available surplus" allocable as bonus is a sum less than 4 percent of the annual earnings, the whole of the amount 4 percent or the amount necessary to make up 4 percent, as the case may be, should be carried forward and "set off" in the succeeding years up to a period of four years.

Case of New Concerns

The formula will apply to those public-sector undertakings which are not departmentally run and which compete with private-sector establishments. For this purpose, if not less than 20 percent of the gross aggregate of the sales turnover of a public-sector undertaking consists of sales of services or products which compete with the sales of services or products by units in the private sector that undertaking will be deemed to be competitive with the private sector.

Where in particular undertakings, employers and units have adopted or may adopt in future, annual bonus linked with production or productivity in substitution of bonus based on profits, the Commission's formula will have no application. Similarly, where industrywise agreements already exist, the parties are at liberty to renew the agreements with such modifications, if any, as may be agreed to by them.

The formula will not apply to new concerns until they have recouped all their early losses including all arrears of normal depreciation admissible under the Income Tax Act, subject to a time-limit of six years.

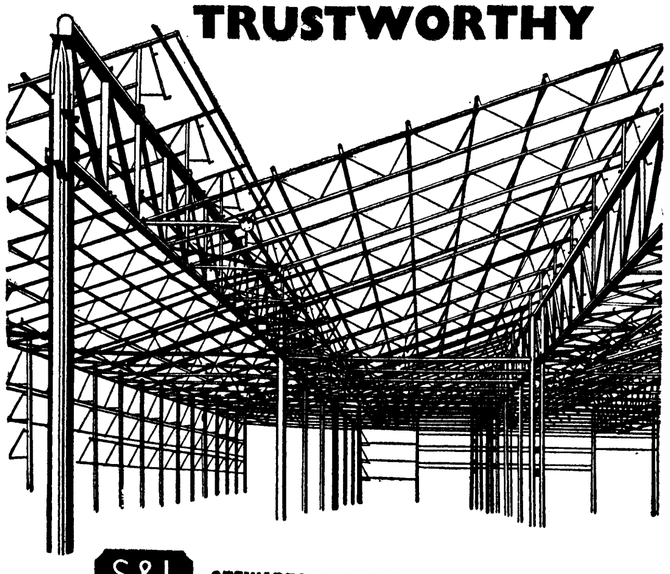
The Commission recommended that its proposals should apply to all bonus matters relating to the accounting year ending on any day in the calendar year 1962 other than those cases in which settlements have been reached or decisions have been given.

One member of the Commission representing the private-sector employers had differed from the main recommendations of the Commission on some points of detail. His view was that in calculating the "available surplus," direct taxes like super-profits tax and suitable allowance for rehabilitation should also be included as prior charges and that the rate of return on capital as a prior charge should not be less than 8.5 percent for paid-up capital and 6 percent of reserves. He had further suggested that in the case of certain industries like jute, plantations, coal and other mines, the limits of minimum and maximum should be fixed at 2 percent and 10 percent of the year's basic wages and dearness allowance, against limits of 4 percent and 20 percent in the case of other industries.

MR. R. N. CHETTUR

Mr. R. N. Chettur has been appointed as a managing director of the State Bank of India. Mr. Chettur succeeds Mr. B. Mukerji. Mr. Chettur joined the Imperial Bank of India as a probationary assistant in 1929; he has served at various offices of the bank and has held senior appointments. He was agent, Rangoon branch, deputy secretary and treasurer, and secretary and treasurer of Madras Circle. Since February 1962, he has been the secretary and treasurer of Bombay Circle until his appointment as managing director.

THAILAND IMPORTS INDIAN ELECTRODES



India-made electrodes are a new item in the list of Indian exports. They were exported to Thailand for the first time in June this year. The initial quantity exported was about 12 metric tons. Thailand's total demand for electrodes is considerable.

India's first tubular structure was made by Stewarts and Lloyds of India and the reason why S & L are still the leading suppliers of steel tubular structures is that no other structure gives you the same feeling of dependability, trustworthiness as an S & L structure.

All S & L roofing structures are delivered complete in every respect with trusses, purlins, columns, hook bolts for roofing and all necessary studs, nuts and washers.

Write today for your requirement of these sturdy and dependable tubular steel structures.

London

BRITAIN FACING A MANPOWER SHORTAGE

(FROM OUR LONDON CORRESPONDENT)

BETWEEN 1963 and 1968, the working population of the United Kingdom will be increasing more slowly than in recent years, while continued growth of employment is expected in both the manufacturing and services sectors, offset to some extent by a continued net decline in the rest of the economy. Total manpower resources are likely, therefore, to be no more than adequate during the period. In the following five years up to 1973, the growth of the working population is again expected to slow down very substantially, and the strain on manpower resources may well be even more severe.

These are the main conclusions of the first report of the Ministry of Labour's Manpower Research Unit, set up a year ago by the then Minister. The text of the report—"The Pattern of the Future"—which was prepared with the assistance of the Ministry's Statistics Department and in consultation with other Government departments and the National Economic Development Office, is to sketch the pattern of employment in the United Kingdom as it has been developing during the past decade and as it is likely to develop in the foreseeable future. It is essentially a study of total manpower resources at the national level and their future distribution, the aim being to give a broad assessment of the main trends in employment. "While this is a necessary first step—in the process of manpower planning, it is no more than a first step," says the report. "Technological progress is constantly altering the occupational structure of the labour force and creating demands for new types of skill." This means that automation and every other means of getting the most out of the labour force is going to be vital over the next ten years. Economically speaking, the fear of a shortage of workers will be stronger than the fear of a shortage of work.

The report paints a broad portrait of a new manpower scene, showing the rise of the "white-collar" worker, a decline in the numbers of young people at work, an increase of married women, and radical changes in the balance of employment between manufacturing and service industries. It emphasises that while the forecasts made represent a careful assessment of the probabilities, they must be regarded as tentative and subject to revision in the light of later knowledge, and, in the case of the employment forecasts, of alternative methods which are being explored.

Here are some of the conclusions of the report as far as the next five years are concerned: (1) as total manpower resources will be no more than adequate to meet the needs of an expanding economy, the efficient and flexible use of manpower will continue to be of the greatest importance. (2) Employment opportunities for women may expand slightly more quickly than those for men and the number of single women and girls available for employment is expected to decline. Employers will, therefore, need increasingly to encourage part-time working and to facilitate the employment of married women. (3) The continued rise in the proportion of "white-collar" workers in manufacturing industry will have important implications in the fields of education and training.

Longer-term Prospects

Turning to longer-term prospects, these are summarised as follows: (4) With a labour force which will be growing at a much slower rate than the total population, efficient manpower utilisation will become even more essential if the task of maintaining and raising the general standard of living is to be successfully achieved. (5) The development of automation and other forms of advanced technology—indeed of any methods whereby productivity can be raised—will assume increasing importance and will to some extent be stimulated by the very fact of labour shortage. (6) The falling off in the number of young people entering the labour market—accentuated by the raising of the school leaving age in 1970—will call for adjustments, while at the same time, making for a less adaptable labour force. Some types of work at present performed mainly by young people may need to be reallocated and arrangements for apprenticeship reviewed. (7) The continued rise in the number of married women, who are themselves relatively immobile, will enhance the need for mobility among the rest of the working population, and measures to facilitate the employment of married women will have to be even more widely adopted.

In a survey of our future manpower resources, the report says that between 1953 and 1963, the working population of the U.K. increased faster than the total population—by 0.7 percent a year, against 0.6 percent a year. During the next decade the total population is expected to increase at about the same rate and the working population very much more slowly—by between 0.3 and 0.4 percent a year. Most of the increase in the working population will come in the next five years. In the longer term, the rate of growth of the working population will probably increase again, but it is expected to remain below the present rate throughout the seventies.

The report points out that the rising birth rate, longer full-time education, earlier marriage and the increased expectation of life in retirement have been combining to increase the "economically dependent groups" of the population. It is expected that this increase will be steadily maintained throughout the sixties, and indeed for many years to come. Until recently, the increase in the numbers of "economically dependent groups" has been more than matched by the increase in the working population. But between 1958 and 1963—in spite of unusually large numbers of school leavers and of immigrants—the additions to the working population have barely kept pace with the rising numbers of those outside it. In the next five years, it is expected that they will fall short by a considerable margin, and after that, the gap will widen, so that in the decade 1963-73, the estimated increase among those at work will be only one-third of the increase in the rest of the population. "These trends mean that the growing volume of goods and services which will be needed to maintain and raise our general standard of living will have to be produced with relatively few extra people at work."

Working Population

In past years, the increase in the working population has contributed substantially to the overall growth of the economy. Over the next decade at least, the same rate of growth will be needed in order to keep pace with the increase in the total population. By contrast, the U.K.'s manpower resources are expected to grow much more slowly than in recent years. "Clearly, therefore, productivity will need to grow at a faster rate if the present rate of improvement in living standards is to be maintained, let alone speeded up." A comparison of rate of growth of working population in the U.K. with those of certain other European countries and of the U.S.A. shows that in recent years the working population of the U.K. has been growing faster than that of France, but much more slowly than that of West Germany, and during the 1960's, it is expected to grow at a rather slower rate than that of the E.E.C. countries as a whole. But the most marked contrast is between the European countries and the U.S.A. Over the decade 1953-63, the latter's working population increased twice as fast as that of the U.K. and the rate is accelerating. Over the next decade, the rate of increase expected in the U.S.A. is more than four times that expected in Britain and appreciably higher than that expected in the E.E.C. countries.

The report attempts to forecast future employment trends in the different groups of industries and the distribution of manpower between broad sectors of the economy. After a survey of the main industrial groups, the report concludes that there may be significant changes of trend in some industries. Employment in chemicals and in iron and steel, which have been on a rising trend over the past ten years, may tend to level off. The rate of growth in several other expanding sections—food, drink and tobacco, the large engineering group, including vehicles, and the paper industries—may be rather slower than in recent years. On the other hand, the decline in the textiles and clothing group may be somewhat moderated, while over a wide range of industries representing a substantial proportion of manufacturing employment no major changes of trend are foreseen. On balance, the effect is one of a slight slackening in the overall rate of growth of the numbers employed in manufacturing industry, but no marked change of trend, for the next few years at least.

White-collar Workers

Although the report is not in general concerned with changes in occupational structure, it does draw attention to the steady rise in the proportion of "white-collar" workers in manufacturing industry. The increase in numbers of these workers accounted for about five-sixths of the total increase in the sector between 1953 and 1963. If this trend continues, "white-collar" workers will represent one quarter of the labour force in manufacturing by 1968. There may, however, be some slowing down in their rate of increase; in some parts of this field, the introduction of computers is likely to have an increasing impact in the longer term.

A review of trends in the services sector indicates that in most cases employment is likely to continue to rise rapidly. The largest increases are expected in health and education services and in distribution—although in the latter case, this represents some slowing down of the rate of growth. Marked increases are also expected in certain of the miscellaneous services, such as motor repairing and garages, and hairdressing. In financial services the rapid growth of business is expected to outweigh staff savings over the next five years from the introduction of computers, although these may have greater effect on this comparatively small sector of service employment in the longer term. An increase is also expected in employment in public administration. The continued declines expected in employment in transport services and in private domestic employment are offsetting factors, but the net effect for the services sector as a whole is one of continuing rapid growth.

The report makes these points on the remaining four groups in the economy. *Agriculture:* In general, employment over the whole sector—agriculture, forestry and fishing—seems likely to continue to decline over the next few years as it has done in the recent past. *Mining:* Little change is to be expected in the recent declining trends of employment over the industry as a whole. *Construction:* The very heavy demands with which the construction industry will be faced during the next five years will not merely sustain employment at its present level, but will require a sizable increase in the labour force, even allowing for substantial and continuing rises in productivity. The supply of skilled labour is likely to be a problem. *Public Utilities:* The accelerating growth of demand for electricity—and the further expansion plans to meet it—suggest that employment will continue to increase in spite of technological changes and economies of scale.

LAW ON STOCK TRANSFER IN U.K.

By Bimalendu Sen Gupta

The United Kingdom has recently passed the Stock Transfer Act with a view to introducing a much simpler, uniform and speedy process of dealing with the transfer of stocks and shares. The Government of India should closely watch the working of the new transfer system in Britain and introduce changes in India to plug the existing loopholes.

WITH the rapid increase in the volume of transactions in shares and securities in the Stock Exchange and outside, the need for introducing a much simpler, uniform and speedy process of dealing with transfer was felt in the United Kingdom. A City Committee was formed for the purpose with representatives from the Stock Exchange and various other bodies, including a professional institution who in turn set up an advisory committee to go into the question in detail and to submit their recommendations. On the basis of their report containing various recommendations which suggested a radical change in the age-long system followed in relation to the transfer of shares and their registration in the U.K., the Stock Transfer Act, 1963, was passed. This new piece of legislation is very brief in context, having only a few clauses.

In India, there is the Companies Act which is largely identical in form and effect to the English Companies Act. The concept of company legislation owed its origin in the U.K. Any changes made in the company law and procedure in one country are looked into with interest by the other. In that perspective, the Stock Transfer Act, 1963, calls for a close study and the advantages and disadvantages of the new system need a careful analysis.

Two Instruments

The Act has introduced and prescribed two instruments of transfer—one called stock transfer form and the other broker's transfer form. The uses of these forms are restricted to the purposes for which they are designed, and these are discussed in detail in the next few paragraphs. The Act mainly applies to (1) fully-paid shares of companies incorporated under the Companies Act and (2) the Government securities with certain exceptions. It overrides all provisions in the articles of association of companies which require the use of any particular form of instrument for transfer, but does not restrict the right of the companies to refuse registration of any transfer on grounds other than the form to be used for transfer.

Every transaction in shares involves two parties—the seller who is described in the instrument of transfer as transferor and the buyer as transferee. Prior to the new legislation, signatures of both these parties on the instrument, commonly known as the transfer deed, duly attested by witnesses in each case were essential requisites. But the Act dispenses with the necessity for attestation of transferor's signature by a witness, for a transferee to sign at all and (except in the case of corporate bodies having a common seal) for a transfer in the form of deed. The evidence of identification as to the parties in the transaction is, however, provided by the stock brokers or other agents by impressing their rubber stamps on the transfer instruments. To give effect to all these changes, the two new forms, namely, stock transfer form and broker's transfer form, have been introduced.

The suitability of stock transfer form is found in all transactions whether through Stock Exchange or outside but the use of a broker's transfer form is restricted to the transactions through Stock Exchange involving the sale of a holding to more than one party. The issue of one stock transfer form to cover several broker's transfer forms eliminates the need for seller to sign more than once in relation to any single transaction. In case of transaction outside Stock Exchange, the stock transfer form is executed by the transferor after it is completed stating the details of the share or stock transferred, the parties to the transaction and the consideration in figures only. Thereafter, the transaction is identified by the stock broker or other agent by impressing his rubber stamp in the respective space provided in the form.

Stock Transfer Form

In case of Stock Exchange transactions, a stock transfer form is filled in by the selling broker covering the entire sale concluded. Thereafter, procedure varies according to the circumstances. If the transaction involves the sale of all the shares covered by the certificate/s to one buyer, the transferor puts his signature in the form which is then identified by the selling broker by inserting his rubber stamp. The form is stamped by the Inland Revenue and delivered to the buying broker for entering the transferee's particulars under rubber stamp and submitting the same to the company for registration.

But if the shares mentioned in any certificate are sold in part, the certification becomes necessary and this is done by the Stock Exchange or by the company, where necessary. In conjunction with the stock transfer form, the broker's transfer form is used when the shares covered by the certificate/s is sold to more than one buyer. As stated earlier, one stock transfer form may cover several broker's transfer forms and each buying broker thus may be in possession of a transfer form for enabling registration expeditiously in his client's name. The selling broker cancels the lower part of the stock transfer form and on its reverse inserts the particulars of the broker's transfer forms issued by him. The broker's transfer forms are then stamped by the Inland Revenue and certified normally by the Stock Exchange who retains the stock transfer form and the certificate for forwarding to the company. The certified broker's transfer forms are then delivered to the respective buying brokers for completion concerning the details of the transferee and submission to the company for registration.

The advantages of the new system as envisaged under the Act outweigh the disadvantages. Besides the uniformity secured in the design and the contents of the transfer instruments, the elimination of the issue of several instruments in favour of different buyers removes botheration on the part of the transferor. As certification can be done by the Stock Exchange, early delivery of transfer instruments to the buying-brokers is possible. The absence of transferee's signature on the transfer form simplifies and reduces the Registrar's work as it does not provide any scope to the company for verification of the transferor's signature unless the transferor is the original holder of the shares. Furthermore, the new system enables the buying broker to lodge the transfer documents with the company without sending them to the client and there the time taken in the movement of the documents through a buyer is saved.

Recording the Particulars

The above changes are not free from criticism. Any incorrectness in recording the particulars of the transferee in the instruments by his broker cannot be detected by the former as he does not at all receive the documents for his inspection or signature. After he executes the contract, there is no opportunity for him to know what is happening at different stages up to the time of his receiving the certificate. Furthermore, until the transferee's particulars are entered in the instrument, the transfer form becomes a bearer form and carries with it all the disadvantages of a bearer document. As the transfer instrument need not be taken to the transferee, the Registrar's Office may be flooded at a time with a large number of instruments immediately after the close of the accounts day in the Stock Exchange. Another defect is that the new system provides an opportunity to an unscrupulous broker to obtain temporary financial accommodation against the security of the stocks by inserting his nominee's details in the instrument instead of the real transferee's.

Although the Act has received a warm welcome in the United Kingdom, it is early to suggest any change in the existing laws and procedure in India with a view to adopting a similar transfer system. The success of this statute depends chiefly on the efficient working of the Stock Exchanges and their brokers in close co-operation with other parties concerned in the buying and selling of shares and securities. Our Stock Exchanges should, therefore, be conscious of the increased responsibilities contemplated in the new transfer system introduced in the U.K., and assess how far they are in a position to shoulder such responsibilities if a similar system is introduced in India at any future date. In view of the incorporation of a large number of companies in India every year and the expansion taking place in the corporate sector, any change to simplify and expedite the transfer work deserves consideration. The Government of India should, therefore, closely watch the working of the new transfer system in the U.K., and give its active consideration, as and when conditions permit, to introduce the changes in the transfer system too after plugging loopholes as far as possible.

Commodity Markets

U.P.A.S.I. CHIEF CRITICISES BONUS DECISION

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE president of the United Planters' Association of Southern India, Mr. J. R. Henshaw, said that the Government's decision on the Bonus Commission's recommendations was a "significant revelation of how political pressures much more than economic common sense can triumph in issues of such vital importance". He said this in the course of his address to the latest annual conference of this premier planting body of south India. The fears expressed by business leaders at the time the Bonus Commission was appointed had been justified. He said the Commission did not understand the peculiar features of the planting industry; nor did it apply its mind to the consequences of carrying out its recommendations on the progress or stability of this industry. He warned that an industry starved of the resources necessary for progress was not the one to provide stable employment with progressive wages.

Mr. Henshaw warned that the cumulative burden of competing taxation from the Centre and the States was starving the plantation industry of the resources so desperately needed, and until this problem was tackled, progress, despite all their efforts, would be limited. He said the mainspring of increased production was the grower's own estimate of his prospect in terms of his own financial security. He said that the capacity of the industry to expand had been considerably weakened over the past 12 years due to a progressive diminution of resources and this in turn had been on account of increased costs of labour and supplies and to a complicated variety of tax measures introduced by different authorities.

Referring to agricultural income tax rates, he said that the Constitution had provided for the reservation of agricultural income for State taxes. But the basic principle should have been laid down, so that one who depend on an agricultural income did not have to pay more than the tax the same amount of non-agricultural income would be subjected to pay under the Central income tax. He complained that the agricultural income tax rates of certain States far exceeded the Central rates and none of the concessions of rebates, deductions and incentives extended by the Centre were available under these taxes.

The U.P.A.S.I. president said that the field assets were entitled to depreciation, and because the depreciation was not provided for tea and coffee, it lowered the ability of the industry to find the necessary resources. It was in recognition of this fact that the Tariff Commission allowed depreciation for the rubber tree.

As for expenditure on labour welfare, made obligatory under the Plantations Labour Act, Mr. Henshaw said that capital diverted to fulfil such obligations under the Act now formed a large portion of the fixed assets of planting companies. This capital was not an investment as there was no financial return on it, and it had to come out of current savings. He said the industry should be given a 50 percent rebate on resources diverted for welfare expenditure.

Referring to the abolition of the export duty, Mr. Henshaw said, that the position had been made worse by the abolition, as the excise duty had been enhanced and made non-refundable when the tea was exported. By this means, the Government made up its loss on revenue, but made the producer pay the excise duty before the sale of the tea was effected. Referring to the notified land tax rates in the various districts of Mysore, the president said that in some cases, the increase was 38-fold from Rs. 2 to Rs. 76 an acre at one stroke, without a care as to what other taxes the same acre already bears, or the permanent injury which it would cause to the industry. He said that every sound principle governing taxation seem to have been thrown to the winds for raising more revenue immediately.

Dealing with what he termed a serious problem confronted by the industry, Mr. Henshaw said that planting in its structure and growth differed quite markedly from manufacturing industries. Not only that this industry was long established, but also because the capital of many of these companies was historical in nature and did not reject the current values of the assets. Being a farm holding, the steady improvement made in expanding the acreage, improving the stand and extending the handling capacity by a slow and long process of reinvestment of savings were not reflected in the equity capital, which in most cases, had remained practically unchanged. By relating dividends to equity capital, which was outdated and unreal, the return had always been judged wrongly. Recent efforts by some of the companies to get a truer valuation of their assets at work and refixation of their equity capital had been turned down as if such a procedure was somehow objectionable on the part of companies. Many small companies found it difficult to be heard in Delhi, however just their case. It might be recognised that the present method of calculating return on equity capital could only be fair if the equity capital itself was fixed in terms of the actual capital at work. He said that the more stringent the control exercised by the authorities, the more important it was that they possessed the attitude for justice and a proper understanding of the particular problems of the planting industry.

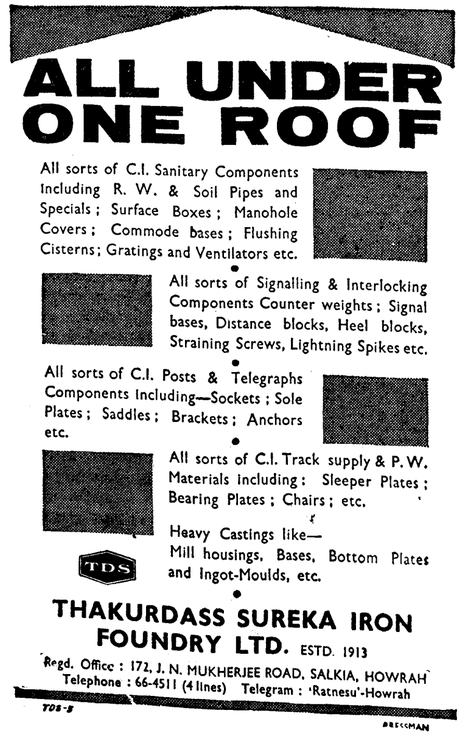
Referring to another serious problem, Mr. Henshaw said that with a low capitalisation and heavy taxation, most planting companies presented a vulnerable section of industrial enterprise. The share values were so much out of line with the market value of the properties owned by them and their true worth that they were easiest victims for cornering. He also objected to the indiscriminate elimination of managing agencies purely on the ground that the capital of the companies concerned was less than Rs. 10 lakhs. He said that the planting industry had always been in need of the services of agencies on the coast both to maintain their supplies and market their produce and to do a variety of other jobs necessary for the plantation.

By rejecting the application for extension of managing agencies, even where according to Company Law the shareholders had voted for such continuance, many planting companies who were in need of managing agency services were being deprived of them. He said the equity capital in the planting industry was only a very small part of the total part really at work and that to terminate agencies against the wishes of the shareholders, would be a needless and purposeless blow. He appealed to the Company Law Board to make a study of the special features of this industry and to devise the controls in such a manner as to have some relevance to the particular case and offered the willing assistance of associations of producers, in any study that the Board might wish to make.

Scientific Agriculture

The U.P.A.S.I. president claimed that the success of agriculture in the country would depend upon scientific agriculture with modern management and advocated approach to farming as a business. He said that competent management and a rational and scientific approach to the problems of the field and the plants were required. He added that since 1947, with an increase of only 11 percent in the area under tea south India produced 98 million lbs more, the production of coffee increased from 11,900 tonnes in 1947 to over 67,000 tonnes last season and rubber production from 16,713 tonnes in 1947 to 37,200 tonnes last year.

Referring to land reform measures aimed at a ceiling for personal holdings, Mr. Henshaw said: "To the community the most productive use of the land is more important. Inefficiently used land, however well distributed among the population, is not of much value in economic progress. During the past 20 years of great resurgence of national economies, unemployment was the least and agricultural progress was the most, precisely in those countries where farm holdings expanded and the number of persons engaged in agriculture fell most markedly".



The president described the long interest the U.P.A.S.I. had bestowed on scientific research and said that in the last few years, the Association had been doing its utmost to enlarge the tea scientific research work. He reported that the sub-station in Vandiperiyar was complete and working, and in the Nilgiris the Department was doing intensive work in the development of high-yielding quality clones, while the main station in the Anamallais, the construction of which had been progressing, was expected to be functioning some time this year. He said attention was being given to improve the quality of tea as well.

Mr. Henshaw said: "The one fatal thing to progress and our competitiveness in the world market is to deny producers the opportunity to experiment with new equipment and machinery developed elsewhere". On the marketing of coffee, Mr. Henshaw said that the U.P.A.S.I. was gratified in the Government agreeing to the resumption of open auction for export sales and he hoped that the Board would give careful consideration to its suggestion for optional export quota, so that the quality of coffee might be improved by the individual grower having an interest in export under his own name.

LEMONGRASS OIL

S.T.C. Handling of Trade

There is a feeling in the market that in order to save India's lemongrass oil export trade from total extinction, the State Trading Corporation should adopt a more flexible price policy. The S.T.C. is now purchasing lemongrass oil from producers in Kerala at a fixed price of Rs. 11 a kilogram. This is part of a price

support scheme introduced by the Central Government early last year with a view to helping the producers who were threatened with a major slump.

The price at which the S.T.C. is lifting lemongrass oil stock from the producers is the "minimum" fixed by the Central Government. It is said that the world price is about 10 percent less than this "minimum" so much so there is some difficulty in getting foreign buyers for Indian lemongrass oil, although it is renowned for its quality. The Indian lemongrass oil has been facing severe competition from cheap oils as well as synthetic substitutes. It is suggested that in order to enable the Indian oil to hold its own in the world market, the Indian Government and the S.T.C. should revise their present "rigid" policy and make it more "flexible".

It is said that the S.T.C. which entered the market at the instance of the Government of India had suffered a loss of about Rs. 30 lakhs last year on lemongrass oil trade. It had to procure almost 80 percent of last year's production at the price of Rs. 13.75 a kilogram in view of the reluctance on the part of the private trade of buy oil from the producers at this prescribed "minimum" price. There was difficulty in finding foreign buyers at this rate so much so by the end of the year, there was a huge accumulation of stocks with the S.T.C. One estimate places the carryover stock to 1964 at as high a figure as 750 tons. The S.T.C. was reluctant to buy up stocks this year, but it had to enter the market again at the orders of the Government. The Government, on its part, had revised the "minimum" down to Rs. 11 a kilogram to make it more in parity with the world price. Both the Government and the S.T.C. have made an appeal to the producers to cut their output in view of the large carryover from the last season's crop. The present expectation is that production will not exceed 1,000 tons this year, against 1,700 tons of 1964. Even then, it is feared that the total supply will be more than what India can export.

The S.T.C. has been procuring oil through three established exporters in Kerala. Some other exporters seem to be very unhappy about this arrangement.

It is alleged that the S.T.C. had turned down certain buying offers from abroad on the ground that the prices quoted were "uneconomic". In the absence of an export "floor" price, a section of the exporters object to the summary rejection of these offers and the prompt approval of some others. Their demand is that the S.T.C. should permit all exports starting from Rs. 11 and above a kilogram and that the S.T.C. should function as a purely stabilising influence in the internal market. This section of the exporters says that the S.T.C.'s entry in the export of lemongrass oil has since shrunk from 1,250 tons to about 700 tons a year. The reason for this, according to them, is that the foreign buyers have not taken kindly to the S.T.C.'s intrusion into the trade. They consider the fixing of any minimum export price as holding them to ransom. They have also voiced the fear that in accordance with certain international conventions, legal proceeding cannot be instituted against a Government corporation in the event of disputes or default of contracts. It is alleged that there were occasions in the past when the S.T.C. had failed to fulfil some of the contracts and annoyed some of the foreign buyers.

There is also the complaint that the present procurement price of Rs. 11 a kilogram is not an economic price as far as the producers are concerned. The cost of production of A grade lemongrass oil for which this price is given, works out to Rs. 13.75 a kilogram, according to certain estimates. This section of the exporters go to the extent of saying that the S.T.C.'s entry in the lemongrass oil trade has benefited neither the producers nor the cause of export promotion.

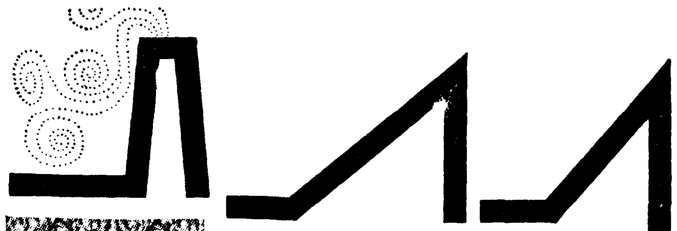
TEA

Big Scale Expansion of Tea Output in Kenya

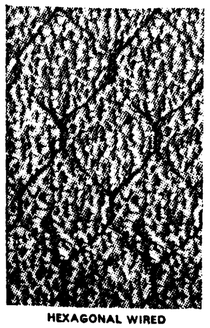
A Special Correspondent writes: To current supplies, Kenya proposes to add more in the future. Tea growing is to be expanded with a $2.8 million (Rs. 1.5 crores) loan from the International Development Association. This will extend the area under tea by 14,400 acres—a 25 percent increase over the present acreage. According to local statistics, East Africa has about 67,400 hectares of planted land, but that covered Tanganyika, Uganda, Nyasaland, Mozambque and South Rhodesia as well as Kenya which is clearly in the lead with production in Africa. They produce 40 million lbs of tea a year, that is 2½ percent of the world production. It has almost unlimited land, with soil and climate suitable for tea.

The I.D.A. loan is specifically for tea growing, and will cover only a part of the total cost of a $4.9 million. An almost equal sum is required to set up ten tea processing factories, which are to be financed half by the Kenya Government and half by the Commonwealth Development Finance Company. Most of the aid programmes are intended to help the small holders, who account for only one-fifth of the total acreage.

According to reports, the vice-chairman of the Pakistan Tea Board has said that the total area under tea in that country would rise to 90,000 acres by 1965. Under the third plan, the acreage was likely to increase by 28,500 acres to 118,500 acres. Addressing a meeting of the reconstituted Tea Board, the vice-president said that tea production had increased considerably since 1952. It went up from 52.27 million lbs in 1952-53 to 58.46 million lbs in 1961-62. He also forecast a record crop output of 60 million lbs for the current year. The consumption figure had also gone up considerably during the past 11 years. It now stood at 52 million lbs, rising at the rate of 2.1 million lbs annually.



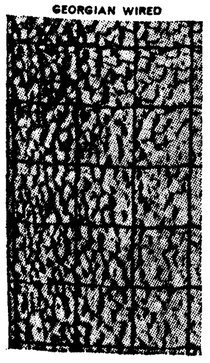
It will be seen that Ceylon, Africa and Pakistan intend to expand in a big way. India has already lost its predominant position in world production, and there is no hope of improving the position until financial facilities are made available at reasonable cost.



With another 63,377 packages up for sale on 24th August and more to follow in the coming months, the demand for leaf teas eased, although there was a good general enquiry and a few of the best Assams sold well, but medium B.O.P. from the Dooars received much less support. On Wednesday, Dust offerings amounted to 34,606 chests, but the demand slackened as the sale progressed. At Cochin quality was generally well maintained with Nilgiri teas showing useful manufacture. Fannings were sought after around last prices.

Colombo advices show a strong demand for B.O.P. fannings. Quality was well maintained from western areas, but others were often inferior to recent offerings. Plainer sorts were easier, but the lowest qualities met with an improving enquiry in some cases.

NEW MARKETING ASSOCIATION FORMED



The formation of the Indian Marketing Association, devoted to marketing practice, research and education, has just been announced in Bombay. The president of its executive committee is Mr. Shivaram Nair. The Association has been organised with the help and co-operation of the American Marketing Association and the International Marketing Federation. The main objective of the I M A. is the promotion of scientific marketing.

HEXAGONAL WIRED

GEORGIAN WIRED

HPG WIRED GLASS
for safe glazing
in factories

The built-in safety of HPG wired glass comes from the steel wire netting inserted into the semi-molten ribbon of glass during the rolling process. This ensures perfect safety. For should the glass break, the pieces are held together — no flying splinters to injure workers or cause damage to property. HPG wired glass has proven fire-retarding characteristics. It may crack in an intense blaze but holds together — thereby reduces draughts which spread flames. ■ You can depend on HPG wired glass. It is manufactured by Hindusthan-Pilkington Glass Works Ltd. in full collaboration with Pilkington Brothers of UK — people who have been making glass for more than a century!

Jute

SPECULATION CURBED: FIBRE PRICES DECLINE

THERE has been a reversal of the upward trend in gunny and raw jute prices, thanks to the timely measures taken by the Jute Commissioner, the East India Jute and Hessian Exchange and the Forward Markets Commission. Speculators have now been restrained. Since the imposition of drastic margins on outstanding long positions in hedge and T.S.D. trading in hessian, sacking and raw jute, more than Rs. 20 lakhs have been collected as deposits by the E.I.J.H.E. A large number of speculative deals were not formally reported, but were squared up in kerb trading by the bulls, helping a decline in prices.

Meanwhile, the Pakistani jute market has softened with an increase in the daily arrivals. Pakistani mills have already booked fair lots of the fibre to continue production right up to November. So they were not showing much interest in fresh purchases. Indian mills also had bought 92,000 bales of long jute and cuttings from Pakistan during the first six weeks of the current season, against a total offtake of 93,000 bales during the 1963-64 season. The exporters booked sales amounting to 1.15 million bales in overseas markets during the same period.

With fair progress in the sowing of *Aman* paddy, farmers are almost free. The feeder roads have dried up. So daily arrivals of fibre have been improving. Speculators have been less aggressive and growers are inclined to accept lower rates. Mills have deemed it advisable to carry on production with their existing stocks. They have refrained from making panicky purchases, and were even agreeable to lift jute according to the maximum quota system. These steps have helped reduce the price of the fibre by more than Rs. 4 a maund during the week. In view of the upward trend in the prices of essential commodities, it is reported that the authorities may soon raise the floor price of raw jute in consultation with the industry and other interests.

The gunny market too has been behaving well. Violent fluctuations have been held in check and prices have gradually come down to more realistic levels. The overseas buyers, the Government of India and internal bulk consumers are still waiting on the side-lines expecting normal trading conditions. Actual transactions have been few and far between in view of the higher levels. Burlap prices have also softened after narrow fluctuations in the New York market in sympathy with the trend in Calcutta.

Fibre Supplies will be Adequate

Addressing a Press conference in Calcutta on 26th August, Mr. G. C. L. Joneja, the Jute Commissioner, stated that the authorities were alive to the situation and were taking appropriate measures in consultation with the industry and the trade to arrest the speculative activities, which had pushed up prices. He reiterated that the Government was keen on maintaining the goodwill and the continued custom of overseas buyers, and so had taken drastic steps to curb unwarranted speculation. About the crop, he said that despite natural setbacks, it would be safe to estimate it around 7.2 million bales. Including the carry-forward of 2.8 million bales from the previous season, the total availability would be 10 million bales. This would be sufficient to run the installed capacities at the present level of maximum production, which would absorb some 8 million bales. Another satisfactory aspect of this year's crop, according to Mr. Joneja, is the appreciable improvement in the quality of fibre produced in Assam and West Bengal.

Meanwhile, the Committee of the I.J.M.A. has reviewed the market situation. It says in a Press statement that mills may have to make some adjustment in production to conserve fibre supplies. But it has assured overseas buyers that the stocks of gunnies held in Calcutta are adequate to meet any foreseeable demand. The stocks of finished goods, which stood at 104,200 tonnes at the end of July 1963 have risen to 135,200 tonnes at the end of July this year. So the industry feels that there should be no fear of any interruption in supplies to consumers due to the adjustment of output by individual mills.

U.K. to Revise Import Arrangements

Mr. Edward Heath, Britain's Trade Minister, will shortly introduce revised arrangements for the import of jute goods, according to the Board of Trade. Goods of the greatest long-term interest to the Scottish industry and which currently represent a substantial part of its cloth production will be subject to a fixed mark-up of 45 percent. Earlier Government proposals had envisaged a diminishing rise in price for these goods.

A further range of goods will be subject to a mark-up, including both fixed and variable elements, which for the first year will be based on 45 percent, the variable rate of mark-up being reduced annually. Finally, a range of cloth, which forms a substantial amount of Scotland's imports and represents only a limited part of Dundee's production, will cease to be subject to protection against imports from India and Pakistan and will be returned to the private trade. The British Government will review the effects of the new arrangements in 1967 with the special object of examining the need for continuing the variable mark-up.

THE JUTE MARKETS

Manufactured Goods: Subdued conditions prevailed in the Calcutta gunny market during the past week. Business was still restricted due to the high prices which were being quoted. Overseas offtake was more or less of a routine nature. The week's completed transactions included Government tenders for about 10,000 bales of B Twills for September-October delivery and scattered hessian business with the U.K., the U.S.A., and the Argentine. Besides, there was usual short- and shipper-covering in ready goods. Mills were reluctant to extend commitments at the prevailing levels as the marginal increases in gunny prices failed to offset the effect of the higher fibre prices. Speculators were inclined to adjust on the kerb most of their outstanding commitments in T.S.D. and hedge transactions. Hessian lost by 50 paise to 75 paise a 100 yards, and B Twills by Rs. 3.25 to Rs. 3.75 a hundred bags in the spot market. In the hedge market, prices eased somewhat on long liquidation. The fluctuations were wide in sacking and moderate in hessian. Turnover was fair in the hedge market and moderate in the spot market. The closing undertone was easy.

Wednesday's quotations were as follows:

	Ready P.D.O.	Sept.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	37.25	37.60	38.10	38.25
40in. 8oz.	40.00	—	—	—
40in. 10oz.	49.55	50.10	50.50	51.00
B Twills	137.90	139.10	139.50	140.50
Cornsacks	143.00	144.00	142.50	143.00
Heavy Cees (Plain)	139.50	140.00	139.00	140.00
A Twills	168.50	169.50	170.50	171.00
Liverpools	153.00	154.00	155.00	156.00

Raw Jute: The drastic restrictions imposed to curb speculation helped bring about a sharp recession in raw jute prices during the past week. Mills were reserved and concluded deals only when unavoidable. So the offtake declined appreciably. Meanwhile, daily arrivals into the agencies improved to around 125,000 maunds and the upcountry price levels subsided appreciably. A decline in agency prices induced Calcutta and Cossipore merchants to quote lower rates and mills accepted bare marginal lots of selected-grade fibre for ready and near positions around the prevailing levels. In the hedge market, prices of Upper Assam White Bottoms for September fluctuated less violently and closed with a loss of about Re. 1, compared with the previous week's level. Bulls preferred liquidating their commitments and this helped the downward trend. Turnover was moderate in the spot market and fairly heavy in the hedge market. The undertone was hesitant at the close.

Wednesday's quotations were as follows:

	Landed at Mills (Basis Bottoms) Current Prices Rs. A Qtl.	Rs. A Md.	T.S.D. Minimum Prices Rs. A Qtl.	Rs. A Md.
Assam-Agartala Jute	109.85	41.00	117.89	44.00

THE U.K. JUTE MARKETS

BUYING OF FIBRE RESTRICTED

(FROM OUR DUNDEE CORRESPONDENT)

THE raw jute market was very firm in Pakistan last week. Imports of loose jute from upcountry were not increasing and the mills there were buying steadily. The fear of a short crop is the main reason for the recent rise in prices.

Dundee spinners were reluctant to pay the present very high prices, and business here was still confined to small quantities. However, they were in the fortunate position of having considerable stocks of raw material and also having purchased substantial quantities for shipment before the rise in prices had taken place.

Offers were very irregular, and covered a wide range. Prices were lowest at £147 for Export Firsts, at £137 for Export Lightnings and at £128 for Export Hearts, c.i.f. U.K. for September-October shipment. Grade Tossa-4 was named at £150 with Dacca Tossa-6 at the same price. Outport Tossa-2/3 ranged from £135 and Outport Tossa-4 from £127, October-November. Cuttings were steady at £100 for S.N.C. and at £93 for N.C.

There was a quieter trend in the Siam jute market, and some sellers reduced their rates. However, the lowest quoted prices were not attracting Dundee spinners to any extent, and this despite the fact that no mesta has been offered for several weeks. Offers were made at £94 for grade A, at £89 for grade B and at £81 for grade C, delivered mill Dundee for November-December shipment.

The Calcutta goods market was very irregular with daily fluctuations in prices. Some buying interest was shown here for hessians. Quotations are at 80s 6d for 40in. 10oz. and at 60s 11d for 7½oz. a 100 yards c. and f. U.K. for August shipment, at 81s 2d and 61s 2d September and at 81s 11d and 61s 11d October-December. B Twills were at 232s 10d, 234s 1d and 235s 1d for the respective shipment periods.

Due to the dearer raw material position, prices of Dundee jute yarns and cloth were raised at the beginning of the week. The higher rates which are now in force are equal to only 50 percent of the advance in raw jute prices. It is hoped that raw jute prices will decline to save spinners and manufacturers having to again increase their selling rates of yarns and cloth.

The price of 8lb common cops is now 19s 9½d a lb, and medium spools 20.37d. Other qualities of yarns have been raised by a similar amount. Cloth prices are at 18.56d a yard for 40in. 10½oz. and 14.64d for 8oz. The higher rates have already been paid and producers here are very busy and

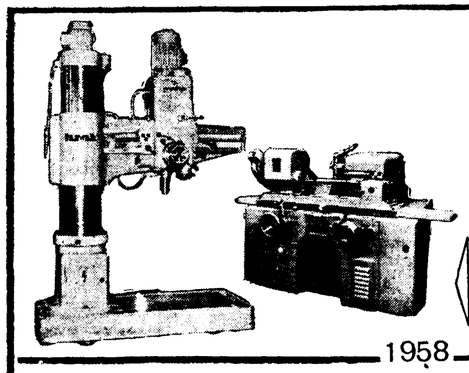
THE PAKISTANI JUTE MARKETS

FIBRE RISES AGAIN

(FROM OUR DACCA CORRESPONDENT)

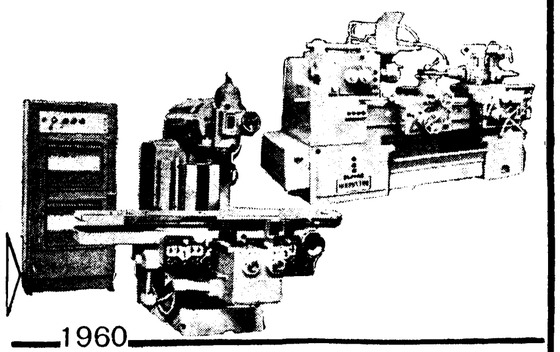
THE market again turned upwards during the past week. The main reason for the latest rise was that arrivals dried up completely. It is suggested that all the jute harvested so far, has been brought into the market, and with the fall in river levels, growers are now harvesting everything they can eager as they are to take full advantage of the high prices.



The quantity of loose jute coming into the market continues to be small. What has been appearing up to now has been poor in quality and extremely wet. As always happens in a low quality crop, it is the higher grade which suffers most so that in white jute Export Heart is a better buy than Export Lightning. This is the position from the consumers' point of view. From the balers' point of view, the percentage of Export Hearts in the crop exceeds 60, and there will therefore be more of it to sell. It is quite likely that the gap between Lightnings and Hearts will increase more by Hearts going down than Lightning going up.

Not much tossa has been seen at present. It would appear, however, that the position would be rather different in tossa. Dundee 4s and Dacca 6s will be practically non-existent. As a result, most of the tossa outturn will be Outport Tossa 2/3s probably as good as last year, but the Outport Tossa 4s will probably tend to be rather weak. Although, therefore, the tossa crop is proportionately smaller, it is quite likely that Outport Tossa 2/3s would be more difficult to sell than Export Lightnings. Therefore, initially, at least it will be offered more cheaply.

In the pucca bales, the market centres around cuttings in spite of small business being done in Export Lightnings. The price of cuttings has once again risen to over £92 f.o.b. in the forward position. The high price of cuttings has enabled balers to keep the sterling price at somewhere near reasonable levels. Perhaps it would be more correct to say that the high price of cuttings has prevented the sterling price of long jute from rising even higher. It is hard to believe that any overseas buyers, even India, can afford to pay these abnormal prices for cuttings. Certainly, it is only local speculators, who are maintaining the level. It is, therefore, reasonable to believe that eventually, cuttings must come down in price, and the most likely period, when it will come down, is January-February-March. This is because of the position in which most business has been done. Secondly, this is about the time when the effects of the sowings of new crop will begin to be felt in the sentiment of the market.



Overseas buyers, who have resisted so effectively so far, are at last beginning to come into the market buying as discreetly as possible. The sellers in the origin are, however, very confident and buyers will have to resist much longer before they can force the prices down.

Except for one or two mills all short-covering have been completed. Despite this and even at rising levels, balers continue to buy which gives an indication of the bullish outlook throughout the market.

REFLECTIONS OF A LIBERAL

The Conscience of a Liberal. By Chester Bowles. (Edited by Henry Steele Commanger and published by Atma Ram and Sons, Delhi 6. Price Rs. 9, pages 351.)

As a speaker and an essayist, Mr. Bowles needs no introduction in India. Professor Commanger has done a really fine job in editing the contents of his speeches and articles. The book broadly covers two aspects: the place of the United States in international political and economic matters and the objectives it has set for itself for achieving a leading position in these spheres.

In the first section, Mr. Bowles discusses the attitude of the U.S.A. towards world problems. He believes that in the eyes of the twenteeth century historians, five "decision areas," as related to U.S policy, will be clearly noted. According to Mr. Bowles, "In two instances, they may say that we failed, in two others that we succeeded; the fifth still hangs in the balance ... First was our tragic failure in 1919 to join the League of Nations and to throw our power and prestige behind a newly won peace in Europe. Second was our equally costly failure, following the collapse of the Manchu Empire in 1911, to understand the revolutionary upheaval in China and its relevance to our future security. Third was our success in meeting the Nazi threat to western Europe. Fourth was our brilliant and decisive reponse to the awesome challenge posed by the postwar economic and political chaos in Europe. Fifth, and finally, is the decision which we face in the 1960's concerning our relations with two-thirds of the people of this world who live in Asia, Africa, the Middle East and Latin America ..." (pp 48-49).

In the second and third sections, Mr. Bowles sketches the pattern of U.S. economic assistance and the relations between the U.S.A. and the developing countries. He makes a case for establishing food banks in India and Pakistan and outlines some aspects of the nature and scope of ideal economic assistance to the underdeveloped world. Section IV is an analysis of the communist challenge. Mr. Bowles says that if Karl Marx were to return, he "would see that in this modern world the old conflict, 'capitalism *versus* socialism', is a make-believe conflict and that the real struggle lies between the forces of freedom and independence and the forces of aggression and suppression." (p. 200.)

The second part of the book deals with the instruments that make the American dream a truism. Mr. Bowles, in this part deals with the economic, political and moral and spiritual responsibilities of Americans to achieve national and international goals. He appears to believe that the concept of liberty should be free from inter-human, inter-colour and international differences.

The book is not a manifesto of a political party. It is a symbolic representation of a free individual, a rational human being and an intelligent diplomat. Mr. Bowles has certainly expressed his views on most of the essential problems in an understandable way, and the book bears testimony to the *Conscience of a Liberal* and of course obviously it is at variance with *The Conscience of a Conservative.*

RAISING PRODUCTION

Towards Greater Production and Productivity. (A symposium organised by the Forum of Free Enterprise. Published by Popular Prakashan, 35C Tardeo Road, Bombay 34. Price Rs. 2, pages 136.)

This is a pocket-book containing seven articles on the following subjects: forms of business organisation, personnel management, financial management, marketing, decision-making, industrial relations and materials management. The contributors are by no means experts in the academic sense, but most of them seem to be experienced in their own fields. It will be apt to call this "A Pocket Book of Management" or a title nearer to this sense. It is by no means a pioneering treatise on modern management, but it provides a useful introduction to some aspects of the complicated science of business management.

So the attempt of the Forum of Free Enterprise has to be appreciated. But the Forum should address itself to a broader scope than this book provides for. Each branch of management science (or art, if one prefers to call it so) has to be tackled by a dozen pioneer practitioners and the theories have to be appraised with available practices. A series of discussions may ultimately result in a useful schedule of objectives, instruments to achieve them, performance standards and so on. It is this schedule that will be useful to practising managers here and elswhere. The get-up and print are good.

COMPANY AND PUBLIC NOTICES

THE BISRA STONE LIME COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of THE BISRA STONE LIME COMPANY LIMITED will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta 1, on Monday the 28th September, 1964 at 11-15 in the forenoon for the following purposes:—

1. To consider the Profit and Loss Account of the Company for the year ended 31st March, 1964 and the Balance Sheet as at that date together with the Directors' and Auditors' Reports thereon.
2. To declare Dividend recommended by the Directors.
3. To appoint Auditors and fix their remuneration.

Special Business

4. To appoint a Director in the place of Sir J. J. Ghandy, who retires by rotation, and, being 68 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him. And in this connection to consider and, if thought fit, to pass the following resolution of which Special Notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company from a shareholder and the relative explanatory statement concerning which, as required by section 173 of the said Act, is appended.

   "THAT Sir J. J. Ghandy who has attained the age of 68 years and who retires from the Board by rotation be and is hereby reappointed a Director of the Company whose period of office would be liable to determination by retirement of Directors by rotation, and it is specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

5. To consider and, if thought fit, to pass the following resolution of which the notice prescribed in Section 257 of the Companies Act, 1956, has been given to the Company by a member:—

   "THAT Mr. S. K. Nanavati be and is hereby appointed a Director of the Company, whose period of office will be liable to termination by retirement of Directors by rotation."

6. To consider and, if thought fit, to pass the following resolution which will be proposed as special resolution of which special notice as prescribed in Section 261 of the Companies Act, 1956, has been given to the Company by a member in the following terms:—

   "Special notice is hereby given of intention to propose the under written special resolution at the Annual General Meeting of the Company to effect the appointment of Mr. D. A. Workman, an officer and employee of the Managing Agents, Messrs. Bird & Co. (Private) Limited in circumstances that Sections 190 and 261 of the Companies Act, 1956, are attracted".

   (As a Special Resolution)

   "THAT Mr. D. A. Workman, who is an officer and an employee of Bird & Co. (Private) Limited, the Managing Agents of the Company, be and is hereby appointed a Director of the Company, whose period of office is liable to termination by retirement of Directors by rotation".

7. To consider and, if thought fit, to pass the following resolution which will be proposed as a special resolution:—

   "THAT the provisions of the Articles of Association of the Company be altered in the manner following, that is to say:—

   (a) That in Article 92 (line 8) the words "and such one of them as from time to time shall be named by the Managing Agents shall be Chairman of the Board", be and are hereby deleted.

   (b) That Article 116 be and is hereby deleted and that the following new Article 116 be substituted therefor:—

   116. The Directors may elect some one of themselves to be Chairman of the Board to preside over their meetings and determine the period for which he is to hold office. If no such Chairman is elected or if at any meeting the Chairman is not present at the time appointed for holding the same, the Directors present shall choose some one of their number to be Chairman of such meeting".

The Share Transfer Register of the Company will be closed from the 14th to the 28th September, 1964, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Registered Office
Chartered Bank Buildings,
Calcutta, 27th August 1964.

NOTES:

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself.

A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after the 10th October, 1964, to those Shareholders so entitled whose names appear in the Company's books on the 28th September, 1964, or to their mandatees. No application for Dividend Warrants will be necessary.

(c) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the special Business set out above, are being sent to the members.

The Rs. 200 million Birla-Kaiser aluminium project at Renukoot, near Rihand, in U.P., has, since December 1962, attained and surpassed the initial target capacity of 20,000 tonnes per annum. While the Renukoot plant is already the biggest integrated aluminium manufacturing complex in India, Hindalco is forging ahead with its programme of rapid expansion, for raising the primary aluminium capacity to 60,000 tonnes per annum (and to provide fabrication facilities totalling 37,000 tonnes per annum), to help the country's fast growing industries in their march towards progress and prosperity.

EXCESSIVE MONEY SUPPLY CAUSES INFLATION

As was to be expected, the observations on the prevailing inflationary situation made by Mr. P. C. Bhattacharyya, Governor of the Reserve Bank, in his address at the annual dinner of Bombay bankers last week, merely echo the views of the Central Finance Ministry. He has said precious little about the causes of the present economic malady. There is no doubt that excessive money supply—it has been growing at the rate of about 15 percent a year—is one of the most potent causes of inflation. The Reserve Bank has so far adopted only half-hearted measures to restrain the excessive liquidity in the economy. A careful scrutiny of credit supplies to the public and private sectors shows that the bulk of them has been used by the former. Even after allowing for the increased outlays on defence and the plan, there is little doubt that the Government is spending its resources wastefully. Considerable sums have been frittered away on unproductive activities which could have been cut out without any difficulty. Although the Central Finance Ministry is making efforts to cut the Government's expenditure by Rs. 70 crores during the current financial year, the reduction is obviously far too small in the context of the total revenue expenditure of Rs. 2,041 crores. So Mr. Bhattacharyya has little reason to praise the Central Government for the proposed cut. The State Governments have no doubt been asked by the Centre to reduce their expenses in line with the latter, but judging by their large overdrafts from the Reserve Bank, it looks that they are not serious in putting a brake on their spending spree.

Unless the Central Government's expenditure is slashed substantially—much more than Rs. 70 crores—excessive money supplies will continue to be poured into the economy. The need to curtail Government expenses has become all the more urgent because of the poor prospects of an increase in agricultural and industrial production during the current financial year. So the move of Mr. Lal Bahadur Shastri, Prime Minister, to shift the emphasis on planning deserves prompt attention. There is obviously no point in allocating funds for those projects which have not yet been undertaken or which are unlikely to be productive in the near future. It is far better to concentrate on making fuller use of existing capacities and on completing the projects which are already under way.

As far as credit supply to the private sector is concerned, there is little evidence to show that it has been excessive. The Reserve Bank is regulating the supply of bank credit to the private sector through selective controls. In view of the Bank's policy to make money steadily dearer for the private sector, industry and trade have been spontaneously restrained from borrowing overmuch. Although the Reserve Bank has had to make changes in its selective credit controls, they have not been quite effective. Inflationary pressures, for example, have been aggravated since the Bank began to tighten its credit policy from March this year. Its supply of credit to commercial banks has not dropped in spite of an increase in the lending rates under the tier system. But as a result of costlier credit, industrial costs have gone up. Mr. Bhattacharyya is no doubt right in saying that easy credit is not the "providential power that solves the difficulties of industrial growth." But he lacks the boldness to say that industrial growth is being hindered by the unrealistic fiscal policy of the Government. If factors like the shortages of raw materials, foreign exchange, transport and power continue to affect the economy, fears of an excessive expansion in the supply of credit to the private sector are clearly exaggerated.

It is interesting to look at the causes which have led to the failure of the Reserve Bank's monetary regulations, although the entire blame for the failure cannot be laid at its door. The existence of a large and active unorganised monetary sector has rendered the Bank's regulations ineffective. In fact, the restraint on the supply of bank credit, combined with the rise in interest rates, has imparted more vigour to the unorganised sector. The supply of credit, particularly in the rural areas, is still largely in the hands of indigenous bankers. The large sums of money pumped into the rural economy through co-operative institutions have unfortunately flowed into the hands of unscrupulous people and have not helped agricultural production much. It is possible that farmers have begun to hoard commodities because of the addition of this windfall cash to their kitty. This apart, the large volume of "unaccounted money" has accentuated inflation by increasing the holding capacity of hoarders. Unless the Government takes strong measures to bring out the unaccounted money, the economy will continue to suffer big strains and stresses. It is relevant to point out that the piling up of unaccounted money has been greatly encouraged by heavy taxation. Recently, the banking community has pointed to the growing prosperity of indigenous bankers, who have begun to spread their activities to the urban sector. Considering that the enforcement of a larger liquidity ratio for banks from the middle of this month is likely to put a further brake on the supply of bank credit, the activity of indigenous bankers will receive a fresh boost.

It has been awkward for Mr. Bhattacharyya to ask banks to retreat from term industrial financing because it is the Reserve Bank which exhorted them to undertake this sort of financing some time ago. It is rather odd that the Reserve Bank has discovered at this late hour that it is not a sound banking principle to block short-term deposits in long-term loans. Although the theory is impeccable, there is no harm if bankers undertake term industrial financing after a certain stage of development. Some Indian banks are believed to have reached that stage. Industrial financing will not only enable banks to diversify their activities, but also help them to gain useful knowledge and experience about industrial borrowers. In any case, industrial term lending by banks has so far been moderate and is likely to remain so. Since the capital markets have been depressed, term lending by banks has served to sustain industrial growth. It should be remembered that industries do not seek loans unless they are forced to do so, because

of the high rate of interest. Judging by the equity-debt ratio of companies, it is clear that the bulk of them have not exceeded the permissible ratio of 1:2. It will be readily conceded that the establishment of the Industrial Development Bank will go a long way towards improving the borrowing facilities of industries. But Mr. Bhattacharyya does not stand on strong ground in suggesting that borrowing companies should replace their term loans from banks by issuing debentures. The move is not likely to be as easy as it appears because the response to debentures carrying even a high rate of interest has not been encouraging in recent months. Although the Unit Trust of India is expected to support debentures, it will do so only if the debenture-issuing company is a dividend-paying one. It should be remembered that a large part of medium-term industrial finance has been used to help new companies which are not expected to pay dividend for some years. He has also discouraged the banks from underwriting new issues. It may be pointed out that under the present circumstances, underwriting by banks is rather necessary. Since professional underwriting has not yet grown sufficiently in this country, only banks which are in close touch with the working of industries are competent to fill the gap. In any case, underwriting constitutes only a small part of the total business of a bank.

As for deposit mobilisation, Mr. Bhattacharyya has rightly called for rethinking on the part of banks. Although deposit interest rates were generally raised from about the middle of August 1964, there is need for a further adjustment. On call money, for instance, the banks are probably paying a higher rate of interest than is warranted. Some short-term funds are bound to stay in banks irrespective of whether the deposit rate is high or low. So it will be economic to hold down the interest rate on these funds. But it may be worth while for banks to consider whether larger funds can be attracted by offering more attractive interest on deposits for longer periods. An increase in the interest rate seems necessary considering the competition for deposits from non-banking institutions. In the meantime, banks should expand their activity by opening new branches. Greater emphasis should be placed on improving banking services. It is unfortunate that most of the banks have been apathetic towards improving their service to customers.

PROTECTION FOR ALUMINIUM

THE Indian aluminium industry has been enjoying protection for over 15 years, during which period it has made substantial progress. The development has been particularly marked over the past few years. The installed capacity has increased from 17,800 tonnes in 1960 to 53,800 tonnes in 1963 and production during the period has risen sharply from 18,247 tonnes to 55,223 tonnes. As for semis, there are now 11 manufacturers in the organised sector, including two primary producers, and their aggregate installed capacity has increased from 19,000 tonnes in 1960 to 26,200 tonnes in 1963. Production of sheets and circles during this period has gone up from 15,788 tonnes to 21,350 tonnes. There is only one unit at present for manufacturing aluminium foils and container sheets. It has raised the capacity of its foil-making plant from 2,000 tonnes in 1960 to 3,000 tonnes now. The capacity of its container sheet plant, however, continues to be 1,200 tonnes. The production of foils increased from 2,426 tonnes in 1960 to 2,578 tonnes in 1962, but declined to 2,420 tonnes in 1963. The output of container sheets has risen from 657 tonnes to 881 tonnes between 1960 and 1963. Besides the expansion which various units have already completed, licences have been granted for an additional capacity of 60,000 tonnes of ingots, 22,860 tonnes of rolled products and 4,200 tonnes of foils. These capacities are expected to materialise within the next two years.

As the present scheme of protection is due to expire at the end of this year, the Government has asked the Tariff Commission to examine the question of continuing protection beyond 31st December, 1964. The industry has pleaded for continuation of protection on the ground that it is still in a developing state and its production costs are bigger than those in the competing foreign countries because of the high cost of electric power, raw materials and railway freight. The primary producers have also urged that they should be allowed to effect a substantial increase in their fabricating capacity as the profitability of their venture depends not on the sale of ingots but on fabrication. The primary producers are now asked to roll or fabricate only 30 percent to 40 percent of their ingot output which is considered to be quite inadequate. This, however, has been strongly opposed by the small re-rollers on the plea that they would virtually have to go out of business if primary producers were allowed to increase their fabrication facilities in a big way.

Opening the public enquiry into the question of continuing protection for a further period of time, the chairman of the Tariff Commission, Mr. M. P. Pai, referred to the progress which the industry had made under protection. He stated that in the next two years, the installed capacity for ingots was expected to be doubled, and if the schemes now under contemplation materialised, the capacity would be about 200,000 tonnes in another five years. Mr. Pai expressed the hope that in view of the increasing demand for this versatile metal, the industry should try to exploit the natural resources available for its growth, raise its efficiency through improved techniques and reduce the cost of production. He said that the Commission had estimated domestic demand for aluminium at 45,000 tonnes in 1960 which was expected to go up to 74,000 tonnes in 1963. The apparent consumption of aluminium calculated on the basis of domestic production and imports was 45,827 tonnes in 1961, 72,846 tonnes in 1962 and 81,136 tonnes in 1963. As for future demand, the Directorate-General of Technical Development had estimated it around 115,000 tonnes in 1964, 125,000 tonnes in 1965, 145,000 tonnes in 1966 and 170,000 tonnes in 1967.

The representative of D.G.T.D. has indicated during the course of the public enquiry that future aluminium plants in the country will have an annual ingot capacity ranging between 25,000 tonnes and 30,000 tonnes so as to ensure maximum economy in costs. But according to western norms, the capacity suggested is rather small to be considered economic. By U. S. standards the minimum economic size of a smelter is 100,000 tons while in Europe it is 30,000 tons. The manufacturers' representatives have pleaded that the concessional duty on imports of alumina should be continued beyond December 1964. They said that the import of this item could not be stopped, as there was a time lag between the commissioning of smelter capacity and alumina plants. The industry has urged that the manufacturers should be given better facilities for prospecting bauxite—the main raw material. As things stand at present, the States concerned have reserved the prospecting rights to themselves or have leased them out to others not concerned with the aluminium industry.

The industry has also drawn attention to the lack of uniformity in power rates in different States. For the aluminium industry, power is a major input and widely varying rates can make much difference to the production costs of the various units. The chairman of the Tariff Commission pointed out that the Commission had no power over the actions of the State Governments or the State Electricity Boards. He informed the industry about the 10 percent reduction in the railway freight for alumina; the industry, however, wants the freight on alumina to be the same as on other raw materials such as pig iron. The plea made by a Bombay firm and the Madras Government that protection should also be granted to other semi-manufactures like extruded rods, sections, pipes, tubes, etcetera, did not find favour with the Commission. It pointed out that there was hardly any need for this as the industry was enjoying protection for aluminium in any crude form (ingots, bars, blocks, slabs, billets, etcetera), for manufactures (plates, sheets, circles, strips, foils, etcetera) and for all non-ferrous alloys, the contents of which were more than 97 percent of aluminium.

PAYMENTS DEFICIT IN U.K.

A FEW weeks before the general election, Britain's Chancellor of the Exchequer felt obliged to make a special appearance on television to discuss the financial position. "I certainly would not accept the use of the word 'crisis'", Mr. Reginald Maudling said. He knew, of course, that others were using that word. Vague anxieties had been sharply defined by a forecast of the National Institute of Economic and Social Research that Britain's payments account would show a deficit for this year of the order of £500 million—more than double the figure estimated a few months before. A substantial deficit for 1964 was visualised in the Government's plan for expanding the economy, and it is arguable that if the deficit is to be offset by international borrowing and by drawing on reserves a difference of between, say, £200 million and £500 million is only one of degree and requires no change of policy. But a basic assumption of that policy is that the deficit is temporary, so that borrowing will be easily repaid and reserves will be gradually restored. The National Institute has, however, predicted an additional deficit of more than £300 million next year.

A two-year deficit exceeding £800 million is equivalent to most of the sterling area's gold and currency reserve. A normal procedure for supplementing reserve when current payments and long-term capital flows produce a deficit is to attract short-term funds from the United States and Europe, but this procedure is not now practicable: high rates would have to be offered to cover the imagined risk of devaluation of sterling and to attract scarce funds from Europe, and an intention to raise rates appreciably in Britain would be officially opposed in the United States. An alternative, and recently very effective, support for the reserve is other sterling countries' surplus earnings held in Britain; but the recent forecast of an adverse change in Australia's balance of payments has confirmed London's belief that these sterling balances will soon be drawn down. Britain cannot permanently rely on expedients, whether acts of policy (such as borrowing abroad) or general economic forces (such as strong commodity prices that bring prosperity to primary producers in the sterling area). She must recognise that the deterioration of her finances is caused by defects in her economy, and she must make appropriate adjustments. The National Institute laid the blame squarely on Britain's exporters, thus rejecting the facile official explanation (subsequently modified by Mr. Maudling himself) that the payments deficit reflects simply the normal growth of imports in the early phase of economic expansion.

The National Institute foresees "the old dilemma", between direct action on the balance of payments and restriction of the whole economy. It implies that the whole "experiment" in continuous growth is in jeopardy. But economic as well as political opinion in Britain is now almost totally opposed to "stop-go" policies. The comparison with the critical situation of 1961 is too close to be comfortable, but it is not forgotten that the drastic restraints imposed by Mr. Selwyn Lloyd, Chancellor of the Exchequer at that time, deflated a boom that was already weakening and delayed the needed modernisation of British industry. Modernisation is still too slow, despite favourable trading conditions and generous tax allowances for new plant; and the current boom is probably as vulnerable as that of 1961. In the present near-crisis, the concept of continuous expansion is being developed rather than modified. The new idea is to make expansion work properly. Inflation is, of course, impermissible; but, although wage costs must (as always) be watched, there is no evidence of general "overheating" in the British economy. The fast growth of imports of manufactures and slow growth of exports of manufactures are, together, strong evidence that industry is not fully competitive; but this is a condition of debility, not of overexertion. In less than a year the nation's growth-rate has apparently declined from around 6 percent to below 4 percent a year. In the opinion of the National Institute, the inadequacy of exports has retarded growth. Britain's present growth-rate is adequate in her present circumstances, but it is not excessive. What is needed is not deflation to squeeze out more exports, but a marginal diversion of trade from the domestic to the export sector and of domestic demand from imported to home-produced goods. More simply, British industry must compete more effectively both abroad and at home.

Some observers, most vociferously the Federation of British Industries, assert that the required expansion of British exports has merely been delayed and is in fact beginning. A survey of the situation in the current quarterly *Review of Barclays Bank* concludes that "a significant rise in U.K. exports is possible; demand in overseas markets is generally strong and should remain so for some time, and U.K. costs are competitive". Other observers are more sceptical. Mr. Harold Wincott, editor-in-chief of the *Investors Chronicle* writing in the *Financial Times*, has pointed out that export prices of British manufactures have risen much more than competitors' in recent years (significantly, "not least since 1961"), despite bigger wage-increase abroad, and he has alleged that "delusions of grandeur ... have led to the most colossal waste of Britain's investment resources and dispersion of the effects." The symptoms are variously diagnosed, because the malady is complex. Devaluation of the currency would not cure it. The economy is like a machine with an inefficient engine. To "tune" that engine to efficiency a mechanic adjusts every part of it. Britain can begin a comparable process by eliminating the waste in her military spending abroad and the waste (of which examples are numerous) in her industry's employment of labour.

Current News and Comment

Progress of World Bank and Affiliates

The 1963-64 annual reports of the World Bank and its affiliates, the International Development Association (I.D.A.) and the International Finance Corporation (I.F.C.), presented last Monday at the annual meeting of the board of governors in Tokyo by Mr. George D. Woods, president of the three institutions, show that for the second year in the Bank's history, economic development commitments were made in excess of $1,000 million in loans, credits and investments. The total comprised $810 million in Bank loans, $283 million in I.D.A. credits and $21 million in I.F.C. loans and equity commitments. Two developments have been responsible for the higher levels of activity by the I.D.A. and the I.F.C. Formalities have been completed for the replenishment of the I.D.A.'s resources through new contributions from 18 of the wealthier nations to aggregate more than $753 million. The new funds will be payable to the Association over a period of three years, instead of five, as in the case of the original subscriptions. By the time the replenishment of the I.D.A.'s resources became effective towards the close of the fiscal year, the Association had committed virtually all of the funds available to it up to that time, totalling $782 million. As the annual report indicates, the figure will rise to $1,540 million when all replenishment contributions have been made.

The governors also had before them a proposal to amend the articles of agreement of the Bank and the I.F.C. to make it possible for the former to lend to the latter for relending to private industry in the less developed countries. The Bank itself is not authorised to lend directly to private companies except with a guarantee by the host government, which private entrepreneurs often hesitate to seek or accept and governments are often reluctant to grant; the I.F.C. neither seeks nor accepts government guarantees. If the proposal is approved, the I.F.C.'s potential for stimulating the development of private enterprise will be substantially expanded, since it would be empowered to borrow from the Bank not more than four times its capital and surplus. The I.F.C. would thus have access to additional resources to increase its present activities, to make loans with no equity features when appropriate, and to enter into larger commitments than its present resources permit.

The annual report for the World Bank and the I.D.A. lists 37 Bank loans and 18 I.D.A. credits in 34 countries. As in other recent years, the heaviest volume of lending was in Asia and the Middle East, which accounted for more than $527 million. Total loans and credits in the western hemisphere were approximately $269 million, in Europe $145 million, in Africa $111 million and in Australasia $40 million. Most European lending was in Portugal, Spain, Yugoslavia, and in three Scandinavian countries. The Bank's 37 loans included its first loans in eight countries: China, Liberia, Malta, Mauritius, New Zealand, Portugal, Spain and Tunisia. The I.D.A. had four new borrowers during the year: Ecuador, Niger, Syria and Tanganyika.

Transportation again took the largest amount in both the Bank's loans and the I.D.A.'s credits, for a combined total of more than $420 million, but electric power was a close second with $375 million, followed by industry with $163 million, water supply $55 million, agriculture $42 million, telecommunications $19 million and education $18 million. The I.D.A. made its first loan of a new type during the year. It was not for a specific project, but to make it possible for major capital goods producing industries in India to import components and materials essential to the full-scale operation of existing plants. The executive directors also confirmed the principle that the Bank or the I.D.A. should be prepared to finance part of the local currency cost of high-priority projects if lending for direct imports alone would not provide adequate support.

The annual report of the International Finance Corporation records larger commitments in more countries than in any previous year. The I.F.C.'s investment commitments for the year amounted to $20.8 million and its all-time total passed a milestone, reaching $111 million, or more than the total of the Corporation's subscribed capital. The I.F.C. made its first commitments in five countries—Honduras, Malaysia, Nigeria, the Sudan and Turkey—widening the geographic diversification of its portfolio to include investments for projects in 29 countries on six continents. It continued to invest in industrial finance companies, making seven commitments to such enterprises in as many countries. The Bank also made loans to three of the seven companies, and two of the I.F.C.'s investments were in companies which already had received loans from the Bank and the I.D.A. Five countries joined the I.F.C. during the year, raising its membership to 78.

Government and Business: A Partnership

The U.S. Ambassador to India, Mr. Chester Bowles, delivered a thought-provoking speech on "Business and Society" at the All India Management Association seminar in Calcutta last week. When one studied the problem of economic development in Asia, Africa and Latin America, Mr. Bowles said, one was struck by a paradox: to achieve the goal of rapid economic growth, new governments badly need the capital, technology and management skills of modern business organisations, while business urgently needs the goodwill, understanding and support of the government. Yet the government and business in newly independent countries often appeared to be engaged in a kind of cold war, each suspecting and fearing the other, and each diffusing or even blocking the contributions of the other to the general welfare. But if the developing nations are to achieve the desired rate of economic growth, this crisis of confidence must be overcome. Without criticising the Government of India's policies on industry and trade, which as a responsible diplomat he could not do, the U.S. Ambassador suggested how peaceful co-existence might be ensured between the Government and business in this country. Mr. Bowles was unable to understand why the relations between the two should not be better than they were at present. In Japan, as in the western democracies, this reconciliation has, in fact, occurred; and the result is not only a rapid growth of industrial and farm output in the free enterprise economies, but also the sharing of that output among the people. Although Mr. Bowles has not explicitly said so, one of the reasons why the tempo of economic development here has been retarded is the ideological predilection of the Government, which wants to usher in a socialist pattern of society, no matter whether it is able to discharge all its responsibilities efficiently. The draconian legislation that has followed to achieve this goal and the controls which have been imposed have hamstrung the activities of private entrepreneurs, who are naturally suspicious about the Government.

The position is different in other countries. Mr. Bowles himself recounted how rapid economic progress had been achieved in the United States, West Germany and Japan through co-operation between the Government and business. In the United States, mass production, high wages and comprehensive social legislation have resulted in unparalleled prosperity for the large majority of American citizens and in the equitable distribution of wealth through democratic means. By and large, business—not only in America but throughout the western democracies—has become a "national resource", a partner in raising living standards and the primary factor of economic growth. In West Germany also, the dramatic recovery after the second World War can be ascribed in large part to a co-operative relationship between the Government and the entrepreneur. The country had the advantage of a skilled work force, but its capital resources had been largely destroyed during the war. The German Government, therefore, invested heavily in an extensive public sector which provided the essential ingredients for the recovery of private enterprise. As the private sector gathered strength, the West German Government sold its public-sector enterprises—among them the famous Volkswagen Company—to responsible private interests. With a sustained annual growth rate of 10 percent, Japan provides another shining example. The sharp rise in production there has been largely due to the efforts made by the Government. One could also cite the examples of Mexico and Greece, with sustained growth rates of 6 percent a year, or France which has maintained a steady growth of 5 percent.

There are four conditions, according to Mr. Bowles, which must be fulfilled if democratic countries want to ensure rapid economic progress. Firstly, the relationship between the factory and the farm should be improved. Secondly, attitudes and practices concerning investments and profits must be changed. Thirdly, governments in developing countries should not attempt to regulate business too minutely. Finally, government should be clear about its own entrepreneurial rôle, and business should be clear about the need for government direction and planning. Business needs enlightened liberal government and government needs enlightened private enterprise. In the nature of things, neither can do without the other.

A Good Cotton Season

The 1963-64 cotton season which ended with August, was notable in many ways, perhaps the least for the unfortunate payments crisis in the Bombay futures market. The crisis was the first of its kind for over a decade, and it resulted from the keen bear-bull tussle in the August contract as well as the mishandling of the situation by the market authorities including the Forward Markets Commission. But for certain restrictions on the movement and consumption of Vijay and Digvijay cotton for a short while, the trade and industry enjoyed full freedom in their operations; there were very few instances of compulsory survey and requisitioning. The industry had no difficulty in securing its raw material, but it had to pay near-ceiling prices for good quality cotton. Growers got good prices for their produce; cotton prices, although generally below the ceiling, kept well

above the levels obtaining for more than a decade. What is more, the cotton crop set a new all-time record at 6.15 million bales, which became possible mainly because of the almost ideal weather conditions during the season and perhaps partly due to the efforts made by the Indian Central Cotton Committee to help increase production. The export trade too had hardly anything to complain about the Government's policy which continued to be very helpful. If the export performance during 1963-64 has been somewhat less encouraging than in the preceding season, notwithstanding a larger crop of Bengal Deshi, the Government's policy had nothing to do with it.

The 1963-64 season started with a carryover of 2.24 million bales, comprising 2.025 million bales of Indian cotton and 213,000 bales of foreign cotton. The season's crop is estimated at 6.15 million bales. In spite of the foreign exchange difficulties, the Government allowed the import of 720,000 bales which is only slightly less than the preceding season's allocation of 793,000 bales. Arrivals during the 1963-64 season are placed around 750,000 bales. All this adds up to a total supply of 9.113 million bales. On the basis of consumption figures for the first ten months, total mill offtake for the season is estimated around 5.4 million bales of Indian coton and 600,000 bales of foreign cotton, making a total of 6 million bales; this represents an increase of over 300,000 bales, compared with the 1962-63 season. The increase occurs despite a fall of about 280,000 bales in the consumption of foreign cotton. Exports are placed around 275,000 bales. Allowing for an offtake of 75,000 bales by *Ambar Charkhas* the total disappearance works out to 6.35 million bales. Thus the season ends with a considerably larger carryover of 2.763 million bales, comprising 2.425 million bales of Indian cotton and 338,000 bales of foreign cotton. This is sufficient to meet the industry's requirements for about five months, whereas the new crop movement will get into full swing by about the middle of November, that is, within two-and-a-half months of the beginning of the new season. The current (1964-65) cotton season is thus off to a good start. Prospects for the new crop seem quite promising. Barring certain cotton producing tracts in the Punjab and Surat district, which have had excessive rains and are urgently in need of bright sunshine, weather conditions so far have been very satisfactory. On current indications, the new crop is likely to set a new record, unless, of course, the weather turns unkind. One can never take a definite view of the cotton crop until about the middle of October. Meanwhile, the Government of India has followed up its liberal export policy for Bengal Deshi with the abolition of the export levy of Rs. 25 a bale. This should stimulate overseas demand, especially from Japan.

Third Plan for Pakistan

The guidelines for Pakistan's third plan, prepared by the country's Planning Commission, has recently been endorsed by the National Economic Council. The plan is quite ambitious, its main objective being to increase the national income by 30 percent at the end of the five-year period. The Pakistani Planning Commission, which is currently working on a perspective plan for the country, aims at tripling the national income by 1985 and doubling the *per capita* income during the same period. Unlike India, which aims to bring about a socialist pattern of society, Pakistan has so far refrained from committing herself to any definite ideological stand. This is presumably because she wants to secure liberal foreign aid in implementing her third plan porgrammes. The plan is likely to cost Rs. 5,200 crores, against the original estimate of Rs. 4,950 crores. An analysis of the resources position shows a shortfall of Rs. 700 crores. But it is still difficult to say whether the country will bridge the gap by imposing more indirect taxation, which will inevitably add to the inflationary pressures, or raise the rates of direct taxation which may cause a slump in the stock exchanges. The third plan also aims to remove the regional unbalances between East and West Pakistan. President Ayub Khan, it will be recalled, recently conceded the need to equalise the economic benefits between the two regions. In the second plan, East Pakistan's share in investment was only 41 percent, but this has now been raised to just over 50 percent with the declared aim of reducing the disparity in the *per capita* income by one-fifth during the third plan period. The reduction of regional unbalances is obviously intended to meet the growing discontent in East Pakistan.

The financial provisions of the third plan shows that of the total outlay, about Rs. 2,800 crores will be earmarked for the public sector and Rs. 700 crores for the private. The plan document shows certain departures from the previous pattern of allocation. Higher priorities are being given to basic industries, technical education, transport and health. Meanwhile, the Pakistani Plannnig Commission has taken up a number of studies in the economic and technical spheres to provide the basis for the detailed framework of the plan. In addition, the Government has set up a taxation and tariff commission to study the measures, which could be taken at the Central, provincial and local levels, for mobilising additional resources for the third plan.

Like India, Pakistan is also facing the problem of growing unemployment. Over the quinquennium 1965-70, the country will have added about 5 million to its labour force, but the third plan visualises an employment target of only 4.5 million. This apart, ambitious targets have been fixed for other sectors of the economy. For example, efforts will be made to strengthen the balance of payments by increasing exports to an annual level of Rs. 400 crores by 1970, compared with the existing annual earnings of Rs. 250 crores. Measures will also be taken to increase farm productivity and to expand the purchasing power in rural areas through a massive works programme. This apart, steps will be taken to arrest the growth of population. In spite of these measures, the success of the third plan will depend on many imponderables. Pakistan was singularly lucky in getting a series of good harvests during the second plan which boosted her farm output and the national income. Nobody can say that the same fortuitous combination of circumstances will help her to achieve her third plan targets.

Power Supply and Demand

The second all-India power survey, recently published by the Central Electricity Authority, is a useful document, although not detailed enough on all relevant points. It shows that the estimated aggregate installed capacity will have gone up to 10,924 MW by 1965-66, which will be still short of the third plan target of 11,270 MW, but not substantially short. (The installed capacity in the survey is defined as the sum of the maximum continuous ratings of all installed generating equipment). The total capability of the power systems is, consequently, placed at 9,434 MW, capability being defined as the maximum kilowatt output ability of the system at the time of peak load with all power sources available with no allowance for outages, and (for systems with hydel installations) with sufficient kilowatt hours available to supply the energy requirements of the system. This capability must provide for scheduled maintenance, emergency outages and system-operating requirements, in addition to the estimated load and any unforeseen load. Estimates of both installed capacity and capability for the four years from 1964-65 to 1967-68 cover the plants already installed, under construction or sanctioned.

The peak load (that is, the maximum simultaneous ultimate customer demand that occurs during the fiscal year as measured by actual deliveries at bulk power sources) is estimated at 8,052 MW in 1965-66. The gross margin, which represents the difference between capability and peak load, is placed at 1,382 MW, representing 17 percent of the total installed capacity. Since the gross margin has to be of a magnitude sufficient to provide for scheduled maintenance, emergency outages and system-operating requirements, it is possible that this accounts for the apparent "surplus". The survey should have made this point clear.

The forecast of "energy required" made in the survey is strictly not a demand estimate. The forecast refers only to "the possible aggregate energy consumption at the estimated lecel of actual power deliveries of ultimate consumption". The real demand for power may be much greater, and there is already substantial unsatisfied demand, in spite of what the national aggregate figures may show. An important point from the economic point of view, however, is the growth in the load factor, indicating a greater use of plant capacity. According to the survey, the annual load factor in India stood at 63 percent in 1963-64, but it will drop to 61 percent for the period 1964-67 and then to 60 percent in 1967-68. Even so, an annual load factor of 60 percent compares well with the 50 percent in the United Kingdom. Another important point stressed in the survey is the need for integrating the power systems in the country. The process has already begun by dividing the country into five regions, which will be followed by a super national grid in due course. The economic advantages of integration are all too plain It will save much capital cost by eliminating the need for large standby capacity and additional power plants.

The survey has added a useful chapter on the country's programme to make heavy electrical equipment and boilers. The firms making these equipment at present are the various units of the Heavy Electricals Ltd, ACC-Vickers-Babcock in Durgapur and the Thapar-Stein Muller Boiler Company in Adityapur, Bihar. The Heavy Electricals factories have planned to make hydro-turbine and generators of large capacity—from 48 MW in 1964-65 to 1250 MW in 1970-71, but this will still be below the ratcd capacity. The boiler manufacturing programme is designed to produce plants with a steam raising capacity of 975,000 kilograms an hour in 1966-67 to 4.06 million kilograms an hour in 1970-71. The production of power transformers of 60 kV and above is likely to go up from 2 million kVA in 1964-65 to 6 million kVA in 1970-71. Other items of heavy electrical plant to be manufactured by the Heavy Electricals Units are switch-gears of 66 kV and above and synchronous condensers. India's capacity for making heavy electrical equipment will grow with years, although she cannot possibly attain self-sufficiency in the forseceable future. But to the extent that this country will be increasing its capacity to make these equipment, its ability to generate power on a large scale will grow.

MUNICIPAL BORROWING

IN their review of the Calcutta Municipal Administration Report, the Special Committee recommend the Corporation to lose no time in obtaining an authoritative opinion as to the extent of their borrowing capacity. They state that if the figures in the departmental report are correct, the borrowing capacity of the Municipality on the 31st March was only Rs. 5,32,700, taking the interest at 4 percent and he Sinking Fund at 1 percent and they point out that Rs. 5 lakhs of this have already been used up in the current year. This, if the Committee are correct, is a position of a "most serious and disquieting nature," for it means that the Corporation have come to the end of their tether. Commenting on the review on Friday last, the Chairman of the Municipality said :—I regret that the question of the borrowing capacity has been given prominence in the Special Committee's Report. The point is a simple one. Section 131 limits the borrowing capacity of the Corporation by providing that the sum payable annually for interest and for the maintenance of Sinking Fund "as hereinafter prescribed" shall not exceed ten percent on the annual value of buildings and land. The Sinking Funds are defined in sec. 133 as being Funds for the repayment of debenture loans. The interest and Sinking Fund payments in the year under review amounted to Rs. 19,66,465 while the annual value of buildings and land was Rs. 2,48,08,465. Ten percent on the latter sum is Rs. 24,80,846, so that the interest and Sinking Fund charges were still short of the statutory maximum by Rs. 5,14,381, a sum sufficient to serve a loan of Rs. 102 lakhs at 4 percent interest and 1 percent Sinking Fund. This sum therefore represents the borrowing capacity of the Corporation on the 31st March, 1904. In their calculation the Committee assume that the charges for the maintenance of Sinking Funds in section 131 include all sums set aside for reayment of loans whether debenture loans or other, and for this review I submit there is no warrant to the law. It may suit the Chairman to autocratically lay down the law in this manner, but it must be borne in mind that the Committee included two learned counsel, and two level-headed business men. The interpretation of the Act is, therefore, not quite so simple as the Chairman appears to think.

A Ditcher's Diary

POETIC JUSTICE IS BY NO MEANS A LAW OF NATURE; but it is difficult not to feel that there is more than an element of it in the recent ordeal of the Congress Party in Kerala. I never understood why the charges against Mr. Pratap Singh Kairon, still unpunished, were referred to a former Chief Justice while those against Mr. R. Sankar were examined by the late Prime Minister himself; I think I recorded my bewilderment in the diary at the time. There is still no occasion to question the clean bill given by Mr. Nehru: but local dissatisfaction with the verdict is now only too obvious. The dissidents who have declined to succumb to the enticement or blandishment of Mr. S. K. Patil must know that the wrath of even what remains of the Congress High Command can kill many a political career; N. B. Khare and Subhas Bose refused to be "Narimaned" but were. If the lucky or unlucky fifteen Congressmen of Kerala still decided to take the risk, it may be because they are fully aware of the moral weakness of the Congress in the State. Let us be frank about it, the communists were removed from office in Kerala in 1959 in the most pusillanimous manner and for the most specious reasons. Not that there is a great deal to say in favour of the communist record of government; but it enjoyed a majority in the Assembly when President's rule was proclaimed —perhaps to the relief of Mr. Namboodiripad. President's rule is likely to come again; and nobody seems to know for certain when the next election will come or how it will go. My own democratic withers are unwrung that democracy will be suspended in Kerala where the most literate population in India seems only to echo Caliban:

> You taught me language; and my profit on't
> Is, I know how to curse; the red plague rid you
> For learning me your language!

The red plague! I had quite forgotten the latter part of the quotation; but Shakespeare knew. Do Messrs Shastri and Kamaraj? I doubt it. With what authority I know not, Mr. Patil still keeps saying that the charges against the Congress Ministry will be looked into; but already he knows what delay can mean. Meanwhile I note that an important recommendation of the Santhanam Committee has been neatly shelved.

THE CONGRESS PARLIAMENTARY BOARD HAS LATELY been very generous. It has let the Congress Government in Kerala fade out after the no-confidence motion was passed; it has also permitted Mr. Biren Mitra of Orissa to resign for reasons not wholly clear. Although it was astonishing how Mr. S. K. Patil took it for granted that the fall of the Congress Government in Kerala could be followed only by President's rule, that is perhaps inevitable. Yet if I were a member of the Opposition in the State I would have gone to all my colleagues and begged of them to let me be Chief Minister for a week—on any condition. Greed for office? Not at all. Only to constitute an enquiry commission to look into the charges against Mr. R. Sankar which the successor administration would find very difficult to dismiss without a public howl. The way our offending or suspect Ministers resign almost suggests that they are doing us a favour, making a great sacrifice, when, in fact, they are only escaping arraignment and, more surprising, getting away with it. Nothing has so far been proved in a court of law against either Mr. Sankar or Mr. Biren Mitra; both, however, are under enormous clouds of suspicion. It is in their interests to have enquiries held so that their names may be cleared of unworthy suspicions. If it is true that the majority in the Shastri Cabinet are opposed to too many enquiries into their assets because, as they are reported to say, this would undermine popular confidence in Ministers, it must be said that they are sadly mistaken. Whispers do the maximum damage, as Lord Boothby recently found in Britain; he accepted the challenge and relieved, in the process, the *Daily Mirror* group of a considerable amount of cash. This is why I am delighted that at least Mr. Biju Patnaik and Mr. Biren Mitra have had the courage to seek legal redress against calumny. But, but ..... any legal action in this country takes so long that when justice comes just about everybody has lost interest in the affair. We are all glad that Mr. Dandekar has had a wrong righted; but let us not forget how long Mr. Ram Ratan Gupta was able to stay in the Lok Sabha.

DEMONSTRATIONS OUTSIDE LEGISLATIVE ASSEMBLIES are by now commonplace. But students in Orissa lately gave fresh evidence of how fast the once backward State has been progressing; they just took over the Assembly and ran its proceedings in their own way. And why not? To improve standards of debate, many universities the world over encourage "mock parliaments"; and one way of looking at what those students in Bhubaneswar did is that they staged Shakespeare's *As You Like It* in the Forest of Arden. Surely, the Orissa students can say in their defence, they have not yet burnt down the Assembly as the Nazis dealt with the Reichstag in Germany in the 'thirties. My admiration for this moderation in the Orissa capital is somewhat limited by the view that, when students dare to take over the legislature of a State, things have come to a pretty pass. The Government, I find, has been criticised for not being firm; the criticism is certainly justified. On the other hand, I see Mr. Biren Mitra's difficulty. Affairs in Orissa have in recent years been conducted in so unorthodox a manner that it seems to me more than probable that nobody has any respect left for any institution. Visitors to Orissa have observed a new drive and a new enterprise; but the more percipient have not failed to notice that with those qualities has come a deplorable disregard for most old values. "Getting things done"—with no nonsense about the propriety of the means adopted—seems for many in Orissa the motto. I have no time at all for the pervasive fatalism so noticeable in this country; there is much to be said for making a cult of success—within limits. What I am getting at is that Mr. Biren Mitra probably felt that he lacked the moral right to be tough with the delinquents. This may well be the explanation for much that is going on all around us. Those in office can go thus far and no farther against the hoarders and tax dodgers. The principal or headmaster of an academic institution is inhibited by the thought that his own lapses in other areas of life are many and perhaps known to the students. The parent that lies has hardly the right to ask his child to be truthful. I think I understand why Mr. Mitra stood before the students with "folded hands".

THE WHOLE QUESTION OF DIVERTING WHEAT shipments intended for someone else intrigues me. This unusual request to the major wheat exporters of the world can obviously be warranted only if the supplies within the country are critically low. And yet we had the Central Food Minister's word only a few days ago that the most critical period was over, and the food situation in most States had improved considerably. The strike in the U.S. port of Houston, which has provided the ostensible reason for requesting the diversion of wheat shipments, could have affected the delivery of only some 40,000 tons, and that too a month or so later. India already expects to get about 500,000 tons of wheat a month from the U.S.A. under the revised programme of shipments. Against this, the quantity immobilised by the strike at Houston is small. The Indian Government's SOS to so many countries is a measure obviously out of all proportion to the threatened shortfall. Fortunately for us, the shortfall will now be made up, thanks to the generous gesture of British purchasers who have diverted 38,000 tons of Australian wheat; some other consignees have also readily responded to India's request for diversion. These emergency measures plainly do not tally with Mr. C. Subramaniam's version of an improvement in the food situation. No, no, the country is desperately

short of foodgrains, whatever the Government may have us believe.

WITHOUT EXCEPTION, ALL THE PSYCHIATRISTS I have known have been in need of an analyst of their own; there has scarcely been an obviously sane one among them. The only redeeming fact is that they have generally realised the existence of their problems—which after all is what they are trained to do—whether or not they have eventually decided to do anything about them. The susceptibility of psychiatrists to the public display of emotional frustrations was, I see, one of the subjects discussed at the two international gatherings of the profession held recently in London. One French expert suggested the reason might be that because psychiatrists have to be interminably kind and understanding with their patients, the only way they can release the tensions built up is to indulge their temperament on one another. Hence the fact that the London meetings have seen a remarkable amount of catty infighting, quite the sort of thing one would not expect of a profession whose task is to show its patients how to deal with their own character difficulties. It is true enough that psychiatrists are only human, but to take one's problems to somebody who not only has plenty of his own, but shown few inhibitions about exercising them in public, is rather like buying hair restorer from a bald-headed barber. Reading the reports of the meetings I was particularly interested in the opinions expressed as to what in fact constitutes "sanity" in a person. For instance, should the aim of treatment be to reconcile a patient with his environment to the extent that he becomes just another cog in the social machine, albeit a well-adjusted one, or should it be to help him develop his true individuality, in which case his lack of social conformity could actually lead him into serious trouble? This is the kind of problem I have often pondered, in my strictly non-professional way, of course. It seems to me that a human being without any difficulties, social or emotional, must be a very empty creature indeed.

POLITICALLY, IT IS OF COURSE EXPEDIENT FOR Dr. Erhard, the West German Chancellor, to blame the second World War on Hitler and his Nazi *régime*. In the interests of world peace we should permit him to go on doing so without too much protest, and even keep our tempers when he indicts the rest of the world for its willingness to appease rather than oppose. Too great a burden of guilt on the shoulders of the German nation may encourage violent reaction and provide an opening for fresh extremism; it is therefore best avoided. But there are limits. To blame everything on the Nazis is to exonerate the German people altogether from any responsibility for supporting Hitler. The answer, as is so often the case, lies somewhere in between. It is extremely difficult to know how to draw the line where apparent aggression is concerned. Exactly what does a *régime* have to do, and how far *must* it go, before it is finally accepted as a menace to human survival and treated as the Nazis eventually were? Must we, for instance, see a Hitler in every Castro, Nasser or Soekarno just because they are aggressive and endanger world peace? Of course we must not. Even when the person concerned commands great national power and rules a tyrannical and efficient *régime*, as Stalin did, there is no excuse for rushing into war until the necessity to do so becomes overwhelming. The one redeeming feature of the events which led to the beginning of the second World War 25 years ago, was the resolution shown by Britain and France in eventually deciding to stand firm against Hitler even when they knew their guarantee to Poland was useless and their own military position extremely vulnerable. Whether they ought not to have done so earlier when Czechoslovakia was invaded is a point which can be debated endlessly; personally I think they should have done. Yet it must be said of them that once having seen their mistake—which could with justification be attributed to a wholly laudable desire to avoid war—they did their best to retrieve it.

THE DITCHER

Guide for Investors

T.I.S.C.O. PLAN FOR FURTHER EXPANSION EXPLAINED

IN his annual statement to the shareholders circulated with the directors' report, the chairman of the Tata Iron and Steel Company, Mr. J. R. D. Tata, had mentioned that the Company had been requested by the Government to undertake further expansion, raising production from the present 2 million tons to 3 million tons of ingot steel. He had also pointed out that this further expansion would cost something like Rs. 170 crores. This is in addition to the Rs. 55 crores which is likely to be spent on the programme already on hand for expanding and modernising the ore mines, building of a battery of coke ovens, adding some equipment to S.M.S. 3 and increasing the output of Jharia collieries by 1 million tons of washed coal. Another Rs. 25 crores to Rs. 30 crores would be needed for normal replacements. All this makes a big total of over Rs. 250 crores.

When the shareholders got together for their annual meeting on 3rd September, they raised several points about the expansion programme, involving a massive financial outlay, and asked the chairman to explain how exactly the Company proposes to raise the required funds and how their fortunes will be affected. The chairman clarified that the management had only agreed in principle to undertake the expansion and it was in no way committed to it; nor had the Government given its consent. The project report itself has still to be prepared. But he assured the shareholders that the directors will sanction a further expansion only if they were thoroughly satisfied that the project was technically and economically sound and that it could be undertaken on terms wholly fair to the shareholders.

He said that expansion did not necessarily mean sacrifice for the shareholders; it would, in fact, mean tremendous strength and security for the Company. But for the two-million ton expansion, the Company would have been in difficulty at present. While making no firm commitment, the chairman pointed out that the new expansion programme would be undertaken only when the directors would be confident of not only maintaining the dividend on the old capital but also ensuring a fair return on fresh capital. Besides, additional capital would be raised as late as possible so that the shareholders could earn a return on it as early as possible. In any event, the issue of additional equity capital will take quite some time, three years or more. The expansion scheme and the balancing project would require in all about Rs. 250 crores to Rs. 260 crores. About Rs. 60 crores to Rs. 70 crores would be found from retained earnings, borrowings from abroad for meeting the foreign exchange cost would be around Rs. 100 crores and the balance would be met from the issue of fresh capital and internal borrowings. Mr Tata assured the shareholders that the additional capital to be raised from the shareholders would not cause any undue hardship to them. It would take some 18 months for the project report to be finalised and approved by the Government. The implementation of the expansion scheme for producing an additional 1 million tons of ingot steel will take about five years or so. The balancing project would be completed in three years and the coal expansion scheme would take about seven years. Mr. Tata stated that unlike the two-million ton expansion programme, the fresh expansion programme would not cause any serious dislocation in production as the new unit would be an integrated one. The proposed expansion, if undertaken, would lead to considerable economies in production costs.

Referring to the Company's working during the current year, the chairman stated that the position so far was not very much different from that in the corresponding period of the previous year, but he hoped for some improvement in the remaining part of the year. However, he did not fail to caution the shareholders against undue optimism. No spectacular increase in production can be expected as the Company has already reached the full capacity in finished steel and the production of ingots is only some 5 percent less than the rated capacity. The partial decontrol of steel will fetch an additional Rs. 2.50 crores (gross) during the current year, but production costs, too, are rising and they are not fully covered by the increases in retention prices of controlled items.

Replying to shareholders' queries about the comparative working results of Indian Iron (I.I.S.C.O.) and Tata Steel (T.I.S.C.O.), Mr. Tata stated that the average cost a tonne of Indian Iron was not lower than that of Tata Steel, nor did Indian Iron's products fetch higher prices compared with the products of Tata Steel. If the results of I.I.S.C.O. looked better, it was mainly because of its other activities such as the manufacture of cast iron spun pipes. The T.I.S.C.O. also had taken to diversification through its investments in other Companies, namely, Indian Tube and T.E.L.C.O. and the Company's investments worth about Rs. 9 crores were yielding a return of nearly 10.75 percent. Mr. Tata reminded the shareholders not to attach too much importance to the comparative results of the two Companies; as the results were not strictly comparable, the conclusions could be very misleading. Referring to the Rs. 10-crore loan from the Government of India, the chairman said that the steel companies were still negotiating with the Government how exactly the repayment is to be effected. He hoped that the Company would be able to arrive at a settlement which would be fair to the Company and the shareholders. He indicated that one of the terms would be that the Government should not exercise the right to convert the loans into equity shares. He advised the shareholders not to press too much for further information on this point and leave the matter to the management.

As for the Bonus Commission's recommendations as accepted by the Government, the chairman pointed out that the Company was already paying more than what labour would be entitled to receive under the new formula. The Life Insurance Corporation holds about 405,000 equity shares (about 11 percent) of Tata Steel and the Unit Trust had purchased up to the middle of August 13,700 shares.

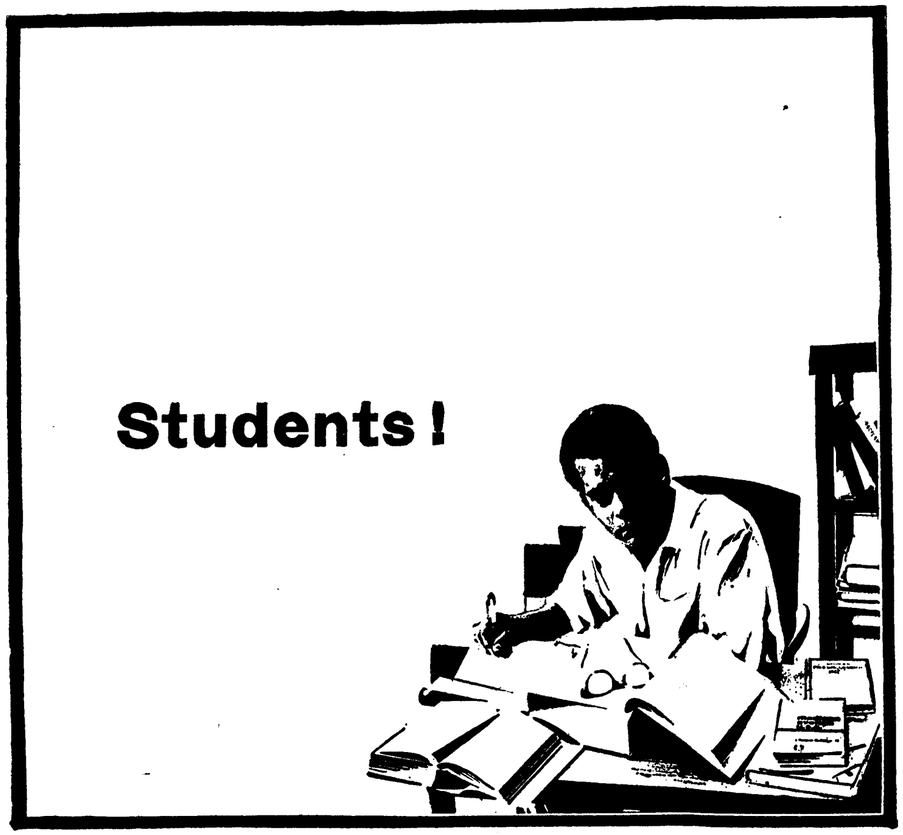
Titaghur Paper Production and Sales Up

IN their report for the year ended March 1964, the directors of the Titaghur Paper Mills Co. Ltd have said that the costs of raw materials and chemicals continue to rise and the increases have not been offset by the internal economies which have been effected. Considering that the mills of the Company are equipped with old machinery, maintenance costs are high. An increase in paper prices is, therefore, required to meet the higher production costs. The trading results have been better than those for 1962-63. The modernisation and expansion schemes of the Company are making progress. Although machine utilisation improved in No. 1 mill, production dropped due to reduced output of heavy-weight paper. Production in No. 2 mill rose because of the increased output of paper boards. In No. 3 mill, production improved in higher heavy-weight allotments despite the reduction in available machine hours for overhauling.

The No. 1 mill has largely contributed to the total profit of the Company and this unit continues to operate satisfactorily. The output of No. 2 mill has been affected by troubles relating to equipment. The No. 3 mill continues to incur a loss. With the present cost structure, this mill will not contribute to the profit of the Company unless output of the machines is increased. Efforts are being made to achieve this. Production of paper rose by 2,397 tonnes to 57,822 tonnes, compared with that of 1962-63. Sales rose from Rs. 10.47 crores to Rs. 11.74 crores. The profit has amounted to Rs. 13.65 lakhs, after providing Rs. 46.82 lakhs (against Rs. 35.55 lakhs) for depreciation. A sum of Rs. 9 lakhs has been transferred from general reserve. The taxable ordinary dividend has been reduced from 10 percent to 2.5 percent which works out to a yield of 2 percent at the present price of Rs. 12.69 a share of Rs. 10 each. The Company incurred a loss of Rs. 20,620 in 1962-63. The carry-forward is Rs. 12,254, against Rs. 15,112 brought in.

Indian Cable Earns More, Pays More

THE Indian Cable Co. Ltd has produced satisfactory results for the year ended March 1964. Sales rose by Rs. 1.5 crores to Rs. 11.98 crores. The expansion programme has made excellent progress. Expenditure on fixed assets amounted to Rs. 55.57 lakhs, chiefly on plant and equipment installed for the manufacture of thermo-plastic cables. Capital work-in-progress on 31st March, 1964, amounted to Rs. 83.43 lakhs which were used to finance mainly equipment to provide additional capacity for power cables and other products. All expansion schemes are expected to be completed during the current year. The order-book of the Company is fairly full for almost all items of manufacture. The non-ferrous rod mill is being increasingly utilised for rolling aluminium. The wire mill business continues to be satisfactory.



In spite of keen competition, the Company has maintained its sales in rubber and plastic house-wiring cables. Sales of paper-insulated power cables rose substantially. Since the factory for manufacturing thermoplastic and paper-insulated cables and winding wires and strips is ready, the Company is in urgent need of raw materials. The full utilisation of capacity depends on an abundant supply of copper and pig lead. It has been difficult to establish sources of supply for indigenous P.V.C. compounds. The directors have pointed out that the levy of excise duty on various products has rendered their prices almost prohibitive. Supplies of steel wire and tape for armouring and synthetic rubber continue to be difficult. The quality of indigenous aluminium supplies has not always been up to the standard necessary for satisfactory rolling into rods. The contract department has done well and is executing a number of jobs. It is hoped that with the beginning of the production of power and thermoplastic cables and enamelled wire, there should be significant increases in sales during the current year.

The profit has risen from Rs. 1.57 crores for 1962-63 to Rs. 1.90 crores for 1963-64, after increasing depreciation from Rs. 19.01 lakhs to Rs. 21.39 lakhs. The taxable ordinary dividend has been raised from 22½ percent to 25 percent, which offers a yield of 7.2 percent at the present price of Rs. 34.62 a share of Rs. 10 each. Taxation absorbs Rs. 1.03 crores (against Rs. 93 lakhs), replacement of fixed assets reserve Rs. 5 lakhs, (the same), development rebate reserve Rs. 4.76 lakhs (against Rs. 45,000), debenture redemption sinking fund Rs. 3.51 lakhs (against Rs. 3.45 lakhs), retiring gratuity reserve Rs. 1 lakh (against Rs. 18 lakhs) and general reserve Rs. 20.50 lakhs (against Rs. 60.50 lakhs). A sum of Rs. 10.35 lakhs has been transferred from taxation provision no longer required. The carry-forward is Rs. 9,790, against 21,521 brought in.

Jardine Henderson Repeats Dividend

IN their report for the year ended March 1964, the directors of Jardine Henderson Ltd say that the profit on the realisation of the Company's shareholding in the Reliance Jute Mills Co. Ltd has been reflected in the results. Referring to the outlook for the jute industry, they say that the installation of more productive capacity will result in a surplus of manufactured goods or lead to a shortage of raw materials. As for the tea industry, the current season started well, but excessive rainfall later may hold the crop down. Referring to the working of the East Indian Coal Co. Ltd, it is stated that with the expansion of the steel industry, the demand for coal is likely to improve. In the field of packaging, the subsidiary Company, Diamond Products Ltd, continues to make good progress. It has earned satisfactory profits. The Company and its associates have acquired a controlling interest in the share capital of Colour Cartons Private Ltd of Bombay. The latter holds a majority interest in Modern Packaging Private Ltd. These two Companies are engaged in a business similar to that of Diamond Products Ltd.

Programmes of expansion for these three Companies are being considered and the directors hope that they will earn satisfactory profits in the near future. In spite of considerable

Why you should fly Lufthansa when the discount offer is the same.

Enter a Lufthansa office and see. There is not only your student discount offer awaiting but also an attractive Pay Later Plan—15% down and the rest within 20 easy instalments.

What's more, Lufthansa representatives advise and assist on your travel documentation, bus, train, air and sea connections and even hotel reservations. Put yourself into the experienced hands of Lufthansa and enjoy the rare satisfaction of well-known efficiency and service. technical progress made by the Dhanbad factory of Meameco Ltd, it has shown disappointing results, but the outlook is encouraging considering that the factory produces goods of high quality. The manufacture of coal drills and accessories and flameproof lighting fittings will be undertaken in collaboration with Victor Products Ltd of England. It is proposed to form a new Company, Jardine Victor Ltd, in which Jardine Henderson will hold a controlling interest for the purpose.

The profit has risen from Rs. 41.88 lakhs to Rs. 44.78 lakhs, after providing Rs. 2.32 lakhs (against Rs. 2.22 lakhs) for depreciation. A taxable ordinary dividend of 7 percent has been maintained which works out to a yield of 9.3 percent at the present price of Rs. 75 a share of Rs. 100 each. Taxation is allocated Rs. 17.24 lakhs (against Rs. 17.12 lakhs), general reserve Rs. 13.24 lakhs (against Rs. 12.68 lakhs) and development rebate reserve Rs. 2,750 (against Rs. 2,830). Sales dropped from Rs. 6.24 crores to Rs. 5.63 crores.

Hukumchand Jute Mills Earns Less

IN their report for the year ended March 1964, the directors of Hukumchand Jute Mills Ltd say that the margin of profit has dropped due to increased labour costs, the obligation of the mills to hold large stocks of raw jute and a decline in the price of jute goods. A total of 52 broad looms has so far been installed. The price of carpet-backing cloth has nevertheless been showing a downward trend. Prospects for the current year are not considered promising. The trading results have been adversely affected due to the high price of fibre. There has also been an all-round increase in production costs. The construction of the factory for the caustic soda project in Amlai is proceeding satisfactorily. The factory is expected to begin production early in 1965.

The profit has dropped from Rs. 84.83 lakhs for 1962-63 to Rs. 54.27 lakhs for 1963-64, after providing Rs. 15.60 lakhs (against Rs. 11.43 lakhs) for depreciation and Rs. 3.43 lakhs (against Rs. 3.06 lakhs) for development rebate reserve. A taxable ordinary dividend of Rs. 2 a share of Rs. 7.50 each has been maintained. The yield amounts to 10.3 percent at the present price of Rs. 19.50 a share. Contingency reserve is allocated Rs. 35 lakhs (against Rs. 57 lakhs) and general reserve Rs. 18.85 lakhs (against Rs. 26.05 lakhs). Taxation relating to previous years absorbs Rs. 50,158 (against Rs. 26,872). Taxation for 1963-64 will be met out of contingencies reserve. The carry-forward is Rs. 2,904, against Rs. 5,058 brought in.

Prospects for Reliance Jute

IN their report for the year ended March 1964, the directors of the Reliance Jute Mills Co. Ltd have pointed out that the jute crops in India and Pakistan during the current year are likely to be smaller than those of 1963-64. Since the price of the fibre has risen much more than that of jute goods, simultaneous business has resulted in losses. They, therefore, think that the current year will be difficult for the jute industry. They also think that the jute industry has been adversely affected by the abolition of the Working Time Agreement. As a result of the Wage Board's recommendations, wages have been raised increasing production costs. Messrs Jardine Henderson Ltd resigned from the managing agency of the Company from 31st October, 1963.

The supply of electric power to the mills has improved. At present, 456 hessian looms and 184 sacking looms are operating out of total looms of 1,276. It has been decided to modernise the preparing and spinning departments of the mills and orders for the necessary equipment for Rs. 45 lakhs have been placed. The installation of the machinery is expected to begin in the near future. The net profit of the Company has amounted to Rs. 14.80 lakhs, against Rs. 17.65 lakhs for 1962-63, after providing Rs. 2.16 lakhs for depreciation. Taxation absorbs Rs. 6.38 lakhs (against Rs. 1.55 lakhs) and development rebate reserve Rs. 2,784. The balance of Rs. 8.86 lakhs has been carried forward. A sum of Rs. 11.01 lakhs has had to be paid on account of income tax assessment for 1960-61. The Company denies this tax liability and has appealed to the higher authorities. The Company has been asked to re-open the case for income tax assessment for 1959-60. If the assessments for 1961-62 to 1963-64 are made on the basis as adopted for the assessment year 1960-61, there would be a contingent liability of Rs. 20.46 lakhs.

Orient Paper Pays the Same

THE ordinary shares of Orient Paper Mills Ltd have been steady around Rs. 33.90 despite a smaller profit for the year ended March 1964. The pre-tax profit has dropped from Rs. 1.40 crores for 1962-63 to Rs. 1.24 crores for 1963-64, after providing Rs. 50.40 lakhs (against Rs. 60.45 lakhs) for depreciation. Taxation absorbs Rs. 47 lakhs (against nil). The Company has not transferred any sum to taxation reserve which was allocated Rs. 70 lakhs in 1962-63. Development rebate reserve absorbs Rs. 75,000 (against Rs. 2.50 lakhs). A sum of Rs. 25 lakhs (against Rs. 15 lakhs) has been transferred to general reserve. A taxable ordinary dividend of 20 percent has been maintained, which offers a yield of 5.9 percent at the present price. The carry-forward is Rs. 56,535, against Rs. 93,457 brought in.

Sales rose from Rs. 11.16 crores to Rs. 11.32 crores. The output dropped slightly, compared with that of 1962-63. Production costs rose due to the increase in the prices of chemicals, wages, power, and fuel. The Company also felt the incidence of higher interest rates. Although the increased production costs were partly absorbed by improved operational efficiency, there has been no rise in prices of paper and boards in the meantime. The Industrial Tribunal has upheld the validity of the agreement between the Company and its workers and rejected the workers' demand for increased bonus. Minimum wages have, nevertheless, been raised from 13th January, 1962. The labour union has, however, appealed to the Supreme Court against the said award and the matter is pending.

India Steamship Skips

INDIA Steamship Co. Ltd has earned a profit of Rs. 9.57 lakhs for the year ended March 1964, against Rs. 1.40 lakhs for 1962-63, after transferring Rs. 1.29 crores (against Rs. 1.21 crores) to depreciation. The usual preference dividends have been paid, but the ordinary dividend has again been passed. General reserve is allocated Rs. 7.95 lakhs.

Freight earned rose from Rs. 8 crores to Rs. 8.28 crores. The directors think that the Company has overcome the difficult period and the future outlook is encouraging. Some 43 voyages were completed in the liner service and 25 in the coastal service. The management has been able to make a profit by rationalising operations in view of rising costs of almost every operation. There has been a phenomenal increase in operational costs, port charges and stevedoring rates. The working has been interrupted by the slow performance of dock workers and congestion in various ports. The expenses for special survey and dry-docking of ships have increased and the Company has been forced to carry out these works in Indian ports. The effects of the increased freight on west-bound traffic have been only partly reflected in the results.

Imperial Tobacco Profit Falls

IN their report for the year ended March 1964, the directors of the Imperial Tobacco Co. of India Ltd have mentioned that the drop in the net profit is largely due to the adverse effects of the increased direct and indirect taxation. But since working is likely to improve in the future, they have withdrawn a small sum from general reserve and declared a final taxable ordinary dividend of 2¼ percent, making 6¾ percent for the year. A taxable ordinary dividend of 8 percent was paid for 1962-63. At the present price of Rs. 8.81 a share, the yield amounts to 7.4 percent. The net profit has dropped from Rs. 1.80 crores for 1962-63 to Rs. 99.25 lakhs for 1963-64, after providing Rs. 1.90 crores (against Rs. 2.66 crores) for taxation and meeting other charges. A sum of Rs. 2.50 lakhs has been transferred from general reserve. Reserves are allocated Rs. 5.71 lakhs (against Rs. 80.22 lakhs). The carry-forward amounts to Rs 80,158, against Rs. 3.29 lakhs brought in. Sales rose from Rs. 50.03 crores to Rs. 55.43 crores.

A.C.C.-Vickers Turnover Shows Big Rise

A.C.C.-VICKERS-BABCOCK LTD, which went into commercial production in February 1962, has reported a marked increase in the turnover for the year ended 31st March, 1964, from Rs. 59.14 lakhs to Rs. 5.474 crores. After providing Rs. 52.10 lakhs (against Rs. 49.87 lakhs) for depreciation, the year's working has resulted in a loss of Rs. 14.73 lakhs, compared with Rs. 45.53 lakhs in the preceding year. With the brought forward loss of Rs. 91.56 lakhs, the total deficit which is being carried forward amounts to Rs. 1.06 crores. The directors state in their report that the substantial increase in the turnover is not reflected in the corresponding improvement in the profitability of the Company's operations as it includes bought-out items of considerable value.

Actual production at the Durgapur works was double that during the previous year but this is still considerably below the optimum production which will be achieved only when the Company is able to recruit the additional artisans and experienced supervisors needed to stretch production to the full rated capacity. The current order-book of the Company will ensure a work load for the next 12 months and further orders, especially for large power station boilers, are urgently needed. For this purpose, the Company is negotiating with the Central Water and Power Commission, New Delhi, for the manufacture and supply of units of 120 MW capacity during the first three-and-a-half years of the fourth plan. During 1963-64, the Company issued at par further equity shares of Rs. 80 lakhs to meet excess expenditure on the original project and to provide the balancing machine tools and equipment required for the manufacture of power station boilers and to increase the capacity for the manufacture of cement-making machinery and general machinery.

Universal Cables to Expand

IN their report for the year ended March 1963, the directors of Universal Cables Ltd say that the entire plant and equipment to manufacture paper-insulated lead-covered power cables and thermoplastic cables has been installed. Production has also begun. The Company has obtained a licence for increasing the capacity for manufacturing power-insulated cables from 1,000 kilometres to 1,600 kilometres a year. Plans to implement the expansion scheme are being considered. The equipment for the casting and rolling mill is being installed. Negotiations with Messrs Tokyo Shibaura Electric Co. Ltd for technical collaboration to produce paper capacitors, electrolytic capacitors and industrial capacitors have made progress.

The Company has incurred a loss of Rs. 8.27 lakhs for 1963-64, before providing for depreciation which absorbs Rs. 21.79 lakhs. Transferring Rs. 4 lakhs from general reserve and bringing in Rs. 25,594, there is a debit balance of Rs. 25.80 lakhs which is carried forward. The directors say that the loss is normal considering the initial stage of the factory. The sum of Rs. 21.11 lakhs relating to development rebate could not be provided for because of the loss, but it will be provided out of the assessable income of 1964-65 and thereafter.

Indian Steel and Wire Products Shows Loss

THE Indian Steel and Wire Products Ltd has incurred a loss of Rs. 3.17 lakhs for the year ended March 1964, after transferring Rs. 48.93 lakhs (against Rs. 23.27 lakhs) to depreciation and Rs. 20.73 lakhs (against Rs. 43.41 lakhs) to development rebate. A sum of Rs. 21.90 lakhs has been transferred from general reserve. A taxable ordinary dividend of 18 percent has been repeated which works out to a yield of 5.7 percent at the present price of Rs. 31.50 a share of Rs. 10 each. Taxation is allocated Rs. 1.31 lakhs, leaving a carry-forward of Rs. 7,607, against Rs. 6,022 brought in. Sales rose from Rs. 3.77 crores to Rs. 4.24 crores. The directors say that the working was interrupted due to the installation of the new wire rod mill. The project has now been completed and the good results from the setting up of the new factory should be reflected in the results for the current year.

Good Outlook for William Jacks

FURTHER progress, in Britain and overseas, is reported by Mr. W. Gray Buchanan in his statement circulated with the accounts of William Jacks and Company, merchants and engineers. Exports rose last year from £6,560,000 to £7,580,000. Mr. Buchanan added that estimated profits for the first five months of the current year, although satisfactory, were below those of 1963. Orders in hand continue at a satisfactory level.

In his survey of overseas activities, he said that the branches in India

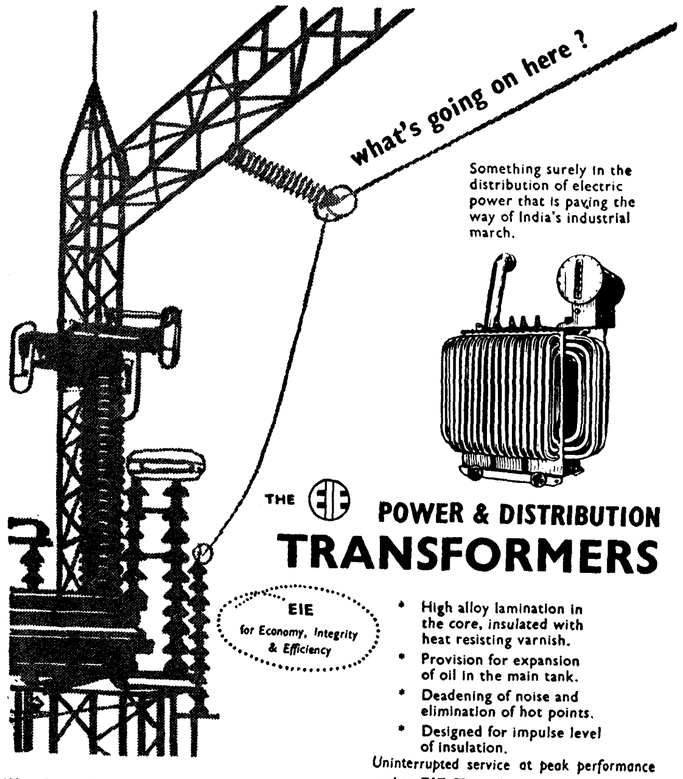
had produced very satisfactory results, but a very large portion of their profits had been taken in taxation. Despite the heavy taxes, India was regarded as a valuable market and the organisation there was a very important part of the Company's activities. The branches in Pakistan had produced quite satisfactory profits, although less than in the previous year. The branch in Hongkong had had a very satisfactory year with a further improvement in profits, and its business had since been transferred to a new wholly-owned subsidiary company.

The subsidiary in Ceylon had had a disappointing year, but the subsidiary in Southern Rhodesia had been very successful, and good progress had been made by the new subsidiary which was formed during the year in Northern Rhodesia. Subsidiaries had been acquired in Australia during 1963 and were in the process of being reorganised to broaden the base of their operations.

Jorehaut Tea Cuts Dividend

LACK of rain, for the second time in four years, has had a severe impact on profitability of Jorehaut Holdings, the Assam tea producer. In 1963 the crop fell by more than 1.3 million lbs, with the result that production costs rose by 4d a lb. This was too much to be offset by the well-maintained and slightly improved prices realised, and the group trading profit fell from £460,000 to £241,794. As already announced, the equity dividend has been cut from 7½ percent tax free to 4 percent tax free.

The directors are carrying out experiments in irrigating the plantations but this is likely to prove very costly if done on a large scale. The balance-sheet, at least, shows improved liquidity, partly no doubt because stock is down. On the 4 percent tax-free payment, the equity is valued on a gross yield basis of just over 7 percent at the current price of around 18s 6d for the £1 ordinary shares. The range over the last four years has been 13s to 34s.



Nedeem Tea Passes Dividend

ORDINARY shareholders of Nedeem Tea Company, whose directors recently rejected a takeover bid of 20s a share, are once again to receive no dividend. Apart from a capital distribution in 1960, the last payment they received was one of 10 percent tax free for 1954. Results for 1963, just announced, show that the revenue profit for last season rose from £94,300 to £99,200. But depreciation went up from £31,000 to £37,000 and tax from £22,500 to £35,000.

Preference shareholders, who went without a payment from 1956 to 1959, are to get their 5 percent. After this payment, the amount left is £9,500, against £22,800 in 1962. The shares are currently quoted around 15s.

Saran Engineering Profit Falls

THE Saran Engineering Co. Ltd has earned a profit of Rs. 95,622 for the year ended March 1964, compared with one of Rs. 2.14 lakhs for 1962-63, after providing Rs. 1.31 lakhs (against Rs. 1.12 lakhs) for depreciation, Rs. 3,986 for development rebate reserve and Rs. 1 lakh (against Rs. 3 lakhs) for taxation. The taxable ordinary dividend of 40 paise a share of Rs. 4 each has been declared. General reserve is allocated Rs. 85,000 (against Rs. 25,000), leaving a carry-forward of Rs. 1,529, against Rs. 13,304 brought in. Sales dropped to Rs. 29.39 lakhs from Rs. 36.40 lakhs because of unfavourable conditions relating to the sugar industry. There has also been keener competition. An industrial licence to manufacture pneumatic hammers has been received from the Government and negotiations are progressing for foreign collaboration. Attempts are being made to raise funds for the project.

Something surely in the distribution of electric power that is paving the way of India's industrial march.

THE EIE POWER & DISTRIBUTION TRANSFORMERS

EIE for Economy, Integrity & Efficiency

* High alloy lamination in the core, insulated with heat resisting varnish.
* Provision for expansion of oil in the main tank.
* Deadening of noise and elimination of hot points.
* Designed for impulse level of insulation.

Uninterrupted service at peak performance makes EIE Transformers really outstanding.

Manufactured & Marketed by :—

EAST INDIA ELECTRICALS

38, Netaji Subhas Road, Calcutta-1.
Phone : 22-4580. Gram : "TWINKLE"

* Rigorous inspection at each stage
* One year guarantee
* After-sales service
* Installation facilities

PRO/EIE—2

Good Prospects for Greaves Cotton

THE preliminary report on the working of Greaves Cotton and Company during the year ended March 1964, has been released along with the announcement of the dividend of 12 percent. It showed a considerable improvement over the previous year's performance. Both sales and profit set new records; turnover increased by about 40 percent from Rs. 7.84 crores to Rs. 10.93 crores and the gross profit increased by 11 percent from Rs. 54.53 lakhs to Rs. 60.48 lakhs. The annual statement of the chairman, Mr. L. M. Thapar, which has been circulated with the directors' report, holds out the promise of still better results for the current year. Trading continues to show progress and unless some adverse circumstances materially alter the position, the chairman expects further expansion in the Company's turnover.

The profits will also improve, but it is feared that the rate of return will be comparatively low, unless prices and costs achieve a greater measure of stability. The Company's own manufacturing activities in the cone plant and diamond bit manufacturing division continue to be encouraging. Diamond bit manufacture is conditioned by allocations of foreign exchange for the purchase of industrial diamonds. While this allocation has considerably improved recently, the diamond bit division is being equipped for the production of drill rods and castings as an added safeguard. The Company has already on hand orders equivalent to one year's production. It has established the satisfactory operation of the impregnating plant in the cone division with the result that it is able not only to offer a better product, but also to capture new markets which hitherto were the preserve of metal cones and tubes.

The working of the associated companies and subsidiaries is expected to show a substantial improvement. Of the associated companies, a substantial expansion of Crompton Parkinson (Works) Ltd has been approved, and a steady improvement in the value of Greaves Cotton's investment in this Company can be looked forward to. The chairman envisages an important contribution to turnover and profit of Greaves Cotton and Crompton Parkinson by a carefully planned expansion of its interests in the design and contracting field.

As for Greaves Foseco Ltd, the Company has already established two works. With the very substantial increases in steel production which are taking place and are being planned, the Company can look forward to the future with great confidence. Besides, this Company has several new ideas under development which, in course of time, will bring their own return. Mr Thapar has made a special mention of Mather Greaves which, after consolidating the manufacture of calender bowls, has now embarked on the production of complete calenders, Schreiner calenders, stenter clips, mangles, printing machines, etcetera. With the widening of scope of manufacturing facilities, the chairman looks forward to a steady and growing return on the investment in the Company.

The growth of Kenyon Greaves and Greaves Dronsfield is closely linked with the progress of the textile industry in general. Of the subsidiary Companies, the prospects for Ruston Hornsby (India) Ltd are considered promising as the factory is now operating at near-optimum level in relation to its existing facilities. The order-book for both horizontal and vertical air-cooled engines is healthy. The demand for air-cooled engines for marine duties and the electrical power generation is said to be particularly encouraging. The outlook for David Brown is good and plans for increasing the production capacity are under active consideration. The Company has maintained very satisfactory turnover and profits and it has undertaken complementary production in the open gearing field.

Plans for the diversification of production of Drayton Greaves Ltd have been completed and the benefit of this will commence during the current year. The Company's financial needs are growing with the rapid and sustained increase in its trading and expansion programmes of its associated and subsidiary Companies. It will, therefore, have to think of different alternatives of raising additional equity or preference capital, long-term accommodation by term loans or debentures and the expansion of matching short-term credit facilities.

Hindusthan Wire Raises Dividend

THE profit of Hindusthan Wire Products Ltd has improved from Rs. 4.53 lakhs for 1962-63 to Rs. 8.47 lakhs for the year ended March 1964, after providing Rs. 2.74 lakhs (against Rs. 6.22 lakhs) for depreciation. The taxable ordinary dividend has been increased from 10 percent to 15 percent, which gives a yield of 9.8 percent at the present price of Rs. 15.37 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 31,073 (against Rs. 20,000), taxation Rs. 5.15 lakhs (against Rs. 70,000) and general reserve Rs. 1 lakh (against Rs. 1.75 lakhs). The carry-forward is Rs. 15,810, against Rs. 2,736 brought in.

Sales rose from Rs. 60.18 lakhs to Rs. 68.34 lakhs. The production capacity for 100 tonnes a month has been achieved, but the working has been interrupted by the shortage of raw materials. Efforts are being made to obtain a more abundant supply of copper. The directors, while emphasising the increase in production costs, hope to have bigger sales during the current year in view of the good demand for enamelled wires. The Company has undertaken an expansion scheme to increase the output capacity to 1,700 tonnes a year.

Midnapore Zemindary Incurs Loss

THE ordinary shares of Midnapore Zemindary Co. Ltd have met with brisk support during the past month or so due to the prospects of diversification of activities following the change in the Company's management. The price of the scrip has improved to Rs. 33.75 a share of Rs. 85 each. Messrs Andrew Yule Co. Ltd tendered their resignation as Secretaries and Treasurers with effect from 13th April, 1964.

In their report for the year ended April 1964, the directors have pointed out that the Company's petition to the Commissioner of State Purchase for review of the revised compensation rolls published in East Pakistan has been allowed and the matter has been remanded to the Compensation Officer for a fresh assessment of compensation according to the Commissioner's directions. The position of the publication of compensation rolls in West Bengal and Bihar remains the same and no special ad-interim payment has been received as yet. A sum of Rs. 17,037 was received from the Government of West Bengal on account of arrears of rent realised by them on behalf of the Company. The Company has incurred a loss of Rs. 71,896, against one of Rs. 74,850 for 1962-63, after providing Rs. 44 (against Rs. 46) for depreciation. Taxation absorbs Rs. 22,500 and a loss of Rs. 19.96 has been carried forward. The dividend has been passed.

Mukand Iron Pays the Same on Increased Capital

THE preliminary report released along with the announcement of 12-percent dividend—the same as in the previous year—on the increased capital showed that during the year ended March 1964, the Company had fared much better than in the preceding year. The gross profit increased by some 37 percent from Rs. 72.86 lakhs to Rs. 1 crore despite a small fall in the sales from Rs. 6.50 crores to Rs. 6.21 crores. The directors state in their report that the production in the rolling mills division was adversely affected due to inadequate and irregular billet supply which resulted in a fall of nearly 15 percent in the sales of rolled products. The statutory control over the price and distribution of many categories of steel, including rerollers' products, was lifted from 1st March, 1964. Billets are not among the decontrolled items and continue to be supplied to rerollers at a fixed price.

The directors have expressed the view that decontrol is not expected to affect materially the Company's operations or profit potential, although the Government's recent billet pricing and freight policies give the main producers an edge over rerollers. The performance of the Company's steel foundry division was highly encouraging. It surpassed the target of 9,000 tonnes of steel castings for 1963-64 by producing 9,564 tonnes, compared with 7,624 tonnes during 1962-63. Sales of steel castings recorded an increase of Rs. 25 lakhs over the previous year, but did not keep pace with production because a large quantity of the centre buffer coupler casting could not be despatched for want of one of its fittings purchased from outside. Scrap prices continue to spiral. Compared with the pre-decontrol prices of Rs. 98 and Rs 25 a tonne for melting scrap and turning scrap, respectively, the current prices are around Rs. 185 and Rs. 115 a tonne.

In his annual statement to the shareholders, which has been circulated with the directors' report, the chairman, Mr. Kamalnayan Bajaj, says that the Company's expansion programmes both in Kurla and Kalwe are well under way. It is hoped that the Kalwe project will go into production by July 1965. The machine building and structural project in Kurla is being implemented. In the steel foundry, the target of 10,000 tonnes is expected to be reached during the current year. The Company has received the rupee loan of Rs. 47 lakhs from the Industrial Finance Corporation for expansion at Kurla, and the final terms and conditions of a loan of Rs. 35.40 lakhs in foreign currencies have been agreed upon. An import licence for Rs 35.75 lakhs for the steel foundry expansion is on hand. The Company has also received the industrial licence and an import licence of the value of Rs 5.25 lakhs in foreign currency for the machine-building and structural activity.

The Company is soon entering into an agreement with Hindustan Electric Company for the fabrication of mechanical and structural parts of furnaces to the designs of the Swiss firm of Brown, Boveri and Co. The loan agreement with the Commonwealth Development Finance Co. Ltd, London, for the Kalwe project has been signed and a sum of £100,000 has been drawn from this account during the current year. Withdrawals from the loan from the I.C.I.C.I. to-date amount to $(U.S.)320,490, including $58.093 drawn during the current year. The Company has received import licence for Rs. 1.60 crores for the wire rod project. All major items of equipment to be imported have been ordered and deliveries are expected to commence shortly.

Dhrangadhra Chemical Earns More

THE profit of Dhrangadhra Chemical Works Ltd has risen from Rs. 55.49 lakhs for 1962-63 to Rs. 77.41 lakhs for the year ended March 1964, after transferring Rs. 54.19 lakhs (against Rs. 34.31 lakhs) to depreciation on fixed assets. Development rebate reserve is allocated Rs. 40 lakhs (against Rs. 1.06 lakhs) and general reserve Rs. 23 lakhs (against Rs. 46 lakhs). The taxable ordinary dividend of 10 percent has been declared, which works out to a yield of 9.8 percent at the present price of Rs. 118.25 a share of Rs. 100 each. The carry-forward is Rs. 76,110, against Rs. 1.75 lakhs brought in.

The directors say that in spite of breakdowns in the equipment, the caustic soda output rose by 27.7 percent over that of 1962-63. The salt works increased production from 10,500 tonnes to 26,000 tonnes. The production of soda ash was more than 43,000 tonnes. The soda bicarb output rose by 25 percent over that of 1962-63. The project to set up the liquid chlorine plant has made progress. The Company is considering certain schemes to use chlorine. The directors consider the outlook encouraging in view of the rising demand for the Company's products.

Amrit Banaspati Skips Dividend Again

ALTHOUGH the dividend has again been skipped and the equity shareholders will probably have to wait for a few more years before they are able to earn any dividend on their investment, the working results of Amrit Banaspati Co. Ltd for the year ended March 1964, show a considerable improvement over the previous year's performance. Despite a fall of a little over 15 percent in the sales from Rs. 6.16 crores to Rs. 5.22 crores, the Company's gross profit has gone up by nearly 31 percent from Rs. 16.63 lakhs to Rs. 21.78 lakhs. After providing Rs. 3.83 lakhs (against Rs. 2.72 lakhs) for depreciation, Rs. 78,597 (against Rs. 1.04 lakhs) for development rebate reserve and Rs. 3.50 lakhs (against nil) for taxation, there remains a surplus of Rs. 13.66 lakhs.

The directors have decided to clear arrears of preference dividends for two years—1959-60 and 1960-61—which will take away a sum of Rs. 5.68 lakhs. After adjusting the balance of profit against the deficit of Rs. 10.29 lakhs brought forward, there is still a deficit of Rs. 2.31 lakhs to be wiped out. Arrears of preference dividends for the three years ended 31st March, 1964, amount to Rs. 8.52 lakhs. The Company has under consideration new schemes for the diversification of its activities and the Government's approval is being sought for the manufacture of citric acid from molasses. The Rs. 10-paid share of the Company is currently quoted around Rs. 5.

Rajapalayam Mills Raises Dividend

THE increase in the dividend by Rajapalayam Mills from 16 percent to 20 percent for the year ended March 1964, is well justified by the Company's excellent performance during the year. Sales are up by about 30 percent from Rs. 1.20 crores to Rs. 1.55 crores and the gross profit has risen by nearly 44 percent from Rs. 17.39 lakhs to Rs. 24.99 lakhs. The Company has been able to achieve higher profitability despite increases in the cost of production. Improved results are attributed to the introduction of the third-shift working, timely and prudent purchase of cotton and the steady movement of yarn during the year. Allocations include depreciation Rs. 5.78 lakhs (against Rs. 5 lakhs), development rebate reserve Rs. 21,000 (against Rs. 28,000), taxation Rs. 8.61 lakhs (against Rs. 4.31 lakhs), donations Rs. 47,317 (against Rs. 48,908), bonus for the year to March 1963 Rs. 2.42 lakhs (against Rs. 2.62 lakhs), general reserve Rs. 2.70 lakhs (against Rs. 1 lakh) and dividend 3.32 lakhs (against Rs. 2.58 lakhs). The directors state that the Company is taking advantage of the permission accorded to the existing mills to increase their spindleage by 7½ percent to 10 percent and it has placed firm orders for eight new ring frames with a total spindleage of 3,600. These machines are expected to be delivered by about the middle of 1967.

Indian Rubber Regenerating Shows Loss

THE working of the Indian Rubber Regenerating Co. Ltd, which went into production in September 1963, during the year ended March 1964 has resulted in a net loss of Rs. 2.28 lakhs, against Rs. 1.03 lakhs in the preceding year. The loss has been arrived at after providing Rs. 5.58 lakhs (against Rs. 20,371) for depreciation. Including the deficit of Rs. 1.36 lakhs brought in, the total deficit of Rs. 3.65 lakhs is being carried forward. Sales during the year amounted to Rs. 7.44 lakhs, against Rs. 1.07 lakhs in the preceding year. The directors have held out the hope of better results in the current year. Finished stocks which had recently accumulated are moving out in increasing volume, and the Company is receiving good orders. Its products have been well received in the market. Since the import of reclaimed rubber has been banned since 1st April, 1964, the demand for the Company's products is likely to increase appreciably. The Company is assured of full support from the Government and the directors do not expect any serious competition from imports.

More from Mysore Tobacco

DESPITE a fall of nearly 20 percent in the gross profit from Rs. 5.68 lakhs to Rs. 4.50 lakhs, the Mysore Tobacco Company has raised the dividend for the year ended March 1964 from 10 percent to 11 percent. And what is more, the profit has declined in spite of an increase of some 26 percent in the sales from Rs. 39.60 lakhs to Rs. 49.85 lakhs which is a new record for the Company. Allocations include Rs. 1.08 lakhs (against Rs 84,382) for depreciation. Rs. 3,967 (against Rs. 2,170) for development rebate, Rs. 1.75

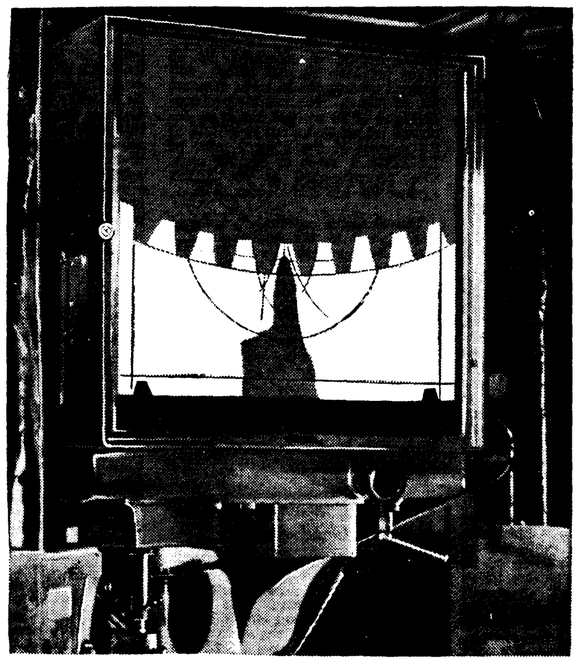
lakhs (against Rs. 2.42 lakhs) for taxation, Rs. 20,000 (against Rs. 65,000) for dividend equalisation reserve, Rs. 10,000 (against Rs. 30,000) for retiring gratuity, Rs. 10,000 (against nil) for general reserve, nil (against Rs. 58,000) for the super profits tax and Rs. 1.10 lakhs (against Rs. 1 lakh) for dividend.

The marked increase in the Company's turnover is attributed to increased purchases of tobacco from private curers and the expansion of its centres.

New Capital Issues

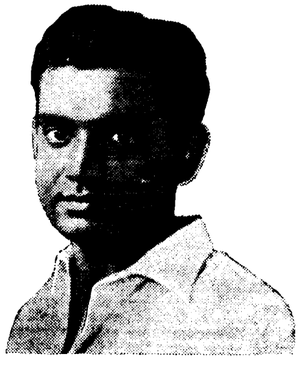
SIX companies have been authorised to raise capital aggregating Rs. 1.395 crores. Of these, three will be issuing bonus capital, one is issuing debentures, another equities, and the sixth equity plus preference shares. Foreign collaboration is involved in one company. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Polychem Ltd, Bombay, is to issue Rs. 24 lakhs bonus capital in 48,000 equity shares of Rs. 50 each, on capitalisation of the share premium account to a like extent. The bonus shares will be offered to the existing equity shareholders of the Company in the proportion of three bonus shares for every seven equity shares held.



The Deccan Sugar and Abkhari Company Ltd, Madras, is to issue shares of the value of Rs. 6.64 lakhs on capitalisation of the share premium account. The bonus shares will be issued in the ratio of one bonus share for six shares held now.

Alcock Ashdown and Company Ltd, Bombay, is to issue Rs. 3,47,000 bonus capital in shares of Rs. 100 each, on capitalisation of the share premium account to a like extent. The bonus shares will be allotted to the existing equity shareholders in the proportion of one bonus shares for every 15 shares held.



Bharat Collieries Ltd, Calcutta, is to issue 29,853 6½ percent unsecured perpetual debentures of Rs. 100 each at par to the preference shareholders in lieu of their 5½ percent cumulative preference shares of Rs. 100 each, in accordance with the Calcutta High Court's order dated 29th January, 1963.

Sundaram-Clayton Ltd, a public Company, is to issue privately a further capital of Rs. 35,47,700 divided into 35,477 equity shares of Rs. 100 each, for cash, at a premium of Rs. 7 a share. Of the issue, 17,477 equity shares will be offered to Adwest Engineering Ltd, England, for cash in sterling to be utilised for the purchase of plant and machinery and the balance shares of the value of Rs. 18 lakhs would be subscribed by T. V. Sundaram Iyengar and Sons Private Ltd. and their associates. The money will be expended for implementing the Company's steering gear manufacturing project.

Hub Bolts and Nuts India Ltd, a public Company proposed to be incorporated in Gujarat, is to issue capital of Rs. 40 lakhs, for cash at par, divided into 27,000 equity and 13,000 preference shares of Rs. 100 each carrying dividend not exceeding 9.5 percent. The money will be used for financing the manufacture of starter gear rings, wheel bolts, nuts, etcetera.

"This machine ensures accuracy of Typewriter parts up to 1/10,000th of an inch

It's the OPTICAL PROFILE GRINDER, housed in a special airconditioned chamber. Tools, dies and precision parts are machined on it, and *automatically* checked against magnified drawing office specifications — clamped on to a screen. The Grinder projects an image of the same part magnified to the same proportion—upto 50 times. I can see where the part falls short of specifications, and I machine it till its absolutely perfect."

Modern precision equipment like the Optical Profile Grinder and Ujjal Kumar Chatterjee who operates it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

Over the years people in India have come to expect the standards set by REMINGTON—the highly responsive touch, light positive shift, smooth carriage action, superior styling and finish—which make them so essential to distinctive correspondence.

LYONS RANGE QUIET AFTER EARLIER STEADINESS

Wednesday Evening.

THE Calcutta stock market has closed the past week in a quiet mood, after an earlier steadiness. At first, the prices of shares improved smartly due to renewed support, combined with brisk short-covering. The flow of good corporate news provided the incentive.

The reaction towards the close is due partly to profit-taking because of the earlier sharp rise and partly to unfavourable political and economic developments. The fall of the Congress Ministry in Kerala, combined with the resignation of the Chief Minister of Orissa, has restrained activities. The intrusion of Chinese troops into Sikkim has caused concern, although the Government of India has stated that it is fully equipped to meet all eventualities.

Lyons Range is, for the time being, weighing the favourable and unfavourable economic developments. The move of the Prime Minister, Mr. Lal Bahadur Shastri, to rephase economic planning has created a good impression. But operators have been disturbed by the prospect that the Government is thinking of enforcing new measures to regulate activities in the stock market.

The Government's move to coordinate the activities of the Industrial Develoment Bank, the Industrial Finance Corporation and the Industrial Credit and Investment Corporation of India in providing finance to industries has been welcomed. These three institutions will also act together in underwriting new shares. The need for underwriting new issues cannot be exaggerated, considering the poor response to new shares in recent months. Several companies are, in fact, finding it difficult to arrange for underwriting, because the funds of most of the underwriters have been blocked in new shares.

Indian Iron have slipped back towards the close largely due to profit-taking in view of the clearing on Wednesday. It passed off smoothly but carry-forward charges were heavy. At the annual general meeting of Indian Iron held in Calcutta on Tuesday, the chairman, Sir Biren Mukherjee, referred to the possibility of henceforth paying an interim dividend to shareholders. During August 1964, the Company produced 91,003 tonnes of pig iron, against 74,440 tonnes in July 1964. The steel ingot output rose from 67,295 tonnes to 70,333 tonnes, but that of salable steel dropped from 63,222 tonnes to 53,526 tonnes. Despatches of salable steel also declined from 58,947 tonnes to 57,875 tonnes. After an earlier rise, nearly all engineering shares have lost fractionally towards the close Guest, Keen, Williams, Texmaco, Indian Standard Wagon and Braithwaite have attracted attention. Scattered support has been forthcoming for J. K. Steel and Calcutta Steel.

In the miscellaneous section, clearing scrip are prominent, but they have reacted towards the close due to profit-taking. Hindustan Motors, Indian Copper, Dunlop Rubber, Indian Cable and Indian Aluminium are active. But Rohtas are being sold since the Company has declared a smaller dividend. Jaipur Udyog are steady on maintaining the dividend. Alkali and Chemical, Union Carbide, Goodyear India, Metal Box and Associated Battery have improved on balance. Support has been extended to National Insulated Cable, British India Corporation and National Rolling Mills. Among new shares, Hindusthan Twyfords and Phillips Carbon are active. Among managing agency shares, Martin Burn are steady but Jardine Henderson are sluggish on repeating the dividend. In electric companies, U.P. Electric have reacted on profit-taking. Bank shares are dull and stray business has been transacted in United Commercial and United Bank. In paper shares, Orient, Seshasayee and Bengal have been steady, but Titaghur have dropped on declaring a disappointing dividend. Sugar shares have been neglected.

The disappointing dividends declared by the Bird-Heilgers group of jute Companies have made the investors in jute shares cautious. The high price of fibre in relation to that of gunnies has tended to reduce the profit margins of jute mills. Birla have reacted due to profit-taking. Anglo-India, Champdany, Barnagore and Ganges have met with scattered support. Stray business has passed in coal shares. Burrakur, Western Bengal, Bengal and Central India have changed hands. In cotton mills, J. K. Cotton, Bharat Commerce, Dunbar and Elgin have been supported. In tea shares, small business has been transacted. Interest has centred on selected Assam and Dooars gardens.

Government securities are steady, although turnover is limited. The 3 percent Conversion Loan 1986 has been quoted at Rs. 63.70. The prices of short-dated loans are fully steady. Most of the new State Government loans are being quoted at a slight discount.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Limited, report that the approximate production of iron and steel at the steel works in Jamshedpur during August 1964 was iron 154,400 metric tonnes; steel ingots 160,000 metric tonnes and salable steel 130,800 metric tonnes.

Bombay

SHARE VALUES REACT ON ADVERSE NEWS

PROSPECTS OF CURBS INDUCE CAUTION

Tuesday Evening.

THE working in the Bombay stock market during the past week was interrupted by holidays. Towards the close, the undertone was quiet due to tired long liquidation, combined with short-selling. Operators wanted to reduce their commitments in view of some adverse developments. Reports of intrusion by Chinese troops into Sikkim have caused concern, although Press reports that Pakistan has agreed to abide by the cease-fire agreement in Kashmir has tended to help sentiment. The prospect of a more stringent regulation of stock exchanges by the Government in the near future has induced caution. Besides this, a reaction had been overdue because of the sharp rise in prices.

Among engineering shares, Tata Engineering have reacted due to profit-taking. Larsen and Toubro, Mukand Iron and Premier Construction are quotably lower. Alcock Ashdown have been about steady on the prospect of a bonus issue in the proportion of one bonus share for every 15 held by capitalising the share premium account. In motor-vehicle shares, Hindustan Motors have drop-

been maintained.

Cotton mill shares have declined in line with the general trend. In spite of a larger interim dividend, Century have reacted to profit-taking. Bombay Dyeing, Kohinoor, Svadeshi and Standard have also lost. Scattered support has been forthcoming for Morarjee and Gokak.

In miscellaneous shares, Belapur and Walchandnagar Industries are steady in the sugar section. In cement shares, Associated Cement and Digvijay have attracted support. Mining shares are subdued, and Shivrajpur Syndicate have been offered freely without attracting buyers. In chemical shares, Tata Chemical have lost on profit-taking and Polychem are steady on the prospect of a bonus issue in the proportion of three bonus shares for every seven held, by capitalising the share premium account. Synthetics and Chemicals have recovered smartly due to replacement purchases. In rayon shares, National Rayon have dropped. Voltas and Tata Oil are about steady.

In spite of limited turnover in bank shares, prices have been maintained. Bank of Baroda and Central Bank have changed hands. Electric company shares are steady. Tata Hydro and Ahmedabad have been supported.

Madras

GOOD CORPORATE NEWS TONES UP MARKET

TURNOVER MAINLY IN CASH SCRIP

Tuesday Evening.

THE Madras stock market has improved during the past week. Operators and investors have been encouraged by the hope that the Government may soon take steps to stimulate activity in the capital market, and also because of good *corporate news*. Although turnover in clearing scrip has been restrained due to the easier trend in Bombay, support has been extended to cash scrip, particularly in the planting section. Business in Government securities has been small, and the new State loans have been quoted at a discount. Interest in preference shares and debentures has been sustained, but sellers are fewer.

In spite of a small turnover in bank shares, Indian Overseas are steady at Rs. 146.50 and Syndicate Bank at Rs. 143.50. In electric companies, Vellore have been supported at Rs. 15.62 due to the payment of a taxable ordinary dividend of 15 percent. West Coast have been taken at Rs. 13.50 on declaring a taxable ordinary dividend of 25 percent. In the sugar section, Deccan have been steady at Rs. 12.25 since the Company will issue bonus shares in the ratio of one bonus share for every six held by capitalising the share premium account. E.I.D. have improved to Rs. 36.12. Support has been extended to Kothari at Rs. 6.60 and to Travancore at Rs. 7.65.

Among planting shares, Blue Mountain have been steady at Rs. 2.30 and Cochin Malabar at Rs. 23.50. Ouchterlony have been done at Rs. 3.20 and Periakaramalai at Rs. 3.50. Emerald Valley have been taken at Rs. 6.75 on declaring a taxable ordinary dividend of 20 percent. Teekoy have been steady at Rs. 6.75, Vaikundam at Rs. 35.50, Woodland at Rs. 6.90 and Peermade at Rs. 20.62. In coffee shares, Savamalai have been quoted at Rs. 5.10, Wartyhully at Rs. 2.54 and Lingapur at Rs. 5.17.

Among textile shares, South India Viscose have been maintained at Rs. 119 and Travancore Rayon at Rs. 20.10. Lakshmi have been taken at Rs. 134 and Madura at Rs. 34.85. Bangalore Woollen have been steady at Rs. 920 and Buckingham at Rs. 275.50. Both these Companies have declared an interim taxable ordinary dividend of 8 percent. Mettur have risen to Rs. 277.50 and Ramakrishna to Rs. 199.50. Vijayamohini have changed hands at Rs. 89 and Sarada at Rs. 80.

In miscellaneous shares, Aluminium Industries have hardened to Rs. 23 and Ashok Leyland to Rs. 6.90. In cement shares, Dalmia have been steady at Rs. 12.50. India have been supported up to Rs. 5.53 on prospects of expansion. Associated Industrial have been quoted at Rs. 74.40 on declaring a taxable ordinary dividend of 8 percent. Mettur Chemical have been steady at Rs. 15.05, but F.A.C.T. have been sold down to Rs. 5.05. Seshasayee Paper have been maintained at Rs. 7.50 and Mysore Paper at Rs 12.50. Forest Industries have changed hands at Rs 237 on declaring a taxable ordinary dividend of 15 percent. Interest has been shown in General Papers up to Rs. 10.37 on paying a taxable ordinary dividend of 12½ percent. Jeewanlal have reacted to Rs. 9.16 on cancelling the new issues because the aluminium rolling mill project has been abandoned. Tube Suppliers have been quoted at Rs. 10 and Tubes and Malleables at Rs. 10.90. An extraordinary general meeting has been called by Tube Suppliers to consider the proposal of Tubes and Malleables for acquiring the shares of the former by offering one ordinary share of Rs. 10 in Tubes and Malleables for every two shares of Rs. 10 each in Tube Suppliers. United Breweries have been steady at Rs. 33 on declaring a taxable ordinary dividend of 9 percent, but the Company has postponed the issue of bonus shares. Parry's Confectionery have been taken up to Rs. 2.97 and Spencer at Rs. 21.37.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available. All quotations are in Rs.]

THE CALCUTTA MONEY MARKET

CALL RATE REMAINS FIRM

Wednesday, 9th September.

THERE has been a slight increase in the general level of advances in the Calcutta money market during the past week. Advances to jute and sugar mills have declined slightly, but credit for the iron, steel and engineering industries and for miscellaneous purposes has gone up. There is no change in the advances given to cotton mills and to the foodgrains trade. In the interbank market, conditions have been steady and the call rate quotes around 4½ percent.

The exchange market has been moderately active, with a fair supply of tea bills and moderate supply of gunny bills. The demand for remittances is fair. In London, sterling continued weak but for minor gains against the currencies of Belgium, Switzerland and West Germany.

SILVER WAS QUIET IN CALCUTTA during the past week. The price closed at Rs. 253.25. It was quoted at 112½d in London and at 129.3 cents in New York.

Gold was steady due to good local offtake, while 14-carat fetched Rs. 72.50.

DURING THE WEEK ENDED 4TH SEPTEMBER, Government of India Treasury bills for Rs. 18,41,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 8th September. The total amount offered was Rs. 4 crores. Tenders at Rs. 99.400 percent were allotted 50 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 14th September.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 9th September to 12th September at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from the 2nd September to 5th September amounted to Rs. 1.29 crores only.

ACTIVE NOTES ROSE BY Rs. 17.37 crores to Rs. 2,407.49 crores, according to the return of the Reserve Bank of India during the week ended 4th September, 1964, while the total note issue dropped by Rs. 2.31 crores to Rs. 2,425.49 crores. Notes held in the Banking Department consequently declined by Rs. 19.67 crores to Rs. 18 crores. Deposits of the Government of India were Rs. 38.44 crores larger at Rs. 134.65 crores mainly due to good tax collection but those of State Governments decreased by Rs. 3.83 crores to Rs. 15.11 crores. Balances of scheduled banks at Rs. 95.16 crores showed a rise of Rs. 3.25 crores. Balances held abroad improved by Rs. 2.19 crores to Rs. 12.34 crores. Investments at Rs. 177.34 crores showed a drop of Rs. 14.33 crores. Loans to scheduled banks rose from Rs. 2.06 crores to Rs. 5.23 crores of which advances against usance bills amounted to Rs. 2.09 crores (Rs. 20 lakhs). Ways and means advances stood at Rs. 18.24 crores, against Rs. 21.93 crores.

THE RETURN OF THE STATE BANK of India for the week ended 28th August, 1964, shows a rise of Rs. 95 lakhs to Rs. 671.97 crores in total deposits. Investments in Government securities are up by Rs. 15.01 crores to Rs. 305.14 crores, while other authorised investments remain unchanged at Rs. 9.44 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have risen by Rs. 1.02 crores to Rs. 340.47 crores. Cash and balances are, in consequence, shown at Rs. 29.21 crores or Rs. 6.17 crores less.

THE STATEMENT OF THE POSITION of the scheduled banks for the week ended 28th August, 1964, shows Demand and Time liabilities at Rs. 1,303.78 crores (Rs. 32.35 crores on account of borrowings from banks) and Rs. 1,423.37 crores (Rs. 17.06 crores), compared with Rs. 1,301.75 crores (Rs. 35.17 crores) and Rs. 1,418.27 crores (Rs. 15.73 crores), respectively, in the previous week. Cash has increased by Rs. 64 lakhs to Rs. 64.25 crores, while balances with the Reserve Bank have declined by Rs. 17.98 crores to Rs. 93.79 crores. There is a rise of Rs. 28.57 crores to Rs. 803.68 crores in investments. Advances and bills discounted at Rs. 1,734.45 crores show a rise of Rs. 4.88 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.8 percent and 63.6 percent, against 6.4 percent and 63.6 percent.

New Delhi

GOVERNMENT EXAMINING SITE FOR FIFTH STATE STEEL PLANT

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Minister of Steel and Mines, Mr. Sanjiva Reddy, said at a Press conference on Sunday that the final location of the fifth State steel plant would be determined in consultation with the Anglo-American consortium, the members of which were expected here by the middle of October. Mr. Vance Brandt of Koppes, a member of the consortium, was here last month. His talks with the Government has encouraged him to bring out his full team in October. Reports of the three feasibility studies of the Goa-Belary-Hospet area, the Bailadilla-Visakhapatnam area, and the Salem area based on Neyveli lignite, now available, are being examined by the Government, Mr. Reddy said that the detailed report on the finally selected project would be made by the consortium.

In this connection, Mr. Reddy referred to the Bokaro project prepared by Messrs Dastur and Company. The report is being altered or modified to suit Russian specifications. Referring to the controversy on consultancy for Bokaro, the Minister said that it was true that his predecessor had announced the appointment of Messrs Dastur and Company in Parliament, but no agreement had yet been signed and, therefore, legally Messrs Dastur and Company were not yet consultants.

Mr. Reddy, however, had talks with the Russian Ambassador earlier last week to ascertain whether and how Dastur and Company could be fitted into the Soviet set-up and if so, in what form and to what extent. The Minister did not expect that this matter would become a hurdle in implementing the project. He added that certain modifications in the Bokaro project report, prepared by Dastur and Company, were being made by the Russians, who were suppliers of equipment and whose technological superiority was conceded by both the Government of India and Dastur and Company. It may be explained that unlike the steel mills built with western assistance, the Russian Government was both the financier and supplier of equipment for the Bokaro project. In fact, the Russians were trying to save the Indian taxpayer's money by undertaking the consultancy themselves. Meanwhile, the leader of the British consortium, Mr. Hindson, is arriving here this week in connection with the second expansion programme of the Durgapur steel plant for which British credit has already been offered.

ALUMINIUM

Creating New Capacity

Some progress is now reported in establishing additional aluminium capacity in India. For reasons now well known, the third plan target for aluminium ingots will not be reached. The estimated demand, production and the resultant gap should be evident from the following figures (in tonnes) :

Year	Estimated demand	Estimated production	Gap
1965-66	110,000	68,000	42,000
1966-67	125,000	90,000	35,000
1967-68	145,000	114,000	31,000
1968-69	170,000	114,000	56.000

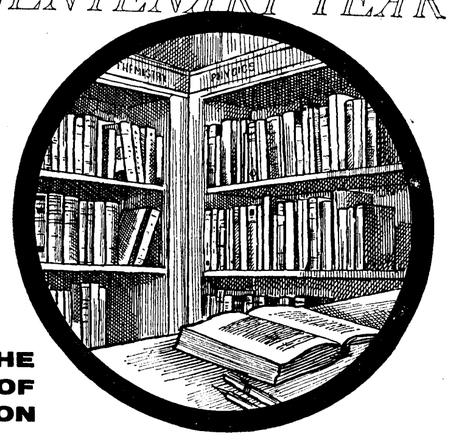
These estimates are based on the assumption that the proposals for the creation of additional capacity, approved or under consideration, were fully implemented. The third plan target, for example, could not be reached because, among other things, a licence granted to Mr. Murarji Vaidya for setting up a 30,000-tonne smelter in Mysore State, based on Sharavathy power, had to be revoked.

The 25,000-tonne Koyna project also met with difficulties, but proposal for its implementation has now been finalised. As for the 30,000-tonne Korba project in Madhya Pradesh, the draft of agreement for the preparation of the project report has been received from the Hungarians who have offered to send out a team for discussion, if necessary. The Hungarians have offered to set up an alumina plant with a capacity of 240,000 tonnes; aluminium is to be processed by some other collaborator for whom the Government is on the look-out. As for expansion schemes, the Government has approved the propsal of Birlas further to expand the capacity of the Rihand smelter to 40,000 tonnes, instead of 60,000 tonnes as applied for. It has also approved Indian Aluminium's expansion scheme in Alwaye (in Kerala) to 10.000 tonnes.

The Government is examining the following additional schemes: The Mettur project (expansion), the letter of intent for which has been issued, 10,000 tonnes; the expansion of the Asansol smelter of Aluminium Corporation, the application for which is being considered, 5,600 tonnes, and J. K. Industries' proposals for a new smelter in Kerala, based on Saurashtra, Kolaba and Thana bauxite deposits, 30,000 tonnes.

As far as the Sharavathy project is concerned, it is now being implemented by the Indian Aluminium Company. The firm proposes to draw its bauxite requirements from the south Kolhapur area in Maharashtra and the Belgaum and Bhatkal areas in Mysore. The cost of the scheme is placed at Rs. 15.8 crores, including Rs. 6 crores in foreign exchange. The smelter, it is expected, will be commissioned by 1967.

NEW BILLS



Discussion in Lok Sabha

A three-week session is planned for the Lok Sabha, which reassembled here on Monday. Food and the rise in prices have dominated the discussions. The Opposition groups tabled a censure motion against the Government.

Seventeen new Bills have been planned for the session. They include the Patents Bill, which is to be referred to a Select Committee, two Bills to amend the Companies Act, the Foreign Exchange Regulation Act Amendment Bill, the Indian Railways Act Amendment Bill, the Direct Taxes Act Amendment Bill, the Wealth Tax Act Amendment Bill and Anti-Corruption Laws Amendment Bill.

The Bill to amend the Companies Act seeks to replace the Ordinance promulgated on 5th July, giving protection to employees of companies. The other Bill, among other things, proposes to make it clear that "books and papers" would include vouchers,

BIRD'S CENTENARY YEAR

PAPER FOR THE EXTENSION OF EDUCATION

"Education is the most important single factor in achieving rapid economic development . . . ", reports the Planning Commission. To spread education, paper is a vital requirement. The Bird-Heilgers Group, one of the largest manufacturers of a wide range of quality paper, is helping in this task with an ever-increasing supply for books, journals, charts and other needs of education.

Deploying the skills acquired over a hundred years, the Bird-Heilgers Group is making important contributions to the economy . . . through planned diversification and expansion.

so that vouchers are also mentioned along with books and papers, as required by law.

The definition of "officer" is proposed to be widened to include any person in accordance with whose instructions the board of directors or any directors is accustomed to act. This provision, it is stated, is designed to counter the tendency of appointing dummy directors.

It is also proposed to do away with the necessity of obtaining Government's approval for the mere addition or deletion of the word "private" in relation to companies.

Another amendment proposes to make it an offence to make applications for shares in the name of, or allot shares to, fictitious persons.

Provision is also being made to safeguard the money paid by applicants for shares until such time as the minimum subscription is collected by the company.

It is proposed to impose a duty on company promoters and directors to ensure that the share capital reflects cash or other valuable assets and is not supported merely by book adjustments. It is proposed to make it clear that an underwriting commission should not be paid except for debenture shares offered to the public.

Certain restrictions are contemplated against blank transfers. Furthermore, companies will be prohibited from commencing any business in relation to their objects without obtaining prior approval of the shareholders.

Beneficial holdings above the 5 percent limit are to be disclosed so that the name of the real holders of such shares, as distinct from nominees, is made clear.

The Foreign Exchange Regulation Amendment Bill gives additional powers to the Enforcement Directorate in relation to the establishments of foreign companies and collaboration with foreign firms.

The Indian Railways Amendment Bill seeks to exclude casual labour governed by the Minium Wages Act from the purview of the parent Act.

The Direct Taxes Amendment Bill gives effect to the assurances given by the Central Finance Minister in Parliament for removing hardship or for providing relief to assessees in certain cases.

The Wealth Tax Amendment Bill gives effect to certain recommendations of the Direct Tax Committee as also to incorporate the changes made in the income tax law by the Income Tax Act, 1961.

I.A.C.

Dispute Referred to Tribunal

The Government of India has referred to the National Industrial Tribunal the despute between the Indian Airlines Corporation and the Indian Commercial Pilots Association for adjudication, it was officially announced here.

COAL MINING

Jarangdih Scheme

The project report on the Jarangdih coal mining scheme, prepared by the U.K. Coal Board, has been received and is being considered by the Government of India. Jarangdih is an old and abandoned coal mine, which the Government now proposes to develop.

The fourth plan coal production target is tentatively fixed at 136 million tons, including a target of 76 million tons for the private sector. The third plan coal target was fixed at 90 million tons. But production by 1966 is likely to be 76 million tons. The fourth plan target, it will thus be seen, will seek to raise coal production by 60 million tons.

DEARNESS ALLOWANCE

Probe by Independent Body

The Government of India has appointed Mr. S. K. Das, retired judge of the Supreme Court to constitute an independent body which will examine the amount of dearness allowance that should be paid to Central Government employees as compensation for the rise in prices.

This independent body has been set up on representations from certain associations of employees that the increases in dearness allowance sanctioned by the Government from time to time are not adequate. According to the terms of reference, the body will examine the question of dearness allowance, subject to the recommendations and general observations made by the Pay Commission's report and in the eight of the various causes of the rise in prices, the state of the economy, the impact of the increased pays on prices and other relevant circumstances. It will report to the Government whether the compensation already granted in the various pay ranges is adequate and recommend what changes, if any, are necessary.

The body will devise its own procedure. It may call for such information and take such evidence as it may consider necessary. The Ministries and the departments of the Government of India will furnish such information and documents as may be required by the body. The latter will submit its report to the Government as soon as practicable.

COPPER

Production under Fourth Plan

Four projects to produce about 58,000 tonnes of copper in the fourth plan period have been taken up for detailed investigations by the Geological Survey of India and the Indian Bureau of Mines. These are likely to cost about Rs. 39 crores. The step has been taken by the Central Ministry of Steel and Mines in order to meet the demand in the next plan.

According to present estimates, the requirements of copper are expected to rise to 250,000 tonnes by the end of the fourth plan, compared with 138,000 tonnes by the end of the current plan.

The schemes which include an integrated copper project to produce 15,000 tonnes of metal in the Rakha-Roam-Siddeshwar blocks in the Singhbhum district of Bihar, where copper mineralisation is promising, is at present being investigated by the Geological Survey of India and the Indian Bureau of Mines. These investigations are likely to be completed by the end of the current plan.

According to present indications, the deposits in this area will sustain a metal production of the order of 15,000 tonnes, and it is hoped that a project to produce this quantity of copper metal can be commissioned before the end of the next plan. The project is estimated to cost about Rs. 20 crores.

The Ministry has already asked the National Mineral Development Corporation to study the position and assess what action can be taken during the current plan itself for the implementation of the project.

Another project to produce 10,000 tonnes of copper from Kolihan, where deposits of copper are also promising, is presently being investigated by the Indian Bureau of Mines. The project is close to the Khetri deposits in Rajasthan. By June next year, the Indian Bureau of Mines is expected to complete investigations and submit a report.

According to present indications, the deposits will be able to sustain metal production of the order of 10,000 tonnes a year. The scheme is expected to materialise by about the middle of the fourth plan. It has been estimated that the Kolihan project, up to the stage of producing concentrates, will involve a capital expenditure of Rs. 10 crores.

A project to produce 2,000 tonnes to 3,000 tonnes of copper from the Guntur district of Andhra Pradesh is also being investigated by the Geological Survey of India and the Indian Bureau of Mines. The present indications are that two or three of these deposits can be proved by about the middle of the next plan and each may sustain metal production of the order of about 2,000 tonnes to 3,000 tonnes. Each of the deposits is likely to be small in size but of a relatively high grade. For the exploration of these projects, a tentative provision of Rs. 1 crore is being made in the next plan.

A project to set up a smelter of 30,000 tonnes' capacity, based on imported concentrates, is to be exploited with technical as well as financial collaboration with foreign parties owning or controlling overseas mineral deposits. The project is estimated to cost about Rs. 8 crores. Such a smelter can be used wherever concentrates can be produced indigenously. A feasibility report on this is being prepared.

At present, the Indian Bureau of Mines is carrying out eight investigations for the metal. It has been proposed to increase the number to 20 investigations by 1967-68 and 30 by 1969-70.

For providing a necessary number of prospectus for the Indian Bureau of Mines, the Geological Survey of India is correspondingly intensifying its copper investigation work.

Copper is known to occur in various parts of the country, and the total number of occurrences is about 300. These occurrences are in well-defined belts, the most important being in Rajasthan, Bihar and Andhra Pradesh. In view of this, it may be possible to exploit even small deposits by establishing regional smelters.

ZINC

Fourth Plan Projects

The demand for zinc at the end of the fourth plan is expected to be 225,000 tonnes, compared with 136,000 tonnes at the end of the third plan, according to the latest estimates prepared by the Central Ministry of Steel and Mines.

To meet the enhanced estimated requirements, the Ministry of Mines has drawn up various projects where investigation, research and pilot-plant tests are necessary to prove reserves. These projects, when fully implemented, will go a long way in meeting additional requirements. These are estimated to cost about Rs. 72 crores.

A project to set up a zinc smelter with a capacity of 30,000 tonnes, based on imported concentrates, and with Polish collaboration, has been finalised. The project is expected to cost about Rs. 12 crores, which will mostly be incurred during the fourth plan period.

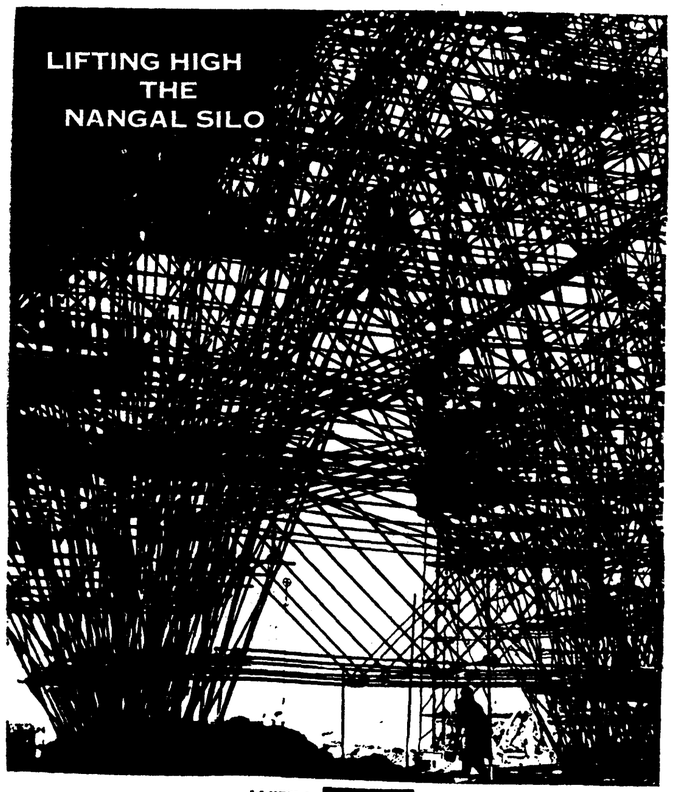
Another project is for the development of the Zawar zinc deposits in Rajasthan to yield about 50,000 tonnes of metal a year. At present, the Zawar zinc deposits are being developed to yield about 18,000 tonnes of metal a year.

Since it has been established that the deposits in Zawar are capable of sustaining metal production of the order of 50,000 tonnes a year, the Ministry has appointed a committee to study the matter and report on the investment required for the exploration of the area and the establishment of additional concentrating and smelting capacity.

It is estimated that the project may involve additional capital expenditure of Rs 25 crores which is to be included in the fourth plan.

It has been found that the establishment of two more zinc smelters of 50,000 tonnes' capacity each, based on imported concentrates, is feasible. A provision of about Rs. 35 crores is to be made for the purpose in the fourth plan. It has been pointed out that it will be advantageous to secure technical and financial collaboration of foreign parties who have the command of necessary mining and concentrating resources.

U.S.A.



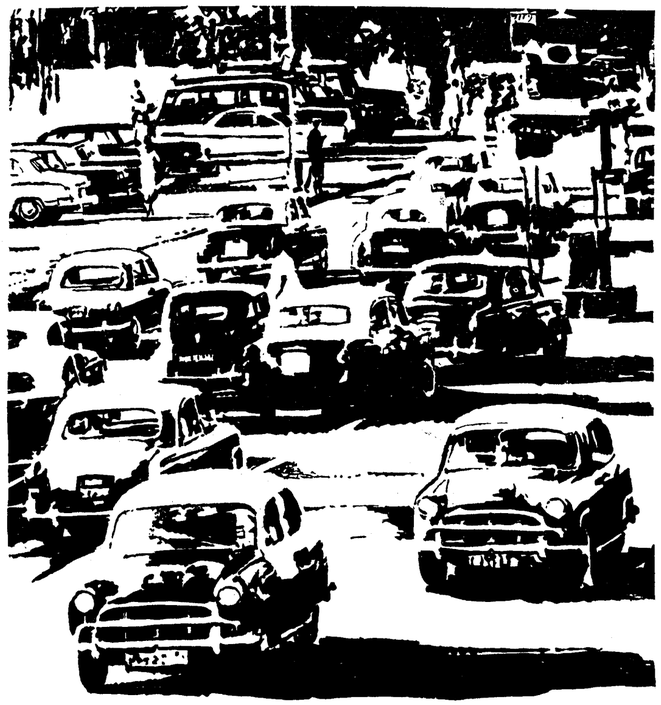
New Credit Offered

The U.S. Government has recently announced the signing of a Rs. 11.9-crore line of credit in favour of the Government of India. The credit is being extended by the U.S. Export-Import Bank. The proceeds of the credit will be used to finance the purchase of U.S. capital equipment and services required by the public or private sectors engaged in development programmes and projects within India.

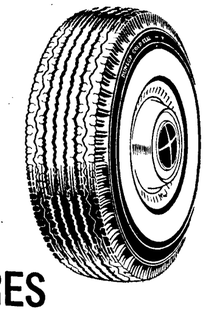
Three earlier credits for similar purposes had been authorised by the Bank in favour of the Government of India for a total of Rs. 107 crores. These credits also financed capital goods such as mining and construction equipment, transport and earth-moving equipment, communications equipment and machinery for the textile, aluminium, chemical and motor-car industries.

The first line of credit for $150 million was extended on 27th February, 1958; the second for $50 million on 23rd December, 1960; and the third for $25 million on 3rd August, 1962.

In addition to these non-project loans, the bank has extended credits to a number of Indian enterprises engaged in the manufacture of diesel locomotives, fertilisers, aluminium, rayon, chemicals, plastics and forgings. The U.S. Export-Import Bank credits have been used by Air-India to purchase its all-jet fleet. The total amount of assistance extended by the Bank to India now exceeds $379.3 million (Rs. 180.6 crores). The Bank's assistance is part of the U.S. Government aid programme to India, which



WITH MILLS
TUBULAR SCAFFOLDING



The Nangal Silo is just one site where Gammon India Ltd. have used MILLS Scaffolding. Safe, practical and economical, MILLS Tubular Scaffolding is being used in the building of more and more projects because it can be used over and over again. Simple to erect, this versatile scaffolding saves time, labour and money. Free advice on installation with drawings can be supplied by Stewarts and Lloyds. The tubes for the scaffolding are made by The Indian Tube Company (1953) Limited. The fittings are made by Guest, Keen Williams Ltd.

Send your enquiries to

now totals $5,348 million (Rs. 2,547 crores).

The loan agreement signed recently is repayable over a period of 12 years commencing in 1967, and bears an interest charge of 5½ percent.

WEST GERMANY

Credit Pact Likely

Since the preliminaries have been finalised, a credit agreement between the Governments of West Germany and India is expected to be signed shortly for the conversion of the Mysore Iron and Steel Ltd into a special steel and alloys producing unit. The agreement is expected to cover 60 million deutschemarks. Immediately after, orders for the import of equipment will be finalised.

After the conversion, the annual capacity of the plant will be 77,000 tonnes of high speed steel, high alloy steel, free cutting and spring steels and constructional steels. The project is estimated to cost Rs. 10.75 crores with a foreign exchange component of about Rs. 7 crores.

The technical know-how required for the production of alloy and special steels is being obtained from Messrs Bohler and Company of Austria, one of the most reputed producers of special steels in Europe.

A West German technical team visited the Mysore works towards the end of last year and approved the scheme. Subsequently, a technical collaboration agreement, which is for a period of ten years, was signed in November 1963.

RAILWAYS

New Train Services

In order to provide improved passenger service, the railways will be introducing 62 new trains from 1st October this year. This will bring the total number of new trains introduced since April 1964. to 163. The fast running "Taj Express" between New Delhi and Agra from 1st October, will be a fully-vestibuled train which will enable tourists to leave Delhi in the morning, visit the Taj and other objects of tourist interest in Agra and return the same evening.

Other important new trains would be the Assam Mail between Delhi and Barauni; the Cochin-Bangalore Express; the Brindaban Express between Bangalore and Madras; and Chandigarh Express between Ferozepur and Kalka.

The frequency of the present Southern Express between New Delhi and Madras will be increased to five days in the week. New trains will be introduced also on Saharanpur-Moradabad and Asansol-Dhanbad sections.

The freight traffic has not, however, come up to the expectation. During the first four months of the current year, both in relation to coal and steel plant traffic, there has actually been less movement of about 3.24 million tonnes, compared with that of the corresponding period of last year.

AGRICULTURE

Corporations Planned

The Government of India is of the view that the pace of agricultural production would be considerably accelerated if some organisations were set up in the public sector to manufacture and supply the needs of the agriculturists by way of tools, implements and equipment. At present, there is no organisation in the public sector which directly helps the agriculturists in this direction. Some of the small-scale industrial units have been producing agricultural implements, but it is felt that there is considerable scope for the improvement of product design and the production of aids suited to the needs of the agriculturists. In view of this, the Government proposes to encourage the setting up of agro-industrial corporations by the State Governments in the public sector.

These corporations, it is proposed, should be autonomous bodies registered under the Companies Act. Each of them will have a board of directors, including a managing director, who will be a full-time officer.

The agro-industrial corporations, it is proposed, will consist of three divisions; (a) a loans division, (b) a manufacturing division; and (c) a demonstration and field work division.

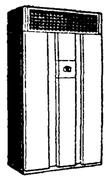
The loans division, it is proposed, will give loans up to a certain limit to any individual firm or company engaged in any industry or occupation which contributes to the production or preservation of subsidiary foods or any other process which increases the availability of food supplies.

The loans may be given for the manufacture of tractor implements, setting up of storage warehouses, building of refrigerated vans for the movement of poultry, fish, vegetables, etcetera, building of fishing boats and the manufacture of poultry equipment like incubators, etcetera.

The manufacturing division, it is proposed, will design and develop new items, particularly agricultural implements and machines, which are power-operated or which can be operated with ease. It will also produce standard items like the following: inexpensive motorised power tillers; poultry and dairy equipment; cold storage plants with capacities of up to 50 tons; and equipment for fruit canning, fish curing and food preservation.

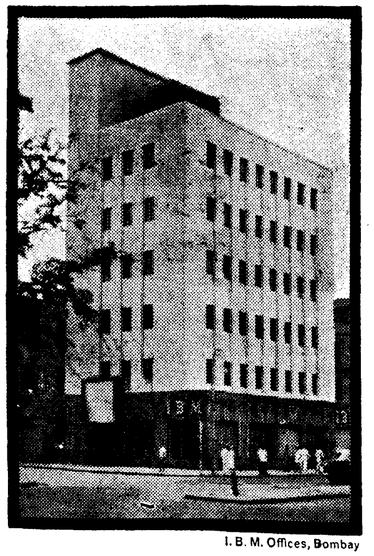
The demonstration and field works division, it is proposed, will organise extensive demonstrations in the use of modern agricultural implements, particularly the power-operated ones.

Initially, the corporations cannot be profit-earning ventures. But ultimately after items of production are standardised and mass production is undertaken, they are expected to become self-supporting.



U.S. Mission Arrives

The U.S. authority on agricultural price supports, Dr. Willard W. Cochrane, has arrived in India. He heads a three-man production incentives mission which has come to India at the invitation of the Government. In an interview, Dr. Cochrane said that although India's food production had been increasing in recent years, it had not been growing as much as the population. "The per capita food production has actually been declining in the last three years," he said. "There are a number of things that can be done to improve the situation, and all of them involve investing more resources in agriculture."



Dr. Cochrane believes that the mission's initial activity should be to help India develop a price-support programme to provide greater production incentives for the individual farmer. "The idea is not just to raise the price level of commodities for the cultivator, but also to stabilise prices and to prevent the drastic price drops at the harvest time."

Dr. Cochrane said that at the harvest time, when commodities are readily available, prices slump on the local market. Later, when food becomes scarce, particularly in the larger cities, prices climb substantially. "The producer does not benefit from these increases," he pointed out. The U.S. expert believes that a price-support programme involving Government storage and distribution programmes will prove to be a great incentive to the local cultivator and stimulate production. After outlining the basic plan—"and if there is agreement among the mission, the Agency for International Development (A.I.D.) in India and Indian officials—he expects to draw up a schedule for American technicians to come to India to help work out operational details of the programme. These technicians would include experts in

YOU CAN COOL A WHOLE FLOOR OR AN ENTIRE BUILDING

WITH BLUE STAR-WORTHINGTON PACKAGED AIR CONDITIONERS 5, 7½, 10 TONS

I. B. M. Offices, Bombay

Give yourself a package deal. Buy comfort with Blue Star-Worthington Packaged Air Conditioners.

These versatile units may be used free standing or with ductwork. Individually they can cool from 1500 to 3000 sq. ft. of floor space; in multiples they form large tonnage central systems to cool a whole floor or an entire building effectively, economically, efficiently.

They offer you the added advantage of flexibility—you can add more units with minimum alterations, as your needs increase.

Blue Star-Worthington Packaged Air Conditioners are ideal for offices, banks, restaurants, canteens, clubs, showrooms, shops, stores... For your next air conditioning job, call in Blue Star.

organisation, storage and grain handling, legal factors and merchandising.

Dr. Cochrane, who believes that the rôle of agriculture in economic development has been under-emphasised in most developing nations, is of the opinion that the following measures should be taken in India to stimulate food production:

Firstly, the country should invest a great deal more money in fertiliser production. Fertiliser costs are now high and the incentive for producers to use it is low. The Government must be prepared to allocate a larger portion of its Budget for fertiliser production and get it to the cultivator at considerably less than current prices.

Secondly, the country should invest more money in fertiliser distribution.

Thirdly, the country should invest more in irrigation projects. "Present projects are not working as well as they should. Some works are silting badly; drainage is poor, and there is the problem of soil salinity in Punjab. A great deal of skill and money must be put into irrigation."

So far so good, but two important questions require Professor Cochrane's attention. One is multiciplicity of agencies dealing with agriculture and the other is the rôle played by the community development projects in stepping up production.

COKING COAL

Fourth Plan Requirements

The demand for coking coal in the fourth plan is expected to increase by more than 100 percent according to the latest estimates of the Central Ministry of Steel and Mines.

The total production of coking coal in 1963-64 was 17.50 million tonnes. By 1965-66, this figure is expected to go up to 19.14 million tonnes. Against this, the total requirements of coking coal during the fourth plan have been estimated at 46.04 million tonnes. Additional requirements during the next plan, therefore, would amount to 26.90 million tonnes.

To meet the overall requirements of coking coal in the fourth plan, the Ministry has estimated that it would be possible to produce 26.54 million tonnes under the third plan projects and schemes. This includes 10.37 million tonnes in the public sector and 16.17 million tonnes in the private.

Under the fourth plan projects, an additional production of 20.07 million tonnes has been envisaged. This would include 10.26 million tonnes in the public sector and 9.81 million tonnes in the private. These estimates —both in the private and public sectors—have been examined by a technical screening committee and found to be feasible.

Out of the total requirements of coking coal, steel plants would require 38.36 million tonnes, merchant cokeries 7.23 million tonnes and Sindri Fertiliser 450,000 tonnes.

HOUSING

Obligation of Employers

It is proposed that all industrial establishments with a paid-up capital of Rs. 20 lakhs or more should be placed under a legal obligation to construct houses for at least 50 percent of their labour over a specific period of years. This is considered necessary because the subsidised industrial housing scheme has not made much headway.

It has been estimated that the shortage of houses in urban areas has gone up from 2.5 million houses in 1951 to 5 million houses in 1961. Against this, only 1.5 million houses are expected to be added during the third plan period.

Even the modest target of 200,000 houses for industrial workers, it is believed, can be achieved in the next plan only if employers generally accept the housing of a substantial portion of their workers as an essential obligation.

While proposing that construction of houses for their workers should be obligatory for employers, the Government is prepared to ensure protection against the abuse or misuse of houses through sub-letting, unauthorised occupation, etcetera.

The Government would also consider making land available to industries for workers' housing at a reasonable price. It is proposed that in the case of new industries, employers should earmark in their projects sufficient land for workers' housing. It is not explained what positive step the Central Ministry of Works and Housing has taken against the evil of sub-letting by its own employees in Delhi.

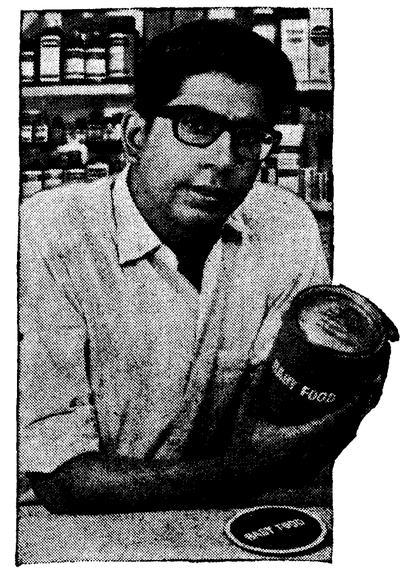
TRACTORS

Public-sector Project

The Government is examining the possibility of a public-sector project to manufacture tractors and power-tillers for agriculture. Collaboration with Czechoslovkia is envisaged.

FERTILISER

Setting up New Plants



A West German delegation of industrialists and bankers is due here in November to explore the investment possibilities in India. A Japanese team is also arriving here shortly to investigate the investment possibilities in the petro-chemical industry.

The Central Food Minister, Mr. C. Subramaniam, stated recently that the Government had authorised a joint Indo-American team to investigate the possibility of setting new fertiliser plants in India. An American consortium headed by the Bechtel International Corporation will spend $1,250,000 on the study, India contributing an equal amount in rupees. The Government has committed itself that in case the study proves favourable, the consortium, in collaboration with the public sector, will set up five new fertiliser plants with a total capacity of 1 million tonnes of nitrogen.

SHIPPING

Fixing Fourth Plan Target

Inaugurating a meeting of the National Shipping Board last week, the Prime Minister, Mr. Lal Bahadur Shastri, said that it would be worth while to aim at carrying at least 50 percent of India's imported cargo in indigenous vessels. It might be a big target to begin with, but it is neces-

Yes, it's safe—because it's in a tamperproof container

The diaphragm you see here is one of the most reliable means of making sure that the product you buy has not been tampered with or contaminated on its way from the factory to the shop.

The foil diaphragm is a widely used pilferproofing technique. Others that you are familiar with are Roll Seal closures on bottled drugs and foods, laminated strip packs for tablets, sealed cans for processed foods, tear-off seals on pharmaceutical phials.

Pilferproofing methods, combined with indelible printing of trade marks and brand names on packages, introduced and promoted in India by Metal Box, are doing a good job in protecting public health and life.

Metal Box currently supply packages to more than 1,500 manufacturers who pack over Rs 120 crores worth of consumer products—all of them kept safe and pure in protective packages.

These figures are impressive—but they are not big enough. Adulteration of foodstuffs and racketeering in spurious drugs continue to be major evils in our public life. Strong, concerted action by Government and Industry alone can help to wipe them out. And Metal Box hope to play a major part in getting this good work done.

MB
METAL BOX
protective packaging

MVTMB 1003A

sary to keep this objective in view. Overseas shipping can earn a good deal of foreign exchange for the country. He, therefore, suggested that while the expansion of overseas trade was going on, the country should try to increase the present tonnage in a big way. He was not quite sure what the fourth plan target would be, but he felt that it should not be less than 3 million to 3.5 million tonnes. Perhaps a tonnage of 4.5 million would be needed if Indian ships were to carry 50 percent of the cargo.

The Prime Minister said: "Two other questions which are connected with shipping are ports and the building of ships in the country. In so far as ports are concerned, there has been considerable expansion during the last few years, and we are going ahead with the development of new majort ports. There are Mangalore, Tuticorin, Marmugao, Paradeep and Haldia. I think, when we get all these ports ready, it will be a remarkable achievement. There are, of course, difficulties in the way. In spite of these difficulties, we have to go ahead with these projects. I am sure that in the next four or five years, it should be possible to complete most of the major ports."

The Prime Minister described the handling of cargo at ports as far from satisfactory. He said that the Government had recently to face serious difficulties in connection with foodgrains imports. When the country is faced with the shortage of foodgrains, it is regrettable that the ships had to wait in the sea for a number of days in different ports. Labour would also have to play its part, although it may be experiencing some difficulty and may be afraid of retrenchment following the introduction of mechanical devices. Mr. Shastri said that even if mechanical handling was introduced for unloading, the present staff would not be affected. Gradually, however, the staff might be reduced.

The Prime Minister advised the port authorities to strike a balance between automatic loading and manual loading and unloading. This middle course was the only right course for the country. "I am supporting the middle course because I feel that it is in the best interests of the country. I would, therefore, suggest that this difficulty in the ports should be tackled with great efficiency and I have no doubt that labour will co-operate."

Harbour Board Reconstituted

The Government of India has reconstituted the National Harbour Board. The non-official members representing the shipping trade and the sailing vessels industry are Messrs Vallabhdas V. Mariwala, H. M. Desai, D. M. Parekh, C. R. Corera and G. S. Darasingh (labour).

TARIFFS

Importance of Rationalisation

Inaugurating the first meeting of the Tariff Revision Committee, set up recently by the Government of India, the Central Minister of Commerce, Mr. Manubhai Shah, said last week that the rationalisation of tariff was a matter of considerable importance at a time when India was trying to achieve an expansion of international trade and the elimination of trade barriers.

The basic tariff structure was adopted in 1934. But during the past 30 years the Minister said, there had been a number of important developments which in one way or another affected or should affect the tariff. India's accession to the G.A.T.T. resulted in a number of commitments, and the creation of new tariff items to provide for them. The balance of payments difficulties, and the introduction of import trade control, changed the pattern of India's imports, and greatly reduced the importance of many tariffs. The industrial progress since independence had led to a change in the pattern of imports of machinery, component parts and raw materials, and finished articles. More and more goods had become liable to the Central excise duty, and consequently to the countervailing duty.

New international nomenclatures and classifications, such as the Brussels Tariff Nomenclature and the Standard International Trade Classification had appeared on the scene. For many reasons, therefore, the tariff which was modern in 1934 had become inadequate and out of date. Citing an instance, Mr. Shah said that Rs. 38 crores, or about 12 percent of the total import revenue, came from a single miscellaneous item out of the 563 items in the tariff, namely, "all other articles not otherwise specified, which covered a mass of miscellaneous articles; whereas there were other sections of the tariff, such as those relating to iron and steel and textiles which abounded in sub-divisions which had now ceased to have significance", the Minister said.

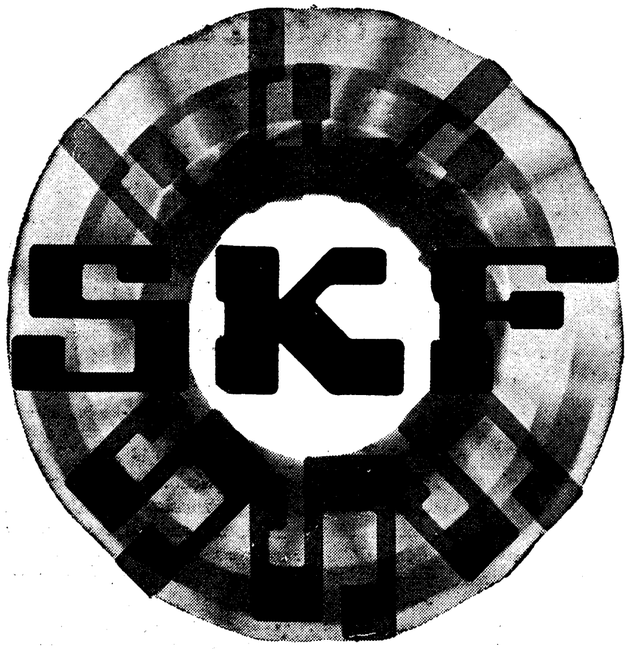
BALANCE OF TRADE

Improvement in April-June

During the quarter April-June 1964, there was a sizable reduction in India's trade deficit amounting to Rs. 68 crores, compared with Rs. 130 crores in April-June 1963 as the following table will show:

(Value in Rs. crores)

	April-June 1964	April-June 1963	Net increase or decrease
Import	272	310	—38
Total exports	204	180	+24
Balance of trade	—68	—130	+62



Exports during April-June 196 (destinationwise) were as follows:

(Value in Rs. crores)

Regions	April-June 1964	April-June 1963	Net in-
E.E.C.	16	14	+2
U.K.	35	30	+5
Other west European countries	4	8	—4
Asia, including the E.C.A.F.E. region	56	50	+6
Africa	10	9	+1
America	47	43	+4
East European countries	36	26	+10
Total exports	204	180	24

The principal reason for the some what higher rise in this quarter wa heavy buying by the east Europea countries, especially Russia, whic contributed to an increase of Rs. crores; the rise in exports to the U.K was Rs. 5 crores, the balance of th Rs. 9-crore increase being accounte for by other countries.

The east European countries bough more of coffee due to recent shortag of the commodity experienced i world markets. At India's suggestio Russia and other east European cou tries bought more of tobacco. As ju sackings were facing severe Pakista

competition, special efforts were made to persuade east European countries to lift more during the quarter.

Sugar sales were accelerated to the U.S.A. and other destinations (156,000 tons of sugar in this quarter) by exporting parties due to attractive prices. Side by side, there was an acute shortage of sugar in India.

On the import side, there was a significant decline in India's imports from Russia from Rs. 21 crores to Rs. 15 crores. Among the other east European countries, imports from Czechoslovakia were somewhat higher while those from East Germany, Poland, and Yugoslavia declined slightly. As for the E.E.C. countries, imports from West Germany increased from nearly Rs. 23 crores to about Rs. 26 crores while those from France were moderately higher. Imports from Belgium, Italy and the Netherlands were at a somewhat lower level. Imports from the U.K. declined by Rs. 2 crores from Rs. 46 crores to Rs. 44 crores. Imports from Iran showed a significant decline from about Rs. 16 crores to Rs. 7.5 crores, mainly due to lower imports of petroleum and petroleum products. Imports from Japan and the U.A.R. were moderately higher. A large part of the decline in imports from the U.S.A. from Rs. 102 crores to Rs 79 crores is accounted for by the items like foodgrains which are not fully covered in the Customs returns.

E. C. G. C.

Helping Exporters

The current year marks a turning phase in the development of the Export Credit and Guarantee Corporation. In May 1962, the Central Ministry of International Trade appointed a study group under the chairmanship of Mr. K. P. Mathrani, to review the credit facilities available in the country for developing India's export trade and to determine the measures which would be necessary to strengthen and supplement the existing financial arrangements. In its report, the group observed that in most developed countries, specialised institutions had been established to cater to the special requirements of the export trade. It emphasised that as Indian exporters would have to fight on equal terms with their international competitors, they too would need to have the benefit of similar organisational facilities. It was, therefore, recommended that an export-oriented credit institution should be set up as an adjunct to the existing export promotion machinery. In accordance with this recommendation, the Government of India decided to transform the Export Risks Insurance Corporation into a full-fledged Export Credit and Guarantee Corporation which, besides covering the schemes of export risks insurance, will also furnish various kinds of guarantees to banks, with a view to securing for the exporters more liberal credit facilities at lower rates of interest. It will also provide supplementary credit facilities whenever necessary and perform such other functions as the Government may assign to it from time to time.

The Corporation has recently formulated a scheme under which foreign facilities are proposed to be extended to manufacturer-exporters for the import of raw materials, components and spares required by them for the production of goods for export. Under the proposed scheme, commercial banks dealing in foreign exchange, will obtain lines of credit from their principals, branches or correspondents on the basis of a general permission from the Reserve Bank to repay the funds to the lending institutions abroad to the extent of the liabilities incurred at the conclusion of the contract. Against these lines of credit, exporters of proved export performance—or capable of giving a satisfactory export performance—will, on approval by a screening committee appointed for the purpose by the Government, be granted import licences for raw materials, components and spares, subject to suitable safeguards. In this scheme, the Corporation will serve as the co-ordinating agency, the link between the sponsoring bank, the screening committee and the licensing authority.

The Government has also decided to raise the paid-up capital of the Corporation from Rs. 50 lakhs to Rs. 2 crores. Of this, Rs. 1 crore is proposed to be placed at the disposal of the Corporation.

BRNO TRADE FAIR

Indian Participation Planned

India is officially participating for the first time in the sixth international trade fair in Brno which will be held from 6th to 20th September. This year's specialised engineering fair will again comprise 12 groups of the engineering industry with the main emphasis laid on machine tools and forming machines, power engineering equipment machines and equipment for the chemical and food industries, transport engineering, tractors and agricultural machines and on machinery and equipment for the leather, textile and rubber industries.

A total of 620 exhibitors from 35 countries will participate in the fair. Official stands will be opened in the Pavilion of Nations by India, Nigeria and Monaco. Of the western countries, the largest exhibits will be from Britain and West Germany.

The Government of India invited nearly 300 Indian firms to participate in the fair. Finally, 81 Indian firms decided to send their best and selected goods. A variety of items ranging from cutting tools, lathes, drilling machine tools, electric motors, textile machinery and textile bleaching machines to industrial process control instruments, refrigerators, sewing machines, fans, etcetera, are being sent for the exhibition.

came the other day

®
Celcon is the new engineering material which has excited interest of buyers from the automobile industry, the electrical industry, the building materials industry, the hardware industry, the packaging industry, the office equipment industry and the weapons-making industry. Celcon was developed after many years of research by the Celanese Corporation of America, one of the world's major producers of formaldehyde and trioxane.

Celcon is fast displacing iron, steel, brass, zinc, aluminium, magnesium, thermosets, laminates and wood in the manufacture of many articles. As contrasted with many die-cast metals, Celcon components require little or no finishing when they emerge from the mould and may almost immediately be put to use. Considerable amounts of money are thus saved when Celcon is used. Celcon maintains its high mechanical strength, stiffness, toughness and resistance to impact force over a long period and through broad ranges of temperature and environment.

Celcon is available in natural translucent white and 18 standard colours; it is easy to fabricate; has excellent frictional characteristics; it can be readily sawed, drilled, turned, milled, filed and threaded. It can be fabricated by injection moulding, extrusion, blow moulding and other high volume thermoplastic processing techniques. Processing ease and economy are its greatest advantages.

FIRST STEPS TO REFORM U.K. COMPANY LAW

(FROM OUR LONDON CORRESPONDENT)

THE Stock Exchange Council has earned the gratitude of the investing public for anticipating the reform of the Companies Act, over which the Government has been brooding ever since the Jenkins report was issued two years ago. Lord Ritchie's letter to 4,500 company chairmen may not satisfy the higher hopes for company law reform; but considering that the Council has little power to enforce demands, it has taken a big step forward. Much, if not all, of the information which companies are asked to disclose in future is, in fact, already given by a small but growing number of the most progressive firms. Moreover, the Quotations Committee of the Council has been demanding most of it lately before granting a quotation.

But in the past, the Council has concentrated mainly on full disclosure in prospectuses and similar documents. This information comes only once and is not necessarily kept up to date later. All that the Council has required in the case of annual accounts and dividend statements is that they should comply with the company law. The new initiative is meant to induce companies to maintain permanently the standard of disclosure which has become the rule for new issues.

For companies seeking quotation for the first time, and for companies issuing additional securities, including scrip issues, new conditions will shortly be imposed. Further requirements may be added to the list as time goes on. As to extending these firm conditions to the great mass of existing quoted securities, the Council takes the view that it cannot change the contract made with a company at the time when a quotation was first granted. Only as new securities are issued can the new terms be enforced. For the rest, the Council hopes that the power of example and persuasion will steadily increase the number of companies which make full disclosure.

As for interim reports, no dates are suggested, but it was said that for companies declaring interim dividends these might be combined with the interim reports. It is the fervent hope of the Council that ultimately every company will comply with the entire list of recommendations in its annual and interim reports. No doubt some of these items may not be applicable to certain companies, but Lord Ritchie's letter shows a refreshingly tough attitude towards the familiar excuse that any additional information might help competitors. As there are something like 3,000 applications for the grant of a quotation each year, the decision to enforce certain new conditions in connection with new issues may produce a good deal more progress than one might imagine.

Information Wanted

All public companies will soon have to undertake to give fuller information when they are applying for a quotation either for the first time or for additional securities, including scrip issues. The following three points are to be made formal requirements for the grant of a quotation when consultations with professional bodies are completed, which may be within two months or so:

(1) Information as to the composition of a group of companies and as to any major interests in associated companies.

(2) Where a company or group carries on widely differing operations, the provision of an analysis of trading results.

(3) The issue of quarterly or half-yearly interim reports.

The letter from Lord Ritchie, chairman of the Stock Exchange, goes on to say that the Council of the Stock Exchange is considering whether some further recommendations should, in the future, be made about admission to quotation. Consultations about these matters are going on. Besides the three points mentioned, the Council attaches particular importance to the disclosure of turnover, but this is, for the present, to remain a "recommendation." A number of further recommendations are set out in an appendix to Lord Ritchie's letter. The following is a summary:

Fixed assets: Land and buildings should be split between freeholds and leaseholds, and, if relevant, a division made between leases for up to 50 years and above. The notes to the accountants should contain a table of movements of fixed assets. Where fixed assets have been revalued, the dates and sums remaining in the account from each valuation should be shown.

Investments: Quoted investments should be valued and a distinction made between those which are current and fixed assets. A list of investments held as fixed assets should be included. In the case of quoted trade investments, the names and holdings in the companies should be revealed.

Stock in trade: Where stock is still given in annual accounts "as valued by the directors", a precise description of the basis of valuation should be provided.

Turnover: Sales turnover figures should be included in the report, together with a break-down between the more important trading divisions. If there is any risk that these figures might be misunderstood, explanations should be given.

Depreciation: A note showing the method used in calculating depreciation should be included and any exceptional charge shown separately.

Other items: Comparative ten-year figures. Number of employees. Particulars of any controlling shareholdings in the company. ("It is particularly desirable that any shareholder should know whether he is a minority shareholder.") A clear description of the activities of the company, the relative importance of different branches and a list of principal products.

Interim reports: The Council believes that interim reports should be issued. It believes that the risk of misinterpretation of figures can usually be avoided by providing explanatory statements. It should be an item of all quoted companies to publish quarterly or half-yearly reports which should be sufficiently detailed to reflect the results for the period.

The recommendations follow the lines of the Jenkins Report on Company Law Reform, which the Government is still considering. The Stock Exchange decided to tighten its own terms and try to achieve further protection for the investing public by persuasion rather than wait any longer for legislation.

What are the lines along which the Government's consideration of the Jenkins Committee's proposals is proceeding? On a number of aspects, new legislation may have to take account of fresh developments in the investment field generally, as well as in company practice. The growth of popular interest in investment, reflected partly in the sharp increase in unit trusts and their funds, makes it even more important that really adequate information should be produced by all types of companies.

Degree of Control

Inevitably, new legislation must mean some increase in the degree of control exercised, particularly over companies having a public quotation, or seeking funds from the public. The first and most urgent stage of providing greater protection for building society members and depositors in other types of concerns has already been secured. Main City attention will be directed at two positive and highly desirable moves. The first is the intended provision for fuller disclosure of beneficial share-ownership, and of company holding in other companies. The second is the wise decision to permit the issue of ordinary shares of no-par-value.

There has long been grounds for objection to the ease with which it has been possible for owners of shares to cloak their identity behind nominee names. The Jenkins Committee's recommendation was simple: Owners of 11 percent or more of an equity, or of voting power in a company, should have to notify it of the extent of their interest. Implementation in the past of this suggested rule might have changed the complexion of a number of take-over bids. Option dealings were covered also in the Committee's proposal.

The City has waited a long time for the right to issue no-par-value shares. Crude misconceptions of dividend policy can arise as a result of uninformed comparison of distributions with a meaningless nominal value. Although the number of companies deciding to avail themselves in the short-term of the right to issue N.V.P. shares might be limited, this move, like others intended, is a step in the right direction. It is part of a process which should lead to a better understanding and more sophisticated approach to investment.

Important elements which reasonably can be expected to figure in the new legislation, when it comes, are a widening of the powers of the Court to deal with negligent directors, and a more practical and less "steam-hammer" approach to inspection of companies by the Board of Trade. It seems less likely that the powers of the Stock Exchange to control its own affairs will be encroached upon. Sentiment in Britain does not favour the American type of official intervention.

In practical terms, it is improbable that a Bill can be introduced before the second session of the next Parliament. It is then intended to be an amending Act to the 1948 Act, leaving scope for a further consolidation a year or so later. At this stage, at least, a separate Act for unit trusts is not intended.

On non-quoted and mainly small "exempt" companies some problems probably have yet to be resolved. The Jenkins Committee's view that there should be no distinction between exempt and non-exempt concerns may not yet be acceptable. The proliferation of small companies seems primarily to be an administrative problem. It would be a pity to restrict a useful corporate form for the sake of the convenience of the Board of Trade.

RAISING FOOD OUTPUT THROUGH CRASH PROGRAMMES

By V. N. Hoon

The shortage of foodgrains and their soaring prices reflect the stagnation in Indian agriculture despite the lavish outlay under the five year plans. Half-hearted and unco-ordinated measures taken by the Centre and the States will aggravate, rather than ease, the existing difficulties. A permanent solution to divergent pulls from the States is to put agriculture on the concurrent list or to make it a Central charge.

SEVENTEEN years of independence and the stress on economic planning have not helped resolve the country's food production difficulties. Instead there has been stagnation in agriculture and a continuing rise in the prices of foodgrains. Since the last two or three years, this has assumed alarming proportions. Foodgrains production has woefully lagged behind the increase in population. The Prime Minister, Mr. Lal Bahadur Shastri, warned the other day that the food shortage and soaring prices could jeopardise the economy and that agriculture still remained a sleeping partner in economic progress. He could have added that if these trends were allowed to continue, there might be a repetition of the 1943 Bengal Famine on a countrywide scale, widespread social discontent, riots and other ugly consequences. The President, Dr. S. Radhakrishnan, has also spoken of the menace of rising food prices and exhorted agricultural research workers to become partners in the development of agricultural science and techniques in the field. Fortunately, the Government is seriously viewing the situation as never before and considering taking strong measures.

A price rise in, say, wheat or rice by itself is not something to be feared. But when it does not lead to an increase in the output of that commodity (or to a reduction in demand, which in the case of foodgrains is not to be expected), then there is cause for misgiving. It is then that certain official measures are called for to correct the play of economic forces. The present 80 million tons of foodgrains production is not enough for the country's consumption requirements. To say that there is enough food and that only the anti-social elements are withholding the supplies from the market is to shut one's eyes to the overall shortage that has dogged the economy for the last so many years. That is obvious from the fact that India is importing foodgrains every year to the tune of 3 million to 4 million tons. This will now increase to 5 million tons. These imports—especially under P.L. 480 from the U.S.A.—have had to be used for meeting the shortfall in internal production, season after season. Production has neither kept pace with the rising demand nor with the rising prices. There is, therefore, need for drastic measures. In a developing economy with increasing population and rising money incomes, a rise in prices is inevitable, but if a simultaneous increase in the output of food is overlooked, then there is bound to be distress. The raising of income and wages merely to meet the price rise adds to inflationary pressures without a corresponding increase in supplies. That is a simple economic proposition, which has unfortunately been overlooked.

Building Buffer Stocks

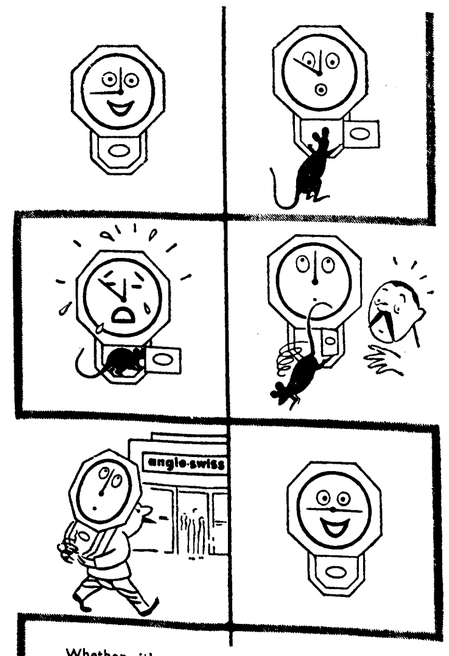
The first five year plan did increase production to a certain extent. But there was a decline in the second and third plan periods. It is claimed by official sources that the production in the current year has exceeded that of last year as far as rice is concerned. The makers of the fourth plan have at last realised the gravity and envisage massive efforts for stepping up agricultural production by at least 5 percent so as to create sufficient buffer stocks without the need of imports and keep prices steady.

Greater attention towards foodgrains, as is now being thought of, will only achieve results. Crash programmes in animal husbandry, poultry and fishery, etcetera, divert the farmers' attention from foodgrains and are not the answer. Making up the deficiency in foodgrains' cultivation is the first and foremost need. The unfortunate tendency of the Government to encourage and unduly emphasise the greater production of cash crops and of non-cereal foods weans the producer away from the cultivation of foodgrains and adds to the diversion of land from grain cultivation.

Ministers and officials shout from the housetops that the farmers are practical minded and receptive to new ideas and methods which would increase their production. Every lay man knows that. But what is required is to make the technological methods and new implements, better seeds and better strains, chemical manures and pesticides available to them easily and cheaply. Even water is not available in sufficient quantities. A Minister once asked an educated and experienced farmer what were the three things he most needed. The reply was, "Water—water—water".

Large dams have been constructed to conserve the river waters for perennial irrigation. But many have not started functioning to that end. One of the main causes is lack of minor and medium irrigation canals for taking the water into the fields. Where these have been made, the irrigation charges are prohibitive for the farmer. The Government should encourage landholders to construct minor irrigation channels and give outright subsidies for the purpose. Irrigation by canals and tubewells should be subsidised. The question of giving additional financial assistance to irrigation projects that have reached an advanced stage of construction is now being belatedly considered. A silver lining is the latest Rajasthan canal which has released waters into channels for an area of 400,000 acres for irrigation in the kharif crop season to start with. This involves a straight addition to the area for cultivation.

When supplies are short, no amount of juggling in controlled distribution or monopolistic purchase by the Government will correct the unbalance or hold the price line. The farmer must be assisted by all measures of loans, subsidies, easy supply of seed and fertilisers to increase his production. It is proclaimed by Ministers and others that the key to increased production at the farms is to promote a technological revolution in agriculture. It is emphasised that industry should gear itself up to meet the needs of such a revolution. But how is it proposed to enable the poor farmer to buy these technical aids? Co-operatives is the reply.



Co-operative Farming

Co-operative farming has, however, shown no sign success so far. Technical improvements by means of modern farming machines are possible only on big farms. But the Government has taken good care to reduce big farms into small uneconomic holdings. Big farmers who had money, means and the will to adopt modern methods have been almost elbowed out. Co-operative farming has not taken their place. The much-vaunted service co-operatives have not started functioning. So there is a stalemate. Traditional means of agriculture may be hidebound, but they still suit the small land-owner who lacks capital even to buy good seed. The old methods should only be given up when the new ones can be made successful and paying in actual practice. For this, a number of other changes in acreage, land tenure and irrigation are required.

Hoarding and blackmarketing are the concomitants of continued short supply. These cannot be effectively stopped by penal enactments as long as the overall shortage continues. Even so, there is at present no serious check on hoarding and blackmarketing. The declaration of stocks and exhibition of prices are not enforced on a systematic basis. The inspecting staff is insufficient and prone to be corrupt. All this requires radical change.

Confused and contradictory loud-thinking by the Ministers on the question of food and agriculture does not help. It should become a convention that on a question which relates to a particular Ministry, only that Ministry's Minister should make public statements. But in recent months, almost every Central Minister and even some of the ex-Ministers and the State Ministers have volunteered their views publicly. This perhaps makes things awkward for the Minister who is chiefly concerned. The result is that the Government is not still clear on a well-defined policy on several important matters like Government procurement, laying down of maxima-minima prices, movement of foodgrains from one State to another, and the rationale of zonal areas. The results of all this vacillation are the vagaries of price and sudden surpluses and deficits.

From the consumer's point of view, the complaint is that there is an unholy combination between the grower, the trader and the miller, which is unconsciously abetted by the Government. So the consumer has to pay through his nose. When one State Government fixed the grower's price at a figure higher than that fixed by the Central Government, it turned the grower into a business man. He withheld his produce for getting a higher price. The trader indulged in

anglo-swiss watch co.

6, DALHOUSIE SQUARE EAST, CALCUTTA-1.

hoarding and profiteering and the miller merrily purchased wheat directly, evaded taxes, saved handling charges and charged high rates. All this may not be a universal practice, but it emphasises the need of laying down a definite and well-considered price policy, which would be followed by the States. This would ensure a reasonable return to the producer and a reasonable price to the consumer.

The fixing of a remunerative price for the producer is a *sine qua non* of Government control, but not at the cost of the consumer. The middleman and the dealer who take away a major portion of the profit and virtually hold the producer to ransom, must be made to forgo unwarranted profit. If this went to the producer, he would get a sufficient margin for his future planning for a greater output, which in turn would increase the supply and bring the price down —at least check it from ever going upwards.

Restriction on Bank Advances

Advances by the banks against foodgrains to dealers have led to unhealthy speculation and misuse of funds. There should be severe restriction on these advances, excepting that to producers who store their grain with the Warehousing Corporations and the co-operatives. In their case, bank advances would supplant the advances given by dealers and moneylenders at high rates of interest. Simultaneously, all speculative and forward transactions in foodgrains should be banned. Forward transactions can exercise a healthy and steadying influence on the market, but in unscrupulous hands they tend to deteriorate into sheer speculation.

Much has been said on the platform and in the Press about the need of chemical fertilisers. But these are in short supply. Even so, at one time the factories had to slow down their production due to lack of sufficient godown accommodation. The allocations for the States were not lifted by them. As for the fertilisers which went to the co-operatives, these remained in their goodwn and did not reach the farmer. There is a widespread notion among farmers that after the first spurt to greater production, the use of chemical fertilisers eventually denudes the soil of its strength, and the crop suffers. It is for experts in agriculture to correct this impression.

The number of farmers whose lands have no easy access to the market is legion. The virile moneylender reaches them with his ready cash advance at high interest and he gathers up their produce—sometimes even before it is harvested. This is a potent cause for hoarding and non-arrival of stocks into the market—a phenomenon which has been vicariously lamented by all and sundry. The remedy is: construct all-weather rural roads under a well-laid out programme, connecting these to the main road leading to the *mandi*. Also set up a chain of Government purchasing points in these areas, to mop up the small producers' grain. "Crash programmes" for an all-round rural development are necessary. The block development officers and the *gram panchayats* need to be more active and their success should be gauged by the increase in production that they effect in their areas. Apart from the reclaiming of waterlogged lands, there are other things requiring action, like discouraging the use of cattle dung as manure. This will require alternative arrangements for the provision of fuel. Cattle dung manure is more precious and also of higher value in terms of money, than cattle dung fuel. The present practice in practically the entire rural India of burning it as fuel is a tremendous national loss.

There has been an increasing migration of the rural population to the towns and cities. A decade ago, only the odd old man who could no longer usefully put his hand to the plough came in search of domestic or other employment. This was followed by younger people, till rapid industrialisation and the lure of town life have become so great an attraction that even young boys now want to leave their hereditary occupation of tilling the land and seek employment in urban centres. Agriculture has consequently languished. This lack of balance in the population movement requires to be corrected before it gets out of hand. The rural emigrants swell the number of unemployed and accentuate the urban problems of housing, sanitation and social aberrations. The work of cultivation requires to be made as remunerative as that of the factory worker and the village life made fuller. If remunerative prices were assured to the farmers for at least five or six seasons, they could plan on a long-term basis instead of the present hand-to-mouth economy.

Short-term Measures

There are some urgent short-term measures that could be taken up forthwith. Subsidies on the supply of fertilisers, water from Government tubewells, irrigation on subsidised rates, cheap supply of good seeds, free service of insecticides, out-right subsidy on the construction of small channels should be followed by ban on lavish entertainments involving the use of cereals in the urban areas and measures like the Guest Control Order, etcetera. To these could of course be added the favourite promises of economising in Government expenditure, which never materialise.

The present idea of the Government is to set up a Foodgrains Trading Corporation and impose controls on distribution and prices. The Corporation will purchase wheat and rice at fixed prices, requisition stocks from dealers at declared wholesale prices and enjoy monopoly of rail movement and in handling imported foodgrains. But the sheer vastness of the country and the spread of cultivation in the remotest areas will hinder the success of this venture. At best, the Corporation will be a distributing agency after effecting purchases of what is available. This cannot be a substitute for a long-term plan for an increase in production. Short supply is the real problem. All other faults will automatically correct themselves if there are sufficient supplies. Even the setting up of new rice mills with better technology in the public and co-operative sectors as envisaged by the Central Food Minister may extenuate the shortage of milled rice for some time and of course destroy the already existing mills, but it is not an answer to the overall shortage. Also, milled rice is said to be nutritionally inferior to husked or hand-pounded rice.

The Government should tread warily on the idea of an all-India foodgrains corporation, since it is fraught with risks. It might disrupt the normal trade channels beyond repair. Where is the organisational strength of a trained managerial and field staff? Has this country got enough suitable storage capacity for this huge undertaking? Will the foodgrains officers have the required business acumen? What will be the position of this Corporation *vis-à-vis* the Central Food Department and the State Food Departments who also handle foodgrains, and also with the Central and the State Warehousing Corporations who offer storage of agricultural produce? The whole idea bristles with many difficulties, namely, equitable distribution between surplus and deficit areas, control over prices (to the satisfaction of both the producer and the consumer) and the removal of the chronic annual shortage by building up buffer stocks. Corruption may become rampant here also.

Village level workers should be able to till the soil themselves introducing new techniques and knowledge. Package programmes for intensive cultivation in selected areas should be seriously undertaken by well-trained field staff who should be able to get the willing co-operation of local cultivators. These areas should be gradually extended, attracting widespread interest in an ever-widening rural circle. The knowledge gained in India's agricultural institutes could only then percolate to farmers.

Procurement levies by the Government have resulted in foodgrains being withheld from the market. The method of procurement requires to be rationalised, and the enactments requiring declaration of stocks and exhibition of price lists by dealers should be seriously enforced. The inspection machinery has to be strengthened with honest staff and corrupt officials excluded. The State Government's Civil Suplies Departments also require to be gingered up. The Community Development Department officials should be made to go to the villages and see how their plans are being put into practice and what are the practical difficulties facing them. Similarly, the Co-operative Department officials must visit the co-operative societies themselves, instead of having conferences with the State Governments' Registrars and others at the State capitals. If the co-operatives are required to take up farming, help in the storage of foodgrains, distribution of seeds, fertilisers and consumers' goods and grains, the present happy-go-lucky going must be ended. The Prime Minister's exhortation for contacting the people in the fields, listen to their difficulties and solve them is the correct and common sense approach. As for the consumers' co-operative stores movement, each State is following its own methods in the absence of a well-planned Central policy. These stores have so far failed to justify their existence. They are badly mismanaged by local directors. There is official direction but loose control. Some of the directors have been reported to indulge in blackmarketing the commodities of the stores. The setting up of Government fair price shops was meant to help the middle class, but these also do not function satisfactorily. It would be better to close these shops rather than continue them as an eyewash.

Set up under an Act of Parliament, the Warehousing Corporations have done useful work. But their functioning has been halting and too much obsessed by the need for making profits. These warehouses have made no great impact upon the problem of good storage of foodgrains in the country. Allowing them to store items like cement, iron, etcetera, is a subterfuge for their lack of success in the storage of agricultural produce; and that is mostly due to causes that could have been overcome by bold Government procedures. These warehouses, together with the co-operatives, have great possibilities of development. In fact, they could well take over the function of the proposed Foodgrains Trading Corporation. The Warehousing Corporations could buy, store, distribute and handle the foodgrains. They have already been established in all the States and have field and managerial staff with proper experience of handling grain and market conditions. Why not try these institutions instead of adding another one?

Central Charge

The problem of food and soaring prices is so serious and insistent that it requires to be tackled on a war footing. Half-hearted and unco-ordinated measures by the Centre and the States will not succeed and will make matters worse. It is clear from the State Ministers' conference on food, held recently in Delhi, that the Central Government's directions are either watered down or opposed on account of strong individualistic pressures. The resultant vacillation and weakening of the Central authority will do no good to any one. A permanent solution to the divergent pulls would seem to be put agriculture on the concurrent list or make it a Central charge. No State can be allowed to play about with the peoples' food on narrow parochial lines. It would be better to overcome their inevitable opposition to this constitutional change than to face food riots and worse.

Jute

CEILING PLACED ON FIBRE PURCHASES

IN order to bring down fibre prices to more realistic levels, Mr. G. C. L. Joneja, Jute Commissioner, has issued a maximum purchase quota of 100,000 bales to the jute mills for the week ending 12th September. Announcing the fixation of the quota at a Press conference in Calcutta on Monday, he said that the authorities intended to ensure that all mills got their due share of fibre. The step has been taken in collaboration with the I.J.M.A. to check panicky purchases of raw jute which had pushed up prices. The individual quotas of mills will vary according to their fibre stocks (together with undelivered balances of previous purchases) and their monthly requirements. Purchases can be made on T.S.D. or non-T.S.D. contracts at the Cossipore spot market or in the agencies. Mr. Joneja said that it was intended to review the position from week to week until the situation returned to normal.

Refuting the suggestion that the introduction of the maximum purchase quota system signified a revision of the official estimates of the 1964-65 crop around 7.2 million bales, he said that it merely showed that the Government was not prepared to take any chances with raw jute prices. The price of fibre had, more or less, settled around Rs. 41 a maund, basis Assam Bottoms, ready, f.o.r., Calcutta, during the past fortnight, he said. But not much business was done. Since the quota was fixed on the basis of daily arrivals, he felt that panic would soon subside and the market would revert to normal conditions. The rationing of raw jute, he maintained, would ensure that not a single mill would go out of production for want of raw material. The Jute Commissioner indicated that he proposed to take other measures if the maximum quota system failed to produce the desired result.

Prospects for Fibre

With well-planned mill buying, there is nothing to prevent jute prices from finding a more realistic level, says the latest issue of the *Jute Bulletin* published by the Indian Central Jute Committee. With the release of the buffer stocks, there should be enough fibre to go round till about the end of October this year, it continues. The fact remains that jute prices cannot be expected to decline to last year's levels since the grower had also been affected by the spurt in the prices of essential goods in recent months.

The present tremor in the world jute industry has East Pakistan as its epicentre, it says. Nobody pretends that the fears of jute shortage in Pakistan are unfounded. When anything goes wrong with the Pakistani crop or, for that matter, with the Indian, operators everywhere take a global view of supply. As the principal exporter of raw jute and having internally to feed the world's second largest jute industry, Pakistan needs to produce annually a minimum of 7 million bales. But the crop this year is estimated to be short by at least 1.5 million bales.

Continuing, the paper says, world consumption of jute, excluding mainland China and Brazil, is running around 15 million bales, with the Indian industry absorbing as much as 8 million bales and the Pakistani industry more than 2 million bales.

The jute manufacturing centres elsewhere largely operate on imported Pakistani jute, consuming roughly 4 million bales. To provide for mills' normal stocking requirements, the annual output of jute and mesta ought to be another 2 million bales. On this basis, world production of these two fibres should be at least 16 million bales. No estimate of the 1964 Pakistani crop and carryover seems to leave much of a safety margin, and for the mills in Pakistan and those outside India there would thus appear to be no alternative to a much dearer raw jute.

Influence of Pakistani Jute

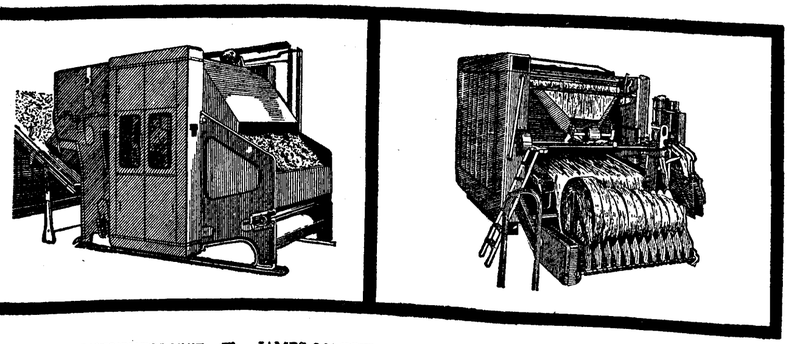
Answering the question whether the Pakistani situation should have influenced the sentiment in India to the extent it has, the paper continues: Unfortunately, as events in Calcutta have once again emphasised, the local industry's dependence on imported raw jute, though marginal, remains strategically significant. It is, therefore, unrealistic to believe that jute price movements in this country could in the foreseeable future be completely insulated from the influence of the Pakistani jute markets.

The psychology of shortage that has gripped the Pakistani balers and shippers has found an Indian parallel in the situation created by a combination of late crop and unfavourable weather. The slowness of new crop arrivals has imported an element of panic into market transactions, which has been tending to confuse the crop outlook. Considerations that this may be due to seasonal factors such as delayed harvesting and retting, difficulty in drying the fibre, and the poor condition of rural roads do not, in the prevailing uncertainties, make much sense to those of the mills which need to buy jute immediately to make up their shortage in certain grades and qualities against firm commitments in jute goods. Jute holdings of few mills are really balanced in their quality composition, and total industry-wise forbearance at any time in the purchase of fibre is therefore out of the question, says the *Jute Bulletin*.

The arrival figure for July has been reassuring. The quantity of Indian fibre received in Calcutta and mill stations was as high as 326,000 bales, against only 203,000 bales in July 1963. The big difference cannot be explained away by pleading that the bulk of the arrivals consisted of old crop fibre. That would be over-simplifying the market situation. The cutting of Tossa jute, which has already commenced, will get into full swing in September. These factors, plus the consideration that cultivators will badly need ready money for the Puja season, favour larger arrivals of jute

I.J.M.A. STOCK FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total stocks of jute goods at the end of August as follows:



Description		31st August, 1964		30th July, 1964		Increase over (+) or decrease from (−) last month		31st August, 1963	
		000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)	000 Metres (Lakh Yds.)	000 Tonnes (000 Tons)

in the coming weeks, the paper concludes.

Small Decline in Stocks

In spite of erratic market conditions, stocks of jute goods with the mills reporting to the I.J.M.A. showed a fractional decrease from 135,800 tonnes to 132,100 tonnes during August. The decline was partially attributed to a voluntary cut in output by mills in view of the high prices of fibre and the slow pace of bookings Stocks of heavy goods recorded the maximum shrinkage from 53,400 tonnes to 49,700 tonnes, followed by miscellaneous goods from 14,000 tonnes to 13,400 tonnes and hessian from 46,000 tonnes to 45,700 tonnes. Carpet-backing cloth inventories, however, went up from 22,400 tonnes to 23,300 tonnes.

At the end of August 1963, the stocks were 103,700 tonnes—50,000 tonnes of sacking, 33,700 tonnes of hessian, 11,000 tonnes of carpet-backing cloth and 9,000 tonnes of other goods.

Draft I.S.I. Standards

The Indian Standards Institution has prepared draft specifications for seaworthy packaging of jute goods, three types of gunnies and for shuttles and oil-content of jute yarn and fabrics. The first specification enumerates the requirements for packaging jute products like hessian, sacking, jute bags and jute yarn for the overseas markets. The second one prescribes the requirements for two varieties of hessian 10in. 40oz. and 40in. 7½oz. The third details the requirements for heavy Cee jute bags 40in. by 28in.. The fourth enumerates the specifications for jute corn sacks or bags 41in. 23in. The fifth prescribes the requirements of shuttles for use in broadlooms for weaving jute cloth. These are meant for use with full cops of 290 × 41 mm., 305 × 45 mm., 355 × 45 mm. and 380 × 45 mm. The last details a method for the determination of the added oil-content of jute yarn and fabrics. The method suggested is applicable to all types of products. The test prescribed is based on the extraction of oil by organic solvents like trichloroethylene or light petroleum. The solvent is removed by distillation after which the weight of the extract is determined.

THE JUTE MARKETS

Manufactured Goods: Despite the continuance of restrictions on trading in T.S.D. and hedge contracts in raw jute and gunnies, steady conditions prevailed in the Calcutta market during the past week. Sentiment was stimulated by brisk short- and shipper-covering in ready and near-delivery goods. A decline in the August closing stocks with mills also reinforced sentiment. The Government offtake was more or less of a routine nature. Some hessian business was reported with the U.K. and the U.S.A. Prospects of a fresh strike in Pakistani jute mills were additional stimulants. But the mills declined to extend their commitments at the present levels in view of the harder trend in fibre prices. For most part of the week, the trend in the hedge market continued to govern sentiment in the spot market. Operators were still sticking to their bullish views. The East India Jute and Hessian Exchange authorities had reportedly collected about Rs. 1 crore towards margins on outstanding long transactions in T.S.D. and hedge contracts. In the hedge market, prices fluctuated within the permissible limits—widely in sacking and moderately in hessian—and closed with a comfortable margin in the former and a minor gain, on balance, in the latter. Turnover was fair in the futures market and moderate in the spot market, and the undertone was steady at the close.

Wednesday's quotations were as follows:

	Sept.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	37.95	38.25	38.50
40in. 8oz.	40.65	—	—
40in. 10oz.	50.40	50.75	51.25

Cornsacks	144.50	146.00	146.00
Heavy Cees (Plain)	144.00	143.40	143.15
A Twills	173.50	173.50	173.50
Liverpools	159.00	160.00	161.00

Raw Jute: Firm conditions marked trading in the raw jute market during the past week. Daily arrivals into the upcountry agencies improved considerably following the commencement of the harvesting of Tossa jute. The condition of the rural roads had also improved. But Indian mills, by and large, were living off their stocks and refusing to place orders at the present prices. Besides, reports from Dacca indicated that the price trend had eased there. It was expected to go down further to around Rs. 30 a maund by the end of this month. With enough stocks of fibre to last up to the end of November, Pakistani mills were not inclined to enter the market soon. These bearish factors failed to produce any impression on the Calcutta and upcountry markets due, among others, to the obstinacy of a number of strong holders, who were reported to be operating in the upcountry markets on the view that fibre prices would at least stabilise around the prevailing levels. The issue of the maximum purchase quota of 100,000 bales by the Jute Commissioner for the week ending 12th September failed to restrain the upward trend. In fact, prices hardened by about Re. 1 a maund in the spot market and by 10 paise in the hedge market on Tuesday. In the hedge market, Upper Assam White Bottoms for September hardened further during the week after wide fluctuations on hectic bear-covering. There was profit-taking at the bulges, but it failed to affect sentiment in any way. Turnover was small in the spot market and fair in the hedge market, and the undertone steady at the close.

Wednesday's quotations were as follows:

Landed at Mills (Basis Bottoms)

	Current Prices Rs. A Qtl.	Current Prices Rs. A Md.	T.S.D. Minimum Prices Rs. A Qtl.	T.S.D. Minimum Prices Rs. A Md.

THE U. K. JUTE MARKETS

FIBRE NEGLECTED

(FROM OUR DUNDEE CORRESPONDENT)

THERE was a quieter trend in the raw jute market in Pakistan during the past week. Most shippers reduced their prices, but there was a bigger reduction in the prices of secured parcels. This was making the position in Dundee very irregular, and a wide range of prices was quoted.

As a result of the weaker market, Dundee spinners showed no buying interest in raw jute. They considered the prices asked were still far too high, and they expected the present downward trend to continue. Dundee spinners are in the fortunate position of being able to remain out of the market as they are holding fair stocks of raw material and substantial quantities of new crop had been purchased before the recent rise in prices took place.

Prices being quoted here were very irregular with the lowest rates at £141 10s for Export Firsts, at £131 for Export Lightnings and at £124 for Export Hearts, c.i.f. U.K., for September-October shipment. There were no offers of Grade Tossa-2/3 being made but Grade Tossa 4 was named at £140. Outport Tossa-2/3 was available at £130 and Outport Tossa-4 at £122 for October-November shipment, but old crop was available at £1 to £2 a ton less.

Cuttings became much quieter of late with prices at £90 for S.N.C. and at £83 for N.C.

The Siam jute market was quiet and unchanged with prices at £92 10s for grade A, at £88 for grade B and at £81 for grade C, delivered mill Dundee for November-December shipment.

The Calcutta goods market was firm and prices remained at a fairly high level. Quotations were at 81s 2d for 40in. 10oz. and at 61s 7d for 7½oz. a 100 yards c. and f. U.K. for prompt shipment, at 81s 9d and 61s 11d September and at 82s 6d and 62s 5d October-December. B Twills were at 231s 10d. 233s and 234s 3d for the respective shipment periods.

Dundee jute spinners and manufacturers were busy and had orders in hand for delivery well forward.

The long awaited announcement by the U.K. Board of Trade concerning the future of the British jute industry has been made. The detailed arrangements which have applied to cloths, yarns and bags and those now being introduced are given in the following table. The Government will review the effect of the new arrangements in 1967, with the special object of examining the need for continuing the variable mark-up.

	Pre-August 1963	Present Treatment	Revised Arrangements
(1) Yarn.	Jute Control did not hold stocks, but imported yarn against specific orders; no mark-up applied.	No change.	No change.
(2) Heavy bags, common sacking and woolpacks.	Imported by the Jute Control and sold without mark-up.	Returned to private trade in 1963.	No change.
(3) Common hessian cloth, mainly used for bag-making.	Sold by the Jute Control with 20% mark-up.	Sold by Jute Control with mark-up of 10% (introduced on 16th August, 1963).	Range widened by the addition of some goods from categories 4 and 5. Mark-up eliminated on 1st September, 1964; being returned to private trade as soon as practicable.
(4) "Equated" cloths.	Sold by the Jute Control at prices similar to those of like Scottish products.	No change.	Protection to be based on a mark-up of 35% fixed element plus a variable as soon as practicable; effect from 1st September, 1965, 35 percent and three-quarters of the variable and from 1st September, 1966, 35 percent and half of the variable.
(5) Cloths not in the Jute Control's range before August 1963.	Not imported.	Imported by Jute Control: 50% mark-up (or Dundee price if lower).	45 percent mark-up with effect from 1st September, 1964.
(6) New sacks and bags (other than heavy bags).	Certain types only imported.	All types can be imported subject to mark-up of 50 percent	The mark-up applicable to category 4.

Categories

(1) Since August 1963 Category 3 has comprised hessian cloth 36" to 45" wide weight in proportion to 10oz. 40in. per linear yard; under the revised arrangements it will comprise cloths up to 45" wide weight in proportion to 7½oz. 40in. to 10oz. 40in. per linear yard.

(2) Category 4 under the revised arrangements will comprise hessian over 45" to 72" wide weight in proportion to 7½oz. 40in. to 10oz. 40in. per linear yard.

(3) At the base date (2nd Quarter, 1964), the variable element, taking account of the relationship between the prices of raw jute and of imported jute goods, would be 10 percent.

(4) The cloths being returned to private trade (Category 3) represent over three-quarters of the Jute Control's sales.

(5) Some two-thirds of Dundee and district production of cloth is in the category 5 goods, which will have the non-reducing level of protection.

Commodity Markets

LAND LAWS AFFECT PLANTATIONS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Central Minister for Food and Agriculture, Mr. C. Subramaniam, while inaugurating the 71st annual conference of the United Planters Association of Southern India in Coonoor recently, admitted that land laws had created a certain amount of uncertainty and urged that this should be removed if increased production was to be achieved. He said that what was important now was to stabilise land tenure at a particular level and see that uncertainties in ownership or in the management of fields were removed as quickly as possible. This point had been incorporated in the Dhebar Committee appointed by the A.I.C.C. He hoped that the State Governments would take measures during the next two years to bring about some sort of certainty concerning agricultural holdings.

Mr. Subramaniam expressed the view that for achieving high production targets, it was not necessary to have large-scale farms. He cited Japan's case in support of this argument. Japan with a high density of population as in India and with holdings as small as two acres had been able to achieve a production four times higher than in India and this was made possible by her adopting scientific methods of agriculture. He agreed that application of new techniques became more difficult as they had to reach 60 million farmers in this country. He dwelt at length on the importance of the application of science and technology to effect a break-through in agriculture. He said that if the plantation industry could increase production by 5 percent annually, he was confident that this percentage increase could also be achieved in other fields of agriculture also. He complimented the plantation industry for achieving a higher percentage of production by using improved strains and adopting scientific methods of cultivation.

The Minister said that it was the Government's programme to educate farmers so that they could make use of the results of scientific research. The Government was thinking in terms of widening the scope of agricultural research so that it would cover all agricultural commodities. In the next few months, the Government would have to take a crucial decision on this subject. An advisory research panel would be created for each agricultural commodity, he said and added that the top-level people in the plantation industry should help him by rendering their advice in this regard. Referring to taxation, Mr. Subramaniam said that the pattern in this sphere was confused, varying from State to State. It would be very useful to bring together all the State Finance Ministers and discuss the matter with them, and thereby bring about some sort of uniformity in the pattern of State taxation in this country.

Mr. S. V. Ramaswami, Central Deputy Minister for Commerce, addressing the conference said that the Government had acceded the industry's demand for the export of "packaged tea under bond", thus saving the industry from paying additional excise duty and awaiting refund. He said that the Central Government had appointed a high-level committee to enquire into the financial position of the tea industry to find out that facilities were available and how to remedy the difficulties facing it and what additional financial assistance was needed. He congratulated the south Indian tea industry on its achievement in production which was two times more than the production in 1947 with only an 11-percent increase in acreage.

Mr. Ramaswami said that the total tea production was 700 million lbs in 1963, while the export that year was 493 million lbs. This was mainly due to the unfavourable seasonal conditions. He, however, hoped that by the end of the third plan, tea production would reach 830 million lbs, with an export component of 530 million lbs. He was glad to note that the highest yield of tea was in India and hoped that this could be increased to 1,200 lbs an acre. Under the fourth plan, they hoped to produce 1,000 million lbs of tea with an export target of 670 million lbs. This would involve an increase in acreage by 120,000 acres at a rate of 24,000 acres a year.

The plantation industry in south India is faced with the responsibility of maintaing food supplies to its labour force. There is acute scarcity in several areas, particularly in Kerala. Many of the estates have been following the practice of procuring from producing areas, transporting, storing and issuing foodgrains at cost price to their labour. With the fixation of grain prices, they cannot pay for grain procurement the higher prices that are demanded and if they do pay such higher prices in the interest of labour, they cannot charge the workers the actual cost as it would infringe the Government order on foodgrains prices.

Foodgrains for Labour

The outgoing president of the U.P.A.S.I., Mr. Henshaw, said while addressing the recent annual meeting of that body, that the industry cannot accept the responsibility for the margin that has to be paid if the foodgrains are to be procured and at the same time on humanitarian grounds it cannot allow labour to starve. Not all estates maintain a supply arrangement. But their workers are also hit by the breakdown in supplies and if this situation continues any longer, production on the estates are bound to suffer. Mr. Henshaw has requested the Government to make special allotments for the planting districts or to allow them to charge the labour the actual cost incurred in supplying foodgrains. (Other important points made by the U.P.A.S.I. Chief in his speech were reported in the previous issue.)

Mr. H. K. Fitzgerald, chairman of the Indian Tea Association, welcomed the appointment of the high-power finance committee to enquire into the financial position of the tea industry and hoped that it would reduce the overall tax burden to ensure the future stability of the tea industry. He criticised the *ad hoc* decision taken by the plantation wage boards, ignoring the mass of information presented by the industry, and added that labour agitation was on the increase in north-east Indian gardens.

RAW RUBBER

Competition from Synthetic

Mr. P. S. Habeed Mohammed, chairman of the Rubber Board, who was another speaker at the U.P.A.S.I. conference said that there need be no fear of creation of any excess capacity for synthetic rubber which would jeopardise the prospects of natural rubber. He said that with a synthetic plant of 30,000 tonnes capacity already set up and another likely to be established by 1968, there would still be a gap of 93,000 tonnes as by that time the demand for rubber was expected to increase to 148,000 tonnes. Domestic production of natural rubber might be only 57,000 tonnes. The price of synthetic rubber was Rs. 4 a kilogram, whereas the minimum price for natural rubber was Rs. 3.23 a kilogram. There were still many fields where synthetic rubber would not be able to replace the natural product, he added. He, however, warned the producers of natural rubber not to ignore the likely impact of synthetic rubber in the long run. In his opinion, more attention would have to be given to marketing and standardisation of natural rubber. To help small growers to improve quality of rubber, the Rubber Board was financing the construction of co-operative smoke houses and marketing societies under a subsidy scheme.

CASHEW

Rise in Exports

Exports of cashew kernels during July last amounted to over 5,820 tonnes, valued at Rs. 3 crores. This was a record in so far as the foreign exchange earning for a single month. Exports during the first seven months of 1964 totalled 30,000 tonnes, valued at Rs. 14.74 crores, against 31,500 tonnes worth Rs. 12.69 crores of the corresponding period of the previous year. Due to higher prices, the export earnings have increased by more than Rs. 2 crores. Another Rs. 1.08 crores was contributed by the industry during this period through the export of cashew shell liquid which amounted to 7,400 tonnes. Corresponding figures for the previous year were 3,996 tonnes valued at Rs. 48 lakhs. The price of cashew kernel is at present ruling at the high figure of 70 to 72 U.S. cents a lb, which is perhaps the highest on record.

TEA

World Crop Running Higher

(BY A SPECIAL CORRESPONDENT)

TEA crop figures from the major producing areas total 745,336,000 lbs so far this year, compared with 721,059,000 lbs up to the same period in 1963. The north Indian output up to 15th August was 274,130,958 lbs. At the end of July it was 226,577,310 lbs. So the first half of August produced 47,553,648 lbs. The estimated yield from 16th to 31st August is 48,500,000 lbs, or say 96,000,000 lbs for the month. That would make the total crop from north India to the end of August 322,577,310 lbs. That date generally indicates the mid-cropping season, and the above estimated output compares with the record 1961 year's output of approximately 328 million lbs.

Some years ago, the Food and Agriculture Organisation drew attention to the probability of a serious surplus by 1965. Past presidents of the Indian Tea Association, London, have called for propaganda to enlarge consuming markets by developing internal consumption in countries which produce tea. The internal offtake in India has saved world producers from a price collapse for the past two years, but, India alone cannot save world growers from loss. All producing countries must encourage home consumption. Last week, this correspondent gave particulars of further heavy extensions being planned in Kenya and Pakistan. In the last-named country, money is said to be available round at 4 percent interest, which is about half the cost in India.

In past decades, there were agreements to adjust supplies to demand, but this facility no longer exists. In recent years, India has restricted her output to save the trade from a price collapse, but to do so again, will only encourage cheap producers to augment their supplies. Therefore, apart from another international agreement to restrict crops (on the lines of the coffee agreement), the only alternative is to find new markets. The seriousness of the situation has been realised by the U.S. Department of Agriculture (Washington), which has issued a warning that expanding world tea production may lead to over supply. It adds: "World tea production in recent years has been setting records and this year, with the output set at a new high of over 2,300 million lbs will be no exception. Thus far exports and internal consumption have gained sufficiently to absorb the mounting production, but the long time threat of an oversupply still lingers. The big question now is, can the large 1964 harvest and future bumper crops be easily marketed or will stocks begin to pile up, as has been the case with coffee? Another major problem was the production of low-to-medium quality teas."

The Department noted that India and Ceylon, first and second largest tea exporters, were most concerned with the problem since they accounted for over three-quarters of the annual $600 million world tea trade. But higher yields in those countries as well as in Indonesia, China, Taiwan and Japan plus rapid expansion in Africa and South America, accounted for the ever-increasing world output. The growth in the tea industry was especially pronounced in the African countries of Malawi, Kenya, Uganda, Tanganyika and Mozambique.

The Department pointed out that those exporting countries had managed to avoid an unmanageable surplus with the result that tea prices were stable and supplies only slightly ahead of consumption. But while consumption was rising, tea was facing intense competition from coffee, cocoa and soft drinks. The Department thought that Britain could be of no help in expanding consumption, since consumption there last year was nearly 10 lbs a head and was considered near saturation point. The U.S.A. was in a little better position to help consumption, as consumption in that country was on the uptrend largely due to the introduction of instant tea.

Exports and distribution of tea from north India continues to make good progress, only the U.A.R. is an exception. The U.S.A. shows a rise, the figures given relate to current half year beginning 1st July to 22nd August, 1964, to 2.66 million lbs. The last year's corresponding figure was 2.46 million lbs. The Russian offtake amounted to 2.80 million lbs, compared with 2.36 million lbs by the same date. Shipments to the U.K. are also heavy, at 51.60 million lbs, against 39.38 million lbs a year ago. Total exports are given at 66.19 million lbs, compared with 54.24 million lbs for the same period in 1963.

Lower Price Trend

Except for Darjeeling which has sold its tea at an average of Rs. 8.70 a kilogram this year, compared with Rs. 8.05 a kilogram in 1963, the price range is generally lower. The average for this year is Rs. 5.99 a kilogram, compared with Rs. 6.22 a kilogram a year ago. Doars teas have held up well at Rs. 4.95 a kilogram, and Rs. 4.98 a kilogram. Calcutta auctions passed off satisfactorily

on 31st August and 3rd September. There was a strong and general demand, but some Assam discriptions were a little easier. Cochin reports indicate that plain and medium dusts were barely steady.

London reports that the prices at latest weekly sales averaged 55.26d a lb, against 47.79d a lb at the previous week and 51.19d a lb last year. The rise could be caused by offerings of second flush Darjeelings together with other quality Indian production, as deliveries were heavy at 11.33 million lbs during the week. Stocks consequently fell to 107.31 million lbs from 110.25 million lbs. Shipments afloat from Calcutta were only 10.53 million lbs, out of a total of 25.61 million lbs.

Our New Delhi correspondent writes:

The working group on the tea industry, set up by the Planning Commission, has submitted its report which is being considered by the Government. Meanwhile, it has been estimated that in the coming years, the industry will have to undertake new plantings of 24,000 acres a year in order to ensure a steady rise in production.

While the overall trend of production this year is encouraging, efforts will have to be made to increase production by (i) intensive cultivation and the maximum use of fertilisers; (ii) replacing old, worn out and low producing areas, preferably on virgin land; and (iii) the extension of tea area.

The Tea Board has, therefore, been providing funds as loans for new plantings and for expansion and modernisation of factories as well as for the installation of irrigation equipment in the draught-affected areas. Out of a total of Rs. 10 crores under the plantation finance scheme and hire-purchase schemes for tea machinery and irrigation equipment, a sum of about Rs. 6.4 crores has been committed for the grant of financial assistance to 322 tea gardens. Development on this scale will no doubt require investment of a large sum of money which is apparently beyond the capacity of the industry. A Committee on Tea Finance has recently been set up to study the entire problem of financial requirements of the industry and to suggest ways and means to enable it to undertake development measures to the desired extent.

RAW COTTON

Current Place in World Trade

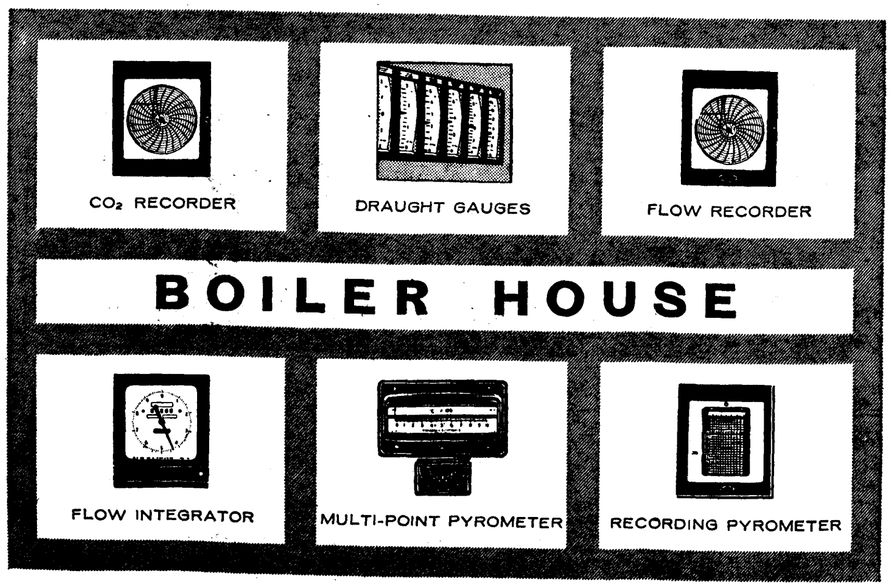
IN the 1963-64 season, as in 1962-63, there was an increase in the world's accumulated stock of raw cotton. The carryover into the current season, at some 24.6 million bales, represents slightly more than one-half of the largest quantity ever consumed in a season, and the situation calls for the serious consideration of producing and consuming countries alike. The world's total consumption of textile fibres is increasing and must be expected to continue to do so as long as many millions of the population remain ill-clad, but cotton's share of the total tends to sag, especially where the production of man-made fibres is highly developed.

This point gives a special significance to the acquisition of control over a large part of the U.K.'s cotton textile machinery by the man-made fibre producers. The question arises whether this will give fresh impetus to the decline, which has already gone a long way, in Britain's share of world consumption. It might, moreover, restrict British participation in efforts which are contemplated to narrow the gap between the production of and the demand for the fibre.

Those efforts may be expected to be considered worthy of support by any British Government committed to a policy of fostering the economic advancement of the developing countries. Those countries, as a group, have played a big part in creating and perpetuating the disparity between supply and demand. Many of them have developed cotton growing as the first stage of their development and cotton is their principal source of foreign exchange. Many of them, moreover, have adopted cotton textile manufacture as their first step in industrialisation. Their earnings from exports of raw cotton and cotton textiles help to pay for the imports they wish to obtain from the developed countries.

One of the most difficult aspects of the problem is that if cotton reached a price level which made it fully competitive with comparable man-made fibres, it would give a very poor return to growers in the countries which have the greatest need of income from that source. The profitability of cotton growing can be increased by methods of cultivation, and the use of fertilisers and insecticides which bring higher yields an acre, but these may also swell total production and tend to reduce the price level.

Many studies of the problem from different viewpoints have been made by the International Cotton Advisory Committee, and the results suggest that both over-production and under-consumption have contributed to the present situation. The opinion is gaining ground that an improvement can best be achieved by undertaking measures to expand consumption. These include a co-operative programme for technological and marketing research and promotion. New end-uses and new outlets for cotton products must be found, and special consideration should be given to certain types and qualities of the fibre. All this will take time to produce results, and meanwhile, the man-made fibres will no doubt continue their progress.



Sales of Egyptian cotton to British—and many other countries'—importers and spinners are still suspended, and offerings of Sakel and Lambert types of Sudan growths at the Khartum auctions have lately dwindled to virtually negligible quantities. It remains to be seen when supplies of those and similar types will become more freely available again and what effects the present scarcity will have on the raw material consumption of fine spinners.

In a report prepared for the International Cotton Advisory Committee, it is pointed out that total production of extra long staples in 1963-64 was the smallest since 1957-58. Stocks at the beginning of the season were lower than a year previously, although higher than in many previous seasons.

MAHINDRA ELECTROFLO

PROCESS CONTROL INSTRUMENTS

FOR EFFICIENT OPERATION

MAHINDRA ENGINEERING CO. LTD.

Head Office & Works : 5, Hide Road, Calcutta-43

VAGUE GENERALITIES FROM THE RESERVE BANK

TO the Reserve Bank of India belongs the annual duty of taking the country from progress report to progress report, a task that has become rather stereotyped since there is little progress for it to report on the state of the economy. Much of what is contained in the annual report of the central board of directors of the Reserve Bank for the year ended June 1964 is a bland repetition of what is already well-known, and as was expected, centres on the price crisis. But in spite of its attempts at window-dressing, the report makes a depressing commentary on the Government's short-sighted economic policies. This is so because of the very nature of the subject it has had to deal with. Indeed, these annual reports have now become traditionally gloomy documents because of the economic mess which they have had to describe year after year.

It is possible to discern in the latest report some instances of plain speaking, although they are in the softest of undertones and couched in the vaguest of phraseology. The central bankers admit that even with the utmost optimism about agricultural production and the availability of foreign exchange, the country's resources budget will remain strained; they add that "the size as also the content of the developmental effort have to be carefully considered... and a solution worked out which will enable development to take place in an environment of stability." This may be construed as the Reserve Bank's support for the Prime Minister in the present controversy over his suggestion for a selective pause in heavy industrial development and for shifting the plan emphasis to agriculture and consumer goods industries. But the Bank has contented itself merely with making this vague statement without bothering to suggest what exactly is the scope for modifying the size and content of the developmental effort. This is particularly important since a pause in some of the major industrial projects may well push up maintenance imports a few years hence.

It has been obvious for quite some time that in an economy as perilously poised as India's, the continuation of the emphasis on heavy industries, with their long gestation periods, carries with it a built-in risk of runaway inflation. The Bank has merely enunciated the conflict between development and stability without prescribing anything definite for resolving the conflict. The few prescriptions that it has given are wrapped up in vague generalities. It has, however, mentioned that the stabilisation of prices must be the major objective of policy in order that defence and development may be secured while strengthening the balance of payments. Having mentioned price stability as the objective, it has had to suggest what is its natural corollary—a sizable expansion in the output of consumer goods, particularly of agricultural products. The Bank's positive guidance is limited to this suggestion. But coming as it does after the Prime Minister, Mr. Lal Bahadur Shastri, has unequivocally favoured it, the Reserve Bank's suggestion loses much of its originality.

Another instance of the prescription coming after a decision has already been taken relates to keeping a "strict scrutiny of Government expenditure with a view to weeding out less essential items", even if this results in a temporary slowdown of developmental activities in some areas. The Finance Ministry has already been alive to this problem as is evidenced by its decision to curtail the non-development outlay by Rs. 70 crores. The Reserve Bank has merely gone a step forward and suggested what has been obvious to everyone else for quite some time—that there is considerable scope for economising on development expenditure too.

Of the many factors which have conspired to bring about the price crisis, the chief ones are the irrepressible increase in population by about 10 million every year, the stagnation in agriculture for the last three years in succession and the uninhibited spending spree of the Governments, both at the Centre and in the States, thanks to the productive capacity of the Security Press. Indeed even when the third plan was half-way through, deficit financing had exceeded the safety limit of Rs. 550 crores laid down by the planners for the entire five-year period. And deficit financing has continued without restraint even afterwards. There has been a rapid expansion in liquidity due to the large bank credit extended both to the Government and the private sectors. In fact, the Government's indebtedness to the banking system, the Reserve Bank points out, "continued as in the preceding two years, to be the dominant expansionary factor"; but it hastens to say that the indebtedness amounted to only Rs. 281 crores in 1963-64, as against Rs. 316 crores in 1962-63 and Rs. 327 crores in 1961-62. Referring to its selective credit controls, the Bank claims that they had a salutary effect in regulating institutional credit for the commodities concerned but at the same time acknowledges the limitations of credit controls. With a vast unorganised money market and big hoards of unaccounted money, it is well-known that the Reserve Bank's credit restrictions have not had anything but a marginal impact. In fact, it is even possible that the controls on institutional credit, instead of restraining speculative price rises, have been increasing the influence of unaccounted money in some of the commodity markets. The sluggishness of the share and bullion markets, if anything, has added to the pressure of such money in the foodgrains trade.

The Reserve Bank report has vaguely acknowledged the harm that is being done by the Government's fiscal policy. It speaks of the necessity of maintaining harmony between monetary and fiscal policies, and says that both of them should act "in such a way as not to add to the pressure of aggregate monetary demand and thereby aggravate the imbalance between overall demand and supply." Does the Bank mean that the present level of taxation is so high that tax evasion is natural, leading to the phenomenal growth of unaccounted money? Or does it mean that the fiscal policy is augmenting the influence of the unorganised money market? One is left guessing. It would have been a lot more meaningful had the central bankers explained clearly what they have in mind when they suggest that fiscal

policies should be brought into harmony with each other, and how both of them are clashing now. While on the subject of fiscal policy, it is worth while mentioning that taxes are now a large element in industrial costs. According to the Federation of Indian Chambers of Commerce and Industry, indirect taxes constitute as much as 30 percent to 50 percent of the final price of several important commodities and are, therefore, a major factor in the inflationary situation. This apart, the Government's fiscal policy is mostly responsible for the present depression in the capital market. Since the flow of risk funds has been greatly reduced, new industries have now to depend largely on underwriters for support and on loan finance.

The Reserve Bank's advice to banks for mobilising deposits is again phrased in the vaguest of terms. After emphasising the obvious fact that the inadequacy of deposit growth assumes added significance in view of the enhanced liquidity requirements from mid-September, it contents itself with dispensing the advice that the rôle of interest rates in the process of deposit mobilisation by banks and the need for introducing greater orderliness in the rate structure require further consideration. Indeed, this amounts to saying little more than what the Government itself said some time ago—that interest rates should correspond more closely to the real cost of raising capital. There is little indication as to what the Reserve Bank thinks the rise in deposit rates ought to be or how the rate structure should be adjusted. As the country's central bank, one would have expected some definite guidance from it in these matters.

EXPORT AMBITIONS AND REALITIES

THE stock market has responded favourably to the deliberations of the Export-Import Advisory Council, which concluded its two-day session in New Delhi last Sunday. The favourable reaction is based on the view that Indian industries will continue to enjoy a sheltered domestic market, because there will be no general relaxation in imports during the next licensing period. Judging from the large deficit in the balance of payments, the prospects of freer imports can be safely ruled out for a long time to come. Although the deficit on current account has dropped slightly from Rs. 345.5 crores in 1962-63 to Rs. 335.3 crores in 1963-64, it is still large enough to cause much worry. If India has so far been able to bridge the trade deficit on current account, it is largely because of the generous foreign aid she has received.

It is, however, not intended to belittle the improvement in exports during 1963-64. What, however, needs to be borne in mind is that the world-wide commodities boom during 1963-64, which greatly contributed to the buoyancy of exports, may not continue much longer. In fact, the tide appears to have turned already. Not only is competition in overseas markets increasing, but the competitive capacity of Indian exports has been steadily weakened by inflation. The magnitude of the balance-of-payments problem is already serious. During 1963-64, for example, this country financed only two-thirds of its imports by export earnings. And the debt repayment obligations have, meanwhile, been mounting.

Addressing the Export-Import Advisory Council, Mr. Manubhai Shah, Central Minister for Commerce, said that the import bill during the next few years would rise if economic growth was to be sustained. If the economy is to grow at the rate of 7 percent a year during the fourth plan period, maintenance imports worth Rs. 5,100 crores to Rs. 5,300 crores and development imports (of capital goods and machinery) worth Rs. 1,800 crores to Rs. 2,500 crores would be necessary for the plan period as a whole. These estimates are tentative because the blueprint of the fourth five year plan is not yet ready. Whether India can afford to launch an ambitious plan based on her needs rather than on her resources has to be considered carefully, especially in view of the prevailing stresses and strains in the economy due to over-investment. According to Mr. Shah, imports would generally continue to be kept down, while strenuous efforts would be made to increase exports. Imports would be liberalised only for the increasing needs of defence, agriculture and export-oriented and basic industries. (This may become possible because of the increased flow of non-project aid.) The import of capital goods, raw materials, components and spare parts would receive topmost priority in the allocation of foreign exchange. Greater attention would be paid to the needs of export-oriented and defence industries. The financial and other requirements of the cotton textile and jute industries would be met as adequately as possible. Small-scale industries would also be given a larger allocation of foreign exchange. Despite the acute shortage of several essential consumer goods like pharmaceutical products and baby foods, their imports are likely to be cut.

Under the present circumstances, rationing of available foreign exchange on a priority basis cannot be questioned in principle. But the selection of priorities is not always made in the best interests of the economy. On sheer ideological grounds, the allocation of foreign exchange to the public sector has steadily risen, while that to the private sector has been cut, although the performance of the latter has been generally more impressive than that of the former. It is time that steps were taken to ensure a more adequate supply of imported raw materials and spare parts for using the existing installed capacity more fully. Small-scale industries may have a large employment-potential, but it is necessary to make sure that the foreign exchange allocated to them is justified on grounds which are economically sound.

Meanwhile, the prospect for foreign aid has become less certain than it was before. While the requirements of the developing countries have increased, some of the leading donor countries have begun to tighten their purse-strings to keep their payments account in balance. In the circumstances, India can have no choice but to increase her exports, if the development plans are to go through. In the present context of things, the proneness of the Government to set ambitious export targets for the fourth five year plan is understandable. But whether exports can be raised by 40 percent over the existing level in the face of galloping inflation is another matter.

Except for reiterating the old exhortations and slogans, the Export-Import Advisory Council has not formulated any concrete scheme to boost exports. The only worthwhile move so far is the decision of the Central Government to institute a Rs. 10-crore revolving import-export stabilisation fund for the benefit of manufacturer-exporters. This is a step in the right direction. Lines of credit, Mr. Shah announced, had already been secured for $20 million, which would be available on a revolving basis to manufacturer-exporters for importing raw materials, components and spare parts to make goods primarily meant for the export market. The fund will help liberalise to some extent the import of raw materials for the export-based industries. A fuller utilisation of the installed industrial capacity may also result.

Export promotion depends on two essential conditions. First, domestic production must be able to support the export drive. Secondly, the price of Indian products must be reduced and their quality improved. The performance of agriculture and industry during the past few years does not inspire much confidence. Due to the neglect of agriculture, this country has been forced to use much valuable foreign exchange on importing food. The food import bill has risen from Rs. 166 crores in 1962-63 to Rs. 197 crores in 1963-64. It is also likely to be pretty high during the current financial year in view of rice imports on a commercial basis. Apart from the necessity of making this country self-sufficient in food as early as possible, it has to be remembered that nearly 80 percent of India's exports is dependent, directly or indirectly, on agriculture.

Industrial production can increase only when the existing bottlenecks are removed. The supply of industrial raw materials, domestic and foreign, must be improved. Production costs can be reduced by improved operational efficiency and modification of the fiscal system. The leading business men who participated in the deliberations of the Export-Import Advisory Council pointed out how the prices of various products had been inflated by numerous taxes and levies. Although Mr. Shah is keen on providing fresh incentives to the major export industries like jute, cotton and tea, precious little has so far been done. It is important to increase the yield and quality of domestic cotton and jute. The rising competition from Pakistani jute mills, particularly in sacking, must be counteracted. The development of the tea industry is hampered by heavy taxation. In spite of earlier promises, nothing has yet been done to promote tea plantation by treating expenditure on planting as a revenue charge. Now the Wage Board has awarded a second interim wage increase for tea garden labour. This together with the decision on paying a minimum bonus will greatly add to the costs and reduce the competitive strength of Indian tea.

LABOUR POLICY UNDER FIRE

IN his address from the chair at the last annual general meeting of the Employers Federation of India in Bombay, Mr. Naval H. Tata has made a forthright attack on the Government's labour policy. His criticism will be widely endorsed. Mr. Tata points out that labour legislation in the country is out of tune with the requirements of industry. It is far too outmoded to fulfil the ambitious planning of the Government to develop the national economy at a rapid pace. Indeed, one cannot help feeling that the Government has not sufficiently appreciated the impact of industrial relations on economic development. In its approach and policy towards labour, the Government has been merely content to shelter the worker under the shell of social justice. It is worth while assessing whether such protective instinct on the part of the Government has built up a healthy: self-reliant and responsible form of trade unionism in the country. It is a pity that, after 17 years of national Government, labour laws do not make any distinction between a genuine strike arising out of an industrial dispute and a political strike intended to further political ends, although there have been so many instances of such gross abuse of trade union rights. As Mr. Tata has suggested, the Planning Commision would do well to work out the magnitude and the value of damage inflicted on the national economy by the loss of production through such political strikes called *bandhs*, which neither do credit to the trade union philosophy nor to the people who support it.

Turning to the problem of industrial relations, Mr. Tata said that employers were faced with a strange situation. In contrast to the philosophy propounded under the Code of Discipline in favour of progressive recognition of unions with the object of determining the ultimate sole bargaining agents, the Central Ministry of Labour had been recently asking employers to deal with "unrecognised" unions even in establishments where well-functioning recognised unions already existed. Apparently, the Government has not appreciated the full implications of its advocacy for unrecognised unions. In support of this attitude, it is indeed strange to find the Government invoking the Industrial Truce Resolution which is today more often violated than observed. Frequent and deliberate misinterpretation by the Government of the text of the Truce Resolution on matters such as arbitration has made the employers lose their faith in the Truce, and the employers could scarcely be blamed for that. Mr. Tata says that the employers stand by the commitment to voluntary arbitration as long as the term is not deliberatedly distorted to mean compulsory arbitration.

With the rumblings at Rourkela, the happenings in Bhopal at Heavy Electricals, the show-down at Sindri and problems of Pimpri and hold-ups at Bombay and Marmagoa ports, labour relations in the country seem to be in a pathetic state. Such a spectacle may some day make employers in the private sector feel cynical of the so-called "model employer" in the public sector. Mr. Tata says that the Government, as a custodian of the interests of the working classes, is always ready to preach virtues of progressive labour policies and to be actively instrumental in granting bigger and more

generous doses of social security, regardless of its cost to the community; yet, the Government, as an employer, is reluctant to practise what it has been preaching. Such double standards of social justice as are seen in the wide disparities between wages and dearness allowance of Government employees as compared with those of industrial workers in the private sector, may make employers feel doubtful about the sincerity of the Government. The Government's solicitude and pleadings for higher wages and dearness allowance for industrial workers in the name of social justice have no meaning when its own employees in various establishments are languishing on fixed dearness allowances unrelated to the rising cost of living.

Referring to the question of the dearness allowance being linked to the cost of living index, Mr. Tata said that the absence of uniform application of the principle of neutralisation throughout the country and similar lack of uniformity of dearness allowance to workers had resulted in an unfair and inequitable burden on the manufacturers in different regions and an unfair disparity of benefits between workers and workers. When price policies are determined and enforced on a nation-wide basis, disparity in wage costs is bound to affect the manufacturing cost adversely in those parts where dearness allowance is far higher than in other parts of the country. It is not sufficiently realised by the authorities that the amount of dearness allowance would henceforth affect not only the sums payable by way of gratuity and provident fund, but also the quantum of bonus. Mr. Tata said that the appointment of wage boards was inconsistent with the policy of holding the price line. He opposed the appointment of a second textile wage board and described it as most inopportune in the context of the present emergency, unless additional wage increases were met from higher productivity of the industry.

Referring to the Bonus Commission's recommendation on the linking of basic wage and dearness allowance in computing the minimum bonus, Mr. Tata said that this was contrary to usage and custom and would result in a perpetual demand by workers for a higher dearness allowance to jack up their bonus. Mr. Tata also contended that the Commission had gone beyond its terms of reference in recommending minimum bonus even when there were no profits at all in a particular year. This is nothing but a grant of a straight increase in wages, which can best be done by a Wage Board. When such a payment, unrelated to profit, has been unreservedly accepted by the Government, one need hardly be surprised if employees outside the organised industry and in all the service departments of the Central and State Governments were to claim similar benefit. The president of the Employers' Federation has urged the Government to ponder whether the time has not come for a more rational and realistic labour policy in order to promote economic and industrial growth on sound lines.

Current News and Comment

Cotton Textile Exports Rise

Cotton textile exports from India during the first seven months of the current year are provisionally placed at 357.3 million yards, valued at Rs. 31.16 crores. This shows a considerable improvement over the performance during the same period last year, when exports totalled 309.9 million yards, valued at Rs. 23.77 crores. The outstanding feature of this year's performance has been the remarkable improvement in the price realisation a unit. The average price realised a yard of cloth during the January-July 1964 period works out to 87 paise, compared with 76 paise in the corresponding period last year. The higher price realisation is due both to improved international trading conditions and the diversification of India's exports towards finished textiles. The pattern of production in the country has undergone a significant change over the past year or so. According to provisional estimates, grey cotton piecegoods exports during the first seven months of the current year are placed at 206.6 million yards (against 179.3 million yards) valued at Rs. 16.72 crores (Rs 12.69 crores) and non-grey exports have gone up from 130.6 million yards, valued at Rs. 10.78 crores to 150.7 million yards valued at Rs. 14.44 crores.

Improved performance during the current year is due mainly to larger offtake by the European zone, more particularly by the U.K. Exports to this zone increased impressively from 98.25 million yards, valued at Rs. 8.174 crores to 172 million yards valued at Rs. 15.518 crores. The offtake by the Asian zone was also larger at 89.83 million yards (76.49 million yards) valued at Rs. 7.526 crores (Rs. 5.401 crores). Exports to the American zone, however, suffered a sharp decline from 42.31 million yards (Rs. 2.995 crores) to 20.98 million yards (Rs. 1.808 crores). Shipments to the African zone were lower at 51.25 million yards (Rs. 3.509 crores), against 68.39 million yards (Rs. 4.225 crores). Exports to Oceania totalled 23.23 million yards (valued Rs. 2.816 crores), compared with 24.41 million yards (valued Rs. 2.679 crores).

The direction of India's export trade in cotton textiles has been undergoing a change. All along, countries in Africa and Asia were natural and traditional markets for Indian textiles. But with the advent of nationhood in many of the countries in Asia and Africa, the textile industry has been singled out for development under the protection of high tariff walls. This has resulted in the shrinkage of the area of the market for the staple qualities which India traditionally used to supply to these markets. While there appears to be considerable scope for selling finished and processed textiles in these markets, India is unable to compete with the other suppliers of processed goods. Exports to Europe have shown an encouraging trend, and this is due to larger shipments to the U.K., France and West Germany; exports to these countries are governed by annual quota arrangements. Exports to east European countries, which also are regulated through annual plans, have not, however, shown the same improvement.

While cotton textile exports during the first half of the current year have been fairly encouraging, the more recent trend is rather disturbing. Shipments from Bombay in July at 31.72 million yards, valued at Rs. 2.679 crores, were the lowest for any month since the beginning of the year, and the provisional figures for August show a further setback at 28.56 million yards valued at Rs. 2.482 crores. Bookings for delivery in the latter half of the current year have not been up to expectation. This is attributed to difficulties of getting supplies for export from mills. The impending introduction of the scheme for popular varieties to the extent of 43 percent of each mill's production is said to have created a situation where most mills prefer to wait and watch the impact of the scheme when implemented. It is considered likely that free sales of 57 percent in the local market may prove more attractive than selling for export. It would be unfortunate if the scheme of partial decontrol of cloth were to affect adversely the export of cotton textiles.

In his address to the latest annual general meeting of the Cotton Textiles Export Promotion Council, the chairman, Mr. Neville N. Wadia, emphasised the need for greater concentration on the shipment of quality goods so that the yardage drawn off the domestic market could be kept at the minimum while at the same time realising better prices. Mr. Wadia said that the prospects of improving India's textile exports lay largely in Europe and the U.S.A., provided, of course, the cardinal principles of the Long Term International Agreement on Cotton Textiles were implemented in the very spirit in which it had been drawn. He was quick to point out that the implementation of the Agreement has belied India's hope for increasing her access to developed countries. The developed countries, more particularly the U.S.A. and Canada, had taken the fullest advantage of the market disruption clause which was an outright negation of the spirit of the Agreement.

Last year, the U.S.A. had restricted four major categories of imports from India to a total figure of 30 million square yards. In February 1964, these restraints were further extended to cover six categories and 25 new categories were stipulated for consultation if and when necessary after specified levels were reached. This hardly leaves any chance for a reasonable expansion of India's trade with due regard to the country's competitive capacity in limited fields of production. Canada, too, had restricted imports of Indian textiles under the plea of market disruption. But strangely enough, imports from Taiwan, China and east European countries continued to flood the Canadian market at prices 20 to 30 percent lower than Indian rates. Mr. Wadia stated that at the forthcoming session of I.F.C.A.T.I. in Zürich, India would urge the western countries to reserve a share of 10 to 20 percent of their internal consumption to be imported from less developed countries A positive approach to this subject is imperative if the less developed countries are to generate their economies and if the western nations really mean to implement the Long Term Agreement in the right spirit.

Referring to Weseur Associates, a consortium of manufacturers and exporters, which has been set up to organise trade with western Europe on a sound and selective basis and to diversify exports in a wider range of fabrics, Mr. Wadia expressed the view that with fuller co-operation from the industry and trade, the consortium would be able to expand textile exports considerably to western Europe in the coming years. Prospects of increasing exports to east European countries are also viewed favourably; a number of study teams have recently visited these countries to make a first-hand appraisal of the marketing potentialities in these countries. Mr. Wadia criticised the Government of India's decision to limit exports of finished goods to the U.K. to 25 million square yards for 1964. Considering the increasing trend in India's exports of finished goods to the U.K. in 1963 and 1964, the Government's surprise decision came as a "nasty shock", he said. Mr. Wadia pointed out that it would be unrealistic and unfair to allow the ceiling to be continued at 25 million square yards for 1965. He said that India should take up this question afresh in the forthcoming talks with the Cotton Board and arrive at a fair and equitable solution in keeping with Hongkong's quota for finished goods which is out of all proportion to her manufacturing potential.

Amalgamating Small Collieries

The Central Government, it is understood, has made a fresh move to bring about the amalgamation of small and uneconomic collieries in the Bihar-Bengal coalfields. As is to be only expected, the collieries concerned are reported to be resisting the move. In their view, the issue of amalgamation has already lost its urgency. The scheme in its original form was meant to accelerate the tempo of production. Now that the situation has fundamentally changed with a surplus emerging in the lower grades of coal, there is no justification for pushing the scheme through. On the other hand, the small collieries deserve, it is argued, the same encouragement as small units in other industries. Even in the U.K. and the U.S.A., it is said, there are small collieries producing about 10,000 tons a year, and the Governments in those countries are not forcing them to amalgamate.

All this, of course, is specious pleading. The amalgamation scheme has not lost its justification simply because there is now no need to accelerate the tempo of coal production; nor can it be reasonably argued that in order to provide some employment, the existing set-up of the small collieries should be left undisturbed. The main justification for amalgamation, on the other hand, is provided by technology, and the need to raise productivity. Coal is a basic industry, and therefore, efficiency, not redundant employment, should be the main consideration. As has been pointed out by more than one knowledgeable person, there is now an urgent need for modernising the technical equipment in coal mines. Production expansion at the rate needed to sustain the economy's long-term plans cannot be achieved except by mechanisation. There are clear technical limits beyond which underground mining not only becomes ineffective but also impossible without fuller mechanisation. Moreover

there is the great need to reduce coal mining costs. This has a bearing on the whole economy, as coal is going to remain the main fuel for as far as one can see into the future.

The future of the coal industry obviously lies in the development of large mines with a scale of output sufficient to absorb not only the higher overheads, but also to leave a surplus for re-investment on technological improvement and renewal of assets by opening up new areas. The amalgamation committee for collieries originally recommended that a mine producing 10,000 tons a month should be considered the minimum economic unit. This norm has subsequently been revised to 7,000 tons a month, but the present circumstances clearly demand that units much larger in size than this should be considered economic if a worthwhile programme of mechanisation is to be carried through.

Happily, the trend in India is already towards greater mechanisation. As Mr. Pran Prashad disclosed in his presidential address to the annual meeting of the Indian Mining Association a few months ago, during the last five years, the proportion of coal won by machines has increased by 70 percent. The quantity of mechanically loaded and conveyed coal has increased three-fold. Yet the average output a man-shift in India at present is only half a tonne. Considerably more than this is being achieved in some of the larger and more mechanised units. But the industry has only regained the prewar level of average output. If productivity is to be increased, further mechanisation is unavoidable. From the economic point of view also, it is necessary to effect a certain amount of reorganisation in the coal industry, if only to strengthen it. Probably in no other country in the world, there are 850 odd coal mines producing merely 66 million tons a year. Even workers' representatives agree that the marginal units which lack the resources and the strength to withstand temporary crises such as is being experienced at present, should either close down or merge with others to make a more viable and stronger unit. Mr. K. D. Malaviya, while he was the Minister in charge, was in favour of the amalgamation scheme going through as quickly as possible. Mr. Sanjeeva Reddy, who now holds the Mines and Fuels portfolio, is obviously of the same opinion. But one question remains. If the amalgamation scheme, which visualises only voluntary mergers, is persistently opposed by the collieries concerned, will the Government be content to leave the matter there, or has it any other scheme to achieve the objective?

Report on Plan Publicity

The report of the study team on plan publicity has, by and large, endorsed the unofficial criticisms against the Government's propaganda machinery. Most of the criticisms against the official publicity efforts are not new, but the team has used strong language to condemn the inefficiency and lack of planning in the programmes. The aim of the latter, as is flamboyantly declared by India's planners and policy-makers, is to promote people's participation in the plan, although the result achieved has often been the opposite. Publicity cannot be a substitute for performance. It is a pity that the execution of the plan as also the supporting publicity programmes have fallen short of expectations. The study team has rightly stated that the impact of publicity programmes on the people has been "tenuous, vague and diffused." It is of the opinion that the failure to recognise the potentialities of publicity as an aid to development has led to a weak approach to the subject. "While the Government has come to regard publicity functionaries as status symbols, the general public has come to view them as propaganda boys of the Government." The existing publicity bureaux of the Government only churn out millions of unreadable hand-outs, which indicate neither any news sense nor any reasonable and impartial appraisal of the performance of public authorities. It is no wonder, therefore, that the Government's publicity machinery has not generated an atmosphere of urgency in achieving national economic goals. Things would have been better if the programmes were organised on the basis of nation-wide planned campaigns with a spirit of objectivity. In the absence of this approach, the Government's publicity effort has degenerated into a blind worship of the personality cult, and All India Radio, in the study team's opinion, is the worst offender.

There may be controversy on the administrative reorganisation suggested by the team. The latter has recommended, for example, the setting up of a Central publicity planning group in the Ministry of Information and Broadcasting, with a director-general of plan publicity as the chief technical executive to plan and direct the programmes. A similar set-up has also been suggested at the State levels. But the study team has not apparently considered the possibility of party politicians bringing pressure to bear on these officials. Nor has it suggested in detail how co-ordination may be efficiently maintained between the Central and State agencies recommended in the report. The team has found a conspicuous lack of methodical execution of plan publicity programmes. It is true that the shortage of funds, materials and equipment and a bewildering range of languages and dialects are some of the serious limitations under which official publicity programmes are being carried out. But with a little more imagination and a sense of purpose, and more freedom to operate regardless of the whims of party politicians, the official publicity programmes would not have been in the bad shape in which one finds them today.

Curbs on Unaccounted Money

The Government of India is obviously worried about the growth of unaccounted money, as is evident from the reply given by Mr. B. R. Bhagat, Minister of State in the Central Finance Ministry, to a question in the Lok Sabha last week. The growth of unaccounted money has made the Reserve Bank's policy of credit control somewhat feeble, so the Government is thinking of taking effective steps in the immediate future. The Minister, however, admitted that the question of tracing the unaccounted money was difficult, if not impossible. There is no denying that the growth of unaccounted money has accentuated the inflationary pressures, although it is difficult to estimate correctly how much of it is circulating in the economy. It will be recalled that immediately after the assumption of office in November last, Mr. T. T. Krishnamachari, Central Finance Minister, drew the attention of the Government and the public to this problem. He said that "while money for worthwhile investments and public purposes is in short supply, there is a great deal of unaccounted money circulating in the economy in search of further undercover gains. Perhaps the most important problem that faces us in relation to fiscal reform is that of devising astute and stringent measures to meet the evil of tax evasion so that it might be possible to distribute the burden of taxation more justly and evenly between different individuals in the same or similar walk of life." At the last Bhubaneswar session of the Congress Party, Mr. Krishnamachari again referred to the problem and said that if Rs. 800 crores to Rs. 1,200 crores of unaccounted money could be institutionalised, it would be possible to control credit.

Apart from tax evasion, which is the main reason for holding unaccounted money, the motive for carrying on transactions with it is to overcome administrative and other difficulties, particularly when one has to obtain permits or licences. The desire for tax evasion has obviously become predominant with the steep increase in direct taxes. In his report on Indian tax reform, which was submitted to the Government in 1956, Professor Nicholas Kaldor pointed out that the taxation structure in the country was both inefficient and inequitable. So he suggested a comprehensive network of taxation and a reporting system; but, instead of reducing tax evasion, they seemed to have increased it. However, in spite of the recent raids on film stars' houses, there is no reason to believe that tax evasion has stopped in India's film world. Nor has unaccounted money invested in jewellery or bullion come out. The smuggling of prohibited articles is also providing an opportunity for using unaccounted money. Cases are also not rare when the latter has been converted into durable assets, such as buildings and real estates. Unaccounted money, according to the Central Food Minister, Mr. C. Subramaniam, has also "played havoc" in the foodgrains trade. If it could be traced, it would have been possible for the Government to reduce the present burden of taxation and to raise larger resources for financing the development programmes.

Mr. Bhagat referred to the unofficial suggestions which have been made from time to time for checking the growth of unaccounted money. It has been suggested, for example, that high denomination notes should be demonetised. But this measure will succeed only if unaccounted money is held in high denomination notes. The prospect of demonetisation has, in fact, driven many people to keep unaccounted money in lower denomination notes. Admittedly, the last Central Budget has given wider powers to tax officials and has imposed heavier penalty on evaders. But it is obvious that the growth of unaccounted money cannot be checked unless the machinery for tax collection is considerably strengthened. Another method suggested is that the Government may declare amnesty to those holding unaccounted money, and float a loan with attractive features to institutionalise it. Permitting banks to issue negotiable bearer bonds is another step suggested for the purpose.

MINERALS IN INDIA

THE Director-General of Statistics has published a blue book showing the mineral production of India for the 10 years, 1894 to 1903.

Salt—We learn that the average production is about a million tons annually, but in 1893 was only 894,840 tons owing to a smaller production in Bombay and Madras. The largest proportion is sea salt made on the coasts. An examination of the Sambhar Lake is now being made by the Geological Survey consequent on apprehensions of a diminution of supply.

Saltpetre—Is most largely produced in Bihar. The average exports from Calcutta during the last five years were 374,629 cwt.

Coal—The output last year was the largest on record, but the value was below the average; the following figures are interesting:—

Output	Tons	Value Rs.
1890	2,168,521	73,47,592
1895	3,540,019	1,29,33,303
1900	6,118,692	2,01,46,222
1901	6,635,727	1,98,50,582
1902	7,424,480	2,05,03,639
1903	7,438,386	1,94,95,741

The Bengal output last year was 6,361,212 tons. Although coal bulks very largely both in quantity and in trade discussions in Bengal, it will be noticed that in value it comes pretty low down in the list of commodities.

Petroleum—Is virtually confined to Burma and Assam, but the output has developed enormously of late years. In 1903 it was nearly 88 million gallons, of which over 85 million gallons came from Burma. In addition to a low-grade burning oil, and solid paraffin, petrol is now being manufactured. The following are some figures of output:

	Gallons	Rs.
1890	4,132,287	2,82,173
1895	13,003,748	15,39,231
1900	37,729,211	22,31,325
1901	50,075,117	30,65,131
1902	56,607,688	32,67,245
1903	87,859,069	53,15,470

The largest increase in late years shows that protection can do for a young and nascent industry. The same thing applied to cotton goods would probably produce similar results.

Iron—The native industry has gradually declined in the face of imports of cheaper iron and steel from Europe, and except at Barakar there has been no attempt to manufacture iron on a large scale in India.

Gold—The output during the last fourteen years shows a steady increase. The following are some figures:—

Output	Ounces	Rs.
1890	107,273	55,54,508
1895	257,830	1,72,13,511
1900	512,985	2,83,76,505
1901	532,126	2,89,56,159
1902	517,639	2,95,53,456
1903	603,218	3,45,37,401

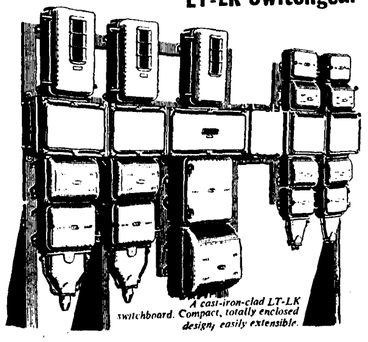
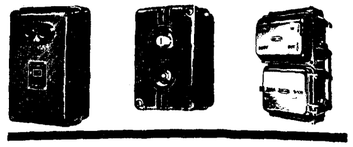
A Ditcher's Diary



I AM QUITE PREPARED TO CONCEDE THAT IT IS altogether too early to criticise Mr. Swaran Singh for what he has or has not done in the Ministry of External Affairs. I seem to be in a minority in thinking that, by the same token, it is too early to praise him for his somewhat intangible achievements among India's neighbouring countries. I have never believed in international bad manners as a sensible form of diplomacy. On the other hand, the more I read Mr. Swaran Singh's statements the more I feel that they constitute little more than what is best described as aimless amiability. India's Foreign Minister thought fit to compliment the Burmese economy. Well, as I have mentioned here before, Burma is among the very few countries which have experienced an actual decline in *per capita* income since independence. I do not believe in Plato's "necessary lie"; Mr. Singh's was an unnecessary one. I am a great admirer of imagination in relations between nations. To discover, however, an enormous fund of goodwill for Indians in Rangoon and Colombo needs more than imagination; it's sheer fantasy. Now, the condition of the harassed Indians in those two countries would not have been one whit better if Mr. Swaran Singh had said rude things about the policies of Mrs. Bandaranaike and General Ne Win; it would very probably have been a good deal worse. But to let the world and the people in this country think that Indians are loved in Burma and Ceylon is not only self-deception but worse. These gratuitous compliments paid by the Foreign Minister will one day be cited by Rangoon and Colombo to prove the cussedness of the expatriates whose present helplessness is more important than their possible rapacity in the past. There is not an awful lot that India can do for the unfortunate Indians abroad; but it seems almost in bad taste to go around giving chits to discriminatory Governments. These latter must be delighted to think that the immigrants are a nuisance not only to the reluctant hosts but also to the Government of India. Repair relations with the neighbours by all means; but not at the price of being blind to unpleasant realities. One of these days Mr. Swaran Singh will have to be a little less pleasant.

IT SEEMS ALREADY TIME TO WARN MRS. INDIRA Gandhi that, unless she is careful, she may soon get lost in a sea of unwieldy committees and an ocean of bulky reports. I have heard it said that Mrs. Gandhi ran her father's household with a fair degree of efficiency. That is all she needs to clean up the Ministry of Information and Broadcasting and the not-too-small empire it rules. She has only to have one quick look at the state of the Press Information Bureau and All India Radio, to say nothing of the lesser directorates, to know where there are deposits of soot. Although bureaucracy's main business is to surround a secretariat with an aura of mystique, the job of running a government department is not greatly different from that of conducting the affairs of an efficient home. The sweeper is a very important member of any domestic staff; in the Government, only Mrs. Gandhi can wield the broom, the one implement she will need to use first. Can she do it in one part of the Government while the rest retain their rules? Not easy at all. But she can begin with A.I.R. and secure for it a certain amount of freedom from the rules and procedures of government. She can do so, to some extent, also for the Press Information Bureau. (Reforming the Ministry is beyond her.) A vast organisation like All India Radio certainly needs administrators; but no qualitative change can begin until the primacy of the programme planner has been restored. Broadcasting is what broadcasters make of it; and in A.I.R. the broadcaster is the least important person. To improve the news services, All India Radio needs newsmen with news sense and a modicum of independence, not bureaucrats with files. Mrs. Gandhi does not need a committee to tell her what's wrong with the A.I.R. bulletins; if she can judge newspapers by reading them as an ordinary reader, she can judge A.I.R. programmes too as an ordinary listener. The incompetence of an administrator can be concealed for a long time. Whether a fellow can sing or talk is soon out; it is not at all difficult to find out who wrote that gibberish in that P.I.B. handout. Committees are good at little besides confusing Ministers who must learn to take their own decisions.



THE NEWS FROM NAGALAND, SO FAR, SEEMS GOOD; and I do not very much care that the possibility of a settlement has come not through any initiative taken by the Government of India but through mainly unofficial efforts, including some foreign assistance in the shape of Mr. Michael Scott's services as a go-between. The only cynical justification of continuing the military operation was that Nagaland provided the Indian army with a training ground, much as the North-west Frontier once did for the old army. Unsympathetic critics were once apt to describe Nagaland as India's Algeria: the parallel was far from fair to India. Yet an expensive, unequal and largely unnecessary war (?) it was. And there was inhuman cruelty—on both sides. I have been reading Sir Hugh Foot's *A Start in Freedom*; and the one thing that stands out in this remarkable book is the way he came to respect the rebels, even those he had to punish. If Sir Hugh, with his middle-class and colonial service background, could approach turbulent rebels thus, I wonder why our present administrators, in the tribal areas in particular, so frequently fail to understand groups or societies with different traditions. The Nagas are a brave people and they want to be respected for their bravery; they also want their customs to be respected and not scoffed at by officials from the plains. In every respect an Indian official is surely closer to India's tribal people than, other things being equal, a bureaucrat from Europe or somewhere. Because of our overbearing Ministers, who are lionised by the Press and the radio, the official has lost, I think, his sense of importance and dedication; he just carries out the orders of his political masters. Even after peace has returned to Nagaland, the problems of administration will remain; and the Government needs to begin to think of them. Between the administration and the people yawns a frightful gap, especially in the aboriginal areas. This can be filled only by officials who take a genuine interest in tribal ways and not by those whose interest is quick advancement in the service.

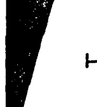
REPORTS WHICH HAVE REACHED ME ABOUT THE television film *Jawan* have all been uniformly favourable. It was shown in Britain recently, and a correspondent has written to say what a superb job of propaganda it does for the Indian soldier. No better commentator than John Masters could have been found anywhere, but it is, I am told, something of a disappointment to find that he has not written the script. It is also rather odd to hear him being referred to as a U.S. citizen, although technically, of course, this is now perfectly correct. The film is in fact angled at American audiences, a point which, my correspondent explains, accounts for the one really unfortunate feature about it. This is its frequent condemnation of India's policy of non-alignment. Apart from this being a somewhat unfair and uncalled-for reflection on the theoretical wisdom of Mr. Nehru's foreign policies, as distinct from their apparent practical success, my correspondent thinks that it is altogether misleading where the facts are concerned. India's determination to retain the friendship and moral support of the Russians in her struggle with China is based on sound strategic premises. It recognises the very real fact that western influence in this three-cornered tussle is entirely marginal, that it was Russian pressure rather than American and British arms that halted the Chinese advance into India. Possibly this might not have been the most tactful of themes to expound in a film so obviously designed to evoke the American people's sympathy and material support for India's fighting men. But my correspondent does appear to feel that understanding might have been more adequately served

For Guaranteed Quality and Dependability insist on LT-LK Switchgear

A cast-iron-clad LT-LK switchboard. Compact, totally enclosed design, easily extensible.

Type MK1, 15Amps automatic direct-to-line motor starters for motors up to 7.5 h.p.

Type MF1, 15 Amps manually operated motor starters for motors up to 7.5h.p.



Switch-fuse gear — available as switch unit, fuse unit; and combined switch-fuse unit in ratings of 60/100 to 1000 Amps, 500 Volts

It is false economy to buy inferior switchgear. Of the finest quality, LT-LK is made in India in collaboration with the leading European manufacturers of switchgear — Laur Knudsen Ltd. of Denmark.

L&T also manufactures control panels (floor mounted, wall mounted or console type) for India's power generating and distribution stations and industrial installations.

by avoiding the issue altogether. Now, the danger is that having condemned the non-alignment policy so unequivocally, instead of attempting to understand its reasons, India's subsequent and inevitable pursuit of it will only serve to irritate the American public even more. Leaving aside this one false note, the rest of the film appears to be a first-class tribute to the Indian *Jawan*.

SCIENCE FICTION READING HAS LONG BEEN A MINOR hobby of mine and I have never for a moment supposed that bug-eyed monsters—"bems" as they are affectionately called by the initiated—are an impossibility. Professor W. T. Williams of Southampton University believes they are, and he said so to the recent meeting there of the British Association. The Professor was discussing the contribution of science fiction to science, and I am gratified that he should rate it so highly. To me it seems obvious enough that scientists themselves rarely possess the imagination to write good science fiction, that to a large extent they must remain prisoners of current thought in their own disciplines. So the fiction writer provides imaginative horizons which the practitioner lacks, and if in the process such little obstacles as, say, the relativity theory get slightly dented, then what does it matter? What indeed? You can sell me super-light velocity travel over the head of the late lamented Professor Einstein any time you care to take the trouble. After what has happened in the past 20 years I wonder if any scientist has the courage to write off anything as impossible. Professor Williams does though. He cannot accept "insect-like creatures of high intelligence" because these would not be large enough to "accommodate a brain". He might be right, but I cannot help suspecting he has overlooked that little creature we have right here on earth, the ant. Besides, since when did the size of brain really matter? If it did, presumably this world would be run by elephants or whales. But all this is merely a quibble. Who cares whether these products of the science fiction writer's imagination are a practical proposition or not? Things never really work out exactly as science fiction predicts them. In the meantime we are provided with some excellent bedtime reading and given a salutary reminder that there may be things in this universe we have not yet even dreamed of. Which is what I always find so interesting about science fiction.

I AM LOOKING FORWARD TO READING MR. V. S. Naipaul's *An Area of Darkness*, which has been highly praised by Mr. V. S. Pritchett. (I do not think this is because they share the initials, V. S.) The title makes clear that the book is hardly flattering to this country. Good. Nothing like criticism—and the more caustic it is, the better. There are, apparently, almost as many foreigners dying to come hither in search of something or other as there are Indians dying to get out of India and, if possible, stay out. I don't mind this two-way traffic at all. But in Mr. Naipaul's case, he came to see the country his grandfather had left for Trinidad. He didn't like what he saw. There are lots of countries I don't like. Each, I say, to his dislike. I do hope, however, that Mr. Naipaul's book will be given here a literary reception and not political. Mr. Naipaul is a writer, a good and sensitive novelist; and it is as a writer that he must be judged. Many good writers hold some very silly views about men and things, which does not prevent them from being good writers. Dom Moraes and Ved Mehta have also written unflatteringly about India; Mr. Nirad C. Chaudhuri's *Autobiography of an Unknown Indian* remains a classic. This is a big country and should be able to take criticism in its stride; and that some of it comes from those who were born in India, or whose grandfathers were, is all to the good. Criticism is too serious a business to be left to foreigners or visitors alone. And when it comes to criticising others, this country certainly gives as good as it takes. I am bored with people saying nice things about peoples and countries. I don't care what people write as long as they do so readably. Opinions? Their validity is usually relative and extremely transient. I remember this about my opinions; I hope you do too about yours.

THE DITCHER

Guide for Investors

BIRD-HEILGERS JUTE GROUP COMPANIES EARN LESS

THE directors of Bird-Heilgers group of jute companies say in their reports for the year ended March 1964, that the outlook for the current year is far from satisfactory. The Indian crop is expected to be of the same size as that of 1963-64, but the Pakistani crop is likely to be smaller. The increased production costs have reduced the profit margins of mills. Simultaneous business in raw jute and jute goods has become difficult due to the disparity in the prices of fibre and jute goods. As for the supply of carpet-backing cloth, it is substantially in excess of demand and the situation is unlikely to improve during the current year. Since the mills were obliged to buy raw jute under purchase quotas issued by the Jute Commissioner, they had to carry large stocks of fibre. So their finances have been strained, and they have had to pay heavy bank charges and insurance premiums. With the steadily increasing production in Pakistan, the directors doubt whether the present level of output in India can be maintained without affecting the parity in prices of raw jute and jute goods.

The profit of the Northbrook Jute Co. Ltd has dropped from Rs. 11.72 lakhs for 1962-63 to Rs. 8.05 lakhs for 1963-64, after providing Rs. 8.19 lakhs (against Rs. 21.55 lakhs) for taxation and Rs. 8.05 lakhs (against Rs. 6.15 lakhs) for depreciation. The taxable ordinary dividend has been reduced from 35 percent to 25 percent, which works out to a yield of 9.8 percent at the present price of Rs. 25.50 a share of Rs. 10 each. Statutory development rebate reserve is allocated Rs. 1.32 lakhs (against Rs. 1.21 lakhs) and general reserve Rs. 6.62 lakhs (against Rs. 1.95 lakhs). The carry-forward is Rs. 7,905, against Rs. 1,076 brought in. Sales rose from Rs. 3.08 crores to Rs. 3.40 crores and stocks of jute goods from Rs. 18 lakhs to Rs. 20.94 lakhs. Steps have been taken to install further equipment to complete the modernisation programme.

The profit of the Dalhousie Jute Co. Ltd has declined from Rs. 17.70 lakhs to Rs. 6.69 lakhs, after transferring Rs. 10.09 lakhs (against Rs. 5.08 lakhs) to taxation and Rs. 9.01 lakhs (against Rs. 6.10 lakhs) to depreciation. The taxable ordinary dividend has been reduced from 25 percent to 7.5 percent. The yield amounts to 6 percent at the present price of Rs. 125 a share of Rs. 100 each. Debenture redemption reserve absorbs Rs. 1 lakh (the same) and development rebate reserve Rs. 2.92 lakhs (against Rs. 4.03 lakhs). The carry-forward is Rs. 9,930, against Rs. 3,316 brought in.

Sales rose from Rs. 3.29 crores to Rs. 4.27 crores while jute goods stocks dropped from Rs. 10.31 lakhs to Rs. 5.32 lakhs. The converter division is working satisfactorily. Business in laminated goods has become very competitive since the installed capacity is in excess of demand. Sales have been hampered by an acute shortage of polythene and polythene film. A large amount of money has been blocked because the difficulty in obtaining drawback on excise and Customs duties has been aggravated.

The Lansdowne Jute Co. Ltd has declared a taxable ordinary dividend of 12.5 percent after a long interval. The yield amounts to 11.3 percent at the present price of Rs. 111 a share of Rs. 100 each. The profit has amounted to Rs. 11.11 lakhs, against one of Rs. 12.88 lakhs, after providing Rs. 1.32 lakhs (against Rs. 63,003) for taxation and Rs. 3.97 lakhs (against Rs. 3.03 lakhs) for depreciation. Development rebate reserve is allocated Rs. 1.34 lakhs and general reserve Rs 2.50 lakhs. The carry-forward is Rs. 6,707, against Rs. 4,687 brought in.

Sales dropped from Rs. 1.32 crores to Rs. 62.48 lakhs. The Dalhousie Jute Co. Ltd is operating 294 looms of Lansdowne Jute. The main mill building is occupied by the Government of India, and many other buildings and land have been leased out to commercial concerns. The foundry section of the Company is operating successfully and has helped increase the profit of the Company. The quality of castings produced is very satisfactory. It is proposed to increase the capacity of the foundry to 200 tonnes a month. So additional equipment has been installed.

The Kinnison Jute Mills Co. Ltd has earned a profit of Rs. 2.85 lakhs, against Rs. 31.90 lakhs, after increasing taxation from Rs. 12.12 lakhs to Rs. 26.65 lakhs and depreciation from Rs. 9.01 lakhs to Rs. 11.94 lakhs. The taxable ordinary dividend has been cut from 10 percent to 5 percent, which works out to a yield of 4.1 percent at the present price of Rs. 122 a share of Rs. 100 each. Development rebate reserve absorbs Rs. 1.11 lakhs (against Rs. 2.94 lakhs) and general reserve Rs. 3.64 lakhs. The carry-forward is Rs. 13,127, against Rs. 12,641 brought in. A sum of Rs. 5.79 lakhs has been transferred from taxation contingency reserve.

Sales rose from Rs. 4.70 crores to Rs. 4.86 crores and stocks of jute goods dropped from Rs. 10.20 lakhs to Rs. 9.94 lakhs. The directors point out that direct taxation has absorbed about 89 percent of the profit. In recent assessments, the Income Tax Officer has disallowed the cost of purchase of loom-hours as an allowable expenditure, although the amount received on the sale of loom-hours has been taxed at the usual rate. An appeal has been lodged against the Income Tax Officer's assessments.

Martin Burn Light Railway Results

THE results of the Martin Burn Railway Companies for the year ended March 1964, have been published. The Arrah-Sasaram Light Railway Co. Ltd has maintained the taxable ordinary dividend at 4 percent. The yield amounts to 12.7 percent at the present price of Rs. 31.62 a share of Rs. 100 each. Gross earnings amounted to Rs. 20.19 lakhs (against Rs. 20.55 lakhs) and working expenses to Rs. 17.73 lakhs (against Rs. 17.25 lakhs). The net profit amounts to Rs. 90,275. The carry-forward is Rs. 4,583, against Rs. 1,080 brought in.

The gross earnings of the Futwah-Islampur Light Railway Co. Ltd amount to Rs. 9.01 lakhs, against Rs. 8.86 lakhs. Working expenses are Rs. 8.20 lakhs (against Rs. 8.60 lakhs). The net profit amounts to Rs. 33,836. A taxable ordinary dividend of 1.8 percent has been maintained, which works out to a yield of 6.3 percent at the present price of Rs. 28.70 a share of Rs. 100 each. Contingency reserve is allocated Rs. 12,500, leaving a balance of Rs. 1,448 to be carried forward, against Rs. 806 brought in.

The Chaparmukh-Silghat Railway Co. Ltd has maintained the taxable ordinary dividend at 2.4 percent. The yield amounts to 6.9 percent at the present price of Rs. 35 a share of Rs. 100 each. Gross earnings dropped by Rs. 32,735 to Rs. 3.48 lakhs, and working expenses are about 50 percent of gross earnings. The net profit amounts to Rs. 76,367. The carry-forward is Rs. 4,587, against Rs. 2,620 brought in.

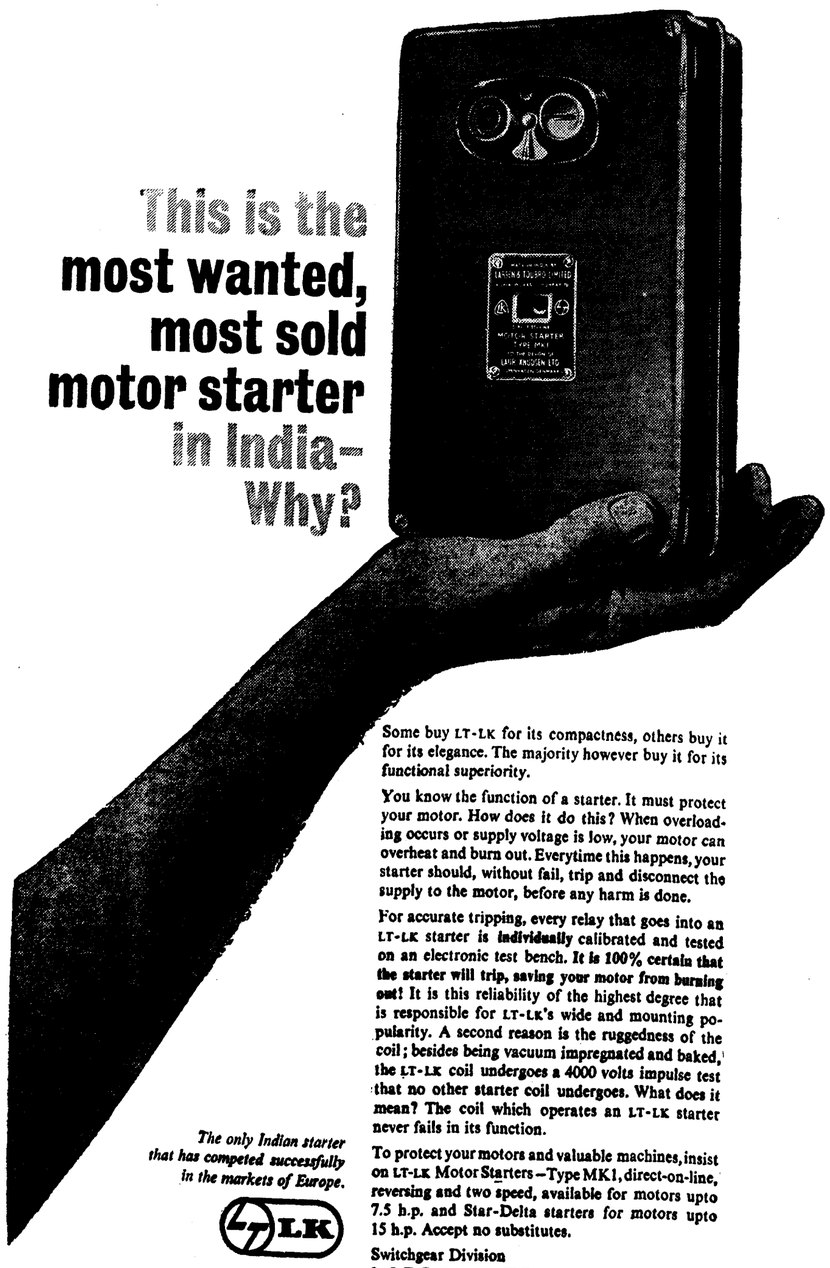
Martin Burn Electric Companies Pay Less

THE results of the Martin Burn electric companies for the year ended March 1964 have been published. As for the Jubbulpore Electric Supply Co. Ltd, the State Electricity Board has indicated that the additional power from the Amarkantak scheme will be soon be available for distribution. An expansion scheme to increase the transmission and distribution of additional power has been undertaken, and the Board has agreed to give a loan of Rs. 6.8 lakhs for the purpose. Units sold rose from 43.8 million to 49.7 million and the revenue from Rs. 53.82 lakhs to Rs. 63.53 lakhs. As the clear profit falls short of the reasonable return, a sum of Rs. 65,967 has been transferred from tariffs and dividend control. The profit has amounted to Rs. 2.86 lakhs, against Rs. 2.13 lakhs for 1962-63, after providing Rs. 3.37 lakhs (against Rs. 2.95 lakhs) for depreciation, Rs. 64,705 (against Rs. 31,452) for contingency reserve, Rs. 2.30 lakhs (against Rs. 85,000) for taxation and Rs. 33 813 (against Rs. 21,478) for development reserve. The taxable ordinary dividend has been reduced from 10 percent to 8 percent. The yield amounts to 6.5 percent at the present price of Rs. 12.31 a share of Rs. 10 each. General reserve is allocated Rs. 1.25 lakhs (against Rs. 83,000), leaving a carry-forward of Rs. 5,734, against Rs. 3,286 brought in.

The profit of Benares Electric Light and Power Co. Ltd has amounted to Rs. 3.17 lakhs, against Rs. 3.04 lakhs, after transferring Rs. 5.09 lakhs (against Rs. 4.77 lakhs) to depreciation, Rs. 51,736 (against Rs. 49,612) to contingencies reserve and Rs. 1.50 lakhs (against Rs. 45,000) to taxation. The taxable ordinary dividend has been reduced from 11 percent to 10 percent which works out to a yield of 7.5 percent at the present price of Rs. 13.25 a share of Rs. 10 each. General reserve is allocated Rs. 2.25 lakhs (against Rs. 2.40 lakhs). The carry-forward is Rs. 2,959, against Rs. 5,522 brought in. The main bulk supply point from the Rihand grid substation has been connected with the Company's system. The expansion programme to increase the transmission and distribution system has been undertaken, and the first instalment of the loan of Rs 10 lakhs from the State Electricity Board has been received by the Company. Units sold rose from 52.9 million to 59.5 million and the revenue from Rs. 65.22 lakhs to Rs. 73.93 lakhs.

Periakaramalai Tea Cuts Dividend

A MARKED improvement in profit despite a shortfall of about 143,000 kilograms in the tea crop, features the working results of the Periakaramalai Tea and Produce Co. Ltd for the year ended March 1964. The profit before taxation for the year amounts to Rs. 20,40,349, compared with Rs. 16,73,728 for the previous year. After deducting the tax provision of Rs. 10,12.000 (against Rs. 7,80.000), the net profit comes to Rs. 10,28,349. With the amount of Rs. 58,308 brought forward, the total available for appropriation comes to Rs. 10,86,657. Out of this, taxation relating to previous years amounted to Rs. 34,449. A sum of Rs. 51,289 is transferred to development rebate reserve (against Rs. 17,500). A sum of Rs. 100.000 is transferred to reserve for retirement gratuity (against Rs. 2,06,319) General Reserve gets Rs. 900,000 (against Rs. nil). The balance of Rs. 919 is carried forward.



The proposed dividend of 13½ percent (against 15 percent) will absorb Rs. 7.82.309. and this dividend will be paid out of the general reserve. The

"The Durgapur Projects Limited **(A Government of West Bengal Undertaking)** offers best quality Grade-I Hard Coke suitable for foundries, Blast Furnaces, Ferro Manganese Plants, etc., etc., and also various bye-products—Benzene (Pure), Benzol (Motor & Industrial), Toluol (Industrial), Light Solvent Naphtha, Creosote Oil (Light & Heavy), Road Tar No. 3 & 4, Sodium Phenolate, Resin and Crude Naphthalene-78°C. and above".

This is the
most wanted, most sold motor starter in India– Why?

Some buy LT-LK for its compactness, others buy it for its elegance. The majority however buy it for its functional superiority.

You know the function of a starter. It must protect your motor. How does it do this? When overloading occurs or supply voltage is low, your motor can overheat and burn out. Everytime this happens, your starter should, without fail, trip and disconnect the supply to the motor, before any harm is done.

For accurate tripping, every relay that goes into an LT-LK starter is individually calibrated and tested on an electronic test bench. It is 100% certain that the starter will trip, saving your motor from burning out! It is this reliability of the highest degree that is responsible for LT-LK's wide and mounting popularity. A second reason is the ruggedness of the coil; besides being vacuum impregnated and baked, the LT-LK coil undergoes a 4000 volts impulse test that no other starter coil undergoes. What does it mean? The coil which operates an LT-LK starter never fails in its function.

To protect your motors and valuable machines, insist on LT-LK Motor Starters—Type MK1, direct-on-line, reversing and two speed, available for motors upto 7.5 h.p. and Star-Delta starters for motors upto 15 h.p. Accept no substitutes.

The only Indian starter that has competed successfully in the markets of Europe.

LT-LK

LT/LK 36

tea crop for the year amounted to 2,203,527 kilograms (against 2,346,900 kilograms). The shortfall in crop was to a certain extent due to the emphasis placed on finer plucking. The average selling prire of tea was higher at Rs. 4.88 a kilogram, against Rs. 4.51 a kilogram in the previous year. The coffee crop was again disappointing and the harvest for the year was only 827 kilograms, against 3,390 kilograms. In view of the continous failures of this coffee area, the Company has decided to replant this poor-yielding coffee area with tea on a phased programme. The tea crop for the year 1964-65 is estimated at 2,375,000 kilograms.

Bisra Stone Lime Repeats

THE profit of the Bisra Stone Lime Co. Ltd has amounted to Rs. 11.08 lakhs for the year ended March 1964, against one of Rs. 13.51 lakhs for 1962-63, after providing Rs. 13.16 lakhs (against Rs. 11.72 lakhs) for depreciation and Rs. 7.20 lakhs (against Rs. 9.40 lakhs) for taxation. Workmen's accident compensation and pension reserve is allocated Rs. 2.84 lakhs (against Rs. 2.95 lakhs), development rebate reserve Rs. 1.93 lakhs (against Rs. 1.93 lakhs) and general reserve Rs. 1.25 lakhs (against Rs. 4.10 lakhs). A taxable ordinary dividend of 12.5 percent, including an interim of 5 percent, has been maintained. The yield amounts to 7 percent at the present price of Rs. 17.75 a share of Rs. 10 each. The carry-forward is Rs. 3,682, against Rs. 3,345 brought in.

The output of limestone at 1.5 million tonnes and sales at 1.5 million tonnes show little change, compared with those for 1962-63. Raisings of dolomite dropped from 497,869 tonnes to 408,470 tonnes. Sales also declined from 504,042 tonnes to 390,452 tonnes. The decline is largely due to the reduced offtake by the steel companies. The working was interrupted by disturbances which broke out in March 1964.

Birla Jute to Diversify

IN their report for the year ended March 1964, the directors of the Birla Jute Manufacturing Co. Ltd say that except for the jute mill division, all the units of the Company have worked satisfactorily. The total expenditure on block and development amounted to Rs. 3.04 crores. The Company has issued debentures for Rs. 2 crores to raise funds. They are also considering further measures to diversify activities. The results of the jute mills were affected because the price of raw jute rose much more than that of jute goods. The carpet-backing section operated with 60 looms. If the demand for this cloth improves, it is proposed to increase the looms to 80 during the current year. As a result of the abolition of the Working Time Agreement, there is likely to be a further increase in the output of jute goods.

The cement factory in Satna produced 235.704 tonnes of cement due to the expansion programme completed recently. The output of cement will rise from 750 tonnes to 1,750 tonnes a day in the near future. A cement factory with an output capacity for 600 tonnes a day is being built in Chittorgarh at an estimated cost of Rs. 3 crores. Production may begin early in 1966. The directors think that the price of cement should be raised to encourage a larger output. It is proposed to increase the capacity of the staple fibre division from 30,000 spindles to 50,000 spindles. The output of calcium carbide has been cut due to excessive supplies in the market. The entire equipment for the production of oxygen and acetylene gas has been received and is being installed. Trial production has already begun.

The trading profit has amounted to Rs. 2.12 crores, compared with Rs. 2.07 crores for 1962-63. A taxable ordinary dividend of 15 percent has been maintained, which works out to a yield of 4.2 percent at the present price of Rs. 35.44 a share of Rs. 10 each. Depreciation is allocated Rs. 1.01 crores (against Rs. 67.43 lakhs), taxation Rs. 36 lakhs (against Rs. 60 lakhs), general reserves Rs. 4 lakhs (against Rs. 30 lakhs), development rebate reserve Rs. 35.56 lakhs (against Rs. 14.11 lakhs) and development and rehabilitation reserve Rs. 2.24 lakhs (against Rs. 3.10 lakhs). The carry-forward is Rs. 40,032, against Rs. 46,410 brought in.

Rohtas Industries Profit Falls

THE profit of Rohtas Industries Ltd has dropped from Rs. 1.22 crores for 1962-63 to Rs. 76.94 lakhs for the year ended March 1964, after increasing depreciation from Rs. 61.93 lakhs to Rs. 76.72 lakhs due to the reintroduction of the triple shift depreciation allowance. Development rebate reserve is allocated Rs. 5.95 lakhs (against Rs. 6.60 lakhs), contingencies reserve Rs. 33.50 lakhs (against Rs. 56 lakhs) and dividend reserve Rs. 46.72 lakhs (against Rs. 51.92 lakhs). The taxable ordinary dividend has been reduced from 9 percent to 8 percent, which works out to a yield of 7.7 percent at the present price of Rs. 10.34 a share of Rs. 10 each. The tax liability is estimated at Rs. 33.50 lakhs. The carry-forward is Rs. 1,697, against Rs. 4,305 brought in. Sales amounted to Rs. 18.73 crores, against Rs. 18.12 crores.

Except for a small decline in the production of paper, boards and cement, the output of other departments improved. The production of paper and boards dropped from 52,243 tonnes to 49,919 tonnes and that of cement from 319,656 tonnes to 317,991 tonnes. The output of caustic soda rose from 5,643 tonnes to 5,991 tonnes; that of *vanaspati* from 11,270 tonnes to 11,321 tonnes; and that of asbestos cement from 19,092 tonnes to 19,546 tonnes. The reduced profit has largely been due to an all-round increase in production costs. The profit of the paper department has tended to shrink due to the uneconomic price fixed for paper by the Government. The Government of Bihar is charging very high royalties for bamboos.

A part of the rising costs has been absorbed by the improved operational efficiency. A satin white plant has been installed to improve the quality of coating. Equipment to increase the bleaching capacity has also been installed. The I.C.I.C.I. has sanctioned a foreign exchange loan of Rs. 15 lakhs to modernise the soda recovery plant. The vulcanised fibre plant continues to work below capacity due to the shortage of imported base paper. As for cement, the directors say that the packing charges fixed by the Government continue to be short of the actual expenses incurred in packing the commodity. The unit for producing asbestos cement has idle capacity. The output of this unit can be increased if the supply of imported asbestos fibre is adequate. Commenting on the outlook for sugar, the directors say that the supply of cane during the current season is expected to be higher by 50 percent. If the diversion of the supply to the manufacture of *gur* is checked, the output of sugar will improve. Due to severe competition, *vanaspati* has had to be sold at prices lower than those allowed by the Government. In view of the shortage of groundnut oil, the *vanaspati* factory may have to close down until the arrival of new crop in November.

Birla Cotton Maintains

THE Birla Cotton Spinning and Weaving Mills Ltd has earned a gross profit of Rs. 65.90 lakhs for the year ended March 1964, against Rs. 42.39 lakhs for 1962-63. Depreciation absorbs Rs. 13.68 lakhs (against Rs. 9.19 lakhs), development rebate reserve Rs. 5.44 lakhs (against Rs. 2.44 lakhs) and general reserve Rs. 16.60 lakhs (against Rs. 11.75 lakhs). Deferred taxation reserve is allocated Rs. 22.20 lakhs (against Rs. 12.50 lakhs). A taxable ordinary dividend of 20 percent has been maintained. The yield amounts to 7.4 percent at the present price of Rs. 27 a share of Rs. 10 each. The carry-forward is Rs. 17,682, against Rs. 19,266 brought in.

Sales rose from Rs. 7.29 crores to Rs. 9.66 crores. Steps have been taken to establish two ginning and pressing factories in Fatehabad, Punjab, and in Sangeria, Rajasthan. The capacity of the tent factory has been increased to meet the requirements of defence. The factory has produced satisfactory results. The Chenab Textile Mills will soon start operating because almost all equipment have been installed. Orders for machinery and plant to set up textile mills in U.P. have been placed.

Ashoka Cement Pays the Same

ASHOKA Cement Ltd has maintained the taxable ordinary dividend at 7 percent for the year ended March 1964, which works out to a yield of 9.7 percent at the present price of Rs. 7.25 a share of Rs. 10 each. The profit has improved from Rs. 4.93 lakhs for 1962-63 to Rs. 6.15 lakhs for the year ended March 1964, after increasing depreciation from Rs. 10.20 lakhs to Rs. 13.30 lakhs. Development rebate reserve is allocated Rs. 54,000 (against Rs. 1.96 lakhs) and general reserve Rs. 1 lakh. The carry-forward is Rs. 51,628, against Rs. 10,914 brought in. The cement output dropped from 174,851 tonnes to 167,036 tonnes.

Frequent D.V.C. trippings continue to hinder production, which was also affected by a strike. The foundry division of the Company has done well. The raw mill is being installed at a cost of Rs. 23 lakhs. The directors refer to the unrealistic price for cement fixed by the Government in spite of the rising production costs.

Western Coal-Fields Pays More

WESTERN Coal-Fields Ltd has increased the taxable ordinary dividend from 9 percent to 10 percent for the year ended March 1964. The yield amounts to 10.7 percent at the present price of Rs. 9.31 a share of Rs. 10 each. The profit has improved from Rs. 6.86 lakhs for 1962-63 to Rs. 7.87 lakhs for 1963-64, after providing Rs. 4.54 lakhs (against Rs. 3.91 lakhs) for depreciation and Rs. 3.25 lakhs (against Rs. 4.50 lakhs) for taxation. Development rebate reserve is allocated Rs. 2.83 lakhs (against Rs. 2.73 lakhs) and taxation for the previous year Rs. 63,000. The carry-forward is Rs. 90,850, against Rs. 32,575 brought in.

The directors point to the rising production costs which are not adequately covered by the price fixed for coal. Raisings amounted to 443,797 tonnes and despatches to 421,307 tonnes. Commenting on the decline in the demand for coal, they refer to the growing accumulation of stocks at the pitheads. A good part of the machinery obtained under the World Bank loan has not been used because there has been no incentive to increase output in the face of the declining demand. The directors, however, say that the demand has improved slightly since. The Company has undertaken exploration and prospecting on its property to increase raisings under its expansion programme.

Metal Corporation Skips Dividend

THE Metal Corporation of India Ltd sold products worth Rs. 1.43 crores for the year ended March 1964, compared with Rs. 1.21 crores for 1962-63. There has been a decline in the output of lead and zinc concentrates. The expansion and development programmes of mines are being implemented. The project to expand the capacity of the existing mill is making progress. When the expansion is completed, the mill will treat about 60,000 tonnes. The construction of the zinc smelter is progressing and the lead smelter is being renovated. The original estimated cost of Rs. 7 crores for the expansion schemes will rise by about Rs. 4 crores in view of the increased prices of equipment. The licensed capacity of the zinc smelter is also proposed to be raised from 15,000 tonnes to 18,000 tonnes a year. An application has been made to the Central Government for fnds to finance the expansion programmes. The Industrial Finance Corporation of India has given a further loan of Rs. 4.15 lakhs to the Company.

The profit has amounted to Rs. 5.76 lakhs, against one of Rs. 4.11 lakhs for 1962-63, after providing Rs. 4.36 lakhs (against Rs. 4.13 lakhs) for depreciation. Development rebate reserve is allocated Rs. 3,172 (against Rs. 56,082) and general reserve Rs. 5.75 lakhs (against Rs. 5 lakhs). The carry-forward is Rs. 18,044, against Rs. 20,454 brought in. The dividend has again been passed.

Maiden Dividend from N.E.P.A. Mills

AT long last, the National Newsprint and Paper Mills Ltd (N.E.P.A. Mills) has succeeded in declaring a maiden dividend of 6 percent for the year ended March 1964. This follows a fairly substantial improvement in the Company's working results during the year. For the first time, the Company reached the rated capacity of the plant and produced 30,078 tonnes of newsprint which was 3,563 tonnes more than in the preceding year. Sales rose from 26,675 tonnes to 30,338 tonnes, and realisations, after payment of excise duty, amounted to Rs. 3.18 crores, compared with Rs. 2.81 crores in the previous year.

The gross profit increased from Rs. 81.85 lakhs to Rs. 95.99 lakhs. After providing Rs. 19.96 lakhs (against Rs. 26.36 lakhs) for depreciation, Rs. 13,432 (against Rs. 29,816) for development rebate, Rs. 20 lakhs (against nil) for taxation and Rs. 5 lakhs (the same) for writing off deferred revenue expenditure, the net profit amounts to Rs. 50.90 lakhs, against Rs. 50.19 lakhs in 1962-63. With Rs. 25.37 lakhs brought in from the previous year, the disposable surplus amounts to Rs 76.27 lakhs. For the first time, the directors have set aside Rs. 30 lakhs for general reserve and Rs 10 lakhs for tax reserve. The proposed 6 percent maiden dividend absorbs Rs. 29.41 lakhs, leaving a

balance of Rs. 6.85 lakhs to be carried forward.

The directors state that the Company was able to show better results in spite of the rise in the prices of essential chemicals, other materials and power which inflated production costs. This became possible because of increased efficiency and larger production. Substantial progress has been made in the erection of the 12/10 tonnes caustic soda/chlorine plant. The plant, it is expected, will be commissioned during the third quarter of the current financial year. Some improvement in the quality of the paper has been made as a result of the extensive experiments conducted in the Research Laboratory.

The Company's expansion programme, raising the capacity from the present 30,000 tonnes to 75,000 tonnes a year, is expected to cost Rs. 8 crores. A formal order for plant and machinery for paper machines, stock preparation and finishing house has been placed with a Finnish firm at a cost of Rs. 1.5 crores. Tenders for the expansion of the pulp mill, recovery plant and water works are under scrutiny and orders for the same are likely to be placed shortly. The Company repaid during the year the fifth instalment of the loan due to the Madhya Pradesh Government, leaving a balance of Rs. 55 lakhs at the end of March 1964. The gross block of the Company amounting to Rs. 5.44 crores has been written down to Rs. 3.02 crores. The paid-up capital of the Company is Rs. 4.90 crores; the reserves and surplus amount to Rs. 85.64 lakhs. The Rs. 10-paid share of N.E.P.A. Mills is currently quoted around Rs. 7.76, offering a gross return of a little over 8 percent.

Nil from Rajasthan Spinning

RAJASTHAN Spinning and Weaving Mills Ltd has earned a trading profit of Rs. 2.63 lakhs for the year ended September 1963. After meeting the interest liability of Rs. 2.77 lakhs and before providing for depreciation, there is a loss of Rs. 14,300. So a debit balance of Rs. 23,730 has been carried forward. The dividend has been passed.

Assets of more than Rs. 25 lakhs have been acquired by borrowings from the Rajasthan Financial Corporation and the Industrial Finance Corporation. The mill went into production in December 1962. The entire installed capacity has been used since January 1964. The Company has been sanctioned an import licence to bring American speed frames. Production amounted to Rs 9 lakhs, and the order-book of the Company has been well filled. The Government has permitted the Company to install a further 8,350 spindles. The total number of spindles installed is likely to rise to 26,350 in the near future.

Indian Detonators Earns More

THE directors of Indian Detonators Ltd have recommended a dividend of 8 percent for the year ended June 1964, on the increased capital of Rs. 30 lakhs, against 14.5 percent paid in the preceding year on a capital of Rs. 15 lakhs. The total amount to be distributed among the shareholders by way of dividend is larger at Rs. 2.40 lakhs, compared with Rs. 2.17 lakhs in the previous year. The directors have made a rights offer in the ratio of one new share for every two held by the existing shareholders which will raise the paid-up capital from the present 30 lakhs to Rs. 45 lakhs. The preliminary report shows that the gross profit of the Company has risen from Rs. 11.37 lakhs to Rs. 11.89 lakhs, despite a small decline in the sales from Rs. 1.217 crores to Rs. 1.127 crores.

After providing Rs. 36,595 (against Rs. 15,676) for depreciation and Rs. 8.45 lakhs (against Rs. 8.50 lakhs) for taxation, the net profit is shown at Rs. 3.08 lakhs, against Rs. 2.72 lakhs. After bringing in the previous year's surplus and writing back excess provisions amounting to Rs. 2.45 lakhs, the directors have used Rs. 12,086 (against nil) towards adjustment of directors' commission provided last year, Rs. 2.30 lakhs (against Rs. 13,250) towards tax provision for the preceding year, Rs. 10,000 (against Rs. 35,000) for general reserve and Rs. 59,753 (against Rs. 34,961) to write off share issue expenses. The proposed dividend absorbs Rs. 2.40 lakhs, leaving a surplus of Rs. 664 to be carried forward, against Rs. 403 brought in. The directors state that the Company is expected to commence the first stage of production by November this year. The Rs. 100-paid share of Indian Detonators is quoted around par.

Hindustan National Glass Fares Well

HINDUSTAN National Glass Manufacturing Co. Ltd reports encouraging results for the year ended March 1964. Sales are up by about 14 percent from Rs. 1.059 crores to Rs. 1.209 crores, and the gross profit has risen by as much as 46 percent from Rs. 17.83 lakhs to Rs. 25.99 lakhs. The dividend, however, has only been maintained at 4 percent. This is not merely because the dividend is being paid on the increased capital as raised by the one-for-five bonus issue made during the year, but also because the net profit is slightly down following substantially larger provision for development rebate. In fact, the directors have had to withdraw a sum of Rs. 1.20 lakhs from the general reserve to be able to provide for the payment of the dividend.

After providing Rs. 10.22 lakhs (against Rs. 8.12 lakhs) for depreciation, Rs. 7.90 lakhs (against Rs. 40,986) for development rebate and Rs. 5.50 lakhs (against Rs. 6.50 lakhs) for taxation, the net profit amounts to Rs 2.37 lakhs, compared with Rs. 2.80 lakhs in the preceding year. After transferring Rs. 1.20 lakhs from the general reserve, the directors have set aside Rs. 1 lakh to the preference share sinking reserve account. The proposed equity dividend absorbs Rs. 1.90 lakhs (against Rs. 1.66 lakhs) and preference dividend takes away Rs. 83,250. The directors state that the Bahadurgarh plant has been commissioned and the sales of white bottles to consumers in north India are being catered from the new plant. This has resulted in surplus capacity at Rishra which is being used by converting furnace No. 1 to amber glass to meet the requirements of the pharmaceutical industry. The Bahadurgarh plant is said to be faced with frequent power failures which has not only resulted in a loss of production, but it is feared that it might cause serious damage to the furnace and equipment. The Rs. 10-paid share of the Company is quoted nominally around Rs. 5.50.

Davangere Cotton Repeats

THE Davangere Cotton Mills Ltd reports fairly encouraging results for the year ended March 1964. Sales have increased by nearly 15 percent from Rs. 1.72 crores to Rs. 1.98 crores, and the gross profit has risen by about 12.8 percent from Rs. 30.22 lakhs to Rs. 34.10 lakhs. The dividend has been maintained at 12 percent, but it is on the increased capital as raised by the one-for-three rights issue made in January 1963, the distribution among equity shareholders amounts to Rs. 5.20 lakhs, compared with Rs. 3.62 lakhs in 1962-63. Appropriations include depreciation Rs. 12.22 lakhs (against Rs. 8.74 lakhs), development rebate Rs. 95,000 (against Rs. 2.60 lakhs), taxation Rs. 11.70 lakhs (against Rs. 11.57 lakhs), dividend equalisation reserve Rs. 2 lakhs (against Rs. 2.50 lakhs) and donations Rs. 35,254 (against Rs. 1.39 lakhs).

A sum of Rs. 58,214 has been set aside for writing off share issue expenses. Equity dividend absorbs Rs. 5.20 lakhs and preference dividend Rs. 1.04 lakhs. The directors state that the Company's modernisation programme is likely to be completed during the current financial year. Out of the 218 looms to be installed at Davangere, 204 looms have already been commissioned, and the balance will go into production by the end of September. The Gadag unit went into production in May 1964, and the full installed capacity of 12,000 spindles will be worked before the end of January 1965.

In view of the delay in securing the requisite import licence, there is likely to be some delay in the completion of the project to instal 500 automatic looms. The Government has permitted the Company to expand the Gadag unit by 13,000 spindles so as to make it an economic unit of 25,000 spindles and the Davangere unit by 3,065 spindles. Licence for the installation of 52 automatic looms at Davangere has been received. The Company has been granted permission to print 2 million yards of cloth a year. The I.F.C. has granted an additional loan of Rs. 14.54 lakhs in German currency to meet the cost of importing German and Swiss machinery for the installation of 500 automatic looms.

Hind Cycles Continues to Disappoint

HIND Cycles continues to disappoint and the dividend is being skipped year after year. Even the preference shareholders have not received any dividend after 1960-61 and arrears of the preference dividend add up to Rs. 7.13 lakhs. In the year ended March 1964, the Company's sales increased by about 24 percent from Rs. 1.857 crores to Rs. 2.299 crores, but the gross profit was lower by nearly 12 percent from Rs. 7.87 lakhs to Rs. 6.95 lakhs. After providing Rs. 6.28 lakhs (against Rs. 6.21 lakhs) for depreciation and Rs. 24,500 (against Rs. 94,200) for development rebate, the net profit for 1963-64 comes to Rs. 42,489 against Rs. 72,217 in the preceding year. The deficit carried to the balance-sheet is Rs. 6.42 lakhs. No provision has been made for arrears of depreciation amounting to Rs. 11.45 lakhs, and arrears of preference dividend amount to Rs. 7.13 lakhs.

The increase in the Company's sales during 1963-64 reflects the improvement in production of both bicycles and chains. The Company produced 159,965 bicycles and 442,940 chains during 1963-64, against 128,086 bicycles and 270,030 chains in the preceding year. Some 15,000 bicycles were exported during 1963-64. The setback in the profit, despite larger sales, is attributed to the rise in production costs without any corresponding increase in the prices of bicycles which have been fixed at the July 1963 level.

With the wage cost of a bicycle continuing to rise, it will be difficult to work the factory economically unless the wage cost is brought down or the price of bicycle is increased. The directors state that the scheme of merging Hind Cycles with Gwalior Rayon has been postponed indefinitely and they are negotiating for the lease of the Company's undertaking to Central India Machinery Manufacturing Company. The directors consider this to be more beneficial to Hind Cycles. The Company has been appointed selling agents of C.I.M.C.O. with effect from 1st April, 1964 for the territory of Greater Bombay. The Government's approval for the selling agency is awaited.

Praga Tools Results Improve

ALTHOUGH the dividend has again been skipped, the working results of the Praga Tools Ltd for the year ended March 1964, show a considerable improvement over the previous year's performance. The production of finished goods valued at Rs. 1.057 crores was up by 41.4 percent, compared with the previous year's figure of Rs. 74.74 lakhs. Sales increased by about 40.4 percent from Rs. 74.63 lakhs to Rs. 1.049 crores. After providing Rs. 9.23 lakhs (against Rs. 6.22 lakhs) for depreciation, Rs. 6.21 lakhs (against Rs. 3.10 lakhs) for expenditure during construction account and after absorbing a loss of Rs. 1.18 lakhs on the sale of milling machine components, the Company has made an operating profit of Rs. 10.38 lakhs, against a mere Rs. 34,282 in the preceding year. In 1961-62, it incurred a loss of Rs. 4.34 lakhs. Out of the profit for 1963-64, the directors have used Rs. 3.72 lakhs for wiping out the accumulated loss of previous years. Further, the entire amount of Rs. 5.26 lakhs paid to the retrenched employees has been written off in one lump-sum even though the benefits of this will be available in succeeding years.

The directors state that the tool and cutter grinder project is now fully on; the British firm of A. A. Jones and Shipman is collaborating in this project. Most of the machinery for the C.V.A. drill chuck project was installed during the year, and production has commenced since April. It is expected that the project will be fully productive during 1964-65. Negotiations for the Pratt project are likely to be finalised shortly. Praga's own type of lathe chucks are, however, being produced steadily. The Government has released the foreign exchange required for the expansion of the forge shop. The construction works at the new Kukatpally site have reached an advanced stage and installation of machinery has commenced. It is expected that the facility will be operative in December this year.

Mysore Lamp Cuts Dividend

MYSORE Lamp Works Ltd has reduced the dividend for the year ended March 1964 from 8 percent to 5 percent. But this does not mean any hardship to the shareholders, in that the total distribution among the equity shareholders is higher at Rs. 64,339, against Rs. 52,500 in the preceding year as the reduced dividend is payable on a substantially larger capital. The financial results of the Company, however, are not encouraging. Despite increased production and larger sales the gross profit has been virtually halved. The Company produced 2,529,500

lamps, against 2,122,797 pieces in the preceding year, and sales rose from 1,982,424 pieces valued at Rs. 19.31 lakhs to 2,304,000 pieces valued at Rs. 22.69 lakhs.

The gross profit, however, declined sharply from Rs. 3.04 lakhs to Rs. 1.55 lakhs. The fall in profit, despite larger sales, is attributed to the increase in expenditure consequent on steps taken to implement the expansion programme. The directors have cautioned the shareholders that they will have to be satisfied with nominal profit or none at all for some time to come until the expansion programme is substantially implemented. The expansion programme has already been taken up for implementation. A new group of lamp manufacturing equipment has been obtained from the U.K. and installed and commissioned. A major item in the expansion programme is the manufacture of glass shells and glass tubes. The Company has purchased the properties of Mysore Glass and Enamel Works Ltd, which was under liquidation, for Rs. 8 lakhs. Details are being worked out to put up the plant for the manufacture of glass shells and glass tubes on this new property. As part of the expansion programme, the present gas plant is being enlarged at a total cost of Rs. 50,000.

After providing Rs. 62,959 (against Rs. 66,028) for depreciation, Rs. 3,066 (against Rs. 27,565) for development rebate reserve and Rs. 48,000 (against Rs. 1.20 lakhs) for taxation, the net profit for 1963-64 comes to Rs. 41,291, against Rs. 90,859 in the preceding year. Writing back excess provisions and transferring a sum of Rs. 57,500 from the dividend equalisation reserve, the disposable surplus amounts to Rs. 1.10 lakhs. The directors have transferred Rs. 1.08 lakhs to the dividend reserve, leaving a sum of Rs. 1,757 to be carried forward, against Rs. 1,217 brought in. The proposed equity dividend absorbing Rs. 64,339 (against Rs. 52,500) and preference dividend amounting to Rs. 4,395 (against Rs. 7,596) are to be paid from the dividend reserve. All the preference shares of the Company have been redeemed at par. The paid-up capital of the Company is Rs. 12,86,770 —all in equity shares of Rs. 10 each. Its reserves and surplus amount to Rs. 26.85 lakhs.

Interim Dividend from Indian Plastics

INDIAN Plastics Ltd has done well during the year ended March 1964. Sales are up by about 13 percent from Rs. 1.073 crores to Rs. 1.217 crores, and the gross profit has risen by about 48 percent from Rs. 5.78 lakhs to Rs. 8.55 lakhs. Improved results have not only enabled the directors to pay preference dividends for two years—1962-63 and 1963-64—but also encouraged them to declare an interim dividend of 4 percent for the current financial year—1964-65. It was in 1956-57 that the Company last paid an equity dividend of 3.7 percent. Allocations include depreciation Rs. 3.68 lakhs (against Rs. 3.19 lakhs), development rebate reserve Rs. 13,195 (against Rs. 45,692) and taxation Rs. 2.87 lakhs (against Rs. 1.50 lakhs). The preference dividends for two years will absorb Rs. 2.48 lakhs, leaving a sum of Rs. 45,692 to be carried forward, against Rs. 66,066 brought in.

The directors state that while the Company's radio division fared well during 1963-64, and it is likely to do even better during the current year, the working of the plastics division was adversely affected by increasing competition in plastics goods on the one hand and rise in the prices of raw materials and stores which pushed up manufacturing costs. The directors point out that although there is demand for the Company's chemical products, production could not be increased due to lack of sufficient import licences. It has applied to the Government for a higher quota as the present quota is insufficient even to maintain the existing level of output. The Rs. 10-paid share of Indian Plastics is available around Rs. 7.50.

SAY GOODBYE TO YOUR FRIENDS BUT NOT TO YOUR MONEY!

TODAY experienced travellers do not carry cash; it can be lost or stolen. Wherever you go in India, carry Bank of Baroda Travellers' Cheques—they're absolutely safe. No one but you can cash them. Gopalpur Tea Earns Less

THE profit of the Gopalpur Tea Co. Ltd (a Dooars garden) has amounted to Rs. 1.60 lakhs for the year ended March 1964, against Rs. 2.01 lakhs for 1962-63, after providing Rs. 1.3 lakhs (the same) for depreciation. The taxable ordinary dividend of Re. 1 a share of Rs. 25 each has been declared to absorb Rs. 56,000. Taxation is allocated Rs. 72,000 (against Rs. 12,000), development rebate reserve Rs. 3,193 (against Rs. 4,122). The carry-forward is Rs. 7,465, against Rs. 27,340 brought in. The crop amounted to 14,467 maunds, against 15,124 maunds and the average sale price rose from Rs. 3.99 to Rs. 4.24 a kilogram. The Tea Board has sanctioned the Company a sum of Rs. 5.99 lakhs for replanting and development. The crop for 1964-65 has been estimated at 13,500 maunds.

Western India Vegetable Products Pays More

WESTERN India Vegetable Products Ltd has raised the dividend for the year ended March 1964 from 6 percent to 7 percent. The Company has fared better than in the preceding year, with sales rising from Rs. 2.69 crores to Rs. 3.22 crores, and the gross profit increasing from Rs. 6.73 lakhs to Rs. 7.28 lakhs. After providing Rs. 4.62 lakhs (against Rs. 2.89 lakhs) for depreciation, Rs. 14,350 (against Rs. 1.98 lakhs) for development rebate and Rs 1.16 lakhs (Rs. 33,000) for taxation, the net profit amounts to Rs. 1 lakh, compared with Rs. 1.17 lakhs in the previous year. After including the sum brought forward, writing back certain excess provision and transferring Rs. 12,000 from the general reserve, the disposable surplus amounts to Rs. 1.20 lakhs. The proposed dividend absorbs Rs. 1.19 lakhs (against Rs. 1.02 lakhs), leaving a sum of Rs. 699 to be carried forward, against Rs. 1,925 brought in.

The directors point out that the year 1963-64 was a very difficult one for the *vanaspati* industry because the Government enforced an uneconomic and unjustified price control on the industry. For considerable periods during the year, the Company had to sell its *vanaspati* at a loss. The Company produced 10,217 tonnes of *vanaspati* during 1963-64, compared with 9,531 tonnes in the preceding year. Despite higher production, profits were lower than might have been possible under normal circumstances because of the difficult situation prevailing in the industry. Some of the sections in the *vanaspati* division are being modernised which are likely to bring about a reduction in the costs of production. The Company introduced in April 1964 a new brand "Kisan Vanaspati" using cottonseed oil. The directors add that the groundnut extraction cake has been finding a good market in India as well as in foreign countries and the Company's goods are being sold at higher prices than those of the competitors. The solvent extraction plant produced 13,341 tonnes of extractions during the year. The directors are examining the possibility of extracting other oilseeds/oilcakes in the extraction plant. The expansion in the soap section has been completed and the Company has started selling its soap in new markets in the country.

Radio and Electricals Cuts Dividend

THE directors' report of Radio and Electricals Manufacturing Co. Ltd for the year ended March 1964 shows a drop in profit despite higher sales. The net sales for the year amounted to Rs. 1,68,34,512, compared with Rs. 1,62,95,723 in the previous year. But the net profit is lower at Rs. 27,19,357, against Rs. 37,47,483 in the previous year.

The profit is lower mainly because during the year, machinery and equipment of the value of Rs. 39,66,928 acquired for some of the expansion schemes, were installed. This includes a sum of Rs. 5,51,496 being interest due to be paid to the Japanese suppliers. Machinery and equipment have also been reclassified during the year to claim the benefit of full depreciation under the Act. Depreciation on these machinery and equipment and other fixed assets increased from Rs. 3,84,333 in the previous year to Rs. 10,74,334 during the year.

Severe competition has developed for some of the products manufactured by the Company. The directors are watching the market trend and they are considering further diversification of production, by taking up new lines. As for expansion schemes, the report says that during the year, a beginning was made in the manufacture of poly-phase electricity meters and paper and electrolytic condensers and these products are now put on the market. The directors also refer to the development and manufacture on a commercial scale of electric massagers and time recorders/hour meters without the assistance of the know-how from outside sources. Import licence for the equipment required for the manufacture of loudspeakers has been received by the Company. Production on a commercial scale will commence in about a year's time.

The net profit for the year amounts to Rs. 27,19,357, after providing Rs. 10,74,334 for depreciation, compared with the previous year's net profit of Rs. 37,47,483 after providing Rs. 3,84,333 for depreciation. Adding to the net profit, a sum of Rs. 2,987 brought forward from the previous year, Rs. 2,00,918 being excess provisions written back and Rs. 11,500 being refund of income tax and sales tax, the total available for appropriation comes to Rs. 29,34,762. Out of this, development rebate amounts to Rs. 7,44,768 (against Rs. 3,57,575). Provision for taxation amounts to Rs. 11,76,000 (against Rs. 22,96,000). General reserve gets Rs. 2,50,000 (against Rs. 6,75,000). A sum of Rs. 7,61,000 is transferred to dividend reserve (against Rs. 10,50,000). The balance of Rs. 2,894 is carried forward. A dividend of 15 percent is recommended (against 18 percent) for the full year on a capital of Rs. 41,30,382 and for four months on Rs. 9,50,184 called up during the year at Rs. 4 a share. This dividend, amounting to Rs. 6,67,066, would be paid out of the dividend reserve.

Nil Again from Mysore Chemicals

THE directors of the Mysore Chemicals and Fertilisers Ltd have not recommended any dividend for the year ended March 1964. The dividend was also skipped during the previous year. The directors' report says that the production of various items in the factory was normal. Sales amounted to Rs. 37,44,581.20, compared with Rs. 44,28,318 in the previous year. The reduction in sales is due to the restricted production of ammonium sulphate, which has to be kept at the minimum, as its cost of production is high compared with that of other manufacturers due to the high electricity charges. The better working results for the year despite lower sales than those of last year, are attributed to economies made by the management of the Company. But the directors say that the adverse position in which the Company has been placed due to circumstances beyond the control of the directors, has not changed.

The report adds that the enormous increase in the rates of electricity has taken away the very basis on which the Company's prospects were based and the fact that losses have been avoided is in itself no mean achievement. But the directors are hopeful that the situation will improve considerably when the expansion schemes are completed. Referring to the expansion schemes, the directors state that the 50-ton a day capacity sulphuric acid plant was successfully commissioned into production on 16th May, 1964, and since then, it is working satisfactorily. The bagging plant which is an important auxiliary unit of the mechanised superphosphate plant was commissioned in July last. The erection of the new superphosphate plant of a capacity of 33,000 tons a year initially, is nearing completion and this plant is expected to be commissioned for production by the end of September 1964. In order to meet the actual expenditure of the above two units, the Company has approached its bankers to grant an additional medium-term loan of Rs. 5 lakhs over and above the sum of Rs. 25 lakhs which has already been used in full.

The directors add that the work on the establishment of caustic soda/chlorine unit has entered a crucial stage. The scheme will entail an expenditure of Rs. 1.75 crores, which the directors propose to meet by the issue of shares of Rs. 10 each to the extent of Rs. 1 crore and by borrowing Rs. 75 lakhs from financial agencies and scheduled banks. The Government of Mysore has agreed to subscribe 10 percent of the new share capital. The directors are actively pursuing this project to see that the scheme is completed with the least possible delay to place the Company on a profitable basis. The working of the Company during the year has resulted in a profit of Rs. 12,822, after providing Rs. 1,65,613 for depreciation, compared with the previous year's loss of Rs. 76,884, after providing Rs. 2,06,917 for depreciation. Including the amount of Rs. 3,322 brought forward, there is a total surplus of Rs. 16,144, which is carried forward to next year.

Sri Krishnarajendra Mills Skips Again

DUE to loss in working, the directors of Sri Krishnarajendra Mills Ltd have not recommended any dividend for the year ended March 1964. There was no dividend in the previous year also. The working resulted in a loss of Rs. 20,86,092, after providing Rs. 7,82,185 for depreciation, against the previous year's loss of Rs. 8,57,677 after providing Rs. 10,18,736 for depreciation. During the year, the depreciation and development rebate earned in Chitradurga unit have been written back, and taken to the credit of the profit and loss appropriation account, and this amounts to Rs. 14,94,745. Apart from this, the Company has made a profit of Rs. 9,08,872 on the sale of the Chitradurga unit. Taking these items and other receipts like the premium on export etcetera, to the credit of the profit and loss appropriation account and after providing Rs. 5,60,000 for taxation, there is a credit balance of Rs. 27,539 after adjusting the year's loss of Rs. 20,86,092. This balance of Rs. 27,539 is carried forward.

During the year, the mills introduced the scheme of rationalisation and increased the workloads and started the third shift working from the end of September 1963. Due to the dislocation in working caused by the introduction of rationalised workloads simultaneously in all the departments of the mills and also due to the inability of workers to cope with the rationalised workloads, there has been a marked fall in production in all the departments. In addition to this, the wage bill has also increased. This low production coupled with higher expenses has made a big inroad into profits. The directors add that the prices of the popular varieties of cloth manufactured by the mills remained unchanged and pegged to unremunerative levels. The new varieties of cloth which were manufactured in the place of old and popular varieties, developed strong consumer resistance, resulting in heavy accumulation of stocks.

Dehri-Rohtas Light Railway Repeats

THE Dehri-Rohtas Light Railway Co. Ltd has maintained the taxable ordinary dividend at 10 percent for the year ended March 1964, which will be paid out of dividend reserve. The yield works out to 8.9 percent at the present price of Rs. 11.19 a share of Rs. 10 each. The profit has dropped from Rs. 18.24 lakhs to Rs. 11.34 lakhs for 1963-64, after providing Rs. 3.30 lakhs (against Rs. 3.24 lakhs) for depreciation. Taxation absorbs Rs. 5.67 lakhs (against Rs. 10.65 lakhs), development rebate reserve Rs. 70,000 (against Rs. 21,000) and general reserve Rs 1.30 lakhs (against Rs. 3.70 lakhs). The carry-forward is Rs. 17,232, against Rs. 4,139 brought in.

Earnings from goods traffic declined by Rs. 7.56 lakhs. The Company's profit has been held down because operating costs have risen while the freight rates have not been changed. Ninteen goods wagons were manufactured by the Company's workshop and 15 more passenger wagons were put on the line.

East Anglia Plastics to Expand

IN their report for the year ended March 1964, the directors of East Anglia Plastics (India) Ltd say that although the output rose, the entire installed capacity could not be used due to the shortage of raw materials. Production rose from 111 tonnes to 600 tonnes in 1963-64. The Company has been granted an actual user licence to import raw materials. So the Company's working during the current year will improve. Production during the first five months of the current year is higher than that for the corresponding period of 1963-64. The directors hope that it may be possible to use the full installed capacity. The compounding unit needs to be expanded in view of the good demand for the products of the Company. The Government of India has sanctioned an import licence to the Company to import capital goods for expanding the compounding unit.

The factory to manufacture plasticisers is nearing completion. The construction of the factory in Visakhapatnam to manufacture cellulose acetate flakes is making progress. Some of the indigenous equipment for producing cellulose pulp have arrived at the site. The installation of the pulp unit may be completed during the current year. It is proposed to issue preference shares to raise further funds. The Company has approached the Government for an industrial licence to install an industrial alcohol distillation plant in Visakhapatnam to produce ethyl alcohol.

The profit has amounted to Rs. 6.50 lakhs, against a loss of Rs. 1.10 lakhs for 1962-63, after providing Rs. 2.21 lakhs (against Rs. 2.25 lakhs) for depreciation. Development rebate is allocated Rs. 10,750 (against Rs. 16,058) and general reserve Rs. 2 lakhs. The debit balance of Rs. 4.08 lakhs has been wiped out and a credit balance of Rs. 31,292 has been carried forward. The dividend has again been passed.

Zandu Pharmaceutical Results Impress

ALTHOUGH the dividend has only been maintained at 10 percent, the working results of the Zandu Pharmaceutical Works Ltd for the year ended March 1964, show a marked improvement over the previous year. While the sales are up by 13 percent from Rs. 82.98 lakhs to Rs. 93.95 lakhs, the gross profit has shot up by nearly 75 percent from Rs. 5.24 lakhs to Rs. 8.19 lakhs. After providing Rs. 2,720 (against Rs. 4,459) for development rebate, Rs. 1.59 lakhs (against Rs. 1.15 lakhs) for depreciation and Rs. 3.25 lakhs (against Rs. 1.83 lakhs) for taxation, the net profit amounts to Rs. 2.62 lakhs, against Rs. 1.82 lakhs in the preceding year. A sum of Rs. 85,000 (against nil) has been set aside for the general reserve. The proposed dividend absorbs Rs. 1.75 lakhs (the same), leaving a sum of Rs. 1,219 to be carried forward, against Rs. 570 brought in.

Crescent Iron Pays the Same

CRESCENT Iron and Steel Corporation Ltd has maintained the dividend for the year ended March 1964 at 12.5 percent, but its working results show an appreciable improvement over the previous year's performance. This is attributable to the implementation of the Company's expansion programme. Production is up by about 48 percent from Rs. 20.22 lakhs to Rs. 29.89 lakhs, and sales are higher by about 35 percent at Rs. 28.39 lakhs, against Rs. 21.03 lakhs in 1962-63. After providing Rs. 1.50 lakhs (against Rs. 1.20 lakhs) for depreciation, Rs. 59,259 (against Rs

13,500) for development rebate reserve. Rs. 20,000 (against Rs. 40,000) for general reserve, nil (against Rs. 10,000) for dividend equalisation reserve, there is a surplus of Rs. 1.44 lakhs. The proposed dividend absorbs Rs. 1.37 lakhs, leaving a sum of Rs 6,673 to be carried forward, against Rs. 4,034 brought in.

Amalgamated Electricity Fares Well

THE Amalgamated Electricity Co. Ltd reports satisfactory results for the year ended March 1964. Sales of electrical energy fetched Rs. 1.66 crores, against Rs. 1.33 crores; the total units generated and purchased during the year increased from 89.7 million to 100.2 million and the total load from 46,824 kW to 50,205 kW. The gross profit increased from Rs. 35.92 lakhs to Rs. 37.76 lakhs. The working of the solvent extraction plant, however, resulted in a loss of Rs. 2.42 lakhs, against Rs. 3.59 lakhs in the preceding year; the loss has been arrived at after providing Rs. 93,013 (against Rs. 83,703) for depreciation, nil (against Rs. 2.88 lakhs) for development rebate and Rs. 2.56 lakhs (against nil) for deferred revenue expenditure.

With the deduction of the loss suffered on the working of the solvent extraction plant, the gross profit of the Company is reduced to Rs. 35.34 lakhs, compared with Rs. 32.33 lakhs in 1962-63. The dividend has been maintained at 9 percent, that is, 90 paise a share. Appropriations include depreciation Rs. 12.62 lakhs (against Rs. 11.33 lakhs), taxation Rs. 6.18 lakhs (against Rs. 5.81 lakhs), dividend reserve Rs. 10 lakhs (against Rs. 17.59 lakhs), development reserve Rs. 36,576 (against Rs. 90,280) and contingency reserve Rs. 92,576 (against Rs. 85,401). Dividends on equity and preference shares will absorb Rs. 12.41 lakhs, which are to be paid out of the dividend reserve.

Estrela Batteries Pays More

DESPITE an increase of some 7 percent in the sales from Rs. 1.487 crores to Rs. 1.595 crores, the gross profit of Estrela Batteries Ltd for the year ended March 1964 is down by about 10 percent from Rs. 26.01 lakhs to Rs. 23.41 lakhs. While the dividend has been maintained at 10 percent, the distribution by way of bonus has been raised from 1 percent to 2 percent, raising the total distribution from 11 percent to 12 percent. The additional distribution for 1963-64 is being made by way of special silver jubilee bonus. The new shares rank for proportionate dividend. The total amount to be distributed among equity shareholders is larger at Rs. 2.27 lakhs, against Rs. 1.65 lakhs in the preceding year. Appropriations include depreciation Rs. 1.85 lakhs (against Rs. 2.10 lakhs), development rebate reserve Rs. 9,838 (against Rs. 42,057), taxation Rs. 12.10 lakhs (against Rs. 14.17 lakhs), general reserve Rs. 3.35 lakhs (against Rs. 4.75 lakhs) and gratuity reserve Rs. 1 lakh (against nil). After providing for the dividends which absorb Rs. 2.98 lakhs (against Rs. 2.36 lakhs), there remains a balance of Rs. 12,519 to be carried forward, against Rs. 11,178 brought in.

The Company produced 47.02 million cells in 1963-64, against 45.92 million cells in the preceding year. It has now undertaken an expansion programme for raising its licensed capacity from 40 million cells to 65 million cells a year. The requisite industrial licence has been received and the Company has been sanctioned a loan of Rs. 10 lakhs in foreign currency by the I.C.I.C.I. for the import of machinery. The Company hopes to be able to achieve the expanded capacity of 65 million round cells by the end of 1965 provided, of course, there is no serious difficulty is regard to the supply of raw materials. The Company also proposes to manufacture 35 million flat cells a year, spread over a few years because of the difficulty in securing the necessary foreign exchange for machinery required for achieving the proposed capacity. The full production of 35 million flat cells is expected to be achieved by the end of 1966-67. The Company is expecting a licence for importing capital goods worth about Rs. 12 lakhs for the manufacture of flat cells.

More from Jiyajeerao Cotton

THE preliminary report on the working of Jiyajeerao Cotton Mills Ltd for the year ended March 1964, shows that the Company has done exceedingly well. The gross profit has almost doubled from Rs. 1.46 crores to Rs. 2.88 crores. This has enabled the directors to step up the dividend from 6 percent to 10 percent. Appropriations include depreciation Rs. 1.01 crores (against Rs. 48.73 lakhs), development rebate Rs. 13.96 lakhs (against Rs. 3.36 lakhs), taxation Rs. 73.25 lakhs (against Rs. 38.50 lakhs), preference share redemption reserve Rs. 26.50 lakhs (against Rs. 12.50 lakhs), preference dividend Rs. 8.45 lakhs (the same). The equity dividend amounting to Rs. 46.36 lakhs (against Rs. 27.82 lakhs) is to be paid from the dividend reserve which has been allocated a sum of Rs. 55 lakhs (against Rs. 29 lakhs). After making various appropriations, there remains a balance of Rs. 39,000 to be carried forward, against Rs. 55,000 brought in.

New Capital Issues

SIX companies have been authorised to raise fresh capital totalling Rs. 5.87 crores. Of these, three are issuing equity shares, one is floating debentures and another is issuing equities plus preference shares. The consent of the Controller of Capital Issues is valid for 12 months in all cases. The following are the details:

Renusagar Power Co. Ltd, a new public company registered in Renukoot, District Mirzapur (Uttar Pradesh), is to issue capital of Rs. 3.50 crores in equity shares of Rs. 100 each, to be subscribed wholly by Hindustan Aluminium Corporation Ltd, for cash at par. The money will be used for financing the setting up of a captive power plant capable of producing 125 MW.

Lakshmi Machine Works Ltd, Madras, is to issue debentures of Rs. 1.657 crores to be issued in five series in favour of the International Finance Corporation of the U.S.A., the Industrial Credit and Investment Corporation of India and scheduled banks. The loan capital is required for the establishment of a plant for the manufacture of textile machinery.

The Bank of Rajasthan Ltd. Jaipur, is to issue further capital of Rs. 1,81,800 divided into 1,818 shares of Rs. 100 each for cash at par.

Indian Air Gases Ltd, a new company having its registered office at Kishori Niwas, Birhana Road, Kanpur, is to issue capital of Rs. 29.49 lakhs, divided into 2,04,900 equity shares of Rs. 10 each and 9,000 9½ percent cumulative redeemable preference shares of Rs. 100 each, all for cash at par. The capital will be used for financing implementation of the industrial licence for the manufacture of oxygen and acetylene gases.

Sivanandha Steels Ltd, Coimbatore, will be issuing capital of Rs. 30 lakhs in 30,000 equity shares of Rs. 100 each for cash at par. The capital is required for establishing a plant for the manufacture of steel castings of a capacity of 3,000 tons a year.

Mazagon Dock Ltd, A Government company, is to issue capital of Rs. 10 lakhs divided into 10,000 equity shares of Rs. 100 each to be issued privately. The money will be used for financing its expansion programme.

The Stock Markets

UNCERTAINTIES AFFECT TRADING AT LYONS RANGE

Wednesday Evening.

THERE have been narrow fluctuations in the Calcutta stock market during the past week. Activity is generally restrained due to various uncertainties. Although selling pressure has abated, bulls are inclined to take profit at every bulge. The approach of the Puja holidays is a major restraining factor. The earlier fall in share prices was due to concern over the massing of Chinese troops along the border. The imposition of the President's rule in Kerala, combined with the uncertainty about the formation of the new Ministry in Orissa, has called for caution.

Attention is largely focussed on clearing shares. Selected cash scrip also met with support due to good corporate news. Fair purchases by the Unit Trust of India have also contributed to the steadiness towards the close. Lyons Range is taking a bullish view of the Government's import policy for the period October 1964 to March 1965. It is thought that domestic industries will have no difficulty in selling their products due to restricted imports. But it is forgotten that the move may not serve the long-term interest of the economy, since competition from imported products promotes industrial efficiency.

Towards the close, operators have become cautious due to the growing labour unrest following the steep rise in the cost of living. Meanwhile, spokesmen of labour are protesting against the Government's acceptance of the Bonus Commission's recommendations in a modified form. In any case, the impact of the recommendations on industries will be severe because a large part of profits will be spent towards meeting commitments on account of bonuses.

Indian Iron have fluctuated narrowly in restricted activity. Selected engineering shares are fairly steady. Guest, Keen, Williams, Burn, Indian Standard Wagon, Texmaco and Braithwaite have met with support. Interested buying has helped Binani Metals. Jay Engineering and Indian Steel and Wire Products have attracted scattered support.

In the miscellaneous section, Hindustan Motors, Indian Aluminium, Indian Copper, Indian Cable and Dunlop Rubber are active. Among clearing scrip, Rohtas have retreated on paying a smaller dividend. Support has been extended to Alkali and Chemical, Union Carbide, Goodyear India, Metal Box and Indian Oxygen. India Steamship have recovered on short-covering. Hindusthan Twyfords and Hindustan Aluminium have been supported. Among managing agency shares, Jardine Henderson have been sold on maintaining the dividend. In electric companies, Calcutta Electric are about steady. J. K. Synthetics and Aluminium Corporation have changed hands. In paper shares, Orient are active. Titaghur are being sold freely due to the poor dividend. Seshasayee and Bengal are steady. Sugar shares are being neglected due to the poor profit outlook for the current year.

Investors in jute shares are cautious due to the discouraging outlook for the profit of jute mills during the current year. The price of fibre is far too high in relation of that of jute goods. Birla have fluctuated both ways. Ganges, Anglo-India, Barnagore and Lansdowne are steady. Stray business has been transacted in coal shares. Burrakur, Bengal, Central India and Western Bengal have been taken. The possibility of fixing a high production target during the fourth five year plan has made little impression.

Cotton mill shares are fairly steady. J. K. Rayon have recovered on short-covering Interest has been shown in Bharat Commerce, Dunbar and Elgin. Bank shares are sluggish and scattered business has been done in United Bank and United Commercial. Tea shares are being dealt in cautiously due to the drop in the average price of the commodity during the current season. Scattered business has been transacted in selected Assam and Dooars gardens.

Government securities are on the whole steady. The 3 percent Conversion loan 1986 has been quoted around Rs. 63.70. Despite enquiries in short and medium-dated stocks, turnover has been small due to the shortage of sellers. Some institutional support has been extended to the new State Government loans, since most of them are quoted at a slight discount.

Bombay

IRREGULAR TREND IN DALAL STREET

UNIT TRUST BUYS SELECTED SCRIP

Wednesday Evening.

THE Bombay stock market has shown an irregular trend during the past week. Although selling pressure was light, bulls have tended to take profit at every rise. There is a general inclination to keep commitments light in view of various uncertainties. Whenever share prices have risen, profit-taking has been attracted. There has also been an absence of follow-up support. Towards the close, a quiet trend prevailed because Dalal Street has been disturbed by the commercial banks' move to increase the rate of interest on overdrafts as it may become unprofitable to finance stock market transactions with borrowed funds. Selected scrip have, however, been steady due to substantial purchases by the Unit Trust. In the cash section, turnover has been negligible and the trend has softened.

Tata Steel ordinary have closed at Rs. 159. Among engineering shares, Tata Engineering, Larsen and Toubro, Alcock Ashdown and Premier Construction are about steady. In motor-vehicle shares, Hindustan have enjoyed support from outside sources. Premier Automobiles have been sluggish.

Cotton mill shares have reacted after an earlier rise. Century, Bombay Dyeing, Kohinoor, Svadeshi and Standard have dropped. Morarjee, Gokak and India United ordinary have been quotably lower.

In miscellaneous shares, selected sugar shares like Belapur and Walchandnagar Industries have been supported. In cement shares, Associated Cement and Digvijay are steady. Mining shares are subdued, and Shivrajpur Syndicate are being offered freely without attracting buyers. In chemical shares, Tata Chemical have reacted due to profit-taking, but Indian Dyestuff have improved on an encouraging speech from the chairman of the Company. In steamship company shares, Scindia Steam have improved on an encouraging outlook. Rayon shares are quiet due to an uncertain outlook. National Rayon have retreated. Interest has been shown in Voltas and Tata Oil. Synthetics and Chemicals have lost, but Dhramsi Chemicals have been supported.

Small business has been transacted in bank shares. Bank of India and Dena Bank have been steady. In electric company shares, Tata Hydro, Ahmedabad and Bombay Suburban have changed hands.

Madras

DEARER BANK CREDIT CURBS ACTIVITY

UNDERTONE FAIRLY STEADY

Tuesday Evening.

THE undertone of the Madras stock market has been fairly steady during the past week. But turnover has dropped considerably, particularly because professional interest has been lacking. Attention has centred largely on selected planting and miscellaneous shares following good corporate news. Investors and operators are, however, reluctant to extend commitments due to increased cost

of funds. The decision of the commercial banks to raise the rate of interest on overdrafts has restrained activity. Turnover in Government securities has been small and the new State loans have been quoted at a slight discount.

In electric company shares, Salem-Erode have come to hand at Rs. 14.37 on declaring a taxable ordinary dividend of 10 percent. Vellore have been quoted up to Rs. 15.62. Bank shares have been sluggish, although prices have been maintained. Indian Overseas have been quoted at Rs. 149 and Indian at Rs. 151. In sugar shares, Deccan have been steady at Rs. 12.40 because the Company has been permitted by the Government to issue bonus shares in the ratio of one ordinary share for every six held. E.I.D. have been steady at Rs. 36.12, Kothari at Rs. 6.50 and Travancore at Rs. 7.65.

In the planting section, Blue Mountain have come to hand at Rs. 2.32, Cochin Malabar at Rs. 6.22, and Ouchterlony at Rs. 3.33. TEXTILES

Bowrcah—Rs 24/12— 24/81— 24/12—24/81—(21/75).

Who has been one of the foremost names in commercial and industrial refrigeration and air-conditioning around the world for over 75 years?

York, of course

Since 1885 York have been making high quality refrigeration and air-conditioning machinery. York equipment, know-how and unparalleled service have been available in India for over 35 years.

York equipment will now be manufactured here by York India Ltd. in collaboration with Borg-Warner Corporation of U.S.A. York India will set a new standard in refrigeration and air-conditioning.

We will welcome an opportunity to discuss your specific refrigeration and air-conditioning requirements.

London

TREND IRREGULAR ON ELECTION PROSPECTS

CORPORATE NEWS KEEPS UNDERTONE STEADY

London, 16th September.

NO decided trend was established in the stock market during the past week. Apart from the occasional features, prices fluctuated narrowly around previous levels in small business. Political uncertainties were the dominating influence. The general undertone was not unsatisfactory. Sentiment was helped by further good company and business news. Extremely quiet conditions prevailed in the gilt-edged, but a little buying developed from time to time and prices were fully maintained or slightly better. Banking, insurance and property shares drifted lower. Industrials were generally little changed. The leaders fluctuated narrowly. Steels suffered from further profit-taking following their recent rise on hopes of a Conservative victory. Gold shares turned easier after an early improvement and if anything, were easier on balance. Coppers staged a modest rally, but tins failed to hold initial improvements. Oils were narrowly irregular. Rubbers were helped by Press comment, but teas, particularly Ceylon issues, were unsettled. Dollar stocks advanced in response to the rise in transatlantic markets.

HIDES AND SKINS

The market in skins continued firm, while that of hides was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 8th September and 14th September, 1964)

Cowhides: Wet salted (Slaughtered) 36,500 pcs on the basis of Rs. 10.50 to Rs. 17 and Rs. 19.50 to Rs. 28.

Goatskins: Wet salted (Daissee, Kustia) 34,800 pcs. on the basis of Rs. 360 to Rs. 390 and Rs. 400 to Rs. 415; Wet salted (he-killed) on the basis of Rs. 4.50 and (she-killed) on the basis of Rs. 4.25 a piece; Assam-Kissenganj 15,000 pcs. on the basis of Rs. 295 to Rs. 300; Patna (Ord.) 2,000 pcs. on the basis of Rs. 250 to Rs. 260; Patna-Muzafferpore 14,000 pcs. on the basis of Rs. 280 to Rs. 320.

Bazaar Stocks

(14th September, 1964)

Cowhides: Wet salted 83,800 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 21,600 pcs.; Assam-Dinajpur 32,000 pcs.; Muzafferpore-Purneah - Kissenganj-Patna-Pakur 167,000 pcs.

THE CALCUTTA MONEY MARKET

CALL RATE DROPS SHARPLY

Wednesday, 16th September.

THERE has been a moderate fall in the general level of advances in the Calcutta money market during the past week. This has been brought about by the slight decrease in the credit given to jute and sugar mills and to the foodgrains trade. Credit for cotton mills and the iron, steel and engineering industries remains unchanged. In the interbank market, conditions have become easy and the call rate has dropped from 4 percent to 1¼ percent.

The exchange market has been inactive, with a poor supply of tea and gunny bills. The demand for remittances has been moderate. In London, sterling has weakened further against most of the important currencies.

SILVER WAS QUIET IN CALCUTTA during the past week. The price closed at Rs. 252.50. It was quoted at 112½d in London and at 129.3 cents in New York.

Gold was about steady. The price of 14-carat fetched Rs. 71.50.

DURING THE WEEK ENDED 11TH September, Government of India Treasury bills for Rs. 42,01,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 15th September. The total amount offered was Rs. 3,04,00,000. Tenders at Rs. 99.405 percent and above were accepted in full and those at Rs. 99.400 percent were allotted 53 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.386 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 21st September.

IT IS STATED THAT 91-DAY INTERmediate Treasury bills will be sold from 16th September to 19th September at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 9th September to 12th September amounted to Rs. 2.45 crores.

THERE WERE RISES OF Rs. 24.58 crores to Rs. 2,450.07 crores in the total note issue and of Rs. 13.68 crores to Rs. 2,421.17 crores in active notes, according to the return of the Reserve Bank of India during the week ended 11th September, 1964. The currency expansion was adjusted by increasing rupee securities by Rs 25 crores to Rs. 2,140.93 crores in the paper currency reserve. Deposits of the Government of India dropped by Rs. 47.33 crores to Rs. 87.32 crores while those of State Governments rose by Rs. 11.26 crores to Rs. 26.87 crores. Balances of commercial banks at Rs. 98.90 crores showed a rise of Rs. 3.74 crores. Balances held abroad declined by Rs. 1.28 crores to Rs. 11.06 crores and investments by Rs. 53.68 crores to Rs. 123.66 crores. Loans to commercial banks dropped from Rs. 5.23 crores to Rs. 2.04 crores, of which advances against usance bills amounted to Rs. 50 lakhs (Rs. 2.09 crores). Ways and means advances stood at Rs. 15.83 crores, against Rs. 18.24 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 4th September, 1964, shows a drop of Rs. 13.07 crores to Rs. 658.90 crores in total deposits. Investments in Government securities are down by Rs. 8 crores to Rs. 297.14 crores, while other authorised investments are up by Rs. 1 lakh to Rs. 9.45 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 2.87 crores to Rs. 343.34 crores. Cash and balances are, in consequence, shown at Rs. 26.20 crores, or Rs. 3.01 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 4th September, 1964, shows Demand and Time liabilities at Rs. 1,285.80 crores (Rs. 29.08 crores on account of borrowings from banks) and Rs. 1,417.05 crores (Rs. 17.00 crores), compared with Rs. 1,303.78 crores (Rs. 32.35 crores) and Rs. 1,423.37 crores (Rs. 17.06 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.36 crores and Rs. 2.52 crores to Rs. 62.89 crores and Rs. 91.27 crores, respectively. There is a drop of Rs. 12.51 crores to Rs. 791.17 crores in investments. Advances and bills discounted at Rs. 1,747.20 crores show a rise of Rs. 12.75 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.7 percent and 64.6 percent, against 5.6 percent and 63.6 percent.

TREASURY BILL MATURITIES

Details of 91-day bills outstanding with the public on 18-9-64.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
18-9-64	21-12-64	2,00.00	Rs. 2.386%
11-9-64	14-12-64	2,00.00	Rs. 2.400%

THE FOOD CRISIS: REALISTIC AND RATIONAL SOLUTIONS NEEDED

(BY A SPECIAL CORRESPONDENT)

High prices and hoarding in the food market basically reflect the shortage of supplies, which has arisen due to a number of factors, the rapid growth in population being the main one. Unless there is a balance between supply and demand, all the evils of scarcity will persist. The Government proposes to fight the chronic food shortage with rationing and State trading, but it cannot effectively do so, without doing something to boost farm production.

THE Government propaganda machine, which is ineffective in the international sphere, has in the domestic field successfully transferred the responsibility for the food shortage to the "hoarder". Quite recently, it was reported that a group of ladies had tied a *rakhi* round Mr. Lal Bahadur Shastri's wrist. The *rakhi* bore the photograph of a child with the inscription, "Let me live, control prices". Normally people would have thought that the children would ask for food, but thanks to the Government propaganda, they now ask for price control. Some years ago, a three or four-year old arriving in Darjeeling with her parents on holiday heard the word "Kanchunjungha" uttered many times, and with her sweet voice expressed the desire to eat fried "Kanchunjungha". It is no wonder, therefore, that our children now want to live on controls.

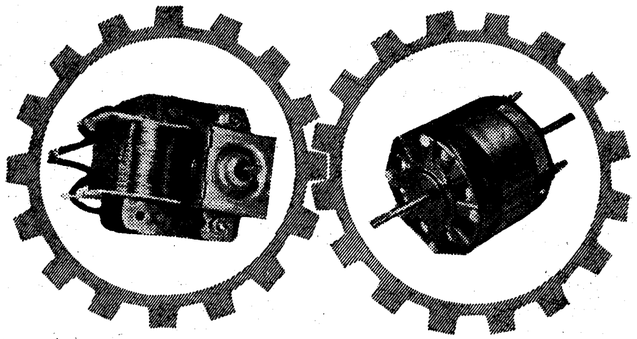
The slogan that foodstuff is not available at any reasonable price only because of some anti-social hoarders and black-marketeers, has been transmitted with great success even to our kitchens. It should have been long apparent to all that there was not enough foodstuff in the country to go round, and the scarcity was leading to hoarding rather than hoarding causing the shortage. When there is scarcity, it is only human that not only the wholesalers and retailers but even the housewives who are charged with feeding the members of the family, will carry a bigger stock to provide against any emergency. The anti-hoarders should, as a matter of interest, check up their own pantries. It is enjoined by religion on certain classes of *sadhus* to live on daily alms and to avoid hoarding, but a different code has been prescribed for the householder.

Price Mechanism

In the absence of rationing, price mechanism is the only way of equating demand to supply. The standard books of economics have given many points in favour of speculation, and hoarding is not necessarily an anti-social act.

It was very interesting to see in the newspapers that the Government had sent an S.O.S. (of course, followed by reassuring explanations!) for the diversion of wheat ships going from Australia to England to the ports in India for feeding the people. It is a matter of great satisfaction that New Delhi has now looked to these wheat ships rather than to the huge "hoarded" stock to feed the hungry millions. People have now become accustomed to hear that they must change their food habits, and they must give up or restrict consumption of rice and take not only to wheat, but also to delicacies like milk, fruits, etcetera. The students of history will find nothing original in these suggestions. As for wheat also, the bubble has been pricked. Hitherto it was essential to draw 1 kilogram of wheat, while purchasing 1 kilogram of rice from the fair price shops, in Calcutta. It has now been announced that as the people in Bengal prefer rice to wheat, it will no longer be necessary to take more than ¾ kilogram of wheat with 1 kilogram of rice. The preference for rice has been honoured by a reduction in wheat but not by a corresponding increase in the rice quota! It is not known whether this doubtful act of kindness has been appreciated by the food department itself. It is sincerely hoped that this reduction is optional to the consumer.

Fish Price Control



It is somewhat heartening to observe in the newspapers that there is some difference of opinion in the West Bengal Government's Department of Fishery about the fish price control. There may still be a chance for introspection about the overworked words "hoarding" and "control". For quite a long time now the state of affairs in the fish market has been nothing but scandalous. Anybody who has eyes to see should have been convinced that the policy followed so far was absolutely absurd. It is sincerely hoped that the difference of opinion (it has since been contradicted) will lead to a reconsideration of the policy. The fact cannot be denied that there is a shortage in foodgrains, shortage in mustard oil, shortage in fish and shortage in multifarious other items. That the shortage has led to hoarding is quite clear, but it is also clear the Governmental measures have aggravated the difficulties rather than solved them.

There cannot be a *via media* between rationing and free trade. Fair price shops may undoubtedly continue to ease the difficult situation even in an uncontrolled market. The present set-up of the Government's administrative machinery, being what it is, rationing should be avoided at any cost. Introduction of rationing only in the industrial areas would be like robbing Peter to pay Paul. All controls should be lifted and with immediate effect. In this connection, it may help to remember that Mahatma Gandhi's successful pressure to abandon cloth control yielded very satisfactory results. The shortage of foodgrains has got to be met by imports. Foreign currency should pose no problem, for many of the projects under the five year plans are not likely to be profitable in any case. It is a matter of congratulation that against tremendous odds, Mr. Shastri has cried a halt to the projects which have not already been taken up. It is a courageous step taken by him and he should stick to it.

Strange Building Designs

Walking along Southern Avenue in Calcutta, one may find a number of Government blocks of flats on the north side of the Avenue which have been built with the south blocked and the east covered by the bathrooms. It will be appreciated that even a layman would not build a hut this way on a plot like that. On enquiries, the answers were very prompt, that

the designs were made in Delhi where there was no southern breeze. It would be interesting to ascertain whether the persons who designed those houses are the architects of future India, through the five year plans. Even a casual visitor to Durgapur will notice that the Durgapur jungle was almost completely cleared in the steel factory town leaving no tree to provide any shade to the thousands of industrial labourers. "*Bona mahatsov*" will solve the problem in time, of course at a cost to the taxpayer. One has got to go a few steps only to see the township established by A.C.C.-Vickers-Babcock to be convinced as to how the old trees could be preserved to add to the beauty of the place and the comfort of the people residing in the area. Common sense is a most uncommon thing. We have nothing to lose if we have got to wait for a few years to allow our common sense to have a free play before rushing in for all these projects which may ultimately be considered to be dead weights on us. Slowing down of the five year plans will mean arresting inflation, thereby bringing down the commodity prices. Further, industrial labour drawn off the land may, if released, augment the food supply. Maintenance of parity between industrial and agricultural progress and population control, although less spectacular, must have top priority in all our future plans.

There is a persistent demand these days for effective legislation against adulteration. Official representations were made to the Central Government to present a case for deterrent punishment for the offenders. Undoubtedly these moves have been taken with the best of motives to save the lives and the health of the people. It is interesting to note, however, that the State-owned buses carry far too many passengers during rush hours disregarding all rules of safety. The Government-owned Haringhata dairy gradually added toned milk and double-toned milk to the list of products, and thereafter, at one stage, milk was substituted by standard milk.

Rightly enough, the people do not criticise the Government for the overcrowded buses or for different compositions of the milk supplied, as these are inevitable in the present position of demand and supply. But the argument applies with equal force to, say, mustard oil. What is necessary, therefore, to tackle the problem of adulteration is to try and augment the supply of the pure stuff and if that cannot be done overnight, to allow addition of non-injurious substances, but insisting on a proper disclosure of the composition of the mixture on the containers.

Law and Sentiment

Law can be enforced only when it is reasonable. Only sentiment against adulteration will take one nowhere. The crusade against hoarding and rise in prices has failed as it was destined to, and the war cry against adulteration also will produce no result unless supplies are increased, and the proposed amendments of the law are made on rational lines. With the progress of civilisation, the severity of punishment for crimes has been on the decline. We cannot afford to go backwards. It is a great pity that well-meaning people resent high prices, hoarding and adulteration, but few of them, if any, suggest increase in food production or family planning.

The Hump Back Oven and Keshab Chandra Bose who works on it, are just one team of the multitude of men and machines at the Remington Rand typewriter plant. They are all engaged in a constant endeavour to improve the quality of each tool, die and part that goes into the making of your Remington typewriter.

Over the years people in India have come to expect the standards set by REMINGTON — the highly responsive touch, light positive shift, smooth carriage action and superior styling and finish — which make them so essential to distinctive correspondence.

LOK SABHA DEBATES FOOD POLICY AND CENSURE MOTION

(FROM OUR NEW DELHI CORRESPONDENT)

PARLIAMENT reassembled here for its monsoon session last week. An independent member, Mr. N. C. Chatterji, succeeded in rallying round him the communists and some other Opposition groups and was able to muster over 50 members to support his no-confidence motion against the Government. The motion was duly admitted for discussion. The Government was equally vigilant and forestalled the Opposition by tabling an official motion to discuss the food situation. The Central Food Minister, Mr. C. Subramaniam, played his cards well. He did not initiate the debate by a long-winded speech, but placed before the house two blue books, describing the latest food situation. He later listened to old and familiar complaints about food shortages and the remedies to solve them. His position was made easier by divergent opinions expressed in the House. While the communists and Congressmen wanted State trading in food, the Swatantra Party criticised the harassment of traders.

Winding up the debate, Mr. Subramaniam said that the food crisis had affected everyone in the country. It has made the consumers, producers, traders and even the State Governments play safe by holding on to whatever stocks they have. He declared that propaganda of the Opposition against the Government had actually helped traders to take advantage of the situation. Whether intentionally or not, the Opposition had become what he called the "colluding factor" in the hoarding of foodgrains by traders. Taking advantage of the situation, the latter have resorted not only to the traditional but also new methods to corner stocks. The Minister added that all this cornering had been done with the help of "unaccounted money."

Food Policy Endorsed

The Lok Sabha endorsed the Government's food policy, and in due course the motion of no-confidence would be defeated. The basic issue is whether these empty victories would solve the food problem and check the runway prices. The Minister of State in the Central Ministry of External Affairs, Mrs. Lakshmi Menon, said in course of a discussion on prices held by the Young Women's Welfare Association that the crux of the problem was lack of clear and coordinated thinking. "We talk of fertilisers and yet huge stocks are rotting. We talk of family planning and at the same time encourage large families. Holding a seminar never increased production." Nor can a motion of no-confidence against the Government. The Prime Minister, Mr. Lal Bahadur Shastri, would have had the full support of the masses if his Government were to strike hard at all anti-social elements which had created a climate of scarcity in this country. A beginning could well be made in Delhi.

PLAN PUBLICITY

Report of Study Team

The study team on plan publicity, whose report was placed on the table of the Lok Sabha last week, has referred to the virtual failure of official publicity efforts which are "too much obsessed with ministerial pronouncements and conference proceedings." While stating that the impact of publicity programmes on the people had been "tenuous, vague and diffused", the report directs special criticism against All India Radio.

The report says: "A.I.R. has shown an undue concern with publicity for personalities and departments of the Government, has betrayed a helpless dependence on Government releases and reports and generally set its face against free and well-intentioned criticism of the performance of public authorities." It is wrong to single out All India Radio, since the Press Information Bureau is no better. The main function of an Information Officer appears to be to give the widest publicity to Ministerial activities. Photographs of Ministers are taken in various intimate poses, as though they were film stars.

AGRICULTURE

Import of Power Tillers

The Government is planning to import from Japan and Czechoslovakia 2,000 power tillers for "crash" programmes for agriculture. As reported recently, a decision has been taken to set up a public-sector undertaking for manufacturing tractors and power tillers. A feasibility report to manufacture 10,000 to 12,000 power tillers and an equal number of tractors is being prepared. The Government has already decided to enter into collaboration arrangements with the Czech Government for setting up the power-tiller plant.

Meanwhile, the manufacture of of tractors in the private sector has not made much headway. Of the four units licensed, Massy-Furguson has made a good start and is expected to put out 7,000 units a year. International Harvestor has also done well, with equal production.

WEST GERMANY

Team Expected in January

About 20 West German industrialists and business men are expected here towards the end of January to assess the climate for investment in India. Originally, their visit was planned from 20th November to 6th December. It was, however, felt that the visit might not be fruitful unless the investment guarantee agreement between the two countries was signed. The German visitors will be part of a bigger team, which will represent the country at the meetings of the International Chamber of Commerce commencing here from 6th February, 1965.

Indo-West German Credit Pact

The Governments of West Germany and India signed an agreement for a credit of 380 million deutschemarks (Rs. 45.24 crores) for the fourth year of India's third five year plan. The agreement was signed by Mr. G. F. Duckwitz, the West German Ambassador and Mr. S. Bhoothalingam, Secretary to the Department of Co-ordination and Economic Affairs, Central Ministry of Finance.

The agreement follows West Germany's pledge to offer aid to India at the last meeting of the Aid-India Club held in Washington on 28th May, 1964. Of the total aid, a sum of 270 million deutschemarks (Rs. 32.14 crores) will be treated as Governmental economic assistance and the balance of 110 million deutschemarks (Rs. 13.10 crores) as guarantees for suppliers' credits.

West Germany has so far agreed to extend credits totalling 3,409.56 million deutschemarks (Rs. 405.90 crores) towards assistance for India's development programmes. Out of this, a sum of 1,176.6 million deutschemarks (Rs. 140.06 crores) was made available during the second plan period and the balance of 2,233 million deutschemarks (Rs. 265.83 crores) for the first four years of the third plan.

India has been importing from West Germany equipment for such industries as motor-car, chemicals, engineering, power, and steel. Among the important projects undertaken with West German assistance are the Rourkela steel project, Rourkela fertiliser plant, Neyveli briquetting and carbonisation plant, Neyveli fertiliser project, Durgapur power-station, expansion of the Mysore Iron and Steel Works and its conversion into an alloy and special steel plant, the new Government electric factory in Mysore, expansion of the Kalinga pig iron plant, extension of the Kargali coal washery and T.E.L.C.O.

A sum of 270 million deutschemarks (Rs. 32.14 crores) constituting the core of the agreement signed here last week, will be used as follows:

(1) 90 million deutschemarks (Rs. 10.71 crores) for refinancing the liabilities of the Rourkela steel plant;

(2) 55 million deutschemarks (Rs. 6.55 crores) as commodity aid for the purchase of goods and services in Germany. In using this money, the requirements of Indo-German enterprises in India will be taken into consideration;

(3) 40 million deutschemarks (Rs. 4.76 crores) for further financing of certain German-aided development projects nearing completion;

(4) 60 million deutschemarks (Rs. 7.14 crores) for spending on new development projects; and

(5) 25 million deutschemarks (Rs. 2.98 crores) for the Industrial Credit and Investment Corporation of India, the Industrial Finance Corporation and the National Small Industries Corporation for granting loans to medium and small undertakings.

An amount of 110 million deutschemarks (Rs. 13.10 crores) which is in the nature of a suppliers' credit will be used in two parts—82 million deutschemarks (Rs. 9.76 crores) for the purchase of new ships which has

already been agreed to. The balance of 28 million deutschemarks Rs. 3.34 crores) is intended for the purchase of other goods and services.

Terms of Credit

The loan of 90 million deutschemarks (Rs. 10.71 crores) is repayable in 16 years at 5.5-percent interest.

The other loans totalling 180 million deutschemarks (Rs. 21.43 crores) are for a period of 25 years, including a grace period of seven years and at an interest rate of 3 percent.

The terms of the suppliers' credit will be settled between the buyers and sellers in both private and public sectors.

The following indicates (in crores of rupees) the broad classification of German assistance for the four years of the third plan:

	Total for four years
Rourkela refinancing ...	55.52
Rourkela steel plant, services, and maintenance requirements	6.66
Rourkela expansion ...	49.28
Cash credits	28.57
Maintenance requirements, including commodity assistance	32.14
Project financing	49.10
Direct loans to the I.C.I.C.I., I.F.C. and H.S.I.C.	14.28
Balance-of-payments support for making down payments for ships ...	3.35
Suppliers' credits for ships and other purposes ...	26.91
	265.81

U.K.

Loan Pacts Signed

Seven loan agreements were signed here last week by Mr. P. Govindan Nair, Additional Secretary to the Department of Economic Affairs, Central Ministry of Finance and the British High Commissioner, Sir Paul Gore-Booth. All the loans are being offered under Section 3 of the Export Guarantee Act, 1949, and will have a maturity of 25 years, including a seven-year grace period for the repayment of principal, and a waiver of interest during the first seven years.

These loans total £14.5 million and are part of the £30-million aid programme for India in 1964-65 pledged by Britain at the Aid-India Club meeting held in Washington on 26th May this year. They will benefit India's oil, heavy electrical, coal mining and power-generating industries. They will also assist certain Indian industries in the private sector, which are at present running below full capacity for the lack of foreign exchange to import the vitally-needed spare parts for maintenance.

The balance of the £30-million aid programme for 1964-65 is being given mainly in the form of general-purpose loans (one for £10 million has already been signed), from which the Government of India may, among other purposes, allocate funds for down payments on cargo ships to be built in British dockyards.

In the context of the general-purpose loans given for 1964-65, special arrangements have been made for importing certain types of steels. The Government of India, in agreement with the U.K. Government, will authorise orders up to £2 million for the purchase of high speed and tool steels (comprising carbon tool steels, alloy tool steels, high speed steels and high speed tool steels); steel castings; and alloy, stainless and heat-resisting steels in any form of products.

Traditional Market

India has been an important traditional market for British suppliers of these types of steel, who have at present a substantial surplus capacity. Purchases by India against this allocation from British aid will be additional to such purchases of steel of these and other categories as may be made from Britain from India's own exchange resources.

The loans signed last week include £4 million to be used for improving the operating efficiency of manufacturers in India who traditionally look to Britain for their supplies and who are experiencing difficulties because of India's tight foreign exchange situation.

For large components such as transformers and switch-gears required by the Heavy Electricals (India) Ltd in Bhopal, a sum of £2 million will be made available. Aid previously given by Britain for the new colliery in Singareni in Andhra Pradesh will be increased by £1.250 million. Power-stations in Madhya Pradesh and West Bengal will benefit from a loan of £3.225 million for turbines. For oil exploration and development equipment required by Oil India Ltd, £1.5 million is being provided. For the private sector, a loan of £1.525 million will be given for importing capital goods and £1 million for components for British-orientated industries.

The £30-million aid programme is additional to the assistance already announced for the Durgapur steel works.

DIRECT TAXES

New Amendment Bill

The Direct Taxes (Amendment) Bill, which has been introduced in the Lok Sabha, seeks to amend not only the Income Tax Act of 1961 but also the Estate Duty Act of 1953 and the Expenditure Tax Act of 1957. One of the important amendments to the Income Tax Act relates to Section 88 of the Act. The effect of this amendment will be that the entire amount paid by an assessee during the previous year as donation to the Nehru Memorial Fund will be allowed for a rebate of income tax without application of the monetary limit laid down in sub-section 3 of Section 88 of the Act.

The sub-section stipulates at present the monetary limit at 10 percent of the total income of the assessee of Rs. 200,000, whichever is less.

A new section is being added to the Income Tax Act providing for the exclusion from the total income of an assessee of any special allowance specifically granted to him by his employer for the payment of rent for residential accommodation to such an extent (not exceeding Rs. 300 a month) as may be prescribed by the Central Board of Direct Taxes.

It has also been provided that the limit up to which such allowance may be excluded from the total income of an assessee will be prescribed in the rules to be framed by the Central Board of Direct Taxes, considering the area or place in which the residential accommodation is situated and other relevant considerations.

Another new section to be inserted in the Income Tax Act prohibits a registering authority from registering any documents purporting to transfer, assign, limit or extinguish the right, title or interest of any person to or in any property (other than agricultural land) valued at more than Rs. 50,000 unless the person concerned produces a tax clearance certificate from the Income Tax Officer.

Such a certificate, the section provides, will have to be in relation to an assessee's liability under the Income Tax Act, the Excess Profits Tax Act, the Business Profits Tax Act, the Wealth Tax Act, the Expenditure Tax Act, and the Gift Tax Act.

New Clause to Estate Duty Act

The new Bill, which has in all 20 clauses, seeks to add a new clause to the Estate Duty Act to provide that where the accountable person transfers any property comprised in the estate of the deceased and uses the proceeds for the payment of estate duty, a deduction will be allowed from the estate duty of a proportionate amount of the tax which becomes chargeable under the Income Tax Act on the capital gains arising from the transfer of the property.

Another provision in place of Section 52 of the Estate Duty Act enables the Central Government to accept at an agreed price, the assets of an estate towards payment of the estate duty if the accountable person so offers.

Provision has also been made that any balance of the price after satisfying the amounts due under the Estate Duty Act will be adjusted against amounts due under other direct taxes Acts from the deceased, his estate and the accountable person beneficially entitled to the asset in question in that order.

An amendment to Clause "J" of Section 5 of the Expenditure Tax Act exempts an assessee from the expenditure tax on the expenditure incurred by him on making a gift which is specifically exempt from the gift tax.

ANNUITY DEPOSIT

Procedure for Payment

The annuity deposit scheme, provided for in the Finance Act, 1964, will come into force on 1st October, 1964. From that date, deposits under the scheme will be accepted at all offices of the Reserve Bank and branches of the State Bank of India and its subsidiaries. Deposits may be made in cash or by cheque drawn in favour of the bank at which the deposit is made. Accompanying the deposit money will be an application for the issue of ten-year annuity deposit certificates for the amount. Where the deposit is made by an unregistered firm, an association of persons or a body of individuals, a declaration on its constitution should be attched to the application. Deposits can be made in instalments during a year. When the deposit money is tendered at a bank, an interim receipt will be given. This would, after a given period, be exchanged for annuity deposit certificates issued by the Public Debt Office.

These certificates will be issued in denominations of Rs. 10, Rs. 100 and Rs. 1,000. Beginning from one year after the date on which the deposit has been made, the depositor will receive an annuity of Rs. 1.25 for every Rs. 10. The rate of interest works out to a little over 4½ percent. Payment of the annuities will be spread over ten years. Depositors may draw their annuities either through their bankers or ask for remittance by postal money order. Individual depositors may nominate a person or persons who will receive the annuities in the event of their death.

In computing the taxable income of the depositor, the amount of the deposit at the rates prescribed in the Finance Act will be allowed as a deduction. The annuities are, however, liable to tax as income When a depositor receives his annuity deposit certificates, he should inform the Income Tax Officer within 14 days that he has made the deposit and send him the counterfoils of the annuity deposit certificates.

Two Categories

The annuity deposits to be made during the financial year 1964-65 fall into the following two categories: (1) deposits to be made for the assessment year 1964-65 and (2) deposits to be made in advance for the assessment year 1965-66.

For the current assessment year, deposits may be made on the basis of an income-tax assessment made by the assessee himself or by the Income Tax Officer. Where a self-assessment has been made, the annuity deposit is required to be made within 30 days of an assessee's filing his income-tax return. However, assessees who have already filed their returns of income or file them by the end of September 1964, can make their annuity deposits by 31st October, 1964.

In cases where the assessment is made by the Income Tax Officer, he will also determine the amount of annuity deposit due and call upon the assessee to make the deposit.

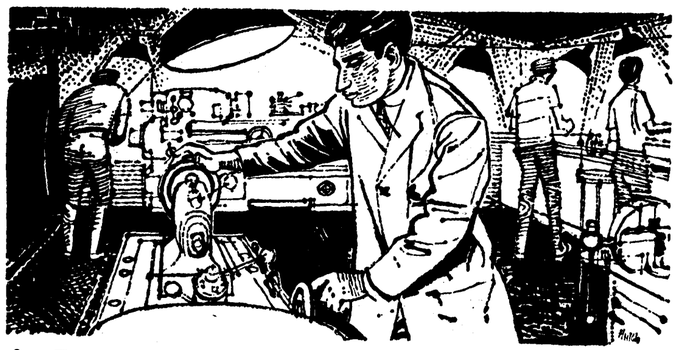
As for deposits to be made in advance for the assessment year 1965-66, the Income Tax Officer will issue a notice of demand. He will also lay down the number of instalments in which the deposit could be made and the dates on which they should be made. However, individuals who have not been assessed to income tax so far and who expect their assessable income to exceed Rs. 15,000, should themselves make an estimate of their annuity deposit liability. They should inform the Income Tax Officer accordingly before 1st March, 1965, and also make the deposit by that date. Assessees may make their annuity deposits even before they are formally called upon to do so by the Income Tax Officer.

The Finance Act, 1964, it will be recalled, has introduced certain provisions in the Income Tax Act, 1961, requiring assessees who are resident in India (excepting individuals of foreign nationality, registered firms, co-operative societies and companies) and whose income exceeds Rs. 15,000, to make annuity deposits. The amount of the annuity deposit is to be calculated on the total income of the assessee (subject to certain adjustments) at the rates prescribed in the Second Schedule to the Finance Act, 1964, namely, 5 percent where the income is between Rs. 15,001 and Rs. 20,000; 7½ percent where it is between Rs. 20,000 and Rs. 40,000; 10 percent where it is between Rs. 40,001 and Rs. 70,000; and 12½ percent where it exceeds Rs. 70,000. The calculation is subject to marginal adjustments as specified in the Second Schedule to the Finance Act, 1964.

The first assessment year for which annuity deposits have to be made is 1964-65. Advance annuity deposits have also to be made during the current financial year in relation to the income assessable for the assessment year 1965-66. Certain types of income such as capital gains, salary for a past year received in arrears, and share of income in an unregistered firm which is liable to make an annuity deposit for its income are not to be taken into account in calculating the amount of annuity deposits. Furthermore, for the assessment year 1964-65, the salary income earned during the previous financial year 1963-64 will also not be taken into account in computing the amount of annuity deposit. However, for salary income earned during the current financial year, advance annuity deposits will have to be made.

RICE

Purchase Pacts Concluded



Apart from the U.S.A. from where rice is being imported under the P.L. 480 agreement, purchase contracts for 70,000 tons from Pakistan under a barter arrangement and 10,000 tons from Thailand have since been concluded. It is proposed to purchase shortly 10,000 tons from Cambodia, it is officially stated here.

UGANDA

Joint Ventures Planned

In accordance with the mutually agreed policy of stimulating technical and economic co-operation between Uganda and India, it has been decided that India should extend co-operation to Uganda for setting up four large-sized sugar mills as a joint venture between the industrialists and Governments of the two countries.

The project is likely to cover an overall investment of £12 million to £15 million (about Rs. 15 crores to Rs. 20 crores) when completed. It will start with an initial investment

In Factories, Hospitals, Schools, Public places...

PUT AN END TO THE DANGERS OF

SUDDEN DARKNESS

In factories sudden darkness can cause injury and damage to machinery. Emergency lighting is the obvious safeguard—and that's where Keepalite comes into its own. Keepalite is an automatic emergency lighting system employing lead-acid storage batteries which are automatically triggered into operation by the actual mains failure. Modern methods of control and 'trickle' charging mean that Keepalite equipment has outstandingly long life and requires minimum of maintenance. That's why architects everywhere specify Keepalite as sure inexpensive protection for factories, hospitals, schools, banks and public places.

Dump capital investment costs with the Load-and-Carry method

no rails no trucks no sleepers no switching gear no locos no tipping stations—just one man and one Autoloader (and compressed air) to load to carry to dump.

Less capital outlay and greater productivity. That's the end-result of the "Load-and-Carry" technique to offset rising overheads in production and development mining. A method that confines the entire muck-load haul cycle to only one man and one machine, the rubber-tyred Autoloader. A system that gives trackless mechanized handling with 65 per cent effective loading time on 100 ft. runs. And makes hauls of 600 ft. possible.

Unique machines-unique results. Man-hour output up from 4.5 to 13 tons in cut-and-fill stoping and 50% increased advance rate in drifts of coal mines in Central Europe. Mucking costs cut 30 per cent in sub-level caving in North America. Loading and dumping 500 tons of ore per man/shift to Scandinavia. These are authentic "Load-and-Carry" figures from mines. Figures that show how pneumatic Autoloaders keep costs down by performance as well as by equipment-saving design. More than 250 Autoloaders are already working in coal mines. And here are some reasons why:

Reduced development costs. Long haul capacity means fewer ore passes are needed.

Reduced working costs. Three-in-one Autoloader fully utilizes labour, cuts idle time

Increased output. Power assisted steering and speeds of up to 5 ft. a second enable quick hauls in winding drifts. Timber props are no hinderance.

A new "Load-and-Carry" booklet shows on-the-job applications of the method as adopted for various mining and tunelling conditions.

Note some "Load-and-Carry" applications:

1. Adit driving 2. Sub-level caving 3. Cut-and-fill stopping 4. Raise mucking 5. Drifting and tunnelling

Atlas Copco puts compressed air to work for the world

ATLAS COPCO (INDIA) PVT. LTD. Mahatma Gandhi Memorial Bldg. Netaji Subhas Road, Bombay 2. P.O. Box 1153. Branches: Delhi, P.O. Box 692—Calcutta, P.O. Box 2349—Madras P.O. Box 2244.

AC-G-49

of about £10 million to £12 million (Rs. 10 crores to Rs. 12 crores), both sides contributing almost equal amounts with majority participation by Uganda.

The machinery and plant and the complete equipment will be supplied by India to the extent possible and only a small portion of the equipment will be imported from other countries.

For exploring the matter further, and to hold technical *cum*-economic consultations, a high-powered delegation led by Mr. D. S. Joshi, Secretary to the Central Ministry of Commerce, has left for Uganda.

A two-man delegation consisting of the well-known sugar industrialist, Mr. S. M. Dahanukar, and Mr. R. R. Panjo, chief of the Central Sugarcane Research Institute, Lucknow, has left for Sierra Leone and Liberia to explore the possibility of establishing one large-sized sugar factory each in these countries as joint ventures between the industrialists of these two countries and Indian industrialists. The large part of the machinery and equipment for these two sugar factories is proposed to be supplied from India where as is well known, modern sugar machinery is being manufactured, excepting a few minor equipment which will be imported from third countries.

Necessary credit and financial facilities will be made available to these joint ventures by the Governments of these countries and the Government of India.

CEMENT

Incentive for Producers

In order to achieve maximum utilisation of indigenous capacity for cement manufacture, the Government of India has sanctioned an extra price to cement producers for the quantity of production achieved by a factory in 1964, which is in excess of its best annual production during the three years ended 1962. This extra price is meant to compensate the producers for the additional expenditure which they may have to incur in maximising production with the existing capacity. This increase in the price payable to some of the producers will not affect the consumer's price, which remains unchanged.

Because of the cement shortage in the country, the Government is anxious to stimulate the maximum utilisation of the indigenous capacity, while at the same time promoting the establishment of additional capacity.

U.A.R.

Trade Talks with India

Trade talks between the United Arab Republic and the Government of India for the current year began here last week. A 14-member delegation from the U.A.R. led by Mr. Hussein Khaled Hamdi, Under-Secretary of State, Ministry of Economy and International Trade, has arrived here. The Indian delegation will be led by Mr. D. S. Joshi, Secretary to the Central Ministry of Commerce.

The visiting delegation will review the working of the present trade arrangements and explore the possibilities of further expanding trade exchanges between the two countries. It is also expected to discuss ways and means to further enlarge the scope of co-operation in industrial and economic fields.

Trade relations between India and the U.A.R. have been governed by the 1953 trade agreement which has been kept in force by various protocols signed subsequently. The last protocol was signed in January last year under which the validity of the trade agreement has been extended up to 28th February, 1966.

India imports mainly cotton, rice and rock phosphates from the U.A.R. and she exports to the U.A.R. tea, jute goods, spices, chemicals and light engineering products.

STEEL

T.I.S.C.O. Expansion Plan

The Government has approved, in principle, the expansion of Tata Steel to a capacity of 3 million tonnes of steel ingots during the fourth plan period. The Company has yet to prepare the detailed project report for the expansion programme. The preliminary estimates indicate that the cost of expansion would be of the order of Rs. 170 crores, with a foreign exchange component of about Rs. 85 crores. As the matter is still in the preliminary stages, the details concerning the foreign supplies of equipment, etcetera, have not so far been worked out.

Scheme of Durgapur Projects

The Durgapur Projects Ltd—a Government of West Bengal undertaking—initially proposed to set up two 100-ton blast furnaces for making pig iron. It was informed that the proposal would be approved after details had been worked out. It is now understood that the Durgapur Projects Ltd is considering establishing a plant to produce 300,000 tons of pig iron a year with facilities for steel making and continuous casting of at least 30,000 tons a year. It has also prepared a feasibility report.

Importing Pig Iron from Russia

A contract has been signed under the Indo-Russian trade plan for 1964 for the import of 100,000 tons of pig iron in instalments by the end of 1964. Payment will be made in Indian rupees.

METAL SCRAP

New Body Formed

The Metals Scrap Trade Corporation, a joint enterprise with the Government-owned Minerals and Metals Trading Corporation, the ferrous scrap collecting and exporting interests and the domestic users of scrap (indigenous melting furnace owners) holding equal shares was constituted and registered as a public limited company under the Indian Companies Act in Calcutta last week.

The Corporation will undertake, through a countrywide network of agencies and by the provision of equipment facilities, the collecting and processing of ferrous scrap, both for the domestic furnace owner as well as for export. All ferrous scrap exports will be canalised through the Corporation in order to end the uncertainties resulting from disorganised efforts and unhealthy trade practices and also for serving the best interests of the country by negotiating long-term contracts with overseas parties for the export of scrap at favourable international prices.

The authorised capital of the Corporation is Rs. 2 crores. The issued capital will be Rs. 30 lakhs. The Corporation is expected to deal with an annual turnover of Rs. 10 crores, consisting largely of exports.

FERTILISERS

U.S. Experts Arrive

Two distinguished U.S. engineers, General Lucius D. Clay and Mr. Stephen D. Bechtel, have arrived here for a five-day discussion on the fertiliser problem. They will speak on behalf of a consortium of American private companies which have high technical competence in this field. Among these firms will be specialists to design, construct, market, distribute, promote, operate and finance a fertiliser programme on the scale needed by India.

As an immediate start, they will discuss the operational study that is expected to be completed by December on the economics and technical problems of building the fertiliser plants. The location of plants, fertiliser distribution and marketing will also be examined in the next four months by experts working under the direction of the Stanford Research Institute, and the Bechtel Corporation.

The study will endeavour to identify rapidly the overall fertiliser requirements of India and, in particular, the specific regional needs. This will provide a basis for determining the size and ideal location of each of the proposed new fertiliser plants. Experts will be called to India to design a typical standardised fertiliser plant to meet these regional requirements and at the same time to demonstrate the advantages in standardisation of design, equipment and plant assemblies. Selection of a standard pattern could save large capital costs and greatly reduce the time needed to install the new capacity.

Furthermore, the current fertiliser pricing, marketing and distribution pattern throughout India will be evaluated. The experts will be asked to propose ways of establishing rational marketing facilities and distribution channels to bring new soil nutrients to the individual Indian cultivator at a substantially lower cost. Potential programmes to instruct farmers in the use of fertiliser and to promote its use will be proposed.

Financing of the fertiliser plants, marketing and distribution systems and the establishment of workable credit programmes with low interest rates to enable the cultivator to use fertiliser will be a concluding part of the study.

If, as expected, the study establishes the feasibility of the envisaged multiple fertiliser plant construction, the next step would be the submission of a detailed proposal to the Government of India to carry out the specific programme. This will be made by a consortium of Indian and American companies, working in collaboration with the Government of India and the existing fertiliser manufacturers.

JAPAN

Importing Textile Machinery

An agreement has been finalised with the Japanese Government for a loan to purchase textile machinery from that country. The agreement will shortly be entered into between the State Trading Corporation and the Japanese Textile Machinery Manufacturers Association. The types of machinery likely to be imported from Japan are the following: (for the cotton textile industry) blow room machinery, draw frames, speed frames and doubler winders, and automatic looms, calenders. For the woollen textile industry: worsted ring frames, woollen ring spinning frames, worsted cards winding, doubling and twisting frames, spinning preparatory machines, weaving preparatory machines, automatic and semi-automatic looms, rag tearing machines, garnet machines, card room accessories, tentering machines, carabbing machines, shearing machines, decatising machines, brushing machines, raising machines, resin curing machines, shrinking machines, hydro extractor machine, vogoreau printing machine, damping and dewing machines, cloth press, wood washing, carbonising and scouring machines, rag saker, fancy twister, and universal twisting machine.

JUTE MILLS

Import of Machinery

With a view to enabling the jute industry to obtain its requirements of machinery on a priority basis to achieve increased production, it was decided early in 1963 to permit the import of such machinery to the extent they are not available indigenously within a reasonable period of time. The import of captive power-generating sets for jute mils is also allowed under this schme, subject to usual clearances.

Such of the jute mills as are able to arrange for a credit with a foreign supplier for the import of spinning, preparatory and post-spining machinery are given licences for the import of such machinery, subject to screening from the indigenous angle. The import licences permit remittance of the value of the machinery in two equal annual instalments or four half-yearly instalments as may be desired, the first instalment being payable after completion of the installation of machinery. If required, an initial payment to the extent of 20 percent will also be permitted on order and on shipment of the machinery. Interest may be paid at a rate not exceeding 6 percent on outstanding amounts, and this will qualify for exemption from income tax. If interest exceeds 6 per cent, the entire amount of interest will be subject to tax. The applicant mills are required to undertake to execute a bond to effect additional export to cover the value of each remittance by additional exports before the payment falls due.

WOOLLEN MILLS

Foreign Exchange Allotments

The total foreign exchange requirements for importing raw materials for meeting the needs of the various sectors of the woollen industry, by the end of the third five year plan, are estimated at Rs. 17.65 crores a year. The foreign exchange allotment to the industry during 1963 and 1964 is as follows: October 1962-September 1963 Rs. 8 crores, this includes Rs. 50 lakhs for the import of terylene under barter arrangements and Rs. 1 crore for export promotion, and October 1963-September 1964 Rs. 5 crores.

Besides, a sum of Rs. 8.65 crores, in foreign exchange, had also been released for meeting the needs of defence. In view of the difficult foreign exchange situation, an advance allotment of Rs. 2 crores has been made against the requirements for the period October 1964-September 1965.

The woollen industry has been periodically representing to the Government about the inadequacy of the foreign exchange allotted to it.

Meanwhile, the Government has decided that instead of wool tops, only raw wool should be permitted to be imported so that greater quantity of raw material could be imported within the same ceiling.

Steps have also been taken to license production of man-made fibres like terylene and acreylic fibre which could be used as an admixture with wool or in substitution of it.

Attempts are also being made to make increasing use of Indian wool in substitution of imported wool, and all facilities are being extended to the industry for this purpose.

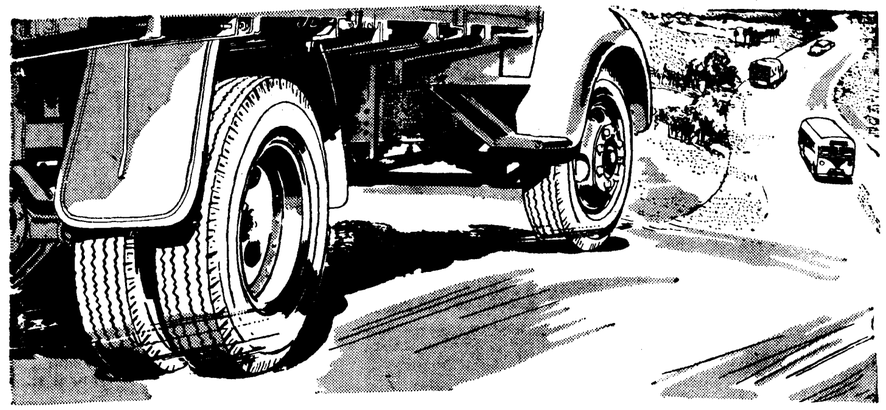
PHYTO-CHEMICAL

Project Abandoned

In view of the high prices of raw materials and consequent high cost of production of caffeine, which was the principal item of manufacture in the production programme, it has been decided to abandon the phyto-chemical plant proposed to be set up in Neriamangalam.

Cashed in a Minute!

And that is precisely what we mean. It takes no longer than a minute to cash your cheque at any PNB office with the Teller System.



The streamlined Teller System eliminates tokens, queues, all tedious and unnecessary waiting and delay.

PNB was the first bank to have introduced the Teller System as far back as 1954. Today, PNB has 90 branches operating this system and plans to introduce this on-the-spot service in 60 more branches throughout the country.

London

THE U.K. EXPORT PUZZLE: CAUSES OF FALL ANALYSED

(FROM OUR LONDON CORRESPONDENT)

THOSE July trade figures are still giving rise to a search for reasons for their bad showing. In a further analysis of the overseas trade position, the U.K. Board of Trade states that the rise in imports has slowed down "greatly" this year, but that there has recently been a pause in the growth of exports. The slowing down in imports has occurred in both industrial materials and finished manufactures. The latter were 3 percent less in May to July than in the previous three months, but the arrival of a large ship in March inflated the figures for the earlier period. The volume of exports in the May-July period was 4 percent less than in the previous three months.

The erratic monthly figures in the earlier period, and to a minor extent the postal strike in July, helped to inflate the fall. Sizable reductions occurred in machinery and transport equipment exports, chiefly in ships, aircraft and motor-cars, and in some semi-manufactured goods. There was a more modest fall in exports of chemicals. That summary of the situation may not set all speculation at rest, but there are apparently other grounds for believing that the fears that the recent decline in exports and increase in imports may reflect an enduring weakness in the British economy might be unfounded after all. It may have been assumed too rashly that British manufacturers are not competitive either in foreign markets or against imported products at home. That at least is what Mr. Edward Heath argued in speaking to the Canadian Chamber of Commerce the other day. His reasoning is a good deal more persuasive than the genial evasions of Mr. Maudling.

True, says Mr. Heath, exports have been disappointing and must do better. But before sweeping pessimistic conclusions are drawn, let us look at the wide range of achievement in different markets and for different goods. This year, for example, British exports to France and Italy have been sharply curtailed by anti-inflationary restrictions on demand in both countries. Against this, British exports to West Germany, a highly competitive market, have been growing rapidly. It is now the U.K.'s best European market and her third largest customer in the world. Western Europe, as a whole, now takes nearly 40 percent of total U.K. exports. The United States, another sharply competitive market, is now Britain's largest single customer. Does that look like weakness?

Import of Manufactures

As for the rapid growth in British imports of manufactured goods, Mr. Heath does not share the view that it shows British industry failing to compete. Here, as in other countries, these imports reflect the growth of world trade in manufactures and the growth of trade between advanced industrial countries. It is also the result of the lowering of world trade barriers over the past decade. With that has come a great widening of the variety of goods on offer, and growing insistence on a large choice by the customer. Another cause is the increasing specialisation of modern industrial production.

It was "superficial nonsense" to say that Britain had a "soft centre" economy—that she was too busy making luxuries and frivolities for herself to be able to make the hard-core goods for export. Mr. Heath added: "We have been disappointed by the failure of our exports in recent months to carry through the encouraging growth we had in 1963, but at the same time, we must not be mesmerised by the low June and July results. The general export figure concealed a wide range of achievement for different goods. Although there seems to have been a pause in the growth of our exports overall, in my view the longer term trend is stronger. From our own information about the export order-books of British firms we know that there is a great deal in the pipeline."

Mr. Heath said it was no surprise that Britain's imports had been at a high level—but her exports of manufactured goods were still about three-and-a-half times as large as her imports of them. In capital goods, Britain exported four times as much as she imported. Neither Mr. Heath nor any one else can, at this stage, be sure whether the present malaise of British trade is temporary or lasting. The answer to this puzzle is vital because, if the massive payments deficit were due to deep economic weakness, the Government would be wrong to draw on the relatively short-term credit of the I.M.F. to spin out the agony. If, on the other hand, there is a fair chance of reviving exports and declining imports next year, or the year after, international borrowing will be perfectly proper. The issue is still open.

Balance of Payments

The Central Statistical Office has just published *United Kingdom Balance of Payments 1964*, the second issue in a new series containing estimates of Britain's payments position for the years 1952 to 1963. On current account Britain had a surplus of £113 million last year. This was little different from 1962 and a substantial improvement over the two preceding years. Within the current account, visible trade continued the improvement which began in 1961. The deficit was further reduced from £72 million in 1962 to £49 million. Net earnings from invisibles were £162 million last year, slightly lower than the 1962 figure of £187 million, but higher than in 1960 or 1961. On long-term capital account the net outflow in 1963 of £155 million corresponded more closely to that of the late 1950's than to that in the previous two years. In 1961, because of some large special transactions, there was a small net inflow, and in 1962, a relatively small net outflow of £107 million. The outcome of the balance of payments in 1963, in terms of the identified balance of current and long-term capital transactions, was a deficit of £42 million.

This invites attention to the fact that the U.K. Board of Trade is conducting an enquiry with a large number of companies into changes in the amount of international trade credit outstanding. The Treasury says that this is among the steps now being taken to improve the balance of payments statistics. The enquiry is welcome. Heavy capital goods now make up an increasing share of total exports and the shifting length of trade credit means that statistics recording merely the flow of exports and imports are no longer a reliable guide to the true state of our current balance of payments. The contract just signed in London for the supply to Russia of plant worth £30 million on terms extending up to 15 years is a clear case in point.

Big transactions of this kind at least come to the notice of the official statisticians who are able to make allowance for them in drawing up the balance of payments estimates. But changes in the terms of credit granted or received by a host of British traders operating on a more modest scale can take place unrecorded, leaving the official figures seriously in error. In *United Kingdom Balance of Payments, 1964*, the Central Statistical Office admits that no allowance is made in the visible trade accounts for changes in the timing of payments for imports and exports. Such changes, it says, may arise through the advancing or retarding of payments or as a result of changes in the commodity pattern of imports and exports.

Short-term Capital Movements

For the purpose of drawing up balance of payments accounts, these changes are regarded as equivalent to short-term capital movements. Where known, they are recorded as part of the changes in the banking claims and liabilities with overseas residents or in the balance of indebtedness between the U.K. and associated companies overseas. But the statisticians concede that to a large extent these changes go unrecorded and then they contribute to errors and omissions (in other words, the "balancing item"). The varying size of this balancing item from year to year has made it hard to get a true picture of Britain's balance of payments with the rest of the world. In nine of the 12 years from 1952 to 1963, the item was positive and over the whole period it averaged £48 million. Partial success in tracking down sources of error is one reason why, over the last six years, the average level of the balancing item has dropped to £30 million. But a great many transactions, it is clear, still go unrecorded.

The statisticians believe that part of the error lies in a persistent underestimate of the current account surplus. A much more irregular element, they think, is due to unrecorded capital and monetary transactions. Fluctuations in this element, they say, "are likely to reflect in the main short-term changes in flows of funds in granting of credit and in timing of payments. These changes are probably influenced to some extent by the level of interest rates in the United Kingdom relative to those abroad and, on occasion, by speculation about exchange rates." As for the visible trade figures, officials believe the margin of error is probably very small in relation to the total involved, although "it could still be of significance in relation to the net result of the balance of payments."

Jute

CONSULTATIVE BOARD STRESSES NEED FOR MODERNISATION

MR. Manubhai Shah, Central Minister for Commerce, inaugurated the Jute Textiles Consultative Board and the Jute Goods Exports Advisory Committee in Calcutta last week. The Board has decided to lay greater emphasis on modernisation and diversification of the industry. Reviewing the progress made by the industry so far, it felt that the prospects for the industry during the fourth plan were promising, although the production and export targets were set rather high. The Board has appealed to the Governments of West Bengal, Assam, Bihar and Orissa to place more emphasis on raising productivity and on stepping up the yield from 2.77 bales an acre to at least 3.8 bales in order to achieve a substantial increase in fibre output.

The Board feels that greater product development and market research are necessary not only to maintain the present export demand but also to secure new markets. It has suggested that the industry should conduct market surveys through specialised agencies. Financial assistance will be provided for the purpose from the Market Research Development Fund of the Government. As for modernisation, the Board has recommended that the industry should promptly streamline its weaving section. It has suggested that a delegation comprising representatives of the industry and shippers should be sent to Latin America to explore market possibilities there.

Indo-Pakistani Co-operation

Inaugurating the Board, Mr. Manubhai Shah hoped that the Government of Pakistan and its leaders would realise that unbridled competition was not doing good to India and Pakistan. Neither of them could prosper by resorting to a rate war. He hoped that it would be possible for India to reach some sort of an understanding on this crucial matter with Pakistan. He was confident that a legitimate price could be secured in the international market for gunnies with a little understanding between the major producers. As regards substitutes, he expressed the view that no substitute would be capable of reducing the demand for this strongest and cheapest of packaging materials.

Appealing to farmers for raising fibre productivity by resorting to scientific methods of cultivation, Mr. Shah said that the State Governments should extend facilities by "opening their purse-strings a little." He assured the industry that the Government was prepared to buy raw jute from other countries, should the situation so demand. The Government wanted to devise an automatic arrangement for importing fibre to fill any gap between the industry's demand and the availability in the market.

Need for Jute Goods Exhibition

The Minister reiterated the Government's offer of a grant of Rs. 20 lakhs for setting up a permanent exhibition of jute goods in Calcutta. Visitors from different parts of the world should be invited to see the exhibition. He was sure that then they would not think in terms of jute goods substitutes. Emphasising the need for laying the maximum stress on the manufacture of quality goods, he said that the industry should see that not a single yard of sub-standard goods left the shores of the country.

The West Bengal Chief Minister, Mr. P. C. Sen, also referred to the vital stake the State had in the jute industry and expressed the hope that the steps visualised would stabilise the future of the industry and the people connected with it.

Welcoming the guests, Mr. R. H. Morrison, chairman, Indian Jute Mills Association, said that jute mills were inevitably preoccupied most of the time with their pressing short-term problems. They had little opportunity of surveying the broader aspects in the proper perspective. "Too little time was given to a searching examination of the future and too few were the occasions when all interests were able to meet together to discuss these affairs jointly", he said. With external pressures continuing to mount, India could no longer consider the problem of her jute industry in isolation. Unilateral decisions to correct local unbalances were unlikely to be fully effective in the long term.

Mr. Morrison felt that "we will inevitably be driven to seek solutions in co-operation with other countries if we hope to provide conditions under which jute products in their many forms continue to be welcomed throughout the world." He was confident that the new Consultative Board would bring to the problems confronting the industry a practical and objective approach.

Industry Achieves Plan Targets

Inaugurating the two-day session of the Export-Import Advisory Council in New Delhi last Saturday, Mr. Manubhai Shah stated that West Germany had completely liberalised the import of jute sacking and bags intended for packing from 1st July, 1964. Import restrictions on jute fabrics, however, continued in the West German market, he added. During 1964, the Indian Government renewed trade arrangements with France, Italy and Greece.

Congratulating the jute industry on its achievement in exceeding the third plan production and export targets two years ahead of schedule, Mr. Shah said that the Government was very much alive to its problems. At the end of the last season, the industry had a carry-over of 2.8 million bales. Latest reports indicated that the 1964-65 jute crop was not as good as it was during the previous season. The Government, he said, was watching the situation and would take all steps to ensure adequate availability of fibre to the industry.

Mr. Shah said that the Government had taken various measures to help in modernising the industry. The Rs. 9-crore "self-financing scheme" and the N.I.D.C. scheme for the grant of Rs. 14 crores for modernisation had yielded good results. A number of export promotion measures were also taken and the Government hoped that higher levels of production and exports would be maintained during the years ahead.

Setback in Gunny Production

Working at the maximum level for 200 hours in August, against 216 hours in the preceding month, mills reporting to the I.J.M.A. have shown a decline in the production of gunnies from 117,700 tonnes in July to 111,500 tonnes in August. Output of hessian dropped by 2,100 tonnes to 47,000 tonnes, of sacking by 1,300 tonnes to 45,100 tonnes and of miscellaneous goods by 2,700 tonnes to 11,300 tonnes. The production of carpet-backing cloth was down from 8,200 tonnes to 8,100 tonnes.

The mills worked at the same level for 208 hours in August 1963, producing a total of 106,500 tonnes—45,700 tonnes of hessian, 42,700 tonnes of heavy goods, 9,700 tonnes of other categories and 8,400 tonnes of carpet-backing. Market circles have not reacted much to the production figures since the output was still higher than the figures for June (107,000 tonnes) when the mills worked slightly longer, namely, for 216 hours.

Spurt in U.S. Burlap Consumption

The consumption of burlap in the U.S.A. has increased sharply from 63.6 million yards to 81 million yards during August. The country consumed 69.5 million yards a year ago. The total offtake for the eight-month period ended August at 580.9 million yards is still lower than the 601.6 million yards consumed in the corresponding period of 1963. The monthly average up to August 1964 was 72.61 million yards, against 75.2 million yards last year.

U.S. stocks at the end of August declined to 281 million yards from 300.1 million yards at the end of the previous month. Of these, 152 million yards (against 151.8 million yards) were spot stocks and 129 million yards (against 148.3 million yards) were afloat. In August 1963, the country held a total inventory of 287 million yards—168 million yards spot and 119 million yards afloat. At the August level of consumption, the stocks will last 3.469 months. The corresponding stock duration on the same basis was four months at this time a year ago.

Indian Jute Team for F.A.O.

A four-member jute delegation led by Mr. G. C. L. Joneja, Jute Commissioner, left Calcutta for Rome on 12th September to attend the first session of the Food and Agriculture Organisation's Study Group on Jute and Allied Fibres. The agenda for discussion includes a comprehensive study of the industrial and economic aspects of fibres grown and manufactured in the world. Mr. R. H. Morrison, chairman of the I.J.M.A., another member of the I.J.M.A. and a representative of the Central Ministry of Agriculture are the other members of the team. On its way home early next month, the team will visit Brussels.

Fibre Purchase Quota

On a review of the position in the raw jute market, the Jute Commissioner has issued a fresh maximum purchase quota of 100,000 bales to the mills for the week ending 19th September under the Jute (Licensing and Control) Order, 1961. The order also specifies the maximum limits of stock holdings by individual mills as on that date.

THE JUTE MARKETS

Manufactured Goods: Easier conditions prevailed in the Calcutta gunny market during the past week despite reports of a decline in the output of jute goods and a sharp increase in U.S. burlap consumption during August. Tired long liquidation, particularly in sacking, in the hedge market and a softening trend in raw jute prices were the major depressants. Mills were generally not inclined to book orders at the prevailing levels in view of the lack of parity with fibre prices. There were reports of moderate hessian business with the U.S.A. The offtake of B Twills by the Government of India fell below expectations. Small lots for ready and near positions were booked. Shippers covered their open positions in ready and near-term goods. But demand lacked edge and so could not harden the price trend. In the hedge market, sacking for November lost after wide fluctuations on tired long liquidation combined with some short-selling. Hessian for November also eased somewhat in sympathy with the trend in heavy goods. Turnover was moderate in the spot market and fair in the hedge market, and the undertone hesistant at the close.

Wednesday's quotations were as follows:

	Sept.	Oct.-Dec.	Jan.-Mar.
40in. 7½oz.	37.75	38.00	38.25
40in. 8oz.	40.65	—	—
40in. 10oz.	50.10	50.35	50.85
B Twills	142.15	141.10	141.00
Cornsacks	142.50	144.00	144.00
Heavy Cees (Plain)	143.00	142.00	141.00
A Twills	172.00	172.00	172.00
Liverpools	157.50	158.00	158.00

Raw Jute: With reports of softening fibre prices in the agencies due to an increase in the daily arrivals to around 125,000 maunds, easier conditions prevailed in the raw jute market during the past week. Upcountry prices were still above Calcutta parity levels. But sellers were keen to book orders at lower prices. The Jute Commissioner issued a second maximum purchase quota of 100,000 bales for the week ending 19th September. With this meagre quota mills had very little to do in the market. So, turnover was more or less of a routine nature confined to selected-grade fibre for ready and near delivery. Since the issue of the first quota on 7th September, spot prices had eased by about Rs. 2 a maund in Assam and Northern fibre and Rs. 2.50 a maund in Daissee, basis Bottoms, f.o.r., ready, Calcutta. In the hedge market, transactions in Upper Assam White Bottoms, on September, were closed uneventfully from 10th September. The firmness towards the close was stimulated by brisk last-minute bear-covering. Turnover was small in the spot market and the undertone easy at the close.

Wednesday's quotations were as follows:

	Rates a maund		Rates a quintal	
	Mid.	Bot.	Mid.	Bot.
Assam-Agartala Jute	41.50	38.50	111.19	103.15
Northern Jute	40.50	37.50	108.51	100.47
Western Desal Jute	38.50	35.50	103.15	95.11
Selected Daissee	42.50	39.50	113.87	105.83
Assam-Agartala Tossa	42.00	39.00	112.53	104.49
Mesta:				
Assam-Northern	37.50	34.50	100.47	92.43
Local Daissee	37.50	34.50	100.47	92.43
Bihar Dist.	36.50	33.50	97.79	89.75

THE U.K. JUTE MARKETS

FIBRE IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

ALTHOUGH the raw jute market in Pakistan remained firm last week with the arrivals of loose jute into baling stations small, the position in Dundee was very irregular, and many sellers were willing to discount the generally quoted rates. This was due to a fairly substantial quantity of secured jute being offered. Holders of these parcels were anxious for business as the bulk of this jute had been obtained before the recent rise in prices.

Dundee spinners showed only a small buying interest in shipment jute, but some movement took place in spot parcels during the past week. Sales of raw jute registered in Pakistan for export to the U.K. during the

first two months of the season exceeded 360,000 bales which is approximately half of the annual consumption of the mills in Dundee and district. It does not follow that the whole of this quantity has been bought by spinners, but it shows that a large quantity of jute will eventually be coming to Dundee.

Offers being made were very irregular and covered a wide range. Prices were lowest at £137 for Export Firsts, at £128 for Export Lightnings and at £120 for Export Hearts, c.i.f. U.K., for September-October shipment. Grade Tossa-4 was named at £139, Outport Tossa-2/3 at £129 and Outport Tossa-4 at £123, October-November. Cuttings were quiet and unchanged at £90 for S.N.C. and at £83 for N.C.

Dundee spinners can remain out of the market for some time, but it is anticipated that their first purchases will be Tossa qualities. A substantial quantity of new crop white jute was bought before the recent rise in prices took place, but purchases of dark jute have been much smaller.

There was now a firmer trend in prices of Siam jute. Many of the cheaper sellers withdrew from the market, and in other cases, prices were raised. Offers were lowest at £93 for grade A, at £88 for grade B and at £81 for grade C, delivered mill Dundee for December-January shipment.

The Calcutta goods market was firm and prices advanced. Quotations were at 82s 8d for 40in. 10oz. and at 62s 5d for 7½oz. a 100 yards c. and f. U.K. for September shipment, at 83s 3d and 62s 10d October-December and at 83s 9d and 63s 2d January-March. B Twills were at 240s 3d, 240s 7d and 240s 3d for the respective shipment periods. The Dundee Jute Control was still buying common hessians, but this trade will be returned to private trading at a date to be announced later.

Dundee jute spinners and manufacturers were very busy despite the recent alteration in the mark-up on imported goods. Supplies of both yarns and cloth are difficult to obtain for reasonably early delivery. The carpet trade is taking regular supplies and this is likely to continue for some time.

Dundee yarn and cloth prices were very firm, and the quoted rates had to be paid in all instances.

I.J.M.A. PRODUCTION FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total production of jute goods for August as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
9,571 tonnes	(9,420 tons)
2,58,54 thousand metres 1,81.9 lakh nos.	(2,82.7 lakh yds)
(b) Sacking	
43,784 tonnes	(43,092 tons)
9,50.82 thousand metres 4,84.3 lakh nos.	(10,39.8 lakh yds)
2 Gunny Cloth	
(a) Hessian	
37,399 tonnes	(36,808 tons)
12,64.24 thousand metres	(13,82.6 lakh yds)
(b) Sacking	
1,333 tonnes	(1,312 tons)
28.67 thousand metres	(31.3 lakh yds.)
3. Carpet-backing	
8,133 tonnes	(8,004 tons)
63.16 thousand metres	(69.1 lakh yds)
4. Other Manufactures	
11,317 tonnes	(11,139 tons)
5. Total Production	
(All kinds)	
1,11,537 tonnes	(1,09,775 tons)

Summary

	(000 metres and 00,000 yds.) August '64	July '64	August '63
Hessian	15,22.78	15,84.89	15,11.49
	(16,65)	(17.33)	(16,53)
Sacking	9,79.49	10,06.85	9,26.74
	(10,71)	(11.01)	(10,14)
Carpet-backing	63.16	62.13	67.08
	(69)	(68)	(73)

	(000 tonnes and tons) August '64	July '64	August '63
Hessian	47.0	49.1	45.7
	(46.2)	(48.4)	(44.9)
Sacking	45.1	46.4	42.7
	(44.4	(45.7)	(42.0)
Carpet-backing	8.1	8.2	8.4
	(8.0)	(8.0)	(8.3)
Others	11.3	14.0	9.7
	(11.2)	(13.7)	(9.6)
Grand Total	1,11.5	1,17.7	1,06.5
	(1,09.8)	(1,15.8)	(1,04.8)
Hours worked	200.0	216.0	208.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

THE PAKISTANI JUTE MARKETS

FIBRE ARRIVALS STILL SMALL

(FROM OUR DACCA CORRESPONDENT)

DURING the past week, there was practically no change in the market except for a slightly steadier undertone. Arrivals of loose jute were small mainly due to continued bad weather. In the interior, there was sellers' resistance. It is expected that the jute being harvested will, to a large extent, be ready soon. It however remains to be seen whether arrivals will increase or whether sellers will hold out for better prices. The financial position makes it very difficult for the balers to pay higher prices. If arrivals remain very small or decrease further, the few balers buying will be obliged to pay more to continue their purchases.

Harvesting everywhere continues. Except in the western jat areas around Ashuganj, there is not very much jute left to be harvested. The western jat area is about the only part which had no trouble from the floods and some of the jute coming into the baling station there is very good. Unfortunately, the jute from the low-lying area to the east of Ashuganj is being mixed with the result that some very badly flood-damaged jute is to be seen. This damage consists of hard centre in some cases, and extremely hard speck in others. The early low-lying tossa in this area is beginning to appear, and has speck which is most unusual in tossa.

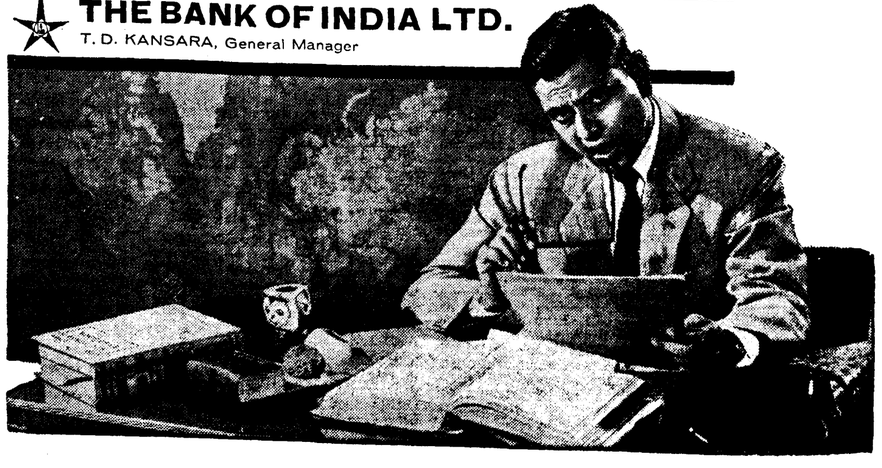
In all areas, the condition of jute continues to be good, but as expected, the proportion of Export Hearts in areas other than western jat is increasing and so is the weight of cuttings. In the local pucca bale market, transactions continue to be restricted to cuttings. There is a slightly steadier tendency with a little bit more business being done in the ready position. The premium for forward, however, remains. The market has been slightly excited by the report that India will issue licences for another 100,000 bales of cuttings as well as long jute from Pakistan.

With the present price of cuttings in Pakistan it is hard to see how India can afford to buy Pakistani cuttings. Certainly, apart from India no other overseas buyers can afford to pay the ruling prices for cuttings. The American buying of cuttings is controlled entirely by the price factor. Since cuttings are expansive in relation to jute, it is unlikely that regular consumers in Europe will be able to pay even the E.P.C. prices, which are not as high as the levels at which business is done locally.

From overseas, reports continue to come in that buyers are waiting for lower prices and that the market is inactive. Unfortunately for reasons connected with cheap registrations of E.P.C.s, there is a fair amount of afloat jute going forward. Some small offers have been made by reputable balers, but this is merely to keep in touch with the buyers.

With our 14 branches overseas and over 1000 correspondents almost all over the world, we are well equipped to assist you in every way.

Trade enquiries? Letters of Introduction? Credit information and status reports? Exchange Control Regulations? Travellers' Cheques? Remittances? Purchase and sale of foreign currencies? Import problems? Export problems?



Bring your problem to us and let us guide and assist you.

THE BANK OF INDIA LTD.

T. D. KANSARA, General Manager

FINDING MARKET FOR INDIAN COFFEE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE latest report from the Coffee Board places the pool receipts from the 1963-64 season's crop at the record figure of 68,123 tonnes, compared with 55,176 tonnes of the previous season. Quality-wise break-up of this crop is Plantation 28,398 tonnes, Arabica Cherry 10,425 tonnes and Robusta 29,300 tonnes. The Board has been able to sell for export 36,915 tonnes from the 1963-64 crop up to 3rd September, 1964. Another 1,712 tonnes is earmarked for the sale on the 23rd of this month. The total exportable surplus from the 1963-64 crop will be around 35,000 tonnes.

India's membership of the International Coffee Agreement makes it obligatory to restrict her exports to the quota-countries at 22,064 tonnes during the current coffee year which ends on 30th September. Among the quota-countries are the members of the European Common Market, Britain and the U.S.A. The Common Market countries such as West Germany, Belgium, France, Italy, etcetera, are among the largest importers of Indian coffee. Indian coffee has established a reputation in these countries for the quality in the cup. With increasing quantities of coffee becoming available for export from India, larger exports to these countries are possible, provided her quota under the International Coffee Agreement is enhanced in response to her representations.

Exports to countries outside the agreement like Russia, Poland, Rumania, Bulgaria and those in the Middle East and Far East, are permissible to any extent. Indian coffee is just entering the east European markets, and the prospects for enhancing this country's exports to these countries are considered bright. The Middle Eastern countries import coffee not only from India. African and Indonesian coffees are serious rivals. The Government of India is proposing to send a trade delegation to the Middle East to explore the possibilities of larger exports. With the increase in the Indian coffee production and the restrictions under the International Coffee Agreement, the non-quota markets will have to play an increasingly important rôle in India's export trade in coffee.

On quality alone, Indian coffee stands a great chance against all rivals. There is, however, need for maintaining quality and to improve it wherever possible. The Coffee Board appears to be aware of this. It has appointed a committee to attend to quality. The Board has laid down and is enforcing grade standards for Indian coffee. The delivery of under-dried coffee into the pool is being penalised by the award of minus points and encouragement is given for the preparation of Parchment coffee by giving additional points on the price differential scale.

The Board also prepares "monsooned coffee", a type peculiar to India. This type of coffee is finding good export demand. It is first passed by a screening panel and after the lots are sold, the bags are sealed by the Central Excise authorities. The seals are then re-examined at the time of actual shipment. This procedure prevents the possible admixture of inferior grades with superior grades of coffee. The matter is kept constantly under review by the Coffee Board. Efforts are also being made to export coffee in other forms than raw. Coffee powder and instant coffee are now being exported, although in small quantities. Coffee in these forms will bring in more foreign exchange than raw coffee seeds.

The foreign exchange earning from coffee export in 1963-64 amounted to Rs. 8.29 crores with an export of 23,320 tonnes. In recent years, it was in 1961-62 that India got the maximum of Rs. 9 crores from coffee exports. The export that year was to the tune of 29,690 tonnes.

It does not appear that all is well with the International Coffee Agreement. The U.S. participation which alone will make the Agreement fully effective has been further delayed by an unfavourable voting in the Congress on Government legislation that would allow the U.S.A. to join the Agreement. This is taken as a reflection of the resentment of the consumers in that country against the price increases that have been brought about by the introduction of the quota system under this Agreement. Although the Government is hopeful that the legislation will eventually be approved, the Brazilians who have been joined by the Congress voting, have asked their President to convene an emergency meeting of all world producers of coffee to consider this development.

At a meeting of the International Coffee Organisation last month in London, Brazil had argued for considerably lower coffee quotas to help keep prices up by reducing the supply. Opposed by the U.S.A., the world's biggest consumer, Brazil had to agree to a quota of 48 million bags. This was 300,000 bags lower than the old quota. According to one estimate, Brazil is still holding a very large stock of coffee without buyers in adequate number. She may not be able to find buyers for her export quota of 18 million bags this year. Brazil is accused of charging her customers too high a price. Aggressive African and Central American producers are underselling Brazil. The Brazilian Coffee Institute which handles Brazil's coffee dealings is accused of bungling and corruption. Brazil which is the largest world producer, is thus facing a crisis in coffee. This crisis may be temporary. Drought and frost fires in that country caused considerable scare-buying and stockpiling abroad, followed by a sharp fall in demand.

PEPPER

Exports Fall

Indian pepper is in bad shape now with cut-throat competition from Indonesia. Indonesian shippers are selling at 30 to 32 U.S. cents a lb. against the Indian price of 40 to 41 cents, although the official price of Indonesian pepper is 39 cents. Consequently, many of the buyers are taking their requirements from Indonesia. America, for instance, has been virtually keeping away from India for some time now. This has rendered the pepper market in this country very dull. It has been the buying support extended by the east European countries that keeps the Indian market at least at the present form. A study of the export figures for July would endorse this argument. Russia had taken 500 tonnes in July while Rumania and Bulgaria had bought 300 tonnes and 125 tonnes, respectively. Yugoslavia took about 125 tonnes, Czechoslovakia 64 tonnes and East Germany 50 tonnes. Between themselves, the east European countries accounted for 1,165 tonnes out of a total of 1,360 tonnes exported in July 1964. Britain took only 4 tonnes and the U.S.A. nothing.

In fact, the bulk of the exports of 14,820 tonnes to the end of July, representing the first nine months of the current pepper season, has been effected to the communist countries. They are said to have bought about 8,800 tonnes so far this season, while the U.S offtake was only about 1,500 tonnes. America is not likely to be seen in the Indian market in a big way for the rest of the season because most of her requirements are covered by Indonesia and Brazil at present at cheap rates.

It is doubtful whether India will be able to export as much pepper as she did last season. Exports to the end of July were to the tune of 14,820 tonnes, against 16,036 tonnes for the same period last season. Exports were low in August and trade estimates place them around 1,000 tonnes. According to present indications, September and October figures too may be more or less of the same size. This means that there may be a shortfall of about 2,500 tonnes in this season's export, compared with last season's 19,500 tonnes.

TEA

Good Crop Prospects

(BY A SPECIAL CORRESPONDENT)

ALTHOUGH there was much flooding in August, weather conditions were normal to good, and upper Assam produced some useful invoices. More rain is wanted. Conditions were normal in central Assam, and too cold in lower Assam. Both north and south Cachar reported unfavourable weather while central and western Dooars did well. The latter produced considerably more than a year ago, but the eastern section was bothered by rain. Terai had seasonable weather, but crops are below last year's output. Darjeeling enjoyed a normal month.

Total output of tea to the end of August 1964 weighed at 148,593,140 kilograms, compared with last year's 137,439,512 kilograms and 142,030,458 kilograms in 1961, a record year. It will be seen that the crop is doing well, but weather prospects hardly seem to justify the view that the crop this year may exceed that of 1961. To reach the 1961 level, 49,000 metric tons will be needed this month, 46,000 tons during October, over 31,000 metric tons during November and December. South India too is running short.

The demand for leaf teas up for sale last Monday eased further. Fairly heavy offerings (65,965 chests) are now available week after week, and over 100,000 packages of Dust come up for disposal every week. Good C.T.C. met with useful support, but a few of the best kinds were easier. Clean mediums sold well. Plain Orthodox grades met with support, but mediums were irregular and good Assam B.O.P. were reported appreciably lower. Whole leaf grades were generally easier, except for cheapest kinds which sold well. The dust sale on 9th September met with good support at firmer prices.

Cochin reports a strong demand for dusts with a useful enquiry for lower grades, but at a slightly reduced level for the latter. The falling away in demand for quality teas seems in direct opposition to the strong market reported from London. At the same time, cheapest types are said to be meeting with more enquiry. It is to be hoped that this means internal consumption is looking up. But in view of the fact that there is plenty of tea in sight, the sudden advance in London prices since the end of August was surprising. Rates were reported up at 55d a lb. Again on 7th September, a further advance was reported near 60d a lb. This remarkable jump in tea prices in London is said to be due to shipowners ordering cargoes loaded Calcutta-London to unload at Continental ports. It is thought such teas, after transhipment, are unlikely to reach British markets for some months. Hence U.K. stocks will be very short in the immediate future.

At this time of year, stocks in the U.K. should be increasing, but they continue to decline. For the week ended 4th September, they were down to 104.69 million lbs, compared with 107.37 million lbs a week earlier. Last year, stocks marked a low of 65,037 metric tons in August, and after rising to 69,262 metric tons in September, they again fell to 65,305 metric tons in October, that is, 65 million kilograms, which is considerably higher than the current figure. Deliveries during the first week of this month were fairly high at 10.63 million lbs, but there was 26.35 million lbs to be landed with 16.31 million lbs afloat; but some of this appears to have been diverted to Continental ports. Prices at the latest Mincing Lane auction were again high, being cabled at 59.79d a lb for last week, or up from 55.29d a lb in the previous week.

Puja Bonus for Workers

A sub-committee representing tea garden owners and central trade union organisations held a meeting in Calcutta last week under the chairmanship of Mr. R. J. T. D'Mello. The bonus sub-committee of the Plantation Industrial Committee of North-East India is reported to have recommended an *ad hoc* payment of Rs. 20 as a profit bonus to tea garden workers before the Pujas.

The recommendation uses the words "profit bonus", but it is understood the sub-committee suggests that gardens incurring losses will also bear this financial burden.

Books

STEEL PRODUCTION AND DEMAND

Reappraisal of Steel Demand. Volume I. (Published by the National Council of Applied Economic Research, New Delhi. Price Rs 12.)

It is not an exaggeration to say that the history of modern industrial civilisation centred round the progress of steel-making. India is no exception to the general rule, and the emphasis on the production of pig iron and steel was correctly placed at the outset of the five year plans. In the present volume the demand for steel from various sectors of the economy such as agriculture, transport and communication, power and irrigation, etcetera, has been analysed and estimates have been prepared for the likely demand under each category during the fourth plan period. In the absence of advanced planning for steel, as the study points out, serious bottlenecks will develop in the implementation of the plan and many projects will remain incomplete due to the lack of supply, thereby hampering the rate of growth.

According to the study, the demand for rolled mild steel will amount to 6.9 million tons in 1965-66, and this is expected to increase to 13.59 million tons by 1970-71. An output of 6.86 million tons is feasible from the existing capacity and the deficit of 6.73 million tons can be bridged by the establishment of the Bokaro steel plant and possibly by one or two more additional steel plants. The deficit is noticed particularly in "flat" steel products and this has no doubt prompted the Government to go ahead with the Bokaro project even if foreign aid were not forthcoming.

The urgency of setting up a permanent Iron and Steel Board, which could collect all statistical data on a continuing basis as well as serve as a clearing house of information, has been strongly advocated. In the foreword, however, Dr. Lokanathan makes the highly controversial comment that it is not desirable to scale down the fourth plan targets because of any shortfalls in fulfilling the targets set for the third plan.

The Iron and Steel Industry of India. By M. R. Chaudhuri. (Review copy received from Oxford Book Company, 17 Park Street, Calcutta 16. Price Rs. 20, pages 196.)

In less than 200 pages, it is not easy to deal exhaustively with the technical, locational and growth components of an industry of vital importance. But the author has achieved this to a great extent, and the book is an excellent treatise on the steel industry of India with special reference to its location and growth.

Among the 11 chapters, apart from an introductory chapter discussing the place of steel in the economy, four chapters deal with location and dispersion, three with raw material and technical aspects, including a chapter on re-rolling mills, and three with the growth of the industry. It would have been better had the book been divided into two or three different sections. There are useful appendices, one of them giving statistical information. But the author is obviously interested in the aspects of location and development of the industry, and not so much with productivity or inter-firm or intra-firm appraisal.

MANPOWER STATISTICS

Fact Book on Manpower. (Published by the Institute of Applied Manpower Research, New Delhi. Pages 230.)

Manpower Group Survey: Stock Taking of Engineering Personnel. (Published by the Institute of Applied Manpower Research, New Delhi. Pages 109.)

The Institute of Applied Manpower Research has just begun its work under the stewardship of Mr. R. A. Gopalaswamy. The *Fact Book on Manpower* is a volume full of useful statistical information. The book is divided into three parts. Part I gives data on general demographic information and sectoral employment statistics. Part II on literacy and education and Part III on scientific, technical and professional personnel. The population census of India, the employment data of the National Sample Survey and the returns available with the Directorate-General of Employment and Training are the sources of information. Researchers and planners will find the report valuable.

The second book is concerned specifically with engineering personnel. The data is collected from the following sources: the National Register of the Council of Scientific and Industrial Research, studies made by the Planning Commission, returns available with the Directorate-General of Employment and Training, 1961 census, and the Ministries concerned. Graduate engineers, diploma holders and "practicals" (without a degree or diploma) are covered in the study and the information on age, employment status and industrial affiliation, etcetera, are given. Manpower planners will find the information useful for studies concerned with engineering personnel.

INDUSTRIAL LICENSING

Procedures for Industrial Licensing. (Published by the Federation of Indian Chambers of Commerce and Industry, Federation House, New Delhi. Price Re 1, pages 56.)

First published in 1960, this is the fourth revised and enlarged edition of the Federation's brochure on industrial licensing. The Government of India, it will be recalled, appointed the Swaminathan Committee to suggest measures for reducing procedural delays in industrial licensing. Many of its recommendations have now been accepted. So the booklet has had to be extensively revised and made up-to-date in order to make it useful to prospective Indian and foreign entrepreneurs. It contains some useful annexures showing how applications for industrial licences have to be submitted to the Government.

COMPANY AND PUBLIC NOTICES

RESERVE BANK OF INDIA

APPLICATIONS are invited for the following posts in the undernoted departments of the Reserve Bank of India :—

(A) POSTS AND SCALES OF PAY :

(i) Deputy Directors : Rs. 850-60-1150.

(ii) Research Officers : Rs. 430-430-55-815 EB 55-925-60-1045.

(iii) Junior Officers Grade II in the Legal Department : Rs. 375-20-535-25-560 EB 25-660-30-720.

Note : Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay the selected candidates in all categories mentioned above will be eligible to draw local pay (at centres where it is admissible), house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) *QUALIFICATIONS :*

(i) *Deputy Directors, Economic Department :* Applicants should possess first or high second class Master's degree in Economics of an Indian or foreign University or a Doctorate degree in Economics of an Indian or foreign University. They must have experience of research work for at least five years in one or more of the following subjects : (a) Monetary Economics, (b) Banking Theory and Practice, (c) International Trade and Finance, (d) Agricultural Economics and (e) Planning and Development.

(ii) *Research Officers, Economic Department :* Applicants should possess first or high second class Master's degree in Economics or Commerce of an Indian or foreign University or a Doctorate degree in Economics of an Indian or foreign University, and a period of research work in one or more of the following subjects : (a) Monetary Economics, (b) Banking Theory and Practice, (c) International Trade and Finance, (d) Agricultural Economics and (e) Planning and Development. Applicants are expected to be proficient in economic analysis. A period of practical banking training will be an additional qualification in respect of applicants with specialisation in (a), (b), and (c) above and experience of agricultural surveys in respect of (d) above.

(iii) *Junior Officers Grade II, Legal Department :* Applicants should be Advocates or Solicitors and should possess in addition to high academic qualifications in Law, practical experience of work in an Advocate's or Solicitor's office or have practised independently, for at least 3 years. Preference will be given to candidates having M.L. or LL.M. or other equivalent qualifications and special knowledge of Banking and Company Law.

THE SELECTION BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY THOSE CANDIDATES WHO POSSESS HIGH ACADEMIC QUALIFICATIONS AND/OR ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

(C) *AGE LIMITS AS ON 1ST SEPTEMBER 1964 :*

(i) *Deputy Directors :* Candidates should be between 30 and 40 years of age but the age limit may be relaxed in the case of candidates possessing exceptional qualifications.

(ii) *Research Officers :* Candidates should not ordinarily be over 35 years of age but the age limit may be slightly relaxed in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.

(iii) *Junior Officers, Grade II :* Between 21 and 27 years. The maximum age limit is relaxable but not beyond 32 years in the case of :—

(a) candidates possessing special qualifications and experience of value to the Bank ; and

(b) candidates belonging to the Scheduled Castes or Scheduled Tribes.

2. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

3. Applicants for the above posts must remit with their applications a fee of Rs. 7.50 for each post by cheque or bank draft on a *scheduled bank* payable at Bombay or by Postal Order. *The application fee is in no case refundable.* In the case of candidates belonging to Scheduled Castes/Tribes the fee will be reduced to one fourth.

4. Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Hyderabad, Trivandrum, Lucknow, Patna and Jaipur accompanied by copies (originals should not be sent) of certificates regarding age and educational qualifications, statements of marks secured in the graduate and post-graduate degree examinations and copies of two testimonials should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay-1 so as to reach him on or before the 3rd October 1964.

5. Candidates already in service will be required to produce a proper discharge certificate from their employers in the event of their being selected at the time of their appointment in the Bank's service.

6. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently in their applications and also enclose a copy of the certificate to that effect from competent authority.

7. Candidates must be prepared to serve in any office of the Bank in India or group of departments to which they are posted and to undertake tours when required.

8. Selected candidates will have to appear for interview/s before the Selection Board at any of the Bank's offices.

9. Appointments will be subject to candidates being found medically fit for service in the Bank by the Bank's Medical Officer.

10. If any candidate desires to have his application acknowledged, he should send it by "Registered Post—Acknowledgment Due" Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

11. Canvassing in any form will be regarded as disqualification.
